Readers of the Qurʾān

see RECITERS OF THE QUR'ĀN; READINGS OF THE QUR'ĀN; RECITATION OF THE QUR'ĀN

Readings of the Qurʾān

A term generally used to denote the *qirāʾāt,* the different ways of reciting the Qurʾān. Variant readings are an important aspect of Qurʾān recitation (see RECITATION OF THE QUR'ĀN; RECITERS OF THE QUR'ĀN),

but *qirā'āt* refer to more than that. Other elements — such as differences concerning length of syllables, when to assimilate consonants to following ones, and where to pause or insert verse endings — form an integral part of the different *qirā'āt* systems.

Reports about different ways of reciting or reading the Qur'ān were transmitted from the beginning of Islam. Traditions from the time of the Prophet (see ḤADĪTH AND THE QUR'ĀN) mention that differences in recitation occurred and that they were permitted by him, but there is no specification of the nature of these differences. In the canonical traditions that go back to Muḥammad these differences in recitation are linked to the seven *aḥruf* (sing. *ḥarf*) according to which Gabriel (q.v.; Jibrīl) recited the Qur'ān to Muḥammad. The contexts of these traditions suggest that with *ḥarf* either a mode of recitation or a manner of pronunciation is meant (see ORALITY; ARABIC LANGUAGE). From early works, however, it is clear that in the second/eighth century *ḥarf* was taken to mean the same thing as *qirā'a* in its narrow sense of "variant reading." Early commentaries on the Qur'ān, such as those of Mujāhid (d. 104/722), Sufyān al-Thawrī (d. 162/778), ʿAbdallāh b. Wahb (d. 197/812), ʿAbd al-Razzāq al-Ṣanʿānī (d. 211/827), al-Akhfash al-Awsaṭ (d. bet. 210/825 and 221/835) and al-Farrā' (d. 207/822), demonstrate that these variant readings did indeed occur across the whole range of lexical issues: from simple pronunciation variants through different case endings or verbal forms, synonyms or near synonyms, to interpolations of whole phrases (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL; GRAMMAR AND THE QUR'ĀN).

Readings before the general acceptance of the ʿUthmānic muṣḥaf

The introduction of the ʿUthmānic *rasm* (unmarked consonantal structure of an Arabic document; see ARABIC SCRIPT; CODICES OF THE QUR'ĀN; COLLECTION OF THE QUR'ĀN) does not seem to have had an immediate, decisive effect on the limitation of variant readings with a different *rasm*. In Sufyān al-Thawrī's relatively short *Tafsīr,* for instance, 67 variant readings — all introduced with *fī qirā'at…* ("in the reading of…") or *kāna… yaqra'ūnahā…* ("… they used to read it as…") — are mentioned, 24 of which have a different *rasm*. Most of these are synonyms that are attributed to Ibn Masʿūd (d. 32/652-3). On the whole, it appears that in the second Islamic century variant readings with a different *rasm,* especially from Ibn Masʿūd's codex, were still freely discussed and were called either *qirā'āt* or, less commonly, *ḥurūf*. The reading *wa-amdadnāhum bi-ʿīsin ʿīnin* ("and we shall support them with grayish white ones, with beautiful eyes") instead of *wa-zawwajnāhum bi-ḥūrin ʿīnin* ("and we shall pair them off with white ones, with beautiful eyes"; Q 44:54) is mentioned by al-Farrā' (*Maʿānī,* iii, 44) as the *qirā'a* of Ibn Masʿūd (see HOURIS). In his commentary on Q 44:54, ʿAbd al-Razzāq al-Ṣanʿānī (*Tafsīr,* iii, 210) simply mentions *bi-ʿīsin ʿīnin* as the *ḥarf* of Ibn Masʿūd, whereas Sufyān al-Thawrī (*Tafsīr,* ad Q 52:20) notes it as Ibn Masʿūd's *qirā'a,* and al-Ṭabarī (d. 310/923; *Tafsīr,* ad Q 44:54) records a tradition which calls this reading a *qirā'a* and another which calls it a *ḥarf*. ʿAbd al-Razzāq (*Tafsīr,* i, 390) shows a corresponding use of the terms. Even though there seems to be a preference for the term *ḥarf,* especially in connection with Ibn Masʿūd's readings, both terms, *ḥarf* and *qirā'a,* are apparently used interchangeably, both for ʿUthmānic and non-ʿUthmānic readings. In connection with Q 17:93, ʿAbd al-Razzāq mentions a tradition from Mujāhid: "We did not know what 'a house of ornament *(zukhruf)*' was until we saw in the *qirā'a* of Ibn Masʿūd 'a house of gold *(dhahab)*'." Thus, the pos-

sibility that *ḥarf* could refer to a written variant and *qirā'a* to an oral one is not borne out by early texts.

Examination of the discussions treating variant readings in the second/eighth and third/ninth centuries indicates that the readings of Ibn Mas'ūd gained increasing prominence as the possible or plausible variants of an apparently widely received, more or less standard text which largely agreed with the 'Uthmānic *rasm*. Al-Farrā' *(Ma'ānī)* is particularly noteworthy for his discussion of a wealth of variant readings, especially from Ibn Mas'ūd, many of which have a *rasm* different from that of the 'Uthmānic codex.

The treatment by al-Farrā' of these variants shows that in his time they could still be discussed on equal terms with the 'Uthmānic text. And in Sufyān al-Thawrī's and 'Abd al-Razzāq's *Tafsīr*s there is no mention of their being unacceptable. The guiding principle for acceptance of a reading appears to have been that it should be well known, either from a codex or from a well-established tradition. For al-Farrā' — but probably also for others — another criterion was clearly in place, namely that an acceptable variant reading should be in accordance with the rules of the Arabic language (Leemhuis, Ursprünge).

Of course, the 'Uthmānic text itself still left room for different readings. The codices of Medina, Mecca, Damascus, Kūfa and Baṣra are said to have presented some slight differences in a number of places, mainly concerning an extra *wāw* or *alif,* or a *dhī* instead of *dhū* or *dhā*. The chapter about the differences among these codices in Ibn Abī Dāwūd al-Sijistānī's (d. 316/929) book on the ancient codices (Jeffery, *Materials,* 39-49 of the Arabic text) sums them up in lists that appear to have been well established by then.

The discussion, however, of which was the primary text, the codified text or the recited text, also played an important part in the history of the gradual acceptance of the 'Uthmānic codex as exclusively authoritative. This is clear from the different treatment of variant readings in the *Ma'ānī l-Qur'ān* by al-Akhfash al-Awsaṭ (d. 215/830) and in al-Farrā''s work with the same title. Both books serve the same general purpose: to establish a correct reading of the Qur'ān and, where necessary, to advance arguments for their choices of correct readings. Many — but by no means all — of the discussed *qirā'āt* are common to both authors. Al-Farrā' treats variant readings that presuppose a different *rasm* much more often than does al-Akhfash. And, unlike al-Farrā', al-Akhfash's prime criterion for not admitting such readings is that, although they may be good Arabic, they do not agree with the writing of the *"muṣḥaf"* (q.v.) — by which is quite clearly meant the 'Uthmānic text. This argument is of overriding importance for al-Akhfash and appears to be his guiding principle (Leemhuis, Ursprünge).

The difference in opinion between al-Akhfash and al-Farrā' on this issue shows that by the end of the second Islamic century this controversy had not yet been resolved. It also appears from their works that certainly at the same time, but arguably already a generation or two earlier, a generally received text existed which had *de facto* been accepted as the standard text. The weight of this standard text, however, does not yet appear to have been such that specialists would necessarily have considered variant readings with a different *rasm* to be invalid on the basis of that fact alone.

Readings accepted after the general authorization of the 'Uthmānic muṣḥaf *and those that were not*

Two generations later, Ibn Qutayba (213-76/822-89) expressed the view that all ways of reciting the Qur'ān which are in

accordance with the *rasm* of "our *muṣḥaf*" (*Mushkil,* 42) were allowed. He quotes ʿUthmān's opinion that the difference between *qirāʾa* and *kitāb* was a matter of the accent *(laḥn)* of the Arabs (q.v.; see also DIALECTS) and that the *rasm* should be left as it was (ibid., 51). In al-Ṭabarī's commentary, which was written near the end of the third/ninth century, the criterion for not accepting a reading was its not being in accordance with the codices of the five cities to which the ʿUthmānic text was sent. Al-Ṭabarī formulated this principle quite explicitly, e.g. in connection with the reading of Abū ʿAmr of *li-yahaba laki,* "in order that he will give you," instead of *li-ahaba laki,* "in order that I shall give you," in Q 19:19. For al-Ṭabarī the correct reading is the latter, because "that is how it is in the codices of the Muslims and this is the reading which the ancient and the recent [authorities] follow, except Abū ʿAmr. It is not permissible to differ from them in what they agree upon. And no one is allowed to disagree with their codices."

It is in this period that, in liturgical use, readings based on the ʿUthmānic *rasm* finally eclipsed those presupposing another *rasm,* notably that of Ibn Masʿūd. This was largely due to the activities of Ibn Mujāhid (d. 324/936), whose view on the admissibility of variant readings was enforced by the vizier Ibn Muqla in 323/935. Ibn Shannabūdh (d. 328/939), who had, in public worship, confidently recited readings of Ibn Masʿūd and other older readings which were not in accordance with the ʿUthmānic codex, was brought to trial and flogged, whereupon he recanted his defense of the non-ʿUthmānic readings (Baghdādī, *Taʾrīkh Baghdād,* i, 280-1). It can be said that, from then on, the codified text in the form of the ʿUthmānic codex was considered to be *the* primary text and the only one admissible for reciting the Qurʾān. The meaning of the term *qirāʾa* shifted from "manner of reciting the Qurʾān" to "manner of reciting the established written text of the Qurʾān."

In the introduction to his book on the seven readings, Ibn Mujāhid does not specifically defend his choice for presenting the seven readings. But his choice is clearly motivated by three hierarchical criteria: (1) the reading should be in accordance with one of the ʿUthmānic codices of the five cities that had received it; (2) it should be authoritatively transmitted and broadly authenticated, i.e. agreed upon by the majority of scholars; and (3) it should conform to the rules of Arabic grammar.

The first criterion still provided some leeway since it was accepted that there were some slight differences in the *rasm* of the ʿUthmānic codices of the five cities. Ibn Mujāhid apparently accepted the divergences between the ʿUthmānic codices as they were known in his time. Of the fifty cases mentioned in the lists that Ibn Abī Dāwūd al-Sijistānī (d. 316/929) gives in his *Kitāb al-Maṣāḥif* (39-49), only four are not accepted by Ibn Mujāhid in his *Kitāb al-Sabʿa fī l-qirāʾāt.* Even so, some adaptation could occasionally be devised in order to accommodate a well-known reading to the *rasm*. The reading of Abū ʿAmr of *li-yahaba laki* in Q 19:19, which was rejected by al-Ṭabarī, is retained by the statement that Abū ʿAmr and Nāfiʿ (according to the transmissions of Warsh and al-Ḥalawānī of Qālūn) read it — according to the *rasm,* but without the *hamza* of the *alif* — as *līhaba*. But recitation according to another *rasm* was clearly ruled out, as the example of Ibn Shannabūdh was meant to show. Ibn Mujāhid recognized that, in the past, the majority of Kūfans had recited the Qurʾān according to Ibn Masʿūd; but he had a simple reason for rejecting this *qirāʾa:* it predated the *ḥarf* on which ʿUthmān united the people.

That, for Ibn Mujāhid, the second cri-

terion had precedence over the third is shown by the story of Ibn Miqsam (fl. fourth/tenth cent.; Baghdādī, *Ta'rīkh Baghdād,* ii, 206-8), an expert on *qirā'āt* who is said to have held as acceptable all readings that the *rasm* allowed as long as they conformed to good Arabic. Like Ibn Shannabūdh a year later, he was brought to trial, but he recanted before being punished.

In applying these criteria, Ibn Mujāhid selected and presented the readings of authoritative readers from the places that were associated with the presentation of the first five copies of the ʿUthmānic codex: from Medina, Nāfiʿ b. ʿAbd al-Raḥmān (d. 169/785); from Mecca, ʿAbdallāh b. Kathīr (d. 120/738); from Kūfa, ʿĀṣim b. Abī l-Najūd (d. 127/745), Ḥamza b. Ḥabīb al-Zayyāt (d. 156/773) and ʿAlī b. Ḥamza al-Kisā'ī (d. 189/804); from Baṣra, Abū ʿAmr b. al-ʿAlā' (d. 154/770); and from Damascus, ʿAbdallāh b. ʿĀmir (d. 118/736).

Ibn Mujāhid not only presented permissible variant readings, he also preserved more or less coherent pronunciation systems. This is also shown by the exposition of more general characteristics of the respective readings. Thus Ibn Mujāhid discusses, for instance, the positions of the different readers about the vowel of the personal suffix *-hum* (whether it had to become */i/* if the vowel before the */h/* was an */i/*, or should remain */u/*), and whether the */m/* should be without a vowel or with an added long or short */u/*. Likewise, he notes their positions on the assimilation of vowel-less consonants to a similar first consonant of a following word, e.g. whether *bal rafaʿahu llāhu ilayhi,* "God raised him up to him" (Q 4:158) should be pronounced *bar rafaʿahu llāhu ilayhi*. These peculiarities represent quite different styles of recitation and they most probably reflect original dialectal differences in the pronunciation of Arabic; but a systematic evaluation of these data remains elusive. At least one phenomenon, however, seems to be significant in this respect. The treatment of the glottal stop in the different readings appears to reflect the variance between ancient east and west Arabian dialects. According to Warsh's transmission of Nāfiʿ's reading, the *hamza,* or glottal stop, is not pronounced when it is without a vowel. The same is mentioned of Abū ʿAmr for the recitation of the Qur'ān in the *ṣalāt*. According to this pronunciation, e.g. *alladhīna yu'minūna,* "those who believe" (Q 2:3 and passim), is read *alladhīna yūminūna,* and *bi'r,* "well, spring" (Q 22:45), is read *bīr*. This is in accordance with what is known of the west Arabian pronunciation and is, moreover, in accordance with the pronunciation that the *rasm* suggests. Ibn Mujāhid discusses all these general rules in excursuses, mostly in connection with the passages where these general differences first appear.

Ibn Mujāhid's work had an enormous influence on the recitation of the Qur'ān, especially because he enjoyed the clear support of the ʿAbbāsid authorities (see POLITICS AND THE QUR'ĀN). From then on, the non-ʿUthmānic readings disappeared, and there were only two kinds of readings based on the ʿUthmānic *rasm:* those that were allowed in recitation because they were authoritatively transmitted and broadly authenticated, and those that were not. Only the first of these, which later were indicated as *mutawātira* — Ibn Mujāhid did not use the term — were allowed in recitation. The other readings became known as *shādhdha,* "solitary, isolated," i.e. lacking a sufficient number of authoritative chains of transmission. Ibn Mujāhid wrote a large book on these readings, but it is not extant. Indeed, many of these readings and also readings that presuppose a different *rasm* remained in

circulation in specialized works in order to support or discuss the meaning of words or expressions. For instance, the above-mentioned reading of Ibn Masʿūd in Q 44:54 is still noted in connection with that passage in the *Tafsīr*s of al-Zamakhsharī (d. 538/1144) and Fakhr al-Dīn al-Rāzī (d. 606/1210).

The combination of the power of the ʿAbbāsid state and Ibn Mujāhid's authority and reputation in the field of qurʾānic readings proved to be quite effective, and in probably less than half a century his system of the seven canonical readings was largely accepted. It was also further systematized. In some cases, as in the case of Nāfiʿ, Ibn Mujāhid had mentioned quite a number of transmitters and, in other cases, as in the case of ʿĀṣim, only one. In the *Taysīr* of the Andalusian Abū ʿAmr al-Dānī (371-444/912-1053), there are for each reader only two *rāwī*s, "transmitters." Some of these, however, do not figure in Ibn Mujāhid's list, although this format of dual transmission eventually became the fixed system.

There were other problems that were addressed. Ibn Mujāhid had limited his choice of readers to seven, apparently because these seven met the criterion of broad authentication. At the same time, this choice of seven suggested that these were in fact the seven *aḥruf* of the prophetic traditions, although this equivalency was not universally accepted. On the basis of the criterion of broad authentication, which was somewhat fluid anyhow, readings of other famous readers were advanced as meeting the same criterion. Already Abū l-Ḥasan Ṭāhir b. ʿAbd al-Munʿim b. Ghalbūn (d. 399/1008) had included a second Baṣran reader in his *al-Tadhkira fī l-qirāʾāt* who became accepted as an eighth reader, namely Abū Muḥammad Yaʿqūb b. Isḥāq al-Ḥaḍramī (d. 205/821). It could also be argued that Abū Jaʿfar Yazīd b. al-Qaʿqāʿ (d. 130/747), one of the teachers of Nāfiʿ who was so eulogized by Ibn Mujāhid, should have his rightful place in the system — especially as both Ḥamza and al-Kisāʾī, who were teacher and pupil, had been included in the list. Khalaf b. Hishām al-Bazzār (d. 229/843), who was one of the transmitters of Ḥamza but who had selected some 120 readings of his own which differed from Ḥamza, had also gained the reputation of an independent reader. This soon led to the general acceptance of these three readers, each again according to two main transmitters. These became known as the "three after the seven." The question whether these readings were also *mutawātira,* "broadly authenticated," or just *mashhūra,* "well known," proved in the end to be merely academic. Together with the seven of Ibn Mujāhid, these three became known as the system of the ten and, at least in later times, these ten readings were all considered *mutawātira*.

But things did not stop there. The idea that the valid transmission of a reading was enough to make it fit for recitation, if the other two criteria were met, continued to attract some followers. Abū Muḥammad Makkī b. Abī Ṭālib al-Qurṭubī (d. 437/1045) was probably the first to advocate this view. Ibn al-Jazarī (d. 833/1429) quotes with approval in his *Nashr* (13-4) Makkī's opinion that there are three kinds of readings. The first is "what is recited nowadays and in which three characteristics are united." These characteristics are: (1) transmission from the Prophet on the authority of reliable authorities *(thiqāt);* (2) accordance with the Arabic in which the Qurʾān was revealed; and (3) conformity with the writing of the *muṣḥaf*. It is this last criterion that decides whether or not a reading is considered to be based on general agreement. Readings that meet these three criteria are accepted and can

be recited, and whoever rejects them is an unbeliever (see BELIEF AND UNBELIEF). The second kind of readings consists of those that meet the first two criteria but not the third. This kind of reading is acceptable but cannot be used in recitation, but whoever rejects it is not an unbeliever — a point, however, on which, Ibn al-Jazarī adds, the scholars do not agree. A minority of them held the view that it was permissible to recite such readings — among others, the reading of Ibn Masʿūd is meant — in the prayer (q.v.; *ṣalāt*) on the basis that the Companions of the Prophet (q.v.) and the successors of his Companions did so. The third kind consists of readings that do not meet either or both of the two first criteria. These are unacceptable even when they are in accordance with the writing of the *muṣḥaf,* and whoever rejects them is not an unbeliever.

Whether or not this reformulation of Ibn Mujāhid's three criteria had made its appearance already in the time of Makkī, is not entirely clear — but the argument that conformity with the ʿUthmānic text in itself constituted *ijmāʿ,* or general agreement, made room for the addition of another four readers to the list: "the four after the ten." The adherents of the system of the fourteen readers generally based their opinion on Makkī and Ibn al-Jazarī and gained some, but certainly not general, acceptance. They continued to be regarded as *shādhdha* — like all the others outside the system of the ten — by most authorities. Nevertheless, the boundary between acceptable and unacceptable readings remained somewhat blurred. Abū l-Qāsim Muḥammad b. Juzayy al-Gharnāṭī (d. 741/1340), who, in his *Tafsīr,* followed Warsh *ʿan* Nāfiʿ's reading because "it is the reading that is used in al-Andalus and the other countries of the Maghrib," gave the following short definition: "The *qirāʾāt* fall into two classes — the well known, established *(mashhūra),* and the isolated, deviant *(shādhdha)* ones. The *mashhūra* are the seven readings and those which are similar to them, like the reading of Yaʿqūb and Ibn Muḥayṣin. *Shādhdha* is what is unlike that" (*Tashīl,* 7).

In the full system of the fourteen readings, each reader is represented by two *riwāya*s, or transmissions, and a reading is generally referred to by both the reader and one of the *rāwī*s in the following form: *qirāʾat Warsh ʿan Nāfiʿ, Ḥafṣ ʿan ʿĀṣim, al-Dūrī ʿan Abī ʿAmr* ("the reading of Warsh from Nāfiʿ," or "Ḥafṣ from ʿĀsim," or "al-Dūrī from Abū ʿAmr"), etc.

The system of the fourteen readings

1. Nāfiʿ b. ʿAbd al-Raḥman (d. 169/785)
   a. Warsh, ʿUthmān b. Saʿīd b. ʿAbdallāh al-Quṭbī (d. 197/812)
   b. Qālūn, Abū Mūsā ʿĪsā b. Mīnā l-Zarqī (d. 220/835)
2. ʿAbdallāh b. Kathīr (d. 120/738)
   a. Abū l-Ḥasan Aḥmad b. Muḥammad al-Bazzī (d. 240/845 or 250/864)
   b. Qunbul, Abū ʿAmr Muḥammad b. ʿAbd al-Raḥmān (d. 280/893 or 291/904)
3. Abū ʿAmr b. al-ʿAlāʾ (d. 154/770)
   a. al-Dūrī, Abū ʿAmr Ḥafṣ b. ʿUmar b. ʿAbd al-ʿAzīz (d. ca. 246/291)
   b. al-Sūsī: Abū Shuʿayb, Ṣāliḥ b. Ziyād al-Riqqī (d. 261/874)
4. ʿAbdallāh b. ʿĀmir (d. 118/736)
   a. Abū l-Walīd Hishām b. ʿAmmār al-Sulamī l-Dimashqī (d. 245/859)
   b. Abū ʿAmr ʿAbdallāh b. Aḥmad b. Bishr b. Dhakwān (d. 242/856)
5. ʿĀṣim b. Abī l-Najūd (d. 127/745)
   a. Abū Bakr Shuʿba b. ʿAyyāsh b. Sālim (d. 193/809)
   b. Abū ʿAmr Ḥafṣ b. Sulaymān b. al-Mughīra (d. 180/796)
6. Ḥamza b. Ḥabīb al-Zayyāt (d. 156/773)
   a. Khalaf Abū Muḥammad al-Asadī al-Bazzār al-Baghdādī (d. 229/844)

b. Abū ʿIsā Khallād Ibn Khālid al-Baghdādī (d. 220/835)

7. ʿAlī b. Ḥamza al-Kisāʾī (d. 189/804)
   a. Abū l-Hārith al-Layth Ibn Khālid al-Baghdādī (d. 240/854)
   b. al-Dūrī, the same as Abūʿ Amr's first *rāwī*
8. Abū Jaʿfar Yazīd b. al-Qaʿqāʿ (d. 130/747)
   a. Abū l-Hārith ʿĪsā b. Wirdān al-Madanī (d. ca. 160/777)
   b. Abū l-Rabīʿ Sulaymān b. Muslim b. Jummāz al-Madanī (d. 170/786)
9. Abū Muḥammad Yaʿqūb b. Isḥāq al-Ḥaḍramī (d. 205/821)
   a. Ruways Abū ʿAbdallāh Muḥammad b. al-Mutawakkil al-Baṣrī (d. 238/852)
   b. Abū l-Ḥasan Rawḥ b. ʿAbd al-Muʾmin al-Baṣrī (d. 234/848)
10. Khalaf, the same as Ḥamza's first *rāwī*
    a. Abū Yaʿqūb Isḥāq b. Ibrāhīm al-Warrāq al-Marwazī al-Baghdādī (d. 286/899)
    b. Abū l-Ḥasan Idrīs b. ʿAbd al-Karīm al-Ḥaddād al-Baghdādī (d. 295/908)
11. Muḥammad b. ʿAbd al-Raḥmān b. Muḥayṣin (123/740)
    a. al-Bazzī, the same as Ibn Kathīr's first *rāwī*
    b. Abū l-Ḥasan Muḥammad b. Aḥmad b. Ayyūb b. Shannabūdh (d. 328/939)
12. al-Yazīdī, Abū Muḥammad Yaḥyā b. al-Mubārak b. al-Mughīra al-Baṣrī (d. 202/817)
    a. Abū Ayyūb Sulaymān b. Ayyūb b. al-Ḥakam al-Baghdādī (d. 235/849)
    b. Abū Jaʿfar Aḥmad b. Faraḥ b. Jibrīl al-Baghdādī (d. 303/915)
13. al-Ḥasan al-Baṣrī (d. 110/728)
    a. Abū Nuʿaym Shujāʿ b. Abī Naṣr al-Balkhī l-Baghdādī (d. 190/806)
    b. al-Dūrī, the same as Abū ʿAmr's first *rāwī*
14. Abū Muḥammad Sulaymān b. Mahrān al-Aʿmash al-Kūfī (d. 148/765)
    a. Abū l-ʿAbbās al-Ḥasan b. Saʿīd b. Jaʿfar al-Muṭawwiʿa al-Baṣrī (d. 371/981)
    b. Abū l-Faraj Muḥammad b. Aḥmad b. Ibrāhīm al-Shannabūdhī l-Baghdādī (d. 388/998)

Spread and occurrence of the accepted readings

Not much can be said with certainty about the actual occurrence of the different readings, or whether most of them had anything more than theoretical significance. The analysis of the numerous preserved historical Qurʾān manuscripts should be of great help in establishing a clearer picture, but these data have only begun to be analyzed (Dutton, Early muṣḥaf; see MANUSCRIPTS OF THE QURʾĀN).

At first, most readings appear to have been favored by the regions in which they originated. It is conceivable that some readings predate the reader with whom they were associated by Ibn Mujāhid (Dutton, Early muṣḥaf). About the subsequent history in some regions a little bit more is known. In the Maghrib, Ḥamza's reading was supplanted by Nāfiʿ's, which also became the favored reading in al-Andalus. Nowadays, the most widespread reading in west and north Africa, except Egypt, is Warsh *ʿan* Nāfiʿ. In Libya and in parts of Tunisia and Algeria Qālūn *ʿan* Nāfiʿ also has some following. In Egypt, the reading of Warsh *ʿan* Nāfiʿ was equally well spread until about the tenth/sixteenth century, but the reading of Abū ʿAmr was also not unknown. The commentary known as *al-Jalālayn,* for instance, follows this reading. The reading of Abū ʿAmr is said to have been dominant in the Ḥijāz, Syria and the Yemen from the fifth/eleventh century, when it superseded Ibn ʿĀmir's. This latter nevertheless is reported to be in use in some parts of the Yemen. Nowadays, the reading of al-Dūrī *ʿan* Abī ʿAmr appears still to be used in parts of west Africa, the Sudan, Somalia and Ḥaḍra-

mawt. Some (as yet unpublished) leaves of a qur'ānic manuscript that were found during emergency excavations in the town of al-Qaṣr in the Dakhla oasis in the western desert of Egypt show what is an interesting, and apparently eclectic, reading (for material from this excavation, see Figs. III and IV of SHEETS). For, in a number of cases, this manuscript — which generally follows Abū ʿAmr — adopts a Meccan reading concerning the pronunciation of the *hamza* (pace Ibn Kathīr and Ibn Muḥayṣin). This *muṣḥaf* probably was in use before or in the nineteenth century C.E.

The great unifying change came in the tenth/sixteenth century, as the Ottoman empire adopted the Ḥafṣ *ʿan* ʿĀṣim reading. In the course of time this reading became and remained by far the most widespread. Only on the fringes of the Ottoman empire or outside of it, as in northwest Africa, did other readings remain in use. The printing of the Egyptian government edition of the Qur'ān, which appeared in 1342/1923 and which followed the Ḥafṣ *ʿan* ʿĀṣim reading, although with a *rasm* with far fewer *alif*s, immensely advanced the spread of this reading, albeit after the fall of the Ottoman empire (see PRINTING OF THE QUR'ĀN). Apart from this reading, only the Nāfiʿ reading in both *riwāya*s seems to be available in printed form.

Registration of the readings

In modern times it became possible to register the readings on gramophone records (see MEDIA AND THE QUR'ĀN). The earliest recordings appear to date from the 1920s. The first complete recording of the whole Qur'ān in the *murattal* style according to both the Ḥafṣ *ʿan* ʿĀṣim and the Warsh *ʿan* Nāfiʿ was done in the 1960s by the Egyptian *shaykh al-maqāriʾ* Maḥmūd Khalīl al-Ḥuṣarī (d. 1980). Since then, numerous recitations of the Qur'ān have become available, especially on audiocassettes, CDs and websites. The vast majority of these recordings follow the reading of Ḥafṣ *ʿan* ʿĀṣim, but recitations according to the readings of Warsh *ʿan* Nāfiʿ, Qālūn *ʿan* Nāfiʿ and al-Sūsī *ʿan* Abī ʿAmr and al-Dūrī *ʿan* Abī ʿAmr also exist. Recitations are broadcast not only by radio stations (like the Egyptian *Idhāʿat al-Qurʾān al-karīm*), but also by several sites on the Internet (see COMPUTERS AND THE QUR'ĀN). With this modern development the diversity of what is essentially an oral tradition is being revived.

Before modern times the differences among the readings were, of course, transmitted orally, but there were also specialized books that described them. At an early stage, graphical signs were devised which were added to the *rasm* of manuscripts of the Qur'ān in order to establish the correct pronunciation. First, a system of little dashes was introduced to differentiate between characters with similar forms. Later, these dashes were changed to dots (see ARABIC SCRIPT). Two slightly different systems evolved. What is now considered the western system, which was and is still used in the Iberian peninsula and north Africa, differentiates between the letters *fāʾ* and *qāf,* by the placement of one dot under the former and one dot above the latter. The eastern system uses one dot above the *fāʾ* and two dots above the *qāf*. Nearly the same system is already in place in the inscriptions of the Dome of the Rock in Jerusalem, with the exception that there the *fāʾ* and *qāf* are distinguished by one dash above the first and one dash under the latter (see EPIGRAPHY AND THE QUR'ĀN; ART AND ARCHITECTURE AND THE QUR'ĀN). Interestingly, the same divergence is found in some early Qur'ān manuscripts, e.g. an early Ḥijāzī *muṣḥaf* in the Austrian National Library in Vienna (cod. mixt. 917), an early, probably Yemeni one (Ṣanʿāʾ, Dār al-Makhṭūṭāt, inv. no. 01-29.2), and an

early Ḥijāzī *muṣḥaf* in St. Petersburg (inv. no. E-20). In some instances in this last mentioned example, however, the double dots above the *qāf* were added (see also CALLIGRAPHY; ORNAMENTATION AND ILLUMINATION).

Probably at a later stage, colored, usually red, dots were added in order to distinguish vowels and the *hamza,* or glottal stop. Sometimes the *hamza* is also represented by a dot of a different color, usually green. It is not known when this system was devised, but it may be noted that it is already used in what is claimed to be a very early *muṣḥaf* among the Qurʾān manuscripts that were found in the Great Mosque of Ṣanʿāʾ (Ṣanʿāʾ, Dār al-Makhṭūṭāt, inv. no. 20-33.1). As with other early manuscripts of the Qurʾān, it is possible that these colored dots were added later, but in the time of Ibn Abī Dāwūd al-Sijistānī (d. 316/929) this was apparently common practice. He devoted a chapter to it in his *Kitāb al-Maṣāḥif* (Jeffery, *Materials,* 144-7 of the Arabic text). Some early manuscripts of the Qurʾān, now housed mainly in the Bodleian Library, mark alternative readings, from the "seven" or the "ten" and also *shādhdh* readings, by dots of a different color (Dutton, Red dots). The problem with early qurʾānic manuscripts is that no consensus about their dating exists. Most of these are assigned to the third/ninth and fourth/tenth centuries, although some are probably earlier.

Apart from signs for vowels, *alif*s were also added, usually in red, to make up for an orthography which did not denote a long */a/*. In the course of time more signs came into existence to denote further niceties of recitation, like signs for nasalization and signs to indicate where a *waqf,* or pause, must, could or must not be inserted. In imitation of the Egyptian government edition of the Qurʾān, modern printed editions of the Qurʾān usually include a list that explains the meaning of these signs. Some remnants of older systems have survived in the western tradition where *hamza*s are written above, below or in the middle of an *alif* to denote whether it is to be pronounced with an */a/,* an */i/* or a */u/,* respectively. An interesting new development is an edition of the Qurʾān (Damascus 1414/1993) according to the reading of Ḥafṣ *ʿan* ʿĀṣim in which different colors are used to denote the varying lengths of syllables; gray is used for letters that should not be pronounced.

The knowledge of the readings is nowadays greatly advanced by the publication of Qurʾān editions that give in the margins the differences between the accepted readings according to the system of the "ten" or the "fourteen."

Rebellion

Opposition to authority. Whether the Qurʾān has anything to say on the subject of rebellion and political violence (q.v.; see also POLITICS AND THE QURʾĀN) is not an issue that can easily be resolved by reference to the text of the Qurʾān alone. Although the Qurʾān does not seem to address the issue explicitly, classical Muslim jurists (see LAW AND THE QURʾĀN) argued that particular verses in the Qurʾān were intended to guide legal determinations regarding rebellion, or what is known as the problem of *al-khurūj ʿalā l-ḥākim,* "disobeying and rebelling against the ruler" (see DISOBEDIENCE; KINGS AND RULERS). Within the first centuries of Islam, the political and legal debate focused on three qurʾānic pronouncements, all three of

which do not appear to address directly the issue of rebellion. The first pronouncement commanded Muslims to obey God, the Prophet and those who are in charge of the Muslim community (Q 4:59; see OBEDIENCE; AUTHORITY). Not surprisingly, the Umayyad caliphs (see CALIPH) and later on the ʿAbbāsids, confronted by multiple rebellions, argued that this qurʾānic verse mandated strict obedience to rulers and forbade all forms of rebellion. In support of this position, a large number of traditions attributed to the Prophet were circulated in the first two centuries of Islam banning rebellion even against an unjust ruler (e.g. Shaybānī, *Sunna,* 29, 445, 491, 492-4; see OPPRESSION).

The second is an ambiguous qurʾānic pronouncement which strongly condemns people who fight God and his Prophet and spread corruption (q.v.) on the earth *(mufsidūn fī l-arḍ)* by destroying property (q.v.) and life (*wa-yasʿawna fī l-arḍi fasādan,* Q 5:33). The verse (known as *āyat al-ḥirāba*) sets out severe punishments, including banishment and death, for those who commit such a hideous deed (see FIGHTING; CHASTISEMENT AND PUNISHMENT). Various historical accounts report that this verse was revealed when a group from the tribe of ʿUrayna pretended to convert to Islam, only to turn around, steal the properties entrusted to them by Muslims and then torture to death a poor shepherd boy who was sent to instruct them in Islam (cf. Rāzī, *Tafsīr;* Ibn Kathīr, *Tafsīr;* Ibn al-Jawzī, *Zād;* Zamakhsharī, *Kashhāf;* Ṭabarsī, *Majmāʿ,* ad Q 5:33; see OCCASIONS OF REVELATION). But because of the verse's broad and strong condemnatory language and its mandate of severe punishments for those who cause corruption on earth, various state functionaries and rulers, commencing with the period of the Umayyads, and continuing even at times to the present age, have asserted that this verse was intended to apply to rebels. Accordingly, various rulers, especially in the first three centuries of Islam, contended that rebellion was strictly prohibited and that rebels are corrupters of the earth *(mufsidūn fī l-arḍ)* and therefore, ought to be treated according to the harsh penalties set out in the qurʾānic verse (e.g. Ṭabarī, *Taʾrīkh,* v, 141-2, 159, 202-37; Ibn al-Athīr, *Kāmil,* iii, 336, 343-4, 455; Ibn al-Aʿtham, *Futūḥ,* iii, 114-52; Ibn al-Jawzī, *Muntazam,* vii, 211-12).

The third qurʾānic verse (Q 49:9; known as *āyat al-baghy*) was the one most central to the early Islamic debates on rebellion and it is also the one after which the law of rebels and rebellion *(aḥkām al-bughāt)* was named. This verse instructs Muslims to seek a peaceful solution to any dispute or conflict that occurs between them and further instructs that if one of the disputing parties refuses to accept a peaceful resolution, then such a party has become a transgressor and Muslims should fight against such a transgressor until he concedes to a peaceful resolution (see CONTRACTS AND ALLIANCES; BREAKINGS TRUSTS AND CONTRACTS). Interestingly enough, this is the qurʾānic commandment that the classical jurists argued is the most relevant to the issue of rebellion. Contrary to the claims of the Umayyads and early ʿAbbāsids, Muslim jurists argued that the qurʾānic verse regarding corruption of the earth was intended to apply to highway robbers and bandits (*quṭṭāʿ al-ṭuruq;* see THEFT), and not to rebels (Jaṣṣāṣ, *Aḥkām,* ii, 409-11, 413-4; Ibn Abī Zayd, *Nawādir,* xiv, 474). This was significant because, in effect, it meant that rulers cannot claim that the harsh treatment of rebels is mandated or sanctioned by the Qurʾān. According to the jurists, the Qurʾān mandated reconciliation and the reaching of peaceful resolutions for all inter-Muslim conflicts, including conflicts with rebels

(cf. e.g. Māwardī, *Kitāb al-Qitāl,* 70-3, 75).

Muslim jurists agreed that obedience to a ruler is mandatory unless such a ruler commands something unlawful (*al-ṭāʿa wājiba li-kulli ḥākim mā lam yaʾmur bi-maʿṣiya;* cf. Abū Dāwūd, *Sunan,* iv, 94; see LAWFUL AND UNLAWFUL; VIRTUES AND VICES, COMMANDING AND FORBIDDING). There was quite a bit of disagreement, however, as to what ought to happen if a ruler does command an unlawful act, with jurists venturing responses ranging from passive resistance to armed rebellion. In general, Muʿtazilī (see MUʿTAZILĪS), Shīʿī (see SHĪʿISM AND THE QURʾĀN) and a significant number of Sunnī jurists argued that armed rebellion against an unjust and illegitimate ruler is mandatory (Ibn Karrāma, *Risāla,* 97). After the fourth/tenth century, with the disintegration of the ʿAbbāsid caliphate and increasing incidents of political and social turmoil (*fitna,* pl. *fitan*), the Muʿtazilī, Shīʿī and the Sunnī Ashʿarī responses (see THEOLOGY AND THE QURʾĀN) became increasingly pragmatic, and less idealistic, in nature and they also became substantially similar to one another. They argued that rebellion against an unjust ruler is justified only if there is a real possibility that such a ruler can be removed through rebellion and the rebellion will not result in more social turmoil and suffering than that experienced because of the injustice of the ruler. In effect, Muslim jurists advocated a type of balancing test according to which rebellion is justified only if the total good outweighs the total anticipated evil (e.g. Ibn ʿĀbidīn, *Radd,* vi, 415; Ibn Mufliḥ, *Furūʿ,* vi, 160; Juwaynī, *Ghiyāth,* 115). In all cases, however, most Sunnī and Shīʿī jurists maintained that it is unlawful to participate or actively to support an unjust ruler in carrying out his unlawful commands (e.g. Ibn Taymiyya, *Siyāsa,* 77; Ibn Fahd al-Ḥillī, *Muhadhdhab,* ii, 327).

Interestingly, the main focus of Sunnī and Shīʿī jurists writing after the fourth/tenth century was not on the justifiability or permissibility of rebellion but on the treatment that ought to be afforded rebels. Basing themselves on *āyat al-baghy* and the precedent of ʿAlī b. Abī Ṭālib's (q.v.) conduct in fighting those who rebelled against him in the battles of the Camel and Ṣiffīn (see ṢIFFĪN, BATTLE OF), Muslim jurists developed an intricate field of law known as *aḥkām al-bughāt,* which is concerned with the lawfulness of rebellion and the treatment that should be afforded rebels. According to the provisions of *aḥkām al-bughāt,* special rules apply to rebels who fight while relying on a plausible interpretation *(taʾwīl muḥtamal)* or just cause *(dhikr mazlama)*. Muslims who rely on a plausible religious interpretation or a plausible just cause are designated as *bughāt* and are treated with a certain degree of benevolence. Conversely, Muslims who fight because of tribal reasons *(ʿaṣabiyya)* or out of mere greed are not considered *bughāt* and are not entitled to benevolent treatment. According to classical jurists, those who do not rely on a plausible interpretation or just cause are treated as bandits or highway robbers and are to be killed or executed, and in certain circumstances amputated or banished (cf. e.g. Ibn al-Muqriʾ, *Ikhlāṣ,* iv, 128; Ibn ʿĀbidīn, *Radd,* vii, 188; Nawawī, *Rawḍa,* vii, 364-5; see BOUNDARIES AND PRECEPTS). In other words, *āyat al-ḥirāba* only applies to either regular highway robbers or to rebels who lack a plausible interpretation or just cause and thus do not qualify as *bughāt*. If rebels do qualify, however, as *bughāt,* their fugitive and wounded may not be dispatched. Rebel prisoners may not be executed or enslaved and the children and women of the rebels may not be intentionally killed, imprisoned or enslaved. Imprisoned male rebels must be released once the fighting or the danger of continued fighting ends.

Furthermore, the property of the rebels may not be taken as spoils and any property taken must be returned after the cessation of fighting. Furthermore, means of mass destruction such as mangonels, flamethrowers or flooding may not be used unless absolutely necessary, and rebels may not be mutilated or tortured under any circumstance, nor may they be denied a proper Muslim burial (q.v.; see also DEATH AND THE DEAD). Additionally, rebels may not be punished or held liable for acts committed during the fighting. Most significantly, the *bughāt,* according to the majority of the schools, are not sinners or criminals (see SIN, MAJOR AND MINOR). Furthermore, according to Muslim jurists, the term *bughāt* does not connote censure or blame (*laysa bi-ism dhamm;* cf. e.g. Māwardī, *Kitāb al-Qitāl,* 164-5; Ibn Qudāma, *Mughnī,* x, 61). The notable exception to this determination were the Ḥanafī jurists, who held that the *bughāt* are sinners but agreed that they should not be treated as common criminals (e.g. Jaṣṣāṣ, *Aḥkām,* iii, 402-4).

The requirement of a *ta'wīl,* "interpretation or cause," which qualifies rebels to be treated as *bughāt,* is somewhat vague. In essence, it appears to mean that the rebels rely on a religious interpretation that, in the view of the jurists, is not heretical (see HERESY). As noted above, this is correlative to the alternative justification, i.e. a grievance from a perceived injustice (*dhikr mazlama;* see OPPRESSION; JUSTICE AND INJUSTICE). In principle, Muslim jurists were not willing to equate Muslims who fight or rebel because of "higher motives" or unselfish reasons to those who resort to violence out of the desire for prurient gain or out of blind allegiance to a tribe or family (q.v.; see also TRIBES AND CLANS; KINSHIP). Regardless of the nature of the *ta'wīl,* Muslim jurists held that in order for the *bughāt* to qualify for preferential treatment, they must have a degree of strength, or *shawka*. Strength, in this context, means that the *bughāt* must be of a certain number so that they are not easily overcome or defeated. Muslim jurists do not specify how many individuals are needed for *shawka* to exist, but simply state that one or two people is not sufficient. They justify this numerical requirement by arguing that since the *bughāt* are not held liable for life and property destroyed during the course of fighting, if the status of *bughāt* is given to individuals, regardless of the degree of support that they might enjoy, suffering will increase. As the jurists put it, without the requirement of *shawka,* anarchy and lawlessness will spread *(ḥattā la tafsad al-siyāsāt)*. They contended that without the requirement of *shawka,* every corrupt person will invent or fabricate a *ta'wīl* and claim to be a *bāghī* (singular of *bughāt;* cf. e.g. Ghazālī, *Wajīz,* 164; Ṭūsī, *Mabsūṭ,* vii, 264, 268). Hence, if a person resorts to force while relying on a plausible *ta'wīl* but does not have a *shawka,* he or she will be treated as a common criminal and will be held liable for any life or property destroyed.

Sunnī and Shī'ī jurists writing after the Mongol invasions in the seventh/thirteenth century started emphasizing an issue that perhaps is particularly pertinent to the modern age. A large number of jurists argued that certain methods of armed rebellion are so reprehensible and immoral that rebels who choose to utilize such methods are to be treated according to *āyat al-ḥirāba,* as corrupters of the earth, and not according to *āyat al-baghy,* as *bughāt*. These jurists argued that rebels who attack by stealth and indiscriminately slaughter innocent civilians (see MURDER; BLOODSHED) should not be afforded the status of *bughāt,* even if they adhere to a *ta'wīl* and enjoy a *shawka*. Rather, because of their indiscriminate and terror-inducing meth-

ods, such rebels ought to be treated as *muḥāribūn* under *āyat al-ḥirāba* and, therefore, may be held liable for their crimes and even executed. Despite their reliance on a religious interpretation or legitimate grievance, such *muḥāribūn* are committing a grievous sin that ought to be punished on this earth and that will be punished by God in the hereafter (e.g. Ibn al-Muqriʾ, *Ikhlāṣ,* iv, 128; Ibn ʿĀbidīn, *Radd,* vii, 188). Not surprisingly, several modern scholars have noted the similarity between what premodern jurists condemned as *muḥāribūn* and the actions of terrorists today. Recitation of the Qurʾān

The vocal rendition of the Qurʾān. *Tilāwat al-Qurʾān* is to render the Arabic Qurʾān in voice. It is a branch of the sciences of the "readings" *(qirāʾāt)* of the Qurʾān (see READINGS OF THE QURʾĀN). In the Qurʾān, the term *tilāwa* (which appears in both nominal and verbal forms) often refers to the signs (q.v.) of God that are "rehearsed" therein, i.e. the narration of accounts of previous messengers and communities in sacred history (see NARRATIVES; MESSENGER; GENERATIONS; PUNISHMENT STORIES), as well as the actual act of the recitation of the Qurʾān itself. In general, when the word *tilāwa* refers to the practice of reading the Qurʾān aloud, it conveys a sense of "following" the qurʾānic message as it is rendered in human voice.

The practice of reciting the Qurʾān is performed according to a set of guidelines known as *tajwīd*. *Tajwīd,* although not a qurʾānic term, is the fundamental system of rules for the correct pronunciation of the Qurʾān as it was understood to have been revealed to the prophet Muḥammad (see REVELATION AND INSPIRATION). Recitation of the Qurʾān according to *tajwīd* has many names across the Muslim-majority and Muslim-minority worlds. Some of these terms are variants of the qurʾānic expression *tartīl,* which conveys a sense of "measuring" out the speech of the Qurʾān in a careful and deliberate manner.

Some recitation of the Qurʾān is always required of Muslims for the performance of one of the canonical acts of Islamic worship (q.v.), prayer (q.v.; *ṣalāt*); reading

the Qur'ān aloud is also a key observance of supererogatory Islamic piety. In Muslim traditions of learning and education, the oral/aural recitation of the memorized Qur'ān is the most authoritative mode of its transmission (see TEACHING AND PREACHING THE QUR'ĀN). In some contemporary societies, promoting engagement with the recited Qur'ān is the basis of popular Muslim revitalization movements (see ORALITY; TRADITIONAL DISCIPLINES OF QUR'ĀNIC STUDY).

Reference to recitation

The Qur'ān on its recitation

The word "Qur'ān" is often said to be a form of the root *q-r-'* meaning "to read, to recite." When understood in this sense, "Qur'ān" could be said to be as much an action as an object. Besides the actual word, the Qur'ān includes other names for itself that also emphasize the active components of engaging the Qur'ān in voice, such as *dhikr,* "reminder" (see MEMORY; REMEMBRANCE; NAMES OF THE QUR'ĀN). Characteristic of the self-referentiality of qur'ānic content, the Qur'ān also contains many descriptions of its own recitation. Because of the Qur'ān's unmatched authority as a guide to thought and action in Islamic systems, the Qur'ān's own descriptions of the recited Qur'ān are also directives for believers.

The Qur'ān conveys instructions about its proper recitation in general terms, although not in specific or technical ones. The verses of the Qur'ān that are said to have been among the very first to have been revealed to the Prophet, those that open Q 96, are interpreted as a command to voice the Qur'ān: "Recite! In the name of your lord (q.v.) who created, created humanity from a clot" (see CREATION). The Qur'ān provides some instruction about how to perform its own recitation, in the form of *tartīl,* as in Q 73:4: "Recite/read the Qur'ān with *tartīl*" *(wa-rattili l-Qur'ān tartīlan)*. The verbal form *tilāwa* appears in Q 25:32, where it refers to the reading of the Qur'ān as an act of chanting distinctly. There is also qur'ānic instruction on reading the Qur'ān, e.g. Q 75:16-8: "Do not move your tongue concerning it in order to make haste with it; it is for us to collect it and to read it *(qur'ānahu);* when we recite it *(qara'nāhu),* follow then its recitation *(qur'ānahu)*." Believers are also told in the Qur'ān to "remember" (i.e. *udhkur*), "preserve," (i.e. *tahfīẓ*) and "read [aloud]" (i.e. *qur'ān; tartīl; tilāwa*) when reciting. The ideal reading of the Qur'ān is described as occupying the full concentration of the reciter; this activity is said to be one of which God, who is omniscient, is aware (Q 10:61). The Qur'ān also recommends its reading at night as an act of supererogatory piety (q.v.; Q 3:113-4; see VIGILS).

The Qur'ān contains many descriptions of its effects on listeners even as it is being recited; these, naturally, also function prescriptively in a qur'ānic context (see RITUAL AND THE QUR'ĀN). The Qur'ān provides numerous depictions of embodied, emotive responses to itself when it describes the normative response among believers to hearing its message recited to them. For instance, the recitation of the Qur'ān causes the senses of the faithful to react with "shivering" skin, "trembling" heart (q.v.), and weeping (q.v.; e.g. Q 19:58 and 39:23). Descriptions of such embodied responses to the recited Qur'ān's message are often immediately followed with an affirmation of a corresponding change in the listeners' moral state, such as the following: "When it is recited to them, they fall down upon their faces, prostrating (see BOWING AND PROSTRATION), and say: 'Glory be to our lord (see GLORIFICATION OF GOD; LAUDATION)! Our lord's promise is fulfilled.' And they fall down upon their

faces, weeping; and it increases them in humility" (Q 17:107-9); and, "And when they hear what has been sent down to the messenger, you see their eyes overflow with tears because of what they have recognized of truth (q.v.). They shout: 'Our lord! We believe'; so you will write us down among the witnesses [to the truth]" (Q 5:83; see WITNESSING AND TESTIFYING).

Traditions on recitation

Throughout the formative history of the development of the sciences of qur'ānic "readings" *(qirā'āt)* and *tajwīd* up to the present day, Muslims have based the theory and practice of the recited Qur'ān upon the most authoritative of sources: first, the Qur'ān and accounts relating the practice of the prophet Muḥammad (ḥadīth; see ḤADĪTH AND THE QUR'ĀN); and, second, accounts about the Companions of the Prophet (q.v.) and those who followed them. Within this material, it is ḥadīth reports that convey the ideal intensity of qur'ānic engagement through the ethico-legal injunction to follow the model of the Prophet (*sunna* [q.v.]; see also LAW AND THE QUR'ĀN; ETHICS AND THE QUR'ĀN).

Ḥadīth collections include many separate accounts indicating that Muḥammad valued beautiful voices among readers of the Qur'ān, such as the following reports of statements ascribed to the Prophet as collected by al-Bukhārī (d. 256/870) and others: "He is not one of us who does not sing *(yataghannā)* the Qur'ān," and, "God has not heard anything more pleasing than listening to a prophet reciting the Qur'ān in a sweet, loud voice." Also transmitted in al-Bukhārī and other collections, on the authority of Abū Mūsā l-Ash'arī, there is the report that the Prophet said, "O Abū Mūsā! You have been given one of the musical instruments [voice] of the family of David (q.v.)!" Compilers of traditions also relate accounts about the Prophet's reaction to hearing the Qur'ān, such as his shedding tears.

Ḥadīth accounts also preserve information about the prophet Muḥammad's own recitation of the Qur'ān. Ḥadīth material includes detailed information about particular sūras (q.v.) recited by Muḥammad; they report, for example, which sūras the Prophet preferred to recite at particular times of day (see DAY, TIMES OF), as well as which parts of the Qur'ān the Prophet would repeat in his recitation (related to this is the abundant ḥadīth material on the merits of the recitation of particular sūras of the Qur'ān). Ḥadīth accounts provide some detail about the Prophet's comportment in recitation, such as the following report in al-Bukhārī: "'Ā'isha (see 'Ā'ISHA BINT ABĪ BAKR) narrated: 'Whenever the Prophet went to bed every night, he used to cup his hands together and blow over them after reciting Sūrat al-Ikhlāṣ (Q 112, "Unity"; also termed al-Tawḥīd), Sūrat al-Falaq (Q 113, "The Dawn") and Sūrat al-Nās (Q 114, "People"), and then rub his hands over whatever parts of his body he was able to rub, starting with his head, face and front of his body. He used to do that three times.'" (*Ṣaḥīḥ,* viii, 110, no. 4372). The Prophet also enjoyed listening to the recitation of others, and there are many reports about weeping when hearing the Qur'ān recited (e.g. Bukhārī, *Ṣaḥīḥ,* viii, 122-3, nos. 4411-3), based on his practice.

In general, accepted ḥadīth accounts and other authoritative material from the earliest period of Islam emphasize the occasions and merits of recitation rather than practical technique. Later authorities continued the precedent of collecting reports about the recitation practice of the prophet Muḥammad, also compiling further information about the recitation habits of other pious people. This material on the proper comportment *(adab)* of

recitation documents the recitation practices of famous religious figures, such as the first four caliphs in Sunnī tradition (see CALIPH). These reports provide information on matters such as the desirability of completing the recitation of the entire Qurʾān at nightfall, daybreak, and just before prayer times (see DAWN; EVENING); they also treat common challenges that reciters face, like confusing pauses and starts in sectioning. Issues that recur in this recitation literature include, for example, questions of how rapidly to recite and what is the proper portion of the book to complete in a given amount of time. One report transmitted by Abū Dāwūd (d. 275/889) and al-Tirmidhī (d. 279/892), for example, states, "Whoever recites the Qurʾān in less than three days does not understand it" (Nawawī, *Tibyān,* 103). Al-Ghazālī (d. 505/1111) sums up many such reports that were in circulation about the reading of the Qurʾān, from canonical ḥadīth collections and elsewhere, in his *Iḥyāʾ ʿulūm al-dīn* (Book 8).

Much of the authoritative material on the *adab* (comportment) of recitation addresses the intents behind recitation, such as that of seeking a worldly reward or payment for teaching or performance (see RECITERS OF THE QURʾĀN). It also includes strong prohibitions against reciting the Qurʾān ostentatiously or for show, a matter addressed in accepted ḥadīth traditions. For example, al-Bukhārī reports (*Ṣaḥīḥ,* viii, 123, no. 4415): "Abū Saʿīd al-Khudrī narrated: I heard God's messenger saying: 'There will appear some among you whose prayers will make you look down on yours, and whose fasting will make you look down on yours, and whose (good) deeds will make you look down on yours; but they will recite the Qurʾān and it will not exceed their throats.'" Another well-known report in most collections compares the piety of Qurʾān readers with the sweet and bitter smells and tastes of different plants and fruits. In this literature, the danger of such hypocrisy is balanced by the instruction to focus on the voicing of the speech (q.v.) of God (see also WORD OF GOD). There is a ḥadīth, for example, that the Prophet said: "Read the Qurʾān as long as your hearts are in harmony with it. When they are not in harmony, get up and stop reading it" (Bukhārī, *Ṣaḥīḥ,* viii, 124, no. 4417; also reported in Muslim's *Ṣaḥīḥ*).

Within the material known as *Adab tilawāt al-Qurʾān,* "Comportment of reciting the Qurʾān," and *Faḍāʾil al-Qurʾān,* "Excellences of the Qurʾān," there is strong emphasis on the idea that the recitation of the Qurʾān brings both individual and collective rewards. This is, for example, expressed in the following statement of Abū Hurayra (d. ca. 58/678), cited in sources such as al-Ghazālī's *Iḥyāʾ ʿulūm al-dīn* (Book 8): "Surely the house in which the Qurʾān is recited provides easy circumstances for its people, its good increases, angels come to it [in order to listen to the Qurʾān] and satans leave it. The house in which the Book of God is not recited provides difficult circumstances for its people, its good decreases, angels leave it, and satans come to it" (Ghazālī, *Recitation,* 25; there are many versions of this report). In addition to describing the immediate peace and tranquility (*sakīna;* see SHEKHINAH) that descends when the Qurʾān is read by the pious in this world, the results of the act of recitation, including knowing the Qurʾān by heart and not forgetting it, as well as "learning and teaching" the Qurʾān, are emphasized many times in numerous accounts found in the major ḥadīth collections. Such consequences of piety and committed action are not only described in terms of this world, but also with respect to the accounting of the day of judgment

and future existence in the world to come (see LAST JUDGMENT; REWARD AND PUNISHMENT).

In an eschatological mode (see ESCHATOLOGY) of devotional piety, it is said that the Qurʾān itself will testify to the pious practice of the reader in his or her lifetime. In many ḥadīth and other pious literature such as al-Ghazālī's *Iḥyāʾ ʿulūm al-dīn* (Book 8), rewards for reciting the Qurʾān that will be credited on the day of judgment are calculated sūra by sūra and even *āya* by *āya,* based on reports in collections such as Abū Dāwūd, Aḥmad b. Ḥanbal, Muslim, al-Nasāʿī and al-Tirmidhī (see Wensinck, *Handbook,* 131). Not only sūra by sūra, or *āya* by *āya,* but there are even claims that rewards may be achieved letter by letter (see ARABIC SCRIPT; NUMEROLOGY; MAGIC; POPULAR AND TALISMANIC USES OF THE QURʾĀN), such as the report transmitted by al-Tirmidhī: "For every letter that you read you will get tenfold reward," and the report that Ibn Masʿūd (d. 32/652-3) said: "[The Prophet] said 'Read the Qurʾān for you will be rewarded at the rate of [the recompense of] ten good deeds (q.v.) for reading every letter of the Qurʾān. Take notice, I do not say that *alif lām mīm* [a combination of three letters that opens Q 2; see MYSTERIOUS LETTERS] constitute one letter. Rather, I should say that *alif* is one letter, *lām* is another, and *mīm* is [still] another'" (Ghazālī, *Recitation,* 24).

The development of early traditions of ascetic piety lent heightened emphasis to such material within Islamic tradition (see ASCETICISM). Among the heirs to this early qurʾānic tradition of piety, Ṣūfīs especially developed the soteriological and interiorized qurʾānic traditions (see POLYSEMY; ṢŪFISM AND THE QURʾĀN). Statements of well-known Ṣūfīs represent the Qurʾān as having a palpable presence for practitioners in their dreams as well as in waking states (see DREAMS AND SLEEP). This presence is depicted as an ongoing intimacy, at times framed in terms of the key concept of "friendship" (*wilāya;* see FRIENDS AND FRIENDSHIP; CLIENTS AND CLIENTAGE). This is indicated by personal accounts, as well as in prophetic narrations, such as: "Those who are concerned with the Qurʾān *(ahl al-Qurʾān)* are friends of God *(awliyāʾ Allāh)* and are special to him," which al-Ghazālī, for example, relates on the authority of Aḥmad b. Ḥanbal (d. 241/845). Ideally, engaging the Qurʾān in practice should conform to the reciter's close and immediate experience of the reading in his or her "heart." This ideal is central to the tradition of the recitation of the Qurʾān in pietistic circles.

Tajwīd *and systems of recitation*

History and development of qirāʾāt

Early readers and transmitters of the Qurʾān were known for their knowledge as well as their piety (see SCHOLAR; KNOWLEDGE AND LEARNING). There are reports that the prophet Muḥammad dispatched "readers" *(qurrāʾ)* in order to teach the Qurʾān to others. Such figures held an important position throughout the earliest period of Islam and some readers were also known for their religiously-inspired political leanings (see POLITICS AND THE QURʾĀN). Those in the category of readers are listed in biographical dictionaries. According to some Muslim historical narratives, the deaths of many of Muḥammad's Companions in the wars of "apostasy" (q.v.), along with the spread of Islam to non-Arab areas, precipitated the standardization of the text of the Qurʾān (see COLLECTION OF THE QURʾĀN; CODICES OF THE QURʾĀN; ORTHOGRAPHY), as well as the beginning of the development of the

qurʾānic sciences (see GRAMMAR AND THE QURʾĀN; EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). As Frederick Denny (Exegesis) has shown, the qurʾānic sciences of grammar, exegesis and recitation (including *qirāʾa,* the study of variant readings or vocalizations of the standard text) developed simultaneously and all in response to similar circumstances and conditions. Like the standardization of the ʿUthmānic text, the technical guidelines for *tilāwa* and readings of the Qurʾān were systematized as a reaction to the potential variability of Muslim practices of recitation.

In technical and restricted usage, the term *qirāʾāt* usually denotes the accepted variant readings of the Qurʾān. These readings do not relate to pitch variation or to alternate texts. Rather, they are minor differences in the vocalization of the same ʿUthmānic text, and all deploy the same system of guidelines for recitation, *tajwīd*. In a straightforward example of "variation" among the readings, a word in the fourth verse from the opening chapter, Sūrat al-Fātiḥa (Q 1:4), may be rendered either as *māliki* or *maliki* but both convey the same sense, which is God's dominion over the day of judgment. In another example, Q 5:6, which has generated differences of legal opinion on the ritual law for ablution (see CLEANLINESS AND ABLUTION; RITUAL PURITY), may carry two meanings depending on its vocalization. The vocalization and the nuances in the meaning depend on the decision to read a verb with or without a related preposition. If the phrase "your legs" *(arjulakum)* is read in the accusative, as according to Nāfiʿ and Ḥafṣ, it is understood as the object of the verbal imperative *"amsaḥū"* (yielding the meaning "wash your legs"). If it is read in the genitive *(arjulikum),* as according to Ibn Kathīr and Abū ʿAmr, "your legs" are like the preceding *"ruʾūsikum"* ("your heads"), the object of the verb *(amsaḥū)* with the preposition *bi-* and the phrase is glossed as "wipe your legs." Some scholars, including those in the European tradition of textual analysis (see TEXTUAL CRITICISM OF THE QURʾĀN), have considered the technical differences among the standard readings to be an important source of information about qurʾānic language and its historical parameters (see ARABIC LANGUAGE; DIALECTS).

There are seven accepted readings in the system of *qirāʾāt*. The number seven is based on a well known ḥadīth of several variants, in which the Prophet is reported to have said: "This Qurʾān has been revealed to be recited in seven different modes *(aḥruf),* so recite of it whichever is easiest for you" (but cf. Melchert, Ibn Mujāhid). Some versions of this report narrate that the occasion of the revelation of the verse was a dispute over the proper reading of Q 25 (see OCCASIONS OF REVELATION). Another report, preserved by al-Bukhārī, relates that the Prophet stated that the angel Gabriel (q.v.) would recite the Qurʾān in different ways for him. These reports have been open to a variety of interpretations in Islamic tradition, including the ideas that the *aḥruf* may refer to differing dialects among the Arabs at the time of the revelation of the Qurʾān, or to the technical rules of *tajwīd.* The dominant interpretation, however, is that the *aḥruf* refer to what became known as the "seven readings" in tradition. Various reasons are given for the diversity of these accepted readings. Among them is the claim that they make the reception of the Qurʾān easier for those who are learning it. Another justification for their existence is that they enhance the multifaceted layers of qurʾānic meanings, including the proscriptive or legal (for elaboration of this

last reason, see Burton, *Collection;* see LAWFUL AND UNLAWFUL; BOUNDARIES AND PRECEPTS; FORBIDDEN).

Abū Bakr b. Mujāhid (d. 324/936) is credited with the establishment of the accepted range of variations in the readings of the text, although additional readings are recorded and historically the content of actual enumerated lists has varied. The seven readings that were standardized in Ibn Mujāhid's time as the accepted *qirā'āt* represented prominent schools of recitation in five centers of Muslim learning in the early Islamic period: Mecca, Medina, Damascus, Baṣra, and Kūfa. Ibn Mujāhid's selection includes the following seven readers: Ibn Kathīr (Mecca, d. 120/738), Nāfiʿ (Medina, d. 169/785), Ibn ʿĀmir (Damascus, d. 118/736), Abū ʿAmr (Baṣra, d. 154/770), ʿĀṣim (Kūfa, d. 127/745), Ḥamza (Kūfa, d. 156/773), and al-Kisā'ī (Kūfa, d. 189/804). This selection was justified by taking independent lines of transmission from scholars who were spread over a large geographic area. There was some controversy over the authority of this selection during Ibn Mujāhid's lifetime. It is also clear that there was continued development in the enumeration of "variant readings" after the time of Ibn Mujāhid since the later, influential scholar Ibn al-Jazarī (d. 833/1429) describes ten readings, while other scholars have cited fourteen. Despite this variation, Ibn Mujāhid's system of seven readings has continued to prevail and is considered standard. Today, the most popular readings (of those listed above) are those transmitted by Ḥafṣ (d. 180/796) on the authority of ʿĀṣim and Warsh (d. 197/812) on the authority of Nāfiʿ.

The system of tajwīd

Technical components of *tilāwa* convey theory and practice for the proper recitation of the Qur'ān. While not easily translated, there are two key terms for the applied aspects of the recited Qur'ān: *tartīl* and *tajwīd.* The terms are closely related; for example, the Qur'ān's instruction, "Recite the Qur'ān with *tartīl*" (Q 73:4) has been taken to mean, "Recite the Qur'ān according to the rules of *tajwīd*." The term *tajwīd* refers to a rigorous system of rules that establish the proper vocalization of the Qur'ān, thereby determining its actual rhythm and sound (although not pitch variation, which is always improvised). The root of the word *tajwīd (j-w-d)* connotes "to be correct" and "to improve." For the reciter, the system of *tajwīd* includes instructions on the correct articulation of phonetic sounds, the assimilation of juxtaposed vowels or consonants, and the proper rhythmic duration of vowel sounds. *Tajwīd* also determines the parameters for non-melodic improvisational flexibility. These include, for example, pauses and starts in reading, which allow the reciter to stress specific words, phrases, or sections. *Tajwīd* structures the unique sound of qur'ānic recitation and thereby distinguishes it from ordinary Arabic speech and singing. Overall, *tajwīd* shapes the rhythm and cadences of Qur'ān recitation and gives it a musical quality, although Muslims do not consider the recited Qur'ān to be the equivalent of a human product such as music.

Tajwīd is a classic qur'ānic science, part of the science of readings. It is treated in detail in writings such as al-Suyūṭī's (d. 911/1505) *Itqān fī ʿulūm al-Qur'ān. Tajwīd* is often defined in the sources by some variant of the phrase, "giving each sound its correct weight and measure." Formalization of the rules of *tajwīd* may be seen as a solution to the historical problem of standardizing style and sound in recitation with respect to the great linguistic and

geographical diversity of the Islamic world. The rules of *tajwīd* expressly provide clear guidelines, assuring a uniformity and consistency of pronunciation of the divine speech. Being a native speaker of Arabic of any register or dialect does not guarantee proficiency in the practice of *tajwīd*. Even if the pronunciation renders the word intelligible and grammatically correct, the rules of *tajwīd* stipulate further scrupulous attention to the technicalities of sound production. *Tajwīd* is learned implicitly when children repeat what they hear but is also taught as a formal course of study. For the four-fifths of today's Muslims who are not native speakers of Arabic, *tajwīd* and the Arabic Qurʾān are learned together. Handbooks for elementary *tajwīd* instruction open by introducing students to the points of articulation *(makhārij al-ṣawt),* i.e. the proper methods for the articulation of the letters of the Arabic alphabet (see Fig. 1 for one such diagram).

Although, as mentioned above, the term *tajwīd* does not appear in the Qurʾān, the practice of recitation according to such guidelines is understood to have been a central dimension of Islamic piety since the time of the Prophet. And, according to Muslim tradition, the prophet Muḥammad learned the recitation of the Qurʾān, as well as the rules for its vocalization, directly from the angel Gabriel, who delivered it from the divine source (see HEAVENLY BOOK; PRESERVED TABLET). Recitation manuals consolidated what had certainly been long-accepted techniques and definitions, and systematic treatises on *tajwīd,* such as those of Ibn Mujāhid and al-Dānī (d. 444/1052), appeared in the fourth/eleventh century and were circulated widely after that time. In later centuries, *tajwīd* was fully developed and qualified as both a term and a practice, particularly with the work of Ibn al-Jazarī. Most manuals and discussions after the time of Ibn al-Jazarī follow his systematization. The formal system of *tajwīd* has two branches. These are, first, the correct vocalization of letters, especially the letter *nūn,* and, second, the proper relative duration of vowels. In addition, the field covers the mandatory and recommended points in the text where the reciter may pause and those where the recitation must continue without interruption. The manuals of *tajwīd* also discuss matters which deal with the proper etiquette or comportment surrounding the Qurʾān *(adab al-Qurʾān),* such as ritual ablutions and respectful attention during recitation sessions.

In learning to read the Qurʾān aloud the student first studies the *makhārij,* or "points of articulation" of letters. These are identified in classical terminology in relation to the parts of the mouth in which they originate, such as *lisānī,* "tongue" letters (i.e. *qāf, kāf, jīm, shīn, yāʾ, lām, nūn, rāʾ, fāʾ*) and *shafawī,* "lip" letters *(bāʾ, mīm, wāw),* as opposed to *ḥalq,* "throat," or guttural letters (*ʿayn, ḥāʾ, ghayn, khāʾ* and the *hamza,* the glottal stop), which are articulated back in the throat. The systemization of phonemes in *tajwīd* contains far more information about the Arabic letters than is included in this basic typology, however. For example, the alphabet is also grouped according to classes of "attributes" *(ṣifāt),* which determine degrees of sound assimilation. These include qualities such as elevation *(istiʿlāʾ),* depression *(istisfāl),* softness *(tarqīq)* and heaviness *(tafkhīm)*. These attributes may be classified as necessary or conditional, depending on whether they are influenced by a given vowel *(ḥaraka)* combination. An individual letter has at least five essential *(lāzim)* or basic *(aṣlī)* attributes, each of which is expressed as one of a pair of opposites (such as *shadīda,* "strong," or *rikhwa,* "soft"). In addition, there are also ten (sometimes said to be seven) secondary but essential attributes which are not arranged

in pairs of opposites, and a letter may have one or two of these ten attributes (such as the *ṣāfira,* sibilant or "whistling" letters, which are *ṣād, sīn,* and *zā';* there is also another important classification known as *qalqala* letters).

A first principle of *tajwīd* is that consonants with the same point of articulation assimilate or blend together. All letters are classified in terms of a basic type of this process; the alphabet contains fourteen *shamsī,* "solar, or sun" letters and fourteen remaining *qamarī,* "moon" letters. Sun-letters are those that blend. For example, as in spoken Arabic, *al-rasūl,* "the Prophet," is pronounced as *ar-rasūl* because *rā'* is a blending sun-letter. In *tajwīd,* other kinds of consonantal assimilations (and partial assimilations), which are not heard in ordinary spoken Arabic, also occur.

Unique to qur'ānic pronunciation are rules for particular letters, such as *mīm* and especially *nūn*. There are special conventions for nasalized pronunciation *(ghunna)* of the letters *mīm* and *nūn* when they are doubled in a word or if their doubling happens between two words. There is also a class of rules related to changes that these letters undergo based on adjacent consonants. For example *mīm* and *nūn* do not get clear pronunciation *(izhār)* when they have been modified in the following ways: full assimilation (*idghām,* when they are voiced as the adjacent consonant), suppressed pronunciation (*ikhfā',* when the sound is influenced by letters with similar points of articulation), and change or conversion (*qalb* or *iqlāb,* which applies to *nūn* only when it is pronounced as a *mīm*). As an example of the latter case, *anbiyā'*, "prophets," is pronounced as *ambiyā'* in the Qur'ān, since according to the rule of *iqlāb* the *nūn* is changed to a *mīm* by the following *bā*. (*Iqlāb* is marked in the text with a *mīm* symbol and some other types of assimilations are also marked; see MANUSCRIPTS OF THE QUR'ĀN; ORNAMENTATION AND ILLUMINATION.)

Consonantal assimilation (*idghām,* occurring with the letter *nūn*), the first case given above, receives a great deal of attention from the beginning student, in part because it appears so frequently. (Indefinite case endings on nouns usually carry a terminal *nūn* sound, *tanwīn,* which is not written as an explicit letter in the text.) An example of this type of assimilation is the pronunciation of *an-lā,* "that no," which is voiced as *al-lā,* as in the testimony of faith — the *shahāda,* the first pillar of Islam (see WITNESS TO FAITH; FAITH) — and heard, with the application of *tajwīd,* in the *ādhān,* the "call to prayer": *ashhadu an lā* — pronounced *al-lā* — *ilāha illā āllāh,* "I testify that there is no god except God." In another example from the *shahāda,* the final nasal *nūn* of the indefinite accusative case ending on the name of the Prophet is also assimilated: *wa-anna Muḥammadan rasūl* — pronounced *Muḥammadarrasūl* — *-ullāh,* "and that Muḥammad is the messenger of God." In addition, the *nūn* may assimilate in ways that are not heard in spoken Arabic and vowels may adapt according to the preceding sounds (such as the long */ā/* in the name of God, *Allāh*).

A second major area of elementary *tajwīd* study pertains to the articulation of vowels. There are three vowel sounds in Arabic: */a/, /i/,* and */u/* in long and short forms. Adjacent consonants affect not only their sound shape (as occurs in standard spoken Arabic) but, in Qur'ān recitation, also their duration. In the system of *tajwīd,* vowels are classified according to their duration or elongation, which is called *madd*. *Madd* is measured in terms of a basic unit or weight — called *madd aṣlī* or *madd far'ī* — of one short vowel (a long vowel counts as two basic units, "movements," or beats, called *ḥarakāt*). The relative weight of a vowel

may be extended through the rules of *madd* or shortened through *qaṣr*. For example, vowels before doubled consonants (two consonants together) are shortened, as in the following: *ashhadu an-lā illāha illā Allāh* — pronounced *"illallāh"* —, "I testify that there is no god except God." *Madd,* or elongation of vowels, occurs when a long vowel (*madda* letter) and a "condition of *madd,*" such as a glottal stop *(hamza)* appear together. For example, when a long vowel is followed by the glottal stop it is subsequently lengthened, usually by a degree of 3-1 or 2-1. An instance of this is the word *al-malā'ikatu,* "the angels," which is pronounced with an extended */ā/* counted with three beats of measure: *al-ma-la*^{1}*-a*^{2}*-a*^{3}*-i-ka-tu*. There are four kinds of extended *madd (madd far'ī)*. These are: *wājib* or *muttaṣil,* "compulsory or joint" *madd* (occurring within a single word); *jā'iz* or *munfaṣil,* "permissible or separating" *madd* (occurring between two adjacent words); *ṣila* or *talaffuzī,* "temporary" *madd;* and *lāzim,* "permanent or essential" *madd,* of which there are four additional sub-types. A further rule is that a long vowel before a certain rare class of modified doubled consonants is lengthened, such as in the word *ḍāllīn,* the last word of Sūrat al-Fātiḥa (Q 1). In this case, the */ā/* of *ḍāllīn,* "those who have gone astray," with *lām*s doubled from an original form *ḍālilīn,* "astray," is pronounced drawn out with five "original" or fundamental *(aṣlī)* weights of measure *(ḥarakāt): ḍa*^{1}*-a*^{2}*-a*^{3}*-a*^{4}*-a*^{5}*-ll-i*^{1}*-i*^{2}*-n*.

Another rule relating to vowel durations is pausal abbreviations occurring on words at the end of sectioned phrasings. These may occur at the marked ends of *āya*s but this is not always the case, as in *āya*s which are too long to recite in one breath. In pausal form, the final element is left unvoiced *(sākin)* whether it be a case of *tanwīn* (a nasalized ending on indefinite nouns, as in *Muḥammadan* above, which would be pronounced as *Muḥammada*), a declensional or conjugational vowel (*i'rāb,* which could also include final short vowels on pronoun suffixes), or a *tā' marbūṭa,* pronounced */t/* (as in *al-malā'ikatu,* which would be pronounced as *al-malā'ika*). Because pausal abbreviation may leave out grammatical cues to meaning, it is advised that after such abbreviation, the reciter resume by repeating the final word of the previous phrase (which, now being the first and not the last word to be voiced, would not be in pausal form). There are also rules that pertain to giving a dropped terminal vowel *(ḥaraka)* some indication by a subtle prolongation or by making the shape of the vowel with the lips but without voicing it.

A final class of rules in the system of *tajwīd* pertains to stops and starts in sectioning or phrasing *(al-waqf wa-l-ibtidā'),* which may only occur at the end of a complete word. Stops are classified according to the reasons for the stop: "forced" *(iḍṭirārī),* which is an unplanned stop, like coughing; "informative" *(ikhtibārī),* which would be a stop made in order to teach or to explain meaning; and "voluntary" *(ikhtiyārī),* such as taking a breath. Stops are classified in terms of their desirability and appropriateness with respect to the meaning at that particular place within the text: there are "perfect" stops *(al-waqf al-tāmm),* such as at the end of an *āya* when there is no connection in meaning to the one that follows; "sufficient" stops *(al-waqf al-kāfī),* which occur at the end of a verse in which the sense of meaning continues in the following verse; "good" stops *(al-waqf al-ḥasan),* which occur in the middle of an *āya* when a phrase is complete but when there is still a meaningful relation to the remainder of the verse; and, there are also bad or "ugly" stops *(al-waqf al-qabīḥ)*. An example of the last is Q 4:43, which is the place of an impermissible stop. This is because reciting only the beginning part of the *āya,* "Do not approach prayer," and stopping there without completing the phrase with

what follows ("when your mind is not clear"), would render the meaning nonsensical.

At certain points in the text of the Qur'ān, a range of permissible and impermissible stops are marked, according to the classification of their desirability. There are seven most general forms of stop, such as the *lāzim* stop (marked *mīm*), where a stop must be made or else the meaning would be distorted. There are also places, as in the example of Q 4:43 above, at which it is impermissible to stop (marked *lā,* meaning "no," i.e. no stop). In between these classifications there are at least five levels of preference, such as "permissible to continue, but stopping is better" (*jīm,* symbol for *jā'iz*), or "permissible to stop but it would be better to continue" (*ṣād,* symbol for *murakhkhaṣ*). Other passages are designated as "embracing," in which there is one meaning if a stop is made but another if reading is continuous and both are allowed. In some manuscripts of the Qur'ān, these are designated by the letters *mīm* and *ʿayn,* which stand for the term *muʿāniqa,* meaning that the phrase or the word may be understood to "embrace" either the passage that precedes or follows it. They are sometimes also marked by three dots. One example is in Q 2:2. In addition, some scholars have also added approximately eight more marks in common use, such as one that indicates that some authorities have said that there is to be a stop while others have not *(q-l-ā),* marks for weak preferences, and places in which it is permitted to pause but it is not permitted to take a breath (marked *w-q-f-h*). Finally, there is a further stop, called "waiting" *(intiẓārī),* which covers a switch between one of the seven standard *qirā'āt*.

Norms of qur'ānic recitation and preservation

Differing styles of recitation are usually identified by their relative rapidity, although terms for this vary across the Muslim-majority and Muslim-minority worlds. Usually, *ḥadr* is the expression for quick recitation, performed from memory or for the purpose of reading large portions of the text aloud; recitation of the Qur'ān in canonical worship *(ṣalāt)* tends to be fairly fast as well. *Tartīl (murattal)* is at a slower pace, used for study and practice (sometimes called *tadarrus*). In many places, the term *tajwīd* has a non-technical meaning of cantillated recitation. The term *mujawwad* refers to a slow recitation that deploys heightened technical artistry and melodic modulation.

Reciting the Qur'ān is dictated by norms of practice known as *adab*. These include respectful silence when listening, sitting facing the *qibla* (q.v.; the direction of prayer) if possible, observing norms of ritual purity, repeating verses (q.v.), and reciting the standard opening and closing formulae. These latter formula are, first, the opening statement, the *taʿawwudh: aʿūdhu bi-llāhi mina l-shayṭāni l-rajīm,* "I take refuge in God from the accursed Satan (see DEVIL)," which is always followed by the *basmala* (q.v.): *bi-smi llāhi l-raḥmāni l-raḥīm,* "In the name of God, the merciful, the compassionate," no matter where in the Qur'ān the reader begins (the *basmala* also opens every sūra except the ninth, Sūrat al-Tawba, "Repentance," with the contested case of its placement as the first *āya* of Sūrat al-Fātiḥa). Second, the reciter always closes a reading with the formula: *ṣadaqa allāhu l-ʿaẓīm,* "Thus almighty God has spoken truly." If the reciter is interrupted by a greeting *(salām)* when reading, he or she is to stop to return the greeting; he or she is also to stop when hearing the *adhān,* the call to prayer. While in some parts of the Muslim world there is concern over men listening to the voices of women reciting the Qur'ān, in other places, such as Indonesia, women reciters are very popular.

Reciters and listeners may observe *sajdat*

al-tilāwa, which is a prostration that, on the basis of a ḥadīth, is to be performed at fourteen or fifteen *āyāt* in the Qur'ān. These are *āyāt* that refer to created beings who bow before their creator (Q 7:206; 13:15; 16:49-50; 17:107; 19:58; 22:18; [22:27]; 25:60; 27:25-6; 32:15; 38:24-5; 41:38; 53:62; 84:20-1; 96:19). *Sajda* is performed by forming *niyya,* "intention," for the act, saying the *takbīr (allāhu akbar)* while facing the *qibla,* touching the ground while saying a formula to glorify God and then rising with another statement of the *takbīr*. After this, the reading continues.

Memorization of the Qur'ān, which is known as its "preservation" *(taḥfīẓ),* was encouraged from the earliest time of Islam. The wives of the Prophet (q.v.), for example, were among those known especially for the memorization and preservation of the Qur'ān. There are many ḥadīth reports that encourage Muslims to read and know the Qur'ān by heart. According to traditions of Islamic law, memorization is a recommended act of piety (see LAWFUL AND UNLAWFUL); it is classified as *farḍ kifāya,* which means an obligation always to be observed at least by some members of a community on behalf of the whole community. This renders Qur'ān memorizers *(ḥuffāẓ)* a special class of Qur'ān readers and they command a special respect within their communities. Traditionally, formal education begins with the memorization of the Qur'ān at an early age and then continues with other subjects; this practice is still observed in many Islamic societies. Morocco, for example, is especially well known for traditions of Qur'ān memorization. For educated Muslims who do not memorize the Qur'ān, it is still is a basic goal to have memorized the final, thirtieth part *(juz')* of the Qur'ān, as well as to have read the entire Qur'ān through with a teacher; the latter, known as *khatm al-Qur'ān,* is marked by life-cycle celebrations in some parts of the Muslim world.

There are life-long challenges that come with the responsibility of memorizing the Qur'ān. First, there is the requirement not to forget any part of the Qur'ān already memorized, which represents an ongoing task due to the uniquely nonlinear structure and style of Qur'ān (see FORM AND STRUCTURE OF THE QUR'ĀN; LANGUAGE AND STYLE OF THE QUR'ĀN), continually demanding rehearsal. Memorizers often cite a ḥadīth of several variants on this challenge, to the effect that the Prophet said that memorizing the Qur'ān is more difficult than trying to tie up a camel (q.v.) that is always trying to run away. Memorizers who have committed the entire Qur'ān to memory often repeat one-seventh of the Qur'ān each day of the week for continual rehearsal. In addition, handbooks circulate among students committing the text to memory for the first time, allowing them to study particularly difficult aspects of the Qur'ān, such as certain verses that closely resemble one another.

Memorizers and readers of the Qur'ān are said to be held to higher moral standards in this world and the next by virtue of "holding" the entire Qur'ān in memory. More specifically, literature on the norms of earning a livelihood by teaching or reading the recited Qur'ān addresses the problem of receiving remuneration for this practice. Ḥadīth reports on this point cited by the pious in the formative period underscore that the Qur'ān is to be cherished for its own sake and should not be deployed for worldly gain. As "preservers," those who carry the Qur'ān have a responsibility to contribute to the overall ethical order of society. Moral responsibility to the community is often illustrated in the classical literature through representations of the memorizer's or reciter's unending com-

mitment, portrayed as a practice continuing both night and day: Qur'ān reading by night and constructive moral action by day. For example, there are many variants of the ḥadīth which states, "The best of believers are those who arise at night," found in the collections of Abū Dāwūd and others. In addition to maintaining a direct relationship with the Qur'ān, accomplished readers have special responsibilities to the community that involve social interaction, as indicated in the well-known statement repeated by many transmitters, including al-Fuḍayl b. ʿIyāḍ (d. 187/803), a figure famous for his piety, stating, "A man bearing the Qur'ān is [in effect] bearing the standard of Islam," and thus should be scrupulous in behavior in every situation.

Practice, piety and the recited Qur'ān

Doctrine, worship and piety

The Qur'ān is the speech of God, according to Islamic tradition, and its recitation is thus the actual voicing of divine speech. In the early period, philosophical controversies arose regarding questions of temporality and agency in "following" divine speech in voice; these disputes related to foundational controversies over the issue of the "createdness of the Qur'ān" (q.v.) in time (see also PHILOSOPHY AND THE QUR'ĀN; THEOLOGY AND THE QUR'ĀN; INIMITABILITY). Similar questions have arisen as practical issues throughout the history of qur'ānic tradition, such as the problem of the reciter's technical artistry potentially being confused with the transcendent power of the Qur'ān. Al-Ghazālī's "rules" for recitation in the eighth book of the *Iḥyā' ʿulūm al-dīn* resolve such an apparent tension by positing both an "external" and an "internal" dimension to the act of voicing God's speech. In his scheme, the intents, consciousness, and sensibilities of the reciter are subordinated to the divine presence through purposive effort. The reciter is thus to strive to diminish the aspects of performance that are not pure amplifications of the manifestation of an idealized presence. Well-defined and specific techniques of presentation and performance may be applied in order to achieve this ideal.

Many such theoretical and practical issues relating to the recited Qur'ān are connected to the doctrine of *iʿjāz,* which is the idea of the "inimitable" nature of God's speech. This is linked to the ontology of the Arabic text as a "miraculous" revelation and to the speech of the Qur'ān as being a unique class of discourse (see MIRACLES; REVELATION AND INSPIRATION).

The practice of reciting the Qur'ān according to the rules of *tajwīd* is a foundational element of Islamic education, practice and piety. During the fasting (q.v.) month of Ramaḍān (q.v.), the entire Qur'ān is read over the course of the month in night prayers called *tarāwīḥ*. One of the standard divisions of the Qur'ān is its partition into thirty equal, consecutive parts, or *juz'* (pl. *ajzā'*); this sectioning facilitates complete recitation over the course of a month. In addition, during Ramaḍān or during the days of the pilgrimage (q.v.; *ḥajj*), pious Muslims may recite the entire Qur'ān in one night. Muslims read the Qur'ān frequently as an act of supererogatory piety, and recitation — especially at night — is performed by committed Muslims.

Reciting the Qur'ān is a required component of one of the fundamental acts of worship in Islam, *ṣalāt,* canonical prayer. Observant Muslims recite the opening sūra, Sūrat al-Fātiḥa, seventeen times because of its liturgical use as a component of *ṣalāt*. This chapter of the Qur'ān is also used in other contexts, such as blessings and the sealing of contractual agreements (see FĀTIḤA; CONTRACTS AND ALLIANCES;

BLESSING). During obligatory prayer, it is required to recite another, unspecified part of the Qurʾān besides Sūrat al-Fātiḥa. When the prayer is conducted in private, usually this is one of the short Meccan sūras that are the thirtieth *juzʾ* of the Qurʾān; if the prayer is led by an imām (q.v.), this reading will be his choice. In addition, it is common in worship and other practices of Muslim piety to hear the well known Light Verse (Q 24:35; see LIGHT) or Throne Verse (Q 2:255; see THRONE OF GOD). The final *juzʾ* of the Qurʾān as well as these other passages are commonly memorized by Muslims. Sūrat al-Mulk ("Kingship," Q 67) and Sūrat al-Ḥujurāt ("Private Apartments," Q 49) are also commonly memorized. Other parts of the Qurʾān that are particularly well known and read on certain occasions include Sūrat Yā Sīn (Q 36), read for the deceased or dying (see DEATH AND THE DEAD; FESTIVALS AND COMMEMORATIVE DAYS) in a sometimes controversial practice, and Sūrat Yūsuf ("Joseph," Q 12; see JOSEPH) and Sūrat al-Kahf ("The Cave," Q 18; see MEN OF THE CAVE) are also often read communally.

The recitation of the Qurʾān is a prototype for the practice of *dhikr,* a qurʾānic word for "reminder" and a practice associated with Ṣūfī piety. The Qurʾān is the basis of the formulae used for such recitational piety, as well as the recitation of the ninety-nine names of God (*al-asmāʾ al-ḥusnā;* see GOD AND HIS ATTRIBUTES). These "beautiful" names are referred to in Q 17:110, part of which reads: "Say, 'Call on Allāh or call on al-Raḥmān. By whatever name you call [God], his are the most beautiful names *(al-asmāʾ al-ḥusnā)*." The Qurʾān provides a brief listing of some of the names in Q 59:22-4. Not all of the names are given directly in the Qurʾān, however.

Throughout Islamic tradition, the appreciation of the vocal artistry of trained reciters has been part of Muslim religious and social life. Much of the theorization and practice related to the aesthetics of Qurʾān recitation is connected to the key idea of "spiritual audition." This term, *samāʿ,* is usually associated with Ṣūfī traditions but in the case of the recited Qurʾān multiple styles of classical piety overlap. In Islamic tradition normative questions relating to musical practice and its application and acceptability are tied to the issue of *samāʿ*. These legal debates usually center on the intents and contexts of practice. For Qurʾān recitation, the most authoritative sources on what Kristina Nelson has termed the "*samāʿ* polemic" highlight a tension between the cultivation of experiential perceptions related to "listening" *(samāʿ)* on the one hand and the ideal of the absolute separation of transcendent revelation and human components on the other.

Aesthetics and artistry

According to Islamic tradition, the "melodic" aspects of Qurʾān recitation may not be fixed in any one performance or in an overall system. This is in order that God's speech in the form of the revealed Qurʾān will not be associated with human technical artistry. It is not known what melodic structures were used in the recitation of the Qurʾān in the earliest period. It is documented, however, that practices of Qurʾān recitation developed into something resembling the *mujawwad* style in the ʿAbbāsid period, when reciters began to deploy the emerging modal system of music (*maqām,* pl. *maqāmāt*). It is in this period that the issue of "recitation with melody" *(qirāʾa bi-l-alḥān)* appears in the literature, and the melodic structures deployed in this time were apparently those of Arab art music. Today, the highly proficient style of recitation known as

mujawwad also uses melodic structures found in Arab art music.

Maqām (pl. *maqāmāt*) denotes a musical "mode," both scalar pitch class and melody type. This system of "qurʾānic" *maqāmāt* that became globally widespread in the latter part of the twentieth century had developed over centuries from multiple and converging branches of influence. It is difficult to prove that any of these branches is a continuous line extending from the early Muslim community since little historical data on the musical practices of the Arabs before the third/ninth century are available. The important source, *Kitāb al-Aghānī*, "Book of songs," by Abū l-Faraj al-Iṣfahānī (d. 356/967), dates to the fourth/tenth century and it is in this period that *maqām* developed as a theory and a practice of art music by way of a synthesis of Arabic and Persian forms. Also in this period, intellectuals analyzed the system, such as in the writings of the great philosophers al-Fārābī (d. 338/949), Ibn Sīnā (d. 428/1037) and especially al-Kindī (d. ca. 252/866), whose treatise on music was foundational. The system also received more esoteric formulations within cosmological frameworks (such as in the thought of the esoteric group, the "Brethren of Purity," the Ikhwān al-Ṣafāʾ), developing concepts like the Greek idea of scale, analyzed along with rhythmic cycles, with reference to mode being made in terms of the fretting board of the lute instrument, the *ʿūd*.

Diversity and flexibility characterizes the modal system both diachronically and synchronically. The treatises of the renowned musician and writer on the history of music, ʿAbd al-Muʾmin Ṣafī l-Dīn al-Urmawī (d. 693/1294) formulated an analytical framework for the system that was followed for centuries, deploying musical characteristics in the identification of mode, such as initial and final pitch as well as, in some cases, melody types. Not only are modes applied flexibly in practice, but also the overall musical system itself is historically and geographically fluid and thus difficult to formalize or classify. In the early nineteenth century, a system for analyzing scale (based on quarter-tones) became widespread in the Middle East. An attempt was also made to codify all of the *maqāmāt* used in Arab countries at the historic Cairo Congress on Arab Music in 1932. This effort, however, along with subsequent ones, faced the challenge of systematizing the diversity of the entire musical system as well as the problems of notation and standardization.

Contemporary performers of the recited Qurʾān in the style called *mujawwad* have been increasingly popular in recent decades due to broadcast and recording technologies and other trends (see MEDIA AND THE QURʾĀN). The development of the first recorded version of the recited Qurʾān in Egypt is documented by Labīb al-Saʿīd. In *The art of reciting the Qurʾān*, Kristina Nelson examines the practices of Egyptian reciters, the same figures who have become influential the world over because of the dissemination of their recordings. The singing of the great women vocalists from the Arab world, such as Fayrūz, Warda, and, above all, Umm Kulthūm (as well as men like ʿAbd al-Wahhāb) have influenced the improvisational styles of these performers. Across the Muslim-majority and Muslim-minority worlds of Islam in the later twentieth century, the recitation recordings of a few Egyptian reciters (many of whom were trained in classical Arabic music: e.g. ʿAbd al-Bāsiṭ ʿAbd al-Ṣamad) were the most influential models for aspiring reciters.

Qurʾānic revitalization and contemporary daʿwa

Since the late twentieth century, changes in technology have combined with the so-called global "Islamic awakening," to

encourage a widespread revitalization of the practice of the popular recitation of the Qur'ān. Evidence of this is the worldwide women's mosque movement that focuses on reciting the Qur'ān and improving recitation technique. Transnational connections support curricula for teaching recitation. For example, in the 1960s and 1970s, the Egyptian government, with official Indonesian support, brought many of the most renowned Egyptian reciters to southeast Asia, a region of the world with as many Muslims as the population of the entire Arabic-speaking world, in order to teach and to perform.

Da'wa is a qur'ānic term interpreted and applied in different ways in different global contexts (see INVITATION). Most basically, the term means a "call" to deepen one's own or encourage others' Islamic piety. As such, it has been a crucial concept in the historical propagation of the Islamic religious tradition. *Da'wa* is key to understanding how the Qur'ān functions as a basis of contemporary Islamic revitalization movements. Qur'ānic *da'wa* promotes recitational aesthetics and schooling as the basis for programs among Muslims of diverse orientations.

In the most populous Muslim-majority nation in the world, Indonesia, the recitation of the Qur'ān was the focus of an energetic movement in Islamic revitalization in the late twentieth century. Southeast Asia is well known for world-class recitation, evidenced in the popularity of the woman reciter from Jakarta, Hajja Maria Ulfah. Southeast Asia also has traditionally been known for the production of exceedingly clear and precise methods and materials. In Indonesia in the 1990s, mainstream *da'wa* was viewed as an "invitation" to voluntary Islamic piety issued to Muslims, and much *da'wa* highlighted engagement with the recited Qur'ān. Examples of the energy of this movement are the massive "Baitul Qur'an" exhibit near Jakarta, as well as the promotion of a wide array of qur'ānic arts like recitation and calligraphy (q.v.).

As the Qur'ān increasingly became the focus of programs to promote Islamic engagement, learning to read the Qur'ān became the basis of a widespread revitalization movement in Indonesia, and new pedagogies blended with traditional methods of teaching and learning recitation. Popular activities ranged from basic study of *tajwīd* to performance in the highly proficient *mujawwad* style of recitation. The phenomenon of qur'ānic learning and engagement was not limited to young people; it also included mature Muslims who labeled themselves as "learners." As part of a resurgent movement in the "fundamentals" of religious practice in Indonesia during the 1990s, religiously oriented individuals actively adopted and promoted projects such as local and national Qur'ān recitation competitions (see Fig. 11), a widespread movement in "Qur'ān kindergartens," revitalized efforts to memorize the Qur'ān, and lively women's mosque groups trained in the development of reading skills. At this time, virtuoso readings in the *mujawwad* style were not considered the most effective means of inducing heightened experiential states. Rather, the emphasis was on the listeners' own efforts to emulate actively such a performance. Expert performances from the Arab world and by Indonesians doubled as pedagogy for ordinary practitioners, a pedagogy that was disseminated and mediated by competition frameworks and other programs and interests. Under these educationally oriented influences, a great variety of material — including the recordings of great Egyptian reciters — became educational curriculum in Indonesia; reciters at all levels were instructed to listen avidly to these performances in order to improve

their *mujawwad* Qurʾān recitation and especially to master the modal system.

The Indonesian term *lagu,* also denoting "song," is used for musical qualities of recitation, doubly conveying the ideas of scalar pitch class and melody type. Contemporary Indonesian and Malaysian sources on recitation group the Arab-derived *maqāmāt (lagu)* used in Qurʾān recitation into two principal types: *misri* and *makawi*. *Misri lagu* are the *maqāmāt* that were introduced in the 1960s and after, denoting modes that were known and used in Egypt (hence *misri* = Ar. *miṣrī*). *Makawi lagu* are understood to comprise an older system from the Middle East, reportedly deriving from the recitational practices of Indonesian pilgrims and students who traveled to the Arabian peninsula (and Mecca, hence the term *makawi*) earlier in the century and before. There are also indigenous southeast Asian *lagu daerah,* "local *lagu*." In Indonesia, the system of *mujawwad* style Qurʾān recitation that developed in the 1990s was based on styles from Egypt. Competition *lagu* were based on seven *maqāmāt* prototypes: *bayati, rast, hijaz, soba, sika, jiharka,* and *nahawand*. Performances and pedagogies increasingly accepted this style as normative for all readers, especially under the influence of competitional readings and regimens.

Apart from the influence of the competition system, the adoption of Arabic, and more specifically Egyptian *(misri)* modes, were supported in Indonesia by the perception that they are more normatively qurʾānic. New kinds of theorization accompanied the reception of the Arabic *lagu,* which became increasingly an aspect of the recited Qurʾān in Indonesia in the 1990s. Partially because of the popularity of contests and in part also due to the acceptance of the Egyptian-inspired model as the ideal, competence in these seven modes has become the goal of intermediate and advanced-level recitational training in modern Indonesia. A competition system had a great deal to do with the standardization and popularization of these structures.

Recitation contests in Indonesia were interpreted as a form of *daʿwa*. The increasing popularity of Qurʾān reciting and recitation contests and, since 1997, their promotion by the *Lembaga Pengembangan Tilawatil Quran,* the Institute for the Development of the Recitation of the Qurʾān (LPTQ), and other organizations, contributed to an explosion of interest and the creation of new media and techniques for the study and appreciation of the recited Qurʾān. Possible controversy over the voicing of the speech of God as a competition was overcome in Indonesia by recognizing the positive effects of the events for Islamic youth. Recitation tournaments, especially the *Musabaqah tilawatil Qurʾān,* the National Contest for the Recitation of the Qurʾān (MTQ), have come to be viewed by many in Indonesia as an avenue for *syiʿar Islam,* or the propagation and deepening of Islamic practice through an appreciation of qurʾānic knowledge and ability, as well as an avenue for the expression of distinctive aspects of Indonesian Islamic piety within the context of the global Muslim community. Competitions as *syiʿar Islam* were understood to be simultaneously a form of education and an invitation to Muslim practice.

Conclusion

The recitation of the Qurʾān is foundational to the history of Islamic worship and piety. As such, it has served as the paradigm for the category of "scripture" in the academic study of religion as developed by comparativists and Islamicists such as Mahmoud Ayoub, Frederick Denny, Michael Sells, Wilfred Cantwell Smith, Marilyn Waldman, and especially William

Graham (see SCRIPTURE AND THE QUR'ĀN; POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QUR'ĀN). These scholars have recognized not only the aural/oral nature of religious texts based on the unique qur'ānic case, but they have also highlighted the communal lifeworlds of the recited Qur'ān. This theme of the inherently social nature of the recitation of the Qur'ān echoes throughout the classical literature, even in interiorized systems such as al-Ghazālī's. Al-Bukhārī's *Ṣaḥīḥ* and other major collections of ḥadīth, for example, relate the tradition in which the Prophet reportedly said, "The best among you are those who learn the Qur'ān and teach it to others" (on the authority of ʿUthmān b. ʿAffān). In the contemporary world, teaching, learning, and practicing the Qur'ān are voluntary open-ended projects, drawing inspiration from the models of others' piety. Al-Bukhārī relates, on the authority of Abū Hurayra, that the Prophet said, "There is no envy (q.v.) except of two kinds: First, a person whom God has taught the Qur'ān and who recites it during the hours of the night and during the hours of the day and his neighbor who listens to him and says, 'I wish I had been given what has been given to so-and-so, so that I might do what he does'; and, secondly, a person to whom God has given wealth (q.v.) and he spends it on what is just and right whereupon another person may say, 'I wish I had been given what so-and-so has been given for then I would do as he does'" (Bukhārī, *Ṣaḥīḥ,* viii, 113, nos. 4389-90). In reading the Qur'ān aloud, the Qur'ān states that Muslims may affect others' religiosity and thereby build the religious community (see COMMUNITY AND SOCIETY IN THE QUR'ĀN): "The believers are only they whose hearts tremble when God is mentioned; and, when his signs [or verses of the Qur'ān] are recited to them, they multiply in faith (q.v.) and put their trust (see TRUST AND PATIENCE) in their lord" (Q 8:2).

Reciters of the Qur'ān

Those entrusted with the oral recitation of qur'ānic passages, or the entire text. The term "reciter" (Ar. sing. *qāri'* and *muqri'*) in its basic, general signification refers to one who reads or recites. With reference to reciters of the Qur'ān, the plural *qurrā'* is much more common than *muqri'ūn*. In a broad sense, the term *qurrā'* is used in various sources to refer both to professional reciters, namely those who accepted payment for their recitation and were often employed by the state, and to pious, non-professional ones who did not seek to make a living from their recitation. Other names less frequently used for Qur'ān reciters are *ḥamalat al-Qur'ān* (literally "bearers of the Qur'ān") and *ahl al-Qur'ān* ("people of the Qur'ān"). *Tilāwa* is a synonym of *qirā'a* in the sense of "recitation" but the active participle *tālī* is seldom seen in place of *qāri'*. *Ḥāfiẓ* commonly denotes one who has memorized the Qur'ān (it is also used to denote one who has memorized unusual quantities of ḥadīth; hence, for example, al-Dhahabī's *Ṭabaqāt al-ḥuffāẓ* is a biographical dictionary of traditionists, not Qur'ān reciters; see ḤADĪTH AND THE QUR'ĀN).

Politics

There was a distinctive party called *qurrā'* in earliest Islamic Iraqi politics (see IRAQ), who took part on all sides in the first two civil wars (see POLITICS AND THE QUR'ĀN). In particular, a significant number of the *qurrā'* broke away from ʿAlī's army (see ʿALĪ B. ABĪ ṬĀLIB) to join the Khawārij (see KHĀRIJĪS) in 37/657 (see Sayed, *Die Revolte*). The obvious — and widespread — interpretation is that they were the ultra-pious party, marked by their devotional recitation of the Qur'ān (q.v.). Norman Calder, however, has suggested alternatively that *qāri'* originally referred to temporary or seasonal troops, serving for a *qar'* or *qur'* (period). M.A. Shaban's (*Islamic history,* 50-1) identification of *qurrā'* as people of villages *(qurā)* is fanciful.

Early Muslim rulers were highly interested in the Qur'ān. Some sources ascribe the earliest official appointment of Qur'ān reciters to the second caliph (q.v.), ʿUmar b. al-Khaṭṭāb, who, in 14/635-6, appointed two reciters, one each to lead men and women in prayer (q.v.; Ṭabarī, *Ta'rīkh,* i, 2749; Ibn Saʿd, *Ṭabaqāt,* iii, 202). Al-Ḥajjāj, governor of Iraq (75-95/694-714), is credited in the Sunnī tradition with introducing vowel signs into the written text of the Qur'ān (see ORTHOGRAPHY; MANUSCRIPTS OF THE QUR'ĀN; ARABIC SCRIPT; ARABIC LANGUAGE); by some revisionist historians, even with formally fixing the qur'ānic canon (see Mingana, Transmission; see COLLECTION OF THE QUR'ĀN; CODICES OF THE QUR'ĀN). Public recitation ideally entailed simultaneous exegesis (Arabic *tafsīr* or *ta'wīl;* see Versteegh, *Grammar and exegesis,* 185; see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL). Early judges *(qāḍīs)* were often responsible for preaching *(qaṣaṣ)* and public recitation of the Qur'ān, as well as deciding lawsuits and other matters (see LAW AND THE QUR'ĀN; see, for example, a sermon by the Baṣran *qāḍī* Ṣāliḥ al-Murrī [d. 172/788-9?], which includes qur'ānic recitation, prayers and weeping by preacher and audience alike; Abū Nuʿaym, *Ḥilya,* vii, 165-7). One of the complaints against the caliph ʿUthmān in the Khārijī Ibn Ibāḍ's letter to the caliph ʿAbd al-Malik (r. 65-86/685-705) is that he prevented *qaṣaṣ* in the mosques (*an yuqaṣṣa fīhā bi-kitāb Allāh;* see MOSQUE). The *qurrā'* of Marwānid times were subject alternately to repression and bribery. Al-Ḥasan al-Baṣrī (d. 110/728), for example, complained of *qurrā'* standing at the governor's gate (Abū Nuʿaym, *Ḥilya,* ii, 151), while Ḥammād b.

Salama (d. 167/783-4) warned against going to the governor *(amīr)* even if he should ask for so little as to recite *qul huwa llāhu aḥad* (Q 112; ibid., vi, 251; a similar report is attributed to Sufyān al-Thawrī [d. 161/778?], cf. Abū Nu'aym, *Ḥilya,* vi, 387).

Devotional recitation

From an early period, excellence in qur'ānic recitation seems to have been regarded as conferring a higher religious and social, even political, status on the individual. A well known prophetic ḥadīth states, "The best of them at reciting the book (q.v.) of God will lead the people" (see KINGS AND RULERS). This ḥadīth is frequently cited in the literature on the excellences of the Companions (see COMPANIONS OF THE PROPHET) and invoked in the debates between the Sunnīs and the Shī'īs (see SHĪ'ISM AND THE QUR'ĀN; SHĪ'A) to affirm the greater right of Abū Bakr or 'Alī, respectively, to assume the caliphate on account of each candidate's superior proficiency in qur'ānic recitation. This ḥadīth is cited in various other contexts as well, particularly to underscore the equality of Muslims regardless of social and ethnic background, and to recognize differences only in religious piety (Afsaruddin, Excellences, 18).

Fasting (q.v.) by day and staying awake by night (see VIGILS; DAY AND NIGHT) seem to have been the most usual components of the devotions of Muslim ascetics (*zuhhād, nussāk;* see ASCETICISM) in the second/eighth century. Ritual prayer was commonly the main occupation of night vigils, but it might be supplemented by qur'ānic recitation or integrated with it. We are told, for example, that the blind Baṣran jurisprudent and traditionist Qatāda (d. ca. 115/735) normally recited the whole Qur'ān weekly, over three days during the first two-thirds of Ramaḍān (q.v.), and daily during the last ten days (Abū Nu'aym, *Ḥilya,* ii, 338-9). The Kūfan jurisprudent al-Ḥasan b. Ṣāliḥ b. Ḥayy (d. 199/814-5), his brother 'Alī (d. 151/768-9?) and their mother used to recite the Qur'ān nightly in shifts; then the two brothers in shifts after their mother died; finally al-Ḥasan alone after his brother died ('Ijlī, *Tārīkh,* 114, 347). Sometimes, however, an ascetic would meditate for a very long time on just one verse; as did, as is reported below, the Baṣran Sulaymān al-Taymī (d. 143/760-1; Abu Nu'aym, *Ḥilya,* iii, 29). Qur'ānic recitation was so strongly associated with renunciation of the world that *qāri'* itself became a regular term for "renunciant" or "ascetic."

Disquiet with renunciant practice is evident in the ḥadīth extolling the merits of contemplating the meaning of the verses as one recites them (e.g. Abū 'Ubayd, *Faḍā'il,* 156-8). Completion of qur'ānic recitation in an exceptionally short time, particularly to attract public acclaim or alms, was looked at askance (e.g. Nawawī, *Tibyān,* 50). Several of the six canonical collections of ḥadīth include a warning from the Prophet, "One who has recited the [entire] Qur'ān in less than three days has not comprehended [it]" (Abū Dāwūd, *Sunan, Shahr Ramaḍān,* 8; Tirmidhī, *Ṣaḥīḥ, al-Qirā'āt,* 11; Ibn Māja, *Sunan, Iqāmat al-ṣalāt,* 178). Public rituals to mark an individual's completion of recitation of the sacred text *(khatma)* were likewise controversial, although they were usual from as early as the second/eighth century (Ibn al-Jawzī, *Talbīs,* 176).

There is evidence that early recitation conventions did not observe full declensional endings as later became customary. Hortatory reports were circulated to exhort the faithful to recite the qur'ānic text with *i'rāb* (desinential inflection; see GRAMMAR AND THE QUR'ĀN). One such report quotes the Prophet as saying, "Whoever recites the Qur'ān without full inflection, the

attending angel records for him 'as revealed' with ten merits for each letter; whoever inflects only part of the Qur'ān, two angels are assigned to him who write down for him twenty merits; and whoever inflects the [entire] Qur'ān, four angels are assigned to him who record seventy merits for each letter" (see Qurṭubī, *Tadhkār,* 84-5; also Kahle, Qur'ān and ʿArabīya). The rise of schools of grammar by the second/eighth century, particularly at Kūfa and Baṣra, and the rapidly growing influence of the grammarians, who concerned themselves to a considerable extent with the correct reading of the qur'ānic text, played a key role in the final development of the *scriptio plena*. This and similar reports very likely also encode rivalry between the pious, non-professional *qurrā'* and the professional grammarians. These pious reciters were inclined to view the grammarians as excessively concerned with the mechanics of language and thus with primarily humanistic perspectives (see LANGUAGE AND STYLE OF THE QUR'ĀN; CREATEDNESS OF THE QUR'ĀN; INIMITABILITY), while the grammarians viewed the pious reciters as amateurs lacking in linguistic competence and thus in scholarly authority (see Afsaruddin, Excellences, 7-8; Versteegh, *Grammar and exegesis,* 178). Some of the *qurrā'* were regarded by the scholarly establishment as unreliable transmitters of ḥadīth; in classical biographical *(rijāl)* works they are likely to be praised for their personal piety but denounced for their dubious status as ḥadīth narrators (see Afsaruddin, Excellences, 21-2).

Al-Ghazālī (d. 505/1111) devoted the eighth book of *Iḥyā' ʿulūm al-dīn* to the etiquette of reciting the Qur'ān. Among other things, he proposes ten outward rules of proper recitation: for the reciter to be in a state of ritual purity (q.v.); to recite no more at one session than one can properly contemplate; to recite by recognized units such as sevenths *(aḥzāb);* to write the Qur'ān properly; to recite at a pace conducive to contemplation; to weep as one recites (see WEEPING); to prostrate oneself at the appropriate verses (as a Shāfiʿī, al-Ghazālī names fourteen; in printed Qur'āns, these verses are commonly indicated by lines in the text and the word *sajda* in the margin; see BOWING AND PROSTRATION; PRINTING OF THE QUR'ĀN; ORNAMENTATION AND ILLUMINATION); to preface one's recitation with certain formulas, e.g. *aʿūdhu bi-llāhi l-samīʿ,* etc., and to conclude it with others, e.g. *ṣadaqa llāhu taʿālā,* etc.; to recite aloud, unless one finds oneself taking excessive pride in it; and to recite in a comely voice. These ten are complemented by ten inward dispositions (see also Nelson, *Art of reciting,* ch. 4.; see RECITATION OF THE QUR'ĀN).

Famous reciters

Particular versions or "readings" *(qirā'āt)* of the qur'ānic text are sometimes associated with Companions, above all Ibn Masʿūd and Ubayy b. Ka'b, but more usually with regions (e.g. "the people of Medina [q.v.] recited thus") and, increasingly over time, with various experts of the second/eighth century (Nöldeke, *GQ,* 2-3 is basic; see also Brockett, Qur'ān readings; see READINGS OF THE QUR'ĀN). Ibn Mujāhid (d. 324/936) is famous for identifying the seven most respected readings (see Ibn Mujāhid, *Sabʿa*). He was involved in the trials of two famous reciters before Baghdādī *qāḍī*s for reciting unacceptable readings: Muḥammad b. al-Ḥasan b. Miqsam in 322/934 and Muḥammad b. Aḥmad b. Shannabūdh (alternatively Shanbūdh and Shanabūdh) in 323/935. Their offences, however, were not that they recited variants not included among Ibn Mujāhid's seven but that they recited variants based only on philological possibility (in the case of Ibn Miqsam), or only on traditions going back

to Companions but not endorsed by the caliph ʿUthmān (in the case of Ibn Shannabūdh; see Jeffery, *Materials;* Melchert, Ibn Mujāhid).

Partly through the influence of his disciples, Ibn Mujāhid's choice of the seven most acceptable readings seems to have commanded general assent from late in the fourth/tenth century, especially in Syria and points west. Three more readings were recognized at that time as the next most highly respected, especially in Iraq and the east (see Nöldeke, *GQ*, iii, 225). Finally, four more readings were identified as having unusually great historical interest without retaining their one-time liturgical use (see FORM AND STRUCTURE OF THE QUR'ĀN); that is, one could no longer recite them as part of a valid ritual prayer *(ṣalāt)*. Medieval scholarly interest in different sets of readings may be estimated from titles in Ḥājjī Khalīfa, *Kashf al-ẓunūn:* of 155 books having to do with an identifiable number of readings, seventy-four treat the seven, forty-four treat the ten, seven treat the eight, while the remaining twenty-nine treat other numbers of readings, of which just one is devoted to the whole fourteen.

The fourteen are listed here in order after al-Dimyāṭī, *Itḥāf fuḍalāʾ al-bashar,* but it is not hard to find other orderings. Italics indicate the most common designation for each:

(1) *Nāfiʿ* b. ʿAbd al-Raḥmān (d. ca. 169/785-6), Medinese;
(2) ʿAbdallāh *b. Kathīr* al-Dārī (d. 120/737-8), Meccan;
(3) *Abū ʿAmr* Zabbān *b. al-ʿAlāʾ* (d. ca. 154/770-1), Baṣran;
(4) ʿAbdallāh *b. ʿĀmir* (d. 118/736), Damascene;
(5) *ʿĀṣim* b. Abī l-Najūd Bahdala (d. ca. 127/744-5), Kūfan;
(6) *Ḥamza* b. Ḥabīb (d. ca. 156/772-3), Kūfan;
(7) ʿAlī b. Ḥamza *al-Kisāʾī* (d. ca. 189/804-5), Kūfan, lived in Baghdād;
(8) *Abū Jaʿfar* Yazīd b. al-Qaʿqāʿ al-Makhzūmī (d. ca. 130/747-8), Medinese;
(9) *Yaʿqūb* b. Isḥāq *al-Ḥaḍramī* (d. 205/820-1), Baṣran;
(10) *Khalaf* b. Hishām (d. 229/844), Baghdādī;
(11) Muḥammad b. ʿAbd al-Raḥmān *b. Muḥayṣin* (d. ca. 123/740-1), Meccan;
(12) *al-Ḥasan al-Baṣrī* (d. 110/728), Baṣran;
(13) Sulaymān b. Mihrān *al-Aʿmash* (d. ca. 148/765), Kūfan;
(14) Yaḥyā b. al-Mubārak *al-Yazīdī* (d. 202/817-8), Baṣran, lived in Baghdād.

All of these but numbers 3 and 4 were clients *(mawālī),* not ancestral Arabs (q.v.; see also CLIENTS AND CLIENTAGE). Only a few were major figures outside the field of qurʾānic recitation: al-Kisāʾī in grammar; al-Ḥasan al-Baṣrī in preaching, ḥadīth, law, and piety; al-Aʿmash in ḥadīth, law, and piety. Particular readings tended to prevail in particular regions. For example, in the late fourth/tenth century, it was reported that most Baṣrans preferred the reading of Abū ʿAmr but the imām (q.v.) of the chief mosque refused to recite any but that of Yaʿqūb (Ibn al-Jazarī, *Ghāya,* ii, 387), while the reading of Ibn ʿĀmir is said to have prevailed in Syria until the beginning of the sixth/twelfth century, thereafter the reading of Abū ʿAmr (ibid., i, 292). Manuscripts of the *Muwaṭṭaʾ* of Mālik (d. 179/795) normally quote the Qurʾān after the reading of Nāfiʿ, which has usually been favored in north Africa (see Dutton, *The origins,* ch. 4; also Cook, A koranic codex).

From the fifth/eleventh century the two most important transmitters (sing. *rāwī,* pl. *ruwāt*) from each of the first seven were identified, later from all of the first ten (the following list is based chiefly on Ibn

al-Jazarī, *Taḥbīr al-taysīr;* cf. as-Said, *Recited Koran,* 127-30):

(1) ʿĪsā b. Mīnā *Qālūn* (d. ca. 220/835), Medinese, and ʿUthmān (Saʿīd?) b. Saʿīd *Warsh* (d. 197/812-3), Egyptian;
(2) Muḥammad b. ʿAbd al-Raḥmān *Qunbul* (d. ca. 291/903-4), Meccan, and Aḥmad b. Muḥammad *al-Bazzī* (d. ca. 250/864-5), Meccan;
(3) *Abū ʿUmar* Ḥafṣ b. ʿUmar *al-Dūrī* (d. ca. 246/860-1), Baghdādī, and *Abū Shuʿayb* Ṣāliḥ b. Ziyād *al-Sūsī* (d. ca. 261/874), Mesopotamian;
(4) ʿAbdallāh b. Aḥmad *b. Dhakwān* (d. 242/857), Damascene, and *Hishām* b. ʿAmmār al-Sulamī (d. 245/859-60?), Damascene;
(5) *Abū Bakr* Shuʿbah (Sālim?) b. ʿAyyāsh (d. ca. 193/809), Kūfan, and *Ḥafṣ* b. Sulaymān, also called Ḥufayṣ (d. ca. 180/796-7), Kūfan;
(6) *Khalaf* (no. 10 among the chief reciters) and Abū ʿĪsā *Khallād* b. Khālid (Khulayd? ʿĪsā? d. 220/835), Kūfan;
(7) *Abū ʿUmar al-Dūrī* (as from no. 3) and *Abū l-Ḥarith* al-Layth b. Khālid (d. 240/854-5), Baghdādī;
(8) Abū l-Ḥārith ʿĪsā *b. al-Wardān* (d. ca. 160/776-7), Medinese, and Sulaymān b. Muslim *b. Ǧammāz* (d. after 170/786-7), Medinese;
(9) Muḥammad b. al-Mutawakkil *Ruways* (d. 238/852-3), Baṣran, and *Rawḥ* b. ʿAbd al-Muʾmin (d. ca. 235/849-50), Baṣran;
(10) Isḥāq b. Ibrāhīm *al-Warrāq* (d. 286/899-900), Baghdādī, and *Idrīs* b. ʿAbd al-Karīm al-Ḥaddād (d. ca. 292/905), Baghdādī.

In time, of course, specialists worked out the most important means of transmission (*ṭarīq,* pl. *ṭuruq*) from each of the *ruwāt*.

Modern scholars have often associated the seven most highly respected readings with the seven *aḥruf* in which, according to a prophetic ḥadīth report, the Qurʾān was originally revealed; most medieval scholars, however, denied any such association (see Melchert, Ibn Mujāhid, 19). Similarly, modern Muslims have often discerned a close connection between the different readings and dialectal differences (e.g. as-Said, *Recited Koran,* 84; see DIALECTS); this, however, also departs from the medieval tradition, which generally recognizes that the leading reciters themselves derived their readings by choosing *(ikhtiyār),* usually among transmitted variants. Commentaries on the readings justify them in terms of grammar and meaning, not transmission history — and only sometimes dialectal usage (e.g. Ibn Khālawayh, *Ḥujja,* and Makkī, *Kashf*). Medieval sources also sometimes use the term *ḥurūf* in connection with the transmission of textual variants; e.g. the Meccan traditionist Sufyān b. ʿUyayna (d. 198/814) is commended for unusual accuracy in transmitting the *ḥurūf* (Ibn al-Jazarī, *Ghāya,* i, 308). The distinctions and connections among *aḥruf, ḥurūf,* and *qirāʾa,* necessary for a sound understanding of the early history of qurʾānic recitational modes, await a thorough study.

It is difficult to name the most important reciters of later centuries since the main creative work of fixing the text had already been done. On the side of performance, there were doubtless reciters of outstanding originality and skill. Their work is mostly undocumented. For the long controversy over musical recitation, see Talbi (La qirāʾa) and Nelson *(Art of reciting)*. The latter gives examples of changes in style across the twentieth century, which are observable, at last, in recordings (see RECITATION OF THE QUR'ĀN).

There is a substantial literature on some further aspects of recitation. One example of the results of such attention over the centuries is visible in many copies of the

Qur'ān, where certain symbols indicate the editors' preferences in recitation; notably, *q-l-y* to indicate *al-waqf awlā* (better to stop but permissible to continue), *ṣ-l-y* to indicate *al-waṣl awlā* (better to continue but permissible to stop), *j* to indicate *jā'iz* (equally permissible to stop or go on), *lā* (to indicate that one must not stop), and three dots forming a pyramid to indicate parentheses, the words of which must go either with what follows or with what has preceded; e.g. at Q 2:2, where *fīhi* may be read with either the preceding *lā rayba* ("there is no doubt in it") or the following *hudan lil-muttaqīna* ("in it is guidance for the godfearing"). These preferences are closely related to a long tradition, but naturally the tradition includes many alternatives, as described in the literature of *al-waqf wa-l-ibtidā'* (e.g. al-Dānī, *al-Muktafā*). Tiny *alif, wāw* and *yā'* indicate the prolongation of a vowel sound; e.g. at Q 2:7, where the *alif maqṣūra* of the third *'alā* is prolonged compared with the *alif*s of the first two. Tiny *mīm* indicates that an */n/* sound (usually of the *tanwīn*) is to be pronounced as */m/* before a */b/;* e.g. at Q 2:18, where *ṣummun* becomes *ṣummum*. But some subtleties of correct recitation have escaped representation in writing; e.g. *imāla,* the pronunciation of */ā/*as though it were */ay/,* and the peculiar shaking *(qalqala)* of some consonants *(q, d, ṭ, b, j)* immediately before another consonant.

Technique of Qur'ān transmission

Muslim children have normally learnt the Qur'ān from around seven years of age but naturally there is much variation; for example, Khalaf, no. 10 on the list of reciters, memorized the Qur'ān at ten (Ibn al-Jazarī, *Ghāya,* i, 273), while the biographer Ibn al-Jazarī (d. 833/1429) memorized the Qur'ān at thirteen (ibid., ii, 247). Learning additional readings would of course come later. *Samā'* describes the student's listening to the teacher's dictation, while *qirā'a* and *'arḍ* describe the opposite procedure, of the student's reciting for the teacher, subject to correction as necessary. Teaching by *samā'* might involve very large groups, *qirā'a* normally no more than three students at a time. Traditionists who dictated ḥadīth for payment were generally scorned in the early centuries, but payment to teachers of the Qur'ān, although controversial, seems to have been better accepted, as in literary studies generally.

Transmission of the Qur'ān has usually depended on a combination of writing and audition. Writing was not necessary, hence the fairly large number of blind Qur'ān reciters (perhaps 10% in the Middle Ages — there had to be far fewer deaf qur'ānic reciters, such as Qālūn, the transmitter from Nāfi', who corrected students on the basis of lip-reading). Differences among the accepted readings, however, often turn on the interpretation of the consonantal outline *(rasm);* for example, whether diacritics go above or below the line, so making a verb masculine or feminine. Therefore, transmission by writing must have been crucial to transmission of variant readings and, indeed, their very generation in the first place. Ibn Mujāhid (d. 324/936) called for reciters to master Arabic grammar as an aid to remembering case endings, although he observed that Ibn Muḥayṣin (no. 11 on the list of reciters) went too far in allowing Arabic grammar to dictate his reading, instead of restricting his choice to transmitted variants, hence his loss of popularity in Mecca to Ibn Kathīr (d. 120/738; Ibn Mujāhid, *Sab'a,* 45-6; Ibn al-Jazarī, *Ghāya,* i, 167). Ḥadīth recommends reading with the written *muṣḥaf* (q.v.) open before one, even if one has memorized the text.

The mosque was originally the main locus of transmission for all the Islamic sciences (see TRADITIONAL DISCIPLINES OF

QUR'ĀNIC STUDY). From the fifth/eleventh century, the *madrasa* (pl. *madāris*) became the premier institution of Islamic higher education. The chief teacher at any particular *madrasa* was normally the specialist in Islamic law, but qur'ānic recitation was often taught at the *madrasa* as an ancillary science. The Baghdādī Niẓāmiyya *madrasa,* for example, included a position for a *muqri'* (Ibn al-Jawzī, *Muntazam,* s.a. 485). In the Mamlūk period, there also appeared an institution dedicated entirely to teaching the Qur'ān *(dār al-Qur'ān)*. Despite that, the majority of Qur'ān teachers of whom we have any information continued to be associated with ordinary mosques.

Today, mosques continue to offer training in reciting the Qur'ān. Governments, however, are much more involved in religious instruction than ever before and not only provide qur'ānic instruction in state institutions of learning but often appoint, supervise, pay, and dismiss mosque personnel (see TEACHING AND PREACHING THE QUR'ĀN). It is nowadays quite common for Islamic countries to host international competitions in recitation of the Qur'ān. Regional mosques and religious organizations often organize similar events on a smaller, local scale.

Qur'ānic recitation is now heard by radio and television broadcasting, also by means of tape and digital recordings (see MEDIA AND THE QUR'ĀN). Gifted reciters may achieve considerable popular followings. Two of the best known reciters in recent times are Maḥmūd al-Ḥuṣrī and ʿAbd al-Bāsiṭ ʿAbd al-Ṣamad, both from Egypt, whose taped recitations remain widely available in the Islamic world even after their deaths. The different readings continue to be cultivated by specialists. Recordings of all but Ḥafṣ *ʿan* ʿĀṣim are difficult to find, and printed versions almost impossible (except for that of Nāfiʿ in the Maghrib). There are, however, signs that alternative readings will become ever more easily available.

Modern research

Gotthelf Bergsträsser and Otto Pretzl edited a large proportion of the most useful medieval scholarship on the readings of the Qur'ān. Nelson *(Art of reciting),* Graham *(Beyond),* Denny (The *adab*), and others have laid new stress on the Qur'ān as liturgy, principally experienced by aural recitation rather than silent reading (see ORALITY; ORALITY AND WRITING IN ARABIA). A number of studies have appeared concerning the readings and recitation practice of particular regions, of which Shalabī *(al-Qirā'āt)* is an outstanding example. There is still much work to do on the origins of the variant readings. See Puin (Observations) for exciting new manuscript evidence. The authors of this article see special promise in the investigation of the social setting of recitation.

Reflection and Deliberation

Thinking about, and deciding a course of action based upon perceptions or observed events. To convey this concept, the Qurʾān most frequently employs the triliteral Arabic root *f-k-r*. Second and fifth forms of the root *f-k-r* are attested eighteen times in the Qurʾān. In contrast to certain conceptions in later mystic circles (see ṢŪFISM AND THE QURʾĀN), the Qurʾān itself does not consider the notion of reflection *(tafakkur)* as inferior to remembrance (q.v.) of God *(dhikr)*. But unlike *dhikr,* the Qurʾān never uses *tafakkur* with regard to God.

Rather, the Qurʾān mentions the creation (q.v.) of the heavens (see HEAVEN AND SKY) and earth (q.v.) and everything between, to request humans to reflect on and to realize divine omnipotence (see POWER AND IMPOTENCE) and the reality of resurrection (q.v.): "Do they not reflect in their own minds? But not in truth and for a term appointed, did God create the heavens and the earth, and what is between them: yet are there truly many among the people who deny the meeting with their lord [q.v.; at the resurrection]!" (Q 30:8; see also Q 45:13). Natural phenomena are interpreted in a similar way (see NATURE AS SIGNS; PSALMS): "The likeness of the life (q.v.) of the present is as the rain which we send down from the skies: by its mingling arises the produce of the earth from which people and animals eat (see SUSTENANCE): [It grows] till the earth is clad with its golden ornaments and is decked out [in beauty]: the people to whom it belongs think they have all powers of disposal over it: There reaches it our command by night or by day, and we make it like a harvest [clean-mown], as if it had not flourished

only the day before! Thus do we explain the signs (q.v.) in detail for those who reflect" (Q 10:24). The singular status of the Prophet is another fact perceptible by means of reflection, as the Qurʾān points out: "Say: 'I do admonish you on one [point]: that you do stand up before God — [It may be] in pairs, or [it may be] singly — and reflect (within yourselves): your companion is not possessed (see INSANITY; JINN): he is no less than a warner (q.v.) to you, in face of a terrible chastisement'" (Q 34:46; see CHASTISEMENT AND PUNISHMENT). Even human relations in general are read as a sign of divine truth (Q 30:21). This refers also to the recall of souls (q.v.) by God during sleep (q.v.) or at death (see also DREAMS AND SLEEP; DEATH AND THE DEAD): "[It is] God [that] takes the souls (of men) at death; and those that die not [he takes] during their sleep: those on whom he has passed the decree of death, he keeps back [from returning to life], but the rest he sends [to their bodies] for a term appointed. Verily in this are signs for those who reflect" (Q 39:42). These verses, among others, aim at divine omnipotence that comprises everything in creation. By reflecting upon these signs, people, as the Qurʾān explains, should be able to recognize this divine power.

In addition to *f-k-r,* mention should be made of three other qurʾānic exhortations to reflection and deliberation on the "signs" of God and his power. Through its frequent employment of the refrain, "Which of the favors of your lord (q.v.) do you deny (see LIE)," an entire sūra (Q 55, Sūrat al-Raḥmān, "The Merciful") reminds the qurʾānic audience of God's beneficence (see GRACE; BLESSING; EXHORTATIONS; FORM AND STRUCTURE OF THE QURʾĀN; SŪRAS; RHETORIC AND THE QURʾĀN) — albeit without a lexeme connoting "deliberation" or "reflection."

Another qurʾānic term for "reflection" appears in Q 59:2: at the end of a passage relating God's punishment of the "unbelievers (see BELIEF AND UNBELIEF) from the People of the Book (q.v.)," "those who can see" (see SEEING AND HEARING; VISION AND BLINDNESS) are told to "take heed" (*fa-ʿtabirū yā ūlī l-abṣār;* see PUNISHMENT STORIES; NAḌĪR [BANŪ AL-]; OPPOSITION TO MUḤAMMAD). In this case, not *f-k-r,* but the eighth verbal form of the root letters *ʿ-b-r* are used to connote reflection and deliberation on a warning. Finally, mention should be made of Q 4:82 and 47:24 (see also Q 23:68; 38:29 for the eighth rather than the fifth form of *d-b-r*) which call for careful pondering of the qurʾānic message.

In tradition, reflection upon the holy scripture is especially emphasized. It is told, for instance, that Zayd b. Thābit discouraged rapid recitation of the Qurʾān (q.v.). Rather, he preferred to recite it over a longer period, "So that I can reflect on it and pause in it" (see Mālik, *Muwaṭṭaʾ,* no 15.3.4.).

As mentioned above, the attitude of mystics towards the intellectual act of reflection *(fikr/tafakkur)* was rather ambiguous. While (mystic) *dhikr* aims at an entire dissolution of self-consciousness before the object of recollection, i.e. God, reflection rather refers to the meditative grasping of an object. Both ways, however, aim at the same result, that is, the deep awareness of divine presence and omnipotence in contrast to the limitation of human contingency. Religion

Prior to the twentieth century, the English word "religion" had no direct equivalent in Arabic nor had the Arabic word *dīn* in English. They became partially synonymous only in the course of the twentieth century as a result of increased English-Arabic encounters and the need for consistency in translation (see TRANSLATIONS OF THE QUR'ĀN). In the same way the English word "religion" carries a genealogy of meanings, as revealed in W.C. Smith's groundbreaking book *The meaning and end of religion,* so does the Arabic word *dīn.* This co-existence of diverse meanings makes the interpretation of both words fluid in terms of their current and past usages as well as their contemporary interrelationship.

The present examination of the concept of *dīn* in the Qur'ān therefore requires a dual approach: first, reconstructing its meanings within the linguistic context of the period during which the Qur'ān was revealed (cf. e.g. Bravmann, *Spiritual background,* 1-7, for discussion of the relationship between *dīn* and the pre-Islamic Arab concept of *muruwwa;* see also REVELATION AND INSPIRATION; ARABIC LANGUAGE; DIALECTS; PRE-ISLAMIC ARABIA AND THE QUR'ĀN), using both intra- and inter-textual approaches to processes of interpretation (hermeneutics); second, writing those reconstructed meanings in English, using words with contemporary meanings that can only approximate their Arabic equivalents. In the face of this double challenge, the primary danger to avoid is the simplistic reduction of the Arabic word *dīn* to that of the English "religion." A rich history of distinct past and interrelated current meanings emerges through an analysis of intra- and inter-textual qur'ānic hermeneutics.

Intra-textual hermeneutics

The word *dīn* occurs ninety-two times in the Qur'ān: forty-seven times in the Meccan sūras and forty-five times in the Medinan sūras (see CHRONOLOGY AND THE QUR'ĀN). It is possible to distinguish further between three Meccan sub-periods, although such detailed chronological taxonomy is subject to scholarly debate. Using René Blachère's chronological subdivisions as her primary taxonomic framework of analysis, Yvonne Yazbeck Haddad (The conception) suggested that the diversity of meanings attached to the word *dīn* in the Qur'ān can be divided into three chronological stages, which overlay the French scholar's Meccan periods and one later Medinan period.

In the first stage, corresponding to the first and second Meccan periods, the word *dīn* means "judgment" (q.v.) or "retribution" (see RETALIATION; CHASTISEMENT AND PUNISHMENT) when used in the expression *yawm al-dīn,* which accounts for almost half of the occurrences. The expression as a whole, often translated as "day of judgment," refers to a particular moment or time in the future rather than a specific day when God will act in history and human beings will be accountable for their actions (see LAST JUDGMENT). Human beings either heed this *yawm al-dīn* or not, according to their personal response to God's signs (q.v.; *āyāt;* see also BELIEF AND UNBELIEF; NATURE AS SIGNS; GRATITUDE AND INGRATITUDE; REFLECTION AND DELIBERATION). The implication of taking *yawm al-dīn* seriously leads to a life of devotion to God and

responsibility (q.v.) towards others. Its denial reflects a lack of awareness of God's involvement in the world (see LIE). In both cases, *yawm al-dīn* implies personal accountability before God, whether individually acknowledged or not. By validating the existence of *yawm al-dīn,* human beings are called to live a life of integrity in the image of God's integrity towards human beings (see JUSTICE AND INJUSTICE).

The second stage corresponds to almost thirty occurrences found in the third Meccan period, with nine sub-categories of meaning that focus primarily on commitment and God's unity (*tawḥīd;* see POLYTHEISM AND ATHEISM; GOD AND HIS ATTRIBUTES). The word *dīn* is now no longer only about accountability for a future day of judgment: *dīn* is God's right path for human beings on earth at all times (see ASTRAY; ERROR; PATH OR WAY). Human beings become accountable by following the *dīn* of God, which requires total obedience (q.v.) and personal commitment to God's integrity and unity.

By contrast, a third stage of meaning emerges in the final part of the third Meccan period. In Q 6:161, *dīn* is associated with the Abrahamic community *(millat Ibrāhīm)* and the "straight path of right guidance" *(ṣirāṭin mustaqīmin)*. The former identification adds a layer of meaning to the initial personal commitment. This verse introduces a new emphasis that becomes central during the Medinan period: with God's unity is associated the unity of the nascent Muslim community (*umma;* see COMMUNITY AND SOCIETY IN THE QUR'ĀN). *Dīn* is now about collective commitment to live up to God's "straight path." *Dīn* then means "religion" both in the sense of a prescribed set of behaviors (see ETHICS AND THE QUR'ĀN; VIRTUES AND VICES, COMMANDING AND FORBIDDING) as well as a specific community of Muslims. There is only one *dīn,* God's unchanging *dīn*. It exists on earth with different degrees of purity (i.e. Jews and Christians only partake in parts of this *dīn* because they have corrupted it over the centuries; see CORRUPTION; JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY). It is also during the Medinan period that there emerged the concept of fighting (q.v.) for the *dīn* of God to preserve the unity of the *umma*. Both Q 3:19 and Q 3:85 make the Islamic *umma* co-extensive with *dīn*. The integration of all three meanings, the *dīn* of God, God's community of Muslims and Islam as a religion is achieved by the end of the Medinan period. This final, third stage in the qur'ānic meaning of *dīn* is then carried down over the centuries as the principal meaning of *dīn* through a complex process of inter-textual hermeneutics.

Inter-textual hermeneutics

The first level of inter-textual hermeneutics requires an etymological examination that rests on comparative linguistics, itself the result of a comparison between various texts preceding or synchronic to the formation, in the present case, of the qur'ānic literary corpus. Although some of the earlier studies on the language of the Qur'ān may have understood it as an Arabic word, derived from the root *d-y-n,* later scholars such as al-Khafājī (d. 1069/1659; cf. Brockelmann, *GAL* S, ii, 396) and al-Tha'ālibī (d. 429/1038; cf. Brockelmann, *GAL,* i, 284) considered it a foreign word on the basis that it had no Arabic verbal roots (Jeffery, *For. vocab.,* 132; see FOREIGN VOCABULARY; GRAMMAR AND THE QUR'ĀN; INIMITABILITY; LANGUAGE AND STYLE OF THE QUR'ĀN). Like its Syriac cognate, the Arabic *dīn* has a polysemous sense: "code of law" (as with the Persian *dēn*) and "judgment" (as in the Aramaic *dīnā*). This dual meaning (attested in pre-Islamic Arabic poetry; see POETRY AND POETS) has led to the supposition that the term entered

Arabic through Syriac, a northern Aramaic dialect, in which language both meanings are attested in the early Christian period (even though a Jewish use of Aramaic in the oasis of Yathrib could have introduced *dīn* in the sense of "judgment" into the Arabic language, this would not explain its second sense in Arabic of "code of law"; see also MEDINA; cf. Ahrens, Christliches, 34-5, in which it is posited that the Arabic term was borrowed from Persian, directly or through Syriac).

Unlike the first level of inter-textual hermeneutics which remains largely synchronic with the period of qurʾānic textual production (see COLLECTION OF THE QURʾĀN), the second level is diachronic, that is, it spans a fourteen-century history of qurʾānic hermeneutics as found in *ʿulūm al-Qurʾān,* "the qurʾānic sciences" (see TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY). In this long and rich Islamic tradition of interpreting the Qurʾān, the dominant meaning of *dīn* reflects the later qurʾānic meaning associated with the Medinan period. For example, in his famous commentary, al-Ṭabarī (d. 310/923) interpreted the word *dīn* in Q 3:85 as synonymous with *islām*. In the commentary of Ibn Kathīr (d. 774/1373), this verse is juxtaposed with Q 3:19 in which *dīn* is glossed as *islām*. In the early twentieth century, however, a plurality of meanings re-emerges as more explanations of the qurʾānic word *dīn* are needed in response to the dominant western Orientalist interpretation of Islam as one religion among many, rather than the Muslim belief of its being the one religion of God (see RELIGIOUS PLURALISM AND THE QURʾĀN). In the first volume of *Tafhīm al-Qurʾān,* as well as in a separate book entitled *Four basic qurʾānic terms,* Sayyid Abū l-Aʿlā Mawdūdī (1903-1979) explicitly defines *dīn* as found in Q 2:132 as "a qurʾānic technical term, signifying the way of life, the system of conduct, and the code on which man bases his entire mode of thought and action" (cf. id., *Towards understanding,* ii, 114 for Eng. trans.; see POLITICS AND THE QURʾĀN). The first two expressions, "way of life" and "system of conduct," on the one hand, and the third expression, "code," on the other, respectively reflect modern English as opposed to pre-modern qurʾānic semantic resonances, thereby demonstrating Mawdūdī's extensive interaction with western thought. This link is even clearer in the fourth volume of his commentary, when he considers the expression *dīn Allāh* as opposed to *dīn al-malik* (*dīn* of the king), translating *dīn* as "law" in both cases (see LAW AND THE QURʾĀN; KINGS AND RULERS). Building again on both Q 3:19 and Q 3:85, he concludes that "These [three] verses require that believers should totally submit themselves to din. And din, apart from prescribing Prayer (q.v.) and Fasting (q.v.), also lays down laws relevant for operating the social system and the administration of a country" (Eng. trans. in id., *Towards understanding,* iv, 197). Here, Mawdūdī integrates both the western (heavily Christian) understanding of religion as a set of beliefs and rituals (see RITUAL AND THE QURʾĀN) with an older legal qurʾānic meaning for *dīn* reflected in the use of English words such as "code" and "law."

In this modern exegesis (see EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY), both older and newer meanings of the word *dīn* are given. These meanings are further affected by their translation into expressions that dovetail with popular definitions of "religion" in the English language of the later twentieth and early twenty-first centuries. For example, in the sixth section of the chapter "Basic concepts of Islam" in the book *Islam in focus,* easily available through the internet, Dr. Ḥammūdah ʿAbd al-ʿĀṭī writes

that "genuine religion must come from God for the right guidance of man." This implicit definition of "religion" is prescriptive and overlaps in part with a more popular western understanding of the word "religion" as both linked to God and to a divine revelation whose purpose is to guide humankind. Yet, on the basis of Q 3:19 and 3:85, ʿAbd al-ʿĀṭī argues that the only genuine religion is Islam. This emphasis on the degree of quality of religion — that there may be different religions but only one is genuinely true — reflects the old third stage, Medinan qurʾānic meaning of *dīn,* which only appears in the singular form, to refer to a personal commitment to a transcendent God *(tawḥīd)* by way of submission *(islām)* as part of a community of Muslim persons *(umma)*.

In short, the equivalent in contemporary English would be the emphasis of Religion with a capital R over either "religion" or "religions" in the plural. But what happens when such a distinction between upper- and lower-case letters does not exist in the Arabic language? The constant contemporary usage of both "religion" (sing.) and "religions" (pl.) in western languages has required the development of an Arabic plural form for *dīn.* In fact, two different forms have emerged: *adyān* and *diyānāt*. How these new variants of *dīn,* currently synonymous, might be distinguished in the future is unclear, as is how they might affect, in turn, the interpretation of the singular form *dīn*. What is certain, however, is that these linguistic changes in contemporary Arabic reflect the unavoidable influence of the current global power dynamics that affect almost unilaterally the direction of change: the meanings traditionally associated with the Arabic word *dīn* are gradually merging into those associated with the English words "religion" and "religions" as well as the use of cognate terms in other Western languages.

The very name of this entry within an English language *Encyclopaedia of the Qurʾān* reinforces such power dynamics, affecting our efforts at reconstructing a qurʾānic understanding of the concept *dīn*. Yet, as the title of this entry uses a capital R, it may reflect a very subtle possibility of meaning more closely akin to the singular, solely qurʾānic use of *dīn*. In this respect, both this encyclopedia entry and ʿAbd al-ʿĀṭī's juxtaposition of *dīn* and "religion" demonstrate how meanings are constantly created and re-created within both culturally received yet continually changing hermeneutical processes.

Religious Pluralism and the Qurʾān

In traditional Muslim thought, Muḥammad is the "seal of the prophets," and his message, contained in the Qurʾān, con-

tinues, confirms — and abrogates — all previous prophetic messages. The Qurʾān demonstrates an awareness of those previous messages, at least some of them, and evidences knowledge of a variety of religious groups in its milieu. The earliest commentators on the Qurʾān were alert to these allusions and their efforts at identification became a traditional topic in classical exegetical works (McAuliffe, *Qurʾānic,* 16-31). Such efforts formed part of a larger agenda, that of providing historical specificity to certain segments of the text. The desire to do so was motivated less by an embracive and encyclopedic scholarly attitude than by the desire to determine both the chronological parameters of qurʾānic directives and the precise groups to whom they applied. Among the qurʾānic "sciences" the subfield known as "occasions of revelation" (q.v.; *asbāb al-nuzūl*) accumulated the results of these narrative elaborations of the qurʾānic text.

Numerous qurʾānic passages allude to individuals, or to groups, who did not accept Muḥammad as a prophet, but are nevertheless identified with one or another "religious" category about which the Qurʾān has a variety of not necessarily uniform opinions. Explicit in its condemnation of polytheists/idolaters (*mushrikūn,* i.e. Q 4:48, 116; 30:31; 39:65; but cf. Hawting, *Idea of idolatry,* for the argument that the qurʾānic polemic against these *mushrikūn* reflects "disputes among monotheists rather than pagans and that Muslim tradition does not display much substantial knowledge of Arab pagan religion" [16]), as well as the so-called "hypocrites" (*munāfiqūn,* also glossed as "cowards" or those who shirked their military responsibilities; cf. Q 4:138, 145; 9:68; 33:73), the Qurʾān does not deny the continued existence of Judaism and Christianity in its own milieu (i.e. seventh century Arabia; for two revisionist arguments that place the origins of the Qurʾān elsewhere, see Crone and Cook, *Hagarism,* and Wansbrough, *Sectarian milieu;* but cf. Donner, *Narratives,* 35-61) and also alludes to other religious groups who are not directly connected to the qurʾānic message (i.e. the enigmatic Sabians and Magians).

For at least the last century and a half, western scholarship has discussed the "monotheistic influence" on Muḥammad and the Qurʾān (see POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QURʾĀN). Examples include A. Geiger's nineteenth century doctoral thesis at the University of Marburg, *Was hat Mohammed aus dem Judenthume aufgenommen?* (Eng. trans. *Judaism and Islam* 1898, repr. New York 1970), R. Dozy's *Die Israeliten zu Mekka* (Leiden 1864); H. Lammens' Les Chrétiens à la Mecque à la veille de l'hégire, in *BIFAO* 14 (1918), 191-230; T. Andrae's Der Ursprung des Islams und das Christentum, in *Kyrkohistorisk Arsskrift* (1923-5), with a French translation, *Les origins de l'Islam et le Christianisme* (Paris 1955); R. Bell's *The origin of Islam in its Christian environment* (Edinburgh 1926); and C.C. Torrey's *The Jewish foundations of Islam* (New York 1933). Other studies have focused on the possible presence of Christian, Jewish or Judeo-Christian sectarian groups in the qurʾānic milieu, and there has been abundant speculation about the identity of the *zindīq*s of Mecca (Manichaeans and Mazdakites have been suggested; cf. Hawting, *Idea of idolatry,* 15, for bibliography; see also HERESY). Further, it has long been acknowledged that much of the qurʾānic message exhibits knowledge of, and similarity to, aspects of Judaism and Christianity, particularly as regards the narrative accounts of the prophets and several of the religious practices of the nascent community (see NARRATIVES; PROPHETS AND PROPHETHOOD; RITUAL AND THE QURʾĀN). Recent work on, for

example, inter-communal similarities continues this long line of scholarship (cf. Donner, *Narratives,* 64-75 for a discussion of qurʾānic piety in this context).

The Qurʾān categorizes and alludes to the various religious groups that appear to have inhabited its milieu (cf. Rubin, *Eye,* 45-53, for an overview of the religious communities present in pre-Islamic south Arabia: namely Jews, Christians, polytheists and *ḥunafāʾ*) in a variety of ways. Additionally, the qurʾānic vocabulary for "religion" (q.v.) is itself multivalent and distinct from the terminology for "faith" (q.v.) or belief (see BELIEF AND UNBELIEF; GRATITUDE AND INGRATITUDE). This article will discuss the development of the qurʾānic attitude towards religious pluralism by looking first at the vocabulary employed by the Qurʾān to designate either "religion" or the various religious groups with which it expresses familiarity. It will then focus upon the instances of "interreligious" encounter between Muḥammad and his followers and non-Muslims, primarily Christians, recognizing the fluidity of these categories. The final section will examine the qurʾānic passages which have formed Muslim attitudes toward the present plurality of religions.

Qurʾānic vocabulary

In addition to the explicit mentions of various religious groups, Jews, Christians, Sabians and Magians — the so-called "People of the Book" (q.v.) — as well as of polytheists/idolaters and the enigmatic *ḥunafāʾ* (sing. *ḥanīf*), the Qurʾān uses a range of words, both Arabic and Arabized non-Arabic (see FOREIGN VOCABULARY), to signify what contemporary readers understand as "religion."

General terms: *dīn, milla, ʿibāda*

Traditional Muslim writings on the religious teachings contained in the Qurʾān often maintain that there is a sharp distinction between the polytheism that dominated pre-Islamic Arabian religious life and the monotheism preached by Muḥammad. In the late nineteenth century, Goldziher *(Muhammedanische Studien)* and others took up this theme of the asserted difference and attempted to contrast a pre-Islamic communal, tribal "materialistic" virtue *(muruwwa)* with the Islamic and qurʾānic concept of religion as individual affiliation (*dīn;* cf. Bravmann, *Spiritual background,* 2, and more generally, 1-7, for a counterargument that maintains that *muruwwa* — like *dīn* — had a moral-spiritual significance, and that "virtus and the virile ethics of the heathen period were appreciated even in the Islamic period, only that in the course of time other qualities, of purely religious character, were added to them"). The most common term for "religion" is *dīn* (over 90 occurrences), an Arabized word with a diglossic background: the Persian *dēn* meaning "religion" or "cult" and the Akkadian *dānu* meaning "judgment" (q.v.; Jeffery, *For. vocab.,* 131-3; cf. *Lisān al-ʿArab* for other glosses, namely "custom, usage" and also "punishment, reward"). In the Qurʾān the Arabic *dīn* has both these senses (as, incidentally, in Christian writings does its Syriac cognate, *dīnâ/dīn;* cf. Jeffery, op. cit., 132-3 for an overview of the complex background of the Syriac term; for additional discussion of the qurʾānic *dīn* — particularly its eschatological usage — see LAST JUDGMENT). Gardet (Dīn) distinguishes between the usage in the Meccan and Medinan periods: in the former, the sense of "judgment" predominates, whereas the latter emphasizes the sense of "religion," with echoes of the "practical" or cultic aspect of the Persian *dēn*. As seen in the exegesis of Q 109:6 ("to you your *dīn,* and to me my *dīn*"), *dīn* is a term that can be applied to believers and unbelievers (cf. e.g. Ṭabarī, *Tafsīr,* ad loc.,

where the enduring quality of religious affiliation is asserted). But it must be emphasized that when *dīn* is used with the sense of "religion" it involves the "act of worship," derived from the Arabic sense of debt, i.e. rendering to God what is his due — that is, the obligations and prescriptions set out in the Qurʾān.

Another term for religion is *milla,* unattested in Arabic prior to its qurʾānic usage (cf. Bosworth, Milla). Likely of Syriac origin, in which *meltâ* may signify "word" (Gk. *logos*) and is used as a technical term for religion (Jeffery, *For. vocab.,* 268-9), in the Qurʾān *milla* denotes "religion" or "sect," and is frequently employed to designate the creed of Abraham (q.v.; 8 out of the 15 occurrences: Q 2:130, 135; 3:95; 4:125, in which the *milla* of Abraham is identified with "submission" to God; 6:161; 12:38; 16:123; 22:78). But again, and also like the qurʾānic *umma,* which is used for the Muslim community as well as for the communities of non-Muslims (even the animals and birds are said to constitute *umma*s, cf. Q 6:38), *milla* is not the exclusive provenance of "believers" or Muslims: it is used for the religion of prophets prior to Muḥammad (i.e. Q 12:38), Christians and Jews (Q 2:120) and polytheists or unbelievers (Q 7:88-9, the religion of the people of Shuʿayb [q.v.]; 12:37; 14:13; 18:20; 38:7). Q 12:37 and 38 exemplify most clearly the range of uses: in Q 12:37, Joseph (q.v.) says, "I have abandoned the *milla* of a people who do not believe in God and deny the hereafter (see ESCHATOLOGY)," and in the following verse he says, "I followed the *milla* of my fathers Abraham and Isaac (q.v.) and Jacob (q.v.); we do not associate anything with God."

Closely related to the semantic range of *dīn,* a third general term for "religion" or religious praxis is *ʿibāda,* "worship" (the nominal form occurs 9 times; various verbal forms of the root *ʿ-b-d* are much more frequent). The root meaning, however, is "to make, to do, to work" — from which the sense of "to serve" is derived (see Jeffery, *For. vocab.,* 209-10; see SERVANT). As with *dīn* and *milla, ʿ-b-d* is used both in reference to the service of the one, true God and the (albeit vain) service of that which is not God (i.e. Q 5:60, 76; 10:104). In later Islamic thought, the "service" to the one God is explained as essentially involving the five "pillars" of Islamic faith, although sometimes other duties, such as marriage (see MARRIAGE AND DIVORCE) and circumcision (q.v.), are included in the books of law (cf. Bousquet, ʿIbādāt).

Terms conveying qurʾānic approval: *islām, ḥanīf, sharīʿa*

Literally "surrender, submission," *islām* (q.v.) occurs 8 times, most notably at Q 5:3, wherein God says to Muḥammad: "I have completed my blessing upon you and I have approved *al-islām* as [your] religion" (cf. Q 3:19: "the [true] religion with God is *al-islām*"). It is not clear from the Qurʾān what, exactly, is meant by *islām:* most notably, there is no clear differentiation between "faith" *(īmān)* and "submission to God" (*islām,* although cf. Q 49:14; for a clear presentation of the relation of these two terms and *dīn* throughout the history of qurʾānic exegesis see Smith, *Historical*). Some later ḥadīth (cf. Eng. trans. of one such account in Bukhārī, *Ṣaḥīḥ,* i, 42-3, related on the authority of Abū Hurayra), however, associate *islām* with the public marks of a Muslim believer, i.e. the five "pillars" of Islam, and *īmān* with belief in God, his messengers and books, the angels (see ANGEL), and the last day (see Smith, *Historical,* 12-3, for the various renditions of this tradition; for a rather different understanding of *islām* and *īmān,* see Bravmann, *Spiritual background,* 7-31, and his theory that the former is a pre-Islamic concept implying defiance of death in the face

of struggle with an enemy, while the latter connotes the sense of security associated with the triliteral Arabic root *ʾ-m-n,* particularly in the context of protection against "fate"; see FATE). In light of the ambiguity of qurʾānic language, subsequent theological debates raised the question of whether non-Muslims, especially Jews and Christians, could be considered "believers" (see Donner, Believers, for a recent discussion). Eventually, however, *islām* was used for both the "personal relationship between man and God and the community of those acknowledging this relationship" (Smith, *Historical,* 2). It also must be noted that, although certain people prior to Muḥammad (notably Abraham) are said to have been *"muslims"* (the active participle of *islām*), the Qurʾān is explicit in its insistence that obedience (q.v.) to God involves obedience to his messenger (q.v.), namely Muḥammad (cf. Q 4:65; 33:36), an obedience that includes following the prescriptions and proscriptions that the Qurʾān exhorts.

Although *ḥanīf* (q.v.; 12 occurrences, nearly all of which are explicitly linked to Abraham) is used in the Qurʾān with the sense of a "true monotheistic believer," a Syriac cognate *(ḥanpâ)* has the connotations of "pagan" (but see Rubin, Ḥanīf, 402, who emphasizes the significance of the Arabic root meaning "to incline," as in having abandoned the prevailing religion and 'inclined' to a religion of one's own). The tension between the apparent qurʾānic meaning and the close Syriac cognate, which is not always mentioned in contemporary discussions of the topic (i.e. Hawting, *Idea of idolatry*), has yet to be explained satisfactorily, particularly with regards to its usage in a Muslim framework (see Watt, Ḥanīf; Jeffery, *For. vocab.,* 113-5). Here it should be noted that Crone and Cook's discussion of the term (*Hagarism,* 13-14) focuses on Syriac Christian accounts of the seventh century Arab conquests, in which there is an apparent conflation of *ḥanpē* and *mahgrayē* (which latter term, in Cook and Crone's reading, designates the "Hagarenes," a Judeo-Arab group who migrated from Arabia) as terms identifying the conquerors. They maintain that the qurʾānic concept of *ḥanīf* was an intentional borrowing of the Syriac cognate by the 'Hagarenes,' but was used instead to "designate an adherent of an unsophisticated Abrahamic monotheism" in a contrivance "to make a religious virtue of the stigma of their pagan past" (*Hagarism,* 14; cf. also Watt, Ḥanīf). There is also a lack of scholarly consensus about whether the qurʾānic employment of *ḥanīf* connotes an actual pre-Islamic religious grouping (see, for example, Rubin, *Eye,* and Hawting, *Idea of idolatry,* s.v., for two different viewpoints in contemporary scholarship). According to the semantic analysis of T. Izutsu, the qurʾānic *ḥanīf* encompasses "(1) the true religion deep-rooted in the natural disposition in every human soul to believe in the One God, (2) absolute submission to this One God, and (3) […] the antithesis to idol-worshipping" (Izutsu, *Ethico-religious concepts,* 191). See further discussion of this term below, under *Religious communities*.

Perhaps parallel to the Christian designation of their religion as the "way," *sharīʿa* (later used as the comprehensive designation of the Islamic law), with one occurrence at Q 45:18, has been understood with the sense of God's having set Muḥammad on the "open way, clear way, right way."

Terms denoting qurʾānic toleration or ambivalence

Ahl al-kitāb, dhimma

A more comprehensive designation are the so-called "People of the Book" (or "those who have been given the book," cf. Q 2:121; also "people of the Gospel," Q 5:47), which

appears over 30 times, with multiple connotations. Although Jews and Christians (the Children of Israel [q.v.]) are considered the prime designates of this terminology and were, subsequently, accorded a "protected" — albeit subordinate — status in later Islamic societies, the Magians and Sabians also appear in the Qurʾān in conjunction with these "scriptured" peoples (cf. Q 22:17), leading to their inclusion among the protected minorities in developed Islamic thought (see below, under *Religious groups*). While in post-qurʾānic times, *ahl al-kitāb* became nearly synonymous with *dhimmī* (or *ahl al-dhimma,* the "protected" persons living in the Islamic state, i.e. religious minorities), the qurʾānic *dhimma* (Q 9:8, 10), from which these latter terms derive, indicates merely "pact, treaty," without any specification of the terms thereof, or of the persons to whom it applies. Later Islamic tradition developed these conditions (as exemplified in the so-called "covenant of ʿUmar"; cf. Tritton, *Caliphs*), and those non-Muslim groups living in Islamic lands to whom they were extended were subsequently termed *dhimmīs/ahl al-dhimma* (cf. Cahen, Dhimma). The designation of a specific group of people with a (revealed) "book" suggests that written scriptures were accorded respect, and those communities that claimed a written revealed text were set apart from others (see ORALITY AND WRITING IN ARABIA). The People of the Book are to be consulted for the meaning of scripture (cf. Q 10:94: "If you [Muḥammad] are in doubt about what we have revealed to you, ask those who recite/read *[yaqraʾūna]* the book before you"), but are also presented in the Qurʾān as people who are in disagreement over the scriptures (cf. Q 3:64, 65, wherein the People of the Book are said to be disputing concerning Abraham; see GOSPEL; TORAH; PSALMS; BOOK).

Parties/factions

In addition to the indicators of religious adherence — generally positive *(ahl al-kitāb, ḥanīf, muslim, muʾmin),* negative *(mushrik)* and neutral *(dhimma, milla),* as well as the religious groups whose adherents are named in the Qurʾān (Jews, Christians, Magians, Sabians) — there are a few terms that indicate divisions among the adherents of a religion, terms that may also be used for secular divisions. These qurʾānic lexemes include *ḥizb* (pl. *aḥzāb*), *ṭāʾifa* and *farīq* (the second verbal form of the root *f-r-q* is also used in this sense; cf. Q 6:159 and 30:32, as well as Q 20:94 and 9:107), *shīʿa* (q.v.; pl. *shiyaʿ, ashyāʿ,* e.g. Q 6:159; 15:10, but also Q 28:15), *zubur* (Q 23:53), *ṭaraf* (e.g. Q 3:127), *ṭarīqa* (pl. *ṭarāʾiq,* e.g. Q 72:11), etc. All of this vocabulary has been variously translated as group, party, sect or division, among other renderings, with the terms generally carrying a negative value. Charges of sectarian division are not infrequent in the Qurʾān and although primarily aimed at the Children of Israel, they are also made against Muslims — as in the designation of those who shirked their military duties as "hypocrites" (see HYPOCRITES AND HYPOCRISY; cf. Rubin, *Between,* esp. 117-46). Such accusations became a prominent theme in Muslim polemics against Christians, who were excoriated for multiple and visible divisions (see below, under "Jews and Christians").

This review of qurʾānic vocabulary demonstrates the complexity of the qurʾānic notion of religion which does not easily map to contemporary Western understandings of religious pluralism. Adherence to the divinely revealed message encompasses more than a profession of faith (i.e. *īmān*); it entails an entire way of life (namely the behavior implied by *sharīʿa, islām, ʿibāda*) — both public and private — a communal concept closer to the qurʾānic concept of *umma* than the

juridical/canonical/liturgical notion more familiar to today's Euro-American societies. Even though the Qurʾān acknowledges the fact of the diversity of religions, it asserts that, had God so willed, he could have made them all one nation (*umma,* see Q 42:6-9; see PARTIES AND FACTIONS).

Religious communities

In addition to the terms that connote religion as a collective category, the Qurʾān names adherents of several religious communities. Most mentions, whether of Islam (i.e. those who adhered to the qurʾānic message) or of other religious groupings, point to people and physical structures rather than conceptual abstractions (note the reference in Q 5:44 to Jewish "rabbis" *[al-rabbāniyyūn]* and "religious scholars" [*al-aḥbār:* also understood to refer to Christian religious authorities in Q 9:31, 34]; Christian "priests" *[qissīsīn]* and "monks" *[ruhbān]* of Q 5:82; the mention in Q 22:40 of God's prevention of the destruction of four different places identified with religious institutions: *ṣawāmiʿ,* identified as monasteries, *biyaʿ* — churches, *ṣalawāt* — synagogues, and *masājid* — mosques, lit. places of "prostration"; see CHURCH; MONASTICISM AND MONKS). For example, the Qurʾān mentions Christians but has no term for Christianity (but cf. i.e. Q 2:62 for a possible attestation of "Judaism"). Here it should be noted that the Qurʾān does not always link *islām* with "religion" (but see Q 3:19, 85; 5:3), although most of the qurʾānic attestations of *islām* denote the relationship of a human being to God: e.g. Q 9:74; 49:17; 61:7. The concept of Islam as distinct from *islām* emerged over time, and received differing nuances in different settings (Smith, *Historical*). Since, as recent scholarship has shown, Christianity and Judaism in the world of late antiquity were not as well-defined as their contemporary apologists have portrayed them (e.g. Boyarin, *Radical Jew;* id., *Sparks of the logos;* cf. also Cameron, *Mediterranean world*), our inability to designate precisely the referents of these qurʾānic mentions is not surprising. Some of these religious groupings appear a number of times (Jews, Christians and polytheists), while others are mentioned only rarely (Sabians, Q 2:62; 5:69 and 22:17 and Magians, Q 22:17). Often, it is not clear if the qurʾānic concept indicates an actual, contemporary religious group identifiable as such to the qurʾānic audience, a pre-Islamic group or a theological concept (i.e. the enigmatic *ḥanīf*).

Further, despite the apparent distinction of these groups from one another and from the emergent community that heeded Muḥammad and his message, the specific nature of the various groups to which these people belonged is by no means clear. There is also a range of qurʾānic judgment on some of them, particularly the Jews and the Christians. Indeed, the Qurʾān has many scriptural figures and concepts familiar to Jews and Christians, making analysis of the degree of real separation and distinction among the communities in the qurʾānic milieu difficult. The prevalence of the qurʾānic attestations of "believers" is a case in point: in passages such as Q 33:35, believers and Muslims are both mentioned — and it is not clear whether one modifies the other, or if they are separate categories. Might Jews and Christians, particularly those not hostile to Muslims, be considered "believers" (as was the claim of Christian apologists such as Theodore Abū Qurra [d. ca. 214/830]; cf. id., *Discussion,* 75-6; see also Donner, Believers)? Despite such irenic arguments, the fact that there are different terms for Jews, Christians and Muslims does indicate a significant qurʾānic distinction among these groups. Finally, the long history of qurʾānic commentary has complicated the

identification of, and attitude towards, the following groups and, consequently, their relationship to contemporary religious groups and the resultant behavior towards them demanded of Muslims. A brief sketch of those communities to which the Qurʾān alludes in various ways and in varying detail, follows. See, however, the articles JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY; SABIANS; ḤANĪF; MAGIANS; POLYTHEISM AND ATHEISM for a fuller discussion of each.

Jews and Christians

As mentioned above, the Qurʾān uses the designation People of the Book and Children of Israel to include both Jews and Christians — with the latter phrase, however, carrying a less obviously Christian valence. But reference to Jews and Christians as separate entities is also made. Often with a negative connotation, "Jews" *(yahūd)* are explicitly mentioned multiple times in the Qurʾān (Q 2:113, 120; 5:18, 51, 64, 82; 9:30; cf. also 22:17, etc.), and once the singular appears — in an assertion that Abraham was *not* a Jew (Q 3:67). Although the origins and the rituals of the Jewish groups in Muḥammad's milieu are not well attested, the qurʾānic evidence, as well as other sources (such as ḥadīth and the *sīra;* see ḤADĪTH AND THE QURʾĀN; SĪRA AND THE QURʾĀN), point to the presence of Jewish communities in seventh century Arabia. (The qurʾānic identification of the individual who, in Q 20:85-95, prompts the Israelites to create the calf of gold [q.v.] as al-Sāmirī may also indicate some familiarity with Samaritans [q.v.]). "Christians" (*al-naṣārā* and other phrases; cf. McAuliffe, *Qurʾānic,* esp. 1-5 and 94-128) also appear a number of times in the Qurʾān (Q 2:62, 111, 113, 120, 135, 140; 5:14, 18, 51, 69, 82; 9:30; 22:17) — with only one occurrence in the singular *(naṣrāniyyan),* again in a denial of Abraham's being one (Q 3:67). But, unlike the frequent qurʾānic condemnation of "Jews," "Christians" are sometimes commended (Q 5:82: "The nearest of them in love to the believers are those who say, 'We are Christians'"; see also Q 24:37-8). As is the case with the Jews, there is more speculation than knowledge about the exact nature of the Christianity present in seventh century Arabia, but the Qurʾān and other, contemporary sources attest to a Christian presence in the peninsula — although the depth of their penetration is not known (cf. Shahid *[Byzantium and the Arabs]* and Griffith [Gospel] for varying opinions on the extent of the "Arabic" nature of pre-Islamic Christianity in the Arabian peninsula; Hoyland maintains that although "in the fourth to sixth centuries Christianity made major inroads into Arabia… it was particularly the inhabitants of north Arabia who were won over to Christianity in large numbers"; cf. Hoyland, *Arabia,* 146-59, esp. 147). Unfortunately — reflecting the paucity of information available for pre-Islamic Arabia — many recent works on Arabia or the Arabs do not explore the religious situation of the inhabitants of the peninsula in depth (cf. Retsö, *The Arabs*). Apart from epigraphic sources, which are currently inaccessible to many western researchers, there is little historical attestation of the Arabian peninsula other than the Islamic annals — which were composed, at the earliest, in the second or third Islamic century. The following is an outline of the state of current knowledge on the subject (see also EPIGRAPHY AND THE QURʾĀN; PRE-ISLAMIC ARABIA AND THE QURʾĀN; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC).

There appears to have been a Jewish presence in the Arabian peninsula since the first century C.E. In the sixth century there was even a south Arabian Jewish "kingdom" of Ḥimyar that flourished for a brief period of time (for details see

Hoyland, *Arabia,* 49-57; 146-7; Lecker, Conversion, 129-36). Thus, it is not surprising to learn that there were a number of presumably Arabic-speaking Jewish tribes in Medina (q.v.) and its surroundings during Muḥammad's lifetime. These Jewish tribes figure prominently in Muḥammad's struggle for the establishment of a political entity in Medina after his emigration (q.v.; *hijra*) from Mecca (q.v.), and various qurʾānic verses are traditionally associated with the different stages of this early "Muslim-Jewish" conflict (see Schöller, *Exegetisches*). For example, the biographers of Muḥammad associate the revelation of Q 3:12 f., which alludes to the Muslim victory at Badr (q.v.) as a warning for the disbelievers, and Q 5:51-6, which urges the believers not to take Jews and Christians as friends (cf. Ibn Isḥāq, *Sīra,* 388, 545-6; Eng. trans. Ibn Isḥāq-Guillaume, 260, 363; see FRIENDS AND FRIENDSHIP), with the confrontation and expulsion of the tribe of Qaynuqāʿ (see OCCASIONS OF REVELATION). Also, Q 59:2-15 (cf. Ibn Isḥāq, *Sīra,* 654; Eng. trans. Ibn Isḥāq-Guillaume, 438) has been connected to the expulsion of the tribe of Naḍīr; and Q 33:26 f. (cf. Ibn Isḥāq, *Sīra,* 693; Eng. trans. Ibn Isḥāq-Guillaume, 468) to the extermination of the males [who participated in battle against the Muslims] from the tribe of Qurayẓa (see NAḌĪR; QURAYẒA; QAYNUQĀʿ for further discussion of the classical Islamic interpretation of these verses).

Although the Christian presence was less localized and less cohesive than the Jewish one, there is ample attestation of Christian communities in pre-Islamic south Arabia. The precise nature, however, of their liturgy, or even their beliefs, is not known (for two different perspectives in modern scholarship on the nature and extent of the spread of Christianity in pre-Islamic Arabia, see the above-mentioned works of Shahid and Griffith on this topic). After the Christological controversies in the early/middle fifth century C.E., the eastern Christians were divided into three groups: those who adhered to the pronouncements of the Council of Chalcedon (451 C.E.; i.e. that in the one person and hypostasis of Christ was a fully human nature and a fully divine one); and two non-Chalcedonian groups, ordinarily known as the Nestorians and Monophysites. Each of these groups existed in south Arabia prior to Muḥammad's lifetime, but the Monophysites, with their connection to Abyssinia, were the politically dominant (cf. the story of the Christian city of Najrān and its famous martyrs). The Persian Nestorians also had a fairly visible role (see below, under "Najrān" in *Episodes*). In addition to the explicit mentions of "Christians" or Christian doctrines that appear in the Qurʾān, certain verses are understood to be allusions to Muḥammad's (or his followers') encounters with specific Christian groups (see below under *Episodes*).

Like the Jews, the Christians are included in such categories as "Children of Israel" and "People of the Book." But, rather than a literal translation of the Greek term "Christian" (i.e. the Ar. *masīḥiyya*), the qurʾānic Christians are termed *al-naṣāra,* most likely in reference to the *nisba* of Jesus (q.v.), i.e. the "Nazarene" (for discussion of the possible significations of this term, see McAuliffe, *Qurʾānic,* 93-128). This term, one that appears to be unique to the Qurʾān, as well as the qurʾānic descriptions of their beliefs, has led to some speculation about the exact nature of the Christians in the qurʾānic milieu: were they (an otherwise-unattested) Jewish-Christian sect (i.e. pace S. Pines, Notes; cf. id., *Jewish Christians;* id., Gospel quotations; but, for an argument against any Muslim awareness of "Jewish-Christians," cf. S.M. Stern, New light; cf. also id., Quotations)? Besides the lack of external evidence for the presence of

"Jewish Christians" in the qurʾānic milieu, the polemical intent of the Qurʾān must be considered when reading the passages that allude to other monotheists. If the Prophet's qurʾānic preaching assumes a knowledge on the part of its audience of the phenomena of which it speaks, it would have the liberty to exaggerate and distort — even "name-call" — in its efforts to persuade its own listeners (i.e. once it became clear that the Jews and Christians would refuse to accept Muḥammad as a prophet in the path of Abraham, Moses [q.v.] and Jesus). In this context, the change of both the *qibla* (q.v.), or direction of prayer, as well as the parameters for fasting (q.v.) have been cited as evidence of the concrete measures that were taken to distance the qurʾānic adherents from the "People of the Book" (cf. Katz, *Body of text,* for discussion of the historical arguments for permissible mingling, or mandatory separation, of the communities due to arguments of ritual cleanliness; see CLEANLINESS AND ABLUTION; RITUAL PURITY). Thus, the abbreviated references to "Christian" or "Jewish" doctrines need not be taken as unambiguous and accurate attestation of the specific tenets (or practices) of these communities, although the qurʾānic indications of Jewish and Christian arguments over Abraham and the Sabbath (q.v.) may well be reflective of such disputes in Muḥammad's milieu.

A further indication of the close contact of the first Muslim community with Jews and Christians is found in the early ḥadīth and *sīra* accounts. The format of the argumentation for Muḥammad's prophethood closely parallels that present in Talmudic and Christian prophetology. Additionally, such discussions often cite Christian and/or Jewish texts as supporting Muḥammad's prophethood (in this regard one may note, respectively, the discussions of Muḥammad as "Aḥmad," understood by Muslim commentators to be the Johannine Paraclete and as the *"ummī"* [q.v.] — or gentile [i.e. *goy*] — prophet; see McAuliffe, Qurʾānic context; see also ILLITERACY). The commentaries on the Qurʾān (which probably emerge as separate works at a slightly later date than the *sīra* and ḥadīth) incorporate these arguments, continuing the trend of inter-communal dependence (for further discussion of the chronology of the early Islamic literature, see Rubin, *Eye,* chaps. 1 and 14).

Magians, Sabians and *ḥunafāʾ*

A *hapax legomenon,* the "Majūs" (commonly understood to be Zoroastrians) are added to the list of qurʾānic "Peoples of the Book" in the late Medinan Q 22:17. The commentators, however, ordinarily stress the distinctions among all of the groups mentioned in this verse. Al-Ṭabarī (d. 310/923), for example, cites Qatāda in glossing *al-majūs* as those who worship the sun, the moon and fire (*Jāmiʿ,* ad loc.).

Whether they are to be considered as "People of the Book" was a debated issue in Islamic law, but, traditionally, the Zoroastrians have been accorded the status of *dhimma* (protected religious minority) in Islamic states. Originally an ancient Iranian priestly class (closely associated with the ruling elite in Sasanid Persia), in the Qurʾān and later Arabic sources, the term *majūs* primarily connotes Zoroastrians, the public cult of which involved fire ceremonies, animal sacrifices and liturgical recitations. Manichaeism, Buddhism and conversion to Christianity all contributed to the erosion of the position of the Zoroastrians within Persian areas during Sasanian times; during Muḥammad's lifetime, descendants of Persian soldiers in the Yemen were converted to Islam; in Iraq, units of the Sasanian army converted to Islam; and, by 101/720, the Majūs in al-Ḥīra were

Muslims (Morony, Madjūs, 1111). At the fall of Sasanian Persia to the Muslims in 30/651, the Magians were accorded the status of *dhimma* so long as they paid the poll tax or *jizya* (for further discussion, see Morony, Madjūs).

The Sabians appear in three qurʾānic verses (Q 2:62; 5:69; 22:17), always in conjunction with "believers" (*allādhīna āmanū,* frequently glossed by Muslim commentators as those who believe 'in the Qurʾān'), Jews and Christians, and once with Magians, as well. Not to be confused with the Sabaeans (i.e. the inhabitants of Sheba [q.v.]), it is not clear exactly which group the Qurʾān intends by this designation (see the *EI²* articles Ṣābiʾ and Ṣābiʾa for the differing opinions of DeBlois and Bosworth as to their identity). Mandaeans and Elchasaites (an ancient Jewish Christian sect that persisted in southern Iraq), as well as Manichaeans, have been proposed (see DeBlois, Ṣābiʾ). It is apparent, however, that they are considered a group separate from the Jews, Christians, polytheists and Zoroastrians (i.e. Magians) and that they were distinct or visible enough to warrant qurʾānic mention. In any event, the qurʾānic Sabians should not be equated with the polytheists in Ḥarrān who adopted the term "Sabian" to designate themselves in the third/ninth century in order to obtain the status of *dhimma* within the Islamic state (DeBlois, Ṣābiʾ; see also Watt, Ḥanīf, for a discussion of the claims of these Harranian Hellenized pagans to the qurʾānic monotheistic designation of *ḥanīf;* for further discussion of the exegetical identification of the qurʾānic Sabians, see McAuliffe, Exegetical identification).

As mentioned above, for the Qurʾān Abraham is the prime example of a *ḥanīf,* or true monotheistic believer — and neither a Jew nor a Christian. Never mentioned in the qurʾānic listings of religious groups (e.g. Q 5:69; 22:17), it has been suggested that *ḥanīf* is a term used specifically by Arabian monotheists who had rejected the idolatrous religion of their families, although it was also used by polytheists who only observed some rites of their religion. Muslim sources indicate that there was a pre-Islamic monotheistic cult or religion of Abraham in Arabia, members of which appeared even to inhabit Muḥammad's milieu (i.e. his wife Khadīja's [q.v.] relative Waraqa b. Nawfal; cf. Ibn Isḥāq, *Sīra,* 143-9; Eng. trans. Ibn Isḥāq-Guillaume, 98-103; see INFORMANTS for a critique of the traditional Muslim account of the monotheists in Muḥammad's milieu). The *Sīra* of Ibn Isḥāq (d. ca. 150/767), for example, describes the *ḥanīf* as turning away from the idolatry of their parents, adopting the religion of Abraham, but not necessarily becoming Muslims (i.e. Zayd b. ʿAmr: Ibn Isḥāq, *Sīra,* 144-7; Eng. trans. Ibn Isḥāq-Guillaume, 99-101; cf. Wansbrough, *Sectarian milieu,* 4-7; Rubin, *Eye,* 47-8). Regardless of the status of the *ḥanīf* in pre-Islamic times, the qurʾānic identification of *ḥanīf*s with true believers, but not necessarily Muslims, is continued in later Islamic history (although, unlike Jews, Christians, Sabians and Magians, the Qurʾān does indicate that a *ḥanīf* can be identical with a Muslim — in connection with Abraham, cf. Q 3:67). While the qurʾānic Magians and Sabians are not *ḥanīf*s, in the post-qurʾānic period a group who termed themselves Sabians also appears to have claimed the designation of *ḥanīf* (see Watt, Ḥanīf). In short, it is not obvious whether — or if ever — the *ḥunafāʾ* were considered by their contemporaries to be an identifiable religious group.

Polytheists and idolaters

Traditional discussions of the Meccan milieu in which Muḥammad was born identify the majority of Meccans as neither Jews nor Christians, but as practitioners of

traditional tribal cultic practices. In the Qurʾān, these individuals are termed *mushrikūn* (lit. "associators"), and there are also allusions to people who worship idols (*aṣnām;* see IDOLS AND IMAGES; IDOLATRY AND IDOLATERS). Whatever their religious orientation, the *mushrikūn* are the Meccans who did not acknowledge Muḥammad as a prophet sent from God, or accept his claim that there is only one true God. As presented in traditional Muslim sources, the reasons for their denial of Muḥammad's prophethood fluctuate between their desire to maintain control of the polytheistic sanctuary at Mecca and their jealous protection of the social status that they had attained through the lucrative caravan (q.v.) trade. In one reading of the reasons for the rise of Islam, Muḥammad preached a message that appealed to people who were becoming marginalized within a society of increasing wealth and of sharp disparities between the rich and the poor. Further, the wealthy Meccans feared that the "radical" social component of Muḥammad's message would weaken their hold on the economy of the city, and that his deposing of the gods would disrupt the profitable pilgrimage (q.v.) to the Kaʿba (q.v.). In this version of early Islamic history, Muḥammad eventually appropriated the mechanism established by the Meccan traders, facilitating the spread of Islam (cf. Watt, *Muhammad at Mecca;* for a revisionist reading of the rise of Islam, see Crone, *Meccan trade,* where it is argued that rather than Meccan trading interests, local Arab tribal concerns prompted the rise and spread of Islam).

Although it is not clear to what extent, in the qurʾānic purview, Jews, and particularly Christians, might fall in the category of "associators," later Muslim exegetes have often placed Christians and Jews, despite their status as "People of the Book," in this category. The polemical writings of John of Damascus (d. 135/753) attest that within the first Islamic century, Christians were termed "associators" by the Muslims (although John's Greek text uses the term Saracenes, and not Muslims; cf. his *De haeresibus,* chap. 100-1 in Sahas, *John of Damascus;* for further and more recent discussion of early non-Muslim perceptions of Islam, the Qurʾān and Muḥammad see Hoyland, Earliest Christian writings on Muḥammad).

In general, it may be said that, despite the qurʾānic distinction between "Peoples of the Book" and those who have no book — the Arabian "idolaters" or "polytheists" — as well as the distinctions made between the Jews and Christians, in both the Qurʾān and later exegesis, those who would deny Muḥammad and the Qurʾān — be they associators, Christians or Jews — are viewed as falling within the general rubric of "disbelief" or "ingratitude," i.e. *kufr.* Q 2:105 and 98:1 are often cited in this context, as well as Q 9:31, which accuses Christians of taking their religious leaders and Jesus as "lords" — in place of the one, true lord: i.e. God (cf. Hawting, *Idea of idolatry,* 49-50 for a fuller discussion of this concept). That being said, however, there is no one formula for the ways in which Muslims interacted with, or categorized, non-Muslims — either in the Qurʾān or later in Islamic history. Pragmatic, as well as doctrinal, concerns affected the treatment of those who were not Muslims. For example, despite the traditional understanding of the so-called Sword Verses (Q 9:5 and 9:29), which exhort the conversion to Islam of "associators" and the "tolerance" of People of the Book, in India, Hindus — not one of the qurʾānic Peoples of the Book — were allowed to practice their religion as long as they paid the poll tax (*jizya;* for more on this topic, see below under "Guidance for Muslim behavior"; see also TOLERANCE

AND COMPULSION; POLITICS AND THE QUR'ĀN).

Qur'ānic indications of interreligious interactions

Episodes

In addition to the above-mentioned political conflicts with the Jewish tribes of Medina, there are a number of qur'ānic indications of early interactions with non-Muslims of a specifically religious nature. All of these interactions occur with Christians, specifically with Monophysite Christians. In addition to the allusions to the "Byzantines" (q.v.; *al-Rūm*, i.e. Q 30:2 — albeit in a military context), Muslim commentators have traditionally understood certain qur'ānic passages to refer to two particular Christian polities: Abyssinia (q.v.) and Najrān (q.v.). According to the traditional Muslim sources, Muḥammad and the nascent Muslim community had political and theological exchanges with both, as will be seen below. But first a discussion of Muslim claims that individual Christians attested to the truth of Islam is in order.

Although not mentioned in the Qur'ān, later Islamic sources claim that Muḥammad had personal encounters with Christian monks who, in the Muslim reports, recognized the "signs of prophecy" on the Prophet (cf. Rubin, *Eye*, 48, for some instances of Companions meeting Christian scholars and hermits in pre-Islamic times, who knew of Muḥammad's impending mission through their own knowledge of their scriptures; see COMPANIONS OF THE PROPHET). Christian sources also describe encounters with Christian monks but in these accounts, the Christian acts as Muḥammad's informant about divine revelation. Interestingly, although frequently this monastic informant is termed a 'Nestorian,' the denomination of the informant does vary, depending upon the community in which the account is relayed. For example, it is likely that the accounts of the Nestorian Sargis-Baḥīrā circulated in a Syrian Jacobite (i.e. "monophysite") milieu (cf. Griffith, Syriac writers, 48; see also Abel, Baḥīrā, for instances of Jacobite, Arian and iconoclast informants; see also ICONOCLASM). The most common figure in both the Christian and Muslim accounts is the monk Baḥīrā (for discussion of this figure see Roggema, Christian reading; id., Legend). There are also accounts of a Jewish scribe of Muḥammad who, again, depending on the vantage point of the relater, either instructs Muḥammad in the Jewish faith, or confirms Muḥammad's prophethood (for details, see Gilliot, Informants). Finally, members of the family of Muḥammad's first wife, Khadīja, appear to have been Christian (or at least monotheists in the tradition of Abraham), and to have confirmed his claims to prophesy.

In addition to these non-qur'ānic assertions of independent (primarily Christian) attestation to the truth of Muḥammad's mission, there are traditions about two face-to-face encounters between the nascent Muslim community and Christians and consequent discussions concerning the nature of Jesus, the son of Mary (q.v.), traditions that invoke qur'ānic verses in support of the 'historicity' of these meetings.

Abyssinia

An ancient Monophysite Christian kingdom that had ruled part of southern Arabia in the sixth century (see ABRAHA), Abyssinia was also the destination of the first emigration (q.v.) out of Mecca (ca. 615 C.E.) of a small group of Muḥammad's followers. Due to the persecution by the Meccan pagans, Muḥammad encouraged some of the Muslims to leave and to go to Abyssinia (Ibn Isḥāq, *Sīra*, 208; Eng. trans. Ibn Isḥāq-Guillaume, 146; cf. Watt,

Muhammad at Mecca, 112-7). The Negus (*al-najāshī,* i.e. the Abyssinian ruler) is said to have granted them refuge, after asking about their knowledge of Jesus, the son of Mary (cf. Wansbrough, *Qs,* 38-43, for one interpretation of the later Islamic tradition on the welcome accorded the Muslims refugees). Q 19:16-21 was revealed just prior to this emigration, and it is this passage that is traditionally considered to have constituted the emigrants' response to the Negus' questioning: "Mention in the book Mary when she withdrew from her family to an eastern place. She placed a *ḥijāb* [to screen herself; see VEIL] from them, and we sent her our spirit (q.v.) who appeared to her as a man, complete. She said: 'I seek refuge in the merciful from you — if you fear God.' He said: 'I am only a messenger of your lord [to tell] you of the gift of a holy son.' She said: 'How can I have a son since no man has touched me and I am not unchaste (see CHASTITY)?' He said: 'Like this. Your lord says…'" Although most of these first emigrants did not stay in Abyssinia, but returned to Mecca or left for Medina, this memory of Abyssinia and its Christians remained enshrined in later Muslim consciousness.

Najrān

Another early Muslim-Christian encounter, but one of a slightly different nature, concerns a delegation from the Christian martyropolis of Najrān (q.v.; not named in the Qurʾān, but probably alluded to in Q 34:18, 85:10 and also possibly in Q 85:4-9, although Shahid disputes this last claim; see NAJRĀN) sent to Muḥammad in Medina, after the Muslim conquest of south Arabia. Although some sources indicate that this mission had a theological purpose, namely to understand the Muslim position on the nature of Jesus (i.e. Ṭabarī, *Tafsīr;* Ibn Kathīr, *Tafsīr,* ad Q 3:61), the delegation to Muḥammad seems to have been prompted by the political exigency of determining the conditions of Christian life under the new Muslim rulers. Q 3:61 is believed to have been revealed in response to the challenge posed by the Christians, a challenge in which the parties of the dispute would present their case, pray and invoke the curse (q.v.) of God upon the liars. The delegation from Najrān, however, withdrew from the contest, averting the mutual adjuration (*mubāhala;* see OATHS). Muḥammad did, however, conclude a treaty with them (the first between the Muslim state and an independent Christian entity), in which they were assured of their freedom of worship in exchange for the payment of the annual tribute (see POLL TAX; TAXATION).

The theological orientation of these Najrān Christians is not clear; although traditionally a center of Monophysite Christianity (Shahid, Nadjrān), some of the Nestorian missionaries who followed the trade routes to India settled in the area of the Persian Gulf and south Arabia (Holmberg, Nasṭūriyyūn, 1030). Additionally, the Persian conquest of south Arabia in 597 C.E. may have witnessed an increased Nestorian presence in the area (further to this see Shahid, Nadjrān; Pellat, Ḳuss b. Sāʿida al-Iyādī; Holmberg, Nasṭūriyyūn).

Although contact with Jews appears to have been of a shorter duration (i.e. concentrated in the late Meccan and early Medinan periods), it was much more problematic for the early Muslim community, as it had negative political ramifications when the Jewish tribes of Medina allied themselves with Muḥammad's Meccan opponents in an attempt to undermine his leadership in Medina. The increasingly harsh measures taken against these Jewish tribes — successive expulsions of two of the major tribes in 624 and 625 C.E., culminating in the massacre of the men and

enslavement of the women and children of Banū Qurayẓa in 627 C.E. — appears to have precluded any conciliatory contact (along the lines of that with the Christians) between the early Muslims and Jews. Nevertheless, the picture of early Jewish-Muslim contacts is not entirely bleak: there are accounts, for example, of Jewish converts to Islam — at least one of Muḥammad's Companions, and probably one of his wives, were Jews (see QURAYẒA). Finally, it should be noted that there are no attestations of Muḥammad's coming into contact himself with either the "Majūs" or the "Ṣābiʾūn."

But the qurʾānic discourse concerning non-Muslims is not limited to those incidents in which, according to the traditional interpretations, Muḥammad or the Muslims actually had political and theological discussions with individuals who did not accept the qurʾānic message. In fact, the majority of allusions to the People of the Book or Children of Israel (which references are more numerous than those to Jews or Christians) are understood to be assertions about what these people believe — or how they have gone astray (q.v.) from God's divinely revealed message (see REVELATION AND INSPIRATION) — independent of any precipitating interaction with a Jew or Christian. And this rhetoric has generated a great deal of commentary on the part of Muslim exegetes and, later, spurred the composition of many apologetic treatises by those Christians and Jews living in Islamic lands.

Rhetoric: polemic and apologetic

Besides the Arabian "associators," the Jews and the Christians are clearly the two religious communities with whom Muḥammad and the Qurʾān had the most experience (although it should be emphasized that, aside from the Jewish tribes of Medina and the Christian delegation from Najrān, Muḥammad seems not to have had contact with any Jewish or Christian community per se, but rather only with individual Jews and Christians). Once the qurʾānic proclamation of an exclusively monotheistic religion is put forth, the *mushrikūn* are seen as unbelievers who need to be brought to the true faith. Concerning the Jews and Christians, with whom the Qurʾān shares a common scriptural heritage, there is a much more ambivalent depiction. In short, it appears that the qurʾānic attitudes towards these groups fluctuate in accordance with the political situation of Muḥammad and the Muslim community, as well as with regard to these groups' acceptance or rejection of the message that Muḥammad proclaimed. The following provides just a few examples of the qurʾānic rhetoric about, and in response to, Jews and Christians (see also POLEMIC AND POLEMICAL LANGUAGE).

Polemic

Although the initial and most virulent thrust appears aimed at the Jews, the boundary between anti-Jewish and anti-Christian polemic is quickly blurred. Aside from a few positive statements about Christians that are in marked contrast to those about Jews (i.e. Q 5:82), what seems to be a defense of Jesus against Jewish slander (their non-acceptance of his prophetic status; his crucifixion; and the calumny against Mary) is also a chastisement of Christians for "exaggerating" in their religion, particularly as regards the Incarnation and the Trinity. In a passage whose exact meaning varies depending upon its grammatical analysis, Christians are also accused of "inventing monasticism" (Q 57:27). Additionally, there is the rather enigmatic polemical accusation that Jews have taken Ezra (q.v.) as a son of God (Q 9:30). Although the polemic against the

Christians is less pervasive and somewhat less virulent than that against the Jews, in the final analysis, Jews and Christians are considered allies of one another — and are not to be taken as friends by the believers (Q 5:51).

Apologetic

In addition to the negative remarks about Judaism and Christianity mentioned above, the Qurʾān also contains positive assertions about its own message and the prophethood of Muḥammad, assertions that seem to be a clear response to Jewish or Christian challenges (for this theme, see Gaudeul, *Encounters,* i, 12-19). To the Jewish challenge that racially Muḥammad could not be a prophet (there are no prophets outside of Israel), the Qurʾān responds that Abraham was not a Jew, but was a believer, a Muslim, a *ḥanīf* (Q 3:67). The argument that Muḥammad's teachings do not conform to the Bible (see SCRIPTURE AND THE QURʾĀN) is also turned against the Jews, for they have broken God's covenant (q.v.; cf. e.g. Q 2:27, 63-4), falsified their scriptures (cf. e.g. Q 2:77-9; see REVISION AND ALTERATION), and rejected his prophets, among them Moses and Jesus (e.g. Q 2:67 f., 87 f.; see also DISOBEDIENCE; cf. Q 2:65). There are also self-conscious rejections of Jewish practices: i.e. the change of the *qibla* from Jerusalem (q.v.) towards Mecca (Q 2:142), as well as the reduction of the fasting of ʿĀshūrāʾ (cf. Q 2:183-5; see Goitein, Ramadan; see also RAMAḌĀN). The response to the Christians focuses mainly on Trinitarian or Christological themes (i.e. Q 5:73, do not say God is a third of three, *thālithu thalāthatin;* cf. Griffith, Syriacisms, for an argument that this is an Arabicized rendition of a Syriac word that, in the new linguistic medium, loses its original sense — i.e. the Syriac epithet *thlīthāyâ,* a title of Christ), but there are some assertions of what could be read as Christian-Muslim collaboration or complicity (i.e. Q 61:6, wherein Jesus foretells a prophet called 'Aḥmad'). See also APOLOGETICS.

Responses

The early ʿAbbāsid period (i.e. 132-441/750-1050) saw a particularly rich production of Muslim and Christian polemic. Intent on disabusing Muslims of the image conveyed in the Qurʾān, and encouraged by an atmosphere of perhaps unparalleled interreligious communication, Christians (and Jews) wrote a number of treatises in defense of their faith. For their part, Muslims went beyond the qurʾānic claims and demonstrated an intimate knowledge of the various religious communities of their own day — even down to the confessional divisions among the Christians (e.g. ʿAbd al-Jabbār's *Tathbīt dalāʾil al-nubuwwa;* for a survey of the Islamic sources, see Thomas, *Anti-Christian polemic,* 31-50; Griffith, The monk in the emir's *majlis,* presents an overview of the earliest such Christian apologetics; see also Ibn Kammūna [d. 683/1284-5], *Tanqīḥ al-abḥāth lil-milal al-thalāth,* for an example of early Jewish apologetics).

Additional attestation of interest in, and intimate knowledge of, Jewish and Christian literature is demonstrated by the familiarity of Muslim authors with extracanonical Jewish and Christian lore that is evidenced in the genre of Islamic literature known as *Isrāʾīliyyāt,* much of which is incorporated in the post-qurʾānic "stories of the prophets" (see McAuliffe, Assessing). The development of both Islamic dialectical theology *(kalām)* and Islamic mysticism, which flourished in the early ʿAbbāsid period, may also trace its roots to the interactions with the Christians in the conquered lands, especially those living on the frontier between Byzantium and Persia (see ṢŪFISM AND THE QURʾĀN; THEOLOGY AND THE QURʾĀN).

Although the early debates over the createdness of the Qurʾān (q.v.; see also INIMITABILITY) and the Muslim literature on "proofs of prophethood" (e.g. ʿAbd al-Jabbār's *Tathbīt*) may plausibly have arisen in a religiously pluralistic environment in which Christians, in particular, took part (cf. e.g. Thomas, *Christians at the heart of Islamic rule;* id., *Anti-Christian polemic in early Islam;* id., *Early Muslim polemic against Christianity*), the classical Islamic response to religious pluralism is perhaps best seen in the development of the sectarian and heresiographical genre (*ʿilm al-firaq* and *al-milal wa-l-niḥal*). Representative works of this genre include ʿAbd al-Qāhir al-Baghdādī's (d. 429/1037) *al-Farq bayna l-firaq,* Ibn Ḥazm's (456/1064) *al-Fiṣal fī l-milal wa-l-ahwāʾ wa-l-niḥal* and al-Shahrastānī's (d. 548/1153) *Kitāb al-Milal wa-l-niḥal*. Such works catalogue and discuss, variously, heterodox versions of Islam, non-Muslim religions and forms of philosophical speculation. Further reflection on Jewish and Christian material is provided by works that consider the relation of earlier scriptures and the qurʾānic revelation. There is a long tradition of Muslim biblical scholarship that spans works of history, exegesis, and heresiography (McAuliffe, Qurʾānic context).

Inferring a qurʾānic attitude toward religious pluralism?

As already indicated, there is no single qurʾānic attitude towards members of other religions. An uninitiated reader of the Qurʾān might have difficulty in discerning the Qurʾān's opinion of a plurality of religions. Commentators found it helpful, therefore, to see the various — even, at times, conflicting — passages dealing with members of other religions as coming in response to certain incidents in Muḥammad's life. But it is equally important to understand how the passages have been utilized by later interpreters of the Qurʾān as either supporting or condemning the beliefs, practices — even existence — of non-Muslims within the domain of Islam. The following is a brief overview of a selection of modern Muslim attitudes towards the subject, as well as certain qurʾānic passages that have frequently been used by Muslims in discussions about members of other faith communities, followed by a presentation of some possible qurʾānic "guidelines" for Muslim behavior towards non-Muslims in the face of a plurality of religions.

Approbation and denigration

There is no one qurʾānic judgment about religious plurality. On the one hand, there are statements, frequently cited today by prominent religious spokespersons like Yūsuf al-Qaraḍāwī and other advocates of the virtues of the Islamic state (cf. e.g. Qaraḍāwī, al-Aqaliyyāt wa-taṭbīq al-sharīʿa al-islāmiyya), that may be read as an exhortation to tolerance of other religions (cf. Mottahedeh, Toward an Islamic theology of toleration). In this reading, religious plurality is permissible (at least as far as monotheists/People of the Book are concerned), as long as Muslims dominate the political sphere and the minorities adhere to the rules put forth in the *sharīʿa* for the proper comportment of non-Muslims. Behind the qurʾānic statements that allow for the existence of other religions is an implicit acknowledgment of the virtues of adherents of other religions, e.g. references to the notion that Christians have helped Muslims, and Jews and Christians have some knowledge of scripture. On the other hand, contemporary extremists such as Usāma b. Lādin, in the tradition of exegetes like Ibn Taymiyya (d. 728/1328) and Sayyid Quṭb (d. 1966), may cite certain verses (e.g. Q 9:5) in support of a rejection of the plurality of religions, and a negative

judgment on non-Muslims. In this reading, there can be no legitimate compromise or collaboration with non-Muslims, or, for that matter, with bad Muslims. Qurʾānic themes such as the eschatological punishment of non-Muslims, their opposition to Muḥammad (q.v.), Islam as the only true religion in God's eyes, Jews and Christians having gone beyond the bounds of their religion — form part of this reading of the qurʾānic denigration of other religions, and a resultant denial of the legitimacy of religious plurality. In the light of these conflicting qurʾānic themes, the question remains: What does the Qurʾān exhort Muslims to do in the face of a plurality of religions?

Guidance for Muslim behavior

While verses such as Q 109:6 have been understood to acknowledge the existence of a plurality of religions ("to you your *dīn* and to me mine"), there have been various interpretations of what this means: it was directed to those of the Quraysh (q.v.) who mocked *(al-mustahziʾūn)* Muḥammad's monotheism (Muqātil, *Tafsīr,* iv, 887-8; see SATANIC VERSES); it is an affirmation of the distinction between the religion of the Muslim and the *mushrik* (and not "true" Jews, for Jews worship God; ibid.), it is a disavowal of everything in which the idolaters are involved (Ibn Kathīr, *Tafsīr,* ad loc.). Likewise, Q 2:256, "there is no compulsion in religion," thought to have been revealed after the submission of the Arabs (cf. Muqātil, *Tafsīr,* ad loc., for a discussion of the distinction between the terms of submission for the People of the Book and those who were not such; also Ibn Kathīr, *Tafsīr,* ad loc., where reference is to the situation of children of the Helpers who were being raised among the Banū l-Naḍīr at the time of their expulsion; see EMIGRANTS AND HELPERS), indicates a qurʾānic acknowledgment that not everyone will accept the truth of the Qurʾān's message. But this, too, has received a variety of interpretations: Muḥammad did not compel any of the Meccans to accept Islam; the people of the two books and the Magians may pay the *jizya* and live peaceably in an Islamic state; there is never force against anyone who has paid the *jizya* (Ṭabarī, *Tafsīr,* ad loc.) A survey of Muslim exegesis, however, reveals that there is certainly no glorification of the diversity of religious belief. Rather, it is accepted as an inevitable aspect of human existence. Generally, the exegetes do not interpret the Qurʾān as exhorting a forcible conversion to Islam. But there is also no false irenicism: those who do not heed the qurʾānic message are promised punishment in the afterlife (see REWARD AND PUNISHMENT). The passages that extol the virtues of peoples of other faith communities are almost universally interpreted with a limited sense, i.e. those commendable individuals are people who did not go beyond the bounds of their religion, or who in some way assisted the Muslims or at least did not harm them. They know their proper place and do not put themselves above Muslims.

Although qurʾānic passages such as Q 2:256 ("there is no compulsion in *dīn*") or Q 109:6 ("to you your *dīn* and to me mine") are often cited as prooftexts for an Islamic tolerance of non-Muslims, as noted above, they have been variously interpreted over the course of Islamic history. Further, historical examples like the contrast between medieval Spain's expulsion of Jews and Istanbul's welcoming of them are frequently offered to argue for the benefits to non-Muslims of living in an Islamic polity, past or present (cf. Qaraḍāwī, al-ʿAqaliyyāt). But there are other passages that are not at all ambiguous in their exhortations of Islam as the true religion and their warnings to maintain

a distance from (adherents of) other religions.

Q 9:5 and 9:29 are perhaps the most famous or infamous of the qurʾānic verses that prescribe 'proper' behavior towards non-Muslims (see McAuliffe, Fakhr al-Dīn). But there are other, less frequently cited, verses that shed light on what may be called the "qurʾānic attitude to non-Muslims." The following is a sampling of these verses: Q 5:3, "I have approved Islam for your religion"; Q 30:30, "That is the right religion" (cf. Q 30:43; 39:3; 61:9; 98:5); Q 30:32, "those who have divided up their religion and become sects"; Q 2:193, "fight them until there is no persecution and the religion in God's"; Q 24:2, "let no tenderness for them seize you in the matter of God's religion"; Q 4:171, "People of the Book, go not beyond the bounds in your religion" (cf. Q 5:77); Q 40:26, "I fear that he may change your religion."

Taken as a whole, the Qurʾān does evince a negative judgment on the People of the Book, claiming that they have exaggerated in their religion and even altered their scriptures (see also DISTORTION; FORGERY; PROVOCATION). The Muslims, therefore, should keep their distance and, when necessary, fight them — as well as other non-Muslims. It is the later exegetical literature, however, and the doctrine of abrogation (q.v.), that have formed the lenses through which the Qurʾān is viewed, and which have informed the traditional Muslim attitude towards non-Muslims. For despite the preponderance of qurʾānic passages that allude to the eschatological punishment of non-believers, it is the tendency of later exegetes to place all non-Muslims, even People of the Book, in that category that has encouraged a reading of the Qurʾān that can support an antagonistic attitude towards non-Muslims, and even towards Muslims who are considered not to be 'true' Muslims (cf. McAuliffe, Christians in the Qurʾān, for further discussion of the distinction between qurʾānic pronouncements and the later exegesis thereof).

Conclusion

It is generally established that by the end of the Umayyad period (ca. 132/750) Islam had come to be seen as the "religion of the Arabs." Emblematic of this association is the famous ḥadīth in which Jews and Christians are banned from the Arabian peninsula (based on the ritual impurity of "associators," mentioned in Q 9:28; cf. Rubin, Jews; cf. Katz, *Body of text,* for discussion of the "impurity" of the People of the Book), a situation still in evidence today (signs outside of Mecca and Medina prevent non-Muslims from entering the city limits). But whether Muḥammad intended such a situation is difficult to determine. In any event, Christian Arabs after the advent of Islam have experienced an inevitable crisis of identity (as "Arab" came to be all but synonymous with "Muslim," an identification that appears to have occurred at an early date; cf. the legal ruling in al-Shāfiʿī's *Kītāb al-Umm* that Christian Arabs are not "People of the Book," cited in Tritton, *Caliphs,* 92, and the Christian Arab refusal to pay the *jizya* on the basis of their being Arabs, cited in ibid, 89) and since the classical period Jewish tribes in Arabia have been all but unknown. In keeping with the qurʾānic injunction found in Q 9:29, Christians (and Jews, and, to a lesser extent, Mandaeans and Zoroastrians) have lived in Arabic-speaking areas of the Muslim world as protected (religious) minorities *(dhimma),* subject to their own religious authorities in legal cases, at least those that do not involve Muslims. As for their situation in non-Arab lands, there has been a relaxation of the traditional exclusion of polytheists from the status of protected religious minority. For example, in India,

Hindus were extended the protection of the Islamic state in exchange for a payment of the requisite tax, as was noted above. In keeping with the qurʾānic differentiation between Muslims and non-Muslims, and also with the qurʾānic injunctions of tolerance for non-Muslims, these non-Muslims have been allowed to live in Islamic lands, albeit as "second-class" citizens (and, it should be remarked, often subject to Islamic law).

History, however, continues to shape the reception of the Qurʾān and its interpretation. Considering the Crusades, the era of capitulations, colonialism and the more recent establishment of the state of Israel, a long sequence of events which is associated with the aggression of western imperialism, contemporary Muslim exegetes have tended to consider the qurʾānic verses that exhibit a more welcoming or tolerant attitude towards non-Muslims as abrogated by those that contain a harsher judgment of people who will not accept the truth of Islam, particularly when they are living in an Islamic polity.

Remembrance

Recollection; state of being held in mind. Verbal and substantive expressions *(dhikr, dhikrā, tadhkira)* derived from the radical *dh-k-r* appear in 274 verses of the Qurʾān (excluding passages rendering the meaning of "male") and these have different

connotations depending on context (see Ahrens, Christliches, 39 for discussion of the etymology). In addition to the basic meaning of "remembrance" this vocabulary can be employed in the sense of "thinking of, speaking about, mentioning, reporting on, relating" as well as "admonition, warning."

Remembrance of God

The most important signification of the first form of the verb is "thinking about" or "calling to mind," with the remembrance of God being the primary focus (see MEMORY; PRAYER). In Q 29:45, "Recite what is sent of the book (q.v.) to you by inspiration (see REVELATION AND INSPIRATION; RECITATION OF THE QUR'ĀN), and establish regular prayer, for prayer restrains from shameful and evil deeds (q.v.), and remembrance of God is the greatest [thing in life] without doubt." Remembrance of God is even deemed superior to the religiously-mandated duties (e.g. the obligatory duty of prayer; see WORSHIP; RITUAL AND THE QUR'ĀN). Some further examples of qur'ānic descriptions of the remembrance of God are: Q 13:28, "Those who believe, and whose hearts find satisfaction in the remembrance of God; for without doubt in the remembrance of God do hearts find satisfaction" (see HEART; BELIEF AND UNBELIEF); Q 18:101, "[Unbelievers] whose eyes had been under a veil (q.v.) from remembrance of me, and who were unable to hear" (see SEEING AND HEARING; VISION AND BLINDNESS; HEARING AND DEAFNESS); and Q 20:14, "Verily, I am God. There is no god but I, so serve me [only], and establish regular prayer for my remembrance" (see WITNESS TO FAITH).

The Qur'ān sometimes specifies that the "name of God" should be remembered, as in Q 87:14-5: "But he will prosper who purifies himself, and remembers the name of his lord (q.v.), and prays" (see CLEANLINESS AND ABLUTION; RITUAL PURITY); and Q 22:40: "If God had not checked one set of people by means of another, monasteries, churches, synagogues, and mosques (see SACRED PRECINCTS; MONASTICISM AND MONKS; CHURCH; MOSQUE), in which the name of God is commemorated in abundant measure, would surely have been pulled down." This exhortation includes the proclamation of the divine name over slaughtered animals (see CONSECRATION OF ANIMALS; SLAUGHTER), e.g. Q 22:28: "That they may witness the benefits [provided for them], and celebrate the name of God, through the days appointed, over the cattle which he has provided for them [for sacrifice]: then eat thereof and feed the distressed ones in want" (see ALMSGIVING; POVERTY AND THE POOR; cf. Q 22:34 and 36 regarding the eating of sacrificial animals); and concerning the eating of animals in general, Q 5:4: "They ask you what is lawful (see LAWFUL AND UNLAWFUL) to them [as food]. Say: Lawful unto you are [all things] good and pure: and what you have taught your trained hunting animals [to catch] in the manner directed to you by God: eat what they catch for you, but pronounce the name of God over it (see BASMALA): and fear God; for God is swift in taking account" (see also Q 6:119, 121; see HUNTING AND FISHING; FOOD AND DRINK).

Also, individual acts attributed to God, like his favor (*ni'ma;* see GRACE; BLESSING), can occur as an object of remembrance, e.g. Q 5:7: "And call in remembrance the favor of God to you, and his covenant (q.v.), which he ratified with you, when you said: 'We hear and obey.' And fear God, for God knows well the secrets (q.v.) of your hearts" (see OBEDIENCE; HIDDEN AND THE HIDDEN; REFLECTION AND DELIBERATION); Q 5:11, "O you who believe! Call in remembrance the favor of God to you when certain men formed the design to

stretch out their hands towards you, and he stopped their hands from you: so fear God. And on God let believers put [all] their trust"; or Q 5:20, when Moses (q.v.) says, "O my people! Call in remembrance the favor of God to you, when he produced prophets (see PROPHETS AND PROPHETHOOD) among you, made you kings (see KINGS AND RULERS), and gave you what he had not given to anyone in the world."

Sometimes *ālāʾ*, "benefits," is used instead of *niʿma*, particularly to recall a legendary occurrence in the past (see GENERATIONS; MYTHS AND LEGENDS IN THE QURʾĀN), e.g. Q 7:69: "Do you wonder that there has come to you a message from your lord through a man from among you, to warn you (see WARNER; MESSENGER)? Call in remembrance that he made you inheritors after the people of Noah (q.v.), and gave you a stature tall among the nations. Call in remembrance the benefits [you have received] from God. That you may prosper"; also Q 7:74: "And remember how he made you inheritors after the ʿĀd (q.v.) and gave you habitations in the land: you build for yourselves palaces and castles in [open] plains, and carve out homes in the mountains; so bring to remembrance the benefits (you have received) from God, and refrain from evil and mischief (see CORRUPTION) on the earth." God's behavior towards humankind is sometimes specified more precisely. For instance, people are reminded that they are created by God (e.g. Q 19:67: "Does not man recall [*yadhkuru*] that we created him before from nothing?"; see COSMOLOGY; CREATION), or that God instructs them (e.g. Q 2:239: "… But when you are secure, remember God *[udhkurū llāha]* in the manner he has taught you, which you knew not [before]"), and leads them the right way (e.g. Q 2:198, "… Remember him *[udhkurūhu]* as he has directed you, even though, before this, you went astray [q.v.]").

But the Qurʾān also recalls God or his benefits by recounting past events without the explicit use of the terminology for remembrance. Examples occur particularly in the long late Medinan sūras (q.v.; see also MEDINA; CHRONOLOGY AND THE QURʾĀN) when the Israelites (see CHILDREN OF ISRAEL), for instance, are called to remember God's mercy (q.v.) and his benefits. While Q 2:47 uses the imperative *udhkurū* to exhort the Israelites to recall God's blessings upon them ("Children of Israel! Remember my favor wherewith I favored you and how I preferred you to (all) creatures"), the individual benefits of God are mentioned by means of a narrative (see NARRATIVES) about Moses (Q 2:49-73; e.g. Q 2:49: "And [remember], we delivered you from the people of Pharaoh [q.v.]: They set you hard tasks and punishments, slaughtered your sons and let your women-folk live; therein was a tremendous trial from your lord"). In this fashion, the Israelites are urged to recall these events and to acknowledge God as their author. Similarly, later in the same sūra, the Israelites are requested to recall the divine mercy (Q 2:122) and then their attention is called to a tale about Abraham (q.v.; Q 2:124-34).

The aim of these different demands for the remembrance of God can be summarized as follows. God must be remembered as creator and preserver of both humankind and the whole creation, but the request for this recollection can be either explicit or implicit (e.g. by the qurʾānic citation of past events as examples of God's mercy and his benefits).

Thus, the Qurʾān points again and again to human forgetfulness of God (see GRATITUDE AND INGRATITUDE), one of humanity's enduring characteristics. Q 5:12-4 presents the consequences of this forgetfulness, using the Israelites and Christians as a warning (see JEWS AND JUDAISM;

CHRISTIANS AND CHRISTIANITY). The peaceful communities dissolve while hatred and hostility take their place, a negative elucidation of the fact that people profit by constant remembrance of God and his deeds. For not only the community, but also the individual, can find peace and satisfaction by remembering God: "Those who believe, and whose hearts find satisfaction in the remembrance of God; for without doubt in the remembrance of God do hearts find satisfaction" (Q 13:28; see COMMUNITY AND SOCIETY IN THE QUR'ĀN; BELIEF AND UNBELIEF).

Means of remembering God

Although the Qur'ān does not always directly invite people to remember God, it does refer to itself as a revelation which conveys the divine word and thus commands actions approved by God. And, although the Qur'ān acknowledges the existence of other "scriptures" (e.g. the Torah [q.v.] and the Gospels [q.v.]; see also SCRIPTURE AND THE QUR'ĀN; cf. Q 2:63, which is in reference to Moses and the Children of Israel: "And remember we took your covenant and we raised above you the mount [saying:] 'Hold firmly to what we have given you and bring [ever] to remembrance what is therein: Perchance you may fear God'."), the Qur'ān itself is sometimes designated as "remembrance" or "reminder" (*tadhkira;* see NAMES OF THE QUR'ĀN) — as in Q 43:5, "Shall we then turn away the reminder from you altogether, for that you are a people transgressing beyond bounds (see BOUNDARIES AND PRECEPTS)?" — or as an admonition, as in Q 74:54-5: "Nay, this surely is an admonition: Let any who will, keep it in remembrance!" Q 38:1 indicates an exceptional case, in which the Qur'ān and the admonition appear together as a so-called oath formula (see OATHS; LANGUAGE AND STYLE OF THE QUR'ĀN): "By the Qur'ān, full of admonition: [this is the truth]." Q 11:120 refers in particular to the individual narratives (q.v.) concerning the former messengers: "All we relate to you of the stories of the messengers — with it we make firm your heart: in them there comes to you the truth, as well as an exhortation (q.v.) and a message of remembrance *(dhikrā)* to those who believe."

In this context, the meaning of the second form of *dh-k-r* — "remind of, call attention to" in the sense of "warn, admonish" — especially stands out. For the Qur'ān is singled out as a means of warning humankind against the consequences of overlooking God: "Leave alone those who take their religion to be mere play and amusement (see HUMOR; MOCKERY), the life of this world deceives them. But continue to admonish with it [the Qur'ān] lest a soul is caught in its own ruin by its own actions" (Q 6:70; see also e.g. Q 87:9). Likewise, the signs (q.v.; or verses [q.v.], *āyāt*) of God which do the admonishing, are mentioned, e.g. Q 18:57: "And who does more wrong than one who is reminded of the signs of his lord, but turns away from them, forgetting the [deeds] which his hand has sent forth?" (see also Q 25:73; 32:22). Sometimes divine activity within nature is specifically referenced (see NATURE AS SIGNS): "Do you not see that God sends down rain from the sky, and leads it through springs in the earth (see WELLS AND SPRINGS)? Then he causes to grow, therewith produce of various colors: then it withers; you will see it grow yellow; then he makes it dry up and crumble away. Truly, in that is a message of remembrance to people of understanding" (Q 39:21; see also Q 16:10-3; 25:45; for discussion of the *idhā-* phrases that contain an implicit exhortation to be mindful of God and the afterlife, see FORM AND STRUCTURE OF THE QUR'ĀN).

Remembrance in tradition (ḥadīth)

Numerous traditions deal with the remembrance of God (see ḤADĪTH AND THE QUR'ĀN) and, in general, address the qur'ānic themes on the subject. As an example, Muslim (d. ca. 261/875; *Ṣaḥīḥ,* bk. 37, *K. al-Tawba,* chap. 1, *Faḍl dawām al-dhikr wa-l-fikr fī umūr al-ākhira wa-l-murāqaba,* no. 4937) relates that Ḥanẓala Usayyidī, reportedly one of the Prophet's scribes, was tortured with doubts about the sincerity of his belief. As long as he was within the circle of Muḥammad's adherents, he was able to consider the things concerning the other world (see ESCHATOLOGY). As soon as he returned to everyday life, to his wife, his children or his business, however, he seemed to forget everything else. The Prophet would reassure him: "By him in whose hand is my life, if your state of mind remains the same as it is in my presence and you are always busy in remembrance (of God), the angels will shake hands with you in your beds and in your paths but, Ḥanẓala, time should be devoted (to the worldly affairs) and time (should be devoted to prayer and meditation)." Thus this ḥadīth expresses the conviction that remembrance of God is an important virtue that can compensate for other negligence. Abū Dāwūd (d. 275/889; *Sunan,* bk. 41, *K. al-Adab. Bāb fī kaffāra al-majlis,* no. 4216) relates an account of assemblies which serve a noble cause or are held for the remembrance of God: "There are some expressions which, if a man utters [them] three times when he gets up from an assembly, he will be forgiven for what happened in the assembly; and no one utters them in an assembly held for a noble cause or for remembrance of God but that [it] is stamped with them just as a document is stamped with a signet-ring. These expressions are: Glory be to you, oh God, and I begin with praise of you, there is no God but you; I ask your pardon, and return to you in repentance" (see REPENTANCE AND PENANCE; FORGIVENESS; LAUDATION; GLORIFICATION OF GOD). Again, in al-Bukhārī's (d. 256/870) *Ṣaḥīḥ* (bk. 10, *K. Mawāqīt al-ṣalāt,* chap. 37, *Man nasiya ṣalāt fa-l-yasilidha dhakara wa-lā yuʿīdu illā tilka l-ṣalāt,* no. 562; Eng. trans. i, 328), there is a report about the Prophet's declaration concerning the relationship between prayer and remembrance of God, in which he cites Q 20:14: "The Prophet said, 'If anyone forgets a prayer he should pray that prayer when he remembers it. There is no expiation except to pray the same.' Then he recited: 'Establish prayer for my remembrance'." Another combination of remembrance of God with ritual duties is found in Abū Dāwūd (*Sunan,* bk. 10, *K. al-Manāsik wa-l-ḥajj. Bāb fī l-raml,* no. 1612): "The apostle of God (peace be upon him) said: Going round the house (the Kaʿba), running between al-Ṣafā and stoning of the pillars are meant for the remembrance of God" (see also Q 2:197-200; see KAʿBA; ṢAFĀ AND MARWA; PILGRIMAGE; PRE-ISLAMIC ARABIA AND THE QUR'ĀN).

As these few examples illustrate, the remembrance of God is not simply a theological postulate but is also important in the everyday life of the believing community (see EVERYDAY LIFE, THE QUR'ĀN IN).

Remembrance in theology

Muslim theologians have also addressed aspects of the concept and the function of remembrance. In his explanation of Q 21:2 the Ashʿarī writer al-Bāqillānī (d. 403/1013) interprets remembrance *(dhikr)* as *waʿẓ,* admonition by the Prophet, and, at the same time, promise *(waʿd)* and intimidation *(takhwīf)*. Based on the qur'ānic characterization of this prophetic "admonition"

as originated *(muḥdath),* he draws the conclusion that there must also exist an eternal kind of *dhikr*. Al-Bāqillānī considers another meaning of *dhikr* as underlying Q 65:10-1, in which the messenger of God himself is called *dhikr,* that is to say, divine admonition for humankind, by his recitation of the verses of God (see NAMES OF THE PROPHET).

In contrast, the Māturīdī theologian al-Ṣaffār al-Bukhārī (d. 534/1139) refers to remembrance in the sense of "pointing out" or "informing" *(tanabbuh),* with reflection *(fikr)* on the subject being possibly but not absolutely demanded. Further, the author reads *dhikr* as remembrance of God by speaking of the Qurʾān as containing the details of the true religion (see RELIGIOUS PLURALISM AND THE QURʾĀN).

A transition towards Ṣūfism can be found in the theosophy of Ibn al-ʿArabī (d. 638/1240). In *al-Futūḥāt al-makkiyya* (chap. 142, *Fī maʿrifat maqām al-dhikr wa-asrārihi:* ii, 228-9) the author describes *dhikr* as a divine attribute (see GOD AND HIS ATTRIBUTES) and Q 2:152 as the answer to the *dhikr* of creatures. According to Ibn al-ʿArabī, mentioning or remembering the name of God refers to his essence *(ʿayn)*. For this reason, *dhikr* should not be restricted to certain forms, but should be expressed by calling the divine name (see also THEOLOGY AND THE QURʾĀN).

Remembrance in Islamic mysticism

The admonition to remember God that is constantly expressed by the Qurʾān, together with a recognition of the divine activity of creation and of God's signs within the world finally led to the special connotation of *dhikr* in Ṣūfism (see ṢŪFISM AND THE QURʾĀN). In this connection, *dhikr* means, first of all, the act of remembrance itself, but also the oral expression of this act and, finally, the special form of that orality. As mentioned above, in Q 29:45 remembrance of God is equated with ritual prayer, if not esteemed more highly. Nevertheless, mystics were often reproached for choosing *dhikr* above ritual prayer *(ṣalāt)*.

In general, remembrance of God in Ṣūfism can be performed in silence (individual *dhikr*) or aloud (individual or collective *dhikr*). Likewise, the threefold classification that comprises *dhikr* of the tongue, *dhikr* of the heart, and *dhikr* of the inner self *(sirr)* became a characteristic of Ṣūfism. This special kind of divine service distinguishes Ṣūfīs from other believers, and the different Ṣūfī brotherhoods have developed different forms of these rituals. Through constant repetition of the divine name or of certain formulas like the profession of faith *(shahāda)* the whole being of the Ṣūfī is consumed by remembrance of God. All else is effaced and states of ecstasy are experienced during voiced and collective *dhikr*.

Remnant

The remains of a destroyed abode of sinful people. The total destruction of former generations (q.v.) is a historical lesson for contemporary sinners (see SIN, MAJOR AND MINOR), as stated, for example, in Q 19:98: "And how many a generation *(qarn)* have we destroyed before them! Do you see any one of them or hear a sound of them?" (see GEOGRAPHY; HISTORY AND THE QUR'ĀN). Among these extinct sinners there were the peoples of ʿĀd (q.v.) and Thamūd (q.v.) about whom it is declared in Q 69:8 that one cannot see any remnant *(bāqiya)* of them. The Qurʾān emphasizes that God has cut off the last of them (*quṭiʿa dābiru l-qawmi;* see Q 6:45; 7:72), as was the case with the people of Lot (q.v.; Q 15:66).

Although the sinners of old were totally wiped out, God left remnants of their abodes to serve as a lesson for posterity. The lesson is called "a sign" (*āya;* see SIGNS), as is the case in Q 27:52, which deals with the sinners of Thamūd: "So those are their houses fallen down because they were unjust (see JUSTICE AND INJUSTICE). Most surely there is a sign in this for people who know." The desolate abodes *(masākin)* of Thamūd as well as of ʿĀd, which remained after their inhabitants had been destroyed, are mentioned also in Q 29:38 and Q 46:25 (cf. Q 14:45; 28:58). Muḥammad's unbelieving contemporaries actually used to go about among these dwellings (Q 20:128). In further passages, the unbelievers are requested to travel in the land and see what was the end *(ʿāqiba)* of the sinners of old, who, however, are not specifically identified (Q 3:137; 6:11; 12:109; 16:36; 27:69; 30:9; 35:44; 40:21, 82; 47:10; see LIE; GRATITUDE AND INGRATITUDE).

Remnants of the town of Lot (Sodom) also survived and God declares that he has left a clear sign of this town for people who understand (Q 29:35; also Q 32:26; 51:37; see KNOWLEDGE AND LEARNING). The Qurʾān stresses that the remnants of Lot's town can be seen by Muḥammad's unbelieving contemporaries who pass by when they go about their business in the land (Q 25:40; 37:137). They can see these remnants because they overlook the main road (Q 15:76). This applies also to the remains of the city of al-Ayka (Q 15:79; see PEOPLE OF THE THICKET). Remnants of Noah's (q.v.) ark (q.v.) could also be seen, as is implied in Q 54:15. This passage asserts that God left it as a sign.

A different type of remnant is called *baqiyya* (from *b-q-y*, "to remain"), which stands for a divine religious or moral relic that has an everlasting value. Hence in Q 11:116, the phrase *ūlū baqiyya* signifies people possessing such a relic or possessing qualities of religious and moral excellence (see ETHICS AND THE QUR'ĀN). In Q 11:86 the *baqiyya* explicitly belongs to God and emanates from him to his obedient servants (see OBEDIENCE; SERVANT). In Q 2:248 it is evidently material, as it stands for the relics left by the Children of Israel (q.v.) within the ark of the covenant (q.v.; *tābūt*). Muslim exegetes (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL) maintain that these relics included the Tablets, the rod (q.v.) of Moses (q.v.) and the turban of Aaron (q.v.).

Repentance and Penance

Contrition or regret and self-mortification, with the intention of obtaining God's pardon (see FORGIVENESS). Repentance is generally designated in the Qurʾān as *tawba* which basically means "return" (from sin; see SIN, MAJOR AND MINOR). For example, in Q 66:8 God demands of the believers a "sincere return" *(tawbatan naṣūḥan)* and he in turn will make them enter paradise (q.v.). God himself is described as "the accepter of *tawba*" (Q 9:104; 42:25; also Q 40:3: accepter of *tawb*), and this represents a crucial aspect of his compassion for the believers (see MERCY). Repentance can, however, only be accepted as long as one remains a believer (see BELIEF AND UNBELIEF; FAITH). Q 3:90 asserts that "those who disbelieve after their believing then increase in disbelief, their repentance *(tawbatuhum)* shall not be accepted and these are they who go astray (q.v.; see also ERROR)." Similarly, the repentance of unbelievers that has been postponed till the last moment of life is doomed to rejection (Q 4:18; see DEATH AND THE DEAD).

But the term *tawba* may denote not just human "return" from sin but also God's "return" (from wrath; see ANGER). This is the case in Q 4:92, in which a Muslim guilty of unintentional murder (q.v.; see also BLOODSHED) is demanded to fulfill some duties, including the payment of blood money (q.v.), which are imposed on him in order to gain God's *tawba* (see RETALIATION). The blood money forms part of the sinner's penance and, as will be shown below, there are other references to penance in the Qurʾān although repentance is mostly answered with forgiveness, without any allusion to specific penance.

Another key term is *tawwāb,* which, like *tawba,* has a two-fold function. On the one hand, it describes humans who repent repeatedly (cf. Q 2:222) but in most cases it stands for God who is willing to accept a human being's repentance. In the verses applying this epithet to God (see GOD AND HIS ATTRIBUTES), his merciful response is promised to the Prophet himself (Q 110:3) as well as to Muslims who have acted unjustly towards other Muslims (see JUSTICE AND INJUSTICE), mainly through slander and spying (Q 24:11; 49:12; see GOSSIP) or disobedience (q.v.) to the Prophet on legal matters (Q 4:64 f.; see OBEDIENCE; LAW AND THE QURʾĀN; AUTHORITY) or stayed behind the fighting (q.v.) ranks (Q 9:118; see RANKS AND ORDERS; WAR; EXPEDITIONS AND BATTLES), etc.

Another form connected with repentance is *tāʾibūn,* which designates persons who repent, as is the case in Q 9:112. This verse provides a list of basic characteristics of the ideal Muslim and the fact that repentance is included in the list means that a believer must always be on guard with respect to his or her unblemished virtues (see VIRTUES AND VICES, COMMANDING AND FORBIDDING). This applies also to Muḥammad's wives, as indicated in Q 66:5 (*tāʾibāt;* see WIVES OF THE PROPHET).

In many other passages the idea of repentance is conveyed by the verb *tāba,* with its various tenses. Here again, a two-fold function is discernible. On the one hand, *tāba* (with *ilā*) denotes returning from sin to God and, on the other (with *ʿalā*), it signifies God's returning from wrath to forgiveness. When denoting human repentance, *tāba* is not necessarily confined to believers and may also allude to unbelievers acting against the Muslims. In their case, returning to God means simply embracing Islam (q.v.; Q 19:60; 25:70-1). This is the only option open to them, other than death (Q 5:34; 9:3, 5, 11) or being punished on the day of judgment (Q 11:3; 28:67; 85:10; see LAST JUDGMENT; REWARD AND PUNISHMENT; CHASTISEMENT AND PUNISHMENT). The fact that repentance may mean

embracing Islam comes out most clearly in the fact that those who have followed the Prophet are called in Q 11:112 "those who have returned *(man tāba)*." Similarly, in Q 40:7, the angels beseech God to pardon those who have returned (*tābū,* i.e. to him) and followed his way and to save them from the punishment of hell (see HELL AND HELLFIRE; ANGEL; INTERCESSION). Repentance is also offered to the hypocrites (*munāfiqūn;* see HYPOCRITES AND HYPOCRISY), in which case it means restoring their faith (q.v.) to its proper sincerity. Otherwise they, too, are condemned to hell (Q 4:145-6; 9:74). The same fate awaits apostates if they do not repent (Q 3:86-9; see APOSTASY; BOUNDARIES AND PRECEPTS). When referring to the believers, the verb *tāba* means mainly desisting from all kinds of sins against other believers, such as slander (Q 24:4-5; 66:3-4) or finding fault with each other (Q 49:11) or accepting usury (q.v.; Q 2:278-9). The repentance of the believers is also accepted in cases of unintentional crimes (Q 4:17; 6:54; 16:119).

Generally speaking, the believer's repentance is considered a constant state of self-trial and improvement, therefore the need to repent is relevant at all stages of life. For example, in Q 46:15, one is requested to "return" to God when one is forty years old, i.e. has reached the peak of one's abilities (see MATURITY). In the same vein, in Q 24:31 God addresses all believers, saying: "return *(tūbū)* to God all of you, O believers, so that you may be successful" (see VICTORY). As noted above, the verb *tāba* (with *ʿalā*) also signifies God's returning from wrath to forgiveness (e.g. Q 3:128; 33:24), and his mercy is reserved mainly for believers. For this reason *tāba* may occur in contradistinction to the punishment awaiting the hypocrites and the unbelievers (Q 33:73; see also Q 9:14-5, 27, 101-2, 106).

It should be observed that there is a mutual dependence between God's mercy, as conveyed by the verb *tāba,* and the believer's repentance, which is conveyed by the same verb. This comes out explicitly in Q 5:39: "Whoever returns *(tāba)* after his iniquity and reforms [himself], then surely God will return to him" (*yatūbu ʿalayhi;* see also Q 2:160). God's mercy is sometimes the first cause that generates repentance, as appears to be the case in Q 4:26-7: "God desires to explain to you, and to guide you into the ways of those before you, and to return unto you *(wa-yatūba ʿalaykum)*." Some exegetes explain that God guides and "returns" to the believer so that the latter may see the way leading to repentance (Ibn al-Jawzī, *Zād,* ii, 59, from al-Zajjāj: *yurīdu an yadullakum ʿalā mā yakūnu sababan li-tawbatikum;* see also PATH OR WAY; FREEDOM AND PREDESTINATION). This correlation between divine mercy and human repentance is even more explicit in Q 9:118, in which God "returns" to some persons *(tāba ʿalayhim),* so that they might also return (to him; *li-yatūbū*). The verse concludes with the statement that God is *tawwāb,* i.e. willing to accept the believer's repentance (and see also Q 4:16).

The idea of repentance comes out in further passages employing roots synonymous to *t-w-b,* such as *n-w-b,* which always occurs in the fourth form *(anāba),* and denotes "return" (from sin to God). It is usually employed to describe one's desisting from idolatry (see IDOLATRY AND IDOLATERS) and returning to God, so that *anāba* actually means embracing Islam (i.e. Q 39:54; see also Q 30:31, 33; 31:15; 34:9; 39:8, 17; 40:13; 50:8, 33; 60:4). Some verses employing this form bring out yet again the mutual dependence between human repentance and divine mercy and guidance. In Q 13:27 it is stated that God guides towards himself those who return (*anāba;* i.e. to him), which means that return to God is the result of God's willing. The same idea recurs in Q 42:13, which states: "God

chooses for himself whom he pleases, and guides him who returns *(yunību)* towards himself."

The root *a-w-b,* which also means "return," features in the sense of repentance in the form *awwābīn* (Q 17:25). The exegetes usually say that *awwābīn* is identical with *tawwābīn* (for further explanations see Ibn al-Jawzī, *Zād,* v, 26; see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL). This is also how they tend to perceive the form *awwāb* that occurs in Q 50:32. The verb *raja'a,* "return," may also occur in the sense of repentance, in verses dealing with God's "signs" (q.v.; *āyāt*), which are said to have been presented to the people in order that they may "return" (from their sins; Q 7:174), or ones dealing with God's punishment, which is inflicted on sinners for the same purpose (Q 30:41; see REFLECTION AND DELIBERATION; NATURE AS SIGNS; PUNISHMENT STORIES).

Closely associated with the idea of repentance is the idea of desisting from sin, as conveyed by the verb *intahā* (with *'an*). Desisting from sin is demanded in many passages that promise a reward for those who desist and a punishment for those who do not. Some of these passages address the Christians in particular (see CHRISTIANS AND CHRISTIANITY). The latter are entreated to desist from believing in the divinity of Jesus (q.v.): if they do so, this would be better for them (Q 4:171), but if they do not, punishment awaits them (Q 5:73; see POLEMIC AND POLEMICAL LANGUAGE). Other passages demand that the idolaters desist from disbelief and from persecuting the believers, which will assure them God's forgiveness (Q 2:192-3; 8:19, 38-9; see OPPOSITION TO MUḤAMMAD).

The Qur'ān allots a significant place to historical precedents of repentance, with a view to edifying Muḥammad's contemporaries (see HISTORY AND THE QUR'ĀN; OCCASIONS OF REVELATION; REVELATION AND INSPIRATION). Such a precedent appears, to begin with, in the story of Cain and Abel (q.v.), which is recounted in the Qur'ān without mentioning the names of the two. In Q 5:31 Cain is said to have become "of those who regret" *(mina l-nādimīn),* and the exegetes maintain that regret is usually a sign of repentance *(tawba)*. They wonder, however, why Cain's regret was not accepted, and provide various answers, one of which is that regret is considered repentance only with Muslims, but not with sinners of earlier generations (q.v.; Ibn al-Jawzī, *Zād,* ii, 339). Further precedents emerge in passages recounting the history of the Children of Israel (q.v.). The passages relating to the Israelites employ the root *t-w-b,* as is the case in Q 20:81-2, where God warns the Israelites against sin and promises to forgive those who "return" *(tāba)*. As indicated in Q 7:152-3, the sin of the Israelites, from which they must "return," is the making of the golden calf (see CALF OF GOLD). The demand for them to repent following this sin, as formulated in Q 2:54, brings out clearly the mutual dependence of divine mercy and repentance: "return *(tūbū)* to your creator and kill each other, that is best for you with your creator: then [God] returned unto you *(fa-tāba 'alaykum),* for surely he is the *tawwāb,* the merciful." The command "kill each other" represents the penance imposed by God, and he has responded to it with mercy, as indicated in the fact that he is described as *tawwāb*. In another version of the affair of the golden calf, the Children of Israel repent on their own accord after having made the image (see IDOLS AND IMAGES). Their regret is conveyed by a special idiomatic phrase: *suqiṭa fī aydīhim* (Q 7:149), i.e. "[remorse] was made to fall upon their hands." Another precedent is provided in Q 2:58-9 and reiterated in Q 7:161-2. Before entering the holy land (see SYRIA; JERUSALEM; PROFANE AND SACRED), the Israelites are requested to enter the gate (of a city there)

while prostrating themselves and are commanded to say *ḥiṭṭa* (See Rubin, *Between Bible,* 83-99), so that God may forgive them their sins. This is the penance that God imposes on them but they say another word instead and are therefore destroyed by a pestilence from heaven. Another community which has repented is the people of Jonah (q.v.). They are mentioned in Q 10:98, where it is stated that they were the only (sinful) people whose (return to) belief helped them gain God's mercy.

The Qurʾān gleans precedents of repentance not only from the history of sinful nations but also from the history of some prophets (see PROPHETS AND PROPHETHOOD). In their case, repentance serves as a model that every pious believer should follow. To begin with, in Q 2:37 Adam is said to have received (some) words from his lord, so God "returned" unto him *(tāba ʿalayhi),* because God is *tawwāb* and merciful (see ADAM AND EVE; FALL OF MAN). The words given to Adam appear to represent the penance imposed on him, i.e. words of repentance, to which God, the *tawwāb,* has responded with mercy. The mutual aspect of the "return" in the case of Adam reappears in Q 20:122, where it is stated that God chose Adam, turned unto him *(tāba)* and guided (him). The exegetes explain that God guided Adam by showing him how to return (Ibn al-Jawzī, *Zād,* v, 330). In the case of Abraham (q.v.) and Ishmael (q.v.), no sin is mentioned in the Qurʾān for which God had to forgive them; nevertheless they pray to God in Q 2:128 that he may return to them (*wa-tub ʿalaynā;* see PRAYER). Some exegetes explain that they had committed some unintentional misdeeds, or that they were asking merely out of modesty and as a lesson to their posterity (Bayḍāwī, *Anwār,* ad loc.). Indeed, in Q 43:28, Abraham's words in which he renounces his father's idolatry are said to have been preserved as an example for his posterity, that they may return *(yarjiʿūna)* from their sins. As for Abraham himself, his penitent "return" is mentioned in Q 11:75, where he is said to have been a *munīb,* which again does not refer to any specific sin, but merely indicates his constant self-reforming. Moses (q.v.), however, has a specific reason for repentance, which is spelled out in Q 7:143. He was bold enough to ask God to reveal himself to him. After having fallen down in a swoon, Moses recovers and states his penitent "return" *(tubtu)* to God. Shuʿayb (q.v.) states in Q 11:88 that he "returns" *(unīb)* to God, which seems to mean that he too is in a state of constant self-reforming. The same applies to David (q.v.) who is described in Q 38:17 as *awwāb*. Elsewhere (Q 38:24), David is said to have sought his lord's forgiveness and to have fallen down in prostration (see BOWING AND PROSTRATION) and to have returned *(anāba)*. Here, the exegetes explain, David repents his sin with Uriah's wife, and the Qurʾān itself says that God has finally forgiven him (Q 38:25). Solomon (q.v.) is described in Q 38:30 as *awwāb* and the exegetes note that here the term refers to "return" from minor unintentional misdeeds (Ibn al-Jawzī, *Zād,* vii, 127). A few verses later (Q 38:34) Solomon is said to have "returned" *(anāba),* and some exegetes say that his sin here was that he preferred the good things to prayer, as stated in Q 38:32 (ibid., vii, 133). Job (q.v.), too, is described in Q 38:44 as repenting, being referred to as *awwāb*. The exegetes explain that his "return" meant that in spite of his terrible sufferings (see TRIAL; TRUST AND PATIENCE; SUFFERING) he continued to obey his lord (Bayḍāwī, *Anwār,* ad loc.). Dhū l-Nūn, i.e. Jonah, repents after having tried to avoid his prophetic mission. Although it is never stated explicitly that he repented, he nevertheless utters words of remorse when saying to God in Q 21:87: "There is no god but you, glory be to you (see GLORIFICATION OF GOD); surely I am

of those who have been of the evil-doers (*zālimīn;* see EVIL DEEDS; GOOD AND EVIL)." God responds to his repentance with mercy and delivers him from his grief (Q 21:88; see JOY AND MISERY).

The prophet Muḥammad himself is associated in the Qurʾān with the theme of repentance. Q 9:117 states that God has "returned" *(tāba)* to the Prophet as well as to his Companions (see COMPANIONS OF THE PROPHET), after "the hearts of some of them were about to deviate" (see HEART). The exegetes explain that God only "returned" from his anger with the Companions, and that Muḥammad is mentioned with them only because he was the reason for their repentance (Ibn al-Jawzī, *Zād,* iii, 511). Here, too, the exegetes assume a mutual dependence between divine mercy and repentance, Muḥammad being regarded as an agent of the divine mercy that generates repentance. In Q 42:10, the Prophet states that he relies on God and returns *(unību)* to him. The exegetes explain that returning unto God means here turning to him at times of distress. Hence repentance is mentioned here in the sense of seeking God's help.

The theme of repentance emerges also in the eschatological sphere (see ESCHATOLOGY), where it is always futile. In some of the relevant passages the sinners ask God for a respite before being punished in hell, so that they can amend their ways and become believers (Q 14:44; 63:10). But, as asserted in Q 44:15, even if given a respite, they will surely return (to evil). In other passages, the repenting sinners who have already been resurrected for the final judgment, ask in vain to be returned to this world to become believers (Q 6:27; 7:53; 26:102; 32:12; 35:37; 39:58; 42:44; 23:99; see RESURRECTION). Some of the passages use the term *ḥasra* (pl. *ḥasarāt*), "regret," to convey the remorse of the hopeless sinners for failing to repent while they were still living their first life (Q 2:167). Accordingly, the day of resurrection is called "the day of regret" (Q 19:39). Their (hopeless) regret on that day is also referred to as *nadāma* (Q 10:54; 34:33).

As for repentance in post-qurʾānic literature, a good overview can be gained from Ibn Qudāma's (d. 690/1291) *Kitāb al-Tawwābīn*. Apart from chapters revolving around the qurʾānic instances of repentance, there are also numerous chapters containing edifying folk tales praising the pious repentance of figures from among the Children of Israel, as well as from the pre-Islamic Arabs (see PRE-ISLAMIC ARABIA AND THE QURʾĀN; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC). Further, there are also traditions about Companions of the Prophet and other ascetics of the first Islamic eras (see ASCETICISM). For repentance among the Ṣūfīs and the Shīʿīs (see ṢŪFISM AND THE QURʾĀN; SHĪʿISM AND THE QURʾĀN), see Ayoub, Repentance.

Responsibility

The relation of an agent to a norm-giving and evaluative instance. It consists of the

imposition of a set of norms, action in regards to these norms, and the assessment of the committed acts according to these norms with any consequences that might ensue. The idea of responsibility is a central feature of social activities, law, ethics and religion (q.v.; see also LAW AND THE QUR'ĀN; ETHICS AND THE QUR'ĀN; SOCIAL INTERACTIONS).

As a result of the complexity of the concept of responsibility, there are several Arabic terms relating to different aspects of it. The common Arabic term for "responsibility," *mas'ūliyya,* is an abstract noun derived from the passive participle of *sa'ala,* "to ask." Although the Qur'ān uses forms of *sa'ala* or the passive *su'ila* in the sense of "to hold responsible" and "to be made responsible," respectively (e.g. Q 7:6; 15:92; 16:93; 21:23; 29:13; 37:24), the term *mas'ūliyya* itself is not classical; lexicographical references probably cannot be found before the nineteenth century (cf. Fleischer, *Kleinere Schriften,* ii, 549; see ARABIC LANGUAGE). In Islamic law *ḍamān* or *kafāla* denote civic responsibility in general, and the responsibility of surety in the law of obligations in particular. The terms with which the notion of responsibility is usually discussed in the field of Islamic theology (see THEOLOGY AND THE QUR'ĀN) are *taklīf,* "imposition," on the part of God, and *kasb,* "acquisition," on the part of man (see REWARD AND PUNISHMENT; CHASTISEMENT AND PUNISHMENT). The verb *kallafa,* "to impose" (of which *taklīf* is the verbal noun), is used in a nearly stereotyped wording in seven qur'ānic verses (see below). And though the word *taklīf* does not occur in the Qur'ān, it was used as early as the time of Abū Ḥanīfa (d. 150/767) as a technical term for the religious obligation that is incumbent upon humans (cf. van Ess, *TG,* i, 207). On the other hand, *kasb* is the verbal noun of *kasaba,* "to acquire," which often appears in the Qur'ān (see below). In theology, *kasb* was first used by Ḍirār b. ʿAmr (d. 200/815) to denote the role the individual plays in his or her actions (see Ashʿarī, *Maqālāt,* 408; see FREEDOM AND PREDESTINATION).

The structure of responsibility in the Qur'ān

In the Qur'ān, the idea of responsibility is the core of the relationship between humans and God. Time and again, the Qur'ān promises abundant reward to those who believe in God (see BELIEF AND UNBELIEF) and do the deeds of righteousness (*alladhīna āmanū wa-ʿamilū l-ṣāliḥāt,* e.g. Q 2:25; 5:9; 10:9; 18:107 f.; 24:55; 98:7 f.; see GOOD DEEDS). That this differentiation between belief and deeds (see FAITH) is more than mere rhetoric (see RHETORIC AND THE QUR'ĀN) is evident from the different valences which are thereby established: Those who believe, but do not comply with specific divine commands, can still hope to be saved, provided that they repent honestly (e.g. Q 4:31; 20:82; 25:70; 29:7; 42:25; 47:2; see REPENTANCE AND PENANCE), while those who do not believe are definitely condemned to hell (see HELL AND HELLFIRE), no matter what they do (e.g. Q 3:21-2; 5:5; 6:88; 14:18; 18:105; 47:1; see FORGIVENESS). Responsibility, therefore, comprises two distinct levels. The basis is God's demand for belief. Given divine omnipotence (see POWER AND IMPOTENCE), this demand tolerates no refusal. There is no neutral position for the human being in the face of it, but only the choice between "the way of God" (*sabīl Allāh,* a metaphor that occurs more than a hundred times, cf. also Q 1:6; 2:142, etc. for similar metaphors; see PATH OR WAY) and "the way of error" (q.v; *sabīl al-ghayy,* Q 7:146; cf. 4:76; 6:55; 7:142; 10:89, etc. for variants: i.e. "the way of sinners," etc.; see also ASTRAY; SIN, MAJOR AND MINOR; DEVIL). But while the decision to reject belief will inevitably lead the individual to eternal torture (see

ETERNITY), the decision to believe does not automatically result in heavenly reward (see PARADISE). It only opens a second level of human responsibility before God. Belief, in this context, is the individual's recognition of God's authority (q.v.), i.e. the willingness to act according to God's norms and to accept his judgment regarding one's conduct (see LAST JUDGMENT; HEAVENLY BOOK). This two-fold nature of responsibility in the Qurʾān gave rise to the controversial discussions of later Islamic theologians about the concepts of "faith" *(īmān)* and "works" *(aʿmāl)*.

Responsibility and free will

The Qurʾān repeatedly emphasizes that on the day of judgment each person will be responsible exclusively for his or her own deeds (e.g. Q 6:164; 17:15; 34:25; 39:7; see INTERCESSION). The attribution of an act to a person, however, presupposes freedom of will. It is well known that there are verses in the Qurʾān that support the assumption that humans are endowed with free will (e.g. Q 18:28; 73:19; 79:37 f.; 88:23 f.), while others suggest determinism and thus seem to exclude the possibility of human responsibility (e.g. Q 13:27; 14:14; 35:8; 42:46). Certainly, the tension between human freedom and God's omnipotence can be understood as a fundamental characteristic of monotheism. The Qurʾān, however, largely associates these opposite notions with an idea that was already held in rabbinic Judaism: God guides the believers and leads the unbelievers astray, meaning that he merely reinforces already existing tendencies (e.g. Q 14:27; 18:57; 19:75 f.; 36:7 f.; 59:19; 92:4 f.; cf. Q 2:81 and 83:14, where sin is described as enclosing man and lying like rust on his heart [q.v.], respectively). Yet, there is no definitive orientation since a believer may apostatize and God may grant undeserved grace (q.v.; see also BLESSING; APOSTASY). Within the scope of this idea, the verbs *kasaba* (forty-nine times) and *iktasaba* (three times, at Q 2:286; 24:11; 33:58), literally "to acquire," metaphorically express the idea that individuals incur the moral responsibility for their own acts — good or bad — and that they will be rewarded or punished for them, as in, for instance, Q 2:281: "And fear (q.v.) a day wherein you shall be returned to God, then every soul shall be paid in full what it has earned *(mā kasabat);* and they shall not be wronged."

The notion of responsibility in Islamic theology

Islamic theologians ordinarily dealt with the question of responsibility in the context of their teachings concerning either God's justice (see JUSTICE AND INJUSTICE) or his omnipotence. Thus, the Muʿtazila (see MUʿTAZILĪS) deduced from their basic doctrine of God's justice *(ʿadl)* that the determinant motive for God's action towards humanity is the latter's benefit or even highest benefit (*ṣalāḥ* or *aṣlaḥ*). And, since God's imposition of his law *(taklīf)* is a means to a supreme good, i.e. heavenly reward, it is in itself a benefit and therefore necessary. Further, it is incompatible with God's justice that he should impose upon people that which is impracticable *(taklīf mā lā yuṭāq)*. In this respect, the Muʿtazila referred to Q 2:286: "God does not charge *(lā yukallifu)* any soul save to its capacity" (*wusʿahā;* cf. Q 2:233; 6:152; 7:42; 23:62; 65:7; also Q 4:84). Therefore, according to the Muʿtazila, for *taklīf* to be in force, three conditions must be met: People need knowledge *(maʿrifa)* about the obligation that is incumbent upon them; they must have freedom of choice *(ikhtiyār)* whether to obey or to disobey (see OBEDIENCE; DISOBEDIENCE); and, finally, they have to possess the capacity to act *(istiṭāʿa)* to implement their decisions. Since *taklīf* is a benefit, however, it must be possible for everyone to meet each of these conditions. Thus, the central problem for the Muʿtazila concerning the notion of responsibility

was "the obligation to something unknown" *(al-taklīf bi-mā lā yuʿlam),* i.e. how can someone, who has not even heard about God, acquire the knowledge about his or her obligation? Most Muʿtazilīs found the solution in the idea that such a person, startled by a sudden suspicion *(khāṭir)* that there might be a God who will punish him or her if no gratitude is shown, begins to reflect upon the contingency of the world. The individual then realizes the existence of the world's creator and the possibility that he imposes commands upon humans (see CREATION; VIRTUES AND VICES, COMMANDING AND FORBIDDING). By further reflection, people will discern that there are obligations which can be deduced by reason alone *(taklīf ʿaqlī)* — especially the principles of ethics — and that there might be others which can only be known through revelation (*taklīf samʿī* or *sharʿī,* see REVELATION AND INSPIRATION) and about which they have to make additional inquiries — as about regulations of cult (see RITUAL AND THE QURʾĀN; RELIGIOUS PLURALISM AND THE QURʾĀN).

By contrast, the Ashʿarīs treated the idea of responsibility from the perspective of God's omnipotence. This becomes clear in their definition of the just act *(ʿadl)* as an act that one is entitled to do *(fiʿl mā lil-fāʿil an yafʿalahu):* Inasmuch as God is unrestricted in his omnipotence, everything he does is just. He may pardon the unbeliever and he does not have to reward the believer. Therefore, *taklīf* establishes no causal connection between belief and reward or unbelief and punishment, as it does in Muʿtazilī theology. It is not even necessary that everybody should know about *taklīf.* Certainly, knowledge about God can be acquired by reason but there is no obligation to reflect. *Taklīf* is valid only if one hears about it and, so, the paradox of an "obligation to something unknown" is not a major problem for the Ashʿarīs. Their understanding of God's omnipotence implies that, since there is no creator save him, he also creates human acts *(khāliq afʿāl al-ʿibād).* Thus, to secure the possibility of attributing acts to humans, the Ashʿarīs developed the concept of "acquisition" *(kasb):* Together with the act, God creates in each person a "temporary ability" *(qudra muḥdatha),* on the basis of which the individual "acquires" *(kasaba)* the act and is made responsible for it. Al-Baghdādī (d. 429/1037; *Farq,* 328) condensed this concept into the formula: "[The person] acquires his act *(muktasib li-ʿamalihi)* and God creates his acquisition *(khāliq li-kasbihi).*" The question whether the existence of this "temporary ability" is the only condition for the attribution of an act to an individual or whether further elements are required, too — like the person's knowledge of the act *(ʿilm)* and the will to act *(irāda)* which are, however, equally created by God — remained a debatable issue for the Ashʿarīs. Because the *kasb* concept implies that God can impose an act upon someone while not creating in that person the necessary ability to carry it out, the Ashʿarīs defended the reality of the "imposition of something that cannot be done" *(taklīf mā lā yuṭāq).* Yet, although they would not regard God's hypothetical imposition of something that is humanly unfeasible as nonsensical *(ʿabath; safah),* they nevertheless asserted that it does not happen.

see SLEEP; SABBATH

Resurrection

The "rising again" of all the human dead before the final judgment. The expression "day of resurrection" *(yawm al-qiyāma)* occurs seventy times in the Qurʾān (although the concept of "rising" — from the triliteral root *q-w-m* — is not limited to this eschatological sense; it is also employed in other instances, with a wider range of meanings). The resurrection of dead human bodies (see DEATH AND THE DEAD; BURIAL) follows the annihilation of all creatures *(al-fanāʾ al-muṭlaq)* and precedes the "day of judgment" (*yawm al-dīn*, thirteen attestations in the Qurʾān; see LAST JUDGMENT) or the "day of reckoning" (*yawm al-ḥisāb*, with four mentions: Q 38:16, 26, 53; 40:27; see ESCHATOLOGY; WEIGHTS AND MEASURES). There will be the last "hour" *(al-sāʿa)* and people will be "gathered." "On the day when the earth shall be cleft off from them, [they will come out] hastening forth. That will be a gathering" (*ḥashr*, Q 50:44). "As such (will be) the resurrection" (*al-nushūr*, Q 35:9).

The "last hour" (forty-eight occurrences) is frequently announced in the Qurʾān, and its establishment is assured (Q 30:55). "The hour is their appointed time, and the hour will be more grievous and more bitter" (Q 54:46). Only God knows its actual "appointed time": "Say: The knowledge thereof is with my lord (q.v.). None can reveal its time but he" (Q 7:187; cf. 31:34), but "It may be that the hour is near!" (Q 33:63). As for the signs (q.v.) of the hour — "Some of the signs of your lord should come" (Q 6:158) — the Islamic tradition, in its apocalyptic literature, has always proposed a list of ten signs (see APOCALYPSE): the coming of the smoke (q.v.; *dukhān*), of the deceiver (*dajjāl;* see ANTICHRIST), and of the beast *(dābba)*, the rising of the sun (q.v.) from the west, the return of Jesus (q.v.), the "great mischief" of Gog and Magog (q.v.) in the land, the earthquakes in the east, in the west, and in Arabia, and finally the fire (q.v.). Three of these signs occur in the Qurʾān and the others are often described in the sunna (q.v.) and in eschatological traditions. As for the smoke, the Qurʾān says: "Then wait you for the day when the sky will bring forth a visible smoke, covering the people…. On the day when we shall seize you with the greatest seizure. Verily, we will exact retribution" (Q 44:10-6). The beast is announced in Q 27:82: "When the word [of torment; see CHASTISEMENT AND PUNISHMENT; REWARD AND PUNISHMENT] is fulfilled against them, we shall bring out from the earth a beast for them, to speak to them because humankind believed not with certainty in our signs." Finally, Gog and Magog are the third of these three apocalyptic signs mentioned in the Qurʾān: When Gog and Magog, the apocalyptic people, "are let loose [from their barrier], and they swoop down from every mound" (Q 21:96), "on that day, we shall leave them to surge like waves on one another, and the trumpet *(al-ṣūr)* will be blown, and we shall

collect them [the creatures] all together" (Q 18:99).

Sūra 99, "The Earthquake," describes very well the last events of history: "When the earth is shaken with its [final] earthquake, and when the earth throws out its burdens, and humankind will say: 'What is the matter with it?' That day it will declare its information, because your lord will inspire it. That day people will proceed in scattered groups that they may be shown their deeds (see GOOD DEEDS; EVIL DEEDS; HEAVENLY BOOK). So whoever does good equal to the weight of an atom shall see it, and whoever does evil equal to the weight of an atom shall see it" (Q 99:1-8; see GOOD AND EVIL). Then, it is said, "listen on the day when the caller will call from a near place, the day when they will hear the shout *(al-ṣayḥa)* in truth: that will be the day of coming out [from the graves]" (Q 50:41-2). God will gather people (Q 50:44) together (Q 10:45), the believers and the disbelievers alike (Q 19:85; 20:102; see BELIEF AND UNBELIEF), the jinn (q.v.) and the angels (see ANGEL), for a universal gathering. And it is only on "that day" that "some faces shall be shining and radiant *(nāḍira)* looking *(nāẓira)* at their lord" (Q 75:22-3; see FACE OF GOD).

The qurʾānic arguments in support of the resurrection of the body, and not only the "return" of spiritual souls (*maʿād,* Q 28:85), could be described as follows: the resurrection represents a new creation (q.v.) on the part of the all-powerful God (Q 17:49; 18:48; 21:104; 27:64; 53:47; 29:19; 30:27; 75:40; 86:5-8; see POWER AND IMPOTENCE), a revivification of the soil and its production of vegetables and fruits (Q 6:95; 7:57; 10:31; 30:19; 35:9; 50:11; see AGRICULTURE AND VEGETATION), and includes the reviving of dead people by God, as in the case of the "seven sleepers" (Q 18:9-25; see MEN OF THE CAVE). But two other terms are also important in the Qurʾān. Resurrection is also called the "raising up" (*baʿth,* which occurs fourteen times) of people by God. People are in doubt about "the day of resurrection" (*yawm al-baʿth,* Q 30:56; cf. 16:21; 22:5; 31:28), but "God will raise them up, then to him they will be returned" (Q 6:36; cf. 58:6, 18). Twice in the Qurʾān human life is depicted in three stages (see BIOLOGY AS THE CREATION AND STAGES OF LIFE): "Peace be on him (i.e. John [Yaḥyā]; see JOHN THE BAPTIST) the day he was born, and the day he dies, and the day he will be raised up alive" (Q 19:15) and "Peace be on me (i.e. Jesus) the day I was born, and the day I die, and the day I shall be raised alive" (Q 19:33). And Jesus himself states that "I bring the dead to life by God's leave" (Q 3:49; cf. 5:110; see MIRACLES; MARVELS). So resurrection is also the gift of life (q.v.; *ḥayāt*) because God himself is "the living one, the ever subsistent" (Q 2:255; see GOD AND HIS ATTRIBUTES): "You were dead and he gave you life. Then he will give you death, then again will bring you to life [on the day of resurrection] and then unto him you will return" (Q 2:28; cf. 22:66; 30:40). Many times God is qualified in the Islamic tradition as the "giver of life" *(muḥyī)* and the "giver of death" *(mumīt)* because in the Qurʾān one reads "God makes people live and die" (*Allāhu yuḥyī wa-yumītu,* e.g. Q 3:156; cf. 41:39).

Retaliation

Act of returning like for like. The Arabic term usually rendered as "retaliation" is *qiṣāṣ,* although *qiṣāṣ* also means punishment for a wrongful act (see CHASTISEMENT AND PUNISHMENT; EVIL DEEDS). The Qurʾān mentions *qiṣāṣ* on several occasions, mostly in the sense of punishment for murder (q.v.) or physical injury and once in the sense of retaliation or reprisal for a wrongful act. In Sūrat al-Baqara (Q 2, "The Cow") the Qurʾān affirms the pre-Islamic practice of considering certain months (q.v.) in the year to be sanctified (see PROFANE AND SACRED) and, therefore, of prohibiting warfare (see WAR; FIGHTING) and the shedding of blood for the duration of these months (see BLOODSHED). The Qurʾān, however, states that *qiṣāṣ,* in the sense of retaliation or reprisal, is permitted during these months if the Muslims are attacked first. Although, according to the Qurʾān, these months are sanctified, Muslims may respond in kind if attacked (Q 2:194). Earlier in the same sūra, the Qurʾān uses the word *qiṣāṣ* in the sense of punishment or retaliation, but in a very different context. Addressing the case of murder, the Qurʾān prescribes proportionality between the crime and the punishment (Q 2:178). Muslim scholars took this to mean that the pre-Islamic practice of tribal feuding and disproportionate retaliation for the killing of noblemen or tribal chiefs was abrogated (Jaṣṣāṣ, *Aḥkām,* i, 164; Ibn al-ʿArabī, *Aḥkām,* i, 89-100; ii, 128). The Qurʾān mandates that no more than a single life be taken for another, but it also urges the next of kin (see KINSHIP) to show forgiveness (q.v.) towards the offender by dropping the demand for retaliation. Instead, the next of kin may accept compensation, which according to the Qurʾān must be paid promptly and with gratitude (see BLOOD MONEY; GRATITUDE AND INGRATITUDE). The Qurʾān also asserts a general principle, namely that the implementation of the rule of *qiṣāṣ* would preserve and protect life (Q 2:179). The meaning and import of this assertion has been the subject of a wide debate among Qurʾān commentators. Some argued that the Qurʾān meant to affirm the importance of proportionality between the crime and punishment (see JUSTICE AND INJUSTICE), while others, especially modern commentators, argued that the Qurʾān meant to emphasize that a strict penal law helps emphasize the value of life and protect the interests of society (Quṭb, *Ẓilāl,* ii, 162-77; Ṭabarī, *Tafsīr,* ii, 102-15; see LAW AND THE QURʾĀN; EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY). In a different sūra, the Qurʾān references *qiṣāṣ* as punishment for intentional physical injuries. The Qurʾān states that God had prescribed for the Israelites that a life is for a life, an eye is for an eye and a tooth is for a tooth and that there should be an equal punishment for all injuries (see LIFE; EYES; TEETH). The Qurʾān goes on to say that whoever forgives and does not demand an exact punishment will be rewarded by God (Q 5:45; see REWARD AND PUNISHMENT).

Relying, in part, on these qurʾānic verses, pre-modern jurists developed a law of talion that, in significant respects, was similar to the rules of *lex talionis* in Roman law and the rules prevalent in Germanic and Anglo-Saxon law as well as other ancient legal systems. According to the rules developed by pre-modern Muslim jurists, there were three possible responses to physical injuries: *qiṣāṣ* (punishment or talion), *diya* (a prescribed blood money amount or wergild paid in compensation for a wrongful death or certain other physical injuries), or forgiveness. *Qiṣāṣ* was possible only in intentional and quasi-intentional killings and physical injuries (quasi-intentional killings would be akin

today to manslaughter and other recklessly induced offenses). The Ḥanafī, Mālikī, and Shāfiʿī schools of law held that in the case of intentional homicide or injury the remedy is *qiṣāṣ* — *diya* is not a co-equal alternative. Consequently, if the heirs of a victim forgive the offender, an automatic right to *diya* does not arise. Nevertheless, *diya* could be payable through a settlement *(ṣulh)* pursuant to which the offender agrees to pay an amount that may be more or less than the specified *diya*. Schools that considered *diya* to be a co-equal alternative to *qiṣāṣ* did not require the offender's consent to paying the *diya;* the choice was entirely that of the victim or the heirs. In effect, according to the first approach, if an intentional or quasi-intentional offense takes place, the victim or his family have one of three choices: (1) demand exaction; (2) reach an agreement with the offender on the amount to be paid, which could be more or less than the legal *diya;* or (3) forgiveness. According to the second school, the victim or relative can demand exaction, the specified amount of the *diya* or forgive. In deliberate injuries, however, a particularly heavy *diya* is prescribed *(diya mughallaẓa)*. *Qiṣāṣ* being applicable only in intentional and quasi-intentional offenses, in the case of accidental injuries, *diya* is the only legal remedy. Even in intentional offenses, however, *diya* might become the only legal recourse if certain legal deficiencies preclude the application of talion. For example, if talion cannot be enforced because strict equality is not achievable, the only option other than an outright pardon is the right to full or partial *diya*. Accordingly, no talion is admitted in the case of fractured bones or if experts testify, in a case not involving murder, that talion is likely to endanger the life of the offender. Furthermore, a right to *diya* is the only recourse if talion is not possible because of certain evidentiary deficiencies. Whether a rule of strict liability or negligence applies to accidental torts is a debated issue. Furthermore, Muslim jurists disagreed on whether in the case of dangerous crimes the state possesses a separate right to punish the offender, regardless of what the victim or heirs decide to do (Ibn Rushd, *Distinguished,* ii, 479-514; Bājī, *Muntaqā,* ix, 3-128; ʿĀmilī, *Lumʿa,* x, 11-320; Shirbīnī, *Mughnī,* iv, 20-138; Kāsānī, *Badāʾiʿ,* vi, 272-414).

Retribution

see REWARD AND PUNISHMENT; RETALIATION

Revelation and Inspiration

The communication of God's knowledge (see KNOWLEDGE AND LEARNING) and will (see POWER AND IMPOTENCE), warning (q.v.) and promise to humanity. The English word "revelation" covers a range of qurʾānic terms, principal among them *waḥy,* "communication" and *tanzīl,* "sending down," with their cognate verbal forms. In the Qurʾān revelation is always mediated, rather than being direct: first, in the sense that it consists in the transmission of a message rather than the "unveiling" of God himself implied by the English word

with its Christian origins and, secondly, because even that message is considered to have been delivered by an intermediary, generally identified as Gabriel (q.v.; Jibrīl). The concept of revelation is central to the nature of the Qurʾān. The Qurʾān itself, however, recognizes the phenomenon as extending beyond prophecy (see PROPHETS AND PROPHETHOOD) and scripture (see BOOK).

Revelation before and beyond scripture

One of the Qurʾān's most insistent claims is that God is constantly offering "signs" (q.v.; *āya,* pl. *āyāt*) that manifest all we need to know. The *āyāt* that constitute God's revelation exist in nature (see NATURE AS SIGNS) and in time (q.v.) before they come to the people as verses (q.v.; also *āyāt*) of scripture. Indeed, the role of the prophetic scriptures is to call people back to the acknowledgment of a truth (q.v.) already expressed in the signs of nature and in the history of God's dealings with humanity (see HISTORY AND THE QURʾĀN). It could be said that there is no essential difference between the verses and the natural or historical signs: all are there to be comprehended by anyone who has the intelligence (q.v.; *ʿaql*) to reflect on them, to acknowledge their truth *(taṣdīq)* and to respond with faithful submission (*īmān, islām;* see FAITH; BELIEF AND UNBELIEF; ISLAM). Many such passages in the Qurʾān cite natural phenomena as symbols pointing to the creator (see CREATION; AGRICULTURE AND VEGETATION). Among the more important are Q 2:164; 3:190-1; 6:95-9; 10:5-7; 13:2-4; 16:10-6, 78-81; 23:21-2; 26:7-8; 27:86, 93; 29:44; 30:20-8, 46; 32:27; 34:9; 36:33-47, 39:21; 41:37, 39, 53; 42:29-34; 45:1-6, 12-13; 50:6-11; 51:20.

Historical events, too, are among the "signs" of God. The fate of nations that have passed away (*umam qad khalat,* Q 7:38; 46:18; cf. 13:30; 41:25; see GEOGRAPHY; PUNISHMENT STORIES; GENERATIONS) is a warning to people that they should take seriously the message of the Prophet (Q 12:109; 14:13; 23:23-30; 31:31-2; 32:26; 36:13-31; 46:27). In these cases the Qurʾān is not revealing something not already known to everybody; rather, it is pointing to these facts of history as revealing the ways of God and the reality of God's threatened judgment (see LAST JUDGMENT; JUSTICE AND INJUSTICE). On other occasions the revelation consists in God's communicating "tidings of the unseen" (*anbāʾ al-ghayb,* Q 3:44; 11:49; 12:102; see HIDDEN AND THE HIDDEN), details of prophetic history that neither Muḥammad nor his people would otherwise have known.

Scriptural revelation prior to the Qurʾān

In the Qurʾān it is axiomatic that the present revelation contains fundamentally the same message as that given to earlier messengers (see MESSENGER). The believers are expected to accept the revelations given before Muḥammad (Q 2:4, 136; 4:60, 162) since God communicated with those messengers as he has done with Muḥammad: "We revealed to you *(awḥaynā ilayka)* as we revealed to Noah (q.v.) and the prophets after him, and as we revealed to Abraham (q.v.) and Ishmael (q.v.) and Isaac (q.v.) and Jacob (q.v.) and the tribes (see CHILDREN OF ISRAEL), and Jesus (q.v.) and Job (q.v.) and Jonah (q.v.) and Aaron (q.v.) and Solomon (q.v.), and as we granted David (q.v.) the Psalms" (q.v.; Q 4:163); "Say, we believe in God and what has been sent down to us and in what was sent down to Abraham, and Ishmael, and Isaac, and Jacob, and the tribes, and in what Moses (q.v.) and Jesus were given, and in what the prophets were given by their lord (q.v.) — we make no distinction between any of them — and to him do we submit"(Q 2:136). The term that binds together these diverse manifestations of revelation is *kitāb* (pl. *kutub*), "scripture":

"O you who believe, believe in God and his messenger and the *kitāb* that he has sent down to his messenger, and the *kitāb* that he sent down before. Whoever disbelieves in God and his angels (see ANGEL) and his *kutub* and his messengers and the last day has already gone far astray" (q.v.; Q 4:136; see also ERROR).

The Qurʾān sees itself as confirming *(muṣaddiq)* the previous revelations (Q 2:41, 89, 91, 97, 101; 3:3, 39, 81; 4:47; 5:48; 6:92; 10:37; 12:111; 35:31; 46:12, 30) in the same way as Jesus came to confirm the Torah (q.v.; Q 3:50; 5:46; 61:6). This raises a difficulty for the notion of verbal inspiration since the actual text of the Qurʾān is not identical to those of the other extant scriptures (see also GOSPEL; SCRIPTURE AND THE QURʾĀN).

Waḥy

The term *waḥy* occurs in Arabic before the rise of Islam (see PRE-ISLAMIC ARABIA AND THE QURʾĀN). In pre-Islamic poetry (see POETRY AND POETS) the word is occasionally used to refer to writing or scriptures (usually with the connotation of the indistinctness of age and foreignness) but more often to describe the message that can be discerned from the traces of an abandoned campsite or the ruins of a habitation (for example, the beginning of Labīd's *Muʿallaqa: kamā ḍamina l-waḥyu silāmuhā,* "as though its rocks contained the message"). Still other uses by the same poets show that the term *waḥy* is equally applicable to communication by sound or gesture. For example, one of the odes of ʿAlqama uses the verbal form *yūḥī* to describe the "speech" of a male ostrich to his nestlings: "He communicates *(yūḥī)* with them in squeaking and clacking sounds, just as the Greeks in their castles speak to each other in an incomprehensible language" (Ahlwardt, *Divans,* 112, v 26). In the poems of the Hudhayl tribe the noun *waḥy* refers to thunder, and the cognate verb *awḥā* is used for the screeching of an eagle (Lewin, *Vocabulary,* 465; for more examples see Izutsu, *God,* 159-60).

Some western scholars have often wanted to see in the term *waḥy* a connection with writing (for example Goldziher, *MS,* ii, 7 and Nöldeke, *GQ,* ii, 1; see ORALITY AND WRITING IN ARABIA). The evidence, however, is far from convincing. Indeed, as will be seen, Muslim tradition has overwhelmingly described the phenomenon of revelation as auditory (even though sometimes accompanied by visions, for example, in the Qurʾān itself: Q 53:4–18; see ORALITY; VISIONS) and very often lacking verbal clarity. Furthermore, the poets' usage of *waḥy* emphasized indistinctness rather than clarity appropriate to a text that declares itself to be in the clear language of the Arabs (q.v.; *lisān ʿarab mubīn,* Q 16:103; 26:195; see also ARABIC LANGUAGE).

In the Qurʾān itself, while *waḥy* is clearly marked as a religious term, three instances of its use remind us that it has a nonreligious basis and is not solely a divine activity: Zechariah (q.v.) after being struck dumb gestured *(awḥā)* to his companions that they should give praise (q.v.) to God (Q 19:11; see also Q 3:41, where it is said that Zechariah was only able to communicate *ramzan,* "using signs"); and twice the same verb is used to describe the communication that takes place among the demons (*shayāṭīn,* Q 6:112, 121; see DEVIL; JINN). When the verb is used of divine activity, it most often refers to God's communication with his messengers. Others with whom God communicates are Jesus' disciples (Q 5:111; see APOSTLE), the angels (Q 8:12), Moses' mother (Q 20:38; 28:7) Isaac and Jacob (Q 21:72-3) and Noah (Q 23:27). This verb is also used for God's communication with the bee (Q 16:68), the heavens (Q 41:12; see HEAVEN AND SKY; ANIMAL LIFE) and the earth (q.v.; Q 99:5).

It should be noted that *waḥy,* even when addressed to prophets and messengers, is not by any means confined to the revelation of a scriptural text. Out of the seventy-one occurrences of *awḥā,* only three times each are *kitāb* and *qurʾān* the direct object (or the subject of a passive form). The verb *awḥā* is often used without a direct object: a process of communication takes place but what is communicated is left unstated. At the same time, however, the communication is not devoid of content. In many cases the end result is a concrete instruction to be followed, for example, in God's direction of the prophetic career of Moses (Q 7:117, 160; 10:87; 20:48; 20:77; 26:52, 63; see COMMANDMENTS; BOUNDARIES AND PRECEPTS). On other occasions it is doctrinal content (see CREED; THEOLOGY AND THE QURʾĀN): "Say, 'I am only human like you (see IMPECCABILITY). It is revealed *(yūḥā)* to me that your God is only one God. And whoever there may be who looks forward to the encounter with his lord, let him do good work (see GOOD DEEDS) and associate no one else with his lord in worship" (q.v.; Q 18:110; see POLYTHEISM AND ATHEISM; IDOLATRY AND IDOLATERS).

Izutsu (*God,* 180) and Jeffery (Qurʾān, 190-2) both suggest a development of the idea of *waḥy* in the Qurʾān, from an earlier usage suggesting a general inspiration to say or do something, towards a more technical usage where the term applies very specifically to the verbatim revelation of scripture. There may be some truth to this, but it must also be noted that some of the non-scriptural uses occur in what are generally agreed to be late Medinan sūras (for example Q 5:111; 8:12; see CHRONOLOGY AND THE QURʾĀN).

In the interpretation of *waḥy,* Muslim tradition has guarded the distance between the divine and the human. There are, however, some important indications in the text of a more direct communication. In Q 4:164 it is emphatically stated that God spoke to Moses directly *(wa-kallama llāhu Mūsā taklīman),* though some commentators read the accusative *Allāha,* indicating rather that Moses spoke to God directly. Without mentioning the case of Moses, Q 42:51 outlines three exceptions to the general rule that God does not address people: "It is not granted to any mortal that God should address him *(yukallimahu)* except by *waḥy,* or from behind a veil (q.v.), or that he send a messenger who reveals *(yūḥī)* with his permission what he wills. Surely he is exalted, wise." There seems a clear enough distinction between the first exception and the third: in one case the connection is more direct; in the other, God uses an intermediary. In both cases, however, there is revelatory communication. The verse indicates that the Qurʾān envisages a process of revelation that does not involve an angelic go-between. Perhaps the distinction between direct address *(taklīm)* and the kind of communication that took place with the prophets may be found in pre-Islamic usage of the type already alluded to. A common thread of mysteriousness and indecipherability runs through those uses of *waḥy* and *awḥā.* Often a sense of distance, absence and antiquity are implied. Even when the communication is immediate, however, without an angelic intermediary, it is still incomprehensible to the third-person observer. Recall the poet ʿAlqama's clacking ostrich and incomprehensible Greeks.

Waḥy, then, does not seem to be the simple and unambiguous direct address that Wansbrough takes it to be (*QS,* 34-6), though he is surely right to insist on a measure of demystification (see POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QURʾĀN). Nor does *waḥy* have any necessary connection with written communication as many others have suggested. It indicates

a kind of communication that appears impenetrable and perhaps exotic to a third person observing it, yet remains full of meaning for the one receiving it. Given the range of its use, it seems possible, perhaps even preferable, to translate *waḥy* simply as "communication," understanding that it normally refers to divine communication.

The experience of revelation: For the Prophet

The Qurʾān itself tells us little, if anything, about the experience of revelation. The exegetical and historical traditions, on the other hand, have dwelt on the subject in detail, expanding on various suggestive verses of the Qurʾān to piece together a coherent account (see SĪRA AND THE QURʾĀN). The time leading up to the initial experience of revelation for Muḥammad was, according to Muslim tradition, characterized by vivid dreams and portents (Ibn Isḥāq, *Sīra,* 151; Ṭabarī, *Taʾrīkh,* i, 1143-6; id., *History,* vi, 63-7). When the revelation actually begins, one finds a certain vagueness in the tradition about whether the Prophet initially encounters God (as seems to be suggested by Q 53:1-18; see also Ibn Isḥāq, *Sīra,* 150; trans. Ibn Isḥāq-Guillaume, 104-5; Ṭabarī, *Taʾrīkh,* i, 1147; trans. Watt/McDonald, *History,* vi, 67-8, where it is said *al-ḥaqq,* one of the names of God, came to him; see GOD AND HIS ATTRIBUTES) or whether his dealings with the divine are always through the medium of Gabriel. The consensus of the tradition has it that the first words of the Qurʾān to be revealed were the beginnings of sūra 96, when Gabriel came bringing a cloth on which was embroidered the text to be recited. Three times the messenger tells Muḥammad to recite and he answers that he is unable, until finally Gabriel teaches him what to recite, and the words remain with him.

The encounter was physically violent and terrifying to Muḥammad. His reaction of hiding in fear then gave rise to his being addressed by the revelatory voice in Q 74:1 f. (or perhaps Q 73:1 f.). According to some versions, Gabriel first identifies himself and announces Muḥammad's role as messenger before beginning the recitation. In others, it is not until later that the origin and meaning of this terrifying experience is made clear (Ṭabarī, *Taʾrīkh,* i, 1147-50; trans. Watt/McDonald, *History,* vi, 67-72). Commentators distinguish three stages in the life of Muḥammad: *nubuwwa, risāla* and *waḥy* — being a prophet, receiving the commission as a messenger and beginning to receive the revelation he is to pass on. In almost all these accounts there is mention of the Prophet's considering or even attempting suicide (q.v.), either because he thinks he has become a poet or a madman (see INSANITY), or because after the initial encounters the revelations are discontinued (the so-called *fatra*) and he is tempted to think God has rejected him.

The continuing revelations are also depicted in the tradition as often being accompanied by physical effects: a loud ringing sound as of a bell or chain, sweating, pain, fainting, lethargy or trance, turning pale, turning red, becoming physically heavier — perhaps the result of a too literal reading of *qawlan thaqīlan,* "a weighty word," in Q 73:5 (for a listing of traditions referring to these phenomena, see Wensinck/Rippin, Waḥy, 55). It is said in some traditions that the shekhinah (q.v.; *sakīna*) descends upon him in these moments (Fahd, Kāhin, 889).

The Qurʾān itself refers to *waḥy* as sometimes being accompanied by visions. The experience is portrayed as a kind of teaching:

It is nothing other than a revelation *(waḥy)*
that is revealed *(yūḥā)*
One of mighty powers has taught him

one who is vigorous; and he grew clear to view
when he was on the highest horizon
(Q 53:4-7; see also Q 81:23-4).

According to al-Ghazālī (d. 505/1111), one of the differences between the inspiration *(ilhām)* brought by an angel to a mystic (see SAINT; ṢUFISM AND THE QUR'ĀN) and the revelation brought to a prophet is that the prophet actually sees the angel (van Ess, *TG,* iv, 621). Al-Bukhārī (d. 256/870; *Ṣaḥīḥ,* iii, 391-2, *Kitāb Faḍā'il al-Qur'ān, bāb* 1), however, records a tradition to the effect that the angel was also visible on one occasion to Umm Salama, even if Gabriel was not visible to Khadīja (q.v.; Ibn Isḥāq, *Sīra,* 154; see also WIVES OF THE PROPHET).

The experience of revelation: For the people

Apart from the physical effects listed above that the people observed when the Prophet received revelation, there are three important elements to be noted about the people's experience of revelation.

In the first place, the revelation is responsive to the situation in which people find themselves. It does not present itself as a prefabricated text related only in the most general way to the present moment. It is experienced as a living voice, ever on the point of intervening in order to resolve disputes, to clarify issues, to call to faith and to command action. The recurrent pattern "They say x; Say to them y" represents this interactive aspect of the revelation (see for example Q 3:119, 154; 56:47-9; 64:7; 67:25-6). The position of the interlocutors is stated ("they say …"), followed by the response God wishes the Prophet to deliver (often preceded by the command *qul,* "Say! …"). Some Companion ḥadīth (see COMPANIONS OF THE PROPHET; ḤADĪTH AND THE QUR'ĀN) indicate that it was not uncommon for a qur'ānic verse to be revealed in the middle of a dispute among them or in the Prophet's family (see, for example, Ibn Isḥāq, *Sīra,* 735-6; see FAMILY OF THE PROPHET; PEOPLE OF THE HOUSE).

The second aspect of the hearers' experience is that the words are authoritative. The authority (q.v.) of the Prophet rests on the authority of the word he speaks (see SPEECH). Although there are, in the prophetic biography *(sīra),* accounts of miracles (q.v.) performed by Muḥammad, the Muslim community has had an ambivalent attitude toward them. They are often seen as either unfounded reports or, if true, extraneous to the essence of his prophecy. The encounter with the revelation elicits faith not because the authority of the Prophet has already been established by some other means, but because of the power of the word itself. The attesting miracle of the Prophet is understood to be nothing other than the Qur'ān (see INIMITABILITY; NAMES OF THE QUR'ĀN).

One facet of the word's power, and the third important aspect of the hearers' experience, was its aesthetic force, its sheer beauty. The inimitability *(i'jāz)* of the Qur'ān has not only an important apologetic role in the Islamic tradition but it signals, as Navid Kermani (Revelation, 223-4; cf. id., *Gott ist schön*) has pointed out, an essential aspect of the Muslim experience of revelation, in the beginning and even now. The sensual nature of this aesthetic dimension is often undervalued because of the more intellectual approach taken to it in apologetics (see RHETORIC AND THE QUR'ĀN; FORM AND STRUCTURE OF THE QUR'ĀN; LITERARY STRUCTURES OF THE QUR'ĀN; NARRATIVES). It remains, however, an ambiguous element. The Qur'ān's repeated insistence (e.g. Q 15:6-7; 21:5; 26:224; 36:69; 37:36; 44:14; 52:29, 30; 68:2, 51; 69:41, 42; 81:22) that the Prophet is neither a possessed poet nor a diviner (see DIVINATION; FORETELLING; SOOTH-

SAYERS) — as well as the *Sīra*'s reference to his considering suicide because he thought he might have become such — indicates that the impression made on the hearers was plausibly comparable to that made by a poet or soothsayer possessed by a spirit.

Yet it is primarily the source of the words, and only to a much lesser extent their literary style (see LANGUAGE AND STYLE OF THE QUR'ĀN), that makes the difference between the poet, the soothsayer and the prophet. All are, in a certain sense, visionaries, conveying knowledge of the unseen world *(al-ghayb)*. Indeed, Ibn Khaldūn (d. 780/1379) posits a continuum in the preparedness of human beings to receive heavenly perceptions; the prophets are merely at the highest grade in this respect, but soothsayers, too, receive some genuine though incomplete spiritual perception (Ibn Khaldūn-Rosenthal, i, 207-8). Yet the source for the soothsayer is the *shayāṭīn* or the jinn, while the source for the prophet's knowledge is God. The poets and those who dismiss the Qur'ān as being no more than poetry, soothsaying or invention (see LIE) are challenged repeatedly (Q 2:23; 10:38; 11:13; 17:88; 52:34) to bring something equal to it (see PROVOCATION). The challenge is predominantly interpreted by the tradition in aesthetic terms: there can be no text more eloquent and more beautiful than the Qur'ān (see LITERATURE AND THE QUR'ĀN).

The process of revelation: tanzīl

The process of revelation is most commonly characterized by the spatial metaphor of "coming down, sending down" — derivatives of the verbal root *n-z-l*. The causative verb forms *nazzala* (sixty-three finite verbal occurrences, fifteen uses of the *maṣdar,* and two of the participle) and *anzala* (188 finite verbal occurrences, no uses of the *maṣdar,* and seven of the participle) are generally considered to be similar in meaning, "to send down." Although by far the majority of uses of verbs from the root *n-z-l* deal with revelation, there are other objects as well: e.g. mountains (Q 24:43), various kinds of rain (Q 30:49; 31:34; 42:28), manna and quails (Q 2:57; 7:160; 20:80), armies (Q 9:26), and *al-furqān* (Q 2:185; 3:4; 25:1; see PROOF; CRITERION) the meaning of which seems to bear elements of salvation (q.v.) as well as revelation.

In one sense, the notion of sending down itself could be said to be theologically neutral since it is merely spatial. This spatiality implies, however, the theological premise of a two-tiered universe in which the initiative is always in the upper (divine, celestial) tier. Furthermore, the verbal noun *tanzīl* standing by itself (e.g. Q 36:5; 41:2, 42; 56:80; 69:43) is only used to refer to revelation. The activity of sending down is exclusively divine. Humans or angels may bring *(atā bi-)* or recount *(qaṣṣa)* the word of God but only God can send it down.

Although the direction of communication is always downward, tradition has also sought in its development of the story of Muḥammad's ascent to heaven (see ASCENSION) to establish a special prophetic access in the opposite direction. In addition, the first revelations are portrayed as taking place in a cave on Mount Ḥirā' to which the Prophet had ascended — in Islamic tradition, no less than in the Jewish and Christian traditions (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY), the mountaintop enjoys a privileged proximity to heaven.

The mode of sending down scripture is made clear repeatedly. It is oral, in the form of a recitation *(qur'ānan);* the idea of sending something down in writing is rejected as unlikely to prove convincing (Q 6:7; 4:153). What is sent down is in the vernacular (*'arabī,* Q 12:2; 16:103; 20:113;

39:28; 41:3, 44; 42:7; 43:3; see DIALECTS), rather than in a foreign or sacral language (*aʿjamī,* Q 16:103; 41:44; but see FOREIGN VOCABULARY). God never sends a messenger except to speak in the language of the people he is addressing (Q 14:4). The sending down comes gradually (*mufarraqan,* Q 17:106) or, as the commentators say, *munajjaman,* or *najūman* (Suyūṭī, *Itqān,* i, 116-9: *nawʿ* 16, *Fī kayfiyyat inzālihi, masʾala* 1); it comes in response to situations (Q 25:33), rather than as a single, completed pronouncement (*jumlatan wāḥidatan,* Q 25:32).

The difficulty presented by the fact that the Qurʾān was not revealed all at once in an already fixed form is answered in the tradition by patching together, in varying ways, isolated parts of the text in order to outline a coherent schema that could reconcile a preexistent canon with what was clearly an *ad rem* mode of revelation (see COLLECTION OF THE QURʾĀN; CODICES OF THE QURʾĀN). The Qurʾān is presented as already complete in the realm of eternity; the text is preserved on a heavenly tablet (Q 85:22; see HEAVENLY BOOK; PRESERVED TABLET), from which it is sent down whole to "noble scribes" (*safara kirām,* Q 80:15-6) or to the "abode of glory" (*bayt al-ʿizza,* an idea attributed to Ibn ʿAbbās by, among others, Suyūṭī, *Itqān,* i, 116-9: *nawʿ* 16, *masʾala* 1) in the lowest heaven, then transmitted to Gabriel, who in turn parcels it out to Muḥammad according to the situation in which he finds himself (see OCCASIONS OF REVELATION).

The Islamic tradition, in developing its ever more elaborate "topology" of revelation, is certainly careful to maintain the distance between God and humanity (see ANTHROPOMORPHISM). Nevertheless, even if the divine essence remains inaccessible, a genuine unveiling of God's knowledge and manifestation of God's will does take place.

The "occasions" of revelation

The apparently one-directional nature of *tanzīl* is qualified in the exegetical tradition by the notion that each part of the Qurʾān was revealed in a particular context in response to a particular situation. This particularity and contextuality is evident in many parts of the text itself. The term used is *sabab* (pl. *asbāb*), which carries an idea of causality that is somewhat veiled by the usual translation "occasion." Al-Suyūṭī (d. 911/1505; *Itqān,* i, 82-98: *nawʿ* 9, *Maʿrifat sabab al-nuzūl*) quotes Ibn Taymiyya (d. 728/1328): "Knowing the reason for the sending down helps in the understanding of the verse. For knowledge of the cause *(sabab)* yields knowledge of the effect *(musabbab).*"

Because they offer a coherent historical context for individual verses or pericopes and because, taken together, they create a narrative structure for the Qurʾān, the *asbāb al-nuzūl* are among the principal traditional tools of interpretation (see TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY). The importance of the *asbāb* for exegesis is the recognition of the responsive nature of the revelation that we have already observed. The commentators can, of course, maintain that it is not the verse itself that is occasioned or caused but rather the sending down of that verse, which itself remains preexistent (see ETERNITY; CREATEDNESS OF THE QURʾĀN). Even so, they are still implicitly recognizing that the process of revelation is a divine response elicited by human word and action.

The importance of this dynamic aspect of qurʾānic revelation is not to be underestimated. It is an essential counterbalance to an approach that privileges the idea of an impassive, static pronouncement fixed from all eternity. The God who speaks in the Qurʾān is also described many times as *baṣīr, samīʿ* and *ʿalīm* — one who sees and

hears and therefore knows the present situation he is addressing (see SEEING AND HEARING).

The role of Gabriel

The Muslim tradition has tended to emphasize those parts of the Qurʾān that suggest that revelation is mediated through Gabriel. The Qurʾān itself does not call Gabriel an angel, though in the tradition there seems to be a conflation of God's spirit (q.v.), the angels and Gabriel. It is explicitly stated in Q 2:97 that it is Gabriel (Jibrīl) who, by God's leave, brings the revelation down upon Muḥammad's heart (q.v.). In an earlier Meccan sūra (Q 53:1-18), however, the most straightforward reading indicates a vision of God (see FACE OF GOD). Muḥammad is described in Q 53:10 as the slave (*ʿabd;* see SERVANT) of the one he sees — a word that could hardly be applied to his relationship with Gabriel: "He revealed to his slave what he revealed."

The biographical tradition, too, shifts between involving Gabriel and speaking as though the revelation were direct. We might deduce from this that the angel plays what we could call the role of a theological safeguard. If the Prophet has dealings only with Gabriel and not with God directly, the absolute transcendence and immateriality of God is safeguarded. Once the point is made, and the theological caveat entered, however, there is little real need to concentrate further on the angel. One finds a similar phenomenon with the role of God's messengers in the Hebrew Bible, for example in the accounts of Moses and the burning bush (*Exod* 3:2-4:17); of Hagar and Ishmael (*Gen* 16:7-14; 21:17-9); of Abraham and his guests (*Gen* 18-19); of Abraham's binding of Isaac (*Gen* 22:11-2); of Jacob (*Gen* 31:11-3; 32:24-30); and of Balaam (*Num* 22-4).

Yet, even though the angel can be understood as in some way bridging the ontological gap between the divine and the human, as Ibn Khaldūn pointed out, there is still a gap between the angelic and the human. The prophet must leave his own state and enter the state of the angels, the highest level of spiritual existence (Ibn Khaldūn-Rosenthal, i, 208). This explains the difficulty prophets experience in the moment of revelation (ibid., i, 201). Ibn Khaldūn's analysis of the phenomenon of prophetic perception reflects the ambiguity of the angelic role. He leaves unresolved the issue of whether angelic agency is necessary to prophecy or whether, when prophets enter the angelic realm, they are just as able as the angels to understand the speech of God. He speaks of it as the realm of direct perception (ibid., ii, 423-4).

Al-Samarqandī (d. 375/985) is reported as saying that there are three opinions about the role of Gabriel in the revelation of the Qurʾān: (1) that he brought both word and meaning *(al-lafẓ wa-l-maʿnā),* having memorized the wording from the Preserved Tablet (q.v.; Q 85:22); (2) that Gabriel brought the meanings *(maʿānī)* and the Prophet expressed *(ʿabbara)* them in Arabic; (3) that it was Gabriel who expressed the message in Arabic — that is how it is recited in heaven — then later brought it in that form to the Prophet (Zarkashī, *Burhān,* i, 228-32: *nawʿ* 12, *Fī kayfiyyat inzālihi*). Some authors would distinguish the second form as being characteristic of the revelation of the sunna (q.v.) rather than the Qurʾān, since the sunna is sometimes thought of as revealed. Whether or not that is accepted, the role of Gabriel has some considerable bearing on the question of verbal inspiration.

Verbal inspiration

The verbal inspiration of the Qurʾān is accepted as virtually axiomatic by the greater part of the Islamic tradition, though the doctrine is recognized even

within that tradition as not being without its difficulties. The Qurʾān itself offers no simple answer to the question of the precise relationship between its text and the eternal word of God (q.v.), although some verses have been taken to argue for their being identical. Several times the scripture is announced as a revelation *(tanzīl)* or a revelation of the scripture *(tanzīl al-kitāb)* from God under various of the divine names (e.g. Q 17:106; 20:4; 26:192; 32:2; 39:1; 40:2; 41:2, 42; 45:2; 46:2; 56:80; 69:43; 76:23). In Q 9:6 the Prophet is told to give refuge to any idolater who asks for it "so that he might hear the speech of God *(kalām Allāh)*." Since there is no qualification of this, it seemed to many commentators to offer proof that the Qurʾān is simply equivalent to God's speech. Further support is sought in Q 75:16-8, in which the Prophet is told not to rush ahead of the recitation but to follow it precisely as God recites it.

The reservations about verbal inspiration were based on several factors. There was in the first place the widespread, though not universal, hesitancy about anthropomorphism or anything that blurs the distinction between the divine and the created realms. For God to have produced the actual wording of the scripture would involve him in the use of human language with its sounds, script and grammar, all of which are clearly created (see ARABIC SCRIPT; GRAMMAR AND THE QURʾĀN; ORTHOGRAPHY). Secondly, in the religiously plural context in which the Muslim community lived (see RELIGIOUS PLURALISM AND THE QURʾĀN; COMMUNITY AND SOCIETY IN THE QURʾĀN), it had to be recognized that the other scriptures are not textually identical to the Qurʾān, even though in principle the import of the message should be identical. This led to such distinctions as that made by Ibn Kullāb (d. 241/855?) between *qirāʾa* — the recited wording, which is a material human action — and *maqrūʾ* — what is recited, i.e. what God intends to convey by it (van Ess, *TG*, iv, 615-6; see RECITATION OF THE QURʾĀN). Furthermore, it could not be ignored that there were at least seven recognized readings of the Qurʾān (q.v.) and strong opposition to the idea of canonizing any one of them absolutely. If only the unpointed consonants *(rasm)* were canonized, the way remained open to multiple pronunciations, and therefore multiple versions, based upon it.

For the Muʿtazilīs (q.v.), what we have on earth is never the word of God itself but rather an account or report *(ḥikāya)* of what God said, a kind of indirect speech. The speech of God is created in a physical substrate — for example, the burning bush associated with Moses (cf. Q 28:30). Even in Gabriel it is created. Ibn Kullāb preferred the term *ʿibāra* to the suspect notion of *ḥikāya*, but in the final analysis there was little difference between his and the Muʿtazilī position on this point. Van Ess (*TG*, iv, 622) notes that even the custom of quoting the Qurʾān with the introductory words *qāla llāhu*, "God says," was not always allowed to pass unchallenged for its presumption of identity between the words of the Qurʾān and the word of God.

It should be noted that the belief in the verbal inspiration of the Qurʾān does not necessarily entail a belief in its uncreated nature, as the Muʿtazilīs seemed to fear. It is possible for God to determine the precise wording of the Qurʾān even while knowing the inability of human language fully to express and convey divine thought.

The complexity of the understanding of revelation in the tradition

It is beyond the scope of this article to deal systematically with the doctrines of revelation that developed in the Islamic community over the centuries. Some com-

ments, however, are in order. The discussions of revelation by theologians, commentators and philosophers seem often to conflict (see PHILOSOPHY AND THE QUR'ĀN; EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL). Things become clearer, perhaps, if one sees that the discussion has tried to balance a series of tensions. Since the divine is so often defined in negative terms and often through the negation of any similarity to the human, it should not be surprising that theologies of revelation are full of paradox and tension. As Izutsu (*God,* 153-4) put it, the Qur'ān, being God's speech, is divine but it is also speech; it therefore conforms to the models and limitations of all speech.

The tradition wants to assert the immediacy of the revelation to the God who speaks, an immediacy on which it depends for its reliability. At the same time it recognizes the mediation required logically and theologically by the absolute ontological distance between God and creation, and even the relative distance between the human and the angelic.

Through the use of *asbāb al-nuzūl* the tradition focuses on the concrete historicity of the text in its interactions with the Prophet and his hearers. At the same time it argues for its pre-existent, timeless nature.

The text has a very obvious cultural and linguistic particularity and the tradition stresses this in its attachment to and celebration of the Arabic of the Qur'ān. At the same time it insists on its universal appeal and applicability.

The tradition carefully observes the delimited extent and content of the qur'ānic text. At the same time, it asserts the unlimited scope and import of the revelation.

Certain key terms for the understanding and interpretation of the Qur'ān have spatial and temporal significance (the heavenly Preserved Tablet, sending down, abrogation [q.v.], forgetting or causing to forget; see also SATANIC VERSES). At the same time, the tradition is aware of the problematic nature of attributing spatial and temporal characteristics to God.

The tradition maintains the uniqueness of the Qur'ān. Yet, on the other hand, it asserts the Qur'ān's commonality with the earlier revealed scriptures.

The Qur'ān itself and the tradition assert the inprinciple identity of the message to that of the earlier scriptures. At the same time, it is aware that in fact there is a divergence among them (see FORGERY; CORRUPTION; POLEMIC AND POLEMICAL LANGUAGE; APOLOGETICS).

The Muslim tradition insists strongly that the Qur'ān is the sole revealed scripture to have been faithfully recorded and preserved in its original form. At the same time, the fact that only the unpointed consonantal text *(rasm)* is canonized means that in effect the canon is kept open by the many possible pronunciations *(lafz)* based on the same *ductus* — some of them doctrinally significant (e.g. Q 2:106).

These tensions are a necessary factor in any theory of revelation because it must account at the same time for the divine and human aspects of the phenomenon. Although Islamic tradition has not succeeded in developing a single coherent theology of revelation, the idea remains central to the religion. God's constancy in revelation shows his engagement with the world, the ceaseless activity of addressing the human situation and providing for human need.

Revenge see VENGEANCE

Revision and Alteration

The idea and the charge that the text of the Qurʾān (and the Bible) underwent changes and emendations over time. According to traditional Muslim accounts, the revelations that make up the Qurʾān were originally collected together by the second caliph (q.v.) ʿUmar (d. 23/644), under the editorship of Zayd b. Thābit, approximately twenty-five years after Muḥammad's death (see COLLECTION OF THE QURʾĀN). ʿUmar died before the task was completed, however, and the collected sheets were transferred to his daughter

Ḥafṣa (q.v.) for safekeeping (see also WIVES OF THE PROPHET). Around 30/650, ʿUthmān (q.v.) later the third caliph (d. 35/655), drew from this collection when he reinstated the editorial commission started by ʿUmar, established the Medinan recension of the materials as the qurʾānic canon and burned all other versions then circulating (see CODICES OF THE QURʾĀN). Traditional Islam understands this ʿUthmānic codex, as it is called, to be both the version most closely resembling Muḥammad's revelations and the very same version still in use today. Bell notes that the religious authorities, largely not positively disposed toward ʿUthmān, never accuse him of having altered the Qurʾān in any form. Similarly, history does not record any substantial disagreements over the text (see TEXTUAL CRITICISM OF THE QURʾĀN; UNITY OF THE TEXT OF THE QURʾĀN).

This does not mean, however, that Islamic tradition rejected absolutely the idea of the alteration of God's word (see WORD OF GOD). Traditional Sunnī Islam recognizes at least three forms of such revision. The Qurʾān itself (Q 13:39; 87:6-7, etc.) speaks of God as editor, causing Muḥammad to forget some revelations or even deleting verses from the Qurʾān (see also SATANIC VERSES; IMPECCABILITY). Additional divine revision comes in the form of the doctrine of *nāsikh wa-mansūkh,* "abrogating and abrogated" (see ABROGATION). According to this principle, the Qurʾān altered and revised itself in the midst of being revealed; later qurʾānic rulings that appear to contradict earlier statements are, in fact, replacing them, terminating the earlier statements in favor of new decrees (for example, Q 4:11 abrogates Q 2:180, Q 24:2 replaces 4:15-6). Some maintain that Muḥammad acted as the Qurʾān's editor as well. According to this tradition, once a year Muḥammad met with the angel Gabriel (q.v.; Jibrīl) to order, fix and collate the revealed materials coming through him (Suyūṭī, *Itqān,* i, 216). In the process, some parts of the revelation were left out of the final compilation, though these continued to hold authoritative status. Indeed, a number of ḥadīth refer to such omitted verses (see ḤADĪTH AND THE QURʾĀN). One such ḥadīth concerns the famous "stoning (q.v.) verse," an omitted verse which declares that male and female adulterers are to be stoned, a punishment that contradicts the lashing (see FLOGGING) prescribed in the written revelation in Q 24:2 (Bayhaqī, *Sunan,* viii, 210; see BOUNDARIES AND PRECEPTS; ADULTERY AND FORNICATION). In line with this view of prophet as editor, Berque suggests that the original command to Muḥammad, *iqraʾ,* may have been a command to assemble/compile the revealed messages, rather than to read/recite them, as traditionally understood (see ORALITY; ORALITY AND WRITING IN ARABIA; ILLITERACY; REVELATION AND INSPIRATION). By ʿUthmān's time, dialectical oddities had crept into the Qurʾān's language, and a third form of revision took place when ʿUthmān edited these out in favor of a pure Qurashī Arabic (see ARABIC LANGUAGE; DIALECTS).

Some modern scholars have disagreed with this traditional (Sunnī) scenario, maintaining that in addition to the supposed early divine and prophetic revisions, later "regular" human hands also played a part in manipulating the content of the revelations. Watt sees evidence of this in the verses' hidden rhyme schemes, pointing out examples of phrases added in order to give passages the correct assonance and cases in which the rhyme of the sūra changes (see RHYMED PROSE). Watt also lists a host of irregularities and unevenness of style in certain sections of the Qurʾān that testify to later human alteration and revision (see LANGUAGE AND

STYLE OF THE QUR'ĀN). He cites changes in subject matter as further evidence of qur'ānic emendation. Weil similarly claims that a number of pericopes (such as the "night journey" verse, Q 17:1; see ASCENSION) were added to the Qur'ān by later hands for a variety of political and religious reasons and were not part of the original revelations. Furthermore, Jeffery maintains that the differences in pronunciation and in words in the assorted canonical *qirā'a* readings (see READINGS OF THE QUR'ĀN) can likewise be seen as alterations, remnants of the various versions destroyed by ʿUthmān. He notes, however, that these variants later came to be seen by normative Islam as little more than acceptable curiosities (see also MUṢḤAF).

The question of the Qur'ān's alteration and revision takes on a different meaning and significance in the Imāmī Shīʿī context (see SHĪʿISM AND THE QUR'ĀN). In the Imāmī view, the canonical version of the Qur'ān contains words, verses and even whole sūras that have been added, omitted or changed from the true version (originally in ʿAlī's possession; see ʿALĪ B. ABĪ ṬĀLIB) in order to fit Sunnī purposes (see POLITICS AND THE QUR'ĀN; THEOLOGY AND THE QUR'ĀN). Through "falsification" *(taḥrīf)* and "alteration" *(tabdīl),* claim the Imāmīs, the Sunnīs omitted verses from Sūrat al-Nūr (Q 24, "Light"; in the ʿUthmānic text, this sūra contains 64 verses, while, according to the Imāmīs, it should have more than 100 verses; Imāmīs also claim that the Sunnīs omitted or suppressed Sūrat al-Nūrayn, "The Two Lights"; cf. Ar. text and trans. in Nöldeke, *GQ,* ii, 102-7) as well as other passages that testify to ʿAlī's distinct role as Muḥammad's spiritual and political heir. Kohlberg, citing von Grunebaum, points out that the Shīʿīs never could ultimately agree on the details of the alleged ʿUthmānic distortion of the Qur'ān's content. Eliash, on the other hand, maintains that the Imāmīs never questioned the accuracy of the text's content but only the ordering of the material. According to Kohlberg, however, the original accusation was of content corruption; only as the Imāmīs began to accept the Sunnī notion of the text's perfection (*iʿjāz al-Qur'ān;* see INIMITABILITY), did the charge slowly evolve into the lesser criticism of order. The belief in the Qur'ān's integrity remains the conviction of the overwhelming majority of modern Imāmīs, although echoes of the early dissent do surface from time to time (Kohlberg notes the recent Ḥusayn b. Muḥammad Taqī l-Nūrī l-Ṭabarsī [d. 1320/1905], for example).

Khārijīs (q.v.), too, have accused the Sunnīs of content manipulation. Many found Sūrat Yūsuf (Q 12, "Joseph") problematic because of its erotic and hence inappropriate overtones. The entire chapter, they claim, does not belong in the Qur'ān and, they charge, was likely added later by human hands.

Perhaps the most famous accusation of textual alteration and revision, however, concerns not the qur'ānic text but the Bible. This charge appears in the Qur'ān itself (see CORRUPTION; FORGERY; POLEMIC AND POLEMICAL LANGUAGE). According to the Qur'ān, although the Torah (q.v.) and the Gospels (q.v.) are genuine divine revelations, deriving from the very same source as the Qur'ān, the Jews and the Christians tampered with their texts by engaging in both *taḥrīf* and *tabdīl* (see Q 2:42, 59, 75-9; 3:71, 78; 4:46; 5:13, 41; 6:91; 7:162, among others; see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY). This claim explains why Muḥammad does not appear in either the Hebrew Bible or New Testament, despite the Muslim claim that his arrival and mission had originally

been predicted there (see PROPHETS AND PROPHETHOOD). Jewish and Christian alteration of the biblical text also solves the riddle of why, if all three scriptures derived from the same divine source, the qurʾānic versions of accounts often contradict those of the Bible (see NARRATIVES; SCRIPTURE AND THE QURʾĀN). The Muslim charge of biblical alteration eventually coalesced into two forms, *taḥrīf al-naṣṣ,* "distortion of text," and *taḥrīf al-maʿānī,* "(deliberate or non-deliberate) false interpretation." Most Muslim writers on the topic accused the Jews (and Christians) mainly of the lesser offense of intentional problematic misinterpretation. Nonetheless, a frequent charge against the veracity of the Torah claimed that it had been burned and subsequently rewritten (inaccurately) by the prophet Ezra (q.v.; ʿUzayr). This more serious allegation of *taḥrīf al-naṣṣ* forms the basis for one of the most famous and systematic polemics against the Bible, that of the Spanish Ẓāhirī theologian Ibn Ḥazm (d. 456/1064). In his detailed *Iẓhār tabdīl al-yahūd wa-l-naṣārā lil-tawrāt wa-l-injīl,* "Exposure of the alterations by the Jews and Christians to the Torah and Gospel" (preserved in his larger *Milal*), Ibn Ḥazm presents case after case in which he claims that the biblical text must have been intentionally altered and falsified by the Jews and Christians. As described by Lazarus-Yafeh, Ibn Ḥazm bases his claims on what he considers to be chronological and geographic inaccuracies, theological impossibilities and preposterous prophetic behavior, among other things (see MIRACLES). Despite his insistence on the unreliability of the Bible and his rejection of using the Bible to prove the truth of a religion or prophet, Ibn Ḥazm nonetheless insists that certain biblical passages testify to the truth of Muḥammad and his prophecy. This dualistic attitude of rejection of and simultaneous reliance upon the "altered" Bible appears throughout the Muslim literature on the topic.

Reward and Punishment

A return or recompense made to, or received by, a person or a group for some service or merit or for hardship endured; and its opposite, judicial chastisement

intended to make a person or a group suffer for an offence, whether as retribution or as caution against further transgression. Both terms together merge into a word like "requital."

A central theme in the Qurʾān is the requital of human deeds by divine justice both on earth and in the world to come (see JUSTICE AND INJUSTICE; JUDGMENT; ESCHATOLOGY; GOOD DEEDS; EVIL DEEDS). To those who believe and do good deeds (see BELIEF AND UNBELIEF), God gives some reward on earth and a far greater reward in the hereafter (see PARADISE; BLESSING; GRACE). Unbelievers and evildoers can be punished on earth and have to undergo eternal chastisement in the hereafter (see CHASTISEMENT AND PUNISHMENT; ETERNITY; HELL AND HELLFIRE). The ultimate separation of the two groups will take place on the day of judgment (see LAST JUDGMENT). According to ḥadīth, unbelievers will also be punished in their graves (see ḤADĪTH AND THE QURʾĀN; DEATH AND THE DEAD).

The relevant qurʾānic terminology

The term *ajr,* "wage, pay, reward," is frequently used in sūras of all periods. It sometimes refers to work or services rendered in everyday human contexts. Pharaoh's (q.v.) sorcerers (see MAGIC) expect payment (Q 26:41); Moses (q.v.; Mūsā) was payed for being a shepherd (Q 28:25-7); wives and girl slaves are entitled to an *ajr* (Q 4:24-5; 5:5; 60:10; cf. 33:50; see WOMEN AND THE QURʾĀN; SLAVES AND SLAVERY); and divorced wives receive payment (pl. *ujūr*) for nursing the children of their former husbands (Q 65:6; see MARRIAGE AND DIVORCE; WET NURSING; LACTATION). A recurrent motif throughout the Meccan sūras (see CHRONOLOGY AND THE QURʾĀN) is that the Prophet does not ask a wage for conveying the message (e.g. Q 6:90; 38:86; 68:46; in Q 23:72 with *kharj* and *kharāj*); that is to God's account (e.g. Q 34:47). The same is true for the prophets of the past (e.g. Q 26:109; cf. 36:21; see PROPHETS AND PROPHETHOOD). In most places, and predominantly so in the Medinan sūras, *ajr* is the reward given by God for righteous conduct (see VIRTUES AND VICES, COMMANDING AND FORBIDDING). One may be rewarded in this world, as e.g. Joseph (q.v.; Yūsuf) was (Q 12:56), but nearly always *ajr* refers to the reward in the world to come, i.e. in paradise. The word is never used in the sense of "punishment."

Thawāb, mathūba and cognates occur nineteen times in sūras of all periods, the basic meaning being "recompense, compensation, requital." Only twice are they used in a negative sense (Q 3:153; 83:36); in the other cases they are virtually synonymous with "reward." They always refer to the recompense for human actions from God, either in this world or in the world to come (e.g. Q 3:145, 148). *Jazāʾ* means "compensation, requital, satisfaction, payment." With its cognates, it occurs frequently throughout the Qurʾān. It refers to both reward and punishment on earth, but far more often in the life to come. In the later sūras the connotation of "punishment" is more dominant. Sometimes the word is embedded in the clausula phrase (see Neuwirth, Form, esp. p. 253): "That is how we recompense the doers of good," which occurs in the later Meccan stories about the prophets (Q 6:84; 12:22; 28:14; 37:105-31; see NARRATIVES) but had already been used in an early evocation of the day of judgment (Q 77:44; cf. also Q 5:85; 39:34) or in the often-repeated phrase: "… so that God may recompense them for the best of their deeds" (Q 9:121; 29:7; cf. 39:35).

Among punishment terms in the Qurʾān, *ʿadhāb* and cognates are by far the most frequent in all periods. They mean "pain,

torment," and more specifically "pain or torment inflicted by way of chastisement; punishment." The flogging (q.v.) of adulterers (see ADULTERY AND FORNICATION) is called *ʿadhāb* (Q 24:2, 8) but otherwise this word mainly refers to the torment in hell. God 'seizes' the sinners with the torment (e.g. Q 23:64; 43:48; see SIN, MAJOR AND MINOR), or the torment is personified: it "seizes" the sinners (Q 11:64; 16:113; 26:156, 158, 189), as does the "cry" (see below under *ṣayḥa*); or torment "covers them from above them and from under their feet" (Q 29:55). In some 150 places, especially in the Medinan sūras, the word is embedded in often-repeated clausula phrases, such as "For them is a painful punishment" (e.g. Q 5:36), or phrases ending with the words "a demeaning (or painful, or severe) punishment," e.g. "he will have a painful punishment" (Q 2:178). About *ʿadhāb al-qabr,* "the punishment in the grave," see at the end of this article.

ʿIqāb is the verbal noun of *ʿāqaba,* a verb which means "to do alternately" and "to punish for crime, sin, fault or offence." It is absent from the earliest, and rare in the middle Meccan sūras. Finite verb forms of the root *ʿ-q-b* occur six times in the Qurʾān and always refer to human activities, meaning both "punishing" and "doing what induces punishment." The frequently used *ʿiqāb* always refers to God's punishment. In Medinan sūras it occurs almost exclusively in concluding clausula phrases, which aim at underlining a command or interdiction, as e.g. "God is severe in punishment" (Q 3:11). Unusually, in Q 5:98 this phrase does not occur at the end of the verse: "Know that God is severe in punishment and that God is all-forgiving." Indeed God's punishment is placed in contrast to his willingess to forgive (see FORGIVENESS) already in late Meccan verses (Q 6:165; 7:167; 13:6; 40:3; 41:43).

The term *intiqām,* "revenge, to avenge oneself, take revenge, to bear a grudge," and cognates are used for the grudge that human beings bear against believers for the very fact that they are believers (Q 5:59; 7:126; 85:8) and enjoy God's blessing (Q 9:74). More frequently they are used to denote God's punishment. From the second Meccan period onward, God presents himself as an avenger. He will take vengeance on the evildoers, both here (Q 43:41) and in the life to come (Q 44:16), as he had done in the past, according to the punishment stories (q.v.; Q 7:136; 15:79; 30:47; 43:25, 55). A few Meccan and Medinan verses end in the clausula phrase "God is mighty and vengeful" (Q 3:4; 5:95; 14:47; 39:37). *Al-muntaqim,* "the avenger," is one of God's "most beautiful names" (see GOD AND HIS ATTRIBUTES).

Additional terminology includes *khizy,* "shame, disgrace, ignominy." From the second Meccan period onward, this word and its cognates are often bracketed with God's punishment (e.g. Q 20:134). Disgrace in this world is terrible, but the torment in the hereafter is worse (Q 39:26). On the day of resurrection (q.v.), God will disgrace the evildoers (Q 16:27), as he had already done in the past, witness several punishment stories (e.g. Q 11:39; 41:16). The stay in hell is, among other things, an ignominy (Q 3:192; 9:63). In Q 5:33, where some heavy physical punishments are enumerated, it is not the pain that is emphasized, but the disgrace. Also the roots *dh-l-l* and *k-b-t* which denote "humiliation" express this aspect of the divine punishment (e.g. Q 10:26; 58:5), as well as the frequent collocation "a demeaning punishment" (*ʿadhāb muhīn;* e.g. Q 2:90). *Mathula,* "exemplary punishment," occurs once in the plural *(al-mathulāt)* in a Medinan sūra, where it refers to an unspecified past time (Q 13:6). *Nakāl* and *tankīl* have a similiar meaning. Punishments meted out to the Jews (see JEWS AND JUDAISM; CHILDREN OF ISRAEL)

and to Pharaoh are presented as warnings and exhortations for the God-fearing (Q 2:66; 79:25; see FEAR; PIETY). In a law-giving Medinan verse *nakāl* is used for the cutting off of the hands of thieves (Q 5:38; see BOUNDARIES AND PRECEPTS; THEFT; LAW AND THE QUR'ĀN).

Rijz, rijs, rujz: rijz is "abomination, filth, impurity" (see CLEANLINESS AND ABLUTION; RITUAL PURITY; CONTAMINATION). In some punishment stories, however, it denotes a scourge which was sent from heaven (Q 2:59; 7:134-5, 162; 29:34; see HEAVEN AND SKY) and, in the phrase "the punishment of a painful scourge" (Q 34:5; 45:11), it refers to the future. Also the word *rijs* has a twofold meaning: in six places it means "abomination, filth, punishable act"; in three verses "scourge" (Q 6:125; 7:71; 10:100). Both *rijz* and *rijs* occur in late Meccan and Medinan sūras. *Rujz,* in the early verse Q 74:5, is sometimes considered to be identical with *rijz,* "abomination," or is taken to be cognate with Syriac *rūgzā,* "wrath" (Jeffery, *For. vocab.,* 139). Finally, *ṣayḥa,* "cry," occurs in the second and third Meccan periods. In Q 50:42 it is the cry or clamor that announces the resurrection on the day of judgment. Mostly, however, the cry has more than a heralding and warning function (see WARNER): it is the punishment itself, or at least part of it. This is hinted at in Q 38:15 and is more obvious in Q 36:49: "they are only awaiting a single cry to seize them." Elsewhere it is the torment that "seizes" them (see above under *'adhāb*). In the punishment stories the cry is destructive. Of Thamūd (q.v.) and al-Ḥijr (q.v.) it is said: "We released upon them a single cry and they became like the dry twigs of a pen-builder" (Q 54:31; cf. 11:67, 94; 15:83), but it also occurs in other stories, e.g. in Q 36:29: "It was but one cry, and behold, they were extinguished."

The eschatological division

A roughly chronological reading of the entire Qur'ān gives a better insight into the qur'ānic system of reward and punishment than does a mere enumeration of the relevant vocabulary (see OCCASIONS OF REVELATION). Both reward and punishment belong to the oldest stratum of the message. On the day of judgment, God will separate the unbelieving evildoers, who are to be punished, from the god-fearing believers, who will be rewarded. The first Meccan sūras describe the guilty as "he who is given his book (q.v.) behind his back" (Q 84:10-12) or "in his left hand" (Q 69:25), as "companions of the left," (Q 56:9; see LEFT HAND AND RIGHT HAND), as "one whose scales are light" (Q 101:8; see WEIGHTS AND MEASURES) and as the one whom "we will brand him upon the muzzle" (Q 68:16). Those who are not condemned are called "companions of the right," (Q 56:8, 27), "he who has been given his book in his right hand" (Q 69:19); he "whose scales shall be weighty" (Q 101:6-7). Finally, reward and punishment are strictly individual: on the day of judgment, no soul will be of help to another (Q 82:19; see INTERCESSION).

Who will be rewarded?

The sūras of the first Meccan period mention those "who purify themselves, remember the lord's name and perform the prayers" (cf. Q 87:14-5; see MEMORY; REMEMBRANCE; PRAYER), those "who give and fear God and believe in the fairest [reward]" (Q 92:5-6; see ALMSGIVING), and "those who believe and do good deeds" (Q 84:25; 85:11; 95:6). The early verses Q 90:13-7 give a short description of the types of deeds that may be rewarded: "freeing a slave; feeding, on a day of famine (q.v.), an orphan near of kin (see ORPHANS; KINSHIP), or a poor person in

misery (see POVERTY AND THE POOR)," as well as belonging to the believers, who urge one another to be steadfast and merciful (see TRUST AND PATIENCE; MERCY; COMMUNITY AND SOCIETY IN THE QUR'ĀN). Q 51:17-9 emphasizes asceticism (q.v.): "They used to sleep (q.v.) little and to ask for forgiveness at daybreak (see DAWN; DAY, TIMES OF; DAY AND NIGHT; VIGILS); the beggar and the destitute had a share in their wealth (q.v.)." In short, belief, devotion and responsible social behavior (see SOCIAL INTERACTIONS) are decisive already in the earliest sūras, and they remain so throughout the Qur'ān. Enumerations of rewardable behavior in various Meccan passages specify these good deeds (Q 23:1-9; 25:63-74; 32:15-6; 70:22-34).

A similar Medinan enumeration (Q 3:130-5) explicitly mentions "hastening to obtain forgiveness" as rewardable. God's forgiveness can reduce punishment and tip the scales towards reward. Repentance (see REPENTANCE AND PENANCE) is of course a necessary precondition for obtaining forgiveness (Q 66:8). Another Medinan passage, Q 33:35, makes clear that the good deeds of both men and women will be rewarded. In the Medinan period, donating wealth for military activities *(fī sabīli llāhi)* without making a fuss about it (Q 2:262), or even better, participating in the fight physically (Q 4:95; 9:88-9; 61:11; cf. 4:100) and, eventually, being killed on the battlefield (see MARTYRS) are emphasized (see also PATH OR WAY; FIGHTING; WAR; EXPEDITIONS AND BATTLES). Also the bedouins (see BEDOUIN) will be rewarded, when they take part in fighting (Q 48:16). Other groups that are explicitly promised a reward in the later sūras are those who emigrate to God and his messenger (q.v.; Q 4:100; see also EMIGRATION), the first Emigrants and Helpers (q.v.; Q 9:100) and the believers among the People of the Book (q.v.; Q 2:62; 3:199; 5:69, 85). Occasionally very specific actions are mentioned as meriting reward: not talking loudly in the presence of the Prophet (Q 49:2-3) and not discriminating among prophets (Q 4:152).

Those who are punished

The people on the left who will be punished, according to the Meccan sūras, are primarily those who do not believe in God and deny his signs (q.v.; e.g. Q 90:19-20); who turn away (see ERROR; ASTRAY); who doubt the resurrection and the reality of the day of judgment (Q 56:47); who declare the prophetic message a lie (q.v.; e.g. Q 52:11; 56:51); and who call the Prophet a sorcerer, a madman or a poet (e.g. Q 10:2; 37:36; see OPPOSITION TO MUḤAMMAD; INSANITY; JINN; SOOTHSAYERS; POETRY AND POETS). Concomitant with their unbelief are their deeds, notably involving antisocial behavior. The unbelievers are impudent (Q 79:37-8; see PRIDE; INSOLENCE AND OBSTINACY) and cheat (Q 83:1-3; see CHEATING); they do not look after the poor (e.g. Q 69:34), notably the orphans (Q 89:17; 93:9; 107:2); and they live in luxury (Q 56:45), or heap up fortunes (Q 92:8; 104:2). Furthermore, they "obstruct God's way and make a breach with the messenger" (Q 47:32), persecute the believers (Q 85:10) or even forbid them to pray (Q 96:9-10). In Q 74:43-6, the evil-doers in hell explain to the believers why they are there: "We were not among those who prayed, and we were not among those who fed the destitute; we used to talk nonsense with others (see GOSSIP), and we used to deny the day of judgment…."

The Medinan sūras repeat what has been said before but add some elements that reflect the changed political circumstances (see MECCA; MEDINA; POLITICS AND THE

QUR'ĀN). There is a certain emphasis on the hypocrites (see HYPOCRITES AND HYPOCRISY), who were lukewarm in their allegiance to Muḥammad or became outright disloyal to him. They are as bad as the unbelievers (Q 4:138, 140, 145; 9:101; 48:6; 66:9); they will not be forgiven (Q 63:6); and they are "in the lowest depth of hell" (Q 4:145). Close to them, or even identical with them (Q 9:97, 101), are the bedouins insofar as they are unreliable allies (see BREAKING TRUSTS AND CONTRACTS; CLIENTS AND CLIENTAGE). Since at a crucial moment they failed to participate in military activities, they are threatened with a painful punishment (Q 48:16; 9:90). In Q 9, those who refuse to take part in war are a main preoccupation. Q 9:81-5 promises them hell, but they are punished in this life as well: they will not be invited for future expeditions (which is a disgrace; cf. Q 9:39), and the believers are not supposed to pray for them on their death. Even worse are those who actively try to restrain the believers from warfare (*li-yaṣuddū ʿan sabīli llāhi,* Q 8:36).

Other punishable acts mentioned in the Medinan sūras are, for example, mockery (q.v.; Q 9:79), believing in the Trinity (q.v.; Q 5:73), opposing God's messenger (Q 8:13; 9:61, 63) and killing his prophets (Q 3:21; cf. *Mt* 23:37). Already in Meccan passages apostates (see APOSTASY) had been threatened with punishment (Q 16:106) but are so again with still more emphasis in Medinan passages (Q 2:217; 3:176-7; 9:74). Certain mundane perpetrators, like murderers (Q 4:93; see MURDER; BLOODSHED) and adulterers (Q 25:68-9) are explicitly threatened with punishment in the afterlife.

The nature of the retribution in the hereafter

What exactly awaits humankind in the world to come is made abundantly clear throughout the Qur'ān and is described in detail elsewhere in the present work (see e.g. the various cross-referenced articles). The reward is that the believers will abide in a luscious garden, or gardens (see GARDEN), with rivers flowing underneath, where they are given fine food and drink (q.v.) and costly clothing (q.v.), where they will be served by youths and enjoy the company of attractive women (see HOURIS). The guilty, i.e. the unbelievers, will be punished by being thrown into the hellfire, where they will neither die nor live, where they are skinned and tortured and will burn forever.

Divine recompense on earth

God rewards and punishes not only in the hereafter but in this life as well (Q 3:145, 148; 4:134). To the Emigrants, God will give "a good lodging in this world, but the reward in the world to come is greater, if they only knew" (Q 16:41; cf. 16:30-1; see HOUSE, DOMESTIC AND DIVINE). Those who pledged allegiance under the tree, i.e. at Ḥudaybiya (q.v.), were rewarded "with a victory (q.v.) near at hand" (Q 48:18).

Already in the past God's punishment was imposed on earth. Stubborn individuals and peoples who had not taken heed of the warnings of God's messengers were punished for behavior not unlike that of Muḥammad's environment: unbelief, polytheism (see POLYTHEISM AND ATHEISM), disobedience (q.v.), arrogance (q.v.). The punishment had consisted in destruction by stones thrown from heaven, by earthquakes, wind or rain, or by drowning (q.v.). These stories aim, among other things, at convincing the Prophet's contemporaries that the punishment is imminent and real (see Horovitz, *KU,* 10-32; see also CHASTISEMENT AND PUNISHMENT; PUNISHMENT STORIES).

But these ancient peoples were not the only ones to be punished on earth. Indeed "there is no city but we will destroy it be-

fore the day of resurrection, or will punish it terribly" (Q 17:58). Unbelievers (Q 13:34), in particular disaffected hypocrites (Q 9:74) and those who slander married women (Q 24:23), will be punished both now and in the hereafter. An earthly punishment may lead to repentance (Q 32:21). The agony of the unjust on their deathbeds, when the angels of death visit them, is called "the punishment of disgrace" (Q 6:93). Sometimes a twofold punishment is announced: disgrace in this life and a severe torment in the world to come (Q 2:85, 114; 5:41; 22:9; 39:26). Human beings may be the instruments of God's wrath on earth (see ANGER), as in Q 59:5, where they cut down palm trees with God's permission, to disgrace the vicious (see DATE PALM). In the battle of Ḥunayn (q.v.), human fighters were helped by invisible soldiers sent down by God, "and he punished the unbelievers" (Q 9:26).

The imagery of the Qurʾān

With reference to reward and punishment the Qurʾān employs two sets of imagery. One of them is that of commerce (see Torrey, *Commercial-theological terms;* Rippin, Commerce; see also ECONOMICS; CARAVAN; TRADE AND COMMERCE). "God buys from the believers their lives and their wealth in return for paradise" (Q 9:111; cf. 4:74). The transaction with God is also called a loan. On his loan to God, the believer will obtain a good or a double advantage, or even more (Q 2:245; 57:11, 18; 64:17). If the believer does not deliver, his soul (q.v.) is impounded (see PLEDGE): "Every soul is a pledge to what it has earned, except for those of the right hand side" (Q 74:38-9; cf. 52:21). Unbelievers suffer a loss *(khusr):* "Humankind is in the way of loss, save those who believe" (Q 103:2-3).

On the day of resurrection everyone will be confronted with his book (*kitāb;* see Madigan, Book, 243-4) in which his standing is recorded. That day will be the "day of reckoning" (*ḥisāb,* Q 38:16, 26, 53; 40:27), on which the account between God and humanity will be settled. A similar term is *aḥṣā,* "counting, calculating." Both *al-ḥasīb,* "the reckoner," and *al-muḥṣī,* "the calculator," are among God's most beautiful names (see Böwering, God, 319). Another commercial metaphor (q.v.) is that of the scales on which all deeds will be exactly weighed: "We set up the just scales for the day of resurrection, so that no soul shall be wronged anything…" (Q 21:47). For God's payment the late Meccan and the Medinan sūras often use the word *waffā,* "to pay in full, to let someone have his full share," which has a more commercial ring than *jazāʾ* or *thawāb:* "every soul shall be paid in full for what it did; they shall not be dealt with unjustly" (e.g. Q 16:111). In executing his part of the deal with humankind in full, God is not "dealing unfairly" *(ẓalama),* he does not "defraud" or "cheat" *(bakhasa, alata),* nor squander the advantage of man *(aḍāʿa)* — all terms with a commercial connotation.

The other set of imagery is of a judicial nature. In a few verses, the day of judgment reminds us of an earthly court, where the guilty are punished and the innocent are released. "He who is given his book in his right hand… shall go back to his people happily" (Q 84:7-9). "Only the most wretched will roast in the blazing fire; the god-fearing will be kept away from it" (Q 92:15-7). On the day of judgment, however, "guilty" or "not guilty" are not exclusively decisive. Above all, God is merciful and inclined to forgive. Numerous are the places in the Qurʾān where punishment is contrasted not with release, but with mercy: "He punishes whom he will and he has mercy upon whom he will," or "forgives whom he will" (e.g. Q 2:284; 3:129; 5:18, 40; 29:21; 48:14). The divine

judge punishes or forgives simply because he is mighty enough to do so (see POWER AND IMPOTENCE): "Should you punish them, [you do so since] they are your servants (q.v.); but should you forgive them, [you do so since] you are the mighty one, the wise one" (Q 5:118; see WISDOM; KNOWLEDGE AND LEARNING). Here is neither an accurate bookkeeper at work, nor an honest judge in some mundane court, but a sovereign and almighty king (see KINGS AND RULERS). Bravmann (Allāh's liberty, 236) has pointed out that such a king-judge resembles the Arabic rulers and grandees that figure in pre-Islamic poetry and early Islamic historiography. The adduced parallels are striking; yet they must be seen in the far wider perspective of divine kingship in the ancient Near East (see PRE-ISLAMIC ARABIA AND THE QUR'ĀN; RELIGION).

Reward may then be, in the first place, associated with trade, profit, gain, etc., whereas punishment and release belong to the realm of legal jurisdiction. Mercy still fits into the judicial imagery, when we keep the nature of the judge in mind. But all the images are blended, and each of them is evocative of only one aspect of God's justice. Those who were released in the above quoted Q 74:38 we see in paradise already in the very next verse. Indeed, in the overwhelming majority of verses release from punishment is connected with bliss in paradise.

The measurement of reward and punishment

The insufficiency of all metaphors is perhaps best illustrated by how the Qur'ān deals with the measurement of the requital. Good and evil deeds are requited proportionally and precisely. "He who has a done an atom's weight of good shall see it, and he who has a done an atom's weight of evil shall see it" (Q 99:7-8; see GOOD AND EVIL; MEASUREMENT). Hence, there are various degrees of reward and punishment. "All shall have their degrees, according to what they did" (Q 46:19). For polytheists, murderers and adulterers "punishment shall be doubled… on the day of resurrection" (Q 25:69). Liable to an extra punishment are also "those who obstruct the way of God" (Q 11:19-20; 16:88). The unbelievers in hell even dare to demand double punishment for those who misguided them (Q 7:38; 33:68; 38:61). The measure of the reward is variable as well. The believers among the wives of the Prophet (q.v.; Q 33:31) and the People of the Book (Q 28:54) are promised a double reward. Active fighters (Q 4:95) and early converts (Q 57:10) will be privileged. Yet the Qur'ān more than once promises a double reward without there being an extra merit. It sometimes corresponds to a twofold deed, or two deeds: "except those who believe and do a righteous deed. To those there will be double recompense for what they did" (Q 34:37; cf. 57:28). God may simply leave the account books aside: "if it is a good deed, he will multiply it and give from himself a great reward" (Q 4:40; cf. 4:173). While punishment is proportional, reward may be far more than doubled: "He who comes up with a good deed shall have ten times its like; and he who comes up with an evil deed will only be requited for it once" (Q 6:160). As a matter of fact, there is no point in being arithmetical about all this. The measurements are mere indications of the immeasurable extent of God's mercy, and of the sovereignty of his judgment. (In ḥadīth, however, the idea of "two rewards" is elaborated in a down-to-earth manner; see Wensinck, *Concordance,* i, 20-1, s.v. *ajrān*.)

Reward and punishment in theology

Within the Qur'ān, the various commercial and judicial metaphors are blended but not brought into harmony with each other. In

theology (see THEOLOGY AND THE QUR'ĀN) they are neither, although attempts have been made to harmonize them. From wherever one may start, the central problem is that of free will (see FREEDOM AND PREDESTINATION). Were people not free to act — at least to some extent — they could not be held responsible for their deeds and consequently there would be no point in retribution. But the more freedom there is for people, the less sovereignty (q.v.) for God. Generally it can be said that in the Qur'ān, in ḥadīth and in Islamic theology God's control over human acts and intentions has been emphasised at the expense of human free will. But this was not always the case (see HERESY).

Three very brief sketches may give an idea of the possible theological viewpoints. The Muʿtazila (q.v.), in the third/ninth century, held that humans have the power to do what God requires of them, hence they are responsible for their deeds and will be rewarded or punished accordingly. By virtue of his justice, God has to be just and can do nothing else than deal out reward and punishment with greatest precision, almost mechanically (Watt, *Islamic thought,* 231-42; van Ess, *TG,* iii, 403-8; iv, 507-12). The orthodox who adhered to ḥadīth and sunna (q.v.), without recourse to speculative reasoning, protested vigorously. Is God not free to punish and to forgive whom he wants? Anything less would impair his omnipotence and sovereignty as a creator (see CREATION), a ruler and a judge. God is not constrained to do anything. This line of thought was adopted by al-Ashʿarī (260-324/873-935), an ex-Muʿtazilī who defended orthodox tenets with arguments of reason. He held that a human "acquires" or "appropriates" *(kasaba)* his acts, which are, however, known, willed and created by God. In this manner he saves God's omnipotence, but the individual remains responsible enough to really deserve his reward or punishment (Ashʿarī, *Maqālāt,* 291-2; McCarthy, *Theology,* 53-8). For al-Juwaynī (d. 428/1085) there is no causal connection between human deeds and divine retribution at all: "According to the true believers, the reward is neither a determined right, nor an obligatory retribution. It is a favor on God's part. The punishment is not necessary either. In so far as it takes place, it is justice on God's part" (Juwaynī, *Irshād,* 381).

The punishment in the grave

A punishment that does not fit into the qur'ānic system of retribution is the torment that will be inflicted on the dead in their graves. It is essentially a theme developed in ḥadīth. Until the day of judgment, the bodies of the deceased lie in their graves, separated from their souls or spirits. In the intermediate state (see BARZAKH) they continue to exist in some way and can feel pressure, pain or pleasure. Although the possible qur'ānic allusions to this state are sparse, ḥadīth and popular texts discuss it in detail (see Wensinck, *Handbook,* s.v. "Graves"; Smith/Haddad, *Understanding of death,* 31-61; van Ess, *TG,* iv, 521-8). Some people receive a special reward immediately after their death. Those who are killed on the battlefield for the cause of God are not dead; rather "they are alive with their lord, well-provided for" (Q 3:169). According to a ḥadīth, prophets, martyrs and innocent children immediately enter paradise (Abū Dāwūd, *Sunan, K. al-Ǧihād,* 25; Ibn Ḥanbal, *Musnad,* v, 58). Another ḥadīth mentions ten persons by name, including the Prophet and the first four caliphs, who "are [already] in paradise" (Abū Dāwūd, *Sunan, Sunna,* 8; Ibn Ḥanbal, *Musnad,* i, 187-8; for other privileged categories, see Wensinck, *Handbook,* s.v. "Graves [who is free from the trial]"; see CALIPH). Most mortals, however, are

subject to interrogation *(musāʾala)* or torment in their graves *(ʿadhāb al-qabr)*. A dead man is made to sit up in his grave and asked to render account of his belief and deeds. If he has done any good deeds, these will answer for him. When the result of questioning is positive, the grave is widened, so that his body feels relief. Otherwise, the torment consists in his being further compressed in the grave, which is made too narrow for the body; he may be beaten, flogged or bitten by a fiery snake. There is also the disgrace of his unbelief becoming publicly known (see *Aḥwāl al-qiyāma,* 39-41; trans. 69-73; Smith/Haddad, *Understanding of death,* 41-50; van Ess, *TG,* iv, 528-34; Wensinck/Tritton, ʿAdhāb al-ḳabr). The torment may be performed by an unknown agent; a single angel, who is sometimes called Rūmān; by two angels, who either remain anonymous or are called Munkar and Nakīr (as early as Muqātil, *Tafsīr,* ii, 193, 405-6; see Wensinck, Munkar wa-Nakīr; id., *Creed,* 117-9, 163-5); or even by four angels (van Ess, *TG,* iv, 528, 531).

The Qurʾān does not explicitly mention the punishment in the grave. Yet, in *tafsīr* works various qurʾānic verses are brought into connection with it. According to Q 9:101, the hypocrites will be punished twice. This could be once in this world and once in the grave (ʿAbd al-Razzāq, *Tafsīr,* i, 253; Ṭabarī, *Tafsīr,* xiv, 444; Zamakhsharī, *Kashshāf,* ii, 211). Muqātil (d. 150/767; *Tafsīr,* ii, 193) considers the earlier punishment to be death: "at the moment of death, the angels beat the faces and backs, and Munkar and Nakīr [do so] in the graves." Similarly in Q 32:21 "the nearer punishment, prior to the greater punishment" may consist either in suffering in this world or in the torment in the grave (Ṭabarī, *Tafsīr,* xxi, 68; Zamakhsharī, *Kashshāf,* iii, 245). In Q 14:27, "God confirms those who believe with the firm word in the present life and in the hereafter," the word "hereafter" cannot refer to paradise, since no support is needed there. Hence several exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) relate it to the punishment in the grave. ʿAbd al-Razzāq (d. 211/827; *Tafsīr,* i, 296) and al-Zamakhsharī (d. 538/1144; *Kashshāf,* ii, 377) mention it briefly, Muqātil (*Tafsīr,* ii, 405-6) and al-Ṭabarī (d. 310/923; *Tafsīr,* xiii, 142-5) treat it at length. God's guidance apparently also remains in effect in the grave, helping the believers to profess the true creed (see CREEDS; FAITH). This is also Muqātil's comment on Q 47:5 (*Tafsīr,* iv, 45), where he interprets the words "he shall guide them," i.e. those killed at Badr (q.v.), as "to the right guidance, i.e. the confession of God's unity *(tawḥīd)* in the grave." At Q 40:11, "Our lord, you have caused us to be dead twice and brought us to life twice," al-Ṭabarī (*Tafsīr,* xxiv, 31) mentions as one interpretation of which he was aware: "They were made to die in this world, then brought to life in their graves, then were interrogated or spoken to, then made to die in their graves and resurrected in the hereafter." "The punishment other [or: less] than that" in Q 52:47 is also sometimes interpreted as the torment in the grave (ʿAbd al-Razzāq, *Tafsīr,* ii, 201; Ṭabarī, *Tafsīr,* xxvii, 22; Zamakhsharī, *Kashshāf,* iv, 26).

The punishment in the grave was once a much disputed theological issue. According to al-Ashʿarī (*Maqālāt,* 430), the Khārijīs (q.v.) and the Muʿtazila denied its existence, but most Muslims asserted its reality. Notably Ḍirār b. ʿAmr (ca. 110-80/728-96) made a point of denying it, since he did not care for ḥadīth, but later Muʿtazilīs did not follow his opinion (van Ess, *TG,* iii, 52; iv, 529). Several creeds of the believers who stuck to ḥadīth and sunna explicitly

state that "the torment in the grave is a reality" (see Wensinck/ Tritton, ʿAdhāb al-ḳabr; Wensinck, *Creed,* index s.v. punishment).

Rhetoric and the Qurʾān

The Qurʾān has been judged in Islamic tradition as inimitable; indeed a dogma emerged in the third/ninth century holding that the Qurʾān is, linguistically and stylistically, far superior to all other literary productions in the Arabic language (q.v.; see also LITERATURE AND THE QURʾĀN). Although the belief in the "inimitability of the Qurʾān" (*iʿjāz al-Qurʾān,* see INIMITABILITY) does not rely exclusively on formal criteria, it has been widely received as a statement about the literary qualities of the Qurʾān both in traditional scholarly literature on Arabic rhetoric (see Heinrichs, Rhetoric and poetics) and in modern scholarship (cf. Bint al-Shāṭiʾ, *al-Iʿjāz al-bayānī lil-Qurʾān*). Kermani *(Gott ist schön)* has contextualized and traced this claim of inimitability for the Islamic scripture, which was a later development in qurʾānic poetics, back to the early strata of Muslim collective memory. As against that, some recent scholars have completely dismissed the notion of *iʿjāz* as being rooted in the event of the Qurʾān. Some have done so based on the assumption of the impossibility of proving that the entire qurʾānic corpus is genuine, and thus maintain that the Qurʾān does not admit of any conclusions drawn from its self-referential statements. Others have — on the basis of a close reading of the so-called challenge verses *(āyāt al-taḥaddī)* — reached the conclusion that the qurʾānic challenges should be viewed as part of the indoctrination of the believers rather than a genuine polemic (see PROVOCATION; BELIEF AND UNBELIEF). The qurʾānic arguments viewed from such a perspective appear topical rather than real, the interlocutors of the qurʾānic speaker being reduced from real to merely imagined, fictitious adversaries (Radscheit, *Die koranische Herausforderung;* see OPPOSITION TO MUḤAMMAD). That assumption, presupposing a strict separation between the biography of the Prophet and the Qurʾān, sets a decisive epistemic course, particularly in a case where matters of prophetic self-image are at stake (see SĪRA AND THE QURʾĀN; PROPHETS AND

PROPHETHOOD): What may have been an existentially significant self-testimony of the Prophet, when read as a true challenge cast against real adversaries, is reduced to a merely rhetorical pattern, an instance of boasting about doctrinal achievements attained.

In view of the internal evidence, enhanced by external evidence (see for new discoveries concerning the interaction between the Prophet and his doctrinal and political adversaries as attested in secular literature, Imhof, *Religiöser Wandel*), the author of this article does not share the pessimism of those qur'ānic scholars who totally negate the legitimacy of drawing connections between the biography of the Prophet and the Qur'ān, provided this biography is not understood in the limited sense of a history of the Prophet's personal development. A close reading of the qur'ānic texts — not as a collection of literary remains left by a no longer feasible charismatic figure and later framed as apologetic-polemic discussions by the redactors (see COLLECTION OF THE QUR'ĀN; POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QUR'ĀN), but as a sequence of testimonies to an ongoing and progressive communication process (see FORM AND STRUCTURE OF THE QUR'ĀN) between the Prophet and his audience(s) — promises insights into a development of rhetorical phenomena discernible in the process of the qur'ānic genesis.

The extraordinary Islamic claim of inimitability *(i'jāz)* will be revisited in the context of a synopsis of some particularly striking qur'ānic stylistic phenomena. In view of the scanty scholarly work done in the field of qur'ānic rhetoric, the following article is limited to an outline of diverse aspects that deserve to be studied. As such, it aims at tracing developments in the rhetorical self-expression of the qur'ānic message rather than assembling comprehensive exemplative material. It will therefore not attempt to study the rhetorical character of the diverse qur'ānic subgenres such as story-telling (see Welch, Formulaic features; see also NARRATIVES; LITERARY STRUCTURES OF THE QUR'ĀN), polemic-apologetic debate (see Radscheit, *Die koranische Herausforderung;* McAuliffe, Debate with them; see also DEBATE AND DISPUTATION; POLEMIC AND POLEMICAL LANGUAGE), or hymnal sections (see Baumstark, Jüdischer und christlicher Gebetstypus), nor will it examine the qur'ānic style as such (see Nöldeke, Zur Sprache des Korans; Müller, *Untersuchungen;* see also LANGUAGE AND STYLE OF THE QUR'ĀN). Rather, the following will try to contextualize striking rhetorical phenomena in the text within the qur'ānic communication process. The discussion will proceed from an examination of the stylistic implications of the early allegation that qur'ānic speech should be the speech of a soothsayer or seer (*kāhin,* pl. *kuhhān* or *kahana;* see SOOTHSAYERS), to an inquiry into the relationship between qur'ānic speech and that of a poet (*shā'ir,* pl. *shu'arā';* see POETS AND POETRY), with particular emphasis on the stylistic characteristics of the early Meccan sūras (q.v.; see also CHRONOLOGY AND THE QUR'ĀN). In the third part it will turn briefly to the rhetorical issues of the later — more biblically inspired — parts of the Qur'ān (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY; PEOPLE OF THE BOOK; CHILDREN OF ISRAEL; SCRIPTURE AND THE QUR'ĀN).

The Qur'ān and its local literary forerunners: Kāhin *and* shā'ir *speech*

Already at the time of the Prophet, controversy over the new liturgical communication arose among its listeners, as to the character of the speech recited by the Prophet. Early sūras transmit various insinuations raised against the Prophet and

refuted in the text, the most general and unspecified being that he is a *kāhin,* a "soothsayer" (Q 52:29: *fa-dhakkir fa-mā anta bi-niʿmati rabbika bi-kāhinin wa-lā majnūnin*), a poet (Q 52:30: *am yaqūlūna shāʿirun, natarabbaṣu bihi rayba l-manūni*), or a madman, *majnūn* (Q 68:2: *mā anta bi-niʿmati rabbika bi-majnūnin*), i.e. a person possessed by (inspiring) demons (jinn) in general (see INSANITY; JINN). Another kind of denunciation motivated by the refusal to accept particular messages consisted in calling his recitations fabrications (Q 52:33: *am yaqūlūna: taqawwalahu, bal lā yuʾminūna*), tales or legends (Q 83:13: *asāṭīr al-awwalīn*), all of which could equally well have been produced by other humans or were no more than repetitions of earlier-told tales (Boullata, Rhetorical interpretation; see GENERATIONS; LIE; FORGERY). Whereas the latter-mentioned verdict may simply be explained as resulting from the desire not to be bothered with the new message, the references to the two types of public spokesmen, soothsayer and poet, appear more serious (see PRE-ISLAMIC ARABIA AND THE QUR'ĀN). They are not totally arbitrary since a number of sūras employ artistic devices that are usually associated with the speech of inspired individuals.

This concerns particularly the speech of the pre-Islamic *kāhin,* a religious functionary about whom we know very little (Wellhausen, *Reste*). The *kāhin* was a man with occult powers that he exercised as a profession and for which he received a remuneration. He gave his utterances in a particular rhythmic form known as *sajʿ* consisting in a sequence of short pregnant sentences, usually with a single rhyme (see RHYMED PROSE).

All speech-act that had its origin in the unseen powers, all speech-act that was not a daily mundane use of words, but had something to do with the unseen powers, such as cursing (see CURSE), blessing (q.v.), divination (q.v.), incantation, inspiration and revelation (see REVELATION AND INSPIRATION), had to be couched in this form…. The magical words uttered by a competent soothsayer are often compared in old Arabic literature to deadly arrows shot by night which fly unseen by their victims (Izutsu, *God,* 183 f.; see MAGIC).

The specimens of *kāhin* sayings that have been transmitted in early Islamic literature are, however, not always assuredly genuine. In some cases, they even appear to be modeled after qurʾānic verses, such as parts of the Satīḥ-story (Neuwirth, Der historische Muhammad) transmitted by Ibn Isḥāq (d. 150/767; *Sīra,* i, 10-11) and adduced by Izutsu (*God,* 174). The literary form of this sparse material has, furthermore, never been studied systematically. It is difficult, therefore, to draw secure conclusions about the relationship between pre-Islamic *kāhin* speech and stylistic phenomena in the Qurʾān. Yet, the identification that is found in traditional literature (Ṭabarī, *Taʾrīkh,* i, 1933 f.) of certain sections of the qurʾānic text with *kāhin* speech has been widely accepted in scholarship; this identification has even led to the assumption that some qurʾānic sūras represent the most reliable evidence for *kāhin* speech itself (Wellhausen, *Reste,* 135). What can be asserted, however, is the similarity between *kāhin* speech and the qurʾānic device of rhymed prose, of *sajʿ*. Rhymed prose in the strict sense of the word — consisting of clusters of very short and thus syntactically stereotyped speech units, marked by rhymes of a phonetically striking pattern — is characteristic of the early sūras.

But though the old traditional form of supernatural communication is used, it

serves as a vehicle for conveying a new content, no longer for the purpose of releasing the magical power of words, nor as a form in which to couch "prophecy" in the sense of foretelling (q.v.) future events (Izutsu, *God,* 184).

Sajʿ is given up completely in the later sūras where the rhyme makes use of a simple *-ūn/-īn* — scheme to mark the end of rather long and syntactically complex verses. In these verses, the rhyming end-syllable has ceased to be the truly relevant closing device; that function is transferred to a particular syntactic structure, the clausula or rhyming cadenza (see below; see also FORM AND STRUCTURE OF THE QUR'ĀN). *Sajʿ* style is thus exclusively characteristic of the early sūras, those texts that aroused — and therefore explicitly transmit — the impression in some listeners that they were related to *kāhin* speech. In the following, the relationship between *kāhin* speech and the early sūras will be elucidated by focusing on a group of initiatory sections that in western scholarship have been associated with *kāhin* speech, namely the introductory oaths (q.v.) of a series of early Meccan sūras. These introductory oaths (though never studied in context) have traditionally been considered dark, obscure, enigmatic.

The "kāhin-*model*": *Oath clusters, idhā/yawma-clause-clusters, etc.*

The introductory oaths that in twenty-one cases initiate a sūra, and in six cases mark the beginning of a new section, are completely devoid of legal connotations (see LAW AND THE QUR'ĀN; CONTRACTS AND ALLIANCES; COVENANT). Several formal characteristics prove their exclusively literary function, the most striking being the multiplicity and diversity of the objects conjured. A second characteristic is their complex formulaic character: they either appear in the form *wa*-X or *lā uqsimu bi*-X, in most cases (eighteen times, all of them early Meccan) continued by further oaths amounting to extended oath clusters. The oaths are usually followed by a statement worded *inna* A *la*-B. Though the oaths most frequently refer to inanimate objects and thus do not appeal to a superior power whose revenge has to be feared, they do convey a particularly serious mood since the objects conjured in some cases project a catastrophic situation; in other cases they pose disquieting enigmas to the listeners. The oath clusters in the Qurʾān may be classified as follows (see Neuwirth, Images):

(1) Oath clusters of the type *wa-l-fāʿilāt* that conjure a catastrophic scenario: Q 37:1-3; 51:1-4; 77:1-5; 79:1-5; 100:1-5 (see APOCALYPSE; PUNISHMENT STORIES)
(2) Oath clusters alluding to particular sacred localities: Q 52:1-6; 90:1-3; 95:1-3 (see PROFANE AND SACRED; SACRED PRECINCTS)
(3) Oath clusters calling upon cosmic phenomena and certain time periods of the day or the night: Q 85:1-3; 86:1, 11-2; 89:1-4; 91:1-7; 92:1-3; 93:1-2 (see WEATHER; COSMOLOGY; DAY AND NIGHT; DAY, TIMES OF)

A few representative examples will be discussed.

Oath clusters that do not explicitly name their objects but only refer to them as unknown, frightening and rapidly approaching phenomena (feminine participles of words of motion or sound appear as harbingers of a catastrophe) have been considered to be the most intricate both by traditional exegetes (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL) and by modern scholars, e.g. Q 100:1-5, 6-11:

Wa-l-ʿādiyāti ḍabḥā/fa-l-mūriyāti qadḥā/fa-l-mughīrāti ṣubḥā/fa-atharna bihi naqʿā/fa-wasaṭna bihi jamʿā/inna l-insāna li-rabbihi la-kanūd/wa-innahu ʿalā dhālika la-

shahīd/wa-innahu li-ḥubbi l-khayri la-shadīd/a-fa-lā yaʿlamu idhā buʿthira mā fī l-qubūr/wa-ḥuṣṣila mā fī l-ṣudūr/inna rabbahum bihim yawmaʾidhin la-khabīr
By the panting runners/striking fire in sparks/storming forward in the morning/their track a dust-cloud/that finally appear in the center of a crowd/verily humankind is to its lord (q.v.) ungrateful/verily, he to that is witness/and verily he for the love of good *(al-khayr)* is violent/does he know? When what is in the graves is ransacked (see BURIAL; DEATH AND THE DEAD)/and what is in the breasts is extracted/verily, their lord that day will of them be well informed.

The five oaths depict a kind of canvas or "tableau" of one and the same object viewed in several successive stages of a continuous and rapid motion: a group of horses, whose riders are carrying out a raid, *ghazwa* (Q 100:3: *al-mughīrāt;* see EXPEDITIONS AND BATTLES; FIGHTING; WAR). The progression of their movement (Q 100:1, 5: *al-ʿādiyāt/fa-wasaṭna*), which ends with a sudden standstill at its destination in the camp of the enemy, is stressed by the particle *fa-*. The movement is directed towards a fixed aim: to overcome the enemy by surprise, perhaps even while still asleep (Q 100:3: *ṣubḥan*).

On closer examination the tableau depicted in the oath cluster appears incomplete, its immanent tension unresolved. The description is interrupted at the very point where the attack on the enemy camp would be expected to start. Instead, a general statement about human ingratitude to God (see GRATITUDE AND INGRATITUDE), their obstinacy (see INSOLENCE AND OBSTINACY) and greediness (see AVARICE) is made — a focus on two vehement human psychic movements that may be taken to echo the violent movements of the horses (see VIOLENCE). The statement leads up to a rhetorical question about human knowledge of their eschatological fate (Q 100:9 f.; see ESCHATOLOGY) which again extends into a description of the psychic situation of humanity on that day (see LAST JUDGMENT; RESURRECTION). At this point the imagery of the interrupted panel of the *ghazwa* is continued: the eschatological scenery (structured in a likewise ecstatically accelerating form of an *idhā*-clause cluster: Q 100:9 f.: *idhā buʿthira mā fī l-qubūri/wa-ḥuṣṣila mā fī l-ṣudūri*) presents a picture that precisely presupposes a violent attack leading to the overturn of everything, since it portrays devastation: the awakening and dispersal *(buʿthira)* of the sleepers *(mā fī l-qubūri),* the emptying of the most concealed receptacles (Q 100:10: *mā fī l-ṣudūri*). The attack presupposed here has already been presumed prototypically by the panel of the *ghazwa*-riders portrayed in the oath cluster. The threatening scenario of the introductory sections, whose effect is enhanced through the equally frightening associations conjured by the *kāhin* speech style, thus relies on a deeper subtext: the panel of Bedouin (q.v.) attackers taking the enemy by surprise after a rapid and violent ride — perhaps the fear-inducing scenario *par excellence* in the pre-Islamic context — reveals itself as an image of the last day (see SYMBOLIC IMAGERY). It serves as a prototype, easily understandable for the listeners as it derives from genuine social experience, for the as yet not-experienced incidents leading up to the last judgment.

The oath cluster in Q 77:1-6, though usually interpreted as a reference to angels in their various activities (see ANGEL), refers "to the winds bringing up the storm-clouds which give the picture of approaching doom" (Bell, *Qurʾān,* ii, 626; see AIR AND WIND). Once more we are confronted with a tableau of violently moving beings — from the time of their earlier use in Q 100 feminine plural participles in qurʾānic speech have a catastrophic connotation — that prototypically

anticipate the eschatological events to be expected. Although the eschatological topic itself is not raised until the end of the sūra, the matrix of images created by the oath cluster remains continuously effective. The refrain repeated ten times throughout the text: "woe that day to those who count false!" (see CHEATING; WEIGHTS AND MEASURES; MEASUREMENT) serves to make audible something of the recitation, the reminder (*dhikr;* see REMEMBRANCE), meant to be a warning, which was part of the appearance of the enigmatic beings projected in the oath cluster (Q 77:5: *fa-l-mulqiyāti dhikrā*). This type of oath cluster soon goes through a change. In the somewhat later text Q 51:1-4, again presenting a panel of clouds that signal a rainstorm, the structural function of the introductory oath clusters has changed. Though it still introduces a prototypical tableau of imminent eschatological incidents, the sense of an "enigma" that had marked the early cases, has now disappeared, and the anticipation of the explicit mention of eschatological phenomena is immediately dissipated. By this stage, the listener is sufficiently accustomed to the prototypical representation of the last day that he or she can immediately translate.

A further step towards the demystification of enigmatic speech is achieved in Q 37:1-5, a sūra of the second Meccan period where an oath cluster of the type *wa-l-fāʿilāt* appears for the last time. Here, the objects conjured no longer belong to the empirical sphere of human experience but to the realm of celestial beings, angels. On the formal side there is a change, too: The usual semantic caesura between the oath formulae and the ensuing statement has vanished, and both textual units display a strong conceptual coherence: the oath cluster involving angels singing hymns (Q 37:3: *fa-l-tāliyāti dhikrā*) is continued by a statement that itself presents the text of that angelical recitation (Q 37:4: *inna ilāhakum la-wāḥidun*). With this last *wa-l-fāʿilāt*-cluster, the earlier function of the oath clusters, i.e. to depict a prototypical panel of the eschatological events, has ceased to operate.

The second and third kinds of oath clusters are less enigmatically coded: they are phrased either *wa-l-*X or *lā uqsimu bi-*X. A group of these clusters alludes to sacred localities. An early example is Q 95:1-3:

wa-l-tīni wa-l-zaytūn/wa-ṭūri sīnīn/wa-hādhā l-baladi l-amīn/la-qad khalaqnā l-insāna fī aḥsani taqwīm/thumma radadnāhu asfala sāfilīn/illā lladhīna āmanū wa-ʿamilū l-ṣāliḥāti fa-hum ajrun ghayru mamnūn/fa-mā yukadhdhibuka baʿdu bi-l-dīn/a-laysa llāhu bi-aḥkami l-ḥākimīn

By the fig and the olive/by Mount Sinai/ and this land secure/surely, we have created man most beautifully erect/ then have rendered him the lowest of the low/except those who have believed and wrought the works of righteousness for them is a reward rightfully theirs/what then, after that will make you declare false in regard to the judgment?/is not God the best of judges?

The first oaths invoke a pair of fruits (resp. fruit-bearing trees; see AGRICULTURE AND VEGETATION; TREES), followed by another pair mentioning two localities (see GEOGRAPHY). The ensuing statement takes a different semantic direction, speaking about human instability from the time of their creation and their falling back, after perfection, into the decrepitude of old age (see BIOLOGY AS THE CREATION AND STAGES OF LIFE). From this bipartite argument — Q 95:6 should be considered a later addition, and not part of the sūra's discourse — the conclusion *(fa-)* is drawn,

clad in a rhetorical question, that the truth of the last judgment can no longer be denied. The discursive thread that holds the three verse groups together becomes visible through a close look at the imagery of the oath cluster. The two kinds of trees may simply be taken as signs of divine bounty granted with creation (q.v.); the ensemble of fig and olive, however, suggests a symbolic meaning, advocated already by the traditional Muslim exegetes who read the two verses as an allusion to al-Shām, the biblical holy land (see SYRIA). Of the two localities that follow in the next oath pair, the first recalls the theophany (q.v.) on Mount Sinai (q.v.) granted to Moses (q.v.), whereas the second alludes to Mecca (q.v.), and is associated with its sanctuary, its *ḥaram*. Theophanies symbolize divine communication and ultimately the divine instruction granted to people that marks the true, significant beginning of human time (q.v.). Though physical time (Q 95:4) that runs in a cyclical way ultimately causes humanity's downfall, within the paradigm of salvation (q.v.) history human longevity is secured. For human beings, historical salvific time eclipses the cyclical movement, running linearly towards the point where the pledge (q.v.) of divine instruction is to be rendered, i.e. toward the last judgment (see HISTORY AND THE QUR'ĀN). The oath cluster referring to creation (nature being an allusion to the divine preservation of humanity) and instruction (theophany-localities symbolizing divine communication with people) serves to arouse the listeners' anticipation of the dissolution of both: the dissolution of creation in physical annihilation at the end of "natural time," and the closure wrought by rendering account for the received instruction at the end of "historical salvific time," on judgment day. The solution of the enigma posed in the oath cluster is fulfilled only at the very end of the sūra where God is praised as the best judge (see JUDGMENT) and the tenor of the sūra returns to the hymn-like tone of the beginning (see NATURE AS SIGNS; PSALMS).

A parallel case is Q 90:1-3, where the introductory oaths again raise the two ideas of creation and instruction, arousing the expectation of a closure that presents the rendering of the pledge of instruction at the last judgment. The somewhat later Q 52, however, starting with a complex oath cluster made up of diverse objects like two sacred sites, the holy scripture (see BOOK) and the — perhaps apocalyptically — turbulent sea: "by the mount/ and a book written/in parchment unrolled (see SCROLLS)/by the house frequented/ by the roof upraised/by the sea filled full," attests a development. Here the statement (Q 52:7-8) about the imminence of the punishment (see CHASTISEMENT AND PUNISHMENT; REWARD AND PUNISHMENT) immediately starts to resolve the tension in the listeners' minds, their expectation — prompted by the initial introduction of symbols of divine instruction (sacred sites and scripture) and allusions to the dissolution of nature (sea filled full) — of the explication of eschatological fulfillment, of human rendering of the pledge of divine instruction (see ERROR; ASTRAY). An eschatological scene constituted by a *yawma*-clause-cluster (Q 52:9-10) follows immediately. This leads to a diptych portraying the blessed and the cursed in the beyond (Q 52:23-8), thus completing the fulfillment of the listeners' anticipation of the eschatological account (see HELL AND HELLFIRE; GARDEN; PARADISE).

All of the oath-cluster sūras demonstrate a similar development of the oath clusters and their ensuing statement: from functional units exhibiting a tension between

each other, to purely ornamental elements without any sensible semantic caesura between the two parts and thus without the power to build up a structure of anticipation (see Neuwirth, Images, for a detailed discussion of the sūras introduced by references to celestial phenomena, i.e. Q 81:15-9; 89:1-30; 90:1-11; 91:1-15; 92:1-21; and of phases of day and night, i.e. Q 51:7-9; 75:1-22; 85:1-7; 86:1-17; see PLANETS AND STARS). The sūras with introductory oath clusters still closely associated with the tradition of earlier Arabian sacred language (see SOUTH ARABIA, RELIGION IN PRE-ISLAMIC) certainly deserve to be considered as a type of their own, in view of the immanent dynamics that dominates them. This effect — that scholarship has neglected completely (see e.g. Welch, Ḳurʾān) — is formally due to the accumulation of parallel phrases in the introductory section, which creates a rhythm of its own. It is structurally due to the anticipation of a solution for the enigma aroused in the listeners' minds by the amassed metaphorical elements, not immediately comprehensible or at least plausible to them. The "dynamization" of the entire composition produced by the introductory section is the main characteristic of this very early text group and has remained exemplary for the structure of the sūra as such.

Yawma/idhā-*clause-clusters, isolated oaths and later* kitāb-*annunciations*

There are introductory sections in the Qurʾan that are closely related typologically, especially the eschatological scenes with their clusters of *yawma/idhā-l-*X-*faʿala*-phrases, that build up a comparably strong rhythmical incipit. Many of these clusters, however, have the tension resolved immediately in the closely following apodosis; with only a few extended clusters is the solution suspended (e.g. Q 56:1-6; 81:1-3; 82:1-4; see Neuwirth, *Studien,* 188 f.). Yet, in no case of the *yawma/idhā-l-*X-*faʿala*-clusters does the tension affect the entire sūra. It is different with the oath clusters. In the case of the *wa-l-fāʿilāt*-clusters, the anticipation of an explication of the enigma posed in the cluster — the translation of the events presented metaphorically, through their empirically known prototypes, into their eschatological analogues — is fulfilled only at the end of the sūra or of its first main part. The immediate fulfillment of the anticipation roused in the oath cluster occurs only in the later texts where oath clusters have lost their tension-creating function.

It is not merely by coincidence that the standard incipit, characteristic of so many later sūras, emerges from these powerful oath-cluster introductions. In the end, among the originally numerous images projected in the oath, only that of the book, of *al-kitāb* (or *al-qurʾān*), remains in use. This is the most abstract of all the different symbols used, essentially no more than a mere sign. Six sūras start with an oath by the book: Q 36:2; 38:1; 43:2; 44:2; 50:1; 52:2. The book is thus the only relic from among a complex ensemble of manifold accessories of revelation used as objects of oaths, originally comprising cosmic (Q 51:1-4; 77:1-5 [clouds]; 51:7; 53:1; 74:32; 85:1; 86:1; 91:1-2 [celestial bodies]), vegetative (Q 95:1), topographic (Q 52:1, 4; 90:1; 95:2-3), cultic (Q 52:3; 68:1) and social (Q 90:2) elements. The book as the symbol of revelation *par excellence* thus acquires, already in early Meccan times, but particularly during the later Meccan periods — *hādhā/dhālika l-kitāb* becomes the standard initial sign of nearly all the later sūras — the dignity which it has preserved until the present day, i.e. that of representing the noblest emblem of the Islamic religion.

Further rhetorical characteristics of early sūras

An early device introduced to arouse attention is the twofold rhetorical question, the "Lehrfrage" (cf. Neuwirth, *Studien,* 132 f.) attached to a newly introduced but enigmatic term. The new notion is named (*al*-X) and is immediately followed by its echo in simple and then extended question form (*mā l*-X? *Wa-mā adrāka mā l*-X?) — leading to an explanatory gloss, as in Q 101:1-3: *al-qāriʿa/mā l-qāriʿa?/ Wa-mā adrāka mā l-qāriʿa?/yawma takūnu…* (for a stylistic evaluation of the entire sūra, see Sells, Sound and meaning; further examples are Q 69:1-3; 83:7-9, 18-20; 90:11-13; 101:9-11; 104:4-6). A new term — particularly a threatening indirect evocation of the imminent eschatological events — can thus be impressed onto the minds. The *mā-adrāka*-question remains limited to early sūras; after having changed into a simple *al*-X *mā l*-X? at a later stage (Q 56:27 f., 41-2) it disappears completely from the qurʾānic rhetorical spectrum.

Repetition of elements is characteristic of the early texts. It ranges from the repetition of a completely identical phrase (as in Q 94:5-6: *inna maʿa l-ʿusri yusrā/inna maʿa l-ʿusri yusrā,* "So, verily, with every difficulty, there is relief, verily, with every difficulty, there is relief") to repetitions of structural elements, thus the isocolon is frequent: Q 88:12-6: *fīhā ʿaynun jāriya/fīhā sururun marfūʿa/wa-akwābun mawḍūʿa/wa-namāriqu masfūfa/wa-zarābiyyu mabthūtha,* "Therein will be a bubbling spring (see SPRINGS AND FOUNTAINS)/therein will be thrones raised on high/goblets (see CUPS AND VESSELS) placed and cushions set in rows/and rich carpets spread out." Of course, the oath cluster relies on the repetition of strictly parallel elements: *wa-l-shamsi wa-ḍuḥāhā/wa-l-qamari idhā talāhā/wa-l-nahāri idhā jallāhā/…,* "By the sun (q.v.) and his splendor/ by the moon (q.v.) as she follows him/ by the day as it shows up its glory.…" (Q 91:1-3). Equally, the *idhā*-clause-cluster is made up of identical structures forming a series of parallelisms or even isocola, as in Q 81:1-13:

idhā l-shamsu kuwwirat/wa-idhā l-nujūmu nkadarat/wa-idhā l-jibālu suyyirat/wa-idhā l-ʿishāru ʿuṭṭilat/wa-idhā l-wuḥūshu ḥushshirat/wa-idhā l-biḥāru sujjirat/wa-idhā l-nufūsu zuwwijat/wa-idhā l-mawʾūdatu suʾilat/bi-ayyi dhanbin qutilat/wa-idhā l-ṣuḥufu nushirat/wa-idhā l-samāʾu kushiṭat/wa-idhā l-jaḥīmu suʿʿirat/wa-idhā l-jannatu uzlifat

When the sun is wound round/and when the stars fall/and when the mountains are made to pass away/and when the pregnant she-camels are neglected/and when the wild beasts are gathered together/and when the seas overflow/and when the souls are joined/and when the infant buried alive is questioned/for what sin was she killed (see INFANTICIDE)/and when the pages are laid open/and when the heaven is stripped off (see HEAVEN AND SKY)/and when hellfire is set ablaze/and when paradise is brought near/[then…]

It is noteworthy that in these clusters, the conditional clauses that normally would be *idhā faʿala l*-X display the inverted syntactic sequence *idhā l*-X *faʿala,* otherwise familiar only from poetry.

In Arabic, etymologic repetitions in morphologically different shape are particularly frequent in *maṣdar*-constructions (see GRAMMAR AND THE QUR'ĀN); paranomasias of this type appear in early sūras (cf. Q 52:9-10: *yawma tamūru l-samāʾu mawrā/wa-tasīru l-jibālu sayrā,* "On the day when the firmament will be in dreadful commotion and the mountains will fly hither and thither," and frequently elsewhere).

It is evident that, from the perspective of the transmission of information, many of these devices are not efficient, since they

are apt to suspend rather than to convey information; their function is revealed, however, once the text is performed orally (see RECITATION OF THE QUR'ĀN). The Qur'ān, abounding in imperatives addressed to the Prophet and/or the believers (see EXHORTATIONS): to recite (Q 96:1: *iqra'*, and often) or to chant (Q 73:4: *rattili l-qur'āna tartīlā,* and often) the text, to recall by reciting (Q 19:16: *udhkur,* or Q 88:21: *dhakkir,* and often; see MEMORY) the text, itself presents the claim of being an oral communication (see ORALITY; ORALITY AND WRITING IN ARABIA). Navid Kermani (*Gott ist schön,* 197) has gone so far as to claim:

If a text is explicitly composed for recitation, fulfilling its poetic purpose only when recited or — more generally speaking — performed, it should be viewed as a score, not as a literary work, as Paul Valéry once said of the poem. Although a score can be read or hummed quietly in private, it is ultimately intended to be performed.

The frequency of appellative expressions presupposing the presence of addressees is particularly striking in the beginnings of early sūras, where the attention of the listeners is sometimes aroused directly through an imperative (Q 73:1-2; 74:1-2; 87:1; 96:1, calling to proclaim), or a related form (Q 106:3, with a preceding address). Polemic introductory parts start with a *waylun li-*, "woe to-," exclamation (Q 83:1-3; 104:1-2; cf. Q 77:24 f.; 107:4-7) or a curse-formula (Q 111:1 *tabbat yadā* X, "may the hands of X perish"), or with a deictic formula, also familiar from interior sections of sūras (Q 107:1: *a-ra'ayta lladhī,* "did you see him who…").

It might, on first sight, appear that the hymnic introductory sections stand by themselves. They are strongly reminiscent of biblical models and, more precisely, of liturgical texts such as the Jewish *berākhōt* that are likewise made up of relative clauses *(bārūkh attā adonai asher…*). In three instances both creation and divine instruction are recalled as is the case in the *berākhōt:* Q 87:1-5, *sabbiḥi sma rabbika l-aʿlā/ lladhī khalaqa fa-sawwā…;* Q 96:1-5, *iqra' bi-smi rabbika lladhī khalaq/khalaqa l-insāna min ʿalaq/iqra…;* and Q 55:1-3, *al-raḥmān/ ʿallama l-qur'ān/khalaqa l-insān/ʿallamahu….* Equally biblically-tuned are hymnic sections in the interior of sūras, like Q 85:13-6 and, particularly, Q 53:43-9, which seems to echo the famous hymn from 1 Samuel 2:6. In the same vein, a number of sūras conclude with a final exclamation clad in an imperative that in most cases calls for a liturgical activity: Q 96:19 (call for prostration; see BOWING AND PROSTRATION), Q 69:52 (call for divine praise; cf. Q 56:74; see also LAUDATION; GLORY; GLORIFICATION OF GOD; PRAISE), Q 52:48 f. (call for patience; see TRUST AND PATIENCE), Q 84:24 (announcement of punishment); see also the final exclamations of Q 53:62 (prostration), Q 93:11 (recitation), Q 94:7-8 (segregation from unbelievers), Q 86:15-7 (patience), Q 51:60 (exclamation of woe); only the final exclamation in Q 55:78 takes the shape of a doxology (see Baumstark, Gebetstypus): *tabāraka smu rabbika,* "blessed is the name of your lord." But in view of the composition of most early sūras made up of diverse elements, it appears problematic to attempt an unambiguous distinction between texts imprinted by ancient Arabian literary traditions and others more biblically styled.

The "poet-model": similes and metaphors, structures of discourse

The allegation that the Prophet was a poet would likely have been based less on particular stylistic evidence than on the general similarity between qur'ānic diction

and other genres of elevated, non-ordinary speech (cf. Gilliot, Poète ou prophète?, 380-8: "Prophétie contre poésie. De la construction d'un prophète"). It is true that the early sūras, which — though not metrically bound nor carrying a mono-rhyme — prompted that particular accusation, are highly poetic (for a study in their stylistic devices, see Sells, Sound and meaning, and id., Sounds, spirit and gender). Indeed, the "*kāhin*-model" of speech is only a special case of poetic diction. As Kermani has shown, a high degree of "poeticity" ("Poetizität") cannot be denied to the Qur'ān as a whole. Not only does the entire Qur'ān morphologically and syntactically adhere closely to what has been termed poetic *'arabiyya* (see GRAMMAR AND THE QUR'ĀN), but it also makes extensive use of a selected vocabulary that — lending itself easily to the demands of the familiar meters — had established itself as poetic (Bloch, *Vers und Sprache*). J.J. Gluck (Is there poetry) has tried to trace rhetorical devices employed by poets. Above all, the priority given in most qur'ānic texts to adornments of speech and devices of appeal to the listeners that are completely unnecessary for the raw transmission of information is a convincing proof of its proximity to the realm of poetry. (For a discussion of the medieval learned debates about the relation between Qur'ān and poetry, see Kermani, *Gott ist schön,* 233-314; von Grunebaum, *A tenth century document*.)

Similes (q.v.; *tashbīh*) and metaphors (*isti'āra;* see METAPHOR) are, of course, the most striking evocations of poetic speech. A modern survey of these tropes in the Qur'ān — as achieved for pre-Islamic poetry by Renate Jacobi (*Studien zur Poetik,* 115-27, 153-67) and Thomas Bauer (*Altarabische Dichtkunst,* 181-204) — is still to be done. T. Sabbagh *(Le métaphore dans le Coran)* is only an inventory; his classification of metaphorical usages does not consider the contexts in which the words are used, nor the fields of their metaphorical application. More research has been done on the theologically controversial aspect of *tashbīh,* namely the cases of qur'ānic anthropomorphism (q.v.), e.g. God's cunning (*makr,* e.g. Q 3:54; 4:142) and the like (see van Ess, Tashbīh wa-tanzīh; see THEOLOGY AND THE QUR'ĀN). Since the appearance in 1892 of the study by C.C. Torrey, *The commercial theological terms in the Koran,* that provides a thorough survey of a number of words touching on commerce and their often metaphoric use in the Qur'ān, commerce had been identified as one major realm of images in the Qur'ān. Torrey, and later scholars following him, suggested that the words and metaphors from the commercial realm form a cluster of terms derived from commercial applications which have taken on theological overtones in the Qur'ān (see e.g. REWARD AND PUNISHMENT; also, ECONOMICS; WEIGHTS AND MEASURES; TRADE AND COMMERCE). As against Torrey who "assumed a mercantile background of Muḥammad and Mecca and then found evidence for that in the Qur'ān" (Rippin, Commerce, 128), Andrew Rippin (The commerce of eschatology) presents a reversal of the commercial-background-theory. He demonstrates that Torrey's terms are employed in three contexts in the Qur'ān, in speaking about the prophets of the past, in legislating the Muslim community and in descriptions of eschatology. Inverting Torrey's argument, he concludes that the

> symbolism of eschatology is partially derived from the image of the foundations of a moral and flourishing society, the symbolism resolves the seeming iniquities of life as it is actually lived — the presence of suffering and injustice as basic facts — by reflecting a divinely-ruled society in which

evil gets its proper reward. The symbolism gives a higher meaning to history by relating it to transcendental mythic patterns (Rippin, Commerce, 134; see ETHICS AND THE QUR'ĀN; GOOD AND EVIL; SIN, MAJOR AND MINOR; OPPRESSION; OPPRESSED ON EARTH, THE).

Rippin advocates utmost caution in attempting a historical contextualization of the symbolism of the text, which he regards as a product of later Muslim readings tailored towards particular ideological ends. A comparative study juxtaposing qur'ānic and poetic similes and metaphors is still a desideratum.

The qaṣīda *and the sūra*

Though the allegation identifying qur'ānic speech with poetical speech arises from observations made on the basis of the earliest texts, it is noteworthy that an intriguing relationship between Qur'ān and poetry can be discerned. This relationship relies less on small isolated speech units — such as the various tropes in both canonical corpora (that still await a comparison) — than on the overall structure of both *qaṣīda* and sūra (see SŪRAS). At a certain stage in the qur'ānic development, the sūra as a literary unit seems to reflect the structure of the dominating poetical genre, the *qaṣīda*. The *qaṣīda* was the standard form of pre-Islamic poetry consisting of a sequence of three sections, each conveying a different mood: a nostalgic *nasīb,* lamenting the loss of stability by recalling the disrupted relation between the poet and a beloved, was followed by the description of a movement in space, a journey (q.v.), *raḥīl* or, more often, a description of the riding camel (q.v.) used by the poet — a section that portrayed the poet regaining his self-consciousness and reattaching himself to the world through recalling instances of his past activities, his interfering with reality through exploitation of the *"kairos,"* the crucial moment for achieving a change. After evoking his heroic achievements, the poet concluded his poem with an evocative *fakhr,* a self-praise or praise of the collective confirming the heroic virtues of tribal society. The social status of the recitation of these poems, as Andras Hamori (*The art of medieval Arabic literature,* 21 f.) stressed, must have come close to that of a ritual:

The extreme conventionality, repetitiousness, and thematic limitation of the *qaṣīda* need not astonish us.… Already in the sixth century, before the coming of Islam, these poems, rather than myths or religious rituals, served as the vehicle for the conception that sorted out the emotionally incoherent facts of life and death, and by the sorting set them at the bearable remove of contemplation. *Qaṣīda* poets spoke in affirmation of a model they shared, their poetry tended to become a shared experience, all the more as the affirmation was through the replay of prototypal events which the model so successfully charted.

The poet, then, is located in the center of the poem; the one who establishes the model for identification through his word, is at the same time the figure standing in the center of the artifice. Looking at the fully developed (most often) tripartite sūras of the middle and late Meccan periods (see Neuwirth, Rezitationstext) we can trace a comparable structure: The sūra starts with a section that draws on various standard themes such as hymns, lists of virtues or vices (see VIRTUES AND VICES, COMMANDING AND FORBIDDING), polemic against unbelievers and affirmations of the divine origin of the message; most of these themes also serve to furnish the final part which should, ideally, be concluded with the topic of affirming the revelation. The

center of the sūra, however, is fixed over a longer period of qur'ānic development. It contains one or more stereotyped narratives about prophets, portraying them in their struggle to achieve an ideological reorientation in their communities, announcing that the *"kairos,"* the unique moment to gain salvation, has come, thus exemplifying the chance granted to Muḥammad's listeners in the light of history. Functioning both as a fixed part in the liturgy of the community and as a mirror of contemporary history, these sūras provide ritualized memory and at the same time real experience. In view of the structure of the extremely powerful genre of the *qaṣīda,* where the poet appears at once as the protagonist in and the transmitter of the message that contains the rules of what should be, it is perhaps not surprising to find the figure of the Prophet — or a whole group of representatives of this type — as the protagonist of the drama and the bearer of the word (see WORD OF GOD) again in the middle part of the sūra. The Prophet is thus, like the *qaṣīda* poet in the poem, the exemplary figure and the speaker in one person. Here, as in the case of the ancient *kāhin* speech, it appears that an earlier genre has been absorbed to shape the foundation of a new sacred canon.

This suggestion does not imply that the stance taken in the Qur'ān towards poets should have developed positively. In Q 26:224-6 we read: *wa-l-shu'arā'u yattabi'uhumu l-ghāwūna/a-lam tara annahum fī kulli wādin yahīmūna/wa-annahum yaqūlūna mā lā yaf'alūna,* "And the poets, the beguiled follow them/do you not see that in every wadi they err about madly in love/and that they say what they do not do?" These verses should be distinguished from the later addition of Q 26:227 (see Neuwirth, Der historische Muḥammad, 103) that reflects a late Medinan development. In Q 26:224-6 the poets are accused of not coming up to the high claims raised in their poetry ("to do what they say") and thus of being incapable of functioning as spokespeople of their collective. The spokesperson of society is no longer the poet but the prophet. The Medinan addition Q 26:227 excludes from the verdict those poets who have actively sided with the community, which, as an *ecclesia militans,* cannot afford to have itself satirized (see Imhof, *Religiöser Wandel*).

The Qur'ān and the Bible: Refrains and cadenzas

Although the Qur'ān contains no explicit allegations that it is modeled on biblical speech, some accusations that he was taught by a mortal (Q 16:103: *innamā yu'allimuhu basharun*) were raised against the Prophet and are refuted in the Qur'ān. It is, however, much more relevant that the Qur'ān as a message communicated in the Arabian peninsula of late antiquity necessarily draws from both pagan and monotheistic traditions. The qur'ānic message soon presented itself as a re-narration of the earlier biblical scriptures and one serving analogous purposes, namely to provide a liturgical base for the communication between God and humanity. We can even locate in the Qur'ān the decisive turn from the communication of a divine message to the celebration of liturgy with the memory of salvation history (i.e. biblical stories) placed in its center (see Neuwirth, Referentiality). Those middle and late Meccan sūras that appear to constitute complex liturgies resembling roughly those of the older monotheistic religions are comprised of the following: an introductory section, reading from the scriptures, and a closing section. The presentation of the biblical story is sometimes explicitly introduced by an announcement, as if a pericope to be read in church were being announced: Q 15:51, "Bring them news (q.v.) about the guests of Abraham" (q.v.; *nabbi'hum 'an ḍayfi*

Ibrāhīm; cf. Q 19:2: *dhikru raḥmati rabbika ʿabdahu Zakariyya,* "This is a recital of the mercy [q.v.] of your lord to his servant Zechariah [q.v.]"). Qurānic re-narrations of biblical texts are enough to fill a comprehensive reference book (see Speyer, *Erzählungen*). It is particularly in this stage of Meccan development that liturgical formulae familiar from Judaism and Christianity become frequent in the Qurʾān, like Q 27:59: *al-ḥamdu lillāhi wa-salāmun ʿalā ʿibādihi lladhīna ṣṭafā,* "Praise be to God and peace be on his elected servants" (cf. *doxa en hypsistois theō kai epi gēs eirēnē en anthrōpois eudokias,* Luke 2:14; see for the Christian doxology and the Jewish *berākhā* reflected in the frequent qurʾānic exclamations *al-ḥamdu lillāh* and *subḥāna rabbinā/llāhi,* Baumstark, Gebetstypus; a complete introitus may be identified in the Fātiḥa [q.v.], see Neuwirth and Neuwirth, Fātiḥa).

The question, however, of the stylistic and rhetorical impact of biblical texts on the Qurʾān has not yet been studied. Only a few isolated parallels strike the eye, such as the pronouncedly biblical sounding hyperboles in Q 7:40: *inna lladhīna kadhdhabū bi-āyātinā wa-stakbarū ʿanhā lā tufattaḥu lahumu abwābu l-samāʾi wa-lā yadkhulūna l-jannata ḥattā yalija l-jamalu fī sammi l-khiyāṭi,* "To those who reject our signs (q.v.) and treat them with arrogance (q.v.), the gates of heaven will not open for them, nor will they enter the garden, until the camel can pass through the eye of the needle" (cf. Matthew 19:24; Mark 10:25; Luke 18:25; see PARABLES) or Q 39:67: *wa-l-arḍu jamīʿan qabḍatuhu yawma l-qiyāmati wa-l-samāwātu maṭwiyyatun bi-yamīnihi,* "And on the day of resurrection (q.v.) the whole of the earth (q.v.) will be grasped by his hand and the heavens will be rolled up in his right hand" (cf. Isaiah 34:4, 40:12; see for further examples Speyer, *Erzählungen;* see LEFT HAND AND RIGHT HAND).

A more prominent stylistic issue shared by the Bible and Qurʾān is certainly the refrain which appears four times in the Qurʾān (Q 26, 54, 55, 77), again mostly in middle Meccan sūras where the focus has shifted from the ancient Arabian tradition to the biblical. Although there are instances of anaphors and even longer speech units repeated in pre-Islamic and *muḥaḍram* poetry (i.e. poetry that spans the pre-Islamic and the Islamic eras), a refrain appearing with the frequency of the verse *fa-bi-ayyi ālāʾi rabbikumā tukadhdhibān,* "Then which of the benefits of your lord will you two deny?" (e.g. Q 55:13) is not found in poetry (see BLESSING; GRACE). That refrain has, however, a close counterpart in the refrain *kīle-ōlām ḥasdō* in Psalm 136, a text that in many respects resembles the sophisticated composition of Sūrat al-Raḥmān ("The Merciful," Q 55) and must have been well known in monotheistic circles since it plays a major role in Jewish liturgy (see Neuwirth, Qurʾānic literary structure). We can conclude that refrains in the Qurʾān may have been inspired by the Psalms (q.v.) or else by liturgical poetry shaped after the model of the Psalms.

Another major rhetorical phenomenon that appears to have a strong biblical imprint is the clausula — or the cadenza, as it might be termed in analogy to the final part of speech units in Gregorian chant — which, through their particular sound pattern, arouse the expectation of an ending as, for example, the concluding colon of the later Meccan and Medinan long verses of the Qurʾān (see Neuwirth, *Studien,* 157-70; see also FORM AND STRUCTURE OF THE QUR'ĀN). In the Qurʾān the cadenza relies less on an identical musical sound than on a widely stereotyped phrasing. It is easily identifiable as an end marker since it is semantically distinguished from its context: it does not partake in the main theme of the discourse

but adds a moral, polemic or hymnal comment to it. Although it is true that not all multipartite verses bear such formulaic endings, cadenzas may be considered characteristic of the later Meccan and all the Medinan qur'ānic texts. On a social level, they betray a novel narrative pact between the speaker and his audience, the consciousness that there is a basic consensus not only on human moral behavior but also on the image of God as a powerful co-agent ever-present in human interaction (see GOD AND HIS ATTRIBUTES; POWER AND IMPOTENCE; FATE; DESTINY). But cadenzas achieve even more in terms of constructing a new identity: they provide markers of the sacred that transform narrative events into stages of salvation history, changing the ordinary chronometric time of the narratives into signifying time. An observation of Aziz al-Azmeh (Chronophagous discourse, 193 f.) is useful to illuminate this point:

The vacuous syntagms of ordinary time is the instrument of a finalist paradigm whose instances punctuate the course of this flow at certain loci of accentuation that enclose values of sacredness, lending a sense of sacredness to historical succession. These values are, primarily, an integrality of divine order which reigned with the creation of Adam (see ADAM AND EVE), the imperative of its complete restoration in paradise and the intermittent attempts to calque this order in the history of prophecy.

It goes without saying that the cadenzas owe their aesthetic effect to their widely predictable sound. Their stereotypical appearance, which is due to the morphological and syntactical constraints imposed by the rhyme (see Müller, *Untersuchungen*) would, in a written text, appear awkward. In the recited text, however, the double-edged style of the long verses, consisting of naturally flowing prose merging into artificial, sacred, speech in the formulaic conclusion, powerfully reflects the bi-dimensionality of qur'ānic speech which evokes simultaneously world and hereafter, time (q.v.) and eternity (q.v.).

Rhyme

see RHYMED PROSE; POETRY AND POETS

Rhymed Prose

The common English translation of *sajʿ,* an ancient form of Arabic composition used in proverbs, aphorisms, orations, descriptions of meteorological phenomena, and soothsayers' oracular pronouncements before the advent of Islam and in sermons, book titles, introductions, anecdotes, belletristic epistles, chancery correspondence, *maqāmāt,* histories and other literary works in the Islamic period. In its simplest form, *sajʿ* consists of groups of consecutive cola sharing a common rhyme and meter. The meter of *sajʿ* is accentual, determined by the number of words *(kalima, lafẓa)* in each colon (*sajʿa,* pl. *sajaʿāt; qarīna,* pl. *qarāʾin; faṣl,* pl. *fuṣūl;* or *fiqra,* pl. *fiqar*), rather than the patterns of long and short syllables that characterize quantitative meter, with word accents providing the feet or beats. In the most common form of *sajʿ,* adjacent *sajʿa*s are rhythmically parallel *(muʿtadil),* containing an equal number of beats. Attempts to describe *sajʿ* rhythm solely in terms of syllables are therefore inadequate. *Sajʿ* regularly exhibits *muwāzana,* repetition of a set morphological (and necessarily syllabic or quantitative) pattern in the colon-final word or final foot (*sajʿ,* pl. *asjāʿ; qarīna,* pl. *qarāʾin;* or *fāṣila,* pl. *fawāṣil;* cf. Suyūṭī, *Itqān,* 693-714/iii, 332-60 [chap. 59]; id., *Muʿtarak,*

i, 29-31, 31-2: "Is there rhymed prose in the Qurʾān?"; Ḥasnāwī, *al-Fāṣila,* 19-27; 31-100; 103-50) of adjacent cola. In addition, *sajʿ* regularly involves the concentrated use of syntactic and semantic parallelism, alliteration, paronomasia and other rhetorical figures. Given that the characteristic features of *sajʿ* are end-rhyme, accent-based meter, and *muwāzana,* the designation "rhymed prose," reflecting only the first of these three, is something of a misnomer. "Rhymed and rhythmical prose" is an improvement, but it is more accurate to label *sajʿ* a type of accent poetry. Goldziher and others have suggested that *sajʿ* is the oldest poetic form in Arabic (see ARABIC LANGUAGE; LITERATURE AND THE QURʾĀN) and some, noting the importance of parallelism and other similar features in Akkadian, Ugaritic and Hebrew poetic forms, above all in biblical poetry, have argued that *sajʿ* in a sense represents the Ur-poetry of the Semites.

Medieval Muslim theologians, rhetoricians and commentators have disagreed concerning the presence of *sajʿ* in the Qurʾān. This debate reflects a strong concern to distance the Qurʾān, as the primary miracle of the prophet Muḥammad's mission (see PROPHETS AND PROPHETHOOD; MIRACLES), from ordinary human types of composition such as *jāhilī* poetry (see AGE OF IGNORANCE) or the *sajʿ* pronouncements of pre-Islamic soothsayers (q.v.). After all, the Qurʾān itself denies accusations that the prophet Muḥammad was a poet (*shāʿir,* Q 21:5; 52:30; 69:41; see POETRY AND POETS) or soothsayer (*kāhin,* Q 52:29). Theologians such as al-Ashʿarī, (d. ca. 325/937), al-Rummānī (d. 384/994) and al-Bāqillānī (d. 403/1013) held that the Qurʾān does not contain *sajʿ*. Their reasoning is that in the Qurʾān, meaning dominates form, whereas in *sajʿ,* form dominates meaning (see FORM AND STRUCTURE OF THE QURʾĀN; LANGUAGE AND STYLE OF THE QURʾĀN). Therefore, the Qurʾān cannot be *sajʿ*. The second position, held by early Muʿtazilī (see MUʿTAZILĪS) theologians such as al-Naẓẓām (d. 220-30/835-45) and taken up by later rhetoricians such as Ḍiyāʾ al-Dīn b. al-Athīr (d. 637/1239) and al-Qalqashandī (d. 821/1418), admits that the Qurʾān contains *sajʿ* and that many sūras of the Qurʾān are composed entirely in this form. Such authors identify specific sūras, such as Sūrat al-Najm (Q 53, "The Star"), Sūrat al-Qamar (Q 54, "The Moon") and Sūrat al-Raḥmān (Q 55, "The Merciful"), as being composed entirely in *sajʿ*. The third position, represented by the majority of late medieval literary critics and scholars of the qurʾānic text such as Jalāl al-Dīn al-Suyūṭī (d. 911/1505), holds that while to term the Qurʾān *sajʿ* is unacceptable or disrespectful, it nevertheless exhibits many formal features of *sajʿ* style. In fact, the overwhelming majority of the examples given of *sajʿ* composition in manuals of rhetoric are qurʾānic. This controversy resulted in the use of two sets of terms for the features of qurʾānic as opposed to extra-qurʾānic or ordinary *sajʿ*. Critics referring to rhyme in the Qurʾān use the terminology "identical letters" (*ḥurūf mutamāthila* or *ḥurūf mutajānisa*) rather than "rhyme" *(qāfiya),* too closely associated with poetry. The rhyme word in *sajʿ* is designated by the term *sajʿ* (pl. *asjāʿ*) itself, but in qurʾānic studies, the terms *fāṣila* (pl. *fawāṣil*) and *raʾs* (pl. *ruʾūs*) are used. The colon or period in *sajʿ* is usually termed *sajʿa, faṣl* or *qarīna* but with reference to the Qurʾān, *fāṣila* or *āya* appears.

The Qurʾān's debt to pre-Islamic *sajʿ* is obvious, particularly in the early Meccan sūras (q.v.; see also CHRONOLOGY AND THE QURʾĀN). The evidence suggests that the Qurʾān contains a great deal of *sajʿ* and that many sūras are composed entirely in *sajʿ,* but Paret and others are wrong to state

that the Qurʾān is entirely in *sajʿ,* for many sections of the Qurʾān do not maintain the rhythmical parallelism *sajʿ* requires. This is particularly clear in the longer sūras, where successive verses, despite end-rhyme, are so long and of such unequal length as to preclude any sustained meter, whether quantitative or accentual. The extent to which qurʾānic style maintains or departs from the styles of pre-Islamic *sajʿ,* a matter of some controversy, is difficult to gauge because extant examples of pre-Islamic *sajʿ* all date from later centuries and many are in fact pastiches of a style associated with paganism and magic (q.v.; see also PRE-ISLAMIC ARABIA AND THE QURʾĀN; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC).
The best working hypothesis is that the Qurʾān's sūras drew on many of the stylistic features, content and conventions of several genres of pre-Islamic *sajʿ,* particularly divination (q.v.) and oratory, but modified these features to fit into the biblical, monotheistic framework of Islam's message (see SCRIPTURE AND THE QURʾĀN).

According to one estimate, 86% of the verses in the Qurʾān exhibit end rhyme. A lower percentage of the qurʾānic text is actually *sajʿ,* for many passages that exhibit end-rhyme do not exhibit the rhythmical parallelism characteristic of *sajʿ*. Conversely, some passages exhibit the rhythmic parallelism characteristic of *sajʿ* without exact or even near rhyme. The rhyme word regularly observes *taskīn,* ending on a consonant through the suppression of a final short vowel. While this sort of rhyme also occurs in poetry, poetic rhymes regularly end in a long vowel and final short vowels are usually lengthened rather than suppressed. As in poetry, *-m* and *-n* rhyme. Near rhyme between consonants is also common, frequent combinations being *l/r* (e.g. Q 25:1-62) and *b/d/q* (e.g. Q 111; 113). Geminate consonants are regularly reduced: *wa-tab* < *wa-tabba* (Q 111:1); *mustamir* < *mustamirrun* (Q 54:2); *wa-lā jān* < *wa-lā jānnun* (Q 55:39, 56, 74). Rhyme words with final CC (double consonant) occur in several passages but these should probably be treated as CvC (consonant — vowel — consonant) rhymes: an interstitial half or full vowel should be assumed, as in Q 86:11-2, where the rhyme words *al-rajʿi* and *al-ṣadʿi* should probably be read *al-rajʿ, al-ṣadʿ,* or Q 89:1-5, where the rhyme words *l-fajri, ʿashrin, l-watri, yasri, ḥijrin* should probably be read *l-fajr, ʿashr, l-watr, yasr, ḥijr*. The long vowels *-ū-* and *-ī-* rhyme, as in poetry, and the short vowels *-a-, -i-, -u-* also rhyme. The indefinite accusative marker *-an (alif-tanwīn)* is regularly voiced as *-ā* in rhyme position. A final long vowel *-ī* is often suppressed: the first person singular possessive pronominal suffix in *dīn* < *dīnī* (Q 109:6), etc., the first person singular objective pronominal suffix in *aṭīʿūn* < *aṭīʿūnī* (Q 26:108, 110, 126), etc., and the endings of definite defective nouns in *al-mutaʿāl* < *al-mutaʿālī* (Q 13:9); *yawma l-talāq* < *yawma l-talāqī* (Q 40:15); *yawma l-tanād* < *yawma l-tanādī* (Q 40:32); and *kallā idhā balaghati l-tarāq* < *kallā idhā balaghati l-tarāqiya* (Q 75:26). Many other modifications of colon-final words for the sake of rhyme occur. Although some sūras include many rhymes, the tendency to maintain mono-rhyme is quite strong in the Qurʾān, and the most common rhyme by far is *-ūn/- ūm/- īn/ -īm*. Sūrat al-Muʾminīn (Q 23, "The Believers") with 118 verses, Sūrat al-Naml (Q 27, "The Ants") with ninety-three verses and Sūrat Yā Sīn (Q 36, "Yā Sīn") with eighty-three verses all maintain complete mono-rhyme. At the other extreme, Sūrat al-ʿĀdiyāt (Q 100, "The Coursers") has four distinct rhymes in only eleven verses.

Medieval rhetoricians classified examples of *sajʿ* according to length of cola, and the fact that they did so in terms of words confirms that the meter of *sajʿ* is essentially

accentual. Ibn al-Athīr distinguishes short *sajʿ*, in which the phrases include two to ten words each, from long *sajʿ*, in which the *sajʿa*s have eleven or more words. Al-Qazwīnī (d. 739/1338) names three categories: short, medium and long, but does not give exact numerical definitions. The length of the colon in qurʾānic *sajʿ* varies from two words — *wa-l-mursalāti ʿurfā/ fa-l-ʿāṣifāti ʿasfā* (Q 77:1-2) — to nineteen. In certain cases, discussed below, a *sajʿa* of one word is possible as part of a more complex rhythmic structure, as in the first cola of the opening of Sūrat al-Raḥmān (Q 55:1-4; "The Merciful"): *al-raḥmān/ ʿallama l-qurʾān/khalaqa l-insān/ʿallamahu l-bayān/*. Al-Qalqashandī states that the following verses, with nineteen words each, represent the longest example of *sajʿ* in the Qurʾān:

idh yurīkahumu llāhu fī manāmika qalīlan wa-law arākahum kathīran la-fashiltum wa-la-tanāzaʿtum fī l-amri wa-lākinna llāha sallama innahu ʿalīmun bi-dhāti l-ṣudūr/ wa-idh yurīkumūhum idh iltaqaytum fī aʿyunikum qalīlan wa-yuqallilukum fī aʿyunihim li-yaqḍiya llāhu amran kāna māfʿūlan wa-ilā llāhi turjaʿu l-umūr (Q 8:43-4)

The average length is much less, particularly in the Meccan sūras. The medieval critics agree that short cola are more effective and eloquent than long cola.

Cola are arranged in groups that I have termed "*sajʿ*-units," unified by a common rhyme and meter or rhythmic pattern. The number of cola in a *sajʿ*-unit varies widely, ranging from two through more than ten. In the Meccan sūras, units of two, three and four *sajʿa*s are common but Sūrat al-Takwīr opens with a *sajʿ*-unit of fourteen parallel *sajʿa*s (Q 81:1-14): *idhā l-shamsu kuwwirat/wa-idhā l-nujūmu nkadarat/wa-idhā l-jibālu suyyirat/wa-idhā l-ʿishāru ʿuṭṭilat/wa-idhā l-wuḥūshu ḥushirat/wa-idhā l-biḥāru sujjirat/wa-idhā l-nufūsu zuwwijat/wa-idhā l-mawʾūdatu suʾilat/bi-ayyi dhanbin qutilat/ wa-idhā l-ṣuḥufu nushirat/wa-idhā l-samāʾu kushiṭat/wa-idhā l-jaḥīmu suʿʿirat/wa-idhā l-jannatu uzlifat/ʿalimat nafsun mā aḥḍarat/*.

An important feature of *sajʿ*, both qurʾānic and extra-qurʾānic, is the introductory phrase, which falls outside the ordinary prosodic structure of the *sajʿ*. The introductory phrase is in effect a separate entity and the *sajʿa* proper begins after that phrase. This feature, which I have termed *maṭlaʿ*, distinguishes *sajʿ* from poetry, where nothing falls outside the metrical scheme of a poem's verses. The *maṭlaʿ* in the Qurʾān is most often shorter than the following *sajʿa*, on occasion equal in length, and rarely longer. Examples include the following, where the *maṭlaʿ* is enclosed in parentheses:

(al-ḥamdu lillāhi) rabbi l-ʿālamīn/al-raḥmāni l-raḥīm/māliki yawmi l-dīn (Q 1:2-4)
(a-fa-lā yaʿlamu idhā) buʿthira mā fī l-qubūr/ wa-ḥuṣṣila mā fī l-ṣudūr (Q 100:9-10)

Recognition of this feature, which has misled many critics from Abū Hilāl al-ʿAskarī (d. after 395/1005) on, is extremely important for the prosodic analysis of *sajʿ* texts. *Sajʿ* cola form groups — I have termed them "*sajʿ*-units" — that share a rhyme and adhere to a common meter or alternative metrical pattern. *Sajʿ* units in the Qurʾān exhibit five main structural patterns. In the first pattern, parallel *sajʿa*s within a *sajʿ* unit are of equal length:

fa-ammā l-yatīma fa-lā taqhar/wa-ammā l-sāʾila fa-lā tanhar (Q 93:9-10)
wa-l-ʿādiyāti ḍabḥā/fa-l-mūriyāti qadḥā/fa-l-mughīrāti ṣubḥā (Q 100:1-3)

This is the most common form of *sajʿ*, in which the feature of rhythmical parallelism, which medieval Muslim critics termed *iʿtidāl*, "balance," is most obvious. While in

later Arabic literature, units consisting of paired rhyming phrases are the norm, in the Qurʾān units of three, four, five and more *sajʿa*s are frequent.

The second pattern has a unit of roughly parallel *sajʿa*s, with following *sajʿa*s slightly longer than the preceding ones. As an example of this, Ibn al-Athīr cites the following three verses, which contain eight, nine, and nine words respectively:

bal kadhdhabū bi-l-sāʿati wa-aʿtadnā li-man kadhdhaba bi-l-sāʿati saʿīrā/
idhā raʾathum min makānin baʿīdin samiʿū lahā taghayyuzan wa-zafīrā/
wa-idhā ulqū minhā makānan ḍayyiqan muqarranīna daʿaw hunālika thubūrā (Q 25:11-3)

A third type has a final *sajʿa* in a group of parallel *sajʿa*s slightly shorter than the preceding ones. The medieval critics disapprove of this type of *sajʿ* but it nevertheless appears in the Qurʾān occasionally:

min sharri l-waswāsi l-khannās/alladhī yuwaswisu fī ṣudūri l-nās/mina l-jinnati wa-l-nās (Q 114:4-6)

The last verse, with three words, is shorter than the first two, with four and five words, respectively.

A fourth pattern, which I have termed the "quatrain" *(rubāʿī)* form, has two *sajʿa*s of equal length followed by a third roughly equal in length to the previous pair combined, resulting in a pattern resembling a quatrain of rhyme scheme *a-a-b-a*. Examples include:

lam yalid wa-lam yūlad/wa-lam yakun lahu kufuwan aḥad (Q 112:3-4)
khudhūhu fa-ghullūhu/thumma l-jaḥīma ṣallūhu/thumma fī silsilatin dharʿuhā sabʿūna dhirāʿan fa-slukūhu (Q 69:30-2)

The fifth pattern is a pyramidal form, where length in successive *sajʿa*s within a *sajʿ* unit increases steadily:

wa-l-ḍuḥā/wa-l-layli idhā sajā/mā waddaʿaka rabbuka wa-mā qalā (Q 93:1-3)

Here, the successive *sajʿa*s are of one, three and five words. In the Qurʾān, this construction often appears in *sajʿ* units of three *sajʿa*s, especially at the beginnings of sūras.

Sajʿ units are joined together in various ways to form larger structures. For the qurʾānic material, particularly the short sūras, this larger block is often the sūra itself. One classical term for the structure which *sajʿ* units form is *faṣl* (pl. *fuṣūl*). Change in rhyme is used quite often in the formation of larger structures:

wa-l-ʿādiyāti ḍabḥā/fa-l-mūriyāti qadḥā/fa-l-mughīrāti ṣubḥā/
fa-atharna bihi naqʿā/fa-wasaṭna bihi jamʿā/
inna l-insāna li-rabbihi la-kanūd/wa-innahu ʿalā dhālika la-shahīd/ wa-innahu li-ḥubbi l-khayri la-shadīd/
(a-fa-lā yaʿlamu idhā) buʿthira mā fī l-qubūr/wa-ḥuṣṣila mā fī l-ṣudūr/inna rabbahum bihim yawmaʾidhin la-khabīr (Q 100:1-11)

This sūra is made up of four distinct *sajʿ*-units, each with a different rhyme *(-ḥā; -ʿā; -ūd/-īd; -ūr/-īr)* and sustained syntactic parallelism. The *sajʿ*-units are also distinguished by length, the first containing cola of two words, the second three-word cola, the third four-word cola and the fourth three-word cola, with the exception of the final *sajʿa* of five words. Rhyme, however, is not the only grouping principle in *sajʿ*. Insertion of an introductory phrase *(maṭlaʿ),* for example, begins a new unit. In addition, a change in *sajʿa* length without a change in rhyme would also mark a divi-

sion between *sajʿ* units, and this is very frequent in the Qurʾān:

(qul aʿūdhu) bi-rabbi l-nās/maliki l-nās/ilāhi l-nās/
min sharri l-waswāsi l-khannās/alladhī yuwaswisu fī ṣudūri l-nās/mina l-jinnati wa-l-nās
(Q 114:1-6)

This sūra, though maintaining the same rhyme throughout, breaks up into two distinct *sajʿ*-units of three *sajʿa*s each. The first *sajʿ*-unit has *sajʿa*s of two words each but the second *sajʿ*-unit has longer *sajʿa*s: four, five and three words. A less common structural device is a refrain, as found in Sūrat al-Raḥmān (Q 55; "The Merciful"), where the verse *fa-bi-ayyi ālāʾi rabbikumā tukadhdhibān* is repeated thirty-one times, marking off twenty-eight couplets and three tercets within the sūra.

The last word of the *sajʿa* is termed *fāṣila* (pl. *fawāṣil*), *maqṭaʿ* (pl. *maqāṭiʿ*), *qarīna* (pl. *qarāʾin*), or *sajʿ* (pl. *asjāʿ*). Medieval critics considered it important that the final words in neighboring *sajʿa*s be of the same morphological pattern *(wazn)* and classified *sajʿ* according to the presence or absence of this property. In *sajʿ muṭarraf,* "lop-sided" or "skewed" *sajʿ,* the final words rhyme but do not have the same pattern. The qurʾānic example given by al-Qalqashandī and many other critics is the following:

(mā lakum lā) tarjūna lillāhi waqārā
wa-qad khalaqakum aṭwārā (Q 71:13-4)

Although *waqārā* and *aṭwārā* rhyme, they are not of the same morphological pattern. The critics consider this type of *sajʿ* inferior to *sajʿ mutawāzī,* "parallel *sajʿ*," in which final words both rhyme and exhibit identical pattern:

(fīhā) surur marfūʿa
wa-akwābun mawḍūʿa (Q 88:13-4)

The terms *izdiwāj,* "pairing," and *muwāzana,* "matching in morphological form," refer to a type of composition which conforms to all the characteristics of *sajʿ* except that of strict end-rhyme. In this type of composition, the final words have identical pattern but do not rhyme. Some critics consider *muwāzana* a type of *sajʿ* itself, especially if it has inexact rhymes, and they term it *sajʿ mutawāzin*. Others, such as al-ʿAskarī, do not consider it *sajʿ* but deem it slightly inferior to *sajʿ* in literary merit. In the following qurʾānic example,

wa-namāriqu masfūfa/wa-zarābiyyu mabthūtha
(Q 88:15-6)

the rhythmical parallelism and basic structure of *sajʿ* is maintained, despite the fact that the rhyme consonants are *f* and *th.*

While in *muwāzana,* quantitative parallelism is restricted to the last word in a *sajʿa,* critics prize *sajʿ* that exhibits more sustained internal rhyme and morphological parallelism between corresponding words in parallel cola. Al-Qalqashandī and others call this type of composition *tarṣīʿ* or *sajʿ muraṣṣaʿ,* "proportioned *sajʿ*." Al-ʿAskarī calls it *sajʿ fī sajʿ,* "*sajʿ* within *sajʿ*" and considers it the best type of *sajʿ*. Qurʾānic examples include:

inna ilaynā iyābahum/thumma inna ʿalaynā ḥisābahum (Q 88:25-6)
inna l-abrāra la-fī naʿīm/wa-inna l-fujjāra la-fī jaḥīm (Q 82:13-4)

In these examples, all the words in the parallel *sajʿa*s rhyme and match in morphological pattern, except for the difference of pattern of *abrār* and *fujjār* in the second example. Syllable lengths are exactly the

same, if *thumma* in the second *sajʿa* of the first example and *wa-* in the second *sajʿa* of the second example are discounted.

The desired effect of syllabic or morphological parallelism is to enhance the accentual meter with quantitative regularity, particularly when approaching the end of the *sajʿa,* producing matching cadences resembling the clausulae of Latin oratory. Examination of the qurʾānic text shows the frequent use of clausulae, such as those which involve the double epithets of God (*al-asmāʾ al-ḥusnā;* see GOD AND HIS ATTRIBUTES) — *inna llāha ghafūrun raḥīm* (Q 2:199); *wa-kāna llāhu ghafūran raḥīmā* (Q 4:96); *innahu huwa l-ghafūru l-raḥīm* (Q 28:16; see FORGIVENESS; MERCY) — or other general statements concerning God's favor or disfavor (see GRACE; BLESSING; LOVE) — *inna llāha lā yuḥibbu l-muʿtadīn* (Q 2:190); *innahu lā yuḥibbu l-musrifīn* (Q 6:141). Rhythm, in addition to rhyme, is a crucial feature of these clausulae. The most common rhythmical patterns in the penultimate and ultimate feet of a colon include ^ — —/ ^ — — and — ^ — —/— ^ — — (overlong syllables scan as long-long). It seems that there is a strong tendency toward a reduplicative rhythm, where the quantitative pattern of the penultimate foot is repeated in the ultimate.

The structural, grammatical and rhetorical effects of end-rhyme and rhythmical parallelism on the qurʾānic text are far-reaching, and further research into the relationship of *sajʿ* to elements of qurʾānic style, incorporating both classical Muslim and contemporary scholarship, is a much needed desideratum (cf. Ḥasnāwī, *al-Fāṣila;* Rāzī, *Nihāya,* 142-3; Nuwayrī, *Nihāya,* vii, 103-5; Mehren, *Rhetorik,* 166-8; Garcin de Tassy, *Rhétorique,* 154-8). Many qurʾānic verses exhibit deviations from ordinary style in order to bring about end-rhyme, yet many commentators on the Qurʾān, either unaware of or determined to ignore the poetic character of the text, propose tortuous arguments to explain grammatical and syntactic features that are due primarily to rhyme. Müller *(Reimprosa)* has discussed this sort of "poetic license," though with limited recourse to medieval Islamic texts. Among the best analyses of this topic within the tradition is *Iḥkām al-rāy fī aḥkām awākhir al-āy,* "The establishment of sound opinion on the rules governing verse endings," by Shams al-Dīn Muḥammad b. ʿAbd al-Raḥmān b. al-Ṣāʾigh al-Ḥanafī (d. 776/1375). This work, summarized by al-Suyūṭī in his *Itqān,* presents forty types of "rules" (sing. *ḥukm*), essentially deviations from ordinary style, which occur in the qurʾānic text in order to produce what he terms "matching" *(munāsaba),* essentially end-rhyme. On the level of the word, deviations which occur include the alteration of word endings — *sīnīn* (Q 95:2) for *saynāʾ,* "Sinai" (q.v.; Q 23:20); *ilyāsīn* (Q 37:130) for *ilyās,* "Elias" (Q 6:85; 37:133; see ELIJAH) — and the use of one morphological pattern with the meaning of another — *taḍlīl* (Q 105:2) for *ḍalāl,* "error (q.v.), loss" (passim; see also ASTRAY); *lāghiya* (Q 88:11) for *laghw,* "idle talk" (Q 19:62; 56:25; 78:35; see GOSSIP); *amīn* (Q 95:3) for *āmin,* "safe" (Q 14:35, etc.); *ṣamad* (Q 112:2) for *ṣāmid* or *ṣamūd,* "enduring" (see ETERNITY), etc.

Other deviations involve the use of feminine forms where masculine forms would be expected, such as *dhālika dīnu l-qayyima* (Q 98:5) for *dhālika l-dīnu l-qayyim,* "that is the right religion" (q.v.; Q 9:36; 12:40; 30:30; cf. 30:43), or the use of an imperfect verb where a perfect would be expected, as in *istakbartum fa-farīqan kadhdhabtum wa-farīqan taqtulūn* (Q 2:87), "You behaved arrogantly (see ARROGANCE): one group you denied (see LIE), and one group you kill (see MURDER)," when logic and paral-

lelism would dictate *qataltum,* "you killed." Word order is also affected, as, for example, in Q 20:70, *qālū āmannā bi-rabbi Hārūna wa-Mūsā* ("They said: We believe in the lord of Aaron [q.v.] and Moses" [q.v.]), when a rhyme in *-ā* is required, as opposed to the usual order *Mūsā wa-Hārūn,* "Moses and Aaron" (Q 7:122; 10:75; 26:48; 37:114, 120) or *iyyāka naʿbudu wa-iyyāka nastaʿīn,* "You we worship and from you we seek help" (Q 1:5), rather than *naʿbuduka wa-nastaʿīnuk** ("We worship you and seek help from you"). Prepositional phrases are often made to precede the adjectives, nouns, or verbs on which they depend, as in *inna l-insāna li-rabbihi la-kanūd* ("verily humankind is to its lord ungrateful"; Q 100:6; see GRATITUDE AND INGRATITUDE) where the ordinary order would be *inna l-insāna la-kanūdun li-rabbih** ("verily humankind is ungrateful to its lord"), or in *wa-llāhu baṣīrun bimā yaʿmalūn* ("God is watchful over all that they do"; Q 2:96) in a context requiring the rhyme *-ūn* and *wa-llāhu bimā taʿmalūna baṣīr* ("God is over all that you do watchful"; Q 3:156) in a context requiring the rhyme *-īr/-ūr*. As mentioned, Ibn al-Ṣāʾigh al-Ḥanafī distinguishes forty features such as these. Many other "deviations" are so common within the Qurʾān as to become standard features of qurʾānic style. The verb *kāna* "was" and its derived forms often appear in contexts where the past tense is not appropriate. In these cases it appears to be pleonastic, used primarily to produce the required end-rhyme in *-ā,* since its predicate requires the accusative, without altering the meaning significantly. This occurs often in the final clausulae that end in double divine epithets, such as *wa-kāna llāhu ghafūran raḥīmā* ("God was forgiving and merciful"; Q 4:96, 100, 152, etc.) in an environment requiring *-ūnā/-īnā* rhyme, which seems equivalent in meaning to *inna llāha ghafūrun raḥīm,* "God is forgiving and merciful" (Q 2:173, 182, 199, etc.). Similar is the common periphrasis *min* with a following definite plural for the indefinite singular, as in *wa-innī la-aẓunnuhu min al-kādhibīn,* "I think that he is indeed of the liars" (Q 28:38), which may be equated with *wa-innī la-aẓunnuhu kādhiban,* "I think that he is indeed a liar" (Q 40:37), and the use of the compound past imperfect *(kānū yafʿalūn)* with the meaning of the perfect *(faʿalū),* as in *fa-yunabbiʾuhum bimā kānū yaʿmalūn,* "and he will inform them of what they were doing/used to do" (Q 6:108), which appears equivalent to *fa-yunabbiʾuhum bimā ʿamilū,* "and he will inform them of what they did" (Q 24:64).

Ritual and the Qurʾān

Following a brief discussion of ritual in modern academic discourse which proposes a functional typology of rituals both within and involving the Qurʾān, and taking into account the context in which certain rituals occur and are performed, this article will then explore the treatment of qurʾānic rituals in works of Islamic jurisprudence (see LAW AND THE QUR'ĀN). Those rituals which employ verses of the Qurʾān — written or spoken, individually or collectively — in various ceremonial, talismanic and therapeutic contexts will also be examined. This article does not deal extensively with those rituals specifically mentioned in the Qurʾān, as they are more fully explained under the relevant entries in this encyclopedia (see e.g. the articles WITNESS TO FAITH; PILGRIMAGE; PRAYER; RAMAḌĀN; FASTING; and RITUAL PURITY, in addition to the other entries which are cross-referenced below).

Ritual is the cornerstone of the Islamic faith and, as such, assumes a primary role in the Qurʾān by making manifest a tangible, sacramental expression of God's design for humankind. In comparing Islam to other religions, the Dutch scholar D.C. Mulder (Recitation) observed that Islam "is not very rich in ritual." But Mulder identified only three primary forms of ritual: prayer *(ṣalāt),* pilgrimage *(ḥajj)* and recitation of the Qurʾān (q.v.; *tilāwa*). Those ritual forms found in the Qurʾān and in the ḥadīth (see ḤADĪTH AND THE QUR'ĀN) are not as numerous as those found in the Talmud, a cornerstone of rabbinical Jewish law which includes archaic rituals no longer practiced by Jews after the destruction of the second temple in 70 C.E. It might be argued, however, that the number and diversity of ritual forms, practices and observances within Islam are as prolific, variegated and complex as those in

Judaism and Christianity. Furthermore, those rituals which observant Muslims perform — from simply invoking the divine name (see GOD AND HIS ATTRIBUTES; REMEMBRANCE) to more elaborate ritual forms such as supererogatory prayer, supplication and recitation of verses from the Qur'ān — emphasize the richness and diversity of rituals and ritual practice in Islam (see PRAYER FORMULAS; PIETY).

Ritual (from Latin *ritualis*) is a religiously defined and prescribed set of actions whose enactment symbolizes humankind's encounter with and reverence for the divine. Anthropologists and scholars of religion have defined it in various ways, including as "a universal category of human experience" (Bell, *Ritual theory,* 14) or "those conscious and voluntary, repetitious and stylized symbolic bodily actions that are centered on cosmic structures and/or sacred presences" (Zuesse, Ritual, 405; see PROFANE AND SACRED). Jonathan Z. Smith (Bare facts, 125) defines ritual as "a means of performing the way things ought to be in conscious tension to the way things are in such a way that this ritualized perfection is recollected in the ordinary, uncontrolled, course of things." In other words, ritual consists of structures of formalized and sometimes spontaneous behavior which emerge from a setting of reverence for and engagement with the divine in its diverse manifestations. The definition of ritual may be broadened to include rites of passage at which scripture is invoked or displayed such as at births and funerals (see BIRTH; BURIAL), indeed in virtually all aspects of daily life.

The following is a typology of the rituals in Islamic societies that are associated with the Qur'ān. (Most of these rituals — as seen in the overlap among the ten categories — are not mutually exclusive.)

(1) Transformative rituals (see also Rituals of purification, below): the performance of these has the effect of transforming one's spiritual, physical and mental state. Transformative rituals may be prescriptive, as in the five pillars, or may be pious practices *(muʿāmalāt)* or rules of etiquette *(adab)*. A transformative ritual may also have the effect of transforming the state of a sacred or venerable object. Often such rituals are performed in fulfillment of a religious precept, as in the case of prayer, but also in anticipation of receiving "blessing" *(baraka)*. In this category may be included: the testament of faith *(shahāda);* ritual prayer *(ṣalāt);* pilgrimage *(ḥajj);* entering *(dukhūl)* and sitting *(quʿūd)* in a mosque (Ibn al-Ḥājj, *al-Madkhal,* i, 13); fasting *(ṣiyām,* Q 2:183-5, 187, 196); almsgiving *(zakāt);* loyalty (q.v.) to the imām (q.v.; *walāya*); reading/reciting the Qur'ān *(dhikr, tilāwa);* seeking *baraka* from a qur'ānic codex (*tabarruk;* see MUṢḤAF; CODICES OF THE QUR'ĀN); kissing *(taqbīl)* the qur'ānic codex; weeping (q.v.; *bukā'*) when the Qur'ān is read; ritual purification (*ṭahāra;* as a category it often includes *wuḍū', ghusl, tayammum;* see CLEANLINESS AND ABLUTION); vows (*nadhr, naḥb;* Q 76:7; see VOW); vigils (q.v.; *tahajjud* — spending the night in prayer, praying the night prayer, reciting the Qur'ān nightly); and humbling oneself before God *(taḍarruʿ)*.

(2) Rituals of purification, which are performed prior to prayer or coming into contact with the sacred. They employ the use of water and other substances (sand, dust). Included in this category is *ṭahāra* (ritual purity; Q 5:6), which includes *wuḍū'* (ritual ablutions), *ghusl* (ritual immersion; Q 4:43, 5:6), *tayammum* (ritual ablutions with fine sand or dust; Q 4:43; 5:6), *ṭahāra* (ritual purity; i.e. as in Abraham's purification and re-consecration of the house of God; cf. Q 2:125; see ABRAHAM; HOUSE, DOMESTIC AND DIVINE; KAʿBA).

(3) Rituals which mark the fulfillment of religious obligation (*muʿāmalāt;* see GOOD DEEDS; ETHICS AND THE QUR'ĀN; see also Obligatory rituals, below), such as marriage (*nikāḥ;* see Rites of passage, below; see MARRIAGE AND DIVORCE) and the ritual slaughtering of animals for food (*taḥlīl,* cf. Q 5:2; see CONSECRATION OF ANIMALS; SLAUGHTER).

(4) Rites of passage, such as birth *(mīlād),* including the naming ceremony; death (*mawt,* cf. Q 3:185, 193; 4:78; 21:35; 33:19, 23; 44:56; 47:27; 56:60, 84-87; 63:10; 75:29; see DEATH AND THE DEAD); marriage (*nikāḥ,* cf. Q 2:187; 25:54, etc.); and the pilgrimage *(ḥajj).*

(5) Obligatory rituals in the Qur'ān, namely: prayer *(ṣalāt),* including prostration *(sujūd)* and bowing (*rukūʿ;* see BOWING AND PROSTRATION); testament of faith *(shahāda);* almsgiving *(zakāt);* pilgrimage *(ḥajj);* and fasting *(ṣiyām).*

(6) Rituals of abstinence (q.v.), which include fasting *(ṣiyām)* and vows (*nadhr* or *nudhūr, naḥb;* Q 33:23: *man qaḍā naḥbahu*). The vow involves making a dedication to God, usually in the form of a sacrifice (q.v.). In a historical context, Muslims, like adherents to other faiths, make vows to engage in or refrain from particular actions. Abstinence from certain practices and *ḥajj* rites, such as eating food and shortening one's hair are valid forms of *nadhr.* In the qur'ānic context, God fulfills vows (cf. Pedersen, Nadhr, for a discussion of the pre-Islamic and Islamic context of *nadhr;* see also CONTRACTS AND ALLIANCES; COVENANT; OATHS).

(7) Rituals of sustenance (q.v.), health (see ILLNESS AND HEALTH), longevity (see also Protective rituals, below), which include consuming food and drink from plates and cups inscribed with qur'ānic verses; consuming food on which qur'ānic verses are inscribed; and seeking *baraka* from the Qur'ān (*tabarruk;* see POPULAR AND TALISMANIC USES OF THE QUR'ĀN; EVERYDAY LIFE, THE QUR'ĀN IN).

(8) Protective rituals, among which are counted a number of activities. The mere act of bringing out a codex at a public gathering is a means to invoke the protection (q.v.) of God through his words (see WORD OF GOD). Other rituals include reciting the *basmala* (q.v.; i.e. invoking the name of God) orally or silently over somebody or before undertaking an activity; reading/reciting the Qur'ān; seeking *baraka (tabarruk)* from the qur'ānic codex by physically touching it or reciting verses from it; carrying a qur'ānic codex to ward off disease, illness, plague, bodily harm, evil, etc.; wearing a garment with qur'ānic verses inscribed on it (usually a tunic or talismanic shirt on which the ninety-nine names of God and verses from the Qur'ān are inscribed); wearing a necklace, amulet (see AMULETS) or talisman with qur'ānic verses and related expressions or a miniature Qur'ān in a *muṣḥaf* pendant of a precious metal, usually gold (children or adults may engage in this practice; a popular practice is for women and girls to wear amulets); eating or drinking from a vessel with verses of the Qur'ān inscribed; and in Turkey there is the practice of writing the word *mashallah,* literally "what God wants," on an amulet and placing it on the person of a newborn child (see the illustrations of POPULAR AND TALISMANIC USES OF THE QUR'ĀN for some examples of the rich variety of material objects employed in protective rituals that involve the Qur'ān).

(9) Rituals acts meant to inflict harm or spread evil. Such rituals appear in a limited historical context. The only known instance in the Qur'ān is the "blowing on knots" (*al-naffāthāt fī l-ʿuqad,* Q 113:4; see MAGIC), but this appears in a negative sense in that the verse alludes to women who

failed in their objective to cause harm to Muḥammad by blowing on knots (see OPPOSITION TO MUḤAMMAD).
(10) Rituals that promote social cohesion and group solidarity, such as prayer *(ṣalāt),* Friday prayer (q.v.; Q 62:9), or prayer in a mosque (q.v.); pilgrimage *(ḥajj);* collectively carrying scriptures in hand while walking in procession at times of crisis, drought and epidemics. This last named function exemplifies the human need to repel imminent danger and disease. Such historical episodes underscore the social function of the Qur'ān in a group environment (see COMMUNITY AND SOCIETY IN THE QUR'ĀN; POLITICS AND THE QUR'ĀN).

As seen from this typology, the word "ritual" in the Islamic context cannot be expressed by a single word found either in the Qur'ān, the prophetic traditions, or in works of jurisprudence. The closest approximation to "ritual" is *ʿibādāt* (sing. *ʿibāda,* lit. "obedience, submission, humility, devout worship"; see WORSHIP) which is also related to *ṭāʿa* (lit. "obedience, submission"; see OBEDIENCE). In the first instance, *ʿibādāt* refers to religious practice and devotion to God (Q 2:21; 51:56) and is commonly applied to the five pillars *(arkān)* of Islam: *shahāda* (testament of faith; Q 3:19-20; 6:19; 63:1), *ṣalāt* (prayer; e.g. Q 2:45; 9:103; 51:18; 70:22-3; 75:31; 96:10; 108:2), *zakāt* (almsgiving; e.g. Q 2:43, 83, 277), *ṣiyām* (fasting; Q 2:183-4), and *ḥajj* (pilgrimage; e.g. Q 2:189, 196). The Semitic root *ʿ-b-d* from which *ʿibādāt* derives captures the relationship between the devotee as the slave of God whose inner and outer natures surrender to God, the exclusive object of worship (e.g. Q 1:5; see SERVANTS; SLAVES AND SLAVERY). "Ritual" also may be applied to modes of religious behavior and experience, and physical and mental states not classified as *ʿibādāt* by jurisprudents and theologians, such as *taḍarruʿ* (Q 6:42, 43), through which believers are urged to reflect upon the lessons of the past and humble themselves before God as did those before them (see OPPRESSED ON EARTH, THE; TRUST AND PATIENCE; TRIAL; PUNISHMENT STORIES; GENERATIONS; HISTORY AND THE QUR'ĀN). During the fifth/eleventh and sixth/twelfth centuries, the very act of remembrance of God (*dhikr,* Q 2:152, 200; 3:41; 7:205; 18:24; 33:41; 72:25) became enshrined in elaborate Ṣūfī rituals and ceremonies that became widespread throughout the Islamic world (see ṢŪFISM AND THE QUR'ĀN).

All devotional acts *(ʿibādāt)* require of those who undertake them to declare clearly their intention (q.v.; *niyya*). In *Kitāb al-Arbaʿīn fī uṣūl al-dīn,* al-Ghazālī (d. 505/1111) provides a succinct discussion of *ʿibadāt,* which when performed properly, lead to the perfection of both the outer and inner self in fulfillment of one's religious duties. In his elucidation of the ten primary principles of religion (ritual prayer; almsgiving and charity; fasting; pilgrimage; recitation of the Qur'ān; *dhikr,* remembrance of God; seeking what is permitted, i.e. *ḥalāl;* upholding the rights of other Muslims and maintaining proper companionship with them; enjoining right and forbidding wrong; following the sunna of the Prophet), al-Ghazālī states that he does not mean undertaking only the etiquette *(ādāb)* of the ritual acts, but everything associated with them (p. 68). The object in performing ritual acts is human certitude in the remembrance of God in order to attain the hereafter and withdraw from the worldly life (p. 76). Invoking this work, the north African Mālikī theologian Ibn al-Ḥājj (d. 737/1336) regards *niyya* and *ʿamal* (i.e. the actual performance of the act) as complete ritual devotion *(bi-himā tamām al-ʿibāda)* and *niyya* as the best of the

two parts (*al-Madkhal,* i, 13). For without the intention, the believer's ritual is deemed invalid and the threat of divine punishment becomes implicit (see REWARD AND PUNISHMENT; CHASTISEMENT AND PUNISHMENT). According to Eliade (*Patterns,* 370-1), the division between the realms of the sacred and the profane "serves the purpose of preserving profane man from the danger to which he would expose himself by entering it without due care. The sacred is always dangerous to anyone who comes into contact with it unprepared, without having gone through 'gestures of approach' that every religious act demands."

Rituals in the Qur'ān

Rituals in the Qur'ān can be classified according to four primary categories: (1) Prescriptive rituals include prayer *(ṣalāt),* almsgiving *(zakāt),* testament of faith *(shahāda),* fasting during the month of Ramaḍān *(ṣiyām),* undertaking the pilgrimage *(ḥajj)* and ritual purity (*ṭahāra,* Q 5:6); (2) rituals of devotion and remembrance, such as *dhikr* and *tahajjud* (night vigil spent in prayer); (3) rites of passage, including birth, marriage and death; (4) rituals that are time and place specific and that refer to a particular historical event or incident or are otherwise related to the prophets before Muḥammad (see PROPHETS AND PROPHETHOOD), like Abraham and Ishmael (q.v.) ritually purifying the house of God (Q 2:125), women's use of black magic against the Prophet by blowing on knots (Q 113:4) and the allusions to the — proscribed — prostration (bowing) of the Israelites to the sun (q.v.) and moon (q.v.; e.g. Q 41:37).

Ritual prayer *(ṣalāt)* represents the ritual enactment and re-enactment of the Qur'ān par excellence. Several prophetic traditions indicate this, including "The difference between *kufr* (infidelity; see BELIEF AND UNBELIEF) and Islam is *ṣalāt,*" and "Only those who pray have my protection" (cf. Muslim, *Ṣaḥīḥ,* bk. 1, chap. 35, no. 134).

Sunnī and Shī'ī (see SHĪ'ISM AND THE QUR'ĀN) works of jurisprudence *(fiqh)* differentiate between *'ibādāt* and a closely related word — *mu'āmalāt,* which refers to the rules governing human behavior —, and almost invariably discuss the former before the latter. Bousquet recognizes that *fiqh* is a deontology for *'ibādāt,* the statements of the whole corpus of duties or acts whether obligatory, forbidden or recommended, etc., which is imposed upon people (Bousquet, 'Ibādāt; cf. id., *Les grandes pratiques,* 9). Apart from the five pillars, the question of which rituals are to be classified under *'ibādāt* is not always clearly delineated in the organization of jurisprudential works. In the Qur'ān one finds mention of such rituals as marriage (*nikāḥ;* e.g. Q 2:220; 33:49) which Bousquet properly indicates should be classified as a pious practice rather than placed among the *'ibādāt*. The same might be said of other practices, not specifically mentioned as an obligation in the Qur'ān, such as circumcision (q.v.; *khitān*), or qur'ānic recitation *(tilāwa)*. Unlike circumcision, however, which is not a qur'ānic prescription but a socially and religiously prescribed ritual and rite of passage, recitation is usually considered among the *'ibādāt*.

In the ḥadīth collections and in legal and theological discussions of the sunna (q.v.) of the Prophet (see THEOLOGY AND THE QUR'ĀN), qur'ānic and extra-qur'ānic rituals are further elaborated. Various ḥadīth collections do not categorically separate *'ibādāt* from other ritual forms, though *'ibādāt* generally are grouped at the beginning of such works. In al-Bukhārī's (d. 256/870) *Ṣaḥīḥ,* for instance, one finds *wuḍū'* (ritual ablution), *ghusl* (ritual immersion), *tayammum* (ritual ablution with fine dust or sand), *ṣalāt* (prayer), *janā'iz* (funer-

als), *zakāt* (almsgiving), and *ḥajj* (pilgimage). The *Ṣaḥīḥ* of Muslim (d. ca. 261/875) follows a different order and includes *ṭahāra* (ritual purity), *ṣalāt* (prayer), *zakāt* (almsgiving) and *ṣawm* (fasting).

The Shīʿī theologian Sallār b. ʿAbd al-ʿAzīz al-Daylamī (d. 448/1056), the author of *al-Marāsīm fī l-fiqh al-imāmī,* essentially divides his work into *ʿibādāt* and *muʿāmalāt,* the latter of which he subdivides into *ʿuqūd* (contracts, the performance of which does not necessitate the declaration of intention; see CONTRACTS AND ALLIANCES; BREAKING TRUSTS AND CONTRACTS) and *aḥkām* (rules governing conduct within society, e.g. inheritance laws; see INHERITANCE; SOCIAL INTERACTIONS). Al-Muḥaqqiq al-Ḥillī (d. 676/1277) delineates in his *Sharāʾiʿ al-Islām fī l-fiqh al-islāmī l-Ǧaʿfarī* four primary categories of ritual which formed the basis for the categories found in later Shīʿī works of jurisprudence: *ʿibādāt, aḥkām, ʿuqūd,* and *īqāʿāt* (legally valid pronouncements which require only one party to transact).

One of the most detailed expositions of *ʿibādāt* can be found in the Shāfiʿī jurist al-Nawawī's (d. 676/1277) *al-Tibyān fī ādāb ḥamalat al-Qurʾān*. Al-Nawawī's work is unique for its discussion of those rituals in which the Qurʾān is invoked, the times at which it is efficacious to recite certain verses or chapters of the Qurʾān, when it is necessary to prostrate oneself upon hearing particular verses, and the proper etiquette for carrying and displaying a codex and according it reverence. Al-Nawawī was particularly concerned that Muslims display proper etiquette and reverence for the Qurʾān. For instance, he observes that such practices as putting the codex under the head as a pillow are to be forbidden (Nawawī, *Tibyān,* 190-1). Perhaps some believed that it would facilitate the acquisition of knowledge or protect them from harm as they slept. Such beliefs are attested to in late nineteenth century Iran: Serena (*Hommes,* 333; cf. Massé, *Popular beliefs,* 21) observed that the qurʾānic codex was placed beneath the head of the newborn as a pillow.

The Ḥanbalī theologian Ibn Taymiyya (d. 728/1328) defines *ʿibāda* — more broadly than the traditional delineation of jurisprudential works — as "a collective term [which encompasses] all that God loves and [that] pleases him *(kull mā yuḥibbuhu wa-yarḍāhu)* from the words and inner and external actions, like prayer, alms, fasting, *ḥajj,* veracious speech, keeping a trust, and reverence for one's parents (q.v.) and close relatives (see KINSHIP)." In a treatise on *ʿibādāt* the modern Shīʿī scholar Jaʿfar al-Sijānī (*ʿIbāda,* 20) argues that Ibn Taymiyya has confused *ʿibādāt* with acts of nearness to God *(taqarrub)* by regarding them as synonymous. In Sijānī's view, acts such as giving alms, respecting one's parents, and the *khums* (a tax among the Shīʿa which was originally applied to the fifth of the spoils of war belonging to the ruler; see BOOTY) necessitate *qurbā* to God but are not *ʿibādāt*.

The modern-day scholar and theologian Aḥmad al-Ḥuṣarī (*Mina l-fiqh,* 142) defines *ʿibāda* as "the obedience *(ṭāʿa)* which the [divine] law-giver *(shāriʿ)* has required his slaves to carry out." Al-Ḥuṣarī distinguishes between three categories of *ʿibādāt:* (1) Purely physical rituals *(ʿibādāt badaniyya)* for which one person is not permitted to substitute for another, like prayer, fasting; (2) rituals for which one person is permitted to substitute for another, like almsgiving *(zakāt);* and (3) physical rituals which require the expenditure of property (q.v.; with the stipulation that, in the case of another's substituting, one must be incapable of undertaking them on one's own), like the *ḥajj* (ibid., 144).

The Shīʿī scholar Muḥammad Saʿīd al-Ṭabāṭabāʾī (d. 1982) includes in his *Minhāj*

al-ṣāliḥīn the following categories among the *ʿibādāt: ṭahāra* (ritual purity), *ṣalāt* (prayer), *ṣawm* (fasting), *iʿtikāf* (pious retreat in a mosque which is generally associated with the month of Ramaḍān; see FESTIVALS AND COMMEMORATIVE DAYS), *zakāt* (almsgiving), *khums,* and *al-amr bi-l-maʿrūf wa-l-nahy ʿan al-munkar* (enjoining others to do what is commendable and to refrain from what is reprehensible; cf. Q 3:104, 110; 22:41; see VIRTUES AND VICES, COMMANDING AND FORBIDDING).

The most important Ṭayyibī-Mustaʿlī Ismāʿīlī work of jurisprudence which serves as the basis for ʿIsmāʿīlī law and which contains a detailed exposition of *ʿibādāt* is al-Qāḍī l-Nuʿmān's (d. 363/974) *Daʿāʾim al-Islām,* "Pillars of Islam." Al-Nuʿmān, the chief qāḍī under the Fāṭimid caliph al-Muʿizz li-Dīn Allāh (r. 344-65/952-75), includes the following seven *ʿibādāt: walāya* (devotion to the imām), *ṭahāra* (ritual purity), *ṣalāt* (ritual prayer), *janāʾiz* (funerals), *zakāt* (alms tax), *ṣawm* (fasting), *ḥajj* (pilgrimage), and jihād (q.v.; holy war). Immediately following *ṣawm,* al-Nuʿmān discusses *iʿtikāf.*

Esoteric interpretations of ʿibādāt

In *Taʾwīl al-daʿāʾim,* al-Qāḍī l-Nuʿmān stresses the importance for the Ismāʿīlī believer of not only performing the *ʿibādāt,* but also of understanding their esoteric meaning *(bāṭin).* After providing an esoteric interpretation of *walāya* (affirming the doctrine of belief in and devotion to the imāms), al-Qāḍī l-Nuʿmān explains the *ʿibādāt* as follows: Ritual purity *(ṭahāra)* refers to "purifying oneself through knowledge *(al-taṭahhur bi-l-ʿilm)* and what it necessitates with respect to the impurities of the soul *(bi-mā yūjibuhu l-ʿilm min aḥdāth al-nufūs)*" (*Taʾwīl,* i, 72). In addition to knowledge, wisdom facilitates purification of the soul. Declaring one's intention *(niyya)* in performing *ʿibādāt* is like *walāya* (ibid., i, 85). Al-Qāḍī l-Nuʿmān states that the performance of the ritual prayer *(ṣalāt)* is symbolic of the Prophet's action in making these particular prayers and postures obligatory (ibid., i, 86). The inner meaning of *zakāt* is that the act of giving purifies *(taṭhīr)* one's personal wealth (q.v.; ibid., ii, 87). *Zakāt* is not only associated with ritual purity, but also with righteousness *(ṣalāḥ)* and growth (*numuww;* ibid., ii, 87-8). Al-Nuʿmān quotes several verses to support his interpretations (including Q 9:34, 103; 73:20; 87:14, 15; 91:9, 10). A deeper meaning of *zakāt* is that it represents the one who purifies *(muzakkī)* the people *(al-nās)* — in this case, the foundations *(usus)* and the proofs *(ḥujaj)* who are the vicegerents of the prophets (ibid., ii, 88).

The Ismāʿīlī scholar Abū Yaʿqūb al-Sijistānī (fl. fourth/tenth century) expounds the *ʿibādāt* as follows: Water which represents knowledge purifies the soul from doubt and uncertainty (q.v.). *Walāya* signifies devotion to the imāms. *Ṣalāt* (ritual prayer) signifies devotion to the *awliyāʾ* (the friends of God, i.e. the imāms; see CLIENTS AND CLIENTAGE; FRIENDS AND FRIENDSHIP). *Zakāt* signifies that those who possess knowledge (i.e. the imāms) should send forth guides to the people (see KNOWLEDGE AND LEARNING; KINGS AND RULERS). The lower ranks become *zakāt* for the higher ranks. Fasting *(ṣawm)* means observing silence and not revealing any secrets (q.v.) to the uninitiated (see also HIDDEN AND THE HIDDEN). *Ḥajj* represents the believer having an audience with the imām, who symbolizes the house wherein knowledge of God resides (Sijistānī, *Iftikhār,* chaps. 13-7; especially useful is Poonawala's commentary: see Poonawala/Husayn, *Biobibliography,* 417-29; cf. Poonawala, Ismāʿīlī taʾwīl, 219). Today, Nizārī Ismāʿīlī prayer consists of supplications, but unlike Sunnī and Ithnā ʿAsharī *ṣalāt,* does not include the same sequence of bowing *(rukūʿ)* and

prostration *(sujūd)*. Usually prayer is performed in a sitting position.

Ṣūfī works like al-Hujwīrī's *Kashf al-maḥjūb* place importance on understanding and implementing the esoteric and exoteric interpretations in the practice of *ʿibādāt*. In the chapter on ritual purity, al-Hujwīrī emphasizes that while prayer requires purification of the body, gnosis requires purification of the heart (Hujwīrī, *Kashf,* 291). In the chapter on prayer, he stresses the importance of humility, awe, abasement and the annihilation of one's attributes. The chapter on alms links the giving of *zakāt* to poverty in this world, but the giver should also aim to give for the blessings of health, mind and body and infinite blessings should be rendered with infinite thanks to God (see BLESSING; GRACE; GRATITUDE AND INGRATITUDE). In the chapter on fasting, al-Hujwīrī mentions that fasting is abstinence which includes the whole method of Ṣūfism. In the chapter on the pilgrimage, the true meaning of *ḥajj* involves the casting off of the worldly life, sensual desires, the attributes of one's humanity, and the complete submission of the believer to God.

Ritual purity

The Qurʾān itself is described as being contained "in books held greatly in honor, exalted, and pure" (*muṭahhara,* Q 80:13-4; see BOOK; SCROLLS; PRESERVED TABLET). Ritual purity *(ṭahāra)* is the foundation of the *ʿibādāt* upon which the performance of other rituals depends. The north African Mālikī theologian Ibn al-Ḥājj interprets *ṭahāra* as interior ritual purification *(al-ṭahāra al-bāṭina)*. He invokes a tradition of the Prophet (*al-Madkhal,* i, 30): "Supplication *(duʿāʾ)* is the essence of ritual devotion *(ʿibāda)*" and refers to Q 2:222, which mentions ritual purity. Likewise, Ibn al-Ḥājj interprets other ritual acts such as *wuḍūʾ* and *zakāt* as purifying humans from sin, base elements and negative attributes associated with the worldly life. Ritual purity (Q 5:6) and the pure water (q.v.; Q 25:48; cf. 8:11) with which it is associated are referred to in the Qurʾān. The acts of ritual purity practiced by the pre-Islamic Arabs included *iḥrām* (ritual consecration) before entering Mecca (q.v.) and forbidding menstruating women (see MENSTRUATION; PRE-ISLAMIC ARABIA AND THE QURʾĀN) from undertaking the pre-Islamic pilgrimage there. In Islamic times menstruating women were allowed to perform the *ḥajj,* although they were allowed to circumambulate the Kaʿba and undertake the running between Ṣafā and Marwa only when they had achieved a ritually pure state (cf. Howard, Some aspects, 41).

A person in a ritual state is described as *ṭahūr* or *ṭāhir* (Ḥillī, *Tadhkirat,* 7). Bousquet (*Les grandes pratiques,* 16) divides his discussion of the state of ritual impurity into two major categories, which are further elaborated: (1) Minor ritual impurity such as *ḥadath,* which refers to minor emissions from the openings of the body or contact with an impure substance, and which invalidates prayer, circumambulation around the Kaʿba, and touching the Qurʾān; (2) Major ritual impurity *(janāba)* from sexual intercourse (see SEX AND SEXUALITY) and menstruation *(ḥayḍ),* as a result of which it is generally forbidden to perform prayer, to recite the Qurʾān, to enter a mosque, or to perform the *ḥajj*.

Sunnī and Shīʿī legal sources usually divide the category "ritual purity" *(ṭahāra)* into three sub-categories: *wuḍūʾ* (ablutions), *ghusl* (ritual immersion), and *tayammum* (making ablutions with pure sand or dust; e.g. Ḥillī, *Tadhkirat,* 7, defines *ṭuhūr* as water). Sources usually distinguish between these three forms of ritual purity and discuss the various states of ritual impurity and the conditions under which it is necessary or permitted to undertake ritual

purification. They also elaborate upon the physical movements and gestures of the body, as well as the oral formulae which are to be performed.

Wuḍū' is necessary for prayer, making *ṭawāf* (circumambulation around the Ka'ba), touching the text of the Qur'ān and for other rituals (cf. Ḥillī, *Tadhkirat,* 8). Similarly, *ghusl* may be made for any one of these three categories in addition to residing in mosques, for producing amulets or talismans for the curing of diseases *('azā'im)* and for obligatory fasting, etc. *Tayammum* is required for prayer or for the ritually impure person (*junub,* literally "precluded from ritual practice"), and in order to set out for a mosque (ibid.). For a ritually impure person *(junub, muḥdith, ḥā'iḍ)* to carry a qur'ānic codex or to touch its pages or its writing is a reprehensible act (*makrūh;* Ḥillī, *Tadhkirat,* 241).

Being in a state of ritual purity is required for anybody who touches, reads or recites the Qur'ān. On the basis of Q 56:79, "none shall touch it [the Qur'ān] save for those who are ritually pure *(al-muṭahharūn),*" al-Ḥillī deems it reprehensible for a ritually impure person to touch the Qur'ān. Abū l-Qāsim al-Khū'ī (d. 1992) mentions that the one who is in a state of ritual impurity is not permitted to touch the writing of the codex or the vocalization signs (see RECITATION OF THE QUR'ĀN; ORNAMENTATION AND ILLUMINATION; GRAMMAR AND THE QUR'ĀN), nor the name of God or the ninety-nine "beautiful names." According to al-Nawawī, other books which contain verses from the Qur'ān are to be treated in the same manner if the qur'ānic text they contain is significantly greater in length than the rest of the text, e.g. a brief gloss or commentary. Thus, it is forbidden for the ritually impure person to touch and carry them (Nawawī, *Tibyān,* 194).

Theological and legal discussions focus on the etiquette *(adab)* of what is permitted and forbidden (q.v.; see also LAWFUL AND UNLAWFUL). For instance, the Qur'ān should be treated with reverence as should, more generally, books which contain the name of God and Qur'ān writing boards used by schoolboys (see TEACHING AND PREACHING THE QUR'ĀN). In a related cultural practice, a scribe does not leave a book he is consulting on the ground for fear an animal or person would walk over it, thus divesting the writing of efficacy (Westermarck, *Pagan survivals,* 134). A state of ritual purity is also required when one writes a talisman which includes verses from the Qur'ān or the ninety-nine beautiful names of God, for it is as if a scribe were copying a codex.

Oaths

Oaths (sing. *qasam, ḥalf*) that are sworn on the qur'ānic codex are seldom attested to in pre-modern sources. Unlike in Christianity or Judaism, where the oath upon a physical copy of scripture is presently a requirement, there is no legal requirement that the Qur'ān need be present or that one place one's right hand on a codex in order to validate an oath. Legal sources discourage the taking of oaths by anything apart from God or his ninety-nine beautiful names (cf. Nawawī, *Tibyān*). The eighth/fourteenth century traveler Ibn Baṭṭūṭa mentions that Damascenes made debtors and those against whom they had a claim swear *(yuḥlif)* on the 'Uthmānic codex of the Qur'ān at the congregational mosque (Ibn Baṭṭūṭa, *Riḥla,* i, 105).

In Ibn Taghrībirdī's *al-Nujūm al-zāhira,* a chronicle of the Mamlūk dynasty of Egypt, two references are made to emirs taking oaths. In the first, an emir takes an oath on a *muṣḥaf* (*ḥalafa 'alā l-muṣḥaf,* Ibn Taghrībirdī, *Nujūm,* ed. Cairo, x, 32, for 742/1341). In the second instance, an emir holds the codex in his hand and takes an

oath (*fa-tanāwala l-muṣḥaf al-sharīf bi-yadihi wa-ḥalafa lahum yamīnan,* trans. Popper, *History of Egypt,* xxiii, 80, for 871/1466). A type of oath is the oath of allegiance *(bayʿa)* which the Quraysh (q.v.) swore when they pledged their fealty to the prophet Muḥammad and which also became the standard for the election of a new caliph (q.v.; Q 48:10, 18).

Today certain courts and administrative bodies in western countries have required that when Muslims swear oaths, they place their right hand on the codex. Some consider placing the right hand on the Qurān to be forbidden *(ḥarām),* especially when one is not in a ritually pure state. During the early twentieth century C.E., Tewfik Canaan observed that oaths by the Qurʾān *(wa-l-muṣḥaf)* were quite common throughout Palestine (Canaan, Modern Palestinian beliefs, 77). Modern day legal opinions commonly regard swearing by the Qurʾān *(al-ḥalf bi-l-muṣḥaf)* as tantamount to swearing by God since the Qurʾān is God's words. The Azharī ʿAbdul ʿAzeem al-Matʿani has issued a legal ruling that taking an oath on the Qurʾān is not valid unless one clearly states one's intention *(niyya)* that in doing so one is swearing by God (Fatwā, IslamOnline.net, Fatwa id=77191: "Swearing by the Qurʾān"). Certain court rulings discuss the expiation (see FORGIVENESS; REPENTANCE AND PENANCE) of one who has not carried out an oath sworn by placing the right hand on the *muṣḥaf*.

Rituals and the Qurʾān

Among the rituals that are discussed at length in legal sources are rituals of purification which are required in order to pray and also those ritual practices which are required before touching or reciting the Qurʾān (see above). Beyond such rituals, there are those which require physical contact with the Qurʾān or particular verses.

Certain highly commendable practices include reciting particular qurʾānic verses at different times. Before going to sleep each night, the Prophet would cup his hands together, blow into them and recite over them Q 112 ("Sincerity," Sūrat al-Ikhlāṣ), Q 113 ("Daybreak," Sūrat al-Falaq) and Q 114 ("People," Sūrat al-Nās), and would rub his hands three times over the "permitted" parts of his body (cf. Bukhārī, *Ṣaḥīḥ,* vi, book 61, no. 35).

Kissing the Qurʾān

Upon holding the Qurʾān in the right hand, Muslims often kiss its cover and raise the Qurʾān above their heads in order to derive *baraka*. Although this devotional act is not generally deemed controversial, the Ḥanbalī position as expounded by the eighth/fourteenth century theologian Ibn Taymiyya maintains that there is no basis for this practice in the sunna of the Prophet or in the deeds of the righteous ancestors *(al-salaf)*. Ibn Taymiyya discusses this practice in conjunction with other practices, such as standing up *(qiyām)* for, or in the presence of the *muṣḥaf,* though he does quote a tradition of ʿIkrima b. Abī Jahl in which he used to put his face to the qurʾānic codex and say: "[These are] the words of my lord *(kalām rabbī);* [These are] the words of my lord" (Ibn Taymiyya, *Fatāwā,* i, 49). Elsewhere, Ibn Taymiyya (*Jāmiʿ,* 109) argues that it is only permissible to touch and kiss the two "Yemeni" stones (i.e. the black stone in the eastern corner of the Kaʿba and that in the southwest corner of the Kaʿba; *lā yushraʿu li-aḥad an yastalima wa-yuqabbila ghayr al-ruknayn al-yamāniyyayn*).

Although no early traditions attest to kissing the qurʾānic codex or kissing it and wiping it over the eyes and face, Wahhābīs consider this a heretical innovation *(bidʿa)* which, based upon a legal ruling of the Permanent Committee on Scientific

Research and Religious Rulings, Saudi Arabia (*Bidʿa,* 549: question 12 of *fatwā* no. 1472), they discourage.

Weeping

Weeping at the recitation of the Qurʾān is commended by God (Q 17:109). Al-Ghazālī states: "Read the Qurʾān and cry; if you do not cry, force yourselves to weep. Weeping is the sixth rule." A Muslim should also weep upon hearing the words *ṣubḥān Allāh,* "Glory be to God" (see GLORIFICATION OF GOD) and Q 17:107-9 (Quasem, *Recitation,* 34).

Resolving conflict

A number of historical incidents are recorded in which verses from the Qurʾān were invoked for the purpose of arbitration (q.v.). The words of the sacred text were used to bring about a desired result or resolution to war (q.v.), conflict (see FIGHTING) or oppression (q.v.; see also JUSTICE AND INJUSTICE). But — apart from the famous battles of Ṣiffīn (see ṢIFFĪN, BATTLE OF), wherein Muʿāwiya and his partisans reportedly raised a copy of the Qurʾān upon spears as a stratagem, and of the Camel, where ʿĀʾisha asked that the Qurʾān be brought for the purpose of arbitration (see ʿĀʾISHA BINT ABĪ BAKR) — only a single incident involves the qurʾānic codex itself in a particular historical event: in 851/1447, presumably after failing to pay a 1/10 levy on their merchandise, the Kārimī merchants were deemed renegades by the Mamlūk sultan Juqmuq. The Kārimīs took the extraordinary measure of holding hostage the preacher of the mosque in Mecca and raised the qurʾānic codices above their heads and requested a *fatwā* concerning the legality of the 1/10 tax (*ʿushr;* ʿAbbās, *Taʾrīkh,* 127).

Recitation of the Qurʾān

The general, though by no means universal, consensus among Sunnī and Shīʿī theologians is that qurʾānic recitation *(tilāwa)* is not included among the *ʿibādāt*. Al-Nawawī does not specifically classify recitation *(tilāwa)* under *ʿibādāt*. But, unlike al-Nawawī, the mystic al-Ghazālī in the eighth chapter of *Iḥyāʾ ʿulūm al-dīn,* "Revivification of the religious sciences," cites a prophetic tradition on the basis of which he justifies the inclusion of the recitation of the Qurʾān among devotional acts (*ʿibādāt;* Quasem, *Recitation,* 22). In the second chapter of the eighth book of *Iḥyāʾ ʿulūm al-dīn,* al-Ghazālī mentions rules for the oral recitation of the Qurʾān, and in the third chapter he enumerates the associated mental or esoteric tasks (*al-aʿmāl al-bāṭina;* ibid., 21).

According to a prophetic tradition narrated by al-Ghazālī, "[One of] the best devotional acts *(ʿibādāt)* of my community is the recitation of the Qurʾān" (ibid., 22; this tradition is also mentioned in al-Bāqillānī's *Inṣāf*). The mere act of looking at a codex while reciting the Qurʾān is also an act of devotion to God (*ʿibāda;* Quasem, *Recitation,* 52-3).

There is no consensus about reciting the Qurʾān over the deceased. Al-Nawawī mentions Q 36 (Sūrat Yā Sīn) or Q 2 ("The Cow," Sūrat al-Baqara) as chapters of the Qurʾān to be recited. For up to three days after the funeral, the male and female mourners would gather to mourn separately at the house of the deceased (Massé, *Persian beliefs,* 91-3). There they would engage in the ceremonial recitation of the entire Qurʾān *(khatm al-Qurʾān)*. The qurʾānic codex, which would be written in thirty or sixty separate notebooks and which was part of a *waqf* legacy, would be distributed to mourners. Near the Qurʾān, a repository (*raḥl,* i.e. for storing the various parts of the codex read by the mourners) would be placed.

A practice found among some mendicant Ṣūfīs (sing. *faqīr*) elicited the rebuke of Ibn Taymiyya (*Fatāwā,* i, 53). Ibn Taymiyya

observed that a group of *faqīr*s who met regularly to ritually remember God and to recite a portion of the Qur'ān, would bare their heads and humble themselves *(yataḍarraʿūna)* for the sake of getting near to God *(ʿalā wajh al-taqarrub)*. Ibn Taymiyya labels this practice as reprehensible *(makrūh),* especially if it is regarded as a devotional practice *(ʿibāda)*.

Healing and curing

The healing properties associated with the Qur'ān and the efficacy of reciting specific verses for particular ailments are widely recognized among Muslims; its curative power lies in the belief in God's words (cf. Nawawī, *Tibyān,* 183). Among the most widely recounted prophetic traditions in this regard is that whenever the Prophet became ill, he would recite Q 113 ("Daybreak," Sūrat al-Falaq) and Q 114 ("People," Sūrat al-Nās), then blow his breath over his body. When he was unable to do so, ʿĀ'isha would take and rub his hands over his body hoping for their blessings (Bukhārī, *Ṣaḥīḥ,* vi, book 61, no. 535; see MEDICINE AND THE QUR'ĀN).

Donning a garment with verses from the Qur'ān and reciting certain verses and chapters or other segments of the Qur'ān, such as the *muʿawwadhatayn* ("the two chapters against evil"), are efficacious for protecting its wearer from harm and curing illness. According to al-Nawawī, the Qur'ān is more effective than the ḥadīth when one is ailing (Nawawī, *Tibyān,* 183).

Talismanic and amuletic uses of the Qur'ān and talismanic objects

Talismanic uses of the Qur'ān fall under the heading of *mujarrabāt;* practices, methods, objects and rituals employed in humankind's encounter with their fellows and with the divine that are tried and proven through personal experience or the experience of others. Such practices may include the recitation of the Qur'ān in order to cure an illness. According to Ibn Taymiyya (*Fatāwā,* i, 49-52), however, the practice of predicting the future with the qur'ānic codex *(fatḥ al-fa'l)* is reprehensible *(makrūh)* and should be forbidden as it did not exist among the pious ancestors *(salaf)*.

When admiring a child, Egyptians would invoke Q 113 (Lane, *Manners,* 259). In Iran when naming a child, the father or the eldest member of the family randomly places slips with names between the pages of the Qur'ān. Those present recite the opening chapter of the Qur'ān, the Fātiḥa (q.v.) and the father or eldest male present chooses a name (Massé, *Persian beliefs,* 25-6).

Verses from the Qur'ān such as from Q 106 were also engraved on the surface of cups and bowls. Those who utilized them were protected from harm (Lane, *Manners,* 263-4), and these vessels were also employed by magicians to reveal the unseen (Q 21, 50; cf. Lane, *Manners,* 279). Amulets containing certain verses from the Qur'ān (Q 6, 18, 36, 44, 55, 67, 78) were placed under articles of clothing such as caps in order to protect the wearer from the devil (q.v.) and all evil jinn (q.v.).

Among the popular Shīʿī beliefs and practices which have parallels among Sunnīs is the inscription of certain passages from the Qur'ān with a variety of writing substances (e.g. saffron, water, kohl) in a number of media. Verses are pronounced over or dissolved in natural substances such as earth, water, or sand. They are employed to realize certain objectives, such as to affect a cure and alter the physical and mental states of the initiator or other persons. Among the innumerable examples of talismanic verses are the following: Q 11:41, which is inscribed on an Indian oak board blackened at its beginning (Maghniyya, *Mujarrabāt,* 18). Concerning Q 12 (Sūrat Yūsuf): "Whoever records it and buries it in his house and after three days takes it out of the house from its exterior, will experience that the

sultan's messenger is calling out to grant him victory and he will become important. Whoever writes a verse and drinks it (i.e. its ink) it will ensure prosperity." Other chapters and verses are inscribed on strips of silken white cloth which are affixed to the upper arm of an infant to protect it from harm and evil. Writing certain verses in saffron and giving them as a drink for a woman who has difficulty lactating, will make her lactate. Whoever writes a certain verse from Q 15 and puts it in his pocket or chest pocket will prosper in his transactions and in his livelihood. If Q 16 is written on the wall of an orchard, trees that do not bear fruit will produce an abundance of ripe fruit. Its invocation also ensures prosperity (Maghniyya, *Mujarrabāt,* 19). Certain verses are efficacious for relieving poverty, such as Q 104:1 which is to be recited at the time of the obligatory prayer.

Q 21 is often recited for the protection of an unborn infant. The verses are to be written on an animal skin and then hung up during the first forty days of pregnancy. During the month in which the mother is due to give birth, she carries it on her person to ensure a successful birth. Marriage will be facilitated for the unmarried person who, every month, reads verses from Q 21 twenty-one times, fasts for three days and supplicates God (Maghniyya, *Mujarrabāt,* 20). When written on a green silken cloth which is hung up, other chapters (like Q 23) prevent individuals from drinking wine. When placed on one's bed, Q 24 prevents one from dreaming. Q 24 is also believed to be efficacious in treating animal ailments: if written in a copper basin from which a sick beast of burden is given to drink, and also if water from the basin is sprinkled on the animal, it will be healed. When Q 26:1 is read over a handful of soil, which is thrown in the enemy's face, God will defeat and forsake the enemy (ibid., 20; see ENEMIES). Other verses constitute forms of sympathetic magic which are intended to alter the physical state of individuals or groups. Q 22 ("The Pilgrimage," Sūrat al-Ḥajj) is employed to defeat one's political rivals, leaders, judges, etc. Other verses are efficacious for the prevention of infidelity and adultery (e.g. ibid., 20-1; see ADULTERY AND FORNICATION). Q 36 is efficacious against jinn and the evil eye (ibid., 21), Q 38 enables one who wears (a strip of cloth with it) on his forearm to become popular among the people (ibid., 22), and Q 41 is efficacious for ailments of the eye: it is written with rainwater and erased, and kohl is then ground into the water and applied to the eye (ibid., 22).

Women in modern day Morocco and elsewhere carry miniature copies of the Qur'ān or select verses of it on their persons. Amulets are also prescribed for various illnesses. Prescriptions may include dissolving a piece of paper with verses from the Qur'ān into water which the patient is instructed to drink (Buitelaar, Between oral traditions, 235-6). Among the popular Shī'ī customs attested to in the modern era is the raising of the Qur'ān over travelers or soldiers going to war in order to protect them from harm.

When visiting the Prophet's tomb in Medina, Shī'ī pilgrims — and, previously, Sunnī pilgrims — would make gifts in charity *(ṣadaqa)* referred to as *najwā.* Such gifts are based on Q 58:12: "O you who believe! When you consult the apostle in private, spend something in charity before your private consultation. That will be best for you and most conducive to purity [of conduct]. But if you find not [the wherewithal], God is oft-forgiving, most merciful." According to al-Ṭabarī (d. 310/923) and al-Nasafī (d. 710/1310) the first person to institute this practice was 'Alī b. Abī Ṭālib (q.v.; Ṭabarī, *Tafsīr,* xxviii, 19-20; Nasafī, *Tafsīr,* iii, 434). In Fāṭimid Egypt, *najwā* was a gift which was collected by

Ismāʿīlīs attending doctrinal teaching sessions (Maqrīzī, *Musawwada,* 92-4).

Rituals of group cohesion and solidarity

Among the qurʾānic rituals which promote group cohesion is the Friday prayer (*ṣalāt al-jumʿa;* cf. Q 62:9) and more generally, congregational prayer at mosques where believers are urged to come together to remember God. The qurʾānic codex also plays an important role in promoting group solidarity. In times of crisis Muslims, Jews and Christians turned to scriptures which they publicly displayed as they walked in procession (Meri, *Cult of saints,* 115). In Damascus in 543-4/1148, the ʿUthmānic codex was brought out in order to ward off an imminent Crusader attack. Men, women and children gathered around it in supplication and the attack was averted. In 680/1282, the ʿUthmānic codex and other venerable copies of the Qurʾān were once again invoked in several Syrian cities in order to ward off a Mongol invasion (ibid., 115-6). The Qurʾān was again used as a weapon against oppression in 711/1312 when the people of Damascus marching in procession with the ʿUthmānic codex and the sandal of the Prophet and the caliphal standards confronted the governor of Damascus about oppressive taxes (ibid., 116).

Ritual Purity

A state of heightened cleanliness, symbolic or actual, associated with persons, activities and objects in the context of ritual worship (q.v.; see also CLEANLINESS AND ABLUTION; CONTAMINATION). The Qurʾān imposes a specific, two-tiered requirement of ritual cleansing before prayer (q.v.) and this is its most direct and detailed — and perhaps its only — regulation of ritual purity in the narrow sense. More general notions of purity and impurity extend, however, to a fairly wide array of persons, objects and activities in contexts that are mostly not, strictly speaking, connected with discrete rituals. These range from qualities of substantive impurity affecting persons and foods (see FOOD AND DRINK), to the idea of purity as an ethical concept (see ETHICS AND THE QURʾĀN), to the use of a concept of purity simply to denote what is good or desirable.

Terminology

Words derived from the root *ṭ-h-r* (compare Heb. *ṭoharot*) denote the requisite state of ritual purity for prayer as well as one of the processes by which that state is achieved. Major impurity in the context of prayer is denoted exclusively by the term *junub*. There is no qurʾānic term for minor impurity but such impurity (or perhaps more accurately, the transient lack of requisite purity) must be remedied prior to praying by a combination of wiping *(m-s-ḥ)* and washing *(gh-s-l)* of the body's extremities. Major impurity is removed by purification

(*ṭ-h-r,* interpreted by jurists to refer to a major washing). Words derived from the roots *z-k-y* and *ṭ-h-r* are occasionally used synonymously to refer to purity in a non-technical sense. Also, *ṭayyib* may denote the substantive purity of certain foods in some contexts; its antonym is *khabīth*. The words *najas, rijs, rijz* and *rujz* can also denote substantive impurity, though it should be emphasized that the Qurʾān does not exhibit a rigorously developed notion of substantive impurity.

Ritual cleansing for prayer (Q 4:43; 5:6)

The Qurʾān mandates that persons who undertake to pray must first complete a ritual cleansing. The details and requirements of this cleansing appear at Q 4:43 and Q 5:6, two partly overlapping passages that are important, difficult to interpret and central to the formation and classical expression of the Islamic law of ritual purity (see Paret, *Koran,* and id., *Kommentar,* for the following translations; for the subsequent discussion, see generally Katz, *Body of text;* see also LAW AND THE QURʾĀN):

O you who believe: When you undertake the prayer, then wash your faces (see FACE) and your hands (q.v.) to the elbows, and wipe your heads and your feet [q.v.; or: and wash your feet] to the ankles. If you are in a state of major impurity, then purify yourselves. If you are sick (see ILLNESS AND HEALTH), on a journey (q.v.), or one of you has come from the privy, or you have touched women (see SEX AND SEXUALITY), and you do not find water (q.v.), then seek out a clean, elevated place, and wipe your faces and your hands therefrom. God does not want to impose hardship on you but rather he wishes to purify you and to complete his favor (see GRACE; BLESSING) towards you. Perhaps you will be thankful (Q 5:6; see GRATITUDE AND INGRATITUDE).

O you who believe: Do not approach prayer while you are intoxicated (see INTOXICANTS; WINE), until you understand what you are saying, and not [while you are] in a state of major ritual impurity, unless you are [merely] passing by, until you have cleansed yourselves. *If you are sick, on a journey, or one of you has come from the privy, or you have touched women, and you do not find water, then seek out a clean, elevated place, and wipe your faces and your hands*. God is forgiving and pardoning (Q 4:43; see FORGIVENESS).

(The italics indicate the overlap with Q 5:6 but note that Q 5:6 contains one additional word, *minhu,* rendered above as "therefrom.") The overlap in wording notwithstanding, Q 5:6 contains the more complete statement of the purity requirements for those intending to pray, with mostly supplementary details being supplied by Q 4:43. The major exception to the basic requirements set forth at Q 5:6 appear, with virtually identical wording, in both passages. The passages pose several problems, though their general structure emerges clearly enough. Q 5:6 sets forth the following requirements: Prior to praying, certain areas of the body must be wiped *(m-s-ḥ)* and washed *(gh-s-l)*. In case of major impurity *(junub),* persons are required to "purify" themselves *(ṭ-h-r),* though the procedure for accomplishing this is not spelled out. Then, the passage sets forth an apparent exception — wiping *(m-s-ḥ)* of specified areas of the body — for certain enumerated situations in which no water is available. The exception appears to apply in lieu of the requirements for the ordinary cleansing (wiping and washing) mentioned at the verse's outset since it neatly substitutes wiping of the faces and hands for the washing of them. Thus, the exception would, in the enumerated situations in which water is not available, allow for the

symbolic wiping of the face and hands, and by implication also of the head and feet.

To the foregoing requirements, Q 4:43 adds only the injunction not to pray while intoxicated and the exception that persons merely passing by the mosque (q.v.) need not cleanse themselves of major ritual impurity. A state of intoxication seems to vitiate intent ("until you understand what you are saying") rather than the requisite degree of ritual purity. To the extent that this rule, by negative implication, suggests that intoxicants are licit (apart from the context of prayer), Muslim jurists considered it abrogated by subsequent denunciations of wine *(khamr)* elsewhere in the Qurʾān (see e.g. Abū ʿUbayd, *Nāsikh,* 87-8; Q 2:219 and Q 5:90-1; also below; see ABROGATION). The exceptive reference to persons merely passing by the mosque was understood to refer to travelers (e.g. ʿAbd al-Razzāq, *Tafsīr,* i, 163, ad Q 4:43), who, as noted, were subject only to the requirement of the substitute symbolic wiping, *tayammum*.

Scholarly and juristic interpretation combined with ritual practice to introduce several interpretive wrinkles into this complex of rules (for the following, see Katz, *Body of text,* chapter 2). The interpretation of the first sentence of Q 5:6 differs fundamentally between Sunnīs and Shīʿīs (see SHĪʿISM AND THE QURʾĀN). The most syntactically plausible reading of the Arabic (see ARABIC LANGUAGE; GRAMMAR AND THE QURʾĀN) would be "wash your faces and your hands to the elbows, and wipe your heads and your feet to the ankles," in which washing faces and hands is parallel to wiping heads and feet. This is, however, the minority, Shīʿī interpretation. The majority Sunnīs, by changing one vowel, make "feet" a third object of the verb to wash, thereby making the verse read "wash your faces and your hands to the elbows, wipe your heads, and (wash) your feet to the ankles" (see READINGS OF THE QURʾĀN). It should be noted that, according to generally accepted principles of Islamic law, invalid ablutions lead to an invalid prayer, so the legal consequences of this minor dispute over vocalization can, in theory, have serious consequences for individual believers' salvation (q.v.).

There is also the question of how the majority Muslim sect came to have a practice at variance with the grammatically most probable vocalization of its scripture. One possibility is that the Shīʿī understanding of the passage represents a survival of the earliest practice of the Muslim community as a whole (for other claims of sectarian practice representing authentic ancient survivals, see Crone, *Roman, provincial and Islamic law,* e.g. 21; and generally, Crone and Hinds, *God's caliph;* see COMMUNITY AND SOCIETY IN THE QURʾĀN). Another possibility is that ritual practice in the period of the conquests simply evolved on its own away from, or even independently of, the explicit text of the Qurʾān (see RITUAL AND THE QURʾĀN). Once the pace of conquest had slowed sufficiently to allow Muslim communities and their scholars to engage in the intensive study of a canonized qurʾānic text (see TEXTUAL CRITICISM OF THE QURʾĀN; TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDIES), the discrepancy was noted, and perhaps the discrepancy in practice frozen, for reasons that remain obscure, along emerging sectarian lines (see Katz, *Body of text,* 75-86; on the date of the Qurʾān's canonization, see Crone, Two legal problems; see COLLECTION OF THE QURʾĀN; CODICES OF THE QURʾĀN; POLITICS AND THE QURʾĀN).

Q 5:6 and Q 4:43 generated other exegetical debates as well. The phrase in Q 5:6 "when you undertake to pray" seems to suggest that ritual cleansing is required at every performance of the prayer, though this is not how the rule has traditionally

been interpreted. Instead, ablutions performed for the first prayer of the day suffice unless one has had an intervening polluting bodily function *(ḥadath)*. What constitutes a polluting bodily function was inferred from subsequent clauses in the rule that refer, or were assumed to refer obliquely, to elimination of waste and sexual activity. The phrase "when you undertake to pray" was also read to mean "when you arise [from sleep] to pray" and so to require ritual cleansing after sleep (q.v.), making sleep — like the enumerated bodily functions — into something that vitiates ritual purity (Katz, *Body of text,* 60-75).

A phrase common to both Q 5:6 and 4:43, "or [if] you have touched women" *(aw lāmastum al-nisāʾa)* also generated exegetical debate (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). Does the verb "to touch" *(lāmasa)* here refer to mere touching or does it refer euphemistically to sexual intercourse? How one answered this question had deeper implications for the meaning of the passage as whole. If mere touching was meant, a literal reading of the verse could produce the result that in cases of simply touching of women — that is, in cases where ablutions were vitiated but no major impurity incurred — substitute wiping with dust *(tayammum)* would be allowed if no water were available. By negative implication, then, major ritual impurity could not be cured by such substitute wiping. On the other hand, if *lāmasa* referred to sexual contact with women, then its mention in the clause in question entailed the possibility that major ritual impurity could be cured by substitute wiping with dust (Katz, *Body of text,* 86-96).

It should be noted that the phrase *tayammamū ṣaʿīdan ṭayyiban,* "seek out a clean, elevated place," in Q 5:6 likely originally referred to the seeking out of an appropriate place to perform substitute ablutions but the verb *(tayammama)* eventually acquired the technical legal sense of performing substitute ablutions or cleansing with sand (Paret, *Kommentar,* 116).

Neither Q 5:6 nor Q 4:43 provide details about what constitutes major impurity, apart from giving it a name, *junub,* in Q 5. The term *junub* and its triliteral root *j-n-b* have a connotation of being set apart or being a stranger (Lane, 466-7) and the connotation of being an outsider is perhaps reinforced by resonances from cognate languages (e.g. Hebrew *gannab,* "thief"; see STRANGERS AND FOREIGNERS; THEFT; FOREIGN VOCABULARY). Despite the potentially broad implications of the term's semantic range, however, Muslim jurists in general recognized only two varieties of this more serious degree of ritual pollution, or rather, two sorts of occurrences that necessitated the more extensive ritual washing: sexual activity and menstruation (q.v.). Sexual activity was defined by Muslim jurists in the first instance as seminal emission but also as any sexually related or induced emission, whether by a man or woman (Ibn Rushd, *Bidāyat,* i, 40).

Menstruation *(ḥayḍ, maḥīḍ),* on the other hand, is addressed in the Qurʾān in several passages, in regard to determinations of paternity (Q 65:4; cf. 2:228) and also as a disability entailing impurity:

> They ask you about menstruation *(al-maḥīḍ)*. Say: "It is a disability *(adhā),* so sequester women during menstruation and do not approach them until they become pure *(ḥattā yaṭhurna)*. Once they have purified themselves *(idhā taṭahharna),* then approach them in the manner that God has commanded you." God loves the penitent (see REPENTANCE AND PENANCE), and he loves those who purify themselves (Q 2:222).

Although this verse does not mention any particular ritual act the performance of

which is impeded by menstruation, Muslim jurists identified menstruation as a variety of major ritual impurity that triggered the more stringent prayer-related cleansing requirements of Q 5:6. Presumably the references in Q 2:222 to purification — denoted by words derived from the root *ṭ-h-r* — drew the jurists' attention and led them to read the requirement of purification in Q 2:222 as parallel to that for major impurity *(junub)* in Q 5:6. A consequence of reading these two verses together is that human states of impurity and associated cleansing requirements were understood to have a limited and specific ritual purpose and therefore to be relatively easily curable. Ritual impurity in human beings was not seen as a general state of substantive uncleanness. Given the lack of references to specific rituals in Q 2:222, it would have been possible, alternatively, to deem menstruation a form of substantive impurity, but that is not the route taken by Islamic law (Reinhart, Impurity/No danger, 15; Katz, *Body of text,* 194-201). On the other hand, Muslim jurists also consider menstruation a bar not only to prayer but also to fasting (q.v.), circumambulation of the Kaʿba (q.v.) and sexual intercourse (Ibn Rushd, *Bidāyat,* i, 49).

Performance of the minor cleansing prior to prayer may have represented an important symbolic act undertaken by converts to Islam in the time of Muḥammad. It is reported (albeit in a very stylized manner) that some of the very first Medinese (see MEDINA) to accept Muḥammad's mission uttered the *shahāda* (see WITNESS TO FAITH), performed the minor cleansing and then prayed (Ṭabarī, *Taʾrīkh,* iii, 1215-6; see also Katz, *Body of text,* 159 n. 42).

Other ritual contexts

Apart from prayer and the varieties of pollution that bar one from performing a valid prayer, the Qurʾān makes no express requirement of ritual purity in connection with other rites. On the other hand, persons undertaking the pilgrimage (q.v.) are considered to be in a special or sacred state (pl. *ḥurum*) and are subject to restrictions in connection therewith (see FORBIDDEN; PROFANE AND SACRED). The Qurʾān suggests that hunting land animals could vitiate this state (Q 5:1, 96) but not fishing (Q 5:96; see HUNTING AND FISHING), though a more likely interpretation of these restrictions would be that the animals in question enjoy a consecrated (taboo) status because of their presence in the sacred precinct (*ḥaram;* see CONSECRATION OF ANIMALS). In addition, some jurists considered the minor cleansing associated with prayer a necessary prerequisite for circumambulation of the Kaʿba and also for touching the Qurʾān (e.g., Ibn Rushd, *Bidāyat,* i, 36-7). Finally, although the Qurʾān imposes no specific requirement of cleansing in connection with fasting, sexual intercourse *(rafth)* is expressly forbidden during the daily fasting period of Ramaḍān (q.v.; cf. Q 2:187).

Substantive impurity

The Qurʾān indicates substantive impurity by the terms *najas,* "unclean," *rijs,* "filthy," *rijz,* "abomination," and *rujz* (see below). The first of these is used only once but the latter appear in a number of passages (see Izutsu, *Concepts,* 240-1).

Even in the context of modern studies of ritual purity and pollution that emphasize the symbolic nature of such concepts (Douglas, *Purity,* 3-4; Katz, *Body of text,* 13-24; Reinhart, Purity/No danger, 18-24), the qurʾānic notion of substantive impurity appears particularly abstract and ideological rather than matter-driven. The Qurʾān labels persons who are portrayed as opposed in one way or another to right religion (q.v.) as unclean. In Q 9:28 the Qurʾān provides that non-monotheists *(al-*

mushrikūn) are *najas,* "unclean," and that they should therefore "not approach the sacred mosque," their fundamental quality of uncleanness precluding them from entry to a sacred site (see BELIEF AND UNBELIEF; POLYTHEISM AND ATHEISM; RELIGIOUS PLURALISM AND THE QUR'ĀN). Sometimes, God is said to endow certain impious persons with the quality of *rijs,* or to add to their *rijs* (see Q 6:125; 7:71; 9:125; 10:100; 33:33). In one passage, uncooperative Bedouin (q.v.) are said to be *rijs* (Q 9:95). Finally, in another passage, God desires to expunge *rijs* from Muḥammad's family (or the people of the Kaʿba, *ahl al-bayt;* see PEOPLE OF THE HOUSE; FAMILY OF THE PROPHET) and to purify them (*yurīdu llāhu li-yudhhiba ʿankumu l-rijsa ahla l-bayti wa-yuṭahhirakum taṭhīran,* Q 33:33). In this verse, *rijs* is connected with practices labeled as *jāhilī* (see AGE OF IGNORANCE), and these practices are, in the same verse, opposed to the most fundamental aspects of Muslim practice: prayer, almsgiving (q.v.) and obedience (q.v.) to God and his messenger (q.v.; see also AUTHORITY; KINGS AND RULERS). In all these passages, *rijs* can be understood to refer to a condition in which pre-existing commitments of one kind or another (but above all, pre-Islamic Arabian beliefs and practices; see PRE-ISLAMIC ARABIA AND THE QUR'ĀN; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC) interfere with receptivity to Islam (see e.g. Izutsu, *Concepts,* 31).

The term *rijz* differs slightly from *rijs* in its connotations. In several passages, it refers to something punitive that comes from God, perhaps in the nature of a plague or a pestilence that descends from heaven (e.g. Q 2:59; 7:134-5, 162; 29:34; meaning punishment in general: Q 34:5; 45:11; see REWARD AND PUNISHMENT; CHASTISEMENT AND PUNISHMENT). In two other passages, however, it seems to denote a general condition of uncleanness that can be remedied by purification. In Q 8:11, God causes rain to descend from the heavens (see HEAVEN AND SKY; WATER) in order to purify *(ṭ-h-r)* persons and to drive away from them the *rijz* of Satan (see DEVIL). In Q 74:4-5, Muḥammad is urged to purify *(ṭ-h-r)* his garment and to avoid *al-rujz,* a word of disputed meaning. Its proximity to an injunction to purify something suggests that it could refer to a variety of (figurative) pollution, and this possibility is recognized by the exegetical literature. Al-Bayḍāwī (d. prob. 716/1316-7; *Anwār,* ii, 367), for example, paraphrases the verse as urging avoidance of divine punishment by avoiding "abominations" *(qabāʾiḥ)*. Commentators also connect it with polytheism *(shirk)* and idol-worship (*awthān;* see IDOLATRY AND IDOLATERS; IDOLS AND IMAGES) as well as with divine punishment (*ʿadhāb;* e.g. ʿAbd al-Razzāq, *Tafsīr,* iii, 361; Farrāʾ, *Maʿānī,* iii, 201; Bayḍāwī, *Anwār,* ii, 367). Paret (*Kommentar,* 163, 184, 493) opines that *rijs,* "Unreinheit," and *rijz/rujz,* "Strafgericht," have been used interchangeably in several passages, even though they are different words with distinct meanings. Jeffery (*For. vocab.,* 139) agrees with those who see *rujz* as a Syriac borrowing of *rugzā,* "wrath," i.e. God's wrath. This last possibility fits with the traditional interpretation of the word as meaning *ʿadhāb* but also raises the question of whether both *rijz* and *rijs* in certain passages (e.g. Q 7:134 and Q 7:71, respectively, both noted above) might not also derive ultimately from *rugzā*.

In other passages, what is substantively unclean divides into sinful conduct and forbidden foods. Wine and certain games of chance (see GAMBLING; DIVINATION) are *rijs* (Q 5:90) as are carrion (q.v.), blood (see BLOOD AND BLOODCLOT) and pork (Q 6:145; see Rivlin, *Gesetz,* 82-3). Muslims are also enjoined to "avoid the *rijs* of idols" (Q 22:30), a phrase which follows closely on

the heels of a general provision of dietary law ("livestock are made lawful for you except for that which is recited to you [as being unlawful]"; see Wansbrough, *QS,* 72). Perhaps the reference is to food sacrificed to idols (compare Q 2:173 and similar passages, in which Muslims are forbidden to eat sacrifices made to other than God; ʿAbd al-Bāqī, 738, entry *ḥ-l-l;* see SACRIFICE). These passages could, together with some of those discussed above that refer to persons, be understood as a general denunciation, in terms of ritual purity, of pre-Islamic Arabian cultic practices.

Another group of prohibitions that overlap partly with notions of substantive purity and impurity receive attention in the Qurʾān under the rubric "lawful and unlawful" (*ḥalāl* and *ḥarām;* see LAWFUL AND UNLAWFUL). For example, the list of prohibited foods identified as *rijs* at Q 6:145 are, in the same passage, declared unlawful or forbidden, *muḥarram*. In addition, as with the division of *najas* and *rijs* primarily into persons and things, so too certain persons (e.g. in regard to marriage; see MARRIAGE AND DIVORCE; PROHIBITED DEGREES) and things (especially foods, but some conduct as well) may be declared lawful or unlawful (see VIRTUES AND VICES, COMMANDING AND FORBIDDING). The concept of unlawfulness — the quality of being *ḥarām* — entails simultaneously a sense of taboo and of sacredness, probably originally in connection with ritual-related restrictions on certain activities (see Heninger, Pureté; Izutsu, *Concepts,* 237-41).

Connected with both the above sets of notions — uncleanness, and lawful and unlawful — is the use of the terms *ṭayyib* and *khabīth,* "good" and "bad" (see GOOD AND EVIL). *Ṭayyib* connotes in particular something that is pleasing to the senses, but it is sometimes expressly associated with what is lawful, especially foods, as is *khabīth* with what is unlawful (e.g. Q 7:157) and both also have an ethical dimension (see Izutsu, *Concepts,* 235-6). In this connection, the lone occurrence of the verb *dhakkā* in Q 5:3 may be noted: The passage in question forbids *(ḥurrimat ʿalaykum)* certain enumerated foods "except for those that you purify" *(dhakkaytum)*. Presumably the term refers to a purifying ritual slaughter for animals that are in the throes of a ritually suspect death (the verb *dhakkā* may be borrowed from Aramaic; cf. Jeffery, *For. vocab.,* 135).

Note that persons are, in general, neither substantively impure nor contagious under the qurʾānic purity regime and also not under general principles of Islamic law (Reinhart, Purity/No danger, 19), although the labeling of polytheists as unclean at Q 9:28 has been read literally by Shīʿī jurists (Katz, *Body of text,* 48). It has been suggested that the rubric lawful-unlawful was more important to the pre-Islamic Arabs than that of clean-unclean (Wellhausen, *Reste,* 168). In the very earliest period of Islam, however, it seems that some regarded substantive impurity as related, or equivalent, to major ritual impurity *(junub)*. Under this view, substantive impurity would be polluting or contagious and so require a major cleansing. By analogy, then, major ritual impurity would also be contagious. This view was rejected at a relatively early date, though, and substantive impurity and major ritual impurity were held distinct. Thus, ritual impurity, of both the major and minor variety, remained confined to individuals and so not directly or indirectly communicable (Katz, *Body of text,* 150-1 and chapter 4).

General declarations of purity and impurity

In addition to its declarations concerning the purity-status of worshippers and the inherently unclean and so unlawful nature of certain items and actions, the Qurʾān

also identifies various persons, objects and actions as pure or impure in a general, non-technical manner. Although these notions do not in strict terms delineate or supplement rules governing the purity-status of believers, they nevertheless form an ethical discourse which inhabits, as it were, the periphery of the Qurʾān's more expressly normative passages regulating matters of ritual purity.

A prominent theme of the Qurʾān's purity rhetoric concerns God's rendering persons pure: He does this to whom he will (Q 4:49; 24:21), though he also sends messengers to purify persons, especially in conjunction with the teaching of "the book (q.v.) and wisdom" (q.v.; Q 2:129, 151; 3:164; 62:2). Conversely, God disdains to purify those who break their troth (Q 3:77; cf. 2:174; see COVENANT; BREAKING TRUSTS AND CONTRACTS). The foregoing passages employ the verb *zakkā* and seem to be of general applicability. God's purification of individuals is also accomplished using the verb *ṭahhara* but when that verb is employed, the context seems more specific. He has angels (see ANGEL) inform Mary (q.v.) that she has been purified (Q 3:42) and it is said to those who will pray (Q 5:6) and to Muḥammad's family (or his wives, or the people of the Kaʿba) that God wishes to purify them (Q 33:33). He sends rain to purify persons from Satan's iniquity (Q 8:11; see SIN, MAJOR AND MINOR) and he also purifies Jesus (q.v.) from those who disbelieve (Q 3:55).

In several passages, certain persons are variously identified as pure or purified. Moses (q.v.), for example, accuses Khiḍr (see KHAḌIR/KHIḌR) of killing a pure (or innocent) soul (*nafs zakiyya,* Q 18:74) and Mary is told that she is to receive a pure youth (*ghulāman zakiyyan,* Q 19:19). Several of these passages suggest, perhaps, that a state of ritual purity is intended: The believers' spouses in paradise (q.v.) will be purified (*azwāj muṭahhara,* Q 2:25; 3:15; 4:57; see HOURIS) and Lot's (q.v.) followers purify themselves (or hold themselves out as pure, Q 7:82; 27:56). A mosque worthy of being prayed in contains persons who love to purify themselves (*an yataṭahharū,* Q 9:108).

The ideas of charitable giving and self-purification are connected in the Qurʾān by the fact that the root *z-k-y* can signify either or both. The connection between charity and self-purification is frequently explicit, as in Q 9:103, in which it is said that taking alms *(ṣadaqa)* from people's property will purify them *(tuzakkī, tuṭahhir)* or, Q 92:18, in which those who donate property purify themselves (*alladhī yuʾtī mālahu yatazakkā;* see GIFT AND GIFT-GIVING). Other examples are more ambiguous and may intend both senses — purification and charity — at once (e.g. Q 91:9; 87:14; 20:76 and elsewhere; see ʿAbd al-Bāqī, 331, *z-k-y;* on *z-k-y* as a borrowing from Jewish Aramaic in the sense of "alms," see Zysow, Zakāt).

Certain items, especially if connected with the divine, are also identified as pure or purified in the Qurʾān. The pages of revelation *(ṣuḥuf)* are called purified *(muṭahhara)* at Q 80:13-4 and Q 98:2 (see SCROLLS; SHEETS). Abraham (q.v.) and Ishmael (q.v.) were commanded to purify *(ṭ-h-r)* the Kaʿba (Q 2:125; cf. 22:26). God sends pure rain (*māʾan ṭahūran,* Q 25:48, the likely source of the idea that ritual cleansing should be performed with water) and also gives the inhabitants of paradise a pure draught (*sharāban ṭahūran,* Q 76:21).

Finally, notions of purity are expressly connected with ethical (and especially chaste) conduct and passages expressing this idea employ the comparative form, derived from either *ṭ-h-r* or *z-k-y* (see CHASTITY). Adherence to certain rules regulating marriage, for example, is "more pure" (*azkā, aṭhar,* Q 2:232), as is adherence to the principle that one not enter

another's home without permission (*azkā,* Q 24:28; see HOUSE, DOMESTIC AND DIVINE). For male believers, it is more pure *(azkā)* not to stare (at women, presumably) and also to cover their private parts (Q 24:30; see MODESTY). Similarly, it is more pure *(aṭhar)* to talk with Muḥammad's wives while separated from them by a curtain (Q 33:53; see VEIL; WIVES OF THE PROPHET; SOCIAL INTERACTIONS). Finally, Lot announces that his daughters would be more pure *(aṭhar)* for his community (Q 11:78; that is, a chaste alternative to their licentiousness; see ADULTERY AND FORNICATION).

It should be noted, that, although the Qurʾān may be said to partake, in certain (but not all) respects, in the generally misogynistic mood of late antiquity (see PATRIARCHY), its notion of substantive impurity does not, and was not interpreted to, relegate women to a special and inherently problematic ritual status (Katz, *Body of text,* 201; see WOMEN AND THE QURʾĀN; GENDER).

Islamic law's approach to ritual purity

The technical terms employed by Islamic law to denote the various aspects of ritual purity discussed above are mostly non-qurʾānic. Ritual purity in general is known as and discussed in books of *fiqh* under the rubric of *ṭahāra*. *Ṭahāra* does not appear in the Qurʾān, though it seems likely to be originally a technical term, given its fundamental etymological and semantic congruence with Hebrew *ṭoharot* (see generally Reinhart, Ṭahāra). Minor or transient impurity entailing the minor cleansing is generally denoted by *ḥadath,* an "event," with a slightly negative connotation (see Lane, 528), though it can also refer to both degrees of ritual impurity (e.g. Ibn Rushd, *Bidāyat,* i, 40). The qurʾānic term *junub* is used for major ritual impurity, though it is an adjective and so the non-qurʾānic noun *janāba* is also employed. The minor cleansing is referred to as *wuḍūʾ,* "ablutions," and the associated verb is *tawaḍḍaʾ* (for further discussion, see CLEANLINESS AND ABLUTION and Chaumont, Wuḍūʾ). The term *ghusl* denotes the major cleansing. None of these three terms occurs in the Qurʾān but they are commonplace in the ḥadīth (see ḤADĪTH AND THE QURʾĀN).

Books of *fiqh* always begin with a chapter on ritual purity, *ṭahāra*. Discussions of *ṭahāra,* in turn, often start with a discussion of what does and does not defile water used for ablutions (see e.g. Shāfiʿī, *Umm,* i, 16-25). Major and minor states of impurity and their causes are discussed, as well as the procedures for remedying them, namely ablutions *(wuḍūʾ)* and the major washing *(ghusl)* and the exception allowing substitute wiping with sand *(tayammum)*. Menstruation usually merits a separate and detailed treatment in the chapters on *ṭahāra*. Some authors also include information on cleansing after elimination of waste and possibly other matters affecting the body, such as personal grooming and also circumcision (q.v.). Finally, the category of the substantively impure may receive attention, though the forbidden quality of certain foods may be treated in a separate chapter on food and beverages, outside the *ṭahāra* rubric.

Conclusion

As discussed, the Qurʾān's most basic rules governing ritual purity, at Q 5:6 and Q 4:43, are embedded in a context of covenantal themes (see COVENANT), constituted in particular by references to God's bounty *(niʿma)* and human obedience (*al-samʿ wa-l-ṭāʿa;* Katz, *Body of text,* 32-58). Additionally, the theme of mobilization of the community, especially for war (q.v.), seems to be associated with such passages, suggesting that the purity strictures serve (or served originally) also to demarcate the

(early) Muslims from outsiders and to delineate community boundaries (ibid., 53-7). Another covenantal theme sounds in those pronouncements concerning the purity or licitness of certain foods, which are bestowed by God as part of his bounty (see e.g. Gräf, *Jagdbeute,* 4-69). This contextual setting of pronouncements on purity and licitness reinforces the impression that the Qurʾān's purity regime is connected with the demarcation of the Muslims as a distinct community, constituted by a unique and reciprocal relationship with the divine (see Katz, *Body of text,* 58).

The relative lack of systematic concern in the Qurʾān with substantive impurity and contamination suggests further, however, that the principal focus of its purity regime is on the immediate human relationship with the divine and not with the hierarchical understanding of society in accordance with exclusivist principles of holiness, mapped on to the body as cleanness. The highly symbolic, qurʾānically-mandated wipings and washings contrast, for example, with other more intensive and intrusive modes of inscribing and ritualizing the body, such as circumcision. Yet this tendency contrasts with the asserted covenantal aspects of the Qurʾān's purity regime. Thus, a fruitful tension obtains between the appropriation of the body as a symbol of a community specially situated relative to the divine and a lack of danger-symbolizing, boundary-constituting purity strictures.

Fundamental to modern studies of ritual (im)purity is the recognition that notions of purity and pollution do not necessarily concern dirt and its removal but rather symbolic ways of arranging the world. Thus, it has famously been observed that, in the context of ritual purity, dirt is "matter out of place," matter that upsets a familiar pattern (Douglas, *Purity,* 3-4, 35, 40). To the extent that it forms a system, the qurʾānic purity regime centers almost entirely on the purity status of persons performing prayer. Thus, what it seeks to organize, at one level of theological abstraction (see THEOLOGY AND THE QURʾĀN), is a mode of human contact with the transcendent by signifying the worshipper's reassertion of bodily control, a theme developed further by Muslim jurists (Reinhart, Purity/No danger, 20). Readiness for the holy is all.

Barriers to effective contact include the symbolic (and occasionally the actual) residue of the most basic, and mundane, of human bodily functions, urination, defecation, menstruation, sexual intercourse and even (as a result of post-qurʾānic juristic elaboration) prolonged sleep (Katz, *Body of text,* 13-24; Reinhart, Purity/No danger, 18-24). In this regard, the purity-related practices mandated by Islamic law — noteworthy for their conspicuous grounding in the qurʾānic text — have been interpreted as gaining "their resonance not from the recapitulation of ontology but in the anticipation of its reversal" (Katz, *Body of text,* 203) as a symbolic prefiguration of the recapture of the solidity and permanence of the near-divine, heavenly, or paradisiacal state (see ESCHATOLOGY; COSMOLOGY).

Rod

Staff or stick upon which one leans for support or uses as a tool. In the Qurʾān, the Arabic word for rod, *ʿaṣā,* which is mentioned twelve times, is used in the possessive form when speaking of Moses (q.v.), that is, *ʿaṣā Mūsā,* "the rod of Moses." It is used in a singular form *(ʿaṣā)* when related to Moses and in a plural form *(ʿiṣiyya)* with reference to Pharaoh's (q.v.) sorcerers (see MAGIC). Events involving the word *ʿaṣā,* which has a variety of features in the Qurʾān, have been presented in support of its being one of the two great miracles of Moses (see MIRACLES; MARVELS). The qurʾānic commentators narrate various stories of how Moses received the rod (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). Some relate that the prophet Shuʿayb (q.v.), the father-in-law of Moses, gave him the rod and that Adam brought it from heaven when he was compelled to leave (see ADAM AND EVE; FALL OF MAN). It was entrusted to Shuʿayb, who then passed it on to his son-in-law Moses (Ṭabarī, *Tafsīr,* xx, 67; *Jalālayn,* 511).

The word first appears in the Qurʾān in connection with a great need for water (q.v.). On this occasion, the rod works as a miraculous instrument to bring water from the bottom of a rock. The verse says, "When Moses asked for water for his people, we said, 'Strike with your rod the rock, and there will gush out from the rock twelve springs'" (Q 2:60; 7:160). On another occasion, the same rod works to swallow sorcerers' false snakes. Q 7:117 states, "And we inspired Moses, saying 'Throw your rod,' and thereupon it swallowed up their lying show." Moses' rod, on this occasion, has been transformed into a giant snake, to swallow up those of the opposing sorcerers. Moses understood that the power of the sorcerers was demonic, which is why they were defeated by his powerful and miraculously-bestowed rod. The Qurʾān refers to the rod of Moses in a conversation between Moses and God. Moses seems unaware of the actual nature of his rod: "'And what is that in your right hand, O Moses?' He said, 'This is my rod, whereon I lean, and wherewith I beat down branches for my sheep, and wherein I find other uses.' He said, 'Cast it down, O Moses.' So Moses cast it down, and immediately it became a gliding snake." The end of the verse suggests that Moses was told to catch the snake and not to be afraid because God would transform it to its original state (Q 20:17-21; cf. 27:10). A mystical interpretation claims that God blamed Moses because he had related the rod to himself in his presence, when he was sup-

posed to acknowledge that everything belonged to God (see ṢŪFISM AND THE QUR'ĀN; GRATITUDE AND INGRATITUDE; POWER AND IMPOTENCE; POSSESSION). Accordingly, God asked him to throw his rod, so that Moses could show God that he was not the actual owner of the rod (Qurṭubī, *Jāmiʿ,* xi, 186; for additional comments, see ibid., vii, 258; Ibn Kathīr, *Tafsīr,* ii, 237). Clearly Moses was entrusted with such a miraculous rod so that he could respond to the taunts of Pharaoh's sorcerers. They had magical rods and were able to challenge Moses and his message. They said, "by the glory of Pharaoh, we will be victorious" (Q 26:44; cf. 20:66; see VICTORY).

The Qur'ān presents the rod of Moses as instrumental in opening a way in the sea to help the Israelites (see CHILDREN OF ISRAEL) escape from Pharaoh's oppression (q.v.). This miraculous event appeared at a time when Moses and his followers were chased by Pharaoh's troops. "Then we inspired Moses, saying 'Strike the sea with your rod,' and it parted. Each part was as a mountain vast" (Q 26:63). Al-Qurṭubī (d. 671/1272) comments that the rod was a simple instrument in this case; the one who parted the sea was actually God himself (*Jāmiʿ,* xiii, 15).

Another word used in the Qur'ān to signify a rod is *minsa'a,* which refers to the rod of Solomon (q.v.). Q 34:14 states, "And when we decreed death for him (Solomon), nothing showed his death to them (the jinn), save a creeping creature of the earth, which gnawed away his rod." The verse indicates that the jinn (q.v.) were unaware of the world of the unseen *(ghayb)*. Since Solomon died while leaning on his rod, they did not know he was dead until his rod decayed, allowing him to fall (see HIDDEN AND THE HIDDEN).

One can argue that the qur'ānic emphasis on the rod of Moses has resulted in the idea that, in Arab culture, carrying a rod has become a sign of faith (q.v.) and an imitation of the prophets (see PROPHETS AND PROPHETHOOD; although there is no mention of Jesus' [q.v.] rod in the Qur'ān, al-Ṭabarī [*Tafsīr,* iii, 285], an early qur'ānic commentator, narrates that Jesus also had a rod). The prophet Muḥammad used to carry a rod and lean on it during the Friday sermon (Qurṭubī, *Jāmiʿ,* xi, 188; Bayhaqī, *Sunan,* iii, 206; see FRIDAY PRAYER). The rod of the Prophet remained significant, even after his death. It is known that the rod was entrusted to ʿAbdallāh b. Masʿūd, one of his great Companions (see COMPANIONS OF THE PROPHET). He was given the honorary title Holder of the Rod of the Prophet (*ṣāḥib ʿasā l-nabī,* Qurṭubī, *Jāmiʿ,* xi, 189). In Islamic culture, the use of a rod has been viewed as a symbol of spiritual transition among Ṣūfīs. Al-Qurṭubī narrates that an ascetic (see ASCETICISM) was asked why he carried the rod despite the fact that he was not sick or old. He answered, "This reminds me that I am a traveler in this world" (Qurṭubī, *Jāmiʿ,* xi, 189; see JOURNEY).

Sabbath

Saturday, technically, Friday evening to Saturday evening. While related etymologically to the Aramaic and Hebrew words for the Sabbath (in which tradition it connotes the day of "rest"), the Arabic term *(sabt)* was provided with an appropriate Islamic sense by the Qur'ān and later Muslim interpretation.

The Qur'ān uses the word *sabt* six times (plus once as a verb, *yasbitu,* "to keep the Sabbath," in Q 7:163) and clearly draws a relationship between the Jews, the Sabbath and not working on that day of the week, in keeping with the Jewish tradition (see JEWS AND JUDAISM). The day was imposed upon the Jews at Sinai (q.v.) according to Q 4:154 through the statement from God, "Do not transgress the Sabbath!" Some Muslim traditions suggest that this regulation was a punishment on the Jews for their refusal to worship (q.v.) on Friday (see FRIDAY PRAYER), the day designated for such activities by God; God would accept the Sabbath as long as the Jews ceased from any work on that day (see Ṭabarī, *Tafsīr,* ii, 167-8). On the other hand, traditions can be found which legitimize all of Friday, Saturday and Sunday as days of worship (e.g. Muslim, *Ṣaḥīḥ, K. Jumʿa* 22). Q 16:124 focuses on disputes over the observance of the Sabbath, "The Sabbath was appointed only for those who were at variance thereon; surely your lord will decide between them on the day of resurrection (q.v.), touching their differences." This perhaps reflects earlier Jewish-Christian debates over the proper day of worship (see CHRISTIANS AND CHRISTIANITY; QIBLA). The breaking of the law of the Sabbath attracts the most attention with three passages, Q 2:65, Q 4:47, and Q 7:163 (where the root *s-b-t* is used twice), speaking of those who transgressed the Sabbath being cursed and transformed into "despised apes" (Q 2:65, 7:166; also see Q 5:60; see BOUNDARIES AND PRECEPTS; LAW AND THE QUR'ĀN). Opinion varied as to whether this transformation was to be understood literally or metaphorically, for example as something that happened to Jewish hearts (see HEART; METAPHOR; POLYSEMY). Modern scholarship has not reached a consensus on the origins of this story.

The Qur'ān restates the biblical notion

that there were six days of creation (q.v.; Q 7:54; 10:3; 11:7, etc.) but denies the biblical implication that God "rested" from creation and that this is to be commemorated through keeping the Sabbath as a day of rest. God says after his experience with creation, "Weariness did not touch us" (Q 50:38). Thus the exegetical problem arose of how to explain that the seventh day of the week was called *sabt* while not implying that the word conveyed that sense of "rest." The answer was contained in the derivation of the word *sabt* from the verb *sabata* restricted in its meaning to senses of "ceasing" or "being still," without conveying an implication of "rest"; the word *subāt* was still seen to have that meaning, however, as was necessitated by Q 25:47 and Q 78:9, where sleep is termed a "rest." (See also DREAMS AND SLEEP; ANTHROPOMORPHISM; POLEMIC AND POLEMICAL LANGUAGE.)

Sabians

A religious community mentioned three times in the Qurʾān. The Sabians *(ṣābiʾūn)* should not be confused with the Sabaeans, the inhabitants of Sabaʾ, the biblical Sheba, a famous ancient nation in south Arabia (see SHEBA; BILQĪS; PRE-ISLAMIC ARABIA AND THE QURʾĀN; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC). The identity of the Sabians has puzzled both medieval and modern scholarship.

Q 2:62 states: "As for those who have believed and those who have professed Judaism and the Naṣārā and the Sabians: those who believed in God and the last day and did good, they shall have their recompense with their lord (q.v.) and there shall be no fear (q.v.) upon them, nor shall they grieve" (see JEWS AND JUDAISM; REWARD AND PUNISHMENT; FAITH). Q 5:69 is nearly identical with the verse just quoted, apart from the fact that the Sabians are mentioned before the Naṣārā. Q 22:17 states: "As for those who have believed and those who professed Judaism and the Sabians and the Naṣārā and the Magians (q.v.; *al-majūs,* i.e. Zoroastrians) and those who have associated, verily God shall distinguish among them on the day of resurrection" (q.v.). The first two verses mentioned here seem to be imply that the Sabians, like the believers (Muslims), the Jews and the Naṣārā (generally understood to mean Christians; see CHRISTIANS AND CHRISTIANITY, but see de Blois, Naṣrānī and ḥanīf), are at least potential candidates for salvation and enjoy the status of People of the Book (q.v.). None of the three verses, however, says anything specific about the beliefs of the Sabians or gives any other indication as to who they actually were.

The classical Muslim exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) offer a large number of conflicting suggestions. Some of these are purely abstract, for example, "they are between the Magians and the Jews" (Ṭabarī, *Tafsīr,* ad Q 2:62), but a few are more concrete. One account (not mentioned in al-Ṭabarī's *Tafsīr* but cited by some of the later commentators) identifies the Sabians with a pagan community in Ḥarrān, generally described as star

worshippers (cf. Shahrastānī, *Mafātīḥ,* i, f. 168b f.; id., *Milal,* 248-51; Fr. trans. in *Livre des religions,* ii, 167-72). In fact, the polytheists of Ḥarrān did call themselves *ṣābiʾūn,* at least when writing in Arabic, but among Muslim authorities the view was widespread that these people had appropriated the qurʾānic name "Sabians" merely so as to be able to claim the status of "People of the Book" and thus to avoid Muslim persecution (cf. de Blois, Sabians). A few authors claim that the "real Sabians," i.e. the Sabians of the Qurʾān, are a sect living in the swamps of southern Iraq. Ibn al-Nadīm's (d. ca. 385/995) *Fihrist* (Eng. trans. of this passage in de Blois, Sabians, 53-60) gives a fairly detailed account of these "Sabians of the swamps," who, he claims, were "numerous" in his own time (late fourth/tenth century), from which description their identity as a remnant of an early Christian sect, the Elchasaites, emerges. And, at a later date, the name "Sabians" was also applied to a different community in southern Iraq, the non-Christian Mandaeans.

In 1856 the Russian scholar Chwolsohn observed, correctly, that Ibn al-Nadīm's "Sabians of the swamps" were Elchasaites but, erroneously, identified the latter with the modern Mandaeans, concluding that the Mandaeans are the Sabians of the Qurʾān. It is unfortunate that western students of Islam almost unanimously accepted this unfounded conclusion for a long time. It is now clear that the Ḥarrānians, Elchasaites and Mandaeans are three different religious communities. It is most unlikely that the original Muslim community in western Arabia had any knowledge of these isolated religious groups in the Tigris-Euphrates area. From the context in which they are mentioned in the Qurʾān, it is also improbable that the qurʾānic Sabians were either polytheist nature worshippers (like the Ḥarrānians) or a community that defined itself in stark contrast to the Judeo-Christian prophetic tradition (like the Mandaeans); if, on the other hand, they were Elchasaites, one could ask why they were not included among the Naṣārā. It seems rather that the Muslim tradition very early lost any recollection of who was intended by the qurʾānic term and that "Sabians," consequently, became a convenient label for a variety of small religious communities seeking refuge from potential Muslim persecution.

On the assumption that the qurʾānic term refers to some community that is likely to have existed in Mecca (q.v.) or Medina (q.v.) and is not covered by other qurʾānic names (associators, Jews, Naṣārā, Magians; see POLYTHEISM AND ATHEISM), the present author has suggested tentatively that the Sabians might have been Manichaeans, i.e. those whom Muslims writers on pre-Islamic Arabia called the *zanādiqa* among the Quraysh (q.v.). In this case, the Arabic *ṣābiʾ* (or *ṣābī*) would not be a Babylonian dialect form of the Aramaic *ṣābiʿ,* "baptizing," as previously proposed (linking it either to the Elchasaites or the Mandaeans, both of whom placed great emphasis on baptism), but an Arabic participle from *ṣabā,* "to turn towards," here with the sense of "to convert to a different religion," as was proposed by some of the medieval Arabic philologists.

Sacred

see PROFANE AND SACRED; FORBIDDEN; SACRED PRECINCTS

Sacred Precincts

Areas considered holy, often associated with places of worship or religious rituals. Sacred precincts are treated in the Qurʾān on two levels: Israelite and Arabian (see CHILDREN OF ISRAEL; PRE-ISLAMIC ARABIA AND THE QURʾĀN; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC). On the Israelite level, a sacred precinct is mentioned, to begin with, in the story of Moses' (q.v.) vocation. In Q 20:12, Moses stands before the burning bush and God tells him that the *wādī,* "valley," i.e. precinct, he is standing in is of "multiple sacredness" *(al-wādī l-muqaddas ṭuwan);* therefore he must take off his shoes. The same description of that sacred precinct is repeated in Q 79:16. The sacredness of the place is conveyed by the Arabic form *muqaddas,* "holy." As for *ṭuwan,* which can be rendered as "multiple," some Muslim exegetes suggested that it stands for the name of that precinct.

The same scene is described in detail in Q 28:30: "And when [Moses] came to [the burning bush], a voice was heard from the right-hand *(ayman)* bank of the valley in the blessed spot *(fī l-buqʿati l-mubārakati)* of the bush, saying: 'O Moses, surely I am God, the lord of the worlds'." This time, the sacredness of a given precinct is conveyed by the Arabic adjective *mubārak,* "blessed (by God)." Besides, the right-hand side of the precinct is singled out, which is another way of saying that this was the most blessed zone of the place (see LEFT HAND AND RIGHT HAND). The same designation is repeated in Q 19:52, where the scene takes place on the "right-hand *(ayman)* side of the mountain *(al-ṭūr)*." The mountain is evidently Mount Sinai (q.v.). This is also the place where God later makes a covenant (q.v.) with the Children of Israel as is indicated in Q 20:80. Here again the right-hand side of the mountain is explicitly mentioned.

The terms *muqaddas* and *mubārak* reappear in relation to the holy land (*al-arḍ al-muqaddasa;* see JERUSALEM; SYRIA; GEOGRAPHY AND THE QURʾĀN). As for *muqaddas,* this is how the Qurʾān describes the holy land into which the Children of Israel are requested to go (Q 5:21): "O my people, enter the holy land which God has prescribed for you…." But the holy land is described more often as a precinct, which God has blessed *(bāraka)*. Thus in Q 21:71 the land which God has blessed for all people *(al-arḍi llatī bāraknā fīhā lil-ʿālamīn)* appears as the destination of Abraham (q.v.) and Lot (q.v.), whereas in Q 21:81 it is the place to which the wind is taking King Solomon (q.v.). In Q 7:137, the eastern and western parts of the land which God has blessed are said to have been given by God to the Children of Israel. Specific places are also described as blessed (see also BLESSING). Sometimes they are described as towns *(al-qurā),* as in Q 34:18, where they are said to have been frequented by the merchants

of Sheba (q.v.). And finally, the farthest mosque (q.v.) which is located in the precinct blessed by God (*al-masjid al-aqṣā lladhī bāraknā ḥawlahu,* Q 17:1) is identified by the exegetes as the Temple in Jerusalem *(bayt al-maqdis)*.

On the Arabian level, sacred precincts are mainly those found in and around Mecca (q.v.). This town is said to have been made sacred *(ḥarramahā)* by God (Q 27:91; see PROFANE AND SACRED; FORBIDDEN). The axis around which its sacredness revolves is the figure of Abraham, which means that the Arabian sphere runs parallel to that of the holy land. In fact, God's blessing and the figure of Abraham are combined in Q 3:96-7 into a common framework for the sacredness of the Kaʿba (q.v.), or *al-bayt,* "the house," as it is called here (see HOUSE, DOMESTIC AND DIVINE): "The first house appointed for people is the one at Bakka, blessed *(mubārak)* and a guidance for all people. In it are clear signs (q.v.), the standing place of Abraham (*maqām Ibrāhīm;* see PLACE OF ABRAHAM), and whoever enters it shall be secure.…" The passage ends with a statement to the effect that everyone must perform pilgrimage (q.v.) to the house.

The exegetes explain that Bakka is a name for Mecca and that the passage asserts that the Kaʿba was established on earth forty years before the Temple in Jerusalem *(bayt al-maqdis)*. Such an interpretation indicates that the sacredness of the Kaʿba was indeed shaped on the model of Jerusalem, with a view to providing the former with superiority over the latter. The Kaʿba is in fact considered a reflection of a celestial house, an idea found in the commentaries on Q 52:4, which speaks about an "inhabited house" *(bayt maʿmūr)*. The exegetes explain that the house is "inhabited" in the sense that angels always frequent it (see ANGEL).

The "standing place of Abraham" *(maqām Ibrāhīm)* is mentioned also in Q 2:125. Here the "house" appears again as a destination for pilgrimage and as a place of security, and the believers are requested to appoint for themselves a place of prayer (q.v.) at the *maqām Ibrāhīm*. Islamic tradition contains vivid details about the history of the sacred stone bearing this name, which is found in the vicinity of the Kaʿba to this very day. Q 2:125 ends with the assertion that Abraham, as well as his son Ishmael (q.v.), were commanded by God to purify God's house for the pilgrims and the believers (see also Q 22:26; see BELIEF AND UNBELIEF). Abraham and Ishmael are also the ones who in Q 2:127 "raise" the foundations of the house.

Abraham is credited not only with the foundation of the house but also with the prosperity of the people living in its vicinity. Their prosperity is the outcome of Abraham's prayer as recorded in Q 14:37: "Our lord, I have settled a part of my offspring in a valley unproductive of fruit near your sacred *(muḥarram)* house, our lord, that they may keep up prayer; therefore make the hearts of some people yearn towards them and provide them with fruits; haply they may be grateful" (see GRATITUDE AND INGRATITUDE). In another version of the same prayer Abraham refers to the "town" *(balad)* in general and not specifically to the house (Q 2:126). The house is mentioned in further passages with no specific allusion to Abraham, while its elevated status is conveyed by a straightforward epithet denoting sacredness, namely, *ḥarām:* In Q 5:97, *al-bayt al-ḥarām* is explicitly the title given to the Kaʿba and in Q 5:2 it features as the destination of sacrificial animals (see SACRIFICE; CONSECRATION OF ANIMALS). The ritual functions of the house come out also in Q 22:33, which refers to the "ancient house" *(al-bayt al-ʿatīq),* near which sacrifice takes place. In Q 22:29, the believers are instructed to per-

form circumambulation *(ṭawāf)* around the "ancient house," and in Q 8:35 pagan rituals performed in front of the house are denounced (see POLYTHEISM AND ATHEISM).

The most explicit manifestation of the ritual functions of the Meccan sacred precincts is provided by the title *al-masjid al-ḥarām*, "the sacred mosque," by which the Qurʾān refers to the Meccan sanctuary. It usually stands for the entire complex encompassing the Kaʿba and in which some rites of the pilgrimage, such as the *ṭawāf* around the Kaʿba, take place. The title "sacred mosque" occurs, to begin with, in a passage (Q 9:28) asserting that the idolaters are nothing but unclean; therefore they should not approach the sacred mosque (see CLEANLINESS AND ABLUTION; RITUAL PURITY). The need to preserve the purity of this precinct is closely associated with the idea that entering it (during pilgrimage) entails ritual preparations such as shaving one's head or cutting one's hair (Q 48:27). The guardians of the mosque are sometimes mentioned, whom the exegetes identify as the Quraysh (q.v.; Q 9:19; cf. Q 8:34). These guardians must guarantee for all believers free access to the mosque but they fail to do so, for which they are repeatedly deplored (Q 22:25; see also Q 2:217; 5:2; 8:34; 48:25). Because of its utmost sacredness, pacts and covenants concluded at the sacred mosque bear special solemnity, as implied in Q 9:7 (see CONTRACTS AND ALLIANCES; BREAKING TRUSTS AND CONTRACTS).

The sacred mosque is the starting point of the Prophet's nocturnal journey to the "farthest mosque" (Q 17:1), which indicates certain parallelism between the two mosques (see ASCENSION). Indeed, the Qurʾān (Q 2:144, etc.) prescribes that it should become the Islamic direction of prayer *(qibla)* and, according to tradition, this substituted a previous *qibla* (q.v.) that was directed towards Jerusalem.

Sacred precincts outside the sacred mosque are the two foothills, al-Ṣafā and al-Marwa (q.v.), which are mentioned in Q 2:158. The Qurʾān declares them to be among God's *shaʿāʾir* (sing. *shaʿīra*), i.e. his prescribed pilgrimage stations, and permits the believers to perform *ṭawāf* around them. The site of ʿArafāt (q.v.), another station of the pilgrimage situated outside the sacred territory *(ḥaram)* of Mecca, is mentioned in Q 2:198. The Qurʾān states that when performing the rite named *ifāḍa* — going in crowds from one place to another — from ʿArafāt, the pilgrims should come to the "sacred station" *(al-mashʿar al-ḥarām)* and mention God's name there. The exegetes explain that by the "sacred station" the site of Muzdalifa is meant or, more specifically, the mountain Quzaḥ, where the pilgrims stay during the night before proceeding to Minā on the tenth of Dhū l-Ḥijja.

The Meccan precincts are not only sacred but also secure. In fact, sacredness and security go hand in hand, as indicated in passages (Q 28:57; 29:67) stating that God has provided the inhabitants of Mecca with a territory sacred and safe *(ḥaram āmin)*. Therefore they are requested to worship the lord (q.v.) of the house who has fed them against hunger (see SUSTENANCE; FOOD AND DRINK) and gave them security against fear (q.v.; Q 106:3-4). God has actually made the house a place of resort *(mathāba)* for all men and a place of security (*amīn*, Q 2:125). Therefore, whoever enters it shall be secure (Q 3:97). Security is the underlying idea also in the title *al-balad al-amīn*, "the town made secure," by which Mecca is referred to in Q 95:3. The outcome of the combination of sacredness and security is the prohibition of waging war (q.v.) in the vicinity of the sacred mosque, as indicated in Q 2:191. The security of Mecca, much like its sacred-

ness, is traced back to Abraham who is said to have prayed to God to provide this town with security and prosperity (Q 2:126; 14:35-7; see WEALTH).

One particular sacred precinct in the vicinity of Medina (q.v.) is mentioned in Q 9:108, namely, "a mosque founded on piety (q.v.; *al-taqwā*) from the very first day.[…] In it are men who love to be purified." The Prophet is advised to go there rather than to the mosque that was built "to cause harm" (*ḍirār,* Q 9:107; see MOSQUE OF DISSENSION). The exegetes usually identify the mosque of piety with the one built in Qubāʾ, a district of Medina.

The Qurʾān also mentions places of sporadic worship (q.v.) whose sacredness is derived from the rites performed therein, mainly the mentioning of God's name (see BASMALA; GOD AND HIS ATTRIBUTES). They are usually called "mosques" *(masājid),* in the sense of sanctuaries. In Q 72:18 these mosques are defined as belonging to God alone, not to any other claimed deity, and therefore idolaters *(mushrikūn)* cannot visit them (Q 9:17-8; see IDOLATRY AND IDOLATERS). On the other hand, preventing believers from entering God's mosques is a grave sin, as stated in Q 2:114 (see SIN, MAJOR AND MINOR). According to this verse, no one is more unjust (see JUSTICE AND INJUSTICE) than he who prevents the believers from entering the mosques of God and strives to ruin them. Some exegetes hold that this refers to the Temple in Jerusalem and to the Romans who destroyed it, but other exegetes believe that the verse deals with the sacred mosque in Mecca.

The sporadic sanctuaries are also called "houses" *(buyūt),* as in Q 24:36. In Q 10:87 the Children of Israel are requested to turn their homes into a *qibla,* i.e. to use them as sanctuaries and, according to the exegetes, they had to do so because their synagogues were destroyed. Monotheistic non-Islamic places of worship are listed in Q 22:40 (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY): cloisters (*ṣawāmiʿ;* see MONASTICISM AND MONKS), churches (*biyaʿ;* see CHURCH), synagogues *(ṣalawāt)* and mosques *(masājid)*. The Qurʾān states that only God protected them from being pulled down. The word *miḥrāb* (pl. *maḥārīb*), "praying chamber," is another term used in the sense of a sanctuary, being mainly part of the Temple in Jerusalem. It is mentioned in passages dealing with King David (q.v.; Q 38:21), King Solomon (Q 34:13) and Zechariah (q.v.; Q 3:37, 39; 19:11).

Sacrifice

The act of making an offering to a deity or the offering itself. In Arabic, these are commonly rendered by the roots, *ḍ-ḥ-y,* *q-r-b* and *dh-b-ḥ.* The first root, which in

the second form can mean to sacrifice an animal during the period of daylight called *al-duḥā,* is not attested in the Qurʾān, though *ʿīd al-adḥā,* "feast of the sacrifice," has become the primary name for the one great sacrificial ritual in Islam, occurring during the daylight hours of the tenth of the month of *dhū l-ḥijja* (see MONTHS; DAY, TIMES OF; NOON) as a part of the major pilgrimage (q.v.; *ḥajj*).

In contemporary usage, some Muslims refer to this feast as *ʿīd al-qurbān* or, in Turkish, *qurbān bayram,* and this word occurs in the Qurʾān three times. Q 3:183: "… those who say: God has covenanted with us that we not believe in a messenger until he brings for us a *qurbān* that fire [presumably from heaven] will eat," and Q 5:27: "Relate to them the true story of the two sons of Adam (see ADAM AND EVE; CAIN AND ABEL), when they [each] offered a sacrifice *(idh qarrabā qurbānan),*" a reference to the narratives found in 1 Kings 18 and Genesis 4. The root of *qurbān* is common in Arabic, Hebrew and Aramaic/Syriac (in which *"qūrbānā"* is the term for the Christian Eucharist; see CHRISTIANS AND CHRISTIANITY) as well as Assyrian and Ethiopian but the morphology of the word suggests a NW Semitic origin. The third locus, Q 46:28, is a difficult verse (see DIFFICULT PASSAGES). Some commentators understand it to mean something like "mediators" (Zamakhsharī, *Kashshāf,* iii, 526) but this seems to ignore syntactical and contextual aspects of the verse (see GRAMMAR AND THE QURʾĀN; EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL).

Dh-b-ḥ occurs in three qurʾānic contexts in the sense of sacrifice (as opposed to, simply, "slaughter" in Q 2:49; 14:6; 27:21; 28:4; see SLAUGHTER). In Q 2:67 and 71, Moses (q.v.) tells the Israelites (see CHILDREN OF ISRAEL) that God commands their sacrifice of a cow, which they do in a sequence that recalls the "red heifer" of Numbers 19:2 (see CALF OF GOLD; NARRATIVES). Q 5:3 forbids making sacrifice on stone altars typically used for dedication to an idol (*ʿalā l-nuṣub;* see IDOLS AND IMAGES). Q 37:102 and 107 occur in the story of Abraham's (q.v.) intended sacrifice of his son. Abraham informs his son that he will sacrifice him (*annī adhbaḥuka,* Q 37:102). Later we are told that God redeemed the son with a magnificent sacrifice as a substitute (*wa-fadaynāhu bi-dhibḥin ʿaẓīmin,* Q 37:107). This is the "intended sacrifice" *(al-dhabīḥ)* that is today commemorated in the "feast of the sacrifice" mentioned above, though neither the Qurʾān nor early tradition literature (see ḤADĪTH AND THE QURʾĀN) makes this connection (Ṭabarī, *Tafsīr,* xxiii, 81-8).

The related word, *uhilla* (fourth form of the root *h-l-l*), is taken by some commentators to refer to slaughter but most understand it to mean invoking the name of God upon an animal when slaughtering it (Ṭabarī, *Tafsīr,* ii, 85-6; Ṭabarsī, *Majmaʿ,* i, 331; Qurṭubī, *Jāmiʿ,* ii, 150-1; see BASMALA; CONSECRATION OF ANIMALS). In all cases the Qurʾān forbids doing so in the name of anything other than God (Q 2:173; 5:3; 6:145; 16:115).

Tradition, then, understands the Qurʾān to prescribe invoking the name of God when slaughtering and that God rather than anything other is the object to which sacrifice is to be made. Q 22:27-37 places both within the context of the pilgrimage. Ritually fit animals are to be slaughtered as the name of God is invoked over the act. They are then eaten and shared with the poor and unfortunate (see POVERTY AND THE POOR; ALMSGIVING; COMMUNITY AND SOCIETY IN THE QURʾĀN). Perhaps because this ritual act of eating a communal meal represented a change from a system in which sacrificial offerings were left for the gods, the section concludes with the statement (Q 22:37): "Neither their flesh nor

their blood will reach God, but your religious devotion (*al-taqwā minkum;* see PIETY) will reach him."

Sadness see JOY AND MISERY

Ṣafā and Marwa

Two low hills near the Kaʿba (q.v.) in Mecca (q.v.) between which the pilgrim engages in a brisk walk or trot called "the running" *(al-saʿy)* during the pilgrimage (q.v.; *ḥajj* and *ʿumra*). This running is an obligatory station (*mansik,* pl. *manāsik*) among the various ritual activities during the ten days of the *ḥajj* pilgrimage ritual at Mecca (see RITUAL AND THE QURʾĀN).

The root meaning of *ṣafā* is to be clear or pure, from which comes the familiar name *muṣṭafā,* meaning "elected" or "chosen" (see NAMES OF THE PROPHET; ELECTION), but may also designate smooth stones. Lexicographers define *marwa* as "a bright, glittering stone that may produce fire." These words have been used since pre-Islamic times as the names for the two Meccan hills and are mentioned once in the Qurʾān (Q 2:158): "al-Ṣafā and al-Marwa are among the ritual ceremonies *(shaʿāʾir)* of God. Therefore, whoever makes the *ḥajj* or the *ʿumra* to the house [the Kaʿba] incurs no sin by making the circuit between them *(an yaṭṭawwafa bi-himā).* God knows and is thankful to whoever voluntarily does a good deed (see GOOD DEEDS)."

This passage attests to the antiquity of the ritual circumambulation between Ṣafā and Marwa. The act, referred to in post-qurʾānic literature as *al-saʿy,* is one of many religious rituals that emerged in the pre-Islamic period in relation to the sacred sites in and around Mecca, which were absorbed into Islam (see PRE-ISLAMIC ARABIA AND THE QURʾĀN; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC). It is possible that the old practice was an independent act of divine worship but it was eventually absorbed into a series of ritual activities that make up the *ḥajj* and *ʿumra.* The tenor of the Qurʾān indicates some ambivalence regarding the ceremony.

Two positions emerged early on with respect to the duty to engage in the ritual. One understands the verse to mean that it is not required in Islam because the qurʾānic expression, "there is no sin in doing it" implies legal neutrality (*mubāḥ;* see SIN, MAJOR AND MINOR; LAW AND THE QURʾĀN). The second position, one that quickly became the norm, assumes that the ritual is obligatory. The latter position required additional support, however, which it found in the sunna (q.v.) of the Prophet. The argument, as put forth on the authority of Muḥammad's wife ʿĀʾisha (see ʿĀʾISHA BINT ABĪ BAKR), was that if the rite were not required, the verse would have read, "Whoever makes the *ḥajj*… incurs no sin by not making the circuit between them."

The origin of the running ritual is uncertain and two sets of traditions have evolved to explain it. The oldest explains

that in pre-Islamic times pilgrims who were engaged in the "running" would touch two sacred stones erected on the two hills, images of the gods Isāf and Nāʾila. The two stones were once human lovers who had engaged in sexual intercourse in the sacred Kaʿba for which they were turned into stone. Their petrified images were later set in place on the two hills in order to warn pilgrims against improper conduct in the sacred places. Over the years, the origin of these stones was forgotten and people began to worship them as idols (see IDOLS AND IMAGES). Lazarus-Yafeh (Religious dialectics) suggests that this legend attests to the ancient Near Eastern cultic practice of ritual prostitution practiced at one time in Mecca.

A second set of traditions authenticates the ritual by associating it with Abraham (q.v.). Al-Ṭabarī (d. 310/923) includes the suggestion that it was one of the stations of pilgrimage *(manāsik al-ḥajj)* that Abraham prayed God would teach him and Ishmael (q.v.) as they raised up the foundations of the "house" (*bayt,* Q 2:127-8; see HOUSE, DOMESTIC AND DIVINE). A variation of the Abraham theme found more consistently in the sources places the origin in Abraham's act of leaving Hagar and Ishmael in the location of the future sacred area of Mecca (Q 14:37, read with Genesis 21 as subtext). According to a number of variants attributed to Ibn ʿAbbās (d. 68/686-8), Sarah's jealousy of Hagar after the birth of Ishmael caused such strife in the family household that the two women had to be separated. Abraham therefore personally brought Hagar and her son to Mecca and left them near the location of the Kaʿba. Before leaving them, Abraham recited Q 14:37: "O lord! I have made some of my offspring live in an uncultivated *wādī* by your sacred house, in order, O lord, that they establish regular prayer (q.v.). So fill the hearts of some with love toward them, and feed them with fruits so that they may give thanks." Hagar and Ishmael's water soon ran out and the infant Ishmael began to die of thirst. In desperation, Hagar climbed the nearby hills of Ṣafā and Marwa seeking a better vantage point in her search for water and ran between them seven times. Her running is usually described in some way that will shed light on how one should "run" the *saʿy* of pilgrimage. When she returned to Ishmael, she found him with an angel, sometimes identified as Gabriel (q.v.), who scratched the earth with his heel or wing to bring forth water, thereby saving the progenitors of the future northern Arabs. This legend also serves as an etiology for the sacred Zamzam spring in Mecca (see WELLS AND SPRINGS).

Each of these two traditions provided an acceptable etiology and, therefore, justification, to continue practicing a religious ritual within Islam that was clearly associated with idolatrous practices in the pre-Islamic period. The specific qurʾānic verse referring to Ṣafā and Marwa occurs shortly after verses treating the controversy over the proper *qibla* (q.v.), or direction of prayer (Q 2:142-5). This suggests that the qurʾānic redactors may have understood Q 2:158 as supporting an Arabization of emerging Islam as adherents of the new monotheism strove to understand their particular religious system in relation to Judaism and Christianity on the one hand and indigenous Arabian religious practice on the other.

Safety

see PEACE; SACRED PRECINCTS

Saint

Person marked by divine favor, holiness. The idea of special, chosen people, "saints," is alien to the Qurʾān (for the closest qurʾānic attestation of this concept, see ELECTION). The word *walī* (pl. *awliyāʾ*) used later for these people, though occurring very frequently, does not designate special people distinguished by striking qualities but the faithful as such, who are devout (*ṣāliḥūn, muttaqūn;* see GOOD AND EVIL; PIETY). This makes them friends of God and he is their friend (see FRIENDS AND FRIENDSHIP; CLIENTS AND CLIENTAGE). Satan (see DEVIL), who is the enemy *(ʿaduww)* of God and the faithful, also has his followers and friends (see ENEMIES; PARTIES AND FACTIONS). God loves his friends and they love (q.v.) him (Q 5:54-5). Therefore they do not need to fear the last judgment (q.v.): "The friends of God, they need have no fear (q.v.) and will not be sad (see JOY AND MISERY). The good news (q.v.) is theirs in this world and the next" (Q 10:62-4).

Once the idea of specially distinguished people had formed in the second/eighth century, these two verses in particular were taken as documentary evidence and the "friends of God" became "saints," special people chosen by God and endowed with exceptional gifts, such as the ability to work miracles (see MIRACLES). They were loved by God and developed a close relationship of love to him. The origin of the idea is unclear; ancient Christian and Jewish elements can be identified (Mach, *Der Zaddik,* 134-46; see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY). A system of concepts associated with this holiness *(wilāya/walāya)* was developed in the second half of the third/ninth century by al-Ḥakīm al-Tirmidhī (d. prob. bet. 295/907 and 300/912). Later authors, such as for instance Ibn al-ʿArabī (d. 638/1240) simply had to expand on al-Tirmidhī's ideas. Among other things al-Ḥakīm al-Tirmidhī developed rudimentarily the concept of a hierarchy of saints/friends of God. Although the names of the individual ranks were later stipulated more precisely, his terminology fluctuates: besides *awliyāʾ* he also uses *ṣiddīqūn* (a term which, with the singular *ṣiddīq,* occurs five times in the Qurʾān; cf. Heb. *ṣaddīq;* see Ahrens, Christliches, 19), *abdāl* (a non-qurʾānic term), *umanāʾ* (the singular form of which appears in the Qurʾān, and is applied to the messenger and to God), and *nuṣaḥāʾ* (this term and its singular appear four times in the Qurʾān, although not in the mystical sense). For the concept of "sanctity" and "sacred" as applied to places, states or things, see e.g. PROFANE AND SACRED; FORBIDDEN; SACRED PRECINCTS.

Sakīna see SHEKHINAH

Ṣalāt see PRAYER

Ṣāliḥ

A messenger (q.v.) sent to the people of Thamūd (q.v.), named nine times in the Qurʾān. His story is dealt with in a number of passages (Q 7:73-9; 11:61-8; 26:141-59; 27:45-53; 54:23-31; 91:11-5), and in other verses mention is made of the people of Thamūd and their fate.

The Qurʾān does not contain a complete narrative of the story of this messenger and the events that led his people to punishment and destruction, but it does mention (and occasionally repeats some details of) his mission among his people. Particular attention is given to the words of Ṣāliḥ when summoning his people to faith in God (Q 7:73 f.; 11:61 f.; 26:142 f.; 27:45 f.). Despite his urgings, they refuse to abandon the faith of their fathers (Q 11:62). When introducing the various versions of the speech of the messenger (q.v.) to his people, Ṣāliḥ is described as their "brother" (Q 7:73 and passim; see BROTHER AND BROTHERHOOD). A chronological setting for these people and the story of Ṣāliḥ is clearly given when it is said that the Thamūd were the successors of the ʿĀd (q.v.). The Qurʾān describes the Thamūd as a prosperous people with castles, impressive buildings and gardens; one passage suggests that they rejected various messengers (Q 26:141).

The story of Ṣāliḥ proper is introduced with the statement that he was sent with a she-camel as a sign (Q 7:73; 11:64; 26:155; see SIGNS; CAMEL), a test (Q 54:27; see TRIAL), or a proof (q.v.; i.e. Q 17:59) from God. This camel variously has the right to drink (Q 26:155; 91:13), or the water has to be shared between her and the Thamūd (Q 54:28). In the meantime, Ṣāliḥ's calls to faith prove fruitless, with the exception of a few followers. The haughty elders refuse to believe (Q 7:75) and openly challenge Ṣāliḥ, accusing him of being a simple man like themselves (Q 26:154; 54:24; see IMPECCABILITY) and even of being bewitched (Q 26:153; see INSANITY). The destruction of these unbelievers (see BELIEF AND UNBELIEF) is precipitated when they hamstring the she-camel (Q 7:77; 11:65; 26:157; 91:14) as an act of resistance and rebellion, particularly on the part of one individual among them (Q 54:29). That malevolent act made punishment inevitable (see PUNISHMENT STORIES; CHASTISEMENT AND PUNISHMENT). It took the form of an earthquake that seized them (Q 7:78) or a thunderbolt that left them all dead. The end was, in fact, announced by Ṣāliḥ himself when he became aware of what had been done to the camel: he stated that the punishment would be upon them in three days (Q 11:65). In some passages allusion is made to the punishment by the expression that the Thamūd were overtaken by a shout (or cry) sent by God (Q 11:67; 54:31), which left them prostrate in their dwellings (Q 11:67). Ṣāliḥ and those who believed were

naturally placed in safety (Q 11:66; 27:53). Finally, it should be noted that the version in Q 27:45-53 differs almost completely from that given in the other passages, excluding details such as the she-camel, or a description of the type of event that caused the destruction of their houses.

Commentators on the Qurʾān (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) and authors of literature on the prophets add further particulars to the portrait given here. For instance, some state that Ṣāliḥ started his prophetic mission when he was forty years old, as did Muḥammad; it is also said that he died in Mecca (q.v.) when he was fifty-eight. There are differing reports about Ṣāliḥ's genealogy and about the manner in which the she-camel was killed; sometimes the names of the torturer of the she-camel and his collaborators are given. The punishment that destroyed the Thamūd was announced three days in advance: first their faces turned yellow, then red, then black, and on the fourth day they were all dead. A report going back to the Prophet (see ḤADĪTH AND THE QURʾĀN) mentions the case of one individual of the Thamūd who had escaped death because he was in the holy territory of Mecca when the destruction took place. This man, named Abū Righāl, did not, however, escape punishment after he left the holy territory.

Though the Thamūd are known from other sources, pre-Islamic attestations of the name Ṣāliḥ are very rare (see Rippin, Ṣāliḥ). Moreover, the story of Ṣāliḥ and the she-camel has no parallel in other religious traditions.

Salvation

Preservation from destruction or failure; in eschatology, deliverance from sin and eternal damnation. Salvation has many meanings in the Qurʾān. Contrary to the final Christian salvation *(khalāṣ),* which supposes deliverance from sin and death for reconciliation and communion with God, the qurʾānic "supreme success" (*[al-]fawz [al-]ʿaẓīm,* Q 4:13, 73; 5:119; 9:72, 89, 100, 111; 10:64; 23:71; 37:60; 40:9; 44:57; 48:5; 57:13; 61:12; 64:9), sometimes called "the great success" (*al-fawz al-kabīr,* Q 85:11) or "the manifest success" (*al-fawz al-mubīn,* Q 6:16; 45:30), is always the ultimate purpose of human life. Therefore the believers "are the successful" (*hum al-*

fāʾizūn, Q 9:20; 23:111; 24:52; 59:20) because they enjoy God's pleasure *(riḍwān Allāh)*.

This enduring and definitive success is also called *falāḥ* and it is hopefully proposed by the *adhān,* which calls to prayer (q.v.; *ṣalāt*): "Come to success" *(ḥayya ʿalā l-falāḥ)*. It is well-known that all who are on "the right path" (*al-hudā, al-sirāṭ al-mustaqīm;* see FREEDOM AND PREDESTINATION; ASTRAY; ERROR; PATH OR WAY) will be "the successful" *(al-mufliḥūn)*. Eleven times, the Qurʾān repeats "so that you may be successful" (*laʿallakum tufliḥūn;* see VICTORY), and warns "the unjust" (Q 6:21, 135; 12:23; 28:37; see JUSTICE AND INJUSTICE), "the criminals" (Q 10:17; see SIN, MAJOR AND MINOR), "the sorcerers" (Q 10:77; 20:69; see MAGIC), and "the disbelievers" (Q 23:117; 28:82; see BELIEF AND UNBELIEF) that they shall never be successful (*lā yufliḥūn,* cf. Q 23:117). "The successful" are those "who have repented (see REPENTANCE AND PENANCE), believed and done righteousness" (Q 28:67; see GOOD DEEDS), who "are on true guidance from their lord" (q.v.; Q 2:5; 31:5), who are "enjoining good deeds and forbidding evil" (Q 3:104; see GOOD AND EVIL; VIRTUES AND VICES, COMMANDING AND FORBIDDING), "whose scale will be heavy" (Q 7:8; 23:102; see WEIGHTS AND MEASURES), "who follow the light (q.v.) which has been sent down" (Q 7:157; see REVELATION AND INSPIRATION; NAMES OF THE QURʾĀN), "for whom are the good things" (Q 9:88; see GOOD NEWS; REWARD AND PUNISHMENT), "who say: we hear and we obey" (Q 24:51; see SEEING AND HEARING; OBEDIENCE), "who seek God's countenance" (Q 30:38; see FACE OF GOD), and "are the party of God" (Q 58:22; see PARTIES AND FACTIONS; SHĪʿA). Finally, "whosoever is saved from his own covetousness" (Q 59:9; 64:16; see ENVY) and "purifies himself" (Q 87:14; see RITUAL PURITY; CLEANLINESS AND ABLUTION; JIHĀD) shall achieve success and will be a *mufliḥ*.

But there is a first salvation during life on earth for those whom God has chosen as his prophets (see PROPHETS AND PROPHETHOOD) or representatives among people. Sometimes the verb *anqadha,* "to save" (four times), is used for deliverance from the fire (see HELL AND HELLFIRE): "You were, it is said, on the brink of a pit of fire (q.v.) and he saved you from it" (Q 3:103). God is proclaimed to be the only savior, as when Abraham (q.v.) proclaims that the idols (see IDOLS AND IMAGES) or false deities could not save him (Q 36:23). A similar case is that of Noah's (q.v.) people (Q 36:43). Is the word *fidāʾ* or *fidya,* "ransom," used for redemption (Q 2:184, 196; 47:4; 57:15)? It seems to be only used for human "ransom" from captivity (see CAPTIVES) or from the marriage bond (see MARRIAGE AND DIVORCE), but sometimes it also means "ransom of punishment" (Q 70:11; see CHASTISEMENT AND PUNISHMENT). Nevertheless, it is the root *n-j-w* which mainly means salvation from perils and deadly events, with its two verbal forms *najjā* (thirty-seven times) and *anjā* (twenty-three times). In history (see HISTORY AND THE QURʾĀN), God has always saved each of his prophets "and those who believed with him": Hūd (q.v.; Q 7:72; 11:58), Ṣāliḥ (q.v.; Q 11:66), Abraham (Q 29:24), Shuʿayb (q.v.; Q 11:94), Lot (q.v.; Q 7:83; 27:57), Jonah (q.v.; cf. Q 6:63), Moses (q.v.; "We saved you from great distress," Q 20:40) and the Children of Israel (q.v.; Banū Isrāʾīl: "When we delivered you from Pharaoh's [q.v.] people," Q 2:49). To escape "from the unjust people" (Q 28:25; see OPPRESSION), to be "released" (Q 12:45), to be "delivered from" the enemy (e.g. Q 2:50; 7:141; 20:80; see ENEMIES), this is the "salvation" of people who believed in God. Therefore the Qurʾān proposes to the believers to repeat the prayer of the ones

who were saved by God, as did Pharaoh's wife: "My lord! Save me from the unjust people" (Q 66:11), and Moses himself: "Save us by your mercy (q.v.) from the disbelieving folk" (Q 10:86). So salvation *(najāt)* is always God's gift granted to faithful people in the present time and in the hereafter. See also ESCHATOLOGY.

Ṣamad see GOD AND HIS ATTRIBUTES

Samaritans

A tiny sect claiming to be Israelite, found today principally in Nablus, biblical Shechem, in the Palestinian territories; and in Holon in Israel. The Samaritans call themselves *Shomʿrim,* "observant ones," from Hebrew *shamar,* "to observe." 2 Kings 17:24-9, the earliest reference to them, calls them *Shomronim* or "Samarians," alleging that they were pagan peoples settled in Samaria by the Assyrians after the deportations of 722 B.C.E. Enmity between Judaeans and Samaritans flared up with the return of Judaean deportees from Babylon in 539 B.C.E. and continued up to and beyond the time of Jesus. Like Jerusalem, Gerizim, the mountain in Nablus holy to the Samaritans, was captured by the Roman armies and the emperor Hadrian built a pagan temple on its summit. During the Roman and Byzantine periods the Samaritans took part in numerous rebellions, provoked by both their strong separatism and the repressive legislation of the imperial authorities.

The only unequivocal reference to Samaritans in the Qurʾān is to al-Sāmirī, the man who in Q 20:85-95 tempted the Israelites (see CHILDREN OF ISRAEL) in the desert, inducing them to throw their ornaments into a fire and producing a live calf (see CALF OF GOLD). Moses (q.v.) condemned him to saying, "do not touch me" (Q 20:97) for the rest of his life. The Samaritans relate this qurʾānic expression of al-Sāmirī, "do not touch me" *(lā misāsa),* to a covenant (q.v.; see also CONTRACTS AND ALLIANCES) that they claim Muḥammad made with them, saying: "In your lifetime you can indeed say 'Let no one touch me.' You have a pledge (see OATHS). Do not violate it (see BREAKING TRUSTS AND CONTRACTS). Look to your God whom you are still loyally following." That Muḥammad had some knowledge of Samaritans and their beliefs (see RELIGIOUS PLURALISM AND THE QURʾĀN) is suggested by Q 2:96, which defends Solomon's (q.v.) piety (q.v.) — impugned by the Samaritans — against unnamed detractors.

The Samaritans appear to have viewed the Muslim army that invaded Syria in 12/632-3 as liberators from Byzantine oppression (see BYZANTINES). In the view of some early Muslim authors, they were exempted from paying the *kharāj,* or land tax, and subjected only to the *jizya,* or poll tax (q.v.; "four dirhams and a feed-bag of barley"), because of the assistance they rendered the invaders. The only Samaritan mention of the Umayyad caliphate to survive is a reference by the Samaritan chronicler Abū l-Fatḥ al-Sāmirī b. Abī l-Ḥasan (fl. 750/1350) to a devastating earthquake in the time of Marwān II (r. 127-32/744-50). The wars between the last of the Umayyads and the ʿAbbāsids are recorded in Samaritan chronicles, as are the consequences for the Samaritans of the

ʿAbbāsid victory and of the wars that followed the death of Hārūn al-Rashīd (d. 193/809). The Samaritans appear to have been treated well by the first Fāṭimid caliphs of Egypt, al-Muʿizz (r. 344-65/952-75) and al-ʿAzīz (r. 365-86/976-96), and during the crusades they enjoyed relative prosperity. The fall of Nablus to the Mongols (657/1259), combined with the Egyptian Mamlūks' destruction of Christian towns and strongholds throughout Syria (between 658/1260 and 690/1291), led to the suffering of the Samaritans, along with that of the other inhabitants.

Numerous Muslim sources attest to a Samaritan presence in the post-qurʾānic Islamic milieu. Muslim geographers like al-Yaʿqūbī (fl. later third/ninth cent.), al-Masʿūdī (d. 345/956), al-Idrīsī (d. ca. 560/1165), al-Iṣṭakhrī (fl. fourth/tenth cent.), the polymath al-Bīrūnī (d. ca. 440/1048) and the historian of religions al-Shahrastānī (d. 548/1153) all describe some aspect of Samaritan life and culture from the third/ninth to the sixth/twelfth centuries. Finally, even though the Qurʾān does not mention the Samaritans in this context, the jurists (*fuqahāʾ;* see LAW AND THE QURʾĀN) include them, along with Christians (see CHRISTIANS AND CHRISTIANITY), Jews (see JEWS AND JUDAISM), Magians (q.v.) and Sabians (q.v.), among the unbelievers (see PEOPLE OF THE BOOK; BELIEF AND UNBELIEF) who, following Q 9:29, must be fought until they pay the *jizya* (see JIHĀD; FIGHTING; WAR; TOLERANCE AND COMPULSION; TAXATION).

Samson

Biblical figure present in Islamic tradition and qurʾānic commentary, but not the Qurʾān. Called Shamsūn in Arabic, this name is not mentioned in the Qurʾān but is briefly mentioned in exegetical and historical works. His story is embellished with miraculous anecdotes. Many reports on him are cited by al-Ṭabarī (d. 310/923), who narrates them mainly from Wahb b. Munabbih (on whose authority Samson is portrayed as an extreme and austere ascetic: for example, he is said to have put out his eyes so as not to be diverted from the worship of God, and to have castrated himself so as to avoid the temptation of women; cf. Khoury, *Légendes,* 80-1 for Ar. text; see also Schwarzbaum, *Biblical,* 64). Al-Ṭabarī's historical work places Samson immediately before the coming of St. George (Jirjīs), suggesting that Samson lived in the Christian era.

Although he was born in a community of unbelievers (see BELIEF AND UNBELIEF) — other sources suggest a community of idolaters (see IDOLATRY AND IDOLATERS; POLYTHEISM AND ATHEISM) — Samson is portrayed as a strong and powerful man of great faith

(q.v.). An inhabitant of a Roman city, he dedicated his life to serving God's cause, which often meant fighting the enemies (q.v.) of God (see PATH OR WAY; JIHĀD). God guided him because of his moral probity and piety (q.v.). Samson is also portrayed as a great fighter (see WAR; FIGHTING) who fought and defeated his people in battle, frequently fighting on his own.

He is reported to have received divine assistance, especially during battles. Sweet water would spring forth from stones to quench his thirst. Samson's enemies soon realized that they could only overcome him through his wife. Bribed by his enemies, she agreed to help them capture her husband. They gave her a strong rope and told her to tie his hands to his neck when he fell asleep. She tried several different ways to tie him down, even with an iron ring tied to his neck, but each time he would break free. When Samson questioned his wife as to why she tied him down, she claimed that she was testing his strength.

Samson had long hair. He confided to his wife that he could only be overcome if his hair was tied. She tied his hands to his neck with his hair while he was sleeping and alerted his enemies. The enemies captured him, pierced his eyes, cut off his nose and ears before bringing him to a local minaret for public display. When he was captured, Samson pleaded with God to let him emerge victorious over those who had captured him (see VICTORY). God miraculously restored his eyesight and the parts of his body that had been mutilated. With his strength restored, Samson was commanded to grasp and pull two of the main pillars on which the minaret rested. As the people jeered, the minaret came crashing down, and the king and all those around him perished.

The discussion on Samson to be found in qurʾānic commentary is closer to the Christian than the biblical account of his life (cf. Rippin, Shamsūn; see Judges 13:5 f., where Samson's mother is told by an angelic messenger that her son is to be consecrated to God from the day of his birth [cf. Numbers 6:2-8] — a passage that likely influenced the later Christian tradition, in which he is depicted as an extreme ascetic; cf. Schwarzbaum, *Biblical,* 156: n. 162 of p. 64). In Islamic tradition, no immoral deeds (see EVIL DEEDS), lust, or acts of self-destruction (cf. e.g. Judges 16:1-31) are mentioned in the exegetical stories about him (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL): rather, Samson is depicted as an upright person and a great fighter who is betrayed by a treacherous wife.

Samuel

While not mentioned by name in the Qurʾān, there is little doubt that the prophet (*nabī;* see PROPHETS AND PROPHETHOOD) referred to anonymously in Q 2:246-8 is the biblical Samuel, the last of the "Judges" who administered the transition of Israel to a kingdom (see KINGS AND RULERS). This important historical detail is

significantly preserved in the short qurʾānic passage treating Samuel, "Have you not looked to the chiefs of the Children of Israel (q.v.) after Moses (q.v.) when they said to a prophet among them, 'Appoint for us a king that we may fight in the way of God'" (Q 2:246; see PATH OR WAY). In contradistinction with the biblical version of the story, however, the qurʾānic account does not present the Israelites as disappointing God with their request for a king (cf. i.e. I Samuel 12:12: "… you said to me, 'No, but a king shall reign over us,' though the lord your God was your king"); nor does the Israelites' request for a king carry any negative connotation in subsequent Islamic prophetology (e.g. al-Kisāʾī, *Qiṣaṣ,* 270: "Samuel humbled himself before God in order that a king might be appointed from among them").

The principal themes of Q 2:246-8, the verses in which this anonymous prophet of the Children of Israel appears, are: the Children of Israel's request for a king; encouragement to fight according to divine prescription (see FIGHTING; WAR); questioning of Saul's (q.v.) legitimacy as the appointed king due to his lack of resources and influence; and description of the resultant sign (see SIGNS) of Saul's kingship, i.e. the return of the ark (q.v.) of the covenant (q.v.). The anonymous prophet, identified with Samuel, is asked by the Children of Israel to furnish them with a king; he says that God has appointed Saul as their king, and to their protestations, he replies that "God gives authority (q.v.) to whom he wills" (Q 2:247; see POWER AND IMPOTENCE). Finally, in Q 2:248, the unnamed Samuel tells of the sign of Saul's authority *(āyat mulkihi)* that will come as a sign *(āya)* for those who believe (see FAITH; BELIEF AND UNBELIEF), namely the ark of the covenant, containing the "shekhinah (q.v.) of your lord."

Exegetical tradition and "stories of the prophets" literature

Identification of this anonymous prophet of Q 2:246-8 is rendered variously in the mainstream exegetical tradition (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). Most commonly he is *Shamwīl;* also *Ashmawīl* (occasionally transcribed *Ishmawīl*), *Ashmāwīl* and *Shamwāʾīl* (the Protestant Arabic translation of the Bible has rendered the name *Ṣamūʾīl;* and the holy burial site of *Nebi Samwīl* preserves a further slightly distinct form). Although this form does not occur in Islamic literature, the properly Arabicized form of the name "Samuel," i.e. that closest to the Hebrew morphology, is Samawʾal. Note, for example, the Jewish pre-Islamic chieftain of Taymāʾ, Samawʾal b. ʿĀdiyāʾ (d. ca. 560 C.E.) or, more incidentally, the Jewish vintner described in a celebrated *khamriyya* by Abū Nuwās (d. ca. 198/814); and especially Samuel's namesake, the Jewish mystic and convert to Islam, Samawʾal b. Yaḥyā al-Maghribī (520-69/1126-74), who describes at the outset of his autobiography, *Ifḥām al-Yahūd,* how his mother, as a result of the manner in which she conceived her child, identified with Hanna, the biblical Samuel's mother, and named her son after him (Shamwāʾīl) "…which is rendered in Arabic al-Samawʾal."

Commenting on Q 2:246, al-Rāzī (d. 606/1210) finds specifying the identity of the unnamed prophet to be less essential than ascertaining the actual point of the short passage in which he occurs (*Tafsīr,* ad loc., second *masʾala*), averring that the multifarious names, even identities, put forward for Samuel detract from the essential message: "…for the intent [of the verse] is [simply] to encourage people to jihād *(al-targhīb fī bāb al-jihād)*." Al-Rāzī distrusts the *isnād*s in the traditions of identification (see ḤADĪTH AND THE QURʾĀN) and vigorously rejects

the claim (*pace* Qatāda) that the prophet was Joshua (based on the fact that the prophet of Q 2:246 is described as coming "after" Moses: the temporal preposition "after" is ambiguous and should not override the consensus of historical chronology). Yet even al-Rāzī, the most sophisticated of the classical exegetes, is not impervious to confusion: he cites anonymously those who offered the identity as Ashmawīl b. Hārūn, "which is Ismāʿīl [sic] in Arabic." His claim that this is the majority view is dubious: it is clear that the more consensual patronymic is Ashmawīl b. Bālī. All commentators attribute to al-Suddī the identification of the prophet as Shamʿūn (Simeon); this itself has given rise to further confusion (cf. al-Fasawī who, in *Badʾ al-khalq,* relates separate stories for Shamʿūn and Ashmwāʾīl, as if they were two distinct men with overlapping biographies; yet in al-Ṭabarī's *Taʾrīkh,* Shamʿūn and Ashmwāʾīl are used interchangeably, apparently as variants of the same name). Identification of Samuel with Shamʿūn may be due to interference from the "story of Leah, Jacob's wife, who called her son Simeon, 'because the Lord hath heard that I am hated' (*Gen* 29:33)" (cf. Katsh, *Judaism,* 162). It is thus the story of Samuel's conception that is the source of confusion in prophetic lore. In modern times, Sayyid Quṭb (d. 1966; *Ẓilāl,* i, 266) concurs with al-Rāzī's disinterest in the question of identity, deeming it irrelevant (cf. also, for example, the fifth/eleventh century mystic al-Qushayrī in *Laṭāʾif al-ishārāt* who omits mention of Samuel when discussing Q 2:246).

In the "stories of the prophets" *(qiṣaṣ)* accounts of Samuel, to be found in *tafsīr* and elsewhere, it is clear that there are distinctly Jewish, Islamic and even Christian (see CHRISTIANS AND CHRISTIANITY) elements (see e.g. Katsh, *Judaism,* 160-1 regarding accounts of the prophet's conception and birth). Noticeable discrepancies between I Samuel and the Qurʾān include details of his divine calling: in I Samuel (3:1-9) when he hears the voice of his lord addressing him, he goes to Eli (three times), whereas in the Islamic tradition it is to his father that he repairs, and only then is he sent to Eli. Further, the qurʾānic recognition of Saul by Samuel follows a quasi-folkloric narrative pattern absent from the Bible, to wit: the bubbling of Samuel's oil-horn in the presence of Saul who has come to him in search of his father's lost asses. If, interpretatively, such a theme can be considered a subtext of Q 2:246-8, it shades meaningfully into the leitmotif of sūra 2: that concealed things will come to light (see HIDDEN AND THE HIDDEN). Even the story of "the cow" (Q 2:67-80), and its facilitating the unmasking of a murderer (see MURDER), forces the surrounding theme about the recognition of true and authentic scripture (see BOOK) and prophecy.

Finally, in addition to the exegetical discussion of Q 2:246-8, there are references to apparitions of Samuel in dreams (see DREAMS AND SLEEP), tales which go beyond the qurʾānic account and involve him further in the life of Saul. Regarding Saul's struggles against his enemies, al-Kisāʾī (*Qiṣaṣ,* trans. Thackston, 277-8) relates how Saul consults Samuel: having summoned him in a dream, he is scolded for having relied upon himself, never having acted upon the advice of Samuel while he lived. The deceased prophet disappears from sight and Saul awakens, frightened, from this terse encounter. While this censorious view of Saul attenuates the argument that he is a type for Muḥammad (see below, under *A revisionist reading*), it must be recognized that this kind of prophetic lore postdates the Qurʾān and may therefore be independent of the latter's own rhetorical agenda (see RHETORIC AND THE QURʾĀN).

A revisionist reading

In the light of a recent account of these verses that cogently situates them within the complex agenda of Q 2 (see FORM AND STRUCTURE OF THE QUR'ĀN), some attention must also be devoted here to Q 2:249-51, verses which pay particular attention to Saul (Ṭālūt). N. Robinson has identified four issues as crucial to their interpretation, as "what matters is not the historical detail but the relevance of the narrative to Muhammad's situation" (Robinson, *Discovering,* 217-8; see OCCASIONS OF REVELATION; SĪRA AND THE QUR'ĀN; HISTORY AND THE QUR'ĀN). The first is refusal to fight, which may reflect "the situation in Yathrib (see MEDINA), where there was a widespread recognition of the need for a strong military leader but a general reluctance to do battle with the superior forces of the Meccans" (see MECCA; POLITICS AND THE QUR'ĀN). The second is Saul's lack of sufficient wealth (q.v.) to justify his selection as king (Q 2:247); this is distinct from the biblical account in I Samuel, where it is Saul's problematic descent from Benjamin (q.v.) that is questioned, by Saul himself. The third is the return of the ark as a sign of Saul's sovereignty (Q 2:248). Again, distinction with the biblical account is noted: "According to the biblical account the Philistines returned the Ark to the Children of Israel before Saul was made king (*I Sam.* 6-7)." Robinson maintains that if the qur'ānic Saul is indeed a figure for Muḥammad, this particular treatment of the ark of the covenant "probably foreshadows the Ka'ba (q.v.); those who questioned Muḥammad's fitness to rule over them would change their minds when, as a result of his leadership, the Ka'ba came to their possession." The fourth is the similarity of the qur'ānic account of Saul's selection of his troops with the test of the biblical Gideon (cf. Judges 7): Robinson observes (re Q 2:249) that this selection of troops is "... probably mentioned in the present context because it reinforces one of the keynotes of the legislative sections (of sūra 2; see LAW AND THE QUR'ĀN): the need to be in control of one's appetites in order to be fit to engage in Jihad" (see JIHĀD). It is noticeable that, according to this reading, the qur'ānic Samuel is eclipsed in importance in favor of Saul the king who may thus emerge as a figure for Muḥammad. Use of the verb *iṣṭafā* for God's selection of Saul in Q 2:247 supports this view and the differentiation between Samuel and Saul in the Qur'ān — that is, the quiet privileging of the latter over the former — is mirrored by the twin roles of Samuel and Muḥammad in the recounting of the sixth/twelfth century Samaw'al b. Yaḥyā al-Maghribī's conversion to Islam (cf. Reynolds, *Interpreting,* 91-2).

Intertextuality?

Some modern Western commentaries on Q 2:249 observe interference from the biblical accounts about Gideon; Wherry, for example, commenting on Sale's translation, wrote disrespectfully in the nineteenth century: "The garbled rendering of Israelitish history in this verse and those following illustrates at once Muḥammad's ignorance of the Bible story, and his unscrupulous adaptation of Jewish tradition to the purposes of his prophetic ambition" (Wherry, *Comprehensive commentary,* i, 379, ad loc). Yet this may overlook the significance of the following cognate details in the life of Samuel as developed in Jewish lore, details that expand on I Samuel 7:6 (Ginzberg, *Legends,* iv, 63-4):

In the midst of the defeats and other calamities that overwhelmed the Israelites, Samuel's authority grew, and the respect for him increased, until he was acknowledged the helper of his people. His first

efforts were directed toward counteracting the spiritual decay in Israel. When he assembled the people at Mizpah for prayer, he sought to distinguish between the faithful and the idolatrous, in order to mete out punishment to the disloyal. He had all the people drink water, whose effect was to prevent idolaters from opening their lips.

Considering also that when Gideon was asked to rule the people he directed them back to their lord, saying, "… the lord shall rule over you," it is possible to detect an important point of reference that distinguishes the changed situation in the time of Samuel. This may also explain the (deliberate?) faint resonance of Gideon in the qurʾānic account of Samuel and Saul.

Sand

Loose granular material resulting from the disintegration of rocks. The most common Arabic word for sand is *raml,* which is not found in the Qurʾān. There are, however, some other terms for sand in the Arabic language, such as *kathīb* and *hāṣib*. These two words are used in the Qurʾān, in a variety of verses. The former is mentioned explicitly only a single time in the Qurʾān (Q 73:14). Referring to the final hour *(qiyāma),* the verse says, "On the day when the earth and the hills rock, and the mountains become *kathīb*." The word *kathīb* can be interpreted as meaning "a huge amount of sand" (*qiṭʿa ʿazīma min al-raml;* Ḥaddād, *Kashf,* vii, 105; see also *Lisān al-ʿArab,* i, 235). On the interpretation of the same word, al-Shawkānī (d. 1250/1834), a Muslim commentator and jurist, says that after the final earthquake, the mountains will become like moving sand (Shawkānī, *Tafsīr,* iv, 371; see APOCALYPSE; LAST JUDGMENT).

The word *ḥāṣib* is mentioned in four verses in the Qurʾān (Q 17:68; 29:40; 54:34; 67:17). On the meaning of the word there are several interpretations by qurʾānic commentators. Ibn Kathīr (d. 774/1372), a prominent commentator (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL), interprets the word in a way that can be understood as "a rainy sandstorm." It comes as a punishment for those who disbelieve God's message (see BELIEF AND

UNBELIEF; CHASTISEMENT AND PUNISHMENT; PUNISHMENT STORIES). The people of Lot (q.v.) were punished in such a way (Q 54:34; Ibn Kathīr, *Tafsīr,* iv, 328). Some commentators believe that the army of Abraha (q.v.), who had attempted to destroy what is now the holy shrine of Islam in Mecca (q.v.), was destroyed in such a sandstorm (Shawkānī, *Tafsīr,* vii, 317-8, 553-4). The word is also interpreted as "a strong wind which carries pebbles" (Ḥaddād, *Kashf,* vii, 46).

The two words *kathīb* and *ḥāṣib* are mentioned in reference to the punishment by God of those who deny the message of the prophets (see PROPHETS AND PROPHETHOOD). The Qurʾān threatens its immediate audience, i.e. the Arabs (q.v.), that, if they fail to listen to God's messenger (q.v.), they will be punished like the ancient disbelievers. A verse says: "Have you taken security from him, who is in the heavens (see HEAVEN AND SKY), that he will not send upon you the *ḥāṣib*" (Q 67:17). It is interesting to note how the Qurʾān threatens its initial audience with disasters with which they were already familiar. In the interpretation of the word *ḥāṣib,* al-ʿĀlūsī (d. 1270/1854), a prominent nineteenth-century qurʾānic commentator, says that the destructive storm on the land is called *ḥāṣib*. A similar storm on the sea is called *qāṣif* (ʿĀlūsī, *Rūḥ,* xv, 117).

The Prophet used the word *raml* in an allegorical sense (see METAPHOR; SIMILES). Speaking of the attributes of God (see GOD AND HIS ATTRIBUTES), and commenting on the qurʾānic verse, "the one who forgives all sins, the most forgiving one" (Q 39:53), the Prophet mentions that anyone who says a certain prayer before going to bed, will be forgiven by God for all of her/his sins, even if they are as numerous as sand (Tirmidhī, *Ṣaḥīḥ,* 470; see also ʿĀlūsī, *Rūḥ,* xxx, 259; see ḤADĪTH AND THE QURʾĀN; RITUAL AND THE QURʾĀN; POPULAR AND TALISMANIC USES OF THE QURʾĀN; EVERYDAY LIFE, THE QURʾĀN IN; SIN, MAJOR AND MINOR; FORGIVENESS).

Satan(s) see DEVIL

Satanic Verses

Name given by western scholarship to an incident known in the Muslim tradition as "the story of the cranes" *(qiṣṣat al-gharānīq)* or "the story of the maidens." According to various versions, this is the assertion that the prophet Muḥammad once mistook words suggested to him by Satan as divine revelation (see REVELATION AND INSPIRATION; DEVIL); that is to say, as verses of the Qurʾān — the words reportedly interpolated by Satan are called the "satanic verses." The historicity of the satanic verses incident is strenuously rejected by modern Islamic orthodoxy, often on pain of *takfīr* (being declared an unbeliever; see BELIEF AND UNBELIEF).

The satanic verses incident is reported in the *tafsīr* (qurʾānic exegesis; see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) and the *sīra-maghāzī* literature (epic prophetic biography; see SĪRA AND THE QURʾĀN) dating from the first two centuries of Islam. While the numerous reports on the incident differ in the construction and detail of the narrative, they may be broadly collated as follows. The incident is generally dated to the fifth year of Muḥammad's mission, when the small Muslim community in Mecca (q.v.) was

under persecution by the leaders of Quraysh (q.v.; the dominant tribe in Mecca), the most vulnerable of Muḥammad's followers having fled for safety to Abyssinia. The reports indicate that in these circumstances, Muḥammad hoped to achieve reconciliation with Quraysh. At this time, Sūrat al-Najm (Q 53, "The Star"), was revealed to Muḥammad, who recited the chapter to a gathering of Quraysh (see OCCASIONS OF REVELATION; RECITATION OF THE QUR'ĀN). When Muḥammad reached Q 53:19-20, with their reference to the female deities worshipped by Quraysh — "Have you considered al-Lāt, al-'Uzzā, and Manāt, the third, the other?" — Satan was able to cast two verses into Muḥammad's recitation which Muḥammad took to be divine revelation and duly recited; in some reports, Muḥammad is portrayed as being drowsy and inattentive when he committed the error. These are the "satanic verses": "Indeed they are the high cranes/the high maidens *(al-gharānīq/al-gharāniqa l-'ulā),* and indeed their intercession is to be desired." (The precise wording of the satanic verses varies with the different reports; a version of the satanic verses is also reported as a pre-Islamic *talbiya* or ritual invocation of Quraysh; see PRAYER FORMULAS; RITUAL AND THE QUR'ĀN.) The Quraysh were greatly pleased at Muḥammad's praise of their deities and at his having accorded them a place in the theology of his revelation, to the point that when Muḥammad recited the closing verse of the sūra, Q 53:62: "So: prostrate yourselves to God and worship [him]" — the unbelievers present prostrated themselves alongside the Muslims (see BOWING AND PROSTRATION). Later, however, Gabriel (q.v.) came to Muḥammad and apprised him of his error; in some reports, Muḥammad is depicted as realizing the error on his own. The Prophet was greatly distressed, so God sent down to him Q 22:52-4, comforting him and explaining to him what had happened:

We have not sent before you a messenger (q.v.) or a prophet (see PROPHETS AND PROPHETHOOD), but that when he desired/recited (*tamannā;* the verb means both "to desire" and "to recite"), Satan cast into his desire/recitation *(umniyyatihi),* so God eliminates *(yansakh)* that which Satan casts, then God establishes his own signs [q.v.; *āyāt*] clearly — and God is all-knowing, all-wise (see GOD AND HIS ATTRIBUTES) — to make that which Satan casts a trial (q.v.) for those in whose hearts is sickness and for those whose hearts are hardened (see HEART) — truly the wrongdoers are in deep dissension — and so that those who have been given knowledge (see KNOWLEDGE AND LEARNING) may know that it is the truth (q.v.) from your lord (q.v.), so that they might believe in it, and that their hearts may submit to it — truly, God guides those who have faith (q.v.) to the straight path (see PATH OR WAY).

Muḥammad then acknowledged his error and recanted the satanic verses, thereby provoking the renewed hostility and persecution of Quraysh (see OPPOSITION TO MUḤAMMAD). Some of the reports cite Q 53:21-2, "Would you have sons, and for him daughters? That, indeed, would be a crooked division," as having been revealed in place of the satanic verses, while others link the incident with the revelation of Q 17:73, "And they strove to tempt you away from that [with] which we inspired you, that you might fabricate against us something other than it; . . . and had we not made you firm, you would have inclined to them a little." Generally, though, the incident is cited as the "occasion of revelation" *(sabab al-nuzūl)* for Q 22:52, although

in some commentaries it appears in the exegesis on Q 53:19. It is also widely reported that the news of the Quraysh prostrating themselves alongside the Muslims made its way to Abyssinia (q.v.), prompting some of the Muslim refugees — understanding Quraysh to have converted to Islam — to return to Mecca, only to have to leave again (see EMIGRATION).

The satanic verses incident is reported in the respective *tafsīr* corpuses transmitted from almost every Qurʾān commentator of note in the first two centuries of the *hijra* (see CALENDAR): Saʿīd b. Jubayr (d. 95/714), Mujāhid b. Jabr (d. 104/722), al-Ḍaḥḥāk b. Muzāḥim (d. 105/723), ʿIkrima the client *(mawlā)* of Ibn ʿAbbās (d. 105/723), Abū l-ʿĀliya al-Riyāḥī (d. 111/729), ʿAṭiyya b. Saʿd al-ʿAwfī (d. 111/729), ʿAṭāʾ b. Abī Rabāḥ (d. 114/732), Muḥammad b. Kaʿb al-Quraẓī (d. 118/736), Qatāda b. Diʿāma (d. 118/736), Abū Ṣāliḥ Bādhām al-Kūfī (d. 120/738), Ismāʿīl al-Suddī (d. 128/745), Muḥammad b. al-Sāʾib al-Kalbī (d. 146/763), ʿAbd al-Malik b. Jurayj (d. 150/767), Muqātil b. Sulaymān (d. 150/767), Maʿmar b. Rāshid (d. 154/770), Yaḥyā b. Sallām al-Baṣrī (d. 200/815). Several of these relate the incident on the authority of ʿAbdallāh b. ʿAbbās (d. 68/687; see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). The incident also appears in the respective *sīra-maghāzī* works transmitted in the first two centuries from ʿUrwa b. al-Zubayr (d. 94/713), Muḥammad b. Shihāb al-Zuhrī (d. 124/742), Mūsā b. ʿUqba (d. 141/748), Muḥammad b. Isḥāq (d. 150/767), Abū Maʿshar al-Sindī (d. 170/786) and Muḥammad b. ʿUmar al-Wāqidī (d. 207/823). Thus, the satanic verses incident seems to have constituted a standard element in the memory of the early Muslim community about the life of Muḥammad (q.v.). The incident continued to be cited and its historicity accepted by several Qurʾān commentators and authors of *sīra-maghāzī* works throughout the classical period, including authors of important commentaries, such as Muḥammad b. Jarīr al-Ṭabarī (d. 310/923), Abū Isḥāq al-Thaʿlabī (d. 427/1035), Abū l-Ḥasan al-Māwardī (d. 450/1058), al-Wāḥidī al-Nīsābūrī (d. 468/1076), al-Ḥusayn b. al-Farrāʾ al-Baghawī (d. 516/1122), Jār Allāh al-Zamakhsharī (d. 538/1144), Jalāl al-Dīn al-Maḥallī (d. 864/1459) and others.

Strong objections to the historicity of the satanic verses incident were, however, raised as early as the fourth/tenth century — as evidenced in *al-Nāsikh wa-l-mānsūkh* of Abū Jaʿfar al-Naḥḥās (d. 338/950) — and continued to be raised in subsequent centuries, to the point where the rejection of the historicity of the incident eventually became the only acceptable orthodox position (see ABROGATION; THEOLOGY AND THE QURʾĀN). From among the many important Qurʾān commentators who rejected the historicity of the satanic verses incident, the respective opinions of Abū Bakr b. al-ʿArabī (d. 543/1148), Fakhr al-Dīn al-Rāzī (d. 606/1210), Abū ʿAbdallāh al-Qurṭubī (d. 671/1273), Abū Ḥayyān al-Gharnāṭī (d. 744/1345) and ʿImād al-Dīn b. Kathīr (d. 773/1373) have been regularly invoked by their successors down to the present day. Probably the most authoritatively cited refutation of the incident, however, appears in the *al-Shifāʾ* of al-Qāḍī ʿIyāḍ al-Yaḥṣubī (d. 544/1149), a work written in demonstration of the superhuman qualities of Muḥammad (see NAMES OF THE PROPHET; but see also MIRACLES; MARVELS).

The historicity of the incident is rejected on two bases. First, the satanic verses story portrays Muḥammad as being (on at least one occasion) unable to distinguish between divine revelation and satanic suggestion. This was seen as calling into

question the reliability of the revelatory process and thus the integrity of the text of the Qurʾān itself (see INIMITABILITY; CREATEDNESS OF THE QURʾĀN). The incident was thus viewed as repugnant to the doctrine of *ʿiṣmat al-anbiyāʾ,* divine protection of the prophets from sin and/or error, as it developed from the third/ninth century onwards, all theological schools coming eventually to agree that God protected prophets from error in the transmission of divine revelation (see IMPECCABILITY). The satanic verses incident was conceived to be an especially egregious instance of error since the praise of the deities of Quraysh uttered by Muḥammad in his recitation of the satanic verses would have been tantamount to the cardinal sin of *shirk* (associating divinity with an entity other than God; see POLYTHEISM AND ATHEISM). The claim that the Prophet could have committed *shirk* was denounced as *kufr* (unbelief). The doctrine of *ʿiṣma* has been most forcefully and consistently upheld by the Shīʿa (q.v.; see also SHĪʿISM AND THE QURʾĀN), for whom it is a central tenet. It therefore appears that no Shīʿī of any school has ever accepted the satanic verses incident. Those Sunnī scholars who did accept the incident had a slightly, but very significantly, different understanding of *ʿiṣma:* like Taqī l-Dīn b. Taymiyya (d. 728/1328), some of them held that prophets were not protected from error in the transmission of divine revelation, but rather from persisting in error after commission (Ahmed, Ibn Taymiyyah).

The historicity of the satanic verses incident is also rejected on the basis of the *isnād*s, the chains of transmission that carry the numerous reports of the incident. In the standard Islamic methodology developed by the scholars of ḥadīth (see ḤADĪTH AND THE QURʾĀN) for assessing the veracity of reports, a report is judged by the reputation for truthfulness of the individual transmitters who constitute a complete *isnād* that goes back to an eyewitness. The satanic verses incident is not carried by *isnād*s that are complete and sound *(ṣaḥīḥ);* at best, some of the *isnāds* are *ṣaḥīḥ mursal,* meaning that while the transmitters are bona fide, the chains are incomplete and do not go back to an eyewitness. Thus, the reports are viewed as insufficiently reliable to establish the factuality of the incident. The incident is not cited in any canonical ḥadīth collection, although it does appear in some non-canonical collections. Those scholars who acknowledged the historicity of the incident apparently had a different method for the assessment of reports than that which has become standard Islamic methodology. For example, Ibn Taymiyya took the position that since *tafsīr* and *sīra-maghāzī* reports were commonly transmitted by incomplete *isnād*s, these reports should not be assessed according to the completeness of the chains but rather on the basis of recurrent transmission of common meaning between reports (*al-tawātur bi-l-maʿnā;* Ahmed, Ibn Taymiyyah).

Other scholars accepted the idea that the fact of widespread transmission meant that the reports about the satanic verses incident could not be rejected outright but also took the position that the equal fact of the *ʿiṣma* of Muḥammad meant that the incident could not have taken place in the specific manner narrated. To reconcile the apparently contradictory epistemological claims of widespread transmission on the one hand and *ʿiṣma* on the other, scholars such as Ibn Ḥajar al-ʿAsqalānī (d. 852/1505) applied the principle of *taʾwīl* — what could be called rehabilitative interpretation — to the satanic verses reports so as to bring the narrative of the incident within the parameters of the permissibly conceivable. These scholars took the position that since Muḥammad simply could not have been deceived by Satan and

have uttered the satanic verses himself, it must have happened that when the Prophet recited Q 53:19, he paused for breath and at this juncture Satan, or one of the unbelievers present, seized on the opportunity to utter the blasphemous verses (see BLASPHEMY) while imitating the Prophet's voice, with the result that those around assumed that the Prophet had uttered them. (None of the early reports actually presents the incident in this way.)

Islamic modernity has been especially forceful and consistent in its rejection of the historicity of the satanic verses incident. The modern *locus classicus* is probably the article "Masʾalat al-gharānīq wa-tafsīr al-āyāt" published by Muḥammad ʿAbduh in *al-Manār* in 1905; but widely-circulated refutations of the incident have also been authored by other influential moderns, including Muḥammad Ḥusayn Haykal (d. 1376/1956) in *Ḥayāt Muḥammad,* Sayyid Quṭb (d. 1387/1967) in *Fī ẓilāl al-Qurʾān,* Abū l-Aʿlā Mawdūdī (d. 1399/1979) in *Tafhīm al-Qurʾān,* and Muḥammad Nāṣir al-Dīn al-Albānī (d. 1420/1999) in *Naṣb al-majānīq li-nasf al-gharānīq* (see EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY). Orientalists (see POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QURʾĀN), including the most widely-read biographers of Muḥammad — such as William Muir, D.S. Margoliouth, W. Montgomery Watt, Maxime Rodinson and F.E. Peters — have tended (with few exceptions) just as forcefully to accept the historicity of the incident, the orientalist logic having been epitomized by Peters: "This is the indubitably authentic story — it is impossible to imagine a Muslim inventing such an inauspicious tale." The widespread acceptance of the incident by early Muslims suggests, however, that they did not view the incident as inauspicious and that they would presumably not have, on this basis at least, been adverse to inventing it.

The rejection — or simple omission from *tafsīr* and *sīra* works — of the satanic verses incident having become routine in modern Islamic thought, the incident was somewhat rudely re-introduced to the larger Muslim consciousness through the publication of Salman Rushdie's novel *The satanic verses* in 1988. While the hostile Muslim reaction had less to do with Rushdie's adoption of the satanic verses incident for his titular phrase and central scene than with other offensive motifs in the novel, it is nonetheless noteworthy that Rushdie's publication did not re-open the debate among Muslims over the historicity of the satanic verses incident. Its only result was reiteration of the orthodox view.

Saul

Israelite king mentioned in both the Qurʾān and the Bible. Called Ṭālūt, the "tall one," in the Qurʾān, Saul is mentioned briefly in Q 2:246-51. After Moses (q.v.), the Israelites (see CHILDREN OF ISRAEL) asked an unnamed prophet (see PROPHETS AND PROPHETHOOD) — identified in qurʾānic commentaries as Ashmawīl or Shamwīl, Samuel (q.v.) — that God appoint a king so that they could fight in his path (see KINGS AND RULERS; PATH OR WAY). They were surprised to find that Saul was appointed, especially since he was a poor water-carrier. The Israelites considered themselves more worthy than he to exercise authority. The prophet assured them, however, that God had chosen him and had granted him knowledge and stature (see KNOWLEDGE AND LEARNING; AUTHORITY).

Saul came with a divine sign, the ark (q.v.) of the covenant (q.v.), which contained the *sakīna,* "tranquility" (see SHEKHINAH), and relics left by the family of Moses and Aaron (q.v.). Before fighting Goliath (q.v.; Jālūt), the Israelites were tested in a river (see TRIAL). They were prohibited from drinking water, and were allowed only to take small sips with their hands. Most of the warriors disqualified themselves from the army by ignoring this prohibition. After they crossed the river, Saul and his small band were frightened by the size of Goliath's army. Some within his army, however, assured others of the ability of a small army to triumph over a larger force. As they proceeded to fight, Q 2:251 states that, with God's help, David (q.v.) slew Goliath. God then granted David the kingdom and wisdom (q.v.), and taught him what he wished.

The exegetes greatly embellish the story of Saul and in doing so differ on many points. Citing different versions from various sources, al-Ṭabarī (d. 310/923; *Taʾrīkh,* i, 549-50; Eng. trans. Brinner, *History,* iii, 131) states that initially the Israelites rejected Saul because he was a descendant of Benjamin (q.v.) and was from the house of neither prophethood nor kingship. Saul was chosen as king because his height corresponded exactly to the length of his staff.

Some commentators state that Saul brought back the ark after the Amalekites had captured it during a battle. This was a sign from God (see SIGNS). The *sakīna,* which Saul brought back, is identified in some sources as the head of a dead cat, whereas in others it is a fragrant wind with a human face. According to al-Ṭabarī (ibid.), the *sakīna* was a basin of gold in which the hearts of the prophets were washed (see HEART). The modern Shīʿī commentator Ṭabaṭābāʾī (d. 1982; *Mīzān,* ad loc.; see SHĪʿISM AND THE QURʾĀN) sees the *sakīna* as "tranquility of the heart, firmness of purpose, and peace of mind."

The remains that Saul brought are identified as the sandals of Moses and the turban and staff of Aaron. Alternative understandings are that the remains refer to knowledge and the Torah (q.v.). The commentators also differ on the number of soldiers in Saul's army. Some claim that up to eighty thousand soldiers were asked not to drink from the river, which is identified as the river Jordan.

Most sources agree that David killed Goliath with a sling, although others say that David threw a stone. Saul became en-

vious of David as he grew more popular. Before the battle, Saul promised to give his daughter in marriage to David if he killed Goliath. When David triumphed, Saul regretted his earlier promise and now stipulated that David slay three hundred more enemies. When David fulfilled this condition, too, Saul sought to have him killed, resulting in David's fleeing to the mountains.

Most commentators identify David's wisdom with the prophethood that he inherited from Samuel. Some state that God taught him the Psalms (q.v.) and the art of judging between people (see JUDGMENT; JUSTICE AND INJUSTICE). He also taught him the language of birds and ants.

Sawda see WIVES OF THE PROPHET

Scholar

A learned person who has engaged in advanced study and acquired knowledge, generally in a particular field. The term *ʿālim,* most commonly used to designate "scholar" in Islamic societies, appears in the Qurʾān only as a description of God, in the sense of "knowing." The plural *ʿālimūn* is applied sometimes to God (cf. Q 21:51, 81) and sometimes to human beings (cf. Q 12:44; 29:43; 30:22), while the plural form *ʿulamāʾ,* which appears twice in the Qurʾān (cf. Q 26:197; 35:28), refers only to human beings. The Qurʾān also denotes knowledgeable or learned human beings by a number of phrases, including *ūlū l-ʿilm,* "those possessed of knowledge," *alladhīna ūtū l-ʿilm,* "those to whom knowledge has been given" and *alladhīna yaʿlamūn,* "those who know."

As the numerous appearances of the root *ʿ-l-m* suggest (Rosenthal, *Knowledge,* 19-22; cf. 30-1), the concept of knowledge *(ʿilm)* is central to the qurʾānic text (see KNOWLEDGE AND LEARNING). Knowledge appears as one of the principal divine attributes (see GOD AND HIS ATTRIBUTES). God's knowledge has no limits: God is "knowing of the hidden and the manifest" (*ʿālim al-ghayb wa-l-shahāda,* Q 6:73; 9:94, 105; 13:9; 23:92; 32:6; 39:46; 59:22; 62:8; 64:18; see HIDDEN AND THE HIDDEN); he "comprehends all things in mercy (q.v.) and knowledge" (Q 40:7), and "encompasses all things in knowledge" (Q 65:12). Like the term *ʿālim,* the word *ʿallām,* "most knowledgeable," is reserved for describing God (Q 5:109, 116; 9:78; 34:48) and *ʿalīm,* "most knowing," refers in most instances to God, who is frequently described as "most knowing and most wise" (*ʿalīm ḥakīm,* cf. Q 2:32; 4:11, 17, 24, 26, 92, 104, 111, 170; 6:83, 128, 139; 8:71; 9:15, 28, 60, 97, 106, 110; 12:6, 83, 100; 15:25; 22:52, 59; 24:18, 58, 59; 27:6; 33:1, 51; 43:84; 48:4; 49:8; 51:30; 60:10; 66:2; 76:3; note, however, among other exceptions, the use of *ʿalīm* in Q 12:55 to describe the prophet Joseph [q.v.] as *ḥafīẓ ʿalīm*).

God's knowledge is of an incalculably

superior order to that possible for human beings. Yet all knowledge derives from God, and he may choose to bestow a degree of understanding on some of his creatures (see, for example, Q 20:114, "Say: Lord! Increase me in knowledge"). Among those to whom God grants a portion of knowledge are his angels (see ANGEL), who assert, "We have no knowledge except what you have taught us" (Q 2:32), and prophets (see PROPHETS AND PROPHETHOOD): to Lot (q.v.), Joseph, Moses (q.v.), David (q.v.) and Solomon (q.v.), God gives judgment (q.v.; *ḥukm*) and knowledge (*ʿilm,* Q 12:22; 21:74, 79; 28:14; on the sense of *ḥukm* and *ḥikma* in the Qurʾān, see Rosenthal, *Knowledge,* 35-40). The Sunnī commentator al-Bayḍāwī (d. ca. 685/1286) glosses these paired gifts as "wisdom" (q.v.) and "prophethood" since "knowledge is appropriate for prophets" (Bayḍāwī, *Anwār,* i, 620, ad Q 21:74; cf. *Anwār,* ii, 78, ad Q 28:14). Moreover, God increases Saul (q.v.) "in knowledge and in body" (Q 2:247), a text taken by some Imāmī Shīʿī (see SHĪʿISM AND THE QURʾĀN) scholars as a proof that among the conditions for the imāmate is that the imām (q.v.) be the most learned among his subjects and the most excellent among them in good qualities (Ṭūsī, *Tibyān,* ii, 292).

The qurʾānic concept of knowledge is often closely connected to ideas of religious understanding and faith (q.v.; Rosenthal, *Knowledge,* 22-32; Rahman, *Major themes,* 34; Gilliot, ʿUlamāʾ). For example, the Qurʾān refers to "those given knowledge and faith" (*alladhīna ūtū l-ʿilm wa-l-īmān,* Q 30:56; see Māwardī, *Nukat,* iv, 323) and it states that "those who believe know it is the truth from their lord" (Q 2:26; for further examples, see Q 58:11, discussed below; Q 6:97-9; Ṭūsī, *Tibyān,* iv, 229-32; Rosenthal, *Knowledge,* 28-32). It is in this sense that the Qurʾān notes that most people lack knowledge (Q 6:37; 7:131, 187; 8:34; 10:55; 12:21, 40, 68; 16:38, 75, 101; 21:24; 27:61; 28:13, 57; 30:6, 30; 31:25; 34:28, 36; 39:29, 49; 40:57; 44:39; 45:26; 52:47), although they will come to know at the time of judgment (Q 15:3, 96; 19:75; 25:42; 29:66; 37:170; 40:70; 43:89; 72:24; 78:4, 5; see LAST JUDGMENT).

Yet the Qurʾān also indicates that some human beings other than prophets may be endowed by God with a measure of knowledge and understanding. The terms and phrases by which such persons are described have sometimes been understood by later commentators as references to those who pursue scholarship and, in particular, religious learning. For example, the Qurʾān states that "Only the knowledgeable ones *(ʿulamāʾ)* among God's servants *(ʿibād)* fear God" (Q 35:28; see further Māwardī, *Nukat,* iv, 471); and "[In these things] are signs for the knowing" (*al-ʿālimīn,* Q 30:22), a reference, according to the Sunnī jurist al-Māwardī (d. 450/1058), to jinn (q.v.) and humans, or to the *ʿulamāʾ* (Māwardī, *Nukat,* iv, 306; for similar verses, see Q 6:97, 98; 7:32; 9:11; 10:5; 29:43, 49). The Qurʾān refers in several instances to "those who know" (*alladhīna yaʿlamūn;* Q 39:9 asks, "Are those who know and those who do not know equal?"); it also recognizes "people who understand" (*qawm yafqahūn,* Q 6:98) and "people who know" (*qawm yaʿlamūn,* Q 2:230; 6:97, 105; 7:32; 9:11; 10:5; 27:52; 41:3); "those who have been given knowledge" (*alladhīna ūtū l-ʿilm,* Q 16:27; 17:107; 22:54; 28:80; 29:49; 30:56; 34:6; 47:16; 58:11), and "the possessors of knowledge" (*ūlū l-ʿilm,* Q 3:18; see also Q 12:76). In Q 16:27, where the context is eschatological (see ESCHATOLOGY), the phrase "those given knowledge" *(alladhīna ūtū l-ʿilm)* refers, according to al-Bayḍāwī, to prophets and the *ʿulamāʾ* or alternatively to the angels (Bayḍāwī, *Anwār,* i, 513); for the Imāmī Shīʿī scholar al-Ṭūsī (d. 460/1067), the phrase refers to "those given

knowledge and cognizance *(maʿrifa)* of God" (Ṭūsī, *Tibyān,* vi, 374). In other cases, the same qurʾānic phrase connotes the recognition of divine revelation and the preservation of it from error and alteration (Q 17:107; 29:49; 34:6; cf. Bayḍāwī, *Anwār,* ii, 99, ad Q 29:49; see REVELATION AND INSPIRATION; CORRUPTION; FORGERY). The Qurʾān also recognizes knowledgeable persons among earlier religious communities (see RELIGIOUS PLURALISM AND THE QURʾĀN); for example, Q 26:197 refers to "the learned ones *(ʿulamāʾ)* of the Banū Isrāʾīl" (see CHILDREN OF ISRAEL) and at Q 4:162, the phrase "those who are firm in knowledge" (*al-rāsikhūn fī l-ʿilm*) is sometimes taken as a reference to knowledgeable Jews (see JEWS AND JUDAISM), such as ʿAbdallāh b. Salām and his companions (Ṭūsī, *Tibyān,* iii, 389; Bayḍāwī, *Anwār,* i, 241). The verse Q 58:11 ("God will raise by degrees those among you who believe and those to whom knowledge has been given") is taken by al-Bayḍāwī as a reference to the *ʿulamāʾ,* who will be especially elevated for their combination of knowledge *(ʿilm)* and action *(ʿamal)*. In support of this interpretation, the commentator cites the well-known ḥadīth according to which the virtue of the scholar exceeds that of the worshipper (Bayḍāwī, *Anwār,* ii, 320; for the ḥadīth, see references in Wensinck, *Concordance,* v, 160; see ḤADĪTH AND THE QURʾĀN). Similar interpretations are recorded in some of the exegetical literature for several other qurʾānic passages, including "We raise by degrees whom we please" (Q 6:83; cf. Māwardī, *Nukat,* ii, 139; Bayḍāwī, *Anwār,* i, 298), and "those possessed of knowledge" (*ūlū l-ʿilm,* Q 3:18; cf. Abū l-Futūḥ Rāzī, *Rawḥ,* i, 529, although here the Shīʿī author states his preference for taking the phrase as a reference to ʿAlī; see ʿALĪ B. ABĪ ṬĀLIB).

The qurʾānic phrase "those possessed of authority among [you]" *(ūlī l-amri min[kum]),* which occurs twice in the Qurʾān (Q 4:59, "Obey God, obey the messenger [q.v.] and those possessed of authority [q.v.] among you" and Q 4:83, "If they had referred it to the messenger and to those possessed of authority among them, then those who formulate ideas among them would have known it"; see OBEDIENCE; KINGS AND RULERS), has also sometimes been interpreted as a reference to the *ʿulamāʾ*. This interpretation, supported by a number of ḥadīths, is already recorded by al-Ṭabarī (d. 310/923), who nevertheless endorses the more commonly expressed Sunnī view that the phrase refers to the holders of political authority (see POLITICS AND THE QURʾĀN), to whom obedience is due insofar as their commands are in accordance with God's (Ṭabarī, *Tafsīr,* viii, 495-504). Similar assessments appear in the works of al-Māwardī (*Nukat,* i, 499-500, 511), al-Zamakhsharī (d. 538/1144; *Kashshāf,* i, 535-6) and al-Bayḍāwī (*Anwār,* i, 214-5, 221). By contrast, Sunnī exegetes Fakhr al-Dīn al-Rāzī (d. 606/1209; *Tafsīr,* x, 143-8) and Ibn Kathīr (d. 774/1373; *Tafsīr,* ii, 326) prefer to interpret the phrase *ūlī l-amr* as a reference to the *ʿulamāʾ*. The Imāmī Shīʿī commentators al-Ṭūsī (d. 460/1067) and Abū l-Futūḥ Rāzī (d. 538/1144) interpret the phrase as a reference to the imāms of the family of Muḥammad (Ṭūsī, *Tibyān,* iii, 236, 273; Abū l-Futūḥ Rāzī, *Rawḥ,* i, 784; ii, 15; see FAMILY OF THE PROPHET; PEOPLE OF THE HOUSE).

Another qurʾānic verse that has contributed much to discussions of knowledge and scholarship is Q 3:79, in which the Qurʾān summons its audience to be "masters" *(rabbāniyyīn)* in the teaching of scripture and study (variant readings of the latter part of the verse are presented in the exegetical literature; see READINGS OF THE QURʾĀN). This qurʾānic text has figured with particular prominence in Ṣūfī theories

of knowledge (Böwering, *Mystical,* 226-30; Chittick, *Knowledge,* 149; see ṢŪFISM AND THE QUR'ĀN). For the term *rabbānī,* the classical commentators record several interpretations, most of which emphasize the pursuit of religious knowledge, although a number of secondary interpretations imply social and political leadership (Māwardī, *Nukat,* i, 405; Ṭūsī, *Tibyān,* ii, 511; Abū l-Futūḥ Rāzī, *Rawḥ,* i, 593).

Science and the Qurʾān

In his anthropological history of India, Abū Rayḥān al-Bīrūnī (d. ca. 442/1050), one of the most celebrated Muslim scientists of the classical period, starts a chapter "On the configuration of the heavens and the earth according to [Indian] astrologers," with a long comparison between the cultural imperatives of Muslim and Indian sciences. The views of Indian astrologers, al-Bīrūnī maintains,

> have developed in a way which is different from those of our [Muslim] fellows; this is because, unlike the scriptures revealed before it, the Qurʾān does not articulate on this subject [of astronomy], or any other [field of] necessary [knowledge] any assertion that would require erratic interpretations in order to harmonize it with that which is known by necessity (Bīrūnī, *Taḥqīq,* 219).

The Qurʾān, adds al-Bīrūnī, does not speak on matters which are subjects of hopeless differences, such as history (see HISTORY AND THE QUR'ĀN). To be sure, Islam has suffered from people who claimed to be Muslims but retained many of the teachings of earlier religions and claimed that these teachings are part of the doctrines of Islam. Such, for example, were the Manichaeans, whose religious doctrine, together with their erroneous views about the heavens (see HEAVEN AND SKY; PLANETS AND STARS), were wrongly attributed to Islam (Bīrūnī, *Taḥqīq,* 220). Such attributions of scientific views to the Qurʾān are, according to al-Bīrūnī, false claims of un-Islamic origins. In contrast, all the religious and transmitted books of the Indians do indeed speak "of the configuration of the universe in a way which contradicts the truth which is known to their own astrologers." Driven, however, by the need to uphold the religious traditions, Indian astrologers pretend to believe in the astrological doctrines of these books even when they are aware of their falsity. With the passage of time, accurate astronomical doctrines were mixed with those advanced in the religious books, leading to the confusion one encounters in Indian astronomy (Bīrūnī, *Taḥqīq,* 220-1; see Fig. VI for a later example of such "confusion" — in this case, an Indian map of the world that is replete with details derived from legends surrounding Alexander the Great, including also some qurʾānic details of the life of Dhū l-Qarnayn; see ALEXANDER; MYTHS AND LEGENDS IN THE QUR'ĀN).

Although not all Indian religious views contradict the dictates of the astronomical

profession, the conflation of religious and astronomical knowledge undermines Indian astronomy and accounts for its errors and weaknesses. And this conflation of scripture and science is contrasted by al-Bīrūnī with the Islamic astronomical tradition which, in his view, suffers from no such shortcomings (although scripture and science may not have been conflated in the classical Islamic period, see the *qibla* [q.v.] compass as depicted in Figs. IV and V for evidence of a type of complimentary relationship between the two that dates to the early centuries of Islam; see also SCRIPTURE AND THE QUR'ĀN; THEOLOGY AND THE QUR'ĀN). In al-Bīrūnī's view, therefore, the Qur'ān does not interfere in the business of science nor does it infringe on the realm of science.

Far from al-Bīrūnī's contentions, contemporary Islamic discourse on the Qur'ān and science abounds with assertions of the relationship between the two. This presumed relationship is construed in a variety of ways, the most common of which are the efforts to prove the divine nature of the Qur'ān through modern science. These efforts cover a wide range of activities including the establishment of institutions, holding conferences, writing books and articles, and the use of the internet to promote the idea of the scientific miracles of the Qur'ān (see MIRACLES; MARVELS; EXEGESIS OF THE QUR'ĀN: EARLY MODERN AND CONTEMPORARY). For example, a recent website search listed slightly fewer than two million occurrences on Islam and science, most of which assert that the Qur'ān's prediction of many of the theories and truths of modern science is evidence of its miraculous nature and its divine origins (Muẓaffar Iqbal, Islam and modern science, 15, 38; see INIMITABILITY; REVELATION AND INSPIRATION). Such contentions are not just part of folk belief but are also reflected in the work and writings of many contemporary Muslim intellectuals. As a manifestation of the popularity of this idea, the Muslim World League at Mecca formed in the 1980s the Committee on the Scientific Miracles of the Qur'ān and the Sunna (traditions of the Prophet; see SUNNA; ḤADĪTH AND THE QUR'ĀN). The Committee has since convened numerous international conferences and sponsored various intellectual activities, all aimed at exploring and corroborating the connections between science and the Qur'ān. A recent meeting of this Committee in Cairo, reported in the mass media, urged Muslims to employ the "scientific truths which were confirmed in the verses of the Qur'ān and which, only recently, modern science has been able to discover" as a corrective to the current misunderstanding of Islam. These truths prove that "Islam is a religion of science." The current president of the Committee, Zaghloul El-Naggar, asserts that it was

> only after man entered the age of scientific discoveries, possessed the most accurate instruments of scientific research, and was able to mobilize armies of researchers from all over the world… that we began to understand the meaning of God's word, may He be exalted, "a time is fixed for every prophecy; you will come to know in time" (Q 6:67).

This verse, according to El-Naggar, refers to the scientific truths that are in the Qur'ān that would be discovered in modern times, centuries after the revelation, and would "astound the contemporary scientists and thinkers of the world" (*al-Sharq al-Awsaṭ,* 5 Sept. 2003). According to him, these scientific miracles of the Qur'ān are the only weapon with which contemporary Muslims can defend the Qur'ān and the only convincing language in this

age of science and materialism (ibid., 23 Sept. 2003).

The qur'ānic attitude towards science, in fact, the very relationship between the two, is not readily identifiable and the discordance between the classical and modern Islamic views on this subject is substantial (see TRADITIONAL DISCIPLINES OF QUR'ĀNIC STUDY). To be sure, almost all sources, classical and modern, agree that the Qur'ān condones, even encourages the acquisition of science and scientific knowledge, and urges humans to reflect on the natural phenomena as signs of God's creation (q.v.; see also NATURE AS SIGNS; REFLECTION AND DELIBERATION; KNOWLEDGE AND LEARNING). In fact, a survey of the material culture produced in the Islamic world (see MATERIAL CULTURE AND THE QUR'ĀN) manifests a plethora of "scientific" instruments inscribed with qur'ānic citations (see e.g. Figs. I and III). Most sources also argue that doing science is an act of religious merit and, to some, even a collective duty of the Muslim community. Yet, as actual debates of the Qur'ān and science show, the points of contention are far more significant than this one general convergence. More than any other place, these debates can be traced in interpretations of the Qur'ān, and in several other writings in which specific uses of the Qur'ān are promoted or where a qur'ānic framework and philosophy of science is adduced. Therefore, the starting point for the study of the Qur'ān and science is not the Qur'ān itself since, as we will see, there are considerable differences in the interpretation of the verses that may have a connection to science or the natural phenomena. For this reason, it is not useful to try to ascertain a particular qur'ānic position on science. Rather, it is more productive to look at the way in which the relationship between science and the Qur'ān has been viewed by various Muslim thinkers, albeit with varying degrees of authority. The main source in which qur'ānic paradigms of science are articulated is the genre of qur'ānic exegesis (*tafsīr,* plural *tafāsīr;* see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL). Much as they insist on grounding themselves in the immutable text of the Qur'ān, exegetical works are repositories of larger cultural debates and reflect the views prevailing in their times and places. Rather than identifying one fixed qur'ānic paradigm of science, the task then becomes one of tracing the evolution of the Islamic discourse on the Qur'ān and science and adducing some of the factors that shaped this evolutionary process.

Classical qur'ānic exegetical works contain much material of possible scientific import. Despite the contemporary interest, however, in the Qur'ān and science, this aspect of exegesis has not received much scholarly attention. One possible reason for this neglect is that, collectively, these traditional materials do not add up to what might be legitimately called a scientific interpretation of the Qur'ān. Traditional interpreters did not present themselves as engaging in such an interpretive exercise. A minority of medieval scholars, notably Abū Ḥāmid al-Ghazālī (d. 505/1111) and Jalāl al-Dīn al-Suyūṭī (d. 911/1505), maintained that the Qur'ān is a comprehensive source of knowledge, including scientific knowledge (Dhahabī, *Mufassirūn,* ii, 454-64). The basis of the contentions of al-Ghazālī and al-Suyūṭī are such verses in the Qur'ān as "for we have revealed to you the book (q.v.) as an exposition of every thing" (Q 16:89). It should be noted, however, that the same verse starts with "Remind them of the day when we shall call from every people a witness against them, and make you a witness over them" (see WITNESSING AND TESTIFYING; LAST JUDGMENT). After describing the book as an

exposition of everything, the verse continues to say "and as guidance and grace (q.v.) and happy tidings for those who submit" (see ERROR; ASTRAY; BLESSING; MERCY; GOOD NEWS). Therefore, the likely reference in this verse to the exposition of knowledge is connected to knowledge of what would happen in the hereafter and the fate of believers (see BELIEF AND UNBELIEF; REWARD AND PUNISHMENT; ESCHATOLOGY; FAITH). Despite their claims, neither al-Ghazālī nor al-Suyūṭī proceeds to correlate the qur'ānic text to science, in a systematic interpretive exercise. Moreover, there are no instances in which these two or other exegetes claim authority in scientific subjects on account of their knowledge of the Qur'ān. Perhaps the most relevant reason for the absence of an articulation of a qur'ānic paradigm of science in premodern times is that there was no need for such an articulation in the absence of the counter-claims of a hegemonic culture of science and the ideological outlook that accompanied the rise of modern science (Iqbal, Islam and modern science, 30).

To be sure, scientific subjects do come up in many medieval qur'ānic exegetical works, but their treatment in these sources is radically different from their contemporary counterpart. The contemporary uses of some of the commonly cited "scientific" verses will be discussed below but, first, I will examine the meaning attributed to these verses in classical commentaries, including some in which such scientific discourse is most pronounced, namely the works of scholars such as al-Zamakhsharī (d. 583/1144) and Fakhr al-Dīn al-Rāzī (d. 606/1210).

The instances of scientific discourse in the classical qur'ānic commentaries are invariably mixed with other kinds of discourse that have no connection to science. Qur'ān commentators had a distinct conception of what constitutes the main thematic emphasis of the Qur'ān and they often, though not always, presented their detailed discussions of specific subjects within this framework. Thus, for example, in his commentary on Q 7:54, al-Rāzī spells out the four themes around which the various discussions of the Qur'ān revolve *(madār amr al-Qur'ān)*. Significantly, the verse in question relates to the natural order. It reads

> Surely your lord (q.v.) is God who created the heavens and the earth (q.v.) in six days, then assumed the throne (see THRONE OF GOD; ANTHROPOMORPHISM). He covers up the day with night which comes chasing it fast (see DAY AND NIGHT); and the sun (q.v.) and the moon (q.v.) and the stars are subjugated by his command. It is his to create and command. Blessed be God, the lord of all the worlds.

Before embarking on a lengthy discussion of this verse, al-Rāzī lists the four overriding qur'ānic themes: the oneness of God (see GOD AND HIS ATTRIBUTES), prophethood (see PROPHETS AND PROPHETHOOD), resurrection (q.v.) and the omnipotence of God (see POWER AND IMPOTENCE) or the related question of predestination (Rāzī, *Tafsīr,* xiv, 96 f., ad loc.; see also Abū Ḥayyān, *Nahr,* i, 809-11; see FREEDOM AND PREDESTINATION); all other themes, including the ones in this verse, ultimately underscore one of these four essential motifs. Al-Rāzī proceeds to explain the manner in which this seemingly unrelated verse does indeed relate to the oneness and omnipotence of God — and lists several interpretations that confirm this correlation. One is to argue that the heavens and the earth are created with a particular size, while their natures do not preclude the possibiliy of having a larger or smaller size. This shows that a willing maker chose to give them this

specific size and no other, thus proving the existence of a free and willing creator (Rāzī, *Tafsīr,* xiv, 96-7). Alternatively, the creation at a specific time of the heavens and the earth, when they could have been created at an earlier or a later time, is an act of choice by God, and not due to the inherent nature of either. The same thing also applies to the configurations and the positions of the various parts of the universe relative to each other, and so on (ibid., 97-8). After a lengthy digression to disprove the attribution of place and direction to God (ibid., 98 f.; see SPATIAL RELATIONS; TIME), al-Rāzī returns to the first theme, albeit from a different perspective. He enumerates the benefits that result from the succession of day and night, again as proof that God creates the world in a specific fashion in order to maximize the benefit for humans from this world (ibid., 117). He then undertakes a linguistic exploration, typical of qur'ānic commentaries of all kinds (see GRAMMAR AND THE QUR'ĀN), of the meaning of the word "subjugated" *(musakhkharāt)*. The sun, he reports, has two motions: one cyclical rotation is completed in a year, and another in a day. The cycle of night and day, however, is not due to the motion of the sun but to the motion of the great orb, which is also the throne (ibid., 117-8). Moreover, each heavenly body or planet has an angel assigned to it to move it when it rises and sets (ibid., 118-9), and God has endowed the throne, or the great outer orb, with the power to influence all the other orbs, thus enabling it to move them by compulsion from east to west, i.e. in the opposite direction to their west-to-east slow motion (ibid., 119-20). This, according to al-Rāzī, is the meaning of "subjugation": that orbs and planets are organized by God in a particular order for no inherent reason of their own, so that they produce optimal benefit for humans (ibid., 120; see GRACE; BLESSING).

Al-Rāzī's approach is typical of many other commentators, both in its linguistic turn, and in its emphasis on the benefits of creation to humans as evidence of the existence of the willing creator. Commentators often focus not just on the meaning and appropriateness of using certain terms but also on the logic of the order of their appearance in the Qur'ān. Such, for example, is one of the main arguments raised in al-Rāzī's commentary on Q 2:22: "[It is he] who made the earth a bed for you, the sky a canopy, and he sends forth rain from the skies that fruits may grow as food for your sustenance (q.v.). So, do not make another the equal of God knowingly" (see POLYTHEISM AND ATHEISM; IDOLS AND IMAGES). In this verse, al-Rāzī maintains, there are five kinds of signs (q.v.) or proofs (see PROOF) that reinforce belief in God: two from within the self *(dalā'il al-anfus)* and three from the external world (*dalā'il al-āfāq;* Rāzī, *Tafsīr,* ii, 101). Since people are more likely to appreciate signs from within themselves and since self-knowledge is clearer than other kinds of knowledge, the Qur'ān first refers to the creation of humans. An added reason for beginning with this proof is that all of God's gifts to humanity presume the prior creation of humans in order to benefit from these gifts (see GIFT-GIVING; GRATITUDE AND INGRATITUDE); in this way the Qur'ān accounts for the creation of humans before accounting for the creation of that from which they benefit. Al-Rāzī also suggests another reason for starting with the creation of humankind, namely that all the signs of the heavens and the earth have their counterparts in humans, whereas the reverse is not true; the unique traits created in human beings include life (q.v.), power, desire (see WISH AND DESIRE), intellection (see INTELLECT) and so on. Elsewhere al-Rāzī explores the reasons why the word "heavens" occurs before the

word "earth" in most cases where they occur together in the Qur'ān (see PAIRS AND PAIRING). Among the virtues of the heavens is that they are ornamented by God with the bright stars, the sun and the moon as well as the throne, the pen (see INSTRUMENTS; WRITING AND WRITING MATERIALS) and the Preserved Tablet (q.v.). God also uses complimentary names to refer to the heavens in order to underscore their high status. Other merits of the heavens are that they are the abode of angels (see ANGEL) where God is never disobeyed (see OBEDIENCE; DISOBEDIENCE; FALL OF MAN; DEVIL), that prayers are directed to them (see PRAYER), hands are raised towards them in supplication and they have perfect color and shape. The one advantage of the heavens over the earth which invokes a scientific view common at the time is the notion that the heavenly world influences the sub-lunar world, whereas the earth is the passive agent that is acted upon. Al-Rāzī also lists some of the merits of the earth according to those who prefer it to the heavens, including the fact that prophets are sent in it and mosques (see MOSQUE) for the worship (q.v.) of God are built in it (ibid., 106-7). The noticeable feature in this comparison is the absence of any discussion of a natural superiority of heaven over earth, a point to which we will return. Suffice it here to note that rather than using the Qur'ān to elucidate science or science to extract the proper meaning of the qur'ānic text, quasi-scientific discussions often aim at explaining the order of words in qur'ānic verses and at demonstrating the linguistic, rhetorical miracles of the Qur'ān (see RHETORIC AND THE QUR'ĀN; ARABIC LANGUAGE; LANGUAGE AND STYLE OF THE QUR'ĀN). Indeed, it is not just the creation of a perfect and wondrous world that is underscored in the commentaries, but also the fact that God refers to this creation by using words that cannot be emulated by the most eloquent humans (ibid., 105).

The marvel of creation is a recurrent theme of qur'ānic commentaries. These marvels are viewed as signs of God and proofs that he exists, is all-powerful and all-knowing, and is the willing creator of all being. The frequent summons in the Qur'ān for humans to observe and reflect on the heavens and the earth (e.g. Q 10:101) are seen by many commentators as evidence that there is no way to know God directly and that he can only be known by contemplating his signs (e.g. Rāzī, *Tafsīr,* xvii, 169; Abū Ḥayyān, *Nahr,* ii [pt. 1], 49; also Zamakhsharī, *Kashshāf,* i, 32). At a basic level, such reflection leads to the conclusion that there is order and wisdom in creation, which in turn means that a wise maker must have created it. The complex "secrets" of creation also lead humans to recognize the limits of human comprehension and its inability to grasp the infinite knowledge and wisdom (q.v.) of God. The more one delves into the details of creation, the stronger the belief one develops in the wisdom behind it (Rāzī, *Tafsīr,* xiv, 121, ad Q 7:54).

One of the commonly cited verses which urge contemplation of the signs of the heavens and the earth is Q 3:190-1:

In the creation of the heavens and the earth, the alteration of night and day, are signs for the wise. Those who remember God (see REMEMBRANCE), standing or sitting or lying on their sides, who reflect on and contemplate the creation of the heavens and the earth, [say]: Our lord, not in vain have you made them. All praise (q.v.) be to you, preserve us from the torment of hell (see HELL AND HELLFIRE).

In his commentary on this verse, al-Rāzī contends that the human mind is incapable of comprehending the manner in which a

small leaf on a tree is created, how it is structured or how it grows; needless to say, the larger task of discovering God's wisdom in the creation of the heavens and the earth is completely impossible. One must therefore concede that the creator is beyond full comprehension. Consequently, one should admit the utmost wisdom and great secrets (q.v.) of creation, even if there is no way of knowing what these are (see HIDDEN AND THE HIDDEN). Ultimately, when people reflect on the heavens and the earth, they will come to realize that their creator did not create them in vain but for a remarkable wisdom and great secrets and that the intellects are incapable of comprehending them (Rāzī, *Tafsīr,* ix, 128-41). This means that the ultimate purpose of reflection is to establish the limitations of human knowledge and its inability to comprehend creation, not to establish a scientific fact and demonstrate its correspondence with the Qur'ān. Moreover, as understood in these commentaries, the contemplation for which the qur'ānic text calls lies outside the text, in nature, and does not move back to the text — nor does it follow or correspond to any particular qur'ānic scheme. As such, contemplation does not imply a correlation between science — whether natural philosophy (see PHILOSOPHY AND THE QUR'ĀN), astronomy, or medicine (see MEDICINE AND THE QUR'ĀN) — and the Qur'ān. The Qur'ān, according to these commentaries, directs people to reflect on the wisdom of the creation of nature but provides no details on the natural order or on ways of deciphering it; these details, if and when they appear in classical qur'ānic commentaries, are drawn from the prevailing scientific knowledge of the time. This overview of the mode in which the commentators invoke creation as evidence of God and his traits illustrates the fundamental divide between science and the Qur'ān.

As noted above, the qur'ānic signs of creation are often classified into those from within the self *(dalā'il al-anfus)* and those from the external world *(dalā'il al-āfāq)*. Alternatively, the qur'ānic signs are classified into signs in the heavens, on earth, or in what falls in between. The heavenly signs include the movements of the celestial orbs, their magnitudes and positions, as well as signs specific to different components of the heavens, such as the sun, the moon and the planets. The earthly signs include minerals, plants and humans (e.g. Qurṭubī, *Jāmi',* ii, 191-202; Abū Ḥayyān, *Nahr,* i, 156 f.; Rāzī, *Tafsīr,* ii, 101 f.; ix, 137; xvii, 169; see METALS AND MINERALS; AGRICULTURE AND VEGETATION). The most striking feature of the discussions of these signs, especially the heavenly ones, is the mixing of some information drawn from astronomy and natural philosophy with a wealth of other non-scientific material. Thus, for example, one of the benefits of the rising and setting of the moon is that, while its rising helps night travelers find their way, its setting shelters fugitives trying to escape from their enemies. Additionally, among the signs of the heavens is the fact that the shooting stars or meteors serve as missiles that drive devils away and keep them from spying on the angels in the heavens (Rāzī, *Tafsīr,* ii, 108-9; cf. ibid., xv, 76; xvii, 37; Qurṭubī, *Jāmi',* vii, 230 f.; viii, 38; Zamakhsharī, *Kashshāf,* i, 291, 354-5; Abū Ḥayyān, *Nahr,* i [pt. 2], 7; ii [pt. 1], 49-50). Another common feature of the commentaries on what is often referred to as the "sign verses" (see PORTENTS) is that, while the complexity and perfection of creation is, in and of itself, a sign of the wise creator, the primary proof is not just in the creation of a complex natural order but in the benefits to humanity from this creation. A typical commentary thus focuses on the specific way in which various aspects of the

natural phenomena are arranged in order to maximize the benefits to humanity from them. Since there is no inherent reason for the universe to be arranged in a particular fashion, then there must be a willing maker who chose to create it as such. Thus, it is the benefit to humans that ultimately proves the existence of a wise and willing creator. To be sure, the subjugation by God of all creation in the service of human beings serves both their needs for survival and their independence without which they cannot worship God; as such, benefit lies both in this world and in the hereafter (Zamakhsharī, *Kashshāf,* i, 43; Abū Ḥayyān, *Nahr,* i, 54). But benefit and utility are not the ultimate purposes of creation; rather, benefit is what induces people to reflect on God's creation, recognize the magnitude of his power and then believe in him.

While material benefit serves as a secondary objective of creation, the primary objective is the religious benefit in the world to come, which results from belief in God. Such, for example, is the gist of a commentary on the above-mentioned verse Q 2:22: "[It is he] who made for the earth a bed for you, the sky a canopy, and sends forth rain from the skies that fruits may grow as food for your sustenance. So, do not make another the equal of God knowingly." According to one commentator, the term bed *(firāsh)* in this verse means a place on which people could walk and settle; and all parts of the earth play a role in making human life on earth possible (Qurṭubī, *Jāmiʿ,* i, 227 f.). The ultimate meaning of the verse, however, is that God made humans independent of the rest of creation so that they should not compromise, out of need, their exclusive worship of God. Alternatively, Ṣūfīs argue that this verse teaches the way of poverty *(faqr)* and self-denial by directing people to sleep in the open, with the earth as bed and the sky as cover (ibid., 229-31; see ASCETICISM; ṢŪFISM AND THE QUR'ĀN; POVERTY AND THE POOR). Other verses occasion more detailed debate of the meaning of benefit, as in the commentaries on Q 2:29: "He made for you all that lies within the earth, then turned to the firmament. He proportioned seven skies; he has knowledge of every thing." Al-Qurṭubī (d. 671/1272) reports that some people argue that this verse proves that the rule with regard to all created things is that they are licit unless there is clear textual evidence that prohibits or regulates them (see FORBIDDEN; LAWFUL AND UNLAWFUL). Benefit here is understood as making use of all created things. Without questioning this notion of permissibility or licitness, al-Qurṭubī maintains that the verse means that all things are created for human beings so that they may reflect on the miracle of creation and thereby believe in God, which is the ultimate benefit for human beings (Qurṭubī, *Jāmiʿ,* i, 250-2; also Zamakhsharī, *Kashshāf,* i, 43; Abū Ḥayyān, *Nahr,* i, 54).

Classical commentaries often introduce elaborate discussions of scientific subjects to illustrate the idea of God's wise choice of creation as a way of maximizing human benefit. For example, in his commentary on Q 2:22 mentioned above, al-Rāzī outlines the prerequisites for making the earth a bed *(firāsh)*. After asserting that one of these prerequisites is that the earth does not move, al-Rāzī proceeds to prove his contention (Rāzī, *Tafsīr,* ii, 101 f.). If the earth were to move, its motion would be either linear or circular. If it were linear, it would be falling. But since heavier objects move faster than slower ones, the earth would fall at a faster speed than the people living on its surface, with the result that they would be separated from the surface of the earth and hence could not use it as a bed. If, on the other hand, the earth's motion were circular, the benefit for humans from it would not be complete

since a person moving in a direction opposite to its motion would never reach his destination. Al-Rāzī then surveys the evidence adduced by various scholars to prove that the earth is stationary. What follows is a quasi-scientific discussion which draws on but does not privilege science as the authoritative reference on this subject. Some, al-Rāzī reports, argue that the earth is bottomless and thus has no bottom to move to, which is why it does not move. This view, al-Rāzī contends, is wrong because all created bodies are finite. The finitude of created bodies, it should be noted, is asserted on theological and not scientific grounds. Others concede the finitude of objects but argue that the earth is still because it is a semi-sphere whose flat bottom floats on the surface of water. Al-Rāzī rejects this argument on the grounds that even if this were true, both the earth and the water on which it floats could be moving. Moreover, al-Rāzī wonders, why would one side of the earth be flat and the other round? Again, while al-Rāzī could have invoked arguments for the sphericity of the earth which are more in line with the sciences of the time, his response is notably general and not grounded in science. A third argument which al-Rāzī rejects is that the orbs attract the different parts of the earth with equal forces from all directions; these equal forces would cancel each other at the center, which is where the earth is located. This theory is rejected because lighter objects, and those farther away from the center of the earth, would be attracted faster than those which are heavier or closer to the center and this would mean that the atoms that are thrown out, away from the center, would never fall back to the surface. Irrespective of how scientific these arguments appear to us, from our modern perspective of science, they do not reflect the prevalent scientific view of al-Rāzī's time. The closest he gets to engaging the then-prevalent understanding of science is when he reports, and rejects, the Aristotelian argument that the earth, by nature, seeks the center of the universe. This, al-Rāzī rightly notes, is the view of Aristotle and the majority of his followers among the natural philosophers. Al-Rāzī objects to this view on the grounds that the earth shares the trait of physicality with all other bodies in the universe and its acquisition of a specialized trait that makes it stationary is by necessity logically contingent. Thus, it is the free volition of the maker, and not any inherent nature, that accounts for the stillness of the earth. If anything, al-Rāzī adds, the nature of the earth is to sink in water and God reverses its nature so that it does not submerge in water in order to maximize the human benefit and to make it a place over which they can reside (Rāzī, *Tafsīr,* ii, 102-4).

This elaborate, quasi-scientific discourse which draws freely on the scientific knowledge of the time is evidently not aimed at upholding a particular scientific view of nature, nor does it strive to make positive contributions to the accepted body of scientific knowledge. Rather, its primary purpose is to argue the contingency of the created order and its ultimate dependence on God (see COSMOLOGY). Nowhere in this and other classical commentaries does one encounter the notion that a certain scientific fact or theory is predicted or even favored by the Qur'ān. Instead, these commentaries emphatically reject explanations of qur'ānic verses that are grounded in the notion of a natural order. The sign verses serve as evidence of the creator not in the particular knowledge that they convey about nature but in the ultimate conclusion in each and every verse that there is a choice in creation and thus a creator who makes this choice, that the "world is created with perfect management, compre-

hensive determination, utter wisdom, and infinite omnipotence" (ibid., 109).

Inevitably, any discussions of nature in a medieval Islamic context must invoke the question of causality and the natural order, widely debated among intellectuals of the period. The clearest articulation of the traditional Islamic view on this subject is Abū Ḥāmid al-Ghazālī's *Tahāfut al-falāsifa*, "The incoherence of the philosophers," but it was also addressed in *tafsīr*. As the above examples already suggest, the tendency in *tafsīr* literature is to attribute the natural phenomena to direct creation by God, rather than to intermediary causes which, once God creates and sets them in motion, become autonomous causes in their own right. For example, in the commentary on Q 2:22 which speaks of God who "sends forth rain from the skies that fruits may grow…," one commentator states outright that this reference to the growth of fruit due to the rain from the sky is figurative and that the real cause is not rain but the creator of all species (Abū Ḥayyān, *Nahr*, i, 40 f.). Al-Rāzī's comments on this verse are more exhaustive (Rāzī, *Tafsīr*, ii, 110): irrespective of whether the cause of the growth of fruit is rain from the sky or direct creation by God, the existence of a wise maker is a necessity. Thus, right from the beginning, he admits both views within the realm of possibility. He goes on to say, in conscious opposition to the late *mutakallimūn* (speculative theologians), that God's omnipotence would not be affected whether he creates the fruit from nothing or through the intermediacy of the affective and receptive powers in bodies. He also points out the possible wisdom inherent in creating intermediaries: if creation were direct, then the role of the maker would be all too obvious; whereas in the case of intermediaries, people would have to reflect on the intricacies of the process of creation to deduce the existence of a creator. The second process of reflection, according to al-Rāzī, is more difficult and merits more reward for the person who undertakes it.

A similar, perhaps even more pronounced recognition of causality is reflected in al-Nīsābūrī's (fl. ninth/fifteenth cent.) portrayal of nature in his *Gharā'ib al-Qur'ān*. Al-Nīsābūrī's work is the only *tafsīr* work which has been systematically examined for its portrayal of nature and for its relationship to science (Morrison, Portrayal of nature). In his commentaries, al-Nīsābūrī draws on astronomy and natural philosophy and provides descriptions of the natural phenomena which are not restricted to appearances but assume the reality of the phenomena in question. Al-Nīsābūrī thus recognized the existence of a chain of real secondary causes in nature (Morrison, Portrayal of nature, 3, 13 f.). As the study of al-Nīsābūrī illustrates, however, this acceptance was somewhat tempered by the notion that these real causes "operated under God's direct control, when God chose to use them" (ibid., 5-9). The concept employed by al-Nīsābūrī is that of *taskhīr* (subjugating), as opposed to *tafwīḍ* (entrusting or commissioning), of the power of the intermediary, which implies the immediate role of God in controlling these causes (ibid., 13). Moreover, regardless of his acceptance of intermediary causes, al-Nīsābūrī's discussion of the natural phenomena conforms to the general outlines of other classical commentaries in two main respects. First, he does not use the Qur'ān as a source of knowledge about nature. Second, his exposition of various scientific theories and explanations is seldom done for the purpose of favoring one over the others. Rather, this exposition is usually undertaken to suggest that there are multiple possible explanations, on which the Qur'ān is neutral.

Asserting the multiplicity of possible explanations of natural phenomena is hardly compatible with the positivism of the scientific outlook. Classical *tafsīr* works, however, are full of such assertions. Most of the commentaries on the sign verses contain multiple interpretations, of which only some are connected to science. While some of these "scientific" interpretations are rejected, many are allowed as acceptable possibilities. In many cases, information culled from scientific discourse is countered, rather than confirmed, by what are considered acceptable alternative interpretations. One example among many is the commentary on Q 15:16-7: "We have placed the signs of the zodiac *(burūj)* in the sky and adorned it for those who can see (see SEEING AND HEARING). And we have preserved it from every accursed devil." Al-Qurṭubī (*Jāmiʿ*, x, 9-10) contends that the word *burūj* means palaces and mansions as well as the signs of the zodiac. In the latter case, he adds, the reference to the science of the stars might be because the Arabs (q.v.) at the time of revelation held the zodiac in high esteem. As usual, al-Rāzī has more to say on this subject. The signs of the zodiac, he argues, serve as proofs of the existence of a willing maker because, as authorities on astrology agree, the natures of these signs vary. The celestial orb is thus composed of many components of varying essences. This in turn means that the celestial orb is a composite entity and, as such, is in need of a composer to put its different fragments together in accordance with God's choice and higher wisdom (Rāzī, *Tafsīr*, xix, 168, ad Q 15:16; see Fig. 11 for an example of the persistence of pre-Islamic depictions of the signs of the zodiac in Islamic times). Both al-Qurṭubī and al-Rāzī also maintain that the preservation of the skies occurs by unleashing meteors to drive away devils. What is characteristic of such commentaries is that the little explanation that is drawn from common scientific knowledge is embedded in a wealth of other material that contradicts the common scientific knowledge of the time. A similar example occurs in the commentary on Q 36:38: "While the sun moves to its resting place *(wa-l-shamsu tajrī li-mustaqarrin lahā)*. That is the dispensation of the mighty, all-knowing [God]." Contemporary translations usually render the first part of this verse as "While the sun keeps revolving in its orbit" and this translation is not totally foreign to the classical understanding of the verse. In fact, the focus of most of the commentaries is on the possible meanings of the word *mustaqarr*. These include a location beyond which the sun cannot go, such that once it reaches that location it starts heading back to where it came from; this is obviously the sense in which the word means orb (Qurṭubī, *Jāmiʿ*, xv, 278; Rāzī, *Tafsīr*, xxvi, 71, ad Q 36:38). Other meanings of equal possibility, however, are also listed, including the possibility that *mustaqarr* means a resting point under the throne where the sun prostrates (see BOWING AND PROSTRATION) before it is commanded to rise again and go back from where it came; or the day of judgment, after which the sun will no longer move; or a specific location, and so on (Qurṭubī, *Jāmiʿ*, xv, 278; Rāzī, *Tafsīr*, xxvi, 72). Al-Rāzī, however, is not impartial to all of these interpretations. His preferred understanding of the word *mustaqarr* is as a locality beyond which the sun can not go. This, he continues, corresponds to the highest as well as lowest points in the daily rotation of the sun. Significantly, however, al-Rāzī does not base his choice on simple observation but on the fact that this rotation of the sun generates the day and the night, both of which are essential for maximizing benefit to human beings. Once again, despite references to science, the guiding principle for the exegetical

exercise is a theological one, and not a scientific one which stands outside the text itself.

In a move that further clarifies his exegetical strategy, al-Rāzī notes in the commentary on the same verse that most commentators agree that the sky is a plane and has no edges or peaks (Rāzī, *Tafsīr,* xxvi, 75-6). In response, however, he maintains that there is nothing in the text of the Qur'ān which suggests with certainty that the sky has to be flat and not spherical. On the other hand, al-Rāzī adds, "sensory evidence indicates that the sky is actually spherical, so it must be accepted." After giving some of this sensory evidence to illustrate his point, he adds that such evidence is abundant and its proper place is in the books of astronomy. To al-Rāzī, therefore, the authority on this matter is the science of astronomy and not the Qur'ān, however understood. The only reason he gets into this extra-qur'ānic discussion is to undermine the claims of other commentators who wrongly extend the authority of the Qur'ān outside its proper realm.

Another aspect of al-Rāzī's exegetical strategy with regard to the sign verses is also revealed in his commentary on the same verse. This time, however, he takes issue with astronomers, and not the commentators. The astronomers maintain that celestial orbs are solid spherical bodies, but al-Rāzī contends that this is not necessarily the case. The basis for his objection is that it is not impossible, from the standpoint of astronomy, to have an orb which is a circular plate or even an imaginary circle which the planet traces in its motion. Furthermore, it is not beyond God's power to create any of these configurations (Rāzī, *Tafsīr,* xxvi, 76; see also Morrison, Portrayal of nature, 20-2, for the different views of al-Nīsābūrī). While al-Rāzī's interest in these quasi-scientific subjects exceeds those of other commentators, it still reflects a pervasive attitude found in classical commentaries. Scientific knowledge is freely invoked, and occasionally challenged in these commentaries. Yet the purpose of rejecting some scientific views is not to promote alternative ones or to assert the authority of the Qur'ān at the expense of the various fields of scientific knowledge. In the absence of a clear statement in the Qur'ān, one seeks answers to scientific questions in their respective fields. The contrary, however, is not true, since the qur'ānic text is not science. When there is an apparent conflict between a qur'ānic text and a scientific fact, the commentators do not present the qur'ānic text as the arbiter. Rather, they simply try to explore the possibility of alternative scientific explanations and thus suggest that scientific knowledge on such points of contention is not categorical. This, for example, is the case in al-Rāzī's discussion of the numbers of celestial orbs. After presenting a "summary and cursory overview" of the prevalent astronomical views on the subject, al-Rāzī maintains that it is not beyond God's power to create the heavens in this particular configuration. He adds, however, that there is no evidence that this is the only possible order of the heavens (Rāzī, *Tafsīr,* xxvi, 77).

It follows from the above that religious knowledge and scientific knowledge are each assigned to their own compartments. This would justify the pursuit of science and even the use of scientific discourse in commenting on the Qur'ān but it would also limit this use. A case in point is al-Rāzī's contention that some ignorant people may object to his unusual use of the science of astronomy in explaining the book of God. In response, he asserts that God has filled his book with proofs of his knowledge, power and wisdom which are inferred from the conditions of the heavens and the earth. If exploring these subjects

and reflecting on them were not permissible, God would not have so frequently urged humans to reflect on these signs. "The science of astronomy," he adds, "has no other meaning than reflection on how he ordered the [heavens] and created its [different parts]" (Rāzī, *Tafsīr,* xiv, 121). The purpose of this exercise is not to establish correspondence between scientific verities and the Qur'ān, but simply to reflect and hence to reinforce belief in the creator of the awe-inspiring universe. This kind of reflection in the service of belief does not produce knowledge about the natural order. Despite all of his talk about the permissibility of using astronomy in exegesis, al-Rāzī asserts that all creation is from God, that the planets have no influence on the sub-lunar world, and that the "assertion of natures, intellects, and souls in the manner advocated by philosophers and diviners is invalid" (ibid., 122-3; see SOUL). These statements are, however, directed primarily at fellow religious scholars and not at scientists. When discussing the religious import of the Qur'ān, commentators are urged to stay within the realm of the text and not to try to impose astronomical knowledge on it or, for that matter, feign a qur'ānic understanding of astronomy. The qur'ānic text to which al-Rāzī wants to restrict himself and his fellow commentators does not have a scientific import and does not translate into binding scientific facts. It underscores the wisdom and power behind creation but says nothing about the exact order of the created world. The complexity and wondrous nature of the world reinforce belief in God but this is not contingent on the adoption of any particular scientific view. In fact, scientific facts and theories in themselves do not provide evidence of the oneness of the creator. Rather, it is the very fact that other natural orders are possible that points to a willing maker who chooses one of these possibilities (e.g. Rāzī, *Tafsīr,* xxii, 161-2, ad Q 21:33). According to this logic, everything in nature, however explained, as well as all scientific discoveries and facts, irrespective of their certainty, serve as proofs for the existence of the maker. And this is the fundamental reason why the scientific and unscientific could appear side by side in the commentaries on the Qur'ān (for example, ibid., 163).

As the above overview suggests, al-Bīrūnī's view was in conformity with the prevalent view within the discursive culture of qur'ānic exegesis. This confluence of attitudes between scientists like al-Bīrūnī and qur'ānic exegetes further suggests a conceptual separation of science and religion in the mainstream of classical Islamic culture. The same, however, cannot be said of modern Islamic discourse on science and religion and on contemporary Islamic views of the relationship between the Qur'ān and science. Ironically, when Muslims were the main producers of science in the world, they did not advocate the idea of the marriage of science and religion, while the contemporary call for such a marriage is concurrent with the dwindling Muslim participation in the production of the universal culture of science. As the above cursory overview suggests, classical commentators on the Qur'ān never even hinted that the miracle of the Qur'ān lies in its prediction of scientific discoveries that were made centuries after the coming of the revelation. Nor did these commentators advocate an understanding of the Qur'ān as a source of scientific knowledge. Yet both claims abound in contemporary Islamic discourse.

Questions of science and religion are approached in manifold ways in modern Islamic discourse. But by far the most common treatments of this subject maintain

that many modern findings of science have been predicted, or at least alluded to, in the Qur'ān, and that these predictions constitute evidence of what is referred to as the scientific miracle *(iʿjāz)* of the Qur'ān (for example, Nawfal, *Qur'ān wa-l-ʿilm,* 24). To be sure, this view is articulated in more than one way. In one form, this understanding maintains that, in contrast to other scriptures, the Qur'ān does not make any statements which contradict the findings of modern science. The most famous proponent of this argument is the French physician Maurice Bucaille. Bucaille's book *The Bible, the Qur'ān and science. The holy scriptures examined in the light of modern knowledge,* in its many translations and editions, has been extremely popular and has inspired an almost cultic following among large numbers of Muslims all over the world. Bucaille argues that the Qur'ān is full of discussions of scientific subjects, including "[c]reation, astronomy, the explanation of certain matters concerning the earth,… the animal and vegetable kingdoms, [and] human reproduction." In contrast to the Bible, whose treatment of these subjects is full of "monumental errors," Bucaille asserts that he "could not find a single error in the Qur'ān." In fact, Bucaille asserts, the Qur'ān does "not contain a single statement which is assailable from a modern scientific point of view" — which led him to believe that no human author in the seventh century could have written "facts" which "today are shown to be in keeping with modern scientific knowledge" (Bucaille, *The Bible,* 120-1, viii). Bucaille also articulates in this book an idea which is current among modern commentators on this subject, namely that "modern scientific knowledge… allows us to understand certain verses of the Qur'ān which, until now, it has been impossible to interpret" (ibid., 251). The two main points of this argument, therefore, are the miraculous conformity between qur'ānic statements and science, and the possibility, in fact need, for a scientific interpretation of the Qur'ān in the light of the findings of modern science.

Once a correlation between the Qur'ān and science is asserted, it only takes a small extension of the same logic to embark on an arbitrary exercise of collecting extra-qur'ānic facts and discoveries, and mining the Qur'ān for statements that seem to correspond to them. That these new scientific discoveries have nothing to do with the Qur'ān never hinders some modern commentators who proudly present these theories as evidence of the qur'ānic miracle. The qur'ānic text is read with these so-called scientific facts in mind without any recognition that this reading is itself an interpretation of the text which is conditioned by the assumptions of the interpreters and by the restricted focus of their textual examination. In extreme cases, this approach borders on the cultic, as in the widely circulated genre known as the *iʿjāz raqamī* or *ʿadadī* (numerical *iʿjāz*) of the Qur'ān. This form of numerology (q.v.) assigns an order to the occurrence of certain terms in the Qur'ān, which is seen as yet another numerical miracle. Thus, for example, one author maintains that the term "sea" is mentioned thirty-two times in the Qur'ān, and the term "land" thirteen times; the ratio thirteen to thirty-two, the author asserts, is equal to the actual ratio of land to water on the surface of the earth (Suwaydān, *Iʿjāz al-Qur'ān,* passim; and Abū al-Suʿūd, *Iʿjāzāt ḥadītha,* passim). This is by no means an isolated view, as is reflected in the scores of books published on this subject, as well as the hundreds of electronic postings on the web. Another extreme to which this argument is carried, again not without wide popularity, is to

present the Qur'ān as a source of knowledge, a book of science of sorts and in some cases even as the comprehensive source of all forms of knowledge, including science.

The verses most frequently cited as instances of the qur'ānic anticipation of modern science include references in the Qur'ān to mountains as stabilizers for the earth which hold its outer surface firmly to prevent it from shaking (e.g. Q 21:31). This "scientific fact" of the Qur'ān, according to the current head of the Committee on the Scientific Miracles of the Qur'ān and Sunna, and author of a whole book on this subject, was only discovered in the middle of the nineteenth century and was not fully understood until the second half of the twentieth (Naggar, *Sources,* passim). The qur'ānic references to the stages of development of the fetus are often quoted as another example in which the Qur'ān is said to have miraculously predicted the discoveries of the modern science of embryology (see BIOLOGY AS THE CREATION AND STAGES OF LIFE). In 1983, Keith Moore, the author of a textbook on embryology, published a third edition of his book under the auspices of the Committee on the Scientific Miracles of the Qur'ān and Sunna, with "Islamic additions" by Abdul Majeed Azzindani, the first head of that Committee. The title of this new edition reads: *The developing human: Clinically oriented embryology. With Islamic additions: Correlation studies with Qur'ān and Ḥadīth, by Abdul Majeed Azzindani*. More recently, the most ambitious of all claims of scientific miracles is that the references in the Qur'ān to the heavens and the earth being originally an integrated mass before God split them (e.g. Q 21:30), are nothing short of a condensed version of the big bang theory (for example, Sa'dī, *Athār,* 41; also Nawfal, *Qur'ān wa-l-'ilm,* 24).

The origins of the school of scientific interpretation of the Qur'ān can be traced back to the nineteenth century. After the sweeping European takeover of most Muslim lands, Muslim intellectuals often attributed European superiority to scientific advancement. Science was, of course, also part of the ideology of the conquering Europeans, who often portrayed themselves as the superior carriers of the culture of reason and science. Faced with the post-Enlightenment ideology of science as well as the effects of European military technologies, Muslim intellectuals generated an apologetic discourse which either internalized European claims about science or simply claimed that the European values of science were not foreign to Muslims. The famous response of the nineteenth century Muslim scholar and activist Jamāl al-Dīn al-Afghānī (d. 1897) to the French Orientalist Ernest Renan (d. 1892) addresses the very question of the compatibility of science and Islam (Keddie, *Islamic response,* 130-87). Other Muslims focused on the promotion of an understanding of Islam which is in conformity with science. The notable example of this trend is Sayyid Aḥmad Khān (d. 1898), who juxtaposed the Qur'ān, the word of God (q.v.), and nature, the work of God, as two manifestations of the same reality that cannot be in conflict. With his positivistic understanding of science, however, Khan maintained that in cases of apparent contradiction between the word and the work [of God], the latter takes precedence while the former should be interpreted metaphorically (Khan, *Tafsīr,* passim; see METAPHOR).

In addition to Afghānī and Khān, both of whose assertions of harmony between the Qur'ān and science served very different political agendas, most discussions by Muslims on this subject were for the purpose of establishing the adequacy of their religion in the age of science and reason

and to encourage Muslims to pursue the sciences. Many of the leading Muslim intellectuals of this period wrote on this or related themes, including Muḥammad Iqbal (d. 1938) of India and Muḥammad ʿAbduh (d. 1905) of Egypt. The writings of these intellectuals did not, however, elaborate on the details of the relationship between the Qurʾān and science and were largely restricted to the realm of generalities. Iqbal, for example, passionately argued that the rise of Islam marked the birth of inductive reasoning and experimental methods, but he did not present the Qurʾān as a repository of scientific knowledge nor did he suggest that one can arrive at scientific facts through the Qurʾān (cf. Iqbal, *Reconstruction,* 114-31). Still, a more elaborate discourse on this subject was produced as early as the late nineteenth century by Muslims who wanted to claim a role for their scripture and belief system in the making of the modern culture of science. One major proponent of this approach was Said Nursi (1877-1960), whose interpretations were rather simplistic but had the notable effect of influencing a large group of Turkish students and followers. Nursi's scientific interpretations included the assertion that the qurʾānic story of the prophet Solomon (q.v.; Sulaymān; i.e. Q 34:12) predicts the invention of aviation (see FLYING), and that the light (q.v.) verse (Q 24:35) is an allusion to the future invention of electricity (Kalin, Three views, 52-5; also Nursi, *Sözler,* passim). Unlike earlier apologetics, Nursi's efforts had the added objective of establishing the truthfulness of the Qurʾān on the basis of the findings of modern science. Another work that marks a turning point in the same direction is Ṭanṭāwī Jawharī's twenty-six volume *tafsīr* entitled *al-J̌awāhir fī tafsīr al-Qurʾān al-karīm*. Jawharī made a point which is frequently repeated in the contemporary discourse on the Qurʾān and science, namely that the Qurʾān contains 750 verses pertaining directly and clearly to the physical universe, while it has no more than 150 verses on legal matters (see LAW AND THE QUR'ĀN). Jawharī thus called on Muslims to reverse the order of interest and to give priority to the scientific verses, especially since they were now living in the age of science (Jawharī, *Tafsīr,* ii, 483-4).

The early attempts to interpret the Qurʾān and verify it in light of the discoveries of modern science received added impetus in the last decades of the twentieth century, when efforts were made to articulate the theoretical foundations of a new mode of *tafsīr* which aims not just at providing a scientific interpretation of the Qurʾān but also at illustrating its scientific miracles. The main proponent of this theorizing effort is Abdul Majeed Azzindani, the first head of the Committee on the Scientific Miracles of the Qurʾān and Sunna, as noted above. While many writers wrote on specific correspondences between the Qurʾān and aspects of modern science, Azzindani wrote a separate work, *al-Muʿjiza al-ʿilmiyya fī l-Qurʾān wa-l-sunna,* in which he identities the rules of the new science of the Qurʾān, the science of *iʿjāz al-Qurʾān*. This new science, Azzindani maintains, is the fruit of the "kind of *tafsīr* which is known to Muslim scholars who are cognizant of the secrets of creation" and is different from the scientific interpretation of the Qurʾān (Azzindani, *Muʿjiza,* 23). The latter occurs when a commentator makes use of the latest developments in "cosmic knowledge" *(al-ḥaqīqa al-kawniyya)* in order to interpret a verse of the Qurʾān. Scientific *iʿjāz,* however, is the "very cosmic truth to which the meaning of the verse points." At the time when the manifestation of the truth of the verse is witnessed in the universe, the interpretation of the verse settles at that truth.

Additional aspects of the universe may become known with time, leading in turn to further confirmation of the "depth and comprehensiveness of the scientific *iʿjāz*" just as the cosmic order *(al-sunna al-kawniyya)* itself becomes clearer (Azzindani, *Muʿjiza,* 23-4). Therefore, there are several steps in the unfolding of this process of *iʿjāz*. First, a universal cosmic truth, already expressed in the Qurʾān, though not necessarily understood, is suddenly revealed by means of the experimental sciences. After much waiting, Azzindani asserts, humanity has now been able to develop the technical skills that would finally "reveal the secrets of the universe, only to realize that what researchers are discovering, after much research and study using the most complex modern instruments, has been established in a verse or a ḥadīth fourteen centuries ago" (ibid., 27; also see Saʿdī, *Athār,* 11). This discovery or revelation then puts an end to the multiplicity of interpretations when the meaning of the verse finally reaches its resting place *(mustaqarr);* more discoveries in the future can only corroborate this fixed interpretation and thus deepen the sense of *iʿjāz* (Azzindani, *Muʿjiza,* 24-5). Azzindani also maintains that, if there is a contradiction between the certain, unequivocal implication of a qurʾānic text *(dalāla qaṭʿiyya lil-naṣṣ)* and a scientific theory, then this theory should be rejected; whereas if there is conformity between the two, then the text serves as proof of this theory. If, on the other hand, the text is ambiguous (q.v.), and the scientific theory is certain, then the text should be interpreted in accordance with the theory (ibid., 26). Azzindani says nothing about the case when both text and theory are certain and unequivocal. What is clear, however, is that the text serves as the final authority in science and not just in religion, ethics or metaphysics (see ETHICS AND THE QURʾĀN). It is important to note here a distinction between two levels of authority that are attributed to the qurʾānic text: according to Azzindani, the text attests not just to the validity of a scientific discovery but also to its invalidity. The former function is limited and serves to highlight the miraculous nature of the Qurʾān without positing it as a source of scientific knowledge, while in the latter case the Qurʾān stands above science in its own realm. In fact, Azzindani adds, Muslim scientists can find leads in the Qurʾān that would facilitate their future scientific research (ibid., 35), presumably by identifying research projects or finding answers to pending scientific questions.

The way Azzindani deals with instances of conflict between qurʾānic statements and scientific theories marks the main difference between his modern school of interpretation and the classical ones. In such cases of conflict, Azzindani insists on the ultimate authority of the Qurʾān in determining the validity or invalidity of scientific theories. In contrast, classical commentators would typically note the possibility of multiple scientific explanations and theories without deploying the qurʾānic authority in favor of any of these theories, as was noted above. The effect of this recurrent strategy is to guard the autonomy of qurʾānic authority in the realm of religious doctrine without infringing on the autonomy of science in its own realm. In classical commentaries, the Qurʾān and science were separate.

Modern discourse on Islam and science is not restricted to the above attempt to establish instances of scientific miracles in the Qurʾān. Two additional approaches have been influential recently in academic circles. The first focuses on the epistemological critique of modern science and situates scientific knowledge in its historical and cultural contexts (Sardar, *Explorations;* id., *Islamic futures*). In opposition to the

claims of universal truth by modern science, this approach underscores the cultural specificity of all forms of knowledge. This critique of science, in its manifold expressions, has been very influential among philosophers of science and, the desire to propose an Islamic epistemology notwithstanding, there is nothing specifically Islamic about it. Moreover, the content of this proposed Islamic epistemology remains undefined (Kalin, Three views, 57-62). The second approach questions the fundamentals of the metaphysical framework within which modern science operates and attempts to articulate an alternative Islamic framework. This approach, best represented by the writings of S.H. Nasr, posits a dichotomy between ancient and modern sciences and contends that the ancient sciences shared conceptions of the sacredness and unity of knowledge (Kalin, Three views, 63 f.; see PROFANE AND SACRED). Yet if the distinctive mark of this ancient metaphysical framework is in the sacredness and unity of knowledge, then it is not clear how Islamic science would be different from, for example, pagan Hellenistic science. Furthermore, as in the epistemological approach, the content of the Islamic metaphysical framework remains unclear. To be sure, both approaches are serious intellectual exercises: Even when they strive to cite verses of the Qurʾān, however, they remain largely extra-qurʾānic. Neither one of these approaches systematically engages the qurʾānic text as a whole or the cultural legacy which endowed the text with its specific historical meanings.

In all its varieties, the newly constructed Islamic discourse on science is not rooted in a historical understanding of the relationship between the Qurʾān and science. On one level, this is understandable. However defined, modern science has and continues to engender multiple and intense responses among Muslims and non-Muslims alike. The challenges posed by the modern culture of science had no parallel in pre-modern societies. It is thus understandable that Islamic attitudes towards modern science would have to confront challenges that were not addressed in the classical period of Islam. But the desire to articulate contemporary critical concerns about science in Islamic language cannot conceal the radical departure of these modern articulations from the classical ones. In contrast to the contemporary readiness to strain and twist and, in effect, manipulate, the qurʾānic verses to endow them with a scientific meaning, classical commentators refused to subordinate the Qurʾān to an ever-changing science. In insisting on the possibility of multiple scientific explanations of the natural phenomena, classical Qurʾān commentators were able to guard the autonomy of qurʾānic, religious knowledge not through the co-option of science but by assigning it to a separate and autonomous realm of its own.

Scripture and the Qur'ān

Addressing the issue of "scripture" in relation to the Qur'ān is at once a straightforward and a complicated venture. It is straightforward because in many respects the Qur'ān itself puts forward a generic concept of scripture that is consistent with that widely used today in the general study of religion. It is complicated because it raises numerous questions of historical, sociological and theological import for any understanding of either Islamic scripturalism or the relation of Islamic scripturalism to that of other religious traditions (see THEOLOGY AND THE QUR'ĀN). In short, the meaning of "scripture" generally and its use specifically in the Islamic context are important but not as straightforward as might be assumed.

The generic concept of scripture

First, the history and phenomenology of scripture as both a generic concept and a global reality has only begun to be written and only in recent decades has it become the object of serious scholarly investigation and reflection (Cf. Smith, *What is scripture;* Graham, Scripture; id., *Beyond;* Levering, *Rethinking scripture;* Leipoldt and Morenz, *Heilige Schriften*). In particular, we are still in the process of understanding how "scripture" as a conceptual category has developed and expanded in the past few centuries from its specific (Christian or Jewish) sense, referring to one's own most sacred and authoritative text(s), to a more generic sense, referring to any text(s) most sacred to, and authoritative for, a given religious community.

Second, "scripture" as a particularistic concept seems to have first developed most fully in Jewish and Christian contexts and it was in later phases of these and, most recently, in secular contexts primarily within the Western world (especially those of the modern academy) that generic use of the term was subsequently developed to refer commonly not only to particular Jewish or Christian biblical texts but also to

the sacred texts of other religious communities. (For a discussion of the historical emergence of scripture as an important element in religious life, see Smith, Scripture as form.) The earliest such documented usage found by the present author is that of Peter the Venerable (d. 1156 C.E.) in his *Summa totius haeresis saracenorum* (cited in Kritzeck, *Peter the Venerable,* 206), where the *nefaria scriptura* of the Qur'ān is contrasted to the *sacra scriptura* of the Bible. This is not to say that in other religious traditions there are no analogous concepts that might be adduced (most obviously that of *kitāb* in the Islamic case; see below); rather it is to note that the inclusion of the Qur'ān (or Veda or Lotus Sutra) under the rubric of the Latinate word "scripture" is not terribly old historically and was relatively infrequent until the past century or so (at least since the 1879-1894 publication of Max Müller's edited series, *Sacred books of the east*). Such generic usage is now much more common but scripture as a phenomenon occurring in diverse religious contexts and traditions is still something that has only begun to be studied comparatively and globally in any adequate way.

Third, "scripture" as a concept must be understood to be relational, not absolute, in nature. It needs still to be freed to a greater degree from its etymological background and not taken to refer simply to documentary texts or "books" (see ORALITY AND WRITING IN ARABIA). What we mean by "scripture" in the present discussion is very different from and very much more than what we mean by "text." "Scripture" is not a literary genre but a religio-historical one. No text is authoritative or sacred apart from its functional role in a religious community and that community's historical tradition of faith. The sacred character of a book is not an *a priori* attribute but one that develops and achieves widespread recognition in the lives of faithful persons who perceive and treat the text as holy or sacred (see e.g. RITUAL AND THE QUR'ĀN). A text only becomes "scripture" when a group of persons value it as sacred, powerful and meaningful, possessed of an exalted authority, and in some fashion transcendent of, and hence distinct from, other speech and writing. In other words, the "scriptural" characteristics of a text belong not to the text itself but to its role and standing in a religious community. A given text may be "scripture" for one person or group and merely another "book" or ordinary "text" for others. It is possible to study the Qur'ān either as text or as scripture but to study the Qur'ān as text is generally very different from studying it as "scripture," just as to read and respond to it only as another book is very different from reading and responding to it as the verbatim word of God (q.v.).

The qur'ānic concept of scripture

Such a generic and relational understanding of "scripture" as that now common in the study of religion is largely compatible with the Qur'ān's own frequent use of *kitāb*, "writing, book, what is laid down or ordained" (see BOOK) and its plural, *kutub,* to refer to scriptural revelation(s) given by God to previous prophets or messengers (see PROPHETS AND PROPHETHOOD; MESSENGER), especially Noah (q.v.), Abraham (q.v.), and their descendants (see CHILDREN OF ISRAEL), before the bestowing of the Qur'ān upon Muḥammad as his *kitāb* (on *kitāb/kutub* generally, see Madigan, *Qur'ān's self-image,* passim). In the Qur'ān, these earlier revelations are clearly considered to belong to the same general religio-historical category ("scripture") as the definitive revelations to Muḥammad (see REVELATION AND INSPIRATION). Jews (see JEWS AND JUDAISM) and Christians (see CHRISTIANS AND CHRISTIANITY; and a

group identified as the *ṣābi'ūn;* see SABIANS) in particular are referred to as *ahl al-kitāb,* "people of scripture" (see PEOPLE OF THE BOOK). The Qur'ān conceives of itself as a revelation intended to confirm the truths and set right the distortions in the earlier scriptures. Here we have already in the seventh century C.E. the use of a generic concept of scripture that is arguably unique among major scriptures of the world in its explicit recognition of the sacred texts of other communities as belonging to the same category as the qur'ānic revelations themselves — the category of *kitāb/kutub* (see RELIGIOUS PLURALISM AND THE QUR'ĀN; although early Christian Arabic texts name the Qur'ān and Bible as "books of God," *kutub Allāh,* the exact signification of such terminology has yet to be determined; cf. e.g. Sinai Arabic MS 434, f. 181 v., where, in the conclusion to his responses to a Muslim interlocutor that are replete with biblical and qur'ānic allusions, a Melkite [monk?] states: "The answers are finished — abbreviated — since the testimonies of the books of God are abundant"; see similar allusion to the "books of God" in Theodore Abū Qurra's *Debate with Muslim theologians in the majlis of the caliph al-Ma'mūn,* esp. pp. 95, 98, 107-8, 110-1).

It is, however, important to note that *kitāb* can have other senses in qur'ānic usage, notably that of a personal book of destiny in which each person's deeds, good and evil (see GOOD DEEDS; EVIL DEEDS), are written down and will be brought as testimony on the day of judgment (e.g. Q 17:71; 39:69; see LAST JUDGMENT) or that of a heavenly book (q.v.) with God in which everything in the world is written before time (e.g. Q 6:59; 11:6; 35:11). The qur'ānic concept of scripture as a general phenomenon appears to be based on the latter meaning of *kitāb* — especially when it is used to refer to an original, heavenly scripture with God from which all of the earthly scriptures, or *kutub,* have been drawn (see PRESERVED TABLET). One example of this sense is found in Q 10:37: "This recitation *(qur'ān)* is not such as could be invented save by God. Rather it is a confirmation of what came before it and an exposition of the scripture *(al-kitāb)* about which there is no doubt, from the lord of all beings." Sometimes the term *umm al-kitāb,* literally "the mother of scripture" in the sense of the essence, source, or prototype of scripture, "the original scripture," also occurs (Q 13:39; 43:4; see NAMES OF THE QUR'ĀN). This further reinforces the notion of a divine *kitāb* that resides with God.

It is, however, the generic use of *kitāb/kutub* to refer to earlier scriptures and to the Qur'ān itself that is special, or even unique, about the qur'ānic notion of scripture. Typically, the other sacred texts of the world's religions that we call "scriptures" were not written with any similar consciousness of belonging themselves to a category of texts called "scripture." Most if not all great scriptural texts other than the Qur'ān are unconscious of being even potentially "scripture," for "scripture" or any analogous concept is usually a category developed ex post facto and then applied to a text or texts that a community has experienced as sacred, and consequently given special treatment. Thus the Vedic texts of India do not speak about themselves as *śruti,* nor the Jewish or Christian Bible about itself as "scripture" (although the Christian New Testament does treat the earlier Hebrew scriptures as scripturally authoritative); it is rather later generations and their texts that recognize them as "scripture." The texts of the religious prophet Mani are possibly one pre-qur'ānic exception to this (Smith, Scripture as form, 35-6) and of course some later Buddhist sutras such as the Lotus Sutra

present themselves as the word of the Buddha *(buddhavacana);* but there seems to be no major scriptural text before the Qur'ān that uses a generic concept of "scripture" as a category to which it also claims to belong.

The Qur'ān, for its part, is self-consciously explicit about its own function as scripture, *kitāb,* and about being the latest, culminating revelation in a long line of scriptural revelations from the lord of all beings to previous prophets and their peoples. This notion of a succession of prophets *(anbiyā')* or messengers *(rusul)* to each of whom God gave revelations is gradually fleshed out in the sequence of qur'ānic revelations and is the leitmotiv of the qur'ānic *Heilsgeschichte.* In qur'ānic perspective, the fundamental pattern of history is God's sending a messenger or prophet with revelatory guidance (see ASTRAY; ERROR) to nation after nation. The revealed scriptures that embody this guidance include the "pages" revealed to Abraham (see SCROLLS), the Psalms (q.v.) given to David (q.v.), the Torah (q.v.) vouchsafed Moses (q.v.), and the Gospel (q.v.) sent to Jesus (q.v.), as well as the Qur'ān revealed to Muḥammad. What followed each of these prophetic or apostolic missions was the creation of a new community of those who heard and responded in obedience (q.v.) to God's message (see COMMUNITY AND SOCIETY IN THE QUR'ĀN). The Qur'ān, however, seems to hold that while the earlier, successively revealed *kutub* represent scriptures derived from these earlier divine revelations, the communities who preserved them did not succeed in doing so scrupulously enough. Each community that had received revelation previously let its scriptural text be partially lost or changed and thus debased over time (see CORRUPTION; FORGERY; REVISION AND ALTERATION; POLEMIC AND POLEMICAL LANGUAGE) — hence the need for the qur'ānic revelations in "clear Arabic" to rectify such lapses (see ARABIC LANGUAGE; LANGUAGE AND STYLE OF THE QUR'ĀN). The Qur'ān portrays itself as a renewed and presumably final revelation of God's word in the scriptural series. It was revealed through the "seal of the prophets," Muḥammad (see NAMES OF THE PROPHET), and is intended to reiterate what has been lost or corrupted in the previous revelations to other prophets or messengers: "This is a blessed scripture *(kitāb)* that we sent down to you, confirming that which came before it…" (Q 6:92).

Thus it is arguable that the Qur'ān is the first sacred text of a major religious tradition to offer a developed understanding of itself as part of a larger scriptural history. With the Qur'ān, scripture as a category provides a clear context in which the Muslim scripture could be revered as the final revelation but also understood to be the recapitulation of all previous revelations from God (and presumably from his heavenly *kitāb*).

The Qur'ān as a discourse of signs

The Qur'ān's own presentation of itself is foundational in preparing the way for its role as "the scripture" *(al-kitāb)* for Muslims ever afterward. It presents itself, and by extension all earlier divine revelations, as, first, a reminder of the manifold signs (q.v.) of God in nature and in history and, second, a compilation of divine words that are themselves signs of God given by him in his revelations. The key word for "sign" here is *āya* (pl. *āyāt*), which in the qur'ānic text can mean (as in the first case above) simply a "sign," or, as in the second, a qur'ānic pericope or "verse" itself (see VERSES).

Both senses of the word are never far away when *āya* or *āyāt* occurs in the Qur'ān, especially in the later revelations when its manifold connotations have been

fully developed (see CHRONOLOGY AND THE QUR'ĀN). We need only consider a qur'ānic *āya* such as Q 38:29, which, addressing Muḥammad, speaks of the Qur'ān as "a scripture *(kitāb)* that we sent down to you, a blessed one, in order that they might ponder its *āyāt* and in order that those of intelligence might be reminded" (see INTELLECT; KNOWLEDGE AND LEARNING; REFLECTION AND DELIBERATION). Here one sees that the ambiguities of the word *āyāt* allow for reading it as the signs of God in nature and history or as the signs of God as the verses of scripture. In general, the qur'ānic discourse is one in which scriptural words and divine signs in creation can be referred to with the same term since both are ultimately the clearest "signs" of the one God in mundane reality (see NATURE AS SIGNS; HISTORY AND THE QUR'ĀN).

The Qur'ān conceives itself (and, by extension, every previous scripture) as first and foremost a vehicle for reminding human beings of God's miraculous works in nature and history (see MIRACLES; MARVELS), both of which contain the physical and temporal *āyāt* that alone should convince anyone of good sense that there is one God alone who is worthy of worship (q.v.) and obedience. Second, it views itself as a full-blown verbal miracle of God's direct revelation, his "signs" or *āyāt* as words of revealed wisdom (q.v.) and guidance: "A revelation from the all-merciful compassionate [one], a scripture the *āyāt* of which have been made distinct as an Arabic recitation *(qur'ānan ʿarabiyyan)* for a people of knowledge" (Q 41:2-3). Here we see the purpose of the constant qur'ānic emphasis upon the clarity, explanatory power and unambiguous force of its message: namely, to stress that even after providing such clear signs in his handiwork and activity in the world, God has also spoken his message in clear human language, so that no doubt can linger. Thus the pointed question in Q 3:101: "How can you reject [faith] when God's *āyāt* are recited to you, and his messenger is among you?" (see FAITH; GRATITUDE AND INGRATITUDE).

What the "sign" language of the Qur'ān offers is the unfolding of a sophisticated and consistent understanding of God's revelatory activity in the created world. This is an understanding that dovetails logically and functionally with the piecemeal nature of the Qur'ān's own revelations, its episodic and referential style, its didacticism (see RHETORIC AND THE QUR'ĀN; FORM AND STRUCTURE OF THE QUR'ĀN), and its fundamentally oral character (see ORALITY) as a "reciting" of *āyāt*. It is based upon the Qur'ān's generic understanding of divine revelation and scripture as key elements of a *Heilsgeschichte* that culminates in Muḥammad's prophetic mission and the qur'ānic revelations of that mission themselves. When Q 6:109 commands Muḥammad, "Say, *āyāt* belong to God" *(innamā l-āyātu ʿinda llāhi)*, the implication is that all the miraculous signs in nature and history and all the miraculous signs of revelation could come solely from one omnipotent lord (q.v.), the creator and sustainer of the universe (see POWER AND IMPOTENCE; CREATION; SUSTENANCE). The God who speaks in the Qur'ān (see SPEECH) is the one who throughout history has never left his human creatures without clear signs and tokens, whether in the natural world, in human affairs, or, most explicitly, in his revealed word. Scripture is a discourse of God's signs, the set of divine *āyāt* that recount and call attention to God's other miraculous works; it is the verbal recital of his signs, tokens, or miracles in the created world and its history, a recital that is itself a kind of miracle.

The Qur'ān as scripture

The Qur'ān has functioned as scripture for Muslims from the inception of Islam as a communal reality. If we take the traditional Muslim reports of Islamic origins and the codification of the qur'ānic text as a written codex at anything like face value, the successive revelations to Muḥammad were apparently promulgated and accepted as divinely revealed words from the early days of his prophetic mission, probably well before the time they were codified as a composite text of the many individual revelations (see COLLECTION OF THE QUR'ĀN; CODICES OF THE QUR'ĀN). Even from a more skeptical viewpoint regarding the traditional accounts of the lifetime of Muḥammad (see SĪRA AND THE QUR'ĀN; ḤADĪTH AND THE QUR'ĀN), the origin of the Qur'ān, and the development of the early Muslim *umma,* the Qur'ān must have functioned as scripture from almost the same time that the Muslim community achieved some kind of distinct identity over against Jewish, Christian and other religious groups (see POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QUR'ĀN). What we understand under the rubric of "Qur'ān as scripture" are its multifarious roles in Muslim life across the centuries and around the world, from the earliest days of Islam down to the present moment. It is the cumulative history of these manifold roles of the Qur'ān in Muslim communities and individual Muslim lives, not the history of the text, its genesis, or its codification, that we study when we consider the Qur'ān as scripture.

These multiple roles of the qur'ānic scripture involve perduring notions among Muslims about (1) the status of the Qur'ān as the word of God, (2) the concomitant question of whether the Qur'ān is created or uncreated (see CREATEDNESS OF THE QUR'ĀN), (3) the felt necessity that the Qur'ān be perfect and free from all possibility of human corruption or tampering (see INIMITABILITY), (4) the crucial character of the Qur'ān as a word revealed in Arabic rather than other languages (see FOREIGN VOCABULARY), (5) the exaltation of the word of God by elaborately artistic calligraphic and oral recitative embellishment (see CALLIGRAPHY; ORNAMENTATION AND ILLUMINATION; MANUSCRIPTS OF THE QUR'ĀN; ARABIC SCRIPT; RECITATION OF THE QUR'ĀN), and, finally, (6) the possibilities for Muslims' employment of the authority of their scripture for both good and evil purposes. These six issues demand individual consideration in what follows, and the central and pervasive presence of the Qur'ān in Islam to which they testify demands that we conclude by reemphasizing (7) the permeating force of the Qur'ān as scripture in the lives of Muslims across the centuries and around the world (see EVERYDAY LIFE, THE QUR'ĀN IN).

The Qur'ān as the word of God

The theological centrality of the Qur'ān as Muslim scripture is hard to exaggerate. While the Torah's massive importance in Jewish life comes closest to this kind of overwhelming centrality, the eventual Muslim emphasis upon the Qur'ān as God's speech *ipsissima vox* — perfect and complete — is unique. For Muslims, God's speech is found verbatim in the Qur'ān and the concomitant of this is the overwhelming emphasis over the centuries since Muḥammad on the perfection of the qur'ānic text, the inerrancy of its transmission, and the direct experience of the divine through the recitation, memorization and reverent study of its text (see TRADITIONAL DISCIPLINES OF QUR'ĀNIC STUDY). The records of the words and actions of the Prophet and his Companions (see COMPANIONS OF THE PROPHET), known individually and collectively as the ḥadīth, are also often accorded the status

of sacred texts in Islam but always as a secondary order of divinely-inspired text and always under the rubric of texts to be transmitted "according to the sense" *(bi-l-maʿnā),* not "verbatim" *(bi-l-lafẓ)* like the Qurʾān.

The issue of scriptural authority was already being debated in the first few Islamic centuries in the question of the status of the ḥadīth as a source of divinely sanctioned authority alongside the Qurʾān. A recent study of this issue shows that, for example, in works ranging from the second/eighth to the fifth/eleventh century, by al-Shāfiʿī (d. 204/820), Ibn Qutayba (d. 276/890) and al-Khaṭīb al-Baghdādī (d. 463/1071), we find evidence of ongoing Sunnī debate as to whether or not the Qurʾān alone or the Qurʾān supplemented by the prophetic ḥadīth should be considered the final authority/ies for Muslim life (see AUTHORITY; LAW AND THE QUR'ĀN). While the latter point of view won out, this debate has never completely died and is experiencing a new life today, not least on the internet (Musa, Study of attitudes; see also COMPUTERS AND THE QUR'ĀN; MEDIA AND THE QUR'ĀN). Even, however, in the prevailing Sunnī view that the ḥadīth represent a second source of revealed guidance for Muslims alongside the qurʾānic word of God, the preeminence of the latter has never been seriously challenged. In Muslim view, the Qurʾān stands alone in its perfection and precision of expression as the literal word of God directly revealed in recitative units during his messenger's lifetime (see OCCASIONS OF REVELATION).

This unique scriptural status of the Qurʾān is the expression of the strong Muslim consciousness of being in the presence of God's living voice and active, ever-present guidance whenever the words of "the reciting" are being rehearsed or read (see RECITERS OF THE QUR'ĀN; TEACHING AND PREACHING THE QUR'ĀN). In a real sense, the primary locus of the divine-human encounter in the Muslim view is God's revealed word, the Qurʾān. This is the reason that numerous modern scholars trying to capture the force of this fact have suggested that for Muslims the true analog of the Christ as the instantiation of the "word of God" for Christians is the Qurʾān; the Bible is not commensurate in Christian theological perspective with the Qurʾān in the Muslim theological universe. It is in their scripture that Muslims most directly experience God's presence and mercy (q.v.), however much the person and life of their prophet Muḥammad also testifies to both. Thus it is arguable that it is recitation of God's word that corresponds in Muslim practice to participation in the Eucharist in Christian practice (Söderblom, *Einführung,* 117; Graham, *Beyond,* 217 n. 3; Kermani, *Gott,* 465 n. 195). C. Geertz (Art as a cultural system, 1490) catches something of this in his strong claim that in chanting the Qurʾān, a Muslim ideally "chants not words about God, but of him, and indeed as those words are his essence, chants God himself."

The uncreatedness/eternality of the Qurʾān

This kind of ascription of divine ontological status to the qurʾānic scripture as God's verbatim speech was from at least the early second/eighth century an issue of considerable moment in Muslim theological discussions. Those philosophical theologians *(mutakallimūn)* who wanted to safeguard the oneness of God (notably the Muʿtazila) argued that the Qurʾān could not be uncreated *(ghayr makhlūq)* without being a second reality co-eternal with God and therefore a dualistic threat to God's oneness (see POLYTHEISM AND ATHEISM), omnipotence (see POWER AND IMPOTENCE), and unique transcendence as well as an

anthropomorphic ascription of the human attribute of speaking to God (see ANTHROPOMORPHISM; GOD AND HIS ATTRIBUTES; ETERNITY; MUʿTAZILĪS). Their notion of the creation of the Qurʾān was, however, severely contested by those like Aḥmad b. Ḥanbal (fl. third/ninth cent.) and others of the ḥadīth specialists, or *muḥaddithūn,* who insisted on both the speaking of God as a proper eternal attribute of the divine and therefore on the uncreatedness of the Qurʾān as a safeguard of the eternality of God's speech as a divine attribute. Ultimately the traditionalist and ʿAsharī insistence on the uncreatedness of the Qurʾān won the day among most Muslims, thus underscoring the eternality of the Qurʾān as God's word, but the very existence of the debate itself gives some indication of the importance ascribed to the Qurʾān's status as God's word in the context of Islamic thought — an importance not unlike that ascribed to the doctrine of the virgin birth or the trinity (q.v.) in Christianity (and productive of similarly bitter controversy).

The perfection of the Qurʾān

The axiomatic nature of the Qurʾān's sublimity as the very speech of God is perhaps most vividly seen in the post-qurʾānic, apparently third/ninth-century, development of the notion of the *iʿjāz,* "(miraculous) inimitability" of the Qurʾān. This was evidently an expression of the felt need to substantiate the divine origin and perfection of the Qurʾān in its uniquely powerful style and content by asserting that no mere human author could write anything remotely as sublime as the miraculous qurʾānic word of God. This concept led to the designation of the Qurʾān by the *mutakallimūn,* among others, as a divine *muʿjiza,* or "miracle," a divinely given wonder, the like of which could not be reproduced by human effort (see PROVOCATION; PARODY OF THE QURʾĀN). The Qurʾān has also been treated in the literature on Muḥammad and the prophets as the special "proof" *(ḥujja)* for his prophetic mission — the particular miracle (one was said to be given to every genuine prophet) granted him by God as the ultimate guarantee of the truth of his prophethood (see PROOF). It can even be argued that the chief motivation for the later, classical Muslim doctrine of Muḥammad's "protection" *(ʿiṣma)* from sin or major errancy was probably ultimately developed to safeguard the Qurʾān from any impugning of its *iʿjāz:* had the messenger not been divinely preserved from at least major sins, how could one be certain he did not make errors with regard to the reception and transmission of God's sacred word? (Graham, *Beyond,* 207 n. 18; see also IMPECCABILITY).

The Qurʾān as the Arabic scripture

A corollary of the Qurʾān's miraculous perfection is understandably the special character of its language. From its early days, Islam became not just an Arab faith (see ARABS) but ever more an international one. Yet even down to the present moment, the fact of the Qurʾān's being revealed in Arabic has remained a centrally important dimension of the text's function as scripture for Muslims of all nations and races and language communities. While it can be argued legitimately that the faith that began with Muḥammad and a largely Arab community became one ultimately made great largely by non-Arabs, the Arabic language has remained highly significant to Muslims whether or not they speak or read the Arabic language. In a practical sense, for Muslims God's final revelation came in the language of the Arabs and its very perfection as God's verbatim word has demanded that Muslims protect and venerate its Arabic form. The Qurʾān itself speaks of the "clear Arabic

tongue" (*lisān ʿarabī mubīn,* Q 16:103; 26:195) in which God speaks in the revelations of the Qurʾān. One dimension of the history of the Qurʾān as scripture has been the generally observed axiom (to which the Ḥanafī legal school has been an exception: Pearson, Translations, 429) that one cannot translate the Qurʾān and have it remain the Qurʾān (see TRANSLATIONS OF THE QUR'ĀN). Interlinear translations and glosses have existed in numerous languages other than Arabic for hundreds of years but even today there is a hesitancy about letting translations threaten to take the place of the pristine "Arabic reciting" (*qurʾān ʿarabī,* Q 12:2; 20:113, etc.), even as more and more translations appear. The entitling of the popular Muslim translation by M. Pickthall as *"The meaning of the glorious Koran"* is a good example of the attempt to signal that any translation is an interpretation, not God's word itself.

The most vivid consequence of this emphasis upon the importance of the language of scripture has been the insistence in Muslim legal interpretation that a performance of the daily worship of ritual prayer (q.v.; *ṣalāt*) is only ritually valid if some portion, however brief, of the Arabic Qurʾān is recited at the appropriate points in the ritual performance. In particular, the memorization and recitation of the Fātiḥa (q.v.), the first sūra (q.v.) of the Qurʾān, is essential to the performance of the *ṣalāt.* This is a key legal distinction between God's word and the ḥadīth of the Prophet since recitation of the latter (even those ḥadīth containing a non-qurʾānic divine word, or *ḥadīth qudsī,* reported on Muḥammad's authority) would not validate one's *ṣalāt* (Graham, *Divine word,* 55-6). A reflex of this necessity for the presence of the Arabic "reciting" in worship is surely the centuries-long insistence of Muslims around the world that the *adhān,* or "call to worship," can only be given in Arabic. The brief attempt of the 1920s in republican Turkey to substitute a Turkish call to worship ended in failure before this deeply ingrained assumption about retaining the Arabic language of the call to worship God as he would be worshipped.

The Qurʾān has also served, along with pre-Islamic and early Islamic Arabic poetry (and to a lesser degree, other early Islamic texts; see POETRY AND POETS; PRE-ISLAMIC ARABIA AND THE QUR'ĀN), but more emphatically, as the standard and proof-text for classical Arabic literary grammar, precisely because it is the divine model of linguistic perfection. Even a *hapax legomenon* in the qurʾānic text becomes a proof of proper grammatical usage because it occurs in the speech of God. Qurʾānic eloquence set the standards used also in Arabic literary criticism. The *iʿjāz* of the Qurʾān means that no other Arabic composition can attain its eloquence and its words and phrases have accordingly permeated Arabic writing and speaking and remained models of Arabic eloquence (see GRAMMAR AND THE QUR'ĀN; LITERATURE AND THE QUR'ĀN). The evidence provided, from the earliest centuries of Islam, of qurʾānic pericopes found in political speeches and on state identification documents such as coins, papyri or glass weights — both within and outside of the Arabic speaking Islamic world — attests to this elevated status (cf. Dähne, Qurʾānic; al-Qāḍī, Impact; see NUMISMATICS; SLOGANS FROM THE QUR'ĀN).

The visual and oral exaltation of God's word

An index of the central role of the Qurʾān as scripture in Muslim life is the lavish overt attention devoted to the special forms of reverent and creative embellishment aimed at exaltation of the scriptural word in both its written and oral forms. Like its Jewish and Christian cousins, the Islamic

tradition has seen the highest development of calligraphic art in the preparation of magnificently lettered and illuminated copies of the qur'ānic text. Unlike either Judaism or Christianity, however, it has also seen the development of an almost ubiquitous tradition of stunning monumental epigraphic inscriptions from the Qur'ān on Islamic edifices, religious and otherwise (see EPIGRAPHY AND THE QUR'ĀN; ART AND ARCHITECTURE AND THE QUR'ĀN; ARCHAEOLOGY AND THE QUR'ĀN). Muslims have focused — in part because of their tendency to iconoclasm (q.v.) — almost exclusively on the calligraphed words of the Qur'ān themselves and made them the major form of visual representation in Islam. Furthermore, this has been the case not only in specifically religious contexts such as those of mosques (see MOSQUE), but also as a dominant artistic mode of expression throughout the various sectors and milieux of Islamic cultures more broadly (see also MATERIAL CULTURE AND THE QUR'ĀN).

At least as spectacular has been the immense level of effort directed at the embellishment of the qur'ānic word in the popular practice and professional oral artistry of memorization and recitation. As no other of the world's great scriptures, the Muslim scripture has been the object of a mnemonic and recitative tradition that has saturated and sustained not only Muslims' devotional life and worship, but also the quotidian life in Muslim societies large and small around the globe with the rich, melodic, and moving strains of the recitation of God's word. From the very beginning, as evidenced in the very name Qur'ān, the qur'ānic revelations were rehearsed, memorized and recited, not only as a part of the *ṣalāt* and other worship observances, but also as the highest form of popular entertainment. The recitation of the Qur'ān, whether as an almost ubiquitous personal practice, a requisite component of the universal performance of *ṣalāt,* or a public-performance art across the Muslim world, has been a characteristic of Muslim societies. The technical discipline of Qur'ān recitation has further been one of the central disciplines of Muslim scholarship, and its high level of technical sophistication and development reflects the massive importance placed upon qur'ānic recitation *(tilāwa, tajwīd)* in Muslim learning as well as everyday life (see Nelson, *Art*).

Use and misuse of the qur'ānic scripture

Like religion itself, scripture is subject to the failings as well as the strengths of the human beings involved with it. Thus the Qur'ān has been both well used and also misused by its adherents. There is a good argument to be made for the Qur'ān being the inspiration for whatever spiritual greatness Muslims have achieved but also for some of the saddest excesses of religious fanaticism Muslims have suffered (see POLITICS AND THE QUR'ĀN). The greatest Muslim religious minds have used their scripture as the touchstone of their faith and yet other Muslims have used a narrow and selective, sometimes mindlessly literal, interpretation of the Qur'ān to justify actions and norms that belied and betrayed the sweeping religious vision that the Qur'ān brought to the period of its revelation. In these things, the Muslim scripture has been no different than any other scripture in any other religious community: even if one were to accept that a given scripture is divinely inspired, human beings can use it to evil or perverted, as well as to noble or spiritual, purposes. Religious people, Muslims among them, have used and do use their scriptures for diverse purposes, from bibliomancy, talismanic help (see POPULAR AND TALISMANIC USES OF THE QUR'ĀN), and

divination (q.v.; see also FORETELLING) to legal argumentation, mystical speculation (see ṢŪFISM AND THE QUR'ĀN) and theological reasoning. For this reason, the formal and informal interpretation of the Qur'ān, like that of other scriptures, has been and remains a constantly changing and dynamic dimension of the Qur'ān's role as scripture, both for good and ill (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL; EXEGESIS OF THE QUR'ĀN: EARLY MODERN AND CONTEMPORARY). The vast range and extent of interpretations accorded individual portions of the Qur'ān are indices of its immense influence as scripture in Islam: when the Qur'ān or any other scriptural text achieves such massive authoritative and sacred status among its adherents, it will be appropriated to justify and explain any and everything that a person or group may want to do, for it will be understood to deliver divine sanction to actions taken to be in accord with its message. From the point of view of the history of religion, one might reasonably argue that the Qur'ān, like any of the world's major scriptures, has been much more frequently used to good than to evil ends — otherwise, it could not long have sustained so great and influential a tradition as that of Islam.

The permeating force of scripture in Muslim life

As the foregoing suggests, it is difficult to overemphasize the degree to which Islamic societies, both those of Muslim-majority countries and those of Muslim minorities in non-Muslim countries, have been saturated in most aspects of everyday life with the presence of the qur'ānic scripture and informed in a variety of specialized disciplines and fields by focus on the Qur'ān as scripture. It is the very fact of its being venerated as scripture, looked to for authoritative guidance as scripture, and received as the direct and powerful presence of the divine working in the world through scripture that has placed the Qur'ān at the center of what it is to be Muslim.

For an adequate understanding of the Qur'ān in its function as scripture, one has to look to the centuries-long, defining impact of this text on Muslims in multiple dimensions of their lives. The full extent of this impact can only be adumbrated here by noting briefly some of the most salient instances of qur'ānic influence beyond those already mentioned above. These include the central role of the qur'ānic scripture as a source for personal and communal norms, legal justification, and religious guidance (see VIRTUES AND VICES, COMMANDING AND FORBIDDING). They include also the Qur'ān's preeminent role in personal spirituality and piety (q.v.), in popular superstition and bibliolatry, in high culture, in education and moral guidance, in liturgical and ritual use, and in inspiration for (as well as justification of) religious faith and dogma. These dimensions of the Qur'ān's roles as scriptural authority and source of divine power cannot be adequately pursued in the compass of the present article; for a fuller sense of the extent and depth of the Qur'ān's role as scripture, see inter alia MEDICINE AND THE QUR'ĀN; SHĪʿISM AND THE QUR'ĀN; AMULETS; CONTEMPORARY CRITICAL PRACTICES AND THE QUR'ĀN; COSMOLOGY; GEOGRAPHY; DEBATE AND DISPUTATION; LITERARY STRUCTURES OF THE QUR'ĀN; MUṢḤAF; MYSTERIOUS LETTERS; NUMEROLOGY; PERSIAN LITERATURE AND THE QUR'ĀN; AFRICAN LITERATURE; SOUTH ASIAN LITERATURE AND THE QUR'ĀN; SOUTHEAST ASIAN LITERATURE AND THE QUR'ĀN; TURKISH LITERATURE AND THE QUR'ĀN; PRINTING OF THE QUR'ĀN;

Scrolls

A roll of paper or parchment for writing a document. The Qur'ān refers to scrolls (*ṣuḥuf* and *zubur* — see also PSALMS; for the different terminology for writing as vehicle of divine command, see Ghedira, Ṣaḥīfa, and Madigan, *Qur'ān's self-image,* 131-2) as written documents (and thus conflated to *kutub,* e.g. Q 98:1-2; see BOOK) that contain God's edicts (cf. Schoeler, Writing), especially his judgments against former nations (see Ṭabarī, *Tafsīr,* ad Q 20:133; see JUDGMENT; GENERATIONS; HISTORY AND THE QUR'ĀN). The idea of scrolls is thus meant to be a clear sign *(bayyina)* to Muḥammad's audience of the consequences they will face if they persist in their ingratitude (see GRATITUDE AND INGRATITUDE) and resistance to the divine communication (for scrolls as a sign of religious authority see Madigan, *Qur'ān's self-image,* 7; see SIGNS; AUTHORITY; PROVOCATION; OPPOSITION TO MUḤAMMAD). The demand for scrolls by Muḥammad's audience (Q 74:52; Ṭabarī, *Tafsīr,* ad loc. gives the report of Qatāda and Mujāhid that people wanted to know who specifically was being addressed by God; for demands that Muḥammad produce a book, see Q 4:153; 6:7; 17:93) is met with the claim that there is evidence *(bayyina)* of God's will in previous scrolls (i.e. scripture; see SCRIPTURE AND THE QUR'ĀN) given to Adam (i.e. the first scrolls, Q 20:133; 26:196; see ADAM AND EVE) and to Moses (q.v.) and Abraham (q.v.;

Q 53:36-7; 87:16-9; see also PROPHETS AND PROPHETHOOD; MESSENGER). The conclusion is drawn that these prophetically conveyed scrolls, having caused division and ingratitude among former nations, will also be met with disagreement — now as an authoritative sign of Muḥammad's mission (Q 98:1-4; Ṭabarī, *Tafsīr,* ad Q 98:2 gives the report of Mujāhid that Muḥammad is no mere prophet within the Judeo-Christian heritage and that he has been given evidence of divine truth, making disagreement over it henceforth impossible; see TRUTH). The demand for scrolls is thus turned into an opportunity to accuse people of disdain for the next world and a warning for them to take heed (see WARNER; ESCHATOLOGY; REWARD AND PUNISHMENT). Indeed, the Qurʾān expresses surprise that people have not heard the news contained in scrolls about the fate of former nations (Q 53:36 f.; see PUNISHMENT STORIES).

The point is clear: socio-political prosperity (see POLITICS AND THE QURʾĀN; COMMUNITY AND SOCIETY IN THE QURʾĀN), i.e. avoiding destruction by God, depends on obedience (q.v.) to God's edicts promulgated in scrolls via messengers of God. It is thus in an eschatological tone that mention is made of the scrolls which will divulge human deeds on judgment day (Q 81:10; Ṭabarī, *Tafsīr,* ad loc. associates scrolls with a record of human deeds to be published on judgment day; see LAST JUDGMENT; HEAVENLY BOOK) — rhetorical encouragement for Muḥammad's audience to choose the next world over this one by recalling the stories contained in the scrolls (Q 80:12-7; Ṭabarī, *Tafsīr,* ad Q 80:13 associates them with the "preserved tablet" [q.v.], *al-lawḥ al-maḥfūẓ,* that the angels have periodically recited as scripture to various prophets; see ANGEL), i.e. the destruction met by former nations (*umam khāliya,* not mentioned but clearly assumed, see Ṭabarī, *Tafsīr,* ad Q 20:133) for refusing to accept God's judgment (cf. Q 87:16-9). Those who accuse Muḥammad of lying about the source of his message should recall that the same accusation was faced by previous messengers of God who came with evidence, scrolls and the illuminating book (Q 3:184; 35:25), in which it is recorded that God caused the earth to swallow up people who did not give heed to former prophets (Q 16:43-5). In short, the idea of scrolls is a rhetorical tool used by the Qurʾān to signify that the record of human deeds has been well documented and should be taken as a warning to those who do not give heed to the divine reminder (Q 54:51-3; see INSOLENCE AND OBSTINACY), making the notion of scrolls an important element in understanding the qurʾānic conception of scripture.

The idea that revelation was not disclosed at once (Q 25:32-3) corresponds to the fact that scrolls containing verses of the Qurʾān were not initially recorded in a single text (see Burton, *Collection,* 119, 139, 141), giving to qurʾānic textual material a fluidity in its earliest form (i.e. pre-ʿUthmānic recension; see COLLECTION OF THE QURʾĀN; CODICES OF THE QURʾĀN; MUṢḤAF) and thereby enabling Muslim scholars to posit an incomplete qurʾānic text *(muṣḥaf)* as reason to explain occasional conflict between Qurʾān and sunna (q.v.; see Burton, *Collection,* 105-13). It is the idea of an open-ended qurʾānic revelation that can help us to understand the early recourse to scrolls as extra-qurʾānic scriptural authority (e.g. Baghdādī, *Taqyīd,* 54-7; the first written collection of prophetic reports, allegedly by ʿAbdallāh ʿAmr al-ʿĀṣ [d. 63/682], was called "the true scroll," *al-ṣaḥīfa al-ṣādiqa;* see SHEETS). The possibility of confusing non-qurʾānic prophetic material in written form with qurʾānic textual material resulted in strong warnings in certain circles against writing down such material (see

Cook, The opponents). Indeed, the concept of scrolls as divine revelation recorded in writing has caused considerable ambiguity over the value of books as vehicle for the transmission of prophetic material (see Heck, Epistemological problem; cf. Melchert, Ibn Mujāhid). See also GOSPEL; TORAH; REVELATION AND INSPIRATION; INSTRUMENTS; WRITING AND WRITING MATERIALS; ORALITY AND WRITING IN ARABIA; MANUSCRIPTS OF THE QUR'ĀN.

Seasons

Each of the four divisions of the year (spring, summer, autumn, and winter), marked by particular weather patterns and daylight hours. Arabia, the cradle of Islam, has different seasons, notably a suffocatingly hot summer, while in the higher places it can be bitterly cold during the winter. In spring and autumn many days are mild. There is no word for season in the Qurʾān. The word *mawsim* (pl. *mawāsim*) occurs in ḥadīth (see ḤADĪTH AND THE QUR'ĀN) in the sense of market or fair, mostly combined with a pilgrimage (q.v.; *ḥajj*) to a sanctuary, like those held in various places in pre-Islamic and early Islamic Arabia (see PRE-ISLAMIC ARABIA AND THE QUR'ĀN). Because these markets (q.v.) took place at a fixed season, the word has also assumed this latter meaning.

In the Qurʾān most references to season are related to the calendar (q.v.). In Islam the calendar is based on a purely lunar year, but in pre-Islamic Arabia this was not the case. Because various names of the Arabian months (q.v.), in so far as these are clear, are related to seasons, it is commonly thought that the old Arabian year was a solar year. For instance, the name Ramaḍān (q.v.), the only name of these months mentioned in the Qurʾān (Q 2:185), is derived from a root that indicates the heat of the summer. From Q 10:5 and Q 36:39, however, it can be concluded that shortly before the advent of Islam the "stations" *(manāzil)* of the moon (q.v.) were used as a measure of time. Because in the period prior to Islam the annual Meccan *ḥajj* (pilgrimage plus market) had to take place in a suitable season of the solar year, it became necessary to prolong the lunar year by intercalating a month every three years to correct the discrepancy between the lunar and the solar year and thus make the lunar month of the *ḥajj* fall within the same season every year. This intercalation *(nasīʾ)* is mentioned in Q 9:37, which characterizes it as "an increase in unbelief" and consequently forbids this practice. Since then, a purely lunar year has been the standard in Islam and consequently the various months of the lunar year move independently of the seasonal year (Wellhausen, *Reste,* 87, 94-8).

In only two cases in the Qurʾān do the

names of a particular season occur, namely in Q 106:2, where the winter and summer journey (q.v.; *riḥlat al-shitāʾi wa-l-ṣayfi*) of the Quraysh (q.v.) are mentioned. Usually this winter journey is interpreted as a trade caravan (q.v.) heading from Mecca (q.v.) to the Yemen (q.v.) in the cold season, while the summer journey is identified with the trade caravan from Mecca towards Syria (q.v.) in the hot season. Q 106 in its entirety should be understood as a sign of God's benevolence towards the Quraysh since, after the rise of Mecca as sacrosanct territory (see PROFANE AND SACRED), the city had become the most important center of pilgrimage and trade in Arabia, as a consequence of which the Quraysh were no longer forced to endure the hardships of the seasonal trade journeys to support themselves (Rubin, Īlāf, 175).

Secrets

Hidden matters. Broadly conceived, secrets as a concept relevant to the Qurʾān may include the "unconnected letters" (*ḥurūf muqaṭṭaʿa;* cf. Rāzī, *Tafsīr,* ii, 3; see MYSTERIOUS LETTERS) and the hidden or inward meanings *(bāṭin)* of the qurʾānic passages, which are different from their literal or outward meanings (*ẓāhir;* see POLYSEMY). Some of the mystics and Shīʿī thinkers (see ṢŪFISM AND THE QURʾĀN; SHĪʿISM AND THE QURʾĀN) claim this way of thinking, which is often supported by a ḥadīth report (see ḤADĪTH AND THE QURʾĀN) regarding the fourfold sense of the qurʾānic text (cf. Böwering, *Mystical,* 139-42; Mullā Ṣadrā, *Mafātīḥ,* 39; cf. Böwering, Scriptural "senses"; Lazarus-Yafeh, Are there allegories). Different kinds of secret knowledge are also subsumed under the divine mystery *(ghayb),* which no one knows except God (cf. Q 27:65; see HIDDEN AND THE HIDDEN).

The word *ghayb* implies exclusively divine secrets to which human senses are unable to gain access. On the other hand, the word *sirr,* "secret," refers to hidden matters in general and, in particular, to matters that human beings keep secret in their minds. Different verbal forms of the root *s-r-r* are utilized as signifying the act of hiding and concealing together with the words derived from the roots *kh-f-y* and *k-t-m*. The words derived from these three roots are often used in a similar way, as found in Q 2:77 *(s-r-r),* Q 2:284 *(kh-f-y)* and Q 2:33 *(k-t-m)*.

The Qurʾān stresses that God knows everything regardless of whether human beings make it hidden or evident, simply because he is the master of the worlds (see LORD). Since the heavens and the world include human beings as well as their external conduct and psychic characteristics, the master of the worlds naturally governs human beings and their souls (see SOUL). Such different characteristics of the soul as virtue (q.v.), evil (see GOOD AND EVIL), faith (q.v.), unbelief (see BELIEF AND UNBELIEF), love (q.v.) and anger (q.v.) may be ex-

pressed in their bodily and verbal acts or may remain hidden. God's final judgment (see LAST JUDGMENT) is always based on the inward aspects of the soul that form the basis of external conduct, be they apparent or hidden, as understood in the context of Q 2:225, Q 2:283 and Q 17:36 (cf. Q 2:284 and Ṭabāṭabāʾī, *Mīzān,* ii, 435-7). The doctrine of religious dissimulation (q.v.; *taqiyya*), which is based on Q 16:106 (also cf. Q 3:28), presupposes the qurʾānic notion of divine omniscience (see KNOWLEDGE AND LEARNING; POWER AND IMPOTENCE), through which God perceives the believer's true intention hidden behind an outward statement made against his will.

Because the words *sirr* and *khafī (akhfā)* in the Qurʾān seem to refer to something secret or to hidden aspects of human consciousness, Ṣūfīs have incorporated them in their theories of the inner subtleties *(laṭāʾif),* a type of religious psychology that analyzes the structure of human inward consciousness. For example, in his *Risāla* (46, 48), a well-known compendium of mysticism, al-Qushayrī (d. 465/1072) presents a four-dimensional structure of human consciousness, which consists of soul (q.v.; *nafs*), heart (q.v.; *qalb*), spirit (q.v.; *rūḥ*) and inmost consciousness/secret *(sirr)*. The *sirr*, the last and deepest dimension of human consciousness, is characterized by a place of contemplation *(mushāhada)* and realization of divine unification *(tawḥīd)*. Although different thinkers present different schemes of *laṭāʾif,* many of the Ṣūfīs and mystical philosophers locate *sirr* at the deepest dimension in the human consciousness, where they realize enlightenment with a divine encounter.

Seeing and Hearing

The action of the eyes (q.v.), and of the ears (q.v.), respectively. Seeing and hearing are understood to be attributes of God and the terms are used literally as human bodily senses as well as metaphorically in the senses of "to know," "to understand," and "to learn" (see KNOWLEDGE AND LEARNING; GOD AND HIS ATTRIBUTES; HEARING AND DEAFNESS; VISION AND BLINDNESS; METAPHOR).

Baṣīr, "the one who sees, the all-seeing," is an attribute of God mentioned forty-two times in the Qurʾān, ten times immediately following "hearing" or "all-hearing," *samīʿ*. The sequencing of these two attributes probably reflects the constraints of the rhyme scheme of the sūras (q.v.) in which this refrain is found rather than a presumed privileging of one sense over the other (see FORM AND STRUCTURE OF THE

QUR'ĀN; LANGUAGE AND STYLE OF THE QUR'ĀN). Nine times the adjective *baṣīr* is used in reference to humans, including the statement, "We [i.e. God] made him hearing, seeing" (Q 76:2) and "The likeness of the two parties is as the man blind and deaf, and the man who sees and hears; are they equal?" (Q 11:24); the other seven instances contrast sight and blindness. The sense of "sight" as the noun *baṣar* (pl. *abṣār*) is a human trait only, the word often meaning the physical eye, as in, "It is not the eyes *(al-abṣār)* that are blind" (Q 22:46) and "They cast down their eyes" (*abṣārihim,* Q 24:30-1). The physical "eye" is also referred to thirty-six times with the word *'ayn* (pl. *a'yun*), which is used of both humans and God as in Q 11:37, "Make the ark (q.v.) under our eyes!" and Q 52:48, "You are before our eyes." The related verbal usage "seeing" as conveyed through *abṣara* and its derivatives (used thirty-six times), predominates in qur'ānic mentions of humans and their ability to perceive: "They have eyes *(a'yun)* but perceive not *(lā yubṣirūna)* with them" (Q 7:179). *B-ṣ-r* (and its derivatives) is sometimes used in opposition to being blind and, at other times, is used rhetorically (see RHETORIC AND THE QUR'ĀN), as in "Will you [or they] not see?" (e.g. Q 28:72; 32:27). The verb is also used on a few occasions in reference to God, as in Q 18:26, "God knows how long they [the men of the cave; q.v.] stayed; to him belong the unseen in the heavens and the earth (see HIDDEN AND THE HIDDEN). How well he sees *(abṣir)!* How well he hears!"

More common words for dealing with human perception are related to *naẓara,* which is used over one hundred times in the Qur'ān. This root incorporates a broad range of usages, including the imperative, where it is usually translated as "Behold!" Here, the sense is turning one's attention to something, making it the focus of one's gaze. Among the instances of the use of this root is the famous passage Q 75:22-3, "Some faces on that day will be radiant, upon their lord they will be gazing *(nāẓira),*" which created significant theological controversy by suggesting that God could be perceived physically in the hereafter (see FACE OF GOD; ANTHROPOMORPHISM; THEOLOGY AND THE QUR'ĀN).

Ra'ā, on the other hand, is the most widely used root suggesting "seeing" and it conveys a sense of seeing with the eyes but with a strong tendency towards "thinking" as well, especially in the rhetorical, "What do you think *(a-ra'aytum)?*" and variations thereon (Q 6:46; 11:28, 63; 53:19; 96:9, etc.). Moses (q.v.), however, "saw *(ra'ā)* a fire" (q.v.; Q 20:10) and "saw *(ra'ā)* [his staff] quivering like a serpent" (Q 27:10; see ROD). The word is also used of God but infrequently, as in "Surely I will be with you [Moses and Aaron], hearing and seeing *(arā)*" (Q 20:46; see AARON); the fact that the rhyme of this section of the Qur'ān (see RHYMED PROSE) is long "a" undoubtedly dictated this usage of *arā* rather than the more common *baṣīr* in reference to God. Other instances include Q 9:94, 105, and Q 96:14 in which God sees what people do, once again a sensation more often invoked by *baṣīr,* as in Q 3:15, 156, 163, etc.

Fundamentally, the use of all these words suggests that the metaphor of sight as "insight" is well entrenched in Arabic and the Qur'ān. This metaphor appears in many cultures and time periods and reflects what is often termed the prejudice of sight as the "queen of the senses." This becomes especially clear when it is contrasted to the way in which the word for "hearing" is used. "Hearing" *(samī')* is less fully metaphorized in the Qur'ān compared to sight, but on occasion clearly tends towards "learn," suggesting a somewhat more passive action than the active sense "insight" suggests. This applies to God as well,

with the frequent conjunction of the "all-hearing, all-knowing" *('alīm)* and the descriptive "hearing, knowing," which occur thirty-two times in total (e.g. Q 2:127, 137, 181, 224; 3:34; 29:5; 29:60; 41:36; 44:6; 49:1; etc.). Such a combination highlights the physicality of knowledge — hearing in order to learn — as compared to the greater inner sense of "insight" through focused seeing; however, as mentioned above, God is both the all-hearing and the all-seeing. Once again, given the predominance in the qurʾānic rhyme scheme of "m" rather than "r," it is not surprising that "all-knowing" *('alīm)* should gain quantitative preference over "seeing" *(baṣīr)* when used in the rhyme position.

In a physical sense, God "hears" petitions from believers (Q 3:38; 14:39) and hears human speech as in Q 58:1, "God has heard the words of her that disputes with you about her husband." Overall, the literal sense of "hearing" is strong in the Qurʾān, often emphasizing the aspect of the orality (q.v.) of the Qurʾān itself in conveying the message. Believers must listen to the Qurʾān (see RECITATION OF THE QURʾĀN; RECITERS OF THE QURʾĀN). The ear (*udhun,* pl. *ādhān*) is clearly indicated as the physical part of the body associated with the sense of hearing, being named eighteen times in the Qurʾān; Q 2:19 suggests putting fingers in one's ears in order not to hear, for example.

Islamic law worked out the metaphorical implications of the conceptions related to "seeing" and "hearing" in the Qurʾān in the realm of Muslim practice (see LAW AND THE QURʾĀN). Blindness and deafness were seen as bodily defects that could disqualify a person from certain legal duties. This is inherent in the Qurʾān when it suggests, for example, that "blindness" is associated with doubt (see UNCERTAINTY), error (q.v.), dark (see DARKNESS), lacking understanding (see IGNORANCE) and sickness (see ILLNESS AND HEALTH), as when the heart (q.v.) is metaphorically linked to blindness in Q 22:46, "What, have they not journeyed in the land so that they have hearts to understand with or ears to hear with? It is not the eyes that are blind, but blind are the hearts within the breasts." While there are many statements in the Qurʾān which suggest that the blind and the seeing are equal (as are the deaf and the hearing), the negative connotations that were carried through the metaphorical usages tended to influence the definition of a full human being. For example, in most law schools a judge *(qāḍī)* must be of sound sight and hearing but such strictures did not prevent many unsighted people from becoming famous in the classical and modern Islamic world, a world where blindness was, and continues to be, a significant sociological fact.

Other aspects of "seeing and hearing" can be considered in relationship to the Qurʾān and its mode of existence and production in the world. That is, Muslims have seen the interaction of both of these human senses with the text of the Qurʾān as vitally important. The Qurʾān has been produced in a manner most pleasing to the sense of sight (see CALLIGRAPHY; ORTHOGRAPHY; MANUSCRIPTS OF THE QURʾĀN; ORNAMENTATION AND ILLUMINATION) and the recitation of the text is designed to produce an aural effect on the person. The privileging of the aural/oral results more from dogmas related to the transmission and preservation of the text of the Qurʾān (which likely evolved in contexts of inter-religious polemic; see COLLECTION OF THE QURʾĀN; CODICES OF THE QURʾĀN; POLEMIC AND POLEMICAL LANGUAGE; MUṢḤAF) than from the appreciation of one range of sense data over another.

Servants

Creatures bound in service to God. In over 100 places, the Qurʾān describes prophets (see PROPHETS AND PROPHETHOOD), believers (see BELIEF AND UNBELIEF), jinn (q.v.; cf. Q 51:56) and angels (see ANGEL) as servants (*ʿabd,* pl. *ʿibād, ʿabīd;* also *ʿābid,* pl. *ʿābidūn*) of God. Human beings in general are also described as God's servants, though they may be currently worshipping Satan (see DEVIL) or another false god (e.g. the *ʿabada l-ṭāghūt* in Q 5:60, the only occurrence of this plural form; see IDOLS AND IMAGES; POLYTHEISM AND ATHEISM). The relationship of master and servant is one of the key metaphors (see METAPHOR) used by the Qurʾān to describe God's relationship to his creatures (see CREATION).

In classical Arabic, *ʿabd* has two primary meanings: slave to a human being (see SLAVES AND SLAVERY) and servant of a divine being. The Qurʾān, however, nearly always uses *ʿ-b-d* in the sense of divine service or worship (q.v.). The five or six places where this root refers to slaves are usually marked by semantic qualifiers, such as *ʿabd mamlūk* in Q 16:75. The qurʾānic commentary known as *al-Ǧalālayn* (ad loc.) explains: "*[Mamlūk]* is an adjective which distinguishes [the slave] from the free [servant], who is 'the servant of God.'" As discussed below, the Qurʾān sometimes plays off these two meanings in explaining the proper role for God's servants. The medieval distinction, however, between plurals of *ʿabd* (*ʿibād* for servants, *ʿabīd* for slaves; see *Lisān al-ʿArab,* iii, 271) does not obtain in the Qurʾān, where with one exception both refer to servants. This change in meaning accords with the semantic range of Semitic cognates (Jeffery, *For. vocab.,* 209-10; Dandamaev, *Slavery,* 85n).

One can identify four distinct categories for servants in the Qurʾān. First, all human beings are God's servants, whether they recognize this fact or not. For example, Q 19:93 states: "There is no one in the heavens and earth but comes to the all-merciful as a servant." Unbelievers are also explicitly described as God's servants in Q 25:17, where God gathers together the false gods and says: "Was it you that misled these my servants *(ʿibādī)* or did they stray from the path (see ERROR; ASTRAY; PATH OR WAY)?" There are also statements that could refer to all humankind or to believers, such as numerous refrains describing

God as generous, all-seeing, or not unjust to his servants (e.g. *Allāhu raʾūfun bi-l-ʿibādi* in Q 2:207; see GIFT-GIVING; SEEING AND HEARING; JUSTICE AND INJUSTICE; GOD AND HIS ATTRIBUTES).

A second category comprises those who explicitly believe in God. A partial definition of what this service entails is found in Q 25:63-8, which describes the *ʿibād al-raḥmān* as those who speak peacefully (see PEACE), pray (see PRAYER), spend money moderately, and do not call on other gods, kill or commit adultery (see MURDER; ADULTERY AND FORNICATION). God's servants are also described in several places as *mukhliṣ/mukhlaṣ* (sincere, pure in faith; alternatively, chosen; see ELECTION), and in Q 38:82-3 Iblīs threatens God that he will lead astray all except his sincere servants. In Q 37:40 f., these sincere servants are promised paradise (q.v.).

The title *ʿabd Allāh,* "God's servant" (var. *ʿabdī, ʿabduka, ʿabduhu,* etc.) forms a third category, usually reserved for God's prophets, specifically Muḥammad (q.v.), Jesus (q.v.), Zechariah (q.v.), Job (q.v.), Solomon (q.v.), David (q.v.), Aaron (q.v.), Moses (q.v.), Joseph (q.v.), Lot (q.v.), Abraham (q.v.) and Noah (q.v.). Moses' companion in Q 18:65, often identified in the commentaries as Khaḍir/Khiḍr (q.v.), is also *ʿabd min ʿibādinā.* Several times, Muḥammad is referred to obliquely as "my/his/our servant" (e.g. Q 2:23; 17:1; 18:1; 25:1) or even "a servant" in Q 96:10. The restriction of this usage suggests a special relationship between God and his prophets.

The final category of servants in the Qurʾān includes angels and other creatures, some of whom may have been worshipped by human beings. For example, Q 7:194 is generally understood to refer to idols when it states, "those on whom you call apart from God, are servants *(ʿibād)* the likes of you." In contrast, Q 17:5 refers to "servants belonging to us and possessing great strength," which most commentators connect to various armies or warriors from biblical stories (see SCRIPTURE AND THE QURʾĀN; NARRATIVES; FIGHTING; WAR). Many qurʾānic verses refer to angels and Q 43:19 states directly that angels are *ʿibādu l-raḥmāni.* The commentators, however, clarify that angels are absolutely obedient to God's will (see OBEDIENCE; FREEDOM AND PREDESTINATION), unlike human servants who may go astray.

Several contexts are useful in making sense of these various meanings. First, service to deities was something well known in seventh-century Arabia, as evidenced by theophoric names. For example, the great-great-grandfather of the Prophet, ʿAbd Manāf, was so called "because his mother Ḥubbā offered him to Manāf, the greatest of the idols of Mecca (q.v.), to show her devotion *(tadayyunan)* to it" (Ṭabarī, *Taʾrīkh,* ii, 254, trans. in Watt, *Muḥammad,* 19). Other attested names were ʿAbd al-ʿUzza, ʿAbd Shams and ʿAbd Manāt. This form of naming, and the attendant right to service, has a long history in Near Eastern cultures (Dandamaev, *Slavery,* 82-5; and Herrenschmidt, Bandaka, iii, 684). But the claims of the gods to service extended only to their devotees, not to humankind in general.

A second, more distant context, that of the Hebrew scriptures, accords more readily with the qurʾānic conception of God as universal lord (q.v.), though the language of servanthood is more restricted. As in the Qurʾān, various prophets are occasionally described, or describe themselves, as God's servant (Hebrew *ʿeved*), such as Abraham, Isaac, Caleb, Joshua and Samuel. But Moses is God's servant par excellence in the Bible, and is designated dozens of times as such. God's people, the Children of Israel (q.v.), are also described as his

servants (e.g. *Lev* 25:55), but, in the Bible, this term is nowhere universalized to encompass all humankind as in the Qurʾān. Neither are angels explicitly called God's servants, though they clearly carry out his will.

The Christian scriptures are even more reticent to designate someone a servant of God, and when this term does appear, it usually echoes the Hebrew scriptures (Luke 2:29; Acts 2:18). Two innovative uses, however, are worth noting. In Revelation 19:9-10, John prostrates himself to an angel, who responds, "You must not do that. I am a fellow servant with you and your brethren" (also *Rev* 22:8-9). This is the only naming of angels as God's servants in the Bible, and the accompanying command not to worship angels finds a parallel in the Qurʾān. Second, while the teachers of the early church were not called servants of God, they were referred to as "servants (Gr. *douloi,* sing. *doulos*) of Christ" (Rom. 1:1; James 1:1, 2; Peter 1:1; etc.). Martin sees this title as an attempt to raise these men to the status of Moses and the prophets (Martin, *Slavery,* 54-6), but it may also be seen as a claim about the divine status of Jesus.

That title continued to be used in the Christian church, and it may have provided the context for Q 3:79 which states: "It is not for a human being *(bashar)* that God should give him the book (q.v.), judgment (q.v.), and prophethood, and then he should say to people, 'Be my servants, apart from God *(kūnū ʿibādan lī min dūni llāh)*.' Rather, 'Be you masters *(rabbāniyyīn)* by knowing the book and studying'" (see KNOWLEDGE AND LEARNING; SCHOLAR). The commentators gloss *bashar* here as Jesus and cite the following occasion of revelation (see OCCASIONS OF REVELATION): "It was revealed when a Christian from Najrān (q.v.) said that Jesus ordered them to take [himself] as a lord *(rabb),* and when [the Christian] demanded that some Muslims prostrate to [Jesus]" (*Jalālayn,* ad Q 3:79; see also Wāḥidī, *Asbāb,* ad loc.; see CHRISTIANS AND CHRISTIANITY; BOWING AND PROSTRATION). This is just one example in which the Qurʾān sets up its theology of servanthood in contrast to servants of other religious traditions.

The Qurʾān explicitly rejects local conceptions of what it means to be a servant when Muḥammad is instructed to say, "I am not serving *(ʿābid)* what you serve" (Q 109:4; see POLEMIC AND POLEMICAL LANGUAGE). Further correction of contemporary misconceptions is found in Q 51:56-7: "I created jinn and humankind only to serve me *(li-yaʿbudūnī)*. I do not desire provisions from them, nor do I wish them to feed me." This idea of "feeding" God might be a reference to pre-Islamic sacrifices to idols (see SACRIFICE; CONSECRATION OF ANIMALS), although most commentators understand it as a metaphor for God's self-sufficiency. For example, al-Rāzī (d. 606/1210) imagines these words in God's mouth "I am not like a [human] master in demanding service, for [masters] profit from the service [of their slaves]" (Rāzī, *Tafsīr,* xxviii, 234, ad Q 51:56-7). In other ways, however, God's relationship to his servants is seen as precisely cognate to the master-slave relationship. In Q 5:118, Jesus addresses God, saying, "If you chastise them (see CHASTISEMENT AND PUNISHMENT), they are your servants; if you forgive (see FORGIVENESS) them, you are the almighty."

In these passages, important theological distinctions are expressed in the language of servitude (see THEOLOGY AND THE QURʾĀN). Human beings are servants and God is their master but, unlike human masters, God is utterly self-sufficient and does not benefit from the service of the believers; nonetheless, he retains rights over them much as a master has over a

slave. For their part, human believers are not to think of themselves as servants of anyone or anything else but rather are to gain mastery through knowledge *(ʿilm),* usually understood as knowledge of the law (see LAW AND THE QURʾĀN). Therefore it is through their righteous actions that Muslims exhibit their service to God.

As regards God's special servants, his prophets, the Qurʾān seems to speak in a Judeo-Christian idiom. It is primarily interested in extending the rank of prophet to Muḥammad and in reducing Jesus and other local deities to the rank of servant. For example, Q 4:172 states: "The Messiah will not disdain to be a servant of God, neither the angels who are near [to God]. Whoever disdains to serve him, and waxes proud (see PRIDE; ARROGANCE), he will compel all of them to come before him." Jesus' statement from the cradle that he is God's servant *(ʿabdu llāhi)* in Q 19:30 is also a rejection of Christian conceptions of Jesus as the son of God (Anawati, ʿĪsā, 83).

While the religious implications of the lord-servant relationship were well established in Arabia, this metaphor gained additional meaning from the local practice of slavery (see PRE-ISLAMIC ARABIA AND THE QURʾĀN). For example, Q 16:71 states: "God has preferred some of you over others in provision; but those that were preferred should not relinquish their provision to their slaves to make them equal; do they deny God's blessing?" In what appears to be a straightforward regulation of slavery, some commentators see an allegorical polemic explaining why God does not accept worship of idols. For example, al-Qurṭubī (d. 671/1272) writes: "If you do not allow your slaves *(ʿabīdukum)* to be equal with you, then how can you make my servants *(ʿabīdī)* equivalent to me?" (*Jāmiʿ,* x, 141, ad Q 16:71; cf. Ṭabarī, *Tafsīr,* ad loc.). Such a statement depends on a culture with clear class distinctions between master and slave to make sense (see COMMUNITY AND SOCIETY IN THE QURʾĀN; CLIENTS AND CLIENTAGE). On the other hand, slaves were treated as members of the family and could even serve as the master's agent in business affairs. Such practices provide a context for explaining that God's sincere servants are also granted a level of intimate contact, and that God's prophets serve as his representatives in reminding and warning humankind (see REMEMBRANCE; WARNER).

In the modern world, where slavery has been nearly eradicated, the prominent qurʾānic metaphor of master-servant may seem authoritarian and restrictive. Yet medieval commentators found this metaphor to be a rich source for describing the believer's relationship to God. In the introduction to his *Revivication of the religious sciences,* al-Ghazālī (d. 505/1111; *Iḥyāʾ,* i, 11) demonstrates the range of "the desirable characteristics by… which the servant can gain the favor of the lord of the worlds," devoting hundreds of pages to ten main characteristics, such as repentance (see REPENTANCE AND PENANCE), patience (see TRUST AND PATIENCE), and thankfulness (see GRATITUDE AND INGRATITUDE). Ṣūfīs and other devotees were pleased to call themselves slaves of God, and female Ṣūfīs even gained a measure of worldly freedom by devoting themselves entirely to God (Cornell, *Early Sufi women,* 54-9; see ṢŪFISM AND THE QURʾĀN). Muslims continue to demonstrate their devotion to God by taking on typical names, such as ʿAbdallāh or ʿAbd al-Raḥmān.

Recent translations of the Qurʾān by Muslims steeped in this tradition sometimes prefer to translate *ʿabd* as slave instead of servant (e.g. Pickthall, al-Ḥilālī and Khān; see TRANSLATIONS OF THE QURʾĀN). Such a translation reflects the Qurʾān's propensity to use the human master-slave relationship to explain the

believer's relationship to God; but in a world where slavery is rightly condemned as an objectionable practice, it can also hide the rich variety of meanings inherent in the Qurʾān's conception of God's servants. See also SLAVES AND SLAVERY.

Seven Sleepers see MEN OF THE CAVE

Sex and Sexuality

The act by which humans procreate, and the sum total of those attributes that cause an individual to be physically attractive to another. While the Qurʾān does criticize lust for women as an example of man's infatuation with worldly pleasures (cf. Q 3:14), it does not categorically condemn sex as a cause of evil and attachment to the world. The Qurʾān does recognize sex as an important feature of the natural world and subjects it to legislation in a number of passages (see LAW AND THE QURʾĀN). It accepts sex as a natural and regular part of human existence, specifically authorizing sexual pleasure and not simply condoning sex for the sake of procreation. It restricts sex to the institutions of marriage and slavery (see MARRIAGE AND DIVORCE; SLAVES AND SLAVERY), and condemns incest, adultery, fornication (see ADULTERY AND FORNICATION), prostitution, promiscuity, lewdness (see CHASTITY; MODESTY), and male homosexual sex (see HOMOSEXUALITY), while defining marriage and divorce in ways which modified and restricted the variety of unions found in pre-Islamic Arabian practice (see PRE-ISLAMIC ARABIA AND THE QURʾĀN). Sex also plays an important role in several narratives (q.v.) related to the biblical tradition, including the stories of Adam and Eve (q.v.), Lot (q.v.), Joseph (q.v.), and Mary (q.v.), as well as in descriptions of paradise (q.v.).

Licit sex in the Qurʾān is designated by the term *nikāḥ,* "intercourse, marriage" and its derivatives (Q 2:221, 230, 232, 235, 237; 4:3, 6, 22, 25, 127; 24:3, 32, 33, 60; 28:27; 33:49, 50, 53). Illicit sex or sexual infractions are termed *fāḥisha* (Q 3:135; 4:15, 19, 22, 25; 7:28, 80; 17:32; 24: 19; 27:54; 29:28; 33:30; 65:1), pl. *fawāḥish* (Q 6:151; 7:33; 42:37; 53:32), usually referring to specific instances of adultery, fornication, or other sexual offenses, or the collective term *al-faḥshāʾ* (Q 2:169, 268; 7:28; 12:24; 16:90; 24:21; 29:45). Adultery or fornication is designated by the term *zinā* and the related verb *zanā, yaznī;* adulterers are *al-zānī* and *al-zāniya* (e.g. Q 17:32; 24:2, 3; 25:68; 60:12), which is related to Hebrew *zonah,* "prostitute," and perhaps derives ultimately from the biblical tradition (see SCRIPTURE AND THE QURʾĀN). The most frequent terms for both male and female genitals are *farj,* pl. *furūj,* literally "cleft, opening"

(Q 21:91; 24:30, 31; 33:35; 66:12; 70:29) and *saw'a, saw'āt* "pudenda, bad part" (Q 7:20, 22, 26, 27; 20:121).

Naturally occurring pairs are an important part of the order of the universe which the Qur'ān cites again and again as evidence for God's existence and unity (see PAIRS AND PAIRING; GOD AND HIS ATTRIBUTES). Pairs appear in the example of the animals brought onto Noah's (q.v.) ark (q.v.; Q 11:40; 23:27), fruit trees on earth (q.v.) and in paradise (Q 13:3; 55:52; see ANIMAL LIFE; AGRICULTURE AND VEGETATION), and generally: "He created the pair, male and female" (Q 53:45); "We have created everything in pairs, that you might reflect" (Q 51:49; see CREATION; REFLECTION AND DELIBERATION; NATURE AS SIGNS). This general principle applies to humans as well: "And [God] made from it [a drop of sperm] the pair, the male and the female" (Q 75:39); "O humankind! We have created you male and female, and have made you nations and tribes, that you may know one another…" (Q 49:13; see TRIBES AND CLANS); "God created you from dust, then from a sperm-drop, then he made you pairs…" (Q 35:11; see BIOLOGY AS THE CREATION AND STAGES OF LIFE); "Among his signs (q.v.) is that he created for you mates from yourselves so that you might find tranquility in them, and he put love (q.v.) and mercy (q.v.) between you. Therein are indeed signs for folk who reflect" (Q 30:21). One understands from such statements that pairs occur by divine design and that the bond between sexual partners is therefore natural and subject to divine sanction. This view is corroborated by a number of passages elaborating an idea found in post-biblical Jewish texts and in Plato, that men and women are attracted to each other naturally by virtue of having been created out of a single original being: "Humankind! Fear (q.v.) your lord (q.v.), who created you of a single soul, and from it created its mate, and from the pair of them scattered abroad many men and women" (Q 4:1); "He it is who created you from a single soul, and made from it its mate, so that he might find tranquility in her…" (Q 7:189); "He created you from a single soul, then from it made its mate" (Q 39:6). The Qur'ān avoids the hierarchy involved in viewing Eve as created from Adam's rib, a story the Qur'ān does not include, and a ḥadīth (see ḤADĪTH AND THE QUR'ĀN) describes women as *shaqā'iq* "slices, or split halves" of men. The Qur'ān stresses that the sexual bond is intended as a comfort for both partners: "They [women] are a garment for you, and you a garment for them (see CLOTHING)… So lie with them *(bāshirūhunna),* and seek what God has prescribed for you" (Q 2:187). Marriage is understood to prevent sexual frustration and temptation to sin (Q 4:25; see SIN, MAJOR AND MINOR). The command to marry is general; all who can afford it are enjoined to do so (Q 24:32). Celibacy is not regarded as a virtue, and a well-known ḥadīth of the Prophet states, "There is no monasticism in Islam" (see ABSTINENCE; ASCETICISM; MONASTICISM AND MONKS). The Prophet is also reported to have advised, "Whoever is well-off, let him marry; he who does not marry is not one of us"; "O assembly of young men! Whoever among you can afford to, let him marry, for it is more effective in lowering one's gaze and keeping one's genitals chaste. Whoever cannot, should fast; it has the effect of restraining lust."

The Qur'ān conceives of marriage as a legal contract, one of God's fundamental laws (*ḥudūd Allāh,* Q 2:187, 229-30; 4:12-4; 65:1; see BOUNDARIES AND PRECEPTS; CONTRACTS AND ALLIANCES). The relatives with whom sexual relations would be considered incest are listed as follows (see PROHIBITED DEGREES): "Forbidden (q.v.) to

you are your mothers, your daughters, your sisters, you father's sisters, your mother's sisters, your brother's daughters, your sister's daughters, your foster-mothers, your foster-sisters, your mothers-in-law, your step-daughters who are under your protection (born) of your wives unto whom you have gone in — but if you have not gone in unto them, then it is no sin for you (to marry their daughters) — and the wives of your sons from your own loins. It is forbidden that you should take two sisters together, except what has already happened in the past. God is forgiving and merciful" (Q 4:23; see KINSHIP). First cousins are acceptable mates (Q 33:50). Qurʾānic legislation prohibits what were evidently pre-Islamic Arabian practices including the inheriting of wives or marrying women formerly married to one's father (cf. Q 4:19, 22) and effecting a divorce by *ẓihār,* that is, for a man to repudiate his wife by uttering the traditional oath, "You are to me like my mother's back" (Q 58:2-3). The number of wives has traditionally been limited to four on the basis of the verse "marry the women who are pleasing to you — in twos, threes, or fours — and if you fear that you cannot be fair, then one, or those that your right hands possess" (Q 4:3). The suggestion here is that while it is permissible to have four wives, one wife is preferable in some cases. The prophet Muḥammad is known to have had more than four wives, but this is explained as a special dispensation for prophets (cf. Q 33:50; see WIVES OF THE PROPHET). Muslim men and women are forbidden to marry idolaters (Q 2:221; see IDOLATRY AND IDOLATERS). It is permitted for masters to have sex with their slave-women, "what your right hands possess," and this is recommended as an appropriate alternative for men who cannot afford a regular marriage and fear that they will be tempted (Q 4:3, 24, 25; 23:6; 70:30). The *mahr* or *ṣadāq,* "dower," is an essential feature of the marriage contract; it is specified as a payment to the bride herself, and not to her father or guardian (cf. Q 4:4; see BRIDEWEALTH). The *shighār,* by which two men agree to marry their wards to each other in order to avoid paying the *mahr,* is condemned in ḥadīth and the legal tradition, though it does not appear in the Qurʾān (Ibn Rushd, *Bidāyat al-mujtahid,* ii, 43). The legality of temporary or fixed-term marriage *(mutʿa)* in return for payment is a complex issue and is a matter of controversy (see TEMPORARY MARRIAGE). For example, the Shīʿites claim that the second caliph (q.v.), ʿUmar, banned the practice and that it is condoned by the qurʾānic verse, "Those of (the women) from whom you seek contentment *(fa-mā stamtaʿtum bihi minhunna),* give to them their payments *(ujūr)* as an obligation" (Q 4:24; see SHĪʿISM AND THE QURʾĀN). Sunnī authorities argue that the Prophet banned the practice shortly before his death, though it had been condoned during his mission, and that this verse refers to the *mahr* in a regular marriage (Ibn Rushd, *Bidāyat al-mujtahid,* ii, 43).

According to tradition, marriage must be publicized: a feast or celebration *(walīma)* is thought to be necessary. A well-known ḥadīth report states, "What distinguishes the lawful from the unlawful is the drum and shouts of the wedding" (see LAWFUL AND UNLAWFUL). Accepting an invitation to a wedding feast is strongly encouraged.

The Qurʾān does not restrict sexual positions, and specifically permits husbands to take their wives as they wish: "Your wives are a field for you. Come at your field from where you will" (Q 2:223). The commentaries specify that this verse was directed at the Jews' (see JEWS AND JUDAISM) condemnation of vaginal intercourse from behind, which they claimed would produce cross-eyed children (Nasāʾī, *ʿIshrat al-nisāʾ,* 56-7). Sex during menstruation (q.v.) is forbidden

(Q 2:222). Though not mentioned in the Qurʾān, anal sex is forbidden in the ḥadīth and the legal tradition; a few ḥadīth reports allow it (Nasāʾī, *ʿIshrat al-nisāʾ,* 57-71). *Coitus interruptus (ʿazl)* is sanctioned in the ḥadīth; this ruling is presented as a correction of Jewish tradition (Nasāʾī, *ʿIshrat al-nisāʾ,* 93-9). Some authorities stipulate that a husband must have a wife's permission to do this, in contrast to his treatment of a slave-woman; others hold that it is reprehensible though not forbidden. Tradition also recommends invoking God's blessing before sex, "In the name of God. Oh God, keep Satan away from us, and keep away from Satan what you have granted us." This is supposed to protect any offspring conceived from being harmed by Satan (Tirmidhī, *Ṣaḥīḥ,* no. 1098; Nasāʾī, *ʿIshrat al-nisāʾ,* 74-5; see DEVIL). One should have some sort of cover over both partners' buttocks during sex; it is improper to be completely nude and exposed (Nasāʾī, *ʿIshrat al-nisāʾ,* 73; see NUDITY). Men are advised to wait until their partners are satisfied during sex before terminating (Tijānī, *Tuḥfat al-ʿarūs,* 113-4). The Prophet is supposed to have advised, "One among you should not fall upon his wife as a beast does. Let there be between you a messenger." He was asked, "What is that, O messenger of God?' He answered, "Kissing and talk" (Tijānī, *Tuḥfat al-ʿarūs,* 114). Some reports, particularly sex manuals, stress that the Prophet condoned making excited noises during sex *(ghunj),* including grunting and snorting. These texts connect such sexual noises with the qurʾānic term *rafath,* which is forbidden during the pilgrimage (q.v.; Q 2:187, 197). The term is taken either to be a euphemism for intercourse or to mean sexually explicit talk in general or making noise or engaging in sexually explicit talk during sex (Tijānī, *Tuḥfat al-ʿarūs*).

Some passages stress the symmetry of the sexual and marital relationship, but other passages make it clear that the rights of men and women concerning sex differ (see GENDER; WOMEN AND THE QURʾĀN). The Qurʾān regularly addresses men primarily regarding sex, marriage, and related issues (see PATRIARCHY). Men have the prerogative of polygamy and repudiation, and the main purposes of marriage, judging from the presentation of its rules, are to satisfy male sexual needs and to allow procreation while preserving accurate male genealogy. Women, though, have an understood right to conjugal duties; we may understand this as not only the opportunity to conceive and procreate, but also that for sex and companionship. The Qurʾān condemns the Prophet's withholding of sexual relations with his wives (Q 66:1), and leaving wives alone in their beds is deemed a punishment for rebelliousness (Q 4:34). In addition, *īlāʾ,* a husband's oath foreswearing sex with his wife, was held to dissolve the marriage contract if they did not resume after four months (cf. Q 2:226).

Prostitution is condemned, particularly as directed toward slave-women (cf. Q 7:33; 16:90; 24:33). A ḥadīth holds that the Prophet outlawed three fees customary in pre-Islamic Arabia: the fee *(mahr)* of a prostitute, the price *(thaman)* of a dog, and the honorarium *(sulwān)* of a soothsayer (see SOOTHSAYERS). Promiscuity and lewdness are also condemned. The Qurʾān praises devout women who preserve the "secret" or "mystery" of sex: "Good women are obedient and guard in secret that which God has guarded" (Q 4:34). Believers are entreated to exhibit what is termed *iḥṣān* or *taḥaṣṣun* (cf. Q 4:24, 25; 5:5; 21:91; 24:4, 23, 33; 59:2, 14; 66:12), the basic meaning of which is to guard, preserve. Mary the mother of Jesus (q.v.) is described as having "guarded" her genitals (Q 21:91; 66:12); this is parallel to verses which use the verb *ḥafiẓa, yaḥfaẓu* and its derivatives to

describe both men and women as "guarding" or "preserving" their genitals (Q 23:5; 24:30, 31; 33:35; 70:29). Married persons, those with a licit sexual partner, are termed *muḥṣan, muḥṣana,* "guarded, fortified." Adultery and fornication are forbidden, but the punishments prescribed vary (see CHASTISEMENT AND PUNISHMENT). The punishment is set at one hundred lashes for both men and women in one passage (Q 24:2); another verse instructs that women are to be confined in their houses until death (Q 4:15); the punishment for a false accusation of adultery against a married woman is eighty lashes (cf. Q 24:4; see FLOGGING). Slave-women are to receive half the punishment of free, married women (Q 4:25); the Prophet's wives are to receive double (Q 33:30). The punishment of stoning (q.v.) for married adulterers, which became a standard feature of Islamic law, is based on the sunna (q.v.), including a report that the Prophet ordered that a man be stoned after he confessed to adultery, and the claim, attributed to ʿUmar b. al-Khaṭṭāb, that the Qurʾān originally included a command to stone adulterers *(āyat al-rajm)* that was subsequently lost (Shāfiʿī, *Kītāb al-Umm,* vi, 133-5). The Qurʾān is silent on certain other sexual infractions, including lesbianism *(saḥq, siḥāq),* bestiality, and masturbation *(istimnāʾ, nikāḥ al-yad, jald ʿUmayra)*.

Adam and Eve's recognition, at Satan's urging, of their nakedness and shame, at which they cover their pudenda *(sawʾāt)* with leaves of the garden (q.v.) is apparently to be understood as an awareness of sex (Q 7:20-2; 20:121). As confirmation, we may cite one passage that, though it does not mention Adam or Eve by name, refers to the original man's "covering" the original woman and the resulting pregnancy: "It is he who created you from a single soul and made from it its mate, that he might take rest in her. Then, when he covered her, she bore a light burden, and went on her way with it, but when it became heavy they call to God, their lord: If you give us an upright (child?), we shall indeed be thankful" (Q 7:189; see GRATITUDE AND INGRATITUDE). In the story of Lot, the inhabitants of the "sinning cities" *(al-muʾtafika/al-muʾtafikāt),* corresponding to the biblical Sodom and Gomorrah, are clearly addicted to pederasty, later called *liwāṭ* or *lūṭiyya,* which derive from *(qawm) Lūṭ,* "Lot's people," but referred to in the text as an abomination *(fāḥisha)* or lusting after men rather than women. Furthermore, the inhabitants of these cities habitually rape male wayfarers. This is denounced in no uncertain terms, and appears to be the main cause for the cities' destruction. The Lot story includes a morally difficult passage for the commentators (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL), where Lot offers his daughters to the crowd clamoring outside his door to deter them from raping his male guests. This seems to be done on the logic that heterosexual sex is a much lesser infraction. The commentators want to avoid attributing such an act to Lot and insist, on little evidence, that he intended to offer his daughters to them in marriage, and not just for sex. In any case, his assailants refuse the offer, confirming their obstinate pursuit of Lot's male guests (Q 7:80-2; 11:77-9; 15:67-71; 27:54-5; 29:28-9).

Perhaps the most dramatic sexual passage in the Qurʾān is the story of Joseph and Potiphar's wife (identified as Zulaykhā in later tradition, but unnamed in the Qurʾān), referred to as the wife of al-ʿAzīz (Q 12:22-35). She tries to seduce Joseph and then accuses him of attempted rape, but he is exonerated and she is rebuked for her misbehavior. The qurʾānic version of the story makes it clear that Joseph is indeed tempted, and would have succumbed had it not been for God's guidance: "She de-

sired him, and he would have desired her had it not been that he saw the sign *(burhān)* of his lord (see PROOF). Thus it was, that we might ward off from him evil and lewdness…" (Q 12:24). His master's wife is clearly driven by lust incited by Joseph's incredible beauty, and she is vindicated when the women who had accused her of improper behavior cut their hands upon witnessing Joseph before them. She is thus excused, to some extent, for her lust, and the commentary tradition portrays her as repenting and being married to Joseph in the afterlife. Sex also plays an important role in the story of Mary, serving to emphasize the miraculous nature of Jesus' birth and the difficult position in which she found herself. Mary fears that the angel (q.v.) sent to announce Jesus' birth is going to rape her. After Jesus is born, she is also accused of being a harlot (*baghiyy,* cf. Q 19:20, 28), but the infant Jesus himself speaks up to defend her (cf. Q 19:30 f.).

Descriptions of the afterlife involve elements of sexual fantasy (see ESCHATOLOGY). The believers are promised beautiful female companions to whom they will be wed in paradise. These companions are large-eyed (*ʿīn,* sing. *ʿaynāʾ*), with marked contrast between the whites and the dark pupils (*ḥūr,* sing. *ḥawrāʾ*) and fair-skinned, being likened to pearls and eggs (see HOURIS). They are "of modest gaze" and virgins, not having been touched before by men or jinn (q.v.; Q 37:48-9; 38:52; 55:56, 72; cf. 44:54; 52:20; 56:22). The believers are to be served in paradise by beautiful boys *(ghilmān, wildān)* as well, also likened to pearls (Q 52:24; 76:19; cf. 56:17).

Sheba

Name of the land in south Arabia whose people developed a prosperous trading civilization in the middle of the first millennium B.C.E., marked by the creation of a kingdom alongside other local states: Maʿin, Qatabān and Ḥaḍramawt. Famous for its caravan (q.v.) traffic and trade in incense and rare spices exported to Babylonia, Egypt and the Mediterranean, the region was called "Arabia Felix" by historians of classical antiquity like

Ptolemy, Strabo or Pliny the Elder. The very existence of the inhabitants of Sheba, the Sabaeans — not to be confused with the Sabians (q.v.), who are discussed in the context of their disputed religious practices (cf. Q 2:62; 22:17; 27:22) — is first attested in the Hebrew Bible (1 *Kgs* 10:18-20 and 2 *Chron* 9:17-9) which reports the meeting between Solomon (q.v.; ca. 970-932 B.C.E.) and the legendary Queen of Sheba, known by the name Bilqīs (q.v.) in qurʾānic exegesis and Islamic sacred history (see HISTORY AND THE QURʾĀN; EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). The New Testament also evokes this "event" in Luke 11:31. In the Qurʾān, a whole sūra (q.v.) bears the name of "Sheba" (Q 34). It specifically refers to the urban and trading culture of the Sabaeans (Q 34:15-9) for which, in fact, the archeology bears witness through buildings, steles, altars and inscriptions (see ARCHAEOLOGY AND THE QURʾĀN). The latter attest the local language affiliated with Arabic, designated by the terms "south Semitic" or "south Arabian," from which many qurʾānic names and nouns derive (see FOREIGN VOCABULARY). This language resisted the regional spread of Aramaic until the rise of Islam, when it was replaced by Arabic. Q 34:15-6 point out the wealth of the country of Sheba, with its skillfully domesticated landscape endowed with two luxurious gardens and irrigation systems (see GARDEN), as God's sign (see SIGNS). Verse 16, in particular, alludes to the flood caused by the break of the dam of al-ʿArim (q.v.; see also PUNISHMENT STORIES) that occurred circa 542 C.E. in the Yemeni city of Mārib (see PRE-ISLAMIC ARABIA AND THE QURʾĀN).

The Qurʾān provides the Sabaeans with a religious status comparable to that of the Jews and Christians (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY), for some of them became believers (Q 34:20; see BELIEF AND UNBELIEF) as did their queen (Q 27:44). Q 27 (Sūrat al-Naml, "The Ant") tells the story of the Queen of Sheba's conversion during her reception by Solomon in his fabled palace with a transparent glass floor (see MYTHS AND LEGENDS IN THE QURʾĀN). This qurʾānic narrative (see NARRATIVES; PARABLES) yielded abundant commentaries and stories related in the books on the history of the prophets (Rāzī, *Tafsīr,* xxiv, 200; Ṭabarī, *Taʾrīkh,* i, 684; id., *Tafsīr,* xix, 472-5, ad Q 27:44; Thaʿlabī, *Qiṣaṣ,* 312-3; see PROPHETS AND PROPHETHOOD). These texts evince a particular concern with the illusion effected by the enigmatic glass device, when it appeared to be a pool with which Solomon (q.v.) tested the queen in order to lead her to convert (see TRIAL). Contemporary exegesis demonstrates how the aesthetic cognitive function of the narrative of the Queen of Sheba's conversion complements its main religious message (Gonzalez, *Le piège,* 26-32; id., *Beauty and Islam,* 26-31).

Finally, further details of Sheba are also known through an early (but post-qurʾānic) account related by the historian and commentator Wahb b. Munabbih (d. 110/728 or 114/732) and preserved in Ibn Hishām's (d. ca. 213/828) *Kitāb al-Tījān fī mulūk Ḥimyār*. His report assimilates the kingdom of the Ḥimyarites, who were ruling south Arabia in the third century C.E., to the Sabaeans and descendants of the prophet Hūd (q.v.). In the Qurʾān, Hūd was sent to the Arab tribe of the ʿĀd (q.v.) before Muḥammad, but they rejected him (Q 7:65-72; 11:50-60; 22:42; 26:123-39; 38:12-4).

Sheets

Flat writing support, made of papyrus *(bardī),* parchment *(raqq, riqq),* leather *(adīm, jild)* or, since the late second/eighth century, paper *(kāghadh),* and used for recording mostly religious, legal and historical texts during the pre- and early Islamic periods (see AGE OF IGNORANCE; PRE-ISLAMIC ARABIA AND THE QUR'ĀN). The term "sheets" (*ṣuḥuf,* sing. *ṣaḥīfa*) extends to the (whole or partial) texts thus recorded, synonymous with *kitāb* (pl. *kutub;* see BOOK), *daftar* (pl. *dafātir*) and *kurrāsa* (pl. *karārīs*). Etymologically derived from South Semitic *ṣaḥafa,* "to write," *ṣaḥīfa* literally means "[a thing] written upon" (Nöldeke, *GQ,* ii, 24 n. 4; for qurʾānic attestations of terms relating to the various media used in writing, see SCROLLS; WRITING AND WRITING MATERIALS; INSTRUMENTS).

Like *qirṭās* and *waraq* ("sheet, leaf"), *ṣaḥīfa* does not designate a specific writing material; but unlike both these terms, it also does not specify quantity. Instead, it denotes anything from a single to multiple sheets, the latter rolled up as a scroll *(darj, majalla)* or folded and sewn together as a notebook (Abbott, *Studies I,* 22-3, 57-9, 66). Sheets were kept in scabbards or gathered in bundles, bags, boxes, and other containers. Bound between two covers *(lawḥān, daffatān)* they become a codex (*muṣḥaf;* q.v.), a term early restricted to the Qurʾān. In the plural, *ṣuḥuf* may comprise the complete Hebrew or Muslim scripture or a scholar's collected papers.

In pre-Islamic times, a *ṣaḥīfa* might contain a letter, a legal contract, a poem, an oration, or a collection of sayings. In the Qurʾān, *ṣuḥuf* refer to the Hebrew scripture (see SCRIPTURE AND THE QURʾĀN), the Qurʾān itself, and metaphorically to the divine records of human deeds (see HEAVENLY BOOK). According to tradition, the first redaction of the Qurʾān was comprised of *ṣuḥuf* written by the Prophet's secretary Zayd b. Thābit (d. ca. 42-56/662-76) and preserved by ʿUmar's daughter Ḥafṣa (q.v.); they formed in turn the core for the official redaction led by the same Zayd at the behest of ʿUthmān (see COLLECTION OF THE QURʾĀN; CODICES OF THE QURʾĀN). Ibn Hishām's *Sīra* attributes ʿUmar's conversion (in one of two accounts) to his reading of a *ṣaḥīfa* containing Q 20 (Sūrat Ṭā Hā; Ibn Hishām, *Sīra,* i,

334-5). In the sunna (q.v.), *ṣaḥīfa* refers not only to the Qurʾān but also to early ḥadīth collections (see ḤADĪTH AND THE QURʾĀN) by Companions (see COMPANIONS OF THE PROPHET) and Successors, written ordinances by the Prophet (both of which were handed down in families from one generation to the next) and other writing (Wensinck, *Concordance,* s.v.). Ḥadīth collections such as that of Ibn ʿAbbās (d. 68/687), or the *ṣaḥīfat al-ṣādiqa* of ʿAbdallāh b. ʿAmr b. al-ʿĀṣ (d. 65/684), were numerous (Goldziher, *MS,* ii, 9-11, 194-6; Sezgin, *GAS,* i, 84-90; Motzki, *Anfänge,* 191 n. 588; Azami, *Studies,* 43-4). The Umayyad caliphs ʿUmar II (r. 99-101/717-20) and Hishām (r. 105-25/724-43) made the first efforts to collect these with the assistance of the traditionist al-Zuhrī (d. 124/742). *Ṣuḥuf* further served to record historical accounts (*akhbār;* see HISTORY AND THE QURʾĀN) about the creation (q.v.), pre-Islamic legends (see MYTHS AND LEGENDS IN THE QURʾĀN), the life of the Prophet (see SĪRA AND THE QURʾĀN), and the early Muslim community (see e.g. Abbott, *Studies I;* see COMMUNITY AND SOCIETY IN THE QURʾĀN) as well as works of linguistics and poetry (see GRAMMAR AND THE QURʾĀN; POETRY AND POETS). The earliest extant specimens of such works on papyrus and paper date to the late second/eighth and third/ninth century (see ʿAbdallāh b. Wahb, d. 197/812; cf. Abbott, *Studies I*); others survive independently in later copies (Hammām b. Munabbih, d. 101/719; cf. Azami, *Studies,* appendix) or as part of larger collections, as, for instance, Ibn Ḥanbal's (d. 241/855) *Musnad* (see LAW AND THE QURʾĀN).

A *ṣaḥīfa* served to jot down information as an aid to memory (see ORALITY AND WRITING IN ARABIA). It played an important part in the practice of teaching and transmission, which followed procedures such as in-class audition *(samāʿ)* with subsequent recording at home, in-class dictation *(imlāʾ),* reading an existing copy back to the teacher for correction *(ʿarḍ)* or receiving from him a written copy (*munāwala;* cf. al-Samʿānī, *Adab al-imlāʾ;* see TEACHING AND PREACHING THE QURʾĀN; RECITATION OF THE QURʾĀN). Preserved *ṣuḥuf* of the late second/eighth century show a concern for precision in the use of diacritics, vowel markers, *muhmal* signs, symbols for ḥadīth division and annotations (see Abbott, *Studies I,* document 6 and *Studies II,* document 6; see ORNAMENTATION AND ILLUMINATION; MANUSCRIPTS OF THE QURʾĀN). Typologically the unstructured *ṣaḥīfa* belongs to the formative period of Arabic-Islamic book culture; it precedes the epistle as well as the larger ḥadīth collection *(jāmiʿ),* organized by topic *(muṣannaf, mubawwab)* or source *(musnad),* which some scholars prepared for their students from the late second/eighth century onward. Nonetheless, the term is occasionally applied to a student's whole or partial copy of a thematically organized work (equivalent to *nuskha, juzʾ*). Only from the third/ninth century, with its mass production of manuscript books in the proper sense with title, preface, overall plan, cross references, and addresses of the reader is the *ṣaḥīfa* truly superseded (Schoeler, *Écrire,* 102-7).

Repeated bans on the writing down of ḥadīth by the Prophet and the four "rightly guided" caliphs *(rāshidūn),* as well as the Umayyad caliphs, together with the claims of some scholars of never having used books, conflict with the more frequently cited permission to do so, as well as accounts about the use of writing beginning with Muḥammad's generation (Baghdādī, *Taqyīd;* see ILLITERACY). Political motives aside (see POLITICS AND THE QURʾĀN), underlying this apparent contradiction is a bimodal, interconnected use of memory (q.v.) and writing for mutual correction, with the latter increasing in importance over time (Rāmahurmuzī, *Muḥaddith,* nos. 370-417). This notwithstanding, oral performance and teaching never ceased com-

pletely and a good memory continued to be an adornment for a scholar in religion, law and philology. Conversely, a student who learned only from written notes risked being branded a *ṣuḥufī,* i.e. someone who misunderstood and mispronounced his texts for lack of an accompanying oral transmission (Schoeler, *Écrire,* 40, 120-1; see READINGS OF THE QUR'ĀN).

As the earliest source for the sunna, *ṣuḥuf* have received great attention. No preserved *ṣaḥīfa,* however, antedates the late second/eighth century, and the authentic survival of the *ṣuḥuf*'s ḥadīth content and notably the chains of transmitters (*isnād,* pl. *asānīd*) in later literature has been challenged in the critical studies of I. Goldziher and J. Schacht (see response by Azami, *Studies,* 215-67) and, more recently, in those of J. Wansbrough, P. Crone and M. Cook. Taking account of the latter scholars' reservations, H. Motzki and G. Schoeler have proposed careful reviews of the sources for jurisprudence and historiography, respectively (on this debate, see Motzki, *Anfänge,* 22-49; Schoeler, *Charakter,* 5-24).

Shekhinah

The earthly manifestation of God's presence, a concept common to the Bible and the Qurʾān. Occurring in six verses, *al-sakīna* derives from God and is usually "sent down" to Muḥammad and/or his fellow believers. The Arabic root, *s-k-n,* denotes "stillness, quiet, calm, being motionless," as in Q 6:96: "[God] has made the night [for] stillness/quiet" (see also Q 10:67; 27:86; 28:72; 40:61, etc.), with a secondary meaning (sometimes expressed in the causative fourth form) of "to settle down, to dwell in a habitation" (Q 2:35; 14:37; 17:104, etc.). This parallels the Hebrew/Aramaic/Syriac triliteral root *sh-k-n,* "to settle down, or dwell." The Arabic term *sakīna* also parallels the Hebrew/Aramaic *shᵉkhīnā (shᵉkhīntā)* both

linguistically and semantically. Both represent, in the general sense, a divine "in-dwelling."

All qurʾānic renderings of the term *sakīna* occur within militant contexts (see FIGHTING; WAR; EXPEDITIONS AND BATTLES). In Q 2:246-8, the Israelites (see CHILDREN OF ISRAEL) asked their unnamed prophet to raise up a king to lead them in battle (cf. 1 *Sam* 8 f.; see KINGS AND RULERS; PROPHETS AND PROPHETHOOD). When he informs them that God has chosen Saul (q.v.; Ṭālūt), they object because of his lowly stature. In order to prove Saul's divinely chosen status, "Their prophet said to them, the sign of his kingship will be that the ark (q.v.) will come to you containing a *sakīna* from your lord (q.v.) and a remnant of what the family of Moses (q.v.) and the family of Aaron (q.v.) left behind" (cf. *Exod* 25:8).

In three cases, *sakīna* is associated with invisible armies that God sends down from heaven (see HEAVEN AND SKY). In Q 48:4 (after God has just given Muḥammad a clear military victory [q.v.] in a preceding verse: *fatḥ mubīn,* Q 48:1), "He [God] is the one who sent down the *sakīna* into the hearts of the believers (see HEART; BELIEF AND UNBELIEF) to add faith (q.v.; or, *īmān*$^{an?}$) to their faith. To God are the armies of the heavens and the earth…." In Q 9:26, after victories followed by defeat, "Then God sent down his *sakīna* to his messenger (q.v.) and onto the believers and sent down armies you could not see…." In Q 9:40, "… So God sent down his *sakīna* to him [presumably Muḥammad] and supported him with armies that you cannot see…."

In Q 48:18, "God was pleased with the believers when they swore allegiance to you [Muḥammad] beneath the tree (see CONTRACTS AND ALLIANCES; OATHS), and he knew what was in their hearts. So he sent down the *sakīna* to them and rewarded them with an approaching victory." Q 48:26 follows within the same general context of warring and of tension with unbelievers: "When those who disbelieve established scorn in their hearts, scorn of the Age of Ignorance (q.v.; *jāhiliyya*), then God sent down his *sakīna* to his messenger and onto the believers, but required of them a word of piety (q.v.; *al-taqwā*). They were worthy of it and fit for it; and God knows everything."

Traditional Muslim scholarship generally holds that *sakīna* means "quiet" or "tranquility" in most of these verses, based on the Arabic root and buttressed especially by Q 48:26; but because this explanation clearly does not fit Q 2:248 and remains problematic in all but Q 48:26, the exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) also rendered it as *naṣr,* meaning "aid," "victory," or even "conquest." Western scholarship considers the term to have derived from the rabbinic concept of *shᵉkhīna,* based on Q 2:248, but has had difficulty fitting such a concept into all the other verses.

In every context the *sakīna* is sent down in order to demonstrate God's support for his chosen agent (Saul or Muḥammad) in the face of unbelief, sometimes even among the agent's followers (see OPPOSITION TO MUḤAMMAD; HYPOCRITES AND HYPOCRISY). The contextual meaning of the term therefore denotes divine aid and proof of the authenticity of God's agent in the face of disbelief and adversity, and this aid or proof (or divine presence) comes in the form of divine victory in battle or its potentiality. This representation would fit all qurʾānic contexts.

It is not clear whether *sakīna* in its qurʾānic loci is abstract or has a concrete, tangible existence. In the secondary literature, however, it is clearly represented as the latter. Al-Azraqī (d. ca. 250/865; *Akhbār Makka,* 28) defines the *sakīna* as *rīḥ*

khajūj lahā raʾs, "a gale wind with a head," in reference to the extraordinary being that led Abraham (q.v.) to Mecca (q.v.; cf. *Babylonian Talmud, Megilloth,* 29a: "Wherever [Israel] was exiled, the *shᵉkhīna* went with them"). We find the same and alternative, occasionally sometimes quite fanciful definitions of a sometimes frightening but benevolent being in other works as well (e.g. Ṭabarī, *Taʾrīkh,* i, 275; id., *Tafsīr,* ii, 611; Thaʿlabī *Qiṣaṣ,* 87; Ibn al-Athīr, *Kāmil,* i, 106; *Lisān al-ʿArab,* xiii, 213). *Sakīna* is attested in pre-Islamic sources as meaning quiet and calm, and this may have been associated also with a wind (see AIR AND WIND). The Islamic legends therefore describe an incarnate wind that had become associated with the concept of the *shᵉkhīna* as the latter became integrated into Arabian culture (see PRE-ISLAMIC ARABIA AND THE QURʾĀN; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC). In the Arabian context, this incarnate and divinely sent *sakīna* wind took on martial power in order to protect its human beneficiaries and bring aid and even victory, especially against the doubters (see UNCERTAINTY) or unbelievers. Finally, al-Bukhārī (d. 256/870) records a tradition that associates this divine presence with the recitation of the Qurʾān (q.v.; cf. *Ṣaḥīḥ,* bk. 61 *[K. Faḍāʾil al-Qurʾān],* no. 531).

Shīʿa

Literally, "party/followers." The term *shīʿa* occurs eleven times in the Qurʾān, with the first use in Sūrat al-Anʿām (Q 6, "The Cattle") and the last in Sūrat al-Qamar (Q 54, "The Moon"). The word itself is lexically derived from the Arabic verb *shāʿa, yashīʿu,* meaning "to spread, disseminate, divulge, publicize or become known," and in this sense occurs once, in Q 24:19: "Those who love to spread *(an tashīʿa)* scandal among the believers…." The primary meaning of the term *shīʿa* (pl. *shiyaʿ* and *ashyāʿ*) that is conveyed in the Qurʾān is that of factions, communities, people with similar views and faith, followers and supporters, as portrayed in Q 37:83, "Verily Abraham (q.v.) was surely among the followers [of Noah; q.v.]" (*wa-inna min shīʿatihi la-Ibrāhīm;* see PARTIES AND FACTIONS).

Q 6:65 speaks of God's power to reduce humankind to factions *(aw yalbisakum shiyaʿan),* with exegetes offering varying opinions as to whether *shiyaʿ* meant the Jews and Christians in particular or the consequence of arbitrary human conflict (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY; RELIGIOUS PLURALISM AND THE QURʾĀN). Al-Qummī (fl. mid fourth/tenth cent.; *Tafsīr,* ad loc.) alludes to religious differences and ʿAlī b.

Muḥammad b. al-Walīd (d. 612/1215; *Tāj,* ad loc.) to community dispute after the Prophet. Q 6:159 refers to those who split their religion and become disparate groups *(kānū shiyaʿan),* and Q 30:31-2 exhorts believers not to be part of them (see RELIGION; BELIEF AND UNBELIEF). Q 28:4 addresses Pharaoh (q.v.) who arrogantly created divisions among his people *(wajaʿala ahlahā shiyaʿan)*. The plural form *ashyāʿ* in Q 34:54 as interpreted by al-Ṭabarī (d. 310/923; *Tafsīr,* ad Q 54:51), refers to those who had intensely questioned the truth (q.v.), while Q 54:51 addresses the polytheists (see POLYTHEISM AND ATHEISM) among Quraysh (q.v.), warning them about how communities in the past had been destroyed (*kamā fuʿila bi-ashyāʿihim;* see PUNISHMENT STORIES).

Q 15:10, on the other hand, employs the term to portray communities to whom messengers (see MESSENGER) had been sent: "Indeed, we sent [messengers] before you among communities of the past" *(arsalnā min qablika fī shiyaʿ al-awwalīna)*. Twice in Q 28:15 it is used for Moses (q.v.), exegetes agreeing that *shīʿatihi* meant the religion of Moses, just as they explain *min shīʿatihi* in Q 37:83 as Abraham following Noah's religion. In Ibn al-Walīd's *Tāj al-aqāʾid,* these verses appear inter-textually to reflect religion as affection for ʿAlī (see ʿALĪ B. ABĪ ṬĀLIB) alongside the prophetic tradition regarding Noah's ark (q.v.), which states that true believers are henceforth called *shīʿa*.

Thus, in four instances (Q 6:65, 159; 28:4; 30:32), the term *shīʿa* has been used to convey the meaning of factions while on four other occasions the word is applied to ancient communities of faith to whom prophets were sent (q.v.; Q 15:10; 28:15 twice; 37:83; see PROPHETS AND PROPHETHOOD). When the Qurʾān speaks of *shiyaʿ al-awwalīn* and *shīʿatihi,* it essentially refers to previously rightly-guided communities (see GENERATIONS), but *kānū shiyaʿan* is used in the divisive sense, while the plural *ashyāʿ* is applied to formerly erring people (see ERROR; ASTRAY), and *min kullī shīʿatin* in Q 19:69 means communities in general.

In post-qurʾānic Arabic writings, the word *shīʿa* can be used in either a qualified or unqualified form, as definite or indefinite. The word can be used in a construct phrase to indicate the "followers" of a particular individual: *shīʿat Muʿāwiya,* for example. Invariably, when the term is found with the definite article *(al-)* and no other qualifier, the followers of ʿAlī are meant: *al-shīʿa* are the "followers [of ʿAlī]" *(shīʿat ʿAlī)*, those who, as described in Abū Ḥātim al-Rāzī's (d. ca. 322/934) *Kitāb al-Zīna,* were intimate with ʿAlī during the lifetime of the Prophet (see also SHĪʿISM AND THE QURʾĀN; FAMILY OF THE PROPHET; PEOPLE OF THE HOUSE; POLITICS AND THE QURʾĀN).

Shīʿism and the Qurʾān

At present, the Shīʿīs, who differ from the Sunnī majority concerning the legitimacy of the political and spiritual succession to Muḥammad, comprise about ten percent of the Islamic community. Like the Sunnīs, they enjoy a rich tradition of scholarship in Islamic sciences, including both ḥadīth collection and classification as well as qurʾānic exegesis. Just as their conception of the legitimate leadership of the Muslim community evolved differently from that of their Sunnī counterparts, so, too, did their understanding of the Qurʾān itself. The following, therefore, will discuss, first, the attitude of the Shīʿa towards the Qurʾān and then provide an overview of the principles and methods of Shīʿī exegesis. It will conclude with a presentation of some of the major Shīʿī exegetes and their works.

The attitude of the Shīʿa to the Qurʾān

One of the bones of contention between Sunnī and Shīʿī Islam concerns the integrity of the Qurʾān. The Shīʿa (q.v.) disputed the canonical validity of the ʿUthmānic codex, the *textus receptus,* of the Qurʾān (see COLLECTION OF THE QURʾĀN; CODICES OF THE QURʾĀN) and cast doubt on the quality of its editing, alleging political tendentiousness on the part of the editors — namely, the three first caliphs (see CALIPH), particularly the third of them, ʿUthmān b. ʿAffān (r. 23-35/644-56). Shīʿī (mainly Imāmī) criticism of the qurʾānic text was most severe in the first centuries of Islam (see POLITICS AND THE QURʾĀN; TEXTUAL CRITICISM OF THE QURʾĀN). The editors were accused of falsification *(taḥrīf)* of the qurʾānic text by both the omission of some phrases and the addition of others (see REVISION AND ALTERATION). Moreover, the claim that the Qurʾān had been falsified is one of the principal arguments to which early Shīʿī tradition resorted to explain the absence of any explicit reference to the Shīʿa in the Qurʾān.

In Shīʿī qurʾānic commentaries many traditions are found accusing the Companions of the Prophet (q.v.) of violating the integrity of the qurʾānic text. In one of these traditions, cited in the commentary *(tafsīr)* ascribed to the Imām Ḥasan al-ʿAskarī (d. 260/873-4), it is stated that "Those whose ambitions overcame their wisdom (*alladhīna ghalabat ahwāʾuhum ʿuqūlahum,* i.e. the *ṣaḥāba*) falsified *(ḥarrafū)* the true meaning of God's book and altered it *(wa-ghayyarūhu)*" (ʿAskarī, *Tafsīr,* 95; cf. Kohlberg, Some notes, 212 and n. 37). A treasure trove of such traditions is *Kitāb al-Qiṛāʾāt* (known also as *Kitāb al-Tanzīl wa-l-taḥrīf*) by Aḥmad b. Muḥammad al-Sayyārī (fl. late third/ninth century), of which an annotated edition is in preparation by M.A. Amir-Moezzi and E. Kohlberg. A similar tradition — which, however, does not blame the Companions of the Prophet for the falsification — is found in the Qurʾān commentary of al-ʿAyyāshī (d. ca. 320/932): "Had the book of God not been subject to additions and omissions, our righteousness would not have been hidden from any [person] of wisdom" (*lawlā annahu zīda fī kitāb Allāh wa-nuqiṣa minhu mā khafiya ḥaqqunā ʿalā dhī ḥijan;* ʿAyyāshī, *Tafsīr,* i, 25). In a similar tradition it is stated: "The [Qurʾān] contained the names of [various] persons, but these names have been removed" (*kānat fīhi asmāʾu l-rijāl fa-ulqiyat;* ibid., i, 24). The commentator does not attempt to validate this general claim with examples of texts that, in his opinion, have been altered.

Just how unspecific these traditions are can be demonstrated by an account ascribed to Imām Jaʿfar al-Ṣādiq (d. 148/765), cited in relation to verse Q 2:79: "On leaving the house of the [caliph] ʿUthmān, ʿAbdallāh b. ʿAmr b. al-ʿĀṣ met

the Commander of the Faithful [ʿAlī; see ʿALĪ B. ABĪ ṬĀLIB] and said to him: 'O ʿAlī, we have spent the night on a matter with which we hope God will strengthen this community.' ʿAlī answered him: 'I know how you spent the night: you have falsified, altered and changed *(ḥarraftum wa-ghayyartum wa-baddaltum)* nine hundred letters/words *(ḥarf);* falsified three hundred letters/words, changed three hundred letters/words and altered three hundred letters/words. [And then ʿAlī added this verse, Q 2:79]: Woe to those who write the book (q.v.) with their hands and then say, 'this is from God' " (*fa-waylun lilladhīna yaktubna l-kitāba bi-aydīhim thumma yaqūlūna hādhā min ʿindi llāhi;* ibid., i, 66). It is obvious that the figures quoted here are not to be taken at face value, just as the three different verbs used to describe the editorial activity (*ḥarrafa, ghayyara* and *baddala*) in no way indicate discrete falsification techniques (see FORGERY; CORRUPTION).

Numerous Shīʿī utterances refer to the nature of the original text of the Qurʾān prior to its alleged corruption by the Sunnīs. In a well-known tradition, which appears in the writings of most early Imāmī commentators, Imām Muḥammad al-Bāqir (d. ca 114/732) declares: "The Qurʾān was revealed [consisting of] four parts: One part concerning us [the Shīʿa], one part concerning our enemies, one part commandments (q.v.) and regulations (*farāʾiḍ wa-aḥkām;* see VIRTUES AND VICES, COMMANDING AND FORBIDDING; BOUNDARIES AND PRECEPTS; LAW AND THE QURʾĀN) and one part customs and parables (*sunan wa-amthāl;* see PARABLE). And the exalted parts of the Qurʾān refer to us" (*wa-lanā karāʾim al-Qurʾān;* ibid., i, 20 and 21 where a tripartite division is suggested; cf. also the following sources, in which allusion is made to division into either three or four parts: Sayyārī, *Qirāʾāt,* tradition no. 11; Furāt, *Tafsīr,* 1, 2; Kulaynī, *Kāfī,* ii, 627-8; Goldziher, *Richtungen,* 288). Other accounts refer to the length of the original Qurʾān. It is believed to have contained 17,000 verses (q.v.; Sayyārī, *Qirāʾāt,* tradition no. 16). Q 33 is given as an example of a text that in the original Qurʾān was two and two-third times longer than Sūrat al-Baqara ("The Cow," Q 2; ibid., tradition no. 418; see SŪRAS), which in turn was longer than the version in the ʿUthmānic codex (ibid., tradition no. 421).

The discrepancy between the qurʾānic text and the Shīʿī viewpoint is not necessarily one that a "correct" interpretation can remedy. This discrepancy results from a textual gap between the incomplete qurʾānic text found in the possession of the Sunnīs and the ideal text that, according to Shīʿī belief, is no longer in anyone's possession but will be revealed by the Mahdī in the eschatological era (see ESCHATOLOGY).

Later, beginning in the fourth/tenth century, in the wake of the political and social changes that Shīʿism underwent, a tendency to moderation became apparent, and some of the criticism became muted. Imāmī-Shīʿī scholars — among them Muḥammad b. al-Nuʿmān, better known as al-Shaykh al-Mufīd (d. 413/1022), al-Sharīf al-Murtaḍā (d. 436/1044), Abū Jaʿfar al-Ṭūsī (d. 460/1067), one of the eminent Imāmī-Shīʿī exegetes, and Abū ʿAlī l-Faḍl b. Ḥasan al-Ṭabarsī (d. 548/1153) — held that although the text of the Qurʾān as we have it is incomplete, it does not contain any falsifications. In other words, what is found in the ʿUthmānic codex is the truth but not the whole truth since it does not include all the revelations made to Muḥammad (see REVELATION AND INSPIRATION). (On the various positions taken by Imāmī-Shīʿīs on this question, see Kohlberg, Some notes.)

Despite the moderate views expressed by these and other Shīʿī scholars, the opinion that the Qurʾān was falsified has been perpetuated throughout the history of Shīʿism and persists to this day. Prominent scholars in Iran during the Ṣafavid period — including Muḥammad b. Murtaḍā al-Kāshānī, known as Muḥsin al-Fayḍ (d. 1091/1680), Hāshim b. Sulaymān al-Baḥrānī (d. 1107/1693 or 1109/1697), and Muḥammad Bāqir al-Majlisī (d. 1110/1699 or 1111/1700) — revived the debate about the integrity of the Qurʾān, basing their anti-Sunnī polemics upon traditions extant in the early Shīʿī corpus of *tafsīr* and ḥadīth (see ḤADĪTH AND THE QURʾĀN).

One of the most radical works ever written on this matter is the *Faṣl al-khiṭāb fī taḥrīf kitāb rabb al-arbāb* by the eminent Shīʿī scholar Ḥusayn Taqī Nūrī l-Ṭabarsī (d. 1320/1902). In this work Nūrī brought together a great number of traditions referring to the question of the falsification of the Qurʾān. A recurrent tradition on which Nūrī bases his argument in favor of *taḥrīf* draws an analogy between the Shīʿīs and the Jews (a notion that in itself is very common in Shīʿī literature): "Just as the Jews and the Christians (see JEWS AND JUDAISM; CHRISTIANS AND CHRSITIANITY; PEOPLE OF THE BOOK) altered and falsified the book of their prophet [sic; see PROPHETS AND PROPHETHOOD] after him, this community [i.e. the Muslims] shall alter and falsify the Qurʾān after our Prophet — may God bless him and his family — for everything that happened to the Children of Israel (q.v.) is bound to happen to this community" (*inna l-yahūd wa-l-naṣārā ghayyarū wa-ḥarrafū kitāb nabiyyihim baʿdahu fa-hādhihi l-umma ayḍan lā budda wa-an yughayyirū l-Qurʾān baʿda nabiyyinā ṣallā llāh ʿalayhi wa-ahlihi li-anna kulla mā waqaʿa fī banī Isrāʾīl lā budda wa-an yaqaʿa fī hādhihi l-umma;* Nūrī, *Faṣl,* 35; whence Brunner, The dispute, 439; see COMMUNITY AND SOCIETY IN THE QURʾĀN). It should be stressed, however, that Nūrī's extreme anti-Sunnī tone was criticized even by the Shīʿī scholars of his day. Nevertheless, the question of *taḥrīf* never ceased to be a burning issue in Shīʿī-Sunnī discourse, to the point that "there is hardly a new book on the general subject of the qurʾānic sciences whose author can afford not to include a long chapter dealing with *taḥrīf*" (Brunner, The dispute, 445; see TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY).

Significant as it may be, the claim of forgery — i.e. that issues relating to the Shīʿa were deliberately omitted from the Qurʾān — is not the sole argument used by Shīʿī authors to explain the absence of any explicit mention of the *ahl al-bayt*/Shīʿa in the Qurʾān (see PEOPLE OF THE HOUSE). Two additional arguments are (a) the Qurʾān contains hidden meanings, which the exegete should decipher (see POLYSEMY) and (b) the Qurʾān teaches principles while tradition expounds their details.

The most common approach explaining the absence of references to the Shīʿa in the Qurʾān asserts that it is in the nature of the Qurʾān to speak in symbols and codes (see METAPHOR; SIMILES; SYMBOLIC IMAGERY) and according to this approach it should come as no surprise that the Qurʾān does not mention the Shīʿa explicitly: those who know how to read between the lines can decipher the passages that allude to the Shīʿa. This is the principle underlying the broad attempt to interpret many obscure qurʾānic verses *(mubhamāt)* as well as some quite clear ones, as referring to the Shīʿa. Even a cursory reading of the early Shīʿī *tafsīr*s reveals how wholeheartedly this approach was embraced by Shīʿī commentators.

The other approach — that the Qurʾān

teaches principles while tradition expounds their details — is expressed, for example, in the answer al-Bāqir gave to one of his disciples concerning the reason ʿAlī is not mentioned in the Qurʾān:

> Say to them [i.e. to those who put this question to you]: God revealed to his messenger [the verses about] prayer (q.v.) and did not [explicitly] mention three or four [prayers] until this was interpreted by the messenger. So also he revealed [the verses about] the pilgrimage (q.v.), but did not reveal the injunction "encircle [the Kaʿba (q.v.)] seven times." So too is the meaning of the verse [Q 4:59] "Obey God and obey the messenger and those in authority (q.v.) among you." This verse was revealed in relation to ʿAlī, Ḥasan and Ḥusayn (ʿAyyāshī, *Tafsīr,* i, 276; see OBEDIENCE; KINGS AND RULERS).

According to this tradition, the reason ʿAlī and his disciples are not mentioned explicitly in the Qurʾān is that the Qurʾān, by its very nature, restricts itself to general principles; it presents religious laws and general rulings yet does not go into details, a prerogative reserved for the interpreter. This tripartite argumentation in no way suggests that these were three separate approaches to the problem, each exclusive of the other. Rather, the three together demonstrate the problems that Shīʿī exegetes faced and the attempts they made to resolve them.

Principles and methods of Shīʿī exegesis

Shīʿī exegetes, perhaps even more than their Sunnī counterparts, support their distinctive views by reference to qurʾānic proof-texts (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). A major distinction is that the Shīʿī exegetes attempt to find in the Qurʾān explicit references to such themes as the imāms' (see IMĀM) supernatural and mystical qualities, their authority to interpret the Qurʾān and other religious scriptures, or such major Shīʿī doctrines as the duty of loyalty (q.v.) to the imāms *(walāya)* and dissociation from their enemies *(barāʾa)*.

A fundamental principle of Shīʿī exegetical tradition is that the authority to interpret the Qurʾān is reserved for ʿAlī and his descendants, the imāms. In a well-known ḥadīth, cited in both Sunnī and Shīʿī sources, Muḥammad is said to have declared: "There is one among you who will fight for the [correct] interpretation of the Qurʾān just as I myself fought for its revelation, and he is ʿAlī b. Abī Ṭālib" (*inna fī-kum man yuqātilu ʿalā taʾwīl al-Qurʾān kamā qātaltu ʿalā tanzīlihi wa-huwa ʿAlī ibn Abī Ṭālib;* ʿAyyāshī, *Tafsīr,* i, 27; Shahrastānī, *Milal,* 189; and cf. Gimaret and Monnot, *Livre,* i, 543, and n. 231, where further sources are cited; also Poonawala, Ismāʿīlī *taʾwīl,* 209-10). This idea of ʿAlī and (implicitly) also his descendants being presented by the Prophet himself as interpreters of the Qurʾān is also deduced from other traditions, the most famous of which is "the tradition about the two weighty things" *(ḥadīth al-thaqalayn),* i.e. the two things that Muḥammad is reported to have bequeathed to his believers. There are significant differences between the Sunnī and Shīʿī exegetical traditions regarding both the identity of these two "things" and the interpretation of the ḥadīth. According to one version, they are the book of God *(kitāb Allāh)* and the Prophet's practice (*sunnat nabiyyihi,* Ibn Isḥāq-Guillaume, 651; see SUNNA). Other versions of this tradition, recorded in both Sunnī and Shīʿī works, mention as the *thaqalān* the Qurʾān and the family of the Prophet (q.v.; *ahl al-bayt*). The explanation given in Shīʿī sources as to the discrepancy between the two versions of this tradition is that while in Sunnī exegesis the practice

of the Prophet is considered a tool for interpreting the Qurʾān (and is therefore mentioned in conjunction with the book itself), in Shīʿī tradition the family of the Prophet plays the equivalent role: only through the mediation of the imāms, the descendants of the Prophet, are both the exoteric *(ẓāhir)* and the esoteric *(bāṭin)* meanings of the qurʾānic text revealed to believers. The *thaqalān* are further viewed as being forever intertwined with each other *(lan yaftariqā)* or, in the words of al-Ṭūsī (d. 460/1067): "This tradition proves that [the Qurʾān] exists in every generation, since it is unlikely that [Muḥammad] would order us to keep something which we cannot keep, just as the family of the Prophet, and those we are ordered to follow, are present at all times" (Ṭūsī, *Tibyān,* i, 3-4). The distance from here to the creation of the metaphor describing the imāms as "the speaking book of God" *(kitāb Allāh al-nāṭiq)* is short indeed (see e.g. Bursī, *Mashāriq,* 135; Ayoub, The speaking Qurʾān, 183, n. 17; Poonawala, Ismāʿīlī *taʾwīl,* 200).

The authority of the imāms as interpreters of the Qurʾān is reiterated in many traditions other than the *ḥadīth al-thaqalayn*. One tradition defining the many functions of the imāms includes their role as interpreters of the Qurʾān: "We know how to interpret the book [i.e. the Qurʾān] and how to speak clearly" (*naʿrifu taʾwīl al-kitāb wa-faṣl al-khiṭāb;* ʿAyyāshī, *Tafsīr,* i, 28).

These as well as numerous other traditions have but one purpose — to make clear that those qualified to interpret the Qurʾān are the imāms, and that this right was bestowed upon them directly by God. In the absence of the imāms, the duty of the text's interpreters is restricted to preserving traditions in their name and making these available to believers (see TEACHING AND PREACHING THE QURʾĀN). The interpreters are thus no more than a vehicle and, at least theoretically, are not authorized to pronounce their own views (ibid., i, 27; Qummī, *Tafsīr,* ii, 397).

Among Shīʿīs, as among other religious circles and groups operating on the fringes of society, allegory, typology and secret codes became favorite methods of interpreting the Qurʾān. Nevertheless, only heterodox factions such as the Nuṣayrīs and the Druze (see DRUZES) went so far as to view the inner meaning of the Qurʾān as the exclusive, binding authority. At times such techniques derive from an elitist outlook, one which maintains that religious secrets (q.v.; see also HIDDEN AND THE HIDDEN) should be concealed from the masses and be the unique privilege of the elect. Sometimes it derives from an existential necessity: religious and ideological minorities may find themselves in danger as a consequence of overt and careless expression of ideas unpalatable to the ruling majority (see HERESY; THEOLOGY AND THE QURʾĀN). And indeed, the fact that many Shīʿī factions throughout their history flourished under Sunnī rule required the use of survival techniques both in everyday life and when committing their religious doctrines to writing. Shīʿī scholars had to walk a fine line: on the one hand, they wished to give whenever possible expression to their real intentions; on the other hand, they had to make sure that the expression of such ideas did not arouse the wrath of their Sunnī opponents. This is one of the clearest manifestations of the doctrine of precautionary dissimulation (q.v.; *taqiyya*).

An illustration of the allegorical approach *(taʾwīl)* of Shīʿī Qurʾān exegesis may be seen in the interpretation of the night journey of Muḥammad referred to in the first verse of Q 17 (Sūrat al-Isrāʾ, "The Night Journey"; see ASCENSION). Although aware of the conventional interpretation of this verse as referring to an

actual journey during which the Prophet was borne from Mecca (q.v.) to Jerusalem (q.v.), Ismāʿīlī as well as Nuṣayrī authors interpreted this passage as a symbol of the spiritual progress of the imāms or other persons within the divine realm. (For the Ismāʿīlī approach, see e.g. al-Qāḍī l-Nuʿmān, *Asās al-taʾwīl,* 337; for the Nuṣayrī interpretation, see the epistle of the Nuṣayrī author Abū ʿAbdallāh al-Ḥusayn b. Hārūn al-Ṣāʾigh [fl. fourth/tenth century] in Bar-Asher and Kofsky, *The Nuṣayrī-ʿAlawī religion,* 89-97.)

Ismāʿīlīs tend to employ allegory to, *inter alia,* interpret Muslim law. Thus, for example, "the pillars of Islam" are given in Ismāʿīlī writings symbolic meanings: the five obligatory prayers correspond to the five divine ranks *(ḥudūd)* in the Ismāʿīlī hierarchical system; almsgiving (q.v.; *zakāt*) means that those with knowledge should provide reliable mentors to guide the people (see KNOWLEDGE AND LEARNING); fasting (q.v.; *ṣawm*) entails observing silence and not betraying religious secrets to the uninitiated; pilgrimage to Mecca, the house of God (see HOUSE, DOMESTIC AND DIVINE), symbolizes an audience with the imām, since God's knowledge resides with him (Poonawala, Ismāʿīlī *taʾwīl,* 218, paraphrasing *Kitāb al-Iftikhār,* 240 f., by the prominent Ismāʿīlī *dāʿī* Abū Yaʿqūb al-Sijistānī [d. ca. 361/971]). It is worth mentioning that this tendency, prevalent in Ismāʿīlism, is shared by Ghulāt groups such as the Nuṣayrīs and the Druzes. A significant difference, however, should be noted. Moderate allegorists — e.g. Imāmī Shīʿī and most Ismāʿīlīs — maintained that the allegorical interpretation that extracts the true meaning of the Qurʾān does not aim to invalidate the plain meaning of the text (see e.g. Bar-Asher, *Scripture and exegesis,* 122-4). Heterodox groups, in contrast, often held that allegory was the only correct interpretation and thus belittled and even ignored the revealed meaning of the texts.

This distinction became especially glaring with regard to legal matters. Consistent allegorical interpretation led its practitioners, more often than not, to adopt antinomian attitudes toward the religious precepts of the Qurʾān, and once a law assumed a symbolic meaning its literal meaning, according to these circles, was no longer binding. A blatant antinomian interpretation of the pillars of Islam is offered e.g. by the fourth epistle of the Druze canon (*al-Kitāb al-Maʿrūf bi-l-naqḍ al-khafī;* an unpublished critical edition of this epistle is offered by Bryer, *The origins,* ii, 31-50; cf. De Sacy, *Exposé,* ii, 673).

Shīʿī Qurʾān exegesis is further characterized by a radical anti-Sunnī bias. Many qurʾānic verses whose apparent meanings have a negative connotation or refer generally and vaguely to evil or to evildoers (see GOOD AND EVIL; EVIL DEEDS; OPPRESSION) are taken, through allegorical or typological interpretation, to refer to specific historical luminaries of Sunnī Islam. Negative qurʾānic terms such as *baghy* (insolence; see INSOLENCE AND OBSTINACY; ARROGANCE; PRIDE), *faḥshāʾ* (indecency; see ADULTERY AND FORNICATION; CHASTITY; MODESTY), *munkar* (dishonor), *al-fujjār* (the wicked), *al-mufsidūn fī l-arḍ* (corrupters on earth; see CORRUPTION; OPPRESSION), *al-shayṭān* (Satan; see DEVIL), *al-maghḍūb ʿalayhim* (those against whom [God] is wrathful; see ANGER), *al-ḍāllūn* (those who are astray; see ERROR; ASTRAY) and the like are interpreted as referring to the enemies of the Shīʿa in general or to specific persons among them, in particular the first three caliphs, two of Muḥammad's wives (ʿĀʾisha and Ḥafṣa [q.v.], the daughters of the first and the second caliphs, respectively; see also WIVES OF THE PROPHET; ʿĀʾISHA BINT ABĪ BAKR), the Umayyads and the ʿAbbāsids. In an utterance attributed to al-Bāqir he goes so far as to state that "every occur-

rence in the Qurʾān of the words 'Satan says' is [to be understood as referring to] 'the second' [namely the caliph ʿUmar b. al-Khaṭṭāb]" (*wa-laysa fī-l-Qurʾān [shayʾ] wa-qāla al-shayṭān illā wa-huwa al-thānī;* ʿAyyāshī, *Tafsīr,* ii, 240). In another tradition, cited in the same source, a more general formulation of this idea is also attributed to this imām. To Muḥammad b. Muslim (d. 150/767), one of his disciples, the imām said: "Whenever you hear God [in the Qurʾān] mentioning someone of this nation in praise, it refers to us [i.e. the Shīʿa]; and when you hear God denigrating people who flourished in the past, it refers to our enemies" (*idhā samiʿta llāha dhakara aḥadan min hādhihi l-umma bi-khayrin fa-naḥnu hum wa-idhā samiʿta llāha dhakara qawman bi-sūʾin mimman maḍā fa-hum ʿaduwwunā;* ibid., i, 24; see CHASTISEMENT AND PUNISHMENT; PUNISHMENT STORIES; REWARD AND PUNISHMENT).

Secret language in Shīʿī exegesis is evident on two levels. The first level, the exegetes believe, is found in the Qurʾān itself; it underlies such obscure or general qurʾānic expressions as *al-jibt wa-l-ṭāghūt* (see IDOLS AND IMAGES; JIBT), *al-faḥshāʾ wa-l-munkar* and many others. The second level is added by the Qurʾān commentator himself. When tracing the exegete's method of unraveling the meaning of obscure expressions one often discovers that the exegete not only avoids disclosing the secrets of the text but actually further conceals them. The commentator never claims explicitly that expressions such as those just mentioned refer to Abū Bakr, ʿUmar or other enemies of the Shīʿa; rather, he resorts to code words such as "the first" *(al-awwal)* and "the second" *(al-thānī), ḥabtar,* "fox" (usually applied to Abū Bakr "because of his cunning and fraudulence" (*li-ḥilatihi wa-makrihi,* Majlisī, *Biḥār,* lith., 4, 378; 9, 65) and *zurayq,* "shiny-eyed" or "blue-eyed" (referring to ʿUmar; e.g. Furāt, *Tafsīr,* 69; see also PRE-ISLAMIC ARABIA AND THE QURʾĀN). This physical feature was considered unfortunate by the ancient Arabs (q.v.) and finds an echo in Q 20:102, according to which the wicked will rise on the day of resurrection (q.v.) with shiny (or blue) eyes (q.v.; for these and other derogatory appellations, see Goldziher, Spottnamen, 295-308; Kohlberg, Some Imāmī Shīʿī views, esp. 160-7; Bar-Asher, *Scripture,* 113-20). In other words, the transition from the covert stratum in the Qurʾān to the overt stratum of the interpretation is not direct but undergoes a further process of encoding. The underlying assumption is that every Shīʿī is familiar with these code words which are an integral part of his religious-cultural upbringing.

In other cases Shīʿī exegesis is designed to support the Shīʿī doctrine of the imāmate and concepts derived from it, examples being *ʿiṣma* (see IMPECCABILITY), or the immunity of prophets and imāms from sin (see SIN, MAJOR AND MINOR) and error; the intercession (q.v.; *shafāʿa*) of prophets and imāms on behalf of their communities; *badāʾ* (the appearance of new circumstances that cause a change in an earlier divine ruling); and, in the case of the Ismāʿīlī, Druze and Nuṣayrī factions, such additional concepts as the cyclical creation (q.v.) of the world and the transmigration of souls (q.v.).

Another current feature of early Shīʿī (mainly Imāmī) exegesis is the use of variant readings *(qirāʾāt)* of the qurʾānic text or, in certain cases, the addition of words believed to have been omitted from it (see READINGS OF THE QURʾĀN). Such textual alterations are based on the assumption that the qurʾānic text is flawed and incomplete. Scholars who held the view that the Qurʾān is corrupt believed that the Mahdī will eventually reveal the true text and uncover its original intention. Examples of

these alterations are the common textual substitution of *aʾimma* (imāms) for *umma* (nation or community) or slight changes to the word "imām" itself. The implication of these variants is that the institution of the imāmate and other principles associated with it originate in the Qurʾān. For example, for Q 3:110 most early Shīʿī exegetes read: "You are the best leaders [leg. *aʾimmatin* rather than *ummatin,* nation] ever brought forth to humankind" *(kuntum khayra aʾimmatin ukhrijat lil-nās);* or in Q 2:143: "Thus we appointed you midmost leaders" *(wa-kadhālika jaʿalnākum aʾimmatan wasaṭan),* etc. (For the first verse, cf. Qummī, *Tafsīr,* i, 110; ʿAyyāshī, *Tafsīr,* i, 218; for the second, cf. Qummī, *Tafsīr,* i, 63.)

Prominent among the other type of alterations is the insertion of certain words generally proclaimed to be missing from the ʿUthmānic codex of the Qurʾān. These are primarily (a) the words *fī ʿAlī* (concerning ʿAlī) in various qurʾānic verses, among them Q 2:91: "Believe in what God has revealed to you [+ concerning ʿAlī]" *(āminū bi-mā anzala llāh [+ fī ʿAlī])* or Q 4:166: "But God bears witness to what he has revealed to you [+ concerning ʿAlī]" *(lākinna llāh yashhadu bi-mā anzala ilayka [+ fī ʿAlī]);* or (b) the words *āl Muḥammad* (the family of Muḥammad) or occasionally *āl Muḥammad ḥaqqahum* ([deprived] of their rights) as the object of a verb from the root *z-l-m* (to do an injustice to/to usurp), which appear often in the Qurʾān. Shīʿī commentators believe that this addition stresses that the injustice (see JUSTICE AND INJUSTICE) referred to by words and verbs derived from the root *z-l-m* alludes specifically to the injustice perpetrated against the family of the Prophet and his offspring, i.e. the Shīʿa. The same method is applied with regard to other doctrines. The insertion of the words *fī walāyat ʿAlī* (concerning the [duty of] loyalty to the house of ʿAlī) in several places in the Qurʾān is intended to provide scriptural authority to the doctrine of *walāya,* as the addition of the words *ilā ajalin musamman* (for a given time) to the *mutʿa* verse (Q 4:24), is meant to emphasize the temporary nature of *mutʿa* marriage (see MARRIAGE AND DIVORCE; TEMPORARY MARRIAGE; SEX AND SEXUALITY). Less known is the addition of the word *mutʿa* in Q 24:33: *wa-l-yastaʿfifi lladhīna lā yajidūna nikāḥan [+bi-l-mutʿa] ḥattā yughniyahumu llāhu min faḍlihi,* "And let those who find not the means to enter into a *[+ mutʿa]* marriage be abstinent till God enriches them of his bounty" (Sayyārī, *Qirāʾāt,* tradition no. 372; see ABSTINENCE).

The differentiation between variant readings and additions by the commentators or their sources inheres primarily in terminology. In many places where the commentator introduces a Shīʿī version of a qurʾānic verse, he does so by using typical formulas. The Shīʿī version is preceded by such utterances as (a) *nazala Jibrīl [*or *Jibrāʾīl] bi-hādhihi l-āya hākadhā ʿalā Muḥammad,* "thus the verse was revealed to Muḥammad by [the angel] Gabriel" (q.v.; see e.g. ʿAyyāshī, *Tafsīr,* ii, 353; and for similar versions, ibid., i, 63; Qummī, *Tafsīr,* ii, 111); or followed by (b) *hākadhā nazalat,* "thus [the verse] was revealed" (see e.g. Qummī, *Tafsīr,* i, 142, 297; ii, 21); at other times it is stated that the version cited was the reading of one of the imāms (e.g. ʿAyyāshī, *Tafsīr,* i, 217, 218; Qummī, *Tafsīr,* i, 389). At times even stronger expressions are used to stress that certain passages in the canonical text are incorrect. These include statements formulated in the negative such as (a) *ʿalā khilāf mā anzala llāh,* "[the version in the *textus receptus*] contradicts the form in which it was revealed" (see e.g. Qummī, *Tafsīr,* i, 10, which cites Q 3:110 or Q 25:74 as examples of such verses); or (b) *fīmā ḥurrifa min kitāb Allāh,* "[This verse] is one of those falsified [or altered] in the book of God" (Qummī, *Tafsīr,* ii, 295).

In the absence of such a firm declaration it is difficult to decide whether the alteration is a mere commentary or whether the exegete is in fact suggesting an alternative reading to the canonical text despite the absence of such typical expressions as those mentioned above.

On the basis of such a rejection of the "Sunnī" text one might have expected the Shīʿa to insert these alternative versions and additions into the text of the Qurʾān or at least to implement them when the text is read on ritual occasions (see RITUAL AND THE QURʾĀN; RECITATION OF THE QURʾĀN). In reality, however, almost no action was taken by the Shīʿa to canonize their variant readings. One exception is a late attempt reflected in a manuscript of the Qurʾān, said to have been discovered in the city of Bankipore, India, in which, besides the Shīʿī alternative versions to some of the qurʾānic verses, two apocryphal sūras were also included: *sūrat al-walāya,* "the sūra of divine friendship (i.e. between God and ʿAlī; see FRIENDS AND FRIENDSHIP; CLIENTS AND CLIENTAGE)" and *sūrat al-nūrayn,* the *sūra* of the two lights (i.e. Muḥammad and ʿAlī; on this issue, noted by scholars as early as the nineteenth century, see Amir-Moezzi, *Le guide divin,* 200-27; *The divine guide,* 79-91, 198-206; see LIGHT).

This behavior of the Shīʿa reveals a paradox. On the one hand, Shīʿīs are certain that the true version of the Qurʾān is that known to them; on the other hand, not only do they not reject the canonical codex, they actually endorse it (see e.g. Goldziher, *Richtungen,* 281). This contradiction is typical of the Shīʿa: on the one hand an uncompromising position of superiority was adopted on the theoretical-doctrinal level; on the other hand the constant fear of persecution from the hostile Sunnī environment brought about, on the practical level, a pragmatic attitude that included the adoption *de facto* of the ʿUthmānic codex. This tension and paradox is reflected in the many Shīʿī exegetical traditions in which Shīʿī *qirāʾāt* are mentioned. In some of them one finds the following situation: A disciple of the imām is reading from the (canonical) Qurʾān in the presence of the imām, who tells him that it was revealed in a different version. The imām then proceeds to read the "true" (i.e. the Shīʿī) version. As, however, against such accounts, which underrate the importance of the ʿUthmānic codex, an opposing tendency is sometimes revealed: Someone is reading from the Qurʾān in the presence of one of the imāms, and inserts in his reading the Shīʿī version of the verse. At this point he is stopped by the imām, who instructs him to read according to the version followed by the people (i.e. the *textus receptus*) until such time as "the righteous savior" *(al-qāʾim)* shall come with the correct version of the Qurʾān, identical with the one that ʿAlī possessed and bequeathed to his daughter, Fāṭima (q.v.), whence its title *muṣḥaf Fāṭima,* "the codex of Fāṭima" (see MUṢḤAF).

Other methods of Shīʿī exegesis are based on the word and letter order and calculations of the numerical value of letters (see NUMEROLOGY). In his interpretation of Q 108 (Sūrat al-Kawthar), al-Sijistānī presents a transposition of the words and letters of the sūra, thus reading into it the Shīʿī tenet of *waṣāya,* the rank of plenipotentiary among the imāms (Poonawala, Ismāʿīlī *taʾwīl,* 218-9). The technique of numerical calculation of letters is primarily applied to the mysterious letters (q.v.; *fawātiḥ al-suwar*) appearing at the head of twenty-nine sūras. For example, the letters *alif, lām, mīm, ṣād* (the total numerical value of which is 161) at the head of Q 7 (Sūrat al-Aʿrāf, "The Heights"; see PEOPLE OF THE HEIGHTS) allude, according to an account attributed to

al-Bāqir, to the year 161 of the *hijrī* calendar (777 C.E.), a year which had been (incorrectly) predicted as the one in which the fall of the Umayyad dynasty would occur (ʿAyyāshī, *Tafsīr,* ii, 7-8).

It should further be noted that Shīʿī, and particularly Ismāʿīlī, exegesis is characterized by the use of a secret script designed to encrypt information — mainly names of persons — that the author wishes to conceal for precautionary reasons. Numerous examples of this practice are found in the *Kitāb al-Kashf* by the *dāʿī,* Jaʿfar b. Manṣūr al-Yaman (fl. first half of fourth/tenth century), and *Mizāj al-tasnīm* by the Yamamite Ismāʿīlī Sulaymānī *dāʿī,* Ismāʿīl b. Hibat Allāh (d. 1184/1770).

Major Shīʿī exegetes and their works

The earliest Imāmī-Shīʿī Qurʾān commentaries known to us are from the end of the third/ninth century. These include the works of Furāt b. Furāt b. Ibrāhīm al-Kūfī *(Tafsīr Furāt al-Kūfī),* al-ʿAyyāshī *(Tafsīr)* and al-Qummī *(Tafsīr),* all of whom flourished in the last decades of the third/ninth century and the beginning of the fourth/tenth century, that is, prior to the Great Occultation *(al-ghayba al-kubrā)* of the twelfth imām, which occurred in the year 329/941. Somewhat later is Muḥammad b. Ibrāhīm b. Jaʿfar al-Nuʿmānī (d. ca. 360/971), to whom is ascribed a treatise constituting a sort of introduction to the Qurʾān (Majlisī, *Biḥār,* xc, 1-97). Other compositions are the two commentaries ascribed to the sixth and eleventh imāms, respectively: *Ḥaqāʾiq al-tafsīr al-qurʾānī,* a small exegetical treatise of a Ṣūfī character (see ṢŪFISM AND THE QURʾĀN) attributed to Imām Jaʿfar al-Ṣādiq and *Tafsīr al-ʿAskarī,* a comprehensive commentary of a legendary-mythical nature on the first two sūras of the Qurʾān attributed to Imām Ḥasan al-ʿAskarī (d. 260/874; on which see Bar-Asher, al-ʿAskarī). The most outstanding *tafsīr*s of the post-*ghayba* period are al-Ṭūsī's *Tibyān,* al-Ṭabarsī's *Majmaʿ* and the *Rawḍ al-jinān wa-rūḥ al-janān,* a Qurʾān commentary in Persian by Abū l-Futūḥ Ḥusayn b. ʿAlī al-Rāzī (fl. first half of the sixth/twelfth century). Some very comprehensive Imāmī-Shīʿī *tafsīr* works, which are mainly compilations of early sources, were composed in Ṣafavid Iran. The most prominent among these are *Taʾwīl al-āyāt al-ẓāhira fī faḍāʾil al-ʿitra al-ṭāhira* by Sharaf al-Dīn ʿAlī l-Ḥusaynī l-Astarābādī (fl. tenth/sixteenth century), *Kitāb al-Ṣāfī fī tafsīr al-Qurʾān* by Muḥsin al-Fayḍ and *Kitāb al-Burhān fī tafsīr al-Qurʾān* by Hāshim b. Sulaymān al-Baḥrānī. Representative of modern Imāmī-Shīʿī Qurʾān exegesis are Ṭabāṭabāʾī's *Mīzān* and *Min waḥy al-Qurʾān* by Muḥammad Ḥusayn Faḍl Allāh. Needless to say, exegetical material other than Qurʾān commentaries per se proliferates in all genres of Imāmī-Shīʿī literature. (For a detailed survey of Shīʿī *tafsīr* works, see Ṭihrānī, *Dharīʿa,* iii, 302-7; iv, 231-346.)

Ismāʿīlī doctrinal writings include a vast amount of exegetical material but little is known of specific Ismāʿīlī exegetical works. Among the few that have come down to us are *Kitāb Asās al-taʾwīl* by the *dāʿī* al-Qāḍī l-Nuʿmān b. Ḥayyūn Maghribī (d. 363/973) and *Kitāb al-Kashf* by Jaʿfar b. Manṣūr al-Yaman. (For other Ismāʿīlī exegetical works, see Poonawala, *Biobibliography,* index, s.v. *tafsīr* and *taʾwīl.*)

The Zaydī exegetical tradition remains largely unexplored and most Zaydī works of *tafsīr* are still in manuscript form. The Zaydī imāms al-Qāsim b. Ibrāhīm Rassī (d. 246/860), al-Nāṣir lil-Ḥaqq al-Uṭrūsh (d. 304/917) and Abū l-Fatḥ Nāṣir b. Ḥusayn al-Daylamī (d. 444/1052) are among those credited with a *tafsīr* (Ṭihrānī, *Dharīʿa,* iv, 255, 261; Abrahamov, *Anthropomorphism).* A Qurʾān commentary is also ascribed to Ziyād b. Mundhir Abū l-Jārūd, the eponym of the Zaydi-Jārūdī sub-sect,

the Jārūdiyya (Ṭihrānī, *Dharīʿa,* iv, 251). The work is not extant; excerpts of it are, however, incorporated in al-Qummī's *Tafsīr* (Bar-Asher, *Scripture,* 46-56, 244-7). Another outstanding Jārūdī scholar who is credited with a *tafsīr* is Aḥmad b. Muḥammad Hamadhānī, better known as Ibn ʿUqda (d. 333/947; cf. Ṭihrānī, *Dharīʿa,* iv, 251). Finally, there is the *tafsīr* by Shawkānī (d. 1250/1834), one of the best known and most prolific authors of the late Zaydiyya.

There is no evidence that Qurʾān commentaries were written by members of Ghulāt groups (such as the Druzes and the Nuṣayrīs), although the Qurʾān is widely cited and often commented on in their sacred writings. See also PERSIAN LITERATURE AND THE QURʾĀN.

Ships

Means of transportation over water. The terms for ship in the Qurʾān are three: *fulk,* which occurs twenty-three times; *safīna,* four times and *jāriya* (pl. *jāriyāt, jawārī*) also four times. The first is probably Greek *(epholkion),* while the third is a purely descriptive term, "the (mellifluously) moving one." In addition to being the most frequently employed, *fulk* is the most significant in qurʾānic thought.

Ships in the Qurʾān appear as an important sign of God's providential care for humankind, an element in the divine economy (see GRACE; BLESSING). It is through the employment of ships that humankind catches fish for food (see HUNTING AND FISHING) and acquires marine ornaments (sing. *ḥilya*); the ship is the means of transportation in maritime commerce, beneficial to humankind (Q 2:164; 16:14; 30:46; 35:12).

In the Qurʾān, ships are associated with four prophets; Noah (q.v.; Nūḥ), Moses (q.v.; Mūsā) and Jonah (q.v.; Yūnus) and, by implication, with Solomon (q.v.; Sulaymān; Q 34:12). The most significant of the references are to Noah, especially Q 11:36-48. Humankind was saved from extinction through his *fulk* (see ARK), the only ship described with some detail à propos of its construction, its planks *(alwāḥ)* its nails *(dusur)* and the mountain (*al-Ǧūdiyy;* see JŪDĪ) on which it finally rested after the flood, described in Q 11:44, which has been rightly considered one of the summits of qurʾānic literary excellence (see INIMITABILITY). Less significant are references to the ship *(safīna)* that Moses boarded with the "servant of God" (Q 18:65, 71, 79; see KHAḌIR/KHIḌR) and the *fulk* that Jonah boarded, whence he was ejected (Q 37:140).

During the lifetime of the prophet Muḥammad, ships re-entered the framework of the divine economy on two important occasions. When the Kaʿba (q.v.), the house that Abraham (q.v.) and Ishmael (q.v.) built (see HOUSE, DOMESTIC AND DIVINE), was burnt down sometime before Muḥammad's prophetic call, it was rebuilt by a certain Bāqūm, possibly a Copt, and either a carpenter or the ship's captain. The wood came from a Byzantine ship which had run aground at al-Shuʿayba, Mecca's port at that time. And when some members of the nascent Muslim community in Mecca (q.v.) emigrated to Ethiopia (q.v.; see also ABYSSINIA; EMIGRATION), it was ships that transported them and, later, brought most of them back. Thus, ships twice performed a crucial function in saving the believers (see BELIEF AND UNBELIEF), in diluvial and post-diluvial times.

The many references to ships and to their element, the sea, especially to striking specificities involving them, and to human conduct and behavior during sea-voyages, strongly suggest that the Meccans had personal experience of sailing the sea. This sea can only have been the Red Sea, which some of the Meccan merchants must have crossed on their way to its African side, well known for its attractive products and exotica. This is valuable qurʾānic confirmation of what the sources say on commercial intercourse between Mecca and Ethiopia and it has important implications for qurʾānic studies, especially

if the prophet Muḥammad himself was one of those who crossed over to the African side, sometime in the period which antedated his call around 610 C.E. (see also CARAVAN; TRADE AND COMMERCE).

Shuʿayb

Name of a messenger mentioned eleven times in the Qurʾān. His story is dealt with in a few passages (Q 7:85-93; 11:84-95; 26:176-91; 29:36-7) where his vicissitudes with his people are described. According to the Qurʾān, Shuʿayb was sent to Madyan (Q 7:85; 11:84; 29:36; see MIDIAN). He exhorted his people (to whom, it is stated, a sign was sent; cf. Q 7:85; 11:88; see SIGNS) to believe in God (see BELIEF AND UNBELIEF) and he urged them not to cheat people by altering weights and measures (q.v.; Q 7:85; 11:84-5; 26:181-2; see also CHEATING). He also summoned them not to engage in corrupt behavior (see CORRUPTION) nor to lurk on any road with the intent to threaten people (7:85-6; see THEFT). The Qurʾān does not give further information about the acts to which these exhortations refer. The haughty elders of his people arrogantly refused, in the name of the religion of their fathers — even accusing Shuʿayb of being bewitched (see INSANITY) and challenging him and his followers to renounce their faith or be thrown out (Q 7:88). Elsewhere, in another verse, the people state that they refrain from stoning (q.v.) the prophet only out of respect for his family (Q 11:91). Shuʿayb obviously rejected their injunctions and invoked God to judge them and thereby establish who was on the correct path (Q 7:89; see PATH OR WAY). The judgment went in his favor, while those who opposed him were tragically punished. An earthquake seized them (Q 7:91; 26:37), a clamor (*al-ṣayḥa,* Q 11:94) or a black cloud (Q 26:189) befell the unbelievers within their habitations (see PUNISHMENT STORIES). Shuʿayb and those who believed were placed in safety (Q 11:94; see PROTECTION).

Q 11:89 gives an approximate chronology for Shuʿayb's mission, for in his preaching, Shuʿayb urges his people not to follow the fate of the peoples of Noah (q.v.), Hūd (q.v.) and Ṣāliḥ (q.v.), adding "the people of Lot (q.v.) are not far away from you [i.e. his people]." The Qurʾān does not contain any other details of great significance that relate to the setting for Shuʿayb's life, with the exception of the name "al-Ayka" (also read as "Layka"; see READINGS OF THE QURʾĀN; ORTHOGRAPHY) that is found at the start of a passage that tells of Shuʿayb (Q 26:176). This term is thus understood to be the name of the people to whom he was sent. This term should not be confused with the "people of al-Ayka" cited in other passages (Q 15:78; 50:14; cf. 38:13), who appear to be a different group than the

people of Madyan. Both expressions have, however, remained rather puzzling to the exegetes who have proposed various explanations (see below; see also PEOPLE OF THE THICKET).

None of the elements listed above permit the identification of Shuʿayb with any other known personage. Madyan, on the other hand, is related to the biblical Midian and to the story of Jethro and Moses (q.v.), and this is confirmed by the fact the name is also cited in the Qurʾān in connection with those events (Q 20:40; 28:22-3, 45). The identification, however, of Shuʿayb in later traditions with Jethro finds no confirmation in the sacred text. "Tales of the prophets" *(qiṣaṣ al-anbiyāʾ)* traditions expanded the qurʾānic content adding further particulars. Depending upon the contrasting and unclear qurʾānic passages stating that he was sent to Madyan and to al-Ayka, some exegetical reports maintain that Shuʿayb was sent to two different peoples. The name al-Ayka also finds various explanations based mainly on the meaning of the word, usually given as "thicket" or "grove of palms." Further reports describe with full details the punishment that erased Shuʿayb's people or, for example, state that the tombs of Shuʿayb and of his followers are around the Kaʿba (q.v.). All these elements have also prompted various interpretations by Western scholars, especially in connection with the origin of the names Shuʿayb and al-Ayka (for further details see Bibliography).

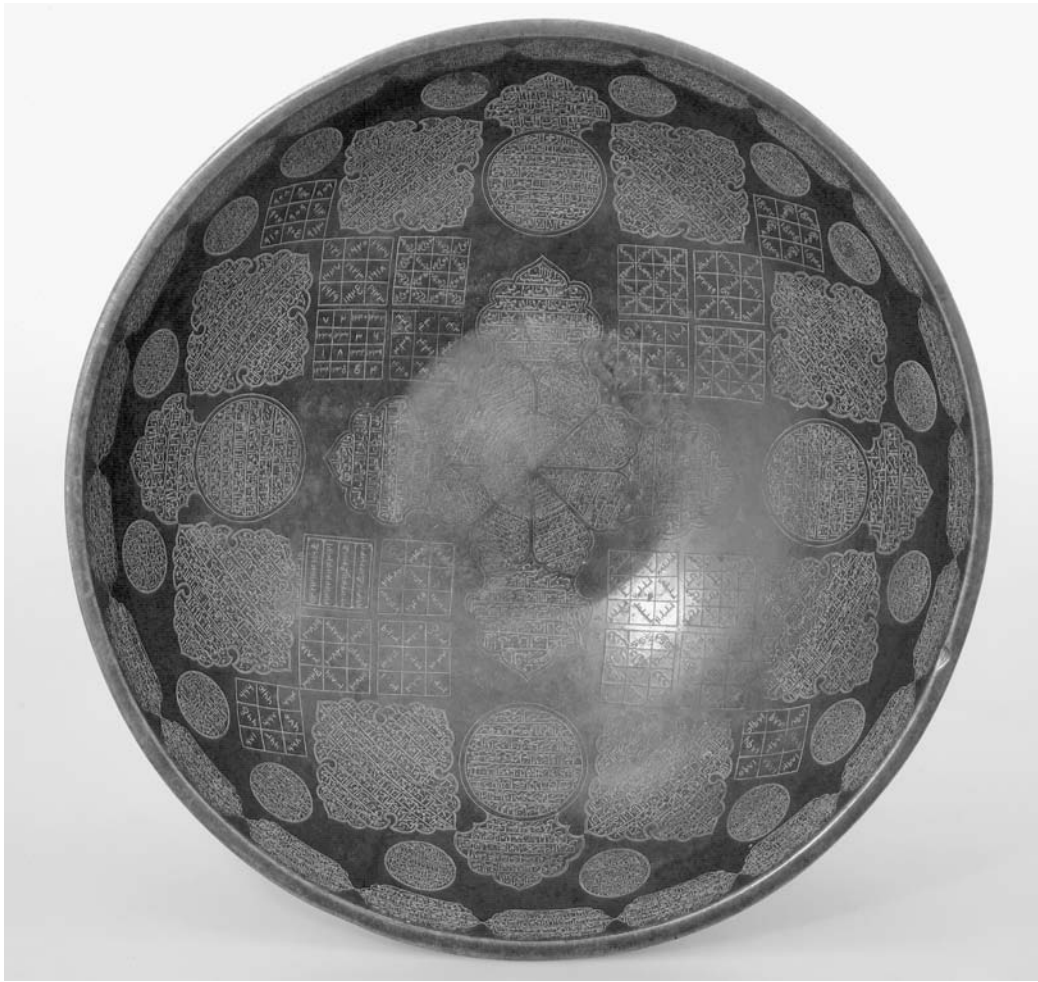
FIGURES I–VI

[1] Magic medicine bowl, back (lead): unknown provenance, second/eighth or third/ninth centuries. The center is inscribed with a portion of the *basmala*, "In the name of God" and, below it, "God suffices me" (Q 9:129; 39:38). Courtesy of the Nasser D. Khalili Collection (MTW 621).

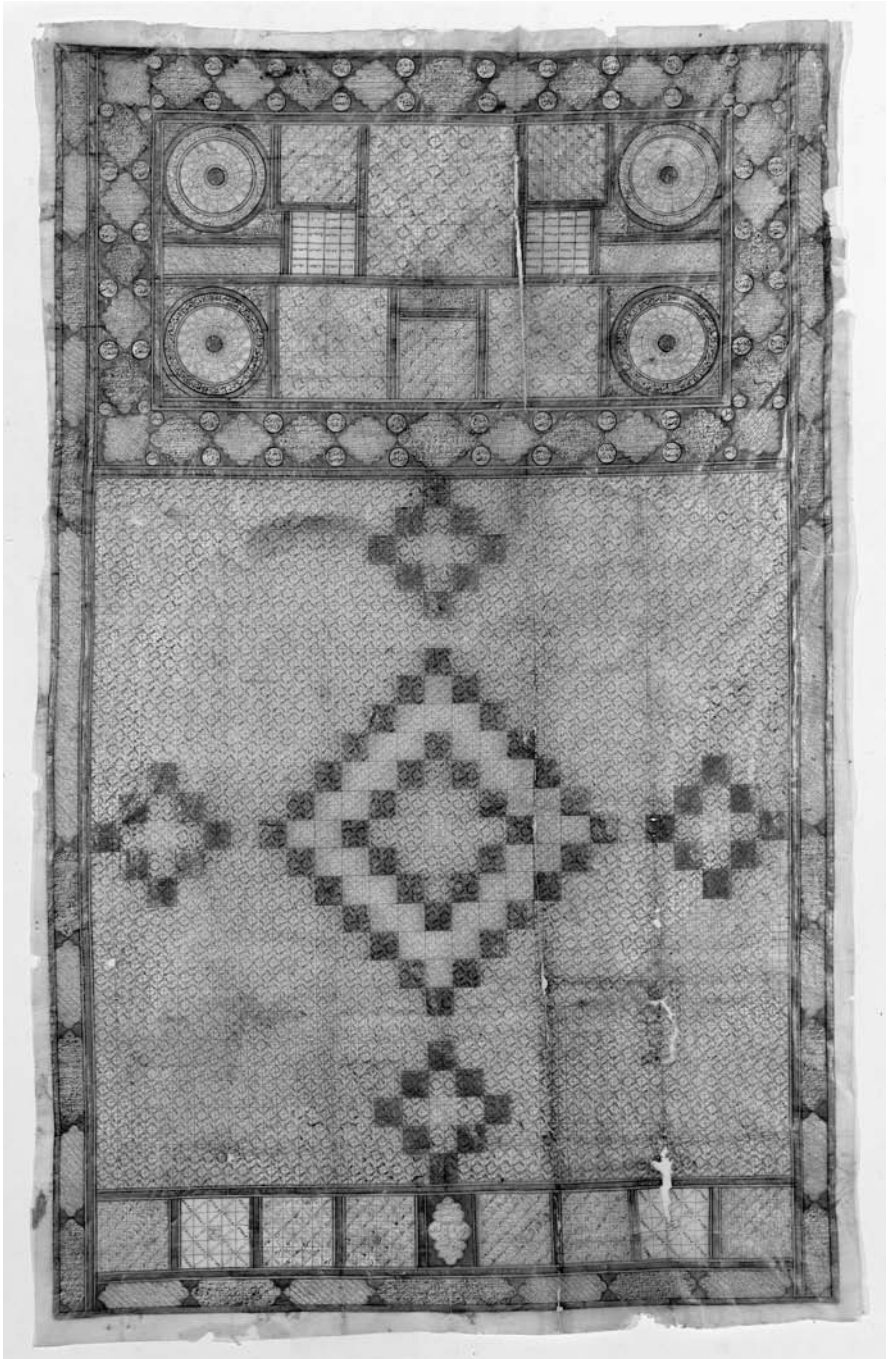


[II] Magic medicine bowl (bronze): Iran, eleventh/seventeenth century. The interior of the bowl, depicted here, is filled with invocations and prayers in Arabic and Persian. Three of the four roundels contain prayers, the *shahāda* and invocations, while the fourth contains Persian and Arabic titles and formulas typical of Ṣūfī dervish orders. The attached cartouches contain additional formulas and titles that indicate a Ṣūfī context, as well as verses from Q 109, 113 and 114. Other qur'ānic citations are found throughout. Courtesy of the Nasser D. Khalili Collection (MTW 1444).

[III] Amulet (tusk): Iran, ca. third/ninth century. Q 1:1-7 form part of the six lines of Kūfic text inscribed on this object. Courtesy of the Nasser D. Khalili Collection (TLS 2466).

[iv] Talismanic book with chart: Iraq?, 828/1425. This manuscript contains the earliest recorded copy of a treatise (five of the six parts of which discuss the magical uses of the names of God) written by Abū l-ʿAbbās Aḥmad b. ʿAlī b. Yūsuf al-Būnī l-Qurashī (d. ca. 622/1225). The sixth section provides specific talismans employing the divine names, individual verses of the Qur'ān and their talismanic uses, and a general discussion of magical alphabets. The folios shown here, which are taken from the sixth section, discuss Q 15:87-8, 17:45-6, and 9:129. Courtesy of the Nasser D. Khalili Collection (MSS 300, folios 62b-63a).

[v] Talismanic shirt, front (cotton): Iran?, tenth/sixteenth or eleventh/seventeenth centuries. The shirt is comprised of two large rectangular pieces, joined at the shoulders, while six smaller pieces form the sleeves and under-arm areas. Each piece of material is framed by a wide band containing prayers, invocations and qur'ānic quotations (e.g. Q 2:255; 24:35; 110; 112). Courtesy of the Nasser D. Khalili Collection (TXT 77).



[VI] Talismanic chart (parchment): Iran, 1919. The bulk of this chart (i.e. most of the lower two-thirds) is a 100X100 magic square composed of 10,000 individual cells, each of which contains a numeral. The border of each of the four large circles in the upper third of the chart contains the Throne Verse (Q 2:255); the lower two circles frame two 16X16 magic squares that flank a 10X10 Latin square (*wafq majāzī*) composed of the "mysterious letters" that open a number of qur'ānic sūras. Courtesy of the Nasser D. Khalili Collection (MSS 755).

FIGURES I–VI

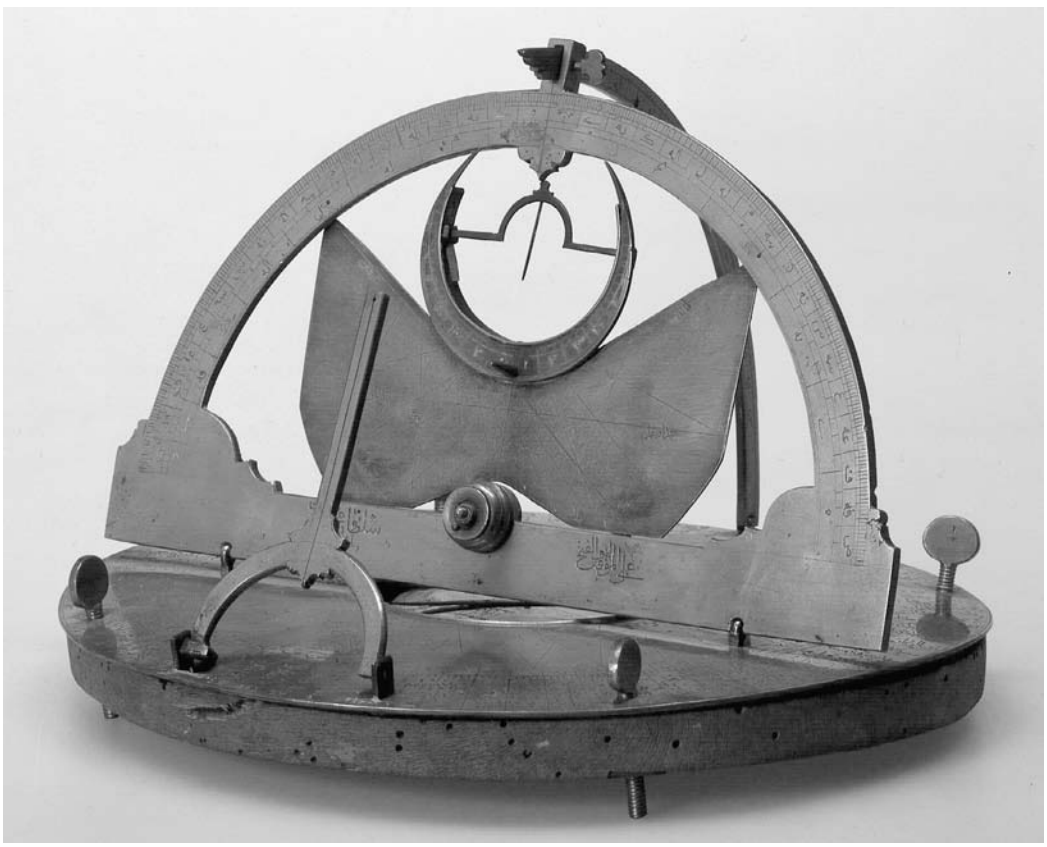
[1] Nilometer (*miqyās*), interior, with measuring column in foreground: Cairo, 241/867. Built after the Arab conquest in order to measure the annual flooding, it consists of three tunnels extending from the Nile, at various levels, which feed into the east side of a stone-lined pit, in which the measuring column is found. Each of the four sides of the pit, which extends below the level of the Nile, contains a pointed-arch vault, constructed three centuries before any Gothic example of the same. For a detailed description of the Nilometer, see pp. 383-4 of K.A.C. Creswell, *A short account of early Muslim architecture* (rev. ed. Aldershot 1989). See E. Dodd and Sh. Khairallah, *Image of the word* (Beirut 1981), ii, 171-2 for the qur'ānic verses that are inscribed on the *miqyās*. Courtesy of the Ashmolean Museum, Creswell Archives, Oxford (E.A., CA. 2484).

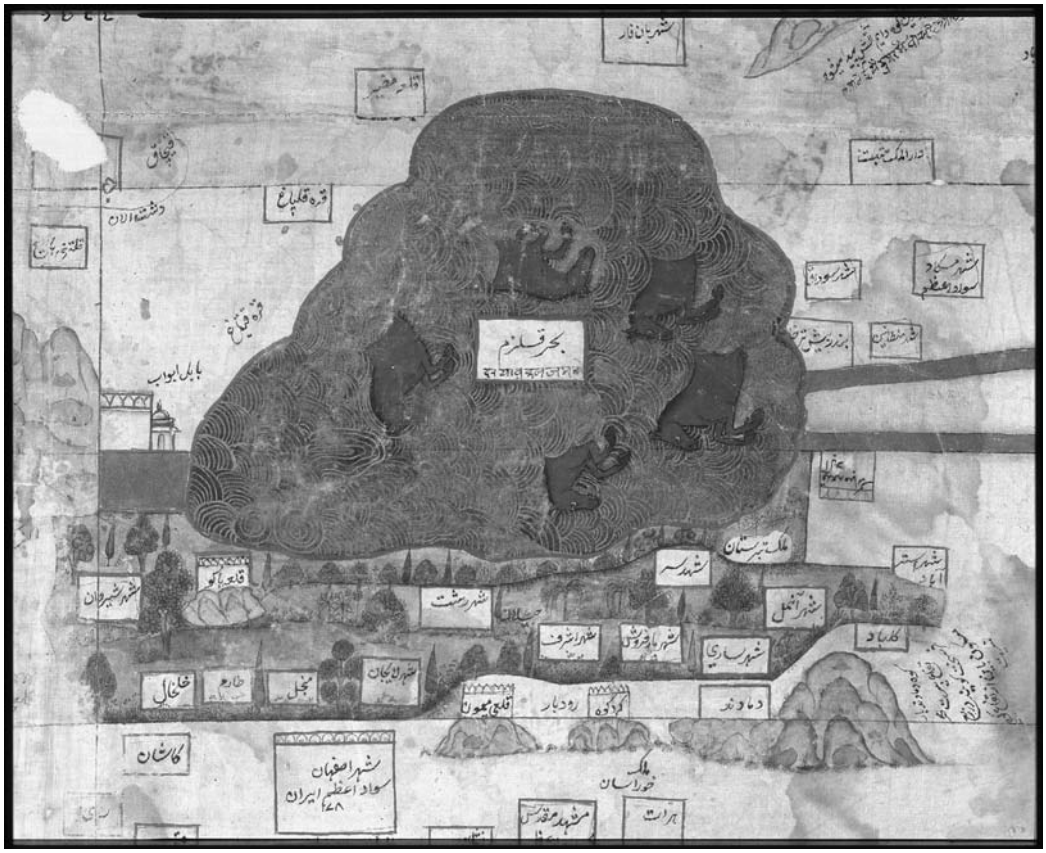
[II] Zodiac plate (ceramic): Iran, 971/1563-4. The twelve circles depicting the twelve signs of the zodiac are a pre-Islamic pictorial tradition that persisted into Islamic times. Courtesy of the Staatliche Museen, Berlin (I. 1292). Photograph: Karin März.

[III] Astrolabe (brass): Iran, early twelfth/eighteenth century. The cartouche in the center of the *kursī* (i.e. the top of the astrolabe) is inscribed with "His throne extends over the heavens and the earth" (Q 2:255). Courtesy of the Museum of the History of Science, Oxford (inventory no. 37940; image no. 153307).

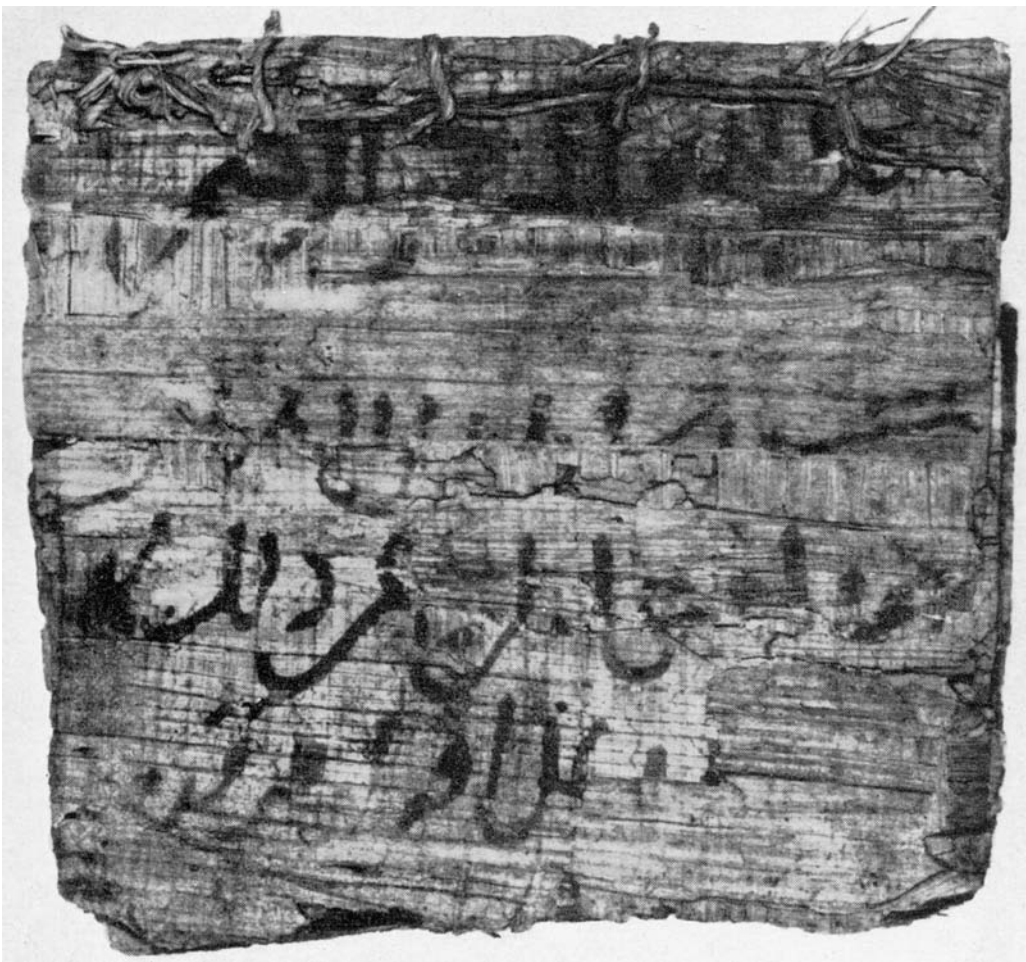


[iv] *Qibla* compass and sundial, open: Istanbul, 1161/1748. This complex device, termed an "equatorial circle" (*dā'irat al-mu'addil*) by its ninth/fifteenth century Egyptian inventor, combines a *qibla* compass with a sundial. Courtesy of the Nasser D. Khalili Collection, London (SCI 270).

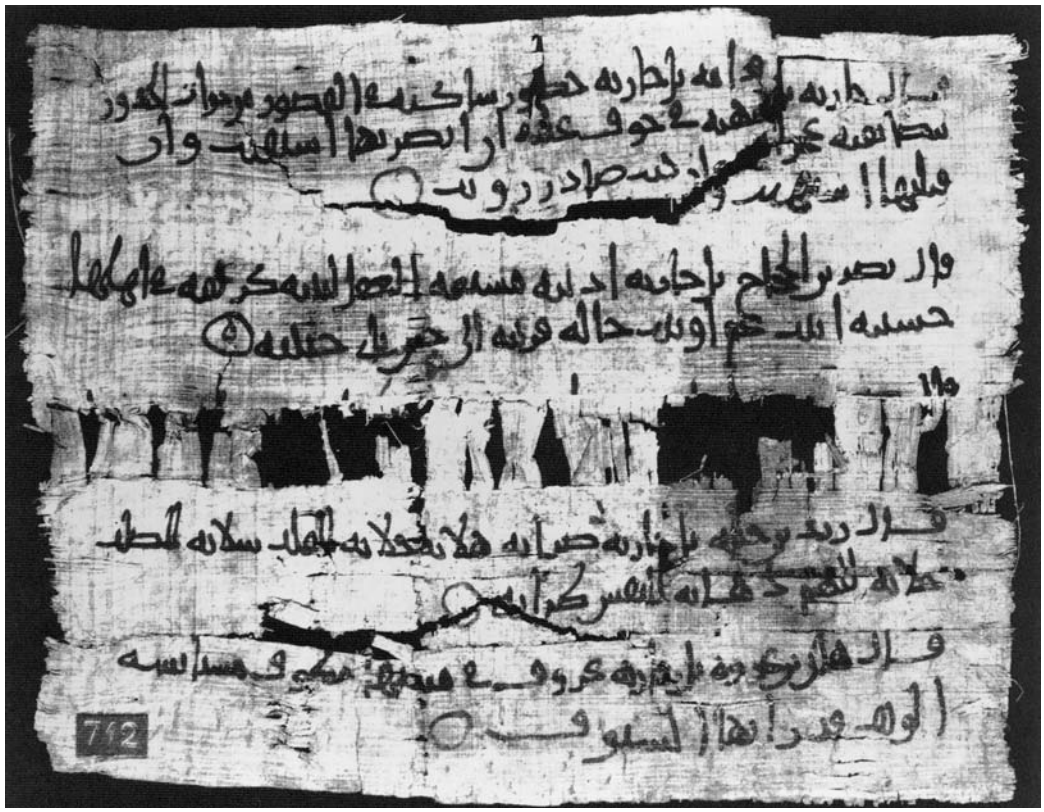
[v] *Qibla* compass and sundial, view of dial: Turkey, late twelfth/eighteenth century. The religious purpose of this instrument is demonstrated by the depiction of the Kaʿba and some of the other monuments of the *ḥaram* of Mecca. Courtesy of the Nasser D. Khalili Collection, London (SCI 49).



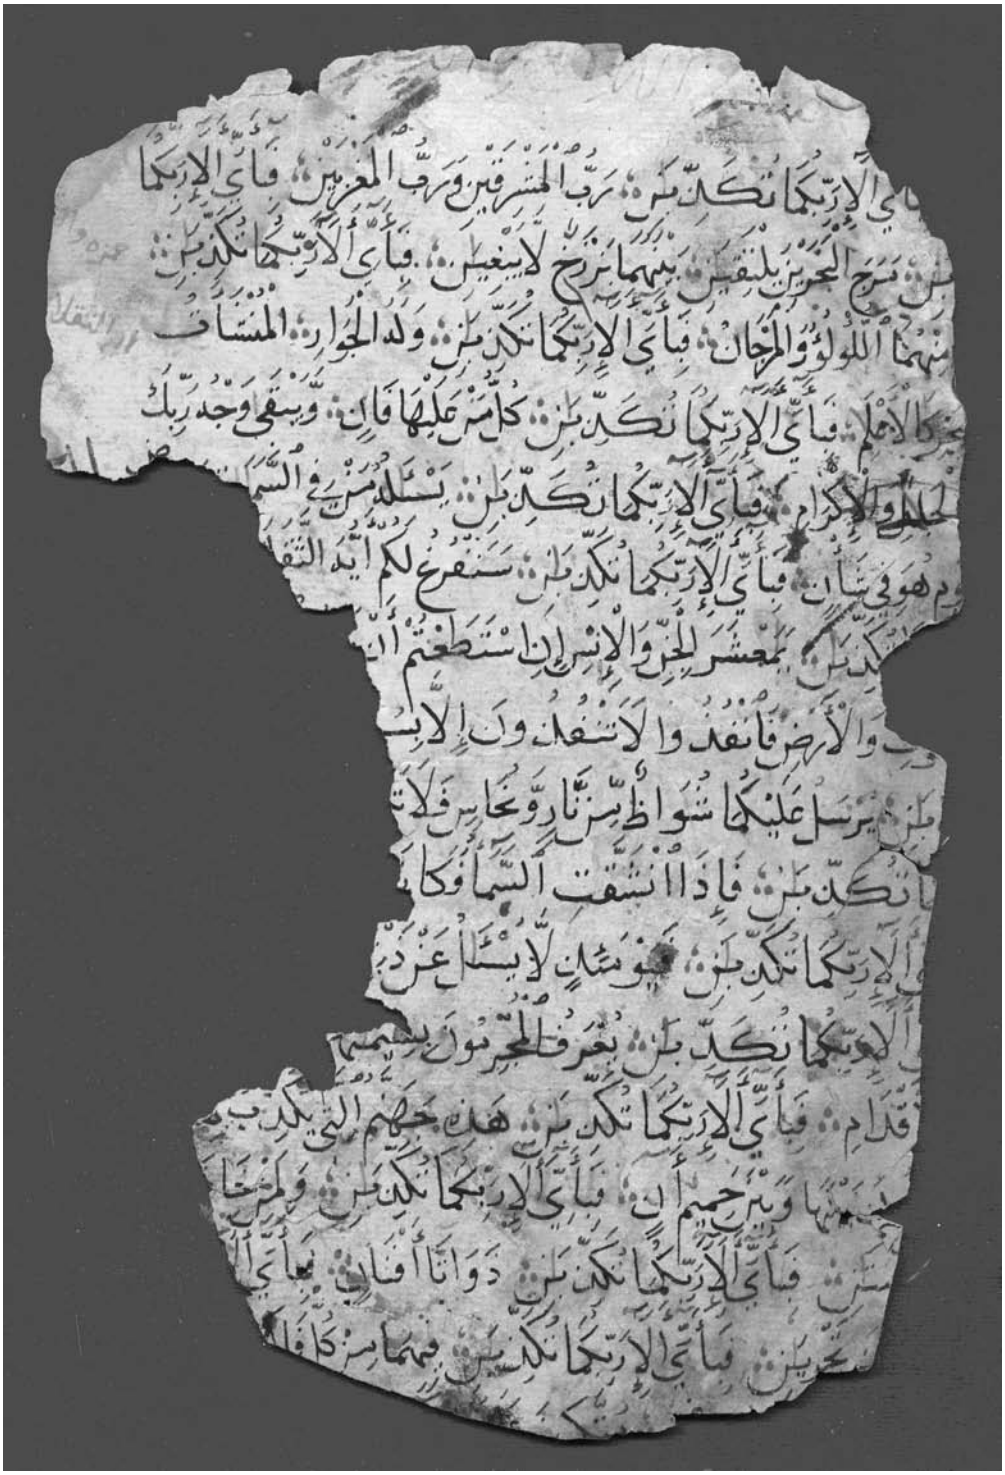
[VI] Map of the world, detail showing horses swimming in the Caspian Sea: India late twelfth/eighteenth century. The map, the primary explanatory details of which are in Arabic, contains images from the stories surrounding Alexander the Great (Dhū l-Qarnayn), such as the wall he built against the people of Gog and Magog (cf. Q 18:94). Courtesy of the Staatliche Museen, Berlin (I. 39/68).



[1] Notebook of sewn papyrus sheets, resembling the medium of some of the earliest Qur'ān *maṣāḥif*. Taken from A. Grohmann, *Arabische Paläographie*, vol. 1 (Vienna 1967), pl. IX, 2. Courtesy of Harvard University (LSoc 386.3).



[II] Fragment of papyrus sheet, similar to those upon which early Qur'ān manuscripts would have been inscribed, mid second/third quarter of the eighth century. The specimen depicted here contains a speech of ʿAmr b. al-ʿĀṣ and descriptions of the ideal maiden. Taken from Abbott, *Studies*, iii, document 3, pl. 4. Courtesy of Harvard University (OL 19038.26f).



[III] Folio from the Qaṣr Qur'ān containing Q 55:16-53, with marginal notes: Egypt, early twelfth/eighteenth century or before. Courtesy of F. Leemhuis, Groningen University (D03.007b v).

[IV] Folio from the Qaṣr Qur'ān containing Q 55:54-56:17, with marginal notes: Egypt, early twelfth/eighteenth century or before. Courtesy of F. Leemhuis, Groningen University (D03.007b r).

Sickness see ILLNESS AND HEALTH

Ṣiffīn, Battle of

Battle which took place during the first civil war between the fourth caliph (q.v.), ʿAlī b. Abī Ṭālib (q.v.), and Muʿāwiya b. Abī Sufyān, governor of Syria, in Ṣafar 37/July 657. Muʿāwiya, facing removal from his post by ʿAlī, decided to revive the cause of a recently defeated coalition of Medinan religious elite who had demanded that ʿAlī punish the assassins of his caliphal predecessor, ʿUthmān b. ʿAffān (see ʿUTHMĀN). ʿAlī refused to do so, given his ambivalence about ʿUthmān's assassination (Ṭabarī, *Taʾrīkh,* i, 3275-8; Balādhurī, *Ansāb,* ii, 194-7; Minqarī, *Waqʿa,* 31-3, 58, 82; see POLITICS AND THE QURʾĀN; SHĪʿA). The sources say that after a series of letters exchanged between the two leaders, the battle between ʿAlī's predominantly Iraqi army and Muʿāwiya's largely Syrian supporters was joined on Ṣafar 8/July 26 at Ṣiffīn, located near al-Raqqa along the Euphrates river in northern Iraq (q.v.). The battle lasted, by various accounts, two or three days, by the end of which ʿAlī had gained the advantage. To avert probable defeat, Muʿāwiya, following the advice of ʿAmr b. al-ʿĀṣ, ordered his troops to bear aloft copies of the Qurʾān (or a copy of the Qurʾān) on the ends of their spears — imitating a precedent set by ʿAlī at the earlier Battle of the Camel (Balādhurī, *Ansāb,* ii, 170-1; Ibn Aʿtham, *Futūḥ,* ii, 315) — and calling for arbitration (q.v.) on the basis of the scripture (Minqarī, *Waqʿa,* 476-82; Ṭabarī, *Taʾrīkh,* i, 3329-30 [trans. 79-80]; Balādhurī, *Ansāb,* ii, 226-7).

ʿAlī, initially reluctant to submit to arbitration, eventually agreed under pressure from some of his supporters, including the Iraqi Qurʾān readers (*qurrāʾ;* Minqarī, *Waqʿa,* 489-92; Ṭabarī, *Taʾrīkh,* i, 3330 [trans. 79]; see RECITERS OF THE QURʾĀN). The more reliable of the two versions of the arbitration agreement found in the early sources stipulated that an arbitrator be nominated from each side and that the two meet on neutral territory to resolve the dispute on the basis of the Qurʾān and, should no clear directive be found in the scripture, on the "just, unifying and not divisive sunna" (q.v.; Minqarī, *Waqʿa,* 510; Balādhurī, *Ansāb,* ii, 226, 230; Ṭabarī, *Taʾrīkh,* i, 3336 [trans. 85-6]). Muʿāwiya named ʿAmr b. al-ʿĀṣ as his representative. ʿAlī sought to name one of his equally trusted men but was pressured by influential members of his camp to name

Abū Mūsā l-Ashʿarī, a well-respected but neutral figure (Balādhurī, *Ansāb,* ii, 230; Ṭabarī, *Taʾrīkh,* i, 3333-4 [trans. 82-3]). The arbitrators seem to have met on two occasions — at Dūmat al-Jandal in Shawwāl-Dhū l-Qaʿda 37/April 658 and later at Adhruḥ in Shaʿbān 38/January 659. While the sources sometimes conflate these two meetings and their outcomes, it seems that at the first meeting, the arbitrators agreed that ʿUthmān had been killed unjustly. ʿAmr connected this judgment to Q 17:33: "Whosever is slain unjustly, we have given authority (q.v.) to his heir," and argued for Muʿāwiya's right to the caliphate as the kinsman of ʿUthmān (see MURDER; CORRUPTION; KINSHIP). Abū Mūsā rejected ʿAmr's interpretation and the arbitration was considered a failure by ʿAlī (Minqarī, *Waqʿa,* 541; Masʿūdī, *Murūj/Prairies d'or,* § 1705-8, iii, 145-8 [Fr. trans. 668-71]; Ibn al-Athīr, *Kāmil,* iii, 331). The second meeting at Adhruḥ, apparently not endorsed by ʿAlī, ended with a ruse whereby Abū Mūsā was tricked into deposing ʿAlī, leaving Muʿāwiya as caliph by default (Minqarī, *Waqʿa,* 544-6; Ṭabarī, *Taʾrīkh,* i, 3341-3 [trans. 90-2]). Although the results of this meeting were not widely recognized outside of Syria, ʿAlī faced growing opposition among his supporters over the terms of the arbitration and its outcome. Many dissenters — including some *qurrāʾ* who initially favored arbitration but reversed their opinion upon learning of its terms — had seceded from ʿAlī's camp even prior to the meeting of the arbitrators, claiming that "judgment belongs to God alone" *(lā ḥukma illā lillāhi)*, a slogan that echoes the qurʾānic statement *ini l-ḥukmu illā lillāhi* (Q 6:57; 12:40, 67). They also demanded that ʿAlī repent of his submission to a process that placed men in judgment over the Qurʾān (see LAW AND THE QURʾĀN). Many of these secessionists, later referred to as "Khārijīs" (q.v.), permanently broke with ʿAlī after the failure of the arbitration and suffered a devastating military defeat at his hands some months later.

Signs

Indications or portents, foreshadowing or confirming something. The concept of sign, one of the most commonly exhibited concepts in the Qurʾān, is expressed mainly by the word *āya* (pl. *āyāt*) in almost four hundred instances and by the word *bayyina* (pl. *bayyināt*) in approximately sixty cases. Several other words also convey the principal idea or some nuances of *āya,* for example: lesson (*ʿibra,* Q 12:111), pattern (*uswa,* Q 60:4), fact, story, discourse (*ḥadīth,*

Q 45:6), example (*mathal,* Q 43:57; see PARABLE), proof (q.v.; *burhān,* Q 4:174), proof (*sulṭān,* Q 30:35), signs (*shaʿāʾir,* Q 22:36), signs (*āthār,* Q 30:50; see GENERATIONS; AIR AND WIND; GEOGRAPHY), sign (*dalīl,* Q 25:45).

The word *āya* (sign) has no root in Arabic and is very probably a loan-word from Syriac or Aramaic (*āthā;* see FOREIGN VOCABULARY) where it indicates not only the ideas of sign and miracle (see MIRACLES; MARVELS), as in biblical and rabbinic Hebrew *(ōth),* but also the notions of argument and proof. (Arab philologists who have tried to find a stem and a form of this word have arrived at different solutions; either the word is derived from *a-w-y* or from *a-y-y* and its form is either *faʿala* or *faʿla* or *fāʿila;* cf. *Lisān al-ʿArab;* see GRAMMAR AND THE QURʾĀN.) The word occurs in pre-Islamic poetry (see POETRY AND POETS) in the meaning of a sign or token and in this meaning it also appears in the Qurʾān (Q 26:128, "as a sign for passers by"). In the Qurʾān, *āya* also often denotes argument and proof. These shades of meaning can be explained in the light of the polemical character of parts of the Qurʾān which are influenced by Muḥammad's struggles with the unbelievers, the Jews and the Christians (see POLEMIC AND POLEMICAL LANGUAGE; BELIEF AND UNBELIEF; JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY).

Expressions of signs

The scripture attests to the numerous and diverse signs which exist in the earth (q.v.) and in humankind: "In the earth are signs for those having sure faith (q.v.), and in yourselves; what, do you not see?" (Q 51:20-1; see SEEING AND HEARING; VISION AND BLINDNESS). These signs are so obvious that one cannot ignore them. Being produced by God (Q 6:109; 7:203; 29:50) and only with his permission (Q 13:38; 40:78), such signs can be detected in all spheres of life. Both animate and inanimate objects provide signs (Fakhr al-Dīn al-Rāzī [d. 606/1210] makes a distinction between signs in man, *dalāʾil al-anfus,* and signs in the world, *dalāʾil al-āfāq;* Rāzī, *Tafsīr,* XXV, 111), as in "O my people, this is the she-camel of God, to be a sign for you" (Q 11:64; see CAMEL; ṢĀLIḤ) and "And it is God who sends down out of heaven water (q.v.), and therewith revives the earth after it is dead. Surely in that is a sign for a people who listen" (Q 16:65; cf. 30:24; see HEAVEN AND SKY; HEARING AND DEAFNESS). God's providential design is demonstrated through his acts in nature and in human beings (see NATURE AS SIGNS; GRACE; BLESSING). A typical sign-passage is Q 13:2-3:

God is he who raised up the heavens without pillars you can see, then he sat himself upon the throne (see THRONE OF GOD); he subjected the sun (q.v.) and the moon (q.v.), each one running to a term stated. He directs the affair; he distinguishes the signs; haply you will have faith in the encounter with your lord (q.v.). It is he who stretched out the earth and set therein firm mountains and rivers, and of every fruit he placed there two kinds, covering the day with the night (see DAY AND NIGHT). Surely in that are signs for a people who reflect (see REFLECTION AND DELIBERATION; AGRICULTURE AND VEGETATION).

Sustenance (q.v.) and dress are given to humankind by God as a sign of his providence:

Children of Adam! We have sent down on you a garment to cover your shameful parts (see CLOTHING; MODESTY; NUDITY), and adornment *(rīsh);* and the garment of godfearing — that is better; that is one of

God's signs; haply they will remember (Q 7:26; see REMEMBRANCE).

Have they not seen that God spreads out the provision to whom he wills or is sparing [with it]? Surely in that are signs for a people who believe (Q 30:37).

To these signs are added the variety of human languages (see LANGUAGE) and colors (q.v.) and their differentiated activities by night and day (Q 30:22-3). God also intervenes in historical events by punishing wicked peoples; this intervention serves as a sign for those who fear the punishment of the last day (Q 11:102-3; see LAST JUDGMENT; HISTORY AND THE QUR'ĀN; CHASTISEMENT AND PUNISHMENT; PUNISHMENT STORIES; REWARD AND PUNISHMENT). In like manner God prevents the enemies [of Muslims] from injuring them (Q 48:20) and he causes some people, especially prophets, to overcome others to prevent their corrupting of the earth (Q 2:251-2; see PROPHETS AND PROPHETHOOD; CORRUPTION). According to the context of Q 3:58, what has happened to the prophets are signs. Mary (q.v.), Jesus' (q.v.) mother, became a sign because of her chastity (q.v.) which caused God to breathe into her something of his spirit (q.v.; Q 21:91).

Functions of signs

Having examined some of the objects which serve as signs, this discussion can turn to the functions of *āyāt*. Most of the signs in scripture have the purpose of calling on humankind to thank God (e.g. Q 16:14; 30:46; 36:73; see GRATITUDE AND INGRATITUDE) and to worship (q.v.) him (cf. Q 10:3). Considering the frequent occurrence of words denoting signs in the Qur'ān (see, for example, the beginning of Q 45 in which the word *āyāt* occurs in almost every verse), it is possible to state that Muḥammad regarded signs as the best means to call people to believe in God and his messenger (q.v.), a means preferable to frightening them with the horrors of the day of judgment. *Āyāt* are miracles done by God for the sake of people. Signs in "ask the Children of Israel (q.v.) how many a clear sign we gave," (Q 2:211) are interpreted to mean the splitting of the Red Sea, and the bringing down of the manna and the quail (see ANIMAL LIFE). The aim of these miracles was to compel the Children of Israel to believe in God, but they refused to believe. Those who deny God's miracles are doomed to suffer God's severe punishment (Q 3:11; 4:56). Miracles also aim at causing people to believe in prophets (Q 58:5); Moses (q.v.) tried to persuade Pharaoh (q.v.) that he had been sent by God (Q 7:103-6). Muhammad's prophecy is not proved directly by *āyāt;* rather it is proved through legitimating his message by *āyāt*. When the message is demonstrated to be genuine, the messenger is a true prophet. Through the use of analogy the Qur'ān attempts to convince people to believe in certain tenets of Islam, such as the resurrection (q.v.). According to Q 2:259, a man passed near a ruined town and asked how shall God give its dead people life. To show this man his power, God put him to death and revived him after one hundred years. The aim of this personal miracle is to show God's ability to resurrect the dead (Ibn Kathīr, *Tafsīr,* i, 558). The miracle here serves as proof based on analogy: just as God put this man to death and then restored him to life, so can he put all people to death and then revive them on the day of judgment (see DEATH AND THE DEAD). Resurrection is also demonstrated through God's creation (q.v.) of the world. If God's ability to create extends to such an enormous act, the more so his ability to revive the dead: "Have they not seen that God who created the heavens and earth, not being wearied by creating them (see

SABBATH), is able to give life to the dead?" (Q 46:33; cf. 75:38-40). Another proof is learned from the rain sent by God. Just as the rain revives the earth, causing plants to sprout, so can God restore the dead to life (cf. Q 35:9).

From the contents and context of Q 3:13 it is obvious that an *āya* is also a lesson *('ibra):* There has already been a sign for you in the two companies that met [at the battle of Badr (q.v.)], one company fighting for the sake of God and another unbelieving; [the unbelievers] saw [the Muslims] twice the like of them, as the eye sees, but God supports with his help whom he will. Surely, in that is a lesson for the wise (see WISDOM; IGNORANCE; TEACHING).

The lesson God conveys here is that he can make a few people overcome many. Again God's power and his help for man are proven (see VICTORY; POWER AND IMPOTENCE; TRUST AND PATIENCE). Whereas in Q 2:259, mentioned above, the analogy is to be learned by stages, here the conclusion from the story is directly inferred. That God punishes evil people is a widespread idea throughout the Qurʾān (see GOOD AND EVIL). Sometimes the Qurʾān points out that whoever fears the punishment of the last judgment should take a lesson from God's previous punishments:

Such is the punishment [literally "seizing," *akhdh*] of your lord, when he punishes [the evildoers of] the cities; surely his punishment is painful, terrible. Surely in that is a sign for him who fears the chastisement of the world to come… (Q 11:102-3; see also Q 15:77; 25:37; 26:103, 121, 139, 158, 174, 190; 27:52; 29:35; 34:19).

The lesson to be learned is not only from God's punishment but also from his reward to the righteous: God saved Noah (q.v.) as he did the people and animals that were in Noah's ark (q.v.; e.g. Q 29:15; 54:15). The history of a family such as Joseph (q.v.) and his brothers serves, too, as a lesson (Q 12:7; see also BROTHER AND BROTHERHOOD; BENJAMIN). A lesson can also be learned from a parable (Q 2:266). Sometimes a sign serves as a trial (q.v.) for a people, whether they will believe or not (Q 44:33). Another aim of the signs is to show that God acts for the benefit of humans in many spheres of life such as sustenance or transportation (Q 16:5-18; see VEHICLES). Finally, a sign may function as a metaphor (q.v.), its explanation being given by exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL); good and bad land are similes for the believer and the unbeliever respectively (*Jalālayn,* ad Q 7:58; cf. 10:24).

Reactions to signs

Reactions to signs, proofs and miracles differ — some people believe in them (Q 6:54, 99) while others do not, or they display a negative attitude toward them. Some people are obstinately reluctant to draw conclusions from God's acts aiming at the preservation of the world: "We set up the heaven as a roof well-protected; yet still from our signs they are turning away" (Q 21:32; cf. 6:157; 15:81; 36:46). Refusing to recognize God's signs is regarded by the Qurʾān as the gravest wrongdoing: "And who does greater evil than he who, being reminded of the signs of his lord, turns away from them…" (Q 18:57; 32:22). These rejecters consider signs to be witchcraft: "Yet if they see a sign they turn away, and they say: 'A continuous sorcery' " (Q 54:2; cf. 27:13; 46:7; see MAGIC). In addition, Muḥammad suffered from the mockery (q.v.) of his opponents (see OPPOSITION TO MUḤAMMAD): "Say: 'What, then were you mocking God, and his signs, and his messenger'?" (Q 9:65; cf. 18:56,

106; 30:10; 45:9, 35). The most common example of such negative reactions is that of evildoers who disbelieve in God's signs: "We have sent down to you clear signs, and only the evildoers disbelieve in them" (Q 2:99). Other evildoers (see EVIL DEEDS) are identified with those who killed prophets (Q 3:21; see MURDER; BLOODSHED). In the qurʾānic view, the refusal to recognize God's signs is connected to rejection of his messengers who point to those signs (see SIN, MAJOR AND MINOR; ETHICS AND THE QURʾĀN). Whoever questions God's existence and power is an evildoer, and vice versa, those who fear (q.v.) God and give alms believe in God's signs (Q 7:156; cf. Birkeland, Interpretation, 13-29; see ALMSGIVING; PIETY). The verb *kadhdhaba* (he accused someone of lying, or discovered someone to be lying, or regarded something as a lie, or denied something; see LIE) is used to indicate another kind of reaction to the signs considered by the Qurʾān as the gravest act (Q 6:21). "(Their way is) like the way of Pharaoh's folk and those before them; they denied the signs…" (Q 8:54; see also Q 5:10, 86, where in both verses *kadhdhaba* comes along with *kafara,* he disbelieved; cf. Q 6:21, 39, 150; 10:95; 7:176-7, 182; 20:56). In Q 6:33 it is emphasized that Muḥammad's opponents, the unbelievers, did not accuse him of lying but they denied *(jaḥada)* God's signs. The verb *jaḥada* and its equivalents, *ankara* and *zalama,* appear several times in the qurʾānic text as expressions of the reaction to God's signs (Q 7:9; 11:59; 29:49; 31:32; 40:63, 81; 41:15; 46:26). In two verses the verb *istakbara* (he became haughty) occurs with the verb *kadhdhaba,* as in "Those who regard our signs as lies and display haughtiness (see ARROGANCE; PRIDE) toward them shall be the inhabitants of the fire (q.v.; see also HELL AND HELLFIRE) forever" (Q 7:36 and Q 7:40), and without *kadhdhaba* in other verses (Q 7:133; 10:75; 45:31). In one place the unbelievers' arrogance and mockery are depicted as a deception (Q 10:75). Another kind of negative reaction to the signs is disputation *(jidāl)* which is associated with unbelief: "None but the unbelievers dispute concerning the signs of God…" (Q 40:4; see DEBATE AND DISPUTATION). But the unbelievers have no proof to support their dispute which derives from their arrogance (cf. Q 40:35, 56). In several verses the opponents' disputation is expressed through mockery; they accuse Muḥammad of telling ancient stories (Q 6:25; 8:31; 68:15; 83:13). Twice, the unbelievers are regarded as heedless of the signs (Q 7:136; 10:7). They also defame the signs (Q 41:40) and oppose them (Q 74:16). In sum, the unbelievers express their reaction to God's signs in several ways — denial, mockery, contestation, opposition and heedlessness. As a text characterized, *inter alia,* by polemics, the Qurʾān frequently refers to its opponents, and naturally emphasizes their negative attitude toward the signs.

Signs as linguistic communication

The word *āya,* apart from connoting non-linguistic communication between God and man (Cf. Izutsu, *God,* 133), also contains the additional meanings of a basic unit or a passage of revelation, namely, linguistic communication (see REVELATION AND INSPIRATION; VERSES). In the Qurʾān itself there is no indication as to the length of these units or passages. Q 2:106 reads: "And for whatever unit of revelation (or passage, *āya*) we abrogate or cast into oblivion, we bring a better or the like of it…" (cf. Q 16:101; 24:1; see ABROGATION). Also when the Qurʾān states that "Those are *āyāt* of the wise scripture" (Q 10:1; 12:1; 13:1, in several beginnings of sūras [q.v.] which constitute a fixed formula), it seems to point to a basic unit of revelation or to passages, although the meaning of signs

cannot be ruled out altogether. *Āyāt* are mentioned in the context of interpretation *(taʾwīl),* a fact that alludes to linguistic communication (Q 3:7). Similarly, it is more probable that *āyāt* mean units of revelation when appearing with the verb *talā* (he recited): "The People of the Book (q.v.) are not all alike. [Among them is] a righteous community who recite God's *āyāt* in the hours of the night…" (Q 3:113, and Q 19:73; 33:34; see VIGILS; RECITATION OF THE QURʾĀN). According to some interpreters of the Qurʾān, the plural word *āyāt* also means the Qurʾān itself (e.g. *Jalālayn,* ad Q 27:81; 29:23, 49; 31:7; 34:43). It is, however, possible to conclude from the context of some verses that *āyāt* are identified with the scripture, as in "Our lord, send among them a messenger, one of them, who shall recite to them your signs, and teach them the book (q.v.) and the wisdom…" (Q 2:129; cf. 2:151; 10:15). According to Q 3:2-4, not only is the Qurʾān designated as *āyāt* but also the Hebrew Bible and the New Testament (see TORAH; GOSPELS).

A further extension of the meaning of *āya,* one with legal connotations, is certainly discernible from Q 2:231:

> When you divorce women, and they have reached their term, then retain them honorably or set them free honorably; do not retain them by force, to transgress [this law]; whoever does that has wronged himself. Take not God's laws *(āyāt)* in mockery… (see MARRIAGE AND DIVORCE; BOUNDARIES AND PRECEPTS; LAW AND THE QURʾĀN).

The word *āyāt* also occurs in the context of God's giving ordinances (Q 2:187, 221; 24:58, 61). And there is another stylistic phenomenon which proves the notion that *āyāt* may also be used as a term for laws. The formula "in such a manner God makes clear to you his *āyāt* (signs)" is found both after a sentence which speaks about God's graces, namely, his help for and saving of the believers (Q 3:103), and after a sentence which talks about the expiation of oaths (q.v.; Q 5:89; see also BREAKING TRUSTS AND CONTRACTS; CONTRACTS AND ALLIANCES). Just as in the former example *āyāt* seems to mean signs, so in the latter *āyāt* seems to mean laws. Our suggestion is that the above-mentioned formula refers to the sentences which precede it. To sum up, *āyāt* has the following basic meanings: signs, miracles, proofs, basic units or passages of revelations, the Qurʾān and other holy books, and laws.

Structure of sign-passages

Most sign-passages (i.e. groups of sign-verses) are characterized by introductory as well as concluding formulas (see FORM AND STRUCTURE OF THE QURʾĀN). The introductory phrase presents God's acts and the concluding sentence emphasizes the fact that these acts are signs for people who reflect, or understand. Q 13:2-3 reads:

> God is he who raised up the heavens without pillars you can see, then he sat himself upon the throne. He subjected the sun and the moon, each running to a term stated. He directs the world (literally: the affair) [and] he makes the signs clear so that you will be certain of the encounter with your lord. It is he who stretched out the earth and set therein firm mountains and rivers, and of every fruit he placed there two kinds, and covered the day with the night. Surely in that are signs for a people who reflect.

In some sign-passages the first words are: "And of his signs…" (Q 30:20). There are, however, sign-passages in which the word "signs" is absent (Q 6:141; 13:12-15; 16:3-8, 80; 30:48-51; 32:4-9). On the whole, the

sign-passages have no uniform internal order, except that there might be a special division and a hierarchy of the signs in some places, as indicated by exegetes (see below *Later development*).

Most of the verbs connected with signs indicate the mode of their arrival to humankind: "to bring," *atā bi, ātā, jāʾa bi* (cf. Q 2:106, 211; 43:47), "to bring down or to reveal," *nazzala, anzala* (e.g. Q 6:37; 10:20), "to come," *atā* (e.g. Q 6:158), and "to send," *baʿatha bi, arsala bi* (e.g. Q 10:75; 11:96). Some verbs *(bayyana, ṣarrafa, faṣṣala)* indicate that the signs are explained or made clear (Q 5:75; 6:46; 7:174; 9:11), and some others (e.g. *dhakkara, qaṣṣa)* indicate that the signs are mentioned, told and recited (Q 6:130; 8:31; 10:71; see NARRATIVES). In the light of the polemical character of many parts of the Qurʾān, it seems that these verbs are intended to deliver the message that God's signs not only exist but are brought down to people, they are transmitted by recounting or recitation and, beyond that, they are made clear in order to convince humans of God's power and providence, so that they will worship him. Without the Prophet's explanation, signs remain a "means of non-linguistic communication" (Izutsu, *God,* 133-9), which humanity is obliged to decipher. In addition, there is the phenomenon that some signs are depicted as clear signs (*āyāt bayyināt,* Q 2:99; 3:97; 17:101). We do not know the difference between *āya* and *bayyina* (as a noun), the latter literally meaning "clear sign." In Q 20:133 and Q 7:73, the identification of *āya* with *bayyina* is transparent, and in other places *bayyina* applies to the same sign which is expressed elsewhere by *āya* (Q 7:105). *Āyāt bayyināt,* however, seem never to be applied to natural wonders, rather only to historical or supernatural signs (Rahman, *Major themes,* 72).

Later development

The natural phenomena that appear in the Qurʾān serve Muslim scholars as corroboration for the argument from design. The teleological argument is used to prove the existence of God, his unity, wisdom, and rule of the world through the wonderful design observed in the world (see SOVEREIGNTY; KINGS AND RULERS; GOD AND HIS ATTRIBUTES). Although this argument is found in Greek philosophy (Socrates, Aristotle, the Stoics) and in Christian thought (Augustine [d. 430], Boethius [d. 524] and, in the Muslim era, John of Damascus [d. ca. 143/750], Theodore Abū Qurra [d. ca. 210/825] and ʿAmmār al-Baṣrī [d. ca. 210/825], who very probably influenced Muslim theologians; on the early interactions between Christian and Muslim theologians, see e.g. Griffith, Faith and reason), one cannot ignore the numerous examples of the argument in the Qurʾān (cf. Gwynne, *Logic*), which certainly induced Muslim theologians to employ it. It seems that Muʿtazilī theologians first used the argument from design (Hishām al-Fuwaṭī [d. ca. 229/844], al-Naẓẓām [d. bef. 232/847], al-Jāḥiẓ [d. 255/869]; see MUʿTAZILĪS). This argument then passed to other theologians, whether they belonged to mainstream Muslims, such as al-Muḥāsibī (d. 243/857), to Ashʿarī theologians like al-Ashʿarī (d. 324/935), al-Bāqillānī (d. 403/1013) and al-Ghazālī (d. 505/1111), or to sectarians, such as the Zaydī Imām al-Qāsim b. Ibrāhīm (d. 246/860; see HERESY). Even the Aristotelian philosopher Ibn Rushd (d. 595/1198) states that he prefers arguments for God's existence that appear in the Qurʾān to speculative arguments (see THEOLOGY AND THE QURʾĀN). His form of the teleological argumentation (see COSMOLOGY), the argument from God's providence, which shows that the design of the world aims to benefit

people, is one that is much cited in the Qurʾān.

The exegetes of the Qurʾān naturally placed much importance on God's signs and the conclusions derived from them concerning God's power and his rule of the world (Ṭabarī, *Tafsīr,* ad Q 30:24; Ibn Kathīr, *Tafsīr,* ad Q 30:21). Generally, however, al-Ṭabarī (d. 310/923), Ibn Kathīr (d. 774/1373) and other traditionalist exegetes did not investigate sign-passages as a whole, nor did they analyze the inter-connections between signs. Such examinations were carried out by rationalist exegetes such as Fakhr al-Dīn al-Rāzī (d. 606/1210), who divides sign-passages according to their functions, the connections between them, and their hierarchical structure (Rāzī, *Tafsīr,* ad Q 30:22-7). Q 30:22-5 reads:

And of his signs is the creation of the heavens and earth and the variety of your languages and colors… and of his signs is your slumbering by night, and your seeking by day after his bounty… and of his signs he shows you lightning (see WEATHER), for fear and hope, and that he sends down out of heaven water and he revives the earth with it after it is dead… and of his signs is that the heaven and earth stand [firm] by his command…

Al-Rāzī divides these signs into necessary accidents *(aʿrāḍ lāzima),* namely, accidents which are part of the essence of a thing, and those which are transitory *(aʿrāḍ mufāriqa),* some departing quickly, such as redness of the face as a result of shame, and others slowly, such as youth (cf. Jurjānī, *Taʿrīfāt,* 153-4; see YOUTH AND OLD AGE). First the Qurʾān points out two examples of necessary accidents (the various languages and colors of people), and then two examples of *aʿrāḍ mufāriqa* (sleep at night and the search for means of subsistence during the day; see PAIRS AND PAIRING). God makes the *aʿrāḍ mufāriqa* of the last two verses which deal with heaven and earth come before their *aʿrāḍ lāzima,* for heaven and earth are stable and changes are more marvelous in them than in humankind. Thus, al-Rāzī organizes signs according to their characteristics. Q 30:8 reads: "Have they not reflected on themselves? God did not create the heavens and the earth and what is between them save with the truth…." Al-Rāzī notices that in this verse signs in people *(dalāʾil al-anfus)* precede signs in the heavens and earth *(dalāʾil al-āfāq),* whereas in Q 41:53, "We shall show them our signs in the horizons *(al-āfāq)* and in themselves…," signs in the heavens and earth take precedence. The solution to this contradiction lies in the distinction between the agents of the verbs mentioned in these verses: when the agent is human, the signs stated are easy to perceive, for they are in humans themselves and people cannot ignore them, while the signs which God mentions about the world are more difficult to perceive, for they are remote from humanity. What God mentions last is understood by people first because they progress in knowing God's signs in stages (Rāzī, *Tafsīr,* xxv, 99, ad Q 30:8). Such sophisticated interpretation occurs neither in classical nor in modern exegesis (see EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY; PHILOSOPHY AND THE QURʾĀN). Scientific exegesis, which searches for elements and terminology of science in the Qurʾān, does appear in classical texts, but is not as widespread as it has become in the modern era (Jansen, *Interpretation,* 36-8; see SCIENCE AND THE QURʾĀN).

Modern exegetes tend to deal not only with separate words in a verse or with a complete verse but also with whole sign-passages, paraphrasing their ideas and

drawing conclusions from them. Q 10:5-6 reads:

It is he who made the sun a radiance, and the moon a light (q.v.), and determined it by stations, that you might know the number of the years and the reckoning. God created that only with the truth, explaining the signs to a people who know. In the alteration of night and day, and what God has created in the heavens and the earth, surely, there are signs for godfearing people.

Muḥammad Rashīd Riḍā (d. 1935), whose interpretation of the Qurʾān follows the teachings of his master, the great Muslim reformist Muḥammad ʿAbduh (d. 1905), states that these two verses direct the Muslim to God's cosmological signs which prove his power to revive the dead and to reward man (cf. Darwaza, *Tafsīr,* vi, 287). According to Rashīd Riḍā, these signs also show God's wisdom and the regular design in creation, and, characteristically of modern exegesis, he points out that they stimulate man to study astronomy, a science which the ancestors favored because of the guidance of the Qurʾān (see PLANETS AND STARS). Furthermore, study of the cosmological signs proves that Islam is a religion based on knowledge (see KNOWLEDGE AND LEARNING) and science *(dīn ʿilmī),* not on blindly following authority (q.v.; *taqlīd*). The scientific discoveries of the secrets of light in this generation prove God's sagacity (Rashīd Riḍā, *Manār,* xi, 301-5). In ʿAbduh's work, the jinn (q.v.) are identified with microbes (Jansen, *Interpretation,* 43). Extensive scientific exegesis *(tafsīr ʿilmī)* is found in Muḥammad Farīd Wajdī's (d. 1940) *al-Muṣḥaf al-mufassar,* "The Qurʾān Interpreted" (Jansen, *Interpretation,* 46-7). A typical modern discussion of sign-passages is found in Sayyid Quṭb's (d. 1966) interpretation of the beginning of Q 30 (vv. 1-32). In his view, sign-passages do not stand apart; there is a close connection between what happens to humans and the natural phenomena, and this is expressed through the notion that God is the source of all things (Quṭb, *Ẓilāl,* vi, 436). The function of the signs is to prompt humans to believe in God (ibid., 448-9). Whoever makes such signs, Quṭb emphatically states, is the same one who sends messengers to humankind, restores people to life, and so on (ibid., 463), as in the second part of the sūra (vv. 33-60).

The notion that all future scientific discoveries are mentioned in the Qurʾān, whether directly or indirectly, is a common modern notion. Muṣṭafā Kamāl Maḥmūd (b. 1921), an Egyptian physician, writer and a qurʾānic exegete, is very fond of scientific exegesis. He finds allusions to recent scientific discoveries in the qurʾānic description of creation (Maḥmūd, *Muḥāwala,* ed.1970, 51, 60-4; cf. Rippin, *Muslims,* 95-7). He partially accepts Darwin's theory of evolution, claiming that God is responsible for the evolution of the species in stages (Maḥmūd, *Muḥāwala,* ed. 1970, 59-60; ed. 1999, 67-8). Among the various natural phenomena which support the scientific knowledge found in the Qurʾān, he points to the state of the embryo (Q 39:6; Maḥmūd, *Muḥāwala,* ed. 1970, 65-8; see BIOLOGY AS THE CREATION AND STAGES OF LIFE). Some modern exegetes regard the scientific contents of the Qurʾān as proof of the veracity of Muḥammad's prophecy and consequently the truthfulness of the qurʾānic ideas. According to these scholars, the scientific elements attest to a miracle that is even greater than the miracle of the literary supremacy of the Qurʾān (see INIMITABILITY; LANGUAGE AND STYLE OF THE QURʾĀN). The scientific interpretation, however, has not gone unchallenged. Muslim scholars themselves have charged the adherents of scientific exegesis with

failing to pay proper attention to the context of the verses discussed, to philological considerations and to the fact that the Qurʾān was addressed to Arabs (q.v.), speaking in their language and informing only of the sciences known in the Prophet's era (see OCCASIONS OF REVELATION; SĪRA AND THE QURʾĀN; PRE-ISLAMIC ARABIA AND THE QURʾĀN). Moreover, they insist that the Qurʾān presents an ethical and religious message (see VIRTUES AND VICES, COMMANDING AND FORBIDDING; ESCHATOLOGY) and that a limited text cannot contain the ever-changing views of scientists in the nineteenth and twentieth centuries (Hussein, Commentaire; Jansen, *Interpretation,* 47-54).

Silk

Lustrous fiber produced by insect larvae frequently used in fine materials. The terms *ḥarīr* and *sundus,* "silk," are attested five times in the Qurʾān (Q 22:23, 35:33, 76:12, and 18:31 and 44:53, respectively). These terms appear exclusively in passages dedicated to the description of paradise that, with the fire of the hell promised to the unbelievers, draws a central binary theme in the qurʾānic discourse focused on an eschatological perspective (see PARADISE; HELL AND HELLFIRE; ESCHATOLOGY). Therefore, the luxury of silk constitutes one of the paradigmatic elements of Islamic heavenly ontology (Q 55 and Q 56 provide the most detailed developments on the theme paradise/hell; see PAIRS AND PAIRING). Depictions of the qurʾānic paradise (also called *al-khuld* or *dār al-salām*) rest upon three major categories that reflect the traditional conception of the ideal life-style in Arab society. The first category is obviously the heavenly landscape comprising bucolic gardens (see GARDEN), live springs of pure water (q.v.), rivers of milk (q.v.), honey (q.v.) and wine (q.v.; see also INTOXICANTS; SPRINGS AND FOUNTAINS), and trees producing the most delightful fruits (see AGRICULTURE AND VEGETATION; TREE(S)). The second concerns creatures of two kinds, symbols of beauty and sensual

happiness, namely immortal male youngsters and virgins with large eyes *(ḥūrunʿīnun)* that will accompany and serve the rewarded in the afterlife (e.g. Q 55:72; 56:17, 22; 76:19; see REWARD AND PUNISHMENT; HOURIS). The third category, to which belongs the mention of silk, consists of an array of precious items, accessories and furniture that embellish the heavenly scenery as the most comfortable and beautifully equipped, something humans would dream of enjoying. Two main materials, textile and metalwork, contribute to idyllic images of the paradise that allow an easier comprehension of the ineffable concepts of eternity (q.v.) and life after death (see RESURRECTION; DEATH AND THE DEAD). Clearly referring to the cultural context of the qurʾānic revelation, a recurrent image presents the rewarded as garbed in silk or other fine fabrics and wearing valuable jewels (Q 22:23; see METALS AND MINERALS; PRE-ISLAMIC ARABIA AND THE QURʾĀN). This image appears in radical contrast to that of the ordinary life in this world whose practical necessities require wearing utilitarian clothes made of rough material, as indicated in Q 16:80: "He has given you the skins of beasts for tents, that you may find them light when you shift your quarters, or when you halt; and from their wool and soft fur and hair has he supplied you with furniture and goods for temporary use" (see equally Q 16:81; see HIDES AND FLEECE).

A range of other heavenly works of textile, supposing both an artistic *savoir-faire* and a high material value, complete the rather realistic picture of a wealthy home (see HOUSE, DOMESTIC AND DIVINE). These include cushions carefully disposed upon ordered sets of beds, spread carpets and rugs (Q 88:13-6), some of them displaying rich adornment on the edges (Q 55:54). Occasionally, the Qurʾān describes these accessories as green in color (Q 55:76; see COLORS), adding another degree of heavenly attribute. In addition to costly furnishing and clothing, the righteous will eat and drink delicious food and beverages in silver and gold dishes and cups (Q 43:71; 76:15-16, 21; see CUPS AND VESSELS; FOOD AND DRINK; GOLD). Q 18:31 delivers a kind of representative summary of the whole topic: "Decked shall they be therein with bracelets of gold, and green robes of silk and rich brocade shall they wear, reclining therein on thrones." As a result, in addition to its marvelous and supra-natural aspect, the qurʾānic paradise offers all the advantages of sensible beauty and pleasure, even luxury. Its aesthetic strongly evokes earthly enjoyments. Therefore, the question of interpretation of this eschatological theme raised many discussions among the exegetes, theologians, philosophers and mystics (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL; ṢŪFISM AND THE QURʾĀN; PHILOSOPHY AND THE QURʾĀN; Sourdel and Sourdel, *Dictionnaire*, 656-7 [Paradis]). Whereas the traditionists accepted the literal qurʾānic description of paradise, in accordance with the manifest meaning of the text, the Muʿtazilīs (q.v.) did not accept certain aspects of it that challenge reason (see INTELLECT). The latter interpreted these passages at a second level of meaning, attributing to them a second signification (see POLYSEMY). Similarly, the philosophers understood the promised delights as a metaphorical or allegorical proposition, fully comprehensible only by the wise and knowledgeable (see METAPHOR; LITERARY STRUCTURES OF THE QURʾĀN) while maintaining that the colorful qurʾānic narrative is intended chiefly for the common people. The Ashʿarīs stand between these two opposing trends, arguing that the heavenly enjoyments belong to another order, although

these enjoyments do display features that are analogous to earthly ones. The Ṣūfīs also found in these verses allegorical signification but without rejecting the literal meaning; they consider the Qurʾān a cognitive construction with multiple layers. Some other theologians, like al-Ghazālī (d. 505/1111), proposed an alternative to these various ideas, asserting that the believer himself should interpret the nature of the ultimate reward according to his own intellectual faculties and spiritual qualities.

Silk became an important part of Islamic culture that developed both the arts of textile fabrication and the economy linked to them. The social and political context of Islam in the middle ages, with sumptuous courts flourishing in the great cities of the Muslim empire and a wide network of trade roads stretching from the Atlantic ocean to India, central and eastern Asia, fostered the manufacture and sale of precious objects in general, and silk items in particular (Sourdel and Sourdel, *Dictionnaire,* 535-7 [Marchandes, activités]). The ancient trans-Asian trading corridor, known as "the silk road," which was revived in the seventh/thirteenth century under the Mongol empire, stimulated the trade of this fine material through commercial centers populated by Muslim merchants who were spread across the whole landmass. Silk was used to make lavish court robes in officially controlled workshops designated by the Persian noun *ṭirāz,* located in palaces (Sourdel and Sourdel, *Dictionnaire,* 806, Ṭirāz). These luxurious garments were distributed as honorary gifts during princely ceremonies. Silk was also, as it still is, a component of particularly fine carpets and rugs of the Islamic world (see MATERIAL CULTURE AND THE QURʾĀN).

Simile

The comparison of two things, made explicit — and distinguished from metaphor (q.v.) — by the use of "like" or "as." "Zayd fought like a lion" is a simile. In Arabic rhetoric (see ARABIC LANGUAGE; RHETORIC AND THE QURʾĀN; LITERARY STRUCTURES OF THE QURʾĀN), "simile" or *tashbīh* has the same general sense, and the same general distinction is made between simile and metaphor *(istiʿāra)*. The "like" or "as" in the simile is usually made with the particle *ka,* though a locution using the noun *mathal* may substitute. Early works on rhetoric placed great emphasis on simile; al-Marzubānī (d. 384/994) in *al-Muwashsha* made simile one of the "four pillars of poetry" (see van Gelder, *Tashbīh;* see POETRY AND POETS). Not surprisingly, proponents of the doctrine of the inimitability

(q.v.) of the Qurʾān, like al-Rummānī (d. 384/994) and al-Bāqillānī (d. 403/1013), listed its excellent similes among the rhetorical qualities that make it inimitable. Al-Bāqillānī (*Iʿjāz,* 263-8) compared them favorably with the outstanding similes found in poets like Imruʾ al-Qays and Bashshār b. Burd. From a rhetorical standpoint, the interest in qurʾānic simile culminates in the work of Ibn Nāqiyā (d. 485/1092) entitled *al-Jumān fī tashbīhāt al-Qurʾān.*

Although similes are common in the Qurʾān, the word *tashbīh* is not found there. The term *mathal,* however, sometimes clearly means "simile." At the same time, it must be said that *mathal* is also used to mean short narrative passages that we would be more likely to call "parables," and it seems no clear distinction is made between these two forms by the Qurʾān, nor, for that matter, by some of the rhetoricians (see PARABLE). They are taken to be the same sort of rhetorical device, *mathal.* Perhaps that word is best rendered by the similarly comprehensive term "analogy." Two passages show this. In Q 56:22-3 the plural form, *amthāl,* introduces a simile: "The houris (q.v.) whose eyes are like hidden pearls" *(wa-ḥūrun ʿīnun ka-amthāli l-luʾluʾi l-maknūni),* whereas Q 18:32-45, which is also termed a *mathal,* clearly exceeds the bounds of what is usually called simile: "Coin for them an analogy *(wa-ḍrib lahum mathalan)* of two men, unto one of whom we had assigned two gardens of grapes and we had surrounded both with date-palms and put between them tillage (see GARDEN; DATE PALM; AGRICULTURE AND VEGETATION)…." It goes on to relate a parable about two farmers, one pious, the other disdainful and proud; as one would expect, the former is rewarded and the latter punished (see REWARD AND PUNISHMENT; PRIDE; INSOLENCE AND OBSTINACY; PIETY).

Uses and examples

In the Qurʾān the simile is often made simply with *ka:* Q 7:179 "Those are like cattle" *(ūlāʾika ka-l-anʿām)* but quite commonly a qurʾānic simile is made with a characteristic pleonasm, *ka-mathal.* As Ibn Nāqiyā shows through numerous examples, qurʾānic similes make use of the same imagery found in Arabic poetry, both pre-Islamic and later (see SYMBOLIC IMAGERY). The first simile (Q 2:17), using the pleonasm *ka-mathal,* compares the hypocrites (q.v.; *al-munāfiqūn;* see HYPOCRITES AND HYPOCRISY) to someone who blunders in the dark (see DARKNESS) after having briefly enjoyed the light (q.v.) of a fire (q.v.): "Their likeness is the likeness of one who lit a fire *(mathaluhum ka-mathali lladhī istawqada nāran),* and when it illuminated his surroundings, God took away their fire and left them in darkness. They do not see (see VISION AND BLINDNESS)." This simile is soon followed by another: "Or like the rain clouds in the sky with darkness and thunder and lightning in it (see WEATHER), they put their fingers in their ears against the thunderbolts" (Q 2:19; see HEARING AND DEAFNESS; SEEING AND HEARING).

Aspects of God's creation (q.v.) provoke a number of similes. Q 36:39, "And for the moon (q.v.) we have devised stations until it returns like an old, withered palm stalk," i.e. curved and small; Q 55:14, "He created man from clay (q.v.) like crockery"; Q 55:24, "His are ships (q.v.) that sail on the sea like mountains." Heaven and hell (see HELL AND HELLFIRE) are the subject of colorful similes. The houris of paradise (q.v.), for example, are described thus: "And with them are ones who lower their eyes, pure as the hidden eggs [of ostriches]" (Q 37:48-9). Likewise, the painful features of hell are also described through similes. The liquid given to the damned is like molten lead (see FOOD AND DRINK; HOT AND

COLD): Q 18:29 "And if they call for help, they will be given water like molten lead scalding their faces, an evil drink."

A fairly limited number of peoples, places and events probably account for most of the similes in the Qurʾān. Recourse to simile is especially frequent in the case of various "enemies (q.v.) of God" *(aʿdāʾ Allāh),* most prominently the unbelievers (*al-kāfirūn;* see BELIEF AND UNBELIEF; GRATITUDE AND INGRATITUDE), the polytheists (*al-mushrikūn;* see POLYTHEISM AND ATHEISM) and the aforementioned hypocrites. Q 7:176 compares an unbeliever to a dog (q.v.): "He is like the dog, if you chase him away, he pants, and if you leave him alone, he pants." Two memorable similes compare the futile acts of unbelievers to ashes (q.v.) and to a mirage (see also TRANSITORINESS). Q 14:18: "Those who disbelieve in their lord (q.v.), their deeds are like ashes which the winds blow on a stormy day" (see GOOD DEEDS; EVIL DEEDS). And Q 24:39: "Those who disbelieve, their deeds are like a mirage in a desert. Someone thirsty reckons it to be water (q.v.) until he reaches it and finds nothing in it."

Q 13:14 tells us that the polytheist who prays to idols (see IDOLS AND IMAGES) is "like a man who stretches his hands to water for the water to come to it, but the water does not come." Q 29:41 compares the refuge the polytheist seeks in his idols to a spider (q.v.) web: "Those who take other protectors besides God (see CLIENTS AND CLIENTAGE; PROTECTION) are like the spider who takes a house — truly the spider's house is the flimsiest of houses!" Q 63:4 compares the hypocrites to blocks of wood: "And when you see them, their persons please you, and if they speak you listen to what they say. [Yet] they are like blocks of wood propped against each other." Two particular events, judgment day (see LAST JUDGMENT) and the destruction of wicked peoples (see PUNISHMENT STORIES; CHASTISEMENT AND PUNISHMENT), are frequent subjects of similes, e.g. the annihilation of the people of ʿĀd (q.v.) in Q 54:19-20: "We sent upon them a roaring wind (see AIR AND WIND) on a day of unrelenting calamity which snatched them away as though they were the trunks of uprooted palm trees." Q 69:7 says that the same people after their destruction seemed "as though they were the hollow trunks of palm trees." Q 55:37 describes the appearance of the sky on judgment day (see APOCALYPSE): "And when the skies are split open, they will be red like stained leather." Q 70:8-9 has: "A day when the sky will be like molten brass and the mountains will be like tufts of wool." Q 101:4 describes the commotion of the resurrected people (see RESURRECTION) thus: "… a day when the people will be like moths scattered about."

In sum, similes vary greatly in tone, some are majestic, some homespun — as Q 2:26 says, "God does not disdain to make a similitude of a gnat" *(inna llāha lā yastaḥyi an yaḍriba mathalan mā baʿūḍatan)*. Sometimes a sardonic tone is struck (see LANGUAGE AND STYLE OF THE QURʾĀN). A memorable simile in Q 62:5 concerns Jews (see JEWS AND JUDAISM) and the Torah (q.v.): "The likeness of those who were given the Torah to carry and then ignored it is that of a donkey carrying books *(asfār)*."

In addition to their illustrative, semantic role, similes often seem to have a rhetorical, emphatic role in the organization of qurʾānic discourse. Similes not infrequently open or close a subsection of a sūra (q.v.; see also FORM AND STRUCTURE OF THE QURʾĀN). For example, the rather ordinary simile in Q 11:24 which compares believers and unbelievers to the seeing and the blind, respectively, is followed immediately by stories of the prophets (see PROPHETS

AND PROPHETHOOD) Noah (q.v.), Hūd (q.v.) and Ṣāliḥ (q.v.), and the "vanished peoples" to whom they were sent — the heedless people whom God destroyed. Similarly, the famous or infamous comparison of Torah-bearers just cited, Q 62:5, introduces a discussion of the Jews. The similes in Q 54:20, 57:20, 69:7 and 105:5 offer tart summations of the preceding passages.

The Qurʾān, in its characteristically self-conscious way, tells us that the simile is one of God's favored rhetorical devices for educating people (see KNOWLEDGE AND LEARNING; TEACHING; INTELLECT): *wa-la-qad ṣarrafnā fī hādhā l-qurʾāni lil-nāsi min kulli mathalin,* "We have put in this Qurʾān every sort of similitude for people" (Q 18:54) and *wa-la-qad ḍarabnā lil-nāsi fī hādhā l-qurʾāni min kulli mathalin laʿallahum yatadhakkarūna,* "We have coined for people in this Qurʾān every kind of similitude. Perhaps they will take heed" (Q 39:27; see WARNING). Indeed, the Qurʾān even goes so far as to use simile to comment on simile/analogy itself. Interestingly enough, the chief characteristic of good rhetoric is stability, that of bad rhetoric instability:

> Have you not seen how God has made an analogy? A good word is like a good tree (see TREES). Its roots are firm and its branches are in heaven. It gives its fruit in every season with its lord's permission. God coins similes for people that they may reflect. The analogy of a bad word is with a bad tree, uprooted from the earth, possessing no stability (Q 14:24-6).

Commentators on simile

Commentators devote considerable attention to these and other similes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). Often their concern is simply to elucidate the obscurity of the simile. For example, in Q 2:17 it is the free mixture of singular and plural pronouns referring to the same party; while in Q 2:19 the entire basis of the simile seems at first confused since, as one reads, it becomes apparent that the hypocrites are not being compared to the rain clouds, despite *ka-ṣayyib,* but rather to people frightened by a thunderstorm.

As might be expected, commentators, depending on their outlook and interests, offer a wide range of interpretations of such similes. To take the example of Q 14:24-6 cited above, al-Ṭabarī (d. 310/923) says, "Interpreters differ on the meaning of 'a good word' *(kalima ṭayyiba)*. Some of them say it is the faith (q.v.) of the believer" (*Tafsīr,* xiii, 135; see also SPEECH; WORD OF GOD). He goes on to say that some specifically equate it with the *shahādat lā illāha illā llāh,* it being firm *(thābit),* meaning the *shahāda* is firmly fixed in the heart of the believer (see WITNESS TO FAITH). A very early exegete, Mujāhid (d. 104/722), tells us that the good tree is a date palm. Others say a good word means the believer himself who is on earth (q.v.) and who works and speaks on earth and so his deeds and his speech reach heaven while he is still on earth. Yet others say the tree in this simile is a tree in heaven but al-Ṭabarī considers it more likely to be a date palm.

Al-Zamakhsharī (d. 538/1144), a Muʿtazilī (see MUʿTAZILA), tells us that "good word" means the word *tawḥīd,* the oneness and unity of God (see GOD AND HIS ATTRIBUTES). Al-Rāzī (d. 606/1210), who rejects the necessity of the tree being a date palm, devotes four and a half pages to explicating the "tree" and its four attributes, its goodness, its firm roots, its lofty branches, and its constant supply of fruit.

On the other hand, we learn from the Shīʿī commentary of al-Kāshī (d. ca. 910/

1505) that the imām (q.v.) Jaʿfar al-Ṣādiq (d. 148/765) said of the good tree: "The Messenger of God is its root, the Prince of the Believers (ʿAlī) is its trunk, the imāms among the descendants of both are its branches, the knowledge of the imāms constitutes its fruit" (Gätje, *Qurʾān,* 243). Not surprisingly, al-Kāshī tells us that the bad tree is the Umayyads (see SHĪʿISM AND THE QURʾĀN; POLITICS AND THE QURʾĀN; ʿALĪ B. ABĪ ṬĀLIB).

Two other similes also address the topic of figurative language in the Qurʾān. The first is Q 2:26, mentioned above, "Verily, God does not disdain to make an analogy with a gnat…" This al-Rāzī tells us is meant as a rebuke to the unbelievers who had falsely claimed that mention of such humble creatures as the bee, the fly, the spider and the ant was unworthy of divine discourse (see ANIMAL LIFE). Wrong, al-Rāzī says, because God has created both great and humble things,

> and the little weighs upon him no less than the big, and the great is no more difficult for him than the small… and it is perfectly apposite to mention flies when God wishes to show how ugly is the polytheists' worship of idols… or to make an analogy with a spider web in order to show how trifling and flimsy their religion is (Rāzī, *Tafsīr,* ii, 134-5).

The other simile, in Q 13:17, is yet more complicated since it encloses one simile within another:

> He sent down water from the sky and the river beds *(awdiya)* flowed with it. But the flood carried away the scum floating on its surface — and like it is the scum which comes from that which they heat with fire seeking to make jewelry and tools — likewise, God shows what is true and what is false. The scum is cast away with distaste, while what benefits people remains on this earth.

Al-Ṭabarī writes that this is an analogy that God makes with truth (q.v.) and falsehood (see ASTRAY; IGNORANCE; LIE), with faith (q.v.) and unbelief. God is saying that the similarity of the truth in its permanence and of error (q.v.) in its evanescence is like the water which God sends down from the sky to the earth. The *wādī*s flow with it, the large ones with large quantities and the small ones with small quantities. The flood carries a swelling scum or foam, and this is one of two analogies pertaining to truth and falsehood. The truth is like the water (q.v.) which remains and which God has sent, while the foam which is of no benefit is falsehood. The other analogy — "and like it is the scum which comes from that which they heat with fire seeking to make jewelry and tools" — is the analogy of truth and falsehood with gold (q.v.) and silver and brass and lead and iron (see METALS AND MINERALS) from which people obtain benefits (see GRACE; BLESSING), while falsehood is like the scum which goes away without being of any benefit while the pure gold and silver remain. Likewise, God compares faith and unbelief, the futility of unbelief and the failure of the unbeliever being a punishment, while faith is that with lasting benefit (Ṭabarī, *Tafsīr,* xiii, 90). Al-Rāzī sharpens the analogy making the rain the Qurʾān and the *wādī*s the hearts of believers (see HEART), which according to their capacities contain more or less of the truth, while the foam and scum that are carried away and vanish are the doubts and obscurities (see UNCERTAINTY) that will vanish in the hereafter when only the truth will remain (Rāzī, *Tafsīr,* xix, 34-5; see also PAIRS AND PAIRING).

Probably the most well-known qurʾānic simile, and also one of the most commented on, is the so-called Light Verse (Q 24:35). This verse begins with a metaphor, "God is the light (q.v.) of heaven (see HEAVENS AND SKY; PLANETS AND STARS) and earth," but then quickly switches to simile,

the likeness of his light is like a niche which holds a lamp (q.v.). The lamp is in a glass which shines like a pearl-like star. It is kindled from a blessed tree, an olive neither of the east nor the west whose oil would almost glow forth itself though no fire touched it. Light upon light. God guides to his light whom he wills. God makes analogies for people. God knows all things.

Al-Ṭabarī, al-Zamakhsharī and al-Rāzī devote considerable space to mapping out the various parts of this elaborate simile, and al-Ghazālī (d. 505/1111) writes an entire book about it, *Mishkāt al-anwār,* drawing an analogy between the five elements of the simile: the niche, the glass, the lamp, the tree and the oil, and the senses, the imagination, the intellect, language, and prophecy. (For more on these interpretations, see METAPHOR.)

Similes, with the uncertainties of interpretation, could also be the topics of theological debate (see THEOLOGY AND THE QURʾĀN). One such exchange took place between the governor of Baghdād and Ibn Ḥanbal (d. 241/855) during the inquisition (q.v.; *miḥna*) on the issue of the createdness of the Qurʾān (q.v.):

Governor: Does not God say, 'We have made it an Arabic (see ARABIC LANGUAGE) Qurʾān' (Q 43:3). How could it be made without being *created?*
Ibn Ḥanbal: But God says, 'and He *made* them like green blades devoured…' (Q 105:5; see GRASSES). Does that mean He *created* them [like green blades devoured]? (Cook, *Koran,* 110).

More broadly, it can be said that just as there are theological dimensions to metaphor — whence the hasty insistence of commentators to assure us that "God is the light" must be understood as meaning "He is the possessor of light" (Zamakhsharī, *Kashshāf,* ad Q 24:35) — even so the simile has theological dimensions. For the notion of similitude in relation to God must also be placed in the context of the Qurʾān's insistence on the absolute oneness and uniqueness of God and the impossibility of likening anyone or anything to him (see ANTHROPOMORPHISM). Thus, Q 42:11, *laysa ka-mithlihi shayʾ*, "There is nothing like him." In this context, it can be seen that similitude is a definitive notion in the qurʾānic universe; similitude is a common quality of God's creation but since similarity requires at least two objects, similitude is a quality that is found *only* in his creation. This is reflected in theological debate about anthropomorphism in which the opposed terms *tashbīh/tanzīh* are employed. In such debates *tashbīh* is the negative term which denotes anthropomorphism.

Similitude see PARABLE

Sin, Major and Minor

Greater and lesser transgressions of the law of God. The Qurʾān promises that God will forgive minor sins if human beings abstain from the major ones (Q 4:31; 53:31-2; see FORGIVENESS). The most common characterization of "major" sins in exegesis and theology is *kabāʾir* (sing. *kabīra;* literally the "big ones"), a term that occurs in this sense in the Qurʾān (cf. Q 4:31; 42:37; 53:32). A common theological characterization of "minor" sins is *ṣaghāʾir* (sing. *ṣaghīra,* as in Q 18:49; see THEOLOGY AND THE QURʾĀN; EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). All deeds, major and minor, are recorded, and their register *(kitāb)* is to be given to each individual on the day of judgment (see LAST JUDGMENT; HEAVENLY BOOK; GOOD DEEDS; EVIL DEEDS), much to the consternation of the sinners (*mujrimīn,* Q 18:49; cf. 54:52-3; see REWARD AND PUNISHMENT).

Terms designating "sin" in the Qurʾān's vocabulary include: *dhanb* (pl. *dhunūb;* e.g. Q 3:11, 16, 193; 8:54; 12:29; 67:11); *fāḥisha* (and other terms from the same Arabic root, i.e. *f-ḥ-sh;* e.g. Q 2:169; 4:22; 12:24; 17:32; 27:54); *ḥaraj* (e.g. Q 9:91; 48:17); *ithm* (e.g. Q 2:173, 181-2, 219; 4:20, 48, 50, 112; 33:58; 42:37; 49:12); *junāḥ* (Q 2:198, 235; 4:102; 33:51); *jurm* (in the form of various derivatives from the root *j-r-m;* e.g. Q 6:147; 7:40; 9:66; 10:17; 11:35; 18:49; 45:31; 83:29); *khaṭīʾa* (and terms derived from the same root, *kh-ṭ-ʾ;* Q 2:81; 4:112; 12:97; 17:31; 69:9; 71:25); *lamam* (Q 53:32); *maʿṣiya* (pl. *maʿāṣī;* cf. Q 58:8-9); and *sayyiʾa* (pl. *sayyiʾāt;* Q 3:193; 4:31; 7:153; 29:7). Whether a particular term denotes a major or a minor sin is often not clear from the Qurʾān itself and the same term might be used to denote major or minor sins. Thus the term *sayyiʾa* occurs in Q 4:31 in the sense of a minor infraction (also in Q 3:193) but elsewhere (as in Q 7:153; 35:43) it refers to evil deeds of a graver kind (cf. Dāmaghānī, *Wujūh,* i, 423f., s.v. *al-sayyiʾāt;* also Zamakhsharī, *Kashshāf,* i, 159, ad Q 2:81, where *sayyiʾa* is glossed as *kabīra min al-kabāʾir*). Many commentators do, however, consider terms like *dhanb* and *ithm* (as well as *maʿṣiya,* a common gloss for *ithm:* cf. Ṭabarī, *Tafsīr,* v, 476, ad Q 7:33) to refer to major sins and understand *lamam, sayyiʾa* and *khaṭīʾa* to mean minor sins. Irrespective of the actual terms used, few commentators deny that there is in fact a distinction to be made between major and minor sins (cf. Haytamī, *Zawājir,* i, 11f.); precisely which sins belong in what category is, however, a matter of great uncertainty.

Definitions

Ibn ʿAbbās (d. ca. 68/687), a major early authority in exegetical matters, is reported to have defined the *kabīra* as "every sin that God has stamped with fire (q.v.), [his] displeasure, [his] curse (q.v.), or with [the threat of his] punishment" (Ṭabarī, *Tafsīr,* iv, 44, ad Q 4:31 [no. 9213]). More vaguely, yet in underscoring the sense of sin as transgression, he held "everything in which God is disobeyed [to be] a major sin" (ibid., no. 9211; see DISOBEDIENCE). Other early definitions related major sins not just to acts for which God has promised hell (see HELL AND HELLFIRE) but also those for which the *ḥudūd,* or the legal punishments explicitly prescribed by the Qurʾān and the sunna (q.v.), are to be executed (cf. ibid., no. 9219; see CHASTISEMENT AND PUNISHMENT; LAW AND THE QURʾĀN). Such views were elaborated on and systematized in works specifically devoted to cataloguing major sins. Shams al-Dīn al-Dhahabī (d. 748/1348), the author of one such book, defines major sins as anything "in regard to which there is a *ḥadd* in this world, such as

murder (q.v.), adultery, and theft (q.v.); or about which there is a threat of [God's] anger (q.v.) and punishment in the hereafter; as well as anything whose perpetrator has been cursed by our Prophet" (Dhahabī, *Kabāʾir,* 6; see ADULTERY AND FORNICATION; BLOODSHED). Ibn Ḥajar al-Haytamī (d. 974/1567), whose dissatisfaction with al-Dhahabī's book led him to write what became one of the most influential works on the subject, gives a broad sampling of both overlapping and alternative views on how to define major sins. Inter alia, the *kabāʾir* are sins that have been expressly forbidden (q.v.) in the Qurʾān and the sunna or accompanied with dire warnings in these foundational texts; acts that entail the *ḥadd*-penalties; sins that result in a loss of one's legal and public standing *(ʿadāla),* since they suggest a lack of concern with conformity to religious norms; and, indeed, sins that become "major" precisely because they are committed without a sense of fear (q.v.) or remorse (Haytamī, *Zawājir,* i, 12-17; ii, 425-7; see REPENTANCE AND PENANCE).

Others saw aspects of greater or lesser gravity as inhering in almost all sins. According to al-Ḥalīmī (d. 403/1012), a minor sin can become a major sin because of the context *(qarīna)* in which it is committed just as a major sin can, in turn, become abominable *(fāḥisha)* by the circumstances attending upon it. Thus, unlawful homicide is a major sin, but to murder a relative (see KINSHIP; FAMILY), for instance, or to do so in the sacred precincts (q.v.; of Mecca [q.v.] and Medina [q.v.]) make it the more abominable because it is not just the sanctity of the victim's life but also other sacred boundaries that have been violated (see SACRED AND PROFANE). To steal some paltry object would be a minor sin, not subject to the legal penalty; but this becomes a major sin when the victim of such theft is so poor as not to be able to dispense even with such an object (Ḥalīmī, *Minhāj,* i, 396-400; paraphrased in Ibn Ḥajar, *Fatḥ,* xii, 227f.; see POVERTY AND THE POOR). Al-Ḥalīmī thought that the only sin that does not admit of degrees of gravity is *kufr* — disbelief in God (see BELIEF AND UNBELIEF; GRATITUDE AND INGRATITUDE) — though Ibn Ḥajar al-ʿAsqalānī (d. 852/1449; *Fatḥ,* xii, 227) suggests in his rejoinder that this cardinal sin, too, can be classified according to its degrees of abomination.

In the end, as al-Haytamī and others recognized, the various definitions of major sin are mere "approximations" to the idea, which itself remains elusive. So, too, therefore, does the question of the *number* of sins that might be thought of as "major" — with estimates often ranging from four to seven hundred (Haytamī, *Zawājir,* i, 18). Al-Dhahabī's work on the subject gives brief accounts of seventy major sins; al-Haytamī describes no less than 476 major sins, which he proceeds to divide between the "interior" and the "exterior." Even as they acknowledged the distinction between major and minor sins, the primary interest of those concerned with such matters has tended to be with the major sins, usually leaving the minor ones as the subject of dire warnings about taking them lightly. (Some, like Ibn Nujaym [d. 970/1563], did however concern themselves explicitly with listing both major and minor sins.)

Sins in the Qurʾān's enumeration

Without providing any clear ranking of sins, the Qurʾān does not leave any doubt about what it considers to be the worst of them: the associating of anything or anyone with God (*shirk;* see POLYTHEISM AND ATHEISM), a "great sin" *(ithm ʿazīm)* that God will not forgive though he might forgive everything else (Q 4:48). Q 17:23-38, in cataloguing a number of God's com-

mands, mentions several acts that are to be avoided for "their sinfulness *(sayyiʾuhu)* is abhorrent to your lord" (q.v.; Q 17:38). In addition to *shirk,* some of the sins that are mentioned as such or are easily derivable from this list include: insolence towards one's parents (q.v.; see also INSOLENCE AND OBSTINACY); wastefulness as well as miserliness; the killing of one's children (q.v.) for fear of impoverishment (a reference to a pre-Islamic Arabian practice characterized here as a "great wrong" *[khiṭʾan kabīra]:* Q 17:31; see INFANTICIDE); wrongful murder of other sorts; fornication (described here as "an abomination and an evil way" *[fāḥisha wa-sāʾa sabīlan]*: Q 17:32); usurping the property (q.v.) of orphans (q.v.); dishonesty in business transactions (see ECONOMICS; TRADE AND COMMERCE); saying things of which one has no knowledge (see IGNORANCE; KNOWLEDGE AND LEARNING); and haughtiness (see PRIDE; ARROGANCE). (Also cf. Izutsu, *Concepts,* 228; for shorter lists, see, inter alia: Q 6:151-2; 25:67-8, 72. Some early exegetes also held that what the Qurʾān regards as major sins are to be located in the various prohibitions mentioned in the first thirty verses of Q 4; cf. Ṭabarī, *Tafsīr,* iv, 39-40 [ad Q 4:31]; see LAWFUL AND UNLAWFUL.) A fuller, though by no means exhaustive sampling of qurʾānic sins would include — besides the *ḥadd*-penalties (for drinking, adultery and fornication, false accusation of adultery and fornication, theft, and brigandage; see INTOXICANTS; WINE) and besides chronic neglect of the fundamental ritual obligations (see PRAYER; WITNESS TO FAITH; PILGRIMAGE; ALMSGIVING; RAMAḌĀN; FASTING; RITUAL AND THE QURʾĀN) — such diverse items as slander (Q 24:11; 33:58), undue suspicion (q.v.; *ẓann*) and backbiting (Q 49:11-12; also see GOSSIP); lying (*qawl al-zūr,* Q 22:30; see LIE) and concealing legal testimony (Q 2:283; see WITNESSING AND TESTIFYING); practicing usury (q.v.; Q 2:275-6, 278-9; 3:130-1); homosexuality (q.v.; cf. Q 26:165 f.; 21:74); "hurting" God, his Prophet, or other believers (Q 33:57-8); and other individual and collective transgressions against the "limits" established by God. (For various qurʾānic terms evoking the idea of transgression, cf. Izutsu, *Concepts,* 164-77 and passim, esp. 172 f.; also see BOUNDARIES AND PRECEPTS.) In general, as the foregoing samples indicate, the interest of the Qurʾān is not with providing any detailed, let alone systematic, catalog of sins, but rather with affirming what Izutsu *(Concepts)* has called a "basic moral dichotomy" between belief and unbelief, virtue and vice, the good and the bad (see GOOD AND EVIL; VIRTUES AND VICES, COMMANDING AND FORBIDDING).

Lists of major sins are more readily accessible in ḥadīth (see ḤADĪTH AND THE QURʾĀN), though there continues to be considerable uncertainty on precisely which, or how many, fall into that category. A tradition reported on the authority of the Prophet's Companion Abū Hurayra lists the following seven as major sins: associating anyone with God; sorcery (see MAGIC); unlawful homicide; usurping the property of the orphan; usury; fleeing from the battlefield (see EXPEDITIONS AND BATTLES; HYPOCRITES AND HYPOCRISY; FIGHTING); and slandering believing women (Bukhārī, *Ṣaḥīḥ, K. al-Waṣāyā,* no. 23; ibid., *K. al-Ḥudūd,* no. 44; Muslim, *Ṣaḥīḥ, K. al-Īmān,* no. 145; Abū Dāwūd, *Sunan, K. al-Waṣāyā,* no. 2874; Haytamī, *Ẓawājir,* i, 18). Again, other lists are much more expansive and Ibn ʿAbbās is often quoted as saying that the major sins are "closer to 700 than they are to seven, except that no sin is 'major' when forgiveness is sought for it, that is when one undertakes proper repentance *(tawba),* just as no sin is 'minor' if one persists in it" (Ṭabarī, *Tafsīr,* iv, 44, ad Q 4:31 [no. 9208]).

Sin, repentance, and forgiveness

Islam, like Judaism, has no concept of an "original sin" (see FALL OF MAN). Every soul (q.v.) bears its own burden (Q 6:164; 17:15; 29:12; see INTERCESSION), though God does not overburden anyone (Q 2:286). Sins also have evil consequences during one's present life, so that whatever harm one is afflicted by is "what your hands have earned" (Q 42:30; also cf. Izutsu, *Concepts,* 227, on the dual meaning of the word *sayyiʾa* as both "misfortune" and "evil deed," which may perhaps be taken to evoke the idea of misfortune as being at least partly a result of evil deeds). The punishment visited by God upon particular communities is likewise the result of their sinfulness (cf. Q 17:16-17; 22:45, 48; see PUNISHMENT STORIES). Conversely, sins are removed through good deeds (Q 11:114) and, in any case, God forgives a great deal (Q 42:30). Indeed, were God to hold people to account for all that they do, no living being would remain on the face of the earth (Q 35:45; see MERCY).

While responsibility for one's actions lies with the individual, the question whether these actions necessarily determine one's fate in the hereafter was much debated among the Muslim theologians (see FREEDOM AND PREDESTINATION). The Qurʾān suggests both that each individual will be judged according to his or her own conduct (cf. Q 2:286) and that the decision to punish or pardon people for their sins rests ultimately, and solely, with God (Q 2:284). All humans being prone to sin (cf. Q 12:53), the pious are much given to seeking God's forgiveness (cf. Q 3:193-5; see PIETY). Indeed, this is a major trait that distinguishes them from the sinners and the unbelievers, who are not only unmindful of the consequences of their actions but also too arrogant to repent for them. The prophets (see PROPHETS AND PROPHETHOOD) not only seek forgiveness for their own sins (see below), but also for those of others (cf. Q 47:19); and, according to the traditional Sunnī view, they will intercede on behalf of their followers on the day of judgment (cf. Elder, *Commentary,* 112-14).

Q 39:53 holds out God's promise to forgive *all* sins *(al-dhunūb)* and therefore instructs those who have exceeded the bounds *(asrafū ʿalā anfusihim)* not to despair of God's mercy. Yet Q 4:48 states that "God will not forgive the associating of anyone with him, but he might forgive anything less than that for whomsoever he wills." The exegetes tried to resolve the discrepancy between the two verses in different ways. Some held that Q 39:53 sought to reassure those who had committed major sins, and who feared their damnation on account of them even if they were to convert to Islam or, in case of Muslim sinners, even if they were to repent of their major sins. On this view, even the major sins were not "deadly" as long as they were followed by repentance; and this was true even of *shirk,* the gravest of sins (cf. Ṭabarī, *Tafsīr,* xi, 14-17, ad Q 39:53). A different view saw Q 4:48 as not abrogating but delimiting the purport of Q 39:53: while God might forgive any sin he wishes to, he would not forgive *shirk* unless one has repented of it (Ṭabarī, *Tafsīr,* xi, 17 [no. 30, 188]; also cf. Haytamī, *Zawājir,* i, 62f.).

God's forgiveness had not always come without a heavy, this-worldly, penalty, however. Those among the Children of Israel (q.v.) who had been guilty of worshipping the calf had to pay dearly for this sin: as described by the Qurʾān, the price of repentance in this instance was death for the guilty (Q 2:54; and cf. al-Ṭabarī's commentary on this verse, *Tafsīr,* i, 325-8; see CALF OF GOLD). Repentance for the sin of *shirk* does not carry such penalties for the Qurʾān's own addressees (cf. Haytamī, *Zawājir,* ii, 190). In the case of sins that are also crimes, however, such as stealing, adul-

tery, or murder, the exegetes and jurists generally held that repentance ought to accompany but does not, by itself, suffice to absolve one of the sin in question (but cf. Q 28:15-17, where Moses [q.v.] seeks the forgiveness of God for a homicide and is forgiven). While all sin involves transgressing limits laid down by God, the jurists made a distinction between the violation of "the rights of God" and that of "the rights of human beings" (cf. Johansen, *Contingency*, 212-18). The rights of God, to be upheld by the ruler or his representatives, involve the *ḥadd*-penalties (see KINGS AND RULERS; POLITICS AND THE QUR'ĀN). On the other hand, infraction of the rights of human beings, a category that also included homicide, was negotiable in the sense that the wronged party might decide to forgo punishment or opt for monetary compensation rather than for physical retaliation (q.v.). Absolution from the sin of violating the rights of human beings required not just the seeking of forgiveness from God but also the legal punishment entailed by the crime in question or forgiveness from the wronged party (cf. Ṭabarī's discussion of Q 5:45 in *Tafsīr*, iv, 598-604). Juristic classifications of the rights of God and of human beings, or what these categories entailed, are not to be found in the Qur'ān, though the combination of the moral and the legal norms that is characteristic of Islamic law is itself firmly grounded in it (see ETHICS AND THE QUR'ĀN).

Theological discourses on the grave sinner

If God might forgive all major sins — even, as many commentators saw it, the most heinous sin of *shirk* — if one repented of them, does it follow that one who did not so repent was doomed to damnation? And what was the status of the person committing major sins, the grave sinner, in relation to the community of Muslims of which he professed to be a member? These questions, which lie at the heart of the early development of Islamic theology, arose when many first generation Muslims strongly disapproved of the conduct of ʿUthmān b. ʿAffān (r. 23-35/644-56), Muḥammad's third successor as caliph (q.v.), accused him of remaining unrepentant after committing major sins, and murdered him (see ʿUTHMĀN). The Khārijīs (q.v.), who may well be regarded as Islam's first "sect," insisted that ʿUthmān's murder was justified; so, too, was that of ʿUthmān's successor, ʿAlī b. Abī Ṭālib (q.v.; r. 35-40/656-61), who had himself become a grave sinner by agreeing to negotiate with other grave sinners (see ARBITRATION; ṢIFFĪN) and it was a Khārijī who assassinated ʿAlī in 40/661. In general, the Khārijīs believed that anyone who committed a major sin but failed to repent was consigned to eternal damnation and that, in his present life, he also ceased to be a member of the community of Muslims. Despite this uncompromising position, the Khārijīs soon came to have their own extremists as well as their moderates; and while the extremist groups held that the grave sinner — which effectively meant anyone who disagreed with their principles — might legitimately be killed, the more moderate Khārijīs, the Ibāḍiyya, allowed mutual coexistence with other Muslims even as they denied the status of believers to them (Ashʿarī, *Maqālāt*, 104f.). Given that the Khārijīs were typically a minority, the latter stance was a matter not just of toleration but also of self-preservation; and it is no surprise that only those who espoused it have survived to the present day.

In opposition to the Khārijīs of various stripes, the Murjiʾīs insisted that major sins did not make one an unbeliever and that the grave sinner continued to be a member of the community of Muslims. But they suspended judgment on whether either

ʿUthmān or ʿAlī, or any other of Muḥammad's Companions involved in the first *fitna* — which is the conventional designation for the chaotic events between the murder of ʿUthmān in 35/656 and that of ʿAlī in 40/661 — had committed major sins. As Crone and Zimmermann (*Epistle,* 221-3) have shown, the Murjiʾīs of the first century of Islam held that the grave sinner was indeed damned forever; it was just that, in the cases of ʿUthmān, ʿAlī, as well as of others embroiled in the *fitna,* they simply did not know who had committed major sins and therefore thought it best to suspend judgment on the matter. It was later second/eighth century Murjiʾīs, such as Abū Ḥanīfa (d. 150/767), the eponymous founder of the Ḥanafī school of Sunnī law, who came to hold the view that the fate even of the grave sinner was to be determined by God on the day of judgment and the question was best deferred until then (ibid., 223). This attitude, towards the participants in the first *fitna* and towards the status of the grave sinner in general, eventually came to be adopted by the Sunnīs, with the significant difference, however, that judgment on questions of sin and guilt was now also deferred because, by the middle of the third/ninth century, the definition of a Sunnī "orthodoxy" had come to be predicated on reverence for the Companions of the Prophet (q.v.) as a whole, irrespective of the particular, and mutually antagonistic, positions they might have held towards one another (cf. ibid., 229).

Like the Murjiʾīs, the Muʿtazilī theologians, who came to prominence from the middle of the second/eighth century, did not banish the grave sinner from the community. But, unlike the Murjiʾīs, and also unlike those who later emerged as the Sunnīs, the Muʿtazilīs (see MUʿTAZILA) assigned an "intermediate state" to the grave sinner so that he was neither a believer nor an unbeliever but a "transgressor" *(fāsiq),* though, as such, still a member of the Muslim community. Unlike the later Murjiʾīs, the Muʿtazilīs mostly thought that such transgressors were doomed to eternal damnation (cf. the creed of the famous Muʿtazilī Qurʾān-commentator, al-Zamakhsharī, in Schmidtke, *Muʿtazilite creed,* 76). As for minor sins, the Muʿtazilīs espoused the view that such sins would be weighed against one's good deeds and cancelled out through them *(taḥābut)* as long, of course, as the good deeds outweighed the sins (cf. Schmidtke, *Theology,* 227f.). Shīʿī theology was strongly influenced by the Muʿtazila; but unlike the latter and in accord with the Sunnīs, Shīʿī theologians did not believe in the eternal damnation of the Muslim grave sinner (for the developed Sunnī position on the matter, cf. Elder, *Commentary,* 114f.; see SHĪʿISM AND THE QURʾĀN; SHĪʿA).

Sin, error, and infallibility

Sin involves an element of intentionality as well as of knowledge that the act in question entails disapproval or punishment and that it is forbidden. (On the question of sinful acts committed in ignorance, see Q 4:17; 6:54, and the discussion of these verses in the major commentaries.) This marks off sin from "error" *(khaṭāʾ),* a term whose primary connotation is legal rather than ethical (cf. Schacht, Khaṭaʾ; for other connotations of "error," elucidated with reference to the qurʾānic term *ḍalāl,* see ERROR; ASTRAY). Thus, while intentional homicide is a crime as well as a major sin (cf. Q 4:93, and Ṭabarī, *Tafsīr,* iv, 220-3, for a discussion of whether God would forgive the premeditated murder of a believer despite the murderer's repentance), the same is not true of unintentional homicide; the latter does, however, require the payment of compensation for that act (Q 4:92; see BLOOD MONEY). Accounts describing the altercations between the caliph ʿUthmān

and those who eventually murdered him have the latter demand that the caliph submit himself to retaliation by those he had wronged, with ʿUthmān responding that the caliph *(imām)* commits errors just as he does what is right and that no retaliation is required for his errors (Ṭabarī, *Taʾrīkh,* i, 2995f.; and cf. ibid., 3043). Many early jurists believed, for their part, that even when the effort to arrive at a legal ruling on the basis of systematic reflection on the foundational texts *(ijtihād)* led to different and thus possibly erroneous results, the effort itself deserved a reward from God; and since a jurist made that effort, he was "right" even when he seemed to have missed the mark (cf. Schacht, Khaṭāʾ; van Ess, *TG,* ii, 161-4). An error was thus not a sin as long as one did not persist in it after having become aware of it.

What sort of an error or even a sin might be imputed to a prophet was a contested issue from Islam's first centuries (see IMPECCABILITY). The Qurʾān recognizes prophets as sinning (as in the case of Adam; cf. Q 20:121; see ADAM AND EVE) or coming close to it (as Joseph [q.v.] did; cf. Q 12:24); as seeking, or being asked to seek, forgiveness for their sins (Q 7:22-3; 11:47; 47:19); and as being forgiven by God for their sins (e.g. Q 2:35-7; 28:15-16; 48:2). In an episode during Muḥammad's early prophetic career in Mecca, Satan is said to have interpolated into Muḥammad's revelation verses that spoke approvingly of the intercession of certain Meccan deities (see Ṭabarī, *Taʾrīkh,* i, 1191-6; see SATANIC VERSES; DEVIL; REVELATION AND INSPIRATION). These verses (which immediately followed Q 53:20) were "abrogated" once Muḥammad was informed that their source was Satan rather than God (cf. Q 22:52; see ABROGATION). This incident raised troubling questions for many Muslims, in particular about the integrity of the Qurʾān (see INIMITABILITY; CREATEDNESS OF THE QURʾĀN) and about Muḥammad's vulnerability to error and sin. The historicity of the episode concerning the Satanic verses was thus denied by many, a view that went hand in hand with the articulation of the doctrine of the infallibility of the Prophet in Islam's first centuries. Yet, while most Muslims today concur in denying this episode, many prominent scholars of the earlier centuries, including al-Ṭabarī (d. 310/923), the Muʿtazilī exegete al-Zamakhsharī (d. 538/1144; cf. *Kashshāf,* iii, 161f., commenting on Q 22:52) and the Ḥanbalī jurist Ibn Taymiyya (d. 728/1328), accepted its historicity. For Ibn Taymiyya, a prophet is infallible not in the sense of being immune to error or sin but only in being secure from persistence in it. On this view, the episode of the Satanic verses poses no problem in that Muḥammad promptly sought God's forgiveness for his error — which, to Ibn Taymiyya, is what it was, rather than a sin — and the matter was clarified by a subsequent revelation (see Ahmed, Ibn Taymiyyah).

That a prophet might commit a *major* sin was not a possibility to be countenanced, however, by Ibn Taymiyya or by anyone else (Ahmed, Ibn Taymiyyah, 86 and passim). Minor sins were another matter, though as al-Zamakhsharī said, in commenting on Q 93:7, prophets both before and after the beginning of their prophetic career were immune not only from the major sins but also from "disgraceful minor sins" (*al-ṣaghāʾir al-shāʾina,* as in *Kashshāf,* iv, 756; he does not, however, give any examples of such minor sins). The Shīʿa agreed with others in insisting on the immunity (q.v.) of the prophets from sin and error, but they extended such immunity to their imāms (see IMĀM) as well. An early Shīʿī theologian, Hishām b. al-Ḥakam (d. 179/795-6), had argued for the immunity of the imāms from sin and error, but not of the

prophets, on the grounds that while a prophet can be corrected through divine intervention, an imām had no such channel available and hence needed the immunity in question. But this doctrine never caught on in standard formulations of Shīʿī theology (see Bar-Asher, *Scripture,* 159-79; on Hishām's position, Ashʿarī, *Maqālāt,* 48).

Modern discourses

With unprecedented modern efforts towards the codification of the *sharīʿa,* certain contemporary Muslim scholars have visualized legislation not only in areas traditionally left to the discretion of rulers and judges but also to regulate matters previously thought of only as sinful behavior rather than as legal infractions. The Egyptian religious scholar Yūsuf al-Qaraḍāwī (b. 1926), one of the most influential of the contemporary *ʿulamāʾ,* has argued, for instance, that considerations of "public interest" require that states legislate punishments for usurious transactions, the usurpation of the orphan's property, the non-performance of the ritual obligations, the harassment of women and other evils. "There are hundreds of sins, forms of opposition [to the divine law], and wrongs that the *sharīʿa* has forbidden, or has commanded doing the opposite of, but it has not established a specific penalty for them. And so," he says, "they need legislation" (*Siyāsa,* 95-6; quotation from 96). While many earlier definitions of sin, especially of major sin, had included under that rubric both moral transgressions and crimes for which the foundational texts had prescribed specific punishments *(ḥudūd),* the distinction between sin and crime or between moral and legal norms was not thereby effaced (cf. Johansen, *Contingency,* 71 and passim). This is not to say, of course, that sin had previously been only a "private" matter. Indeed, Muslim scholars have long recognized the obligation of "forbidding wrong" even when the offense affects no one but the actor him- or herself; and the activities of vigilantes who felt obligated to intervene even in privately committed wrongs are extensively reported in the historical sources. Yet, Muslim scholars often also disapproved of such vigilantism, just as they sought to protect an individual's privacy even when doing so meant that many wrongs would go unpunished (on all this, see Cook, *Commanding right*). A proposal such as al-Qaraḍāwī's would deal with the problem of vigilantism but only at the expense of privacy; and in combating sin, it ends up legitimizing the intrusive powers of the state, an outcome about which not only medieval scholars but also many modern *ʿulamāʾ* have had grave misgivings (see OPPRESSION).

In seeking to reinterpret Islam's foundational texts and its institutions in ways that would make them more compatible with what are perceived to be the demands of the modern world, other, "modernist," readings of the Qurʾān often lay a new stress on individual moral responsibility (q.v.) and a this-worldly orientation (see WORLD); and conceptions of sin and related ideas have been interpreted accordingly. The influential Pakistani modernist Fazlur Rahman (d. 1988) sees the qurʾānic notion of *taqwā* as guiding individuals through the tensions and the extremes to which they, as human beings, are inherently susceptible; and sin, wrong, or evil signifies precisely the failure to successfully navigate one's course through these tensions (cf. Rahman, *Major themes,* 27 and passim). Rahman sees the qurʾānic concept of sin — though he seems to prefer the term "evil" to "sin" — primarily in terms of its deleterious effects on human welfare in the present world and, more specifically, with reference to what it contributes to the failure of human moral endeavors. To him, the Qurʾān's overall "attitude is quite

optimistic with regard to the sequel of human endeavor." Yet, this optimism is predicated on, and illustrative of, the Qurʾān's "action orientation and practicality." Within the framework of that orientation, smaller failings are remediable, and this — in his telling rendition of Q 4:31 — is the point of God's forgiveness of minor sins: "If you avoid the major evils that have been prohibited to you, we shall obliterate *[the effects of]* occasional and small lapses" (ibid., 30; brackets in the original, emphasis added). By the same token, *individual* failings are more likely to be forgiven by God than are failures in a people's "collective performance"; the latter are much more grave, even irremediable, in their effect (ibid., 52, and 37-64, passim; see OPPRESSED ON EARTH, THE).

For all their severe disagreements with the modernists, "Islamists" (or "fundamentalists") are often no less concerned, in seeking the public implementation of Islamic norms, with demonstrating the Qurʾān's "action orientation and practicality." Thus, in a passage like Q 17:23-38, where one might previously have seen a catalog of some of the major sins to be avoided (cf. Izutsu, *Concepts,* 229), the influential Pakistani Islamist Sayyid Abū l-Aʿlā Mawdūdī (d. 1399/1979) finds the "manifesto of the Prophet's mission…, making the intellectual, moral, cultural, economic and legal bases of the Islamic society and state of the future known to the world" (Mawdūdī, *Understanding,* v, 34; also cf. id., *Islamic law,* 202-13). The first of these "bases" is, of course, the injunction not to worship (q.v.) anyone but God, which is not simply a matter of avoiding *shirk* but of "recogniz[ing] and submit[ting] to his sovereignty (q.v.) to the exclusion of any other sovereignty" (Mawdūdī, *Understanding,* v, 35, commenting on Q 17:23). According to the Egyptian Islamist Sayyid Quṭb (d. 1966), himself much influenced by Mawdūdī, whether a society bases itself on a recognition of this divine sovereignty determines its overall orientation, viz., whether it is a properly Islamic society rather than one living in pagan ignorance (*jāhiliyya;* see e.g. Quṭb, *Ẓilāl,* iii, 1217 and 1229-34, discussing Q 6:151-3; see AGE OF IGNORANCE). Unlike many a medieval commentator, detailed catalogs or relative rankings of major and minor sins are matters far less pressing than are the implications of this overarching orientation.

Sinai

The triangularly shaped peninsula that witnessed the wanderings of the Israelites after their flight from Egypt on the way to their promised land in Canaan, under the leadership of Moses (q.v.); the scene of the latter's miracles (q.v.) and, above all, the region where the Decalogue was given and God's covenant (q.v.) with Israel (q.v.) concluded. All of these matters are recorded in many of the sūras (q.v.) of the Qurʾān, with variations from the biblical accounts (see NARRATIVES; CHILDREN OF ISRAEL).

The term Sinai appears twice in the Qurʾān, in Q 23:20 as *saynāʾ* and in Q 95:2 as *sīnīn,* possibly a dittograph of the letter *sīn,* more assonant with *zaytūn* than *sīn* (cf. *il yāsīn,* Q 37:130). In both cases, the word is preceded by the term *ṭūr,* "mountain," the compound referring to one spot in the peninsula, namely, Mount Sinai.

The peninsula was especially important in Moses' career, more important than Egypt (q.v.) or Canaan, since it witnessed the birth of Mosaic Judaism (see JEWS AND JUDAISM), when the law and the covenant were given to Israel through him at Mount Sinai. Consequently, in the Qurʾān, it is of great significance, derived from the importance of Moses as the most frequently mentioned biblical figure in the qurʾānic text (157 times, as opposed to 25 for Jesus [q.v.]) and from the image of the prophet Muḥammad himself. For Moses was a model for the latter — as a legislator, as a prophet of action who led his people and, above all, as one to whom God foretold the prophethood of Muḥammad in Q 7:157 (see PROPHETS AND PROPHETHOOD), which the exegetes related to Deuteronomy 18:15.

In the vast peninsula, the holiest *locus sanctus* was Mount Sinai, which, as just mentioned, witnessed the giving of the law and the covenant. It occurs seven times without the addition of Sinai, simply as *al-ṭūr,* "the mountain" (cf. *Exod* 19:2, 3; 24:4, etc.), the Arabic definite article giving *al-ṭūr* the uniqueness it has given to other terms, such as *al-bayt,* "the Kaʿba" (see KAʿBA; HOUSE, DOMESTIC AND DIVINE), *al-rasūl,* "the prophet, Muḥammad" (see MESSENGER), and *al-madīna,* Yathrib, the Prophet's city (see MEDINA). Of the many references to *al-ṭūr,* the most important are two. One occurs in Q 95:2, where the phrase *ṭūr sīnīn* appears as part of a tripartite asseveration involving Palestine, Mount Sinai and Mecca (q.v.). In that sūra, God honors Mount Sinai by including it as an element in the asseveration and, what is more, by allying Mount Sinai as the scene of the Decalogue, to Palestine as the holy land. In this sūra, the concept of holiness is expressed territorially by reference to three *loca sancta,* and the tripartite oath (see OATHS) reflects the qurʾānic perception of the essential identity of the three Abrahamic religions (see ABRAHAM). The other important reference is in Q 52, which opens with an oath by *al-ṭūr,* followed by five other elements included in the oath, the first four of which, the book (q.v.), the parchment, the house and the roof, have a natural affinity with *al-ṭūr,* when they are conceived as elements in the monastery/

fortress of Mount Sinai, rebuilt by the emperor Justinian in the sixth century C.E.; otherwise the four elements are incongruous with, and incomprehensible as a sequence to the first element in the oath — *al-ṭūr*. The monastery became a very popular pilgrimage destination, visited by Christians, including Christian Arabs, who lived so close to it (see CHRISTIANS AND CHRISTIANITY). This, together with some specific topographical references to *al-ṭūr* in the Qur'ān, such as the right side of it as in Q 19:52 and Q 20:80 (see LEFT HAND AND RIGHT HAND), suggest that the Arabs (q.v.) of Muḥammad's time, whom the Qur'ān addressed, were familiar with Mount Sinai, possibly including Muḥammad himself, who, fifteen years before his call, had led caravans to such termini of the spice route as Gaza and Elat, from where routes led to Mount Sinai (see CARAVAN). Two verses in Q 28 (Q 28:44, 46), in which the Qur'ān says that Muḥammad was not at Mount Sinai when Moses was there, are tantalizing in this context. A covenant alleged to have been issued by the Prophet to the monks of Mount Sinai has been haunted by the ghosts of authenticity.

Sīra and the Qur'ān

Sīra is a branch of Arabic literature that is devoted to the earliest salvation history of Islam and focuses on God's actions towards his prophet Muḥammad and through him, i.e. the revelation of the Qur'ān and the foundation of an Islamic community. The term *sīra* can also connote a work belonging to that literature.

Sīra is the noun of kind *(fiʿla)* of the Arabic verb *sāra,* "to go," "to travel," etc., indicating the manner of doing what is expressed by the verb (see ARABIC LANGUAGE; GRAMMAR AND THE QUR'ĀN). Hence it originally means "way of going," but the most frequent meaning is "way of acting, conduct, way of life" (see also TRADITION AND CUSTOM). In the Qur'ān the word *sīra* occurs only in Q 20:21, where it means "way of acting," or "condition" and has nothing to do with the literature under discussion. The word also came to mean "the life and times of…," "vita," "biography." In the second/eighth century it was applied to the history of various Persian kings, and also to the lives and times of some Umayyad caliphs (see CALIPH).

In present day Muslim usage, the *sīra* par excellence is that of the Prophet: *sīrat rasūl Allāh* or *al-sīra al-nabawiyya,* which is often rendered as "the biography of the Prophet." But this designation is imprecise. The life and times of Muḥammad (q.v.) are pivotal in the *sīra,* but it also contains reports and narrations about the ancient history of Arabia (see PRE-ISLAMIC ARABIA AND THE QUR'ĀN), the earlier prophets (see PROPHETS AND PROPHETHOOD;

MESSENGER), the Companions (see COMPANIONS OF THE PROPHET) and the first caliphs, whose *sunna* (q.v.) was relevant for the Islamic community. Furthermore it deals with qur'ānic exegesis (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL) and the occasions and ways of qur'ānic revelation (see REVELATION AND INSPIRATION; OCCASIONS OF REVELATION); and it preserves letters, speeches, documents, genealogies, lists of names, and poetry (see POETRY AND POETS; RHETORIC AND THE QUR'ĀN).

Sīra *or* maghāzī

In the first centuries of Islam, most collections of *sīra* texts were formulated with the name of *maghāzī,* "expeditions" (see EXPEDITIONS AND BATTLES), although they also contained texts on non-military matters. Whatever their name, the collections consist of the same kind of greatly heterogeneous, rather fragmentary material that belong to different genres (Hinds, Maghāzī; id., 'Maghāzī' and 'sīra'; Jarrar, *Prophetenbiographie,* 1-59; Schöller, *Exegetisches Denken,* 37-49).

The earliest sources

Sīra works have been written throughout the centuries, and one may even count modern biographies of the Prophet among them. Since the *sīra* is a whole branch of literature, there is no point in studying only the one book by Ibn Isḥāq (d. 150/767) in the edition of Ibn Hishām (d. ca. 213/828) that became famous. Here follows a survey of the earliest sources, which have the greatest relevance to our subject. About half of them can be studied in translations (see TOOLS FOR THE STUDY OF THE QUR'ĀN). For the later *sīra* works see Kister, Sīrah, 366-7; Schöller, *Exegetisches Denken,* 64-70.

Qiṣṣa

The first to occupy themselves intensely with the Qur'ān, the Prophet and early Islamic knowledge in general were the storytellers or preachers named *qāṣṣ* (pl. *quṣṣāṣ;* see Pellat, Ḳāṣṣ; Duri, *Rise,* index s.v. *qiṣaṣ;* Norris, Elements; see TEACHING AND PREACHING THE QUR'ĀN). They commenced their activities in private gatherings and sometimes in the mosque (q.v.). In the Umayyad period they obtained official permission to address the faithful in the mosques. In their sermons they would encourage soldiers and curse the enemies of Islam (see PATH OR WAY; FIGHTING; JIHĀD), but also explain the Qur'ān, depict hell (see HELL AND HELLFIRE) and paradise (q.v.) and recount the life of the Prophet and the lives of his predecessors.

Their stories (*qiṣṣa,* pl. *qiṣaṣ*) were both edifying and entertaining and did not eschew flights of fancy. When expanding on the qur'ānic stories about earlier prophets they often drew upon Jewish and Christian narratives, both biblical and non-biblical (see Vajda, Isrā'īliyyāt; see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY; SCRIPTURE AND THE QUR'ĀN). What had already begun in the Qur'ān was continued in these stories: Muḥammad is positioned as the last prophet in a succession of earlier prophets, while the latter, for their part, are given characteristics of Muḥammad (see NARRATIVES).

After the Umayyad period, the storytellers were banned from the mosque again and again. Their reputation deteriorated and they ended on the streets, always popular with the public, but frowned upon by the religious establishment. Their inclination to exaggerate and fantasize irritated pious believers and ḥadīth scholars (see ḤADĪTH AND THE QUR'ĀN), and the extra-Islamic material they divulged

was increasingly deemed unacceptable (see TRADITIONAL DISCIPLINES OF QUR'ĀNIC STUDY).

For the *sīra,* the early activities of storytellers are of great importance. Since they were not writers, and since they lost their good reputation quite early, hardly any of their narratives have been collected in books under their names. But in some form or other their stories seeped into *sīra* and *tafsīr* works, in spite of frequent attempts of the compilers to dissociate themselves from them.

One often recognizes a storyteller's contribution by its style. The story of the Prophet's bargaining with God in heaven about the number of obligatory prayers (e.g. Ibn Isḥāq, *Sīra,* 271; Ibn Isḥāq-Guillaume, 186-7; see PRAYER; ASCENSION), which has clear biblical precedents, has all the characteristics of an orally performed story (see ORALITY). Also the Prophet's world-renouncing address at the graveyard of Medina (q.v.) shortly before his death (Ibn Isḥāq, *Sīra,* 1000; Ibn Isḥāq-Guillaume, 678) has the pietistic ring of a *qiṣṣa,* although it is recorded with a chain of transmitters or *isnād* (other examples in Duri, *Rise,* 113; see ASCETICISM; PIETY; ABSTINENCE).

Wahb b. Munabbih

One storyteller who is relatively well documented is the Yemenite Wahb b. Munabbih (ca. 34-110/654-728; see Wahb, *Papyrus;* Khoury, Wahb; id., Les sources, 23-7; Duri, *Rise,* 122-35), who was well-versed in the biblical and pre-Islamic heritage and familiar with stories about the Prophet. Several books were ascribed to him. Whatever form they may have had, there was one about the creation (q.v.) and the early prophets and another about the pre-Islamic history of Yemen (q.v.). In these fields, Wahb was considered an authority and quoted extensively by *sīra* authors like Ibn Isḥāq, Ibn Hishām, al-Ṭabarī (d. 310/923) and others, but his texts about the expeditions and battles of the Prophet they did not find reliable enough to quote. Long *sīra* quotations from Wahb b. Munabbih can, however, be found with the Ṣūfī author Abū Nuʿaym al-Iṣfahānī (336-430/948-1038; *Ḥilyat al-Awliyāʾ,* iv, 72-81; see ṢŪFISM AND THE QUR'ĀN).

Two larger pieces ascribed to Wahb have been preserved in a third/ninth century papyrus. One is a part of the story of David (q.v.); the other is a *sīra* text that covers some events concerning the Prophet's meeting with envoys from Medina at ʿAqaba, his emigration (q.v.) and a military expedition by ʿAlī (see ALĪ B. ABĪ ṬĀLIB). The narrative is lengthy, abounds in poetry and contains miracle stories (see MARVELS; MIRACLES; e.g. the Prophet healing with "the breath of God"; Wahb, *Papyrus,* 142; see ILLNESS AND HEALTH; MEDICINE AND THE QUR'ĀN). In its present shape, the text may not contain Wahb's own wordings; the same applies to the quotations in Abū Nuʿaym; yet both clusters do exude the *qiṣṣa* atmosphere and reveal a pre-"scholarly" stage of *sīra* activity.

ʿUrwa b. al-Zubayr

ʿUrwa b. al-Zubayr (ca. 23-93/643-712; Schoeler, ʿUrwa; id., *Character,* 28-32; Stülpnagel, *ʿUrwa;* Sezgin, *GAS,* i, 278-9; Duri, *Rise,* 76-95; Görke, Ḥudaybiya; Horovitz, Biographies, 548-52), a traditionist and historian from Medina, belonged to the establishment of early Islam. The Umayyad caliph ʿAbd al-Malik (r. 65-85/685-705) and his successor al-Walīd (r. 86-96/705-15) wrote to ʿUrwa for information about certain events that happened during and after the time of the Prophet. ʿUrwa's answers form a first attempt at historiography. These letters,

however, are without the edifying and entertaining character of *qiṣaṣ*. Taking into account that ʿAbd al-Malik did not appreciate the then current *maghāzī*-stories (Schoeler, *Character,* 47; Jarrar, *Prophetenbiographie,* 20-3), ʿUrwa perhaps deliberately composed his letters as no-nonsense, memorizable summaries, meant to lay down in writing the politically correct versions of important events (see also POLITICS AND THE QUR'ĀN). Yet, he must have drawn upon longer narratives.

The letters are scattered over various sources (on these and on the German and Italian translations see Schoeler, ʿUrwa; for Eng. trans. see Ṭabarī, *Ta'rīkh,* index, and Rubin, *Eye,* 157-61). They can be recognized by an introduction of the kind: "ʿAbd al-Malik asked about […] and ʿUrwa wrote back […]," although this formula is sometimes lacking. There is a fair chance that the letters indeed go back to ʿUrwa, although his wording may have suffered in the course of transmission. ʿUrwa did *not* write a book; the work published under the title *Kitāb Maghāzī rasūl Allāh* is a later concoction.

Mūsā b. ʿUqba

Mūsā b. ʿUqba al-Asadī (ca. 55-141/675-758; Sezgin, *GAS,* i, 286-7; Schoeler, Mūsā; Schacht, On Mūsā; Horovitz, Biographies, 164-7) was a Medinan scholar and historian, who collected and disseminated material on the Prophet's life, but also on the pre-Islamic period and the first caliphs. Being a client of the Zubayr family (see TRIBES AND CLANS; CLIENTS AND CLIENTAGE; ARABS) and a pupil of al-Zuhrī, he was in an excellent position to do so. His *Kitāb al-Maghāzī,* i.e. his notebook to be copied by pupils, is not extant. A selection of nineteen ḥadīths has, however, been preserved in a Berlin manuscript. G. Schoeler defends Mūsā against J. Schacht, who maintained that these texts were not really transmitted by him. He demonstrates that Mūsā's source indications (mostly al-Zuhrī) are not fictitious, and in one case even proves the authenticity of al-Zuhrī's source, who is no other than ʿUrwa b. al-Zubayr. His argument rests on the analysis of more Mūsā quotations and parallel texts than Schacht had at his disposal, and on using the common-link method (see Juynboll, Ḥadīth, 378-81).

A current scholarly desideratum is the collection and study of all Mūsā quotations that are scattered over various sources (some references in Sezgin, *GAS,* i, 287). Pending that, we have only an impression of Mūsā's activities and interests. In none of his texts seen by the present author does he refer to the Qur'ān. He does not shun *qiṣṣa* or miracle stories but has also a clear interest in chronology.

al-Zuhrī

One of the central figures of the *sīra* literature was Muḥammad b. Muslim b. Shihāb al-Zuhrī (d. 124/742; Lecker, al-Zuhrī; Horovitz, Biographies, 33-50; Schoeler, *Character,* 32-7, 47-8; Duri, *Rise,* 27-9, 113-17), a collector of both ḥadīth and stories, who was also interested in genealogy and the early caliphs. He was the most important pupil of ʿUrwa b. al-Zubayr. His works may have been no more than note books for private use and reading sessions for civil servants and pupils, but he did lend the beginning of a structure to the *sīra*. His narratives are often lengthy and have the form of ḥadīth, i.e. they have chains of transmission.

Al-Zuhrī was consulted and patronized by the Umayyad court, which implied that he should not write favorably about ʿAlī (see SHĪʿA; SHĪʿISM AND THE QUR'ĀN). Allegedly he was asked by an Umayyad governor to compose a book on genealogy and a second one on *maghāzī*. The order for the first work was soon cancelled but he

was to continue on the second one. Whether he really wrote it is unknown (Schoeler, *Charakter,* 47; Jarrar, *Prophetenbiographie,* 23-32). Maʿmar b. Rāshid (see below) offers a more or less uniform block of texts from al-Zuhrī's collection. His traces are found in all later *sīra* compilations.

Ibn Isḥāq and his editors

Muḥammad b. Isḥāq (Medina; ca. 85-150/704-67 [Baghdād]) is the most important author of *sīra* literature (Schoeler, *Charakter,* 37-51; Newby, *Making,* 1-31; Duri, *Rise,* 32-7; Jones, Ibn Isḥāḳ). He seems to have specialized early in narrations and history. His main teacher was al-Zuhrī, and several relatives of ʿUrwa b. al-Zubayr were informants of his. Not all scholars in Medina appreciated Ibn Isḥāq's work. By his time, narratives were generally losing ground to legal ḥadīth with fully-fledged chains of transmission (see LAW AND THE QUR'ĀN; ABROGATION). He therefore left his native town and settled in Iraq (q.v.), where he found a more appreciative audience. Caliph al-Manṣūr (r. 136-58/754-75) asked him to write an all-encompassing history book, from the creation of Adam (see ADAM AND EVE) to the present day. The material on the Prophet that Ibn Isḥāq had previously collected and dictated to his pupils, was integrated into this book and given a central position. His magnum opus consisted of three volumes. The first one, *al-Mubtadaʾ* ("In the beginning") dealt with the creation of the world, the early prophets from Adam to Jesus (q.v.), and the Arabs in pre-Islamic times. In the second part, *al-Baʿth* ("The mission"), the life of the Prophet was depicted until his emigration to Medina. In part three, *al-Maghāzī* ("Expeditions and battles"), Muḥammad's activities in Medina were described. A fourth volume was added about his successors, the caliphs. Ibn Isḥāq did not merely collect materials, like his predecessors; he composed a work with a structure, sometimes chronological, sometimes arranged by subject matter.

Apparently there was only one copy of his work, and it was held in the court library in Baghdād. Ibn Isḥāq continued "publishing" from it by dictating parts to his pupils, who wrote them down verbatim. Large parts of the book, especially of the first three parts, have been handed down to us in the dictations and extracts of his pupils, and in the works of later compilers who edited these.

Three of Ibn Isḥāq's editors are worth mentioning here. The most widely known is ʿAbd al-Malik b. Hishām (d. ca. 215/830 in Egypt; see Watt, Ibn Hishām; Schoeler, *Charakter,* 50-3), whose selection from Ibn Isḥāq's work was the first *sīra* text to be transmitted in a fixed form (Arabic text: Ibn Isḥāq, *Sīra,* ed. Wüstenfeld; trans. Ibn Isḥāq-Guillaume, which displays *in margine* the page numbers of the Wüstenfeld edition). By editing only part of the original work Ibn Hishām narrowed the perspective down to the Prophet and ancient Arabia: he deals with the Kaʿba (q.v.) and the Christians and Jews on the peninsula, but not the earlier prophets. He explains difficult words and expressions in notes of his own, adds narratives, poetry and genealogical data. Ibn Hishām made judgments about the theological "purity" in the texts he selected and left out passages that he found offensive.

Al-Ṭabarī (d. 310/923; see Bosworth, al-Ṭabarī) transmits in his *Taʾrīkh* considerable parts of Ibn Isḥāq's work. For the *Kitāb al-Mubtadaʾ,* al-Ṭabarī is even our main source (Ṭabarī, *Taʾrīkh,* i, 9-872, fragments; trans. vols. i-iv, index; the stories of the prophets also in Newby, *Making*). The part on Muḥammad, in a version related to that of Ibn Hishām, but shorter, is scattered over Ṭabarī, *Taʾrīkh,* i, 1073-1837.

Two striking stories that Ibn Hishām had not included are those about Muḥammad's intended suicide (Ṭabarī, *Taʾrīkh,* i, 1147) and the "satanic verses" (q.v.; ibid., i, 1192-6). The *Taʾrīkh* is conceived as a universal history; Muḥammad is once again the central part between the earliest history (here including the kings of Persia) and the later periods of the caliphs. Much of Ibn Isḥāq's *sīra* material is also found in al-Ṭabarī's *Tafsīr,* but there it has to be laboriously gleaned from his exegesis of individual qurʾānic verses (some references in Newby, *Making*).

The least known edition of a part of Ibn Isḥāq's work is that by Aḥmad b. ʿAbd al-Jabbār al-ʿUṭāridī (177-272/794-886; Sezgin, *GAS,* i, 146). It is based on the transmission of Ibn Isḥāq's pupil Yūnus b. Bukayr (d. 199/815; Sezgin, *GAS,* i, 289). The extant text, which covers roughly one fifth of Ibn Hishām's recension, was not printed until 1976, and there is no translation yet. On the whole, al-ʿUṭāridī has some Ibn Isḥāq material that Ibn Hishām would have frowned upon. Moreover, he includes texts that do not go back to Ibn Isḥāq at all (Ibn Isḥāq-ʿUṭāridī; Muranyi, Riwāya; description of contents in Guillaume, *New light;* translated fragments in Rubin, *Eye,* index s.v. Yūnus b. Bukayr, and in Schoeler, *Character,* index s.v. Yūnus and al-ʿUṭāridī).

Maʿmar b. Rāshid

A medium sized, as yet untranslated *maghāzī* collection by the Yemenite Maʿmar b. Rāshid (96-154/714-70) is preserved in ʿAbd al-Razzāq, *Muṣannaf,* v, 9718-84 (Horovitz, Biographies, 167-9; Sezgin, *GAS,* i, 290-1; Schoeler, *Character,* 40). His work is important, since it gives an insight into the collection of al-Zuhrī, his primary source. Maʿmar offers no continuing story. His texts about important events are arranged more or less chronologically and following these are texts about the private life of the Prophet. His material included stories about the ancient prophets, which are quoted in al-Ṭabarī (*Taʾrīkh,* i, Index). Quotations from him can also be found in al-Wāqidī (d. 207/822) and Ibn Saʿd (d. 230/845).

al-Wāqidī

Muḥammad b. ʿUmar al-Wāqidī (130-207/747-822; see Leder, al-Wāḳidī; Duri, *Rise,* 37-9; Schoeler, *Charakter,* 137-41) was a fully-fledged historian. Due to his favorable position at the ʿAbbāsid court, he had the best possible library at his disposal; moreover he owned many books himself. He also did research by visiting the sites of battles and interviewing the descendants of the combatants. His only extant work, *al-Maghāzī,* of which we have a German translation, is an indispensable source on the expeditions and battles of the Prophet and displays a great interest in chronology (see HISTORY AND THE QURĀN). Other *sīra* texts by al-Wāqidī, e.g. a book on the death of the Prophet, have reached us in quotations in the works of his secretary Ibn Saʿd.

Typically, al-Wāqidī not only copied his sources, but also re-shaped and combined various traditions under collective chains of transmission. The question of whether he plagiarized Ibn Isḥāq remains controversial.

Ibn Saʿd

Ibn Saʿd Muḥammad b. Saʿd (168-230/784-845) wrote *Akhbār al-nabī,* the life and times of the Prophet, which is the first extant full biography of the Prophet after Ibn Isḥāq and of which an English translation is available (Fück, Ibn Saʿd; Duri, *Rise,* 39-40; Horovitz, Biographies, 521-6). A later editor integrated it into Ibn Saʿd's *Kitāb al-Ṭabaqāt al-kabīr,* a work on the Companions of the Prophet and successive generations of ḥadīth transmitters, of which it became the first part. Having been

the secretary of al-Wāqidī, Ibn Saʿd heavily depends on the latter's works and is an important source for al-Wāqidī's lost works. In the *Akhbār,* the pre-Islamic section is limited to some of the early prophets and the ancestry of Muḥammad. The Meccan period is presented chronologically, interrupted only by a survey of the signs of prophethood. The chronological account of the Medinan period is interspersed with thematically arranged collections of traditions on various specialized subjects. These have proper chains of transmission, whereas the longer narratives often have collective *isnād*s. For the part on the expeditions and battles, one might prefer al-Wāqidī's *Maghāzī,* of which Ibn Saʿd offers only an abridged version, although he also included some material from elsewhere. The *Akhbār al-nabī* ends with detailed sections on the Prophet's final illness, death and burial, his heritage, and elegies on him (see also NAMES OF THE PROPHET). Here he draws upon al-Wāqidī's lost book on the death of the Prophet, but once more he enriches the section with many traditions, all with *isnād*s. For the lives of the Companions who play a part in the *sīra,* Ibn Saʿd's *Ṭabaqāt* proper is of key importance.

Ḥadīth collections

Several ḥadīth collections have a *maghāzī* section, e.g. those of Ibn Abī Shayba (*Muṣannaf,* xiv, 283-601) and al-Bukhārī's (d. 256/870) *Ṣaḥīḥ, Maghāzī.* Above we have made special mention of Maʿmar's collection, since that is presented as a distinct block with a certain degree of composition, which is not the case elsewhere. Otherwise, *sīra* fragments are found throughout the ḥadīth collections. Many narratives that would have had a defective chain of transmission or none at all in early *sīra* compilations were preserved as acceptable by being admitted into the "canonical" ḥadīth collections. Ḥadīth, however, often does not want to narrate, but focuses on what is lawful and ethical (see LAWFUL AND UNLAWFUL; ETHICS AND THE QURʾĀN). This may lead to a re- or decontextualization of *sīra* elements in ḥadīth. It is interesting to see, for instance, how the Prophet's use of a toothpick on his deathbed (Ibn Isḥāq, *Sīra,* 1011; Ibn Isḥāq-Guillaume, 682) turned from a minor narrative detail into an example for daily life in ḥadīth (Bukhārī, *Ṣaḥīḥ, Maghāzī,* 83; *Jumʿa,* 9 and see Wensinck, *Concordance,* s.v. siwāk).

Sīra *and scripture*

The Qurʾān is neither the only, nor the oldest text that had an impact on the *sīra*. In the first place, there was a heritage of ancient Arabic narrative literature, the "days of the Arabs" (*ayyām al-ʿarab;* see Mittwoch, Ayyām; Duri, *Rise,* 16-20 and index), which were stories about battles and fights interspersed with poetry (see FIGHTING; DAYS OF GOD). They served as models for accounts of military expeditions in the *sīra*. Large parts of the *sīra* originated in reaction to the Bible, the apocrypha and exegetical traditions of both Jews and Christians, as well as Christian saints' legends (for the latter, see e.g. Newby, Example). The authority of the new Prophet over the earlier prophets had to be established, and the superiority of the Qurʾān to the scriptures of others had to be demonstrated (see POLEMIC AND POLEMICAL LANGUAGE).

U. Rubin has pointed out that the Bible and the literature around it were the first scriptural influence in more *sīra* passages than had been realized before. He demonstrated by various examples how biblical references, which occur at an early stage of a text, were later removed or replaced by qurʾānic ones, since the *sīra* compilers or authors were increasingly embarrassed by the original background of their material (Rubin, *Eye;* see also Vajda, Isrāʾīliyyāt, and

below under "Qurʾānization"). It is not always easy to recognize the traces of these forms of literature, since later *sīra* authors tried to erase them. Textual parallels, however remote, are rare; it is mostly the subject matter or the pattern of a narrative that can be recognized as Jewish or Christian in origin. For a better understanding of the intertextuality in the *sīra,* it is therefore necessary to study it in the context of all relevant previous literature, not only in connection with the Qurʾān.

The Qurʾān is part of the subject matter of the *sīra,* but it has also various other relations with it. Since the *sīra* is fragmentary and consists of many genres, every genre must be studied to ascertain how it reacts to qurʾānic scripture. But first the various Qurʾān-related activities in *sīra* texts must be described.

Certain *sīra* texts originate from an exegetical impulse. They elaborate on qurʾānic passages by commenting, expanding, or historicizing them through episodes of the life of the Prophet and his entourage. Other texts originated in a non-scriptural impulse, and qurʾānic words or passages were added to them secondarily (qurʾānization). This was done for a diversity of reasons: to edify; to create an elevated atmosphere; to lend weight to a statement or argument; or to replace other "scripture" or poetry that an earlier stage of the text had contained. A great many texts, however, are so complex that it is difficult to decide which impulse was predominant.

Commenting on the Qurʾān

In its narrative parts, the *sīra* is to a large extent qurʾānic exegesis *(tafsīr)*. Ibn Isḥāq's method does not differ much from that of his contemporary, the qurʾānic exegete Muqātil b. Sulaymān (d. 150/767; Wansbrough, *QS,* 122-7). When we focus on the details, various methods of exegesis can be discerned. Several of them are manifest in two single passages: the commentary on Q 108 (Ibn Isḥāq, *Sīra,* 261-2; Ibn Isḥāq-Guillaume, 180-1, 725) and on Q 93 (Ibn Isḥāq, *Sīra,* 156-7; Ibn Isḥāq-Guillaume, 713-14).

Lexical explanation of one rare, difficult or ambiguous word. This is not typical of *sīra* texts, but it does occur, notably with Ibn Hishām, and a few times with Ibn Isḥāq (see DIFFICULT PASSAGES; AMBIGUOUS). A single word may be explained: a) by a single synonym. *Al-kawthar* (Q 108:1) is "great" (see SPRINGS AND FOUNTAINS; WATER OF PARADISE); *sajā* in Q 93:2 means "to be quiet"; b) by a number of words. Ibn Hishām explains the word *nādī* in Q 96:17, "let him then call his *nādī,*" as: "the meeting place in which people gather together and settle their affairs" (Ibn Isḥāq, *Sīra,* 200; Ibn Isḥāq-Guillaume, 720); c) with the help of other qurʾānic verses where the word occurs. Ibn Hishām continues by referring to *nādī* in Q 29:29 and to the synonym *nadī* in Q 19:73; d) with the help of a quotation from early poetry where the same word is used. At Q 93:2: "By the night (see DAY AND NIGHT) when it is quiet *(sajā),*" Ibn Hishām mentions a synonym for *sajā,* but he adds: "[The poet] Umayya b. Abī al-Ṣalt says: '[…] and *the night was quiet* in blackest gloom.'"

Paraphrase, explaining a sentence or passage by rewriting it in other words. Unknown words are replaced by well-known ones; the meaning of ambiguous words is fixed by the use of unambiguous words. "Your lord (q.v.) has neither forsaken you nor loathes you" (Q 93:3), is paraphrased: "meaning that he has not left you and abandoned you, nor hated you after having loved you." With the words "after having loved you," the paraphrase slips into another exegetical mode: expansion.

Specifying what is vague, with the help of external information and/or the free flow of thought. Al-Ṭabarī (*Ta'rīkh,* i, 1142) explains "on the day of the *furqān,* on the day when the two armies met" (Q 8:41; see CRITERION) as: "the battle of the Prophet with the polytheists (see POLYTHEISM AND ATHEISM; OPPOSITION TO MUḤAMMAD) at Badr (q.v.), which took place on the morning of the seventeenth of Ramaḍān (q.v.)."

Ibn Isḥāq quotes a ḥadīth according to which *kawthar* is "a river as broad as from Ṣan'ā' to Ayla. Its water pots are in number as the stars of heaven (see PLANETS AND STARS; HEAVEN AND SKY). Birds go down to it with necks like camels […]." In an ascension story (Ṭabarī, *Ta'rīkh,* i, 1158), *kawthar* is described as "a river [in paradise] whiter than milk (q.v.) and sweeter than honey (q.v.), with pearly domes on either side of it."

Identifying the anonymous. Who was the man with the horns whose story is told in Q 18:83-98? Ibn Isḥāq heard from a Persian source that he was an Egyptian of Greek extraction, whose name he mentions. But he also quotes a ḥadīth, according to which he was an angel. Ibn Hishām knows another name: it was Alexander (q.v.), who built Alexandria (Ibn Isḥāq, *Sīra,* 197; Ibn Isḥāq-Guillaume, 139, 719). This is an example of the unbridled imagination of the storytellers, who left no bit of the Qur'ān unexplained. The *sīra* has yet another purpose, to identify persons who are referred to in the scripture. It aims to link qur'ānic passages to situations and to record the history of early Islam, on which see below.

Narrative expansion

A short example of narrative expansion is found below, under "Linking scripture to situations" with the case of Jadd b. Qays. Two incomprehensible words in the scripture are explained by building a few sentences around them. A story can also be built around the framework of a qur'ānic passage. Ma'mar's narrative ('Abd al-Razzāq, *Muṣannaf,* 389-90 [no. 9743]) about the Qurayshite plot to kill the Prophet on the eve of his *hijra* is an expansion of Q 8:30: "[Remember] when the unbelievers plotted against you, to confine you, kill you or expel you. They plotted, but God plotted also, and God is the best of plotters." In the narration, the Qurayshites (see QURAYSH) gather in their council chamber, assisted by Satan in disguise. They discuss these three possible ways of dealing with Muḥammad, expelling, confining or killing him, and accept the third proposal. (To create greater suspense, the order was slightly changed.) God's counterplot consists in warning the Prophet, who can escape unseen, while 'Alī is to sleep in the Prophet's bed, so that the Qurayshites would find only him. The whole story follows the structure of the qur'ānic verse; only the satanic motif is foreign to it.

With Ibn Isḥāq, whose work shows a well-balanced composition, *sīra* narratives that are linked to a qur'ānic passage can be much longer, and the verses need not even to be quoted. The story of the Prophet's ascension (Ibn Isḥāq, *Sīra,* 263-72; Ibn Isḥāq-Guillaume, 181-7) is preceded and followed by mentions of enemies who mocked the Prophet and of how they were punished (see MOCKERY; CHASTISEMENT AND PUNISHMENT). After the ascension story, Ibn Isḥāq continues with Gabriel (q.v.) arriving to punish the men. Apparently Ibn Isḥāq had a qur'ānic passage in mind: "And they say: '[…] we will not believe you until you […] ascend to heaven. Yet, we will not believe in your ascension, until you send down to us a book we can read' " (Q 17:90-3). Ibn Isḥāq here wants to apply the qur'ānic motif that

unbelievers ask for signs (q.v.), and when these are given to them, still do not believe (see reflection and deliberation; provocation).

Qurʾānization

While a *sīra* narrative may start from a qurʾānic word or pericope that is explained or expanded, the opposite can be found as well: a narrative starts from an extra-qurʾānic impulse, as e.g. the desire to tell a certain story, and is then enriched with scriptural material. This can be called "qurʾānization."

A simple form of it may be called decorative qurʾānization: the use of qurʾānic wordings to elevate the style register and to create a pious atmosphere. When Ibn Isḥāq once wanted to say "as a bringer of good tidings to all mankind" (Ibn Isḥāq, *Sīra,* 150; Ibn Isḥāq-Guillaume, 104), he did not use his own words, but preferred the syntactically unusual wordings of Q 34:28. When ʿĀʾisha, in the "account of the lie" (q.v.; see also Spellberg, ʿĀʾisha, 56-8), tried to build courage within herself, she borrowed the words that Jacob (q.v.) had used in his distress according to Q 12:18 (Ibn Isḥāq, *Sīra,* 735; Ibn Isḥāq-Guillaume, 496). The narrator put qurʾānic words in her mouth to show what a pious woman she was.

Not just one sentence, but the story as a whole is elevated when a narrative element is added that is built around a qurʾānic phrase, irrespective of its meaning in the original context. In the ascension story, the Prophet comments on the immense numbers of angels in heaven with the words of Q 74:31: "And none knows the armies of God but he" (Ibn Isḥāq, *Sīra,* 268; Ibn Isḥāq-Guillaume, 185; see troops; ranks and orders). In the verse itself, this phrase refers to the guardians of hell. When during the Prophet's visit to heaven the number of obligatory prayers is reduced, he is notified in qurʾānic wording: "The word is not changed with me" (Q 50:29; ʿAbd al-Razzāq, *Muṣannaf,* 9719), which originally referred to the day of judgment (see last judgment).

But qurʾānization can take on much wider dimensions. Above, we have introduced Maʿmar's Qurʾān-based version of the story about the plot to kill the Prophet. In Ibn Isḥāq (*Sīra,* 323-6; Ibn Isḥāq-Guillaume, 221-3), that story is much longer. A narrator decided to add the qurʾānic motif of the Prophet being called a poet. The suggestion that comes up among the plotters is to confine him and to subject him to the same fate that befell the poets Zuhayr and Nābigha and others. Hereby Q 52:30 is put to use: "Or they say: 'A poet for whom we await an uncertain fate.'" The verse itself does not occur in the narrative, but the linking words are obvious: "poet(s)" and "await" *(tarabbaṣa)*. For those who had not recognized it yet, Ibn Isḥāq quotes the verse in full after his narrative, as one of the verses "that God revealed about that day." Whereas the story as a whole is Qurʾān-based, this part is qurʾānized.

In that same story yet another type of qurʾānization can be seen. Wahb's version has an additional motif: God impairs the sight (see vision and blindness) of those who lie in wait to kill the Prophet. Miraculously, they cannot see how he walks past them and do not even notice him strewing dust onto their heads. This is illustrated by a piece of poetry attributed to ʿAlī (Wahb, *Papyrus,* 140-4). The partial blindness fits well into the story and anticipates the same motif that occurs somewhat later in the story of the Prophet's emigration (cf. Rubin, *Hijra,* 60-1). Ibn Isḥāq (*Sīra,* 326; Ibn Isḥāq-Guillaume, 222), however, instead of quoting poetry, tells us that the Prophet recited Q 36:1-9 at the occasion. The choice of these verses is a

bit awkward, for only Q 36:9 fits the situation: "And we covered them and they could not see." If Wahb indeed represents an older text stage, this is a case of the phenomenon that Rubin pointed out: in time, qurʾānic elements tend to replace other types of literature, since poetry or biblical texts were increasingly deemed unfit to occur in *sīra* texts (Rubin, *Eye,* 33-5, 227). Large-scale qurʾānization takes place in the reports on the battles of the Prophet; see below under *"Maghāzī."*

Linking scripture to situations

A typical objective of *sīra* is to establish a link between a qurʾānic passage (mostly a verse) and a moment in the life of the Prophet. Within the plot of a narrative, a qurʾānic verse may serve as the impulse for a subsequent action. A verse with an imperative almost cries out for a story about how the command was executed. When the verse, "and warn your closest clan members" (Q 26:214) was revealed, the Prophet warned his nephew ʿAlī and his other relatives (Ṭabarī, *Taʾrīkh,* i, 1171-4). After the revelation of, "Speak of the kindness of your lord" (Q 93:11), the Prophet began to speak secretly about God's kindness to everyone he could trust (Ibn Isḥāq, *Sīra,* 157; Ibn Isḥāq-Guillaume, 112).

But in most cases the order is the other way round: something happens, and then a qurʾānic verse is revealed. These kinds of texts are known as "occasions of revelation" (see Rippin, Occasions; Rubin, *Eye,* 226-33; Schöller, *Exegetisches Denken,* 128-33). A complete "occasion" report is characterized by the following features (not necessarily in this order): a reference to some event or situation, mostly in combination with the name(s) of one or more persons, a place, and/or an indication of time; some qurʾānic words which anticipate the qurʾānic passage that is about to be revealed; a formula like: "(Then) God revealed about …" or: "This verse was revealed about […]," and finally the quoting of the revealed passage itself.

A perfect, but late example is presented in Rippin, Occasions, 570. An example from the *sīra,* with a somewhat different structure, is: "Some mockers said to the Prophet: 'Muḥammad, if an angel had been sent to you […].' Then God revealed concerning these words of theirs: "They say: 'Why has not an angel been sent down to him?' " (Q 6:8; Ibn Isḥāq, *Sīra,* 262; Ibn Isḥāq-Guillaume, 181).

Complete "occasion"-stories are amply represented in *sīra* texts. The *sīra,* however, also contains many of them in less complete or preliminary stages. Some examples are: "Then revelations stopped for a time, so that the Prophet was distressed and grieved (see JOY AND MISERY). Then Gabriel brought him Q 93 […]" (Ibn Isḥāq, *Sīra,* 156; Ibn Isḥāq-Guillaume, 111). Ibn Isḥāq (*Sīra,* 171; Ibn Isḥāq-Guillaume, 121-2) relates about a person who had called the Prophet a sorcerer (see MAGIC), and then says: "About him Q 74:11-22 was revealed." But he does not say that it was revealed at that occasion, and as regards contents, there is no connection between the qurʾānic passage and the story. An enemy makes some insulting proposals to the Prophet. Then the latter recites Q 41:1-5, and the man leaves him in peace. This is not formally an occasion; it sounds as if the Prophet knew these verses already and recited them from memory (Ibn Isḥāq, *Sīra,* 186; Ibn Isḥāq-Guillaume, 132-3).

Sīra texts seemingly avoid the pretension of knowing God's reasons for his revelations. The Qurʾān exegete Muqātil b. Sulaymān (*Tafsīr* i, 458, ad Q 5:11) says in all innocence: "This verse was revealed *because* […] *(li-anna),*" but the *sīra* confines itself to *fī,* "concerning"; although the suggestion of causality is always there.

Scholarly opinion differs about the role of the "occasions" in the *sīra*. Lammens seems to consider the whole *sīra* a compilation of "occasions," with the exception of "a vague oral tradition" or "a primitive core" (Lammens, Koran and tradition, 170, 171). To Rubin, the *sīra* contains no occasions: "… none of the Qur'ānic verses which appear in the biography of Muḥammad can be regarded as the primary source of the story" (Rubin, *Eye,* 227). Both points of view are extremes, but there are enough cases where the exegetical impulse is obvious and where no qur'ānization can be discovered.

In certain texts, the aspect of "identifying the anonymous" seems to prevail. When the Qur'ān alludes to an unknown speaker or sinner (see SIN, MAJOR AND MINOR), the occasion-report knows who this person is. When a narrator says: "This verse was revealed concerning so-and-so," the intention may be to enhance or undermine the reputation of that person; see below under "Merits of the Companions."

An "occasion" with a multiple and complicated intention is related in connection with the expedition to Tabūk (see EXPEDITIONS AND BATTLES). While preparing for it, the Prophet asks Jadd b. Qays whether he wants to fight the Byzantines (q.v.). Jadd answers: "Will you *allow me* to stay behind *and not tempt me,* for everyone knows that I am strongly addicted to women and I am afraid that if I see the Byzantine women I shall not be able to control myself." About him the verse came down: "Among them there is one who says: 'Allow me and do not tempt me' …" (Q 9:49; Ibn Isḥāq, *Sīra,* 894; Ibn Isḥāq-Guillaume, 602-3). This verse existed before the story. It raised three questions: Who was the "one who says"? The exegete names him. What do his words "allow me" and "do not tempt me" mean? It is explained by means of the rather strained narrative expansion, in which the very qur'ānic words are put into Jadd's mouth. In what situation did Jadd use these words? Within the report, the connection with the Tabūk expedition is created only by the mention of the Byzantine women. Outside the narrative it is corroborated by its place in the larger context of that expedition. The exegetical activities apparently were carried out only after the assignment of Q 9 to that expedition, which in itself is a case of qur'ānization. Apart from exegesis and qur'ānization, the "occasions" serve to "historicize" the Qur'ān (see Rippin, Occasions, 572) and to establish its chronology (see Böwering, Chronology). This was important for the study of law (see Burton, Abrogation), but several *sīra* compilers, who show no interest in law, deal with chronology simply out of historiographical interest.

The genres within the sīra

Now we will address the various genres within the *sīra* literature, and the degree of their scripturality. There are many places where one is tempted to consider qur'ānic exegesis as a genre, as well. Since the exegetical intention, however, pervades the whole *sīra,* it seemed preferable to treat it in the broader framework above.

Prophetic legend

Under this heading we group the texts about prophets and prophecy that aim at elaborating Muḥammad's prophetic features (Andræ, *Person Muhammeds,* ch. 1; Newby, *Making,* 1-32). The positioning of Muḥammad as the last and the best among the prophets that had already been established in the Qur'ān was completed in the *sīra*. Characteristics of the ancient prophets were ascribed to Muḥammad and vice versa. The impulse may have been the need for qur'ānic exegesis, but the elabora-

tions in *qiṣṣa* and *sīra* are often of biblical or post-biblical inspiration and therefore scriptural in the wider sense. Many stories about the earlier prophets were collected in Ibn Isḥāq's *Kitāb al-Mubtada'*, now partially preserved in al-Ṭabarī, *Ta'rīkh*, i, 86-795 (trans. also in Newby, *Making*).

A number of examples may illustrate how extant literary topics were remodeled to fit Muḥammad. The annunciation by Jesus (q.v.) of a comforter, or the Holy Spirit (q.v.; John 15:26) was applied to Muḥammad in the *sīra* (Ibn Isḥāq, *Sīra*, 150; Ibn Isḥāq-Guillaume, 104). Muḥammad's mother received an annunciation during her pregnancy not unlike the mother of Jesus (Luke 1:26-38; Ibn Isḥāq, *Sīra*, 102; Ibn Isḥāq-Guillaume, 69). These are only small-scale examples, but the annunciation is a major motif in the *sīra*, which has recently been studied by Rubin (*Eye*, 21-43). Jews and Christians are said to have known of the birth of Muḥammad in advance. They were supposed to have read in their scriptures about the coming of Muḥammad and his characteristics, so that they could recognize him as a child. The biblical texts that Jews and Christians had applied to the coming of the Messiah, or the Holy Spirit respectively, were now reinterpreted to make them refer to Muḥammad (Ibn Sa'd, *Ṭabaqāt* I, ii, 87-9; trans. i, 421-6).

When Muḥammad was with his wetnurse, he grew up uncommonly fast (Ibn Isḥāq, *Sīra*, 105; Ibn Isḥāq-Guillaume, 71), and he was not the only prophet who did so. The Gospels of the Infancy abound in examples of Jesus' precocity.

The topic of Muḥammad's ascension (Ibn Isḥāq, *Sīra*, 263-71; Ibn Isḥāq-Guillaume, 181-7) may have been inspired by Q 17:90-3 (see Sells, Ascension, 177), but the story itself stands in a long tradition of Persian, Jewish and Christian accounts. Certain details in it are reminiscent of specific texts: e.g. the description of punishments in hell (Ibn Isḥāq, *Sīra*, 269; Ibn Isḥāq-Guillaume, 185-6; see HELL AND HELLFIRE) has parallels in the *Apocalypsis Pauli* and the Persian text *Ardā Wirāz Nāmag*.

The initial refusal of Muḥammad to recite (see RECITATION OF THE QUR'ĀN) when Gabriel brought him the revelation on mount Ḥirā' (*mā aqra'u;* Ibn Isḥāq, *Sīra*, 152; Ibn Isḥāq-Guillaume, 106 has a mistaken translation) has precedents in the excuses of several other prophets (cf. Exodus 3:11-4:13; Jeremiah 1:6; Jonah 1:2-3 and Q 37:140).

The *sīra* sometimes recapitulates prophetic characteristics in general statements, most of which are rooted in biblical or qur'ānic scripture. E.g. the saying "There is no prophet but has shepherded a flock" (Ibn Isḥāq, *Sīra*, 106; Ibn Isḥāq-Guillaume, 72) holds true of the qur'ānic Moses (q.v.; Q 28:22-8) and of the patriarchs as well as Moses, David (q.v.) in the Bible and, metaphorically, of Jesus, "the good shepherd" (John 10:11, 14).

The dictum "A prophet does not die without being given the choice" (Ibn Isḥāq, *Sīra*, 1008; Ibn Isḥāq-Guillaume, 680), however, applies only to Muḥammad. Several prophets had not died in the normal way. Idrīs (q.v.) was raised to a high place (Q 19:57). In the Bible it was Enoch, Moses and Elijah (q.v.) who were "raised." Jesus was resurrected and then raised into heaven (see RESURRECTION). Since Q 3:144 mentions the possibility of the Prophet's death, Islamic legend had to go its own way on this point. Muḥammad was given the choice between remaining alive or joining the highest companions (*al-rafīq al-a'lā;* cf. Q 4:69) in paradise (Ibn Isḥāq, *Sīra*, 1000, 1011; Ibn Isḥāq-Guillaume, 678, 682). Yet, an attempt was made to make his death resemble the forty-day absence of Moses on Mount Sinai (q.v.; Ibn Isḥāq, *Sīra*, 1012; Ibn Isḥāq-Guillaume, 682).

In the Qur'ān, miracles (q.v.) play a part in the stories of most prophets, but to Muḥammad they are given only sparsely. The miracles that are alluded to in the Qur'ān, as, for example, the intervention of angels in the battles of Badr (q.v.) and Ḥunayn (q.v.), are elaborated in the *sīra*. In addition to that, *sīra* texts have few inhibitions about making more miracles happen to or through the Prophet (Andræ, *Person Muhammeds,* 46-68), such as stones and trees talking to him, trees changing places, the multiplication of water and food, healings, the discovery of poisoned food, and even an unexpected win in a wrestling match (Ibn Isḥāq, *Sīra,* 258; Ibn Isḥāq-Guillaume, 178). Ibn Sa'd (*Ṭabaqāt* I, i, 96-135; trans. i, 170-219) collected these "signs of prophecy" in a separate chapter; also al-Bukhārī has a small collection (*Ṣaḥīḥ, Manāqib,* 25). Later on, they developed into a literary genre in its own right (*dalā'il al-nubuwwa;* cf. Kister, Sīrah, 355).

Maghāzī

As we have said at the start, the word *maghāzī* could be applied to the *sīra* literature as a whole. Here we will deal with *maghāzī* in the narrower sense: stories about the raids, military campaigns and battles organized or attended by the Prophet (see Faizer, Expeditions, and its bibliography; M. Hinds, Maghāzī; Duri, *Rise,* index s.v. *maghāzī;* Jones, Maghāzī). They may vary from the assassination of a single person through small raids to campaigns of considerable dimensions. The main sources are Ibn Isḥāq and al-Wāqidī. Both tried to establish a chronology, as Mūsā b. 'Uqba apparently also intended to do, but no reliable chronological table can be verified (Schöller, *Exegetisches Denken,* 215-29; Jones, Chronology). A convenient survey of all the battle accounts and their sources in English is found in Watt, *Medina* (esp. 339-43).

Maghāzī stories originally had nothing to do with the Qur'ān. They were a continuation of the pre-Islamic tales of tribal battles *(ayyām al-'arab)*. In the (theoretical) original *maghāzī* stories, prose was mixed with poetry; they contained names of participants and heroes, names of places and a description of the action, sometimes with its occasion and consequences (see GEOGRAPHY AND THE QUR'ĀN). But such stories that are free of ideology do not exist in the *sīra*.

The story of Hamza's expedition to the coast, with its exchange of poetry as the main part (Ibn Isḥāq, *Sīra,* 419-21; Ibn Isḥāq-Guillaume, 283-5), has an ancient structure, but the poetry has already been touched by qur'ānic vocabulary. In the small report on the so-called "barley meal raid" the poetry comes after the story (Ibn Isḥāq, *Sīra,* 543-4; Ibn Isḥāq-Guillaume, 361-2; Ṭabarī, *Ta'rīkh,* i, 1365). Both sources have different poems; apparently they were felt to be interchangeable. Al-Wāqidī (*Maghāzī,* 181-2) has only two lines, from the same poem as in Ibn Isḥāq. The later the source, the less poetry it contains.
At the end of another expedition story, a qur'ānic verse is quoted that was associated with it secondarily. The story takes the shape of an "occasion of revelation." Then follows the poetry that was composed about that expedition (Ibn Isḥāq, *Sīra,* 642-8; Ibn Isḥāq-Guillaume, 429-33).

This pattern is followed in the larger reports as well. The account of the battle of Badr (q.v.; Ibn Isḥāq, *Sīra,* 427-539; Ibn Isḥāq-Guillaume, 289-360) is a mix of all sorts of sources, but is essentially a narrative on a battle. It has some poetry and was apparently already interspersed early with a few qur'ānic elements: God's promise, the help of fighting angels, the enemy being supported by Satan (see DEVIL; ENEMIES; PARTIES AND FACTIONS). Then follow several bundles of texts. One is the

collected poetry on the subject, which one can imagine had been integrated into the narrative itself at an earlier stage. Furthermore, there are lists of participants and of the fallen.

Almost immediately after the account proper follows a Qurʾān-centered collection, in which large passages from Q 8 are applied to this battle. In them, the story of Badr is re-told in the light of the Qurʾān. The parts of Q 8, which were chosen more or less arbitrarily, are applied verse by verse to the details of the battle (Wansbrough, *Sectarian milieu,* 25-31). This is a case of qurʾānization. In al-Wāqidī (*Maghāzī,* 19-128) these qurʾānic passages are integrated into the battle story itself, although a separate part on Q 8 is also maintained, rather redundantly; perhaps only because it was there (al-Wāqidī, *Maghāzī,* 131-8; Wansbrough, *Sectarian milieu,* 25-31). This pattern is followed in several larger *maghāzī* stories: Uḥud, the battle of the trench (see PEOPLE OF THE DITCH; UKHDŪD), Qurayẓa (q.v.), Naḍīr (q.v.). Each of them has received "its" sūra. But it also happens that the qurʾānic passage is the origin of the very story, as is the case in Ibn Isḥāq's report on the expedition against the Jewish tribe Qaynuqāʿ (q.v.; Q 5:51-8; see Schöller, *Exegetisches Denken,* 232).

Even within the *maghāzī* genre there may be an impact of the Bible. Von Mžik pointed to parallels between the biblical story of Gideon (Judges 7:2-22; cf. Q 2:249) and certain elements in the Badr story. Both recount a victory of a host of some 300 men facing fearful odds. In both cases God offers help, and the defeat of the enemy is predicted by a dream of someone in the enemy camp (Ibn Isḥāq, *Sīra,* 428-9, 506, 516; Ibn Isḥāq-Guillaume, 290-1, 336, 340; Jones, Dream).

Last, but not least, the various *maghāzī* texts may influence each other. Schöller (*Exegetisches Denken,* 241-9) shows that al-Wāqidī's version of the Qaynuqāʿ story borrowed elements from reports about the expulsion of other Jewish tribes.

Poetry

One genre in the *sīra* that has no connection with the Qurʾān is poetry (Horovitz, Einlagen; Kister, Sīrah, 357-61; Wansbrough, *Milieu,* 32-9). Of old, storytellers had combined prose with poetry in their stories, and the *sīra* narrators continued this tradition. The poetry has functions similar to those of speeches (see DIALOGUE): it captivates the audience by switching to another mode, underlining a point or emphasizing a dramatic moment. In *sīra* narratives too, battling or dying heroes are given their chance to improvise poetry, be it self-praise, vituperation or a rhyming creed, and relatives declaim elegies for those who fell. Such poems often have little merit and are ascribed to unlikely poets. Even more than the narrative parts of the *sīra,* they were severely criticized (ʿArafat, Early critics).

Often enough, the pieces of poetry are not "insertions" that could be cut out without damaging the story or the report, but indispensable constituents of it (Wansbrough, *Sectarian milieu,* 38-9; an extreme case: Ibn Isḥāq, *Sīra,* 144-9; Ibn Isḥāq-Guillaume, 100-3). Poetry was not unproblematic to early Muslims, since the Qurʾān takes a hard line on it (Q 26:224-6; 52:29-30). The story of the Prophet's approval of a long poem by the newly converted Kaʿb b. Zuhayr (Ibn Isḥāq, *Sīra,* 887-92; Ibn Isḥāq-Guillaume, 597-601; Zwettler, The poet) was one of the means to legitimize poetry that fulfilled the Islamic condition of not provoking intertribal hostility.

The *sīra* pays much attention to the verse of Ḥassān b. Thābit (d. ca. 50/669; see ʿArafat, Ḥassān), the "court poet" and elegist of the Prophet (Ibn Isḥāq, *Sīra,* 1022-6

and index; Ibn Isḥāq-Guillaume, 689-90, 795-8 and index). Much of the verse ascribed to him is considered spurious today.

The qurʾānic verdict on poetry, as well as the increasing authority of the Qurʾān in general, resulted in a decreasing use of poetry and an increasing application of qurʾānic material in *sīra* texts through the years (cf. Rubin, *Eye,* 227, 121). As we saw, Ibn Isḥāq placed all the relevant poetry after the accounts of the larger battles. Maybe the reconstitution and qurʾānization (on which see above) of these long narratives had already taken place in his sources and made it impossible to keep the verses in their original places, or he himself felt it proper to give this poetry a less prominent place. For a case of poetry being replaced by qurʾānic text in a later version of a narrative, see above under "Qurʾānization"; about the use of pre-Islamic poetry in the Qurʾān exegesis see above under "Commenting on the Qurʾān."

Addresses

Sīra texts contain speeches and sermons by the Prophet at solemn occasions, e.g. his first sermons in Medina (Ibn Isḥāq, *Sīra,* 340-1; Ibn Isḥāq-Guillaume, 230-1), his speech at the door of the Kaʿba after the conquest of Mecca (q.v.; Ibn Isḥāq, *Sīra,* 821; Ibn Isḥāq-Guillaume, 553; see CONQUESTS) and during the Farewell Pilgrimage (q.v.; Ibn Isḥāq, *Sīra,* 968-9; Ibn Isḥāq-Guillaume, 650-1). They are a mix of *qiṣṣa*-style piety and regulations, enriched with some qurʾānic allusions or quotations. Some speeches by other persons have been written down: one by the Prophet's uncle ʿAbbās at the ʿAqaba meeting (Ibn Isḥāq, *Sīra,* 296; Ibn Isḥāq-Guillaume, 203) and one of Jaʿfar b. Abī Ṭālib at the court of the Negus (Ibn Isḥāq, *Sīra,* 968-9; Ibn Isḥāq-Guillaume, 650-1; see ABYSSINIA). Speeches have a similar function as poetry, or in some cases as documents: they catch the attention and emphasize the importance of what is brought forward (Wansbrough, *Sectarian milieu,* 38).

Written documents

In this context "written documents" means texts that present themselves as such. The question of whether they are fictitious or not need not bother us. In *sīra* collections, various types of documents are found:

Treaties. The "Document *(kitāb)* of Medina" (Ibn Isḥāq, *Sīra,* 341-4; Ibn Isḥāq-Guillaume, 231-3), is an agreement between "Muḥammad the Prophet" and "the believers and Muslims of Quraysh (q.v.) and Yathrib [= Medina (q.v.)] and those who follow them, join them, and strive alongside them," including Jewish groups. The "Document," whose textual unity remains controversial, is generally considered to be very old. It contains no allusions to the Qurʾān and has a matter-of-fact attitude towards the Jewish tribes of Medina, which are included in the community *(umma),* whereas the mainstream *sīra* stories are hostile to the Jews and full of intertextuality. The names of the three Jewish tribes (Naḍīr, Qurayẓa, Qaynuqāʿ), which through the *sīra* have become widely known in the Islamic tradition, do not appear in the Document (Humphreys, *Islamic history,* 92-8, with bibliography; Rubin, Constitution). The text of the Ḥudaybiya (q.v.) treaty is given in full (Ibn Isḥāq, *Sīra,* 747-8; Ibn Isḥāq-Guillaume, 504-5). Treaties with tribes (see TRIBES AND CLANS; APOSTASY) are often embodied in letters.

Correspondence of the Prophet with governors, Arabian tribes, foreign rulers and others (Ibn Abī Shayba, *Muṣannaf,* xiv, 336-46, nos. 18,475-86; Ibn Saʿd, *Ṭabaqāt* I, ii, 15-38;

trans. i, 304-45; spread all over Ibn Isḥāq, al-Ṭabarī and al-Wāqidī; Hamidullah, *Documents;* Sperber, Schreiben Muḥammads). Most of this correspondence contains no allusions to the Qur'ān; notable exceptions are the letters to the rulers of Persia and Ethiopia (Ṭabarī, *Ta'rīkh,* i, 1569-71), and the false prophet Musaylima (q.v.). Letters with qur'ānic content are unlikely to be old (see also ORALITY AND WRITING IN ARABIA).

Lists. Sīra texts contain lists. Most of them enumerate names of persons, e.g. the oldest converts to Islam; the participants in battles; those who were killed in action (on both sides); the emigrants to Ethiopia and to Medina (see EMIGRANTS AND HELPERS), as well as those who returned from exile in Ethiopia or who died in that country; the participants in certain negotiations (see CONTRACTS AND ALLIANCES; BREAKING TRUSTS AND CONTRACTS); the members of certain tribes who came to the Prophet; those who received part of the booty (q.v.). Such lists may have been copied from government registers, where they originally had the practical function of establishing the rank of a person or his descendants with the "Islamic elite," and the size of the state income that could be claimed (see Duri, Dīwān; Puin, *Dīwān*). Their purpose in the *sīra* is related to that of the genre of "Merits" (on which see below), i.e. to enhance the reputation of the Companions mentioned therein. Purely historiographical are surveys of the Prophet's military actions (Ibn Isḥāq, *Sīra,* 972-3; Ibn Isḥāq-Guillaume, 659-60; also Ibn Sa'd, *Ṭabaqāt* II, i, 1-2; trans. ii, 2). The greatest list makers were al-Wāqidī and Ibn Sa'd. The latter went to great lengths: he listed even the camels and goats of the Prophet (Ibn Sa'd, *Ṭabaqāt* I, ii, 176-9; trans. i, 584-90; see CAMEL; HIDES AND FLEECE; ANIMAL LIFE).

Most lists in the *sīra* are by their nature not scriptural. But there are exceptions: the enumeration of twelve leaders of the Helpers is linked to the twelve disciples of Jesus (Ibn Isḥāq, *Sīra,* 299; Ibn Isḥāq-Guillaume, 204; see APOSTLE). The description of the route taken by Muḥammad in his emigration to Medina, a trajectory unspectacular in itself (Ibn Isḥāq, *Sīra,* 332-3; Ibn Isḥāq-Guillaume, 226-7), may be inspired by the biblical list of stopping places during Israel's (q.v.) exodus (Numbers 33; see also CHILDREN OF ISRAEL).

Genealogy

In the tribally organized Arabian society, genealogy had always stood in the center of historiographical interest, with all the fictionality it inevitably involved (Rosenthal, Nasab; id., *Historiography,* 95-100; Duri, *Rise,* 41-2, 50-4; Kister, Sīrah, 361-2; Noth/Conrad, *Historical tradition,* 37-8). The aspiration was to establish one's filiation from the noblest Arabian forebears possible, ideally from the legendary Ma'add (see PRE-ISLAMIC ARABIA AND THE QUR'ĀN).

Sīra authors continued this activity. Their first aim was to establish the purity of Muḥammad's pedigree and the nobility of his ancestors. Ibn Isḥāq's genealogy of the Prophet in the male line (Ibn Isḥāq, *Sīra,* 3; Ibn Isḥāq-Guillaume, 3) goes further back than Ma'add. About half of the fifty names are Arabic, but beyond Ma'add the names are biblical (cf. Genesis 5 and 11:10-32; Ṭabarī, *Ta'rīkh,* i, 1113-23). They link the Prophet to some of the key figures of Islamic salvation (q.v.) history: Ishmael (q.v.), Abraham (q.v.), Noah (q.v.) and Adam (see ADAM AND EVE), thus elaborating the qur'ānic motif of Muḥammad being the last in a succession of prophets. Ibn Isḥāq's genealogy is reminiscent of that of

"Jesus Christ, the son of David, the son of Abraham" at the beginning of the New Testament (42 names in the reversed order; Matthew 1:1-17).

A list of the ancient prophets from Adam to Muḥammad, with their respective pedigrees (Ibn Saʿd, *Ṭabaqāt* I, i, 26-7; trans. i, 48-9), functions as a kind of spiritual genealogy of the latter. It establishes a relation without claiming physical filiation.

There are endless genealogies of the early prophets, notably in al-Ṭabarī's *Taʾrīkh* and Ibn Saʿd's *Ṭabaqāt,* that are not linked to Muḥammad. These are obviously biblically inspired. On the other hand, several ḥadīth criticize the mentioning of biblical names in the Prophet's genealogy ("genealogists are liars"), arguing that the Qurʾān leaves his oldest forebears unnamed; others replace them with purely Arabic names (Ibn Saʿd, *Ṭabaqāt* I, i, 27-9; trans. i, 49-52). There are non-scriptural genealogies of Muḥammad's father and mother. Many traditions establish the pedigree of the female ancestors of the Prophet in the maternal line (Ibn Saʿd, *Ṭabaqāt* I, i, 30-6; trans. i, 54-63; see PATRIARCHY; GENDER). All of them are purely Arabian. There are more than one hundred "mothers," well distributed over all tribes. Apparently the objective was to demonstrate how firmly connected with all Arabian tribes the Prophet was, and to counter-balance the large impact of non-Arabic traditions.

The numerous genealogies of Companions of the Prophet that found their way into *sīra* texts are also non-scriptural, including those of the Prophet's wives (see WIVES OF THE PROPHET). They intend to show the nobility of these persons and their closeness to the Prophet, and serve similar purposes as the "Merits" texts.

The merits of the Companions

The *sīra* is not only interested in the Prophet, but also in his Companions who constituted the first Islamic community (see Muranyi, *Prophetengenossen;* id., Ṣaḥāba). Apart from being an archive of genealogies and lists of these Companions' names, it also contains many narratives about their deeds. By such stories people wanted to keep the past alive, as they had always done. Later generations tried to put their forebears in a favorable light, to recount their deeds that were approved or praised by the Prophet, and to emphasize their merits *(faḍāʾil, manāqib)* for nascent Islam, if need be by contrasting them to the demerits *(mathālib)* of others. There was also a practical reason to do so. A Companion's position in a list of beneficiaries of donations (see above under "Written documents") was corroborated by reports about him. Moreover, before the sunna of the Prophet became predominant in Islamic law, the scholars were just as interested in the "way of acting" (*sīra* or *sunna*) of the earliest caliphs and other prestigious Companions as a means of establishing the right behavior. Hence several *sīra* works also dealt with the period after the death of the Prophet.

A specific type of text on merits that features in the *sīra* is that of the *awāʾil,* which record by whom something was done for the first time (see Rosenthal, Awāʾil; Ibn Abī Shayba, *Muṣannaf,* xiv, 68-147). The first male who believed in the Prophet was ʿAlī (Ibn Isḥāq, *Sīra,* 158-61; Ibn Isḥāq-Guillaume, 114-15). ʿAbdallāh b. Masʿūd was the first after the Prophet to recite the Qurʾān openly in Mecca (Ibn Isḥāq, *Sīra,* 202; Ibn Isḥāq-Guillaume, 141); the first to hold Friday prayers in Medina was Muṣʿab b. ʿUmayr (Mūsā b. ʿUqba, Fragm. 2; see FRIDAY PRAYER). It may have come naturally for the community to have more

regard for the earliest Muslims than for later converts. The first emigrants from Mecca and the first helpers in Medina, as groups, enjoy a special esteem as well.

The functioning of the "merits" genre as an instrument of public opinion may be demonstrated by the example of one Companion. Sa'd b. Abī Waqqāṣ (d. after 40/660; see Hawting, Sa'd) was one of the first Muslims. He led several military expeditions, took part in all major battles and was to become a successful general. But when he commanded the army that defeated the Persians at Qādisiyya (ca. 14/635), he did not attend the battle in person — allegedly for health reasons. Some authors criticize him for this absence. In a *sīra* narrative this criticism is apparently given more weight by projecting it back into the lifetime of the Prophet. It says that Sa'd for some trivial reason failed to take part in a raid on which the Prophet had sent him (Ibn Isḥāq, *Sīra,* 424; Ibn Isḥāq-Guillaume, 287; Ṭabarī, *Ta'rīkh,* i, 1274, 1277; cf. Watt, *Medina,* 6). In contrast, other texts state emphatically that Sa'd was the first to shed blood (Ibn Isḥāq, *Sīra,* 166; Ibn Isḥāq-Guillaume, 118) and the first to shoot an arrow for the cause of Islam (Ibn Isḥāq, *Sīra,* 416; Ibn Isḥāq-Guillaume, 281; Wāqidī, *Maghāzī,* 10; Ṭabarī, *Ta'rīkh,* i, 1267). Are these mere praises of Sa'd or attempts to wipe away the blot on his reputation? At any rate, the example shows how a Companion could be given positive or negative "press" in *sīra* texts.

The attitudes towards the most prominent Companions, the first caliphs, strongly diverge in the *sīra*. Both their adherents and adversaries tried to make their points in the various narratives, e.g. in those about the death-bed of the Prophet, where the matter of his succession was an issue. A special case is 'Abbās b. 'Abd al-Muṭṭalib (see Watt, 'Abbās). He was Muḥammad's uncle, but not a "Companion," since he never became a Muslim. To the 'Abbāsid rulers he was a prestigious forebear. Hence we see that Ibn Isḥāq, who worked for the 'Abbāsid court, has favorable accounts of him (Ibn Isḥāq, *Sīra,* 296, 1007; Ibn Isḥāq-Guillaume, 203, 680), whereas Wahb b. Munabbih is negative about him (Wahb, *Papyrus,* 126). Mūsā b. 'Uqba (Fragm. no. 6) attempts to establish his kinship with the Helpers of Medina.

Merits have their counterparts in demerits *(mathālib)*. These are not always presented as subtly as in the case of Sa'd. In the story about the Muslim emigrants to Ethiopia and the visit paid to the Negus by pagan Meccans (Ibn Isḥāq, *Sīra,* 217-22; Ibn Isḥāq-Guillaume, 150-3; Raven, Negus, 200-1), the good characters are early Muslims with impeccable records, whereas the villains were known as late and possibly opportunistic converts.

There is little qur'ānic material in the "merits," apart from some mentions of privileged groups of Companions in Q 9:100; 56:10-11; 59:9-10, but there are many qur'ānic verses about the hypocrites, who are also an extensive topic in the *sīra* (see HYPOCRITES AND HYPOCRISY). There is no biblical background, unless one thinks of vague thematic parallels, e.g. that of 'Umar, a harsh enemy of Islam, turning into its most ardent defender (Ibn Isḥāq, *Sīra,* 224-7; Ibn Isḥāq-Guillaume, 155-7), as Paul had been for nascent Christianity (Acts 9:1-29).

The deeds of the Companions also found their way into ḥadīth collections in chapters entitled *faḍā'il* or *manāqib al-aṣḥāb* and, from Ibn Sa'd's *Ṭabaqāt* onwards, in works especially dedicated to them (see Kern, Companions, primary bibliography).

Apart from showing an interest in individuals, the *sīra* also preserves pieces of tribal history, such as reports on

delegations of tribes to the Prophet and their treaties with him, or on conflicts between tribes. Also the rivalry between the Emigrants and Helpers finds its expression in the *sīra*.

Sīra *and historiography*

Can *sīra* texts be useful sources for a reliable biography of Muḥammad, or for the historiography of early Islam? The question has occupied Orientalists for a century and a half (Jeffery, Quest; Peters, Quest; Ibn Warraq, *Quest;* Rodinson, Survey; Watt, Reliability; Schoeler, *Charakter,* 9-24; Schöller, *Exegetisches Denken,* 1-5, 106-14; Motzki, *Biography,* xi-xv). Ernest Renan (1823-1893) was full of confidence: whereas the origins of other religions are lost in mystery and dreams, Islam, as he wrote in 1851, "was born in the full light of history; its roots are on the surface. The life of its founder is as well known to us as that of any sixteenth-century reformer" (quoted in Ibn Warraq, *Quest,* 129; French original in Gilliot, Muḥammad, 4). It set the tune for the rest of the nineteenth century: whereas Orientalists and Christian theologians deconstructed the Bible and left little of the life of Jesus and the founding myths of Christianity, they were quite naive towards the sources on early Islam. The German Julius Wellhausen (1844-1918) is another example of this type of Orientalist. He hypercritically dissected the Hebrew Bible, but was rather uncritical when it came to accepting Islamic tradition. These old-style Orientalists left no room for a divine inspiration of the Qur'ān or for miracles, and since Ignaz Goldziher (1850-1921) they had a keen eye for political or doctrinal tendencies in the sources. But when texts contradicted each other, they eliminated the less likely ones and assumed that there was enough left to reconstruct the historical past "as it had really been."

This was strongly doubted by Caetani, who edited a synopsis (*Annali;* 1905-07) of all early sources known at the time, which was preceded by a critical introduction. Henri Lammens (1862-1937) was equally skeptical. He considered the whole *sīra* dependent on the Qur'ān and therefore historically unreliable. The period after the First World War in Europe was not favorable for critical *sīra* studies (see POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QUR'ĀN). The wave of skepticism seemed over and the quest for "what had really happened" was resumed. Scholarly biographies of Muḥammad were written, the apogee of which was the monumental work by Watt, which appeared in the fifties *(Mecca; Medina)*.

The belief in the usefulness of *sīra* texts for historiography was shaken in the seventies by a new wave of criticism and skepticism. Wansbrough dated the Qur'ān much later than did all others, and applied "source criticism" to the *sīra,* as it had been done with the Bible, analyzing the various literary genres and which purposes they served. Crone and Cook, in their controversial *Hagarism* (1977) continued this literary approach. Moreover they displayed a fundamental mistrust of Islamic tradition and brought forward the hitherto neglected extra-Islamic sources — a line of research further pursued by Hoyland in *Seeing Islam* — and had a keen eye for the material, economic and geographical realities of the Arabian lands (see TRADE AND COMMERCE; ECONOMICS; CARAVAN). In her *Meccan trade* (1987), Crone reduced the legendary Meccan trade republic, and thereby the rise of Islam, to realistic proportions.

A lasting outcome of modern research has been the awareness of many *sīra* genres as literature. *Sīra* narratives are neither police records nor eyewitness reports, nor transcripts of things said, but are struc-

tured along the lines of sometimes long established literary patterns. They belong to certain genres and, as all literature, display a good deal of intertextuality. In general one might say: the more intertextuality an account reveals, the less likely a source it is for historiography (see HISTORY AND THE QUR'ĀN; LITERATURE AND THE QUR'ĀN). A text that originated on the base of a biblical or qur'ānic text or along the pattern of a saint's legend can be used for the history of ideas in their time of origin, but not for that of the events that are represented. Equally unusable are texts that want to preach or to glorify. Some of the genres (documents, genealogy, "merits") present themselves as historical sources, but even they are of limited use for historiography in the modern sense. The *sīra* as a whole is a vehicle of salvation (q.v.) history rather than scientific history.

A post-skeptical attitude, no longer keen on deconstruction, is found with Rubin, in whose book "the effort to isolate the 'historical' from the 'fictional' in the early Islamic texts is given up entirely" (Rubin, *Eye,* 3) and with Schöller, to whom any historical information that might be found in the *sīra* would be "a by-product, in a way, within the complex process that resulted in the formation of the prophetic biography" (*Exegetisches Denken,* 36). A certain nostalgia for "a true historical biography of the Prophet" can be heard in Schoeler, *Charakter,* and in Motzki (*Biography,* 233), which does not keep them from applying fully up-to-date research methods. Peters shows himself well aware of the nature of the sources and at the same time gropes his way towards a biography (Peters, *Origins*). To non-Muslims the idea that little might be known about Muḥammad may be slightly disturbing, but not more than that. To Muslims, the problem has a different dimension. Of old, the *sīra* had less prestige than ḥadīth, yet undermining the historicity of the *sīra* may well be felt as an attack on the religion itself. It would be most important to take note of what present-day Muslims have brought forward on the subject, but unfortunately a survey or study of modern Muslim attitudes towards *sīra* criticism is still lacking.

Sirius

The brightest star in the night sky. Sirius *(al-shiʿrā)* is the only star mentioned by its proper name in the Qurʾān — Q 53, *al-Najm,* "the star," verse 49 says: "and he who is the lord of *al-shiʿrā*." There are, in fact, two *al-shiʿrā*s, Sirius and Procyon, which are, in Arabic star-lore, both sisters of Suhayl (Canopus), and resided in the northern sky. After a failed courtship attempt, Suhayl had to flee to the southern sky (i.e. with respect to the Milky Way) and only one sister — the brighter Sirius — could follow. The other (Procyon) remained and cried until she became almost blind (*ghumayṣā* — hence her relative dimness). So we have one *shiʿrā* in the south *(al-yamāniyya)* and one in the north *(al-shāmiyya)*. But there is consensus in qurʾānic exegesis that Q 53:49 refers to Sirius, *al-shiʿrā al-yamāniyya,* and when the name *al-shiʿrā* is used alone it refers to Sirius.

While the origins of the star's name are uncertain, it is the only star known with certainty in the Egyptian records — its hieroglyph (a dog, i.e. the companion of the hunter-hero Orion, an ancient association dating back to Mesopotamian times) is found on monuments throughout the valley of the Nile. The worship of Sirius — in

conjunction with its helical rising at the summer solstice — is thought to have begun around 3000 B.C.E.; Ovid and Vergil referred to Sirius as Latrator Anubis: Egyptian Cahen Sihor. In Arabic, as in English, Sirius is also termed "the dog" (*al-kalb;* cf. the prophetic dicta relating to this name found in Ṭabarī, *Tafsīr,* ad Q 53:1). It is possible that the formal name of the star, "Sirius" (the root *sh-ʿ-r* means "to kindle fire" or "to shine"), and similar names in other languages (the Celts called the star Syr; the Greeks, Seirios aster, "the scorching star"; while in Sanskrit, it is termed Surya; cf. Heb. Sihor/Shihhor) derive from the Egyptian Sothis, the brightest star in the sky and the one directly linked with the Nile in Egyptian mythology. Among the other Arabic names for Sirius are *al-ʿabūr* (the crosser of the galaxy) and *barāqish* (the one of many colors).

As to why Sirius — albeit the brightest fixed star in the sky — was singled out from the hundreds of stars and the planets (see PLANETS AND STARS), a review of qurʾānic exegesis has revealed one line of reasoning common to all exegetes. This is that Sirius had been worshiped by some tribes of Arabia (as, incidentally, it was in its association with Isis by the ancient Egyptians, with the goddess Ishtar by the Sumerians), and God wanted to show them that he is the lord of their purported god (see PRE-ISLAMIC ARABIA AND THE QURʾĀN; IDOLS AND IMAGES; POLYTHEISM AND ATHEISM; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC). One can, however, easily suppose that other stars, even more venerable than Sirius, were worshiped (see SUN; MOON).

A contemporary form of qurʾānic exegesis known as "scientific interpretation" *(tafsīr ʿilmī)* would stipulate that the significance of the mention of Sirius in the Qurʾān can only be understood when examined in the light of modern astronomical discoveries (see also SCIENCE AND THE QURʾĀN; EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY). While appearing to be a single star, Sirius has a stellar companion as massive as the sun, which was only discovered in the mid-nineteenth century (1862). The two components of Sirius were found to revolve around their center of gravity every fifty years. The companion of Sirius is a collapsed star so dense that its size is equal to that of the earth. Studying the verse of Sirius and other related verses, the proponents of *tafsīr ʿilmī* perceive compatibility with modern scientific facts. By including the *basmala* (q.v.) as the first verse of sūra 53, the number of the Sirius verse (Q 53:49) becomes 50 — the same as the period of revolution of Sirius' two stars (which have an orbital period of 49.94 years). The first verse of the sūra ("By the star when it plunges," Q 53:1), is then deduced to refer to a collapsed star, and the Sirius verse to imply the existence of an extinct habitable planet (an earth). Other related verses, such as Q 43:37-9 and Q 55:17 confirm, for this form of interpretation, the existence of planets in binary stars, a recent astronomical discovery. Finally, the verse of Sirius together with the next verses (Q 53:49-50), relating the destruction of ʿĀd (q.v.; see also PUNISHMENT STORIES), is seen by such exegesis to hold a clue to what has been known as the "red Sirius mystery," namely that Sirius was described as a red star in ancient times while in modern times it is a white star.

Sister

A female who shares a mother and/or a father with a sibling. The term sister *(ukht)* appears in the Qurʾān in several ways, most frequently in this biological sense. It is also socially constructed in the case of a female who is suckled by a woman and thus becomes a "milk sister" (or foster sister) of the woman's biological children (q.v.; see also MILK; FOSTERAGE; WET-NURSING; KINSHIP; LACTATION). "Sister" is sometimes subsumed or included in the term for brothers *(ikhwa)* as evident from the context (see GENDER; BROTHER AND BROTHERHOOD). The term sister is also used metaphorically (see METAPHOR).

Qurʾānic verses relating to sister carry legal implications (see LAW AND THE QURʾĀN). Concerning marriage these apply equally to a biological sister and a "milk sister" (see MARRIAGE AND DIVORCE; PROHIBITED DEGREES). In Q 4:23 the man is told he may not marry his sisters (biological or foster), his father's sisters and mother's sisters, and his sister's (and brother's) daughters, nor may he take two sisters as wives (see WOMEN AND THE QURʾĀN; BLOOD AND BLOOD CLOT). From this it is clear those whom sisters must avoid as marriage partners. Legal implications concerning sisters and inheritance (q.v.) are restricted to biological sisters who alone are eligible as heirs. Sister is mentioned explicitly in Q 4:12 concerning her entitlements as an heir of a woman or man (along with any brother) leaving neither ascendants nor descendants. In Q 4:11, regarding entitlements in the case when the deceased leaves only parents (q.v.) and siblings, sisters are included in the term *ikhwa.*

Injunctions of modesty relating to sisters, both biological and milk-sisters, follow the pattern concerning marriage; they must not display their beauty to males who are not prohibited in marriage and must avert their gaze from them (and likewise such men must not gaze upon these women) as in Q 24:30-1. The exception in the prescription of modesty concerns sisters' sons as stated in Q 24:31 and Q 33:55. Sisters are explicitly included in the practice of family familiarity and conviviality as seen in Q 24:61, which enunciates a positive stance toward the sharing of meals in houses of kin (this constitutes a rejection of pre-qurʾānic notions and practices shunning such sociability).

The word sister appears once in relation to a named brother, as in Q 28:11, which mentions the "sister" of Moses (q.v.). This verse relates how the mother of Moses, after casting her son into the river, who is then taken in by the wife of Pharaoh (q.v.), despaired and sent his sister to look for him. When his sister (in the guise of a stranger) found her infant brother in the care of Pharaoh's wife and learned that he refused to suckle, she pointed the way to "a house that will nourish and bring him up for you." Thus did the sister of Moses restore her brother to his mother. The sister plays a pivotal role in this narrative of recovery and restoration and may be seen, by extension, as a defender of family and people. This story of the sister of Moses affirms the notion in Q 9:71 that women and men are supporters *(awliyāʾ)* of one another, in contradistinction to the idea that later became prevalent in juristic circles that men are the protectors of women (see CLIENTS AND CLIENTAGE; MAINTENANCE AND UPKEEP; PROTECTION; PATRIARCHY).

The term sister appears metaphorically

in Q 19:28 when Mary (q.v.) is called "the sister of Aaron" to establish her respectability by associating her with the lineage or tribe (people) of Aaron (q.v.). That she is referred to as "the sister of Aaron" and not the daughter of Aaron suggests the amplitude of meaning inhering in the idea of sister as conjuring family not only expressed in a directly descending biological line. Sister is also used abstractly to indicate closeness in Q 7:38, which refers to a "sister nation" or community *(ummatun laʿanat ukhtahā),* and to signal similarity or a like phenomenon in Q 43:48, "We showed them sign after sign (see SIGNS) each greater than its sister."

The qurʾānic *ikhwa,* as observed above, may include both female and male biological siblings and can also be understood in a wider metaphoric sense or as a social construct that includes women and men as brethren in religion (q.v.; see also FAITH; BELIEF AND UNBELIEF). Several verses attest to the notion of the brotherhood of believers such as Q 3:103, which relates that after the acceptance of the faith, "[God] joined your hearts (see HEART) together so that by his grace (q.v.), you became brethren." Clearly brethren in religion are not restricted to males. The deployment of the term "brethren" creates a sense of religious family (q.v.), bringing into the *umma* (religious community bound by faith) the sense of intimacy, loyalty (q.v.), and bonds implicit in family. If the mother is located, literally and figuratively, in the vertical line, the sister is positioned in a lateral line. In the Qurʾān, the sister is explicitly part of the adhesive of the religious collective.

The deployment of sister in the Qurʾān as both a biological category and as a social construction in the variant contexts of family, society, religious community, and people (see COMMUNITY AND SOCIETY IN THE QURʾĀN), and the interchange between the explicit and the implicit, reveals the subtle and sophisticated interplay of terminology between text and context in signaling meaning and guidance. The term sister moves between "siblinghood" and a "wider fellowship."

Slaughter

The act of slaying animals according to Muslim requirements, making them permissible as food. The act of slaughter (in Arabic, *dhakā, tadhkiya*) does not formally differ from the ritual of slaughtering the victims destined for immolation (*dhabīḥa;* see SACRIFICE; CONSECRATION OF ANIMALS).

The root *dh-k-w* occurs once in Q 5:3 regarding the prohibition of animals that have been strangled, killed by a blow or a fall, or by the horn of another beast, meaning that their flesh cannot be eaten (see FOOD AND DRINK; FORBIDDEN), unless they are slaughtered just before the last spark of life has disappeared (*illā mā*

dhakkaytum, "except that you slaughtered"; see Ṭabarī, *Tafsīr* and Qurṭubī, *Jāmiʿ,* ad Q 5:3). According to al-Ṭabarī (d. 310/923), the act of *dhakā* purifies *(ṭahhara)* the flesh of the dying animals so that it becomes lawful (see LAWFUL AND UNLAWFUL).

Further qurʾānic interdictions concern blood (see BLOOD AND BLOOD CLOT), pork, what is dead *(mayta)* and what is sacrificed to idols (see CARRION; IDOLS AND IMAGES; IDOLATRY AND IDOLATERS), except in the case of extreme necessity *(ḍarūra):* "But if anyone in his hunger is forced *(fa-mani ʾḍṭurra)* [to eat of them] without wishing to commit sins (see SIN, MAJOR AND MINOR), God is merciful and indulgent" (Q 5:3; see also Q 2:173; 6:146; 16:115; see MERCY; GOD AND HIS ATTRIBUTES). The qurʾānic rules were further developed in *fiqh* literature (see LAW AND THE QURʾĀN); according to these, there are a number of recognized means of *tadhkiya*. *Dhabḥ,* which applies particularly to smaller animals, like sheep and goats, consists of slitting the throat by cutting the windpipe, the gullet and the two jugular veins. If it becomes impossible to slaughter the animal in the specified manner, it is sufficient to cut the throat or to wound the animal at any place in order to cause its death by bleeding. The method called *naḥr* applies to camels, horses and cows and consists of slitting the throat, without it being necessary to cut it in the manner prescribed for the *dhabḥ*. At the moment of slaughtering by the method called *dhabḥ* the victim should be laid upon its left side facing the direction of the *qibla* (q.v.); if applying *naḥr* the animal remains upright facing the *qibla*.

According to all rites of Islamic law, the animal should be slaughtered by a sharp instrument, even with a stone or a piece of wood, without lifting it until the act is completed, in order to take the animal's life in the quickest and least painful way. It is forbidden to rend the throat by using unsuitable objects, like teeth or nails, since this will cause further pain to the animal (see ANIMAL LIFE; CREATION; CALIPH). The *tasmiya* (repeating the name of God) must accompany the act of slaughtering (*fa-kulū mimmā dhukira ism Allāh ʿalayhi,* Q 6:118; cf. 6:119, 121), but there are differences of opinion among scholars about whether this is an essential condition in order to make the meat permissible to eat (see Ṭabarī, *Tafsīr* and *Jalālayn,* ad Q 6:118; see also BASMALA). According to al-Qurṭubī (d. 671/1272; *Jāmiʿ,* ad Q 6:118) who quotes a tradition related on the authority of ʿAṭāʾ b. Abī Rabāḥ (d. ca. 114/732), these words imply not only the duty of mentioning the name of God at the time of slaughter but also before drinking or eating food of any kind (see FOOD AND DRINK; SUSTENANCE). Moreover, a famous tradition narrated by ʿĀʾisha (see ḤADĪTH AND THE QURʾĀN; ʿĀʾISHA BINT ABĪ BAKR) suggests that God can also be invoked at the time of eating, if there is any doubt as to whether his name had been mentioned over the animal at the moment of slaughter.

The *ʿaqr,* the act of wounding prey in hunting (see HUNTING AND FISHING), also constitutes a legal method of *tadhkiya*. It must occur by shooting arrows or other sharp objects or by letting the dogs on the victims, and must be accompanied by the mention of the name of God (Q 5:4).

Some animals, like locusts and fish, do not require any special manner of slaughtering because they have no blood. Even the dead fish floating upon the surface of the water can be eaten, as it is said that, in this case, "the sea has performed the ritual slaughter." According to Mālikīs and Shāfiʿīs the unborn animal can be eaten as well without any ritual slaughtering because "the slaughter of the mother is also the slaughter of the embryo."

Animals slaughtered by the ahl al-kitāb

Food prepared by the People of the Book (q.v.) is permitted for Muslims (Q 5:5), including what they slaughtered to eat, unless it is forbidden in itself, like blood or pork. According to the opinion of some jurists, however, the flesh of animals slaughtered for Christian festivals and churches is considered *ḥarām,* because it falls under the heading of what has been dedicated to other than God (see CHRISTIANS AND CHRISTIANITY; CHURCH).

There are some divergent views among scholars concerning animals slaughtered by Zoroastrians or Parsees (*majūs;* see MAGIANS). Some commentators forbid the eating of them because the words *wa-ṭaʿām alladhīn ūtū l-kitāb* refers only to the food of Jews (see JEWS AND JUDAISM) and Christians who were given the holy scripture (see, for example, Ṭabarī, *Tafsīr* and *Jalālayn,* ad Q 5:5; see BOOK). But a number of jurists do not consider the Zoroastrians polytheists (see POLYTHEISM AND ATHEISM), basing themselves on a tradition from the Prophet where he claims that they must be treated like the People of the Book. These jurists therefore allow Muslims to eat the flesh of an animal slaughtered by Zoroastrians.

The majority of jurists suggest that animals slaughtered by Christians are lawful for Muslims only if they have been slain according to Islamic procedures (cf. Ṭabarī, *Tahdhīb al-āthār. Musnad ʿAlī,* 230, on the basis of the Christian tribe of Taghlib; cf. Gilliot, Réalité et fiction, 192). On the other hand, a number of jurists admit that what the Christians consider religiously lawful to eat is allowed for Muslims, regardless of the manner in which the animal's life was taken. A step forward in this direction was made by a famous *fatwā* delivered by Muḥammad ʿAbduh, who was Egypt's Grand Muftī from 1899 until his death in 1905. From that pulpit he authorized the Muslims of the Transvaal to eat animals slaughtered by Christians, even though their way of killing animals might differ from the Muslims'. The chief point to be considered is that what is slaughtered by Christians should be regarded as food for the whole body of them (cf. Adams, Muḥammad ʿAbduh and the Transvaal *fatwā*). In the light of this ruling, meat originating from the People of the Book is lawful for Muslims, even though the animals may have been killed by means of electric shock or similar methods.

Slaves and Slavery

Persons incorporated into a family in a subordinate position who are subservient to a master who owns them and may sell them, and the institution of acquiring, keeping, selling, and freeing slaves. Slaves are mentioned in at least twenty-

nine verses of the Qurʾān, most of these are Medinan and refer to the legal status of slaves. Seven separate terms refer to slaves, the most common of which is the phrase "that which your/their right hands own" *(mā malakat aymānukum/aymānuhum/aymānuhunna/yamīnuka)*, found in fifteen places. This phrase often refers to female concubines (q.v.), though it also serves as a general term for slaves. *ʿAbd,* the common word for slave in classical Arabic, is found in four places, and *ama,* a female slave, is mentioned twice. In several places, the Qurʾān refers to slaves in ambiguous terms: *fatayāt,* literally "female youths" (Q 4:25; 24:33); *rajul,* "a man" (cf. Q 16:76; 39:29); and *adʿiyā,* "adopted sons" (Q 33:4-5, 37). Finally, the Qurʾān uses *raqaba,* "the nape of the neck," several times as a synecdoche to mean slave, though captive may be a better interpretation for the plural form (*al-riqāb,* as in Q 2:177; 9:60). Slavery, *ʿubūdiyya* or *riqq,* is nowhere mentioned, though the Qurʾān recommends freeing of slaves and is obviously interested in regulating the institution.

The Qurʾān accepts the distinction between slave and free as part of the natural order and uses this distinction as an example of God's grace (q.v.) in Q 16:71: "God has preferred some of you over others in provision; but those that were preferred shall not give their provision to their slaves *(mā malakat aymānuhum)*, in order to make them equal therein. What, do they deny God's blessing (q.v.)?" The Qurʾān, however, does not consider slaves to be mere chattel; their humanity is directly addressed in references to their beliefs (Q 2:221; 4:25, 92), their desire for manumission and their feelings about being forced into prostitution (Q 24:33). In one case, the Qurʾān refers to master and slave with the same word, *rajul* (Q 39:29). Later interpreters presume slaves to be spiritual equals of free Muslims. For example, Q 4:25 urges believers to marry "believing maids that your right hands own" and then states: "The one of you is as the other" *(baʿḍukum min baʿḍin),* which the Jalālayn interpret as "You and they are equal in faith (q.v.), so do not refrain from marrying them" (see MARRIAGE AND DIVORCE). The human aspect of slaves is further reinforced by reference to them as members of the private household, sometimes along with wives or children (q.v.; Q 23:6; 24:58; 33:50; 70:30) and once in a long list of such members (Q 24:31). This incorporation into the intimate family is consistent with the view of slaves in the ancient near east and quite in contrast to Western plantation slavery as it developed in the early modern period.

The legal material on slavery in the Qurʾān is largely restricted to manumission and sexual relations (see SEX AND SEXUALITY). Masters are encouraged to be kind to slaves (Q 4:36), manumit them and even marry them off but slaves have no corresponding right to demand such treatment (al-Ghazālī's [d. 505/1111] list of "slaves' rights" is based entirely on tradition; see Bousquet, Droits de l'esclave, 420-7). For example, Q 90:12-18, perhaps the earliest qurʾānic statement on slaves, addresses the master and emphasizes a religious motivation for manumission: "What will make you understand the steep path? Releasing a slave *(fakku raqabatin)* or giving food on a day of hunger to an orphan relative or a miserable poor person (see POVERTY AND THE POOR). [. . .] These are the companions of the right hand!" (see LEFT HAND AND RIGHT HAND; ORPHANS). Here, manumission is one way in which wealthy members of society can care for the less fortunate, but elsewhere, manumission is used to expiate sins such as oath-breaking (Q 5:89; 58:3; see SIN, MAJOR AND MINOR; BREAKING TRUSTS AND CONTRACTS). Q 24:33 is universally

regarded by the interpreters as the origin of the *kitāba,* a "manumission contract," in which slaves buy their freedom from their masters in installments, though it is unlikely that such a contract was known in the qurʾānic period (Brockopp, *Early Mālikī law,* 166-8; Crone, Two legal problems, 3-21). Two exhortations to help *al-riqāb* (Q 2:177; 9:60) have been interpreted as urging believers to support slaves trying to pay off such contracts (e.g. *Jalālayn*), although these verses may also refer to ransoming of Muslims captured in battle (as implied in Qurṭubī, *Jāmiʿ,* ad loc.).

The second major category for qurʾānic rules on slavery is sexual relations. The Qurʾān condones the use of female slaves as concubines (Q 23:5-6; 70:29-30) and also marriage to believing slaves (Q 2:221; 24:32), although abstinence (q.v.) is touted as a better choice (Q 4:25; 24:30; see also CHASTITY). Within the rules on marriage to slaves, the punishment of married slave women is to be half that of married free-women (Q 4:25), a rule that was later extended to all crimes committed by slaves. The Qurʾān also explicitly prohibits slave prostitution (Q 24:33; see ADULTERY AND FORNICATION).

There is strong evidence to suggest that the Qurʾān regards slaves and slavery differently from both classical and modern Islamic texts. First, the vocabulary is distinct. Several words for slave in classical Arabic (such as *mukātab, raqīq, qinn, khādim, qayna, umm walad,* and *mudabbar*) are not found in the Qurʾān, while others *(jāriya, ghulām, fatā)* occur but do not refer to slaves. Likewise, *ʿabd* (along with its plurals *ʿibād* and *ʿabīd*) is used over 100 times to mean "servant" (q.v.) or "worshipper" in the Qurʾān (see SERVANT; WORSHIP); in each occasion when it is used to refer to male slaves, a linguistic marker is appended, contrasting *ʿabd* to a free person (*al-ḥurr* in Q 2:178) or a female slave (*ama,* pl. *imāʾ* in Q 24:32) or qualifying it with the term "possessed" (*ʿabd mamlūk* in Q 16:75). Further, when the Qurʾān speaks of manumission, it does not use the classical *ʿitq;* nor does *walāʾ,* the state of clientage after manumission, appear (see CLIENTS AND CLIENTAGE).

Second, the institution of slavery changed dramatically in the seventh and eighth centuries C.E.: tens of thousands of captured slaves poured into Damascus and other urban centers, and Mecca (q.v.) and Medina (q.v.) became important centers of the luxury slave trade. The earliest legal texts have expansive chapters on slavery and manumission that depend very little on the Qurʾān. Pre-modern Islamic civilizations, with their eunuchs, slave armies and slave dynasties, were even further removed from qurʾānic concerns. Modern interpreters have used this disconnect to argue that the Qurʾān would not have condoned the slaving practices common in Islamic history, with some claiming that medieval interpreters subverted the Qurʾān's demand for manumission contracts (Rahman, *Major themes,* 48), while others argue that the Qurʾān's original intent, properly understood, was to eliminate slavery altogether (ʿArafat, Attitude; but compare Mawdudi, *Purdah,* 20).

It is possible, however, to delimit these interpretive constructs by analyzing early biographical dictionaries and historical accounts. While the biographies of certain famous individual slaves, such as Bilāl b. Rabāḥ (d. 20/642?) and Salmān al-Fārisī (d. 35/656?), were clearly enhanced or fabricated by later authors, the historical record is trustworthy regarding the general features of slavery in the qurʾānic period. According to these accounts, slavery was widely known but slaves were held in small numbers, with exceptionally rich persons owning no more than several dozen. Also, slaves appear to have been brought to Mecca and Medina through the caravan

trade from Egyptian, Syrian, Persian and Ethiopian sources. In addition to importation, children of slaves were also considered slaves.

Among the earliest believers, slaves of non-Muslim masters reportedly suffered brutal punishments (see CHASTISEMENT AND PUNISHMENT). Sumayya bt. Kubbāṭ (d. before the *hijra;* see EMIGRATION) is famous as the first martyr of Islam, having been killed with a spear by Abū Jahl when she refused to give up her faith. Likewise, Bilāl was freed by Abū Bakr when his master, Umayya b. Khalaf, placed a heavy rock on his chest to force his conversion. In contrast, Muḥammad was kind to his slaves. Zayd b. Ḥāritha (d. 8/630), bought by Khadīja (q.v.) for the Prophet and one of the first to profess Islam, was adopted by Muḥammad as his son, though the adoption was later annulled (Q 33:5). Muḥammad was also very fond of Māriya (d. 16/638), a Coptic slave who bore him a son.

There is good evidence that slaves were freed for pious reasons; manumission is also mentioned as a reward for certain deeds. Many manumitted slaves remained dependent upon their masters (see Crone, *Roman law*) but some freed slaves attained positions of importance. Zayd b. Ḥāritha, general and confidant of Muḥammad, is perhaps the most famous example, although ʿAmmār b. Yāsir was governor of Kūfa, and Ṣuhayb b. Sinān served as interim caliph (q.v.) after ʿUmar's (q.v.) death (Dhahabī, *Taʾrīkh,* yrs. 11-40, p. 600). Other famous slaves include Sālim b. Maʿqil (d. 12/634), who is counted among the Emigrants (*muhājirūn;* see EMIGRANTS AND HELPERS) and was an important Qurʾān reciter (see RECITERS OF THE QURʾĀN) and Waḥshī b. Ḥarb (d. 41-50/662-70), a slave of Meccan owners who killed both the Prophet's uncle Ḥamza and, after his conversion, the pseudo-prophet Musaylima (q.v.).

These historical records agree with the Qurʾān on the following substantial points. Slaves were considered a part of the family, though of a status lower than that of free family members (see FAMILY; KINSHIP; TRIBES AND CLANS). Manumission of slaves was an act of piety (q.v.), though freed slaves remained dependent on their former masters. Female slaves were taken as concubines and marriage between free and slave was condoned. Neither the Qurʾān nor the historical record mentions any way of acquiring slaves other than through capture in war (q.v.; see also CAPTIVES; BOOTY), purchase or being born into slavery; this is significant given the persistence of debt slavery (see Schneider, *Kinderverkauf und Schuldknechtschaft*). Finally, the important role played by slaves as members of this community may help explain the Qurʾān's emphasis on manumission and kind treatment. Nonetheless, by the time of Muḥammad's death, slaves did not make up a large proportion of the believers.

While the institution of slavery in the Qurʾān shares many features with neighboring cultures, the use of alms for the manumission of slaves (see ALMSGIVING) appears to be unique to the Qurʾān (assuming the traditional interpretation of Q 2:177 and Q 9:60), as does the practice of freeing slaves in expiation for certain crimes (Pedersen, *Eid,* 196-8; but compare *Exod* 21:26-7). Other cultures limit a master's right to harm a slave but few exhort masters to treat their slaves kindly, and the placement of slaves in the same category as other weak members of society who deserve protection is unknown outside the Qurʾān (see OPPRESSION; OPPRESSED ON EARTH, THE). The unique contribution of the Qurʾān, then, is to be found in its emphasis on the place of slaves in society and society's responsibility toward the slave, perhaps the most progressive legislation on

slavery in its time (see LAW AND THE QUR'ĀN).

Slavery continued as an important aspect of medieval Islamic culture but by the nineteenth century it was on the wane. The slave dynasties of Egypt and the Deccan had been dismantled and the famous Janissary corps of the Ottoman empire was no longer dependant on a slave levy *(devşirme)*. Pressure from European powers to end the slave trade was resisted in some areas but also found ready assent among Muslim jurists. In the Ottoman empire, east Africa and elsewhere, the manumission contract (*kitāba,* based on Q 24:33) was used by the state as a device to end slavery by giving slaves the means to buy their freedom from their masters. Some authorities made blanket pronouncements against slavery, arguing that it violated the qur'ānic ideals of equality and freedom (Shafiq, *L'esclavage;* see FREEDOM AND PREDESTINATION). The great slave markets of Cairo were closed down at the end of the nineteenth century and even conservative Qur'ān interpreters continue to regard slavery as opposed to Islamic principles of justice and equality (see JUSTICE AND INJUSTICE; EXEGESIS OF THE QUR'ĀN: EARLY MODERN AND CONTEMPORARY). This dramatic shift in Islamic attitudes toward slavery is a prime example of flexibility in interpreting qur'ānic norms (see also ETHICS AND THE QUR'ĀN).

Sleep

Natural and temporary periodic reduction of sensation and consciousness. Sleep *(nawm)* is mentioned a number of times in the Qur'ān. According to Q 25:47, "It is he [God] who appointed the night for you to be a garment and sleep for a rest, and day he appointed for a rising" (see DAY AND NIGHT). Sleep in the night is deemed to rest the body after a day's work and thus it is a gift from God almighty (see GRACE; GIFT AND GIFT-GIVING). The concept had found expression already in Q 78:9-11, "and we appointed your sleep for a rest and we appointed night for a garment and we appointed day for a livelihood" (see WORK).

That sleep is a gift from God is also alluded to in Q 30:23, which states that "of his signs (q.v.) is your sleep by night and day, and your seeking after his bounty." According to the exegetes (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL) this is a reference to God's omnipotent control (see POWER AND IMPOTENCE) over the passing of time (q.v.), in particular the alternation of day and night (Ṭabarī, *Tafsīr,* xxi, 32; see PAIRS AND PAIRING); since if there were no sleep, people would have no time to rest from the fatigues of the day (Muqātil, *Tafsīr,* iv, 558). The exegetes usually add that sleep is similar to death, since, like the dead, sleepers are neither conscious nor capable of thought (see DEATH AND THE DEAD; INTELLECT). This is alluded to in Q 39:42, according to which "God takes the souls at the time of their death (see SOUL), and that which has not died, in its sleep."

A different perspective is offered in another passage, where it is stated that "slumber seizes him [i.e. God] not, neither sleep" (Q 2:255; see SABBATH). This qualification underscores the same verse's earlier definition of God as the living and the eternal (see ETERNITY; GOD AND HIS ATTRIBUTES). The exegetes point out that sleep is a negative attitude *(āfa)* and cannot be attributed to God: as he is the conqueror (see VICTORY), he cannot, therefore, be conquered by sleep; just as he is the living, he cannot be overcome by rest and sleep, which are similar to death (Thaʿlabī, *Kashf,* ii, 231). Another qurʾānic passage alludes to sleep, in relation to the rather obscure "people of the cities" of Q 7:96-7. There it is asked: "Do the people of the cities feel secure [in the conviction] that our might shall not come upon them at night while they are sleeping?" (see CITY; PUNISHMENT STORIES; GENERATIONS; GEOGRAPHY). The occurrence of *manām* in Q 37:102, in the episode of Abraham's (q.v.) being commanded to sacrifice (q.v.) his son (see ISAAC; ISHMAEL), is connected to a vision during sleep, that is, a dream (see also Q 8:43; see VISION; DREAMS AND SLEEP).

Other episodes that Muslim tradition connects with sleep do not employ the common qurʾānic terminology for "sleep" *(nawm):* sleep *(nawm)* and vision in dream *(manām)* are not mentioned in the story of Joseph (q.v.) in Q 12, nor in the story of the Men of the Cave (q.v.) in Q 18 (see NARRATIVES; MYTHS AND LEGENDS IN THE QUR'ĀN). In the latter, although derivatives of *n-w-m* are not used, it is stated that God "smote their ears" (q.v.; Q 18:11; see also HEARING AND DEAFNESS) and then "raised them again" (Q 18:12; see RESURRECTION) and that they were lying asleep (*ruqūd,* Q 18:18) before God raised them (Q 18:19). The extent of this prodigious sleep, lasting more than three hundred years, is fully described in later reports.

In their exegesis of the verses just cited, qurʾānic commentaries seldom add any traditions regarding sleep. Muḥammad was asked if people in paradise (q.v.) sleep and he answered no, since sleep is the brother of death (Thaʿlabī, *Kashf,* ii, 231). According to another widespread report in the exegetical literature, Moses (q.v.) asked if God sleeps. In other versions Moses was prompted by the Israelites to ask this, or Moses asked the angels (see ANGEL; CHILDREN OF ISRAEL). God ordered him to take two glasses and when the end of the night came (or, according to some versions, after God ordered the angels to keep Moses awake for three days) he fell asleep and the glasses fell down and broke. The moral is that God never sleeps because otherwise the skies and earth (q.v.) and all creation (q.v.) would break apart (see HEAVEN AND SKY; COSMOLOGY). The explicit affirmation that God does not sleep and has no need for sleep is also mentioned

in the major ḥadīth collections (see ḤADĪTH AND THE QURʾĀN), although in ḥadīth literature sleep is usually mentioned in connection with ritual laws relating to prayer (q.v.; see also VIGIL; RITUAL AND THE QURʾĀN). The question at hand in these cases generally centers on the requirement of ablution after sleep (see CLEANLINESS AND ABLUTION).

Smell

Olfactory sense; pleasing or unpleasing odor. The verb "to smell" does not occur in the Qurʾān; the word for nose *(anf)* only occurs once, in the context of the *lex talionis* (see RETALIATION; LAW AND THE QURʾĀN; TEETH); the term *rīḥ,* usually "wind" (see AIR AND WIND), occurs at least once with the meaning "smell, odor, scent" (Q 12:94). Smell plays a significant role in qurʾānic images of paradise (q.v.) and in a scene in the Joseph (q.v.) story (see NARRATIVES). While the visual predominates, qurʾānic imagery also draws on smell, sound, taste and touch (see SEEING AND HEARING; VISION AND BLINDNESS; HEARING AND DEAFNESS; EARS; EYES; HANDS). The two main types of imagery which evoke the olfactory sense have to do with gardens (see GARDEN), particularly the garden of Eden or paradise, and drink (see FOOD AND DRINK). The sense of smell serves to heighten the effect of these depictions of delight (*naʿīm;* see JOY AND MISERY; GRACE; BLESSING). Garden imagery in the Qurʾān regularly depicts lush green foliage (see AGRICULTURE AND VEGETATION) and fruit-bearing trees (q.v.), including pomegranates and date-palms (see DATE PALM). Smell is evoked explicitly in references to the presence there of *rayḥān,* perhaps best rendered "scented, or sweet-smelling herbs": *wa-l-ḥabbu dhū l-ʿaṣfi wa-l-rayḥānu,* "grain with [full, plentiful?] leaves/ears [?] and scented herbs" (Q 55:12; see GRASSES). The same term occurs in Q 56:89: *fa-rawḥun wa-rayḥānun wa-jannatu naʿīmin,* "Then ease [or a light breeze], scented herbs, and a garden of delight." In keeping with the theme of sensory delight is the close association of smell with heavenly drink, the descriptions of which refer to perfumes. The drink of the inhabitants of heaven is described as pure wine *(raḥīq)* mixed with water of the heavenly spring of Tasnīm and "sealed" with musk (*misk,* Q 83:25-8; see SPRINGS AND FOUNTAINS; WATER; WINE; INTOXICANTS). In another passage, the righteous shall be rewarded in heaven (see REWARD AND PUNISHMENT) with wine mixed with *kāfūr,* "camphor" (q.v.), and water from another heavenly spring (Q 76:5-6). Dressed in silk (q.v.) and reclining on cool couches under shady trees with clusters of fruit hanging down above them, they will drink from shiny goblets of silver (see METALS AND MINERALS; CUPS AND VESSELS) wine mixed with ginger *(zanjabīl)* and water from the heavenly spring Salsabīl (Q 76:12-18). Missing are passages reminiscent of biblical references to the pleasant odor of burnt

offerings, presumably because it would not be in keeping with the qurʾānic portrayal of God to suggest that he was delighted by sacrifices and felt hunger or need for them (see SACRIFICE; ANTHROPOMORPHISM). Missing also are references to women and their perfume which occur frequently in pre-Islamic poetry but which would not go along with the moral tenor of the qurʾānic text (see ETHICS AND THE QURʾĀN; WOMEN AND THE QURʾĀN; PRE-ISLAMIC ARABIA AND THE QURʾĀN; POETRY AND POETS).

Smell plays an important role in the scene in the Joseph story depicting the restoration of sight to the elderly Jacob (q.v.; Q 12:93-6), who had become blind out of grief at the loss of Joseph (Q 12:84). After revealing his identity to his brothers (see BROTHER AND BROTHERHOOD), Joseph orders them to return to Canaan and bring all their folk to Egypt (q.v.). He also instructs them to take his shirt with them and throw it over Jacob's face; this will enable him to see again. When they set out from Egypt, Jacob senses their approach. He claims to detect the "smell" *(rīḥ)* of Joseph (Q 12:94). Commentators, citing traditions from Ibn ʿAbbās (d. 68/686-8), say that he did so when the caravan (q.v.) was eight nights away, a distance comparable to that between Kūfa and Baṣra. Those present with Jacob think he is deluded (Q 12:95). When the brothers arrive, "the bearer of glad tidings" (*al-bashīr;* see GOOD NEWS), identified by commentators (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) as Jacob's son Judah (Yahūdhā), throws the shirt over Jacob's face and his sight is restored (Q 12:96). The suggestion is that smelling Joseph's odor proves to him that Joseph is indeed alive and restores his hope in being reunited with him. A pun here (see HUMOR; LITERARY STRUCTURES OF THE QURʾĀN) connects the "smell" *(rīḥ)* of Joseph with "the spirit/breath of God" *(rawḥ Allāh)* in Jacob's statement "Go, O my sons, and ascertain concerning Joseph and his brother, and despair not of the spirit of God. None despairs of the spirit of God save disbelieving folk" (Q 12:87; cf. alternate translation of "comfort or mercy of God"; see BELIEF AND UNBELIEF; SPIRIT; HOLY SPIRIT). Smell, like the dreams in the Joseph story (see DREAMS AND SLEEP), is one of God's methods for delivering messages. These messages are not apparent to everyone but only inspired or favored individuals notice them or understand their intent (see REVELATION AND INSPIRATION; MESSENGER; PROPHETS AND PROPHETHOOD).

According to exegetical traditions attributed to Anas b. Mālik (d. 91-3/710-12), Ibn ʿAbbās, Mujāhid (d. ca. 100/718) and others, Joseph's shirt originated in heaven. Gabriel (q.v.) had brought down this same shirt, or cloak, to Abraham (q.v.), whom it saved from burning at the hands of Nimrod (q.v.), and it had been passed down through the descendants of Abraham to Joseph. Joseph reportedly wore the shirt in a silver rod around his neck, as a type of amulet, and had it with him when he was thrown into the pit. The smell of heaven *(rīḥ al-janna)* which lingered in the shirt was what gave it the power to cure the ill and afflicted (Ṭabarī, *Tafsīr,* xvi, 249-52, ad Q 12:94; Zamakhsharī, *Kashshāf,* ii, 342-3, ad Q 12:93; Ṭabarsī, *Majmaʿ,* xiii, 115-16, ad Q 12:93; Ṭarafī, *Storie,* 226-8; Thaʿlabī, *Lives,* 228-9).

Smile see HUMOR; LAUGHTER

Smoke

Gaseous by-product of fire. Two words which occur in the Qurʾān — *dukhān* and *yaḥmūm* — are usually translated as "smoke" but their exact meaning in the text is uncertain: *dukhān,* though the contemporary Arabic word for "smoke," never occurs in the Qurʾān in connection with fire (q.v.), be it hellfire (see HELL AND HELLFIRE) or earthly fire. Actually, it can only be found twice, in Q 41:11, and in Q 44:10, to which latter sūra it lends its title (Sūrat al-Dukhān); both verses were revealed in Mecca (q.v.).

In the first of these verses, *dukhān* is mentioned in the context of the creation (q.v.) of heaven (see HEAVEN AND SKY) which was *dukhān* before God fashioned the seven heavens, assigned to each of them its proper order, and adorned the lower one with "lights" (*maṣābīḥ,* Q 41:12; see LAMP). According to a tradition which goes back to Ibn Masʿūd (d. 32/652-3), in the very beginning God's throne (see THRONE OF GOD) was set on the water (q.v.; *māʾ*). When he decided to create the universe, he first produced a *dukhān* from the water which rose; then he lifted it and called it "heaven" *(samāʾ)*. It is likely that this *dukhān* resembles "mist," "fume," or "vapor," rather than "smoke." This interpretation is confirmed by al-Ṭabarī (d. 310/923), who comments on this *dukhān* in his remarks on Q 2:29 (Ṭabarī, *Tafsīr,* i, 425-6, no. 591), and also in his *Taʾrīkh* (i, 49-50; *History,* i, 219-20; cf. also the tradition of Ibn Isḥāq recorded in Ṭabarī, *Tafsīr,* i, 433, no. 590). In the same context, he quotes a tradition going back to Ibn ʿAbbās (d. 68/686-8) which explains that God "raised the water's vapor/ mist/ fume" *(rafaʿa bukhār al-māʾ)* and made the heaven(s) out of it (*Taʾrīkh,* i, 48; *History,* i, 218; see also Ṭabarī, *Tafsīr,* xxix, 14, ad Q 68:1; cf. Gilliot, Mythe, 165-6). In another version (Ṭabarī, *Taʾrīkh,* i, 52-3; *History,* i, 222) going back to Ibn Masʿūd, the same *dukhān* is said to have been the material out of which God created the earth *(arḍ)* as well as the heaven(s). According to the same tradition, the *dukhān* in question resulted from the breathing of the water (*min tanaffus al-māʾ ḥīna tanaffasa;* Ṭabarī, *Taʾrīkh,* i, 54-5; cf. Ṭabarī, *Tafsīr,* xxiv, 99, ad Q 41:12 for this same expression in a tradition of al-Suddī).

A similar problem concerning the meaning of *dukhān* arises in Q 44. Here, the Prophet is invited to watch for the day when heaven will bring forth a *dukhān* (Q 44:10) that will cover *(yaghshā)* the people, thus inflicting on them a painful torment (Q 44:11; see APOCALYPSE; CHASTISEMENT AND PUNISHMENT). The people then implore God to remove this torment, promising in exchange to become believers (Q 44:12; see BELIEF AND UNBELIEF; REWARD AND PUNISHMENT). But when God answers their prayer, they break their promise (see COVENANT; BREAKING TRUSTS AND CONTRACTS) and as a result God announces that he will have his revenge (see VENGEANCE) on the day of the "supreme disaster" (*al-baṭsha al-kubrā,* Q 44:16). A tradition going back to Ibn Masʿūd and accepted by most commentators (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL), considers this passage to refer to a famine (q.v.). This famine is said to have affected the Quraysh (q.v.) and to have driven them to eat bones and carrion (q.v.), after the Prophet, exasperated by their insolence (see INSOLENCE AND OBSTINACY), had asked God to punish them with the "days of Joseph (q.v.)," i.e. to inflict on them seven years of

famine. As for the "supreme disaster," it is believed to announce the future battle of Badr (q.v.) in which the Quraysh were defeated. In this context, *dukhān* is supposed to denote a sort of "haze" which dimmed the people's eyes as a consequence of their hunger. Contrary to this interpretation, some other traditions see in the *dukhān* mentioned in Q 44 one of the signs of doomsday. In these versions, *dukhān* actually seems to mean "smoke." This smoke is either supposed to enter the unbelievers' ears, so that their heads are like roasted meat (*ka-l-raʾs al-ḥanīdh;* cf. Ṭabarī, *Tafsīr,* xxv, 113, ad Q 44:10, according to Ibn ʿUmar) or to dry up their heads and come out of their ears and nostrils. At the same time, the believers will only be affected by the smoke in the form of what resembles a head cold (*ka-hayʾat al-zakma/al-zukām; ka-l-zukām, ka-zakma;* Ṭabarī, *Tafsīr,* xxv, 111-13, ad Q 44:10). Of course, the commentators who adopt this interpretation consider the "supreme disaster" in Q 44:16 to refer to doomsday (see LAST JUDGMENT).

As for *yaḥmūm,* it only occurs once, namely in Q 56:43, in a Meccan sūra describing the environment of the damned (Q 56:41-4), where *yaḥmūm* qualifies the infernal shadow (*ẓill min yaḥmūm;* see DARKNESS; cf. also Ṭabarī, *Tafsīr,* xxvii, 189-93). Here again the exact significance of *yaḥmūm* is not absolutely sure. The word derives from a Semitic root meaning "intense heat." The corresponding Arabic root covers quite a large semantic field — it either means "to turn into coal," "to be very black," "to be very hot," or it qualifies boiling water *(ḥamīm)*. Yet, most commentators and lexicographers define *yaḥmūm* as a "very black smoke" *(dukhān aswad shadīd al-sawād)* or an "intense smoke" *(dukhān shadīd)* or a "hot smoke" *(dukhān ḥamīm)*. Whatever the exact meaning of *yaḥmūm* may be, in Q 56:43 it is obviously linked to hellfire and to the effect it produces on the whole infernal environment (see also ESCHATOLOGY).

Social Sciences and the Qurʾān

The rise and growth of the social sciences as we know them today coincided with the commercial and industrial revolutions that began in the eighteenth century. Formal economics, political science, and sociology emerged only with a differentiation between state and society and the ability to think abstractly about texts, social contexts, and institutional structures. For the Qurʾān or any other sacred text to be understood from a sociological perspective, language had to be developed to think abstractly about religion and text (see CONTEMPORARY CRITICAL PRACTICES AND THE QURʾĀN).

The social sciences began to take formal, disciplinary shape in the nineteenth century but they have always had two conflicting currents. One tendency has been to analyze and understand social forces and the relation of ideas and beliefs to society. The other tendency has been to hold the "modern" belief that societies, like physical structures, can be "managed" to engineer desired social outcomes. This idea of the social sciences often rests uneasily with the more analytical and philosophical goal of "understanding."

The tension between these two visions of social science was most evident in the colonial social sciences and in depicting the non-elite strata of society, such as the poor of Victorian London or Manchester, England, described in detail by Karl Marx and Fredrich Engels.

Text and society: pre-twentieth century approaches

Ideas of "good" social science have changed significantly since the nineteenth century, and these changes can be seen in the dynamic relation between understanding the Qurʾān and the social sciences. By the seventeenth century the plural "religions" became common English usage, and by the nineteenth century the idea of religion as an abstract category became connected with the rapid growth in knowledge about the historical development of rituals, beliefs, and practice of different religions over long periods of time (see RELIGION; RITUAL AND THE QURʾĀN; FAITH). Scholars and travelers began to seek out and organize information about religions. Such collected knowledge, when joined with reflection about religion as an abstract category, paved the way for what eventually came to be known as the history of religions. As a field of study, the history of religions used terms such as Islam, Christianity, Judaism, and Buddhism to connote organized systems of belief (see BELIEF AND UNBELIEF) that were differentiated from one another (Smith, *Meaning and end*).

The polymath biblical scholar W. Robertson Smith (1846-1894) may not have been the first scholar to see a close relationship between the stage of development of a social group and the nature of its intellectual, religious, and moral life, but by the late nineteenth century his *Religion of the Semites* became a foundational text for comparative religion. Smith's focus was on the relation of text to society in the study of the Hebrew Bible, but his travels to the Ḥijāz in 1880 and his monograph entitled *Kinship and marriage in early Arabia* allowed him to invoke qurʾānic texts alongside other religious texts as a means of advancing his principal argument on the structure of ancient Semitic society and the changing role of prophecy in it (see PROPHETS AND PROPHETHOOD; PRE-ISLAMIC ARABIA AND THE QURʾĀN). He saw a close relationship between what he viewed as the "stages" of development of a social group and the nature of its intellectual, religious, and moral life. Consequently, each prophet could speak only for his or her time and thus had to convey prophecy in terms that could be understood by members of that society.

In common with many other nineteenth century scholars, Smith judged some societies to be essentially holdovers from earlier historical areas. Hence when he traveled to western Arabia and neighboring Arab countries, his perception of Bedouin (q.v.) society was that it was relatively unchanged from the time of the Hebrew Bible and the time of the prophet Muḥammad (see also ARABS).

Such an ahistorical assumption was criticized even in Smith's time, but his efforts to relate the structure of social groups systematically to their representation in texts and to the structure of the texts themselves

find strong parallels in the work of Smith's contemporaries, such as Ignaz Goldziher (1850-1921), whose primary interests were in early Islamic texts.

Context of qurʾānic revelation: twentieth century approaches

Although it is possible to find approaches in philological and historical writings that facilitate what later would be called a social scientific understanding of the Qurʾān in its initial setting, most such approaches focused not on the qurʾānic text itself but on the context of its revelation (see OCCASIONS OF REVELATION). This is the approach followed also by earlier sociologists. Joseph Chelhod's *Introduction à la sociologie de l'Islam* (1958) uses the Qurʾān, early Islamic sources (see TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY), and sources in comparative religions to establish understandings of the sacred (see SACRED AND PROFANE), authority (q.v.), governance and ideas of the person. He also explored how conceptions of the Qurʾān as a text changed over subsequent centuries (see TEXTUAL HISTORY OF THE QURʾĀN; COLLECTION OF THE QURʾĀN; INIMITABILITY). His argument about Islam as a "national religion" for the Arabs is strained, but Chelhod's narrative has the advantage of juxtaposing qurʾānic passages in a way that facilitates placing them in a sociological context. In contrast, Rodinson's *Mohammed* is a more focused sociological biography that takes advantage of the earlier work on the sources for Muḥammad's life, using qurʾānic text to document the Prophet's life and the progression of the early Islamic movement from sect to nascent state, differentiating itself from the earlier religious ideas and organization prevalent in the Arabian peninsula (see ISLAM; POLITICS AND THE QURʾĀN).

One issue that Rodinson and other sociologists addressed is the language and structure of the Qurʾān, less for an understanding of the text in itself but more to use it to determine the sociological context of seventh century Arabia (see LANGUAGE AND STYLE OF THE QURʾĀN; FORM AND STRUCTURE OF THE QURʾĀN). One issue with which they were concerned, for example, was how prophetic inspiration (see REVELATION AND INSPIRATION) was recognized and legitimized in seventh century Arabia. One indication was the use of *sajʿ* verse, short sentences in rhythmic prose (see RHYMED PROSE). A rival to Muḥammad who used such verse was Maslama, known in early Islamic sources as Musaylima (q.v.), the "little Muslim." He identified the source of his inspiration as "the Merciful One" (*al-raḥmān;* see GOD AND HIS ATTRIBUTES). There are some indications that Maslama's following was primarily related to his tribal origins, so that opposition to Muḥammad's claim to prophecy and the early Islamic movement would have been based on the understanding among the Banū Ḥanīfa, Maslama's tribal group, that prophecy was tribe-specific and did not transcend existing bonds of community (see TRIBES AND CLANS; KINSHIP).

Framing the question: Qurʾān and society

The sociological contribution to the understanding of the origins of Islam has been strongest in framing explicitly comparative questions. Writing in the 1960s, sociologist Robert Bellah *(Beyond belief)* argued that Islam in its seventh-century origins was, for its time and place, "remarkably modern… in the high degree of commitment, involvement, and participation expected from the rank-and-file members of the community." Its leadership positions were open, and divine revelation emphasized equality among believers. Bellah argues that the restraints that kept the early Muslim community from "wholly

exemplifying" these modern principles underscore the modernity of the basic message of the Qurʾān, which exhorted its initial audience in seventh-century Arabia to break through the "stagnant localisms" of tribe and kinship. In making such statements, Bellah suggests that the early Islamic community placed a particular value on individual, as opposed to collective or group, responsibility (q.v.), so that efforts by contemporary Muslims to depict the early Islamic community as an egalitarian and participant one are not unwarranted.

Of course, these "stagnant localisms" offered powerful resistance to the qurʾānic vision of community in the seventh century (see COMMUNITY AND SOCIETY IN THE QURʾĀN). An often-cited qurʾānic verse emphasizes that there is "no compulsion in religion. Whoever… believes in God has grasped a firm handhold of the truth *(bi-l-ʿurwati l-wuthqā)* that will never break" (Q 2:256; see TOLERANCE AND COMPULSION). Other verses nonetheless appear to justify coercion and severe punishment (see CHASTISEMENT AND PUNISHMENT) for apostates (see APOSTASY), renegades (see HYPOCRITES AND HYPOCRISY), and unbelievers who break their agreement with the prophet Muḥammad (for example, Q 4:89, 9:1-16; see also CONTRACTS AND ALLIANCES; BREAKING TRUSTS AND CONTRACTS).

Some commentators (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) conclude that such coercion is specific to the context of the early Islamic community and grounded in "emergency conditions." In this view, coercion was needed to emphasize such "basic moral requirements" as keeping promises and treaties, and protecting a community's "basic welfare and security against aggression" (see ETHICS AND THE QURʾĀN). The overall emphasis is on voluntary consent to the will of God "which is prompted by the universal guidance that is engraved upon the human heart (q.v.)." The Qurʾān advises even the prophet Muḥammad to show tolerance toward his opponents (see OPPOSITION TO MUḤAMMAD): "If it had been your lord's (q.v.) will, they would all have believed, all who are on earth. Would you [O Muḥammad] then compel humankind [against their will] to believe?" (Q 10:99).

Of course, historians of religion use the same style of argument to interpret the qurʾānic text. Fazlur Rahman *(Major themes)* supports his view that Muḥammad "recognized without a moment of hesitation that Abraham (q.v.), Moses (q.v.), Jesus (q.v.), and other Old and New Testament religious personalities had been genuine prophets like himself" (see SCRIPTURE AND THE QURʾĀN; TORAH; GOSPEL) by invoking the Qurʾān: "I believe in whatever book (q.v.) God may have revealed" (Q 42:15). The idea of "book" *(kitāb),* as Rahman points out, is a generic term in the Qurʾān, denoting the totality of divine revelations.

In such interpretations, the Qurʾān is both a historical text and "good to think with." In 1999, the *Atlantic monthly* published an article, "What is the Koran?," that brought to the foreground issues regarding the interpretation of the Qurʾān. It made public a scholarly controversy surrounding the discovery of eighth-century manuscripts (see MANUSCRIPTS OF THE QURʾĀN) suggesting minor variant readings of the Qurʾān (q.v.) and the possibility of a stage at which the meaning and pronunciation of the Qurʾān was done "with no reference to a living oral tradition" (Rippin, *The Qurʾān,* xi; see ORALITY; RECITATION OF THE QURʾĀN). One of the developments emphasized in this article are those studies that treat the Qurʾān as a sacred text that can be analyzed through scholarly techniques that have been common since the nineteenth century (see POST-ENLIGHTEN-

MENT ACADEMIC STUDY OF THE QUR'ĀN). At one end of the spectrum of such studies are works in the classic philological tradition, such as the pseudonymous C. Luxenberg (2002), who argues that many otherwise inexplicable elements of qur'ānic orthography (q.v.), lexicon, and syntax can better be explained when understood in a Syriac (Christian Aramaic) linguistic context. In Luxenberg's hypothesis, the Syriac palimpsest for many qur'ānic words and phrases helps to solve the problems of adding diacritical points to early Arabic orthography. Such arguments necessarily impute a particular social context in which the text was developed even when they do not develop this imputation. But studies that elaborate a sustained *sociological* idea of language use in the qur'ānic text are minimal.

The Qur'ān and sociolinguistics

At the other end of the interpretive spectrum is the use of a sociologically-informed linguistic analysis of the Qur'ān, such as the approach that Izutsu used in *God and man in the Koran* (1964). Izutsu's methodology assumes that the qur'ānic vision of the universe may be drawn from an analysis of how the basic concepts of the Qur'ān, such as *Allāh, islām, nabī* (prophet), *umma* (community), and *īmān* (belief) are interrelated, and how the text of the Qur'ān itself suggests the way in which qur'ānic usage of these terms differed from prior usage. The relationship between humankind and God, the idea of worship (q.v.) and community, and the implications of the "acceptance" and "rejection" of Islam are all embedded in a complex system of belief and practice. Izutsu's assumption is that Muslims may believe that divine revelation has nothing in common with ordinary human speech (q.v.), but understanding it requires that it possesses "all the essential attributes of human speech."

A similar approach underlies Naṣr Ḥāmid Abū Zayd's approach to an understanding of the qur'ānic text. Abū Zayd was significantly influenced by anthropology and sociology in his doctoral studies at the University of Pennsylvania, including the structural approach to the study of Islam developed by A. El-Zein (1977) at nearby Temple University. Abū Zayd's treatment of qur'ānic texts, like that of Muḥammad Shaḥrūr and Abdul Hamid El-Zein, also exemplifies the erosion of boundaries between "Muslim" and "non-Muslim" approaches to the social understanding of sacred texts. In El-Zein's structural approach, ideas of purity and impurity (see CLEANLINESS AND ABLUTION; RITUAL PURITY), sacralization and defilement (see CONTAMINATION) are embedded in relational constructs that people articulate with history and society in a variety of complex ways and possess "a logic which is beyond their conscious control" (El-Zein, Beyond ideology). Abū Zayd's hermeneutic methods for the study of the qur'ānic text follow a similar path, particularly in his seminal *Mafhūm al-naṣṣ* (1990), in which his textual concern is to trace how *waḥy* (inspiration) became the Qur'ān, the unlimited word of God (q.v.), expressed in human language and expressed as a text that can be understood like any other, as existing in particular social and historical contexts. Seen in this way, no text is a pure interpretation, but depends on webs of significance that are discussed, re-interpreted, and argued in a variety of contexts and for a variety of purposes.

The linguistic approach advocated by Muḥammad Shaḥrūr in his 1990 publication, *al-Kitāb wa-l-Qur'ān. Qirā'a mu'āṣira* ("The book and the Qur'ān: A contemporary reading"), like Abū Zayd's approach to the interpretation of qur'ānic text, stimulated considerable controversy when it first appeared because of what he said and how

he said it. Although a civil engineer by training, the analytical method that he invokes is principally that of structural linguistics, thus contrasting significantly with conventional qurʾānic scholarship. Shaḥrūr refers to classic linguists such as Ferdinand de Saussure and Edward Sapir, but not to Toshihiko Izutsu's linguistic analysis of the Qurʾān.

Writing like an engineer, each chapter of his *al-Kitāb* begins with an outline, a procedure also followed in his subsequent books. Shaḥrūr argues that the chapters and verses of the Qurʾān do not change, but understanding of them in any given time and place is relative and part of the human heritage *(turāth)*. As Shaḥrūr writes, "What happened in the seventh century in the Arabian peninsula was the interaction of people in that time and place with the book. That interaction was the first fruit of Islam, not unique and not the last." Some elements were meant for all time, but others — "clothing (q.v.), drink (see FOOD AND DRINK), style of governance, and life style" — are the result of interaction with the "objective conditions" of specific times and places (*Kitāb,* 36).

Echoing Q 3:7 Shaḥrūr distinguishes between qurʾānic verses which are complete in themselves, representing the message of the Prophet and setting outer limits *(al-āyāt al-muḥkamāt)* and those verses *(al-āyāt al-mutashābihāt)* which become clear only when interpreted contextually and relative to time and place, such as dress codes (see MODESTY). All the verses are God's word, but their understanding requires the continuous exercise of human reason (see INTELLECT). Nor is there a contradiction between the Qurʾān and philosophy (see PHILOSOPHY AND THE QURʾĀN). Muslims have a responsibility to interpret the Qurʾān in light of modern linguistics and new scientific discoveries (see SCIENCE AND THE QURʾĀN; EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY). "If Islam is sound *(ṣāliḥ)* for all times and places," then we must not neglect historical developments and the interaction of different generations. We must act as if "the Prophet just died and informed us of this book" and interpret his message anew (*Kitāb,* 44).

Consider how knowledge is passed between father and son, Shaḥrūr writes. Fathers pass knowledge little by little to their children, adapting content and style according to their age and experience. Likewise, in each historical era, the Qurʾān must be interpreted so that people can understand it. He writes that this purpose is defeated by the jurists, who have monopolized interpretation and imply that their heritage of interpretations are almost as sacred as the Qurʾān itself (see LAW AND THE QURʾĀN).

Shaḥrūr adapts the linguistic distinction between *langue* and *parole* to understanding the Qurʾān. Human thought requires language (q.v.). The qurʾānic text may be fixed, but its expressive and communicative side *(al-dhikr)* must be interpreted for each age and evolves like our understanding of the universe. The worst mistake of Muslims has been to rely heavily on inherited interpretations. Even relying on prophetic example can harm Muslims: if the Prophet's example was right for his own age, following it literally today would cause stagnation in knowledge (see KNOWLEDGE AND LEARNING) and science.

One of Shaḥrūr's primary examples is the treatment of women in Islam (*Kitāb,* 592-630; see WOMEN AND THE QURʾĀN; GENDER; FEMINISM AND THE QURʾĀN). Their status can be resolved only by distinguishing between qurʾānic understanding and later interpretations. In earlier historical eras, Muslims did not distinguish between qurʾānic verses intended to set outer limits *(ḥudūd)* and those limited to

specific historical contexts *(taʿlīmāt)*. Nor should we blame our predecessors for failing to distinguish between the two, he argues. Just as the study of mathematical principles accelerated only with Isaac Newton's ideas, so too we have had to wait until now to understand the theory of outer limits *(ḥudūd)* and its compatibility with what we know of human nature today (see BOUNDARIES AND PRECEPTS). We should not assume that the liberation of women began with the Prophet's message and ended at his death. "If a woman wasn't a judge during the Prophet's lifetime or didn't attain a political position, this doesn't mean that she was forbidden from doing so for all time." As with slavery (see SLAVES AND SLAVERY), not all changes can occur at once. Islam drew the basic lines for freedom and liberation without ruining the existing means of production. If Syria, for example, tried to convert its economy to computer labor overnight, Syrian economic production would be destroyed. Women were full participants in the first acts of allegiance to the Islamic community and fought for Islam (see FIGHTING; PATH OR WAY); no one told them to stay at home and take care of the children (q.v.). Nonetheless, women's share in inheritance (q.v.) was initially less than that of men because of their relation to the means of production in the seventh century (see WORK; MAINTENANCE AND UPKEEP).

In Shaḥrūr's view, the qurʾānic verses related to women have been misunderstood. The inherited Islamic jurisprudence considers the [literal] interpretation of some qurʾānic verses, such as "Your women are a tillage for you" (Q 2:223) in isolation from other verses which suggest that women and men are equal in Islam, even if, in the time of the Prophet, men had a functional superiority over women. Thus in matters of clothing and modesty (q.v.), the qurʾānic injunctions apply equally to both genders (for example, Q 24:30-3).

Shaḥrūr argues that he is following a "scientific" method of qurʾānic analysis based on linguistic analysis, but his interpretive method is only loosely adapted to his approach to solving contemporary issues. Hence except for the unacceptable trades of "striptease" *(stribtīz)* and prostitution, which are sinfully immodest (see ADULTERY AND FORNICATION), he argues that women can practice any available occupation suitable to their social context and historical conditions, work alongside men, and participate in Friday prayers with men veiled or unveiled (*Kitāb*, 623; see VEIL; FRIDAY PRAYER). Some tasks may be more difficult for women to perform, but women, not traditional scholars *(ʿulamāʾ)*, should decide which tasks these are.

Shaḥrūr offers a similar argument, replete with qurʾānic citations and arguments against misinterpreted sayings of the Prophet (see ḤADĪTH AND THE QURʾĀN) for women to participate as full equals in politics, including parliament: "Muslim women should know that they have the right to elect and to be elected and to practice the highest responsibilities in the Islamic state, including its leadership, to participate in Friday prayers with men, and participate in all legislative and judicial activities" (*Kitāb*, 625-6).

Contemporary case studies

Two subjects under discussion in contemporary sociological and anthropological studies of the Qurʾān will suffice as a conclusion to this survey of social sciences and the Qurʾān.

Qurʾānic schooling: past and present

Among the topics that has attracted the attention of anthropologists who study Muslim societies is that of education. In its most traditional forms, Muslim education centers on the Qurʾān. The Qurʾān is

omnipresent in daily life throughout the Muslim world (see EVERYDAY LIFE, THE QUR'ĀN IN), and the public recitation of the text reaffirms the idea of both divine and human ordering (see TEACHING AND PREACHING THE QUR'ĀN). Understood theologically, its recitation reaffirms the divine template for society as reiterated through a fixed and memorizable text. Even if most listeners cannot understand the Arabic words and phrases, accurate memorization and recitation take priority over understanding and interpretation and reaffirm the divine order and human community.

The paradigm of all knowledge is the Qur'ān (see TEACHING). Its accurate memorization in one or more of the seven conventional recitational forms is the first step in mastering the religious sciences through mnemonic possession. A distinctive feature of rural and urban community life is the presence of scholars versed in the Qur'ān who are present for all major life-cycle events and for major community occasions (see FESTIVALS AND COMMEMORATIVE DAYS; BURIAL; PRAYER FORMULAS). In Morocco, for example, every urban quarter and rural community maintains a mosque school in which a teacher *(fqīh)* conveys the basics of qur'ānic recitation and participates in recitations for both public ceremonies and private ones, such as birth (q.v.), circumcision (q.v.), marriage (see MARRIAGE AND DIVORCE), celebrations of school diplomas, and death (see DEATH AND THE DEAD).

Throughout the Muslim majority world, most males and a fair number of females, at least in towns, attend qur'ānic schools long enough to commit a few passages to memory, although these schools have long been characterized by a high rate of attrition. Most students leave before they acquire literacy and few remain the six to eight years generally required (at least in Morocco) to memorize the entire Qur'ān. In Morocco in the 1970s, according to one study, the average number of years spent in qur'ānic school ranged from almost two years in Marrakesh to only four months in small Middle Atlas mountain villages (Eickelman, *Knowledge and power,* 61).

The cognitive style associated with Qur'ān memorization is tied closely to popular understandings of Islam (see POPULAR AND TALISMANIC USES OF THE QUR'ĀN) and has important analogies in non-religious spheres of knowledge. *Ma'rifa* is the ordinary term for knowledge in contemporary Arabic: it can convey the technical religious connotation of esoteric spiritual insight but it also connotes knowledge related to commerce and crafts, including music and oral poetry. These arts share significant formal parallels with the religious sciences and are also presumed to be contained in fixed, memorized truths. Effective public speech involves the skillful invocation both of qur'ānic phrases and of the mundane but memorizable elements of knowledge drawn from poetry and proverbs (see POETRY AND POETS). A further parallel lies in the model for the transmission of knowledge. The religious sciences throughout the Islamic world are transmitted traditionally through a quasi-genealogical chain of authority that descends from master or teacher *(shaykh)* to student *(ṭālib)* to insure that the knowledge of earlier generations is passed on intact. Knowledge of crafts is passed from master to apprentice in an analogous fashion, with any knowledge or skill acquired independent of such a tradition regarded as suspect.

The formal features of qur'ānic schools have been frequently described, although the consequences of this form of pedagogy on how people think are not as well understood. The traditional emphasis on qur'ānic memorization, for example, is not

unique to the Muslim world. Elaborate mnemonic systems existed in classical Greece and Rome to facilitate memorization through the association of material with "memory posts," "visual images like the columns of a building or places at a banquet table" (Yates, *Art of memory,* 2-7). Accompanying such techniques was the notion that mnemonic knowledge was more pure than that communicated through writing (see ORALITY AND WRITING IN ARABIA; MEMORY; REMEMBRANCE).

What is remarkable about memory in the context of Islamic education in Morocco is not the performance of prodigious mnemonic feats in qurʾānic memorization — such feats were fully paralleled in Europe. It is the insistence of former students that they employed no devices to facilitate memorization. Nonetheless, these same students recall visualizing the shape of the letters on their slates and the circumstances associated with the memorization of particular verses and texts. One study (Wagner, Memories, 14) suggests that patterns of intonation and rhythm systematically serve as mnemonic markers.

Even after the advent of print technology (see PRINTING OF THE QURʾĀN), printed books were long neglected in *madrasa* education through the 1970s in many regions. This was partly because of the lack of printed or manuscript books, but also because of the cultural concept of learning implicit in Islamic education. A typical qurʾānic teacher (*fqīh* in Morocco) had between fifteen and twenty students, ranging in age from four to sixteen. Each morning the *fqīh* wrote the verses to be memorized on each student's wooden slate *(lūḥ)* and the student then spent the day memorizing the verses by reciting them out loud and also reciting the verses learned the previous day. Memorization was incremental, with the recitation of new material added to that already learned (for example, a, then a,b, then a,b,c). Students were not grouped into "classes" based on age or progress in memorization.

Qurʾānic studies have been culturally associated with rigorous discipline and the lack of clear explanation of memorized passages. Both these features are congruent with a concept of religious knowledge as essentially fixed and, in the Moroccan and other contexts, an associated concept of "reason" *(ʿaql),* which is conceived as a human's ability to discipline his or her nature in accord with the arbitrary code of conduct laid down by God and epitomized by acts of communal obedience (q.v.), such as the fast of Ramaḍān (q.v.; Eickelman, *Moroccan Islam,* 130-8; see also FASTING). Firm discipline in the course of learning the Qurʾān is thus regarded as an integral part of socialization.

When a father handed his son over to a *fqīh,* he did so with the formulaic phrase that the child could be beaten. Such punishment was considered necessary for accurate qurʾānic recitation. Former students explained that the teacher (or the student's father, when he supervised the process of memorization) was regarded as the impersonal agency of punishment, which, like the unchanging word of God itself, was merely transmitted by him. Students were also told that the parts of their bodies struck in the process of qurʾānic memorization would not burn in hell (see REWARD AND PUNISHMENT; HELL AND HELLFIRE). The same notion applied to the beatings apprentices received from craftsmen and musicians. In practice, students were slapped or whipped only when their attention flagged or when they repeated errors, although the children of high-status fathers were struck much less frequently than other children.

Former students emphasize that they asked no questions concerning the meaning of qurʾānic verses, even among themselves, and it did not occur to them to do so. Their sole activity was properly recited memorization. Because the grammar and vocabulary of the Qurʾān are not immediately accessible to speakers of colloquial Arabic, and even less so to students from regions where Arabic is not the first language, former students readily admitted that they did not comprehend what they were memorizing until fairly late in their studies. "Understanding" *(fahm)* was not measured by the ability to explain particular verses, since explanation was considered a science to be acquired through years of study of the exegetical literature *(tafsīr)*. Any informal attempt to explain meaning was considered blasphemy (q.v.) and did not occur. Instead, the measure of understanding consisted of the ability to use qurʾānic verses in appropriate contexts.

In the first few years of Qurʾān school, students had little control over what they recited. They could not, for instance, recite specific chapters of the Qurʾān, but had to begin with one of the sixty principal recitational sections. Firmer control was achieved as students accompanied their father, other relatives, or occasionally the teacher to social gatherings, where they heard adults incorporate qurʾānic verses into particular contexts and gradually acquired the ability to do so themselves, as well as to recite specific sections of the Qurʾān without regard to the order in which they had been memorized. Thus the measure of understanding was the ability to make practical reference to the memorized text, just as originality was shown in working qurʾānic references into conversation, sermons, and formal occasions. Knowledge and manipulation of secular oral poetry and proverbs in a parallel fashion is still a sign of good rhetorical style; the skill is not confined to religious learning (see RHETORIC AND THE QURʾĀN).

The high rate of attrition from qurʾānic schools supports the notion that mnemonic "possession" can be considered a form of cultural capital. Education was free aside from small gifts to the teacher, yet most students were compelled to drop out after a short period to contribute to the support of their families or because they did not receive familial support for the arduous and imperfectly understood process of learning. In practice, memorization of the Qurʾān was accomplished primarily by children from relatively prosperous households or by those whose fathers or guardians were already literate (see LITERACY). Nonetheless, education was a means to social mobility, especially for poor students who managed to progress through higher, post-qurʾānic education.

The notion of cultural capital implies more than possession of the material resources to allow a child to spend six to eight years in the memorization of the Qurʾān; it also implies a sustained adult discipline over the child. Students' fathers, elder brothers, other close relatives — including women in some cases — and peers, especially at later stages of learning, were integrally involved in the learning process. All provided contexts for learning to continue, since formal education did not involve being systematically taught to read and write outside the context of the Qurʾān, even for urban students from wealthy families. Students acquired such skills, if at all, apart from their studies in qurʾānic schools (Berque, *Maghreb,* 167-8), just as they acquired an understanding of the Qurʾān through social situations.

A student became a "memorizer" *(ḥāfiẓ)* once he knew the entire Qurʾān; this set him apart from ordinary society even without additional studies. In the pre-colonial era in Morocco, qurʾānic students often

were the only strangers who could travel in safety through tribal regions without making prior arrangements for protection. The mnemonic "possession" of the Qurʾān set people apart from other elements of society.

The Qurʾān in daily life

Yet another aspect of qurʾānic studies that has generated interest among both anthropologists and sociologists is the integration of the Qurʾān within the social fabric of Muslim life. It may be correct to say that the Qurʾān continuously plays a central role in society, but *how* this is accomplished contextually points to significant differences that often are the product of incremental changes that frequently go unnoticed. One significant change is in the memorization of the Qurʾān. For an earlier generation of religious learning, it could be taken for granted that its recitation was known by heart. In courtrooms and in gatherings of the pious, those not engaged in conversation would continue its recitation *sotto voce,* using a rosary *(tasbīḥ)* to keep track of the parts recited. Among the most able and educated, apposite qurʾānic verses were dropped into conversation or sermons. With the spread of literacy and mass higher education, memorization of the entire Qurʾān has become less common. On occasions such as the commemoration of a deceased forty days after his or her death (the *arbaʿīn*), the reciters and guests who accompany the imām (q.v.) in most parts of the Muslim world are likely to recite from printed copies of the Qurʾān. This opens the art of recitation to more people, although the imām or other expert recitational leaders exercise the same care for the production of an *exact* recitation according to one of the established forms of recitation. In practice, the most skilled can exercise control over those at the core of such a gathering, occasionally correcting one another as a sign of authority but offering only example, not authoritative control, over the larger group. Governments offer qurʾānic recitation contests and commissions to ensure its proper style and encouraging it as an art (Nelson, *Art of reciting*). It remains popular, but other forms of public religious performance increasingly displace it.

Changes in media have tacitly displaced the predominance of the Qurʾān in daily life (see MEDIA AND THE QURʾĀN). Several countries, including Saudi Arabia, Morocco, and Egypt, offer non-stop qurʾānic recitations on the radio and nearly all Muslim majority countries offer qurʾānic recitation for at least part of the day on radio and television. In an earlier era, such media recitations were central. The advent of the new media, including audio- and videocassettes and the Internet, offer many popular alternatives. The taxi driver in Cairo, Amman, or Fez who once would have listened to qurʾānic recitation on his radio is now more likely to listen to a popular religious preacher speaking in a direct, comprehensible, and forceful way in his own dialect. Ideally, listening to qurʾānic recitation is a complex activity, requiring a combination of intent, training, and discipline. The same is the case when listening to a cassette sermon, except that the speaker can build into his sermon calls for audience participation, such as asking the audience to recite "in the name of God" (*bi-smi-llāh;* see BASMALA) each time a qurʾānic verse is invoked, or to repeat certain key phrases from the sermon (Hirschkind, Ethics of listening, 637). Such interactivity is implicit, not explicit, in Qurʾān recitation. Qurʾānic recitation focuses attention on the beauty of recitation. Its meaning — as the word of God — is known in general, but except for a stock of commonly invoked passages for life-crises occasions, the meaning of

specific phrases is the domain of scholars. Sermons are much more accessible to a wider public and one that increasingly anticipates the ability to participate in religious discussion and debate (Eickelman and Anderson, Redefining Muslim publics, 9-11).

The place of the Qurʾān in daily life can be highly variable. In places as varied as Bulgaria and North America, its presence in a room can be venerated and iconic if its recitation is limited to a handful of persons present. In other cases, its study, as in women's discussion groups in Iran (Torab, Piety as gendered agency, 296), can offer women a means of participation in the religious life of the wider community. In the contemporary world, the role played by the Qurʾān as a text, as the idea of a text, and as a physical object in printed or manuscript form continues to shift. Its character may be eternal, but its place in society contextually shifts. See also COMMUNITY AND SOCIETY IN THE QURʾĀN; EVERYDAY LIFE, THE QURʾĀN IN.

Sociology

see SOCIAL SCIENCES AND THE QURʾĀN

Solomon

The son of the biblical king David (q.v.) and heir to his throne. Solomon (Ar. Sulaymān) is presented in the Qurʾān as playing three important roles, although they are often interwoven in its narrative (see NARRATIVES). He was a ruler who inherited his father's knowledge as well as his kingdom (see KINGS AND RULERS; KNOWLEDGE AND LEARNING; POWER AND IMPOTENCE); a prophet (see PROPHETS AND PROPHETHOOD) who, despite occasional lapses in devotional practice (see PIETY; WORSHIP; RITUAL AND THE QURʾĀN), enjoyed divine protection (q.v.) and was assured an honored place in paradise (q.v.); and a person who possessed wide-ranging magical and esoteric powers which he used with divine sanction (see MAGIC). Solomon's life and accomplishments are

described in Q 21:78-82, 27:15-44, 34:10-14 and 38:30-40 but many of these passages are written in a laconic and allusive style that stimulated the composition of glosses, commentaries and stories (see MYTHS AND LEGENDS IN THE QUR'ĀN; EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL). These sources often supply colorful details about him and his associates not mentioned in the Qur'ān. Solomon's unusual mixture of skills and characteristics also encouraged symbolic interpretations of his life and accomplishments (see SYMBOLIC IMAGERY).

Solomon in the Qur'ān

As a ruler Solomon was noted for his possession of knowledge *('ilm)* and wisdom (q.v.; *ḥikma*), characteristics that he inherited from his father, David, but in which he was believed to have surpassed him (Q 21:78-9; Ṭabarī, *Tafsīr,* xvii, 50-4; id., *Ta'rīkh,* i, 573; Tha'labī, *Qiṣaṣ,* 257-9). Another area in which the son was more accomplished than the father was as a builder. The Qur'ān alludes to the various objects and structures which were made for him, including mihrabs *(maḥārīb),* images or sculptures *(tamāthīl)* and watering troughs (*jifān,* Q 34:12-13; Ṭabarī, *Tafsīr,* xxiii, 70-1; see ART AND ARCHITECTURE AND THE QUR'ĀN; MOSQUE; IDOLS AND IMAGES). Another passage mentions the palace with a glass floor where he received the Queen of Sheba (q.v.; Q 27:44; Ṭabarī, *Tafsīr,* xix, 168-70; id., *Ta'rīkh,* i, 583; Tha'labī, *Qiṣaṣ,* 271, 275-6; see BILQĪS).

Descriptions of the structures and objects made for Solomon present them primarily as a demonstration of his power to force men, birds (see ANIMAL LIFE), jinn (q.v.) and *shayṭān*s to do his bidding (Q 21:82; 38:37-8; Ṭabarī, *Tafsīr,* xvii, 55-6; xxiii, 160; id., *Ta'rīkh,* i, 575-7; Tha'labī, *Qiṣaṣ,* 269-70; see DEVIL). Both Solomon and David are said to have had the ability to communicate with birds and animals (see LANGUAGE, CONCEPT OF). David charmed them with his mellifluous voice whereas Solomon was able to affect their behavior through his understanding of their speech (q.v.). His power to communicate with both ants and birds is specifically mentioned by the Qur'ān (Q 27:16-18; Ṭabarī, *Tafsīr,* xix, 141-2).

Solomon's ability to command the wind (see AIR AND WIND) and to make it transport him wherever he pleased is another manifestation of his special powers. This ability is referred to in three different qur'ānic passages affirming its importance as an aspect of Solomon's status (Q 21:81; 34:12; 38:36; Ṭabarī, *Tafsīr,* xvii, 55-6; xxiii, 68-9, 160-1; id., *Ta'rīkh,* i, 573-5; Tha'labī, *Qiṣaṣ,* 260-1). A similar ability to travel miraculously is attributed to the jinn under his command because they are able to seize a throne belonging to the Queen of Sheba and bring it to Solomon in an instant (Q 27:23, 38-42; Ṭabarī, *Tafsīr,* xix, 148, 159-68; id., *Ta'rīkh,* i, 580-1; Tha'labī, *Qiṣaṣ,* 279, 283-4; see TRIPS AND VOYAGES; JOURNEY).

Solomon in qur'ānic exegesis and the stories of the prophets

Muslim commentators provide anecdotes which demonstrate Solomon's wisdom and piety but they also delight in his regal pomp and magical powers. Stories about his magical levitating throne, his retinue of birds, animals, demons and men and his connection with the Queen of Sheba, identified as Bilqīs in Muslim sources, captured popular imagination. Solomon's temporal, religious and esoteric powers made him a model for both religious and secular personages (Melikian-Chirvani, Royaume). His mobility led Muslim commentators to link him with far-flung places; rulers distant from Jerusalem (q.v.) invoked his memory in the construction and decoration of their residences (Soucek, Throne; Koch, Jahangir). On a more popular level,

his attributes and accomplishments are described in stories and depicted in paintings (Bagci, Divan; Milstein, Ruhrdanz and Schmitz, *Stories of the prophets*).

Soothsayer

One who foretells or interprets events. The Arabic term *kāhin,* related to Hebrew *kohen* ("priest"), designates a soothsayer, seer or diviner. It appears twice in the Qurʾān, reflecting one of several accusations directed at the prophet Muḥammad: that he was a madman (see INSANITY), poet (see POETRY AND POETS) or soothsayer or that he was instructed by someone else (*muʿallam;* see INFORMANTS). The text emphatically rejects such slurs:

> Therefore warn (humankind), for, by the grace of God, you are neither a soothsayer nor a madman" (Q 52:29; see WARNER). But nay! I swear by all that you see and all that you do not see that this is indeed the speech *(qawl)* of a noble messenger (q.v.). It is not the speech of a poet — how little you believe (see BELIEF AND UNBELIEF)! Nor is it the speech of a soothsayer — how little do you take heed! (Q 69:38-42).

The soothsayer was an important religious specialist in pre-Islamic Arabia who served several functions, showing some affinity with soothsayers in ancient Semitic traditions (see PRE-ISLAMIC ARABIA AND THE QURʾĀN; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC; MAGIC). He was often the custodian *(sādin, ḥājib)* of a temple or shrine *(bayt, kaʿba)* within a sacred precinct (*ḥaram;* see SACRED PRECINCTS), in which capacity he maintained the shrine itself, supervised sacrifices (see SACRIFICE) and other rites and oversaw donations. As seer, he was called on to predict events (see FORETELLING; DIVINATION), interpret dreams (see DREAMS AND SLEEP) or provide advice regarding difficult decisions such as undertaking a journey (q.v.), going to war (q.v.), or sealing an alliance (see CONTRACTS AND ALLIANCES). He usually performed divination by casting lots consisting of marked rods or arrow shafts *(azlām, aqdāḥ)*. In an altered state, often enshrouded in a cloak, he also received oracular statements through inspiration from a familiar spirit *(tābiʿ)*. Purporting to be in the voice of the spirit, these statements addressed the soothsayer himself as "you"

and were couched in rhymed and rhythmic cadences (*sajʿ;* see RHYMED PROSE), drawing on obscure and ambiguous vocabulary and often prefaced by oaths (q.v.) sworn upon natural phenomena. They included omens, charms, prayers, blessings and curses (see CURSE; BLESSING; PORTENTS). The soothsayer received remuneration for his services in the form of an "honorarium" *(ḥulwān)*.

In addition, the label soothsayer was applied to the "false prophets" active during the "wars of apostasy (q.v.)" both before and following the death of the prophet Muḥammad: al-Aswad al-ʿAnsī (d. 10/632) in Yemen, Ṭulayḥa b. Khuwaylid (d. 21/642) among the Banū Asad, Musaylima b. Ḥabīb in Yamāma and the prophetess Sajāḥ among the Banū Tamīm (see TRIBES AND CLANS). Musaylima (q.v.), known as "the liar" in Muslim sources, was the most important of these prophets historically; his religious movement showed many similarities to that of the prophet Muḥammad and may have been nascent Islam's most formidable rival. After crushing two Muslim armies, his forces were defeated by the Muslims under the general Khālid b. al-Walīd, and he himself was killed at the battle of ʿAqrabāʿ in 12/634.

As part of the pagan religion, soothsaying was rejected under Islam and survived only in marginal contexts. The soothsayers' claims of access to hidden knowledge *(ghayb)* went against the Islamic attribution of this power exclusively to God (see KNOWLEDGE AND LEARNING; HIDDEN AND THE HIDDEN); in the words of al-Bāqillānī (d. 403/1013), "soothsaying contradicts the prophecies" (*Iʿjāz,* 87). It is reported that the Prophet outlawed three fees: the price for a dog (q.v.), the payment *(mahr)* of a prostitute (see ADULTERY AND FORNICATION; TEMPORARY MARRIAGE) and the honorarium of a soothsayer (Bukhārī, *Ṣaḥīḥ, bāb thaman al-kalb*). A report known as "the ḥadīth of the fetus" is also cited to show that the Prophet rejected the use of rhymed prose because of its association with soothsaying. Transmitted in various versions, the ḥadīth relates a case concerning two co-wives (see MARRIAGE AND DIVORCE; WOMEN AND THE QURʾĀN; ḤADĪTH AND THE QURʾĀN), one from the tribe of Hudhayl and the other from the tribe of ʿĀmir. The Hudhaliyya struck the ʿĀmiriyya with a pole, killing her and also causing a miscarriage. When the Prophet ruled that the guilty woman's relatives had to pay blood money (q.v.) both for the ʿĀmiriyya and for the fetus, her guardian remonstrated, "O, messenger of God, have you ruled (that blood money be paid) for one who has neither eaten nor drunk, nor let out his first cry, when such as this should be left uncompensated?" *(qaḍayta fī man lā akala wa-lā shariba wa-lā ʿstahal[la] fa-mithlu dhālika yuṭal[l])*. The Prophet remarked, in disapproval, "*Sajʿ* like the *sajʿ* of the soothsayers?" (Jāḥiẓ, *Bayān,* i, 287-91; Abū Dāwūd, *Sunan,* iv, 190-3; ʿAskarī, *Ṣināʿatayn,* 261; Abū Nuʿaym al-Iṣbahānī, *Dhikr akhbār Iṣbahān,* ii, 97, 112). Some authorities argue, however, that the Prophet did not mean to condemn rhymed prose altogether but only its use as a rhetorical flourish designed to make an illegitimate point (Ibn al-Athīr, *al-Mathal al-sāʿir,* i, 274). Recommendations to avoid rhymed prose in prayers (Bukhārī, *Ṣaḥīḥ,* ii, 43 [34. *Buyuʿ*, 113 *(bāb thaman al-kalb)*]; Fr. trans., ii, 5) also represent an attempt to distinguish Islamic prayers from those of the soothsayers (see PRAYER; RITUAL AND THE QURʾĀN; PRAYER FORMULAS).

Nevertheless, just as the pagan ritual of the pre-Islamic pilgrimage (q.v.) was accepted in Islam by being reinterpreted within a biblical framework, so, too, were elements of soothsaying adopted in the Qurʾān and Islamic tradition with similar modifications. It is curious that Ibn

Hishām's (d. 761/1360) *Sīra* uses a soothsaying tradition to legitimate the rise of Islam. It begins with two renowned south Arabian soothsayers, Shiqq and Saṭīḥ, predicting the Ethiopian invasion of Yemen and the rise of a great prophet who would reverse the invasion. In addition, many passages of the Qurʾān exhibit features related to the style of soothsayers' pronouncements. The Prophet receives revelation when enshrouded (Q 73:1; 74:1). He is also visited by a spirit (q.v.), though the familiar spirit of the soothsaying tradition is reinterpreted as the angel Gabriel (q.v.; cf. Q 53:1-18). The Prophet is regularly addressed as "you" (sing.). Rhymed prose is prevalent, particularly in the early Meccan sūras (see RHETORIC AND THE QURʾĀN; LANGUAGE AND STYLE OF THE QURʾĀN). In addition, many specific forms associated with soothsaying appear: oaths by celestial bodies (see PLANETS AND STARS) and natural phenomena (Q 37:1-3; 51:1-4; 52:1-6; 53:1; 74:32-34; 77:1-6; 79:1-5; 81:15-18; 84:16-18; 85:1-3; 86:1; 89:1-4; 90:1-3; 91:1-7; 92:1-3; 93:1-2; 95:1-3; 100:1-5; 103:1; see NATURE AS SIGNS), omens and predictions, often in the form "when" *(idhā)* . . . "then, on that day" (*yawmaʾidhin;* cf. Q 77:8-19; 81:1-14; 82:1-5; 84:1-15; 99), the *mā adrāka* construction (Q 69:1-3; 74:26-7; 77:3-4; 82:14-18; 83:7-8; 83:18-19; 86:1-2; 90:11-12; 97:1-2; 101:1-3; 104:4-5; see FORM AND STRUCTURE OF THE QURʾĀN), charms (Q 113; 114; see POPULAR AND TALISMANIC USES OF THE QURʾĀN), and curses (Q 104; 111). The content, though, has presumably shifted. For example, all omens or predictions in the Qurʾān, with the exception of Q 30:1-2 which are understood to predict a victory by the Byzantines (q.v.) over the Persians, have to do with the apocalypse (q.v.) and judgment day (see ESCHATOLOGY; LAST JUDGMENT).

Sorcery see MAGIC

Sorrow see WEEPING; JOY AND MISERY

Soul

That which makes a creature animate, and to which individuality is attributed. From the second/eighth century until today, the vast majority of Muslims have believed that each human being has a soul. Opinion has varied regarding the soul's nature and its relationship to the body, though most Muslim scholars have envisioned the soul as a subtle form or substance infused within or inhabiting a physical body. Generally, Muslims have believed that souls are created by God, joined to a body at birth, taken from the body at death and reunited with the body on the resurrection day (see CREATION; BIRTH; BIOLOGY AS

THE CREATION AND STAGES OF LIFE; DEATH AND THE DEAD; RESURRECTION). Muslim theologians, philosophers and mystics have cited various verses from the Qurʾān in support of the soul's existence (see THEOLOGY AND THE QURʾĀN; PHILOSOPHY AND THE QURʾĀN; ṢŪFISM AND THE QURʾĀN). Yet, such readings appear indebted more to Aristotle, neo-Platonism and Christianity (see CHRISTIANS AND CHRISTIANITY) than to the Qurʾān, with its holistic view of the human being.

In Arabic, two words are used interchangeably for soul: *rūḥ,* "breath, spirit (q.v.; see also AIR AND WIND)," and *nafs,* "self." *Rūḥ* appears twenty-one times in the Qurʾān, always as a singular substantive, masculine noun. There, *rūḥ* often refers to the spirit of revelation (see REVELATION AND INSPIRATION) sent by God to his prophets (see PROPHETS AND PROPHETHOOD): "High of rank, possessor of the throne (see THRONE OF GOD), he casts the spirit of his command upon whomever he wills of his servants (q.v.), that they might warn of the day of meeting" (Q 40:15; see WARNER). The spirit (of God's command) may be accompanied by angels (see ANGEL) when bringing revelation, ascending to their lord (q.v.), and on judgment day (Q 16:2; 70:4; 78:38; 97:4; see LAST JUDGMENT). Using similar language, the Qurʾān speaks of *rūḥ al-qudus,* or "the holy spirit," sent by God to assist Jesus (q.v.; Q 2:87, 253; 5:110; see also HOLY SPIRIT) and to bring Muḥammad the qurʾānic revelation: "Say [Muḥammad]: Truly the holy spirit brought down [revelation] from your lord to strengthen those who believe (see BELIEF AND UNBELIEF), as guidance (see ERROR; ASTRAY) and glad tidings (see GOOD NEWS) for those who submit!" (Q 16:102; cf. 26:193; 42:52). The Qurʾān clearly identifies this spirit of revelation as Gabriel (q.v.; Q 2:97).

God's spirit also came, in the form of a man, to Mary (q.v.), to assist in her conception with Jesus (Q 19:17), about which the Qurʾān says: "And Mary daughter of Imrān (q.v.), who guarded her chastity (q.v.), we breathed into her from our spirit…" (Q 66:12; cf. 4:171; 21:91). Comparable to the prophets, who bring revelations from God, Mary conceived and gave birth to the prophet Jesus. Mary's story also parallels that of Adam's creation (see ADAM AND EVE): "Then [God] proportioned him and breathed into him of his spirit, and he assigned you hearing and sight and hearts, but little thanks you give!" (Q 32:9; cf. 15:29; 38:72; see SEEING AND HEARING; HEART; GRATITUDE AND INGRATITUDE). Yet, in the last two examples, the term *rūḥ* probably does not designate the spirit of revelation but, rather, the "breath of life" given by God (cf. Hebrew *ruaḥ; Gen* 2:7; *Ezek* 34:1-14). A related use of *rūḥ* is found in the verse of the pre-Islamic poet ʿAbīd b. al-Abraṣ (sixth century C.E.): "What are we but bodies that pass under the earth and breaths to the winds?" Nevertheless, many Muslims have taken the story of Adam's creation as proof of the existence of a soul within each human being. Some Muslim scholars have suggested that human beings may thus have a portion of divinity itself or, at the very least, a very special relationship with God. Clearly, the meaning of *rūḥ* in the Qurʾān has been a topic of discussion since Muḥammad's time, as the Qurʾān notes: "They ask you about the spirit. Say: 'The spirit is from the command of my lord, and you have been given little knowledge!' " (Q 17:85; see KNOWLEDGE AND LEARNING).

The second word found in the Qurʾān which has been read as soul is *nafs*. Like *rūḥ, nafs* is derived from a root involving air, breath and life; the verb *nafasa* means "to breathe," with *nafas* meaning "breath," though neither word appears in the Qurʾān. *Nafs* is a cognate of the Hebrew

nefesh which, in the Bible, generally refers to the life force coursing through the blood of humans and animals (e.g. *Lev* 17:11; see BLOOD AND BLOODCLOT); by extension, *nefesh* may designate the appetites, a person or a slave (see SLAVES AND SLAVERY). Among the pre-Islamic Nabataens, *napshā* referred to a tomb, the last resting-place of a human being, while in pre-Islamic Arabic poetry (see POETRY AND POETS; PRE-ISLAMIC ARABIA AND THE QUR'ĀN), the feminine noun *nafs* and its plurals *anfus* and *nufūs* refer to living beings, in general, and to one's self or tribe (see TRIBES AND CLANS), in particular. This use of *nafs* as a reflexive particle is very common in the Qur'ān, where *nafs, anfus* and *nufūs* appear over 250 times:

As to those who argue with you about [the revelation] after what knowledge has come to you, say [to them]: "Come, let us call together our children (q.v.) and your children, our women and your women (see WOMEN AND THE QUR'ĀN), ourselves *(anfusanā)* and yourselves *(anfusakum)*. Then we will humbly pray and call down God's curse (q.v.) upon the liars!" (Q 3:61; see also LIE).

Nafs may refer to humans, the jinn (q.v.), Satan (see DEVIL) and God: "God has prescribed mercy (q.v.) for himself" (*'alā nafsihi,* Q 6:12; cf. 6:130; 18:51; 21:43). As in this last example, *nafs* may imply an essential quality, a disposition or intentions: "Your lord knows what is within yourselves" (*fī nufūsikum,* Q 17:25; see HIDDEN AND THE HIDDEN). This calls attention to an important ethical aspect often found in the reflexive *nafs* (see ETHICS AND THE QUR'ĀN) as the Qur'ān challenges its audience to choose between God's commands and their own desires (see WISH AND DESIRE): "Say: 'O people, the truth (q.v.) has come to you from your lord. Whoever is guided [by it], is guided for himself *(li-nafsihi),* while he who goes astray, strays against himself' " (*'alayhā,* Q 10:108). Use of the reflexive pronouns in such verses, then, underscores human responsibility for one's belief and actions: "What they spend on this worldly life is like a cold blast that strikes and destroys the fields of a people who oppress themselves (see PARABLE; SIMILES; LITERARY STRUCTURES OF THE QUR'ĀN). God did not oppress them, but they oppress themselves!" (Q 3:117; see OPPRESSION; OPPRESSED ON EARTH, THE; FREEDOM AND PREDESTINATION; REWARD AND PUNISHMENT).

Here, *nafs* reflects a negative human trait, namely selfishness, against which the Qur'ān warns: "So be mindful of God as much as you can, listen and obey (see OBEDIENCE), and spend on charity to help yourselves. For those who are saved from their selfish greed *(shuḥḥ nafsihi),* they are the successful ones!" (Q 64:16; cf. 53:23; 59:9; see TRADE AND COMMERCE). This *nafs* corresponds to the appetites or the appetitive faculties discussed in ancient and Hellenistic philosophies. As such, the Qur'ān links *nafs* with greed (see AVARICE), envy (q.v.), and lust. Like Satan, selfishness whispers its desires to the individual and incites evil acts (Q 12:18; 20:96, 120; 47:25; 50:16; see EVIL DEEDS; WHISPER). As Joseph (q.v.) declares when faced with Potipher's wife and her scheme to seduce him: "I do not absolve myself, for, indeed, selfishness instigates evil *(al-nafsa la-ammāratun bi-l-sū'i),* save where my lord has mercy. Indeed, my lord is forgiving and merciful!" (Q 12:53; cf. 4:128; 5:30; see FORGIVENESS). Thus, the Qur'ān declares that concupiscence must be fought and controlled if one is to obey God: "As for him who fears standing before his lord (see FEAR), and who restrains the self *(al-nafs)* from desire (see ABSTINENCE), indeed the garden (q.v.) will be the place of refuge!"

(Q 79:40-1). The believer resists his selfish impulses by heeding *al-nafs al-lawwāma,* his "blaming self" or conscience (Q 75:2), so that on the judgment day he may appear before God with a clear conscience and inner tranquility (*al-nafs al-muṭma'inna,* Q 89:27).

In these and similar instances, *nafs* and its plurals do not appear to designate a spiritual substance or soul but rather aspects of human character, including selfishness, concupiscence, personal responsibility and individual conscience. In other verses, however, *nafs* has a more general meaning as a living person or human life. When God called Moses (q.v.) to go to Egypt (q.v.), Moses replied: "Lord, I have killed a person *(nafs)* among them, and I fear they will kill me!" (Q 28:33; see MURDER; BLOODSHED; RETALIATION). Similarly, the Qur'ān declares: "And do not kill a person *(al-nafs),* which God has forbidden, save for a just cause" (Q 17:33; cf. 18:74; 25:68) and most explicitly: "And we decreed for them in [the Torah (q.v.)] a life *(al-nafs)* for a life (q.v.), an eye for an eye (see EYES), a nose for a nose…" (Q 5:45). Likewise, the Qur'ān calls Muslims to defend their faith (q.v.) with their property (q.v.) and lives: "Believe in God and his messenger *(rasūlahu)* and strive in the way of God with your property and lives *(anfus)*!" (Q 61:11; cf. 9:20, 41, 44, 81, 88; see PATH OR WAY). Such loss and death are an inevitable part of life's trials: "We will test you with something of fear and hunger, and loss of property, lives *(al-anfus),* and the fruits [of your labors]. Yet give good news to the patient ones" (Q 2:155).

The Qur'ān states emphatically that every human being will die: "Every person *(nafs)* will taste death, and your wages will be paid in full on the day of resurrection!" (Q 3:185; cf. 3:145; 21:35; 29:57). In several passages, angels seize the living at the time of death. Speaking of unbelievers, the Qur'ān says: "If you could only see when the oppressors are in the throes of death, as the angels stretch out their hands, pulling out their lives!" (*anfus,* Q 6:93; cf. 4:97). Some commentators have read this passage as referring to souls, though in a larger qur'ānic context, *anfus* might better be read as "lives." A related verse, however, is more ambiguous: "God gathers up persons *(al-anfus)* at their death and, for those who do not die, in their sleep (q.v.). He keeps those upon whom he has decreed death, and sends the others back until an appointed time…" (Q 39:42; cf. 6:60). The Qur'ān likens sleep to death for, as the commentator al-Zamakhsharī (d. 538/1144) points out, sleep suspends exterior movement and consciousness *(nafs al-tamyīz),* while, in death, consciousness, movement and life itself *(nafs al-ḥayā)* are ended. Al-Zamakhsharī makes a distinction here between reason and discrimination (*nafs al-'aql wa-l-tamyīz;* see INTELLECT) and the life force *(rūḥ)* that is characterized by breath and movement. Other commentators, however, including al-Ṭabarī (d. 310/923), al-Qushayrī (d. 465/1072) and al-Rāzī (d. 606/1210) go further, stating that in both sleep and death, God takes away a person's movement and consciousness, along with their soul *(rūḥ; jawhar mushriq rūḥānī).*

Commentators have also found reference to the soul in Q 81:7, which says that on judgment day, "the *nufūs* will be paired." They note that one possible meaning is that souls *(al-arwāḥ)* will be joined with their bodies. Yet some of these commentators, especially al-Ṭabarī, point out that the probable meaning is that each person *(al-insān)* will be gathered with people of a similar sort, as good persons enter paradise (q.v.), evil people, hell (cf. Q 56:7; 37:22; see GOOD AND EVIL; HELL AND HELLFIRE). This reading is consistent with the Qur'ān's many other references to the

nafs on judgment day when individuals are called to account:

Every person *(nafs)* is held accountable for what she earned (Q 74:38).
We do not burden a person *(nafs)* beyond her capacity. We have a book (q.v.) that speaks the truth, and they will not be wronged! (Q 23:62; see also HEAVENLY BOOK).
[On a day] when a person *(nafs)* will know what she sent forward and what she left behind (Q 82:5).

Nafs in such passages probably means the person held responsible for his or her beliefs and actions and not the soul. This is suggested by nearly identical passages in which the feminine *nafs* is replaced, not by *rūḥ* or some other synonym for soul, but by the masculine noun *insān,* meaning human being. "On that day, the human being *(al-insān)* will be informed of what he sent forward and what he left behind" (Q 75:13; cf. 82:5; 91:7). Similarly, regarding the creation of the human race, the Qurʾān says: "He it is who created you from a single person *(nafs)* and made from her, her mate, that *he* might find rest in her" (Q 7:189; see PAIRS AND PAIRING). Though the feminine *nafs* is used here, this person clearly refers to Adam as reflected in the shift in gender within the verse (cf. Q 4:1; 38:71-2; 39:6).

Clearly, then, in accounts of creation and resurrection, the Qurʾān never states that the *nafs* is a soul that joins or enters a body. Rather, in the Qurʾān, it is the entire person in all of his or her physical, emotional and spiritual capacities that is created, dies and will be recreated on judgment day: "Your creation and resurrection are but like that of a single person *(nafs)*. Indeed, God hears and sees all!" (Q 31:28; see GOD AND HIS ATTRIBUTES).

South Arabia, Religions in Pre-Islamic

The religious history of south Arabia is divided into two periods of unequal length: polytheistic from its beginnings (eighth century B.C.E.) until around 380 C.E. (see POLYTHEISM AND ATHEISM), then monotheistic thereafter. Only the first is dealt with here; for the second, see YEMEN; JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY. (For other aspects of pre-Islamic religious traditions of which the Qurʾān evinces knowledge, see e.g. ABYSSINIA; MAGIANS; MECCA; MEDINA; NAJRĀN; SABIANS; SHEBA; SOOTHSAYER; SYRIA.)

The main source for understanding the religions of pre-Islamic south Arabia

consists of inscriptions, which are engraved on durable materials and are numbered in the thousands (see also EPIGRAPHY AND THE QUR'ĀN). Archaeological investigation of ancient cult places complements the information taken from the texts (see also ARCHAEOLOGY AND THE QUR'ĀN). By comparison, external sources, whether ancient works in classical or oriental languages or the rare pieces of information passed on by the Arab traditions of the Islamic era, provide us with very little (see ORALITY AND WRITING IN ARABIA; PRE-ISLAMIC ARABIA AND THE QUR'ĀN). Such sources, which could clarify the religious conceptions of ancient south Arabians for us and give us an organized presentation of the divine cosmos (see COSMOLOGY), have not been preserved as literary texts (myths, epics, poems or rituals; see MYTHS AND LEGENDS IN THE QUR'ĀN; POETRY AND POETS; RITUAL AND THE QUR'ĀN). Most of the time, such sources simply mention the divinities, sanctuaries (see SACRED PRECINCTS; SACRED AND PROFANE; HOUSE, DOMESTIC AND DIVINE) or rituals.

The inscriptions deal only with a restricted range of subjects. The vast majority of them commemorate specific actions, setting out the rights of men or gods: building or construction operations which establish property (q.v.) rights; offerings to a divinity in order to obtain favor; rites carried out at important moments in the life of the community. These texts almost always provide important information for understanding religion (q.v.). The particular titles of their authors may make mention of a priestly office. The dedications quote the name of the intended divinity, particular titles (epithet, temple name) and, after the start of the Christian era, the reasons why the believer was making his offering. The dedications and texts which commemorate building or construction works normally end with "invocations," that is, a detailed list of the earthly and supernatural powers from whom the authors had obtained support or approval (see PRAYER FORMULAS). Prescriptive texts, which are few in number, are equally interesting. Some control access to the sanctuary, while others call upon divinities to grant greater weight to their prescriptions.

Gods and goddesses

The inscriptions name a whole host of divinities. Several, slightly dated works (Höfner, Die Stammesgruppen; id., Vorislamischen Religionen; Ryckmans, Religions arabes; id., *Religions arabes*) provide a list of these. Clearly this collection of divinities does not constitute a south Arabian pantheon as such. The first rule of classification is to identify those sites where a divinity is venerated or invoked: it is immediately clear that the majority of divinities have a special link with a particular family (q.v.), a named tribe (see TRIBES AND CLANS; KINSHIP), a tribal federation or a kingdom (see KINGS AND RULERS). These divinities may be termed "institutional" since they intervene in the life of the community at a certain level. It is these divinities that are invoked at the end of inscriptions.

Institutional divinities

Each kingdom had an official pantheon, made up of a small number of divinities, around five in total. This list of divinities is easy to determine for the kingdom of Saba' (ʿAthtar, Hawbas, Almaqah, dhāt-Ḥimyam and dhāt-Baʿdān^{um}, *ʿ<u>tt</u>r, Hwbsʿ, 'lmqh, <u>d</u>t-Ḥmym, <u>d</u>t-Bʿdn^{m}*; see SHEBA) and Qatabān (ʿAthtar, ʿAmm, Anbī, dhāt-Ṣanat^{um} and dhāt-Ẓahrān, *ʿ<u>tt</u>r, ʿm, 'nby, <u>d</u>t-Ṣnt^{m}, <u>d</u>t-Ẓhr^{n}*) because the most solemn inscriptions always call upon them in that order (for the precise location of ethnic groups and place names, see Robin and

Brunner, *Map of ancient Yemen*). Elsewhere the list is much more a matter of conjecture. In the small kingdoms of al-Jawf, it is reconstructed from the rite celebrated by those in authority. Finally, for the Ḥaḍramawt there is almost no information at all.

Before the Christian era, the political cohesion of states was based upon the cult of divinities in the official pantheon; each divinity was the object of particular rites, which suggests a specific role, complementing the role of associated divinities. Changes in political organization, following conquests, annexations, secessions, alliances, etc., logically translated into change in the religious sphere also. For example, Sabaean domination of the city kingdom of Nashshān (in al-Jawf) led to the construction of a temple to the Sabaean god Almaqah in the town center; and when Sabaʾ (Sheba) annexed the tribal federation of Samʿī, the great Samiʿyan god (Taʾlab) decreed that the federation should henceforth take part in the official Sabaean pilgrimage to Almaqah at Marib (today, Maʾrib; see AL-ʿARIM), in the month of dhū-Abhī (*d-ʾbhy,* roughly July; see MONTHS; CALENDAR). The introduction to the Sabaean pantheon of a new god, Hawbas, around the sixth century B.C.E., may perhaps be explained by new alliances. This parallel political and religious organization broke up from the beginning of the Christian era, when the redrawing of the political map ceased to have a corresponding religious effect. Henceforth, whoever held power (whether sovereign or tribal leader) replaced the divinity as the basis of political entities and more and more often kingdoms and principalities were collections of tribes with different cults.

A large number of divinities were only worshipped by a single kingdom, such as Almaqah (Sabaʾ), ʿAmm (Qatabān) or Sayīn (Ḥaḍramawt), others, such as Waddᵘᵐ *(Wdᵐ)* or dhāt-Ḥimyam *(d̲t-Ḥmym)*, in many. Only one, ʿAthtar *(ʿ̲ttr),* is common to the entire population of south Arabia. A single divinity common to several groups is often individualized by a qualifying name or title. ʿAthtar, for example, is always qualified by dhū-Qabḍᵘᵐ *(d̲-Qḇḍᵐ)* when describing the principal god of the kingdom of Maʿīn. The title often denotes the name or location of a sanctuary, and sometimes both, as with "Taʾlab Riyāmᵘᵐ lord (of the temple) of Qadmān (of the city) of Damhān" *(Tʾlb Rymᵐ bʿl Qdmⁿ d̲-Dmhⁿ)*.

For some uncommon divinities, the texts make explicit mention of their tribe of origin, such as dhū-(l)-Samāwī, "the heavenly one" *(d̲- Sᵗmwy),* who is often called "god (of the tribe) of Amīrᵘᵐ," an Arab tribe (see ARABS) based between al-Jawf and Najrān (q.v.). His principal temple (called *d̲-yḡrw*) was located at the heart of Amirᵘᵐ territory, in wādī l-Shuḍayf, (some sixty km north of al-Jawf), but some sanctuaries were also dedicated to him by other tribes elsewhere: at Haram (in al-Jawf), at Marib (capital of Sabaʾ), at Tamnaʿ (capital of Qatabān) and at Sawāᵐ (22 km south of Taʿizz).

Some divinities are not exclusively Yemeni. There is evidence for the god Waddᵘᵐ in the Persian Gulf, and according to tradition, he was also worshipped by the Kalb at Dūmat al-Jandal. The gods Sayīn and Anbī had corresponding gods in Mesopotamia (Sīn and Nabū), the gods Saḥar and Rammān, just like the goddess Athirat, in the near east (Shaḥar and Athirat in Ugarit, Ashera in the Bible, Rammān as an epithet of the Aramaic god Hadad; Bron, Notes sur le culte; id., Divinités communes). The most widespread divinity was ʿAthtar, with a dual male and female aspect, as can be seen at Ugarit and Ḥaḍramawt, even if

one of the two is very often dominant (the male aspect in south Arabia, except at Ḥaḍramawt, the female aspect in Mesopotamia).

A large number of divinities do not have a proper name as such, but are indicated by a quality (Wadd^{um}, "Love"), a family relationship (ʿAmm, "Uncle on the father's side"), a locale (and perhaps sometimes by a quality or a function) introduced by the pronouns "He who ..., she who ..." (dhū-[l-]Samāwī, dhū-Qabḍ^{um}, dhāt-Ḥimyam, dhāt Badān^{um}, etc.). Most likely the real names of these divinities were taboo. The same phenomenon can be seen in the Arabian desert with al-Lāh ("the god"), al-Lāt ("the goddess"), al-ʿUzzā ("the most powerful"; cf. Q 53:19-20) and all the names with dhū- or dhāt- (dhāt Anwāṭ, dhū l-Kaʿbāt, dhū l-Khalaṣa, dhū l-Kaffayn or dhū l-Labaʾ).

The development of formal pantheons is most obvious at the level of kingdoms, which could be extremely varied in size, ranging from the simple city-tribe (like Kaminahū or Haram in al-Jawf) to the assembly of enormous collections of tribes (like Sabaʾ). But tribes, towns, clans, lineages and families had their own cults, too, and these were added to the collective rites of the kingdom. It follows from this that the structure of the divine world faithfully reflected the organization of society. The same phenomenon can be seen elsewhere in Arabia, for example in the Yathrib oasis when Muḥammad arrived there (Lecker, Idol worship; see MEDINA).

Some minor divinities, divided into four classes entitled *bʿl byt-, mnḍḥ, sʾmsʿ* and *rbʿ*, are entrusted with the protection of palaces, temples, family groups or individuals. The terms which denote these classes may be translated as "master of the palace of…," "household divinity," "genium (lit. sun)" and "protector."

Some divinities have a double name, like those of mere mortals, in which we can see a divine name, such as ʿIzazallāt ("Power of al-Lāt"), Hawfʾīl ("Īl has saved"), Laḥayʿathat ("ʿAthtar shines"), Sumūyadaʿ ("His name knew") or Yadaʿismuhū ("He knew his name"). These are probably deified individuals, ancestors or heroes. Normally living human beings, including the sovereign, are not described thus. There is, however, one somewhat puzzling exception, a king of Awsān from the Hellenistic era, who is called "son of (god) Wadd^{um}" and receives offerings, as if he were himself a god.

Non-institutional divinities

A relatively large number of divinities have no clear link with any political or tribal entity. These apparently include the "Daughters of Īl," mostly worshipped by women. Their name suggests that they were a class of supernatural entities acting as intermediaries between human beings and the assembly of gods. Other unnamed divinities can also be added, who may be identified by a parental relationship with a divinity: "Son of Hawbas," "Mother of ʿAthtar," or "Mother of goddesses." Instances of divinities particular to a place or sanctuary are more doubtful: e.g. "He who is at Raydān," the "Lord of Awran," the "Lord of Baḥr^{um}," the "Lord of Yafʿān," the "Lord of Ḥadas^{um}," the "Mistress of Ḥadath, she who is from Ẓarb^{um}," the "god in the chapel (of worshippers) Kharīf at Mayfaʿ," etc. It is possible that these divinities, or some of them at least, provided individuals or non-tribal groups (women, those of the same age group, or in the same trade) the chance to meet with each other and express their solidarity.

Divinities borrowed from the Arabs

Several divinities of Arab origin were known and worshipped in south Arabia.

They were introduced after Arab tribes settled in the lowlands of Yemen from the second century B.C.E. Dhū-(l-)Samāwī, the Amīr^{um} god, has already been mentioned. Another god of the same sort is Kāhilān (who may perhaps be identified with the god Khl^{m} of Qaryat al-Fāw), known from the kingdom of Maʿīn (Bron, *Maʿīn,* 30). Above all, however, there are the three goddesses al-Lāt, Manāt and al-ʿUzzā, mentioned in Q 53:19-20 (cf. Robin, Filles de Dieu, 139 f.; see SATANIC VERSES).

Al-ʿUzzā, Sabaean ʿUzzayān *(ʿzy^{n}),* is the only Arab divinity, along with dhū-(l-)Samāwī, whose cult was widespread in south Arabia. There is evidence for her in twelve texts (two of which are fragmentary): five commemorate offerings in one of her temples; two, on amulets (q.v.), call upon her as a protectress; and three call upon her as the guardian divinity of the final royal palace of Qatabān. The name ʿUzzayān is also found in several theophoric anthroponyms, almost all relating to the same inscription. An onomastic, ʿUzzayān first appeared in south Arabia in the third century B.C.E. This was not far from Najrān, a region inhabited by north Arabian tribes. The first sign of a cult (a dedication in a sanctuary consecrated to the goddess) comes from Qatabān dating from the second century B.C.E.

Al-Lāt, Sabaean Lātān and Lāt (*Lt^{n}* and *lt*), who was popular in northwestern Arabia and among the Arabs of the near east, does not seem to have been the object of an organized cult in south Arabia. The only indications of veneration are two amulets. The name of the goddess is written once with the article *-n,* and once without. The goddess, however, seems to have been extremely popular among the Arab tribes on the northern borders of Yemen, then among the south Arabians themselves, judging by theophores with *-lt,* of which there are dozens. The appearance of these theophores in al-Jawf may be dated to the second century B.C.E.

Manāt, south Arabian Manawt *(Mnwt),* whose cult is well documented among the Palmyrenians and in northwestern Arabia (notably at Taymāʾ and al-Ḥijr), makes almost no appearance in the epigraphic records of south Arabia. At present there is only a single reference in a text from Maʿīn dating from the fifth century B.C.E. (Bron, *Maʿīn,* 30). This occurrence, seemingly older than everything found elsewhere, suggests that Manawt was a divinity of Ragmat (the ancient name of Najrān). Similarly, the name Manawt appears in several anthroponyms from the Najrān region in its broadest sense.

These three goddesses, introduced by the Arabs, should be distinguished from the "Daughters of Īl," who are local divinities (Robin, Filles de Dieu). All these, however, are minor divinities, a fact which prefigures the compromise proposed by Muḥammad in the "satanic verses," namely the recognition of divinities which served Meccan interests, provided that they were reduced to the status of "Daughters of Allāh" (the local version of the south Arabian "Daughters of Īl"), that is, divine messengers (see MESSENGER).

Strangely enough, all the known south Arabian divinities had a positive or protective role. Evil powers are alluded to in invocations but are never personified. Magical thinking is afraid to name evil, lest it contribute to making it real (see MAGIC; GOOD AND EVIL).

Cult organization

Places of cult worship, whether of human design ("temples") or otherwise ("sanctuaries"), were quite varied in size. The plans, the quality of the building and the organization were incredibly diverse, even in the same tribe. This is equally true

for the locations, at the center of town, outside the walls, in the countryside or the steppe, at the top of a mountain or in the midst of the rocks (Jung, Religious monuments). The temple seems to have played an important economic role (see ECONOMICS; TRADE AND COMMERCE). It owned property (q.v.; *mbʿl*). Furthermore, at Sabaʾ and Ḥaḍramawt, the currency was placed under the control of the chief god (see MONEY). Certain temples and sanctuaries display features which can be found in the Meccan *ḥaram*. The temple of Ṣirwāḥ (90 km east of Ṣanʿāʾ), with a half-oval precinct, recalls the form of *ḥijr* and is bounded by a semi-circular cloister. The low walls which enclose the sanctuary of Jabal al-Lawdh (135 km north-east of Ṣanʿāʾ) seem comparable to the *ʿarīsh* (the building with no roof and with walls so low that cattle can step over them) which stood there, prior to the Kaʿba. The sacred perimeter of the sanctuary of Darb al-Ṣabī, near Barāqish (95 km northeast of Ṣanʿāʾ, ancient Yathill) is marked by boundary stones (nine are preserved, with the inscription "boundary of the sanctuary"), just like the Meccan *ḥaram*.

To the best of our knowledge, places of worship were not under the authority of an actual clergy, mediating between humans and the gods. Nonetheless, certain individuals were engaged in the service of the temples. They held titles such as *rs²w* ("priest"), *qyn* ("administrator"), *mrṯd* ("consecrated to a particular divinity") or *ʾfkl* (pl. *ʾfklt*, "priests," an Akkadian loan word, which is only found at a very early period).

Rituals

The most frequent ritual was apparently the presentation of offerings, commemorated by an inscription, which commends in a lasting manner the generosity of the person making the offering. In ancient times, these offerings consisted either of people (who seem to have entered into the service of the divinity) or of produce or various other objects. From the start of the Christian era, or a short time earlier, offerings of people were replaced by the dedication of small statuettes; such representations were called *ṣlm* (in Arabic *ṣanam*) when a man was represented and *ṣlmt* when a woman was concerned. By means of these statuettes, those individuals consecrated to the divinity were symbolically present in the temple, without actually performing any service as such.

The divinity was regularly honored by great pilgrimages (usually called *ḥḍr* and *mwʿfrt*, and less commonly *ḥg;* see PILGRIMAGE). For Sabaʾ, the most important was definitely the pilgrimage of Almaqah at Marib, in dhū-Abhī (roughly in July, the main period of rains). Another, the pilgrimage of Almaqah dhū-Hirrān at ʿAmrān (45 km northwest of Ṣanʿāʾ), is known because of two references. The principal god Samʿī, Taʾlab Riyām[um], was visited at Mount Turʿat (modern-day Jabal Riyām, 50 km north of Ṣanʿāʾ) and the Ẓabyān temple at Ḥadaqān (30 km north of Ṣanʿāʾ). Finally, a pilgrimage in honor of dhū(l-)Samāwī took place at Yathill. Apart from Sabaʾ, the only known pilgrimage is of Sayīn, at Shabwat.

The divinity provided oracles and issued commands — in an unknown manner (see DIVINATION; FORETELLING), and reveals itself via visions in the temple (see VISION; DREAMS AND SLEEP). He or she was asked to provide rain (a ceremony called *istisqāʾ* in Arabic) during particular ceremonies (see WATER; PRAYER FORMULAS). Several texts mention the practice of divination, although this is difficult to identify precisely. South Arabians definitely offered blood sacrifices, but there are few allusions to this, apart from some Minaean inscriptions

(see BLOODSHED; BLOOD AND BLOOD CLOT). Ritual banquets accompanied certain celebrations. Fumigation with aromatic substances such as incense was common practice, to judge from the number of perfume burners found so far (see SMELL). Similarly, there would have been libations (consisting of what?) which were carried out on tables or altars (see TABLE; FOOD AND DRINK). Finally, several rites took place outside of the temple, such as ritual hunting (see HUNTING AND FISHING) or erecting memorials. (Regarding the cults of south Arabia, see Ryckmans, Rites du paganisme; Robin, Sheba. II, 1156-83.)

Representation of divinities

In south Arabia, human or animal representation was not taboo (see ICONOCLASM). Statues and historical tableaux adorned temples and palaces; images of the dead were placed in tombs (see BURIAL). It is worth noting, however, that in this large number of images, very few are definitely those of divinities. The most significative have been discovered very recently (Arbach, Audouin, Robin, La découverte). It is not certain whether the tentative identification of the young female figures on the temples of al-Jawf as the "Daughters of Īl" is indeed correct. The bust of a woman holding ears of corn in one hand and giving a blessing with the other, identified by Jacqueline Pirenne as the goddess Dhāt-Ḥimyam, or the young man whom she regards as Almaqah, represent believers, not divinities.

Representation of divinities in animal form is somewhat better documented. Large size coins from Ḥaḍramawt depict Sayīn, the kingdom's principal god, in the shape of an eagle attacking a serpent and there is an inscription which explicitly likens him to this powerful bird. Some coins of smaller size also depict Sayīn in the shape of a bull. Other divinities must also have appeared in the shape of a bull, such as Thawr-Baʿal^{um} ("Bull-Lord"), associated with and then identified as Almaqah or Samʿī, when he is called "Bull of Abḍuʿ^{um}."

Comparisons with the ritual practices of pre-Islamic Ḥijāz

The prohibitions entailed by the demand for ritual purity (q.v.; see also CONTAMINATION; CLEANLINESS AND ABLUTION) at Mecca and in south Arabia are often comparable. In the *ḥaram,* the area where the "idols" of Isāf and Nāʾila (see IDOLS AND IMAGES) stood was out of bounds for menstruating women (see MENSTRUATION), and this rule applied to all the "idols," if we are to believe Ibn al-Kalbī (d. ca. 205/820; *Kītāb al-Aṣnām,* 26). A south Arabian inscription from al-Jawf (Haram 34 = *CIH* 533) echoes an identical prohibition. Ibn al-Kalbī (*Kītāb al-Aṣnām,* 6) narrates that Isāf (son of Yaʿlā) and Nāʾila (the daughter of Zayd of Jurhum) were two young lovers who made love in the Kaʿba and had been turned to stone and joined in the Kaʿba (q.v.); this etiological story recalls the prohibition on sexual intercourse in the temple, set out in two other south Arabian inscriptions. According to some traditions, pilgrims coming to Mecca were given milk (q.v.) and honey (q.v.). In other temples, Ibn al-Kalbī (*Kītāb al-Aṣnām,* 40, 46) notes that flour and milk were used for the ritual. These are listed in the inscription Haram 13 = *CIH* 548/12-13: for some offence, the precise nature of which is unclear, the believer must hand over a bull to the temple of Arathat "and throughout the temple, flour, the cost of curds, honey, heart of palm and full expenses (imposed) on everyone." The practice of circumcision (q.v.) in the Arabian desert is mentioned by two external sources, Sozomen and the Talmud, and by Arab tradition. As regards Yemen, the

information is contradictory. We have two representations of an uncircumcised male. First there is the bronze statue of a Ḥimyarī sovereign, depicted in Roman style, completely naked, and there is also a male member in relief on a small glass disc (Ghul, New Qatabāni inscriptions); these two artifacts are not decisive, however, since the first imitates a foreign model and the second may have been imported. Nonetheless, one external source remarks that the Ḥimyarīs practiced circumcision, at least in the middle of the fourth century C.E. (Philostorgius, *Kirchengeschichte,* iii, 4). The practice of covering the Kaʿba with hangings *(kiswa)* is not without parallel in Yemen. Three inscriptions from Qatabān commemorate the offering of *ksʾwt* to lesser divinities. It is not known, however, whether these *ksʾwt* were intended to cover the god or his dwelling place.

Development towards a supreme god?

In the third century C.E., the Sabaeans began to give the principal god, Almaqah, the title of "lord" (q.v.; *mrʾ*); in the same period, in the inscriptions dedicated to him in the temple of Awwām, they ceased to invoke the other divinities of the pantheon. This has been seen as the evolution towards henotheism, as it is surmised from this that a supreme divinity was beginning to emerge and take on the main functions of a chief god. In fact, the arguments put forward are not decisive. The Sabaeans gave the same title "lord" to other divinities. As for the fact that only Almaqah is mentioned by the invocations in the temple of Awwām, there are other possible explanations for this, such as clerical rivalry.

It nevertheless remains true that the greater divinities of every pantheon tended to assume the majority of functions from the start of the Christian era. An analysis of dedicatory inscriptions is illuminating. Their authors thank the divinity for the following reasons: political, military, diplomatic or hunting success (see VICTORY); help given in peril (sickness, misfortune or battle; see FIGHTING; WAR); protection (q.v.) bestowed upon their people and their goods; their well-being; their cure in case of illness; the birth of children, preferably male (see INFANTICIDE; PATRIARCHY); the abundance of agricultural produce and livestock (see AGRICULTURE AND VEGETATION; HIDES AND FLEECE); rainfall; the granting of visions or favorable oracles (see PORTENTS), etc. Petitions for the future are principally: humiliation of the enemy (see ENEMIES); good health, success and well-being; protection from various dangers, particularly sickness; good harvests; children, preferably male (see GRACE; BLESSING); the favor of the sovereign (see SOVEREIGNTY; KINGS AND RULERS), etc.

It does not, however, seem that any polytheistic divinity of south Arabia attained the status of supreme god. Until the rejection of polytheism, in the formulas which symbolize each kingdom, we note that two divinities are mentioned: Sayīn and Ḥawl for the Ḥaḍramawt; ʿAmm and Anbī for Qatabān; ʿAthtar and Almaqah for Sabaʾ; Wagl and Sumūyadaʿ for Ḥimyar, without exception. We may also add Balaw and Waddum for Awsān, even if the two gods are not mentioned in the same formula. It seems that one of the two divinities was the guardian of the throne (thus guaranteeing order and justice) and the other protected the tribe (watching over its growth and wealth). Anbī, ʿAthtar and Waddum are undoubtedly in the first category, ʿAmm, Almaqah and Balaw in the second.

South Arabian polytheism according to Islamic tradition

Islamic authors know little of the paganism of south Arabia. The most knowledgeable

are Hishām b. al-Kalbī (ca. 120-204/737-819), who produced a work — *Kitāb al-Aṣnām* — entirely devoted to pre-Islamic paganism, and al-Ḥasan b. Aḥmad al-Hamdānī (d. 360/971), a Yemeni who spent his entire life on the Arabian peninsula. Al-Hamdānī's *Kitāb al-Iklīl* reflects his interest in the history and remains of pre-Islamic Yemen. Some information on south Arabia is also given by Ibn al-Kalbī in *Kitāb al-Aṣnām;* he mentions five Yemeni "idols": Yaghūth (venerated, according to him, by the Madhḥij tribe and the people of Jurash, that is by the peoples who were living at Najrān and in ʿAsīr in Ibn al-Kalbī's era), Yaʿūq (worshipped by Hamdān and their Yemeni allies at Khaywān, a small village 100 km north of Ṣanʿāʾ), Nasr (the eagle god, worshipped by the Ḥimyarites at Balkhaʿ, a location which has not been identified), Riʾām (in fact a temple, *bayt,* in the province of Ṣanʿāʾ) and Ammīʾanas, worshipped by the tribe of Khawlān-Ṣaʿda.

Yaghūth, Yaʿūq and Nasr are three of the five "idols" mentioned by Noah (q.v.) in Q 71:23 (see also IDOLATRY AND IDOLATERS). There is no mention of Yaghūth in the inscriptions of south Arabia; his name occurs only in the Safaitic inscriptions (of Syria and Jordan), where it is an anthroponym; elsewhere, we find *ʾmrʾyʿwt* as a man's name in three Nabataean inscriptions, consisting of *ʾmrʾ* (in Arabic *imruʾ*) and *yʿwt* (the Aramaic way of writing *yaghūth*). Finally, in pre-Islamic Arabic onomastica, such as that which Ibn al-Kalbī sets out in his *Ǧamharat al-nasab* (Caskel, *Ǧamharat*), the name ʿAbd Yaghūth reoccurs forty-two times (eighteen of these in the Madhḥij genealogies). It is possible that a god Yaghūth, apparently an individual who had been made a hero, existed and was commonly known among the Nabataeans and Madhḥij. The name Yaʿūq does not occur in Arabian epigraphy, except as the name of a synagogue *(mkrb)* built in January 465 C.E. (*d-dʾwn* 574 of the Ḥimyarite era), at Ḍulaʿ (twelve kilometers north-west of Ṣanʿāʾ). Nasr was indeed a divinity worshipped by the southern Arabs, especially in Ḥaḍramawt and at Sabaʾ (Müller, Adler und Geier), but the link with the mysterious Balkhaʿ made by Ibn al-Kalbī seems without foundation. Regarding Riʾām, Ibn al-Kalbī is a little better informed. He is aware that it is a temple in the province of Ṣanʿāʾ but he does not know the name of the god to whom this building is dedicated. The ancient temple was in fact called Turʿat and the god worshipped there was Taʾlab Riyām[um]; his epithet eventually came to indicate both the building and the mountain upon which it was located (modern day Jabal Riyām, 50 km north of Ṣanʿāʾ).

Finally, there is no epigraphic evidence of ʿAmmīʾanas, but the existence of such a divinity cannot be ruled out because we know of a Khawlānite leader of this name in the third century C.E. ʿAmmīʾanas could have been an ancestor or a deified hero. Ibn al-Kalbī (or his source) thus provides more or less accurate information regarding four out of five divinities. That being said, two caveats should be borne in mind. First, Ibn al-Kalbī ignores all the major divinities of the ancient kingdoms, notably Almaqah (Sabaʾ), ʿAmm (Qatabān), Sayīn (Ḥaḍramawt), ʿAthtar dhū-Qabḍ[um] (Maʿīn) and Balaw (Awsān); his knowledge is thus extremely incomplete. Secondly, he is more concerned with providing details of the idols mentioned in the Qurʾān or tradition (see ḤADĪTH AND THE QURʾĀN) rather than with researching first-hand information.

The second original author on south Arabian paganism was the Yemeni al-Ḥasan al-Hamdānī. In addition to a fairly accurate description of the temple of Riyām, he mentions the names of three

south Arabian divinities, reinterpreted as anthroponyms: Sinān dhū-Ilīm, a king of Ḥaḍramawt in ancient times (Sayīn dhū-Ilīm in the Ḥaḍramawt inscriptions); Taʾlab Riyām b. Shahrān, who is supposed to have married Turʿa (a misunderstanding of the divine title "Taʾlab Riyām^{um} lord of Turʿat," in which the word *baʿal,* "lord," has been taken to mean "spouse"); Almaqah (the Sabaean god Almaqah) identified with Bilqīs (q.v.; the traditional name of the Queen of Sheba). Finally, in a short passage of *Kītāb al-Ǧawharatayn,* he observes: "The sun (q.v.), the moon (q.v.) and the stars (see PLANETS AND STARS) were depicted on the silver and gold coinage of the Ḥimyarites, because they worship them. They call them ʿAthtar, Hubas (the moon) and Alāmiqa (the stars), in the singular Almaq or Yalmaq. This is why Bilqīs is called 'Yalmaqa' and one speaks of Zuhra [i.e. Venus]." Al-Hamdānī not only knew that Almaqah was a divinity (and not a queen), he also knew the gods ʿAthtar and Hubas (Sabaean Hawbas), whose name appears in no other Islamic source (Robin, Sheba. II, 1184-9). Yemeni authors are thus a little better informed concerning the paganism of south Arabia than is the rest of Islamic tradition. They know the names of several important divinities, such as the principal gods of Sabaʾ, Ḥaḍramawt and Samʿī, whereas Ibn al-Kalbī only refers to minor divinities. Their knowledge is nonetheless limited to a few divine names and some uncertain identifications. Rather than vague recollections from memory, we are talking of names they have deciphered from inscriptions and interpreted more or less correctly. They were indeed able to read the south Arabian script, although they often confused letters of a similar shape and interpreted the text very freely. The feeble nature of such knowledge in traditional sources is undoubtedly explained by the fact that polytheism had been rejected by Ḥimyar almost 250 years before the appearance of Islam and that it survived only underground, except perhaps in certain outlying tribes.

South Asian Literatures and the Qurʾān

With a Muslim population of over 300 million, south Asia (India, Pakistan, Bangladesh) is home to the largest concentration of Muslims in the world. Muslims in the region have employed a wide variety of languages to compose their literatures. Among these languages, Arabic and Persian have historically played a cosmopolitan role, for they have enabled south Asian elites to participate and share in literary cultures that extend well beyond the subcontinent to central Asia and the Middle East. In addition to these transnational languages, Muslims have employed a host of other languages that are indigenous to south Asia. Ranging from Baluchi and Bengali to Tamil and Urdu, these vernaculars, in contrast to Arabic and Persian, have been local, or regional, in their geographic significance. They encompass a broad spectrum of literary traditions that include folk songs sung by village women as well as sophisticated poems composed by erudite scholars. This article focuses on the interaction of the Qurʾān with literary cultures in the vernacular traditions. The corpus of these literatures is so vast and diverse that in this brief article we can only touch upon a few key ideas, citing examples from a limited range of linguistic traditions (see also LITERATURE AND THE QURʾĀN).

It is hardly surprising that the Qurʾān, the sacred scripture of Islam, should have influenced Muslim poets and writers in south Asia. The nature of the Qurʾān's impact on the vernacular traditions varies, however. At its most obvious, it consists of the insertion of qurʾānic quotations into literary works, particularly poetry. Called *iqtibās,* this popular literary device assumes that every reasonably educated Muslim would know the Arabic Qurʾān well enough to understand a scriptural allusion, no matter how obscure it may be (see TEACHING AND PREACHING THE QURʾĀN; RECITATION OF THE QURʾĀN). The incorporation of a qurʾānic verse into a vernacular text served several purposes. First, it sanctified the text for both the author and the audience, thus making it more sublime. Second, the skill with which the Arabic sacred text (see BOOK; ARABIC LANGUAGE) was woven into the fabric of the vernacular demonstrated the author's literary prowess. Third, the verse could also serve as a proof text validating the author's religious beliefs and convictions. For instance, Q 7:172, *a-lastu bi-rabbikum? qālū balā shahidnā,* "'Am I not your lord (q.v.)?' They said 'Yes we witness it'" (see WITNESSING AND TESTIFYING), is a particularly popular quote among mystically inclined Muslims, for it supports a concept that is pivotal to Ṣūfism: the existence of a primordial covenant (q.v.) of love (q.v.) between God and creation (q.v.; Schimmel, *Two colored brocade,* 57-8; see also ṢŪFISM

AND THE QUR'ĀN). To illustrate the insertion of this qur'ānic verse into a vernacular text, we may cite a verse in Sindhi by the poet Shāh ʿAbdu l-Laṭīf (d. 1752 C.E.) in which Maruī, a Sindhi folk heroine whom the poet uses to represent the human soul (q.v.), proclaims:

When I heard "Am I not your lord?"
Right there and then I said "Yes" with all my heart
At that time I made a promise [of loyalty] to my love
(Shāh ʿAbdu l-Laṭīf, *Risālo,* Sur Maruī, i, 1, 255).

Shīʿī writers, on the other hand, are more likely to quote those qur'ānic verses that best champion a Shīʿī perspective (see SHĪʿISM AND THE QUR'ĀN). Such is the case, for example, with Mīr Anīs (d. 1874 C.E.), a prominent Shīʿī poet, who embedded within his Urdu elegies those qur'ānic verses that could be interpreted as supporting the Shīʿī notion of the imāmate (for instance, Q 36:12 and its reference to the *imām mubīn,* "manifest imām"; Haider, *Rumūz,* 80-2; see IMĀM). In this manner, many a qur'ānic verse has been incorporated into south Asian vernacular literature, the choice of verse being determined by the author's religious worldview.

Frequently, a quotation from the Qur'ān may consist of only one or two words (see SLOGANS FROM THE QUR'ĀN); yet allusions to these isolated words, no matter how obscure they may seem, are sufficient to trigger a range of associations in the minds of those familiar with the scripture. Hence, in many vernacular poems in praise of the Prophet of Islam, Muḥammad may be referred to not by his name (see NAMES OF THE PROPHET) but by names or epithets that some Muslims claim to have discovered in the Qur'ān: *ṭā' hā* and *yā'sīn,* the unconnected letters that appear at the beginning of sūras 20 and 36 or *muzzammil* and *muddaththir,* divine addresses to the Prophet found in the introduction to Q 73: *yā ayyuhā l-muzzammil,* "O you enwrapped one," and Q 74: *yā ayyuhā l-muddaththir,* "O you covered one" (see REVELATION AND INSPIRATION; SOOTHSAYER).

Even more frequent than allusions to verses and words are references to figures mentioned in the Qur'ān, particularly prophets (see PROPHETS AND PROPHETHOOD), and events associated with them (see NARRATIVES). Abraham (q.v.), the ideal monotheist (see ḤANĪF) who destroyed the idols (see IDOLS AND IMAGES) made by his father Āzar (q.v.; cf. Q 6:74); Moses (q.v.) and the burning bush (Q 20:10f.); Jesus (q.v.) who could heal the sick and revive the dead, and give life to inanimate objects with his breath (Q 5:110; see DEATH AND THE DEAD; ILLNESS AND HEALTH; MIRACLES; MARVELS) are but a few examples from the rich prophetic lore of the Qur'ān to which many south Asian poets may refer (Schimmel, *Two colored brocade,* 62-79). In many instances, however, these figures are assigned interpretations and meanings that are not obvious in the original qur'ānic text. For instance, Q 21:69 mentions that when the tyrant Nimrod (q.v.) threw Abraham into a fire (q.v.), God saved him by commanding the fire to be cool and peaceful (see HOT AND COLD; PAIRS AND PAIRING). In the hands of many poets, Abraham becomes the symbol of a daring love that has the strength to accomplish the most miraculous feats. Hence, the seventh/thirteenth century poet Lāl Shāhbāz Qalandar alludes to this qur'ānic verse when he joyously sings: "[Because of] my friend's love, I dance every moment in the midst of fire!" (as quoted in Schimmel, *Two colored brocade,* 63).

Similarly, God's response to Moses "you shall not see me" (Q 7:143; see SEEING AND HEARING) becomes in vernacular poems

the standard answer that a veiled or otherwise inaccessible beloved gives to a lover who yearns to see his/her face. The most dramatic reinterpretation of a qurʾānic figure, however, occurs in the case of ʿAzāzīl/Iblīs (Satan; see DEVIL), the angel who refused to bow to Adam (see ADAM AND EVE; BOWING AND PROSTRATION) and hence was cursed by God for disobedience (q.v.; Q 7:11 f.; see also INSOLENCE AND OBSTINACY; ARROGANCE). While it is true that in some south Asian literatures Iblīs is traditionally perceived as a character associated with rebellion (q.v.) and evil (see GOOD AND EVIL), he is viewed, in at least one powerful current of Muslim mystical poetry in the vernacular, as a positive figure — the paradigmatic lover who suffers for his unswerving loyalty to the one beloved (Schimmel, *Two colored brocade,* 60-1). Shāh ʿAbdu l-Laṭīf's memorable line in Sindhi bears eloquent testimony to this tendency:

ʿAzāzīl is the lover, all others are frauds
The cursed one was honored by way of love (Shāh ʿAbdu l-Laṭīf, *Risalo,* Sur Yaman Kalyān, v, 18, 32).

Although all major prophets named in the Qurʾān appear in south Asian literatures, perhaps the true favorite is Joseph (q.v.; Yūsuf), whose story is told in the twelfth sūra of the Qurʾān. The Joseph story, which the Qurʾān calls "the most beautiful of stories," has inspired epic narratives in several south Asian languages such as Bengali, Urdu, Panjabi and Sindhi. In some instances, the epic has even been illustrated with miniature paintings. Typically, these epics interpret the romance between Joseph and Potiphar's wife within a Ṣūfī framework. Potiphar's wife, identified in popular tradition as Zulaykha, represents the woman-soul at the lowest level of spiritual development — the *nafs ammara,* or "the soul inciting to evil" (*al-nafsa la-ammāratun bi-l-sūʾa,* Q 12:53), who must first be transformed into the *nafs lawwāma,* or "the blaming soul" (Q 75:2) and finally into "the soul at peace" (*al-nafs al-muṭmaʾinna,* Q 89:27) before she can be accepted by the divine beloved.

It is, perhaps, inevitable that the "most beautiful story" of the Qurʾān, when recast in the vernacular tradition, would be acculturated to the local environment, that is, the composers of the vernacular epic would set it within the geographical, social and cultural milieu of their region. A typical example would be the Bengali poet, Shāh Muḥammad Saghir (late thirteenth/early fourteenth century C.E.), who composed a version of the Yūsuf-Zulaykha epic set entirely in Bengal. In his version, he recreates the landscape of Egypt with the fauna and flora typical of Bengal, introduces the river Nile as the Ganges, gives the merchant who bought Joseph a typical Bengali name, and has Zulaykha send her female companions to Vrindavan, famed for being the location of the dalliance between Krishna and the *gopi*s, "cow maids" (Roy, *The Islamic tradition,* 104-8).

The indigenization of the qurʾānic story of Joseph in the Bengali epic should also be seen within the larger context of Muslim Bengali literary culture and the development of a distinctive Bengali Muslim identity in medieval India that is reflected in the genre of the *puthi* literature. In this literature, the qurʾānic concept of *nabī/rasūl,* or "prophet/messenger (q.v.)," is identified with the local Hindu concept of *avatāra,* "divine descent or incarnation." This identification allowed authors to incorporate various Indian deities, particularly Krishna, into a long line of qurʾānic prophets that ends with Muḥammad (Roy, *The Islamic tradition,* 95-7). Just as Islam in the Middle Eastern context was seen as a

culmination of Judeo-Christian monotheism (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY), in medieval Bengal and several other Indian regions, the religion came to be seen as the continuation and culmination of the local Hindu tradition. Seen within this framework, the Qurʾān became the *Veda* (scripture) of the *Kali Yug,* the last chronological age of Hindu mythology.

Although such localized or acculturated understandings of the prophetology of the Qurʾān and the Qurʾān itself have frequently been characterized as syncretistic, mixed or heterodox, they are, perhaps, better understood as attempts to "translate" universal Islamic teachings within "local" contexts. The validity in approaching vernacular Muslim poetry through the lens of "translation theory," as proposed by Tony Stewart (In search of equivalence), is confirmed by the fact that communities who recite and sing vernacular religious poems frequently regard them as texts which encapsulate the teachings of the Arabic Qurʾān. Sindhi-speaking Muslims in southern Pakistan revere Shāh ʿAbdu l-Laṭīf's poetic masterpiece in the Sindhi language, the *Risālo,* as a book that contains within it the essence of the spiritual teachings of the Qurʾān. Through his exegetical remarks on dramatic moments and events in popular Sindhi folk romances, Shāh ʿAbdu l-Laṭīf is perceived to be conveying qurʾānic ideas on the spiritual significance of the human situation. In the Punjab, poems attributed to Punjabi Ṣūfī poets, such as Sulṭān Bahū (d. 1691 C.E.), Bullhe Shāh (d. 1754 C.E.) and Vāris Shāh (d. 1766 C.E.), are also commonly regarded as spiritual commentaries on qurʾānic verses. Similarly, the *ginān*s of the Khoja Ismāʿīlī communities of western India and Pakistan, composed in various vernacular languages such as Gujarati, Hindi, Punjabi and Sindhi and embodying the teaching of Ismāʿīlī preacher-saints (see SAINT), have also been regarded as texts embodying the inner signification of the Qurʾān (Asani, *Ecstasy and enlightenment,* 29-31).

The conception of some genres of vernacular poetry (such as the Sindhi *Risālo,* Punjabi Ṣūfī poems or the Ismāʿīlī *ginān*s) as secondary texts that provide non-Arabic speaking Muslims access to the inner *(bāṭin)* meaning of the Qurʾān (see POLYSEMY) is not without parallels. In Persian-speaking parts of the Muslim world, Mawlānā Jalāl al-Dīn Rūmī's *Masnawī,* popularly called the "Qurʾān in Persian," is regarded as a vast esoteric commentary on the Qurʾān, many of its verses being interpreted as translations of qurʾānic verses into Persian poetry (see PERSIAN LITERATURE AND THE QURʾĀN). Significantly, the mediating role that these vernacular texts play between the faithful and the Qurʾān provides evidence of a process that Paul Nwyia has so aptly called the "Qurʾānization of memory" (*Ibn ʿAṭāʾ Allāh,* 46). Referring specifically to early Ṣūfīs, he argues that, because they were constantly preoccupied with the Qurʾān as the word of God (q.v.), their memories were eventually "qurʾānized." Consequently, they saw everything in the light of the Qurʾān, interpreting their own experiences and contexts within the larger framework of the revelation (see REVELATION AND INSPIRATION). We may extend Nwyia's perceptive comments to include Muslim poets writing in the south Asian vernaculars, many of whom were influenced, directly or indirectly, by Ṣūfī ideas. Their worldviews were so thoroughly colored by qurʾānic ideas that even though they did not always cite specific qurʾānic verses in their compositions, many of their lines seem either to echo a qurʾānic concept or to be a literal translation of the qurʾānic text into the vernacular (see LANGUAGE AND STYLE OF THE QURʾĀN). This is why the student of south

Asian Muslim literatures, whether reading the highly philosophical Urdu poetry of Sir Muḥammad Iqbāl (d. 1938 C.E.) or listening to Punjabi songs attributed to the folk poet Bullhe Shāh, is often surprised to discover that a seemingly simple line in the vernacular is in fact inspired by a qurʾānic verse.

Southeast Asian Qurʾānic Literature

This entry is meant to provide an overview of literature of the Qurʾān in southeast Asia, including both texts produced locally and those imported from elsewhere in the Muslim world that have been important to the region's religious and intellectual history.

Commentary in Arabic

As in many parts of the Muslim world, the most popular Arabic work of commentary *(tafsīr)* in southeast Asia from the seventeenth through the nineteenth centuries was the *Tafsīr al-Ǧalālayn*. In addition to being read and studied in its original Arabic, this text formed the primary basis of the most popular early modern work in Malay, the *Tarjumān al-mustafīd* of ʿAbd al-Raʾūf Singkeli. For three centuries, this work remained the standard work of *tafsīr* in the Malay-language curricula of the region's *pesantren* Islamic educational milieu. Other early Malay works of *tafsīr* drew on a range of Arabic texts, including those of al-Bayḍāwī (d. prob. 716/1316-17). Despite their openness to works of *tafsīr* from elsewhere in the Muslim world, however, southeast Asian scholars were not mere passive recipients of the Arabic tradition of *tafsīr.* For some attained the erudition and proficiency to produce Arabic works of their own. The most notable of this type is Muhammad al-Nawawī Jāwī (Banten's; 1813-97) *Marāh Labīd* (which draws in large measure on Fakhr al-Dīn al-Rāzī's [d. 606/1210] *Tafsīr al-Kabīr*; cf. Johns, Qurʾānic exegesis), which has been printed and distributed in the Middle East as well as in southeast Asia.

Translations into southeast Asian languages

The earliest textual evidence we have of qurʾānic exegetical activity in Muslim southeast Asia comes to us in a manuscript containing the Arabic text of Q 18, Sūrat al-Kahf ("The Cave"), written in red ink along with a Malay translation and running commentary, primarily following al-Baghawī (d. ca. 516/1122) and al-Khāzin (d. 740/1340), in black (Riddell, *Islam and the Malay-Indonesian world,* 139-67). The translation of such earlier commentaries appears to have been largely eclipsed by ʿAbd al-Raʾūf's *Tarjumān al-mustafīd* in the seventeenth century. While this work dominated the field of qurʾānic exegesis in southeast Asia for generations, in the early twentieth century an increasing amount of attention was given to other, more recent works of *tafsīr* in Arabic as well. This expansion of the curriculum of qurʾānic studies in the region was an important aspect of broader developments of Islamic reformism in modern southeast Asia. Among the works translated in these contexts were those of modern Muslim

exegetes of various orientations, both from the Middle East and south Asia.

Indonesian translations of selections from the *Tafsīr al-Manār* (a work initiated by the Egyptian reformer Muḥammad ʿAbduh and continued after his death in 1905 by Rashīd Riḍā) by various translators appeared, starting in 1923. The Indonesian translation of Maulana Muḥammad ʿAlī's *The holy Qurʾān* and accompanying commentary by Tjokroaminoto began to appear in 1928 but the Muhammadiyyah and other Indonesian Muslim groups protested the project for its Aḥmadiyya (q.v.) orientation (see also TRANSLATIONS OF THE QURʾĀN). The pace of such translation activity increased dramatically as the century progressed, with economic development under the New Order supporting a vibrant publishing industry producing Indonesian translations of Arabic-language works of *tafsīr* by Maḥmūd Shaltūt, Muṣṭafā al-Marāghī and Sayyid Quṭb as well as thousands of other Muslim religious texts.

Commentaries in southeast Asian languages

Manuscript collections and library holdings in Indonesia and Europe contain a remarkable range of works on the Qurʾān written in a number of different southeast Asian languages. One striking example may be found in an early nineteenth-century Makassarese text that offers a paraphrase of the Qurʾān in that language. Another method of qurʾānic "translation" and interpretation can be found in Javanese literature, where a tradition developed of inserting an interlinear Javanese translation (written in *pegon,* or modified Arabic script) into the text of the Qurʾān itself. This tradition of *pegon*-script qurʾānic literature in Javanese continued into the twentieth century with works like the *Tafsīr al-Ibrīz* of Bisri Mustofa. An analogous work in the Arabic script, or *jawi,* an adaptation of the Arabic script used for writing Malay, can be found in Syekh Haji Abdul Karim Amrullah's *al-Burhān,* a commentary on the last thirtieth part of the Qurʾān *(juzʾ ʿam).*

Such works in *jawi* and *pegon* script were accessible only to *pesantren* students, and as the twentieth century progressed they were thus largely overlooked by the burgeoning ranks of new readers literate in the Roman, rather than Arabic script. Publishers catering to these growing markets produced an explosion of works in various fields of the Islamic religious sciences composed in modern Bahasa Indonesia. One of the first major original works of *tafsīr* to appear in this format was A. Hassan's *Tafsir al-Furqän,* which first appeared serially starting in 1928. This work by one of the leading figures of the radical reformist organization PERSIS is actually more of a "translation" than a *tafsīr* proper, as what little non-literal interpretation there is comes only in the form of short footnotes. Nonetheless, it also contains a fairly lengthy preface in which the author outlines his method of interpretation, laying out a set of radical and narrowly scriptural exegetical principles differing significantly from most works produced in southeast Asia before that time. When Hassan's work appeared, a parallel project was already in preparation by another Indonesian reformist, Mahmoed Joenoes. This work, begun in 1922, finally appeared in its first complete published edition in 1938 and contained a thirty-page indexed outline of "the summarized essence of the Qurʾān" for modern readers, in addition to an Indonesian translation of the text and explanatory footnotes.

From the 1950s on, one finds a steady increase in the number of new *tafsīr* works written in the modern Indonesian language with the Latin script. Among these the *Tafsir al-Azhar* of Hamka (Haji Abdul Malik Karim Amrullah) is one of the most enterprising endeavors of modern qurʾānic exegesis, not just in southeast Asia, but in

the Muslim world as a whole. Although often described as a "Modernist," Hamka's thinking reflects a mixture of ideas and orientations to the tradition ranging from Ṣūfism to Salafism. Hamka's work of *tafsīr* runs to ten volumes totaling over 8,000 pages in its hardcover edition. The work began as a series of early morning lectures at the al-Azhar mosque in Kebayoran, Jakarta. The commentary expounded in these oral settings was first published serially in the magazine *Gema Islam*. Shortly after beginning the project, however, Hamka was imprisoned by the increasingly left-leaning government of Soekarno and the work was thus completed during his two years of incarceration. Hamka's copious commentary draws on a number of authorities with a heavy emphasis on modern Egyptian exegetes. The commentary is not, however, simply a rehashing of Egyptian modernism under the rubric of qurʾānic exegesis but rather incorporates select elements of Egyptian modernism and other aspects of Muslim tradition with considerable original material, including even a number of rather revealing personal anecdotes. This work continues to enjoy popularity not only in Indonesia but in other parts of southeast Asia as well, including Malaysia and Singapore, where the "deluxe edition" was published by Pustaka Nasional from 1982 to 1993.

With the establishment of Soeharto's New Order regime in 1965, the Indonesian government itself began to sponsor ambitious projects in the area of *tafsīr*. In 1967, the Ministry of Religious Affairs initiated a special foundation that was given the assignment of producing works of Qurʾān translation and commentary. This resulted in the publication of two major works: *Al Quraan dan terjemahannya,* "The Qurʾān and its translation," and *Al Quraan dan tafsirnya,* "The Qurʾān and its commentary." Both works may be seen as officially-sponsored attempts to provide Indonesian Muslims with "standard" works of reference and thus ensure a greater uniformity in national discourses on the sacred text. Nevertheless, over the course of the twentieth century the number of privately conceived and published works of translation and exegesis has continued to proliferate, thus offering a considerable range of interpretations of the text and its exegetical traditions. These range from the multi-volume works covering the entire qurʾānic text like that of Ash Shiddieqy's *Tafsir al-Quränul madjied "an-nur"* to a host of shorter works that deal only with certain sūras (especially Q 1, Sūrat al-Fātiḥa, "The Opening"; see FĀTIḤA) or selections from qurʾānic narrative (see NARRATIVES). Popular works of both of these latter genres are those by Bey Arifin: *Samudera al-Fatihah* and *Rangkaian tjerita dalam al-Quran,* respectively. Later editions of the latter relate embellished tales of Islamic prophets and the early Muslim community complete with illustrations (see PROPHETS AND PROPHETHOOD). There are likewise a number of handbooks on *tajwīd,* qurʾānic recitation, an art form in which Indonesian and Malay reciters have received international acclaim.

Just a few years after the completion of these works another Indonesian translation of the Qurʾān was published by the well-known literary critic H.B. Jassin. It was entitled *Bacaan mulia,* "the glorious reading," an Indonesian rendering of *al-Qurʾān al-karīm,* and met with strong criticism from conservative *ʿulamāʾ* who objected to the fact that it claimed to be a "poetic" translation (see POETRY AND POETS; LANGUAGE AND STYLE OF THE QURʾĀN). Critical responses appeared in a number of Indonesian magazines and newspapers and some even found their way into a number of polemic monographs. Jassin, however, seemed undeterred by all of this; some fifteen years later he published another edition of the Qurʾān, this one in Arabic

rather than in Indonesian translation. This work, entitled *al-Qurʾān berwajah puisi,* did not alter the contents of the Qurʾān in any substantive way but rather experimented with new typographical arrangements of the Arabic text that highlighted its rhythmic and assonant qualities — giving it, in a sense, a "poetic" face (see FORM AND STRUCTURE OF THE QURʾĀN). Following the publication of this text, many of Jassin's earlier critics resurfaced to protest what they saw as his "deviation" from the established practice of printing the qurʾānic text (see PRINTING OF THE QURʾĀN), resulting in a new wave of public polemics and hampering the distribution of Jassin's text.

At about the same time that these developments were taking place in Indonesia, we see an unprecedented upsurge in the production of works of Qurʾān "translation" and exegesis in a wide range of southeast Asian languages beyond Malay/Indonesian. Prominent among them were a number of commentaries in Sundanese, including those of Qamaruddin Shaleh and Muhammad Ramli. Yet such activity was not even restricted to southeast Asian languages with predominantly Muslim speakers. For, at this time we find the first full Thai translation of the Qurʾān, completed by Direk Kulsiriswasd, a.k.a. Ibrahim Qureyshi. The translation of the Qurʾān into Vietnamese is an even more recent phenomenon, the first example of which the present writer is aware having been published not in southeast Asia but in southern California in 1997. Two of the first significant works on the Qurʾān in Tagalog date back to the early 1980s. The first, *Ang banal na Kuran,* is a fairly straightforward translation following the order of the standard arrangement of the text in Arabic. The second is a topically arranged treatment of legal categories and related concepts as illustrated by qurʾānic verses. In each section the verse is given first in English (text from Yūsuf ʿAlī's translation) and then followed by a Tagalog translation without further commentary.

This approach to topical *(mawḍūʿī) tafsīr* was also gaining popularity in Indonesia during the 1980s. Works of this kind appealed more to a modern lay Muslim readership than did works following the more traditional, verse-by-verse *(tartīb al-āyāt)* arrangement. One of the most ambitious works of this type is Dawam Rahardjo's 700-plus page *Ensiklopedi al-Qurʾān,* which is comprised of chapters dealing with topics like "justice," "mercy," "religion," "knowledge," etc. In addition to this, the work also contains important chapters on his interpretive methodology and his understanding of the "social vision" of the Qurʾān (see ETHICS AND THE QURʾĀN; SOCIAL SCIENCES AND THE QURʾĀN; COMMUNITY AND SOCIETY IN THE QURʾĀN). Other significant Indonesian works of this type include the work of Jalaluddin Rakhmat, a popular preacher from Bandung with a degree in communications from the University of Iowa.

With such work we enter a new period in the history of interpretive literature on the Qurʾān in Indonesia, one in which traditional methodologies have largely given way to works addressing the needs of a wider readership whose education has not been in the traditional Islamic sciences (see TOOLS FOR THE STUDY OF THE QURʾĀN; TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY). Over the past decade, these developments have been paralleled by a marked increase in Indonesian translations of works of modern qurʾānic scholarship that have been produced not in Arabic but in Western languages by Muslim scholars working in European and North American university contexts. Some of the most popular works of this type have been translations of Fazlur Rahman's *Major themes of the Qurʾān* and Muhammad Arkoun's *Lectures*

du Coran (see CONTEMPORARY CRITICAL PRACTICES AND THE QUR'ĀN).

Sovereignty

(Sole) authority and power, rulership. In exploring the notion of sovereignty much care should be given to terminology. Sovereignty generally means authority (q.v.) and power (see POWER AND IMPOTENCE) but it lacks precise definition and has many divergent interpretations in English usage as do its cognates in other Western languages. The word *ḥākimiyya,* a derivative of the verb *ḥakama,* has been commonly used in modern Islamic thought to denote sovereignty. The form *ḥākimiyya* itself does not occur in the Qur'ān but *ḥakama* and other derivatives of *ḥ-k-m* are used in more than a hundred places. The verb *ḥakama* primarily means "to restrain from doing that which is desired." In Arabic dictionaries it signifies "to judge, decide order, exercise authority, rule and govern." An examination of the occurrences of the word and its derivatives in the Qur'ān reveals that they have been associated with both God and human beings but at varying levels and for varying types of authority (see also JUDGMENT; WISDOM).

The doctrine of God occupies a central position in the qur'ānic discourse, where God is portrayed with absolute authority over the world. Among the terms used to signify his divine authority is *ḥakama* and its derivatives. For instance, *ḥakam, ḥākim* and *ḥakīm* are all attributes of God that include his qualities as lord (q.v.) and ruler of the universe (see GOD AND HIS ATTRIBUTES; CREATION). The Qur'ān has also emphasized repeatedly that *ḥukm,* "command, judgment and decision," belongs ultimately to God (e.g. Q 95:8; 11:45; 12:40;

13:41; 18:26). The usage of the term in the Qurʾān has been understood to comprise several significant concepts. Theologically, it is understood to signify that God determines and causes all that happens in the universe (Q 4:78; 7:54; see FREEDOM AND PREDESTINATION) and that he is the sole adjudicator among humans on the day of the judgment (Q 22:55-7; see LAST JUDGMENT). On the other hand, God is also viewed as a lawgiver in the sense that he prescribes the rules that govern human affairs (see LAW AND THE QURʾĀN; BOUNDARIES AND PRECEPTS). On the basis of these understandings, it has been argued that sovereignty belongs to God, not only in the theological sense but also in the political and legal sense (Quṭb, *Ẓilāl*, 1191-9, 1213-34; see THEOLOGY AND THE QURʾĀN; POLITICS AND THE QURʾĀN).

But the Qurʾān does not confine *ḥukm* to God alone. It is assigned also to various humans: to the rabbis and scholars (q.v.) who judge, *yaḥkum,* applying the Torah (q.v.) code (Q 5:44; see JEWS AND JUDAISM); to David (q.v.) who was commanded to judge between people justly (Q 38:26; see JUSTICE AND INJUSTICE); to Muḥammad who must judge in accordance with the Qurʾān (cf. Q 4:65, 105). And, there are two further incidents where the authority of *ḥukm* is conferred: on the arbitrators who settle a marriage dispute (Q 4:35; see MARRIAGE AND DIVORCE) or estimate the compensation to be paid by a pilgrim as atonement (q.v.) for the sin (see SIN, MAJOR AND MINOR) of killing game during the pilgrimage (q.v.; Q 5:95; see also HUNTING AND FISHING).

Closely related to the term *ḥākimiyya* are two other terms relevant to the concept of sovereignty in the Qurʾān: *ulūhiyya* (divinity) and *mulk* (kingship). *Ulūhiyya* denotes, among other things, the absolute right of command over the creation (e.g. Q 7:54) and the authority to legislate for humankind (e.g. Q 42:21), both of which belong exclusively to God. Therefore, it appears that the term *ulūhiyya* comprises the meanings that those who assigned sovereignty to God wanted to attribute to him. On the other hand, human governance has been mostly denoted by derivatives of *m-l-k*, such as *mulk* (e.g. Q 2:102, 251, 258; 12:43, 50, 54, 72, 76, 101) though it has sometimes been used to refer to God's sovereignty (Q 3:26; 23:116; see KINGS AND RULERS). Ibn Khaldūn (d. 808/1406), the famous Muslim historian and sociologist, defines the nature of *mulk* in a way that is very similar to the Western concepts of political, legal and coercive sovereignty (see also TOLERANCE AND COMPULSION; OPPRESSION; OPPRESSED ON EARTH, THE). He says:

> *Mulk,* in reality, belongs only to one who dominates the subjects, subjugates the people, collects revenues (see TAXATION; POLL TAX), sends out military expeditions, and protects the frontiers; and there is no other human power over him. This is generally accepted as the real meaning of the true character of *mulk* (Ibn Khaldūn, *Muqaddima,* ii, 574).

Historically, the slogan of the Khārijīs (q.v.) that *ḥukm* belongs to God alone seems to be the earliest use of the term in politics. Modern Muslim reformers have attempted to find an Islamic equivalent to the Western concepts of political and legal sovereignty (see EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY). A number of them, including Nāmiq Kemāl (d. 1888), Rashīd Riḍā (d. 1935) and Ḥasan al-Bannā (d. 1949), advocated the view that Islam approves of popular sovereignty. Others, among them Abū Aʿlā l-Mawdūdī (d. 1979) and Sayyid Quṭb (d. 1966), denied that sovereignty can be attributed to a human being and argued that it belongs exclusively to God. In spite of those differences about the type and location of sovereignty, it appears that many accept

the principle of the supremacy of God's laws, the *sharīʿa,* the rights of the ruler and the role of the people in the collective decision-making process in Muslim politics.

Spatial Relations

Relative physical and geographic placement (above, below, close, etc.). In Islamic tradition, the qurʾānic corpus is understood as consisting of two kinds of text units, Meccan sūras and Medinan sūras (see MECCA; MEDINA; SŪRA). While this division serves the juridical purpose of distinguishing earlier texts from later texts (see ABROGATION), by such geographic identification sūras are explicitly related to places (see GEOGRAPHY AND THE QURʾĀN) rather than time periods (see CHRONOLOGY AND THE QURʾĀN). This is in accord with a general qurʾānic trend to focus on space rather than time (q.v.). The Qurʾān furthermore displays a strong tendency to arrange essential phenomena of creation in pairs, sometimes antithetical, sometimes complementary (see PAIRS AND PAIRING; RHETORIC AND THE QURʾĀN). Although there occasionally occurs a similar kind of structuring speech in the Bible — see the passages about God's promise to Noah (*Gen* 8:22) or the sequence of antithetical mental dispositions (in *Koh* 3:1-8) — this tendency is much further developed in the Qurʾān (see Neuwirth, Qurʾānic literary structure revisited; see LITERARY STRUCTURES OF THE QURʾĀN; FORM AND STRUCTURE OF THE QURʾĀN). Among the many phenomena presented as coupled in the Qurʾān, spatial notions figure prominently. They are presented in some cases as related closely enough to constitute together one complete whole — linguistically reflected in the rhetorical figure of a *merismos* (see Lausberg, *Handbuch*). Although each part of the pair does exist by itself, it is always perceived as related to the other. Among these pairs, we find in the early sūras the figure of "present life/hereafter" (*al-ḥayāt al-dunyā/al-ākhira;* see ESCHATOLOGY; EARTH; TRANSITORINESS; ETERNITY), as well as that of paradise (q.v.) and hell (*al-janna* and *jahannam;* see HELL AND HELLFIRE; GARDEN). A less tightly connected pair in the early sūras is Mecca and the holy land (see SACRED AND PROFANE; SACRED PRECINCTS). It is exactly this pair, however, that will gain importance in the later sūras, where it appears emblematically coded as *al-masjid al-ḥarām/al-masjid al-aqṣā,* the first being a coded designation of Mecca, the second of Jerusalem (q.v.). In the later Meccan sūras, the biblical pair heaven and earth (q.v.; *al-samāʾ wa-l-ard/al-samāwāt wa-l-arḍ*) are frequently invoked (see HEAVENS AND SKY; SCRIPTURE AND THE QURʾĀN). A more marginal relation is that between Egypt (q.v.) and the holy land as portrayed in Q 12 (Sūrat Yūsuf, "Joseph") and in the story of the Children of Israel (q.v.; Banū Isrāʾīl), as narrated repeatedly throughout the developing revelation of the Qurʾān. Mecca and Medina are never juxtaposed explicitly in the Qurʾān, nor is the migration of the Prophet and his adherents portrayed in the Qurʾān (see EMIGRATION; EMIGRANTS AND HELPERS). Another relation between cities

(see CITY) appears more significant: Mecca and, later, Medina are virtually related to a third, symbolic center — Jerusalem — a relation that develops into Mecca's absorption of Jerusalem's prerogatives (see Neuwirth, Spiritual meanings). Whereas a real journey is made from Mecca to Medina, a virtual and symbolic trajectory leads from Medina back to Mecca. In the following the three most prominent complementary (or antithetical) figures of spatial relations will be discussed, as well as some less explicit ones.

Earthly life and the hereafter, al-ḥayāt al-dunyā/al-ākhira

Since the early sūras are dominated by the imagination of eschatology, it is the antagonism of the present life and the hereafter (*al-ḥayāt al-dunyā* vs. *al-ḥayāt al-ākhira*) that appears first in the Qurʾān. Whereas the English translation of the pair might suggest a temporal rather than a spatial relation, the Qurʾān obviously views the two worlds as spatial units. This is all the more surprising since the likely rabbinical model for the idea of the two worlds (see JEWS AND JUDAISM; FOREIGN VOCABULARY), the Hebrew notion of *ha-ʿōlām ha-zeh* vs. *ha-ʿōlām ha-bā,* this world vs. the coming world, does presuppose a temporal sequence, *ʿōlām* being a temporal term in both Hebrew and Aramaic *(ʿalmā)*. It is noteworthy, however, that with respect to terminology, the Hebrew discourse of the two temporally juxtaposed worlds did leave a trace in the Qurʾān, which from the middle Meccan sūras onward (the two first instances being still early Meccan, Q 81:29 and Q 83:6) employs the formula *rabb al-ʿālamīn* to express a crucial divine predicate, one that becomes a standard formula through the Fātiḥa (q.v.; see Neuwirth, Fātiḥa). Although *rabb al-ʿālamīn* reflects Hebrew *ribbōn ʿōlām* (in the sense of "lord [q.v.] of eternity [q.v.]"), the Arabic cognate of *ʿōlām,* i.e. *ʿālam,* which appears in the Qurʾān exclusively as *ʿālamīn* (see translation of 1 John 4:19), is not always used in a temporal sense but in some instances seems rather to denote the inhabited earthly world, represented by humans. *ʿĀlamīn* in this sense (which is reflected in various translations of the Qurʾān into western languages) could be explained as a contracted plural of an adjectival form *(nisba), ʿālamī.*

It appears, however, as if *ʿālamīn* was at first used in another sense: to denote something like "eternity," such as in the formula *rabb al-ʿālamīn* (early sūras, Q 56:80; 69:43; 81:29; 83:6) which is a loan from the Hebrew but is well isolated from the word *rabb* in *dhikrun lil-ʿālamīn* (Q 68:52; 81:27), perhaps in the sense of "a remembrance (q.v.) forever." Only later, from middle Meccan sūras onward, do contexts like *wa-faḍḍalnāhum ʿalā l-ʿālamīn* (Q 45:16; see GRACE; BLESSING) or *nisāʾ al-ʿālamīn* (Q 3:42; see WOMEN AND THE QURʾĀN), suggesting the meaning of "humans," occur. It is worth noting that the word *ʿālam* in Christian Arabic expresses a spatial notion (see 1 John 4:19), obviously reproducing the signification of the Greek *kosmos,* which is a spatial rather than temporal notion.

The qurʾānic structuring of the universe into two worlds is certainly inspired by the imagination of the Aristotelian-Ptolemaic edifice of the universe as made up of spheres viewed as encompassing each other (see COSMOLOGY). The lowest or closest of these is encompassed by the "nearest heaven," *al-samāʾ al-dunyā* (Q 67:5), which is the world, and by the last *(al-ākhira),* i.e. the most remote, which is the transcendent world, hosting the heavenly court. Since paradise is imagined in the Qurʾān to be situated in a higher place than the earth, *al-ākhira,* the "last," may well be alluding to the highest, the "last sphere."

Whereas in early and middle Meccan

texts *al-dunyā* is always positioned as an attribute to *al-ḥayāt,* and *al-ākhira* — though not directly connected to *al-dunyā* — refers back to *al-ḥayāt* as well, in late Meccan and Medinan sūras, *al-dunyā* becomes an independent designation of the earthly world, as does *al-ākhira* (which also appears as *dār al-ākhira,* Q 28:77) for the hereafter. In these texts the direct juxtaposition *al-dunyā wa-l-ākhira* (Q 12:101) marking a *merismos* — the earthly world and the hereafter equals reality in toto — becomes familiar.

Paradise versus hell, al-janna *vs.* jahannam (*or* al-nār, al-saʿīr, al-jaḥīm, al-ḥuṭama)

This pair, another major element of eschatology, does not appear in direct juxtaposition, though the two abodes are described almost always in close context with each other. *Jahannam* is the second most common (seventy-seven occurrences) designation of hell in the Qurʾān after *al-nār*. *Jahannam* originally denotes a site in Jerusalem, *Gē Hinnōm,* the valley of Bne Hinnom, the biblical locus of the immolation of human offspring to Moloch (*Jer* 7:31f.). The eschatological landscape of Jerusalem, which locates the diverse stages of the resurrection in single parts of the city (see Neuwirth, The spiritual meaning), is otherwise not reflected in the Qurʾān; it will come to the fore in early Umayyad times. The name is obviously already established as a geographically neutral term in Christian tradition and has possibly entered Arabic through Ethiopian (Jeffery, *For. vocab*., 105-6; see CHRISTIANS AND CHRISTIANITY).

[Al-] janna is the counterpart of the biblical *gan* or *gan ʿeden*. As a designation for paradise, the primordial human abode, its biblical use does not denote the hereafter, eschatological thinking having emerged only after the completion of most biblical books. *[Al-] janna* is from middle Meccan times onward connected with the determination Eden *(ʿadn)* which, however, has no topographical reference in qurʾānic creation (q.v.) stories. In early sūras paradise and hell are often depicted with cognate literary devices, their respective attributes often matching each other, the one being extremely delightful, the other extremely abhorrent. Their depiction tends to be structured as constituting equal numbers of verses (e.g. Q 51:10-14, 15-19; five verses each) or as two verse groups displaying a proportional relation to each other (e.g. Q 69:19-24 as against 69:25-37, six and thirteen verses, respectively; see FORM AND STRUCTURE OF THE QURʾĀN). As such, they remind one of the closely juxtaposed pictorial representations of both forms of the hereafter that are familiar from Christian ecclesiastical iconography, thus suggesting the designation of "diptycha" (see Neuwirth, *Studien*). Both *janna* and *jahannam* share the presence of trees and abundant water, *janna,* however, being shady, *jahannam* being burning hot. Both are eternal abodes for their inhabitants. The most impressive depiction of paradise is presented in Q 55 (Sūrat al-Raḥmān, "The Merciful"; see GOD AND HIS ATTRIBUTES), one of the few cases where the negative counterpart *jahannam* is marginalized (see Neuwirth, Qurʾānic literary structure). The biblical characterization of paradise as a landscape where four mythic rivers are flowing is reflected in the Qurʾān in a more general way, the phrase "rivers flowing beneath it" (*tajrī min taḥtihā l-anhāru;* cf. Q 18:31) being often added to the mention of *janna* (see SPRINGS AND FOUNTAINS). A characteristic of the qurʾānic paradise that has no counterpart in the Bible is the existence of virtuous virgins destined to become the wives of the resurrected males (Q 44:54; 55:56-8; see HOURIS; MYTHS AND LEGENDS IN THE QURʾĀN). The banquets in which they participate have been interpreted by J. Horovitz *(Das koranische Paradies)* as magnifications of festal banquets familiar in

the circles of tribal elites and thus well-known to the Qurʾān's listeners from ancient Arabic poetry (see POETRY AND POETS; PRE-ISLAMIC ARABIA AND THE QURʾĀN). The hypothesis that the presence of virgins in the Qurʾān is due to a misreading of the text (see Luxenberg, *Die syro-aramäische Lesart*) is unfounded (see Wild, Lost in translation). These depictions are exclusively early and middle Meccan; later, once a community had been established where women played vital roles, the issue of transcendent happiness had to be rethought. In the course of that development, family members took the place of the houris as companions to the males in paradise. In the early sūras, paradise and hell appear to be juxtaposed; the antagonism between earth and paradise, resulting from the first couple's expulsion from *al-janna* (see FALL OF MAN), is introduced only in later texts, where, however, it does not play as momentous a role as in Christianity.

Mecca and the holy land

In their introductory sections, a few sūras focus on a place or a set of places held sacred in monotheistic tradition, to which Mecca has been added: Q 52:1-6 (Mount Sinai and Mecca), Q 95:1-3 (Mount Sinai, and, perhaps symbolically coded, Palestine — *wa-l-tīn wa-l-zaytūn,* "the fig and the olive," and Mecca — *hādhā l-balad al-amīn,* "this safe city"), whereas in Q 90:1-2 Mecca (*hādhā l-balad,* "this city") is mentioned alone. The places are obviously regarded as being related, Mecca thus being put in a position that allows it to share the blessing inherent in the other place(s). The relation between Mecca and the holy land is thus established from the beginning of the Qurʾān's development. In middle and late Meccan sūras the holy land, *al-arḍ al-muqaddasa* (Q 5:21), *al-arḍ allatī bāraknā ḥawlahā/fīhā,* literally, "the land that we have blessed" (Q 21:71; cf. 7:137; 17:1; 34:18), is evoked on different occasions. At this stage, the earlier reminiscences of Arabian salvation (q.v.) history, the sites of ʿĀd (q.v.), Thamūd (q.v.) and other ancient peoples are replaced by recollections of biblical history featuring the Children of Israel (see Speyer, *Erzählungen*). Local *lieux de mémoire* are substituted by geographically remote ones and a new *topographia sacra* emerges, adopted from the "others," not the genealogical, but the spiritual forebears. The community that was in late Meccan time urged to go into an inner exile yearned for a substitute for the emotionally alienated and politically hostile landscape of their origin. Through the adoption of the orientation in prayer, the *qibla* (q.v.), towards Jerusalem dating to the last years of Muḥammad's Meccan activities, a trajectory has been constructed. Q 17:1, the sole verse that connects the holy land directly with the biography of the Prophet (see Neuwirth, Sacred mosque; see SĪRA AND THE QURʾĀN; ASCENSION), is also a testimony of the establishment of the first *qibla* (see also GEOGRAPHY). This orientation taken by a community in spiritual exile towards the spiritual home is understood as an emulation of the practice of Moses (q.v.) who in Egypt, equally in a situation of external pressure, ordered the Children of Israel to adopt a *qibla* (Q 10:87) for their prayer (q.v.).

Only a few years later, in Medina, as a result of complex developments, the trajectory from the familiar but now banned and forbidden hometown Mecca to the "remote," imaginary sanctuary of Jerusalem is called into question. When, after the battle of Badr (q.v.), hostility between the community and the Medinan Jews broke out, the incompatibility of the rivaling *lieux de mémoire,* the two *topographiae sacrae,* Jerusalem with the holy land on the one hand and Mecca with the Ḥijāzī landscape on the other, became evident. The spiritual return of the worshippers to the

Kaʿba (q.v.) at Mecca is heralded in the verses that prescribe the realignment of the orientation in prayer, now directed towards Mecca (Q 2:142-4). In the prayer of Abraham (q.v.; Q 2:126f.), finally, the Kaʿba appears as the monument of a new divine foundation. According to Abraham's inaugural prayer, verbal worship (q.v.) and the reading of scripture shall take place in this sanctuary in addition to the constitutive rites of the ancient cult (see also RITUAL AND THE QURʾĀN) that reflects Solomon's prayer at the inauguration of his Temple (1 Kings 33-4). The prayer related in the Qurʾān reaches its fulfillment with the appearance of the prophet Muḥammad and the emergence of a scripture for the worshippers of the ancient cult (see BOOK; ḤANĪF). What had been a prerogative of Jerusalem to be the site of divine communication (*Isa* 2:3) is finally conferred on Mecca (see REVELATION AND INSPIRATION). Finally, both Mecca and the peninsula acquire biblical associations and become the site of monotheistic salvation history.

Various further spatial relations have been discussed in the context of other articles or in monographs: for heaven and earth *(al-samāwāt wa-l-arḍ),* see COSMOLOGY; for the hidden and the revealed (*al-ghayb* and *al-shahāda*), see HIDDEN AND THE HIDDEN and Izutsu, *God;* for earth and the two oceans, see BARRIER; BARZAKH; for world vs. underworld (the story of Moses in Q 18:60-82), see Francke, *Begegnung mit Khidr* (see also KHAḌIR/KHIḌR). See also LEFT HAND AND RIGHT HAND; SYMBOLIC IMAGERY.

Speech

The act of speaking and the expression or communication of thoughts and feelings by spoken words. The Arabic word for "speech" is *kalām*. It is derived from the root *k-l-m,* just like the Arabic verbs "to speak," *kallama* and *takallama*. Several other qurʾānic verbs refer to the act of speaking, such as the verbs *qāla,* "to say," *naṭaqa,* "to articulate," and *nādā*, "to call or shout." Some verbs indicate the speaker's intention, such as *saʾala,* "to ask," *ajāba,* "to answer," *nabbaʾa,* "to inform" (see NEWS), *waʿada,* "to promise" (see REWARD AND PUNISHMENT), *nahā,* "to forbid" (see FORBIDDEN; VIRTUES AND VICES, COMMANDING AND FORBIDDING), and *amara,* "to command."

The most important speaking person in the Qurʾān is God. He brings things into

existence by speaking to them and ordering them to exist. He says to a thing "Be!" *(kun),* whereupon the thing in question exists (Q 2:117; 3:47; 6:73; 16:40; 36:82; 40:68; see COSMOLOGY). After God had created Adam from dust (see ADAM AND EVE; CREATION; CLAY), he said to him "Be," whereupon Adam existed (Q 3:59). God may also speak to something and order it to change its quality. When Abraham's (q.v.) people intended to burn him, God said to the fire (q.v.) "Be cool!" (Q 21:69; see HOT AND COLD). Another example of a divine command that affects a change is God's ability to end people's lives, by ordering them: "Die!" (Q 2:243; see DEATH AND THE DEAD).

God speaks to the creatures he has created. There are some qurʾānic reports of conversations between God and the angels (see ANGEL). Before God created Adam, he informed the angels of that (Q 15:28; 38:71) and they commented on it (Q 2:30). After the creation of Adam, God ordered the angels to prostrate themselves to Adam (Q 2:34; 7:11; 15:29; 17:61; 18:50; 38:72; see BOWING AND PROSTRATION). Thereupon a discussion took place between God and Iblīs (see DEVIL) who refused to do so (Q 7:12-18; 15:32-42; 17:61-5; 38:75-85; see INSOLENCE AND OBSTINACY; ARROGANCE; PRIDE). Adam was the first human being to whom God spoke: "He taught Adam all the names" (Q 2:31; see TEACHING; KNOWLEDGE AND LEARNING). The exegetes disagree about whether God taught Adam the name of everything there is or simply the names of angels or humans (Ṭabarī, *Tafsīr,* ad Q 2:31; see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). Some Arab grammarians (see GRAMMAR AND THE QURʾĀN; ARABIC LANGUAGE) referred to this verse to support their opinion that human speech finds its origin in revelation (see REVELATION AND INSPIRATION). They rejected the idea that language is the result of agreement between humans (Versteegh, *Arabic linguistic tradition,* 101-2). God also spoke to Adam and his wife when he told them to live in paradise (q.v.) but not to approach the tree [of immortality] (Q 2:35; see TREES; ETERNITY). After their disobedience (q.v.), God spoke to them again, when he told them to leave paradise (Q 2:38; 20:123).

These conversations took place in paradise (q.v.) but God also spoke to prophets (see PROPHETS AND PROPHETHOOD) who lived as human beings in this world. God spoke to Noah (q.v.; e.g. Q 11:46), Abraham (e.g. Q 2:124), Moses (q.v.; e.g. Q 7:143-4), Jesus (q.v.; e.g. Q 3:55) and Muḥammad (q.v.). In most accounts of these communications, the verb "to say" *(qāla)* is used, for instance, "God said" *(qāla llāhu),* "his lord (q.v.) said" *(qāla rabbuhu),* "he [God] said" *(qāla),* and "we [God] said" *(qulnā).* (For the use of personal pronouns with respect to God, see Robinson, *Discovering,* 224-55.) The whole Qurʾān is considered to be what God said to Muḥammad through the intermediation of Gabriel (q.v.), but when the Qurʾān refers to God's giving information to Muḥammad, the verb *qaṣṣa,* "to narrate," is repeatedly used (e.g. Q 40:78; 11:120; 12:3; see NARRATIVES; HEAVENLY BOOK; INIMITABILITY; CREATEDNESS OF THE QURʾĀN; COLLECTION OF THE QURʾĀN).

These reports about the prophets raise the question of whether they heard God's voice when he spoke to them (see SEEING AND HEARING). The answer is given in the Qurʾān itself. It is said that God speaks to humans only "by revelation, or from behind a veil (q.v.), or he sends a messenger (q.v.) who, with his permission, reveals what he wills" (Q 42:51). According to al-Zamakhsharī (d. 538/1144; *Kashshāf,* iv, 226-7), the first way means that God gives someone inspiration *(ilhām)* and "throws" something in his heart (q.v.) or in a dream

(see DREAMS AND SLEEP). It is also possible that God creates a voice in some object *(baʿḍ al-ajrām)* without the listener seeing who speaks to him. The second way in which God speaks, i.e. from behind a veil, means that those who are addressed can hear his voice but cannot see him. According to al-Zamakhsharī, God spoke to Moses in this way. It is also the way in which God speaks to the angels. The other prophets did not hear God's voice. God spoke to them through an angel who acted as intermediary, bringing God's words to the prophet in question. This is the way in which God spoke to Muḥammad. The third way, according to al-Zamakhsharī's explanation, is that God speaks through the intermediation of a prophet. In this way, God speaks to the common people. They hear God's word from prophets who speak in their own languages (see LANGUAGE, CONCEPT OF).

"God really spoke to Moses" (*kallama llāhu Mūsā taklīman,* Q 4:164). Muslim scholars agree that Moses is the only prophet to whom God spoke directly. This does not become clear from Q 2:253, where it is said that God spoke to one (or some, *minhum man kallama llāhu*) of the messengers. According to al-Zamakhsharī (*Kashshāf,* i, 293), Moses is meant here. God said to Moses that he had chosen him above other people by means of his messages and his speech (*kalām,* Q 7:144; see ELECTION). A comparison of the verses about God's speaking to Moses indicates that not only the verb *kallama* but also other verbs are used to render God's speaking to Moses, such as *nādā,* "to call," as in "When his lord called him in the holy valley of Ṭuwā" (q.v.; Q 79:16, cf. 19:52; 26:10; 28:46). This verb is also used in the passive sense, although from the context it is evident that God is speaking. "When he [Moses] came to it [the fire], he was called *(nūdiya)* from the right side of the valley, in the blessed spot (see SACRED AND PROFANE), from the tree: 'Moses, I am God, the lord of the worlds' " (Q 28:30; cf. 20:11; 27:8).

In the Qurʾān it is reported that God spoke to humans who were not prophets, such as the apostles of Jesus (Q 5:115; see APOSTLE) and the Israelites (e.g. Q 5:12; 2:58; 17:104; see CHILDREN OF ISRAEL). As we have seen before, the explanation must be that he spoke to them through the intermediation of a prophet. It is not clear in which way God will speak to those who are brought back to life on the day of judgment (see RESURRECTION; LAST JUDGMENT). It is said that he will speak to them, including to the unbelievers (see BELIEF AND UNBELIEF). "Then I will inform you *(unabbiʾukum)* of what you did" (Q 31:15). God will not, however, speak *(yukallimu)* to people who have sold their covenant (q.v.) with him (Q 3:77; see TRADE AND COMMERCE) or the book (q.v.) he has sent down to them (Q 2:174). Only those will speak who have received permission (Q 11:105) and those who speak rightly (Q 78:38). Those who have declared the prophets to be liars will not be allowed to speak (e.g. Q 77:34-6; see LIE; GRATITUDE AND INGRATITUDE). Unbelievers will not be able to speak because God will seal up their mouths. Instead, their hands (q.v.) will speak *(tukallimu)* to God and their feet (Q 36:65), tongues (Q 24:24), ears (q.v.), eyes (q.v.) and skins (Q 41:20-3) will bear witness against them as to what they have done (see WITNESSING AND TESTIFYING). Probably, this is meant literally, as it is said that God can give each thing the power of speech (Q 41:21; see LITERARY STRUCTURES OF THE QURʾĀN).

In the Qurʾān some inanimate things are mentioned as speaking to God, such as the sky and the earth (q.v.; Q 41:11; see also HEAVEN AND SKY) and hell (Q 50:30; see HELL AND HELLFIRE). There are also written documents that can speak. "We have a book that speaks the truth" (*yanṭiqu bi-l-*

ḥaqq, Q 23:62; cf. 45:29). In this case, speaking may be understood metaphorically (see METAPHOR), just as in "This Qurʾān tells *(yaquṣṣu)* to the Israelites…" (Q 27:76) and "Did we [God] send them an authorization that speaks *(yatakallamu)?*…" (Q 30:35).

God's speech (kalām Allāh) *as a theological question*

The word *kalām* "speech" occurs four times in the Qurʾān. In all these cases it concerns God's speech. In Q 7:144 God says that he chose Moses above other people by means of the speech and messages that God revealed to him. In this case *kalām* may be understood as *taklīm,* "addressing someone," as al-Zamakhsharī says (*Kashshāf,* ii, 151), but it may also refer to the Torah (q.v.), which Moses received from God. In the other three cases, *kalām* cannot have the meaning of "addressing someone." It must mean God's message or the Qurʾān, as it is said that idolaters hear it (Q 9:6; see IDOLATRY AND IDOLATERS; POLYTHEISM AND ATHEISM) and people wish to change it (Q 48:15) or changed it after they had understood it (Q 2:75; see REVISION AND ALTERATION; FORGERY; CORRUPTION). Because of this, all Muslims agree that the Qurʾān is God's speech. Disagreement arose, however, about the nature of God's speech (see THEOLOGY AND THE QURʾĀN).

There is a close relationship between the discussions about the nature of God's speech and the discussions about the createdness of the Qurʾān (q.v.). Jahm b. Ṣafwān (d. 128/745-6) and his adherents asserted that God's speech is created but they denied that God speaks in the same way as humans do. They took into consideration the fact that human speech needs a special organ and movements of tongue and mouth. Because of their rejection of anthropomorphism (q.v.), they were convinced that God does not produce speech in this way. According to them, God does not really speak but when he wishes to "speak" to a creature, he creates the sound of speech, which is heard by this creature and is called "speech" (Madelung, *Origins,* 506-8).

The Muʿtazilīs (q.v.), too, were convinced that God's speech is created. The majority of the Muʿtazilīs defined speech as separately articulated sounds *(aṣwāt muqaṭṭaʿa)*. For this reason they rejected the idea that speech is something that exists in the soul (q.v.; *nafs*). They acknowledged that God has the attribute of "speaking" and pointed out that someone is described as "speaking" *(mutakallim)* because he produces speech in accordance with his intentions. Depending on these intentions, speech occurs as information, command or prohibition. These Muʿtazilīs denied that speech can inhere in God but they deemed it possible that God creates speech directly in some substrate, in a tree, for instance, which explains how God spoke to Moses (see THEOPHANY). Another question is whether the Qurʾān in its recited, written and remembered form is identical to God's speech (see TEACHING AND PREACHING THE QURʾĀN; RECITATION OF THE QURʾĀN; MEMORY). According to the Muʿtazilī ʿAbd al-Jabbār (d. 415/1025), the Qurʾān is God's speech as he really produced it. When we hear a recitation *(qirāʾa)* of the Qurʾān, we hear a reproduction *(ḥikāya)* of God's speech as it was sent down to Muḥammad through his intermediary, the angel Gabriel.

Theologians who adhered to the opinion that God's speech is uncreated, such as the Ḥanbalīs, the Kullābīs and the Ashʿarīs, took into consideration that "speaking" is a divine attribute which can be equated with other essential attributes of God, such as his being knowing (see GOD AND HIS ATTRIBUTES). In their opinion, this implies that God is eternally "speaking" *(mutakallim)*. Their opinion about speech differed

from the Muʿtazilī definition of speech. Ibn Kullāb (d. ca. 240/854) declared that "God's speech *(kalām)* does not consist of letters and is not a sound. It is indivisible, impartible, indissectible and unalterable. It is one thing *(maʿnā)* in God" (Ashʿarī, *Maqālāt,* 584). This was the basis for the principle of "inner speech" *(kalām nafsī)*. Probably, al-Ashʿarī (d. 324/935-6) himself did not speak about it but his adherents, al-Bāqillānī (d. 403/1013) and al-Juwaynī (d. 478/1085), used this term in reference to God's eternal uncreated speech. Inner speech is speech that is not yet expressed in words. In their opinion, the Qurʾān is an expression *(ʿibāra)* of God's inner speech but, as distinct from inner speech, it consists of sounds and letters. The expression may be Arabic or Hebrew. They declared that in the recitation *(qirāʾa)* of the Qurʾān, the pronunciation *(lafẓ)* is a human act but what we understand from the words is God's eternal speech.

The Ḥanbalīs declared that the Qurʾān, in whatever form, be it written, memorized, or recited, is God's uncreated speech. In their opinion, God's speech consists of sounds and letters and is identical to the letters of the Qurʾān (see PRESERVED TABLET; ARABIC SCRIPT; CALLIGRAPHY). The Ḥanbalīs rejected the idea that the Qurʾān is an expression or a reproduction of God's speech. They admitted that when the Qurʾān is recited, the pronunciation is a human act but they declared that what we hear and read is God's uncreated speech. H.A. Wolfson (*Philosophy,* 252-4) described this as the "inlibration" of God's uncreated speech (see also ORALITY; ORALITY AND WRITING IN ARABIA).

Spider

Creature whose body contains two main divisions: one with four pairs of walking legs, the other with two or more pairs of spinnerets for spinning the silk that is used in making the cocoons for its young, nests for itself or webs to entangle its prey. The word spider *(ʿankabūt),* which provides the

name for Q 29, Sūrat al-ʿAnkabūt, occurs twice in the Qurʾān in one and the same verse, Q 29:41. In this verse, the spider exemplifies an agent for warning and threatening the infidels for their ungrateful conduct (see ANIMAL LIFE; BELIEF AND UNBELIEF; GRATITUDE AND INGRATITUDE). Those who choose for themselves benefactors other than God (see POLYTHEISM AND ATHEISM) are likened to the spider because this animal opts for the frailest of houses to live in. This qurʾānic passage alludes to the spider's web and its fragility and is one of the very few passages in the Qurʾān that refers to animal behavior. In reality, the spider's thread is strong enough for the spider itself and for its catch; so only from a human viewpoint can the web be considered weak.

In Arabic zoological literature, the spider's web plays an important role in describing the spider. (For other topics in connection with the descriptions of the spider in Arabic literature, e.g. its copulation, see Ruska, ʿAnkabūt; Eisenstein, *Einführung,* index.) It remains unclear for Arab authors whether it is the male or the female who fabricates the web in which the spider and its spittle wait for a catch. Although the spider's web is always described as weak it is also the reason for its reputation as a wonderful creature. For, according to the Arabic authors, the spider is able to spin its marvelous net immediately after its birth. Therefore, the spider is seen as one of the animals with inborn proficiencies, which do not have to be taught by parents. The spider only assumes its full shape, according to the Arabic sources, three days after birth. Among animals, the spider is considered impure and disgusting, and may therefore not be eaten. The prophet Muḥammad himself is said to have called the spider a *shayṭān* (devil) transformed by God and ordered it to be killed; this ḥadīth is, it should be noted, considered weak (al-Damīrī, *Ḥayāt,* ii, 223; see ḤADĪTH AND THE QURʾĀN).

In other words, contradiction and discrepancy determine the spider's image in Arabic literature. To make things more complicated, the spider and its web once saved the Prophet himself. According to tradition, the prophet Muḥammad and his Companion Abū Bakr had, on their way to Medina (q.v.) during the *hijra* (see EMIGRATION), taken refuge for three days in a cave (q.v.) located in the Thawr mountain. While they were in the cave, a spider built its web over the entrance of the cave protecting them from discovery by the Quraysh (q.v.) who were intent on harming them. A comprehensive account of this event may be found in Ibn Kathīr's (d. 774/1373) biography of the Prophet (Le Gassick, *Imām Abū l-Fidāʾ,* ii, 158f.; see SĪRA AND THE QURʾĀN), whereas in Ibn Hishām's account, the spider is not explicitly mentioned in this connection. (As an aside, other accounts have it that the Prophet was saved during the *hijra* not by a spider but by two doves.) At any rate, this event led to the conclusion that a spider could build its web very quickly. Moreover, the prophet Muḥammad was not the only one to be protected from danger by a quickly-built spider's web. Among the prophets, David (q.v.; Dāwūd) had the same experience. An account of this episode and a listing of other people saved by a spider are found in al-Damīrī's (d. 808/1405) book on animals.

Spirit

Life force or supernatural being. In pre-Islamic poetry the Arabic word *rūḥ* refers to a blowing or breathing (see AIR AND WIND; POETRY AND POETS; PRE-ISLAMIC ARABIA AND THE QURʾĀN). In the Qurʾān, the word appears twenty-one times but in the sense of spirit rather than of blowing, in a manner analogous to its Hebrew cognate, *ruach,* in the Bible (see SCRIPTURE AND THE QURʾĀN). The qurʾānic *rūḥ* evokes spirit in passages related to the three boundary moments in the Qurʾān: creation (q.v.), the sending down of prophetic revelation (see REVELATION AND INSPIRATION; PROPHETS AND PROPHETHOOD), and the eschatology (q.v.) of the day of reckoning (*yawm al-dīn;* see LAST JUDGMENT). At divine behest or command *(amr),* spirit mediates the eternal and the temporal, coming down or rising up from one realm to another (see ETERNITY; TIME; WORLD). It comes down as the breath of life into Adam (see ADAM AND EVE; COSMOLOGY), as the conception of Jesus (q.v.) for Mary (q.v.), and with (or as) revelation to the prophets. It rises with the angels (q.v.) into the divine realm, bringing the temporal world to its conclusion and humans to their second creation (see RESURRECTION).

The qurʾānic concept of spirit is complicated by allusion, referential multivalence and theological allusion well beyond the issue of a possible equivalence of the spirit with Gabriel (q.v.; see also HOLY SPIRIT). These more subtle features are expressed through parallelism — in phrasing (see FORM AND STRUCTURE OF THE QURʾĀN), rhythm (see RHYMED PROSE), grammatical (see GRAMMAR AND THE QURʾĀN) and personal gender (q.v.) and key themes — which ties together passages across different sūras (q.v.) and allows disparate passages to reverberate semantically and sonically from one to the other (see LANGUAGE AND STYLE OF THE QURʾĀN; RHETORIC AND THE QURʾĀN). The result is that each boundary moment (creation, prophecy, reckoning) can be heard echoed within the others.

Spirit and creation

In the passages depicting the creation of Adam, the primordial human being (*insān* or *bashar*) is first shaped out of mud or clay (q.v.) and then brought to life as the creator breathes spirit into the shaped form (see BIOLOGY AS THE CREATION AND STAGES OF LIFE). God as creator speaks in the first person singular (Q 15:29; 38:72): "When I formed him and breathed into him some of my spirit" *(idhā sawwaytuhu wa-nafakhtu fīhi min rūḥī)*. Other passages on the creation of Adam employ the exact same formula but in the third person (Q 32:9): "He formed him and breathed into him some of his spirit" *(sawwāhu wa-nafakha fīhi min rūḥihi)*. The inbreathing actualizes and brings to life the material form of the creature after the shaping *(taswiya)*. Before breathing into Adam, the creator shapes, kneads, molds, forms *(sawwā)* the substance of the creature into a form receptive of the spirit.

The formula used to depict spirit within creation found in the passages on Adam recurs in the passages depicting the conception of Jesus. Speaking about Mary, in one passage, God relates: "We breathed into her some of our spirit" (*nafakhnā fīhā min rūḥinā,* Q 21:91). Another passage is identical, except that the "into her" has been changed to "into it" *(fīhi):* "We breathed into it some of our spirit" (Q 66:12). The same verse had begun by referring to Mary as one who "guarded her

private parts" *(farjahā)*. Thus some commentators interpret the "into it" as a reference to the breathing of the spirit directly into her vagina (see SEX AND SEXUALITY; MODESTY; CHASTITY). The most extended narrative concerning Jesus and Mary is found in Q 19:16-33. In Q 19:17 the divine voice relates that "We sent down to her our spirit which took on the likeness of a human being well formed *(basharan sawiyyan)*." Mary expresses shock and fear at the sight of the figure (interpreted in commentaries as Gabriel) and her reaction shows clearly that the figure is male in appearance. The figure (spirit in the likeness of a human form) replies that it is the messenger of her lord (q.v.; *rasūlu rabbiki*) sent to bestow on her a pious male child (for the efforts of commentators to distinguish the "our spirit" that God breathed into Mary from the "our spirit" that God sent down to Mary in the shape of a human, see MARY; and for a more philosophical discussion of the complex relationship of Mary to spirit, see Ibn al-ʿArabī, *Fuṣūṣ,* 138-67).

Spirit and revelation

With Jesus, the spirit is associated not only with creativity in his conception but with his prophetic mission as well. In three passages, Jesus, son of Mary, is depicted as being given the holy spirit *(rūḥ al-qudus)* as a support (Q 2:87, 253; 5:110). In the first two of those passages, the holy spirit's support is linked to Jesus' bringing of clear proofs (*bayyināt;* see PROOF). In the third passage, God speaks directly to Jesus, explaining how the holy spirit was sent as a support to him at the time he was prophesying while yet an infant. The passage goes on to remind Jesus how, with the permission of God, Jesus was able to shape birds from clay, breathe into them and bring them to life; this is a sequence that is precisely parallel to God's activity in bringing Adam to life. In yet another discussion of Jesus, he is identified with the spirit (Q 4:171). The different relations of Jesus to spirit can be summed up in the following way: Jesus was conceived through the spirit; prophesies with the support of the spirit; shapes creatures and brings them to life with divine permission by breathing into them in exactly the fashion through which God brought Adam to life; and is the spirit (see POWER AND IMPOTENCE; MIRACLES; MARVELS).

Spirit plays the central role in all prophecy which occurs through the spirit by the command *(amr)* of God (Q 16:2; 17:85; 40:15) and as a support for believers (Q 58:22). Other passages relate the spirit to the specific movement of the bringing down *(tanzīl)* and the coming down *(tanazzul)* of prophetic revelation. In a reference to the role of prophets as those who warn that there is no god but God (see WARNER; POLYTHEISM AND ATHEISM), the Qurʾān states (Q 16:2): "He sends down the angels with the spirit by his command to whichever of his servants (see SERVANT; WORSHIP) he wills." The spirit is sent down according to, through, or at the behest of the divine command. In a reference to the spirit sent to Muḥammad that empowers him to be a prophetic warner it is called the trustworthy *(amīn)* spirit.

In Q 16:102 it is the holy spirit that actively sends down *(nazzala)* the verses or signs *(āyāt)* of revelation. Most classical commentaries identify the holy spirit with Gabriel. Nowhere in the Qurʾān is such an identification made explicit and the name Gabriel appears in only two verses in the Qurʾān. The strongest evidence for assuming an identification between the spirit and Gabriel is found in Q 97:4, where the angels and the spirit descend *(tanazzalu)* by permission of their lord, a terminology and phrasing that relate to Q 16:102 on the role of the holy spirit. The Qurʾān refers

neither to the spirit nor to Gabriel as an angel. The spirit does act in close proximity with the angels, leading to the common assumption that Gabriel and/or the spirit were the highest form of angel (see ANGEL; for further discussion and the alternative views of Ibn Zayd who interpreted the holy spirit as a reference to the Qurʾān and/or the Gospel, see Ayoub, *Qurʾān,* 124-5). In Q 81:19, the revelation to Muḥammad is referred to as the speech (q.v.) of a noble messenger (q.v.; *rasūl karīm*), which would fit the role of the spirit or that of Gabriel.

The spirit passages concerning Mary and Jesus tie creative activity to prophecy and revelation. Parallel constructions and vocabulary link those passages of the bringing to life of Adam to the act of prophetic inspiration (in the strong sense of inspiration). Q 97 recounts the sending down of revelation to Muḥammad. It begins with the divine voice announcing that "We sent him/it down *(anzalnāhu)* on the night of destiny (see NIGHT OF POWER)." If the pronoun *hu* is taken as indicative of a person, it is interpreted as Gabriel. When taken as indicative of a non-animate object, it is interpreted as the Qurʾān or associated with the revelatory vision(s) of Muḥammad depicted most famously in Q 53:1-18 and Q 81:19-24. Q 97:4 contains a complex formulation: The angels came down — the spirit — by the permission of their lord through/from every order. The central phrase, *wa-l-rūḥu fīhā,* is multivalent. The angels came down with the spirit among them; the angels came down with the spirit during it (the night of destiny or power, *qadr*); the angels came down upon the night (personified as female) of destiny. The grammatical and referential indetermination of the key phrase, its place at the rhythmic and semantic nexus of the verse and the dramatic placement of the verse in the larger sūra, heighten the sense of mystery and wonder surrounding the operation of the spirit (Sells, Sound).

Spirit and reckoning

The third boundary moment is the day of reckoning, a day when the angels will appear with the spirit in array (*ṣaffan;* see RANKS AND ORDERS). The spirit passages relating spirit to creation and prophecy parallel strongly the portrayal of the role of spirit in eschatology. In one case, the exact same wording is used stretched across disparate sūras concerning prophecy and reckoning. But the movement is reversed from downwards to upwards. In Q 97:4, "The angels come down with the spirit upon her/among them *(al-rūḥu fīhā)*." In Q 70:4, the angels rise with the spirit to him *(wa-l-rūḥu ilayhi)*. The link between these two passages and the events they depict is heightened by the stretching out of temporal limits in both prophecy and reckoning and by the inversion of night and day (see DAY AND NIGHT). Thus the night on which the spirit descends is "better than a thousand months" (q.v.; Q 97:3) while the day of reckoning is "a span of fifty-thousand years (see YEAR)." In addition, the grammatically feminine indirect object *(hā)* is balanced by the masculine indirect object *(hi)*. The intertwining of the two passages — one on the night of destiny, the other on the day of reckoning — intimate something undefined and perhaps indefinable hidden within the intensely lyrical imagery of daybreak (see DAWN; DAY, TIMES OF). The ambiguity in both passages concerning the role of the spirit in the rise and descent of the angels creates an openness of meaning that keeps the spirit from being limited to a particular finite being or form. The word "to breathe" or "to blow" *(nafakha)* intensifies the association of spirit with the day of reckoning. In the Qurʾān *nafakha* is used in only four contexts: the bringing to life of Adam; the conception of

Jesus; Jesus' bringing the material forms of birds to life; and (in twelve different places) the day on which the trumpet will be blown, that is, the day of reckoning and resurrection (see also APOCALYPSE).

Spirit and gender

Rūḥ is one of only a handful of nouns in Arabic that can be either masculine or feminine according to the grammatical gender (see ARABIC LANGUAGE). The way in which the differing spirit passages intersect and interweave with one another, particularly in the passages on the conception of Jesus and the descent of the spirit on or upon the night of destiny, suggest that spirit serves to mediate not only the temporal and eternal but also the male and female. The night of destiny is partially personified as female in a manner similar to the personification of the earth (q.v.) as giving birth to "her secret" in Q 99 (see SECRETS; HIDDEN AND THE HIDDEN). The implication of a personified animate being for the night would be especially pronounced in readings of verse one of Q 97 (Sūrat al-Qadr, "Destiny"), "we sent it/him down," as a reference to Gabriel, animate and conventionally male (at least in his appearance on earth). In its final verse, the sūra of Destiny closes with the emphatic "peace (q.v.) it is" or "peace she is" *(salāmun hiya)* "until the rise of dawn." The descent of the spirit upon or into Mary at the conception of Jesus strongly parallels the descent of the spirit on or into the night of destiny (Sells, *Approaching,* 183-207).

Spiritual Beings

Supernatural creatures, either benevolent or malevolent. Within the Islamic world the expression "spiritual beings" carries different significations, depending on whether reference is made to the theological sphere (Qurʾān and ḥadīth; see ḤADĪTH AND THE QURʾĀN), or to the knowledge of the scholars or to local traditions. This wide world of chthonic spirits, that at first seems confused and undefined, consists of elements and cultural representations developed through the encounter with various ethnic groups and stratified throughout the course of history.

The belief in spiritual beings is already attested in the pre-Islamic period. The supernatural beings who survived the demise of Arab paganism, however, do not coincide with their status and significance in the animistic world of the Jāhiliyya (see AGE OF IGNORANCE; IDOLATRY AND IDOLATERS; POLYTHEISM AND ATHEISM). At first, they were utilized by some in the early Muslim community as more approachable entities who could intercede with God. The charges of *shafāʿa,* "intercession" (q.v.), in various sūras of the Meccan period are an indication of this utilization (Q 6:94; 10:18; 30:13; see MECCA). Subsequently, they were firmly rejected as impotent, or even changed into *shayāṭīn,* evil beings (see DEVIL; POWER AND IMPOTENCE).

As these preliminary remarks indicate, from its beginning, Islam has accepted the existence of subtle, non-human beings as part of God's creation (q.v.). In various passages the Qurʾān makes matter a metaphor (q.v.) of the spirit (q.v.; Q 42:49-53), whether this matter is fire (q.v.), air or light (q.v.; see also JINN; AIR AND WIND). Belonging to the world of the invisible (*ʿālam al-ghayb;* see HIDDEN AND THE HIDDEN), these spirits are characterized by their transient, volatile forms. They permeate the cosmos in order to direct the multifaceted variety of creation to the indivisible oneness of God (see GOD AND HIS ATTRIBUTES). But they are not thought to participate in God's transcendence; rather, the Qurʾān underscores their impotence and affords them a status not higher than humans (see ANGEL).

Qurʾānic and later references tend to distinguish malignant from benevolent spirits and to create a hierarchy within these categories. Whereas angels are considered to be benevolent, the scriptural conception of the jinn is somewhat more ambivalent. Angels *(malāʾika),* devils *(shayāṭīn)* and jinn, the largest gatherings of spiritual beings that appear in the Qurʾān, do not belong to the same cosmic sphere. All they share in common is being invisible; otherwise they are differentiated in terms of essence and nature, function, and place in the cosmos (see COSMOLOGY). The merciful angels are made of *nūr,* which can be translated as "cold light," while the angels of punishment are made of *nār,* "fire," indicating distinctions of both density and weight (cf. Q 66:6; Huart, *Livre de la création,* i, 169).

Whether they are "supervisors" *(al-mudabbirāt),* as in Q 79:5 or, expressed differently, "agents of beings" *(mawkūlāt bi-l-kāʾināt),* as al-Qazwīnī (d. 682/1283) says, or, again, spiritual entities *(rūḥāniyyūn),* as mentioned by the Ikhwān al-Ṣafāʾ, they govern the three realms of nature, "managing the mysterious development of life through their clever delicate hands" (Qazwīnī, *ʿAjāʾib,* 62). Among these innumerable creatures, some have proper names: *rūḥ al-qudus* (Q 16:102; see HOLY SPIRIT), Gabriel (q.v.; Jibrīl), Michael (q.v.; Mikāʾīl), Hārūt and Mārūt (q.v.; Q 2:102), Iblīs (see DEVIL). Others are identified only by their functions. There are the *ḥafaẓa,* honorable scribes, who attend human beings and record impartially their good or evil actions (see GOOD DEEDS; EVIL DEEDS; HEAVENLY BOOK; WRITING AND WRITING MATERIALS). There are the *kirām kātibīn,* as they are identified in Q 82:11 (cf. Q 43:80), who sit on a human's shoulders to note down his or her thoughts, and are termed *al-ḥafaẓa* in Q 6:61 or *ḥāfiẓ* in Q 86:4 (cf. Q 82:10). Their role is revealed by the epithets "observer" (*raqīb,* Q 50:18), "guide" *(sāʾiq)* and "witness" (*shāhid,* Q 50:21; see WITNESSING AND TESTIFYING).

The *muʿaqqibāt* (Q 13:11), "those who follow one upon the other," establish a continuous relationship between humankind and heaven (see HEAVEN AND SKY), coming down with divine grace and re-ascending *(ʿurūj)* with human actions (cf. Q 32:5; 34:2). This term has generated diverse interpretations and some commentators understood it to be a dual of the second verbal form *ʿaqqaba,* that here replaces the third form *ʿāqaba* (Ṭabarī, *Tafsīr,* xiii, 68). In function, however, these beings watch lovingly over every person: "Alike (to him) of you is he who conceals (his) words and he who speaks them openly, and he who hides himself by night and (who) goes forth by day (see DAY AND NIGHT). For his sake there are those who follow one another [*muʿaqqibāt,* angels, according to Ibn ʿAbbās], before him and behind him, who guard him by God's commandment" (Q 13:10-11).

The concept of "guardian angels" had already been developed throughout the

Semitic world. We find angels in charge of human souls and recording human actions in Enoch's *Book of secrets,* as well as in *Jubilees* (4:6 and 17:5), and in *Sabbat, Ta'anit, Hagigah* and *Berakot,* where two angels standing near every human being are mentioned. These figures may have been inspired by Thot, the scribal god in the Egyptian pantheon, who appears in funeral processions as the one who notes down the past actions, both good and bad (cf. Dubler, L'ancient orient, 71, who considers Q 101:5-8 to show a close resemblance to the Egyptian tradition concerning the last judgment). In reference to the judgment, Q 50:17 hints at two entities, *al-mutalaqqiyān,* "receivers," who are named *munkar* and *nakīr* in ḥadīth and the commentaries (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL). "The two delegated to receive" carry out the torment of the grave *('adhāb al-qabr),* repeatedly mentioned in the Qur'ān; it takes place after burial (q.v.). This idea recurs in rabbinic literature and its remote origins could be traced back to Iranian Mazdaism.

In the Qur'ān, as in other early sources, the angels are compared to the lightness of the wind. This is the element that best evokes the incorporeity of God but since it is still a substance it becomes identified with angels and spirits. Q 77:1, like Q 51:1, cites an oath by "those who have been sent one by one, and are blowing furiously," which affirms the similitude between winds and heavenly messengers (cf. Q 25:48; 27:63; 30:46). The connection of messenger and wind recurs in two lines of verse attributed to Umayya b. Abī l-Ṣalt, a contemporary of the Prophet and the linkage was maintained by the Islamic tradition, as the words of al-Maqdisī (d. 340/934) testify: "And we said that the wind is an angel as well as *al-rūḥ*" (cf. Huart, *Livre de la creation,* i, 176). Such angels are also equated with the nineteen *al-zabāniya* (Q 96:18; cf. 74:30), under the leadership of one *mālik* (Q 43:77, possibly to be interpreted as the "owner of the doors of hell"; see HELL AND HELLFIRE), but there are other spiritual beings whose provenance is unspecified. The root of the word *qarīn* connotes the idea of a "double" — it is an adjectival form that indicates being one of a pair. This human "double," the companion or twin spirit, takes life upon the birth of a human being. Q 41:25 and its mention of *quranā'* can be understood to contain reference to the tempting spirit or *shayṭān* — synonymous with *muṣāḥib* (cf. *Lisān al-'Arab,* s.v.) or *khidhn* (cf. Bayḍāwī, *Anwār,* ad Q 41:25) — to which Q 4:38 may allude. Commenting on Q 50:23, al-Ṣuyūṭī (d. 911/1505) wonders whether the word *qarīn* denotes a *shayṭān* or an angel; but the author is sure that elsewhere in the same sūra (Q 50:27) it denotes a *shayṭān* (Ṣuyūṭī, *Durr,* iv, 124). Al-Ṭabarī (d. 310/923), in his *Tafsīr* at Q 43:36, reports the tradition according to which every human has a *qarīn* or *shayṭān* and an angel, inciting evil and good respectively. These two beings are not to be confused with the two recording angels.

While a benevolent spirit in the pre-Islamic period, in which period the word indicated the spirit which follows a poet and inspires his verse (see POETRY AND POETS; RHYMED PROSE), this entity changes within the monotheistic orientation of Islam to a sort of keeper-demon who leads humans into temptation. The Islamic statements about *qarīn* recall the ancient Egyptian beliefs about *"ka,"* the abstract individuality of every human being, which in turn goes back to the Babylonian idea of an undefined personal god "walking beside man" (see Blackmann, *Karīn* and *karīneh;* Hornblower, Traces of a ka-belief).
In the Qur'ān, those who believe in *ṭāghūt,* along with *jibt* (q.v.), are said to be those who have received only a part of the scrip-

tures (Q 4:51; see BOOK; PEOPLE OF THE BOOK; IDOLS AND IMAGES) and it contrasts belief in God with belief in the *ṭāghūt,* equating the latter with the leaders of the unfaithful (Q 2:257; see BELIEF AND UNBELIEF). The qurʾānic denunciation of those who "desire to go to judgment before the *ṭāghūt,* although they have been commanded not to believe in him; and Satan desired to seduce them into a wide error" (q.v.; Q 4:60; see also ASTRAY) indicates that *ṭāghūt* may refer to a spiritual entity or an idol (see also Atallah, Ǧibt and Ṭāghūt, for an interesting theory that relates these two words with magical practices in ancient Egypt). It is thus connected to the religious and political spheres of pre-Islamic society (see PRE-ISLAMIC ARABIA AND THE QURʾĀN). The meaning of the term *ṭāghūt,* however, remains a matter of speculation (for an Aramaic derivation — cf. Syr. *ṭāʿyē,* "planet/planet god" — see Köbert, Das koranische "ṭāġūt"; cf. Bukhārī, *Ṣaḥīḥ,* bk. 10, *K. Adhān,* 129 *[faḍl al-sujūd],* ed. Krehl, i, 207; trans. Houdas, i, 268: "Et il en est qui suivront le soleil, d'autres la lune, d'autres enfin les idoles"). Lexicographers and commentators have interpreted *al-jibt* and *al-ṭāghūt* as "everything that is adored instead of God," without identifying the origins of these words (see Fahd, *Le panthéon,* 240). According to both Qurʾān and ḥadīth, the Prophet recognized the existence of the heathen gods, but classed them among the demons.

In the Qurʾān, the word *jinn* acquires a connotation that is definitely pejorative, particularly in Medinan passages (see MEDINA). The original meaning of this term is probably "covert" (from the Semitic root *j-n-n*); another word for it is *jann* (to which the Ethiopic *ganen,* "demon," corresponds); it is sometimes used as a name of Iblīs (*al-jānn,* Q 15:27), or with the meaning of serpent (Q 27:10; 28:31), or as a synonym to jinn (Q 55:39; see also INSANITY).

An examination of the qurʾānic data reveals identification between *shayāṭīn* and jinn, as is the case in the Solomon (q.v.) legend (Q 2:102; 21:82; 38:37) or the abduction of human beings through the agency of spirits (Q 6:71). There are also several passages in which *shayāṭīn* means "pagan idols" (Q 2:14; 4:76; 5:90; 19:44) and a similar meaning is assigned to the word *jinn* in Q 6:100 and 34:41. This interpretation of their identity is a consequence of superimposing two different demonologies, one the outcome of monotheism, the other, previously known in the Arab world, arising from polytheism (see SOUTH ARABIA, RELIGIONS IN PRE-ISLAMIC). Nevertheless, in the qurʾānic purview, they are God's creatures and never appear as God's enemies (q.v.) or as an anti-divine power. The Qurʾān refers to the army of Iblīs (Q 26:95) and to Satan's party (Q 58:19), but these expressions have no dualistic flavor (see TROOPS; PARTIES AND FACTIONS; RANKS AND ORDERS). M. Iqbāl *(Reconstruction)* even considers Iblīs and the devils to be a necessary force in life because only by fighting them can one grow into a perfect human being. Though the jinn and *shayāṭīn* have no individuality, they fall into various classes, and some of them are mentioned as particularly harmful.

The most dangerous kind of harmful being is the *ghūl* (a feminine noun). This word, which comes from a root signifying "to destroy," does not appear in the Qurʾān except in the derivative form *ghawl* (Q 37:47), which refers to the dangerous effects of wine (q.v.). The *ghūl* is supposed to lie in wait at places where men are destined to perish; she entices them there, especially by night. Poets sometimes depict the *ghūl* as the daughter of the jinn (Qazwīnī, *ʿAjāʾib,* 370). Some words which are often understood as referring to demons actually have a different sense. *ʿIfrīt* (q.v.) in Q 27:39 is an epithet of somewhat doubtful meaning (it seems to have the

general value of "skillful" with a shade of "rebel"; see REBELLION), which is applied to a jinn, but it is not the name of a particular class of demons.

As with other aspects of belief, the qurʾānic account of spiritual beings has generated a wide range of variations at the local level. For a large group of believers these spiritual beings are, at best, of philosophical importance only and of little practical concern as a sensible representation of the spiritual world. Others consider the veracity of their possible interference only in rare circumstances. But recent ethnographic research has shown that belief in spiritual beings persists as a regular ingredient of everyday life in various parts of the Muslim world.

Spring see SEASONS

Springs and Fountains

Natural or artificial sources of water that issue from the earth and — in contrast to wells — provide running water (q.v.). There are several Arabic words for a natural spring. The most common designation is *ʿayn,* which occurs twenty-one times in the Qurʾān (with the respective dual and plural forms *ʿaynān* and *ʿuyūn;* e.g. Q 2:60; 15:45; 34:12; 55:50). The word *maʿīn* — probably of Syriac or Hebrew origin (see FOREIGN VOCABULARY) — is used four times (Q 23:50; 37:45; 56:18; 67:30); *yanbūʿ* (Q 17:90) and its plural *yanābīʿ* (Q 39:21) each appear only once. Although the Arabic term for hot springs, *ḥamma* (pl. *ḥammāt*), does not appear in the Qurʾān, *ḥamīm* is used fourteen times for the boiling water of hell (e.g. Q 6:70; 10:4; 22:19; see HELL AND HELLFIRE; REWARD AND PUNISHMENT). There is no special qurʾānic expression for artificial fountains, such as *fawwāra* (pl. *fawwārāt*) or *nāfūra* (pl. *nawāfūr*).

General characteristics

As objects of religious interest, springs are characterized above all by two aspects: on

the one hand, with their life-giving water, they stand for vitality and purity; on the other hand, when considered as openings into the interior of the earth, they appear to be mysterious and strange. Especially when they are located in the immediate vicinity of other remarkable natural features, such as mountains, grottoes or trees (q.v.) — and even more so if they are hot or periodic — springs have attracted religious veneration and could persist as sacred locations even when the people living there changed (see NATURE AS SIGNS; AGRICULTURE AND VEGETATION).

The chthonic aspect often ascribed to springs appears in the widespread belief, held since time immemorial, that they are inhabited by spirits — a belief largely adopted in Islam as well (see SPIRITUAL BEINGS; JINN; DEMONS). Particularly when springs are situated in lonely, gloomy places, the inhabiting spirits are described as evil demons *(jinn; ghīlān)* who appear in the shape of animals or of seductive women. Yet other springs are associated in one way or another with saints (q.v.) and holy men, whether Christian or Muslim; in this case, the spirits *(arwāḥ)* who dwell there may be benevolent. In Greek antiquity, springs often stood under the patronage of particular gods, such as Apollo and Artemis. From Hellenistic times onward, however, hot springs were increasingly ascribed to the healing god Asclepius. According to Ibn al-Kalbī's (d. ca. 205/820) *Kitāb al-Aṣnām* (Book of Idols), it was after the legendary ʿAmr b. Luḥayy of pre-Islamic times had visited the spas of the Balqāʾ, which were associated with a cult of healing gods, that he introduced their idols in Mecca (q.v.; see also IDOLS AND IMAGES). And though Ibn al-Kalbī remains silent on this subject, it has been suggested that the female Arabic goddesses al-Lāt, Manāt and al-ʿUzzā — "the exalted cranes" *(al-gharānīq al-ʿulā)* according to the well-known story about a later abrogated Satanic inspiration (cf. commentaries on Q 53:19-20; see SATANIC VERSES; POLYTHEISM AND ATHEISM) — were originally venerated as water nymphs of some kind. Also, Ibn Isḥāq's (d. ca. 150/767) report of how ʿAbd al-Muṭṭalib, the Prophet's grandfather, found golden figurines, swords and coats of mail while excavating the shaft of the Zamzam spring can be seen as hinting at ritual offerings made at springs.

The idea of pure and vital spring water has its most influential expression in the mythical notion of the fountain of life, which provides those who drink from it with everlasting health and youth. The search for the fountain of life is the subject of countless tales and legends, including the late-antique legend of Alexander (q.v.). There is an allusion to this story in Q 18:60-4 (with Mūsā, Moses [q.v.], instead of Alexander) and it is retold at great length in several subsequent forms of Islamic literature, for example by the Persian poet Niẓāmī (fl. sixth/twelfth cent.) in his *Iskandarnāme*. The fountain of life is a familiar theme in the biblical tradition as well (see SCRIPTURE AND THE QURʾĀN; MYTHS AND LEGENDS IN THE QURʾĀN). The Psalms (e.g. *Ps* 36:9; 42:2-3) state that the fountain of life is with God; and the visions of Ezekiel 47, Zechariah 14 and John 22 describe the living water that issues from the temple in Jerusalem at the end of time. The early Christians frequently interpreted the baptismal font, the *piscina,* as *fons vitae* (cf. John 4:11 f.). The redemption obtained through baptism, on the other hand, is closely linked with the blood of Christ and, therefore, with the wine of the Eucharist. As a result, the predominant early-Byzantine symbol for the fountain of life is a goblet — itself an age-old symbol for the water-spring — with vine tendrils growing out of it, sometimes flanked by peacocks,

which signify immortality. This imagery found its way into early Islam. In the mosaics in the Umayyad Dome of the Rock, goblets and tendrils adorned with pearls are one of the dominant motifs and can be read as metaphors for paradise (q.v.; for the symbolism of pearls, see Flood, *Great mosque,* 15f.). Finally, it should be remarked that these pictorial elements, viz. goblets (see CUPS AND VESSELS), pearls (see METALS AND MINERALS), vine tendrils and birds, are also features of the qurʾānic descriptions of paradise, although they appear there in a recontextualized manner — goblets *(akwāb)*: e.g. Q 43:71; 76:15; pearls *(luʾluʾ):* e.g. Q 22:23; 56:23; clusters *(quṭūf):* Q 69:23; 76:14; birds *(ṭayr)*: Q 56:21; cf. 52:22.

Springs and fountains in the qurʾānic paradise

In the Qurʾān, springs never appear as neutral natural phenomena. They are always connected with the idea of God's omnipotence (see POWER AND IMPOTENCE) and are predominantly symbols for his mercy (q.v.). This is especially clear in the qurʾānic descriptions of the landscape of paradise where springs appear as its most characteristic element. Several times, the Qurʾān promises that in the hereafter "those who show piety (q.v.) are among gardens (see GARDEN) and springs" (*inna l-muttaqīna fī jannātin wa-ʿuyūnin,* Q 15:45; 51:15; cf. 44:51-2; 55:50, 66; 77:41; 88:12; see ESCHATOLOGY). Still more often, paradise is referred to as "gardens underneath which rivers flow" *(jannātun tajrī min taḥtihā l-anhār)*. This usage appears some forty times (e.g. Q 2:25; 3:15; 4:13; 5:12) and implies the idea of springs as well.

The Qurʾān, however, does not give a clear picture of the design of this garden landscape, with its springs and rivers. Some passages suggest that there is only one — or at least only one distinctive — spring in paradise (Q 76:6, 18; 83:28; 88:12). For example, Q 83:25-8, in speaking about the beverage of the pious *(al-abrār),* mentions one spring only: "They are given to drink of a wine (q.v.) sealed whose seal is musk so after that let the strivers strive and whose mixture is *tasnīm (wa-mizājuhu min tasnīm),* a fountain *(ʿayn)* at which do drink those brought nigh *(al-muqarrabūn)*." While most commentators understand *tasnīm* as the fountain's proper name, al-Ṭabarī (d. 310/923) reports that Mujāhid (d. 104/722) and al-Kalbī (d. 146/763) explained the expression *min tasnīm* as meaning "from above." This explanation suggests a vertical concept of paradise, similar to the idea of the paradisiacal mountain, with the pious *(abrār)* dwelling below, above them "those brought nigh" *(al-muqarrabūn),* and at the top the divine presence (see FACE OF GOD; SHEKHINAH).

This passage can be compared to Q 76:5-19. In the latter, verses 5 and 17 promise that the pious *(abrār)* will drink from a cup "whose mixture is camphor (q.v.)" and "ginger," respectively; whereas verse 6 seems to indicate that the "servants of God" *(ʿibād Allāh)* drink directly from that spring; and in verse 18, the spring is given the enigmatic name *salsabīl.* Although these verses contain no indication of a vertical structure of paradise, here, too, an implicit differentiation is made between the pious who drink mixed and strongly flavored beverages and another, privileged class of inhabitants of paradise, viz. the "servants of God," who have direct access to the pure divine spring (cf. Q 55:46, 62; 56:10, 27). In this context, it should be noted that only in Q 88 is the paradisiacal spring contrasted with a spring in hell: "Faces on that day humbled,… watered at a boiling fountain *(ʿayn āniya),*… Faces on that day jocund,… in a sublime garden,… therein a running fountain (*ʿayn jāriya,* Q 88:2-12)." Here, the dark side of springs appears as a symbol

for evil and punishment (see GOOD AND EVIL; REWARD AND PUNISHMENT; CHASTISEMENT AND PUNISHMENT). This is remarkable because the polarity of paradise and hell, which is usually expressed in the Qurʾān through the polarity of water and fire (q.v.), appears here as the contrast between (cool) running and boiling (stagnant) water (see also PAIRS AND PAIRING).

Inspired by qurʾānic passages such as those mentioned above, Islamic culture commonly designates single fountains as symbols for paradise as a whole. This holds true, for example, for the basins or fountains that provide drinking water in the courtyards of mosques (see MOSQUE). (There are several designations for these basins, such as *ḥawḍ*, *birka* or *fisqiyya*, derived from the Latin *piscina*, the [baptismal] font, in contradistinction to the facilities for ablution, which are called *maṭāhir* or *mayāḍiʾ*; see CLEANLINESS AND ABLUTION.) It holds as well for the *asbila* (sing. *sabīl*), the public drinking fountains that were built and established as religious foundations from the sixth/twelfth century onward in some of the major cities of the Islamic world.

Q 55:46f. expresses the idea of a bipartite paradise and presents the vision of a double set of twin gardens. In describing the first pair of gardens it says: "therein two fountains of running water" (*fīhimā ʿaynāni tajriyāni*, Q 55:50). Referring to the second pair, which is situated *min dūnihim* (Q 55:62) — an expression that can either mean "below" or "besides these" two — it says: "therein two fountains of gushing water" (*fīhimā ʿaynāni naḍḍākhatāni*, Q 55:66). Although the qurʾānic text says nothing about it, the exegetical tradition (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) is nearly unanimous in declaring that a difference exists in rank between the two pairs of gardens and that the first pair is reserved for the *muqarrabūn*. According to al-Zamakhsharī (d. 538/1144), al-Ḥasan al-Baṣrī even identified the two springs therein as *salsabīl* and *tasnīm*. While it is possible that the continuous use of the dual in Q 55 is merely a stylistic means to intensify the meaning, the idea of four gardens indicated there exerted a very great influence upon later Islamic representations of paradise. This is especially true in painting and horticulture, where the *chahār bāgh* — the four-partite garden of the Achaemenid tradition, with its central basin and its four dividing canals — became the paradigm of paradise (see ART AND ARCHITECTURE AND THE QURʾĀN).

Q 47:15 contains a third important concept concerning the celestial springs and rivers: "This is the similitude of paradise (*mathalu l-jannati;* see PARABLE) which the godfearing have been promised: therein are rivers of water untainted, rivers of milk (q.v.) unchanging in flavor, and rivers of wine — a delight to the drinkers — rivers, too, of honey (q.v.) purified." The idea of four cosmic rivers that structure the world was already known to the Sumerians in the third millennium B.C.E. Genesis 2:10 adopts this notion and states that "a river went out of Eden to water the garden; and from thence it was parted, and became four heads." In the Genesis report, it is not clear whether the river's source is situated within the garden or whether the river divides into four inside of the garden or at its exit. The belief in the existence of four rivers inside paradise emerged, however, when, from exilic times onwards, the desired eschatological fate was described as a recovery of the garden of Eden. Later this became associated with the *pairidaeza* — the royal garden of the Achaemenids. In Hellenistic times, this conception was embellished by the idea that the four rivers were flavored with the tastes of milk, honey, wine and oil — sacred liquids in the ancient near east and

symbols for the promised land (cf. *Lev* 2; *Num* 13:23f.). But while St. Ephraem the Syrian (fl. fourth century C.E.) mentions four kinds of paradisiacal springs, Q 47:15 speaks only of four kinds of rivers and leaves the question of their origin unanswered. Among the flavors of these rivers the "water untainted" now replaces the oil — certainly not because Muḥammad considered water necessary to dilute wine, as J. Horovitz suggested (*Das koranische Paradies,* 9), but rather because of the symbolic value inherent in living water. At any rate, the Qurʾān unmistakably characterizes this description of the rivers of paradise as a "similitude" *(mathal)* and emphasizes thereby its metaphorical dimensions (cf. Q 13:35; 24:35; see METAPHOR).

In this context, mention must be made of Q 108:1: "Surely we have given you *al-kawthar*." Many commentators understood the word *al-kawthar* to mean "the abundance" and interpreted this as "the plentitude of grace" *(al-khayr al-kathīr)* that God granted to his Prophet. According to a popular explanation (especially in connection with the story of the *miʿrāj,* Muḥammad's ascent to heaven; see ASCENSION), however, *al-kawthar* is said to be the proper name of a river in paradise or of the pool *(ḥawḍ)* into which this river flows. Of particular interest here is the way the river *al-kawthar* is usually described in exegesis: its water — more delicious than honey — is of a brighter whiteness than milk or snow, and runs over precious stones and pearls, with banks of gold (q.v.) and silver (cf. e.g. Ṭabarī, *Tafsīr;* Zamakhsharī, *Kashshāf;* Bayḍāwī, *Anwār,* ad Q 108:1). Q 37:45-6, too, clearly states that the nonintoxicating, pure paradisiacal beverage (Q 37:46-7; 56:19; 76:21) — which is wine, according to al-Ṭabarī and al-Rāzī (d. 606/1210) — has a white color *(bayḍāʾ).*

It should be pointed out here that pearly whiteness is also the characteristic feature of the *qāṣirāt al-ṭarf ʿīn* and the *ḥūr ʿīn,* which have been traditionally understood as metaphors for the maidens awaiting the believers in paradise — "those of modest gaze, with lovely eyes" and as "fair ones with wide, lovely eyes," respectively (for an opposing interpretation, see Luxenberg, *Syro-aramäische Lesart,* 221f.; see HOURIS). The *qāṣirāt al-ṭarf ʿīn* are likened to hidden white objects (*bayḍ maknūn,* Q 37:49), pearls or eggs, and the *ḥūr ʿīn* are described "as the likeness of hidden pearls" (*al-luʾluʾ al-maknūn,* Q 56:23). In addition, the Arabic root *ḥ-w-r* that underlies the word *ḥūr* carries the meaning "whiteness," and *ʿīn* (derived from *ʿayn,* denoting either "spring" or "eye") implies the idea of shimmering and brightness as well. In ḥadīth and later Islamic literature (see ḤADĪTH AND THE QURʾĀN), this paradisiacal feature of pearly white shininess was enriched with the biblical vision of paradise as a garden of precious stones and metals (*Jes* 54:11-12; *Ez* 28:13-14; cf. *Rev* 21:10f.) — a vision that not only underscores the beauty of paradise but emphasizes its everlastingness as well (see ETERNITY). (In passing, reference can be made here to the use of rock-crystal in Islamic art: as a working material, it simultaneously stands for water and light and was therefore considered apt to symbolize God as the fountain of life and as the "light upon light" of Q 24:35; see LIFE; LIGHT.)

Given the varying glimpses of the paradisiacal landscape in the Qurʾān, it is not surprising that Islamic theology elaborated at least three different conceptions of it (see THEOLOGY AND THE QURʾĀN): paradise as one extensive park, paradise as four neighboring gardens, or paradise consisting of seven concentric and ascending circles. In each conception of paradise particular importance is imputed to its springs, which, by virtue of their hidden origin, point to another, transcendent

dimension. One group of traditions locates the sources of the four rivers of paradise at the foot of the *sidrat al-muntahā,* the "lote-tree of the boundary," in the seventh heaven below God's throne (see al-Ṭabarī, *Tafsīr,* ad Q 53:14; see THRONE OF GOD). The idea of the divine origin of the paradisiacal springs also finds its appropriate expression in a later tradition that relates how, during the *miʿrāj,* the prophet Muḥammad is shown a huge cupola made from a white pearl *(min durra bayḍāʾ),* from whose four corners the four rivers of paradise flow. Entering the cupola, the Prophet sees that over its corners the *basmala* (q.v.) is written in such a way that the river of water springs from the letter *mīm* of the *bi-ism,* the river of milk from the *hāʾ* of *Allāh,* the river of wine from the *mīm* of *al-raḥmān* and the river of honey from the *mīm* of *al-raḥīm* (see Qāḍī, *Daqāʾiq,* 107f.; see GOD AND HIS ATTRIBUTES).

Qurʾānic cosmology and springs

Paradise is connected with earth (q.v.), and cosmology (q.v.) explains how. Following the ancient near east tradition all the way back to *Enuma elish,* the Babylonian myth of creation (q.v.; cf. also *Gen* 1:6-7), the Qurʾān assumes the existence of two oceans that surround the cosmos, one of sweet *(ʿadhb furāt),* the other of salt *(milḥ ujāj)* water (Q 25:53; 35:12; cf. 27:61). The clearest qurʾānic traces of the idea that the cosmos was created by dividing these primeval waters can be found in references to the deluge. There, it is stated that the destruction of the cosmos took place in reverse order of its creation, namely by the reuniting of the upper and lower ocean: "Then we opened the gates of heaven to water torrential, and made the earth gush with fountains *(wa-fajjarnā l-arḍa ʿuyūnan),* and the waters met for a matter decreed" (Q 54:11-12; cf. 11:44; 21:30 and *Gen* 7:11). According to two other verses (Q 11:40; 23:27) the flood began when "the oven boiled *(fāra l-tannūr).*" Most Muslim commentators explained this expression by saying that the water flowing out of his oven was the sign for Noah (q.v.) to embark; yet at its root lies the rabbinic conviction that the waters of the flood were boiling hot, like hell (cf. above at Q 88:5).

In the Ugaritic Baal mythology, the salty ocean represents the chaotic monster "Yamm," who threatens the gods (cf. *Ps* 93). Also, although the Qurʾān stresses that God exerts his control over both oceans by setting "between them a barrier (q.v.), and a ban forbidden" (Q 25:53), it may be considered a reminiscence of Ugarit, that the word *yamm* in the Qurʾān always denotes the sea in its negative aspects (e.g. Q 7:136; 20:39, 78, 97). Since, according to the qurʾānic cosmology, the salt-water ocean consists of the terrestrial sea, the sweet-water ocean must be located above the firmament where paradise is also situated, as H. Toelle (*Le Coran revisité,* 124-6) has pointed out. Even though the Qurʾān remains silent about the precise spatial relationship of paradise on the one hand and of the sweet water ocean on the other, paradise is characterized by the element of sweet water, and the celestial ocean in turn bears paradisiacal traits. From above, God sends down water which is blessed (Q 50:9; cf. 7:96), pure (Q 25:48) and purifying (Q 8:11) and which makes gardens flourish, whose description is reminiscent of the gardens of paradise (Q 23:19; 50:9-11). This is in contrast to Genesis 2:10-14, where the four rivers of paradise, especially the Tigris and the Euphrates, actually translate paradise to earth. Here, according to the Qurʾān, it is the rain that safeguards this connection. And since rain is the reason for springs to gush forth and for valleys to flow (Q 13:17; 23:18-20; 39:21), both springs and rivers are, although indirectly, of paradisiacal origin, too.

In the Islamic tradition, another concept for the connection of paradise and earth is that of the navel. This theory centers on the idea that one place on earth is distinguished as the point of contact to the upper world. In early Islam, this navel was identified as the rock in Jerusalem (q.v.); later on it was transferred to the Kaʿba (q.v.) in Mecca. Thus, according to Kaʿb al-Aḥbār (d. ca. 32/652-3), each source of sweet water on earth originates below the rock in Jerusalem. A similar idea evolved concerning Zamzam in the Kaʿba district. Yāqūt (d. 626/1229) relates that when Zamzam first gushed out to save Ishmael (q.v.; Ismāʿīl) and Hagar (Hājar), it was a spring, and had Hagar not built an enclosure around it, its waters would have flooded the whole earth. Ibn Jubayr (d. 614/1217; *Travels,* 139, ll. 12f.), in turn, reports that upon his visit to Mecca in 579/1183, pilgrims believed that on *laylat al-barāʾa,* the "night of repentance" following the 14th of Shaʿbān, when God descends to the lowest heaven to forgive the repentant sinners (see FORGIVENESS; REPENTANCE AND PENANCE), the water level of Zamzam will rise. Finally, Zamzam is thought to have a subterranean connection with other springs. Yāqūt reports the popular belief that each year on the day of ʿArafāt (q.v.), the 9th of Dhū l-Ḥijja, the spring in Sulwān, a spot in the environs of Jerusalem, is "visited" by the water of Zamzam. Likewise, at the beginning of the last century, it was still a widespread belief that on the 10th of Muḥarram, the day of ʿĀshūrāʾ (see FASTING; RAMAḌĀN), Zamzam water combines with the springs of Ḥammām al-Shifā in Palestine.

As symbols for paradise on earth, springs are considered signs of God's blessings for humankind (see BLESSING). Time and again, the Qurʾān admonishes people to be thankful for this (Q 2:74; 26:134, 147; 36:33-5; 39:21). If, however, man proves to be ungrateful (see GRATITUDE AND INGRATITUDE; BELIEF AND UNBELIEF), God may expel him from the springs or cause the springs to dry up (cf. Q 2:266; 18:32-46; 23:18-20; 26:57; 44:25; 67:30). In addition, springs appear as marks of distinction for persons important in salvation (q.v.) history (see HISTORY AND THE QURʾĀN): at God's command Moses (q.v.) strikes the rock with his staff (see ROD) and twelve springs gush out (*ʿayn,* Q 2:60; 7:160). God makes the "fount of molten brass" flow for Solomon (q.v.; *ʿayna l-qiṭr,* Q 34:12; cf. 1 *Kings* 7:23f.). When Mary (q.v.) — leaning against the trunk of a palm (see DATE PALM) and surprised by birth pangs — cries in despair (q.v.), [a voice] "below her" calls to her, "No, do not sorrow; [see] your lord (q.v.) has set below you a rivulet" (*sariyyan,* Q 19:24). Both Mary and Jesus (q.v.) are given refuge upon "a height with a secure abode and a spring" (*maʿīn,* Q 23:50). Finally, the unbelievers' demand that the Prophet legitimate his mission by making a spring gush (*yanbūʿ,* Q 17:90-1) can be seen in this context as well (see MIRACLES; MARVELS; OPPOSITION TO MUḤAMMAD; PROVOCATION).

Stone

Concreted earthy or mineral matter. Stone, *ḥajar* (pl. *ḥijāra*), attested in eleven verses of the Qurʾān, is never mentioned as part of the landscape or as a natural object; it is used as a symbol or a metaphor (q.v.) whose meaning is patterned by the intertextual relations between the stone motifs in the Qurʾān and the Bible (see SCRIPTURE AND THE QURʾĀN; SYMBOLIC IMAGERY). The image of the stone appears in the Qurʾān at the same time that biblical images, narratives (q.v.) and persons, which are virtually absent from the early sūras, flood the text (see CHRONOLOGY AND THE

QUR'ĀN). Most of the mentions are found in the late Meccan sūras and the Medinan sūras (see MECCA; MEDINA).

The *ḥajar*-contexts can be divided into two groups: 1) those related to the idea of stoning (q.v.; five occurrences); 2) those with a different symbolic weight (six occurrences). The first group is very homogeneous in meaning. All the contexts (Q 8:32; 11:82; 15:74; 51:33; 105:4) convey one and the same idea, that of God's direct punishment of sinners (see SIN, MAJOR AND MINOR) and infidels (see BELIEF AND UNBELIEF) by throwing stones from the sky. This has a clear biblical prototype (*Josh* 19:8-10; see CHASTISEMENT AND PUNISHMENT; PUNISHMENT STORIES). The main difference between the Bible and the Qur'ān with respect to this motif is that the qur'ānic stones for punishment are made of clay (q.v.). This would be impossible for the Hebrew Bible, where clay and stone constitute the opposition between a natural substance and a material symbolically intertwined with the idea of the chosen people (see ELECTION). The qur'ānic image of clay stones marked with inscriptions (*ḥijāratan min musawwamatan,* Q 51:33-4; *ḥijāra min sijjīl,* Q 11:82; 15:74; 105:4) recalls clay tablets with cuneiform inscriptions from Mesopotamia and hints at its Mesopotamian, not biblical, background. The second group of mentions is centered on the opposition between life (q.v.) and death (see DEATH AND THE DEAD; PAIRS AND PAIRING) — where stone is a metaphor for the dead matter — and the possibility of overcoming this opposition by God's omnipotence (see POWER AND IMPOTENCE). Two instances (Q 2:60; 7:160) are reminiscences of the biblical story of Moses (q.v.), who struck water (q.v.) from the stone with his rod (q.v.; *Exod* 17:5-6) and thus produced life (water) from dead matter with the lord's (q.v.) help. Conversely, Q 2:74, also placed within the framework of the story of Moses, asserts that live matter (e.g. the hearts of unbelievers; see HEART; BELIEF AND UNBELIEF) can turn into dead matter (stones) if they do not have faith (q.v.) and, on the contrary, stones can become alive and produce water if they fear (q.v.) God (cf. the motif of "hearts of stone" in the Bible: 1 *Sam* 20:37; *Job* 41:16; *Ezek* 11:19; 36:26; *Zech* 7:12; cf. also Q 2:264 for a very close motif in the Qur'ān but without stone). Along the same lines, Q 17:50 expressly asserts God's ability to resurrect people (see RESURRECTION) even if they became stones and has a direct parallel in the New Testament (*Matt* 3:9). The remaining instances (Q 2:24; 66:6) speak about people and stones as fuel for the fire of hell (see HELL AND HELLFIRE), and thus once more show that God's might is able to transcend such opposites (cf. a parallel to this motif in the Bible: 1 Kings 18:31-8).

Stoning

A capital punishment for grave sins attested in the ancient Near East from time immemorial, representing part of the biblical legacy in the Qur'ān (see SCRIPTURE AND THE QUR'ĀN). The motif of stoning is expressed in two ways in the Qur'ān. It is either the verb *rajama,* "to stone" (equivalent to the biblical *ragam*), and its derivatives (thirteen occurrences); or verbs that convey the idea of "throwing, showering,

sending down" *(ramā, amṭara, arsala),* with *ḥajar,* "stone" (q.v.), as an instrumental complement (five occurrences).

The punishment of stoning occurs in four different situations in the Qurʾān and the origin of most of them can be traced back to the Bible. The first is the punishment inflicted from the sky by the lord (q.v.) on his enemies (q.v.) expressed exclusively by a verbal phrase with *ḥajar* as a complement (see CHASTISEMENT AND PUNISHMENT; PUNISHMENT STORIES). It has evident biblical connotations as three of the five contexts which depict this are part of the story of Abraham (q.v.; Ibrāhīm) and Lot (q.v.; Lūṭ; Q 11:82-3; 15:74; 51:33) as well as a direct prototype in the Bible (*Josh* 19:8-10). The two remaining contexts are related to the biography and mission of Muḥammad (see Q 8:32; 105:4; see SĪRA AND THE QURʾĀN), including the episode of a miraculous punishment from the sky visited upon the "companions of the elephant," or the invaders from south Arabia who intended to conquer Mecca (q.v.; see also ABRAHA; PEOPLE OF THE ELEPHANT). In a second, variant occurrence God inflicts punishment by stoning not only people but also the devil (q.v.; *shayṭān*) and his army. This act of the lord, which has no parallels in the Bible, emerges as part of the story of the creation (q.v.) of humankind (Q 15:16-17; 67:5) and connotes the eternal condemnation of Satan. This narrative in turn gives birth to a well-known epithet of the devil, namely *rajīm* (stoned; Q 3:36; 16:98; 81:25) and to a ritual of stoning during the pilgrimage (q.v.) to Mecca. Its relation to the first situation is shown by the contexts where devils are stoned from the sky with projectiles in the form of the fallen stars (Q 15:17; 67:5). The third incident is opposed to the first two. The stoning or the threat of stoning of the prophets and the believers by the infidels is attested both in the Bible (*Exod* 8:25-6) and the Qurʾān, where this occurs not only in the story of Moses (q.v.; Mūsā; Q 44:20) but also in the story of Noah (q.v.; Nūḥ; Q 26:116), Abraham (Q 19:46) and Shuʿayb (q.v.; Q 11:91; see also Q 18:20; 36:18; see also BELIEF AND UNBELIEF; PROPHETS AND PROPHETHOOD). The most paradoxical situation has to do with the fourth situation which, according to Muslim tradition, is present in the qurʾānic text "virtually," not actually. Stoning as the capital punishment prescribed by the law for certain major crimes (see SIN, MAJOR AND MINOR), which is very frequent in the Bible, is absent from the *textus receptus* of the qurʾānic vulgate (see CODICES OF THE QURʾĀN; COLLECTION OF THE QURʾĀN). Muslim scholars nevertheless postulate the existence of a qurʾānic verse which has been "abrogated" (*mansūkh;* see ABROGATION) textually but still remains one of the foundations of Muslim law (see LAW AND THE QURʾĀN): "If a man or a woman commits adultery, stone them…" (on this "stoning verse," see Suyūṭī, *Itqān* [chap. 47], iii, 82; Nöldeke, *GQ,* i, 248-52; Burton, *Collection,* 70-80, 89-96 and passim; see also ADULTERY AND FORNICATION).

Strangers and Foreigners

Those who are away from their usual place of residence and find themselves among people who view them as outsiders. In this sense, stranger and foreigner are social categories whose referent cannot be fixed but will vary according to time, place and culture. In medieval Arabic, Persian and Turkish, both categories were best expressed by the term *gharīb,* which, however, does not occur in the Qur'ān. *Ajnabī,* a term that has come to mean "foreigner" in all three languages especially in the era of modern nation-states, is also absent from the Qur'ān but it is represented in the forms *al-jār al-junubi* and *al-ṣāḥib bi-l-janbi* in Q 4:36 mentioned among categories of people that are to be shown kindness (see LOVE; MERCY). Most commentators are agreed that the former phrase should be understood as the opposite of the phrase *al-jār dhī l-qurbā,* "near or related neighbor," that precedes it in the verse (see KINSHIP). Al-Ṭabarī (d. 310/923; *Tafsīr,* iv, 82-3) reports "unrelated neighbor" and "neighbor who is a *mushrik* (see POLYTHEISM AND ATHEISM)" as the two alternative readings for *al-jār al-junubi,* and he himself opts for "unrelated stranger" as the best reading (translation of key passage in Rosenthal, Stranger, 39-40). Al-Bayḍāwī (d. prob. 716/1316-17; *Anwār,* i, 214) and, following him, the modern Turkish exegete Elmalılı (*Kur'ān Dili,* ii, 1354-5) simply read the two phrases *al-jār dhī l-qurbā* and *al-jār al-junubi* to mean "near [i.e. related and/or close] neighbor" and "far [i.e. unrelated and/or far] neighbor" respectively, and linked them to the following ḥadīth (which does not appear in the six canonical collections [see ḤADĪTH AND THE QUR'ĀN], but is attributed to a Companion of the Prophet in a number of other works; see COMPANIONS OF THE PROPHET; cf. Zabīdī, *Itḥāf,* vii, 268; Daylamī, *Firdaws,* ii, 120, no. 2628; see also Ghazālī, *Iḥyā',* ii, 231):

There are three [kinds of] neighbors. The first [i.e. the Muslim who is both a neighbor and a relative] has three rights: the right of proximity, the right of relatedness, the rights accorded him on account of being a Muslim. The second [i.e. the nonrelated Muslim who is a neighbor] has two rights: the right of proximity and the right of being a Muslim. And the third [i.e. the neighbor who is neither Muslim nor a relative] has one right: the right of proximity, and these are *mushrik*s [and *ahl al-kitāb*].

As for the qur'ānic phrase *al-ṣāḥib bi-l-janbi,* it is not clear whether it should be read in conjunction with what precedes it (which is the phrase *al-jār al-junubi*) or in isolation from what surrounds it. The first alternative would seem to be ruled out by the conjoined reading of the two preceding phrases as "near and far neighbors," while the second alternative is picked up by al-Ṭabarī (*Tafsīr,* iv, 83-4), who lists the meanings "travel companion (see TRIPS AND VOYAGES; JOURNEY)," "a man's female companion," and "friend, comrade," and endorses all of them. Whatever their exact meanings may be, however, it is clear that of the two phrases *al-jār al-junubi* and *al-ṣāḥib bi-l-janbi,* only the former may perhaps be slightly relevant to a discussion of strangers in the Qur'ān and neither expression really refers to those away from their usual place of residence.

Another qur'ānic locus for the concept of

foreignness might be the term *aʿjamī,* meaning "non-Arab" and "non-Arabic" (see ARABS). The term is used in Q 16:103, 41:44 and 26:198 but in all three instances the element of linguistic differentiation seems to be foregrounded and it is difficult to see anything other than an attempt to emphasize the inimitability (q.v.) of the Qurʾān. A better candidate for a qurʾānic approximation to the concept "stranger," however, is the phrase *ibn al-sabīl,* meaning "traveler," "wayfarer," or, though only secondarily, "guest," which is mentioned eight times in the Qurʾān (Q 2:177, 215; 4:36 [where it follows the phrase *al-ṣāḥib bi-l-janbi* discussed above]; 8:41; 9:60; 17:26; 30:38; 59:7) always as one of the many different social categories listed as recipients of charity. Arguably, the traveler is the stranger *par excellence;* the Qurʾān can be said to endorse travel (Q 20:53: "He spread out the earth for you and lined it up with roads," and Q 67:15: "It is he who has made the earth manageable for you, so travel its regions") and designates the traveler as deserving of charity and kind treatment. Thus it is possible to see here a genuine concern for the welfare of strangers, which would be in keeping with the qurʾānic insistence on social justice (see JUSTICE AND INJUSTICE; OPPRESSED ON EARTH, THE; OPPRESSION).

Finally, while not necessarily falling into the category of "strangers" as "outsiders," "guests" — and their proper treatment — also appear in the qurʾānic discourse (see VISITING; HOSPITALITY AND COURTESY). The "honored guests of Abraham" (*ḍayf ibrāhīm al-mukramīna,* Q 51:24; cf. 15:51) figure in four qurʾānic narratives (q.v.; Q 11:69f.; 15:51f.; 29:31f.; 51:24f.), in which Abraham (q.v.) is portrayed as the host *par excellence,* much as in the biblical account (see SCRIPTURE AND THE QURʾĀN). In these narratives, both Abraham and Lot (q.v.) fear lest their guests be dishonored and mistreated (cf. esp. Q 11:78; 15:68; 54:37), echoing the qurʾānic exhortation to proper treatment of visitors (and, by extension, foreigners).

Suffering

Pain, distress or injury, and the endurance of pain, distress or injury. The noun "pain" (*alam* or *waja*ʿ) does not occur in the Qurʾān. The verb "to feel pain" *(alima)* is used only three times, all in the same verse (Q 4:104), in which it refers to suffering in warfare. The adjective "painful" *(alīm),* a derivation of the same root *(ʾ-l-m),* is more commonly used. It occurs seventy-two times, mostly in combination with the word "punishment" *(ʿadhāb).*

With the exception of Q 36:18, the

expression "painful punishment" *('adhāb alīm)* relates to punishment from God (see CHASTISEMENT AND PUNISHMENT; REWARD AND PUNISHMENT). "My punishment is the painful punishment" (Q 15:50). Sometimes, the content of this punishment is mentioned. It is a wind that destroys everything (Q 46:24; see AIR AND WIND), smoke (q.v.) that covers the people (Q 44:10-11) or punishment in hell (Q 5:36; see HELL AND HELLFIRE). That the punishments in hell will be very painful can be concluded from their descriptions in the Qurʾān (e.g. Q 4:56; 9:35; 18:29; 22:19-21; 56:42-4). People in hell will undergo intense pain and suffering. They will sigh and groan (Q 11:106), distort their burnt faces (Q 23:104) and be distressed and despairing (Q 22:22; 43:75).

Part of God's punishment may be given in advance in this world (Q 24:19; 9:74). According to the qurʾānic punishment narratives (q.v.; see also PUNISHMENT STORIES), God has already punished unbelieving peoples by sending a flood *(ṭūfān,* Q 29:14), an earthquake *(rajfa,* Q 29:37), a violent storm *(ḥāṣib,* Q 29:40) or a roaring wind *(rīḥ ṣarṣar,* Q 69:6; see WEATHER). These calamities annihilated the unbelievers because of their persistence in unbelief after a prophet had warned them (see BELIEF AND UNBELIEF; PROPHETS AND PROPHETHOOD; WARNING). God's sending of a prophet may be accompanied by calamities that support the prophet's warning, so that the unbelievers will abandon their sins (Q 6:42; 7:94; 32:21-2; see SIN, MAJOR AND MINOR). This happened to the people of Egypt (q.v.). God sent them calamities as a warning, but when they did not heed these warnings and persevered in their sins, God drowned them in the sea (Q 7:133-6; see DROWNING).

Other afflictions and calamities are not meant to be punishments but trials (see TRIAL). God tests *(yablū)* the people's belief by giving them either welfare or adversity (Q 5:48; 6:165; 21:35; see GRACE; BLESSING; TRUST AND PATIENCE) because he wants to know how they behave in prosperity and in adversity (Q 47:31; 67:2). For this purpose, he has created earth (q.v.), life (q.v.), death (see DEATH AND THE DEAD), and people themselves (Q 11:7; 18:7; 67:2; 76:2; see CREATION). God tries them by restricting their sustenance (q.v.; Q 89:16). He imposes hunger (see FAMINE), poverty (see POVERTY AND THE POOR), and the loss of property (q.v.), lives and crops upon them to test them (Q 2:155). Being tried by these afflictions, people should show their belief in God by patient endurance (Q 2:156, 177; 22:35; 31:17).

Forms of suffering connected to human existence are the undergoing of illness, pain and infirmities (see ILLNESS AND HEALTH). In the Qurʾān some illnesses and infirmities are mentioned without being indicated as trials or punishments from God. Abraham (q.v.) referred to illness when he said that God gave him health when he was ill (Q 26:80). Leprosy and blindness are mentioned in Q 3:49 and Q 5:110, where it is said that Jesus (q.v.) healed the leper and those born blind (see SEEING AND HEARING; VISION AND BLINDNESS; MIRACLES; MARVELS). Q 22:5 refers to the infirmities of old age, stating that humans lose their knowledge (see KNOWLEDGE AND LEARNING) when they grow old (see YOUTH AND OLD AGE). The pains of childbirth are mentioned in Q 19:23, where it says Mary (q.v.) underwent them (see BIOLOGY AS THE CREATION AND STAGES OF LIFE). Blindness and other infirmities are mentioned when it is said that the blind, the cripple and the sick are excused for not being able to fulfill all their duties (e.g. Q 24:61; 48:17). There is no indication that these illnesses and infirmities are a punishment from God. An exception may be the blindness of Lot's (q.v.) people,

whose eyes (q.v.) God effaced. This was a punishment and a warning (Q 54:37). The terms illness, blindness and deafness (see HEARING AND DEAFNESS) are, however, often used metaphorically in the sense of wavering in belief or failing to heed a prophet's message (see METAPHOR).

An example of suffering which is a trial imposed by God is that endured by prophets, a group who cannot have deserved punishment. We have already seen that Abraham suffered illness. An often-cited example of patient suffering is Job (q.v.), whose suffering was not from God but Satan (Q 21:83; 38:41; see DEVIL). According to the exegetes, however, this was done with God's permission. When Job endured affliction without losing his belief in God, God rewarded him by taking away the affliction, returning his family and doubling their number (Q 21:84; 38:42-3). Another prophet who suffered was Jacob (q.v.), who was told that his son Joseph (q.v.) had been killed by a wolf (Q 12:16-18). He patiently endured the loss of his son, although he became blind because of his distress (Q 12:84). Later he found out that Joseph had not died and he regained his sight (Q 12:96).

Job and Jacob suffered both mentally and physically but the suffering of other prophets was largely mental. They suffered distress, being called liars (see LIE) and being rejected by the unbelievers (Q 6:34; 14:12). This also happened to Muḥammad (see OPPOSITION TO MUḤAMMAD). He was distressed and depressed because of what the unbelievers said to him (Q 6:33; 15:97) and their unbelief caused him great sorrow. "Perhaps you [Muḥammad] will kill yourself with grief *(asaf),* because they do not believe in this message" (Q 18:6; cf. 26:3; see JOY AND MISERY). God told him not to grieve (Q 5:41; 10:65; 27:70; 31:23; 36:76) but to endure patiently (Q 16:127; 20:130; 73:10). Just like Muḥammad, the believers should patiently endure distress and affliction (e.g. Q 3:200). If they hold out and keep to their belief in God in difficult situations, God will reward them (Q 23:111; 25:75; 33:35; 76:12). He will even double their reward (Q 28:54) and remit the bad actions of those who suffered because of their religion (Q 3:195).

More details about suffering can be found in the ḥadīth (see ḤADĪTH AND THE QUR'ĀN). It is reported that Muḥammad said that for each harm that a Muslim meets in the form of illness, tiredness, sorrow, distress and pain, "even if it were the prick of a thorn," God will grant remission of some of his or her sins (Bukhārī, *Ṣaḥīḥ,* bk. 75, *K. Marḍā,* 1/1, iv, 40; Fr. trans. iv, 50; and 2/2, iv, 41; trans. iv, 51). As God does not punish twice and some sins are already paid for by suffering imposed by him, they will not be counted on the last day (see LAST JUDGMENT). Suffering is also seen as a trial from God. Those who patiently endure it will be generously rewarded. A ḥadīth *qudsī* (prophetic dictum attributed to God that is not in the Qur'ān) says that when God tests a Muslim by depriving him of his eyes, and he patiently undergoes it, he will enter paradise (q.v.) as compensation (Bukhārī, *Ṣaḥīḥ,* bk. 75, 7, iv, 42; Fr. trans. iv, 52-3). God's imposition of illness and pain can be seen as a sign of his special attention or as a favor. Only those who suffer get the opportunity to practice patient endurance. Abū Hurayra (d. ca. 58/678) reported that Muḥammad said: "If God wants to do good to somebody, he afflicts him with trials" (Bukhārī, *Ṣaḥīḥ,* bk. 75, 1/5, iv, 41; Fr. trans. iv, 51, which contains an alternative reading of the final phrase: "Celui à qui Dieu veut du bien réussit toujours à l'obtenir"; cf. Ibn Ḥajar, *Fatḥ,* x, 108 for both readings). A closely related view is that those who are most loved by God suffer most. This finds its expression in the saying that the people

who are most visited with afflictions are the prophets, then the most pious people (see PIETY), and so on. According to ʿĀʾisha (see ʿĀʾISHA BINT ABĪ BAKR), nobody suffers as much pain as Muḥammad did (Bukhārī, *Ṣaḥīḥ,* bk. 75, 2/1, iv, 41; Fr. trans. iv, 51).

Suffering is an important element in Islamic mysticism (see ṢŪFISM AND THE QURʾĀN). Patient endurance *(ṣabr)* of affliction *(balāʾ)* is one of the stations *(maqāmāt)* of the mystical path. It is closely related to *tawakkul,* "complete trust in God," and *riḍā,* "contentment about all that comes from God." According to the descriptions of the mystical path, the mystic's attitude to suffering changes in accordance with his mystical progress. First, he patiently endures affliction as a trial from God. Next, he willingly accepts it in the belief that affliction is a grace from God. At a still higher mystical level, he receives affliction with contentment and joy because God, the object of his love, sent it to him. Those who love God are happy to receive afflictions because they consider these as signs of divine love. The afflictions teach them that they are friends of God (see FRIENDS AND FRIENDSHIP), and that they are tested by him because he wishes to know the sincerity of their love.

The Imāmī Shīʿī (see SHĪʿISM AND THE QURʾĀN) doctrine of suffering focuses on the sufferings of Muḥammad and his descendants, the Imāms (see IMĀM), and in particular on the sufferings of Muḥammad's son-in-law ʿAlī b. Abī Ṭālib (q.v.; d. 40/661) and his grandson, al-Ḥusayn (d. 61/680). On the day of judgment, the Prophet, his daughter Fāṭima (q.v.), and the Imāms will be allowed to intercede for the faithful, as a reward for their sufferings (see INTERCESSION).

Suffering as a theological question

The view that suffering imposed by God is either a punishment or a trial raises the question of why innocent children (q.v.) and animals suffer. Adults of sound mind (see MATURITY) are considered to be *mukallaf,* which means that they are subject to God's imposition of obligations *(taklīf).* They will be rewarded for fulfilling these obligations and will be punished for failing to do so. Children, the insane (see INSANITY), and animals (see ANIMAL LIFE) are not *mukallaf,* which means that their suffering cannot be a punishment, and cannot be a trial, either, because they are not eligible for a reward for patient endurance. Some theologians believed that children suffer as an advance punishment for sins they will commit as adults. This does not answer the question of the suffering of children who die before reaching adulthood, and the suffering of animals.

The Muʿtazilīs (q.v.) were convinced that the suffering of children, the insane, and animals cannot be intended to punish them because this would be in conflict with God's justice (see JUSTICE AND INJUSTICE). According to the Muʿtazilī scholar ʿAbd al-Jabbār (d. 415/1025), God imposes suffering upon children and animals because he wants to warn the adults near them. The children and animals will be compensated for this in the hereafter (see ESCHATOLOGY). For that reason, they will be revived on the last day (see RESURRECTION), together with those who were *mukallaf.* According to ʿAbd al-Jabbār, all those who are brought back to life will receive compensation for undeserved suffering, but they will have to give up some of this compensation in order to compensate for pain they themselves inflicted on other living beings without God's permission. The people of paradise will receive their compensation in addition to their reward, whereas the people of hell will receive it in the form of a temporal reduction of their punishment. Some adherents to parts of the Muʿtazilī doctrine, such as the Imāmī Shīʿīs

al-Shaykh al-Mufīd (d. 413/1022) and al-Sharīf al-Murtaḍā (d. 436/1044) and the Karaite Yūsuf al-Baṣīr (fl. first half fifth/eleventh century) held largely similar opinions about suffering and its compensation.

The Ashʿarīs rejected the Muʿtazilī rationalizations about God's actions (see THEOLOGY AND THE QUR'ĀN). What counted for them was that everything in this world, good or bad, happens in accordance with God's will. God imposes suffering on his creatures but humans cannot know why he does so (see KNOWLEDGE AND LEARNING; FREEDOM AND PREDESTINATION; INTELLECT). The incomprehensibility of God's actions may be illustrated by the qurʾānic story of Moses' (q.v.) friend, whose name, according to the majority of the exegetes, was al-Khiḍr (or al-Khaḍir; see KHAḌIR/KHIḌR). He told Moses not to ask him about his actions, which included the killing of a boy (see MURDER; BLOODSHED). Nevertheless, Moses could not stop himself asking why he did such things. In the end, his friend explained his motives to him. Then it became clear to Moses that in reality his friend's actions were deeds of mercy (q.v.). The friend, however, left him because of his questioning (Q 18:66-82). This may explain why the Ashʿarīs and mainstream Sunnī Islam did not develop a theory about suffering in this world. Al-Bāqillānī (d. 403/1013) and al-Juwaynī (d. 478/1085) discussed suffering mainly in order to refute their opponents. Al-Juwaynī explained that there is no need to value pains imposed by God because we know that they are good, as they come from God (see GOOD AND EVIL). Al-Ghazālī (d. 505/1111) pointed out that humans do not have the right to ask God for an explanation of his actions (Q 21:23). As God is the master of all (see LORD; KINGS AND RULERS; SOVEREIGNTY), he is entitled to impose pain without it being deserved or compensated for (*Iḥyāʾ*, i, 99 [*kitāb* 2, *faṣl* 3, *rukn* 3: *al-ʿilm bi-afʿāl Allāh, al* 6]). He declared that although we cannot know the reasons for God's actions, believers should be convinced that all afflictions from God in this world may contain secret blessings (Ormsby, *Theodicy,* 256).

Ṣūfism and the Qurʾān

Taṣawwuf, Islamic mysticism, is an ascetic-mystical trend in Islam characterized by a distinct life-style, values, ritual practices, doctrines and institutions. Ṣūfism emerged as a distinct ascetic and mystical trend in Islamic piety under the early ʿAbbāsids at about the same time as similar movements in Syria, Iran and central Asia which, though designated by different names, shared the same world-renouncing, inward-looking and esoteric attitude. By the fourth/tenth century, the Iraq-based trend in Islamic ascetic (see ASCETICISM) and mystical piety (q.v.) known as "Ṣūfism" *(taṣawwuf)* gradually prevailed over and integrated the beliefs and practices of its sister movements in the other regions of the caliphate (see CALIPH). By the end of the fourth/tenth century, leading representatives of this syncretic ascetic and mystical trend in Islam had generated a substantial body of teachings, practices and normative oral and literary lore that became the source of inspiration, life-orientation, ethos and identity for its subsequent followers, whose number continued to grow with every century. With the emergence first of Ṣūfī lodges, and, somewhat later, Ṣūfī "brotherhoods" (the fifth-seventh/eleventh-thirteenth centuries) or "orders" (*ṭuruq,* sing. *ṭarīqa*), Ṣūfism became part and parcel of the spiritual, social and political life of pre-modern Islamdom. With the advent of modernity in the thirteenth/nineteenth century Ṣūfism was subjected to strident criticism by Muslim modernists and reformers, and in the course of the fourteenth/twentieth century lost ground to competing ideologies, both religious and secular (see POLITICS AND THE QURʾĀN). Nevertheless, it has managed to survive both criticisms and overt persecutions and even won converts among some Western intellectuals.

Early Ṣūfī attitudes to the Qurʾān

From the outset, the Qurʾān was the principal source of contemplation and inspiration for every serious Muslim ascetic and mystic, whether formally Ṣūfī or not. In fact, many Ṣūfī concepts and terms have their origin in encounters with the qurʾānic text, endowing Ṣūfism with much-needed legitimacy in the eyes of both Ṣūfīs and Muslims not directly affiliated with it. Yet, from the very beginning Ṣūfī interpretations of the scripture (as well as Ṣūfī practices, values and beliefs) were challenged by influential representatives of the Sunnī and Shīʿī religious establishments (see TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY), occasionally resulting in persecution of individual mystics. Ṣūfīs were accused of overplaying the allegorical aspects of the Qurʾān, claiming privileged, esoteric understanding of its contents and distorting its literal meaning (see POLYSEMY; LITERARY STRUCTURES AND THE QURʾĀN). To demonstrate their faithfulness to the spirit and letter of the revelation (see REVELATION AND INSPIRATION) advocates of Ṣūfism drew heavily on the qurʾānic verses (q.v.) which, in their view, legitimized their brand of Islamic piety. Such verses usually emphasize the proximity and intimacy between God and his human servants (e.g. Q 2:115, 186; 20:7-8; 58:7; see SERVANT; WORSHIP; GOD AND HIS ATTRIBUTES). God's immediate and immanent presence among the faithful is forcefully brought home in Q 50:16, in which he declares himself to be nearer to man than "his jugular vein" (see ARTERY AND VEIN). The relationship of closeness and intimacy is occasionally presented in the Qurʾān in terms of mutual love (q.v.) between the maker and his creatures (see CREATION; COSMOLOGY), as, for instance, in Q 5:54 (cf. Q 3:31, 76, 134, 146, 148, 159; 5:93, which also describe different categories of believers deserving of divine affection). Deeming themselves paragons

of piety and devotion to God and true "heirs" of his Prophet (see PROPHETS AND PROPHETHOOD; MUḤAMMAD), representatives of the early [proto-]Ṣūfī movements viewed such verses as referring primarily, if not exclusively, to them. With the emergence of mystical cosmology and metaphysics, which provided justification for the mystical experiences of the Ṣūfīs, they put the Qur'ān to new, creative uses. Thus, in the famous "Light Verse" (Q 24:35) God's persona is cast in the imagery of a sublime, majestic and unfathomable light, which renders it eminently conducive to gnostic elaborations on the theme of light (q.v.) and darkness (q.v.) and the eternal struggle between spirit (q.v.) and matter. According to early Ṣūfī exegetes, God guides whomsoever he wishes with his light (see ERROR; ASTRAY; FREEDOM AND PREDESTINATION) but has predilection for a special category of pious, god-fearing individuals (see FEAR) who devote themselves completely to worshipping him. In return, God assures them of salvation (q.v.) in the hereafter (Q 2:38, 262, 264; 3:170; etc.; see ESCHATOLOGY). As to those "who prefer the present life over the world (q.v.) to come," "a terrible chastisement" awaits them (Q 14:3; cf. 2:86; see REWARD AND PUNISHMENT). From the beginning, Muslim ascetics and mystics identified themselves with God's "protégés" *(awliyā')* mentioned in Q 10:62 (cf. Q 8:34; 45:19; see CLIENTS AND CLIENTAGE; FRIENDS AND FRIENDSHIP). With time Ṣūfī exegetes came to portray them as God's elect "friends" and confidants who are able to intercede on behalf of the ordinary believers and guide them aright (see INTERCESSION; SAINTS). In Ṣūfī lore such "friends of God" were identified with authoritative Ṣūfī masters, both living and deceased. In Q 7:172, which figures prominently in early Ṣūfī discourses, the relations between God and his creatures are placed in a cosmic framework, as a primordial covenant (q.v.; *mīthāq*) between them. During this crucial event the human race presented itself before God in the form of disembodied souls (q.v.) to bear witness to the absolute sovereignty (q.v.) of their lord (q.v.) at his request (see WITNESSING AND TESTIFYING). Once in possession of sinful and restive bodies (see SIN, MAJOR AND MINOR), however, most humans have forgotten their promise of faithfulness and devotion to God and therefore have to be constantly reminded of it by divine messengers (see MESSENGER) and prophets. The goal of the true Ṣūfī is to return to the state of pristine devotion and faithfulness of the day of the covenant by minimizing the corruptive drives of his body and his lower soul — one that "commands evil" (*ammāra bi-l-sū'*, Q 12:53; see GOOD AND EVIL). If successful, the mystic can transform his lower, restive self into a soul "at peace" (*al-nafs al-muṭma'inna*, Q 89:27) that is incapable of disobeying its lord (see DISOBEDIENCE). This can only be achieved through the self-imposed strictures of ascetic life, pious meditation and the remembrance (q.v.) of God *(dhikr)* as explicitly enjoined in Q 8:45, 18:24 and 33:41 (see also REFLECTION AND DELIBERATION). Finally, on the level of personal experience, verses describing the visionary experiences of the prophet Muḥammad (namely, Q 17:1 and Q 53:1-18; see VISIONS) provided a fruitful ground for mystical elaborations and attempts by mystically minded Muslims to, as it were, "recapture the rapture" of the founder of Islam, all the more so because the Qur'ān and the sunna (q.v.) repeatedly enjoin the believers to imitate him meticulously. While all of these verses resonated well with the aspirations of early Muslim ascetics and mystics, there were also those that did not, in that they prescribed moderation in worship, enjoyment of family (q.v.) life and fulfillment of social responsibilities,

while at the same time discouraging the "excesses" of Christian-style monasticism (Q 4:3-4, 25-8, 127; 9:31; 57:27; see CHRISTIANS AND CHRISTIANITY; MONASTICISM AND MONKS; ABSTINENCE). Yet, these passages, as well as numerous injunctions against the renunciation of this world found in the Prophet's sunna, could be either ignored or allegorized away, especially since some of them were inconclusive or self-contradictory (e.g. Q 5:82, which may be interpreted as praising the Christian monks for their exemplary righteousness). Eventually, however, the weight of scriptural evidence and social pressures forced most adherents of Ṣūfism to steer a middle course, which allowed them to participate in social life and raise families while not compromising their ascetic-mystical vocations. As the body of Ṣūfī lore grew with the passage of time and Ṣūfism became a distinct life-style and a system of rituals (see RITUAL AND THE QUR'ĀN), practices and beliefs, there emerged a specific Ṣūfī exegesis aimed at justifying them (see also EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL).

The rise and early development of Ṣūfī exegesis

The earliest samples of the Ṣūfī exegetical lore were collected by an eminent Ṣūfī master of Nīshāpūr, Abū ʿAbd al-Raḥmān al-Sulamī (d. 412/1021) in his *Ḥaqāʾiq al-tafsīr*. This work, which still awaits a critical edition (but cf. Böwering's ed. of Sulamī's *Ziyādāt,* an appendix to the *Ḥaqāʾiq*), is practically our only source for the initial stages of mystical exegesis in Islam. Its major representatives, al-Ḥasan al-Baṣrī (d. 110/728), Jaʿfar al-Ṣādiq (d. 148/765), Sufyān al-Thawrī (d. 161/778) and ʿAbdallāh b. al-Mubārak (d. 181/797) were not Ṣūfīs *stricto sensu,* since the Baghdād school of Ṣūfism was yet to emerge. Rather, these pious individuals were appropriated by Ṣūfism's later advocates, who presented them as paragons of Ṣūfī piety *avant-la-lettre*. While their preoccupation with the spiritual and allegorical aspects of the scripture is impossible to deny, the authenticity of their exegetical logia, which were collected and transmitted by al-Sulamī and some of his immediate predecessors more than a century after their death, is far from certain. The problem is particularly severe (and intriguing) in the case of the sixth Shīʿī *imām* (q.v.), Jaʿfar al-Ṣādiq (see also SHĪʿISM AND THE QUR'ĀN). His role as a doyen of primeval mystical exegesis is difficult to prove, especially since his exegetical logia transmitted by al-Sulamī are devoid of any of the expected Shīʿī themes. Unless his other *tafsīr* transmitted in Shīʿī circles proves similar or identical to the one assembled by al-Sulamī, the matter will remain uncertain (for details see Nwyia, *Exégèse,* and Böwering, *Mystical vision*). One should not rule out the possibility of Shīʿī elements having been expunged from Jaʿfar's exegetical logia by Sunnī Ṣūfīs who transmitted them through separate channels (see THEOLOGY AND THE QUR'ĀN). Alternatively, one may suggest that Ṣūfī and Shīʿī esotericism originated in the same pious circles (Jaʿfar al-Ṣādiq is frequently quoted in the standard Ṣūfī manual of Abū l-Qāsim al-Qushayrī; d. 465/1072), whereupon it took on different forms in the Sunnī and Shīʿī intellectual environments. The problem of authorship is less severe in the case of such ascetically minded individuals as al-Ḥasan al-Baṣrī, al-Thawrī, and Ibn al-Mubārak who were major exponents of Sunnī Islam in their age, although their role as the *bona fide* progenitors of the Ṣūfī tradition is problematic. If authentic, Jaʿfar's logia are probably the earliest extant expression of the methodological principles of mystical *tafsīr,* which were adopted and elaborated by subsequent generations of Ṣūfī commentators.

According to Jaʿfar's statement cited by al-Sulamī at the beginning of his *Ḥaqāʾiq al-tafsīr,* the Qurʾān has four aspects: *ʿibāra* (a literal or obvious articulation of the meaning of a verse); *ishāra* (its allegorical allusion); *laṭāʾif* (its subtle and symbolic aspects; see SYMBOLIC IMAGERY) and *ḥaqāʾiq* (its spiritual realities; cf. Böwering, Scriptural "senses"). Each of these levels of meanings has its own addressees, respectively: the ordinary believers *(al-ʿawāmm),* the spiritual elite *(al-khawāṣṣ),* God's intimate friends *(al-awliyāʾ)* and the prophets *(al-anbiyāʾ)*. On the practical level, Jaʿfar and his Ṣūfī counterparts usually dealt with just two levels of meaning: the outward/exoteric *(ẓāhir)* and the hidden/esoteric *(bāṭin),* thereby subsuming the moral/ethical/legal meanings of a given verse (see ETHICS AND THE QURʾĀN; LAW AND THE QURʾĀN) under "literal" and its allegorical/mystical/anagogical subtext under "hidden." As demonstrated by P. Nwyia, Jaʿfar's exegetical interests were worlds apart from those of his contemporary Muqātil b. Sulaymān (d. 150/767) who pursued a more conventional (albeit imaginative) historical and philological *tafsīr* (see GRAMMAR AND THE QURʾĀN). For instance, unlike Muqātil, Jaʿfar shows no interest in the historical circumstances surrounding the battle of Badr (q.v.), as presented in the Qurʾān (see also OCCASIONS OF REVELATION). When the Qurʾān says that "God supported him [Muḥammad] with the legions you [his followers] did not see" (Q 9:40), Jaʿfar interprets the "legions" not as "angels" (as argued by Muqātil and other exoterically minded exegetes; see ANGEL; RANKS AND ORDERS; TROOPS) but as spiritual virtues that the mystic acquires in the course of his progress along the path to God *(ṭarīq),* namely, "certitude" *(yaqīn),* "trust in God" *(thiqa)* and a total "reliance" on him in everything one undertakes (*tawakkul;* see TRUST AND PATIENCE; VIRTUE). Likewise, the qurʾānic injunction to "purify my [God's] house (namely, the Kaʿba [q.v.]; see also HOUSE, DOMESTIC AND DIVINE) for those who shall circumambulate it" (Q 22:26) is interpreted by Jaʿfar as a call upon the individual believer to "purify [his] soul from any association with the disobedient ones and anything other than God" (see POLYTHEISM AND ATHEISM), while the phrase "those who stay in front of it [the Kaʿba]" is glossed as an injunction for the ordinary believers to seek the company of "the [divine] gnostics *(ʿārifūn),* who stand on the carpet of intimacy [with God] and service of him." The notion of the divinely bestowed "gnosis," or mystical knowledge *(maʿrifa),* which characterizes these elect servants of God figures prominently in Jaʿfar's logia (see e.g. his commentary on Q 7:143, 160; 8:24; 27:34). This was to become a central concept in later Ṣūfī epistemology, where it is usually juxtaposed with both received (traditional) wisdom *(naql)* and knowledge acquired through rational contemplation (*ʿaql;* see KNOWLEDGE AND LEARNING; INTELLECT). The Qurʾān was, for Jaʿfar and Ṣūfī commentators, a source of and a means towards the true realization *(taḥqīq)* of God (see TRUTH).

The next stage of the development of Ṣūfī exegesis, or, as Nwyia aptly calls it, *une lecture introspective du Coran,* is associated with a fairly large cohort of individuals who lived in the third/ninth-early fourth/tenth centuries. Their Ṣūfī credentials, a few exceptions apart (e.g. al-Ḥakīm al-Tirmidhī, fl. third/ninth cent.), do not raise any serious doubts. At least one of them, Aḥmad b. ʿAṭāʾ (d. 309/922), and possibly also Dhū l-Nūn al-Miṣrī (d. 246/861) were involved in the transmission of Jaʿfar's exegetical logia, which they amplified with their own elaborations. The others — namely Sahl al-Tustarī (d. 283/896), Abū Saʿīd al-Kharrāz (d. 286/899), Abū l-Ḥusayn al-

Nūrī (d. 295/907), Abū l-Qāsim al-Junayd (d. 298/910), Abū Bakr al-Wāsiṭī (d. 320/932) and Abū Bakr al-Shiblī (d. 334/946) — were frequently cited in Ṣūfī literature as authoritative sources of exegetical logia and, in the case of al-Tustarī, Ibn ʿAṭāʾ and al-Wāsiṭī, also as authors of full-fledged qurʾānic commentaries (Böwering, Ṣūfī hermeneutics; id., *Mystical vision*).

The centrality of the Qurʾān to Ṣūfī piety

The methods of Qurʾān interpretation characteristic of early Ṣūfī masters were examined by Nwyia (Jaʿfar al-Ṣādiq, Shaqīq al-Balkhī, Ibn ʿAṭāʾ, and al-Nūrī) and Böwering (al-Tustarī, al-Sulamī, and al-Daylamī). They should be viewed against the background of the practices, life-style, values and beliefs current among the members of the early Ṣūfī movement. On the practical level, the recitation of the Qurʾān (q.v.) was an indispensable part of quotidian Ṣūfī life. Thus, Ibn ʿAṭāʾ is said to have recited the entire text of the Qurʾān on a daily basis and thrice a day during the month of Ramaḍān (q.v.), which along with other rituals and supererogatory prayers (see PRAYER) left him only two hours of sleep; Sahl al-Tustarī (d. 283/896) learned the entire Qurʾān by heart when he was six or seven years old and kept reciting it throughout the rest of his life; Mālik b. Dīnār (d. 131/748) "was 'chewing' it for [the first] twenty years [of his life] only to take pleasure in its recitation *(tilāwa)* for the next twenty years" (Sarrāj, *Kitāb al-Lumaʿ*, 43); Ibn Khafīf (d. 371/981) recited Q 112:1 ten thousand times during just one prayer and occasionally recited the entire text of the Qurʾān in the course of one prayer, which took him an entire day and a good part of the night, etc.

In most cases, esoteric interpretations of the Qurʾān by the above-mentioned Ṣūfīs were the fruits of many years of incessant recitation in an attempt to grasp and "extract" its hidden meaning *(istinbāṭ)*. This term, which is derived from Q 4:83, became the hallmark of Ṣūfī methods of Qurʾān interpretation. Alerted to the presence of a hidden meaning in a given verse by its subtle "allusion" *(ishāra)*, the Ṣūfī felt obligated to "extract" it by means of *istinbāṭ*. This process is limited to those individuals who have fully engrossed themselves in the "sea" of the divine revelation after having purified their souls of any worldly attachments. Commenting on Q 4:83, al-Ḥallāj (d. 309/922) stated that a Ṣūfī's ability to exercise *istinbāṭ* corresponds to "the measure of his piety, inwardly and outwardly, and the perfection of his gnosis *(maʿrifa)*, which is the most glorious station of faith" (q.v.; *ajall maqāmāt al-īmān;* Sulamī, *Ḥaqāʾiq*, i, 157). The close link between one's ability to practice *istinbāṭ* and one's strict compliance with the precepts of the divine law is brought forth by Abū Naṣr al-Sarrāj (d. 378/988), a renowned collector and disseminator of early Ṣūfī lore. In his words, "extractions" *(mustanbaṭāt)* are available only to those who "act in accord with the book (q.v.) of God, outwardly and inwardly, and follow the messenger of God, outwardly and inwardly." In return, God makes them "heirs to the knowledge of subtle allusion *('ilm al-ishāra)*" and "unveils to the hearts of his elect [servants] carefully guarded meanings *(maʿānī madhkhūra)*, spiritual subtleties *(laṭāʾif)* and well-kept secrets" (*asrār makhzūna;* Sarrāj, *Kitāb al-Lumaʿ*, 105).

In the case of the early Ṣūfī exegete Sahl al-Tustarī, we find a deeply personal and experiential relationship of the Ṣūfī to the Qurʾān, which evolves within the framework of an oral recitation and reception of the divine word (see ORALITY; WORD OF GOD). On hearing or reciting a verse that resonates with the mystic's spiritual state he may occasionally find himself gripped by

an intense ecstasy and even lose consciousness. According to Böwering (*Mystical,* 136), al-Tustarī's commentary can be seen as a product of such experiential encounters "between the qurʾānic keynotes and the mystical matrix of [the mystic's] world of ideas." Inspired by a certain verse, al-Tustarī spontaneously endeavored to communicate to his disciples his deeply personal and experiential understanding of it, which often had very little to do with its literal meaning. To sum up,

> The Ṣūfīs… read the Qurʾān as the word of God, and what they seek there is not the word as such (which may even become a veil between them and God), but a God who makes himself accessible [to his worshippers] by means of this word (Nwyia, *Trois oeuvres,* 29).

The themes of the first Ṣūfī commentaries on the Qurʾān are diverse and rather difficult to summarize. They usually deal with mystical cosmology, eschatology and the challenges faced by the human soul on its way to God (see TRIAL). After professing their allegiance to their divine sovereign on the day of the primordial covenant (Q 7:172) human beings have found themselves plunged into a world of false values, temptations and illusions designed to test the integrity of their pact with God. God created good and evil and arbitrarily imposed his command *(amr)* on his human servants in order to distinguish the blessed from the evildoers (see ELECT; EVIL DEEDS; BLESSING; GRACE). Within the former category he designated a special class of believers whom he endowed with an intuitive, revelatory knowledge of himself and his creatures *(maʿrifa),* leaving the rest of humankind to be content with the "externals" of religious faith and practice. These elect "friends of God" *(awliyāʾ Allāh)* carry divine light in their hearts (see HEART) and thus can be seen as embodiments of his immanent and guiding presence amidst humankind. By imitating the friends of God (who, in turn, imitate the godly ways of his Prophet) ordinary believers can hope to escape the allure and temptations of mundane existence and to achieve salvation in the hereafter. Attaining the status of God's friend and gnostic is not automatic, however, and requires painstaking efforts on the part of the aspirant *(murīd)* as well as God's continual assistance. The seeker's greatest challenge is the corruptive influences of his vile body and the base soul *(nafs),* which acts as a constant temptress and an ally of Iblīs (see DEVIL). Its machinations can only be overcome by constant remembrance of God *(dhikr),* including the recitation of God's word and remembrance of his "most beautiful names." This goal can only be achieved by the elect few who traverse the entire length of the path to God in order to enter into his presence (see PATH OR WAY; FACE OF GOD). In this state they become completely oblivious of the corrupt world around them, taking God as their sole focus and *raison d'être*. By any standard, since its inception Ṣūfī exegesis was thoroughly elitist and esoteric. Its practitioners implicitly and, on occasion, explicitly dismissed the concerns of mainstream Qurʾān interpreters (legal, historical, philological and theological) as inadequate and even misguided inasmuch as they focused on the Qurʾān's "husks," while ignoring its all-important spiritual "kernel." The Ṣūfīs regarded themselves as the sole custodians of that kernel and sought to protect it from outsiders by using subtle allusions and recondite terminology.

Some Muslim scholars were enraged by the Ṣūfī claim to a privileged knowledge of the scripture and denounced Ṣūfī exegesis as fanciful, arbitrary and not supported by the authority of the Prophet and his Companions (see COMPANIONS OF THE

PROPHET; ḤADĪTH AND THE QURʾĀN). Thus, a renowned Qurʾān commentator, ʿAlī b. Muḥammad al-Wāḥidī (d. 468/1076), not only refused to accord al-Sulamī's exegetical summa the status of *tafsīr* but even proclaimed it an expression of outright "unbelief" (see BELIEF AND UNBELIEF). Similar negative opinions of that work were voiced by Ibn al-Jawzī (d. 597/1201), Ibn Taymiyya (d. 728/1328) and al-Dhahabī (d. 748/1348), who declared it to be a collection of "distortion and heresy" (q.v.; *taḥrīf wa-qarmaṭa;* see also CORRUPTION; FORGERY) reminiscent of Ismāʿīlī exegesis *(taʾwīlāt al-bāṭiniyya)*. Yet, despite such criticism al-Sulamī's voluminous work, which contains more than twelve thousand glosses on some three thousand qurʾānic passages, gained wide popularity among Ṣūfīs of various stripes. As was the case with Jaʿfar, Ibn ʿAṭāʾ and al-Tustarī, al-Sulamī did not include in his compendium any conventional exegetical material, be it legal, philological or historical (Böwering, Ṣūfī hermeneutics). His position is clearly stated in the introduction to his magnum opus:

Upon discovering that — among the practitioners of exoteric sciences *(ʿulūm ẓawāhir)* [who] have compiled [numerous] works pertaining to [beneficial] virtues *(fawāʾid)* of the Qurʾān, such as methods of its recitation (*qirāʾāt;* see READINGS OF THE QURʾĀN), its [historical] commentaries *(tafsīr),* its difficulties (*mushkilāt;* see DIFFICULT PASSAGES), its legal rulings *(aḥkām),* its vocalization *(iʿrāb),* its lexicological aspects *(lugha),* its summation and detailed explanation *(mujmal wa-mufaṣṣal),* its abrogating and abrogated verses (*nāsikh wa-mansūkh*; see ABROGATION), and so on — no one has cared to collect the understanding of its discourse *(khiṭāb)* in accordance with the language of the people of the true reality *(ahl al-ḥaqīqa)*… I have asked God's blessing to bring together some of it.

All told, al-Sulamī's exegetical methods and goals are similar to those of about a hundred of his authorities, who lived in the third/ninth and fourth/tenth centuries and whose foremost representatives have already been discussed. To quote the major Western expert on this work,

The *Ḥaqāʾiq al-tafsīr* is the crowning event of a long creative period of Ṣūfī terminology and ideology, developing in close relationship with its Koranic foundation and yet breaking through to a continuous process of inspired revelation by the methodological means of allusion (Böwering, Ṣūfī hermeneutics, 265).

The growth and maturity of Ṣūfī exegetical tradition (from the fifth/eleventh to the seventh/thirteenth centuries)

Al-Sulamī's monumental work, which played the same role in Ṣūfī *tafsīr* as al-Ṭabarī's (d. 310/923) *Jāmiʿ al-bayān* in traditional exegesis, laid the foundations for the subsequent evolution of this genre of Ṣūfī literature. With time there emerged several distinct trends within the body of Ṣūfī exegetical literature, which reflected the growing internal complexity of the Ṣūfī movement in the period leading up to the fall of the Baghdād caliphate in 656/1258. One such trend can be described as "moderate" or "*sharīʿa*-oriented." It is represented by such Ṣūfī luminaries as al-Qushayrī (d. 465/1074), Abū Ḥāmid al-Ghazālī (d. 505/1111) and Abū Ḥafṣ ʿUmar al-Suhrawardī (d. 632/1234).

Abū l-Qāsim al-Qushayrī of Nīshāpūr is famous first and foremost as the author of the popular tract *al-Risāla [al-Qushayriyya] fī ʿilm al-taṣawwuf* which combines elements of Ṣūfī biography with those of a Ṣūfī manual. Like the *Risāla,* al-Qushayrī's

qur'ānic commentary *Laṭā'if al-ishārāt* pursues a clear apologetic agenda: the defense of the teachings, values and practices of "moderate," Junayd-style Ṣūfism and the demonstration of its full compliance with the major precepts of Ash'arī theology. Written in 410/1019, this exegetical work consistently draws a parallel between the gradual progress from the literal to the subtlest meanings *(laṭā'if)* of the qur'ānic text and the stages of the Ṣūfī's spiritual and experiential journey to God. The success of this exegetical progress, as well as of the Ṣūfī journey, depends on the wayfarer's ability to combine the performance of pious works and feats of spirit with sound doctrinal premises. Giving preference to one over the other will result in failure. Even when this delicate balance is successfully struck, one still needs divine assistance in unraveling the subtleties of the divine revelation, which is equally true of the Ṣūfī seeker's striving toward God. Hence the notion of a privileged, esoteric knowledge of both God and this word that God grants only to his most intimate, elect "friends," the *awliyā'*. This idea is stated clearly in the introduction to *Laṭā'if al-ishārāt:*

> [God] has honored the elect *(aṣfiyā')* among his servants by [granting them] the understanding of his subtle secrets (q.v.; *laṭā'if asrārihi*) and his lights so that they can see the elusive allusions and hidden signs (q.v.) contained therein [in the Qur'ān]. He has shown their innermost souls hidden things so that by the emanations of the unseen (see HIDDEN AND THE HIDDEN) which he has imparted solely to them they can become aware of that which has been concealed from all others. Then they have started to speak according to their degrees [of attainment] and capabilities, and God — praise be to him — inspired in them things by which he has honored them. So, they now speak on behalf of him, inform about the subtle truths that he has imparted to them, and point to him… (*Laṭā'if,* i, 53).

The exegete's progress toward the innermost meaning of the scripture is described by al-Qushayrī as a movement from the intellect (q.v.) to the heart, then to the spirit *(al-rūḥ),* then to the innermost secret *(al-sirr)* and, finally, to the secret of secrets *(sirr al-sirr)* of the Qur'ān. Al-Qushayrī's approach to the Qur'ān is marked by his meticulous attention to every detail of the qur'ānic word, from an entire verse to a single letter found in it (see ARABIC SCRIPT). Typical in this regard is his interpretation of the *basmala* (q.v.), in which each letter of this phrase is endowed with a symbolic meaning: the *bā'* stands for God's gentleness *(birr)* toward his friends *(awliyā');* the *sīn* for the secret he shares with his elect *(asfiyā');* and the *mīm* for his bestowal of grace *(minna)* upon those who have attained intimacy with him *(ahl wilāyatihi)*. In an attempt to achieve comprehensiveness al-Qushayrī marshals several alternative interpretations of the *basmala,* e.g. one in which the *bā'* alludes to God's freedom *(barā'a)* from any fault; the *sīn* to the absence of any defect in him *(salāmatuhu min 'ayb);* and the *mīm* to the majesty of his attributes (*Laṭā'if,* i, 56).

While such speculations are not unique to al-Qushayrī and can be found in exegetical works contemporary to his, both Ṣūfī and non-Ṣūfī alike, there is one feature that sets *Laṭā'if al-ishārāt* apart from them. For al-Qushayrī, the *basmala* is not a simple repetition of the same set of meanings, for the divine word allows no repetition. Rather, the meaning of the *basmala* may change depending on the major themes contained in the sūras (q.v.) that it precedes. Thus, in discussing the symbolism of the letters of the *basmala* preceding Q 7, al-Qushayrī

implicitly links them to the themes of submission *(islām),* humility and reverence requisite of the true believer as opposed to the rebellious behavior (see REBELLION) of Iblīs and his host (e.g. Q 7:11-15, 31-3, 35-6, 39-40, etc.) by arguing that the letter *bā'*

is of a small stature in writing and the dot [underneath it], which distinguishes it from other [letters] is single and, to boot, small to the extreme. Moreover, it [the dot] is positioned underneath the letter, [all of which] alludes to modesty and humility in all respects (*Laṭā'if,* i, 211-12).

Likewise, the presence of the *sukūn* (absence of a vowel) over the letter *sīn* following the "humble" and "submissive" *bā'* alludes to its silent acceptance of the divine decree and complete contentment with it. Finally, the letter *mīm* points to "his [God's] bestowal of grace [upon you] *(minnatuhu),* if he so pleases, then to your agreement *(muwāfaqatuka)* with his decree and your satisfaction with it, even though he may not bestow anything [upon you] (ibid.).

Al-Qushayrī's interpretation of the *basmala* of Q 15 (Sūrat al-Ḥijr) is quite different. The omission of the *alif* in the *basmala* of that sūra without any rationally justifiable reason, either grammatically or morphologically, according to al-Qushayrī, symbolizes God's arbitrary "raising" of Adam (despite his "base" nature; see ADAM AND EVE) and his subsequent "humiliation" of the angels (despite their elevated status), as described in the main body of the sūra. In a similar vein, the omission of the *basmala* in Q 9 is interpreted by al-Qushayrī in the following manner:

God — praise be to him — has stripped *(jarrada)* this sūra of the *basmala,* so that it be known that he can endow *(yakhuṣṣ)* whomever and whatever he wants with whatever he wants. [In the same way,] he can single out whomever he wants with whatever he wants. His creation has no cause, his actions have neither a purpose nor a goal (*Laṭā'if,* iii, 5; see FREEDOM AND PREDESTINATION).

This, of course, is an Ashʿarī stance formulated in implicit opposition to that of the Muʿtazilīs (see MUʿTAZILA) who advocated the underlying rationality and purposefulness of divine actions. Thus, as mentioned, in al-Qushayrī's commentary, Ṣūfī symbolism and the Ashʿarī dogma go hand in hand and are deployed to support each other.

Al-Qushayrī's interest in the symbolism of letters comes to the fore in his discussions of the "mysterious letters" (q.v.) that appear at the beginning of some qur'ānic chapters. Typical in this respect is his exegesis of the combination *alif lām mīm* that precedes Q 2. Upon stating that the *alif* stands for *Allāh,* the *lām* for *laṭā'if* (the subtle realities; also one of the epithets of God, *laṭīf*) and the *mīm* for *majīd* (the glorious) and *malik* (the king; see KINGS AND RULERS), he proceeds to argue that

The *alif* is singled out from among the other letters by the fact that it is not connected to any letter in writing, while all but a few letters are connected to it. May the servant of God upon considering this feature become aware of the need of all creatures for him [God], with him being self-sufficient and independent of anything (*Laṭā'if,* i, 41).

Furthermore, the *alif*'s singularity is evident from the fact that all other letters have a concrete site of articulation in the human speech (q.v.) apparatus, while it has none. In the same way, God cannot be associated with *(yuḍāf ilā)* any particular location or site. Finally, "The faithful

servant of God is like the *alif* in its not being connected to any letter, in its constant uprightness and its standing posture before him" (ibid.).

As one may expect of a Ṣūfī master, al-Qushayrī showed little interest in the historical and legal aspects of the qurʾānic text. For him, they serve as windows onto the spiritual and mystical ideas and values characteristic of Ṣūfī piety. Thus, in discussing the spoils of war *(ghanīma)* mentioned in Q 8:41 (see BOOTY) al-Qushayrī argues:

Jihād (q.v.) can be of two types: the external one [waged] against the infidels and the internal one [waged] against [one's] soul and Satan. In the same way as the lesser jihād involves [the seizure of] spoils of war after victory, the greater jihād too has the spoils of war of its own, which involves taking possession of his soul by the servant of God after it has been held by his two enemies — [his] passions and Satan (*Laṭāʾif,* ii, 321).

A similar parallel is drawn between ordinary fasting (q.v.) which involves abstention from food, drink (see FOOD AND DRINK) and sex (see SEX AND SEXUALITY) and the spiritual abstention of the Ṣūfī from the allure of this world and from seeking the approval of its inhabitants. In a similar vein, al-Qushayrī likens the juridical notion of abrogation *(naskh)* to the initial strict observance of the divine law by the Ṣūfī novice, which is supplanted, or "abrogated," when he reaches the stage at which God himself becomes the guardian of his heart. In al-Qushayrī's commentary all ritual duties sanctioned by the Qurʾān are endowed with a deeper spiritual significance: the standing of pilgrims on the plain of ʿArafāt (q.v.) is compared to the "standing" of human hearts in the presence of the divine names and attributes (see PILGRIMAGE). Despite its overall "moderate" nature, the *Laṭāʾif al-ishārāt* is not devoid of the monistic and visionary elements that characterize what is usually described as the more "bold" and "esoteric" trend in Ṣūfī qurʾānic commentary. This aspect of al-Qushayrī's exegesis comes to the fore in his interpretation of Q 7:143, in which Moses (q.v.) comes to God at an appointed time *(li-mīqātinā)* and requests that God appear to him, only to be humbled by the sight of a mountain crumbling to dust, when God shows himself to it (see THEOPHANY). According to al-Qushayrī,

Moses came to God as [only] those passionately longing and madly in love could. Moses came without Moses. Moses came, yet nothing of Moses was left to Moses. Thousands of men have traversed great distances, yet no one remembers them, while that Moses made [only] a few steps and [school] children will be reciting until the day of judgment (see LAST JUDGMENT): "When Moses came…" (*Laṭāʾif,* ii, 259).

Despite such "ecstatic" passages, al-Qushayrī's book can still be considered a typical sample of "moderate" Ṣūfī exegesis because of its author's overriding desire to achieve a delicate balance between the mystical imagination and the respect for the letter of the revelation or, in Ṣūfī parlance, between the *sharīʿa* and the *ḥaqīqa*. One should point out that al-Qushayrī is also the author of a conventional historical-philological and legal *tafsīr* entitled *al-Taysīr fī l-tafsīr,* which is said to have been written before 410/1019. This is an eloquent testimony to his dual credentials as both a Ṣūfī and a conventional scholar *(ʿālim)*.

Another example of "moderate" Ṣūfī *tafsīr* is *al-Kashf wa-l-bayān ʿan tafsīr al-Qurʾān* by Abū Isḥāq Aḥmad b. Muḥammad al-

Thaʿlabī (d. 427/1035). Drawing heavily on *Ḥaqāʾiq al-tafsīr,* al-Thaʿlabī augmented the Ṣūfī exegetical logia assembled by al-Sulamī with conventional exegetical materials derived from ḥadīth as well as detailed discussions of the philological aspects and legal implications of the qurʾānic text (Saleh, *Formation*). Al-Thaʿlabī's work formed the foundation of the famous commentary *Maʿālim al-tanzīl fī tafsīr al-Qurʾān* by Abū Muḥammad al-Ḥusayn al-Baghawī (hence its better known title — *Tafsīr al-Baghawī*). He was born in 438/1046 in the village of Bagh or Baghshūr located between Herat and Marw al-Rūdh and distinguished himself primarily as a Shāfiʿī jurist and *muḥaddith,* whose thematically arranged collection of prophetic reports titled *Maṣābīḥ al-sunna* became a standard work of its genre. Although al-Baghawī was not considered a full-fledged Ṣūfī, he led an ascetic and pious way of life and avoided any contact with ruling authorities. His *tafsīr* is marked by his meticulous concern for the exegetical materials going back to the Prophet and his Companions *(al-tafsīr bi-l-maʾthūr)* and his desire to elucidate all possible aspects of the qurʾānic text. In seeking to achieve comprehensiveness he availed himself of diverse sources: from the leading Arab grammarians to the Shīʿī imāms and legal scholars. His Ṣūfī authorities include Ibrāhīm b. Adham (d. 160/777), Fuḍayl b. ʿIyāḍ (d. 188/803), al-Tustarī and al-Junayd (d. 298/910), whose ideas had probably reached him via al-Sulamī's *Ḥaqāʾiq al-tafsīr* and al-Thaʿlabī's *al-Kashf wa-l-bayān*. Al-Baghawī's use of this material was probably dictated by his drive to highlight all possible interpretations of the sacred text without privileging any one of them. Since by his age Ṣūfism had established itself as a legitimate and praiseworthy strain of Islamic piety he felt obligated to mention Ṣūfī views of the revelation, avoiding, however, their more controversial aspects. Thus, his inclusion of Ṣūfī exegesis did not necessarily reflect his own spiritual and intellectual priorities — a trend that we observe in many later exegetical works.

A typical representative of this trend in the later period is Abū l-Ḥasan ʿAlī b. Muḥammad al-Shīḥī al-Baghdādī, better known as "al-Khāzin" (d. 741/1341), whose *Lubāb al-taʾwīl fī maʿānī al-tanzīl* is an abridged rendition of al-Baghawī's *Maʿālim al-tanzīl*. As with al-Baghawī, Ṣūfī exegesis is just one of the aspects of the qurʾānic text that preoccupy al-Khāzin who explicitly states this in the introduction to his commentary. His other concerns include the rules of recitation, material transmitted by the Prophet and his Companions *(tafsīr bi-l-maʾthūr),* legal implications *(al-aḥkām al-fiqhiyya),* the "occasions of revelation," curious and unusual stories of past prophets and generations (q.v.; *al-qiṣaṣ al-gharība wa-akhbār al-māḍīn al-ʿajība*). Therefore, the reason why this *tafsīr* is sometimes classified as Ṣūfī (e.g. Ayāzī, *Mufassirūn,* 598-602; al-Baghawī's *tafsīr,* on the other hand, is not identified as such, ibid., 644-9) remains unclear. In any event, it is certainly indicative of the trend toward comprehensiveness that gradually led to the blurring of the borderline between "Ṣūfī" and "non-Ṣūfī" exegesis and the inclusion of Ṣūfī exegesis in conventional commentaries, both Sunnī and Shīʿī.

On the other hand, we observe the opposite tendency in approaching the Qurʾān, when renowned Ṣūfī masters produce quite conventional exegetical works that are practically devoid of any Ṣūfī elements. *Nughbat al-bayān fī tafsīr al-Qurʾān* by the influential Ṣūfī scholar and statesman under the caliph al-Qādir, Abū Ḥafṣ ʿUmar al-Suhrawardī (d. 632/1234), which is occasionally classified under the rubric of "moderate" Ṣūfī exegesis (e.g Böwering, Ṣūfī hermeneutics, 257), is a case in point.

This work, which remains in manuscript (see Düzenli, Ṣihabuddin), is characterized by a Western scholar as "a very standard, non-mystical commentary" that is "firmly situated in the type of philological and situational exegesis represented in the standard Sunni commentaries and exegetical tradition upon which al-Suhrawardī was drawing" (Ohlander, Abū Ḥafṣ). Indeed, even a cursory glance at the first dozen pages of its manuscript demonstrates an almost complete lack of any recognizable Ṣūfī motifs and methods. Moreover, the author explicitly states in the introduction that he has chosen to "stick to the basics" of the *tafsīr* genre and to abstain from composing a sophisticated and recondite esoteric commentary *(an ubriza min sawāniḥ al-ghuyūb mā yarwī ʿaṭash al-qulūb)* because of lack of time (fol. 2).

Our survey of "moderate" Ṣūfī exegesis would be incomplete without mentioning Persian *tafsīr*s by Abū l-Faḍl Rashīd al-Dīn Aḥmad al-Maybudī (d. 530/1135) and Abū Naṣr Aḥmad al-Darwājikī (d. 549/1154). The former is based on the exegetical work of the renowned Ḥanbalī mystic ʿAbdallāh al-Anṣārī l-Harawī (d. 481/1089), as the author explicitly states in the introduction. It is no wonder that it is sometimes referred to as *Tafsīr khawāja ʿAbdallāh al-Anṣārī*, but the title given to it by the author is *Kashf al-asrār wa-ʿuddat al-abrār*. Born of a family renowned for its learning and piety in a town of Maybud (the province of Yazd in Iran), al-Maybudī combined the traditional education of a Shāfiʿī jurist and *muḥaddith* with a propensity to mysticism and an ascetic life-style. Like the other "moderate" Ṣūfī commentaries discussed above, al-Maybudī's *Kashf al-asrār* combines conventional historical, philological and legal exegesis with Ṣūfī *ishārāt* and *laṭāʾif*. The former is usually expressed in Arabic and the latter in Persian, thereby setting a precedent to be followed by many Persophone Ṣūfī authors in Iran and India. The commentator describes his method as consisting of three "stages" *(nawba)*. The first involves a translation of selected verses from Arabic into Persian (see PERSIAN LITERATURE AND THE QURʾĀN; LITERATURE AND THE QURʾĀN); the second provides a conventional historical, philological and legal commentary; while the third deals with the mystical aspects of the revelation. The latter relies heavily on al-Anṣārī's mystical commentary, which in turn is based on al-Sulamī's *Ḥaqāʾiq al-tafsīr* and its Ṣūfī authorities such as Abū Yazīd al-Biṣṭāmī (d. 234/848 or 261/875), al-Junayd, al-Tustarī, and al-Shiblī (d. 334/946), etc. As befits a "moderate" commentator, al-Maybudī avoids Ṣūfī interpretations that conflict with the literal meaning of the qurʾānic text. His treatment of the controversial issues of anthropomorphic features of God, the provenance of good and evil, and divine predetermination of all events is that of an Ashʿarī theologian (see FREEDOM AND PREDESTINATION).

Little is known about the other Persian *tafsīr* of that age by al-Darwājikī, nicknamed the "ascetic" *(zāhid)*, beyond a cursory mention of his work, which remains unpublished. Even the exact title of his *tafsīr* remains debated, although it is often referred to as *Tafsīr al-zāhid*. The author's sobriquet indicates his propensity for an ascetic life-style; however, in the absence of an available text of this work its exact character is impossible to determine.

A totally different vision of the qurʾānic revelation was presented by the celebrated Sunnī theologian and jurist Abū Ḥāmid al-Ghazālī, whose famous tract *Jawāhir al-Qurʾān* can hardly be defined as exegetical in the conventional sense of the word.

Nevertheless, its emphasis on the numerous layers of meaning embedded in qur'ānic chapters and verses and the idea that the most elusive and subtle of them constitute the exclusive domain of Ṣūfī gnostics gives it a distinctive Ṣūfī flavor. In this work al-Ghazālī undertakes a classification of several types of qur'ānic verses according to their contents. In so doing he establishes a hierarchy of verses by likening them to various types of precious stones, pearls and rare substances. Thus, the knowledge *(ma'rifa)* of God is symbolized by red sulfur (the precious substance which according to medieval alchemy could transform base metals into gold), while the knowledge of God's essence, attributes and works is likened to three types of corundum. Below this sublime knowledge lies what al-Ghazālī describes as "the definition of the path advancing to God," namely the verses of the Qur'ān that elucidate the major stages of the believer's progress to God. This progress is couched by al-Ghazālī in a typical Ṣūfī imagery of "polishing" the mirror of the heart and soul and actualizing the divine nature *(lāhūt)* inherent in every human being. Al-Ghazālī likens this category of qur'ānic verses to "shining pearls." The third category contains verses dealing with man's condition at the time of his final encounter with God, namely, resurrection (q.v.), reckoning, the reward and the punishment, the beatific vision of God in the afterlife, etc. According to al-Ghazālī, this category, which he dubs "green emerald," comprises "a third part of the verses and sūras of the Qur'ān." The fourth group includes numerous verses describing "the conditions of those who have traversed [the path to God] and those who have denied him and deviated from his path," namely, various prophetic and angelic figures and other mythological individuals mentioned in the Qur'ān (see LIE; GRATITUDE AND INGRATITUDE; MYTHS AND LEGENDS IN THE QUR'ĀN). In al-Ghazālī's view, their goal is to arouse fear and give warning to the believers (see WARNER) and to make them consider carefully their own condition vis-à-vis God. He compares these verses to grey ambergris and fresh and blooming aloe-wood. The fifth group of verses deals with "the arguments of the infidels against the truth and clear explanation of their humiliation by obvious proofs." According to al-Ghazālī these verses contain the greatest antidote *(al-tiryāq al-akbar)*. The sixth category of verses deals with the stages of man's journey to God and the management of its "vehicle," the human body, by supplying it with lawful means of sustenance (q.v.) and procreation (see LAWFUL AND UNLAWFUL). All this presupposes the wayfarer's interaction with other human beings and their institutions, the rules of which, according to al-Ghazālī, are stipulated in the verses belonging to the sixth category. Al-Ghazālī likens it to the "strongest musk."

Upon establishing this hierarchy of qur'ānic verses, al-Ghazālī proceeds to classify the "outward" and "inward" sciences associated with the Qur'ān. To the former belong (a) the science of its recitation which is represented by Qur'ān readers and reciters (see RECITERS OF THE QUR'ĀN); (b) the knowledge of its language and grammar which is handled by philologists and grammarians (see LANGUAGE AND STYLE OF THE QUR'ĀN); and (c) the science of "outward exegesis" *(al-tafsīr al-ẓāhir)* which its practitioners, those scholars whose focus rests on the Qur'ān's "external shell" *(al-ṣadaf)*, mistakenly consider the consummate knowledge available to human beings. While al-Ghazālī recognizes the necessity of these "outward" sciences and their practitioners, he dismisses their

claims to represent the ultimate knowledge about the Qur'ān. He attributes this honor to the "sciences of the kernels of the Qur'ān" *('ulūm al-lubāb),* which are subdivided into two levels: the lower and the higher. The former, in turn, is subdivided into three groups: (a) the knowledge of the stories of the qur'ānic prophets, which is preserved and transmitted by story-tellers, preachers and ḥadīth-transmitters (see TEACHING AND PREACHING THE QUR'ĀN); (b) the knowledge of God's arguments against his deniers, which gave rise to theology *(al-kalām)* and its practitioners (the *mutakallimūn*); and (c) the knowledge of the legal injunctions of the Qur'ān, which is represented by the jurists *(fuqahā').* The latter, according to al-Ghazālī, are more important than the other religious specialists because the need for them is "more universal." The upper level of the sciences that branched off of the Qur'ān includes the knowledge of God and of the world to come, followed by the knowledge of the "straight path and of the manner of traversing it."

Having established the hierarchy of sciences that have grown out of the Qur'ān, al-Ghazālī lays out his exegetical method, which hinges on the notion of the allegorical and symbolic nature of the revelation:

Know that everything which you are likely to understand is presented to you in such a way that, if in sleep you were studying the Protected Tablet (*al-lawḥ al-maḥfūẓ;* see PRESERVED TABLET) with your soul, it would be related to you through a suitable symbol which needs interpretation (Eng. trans. in Ghazālī, *Jewels,* 52).

Hence, "The interpretation of the Qur'ān *(ta'wīl),*" according to al-Ghazālī, "occupies the place of the interpretation of dreams" (*ta'bīr;* ibid.) and the exegete's task is to "comprehend the hidden connection between the visible world and the invisible" (Ghazālī, *Jewels,* 53) or unseen in the same way as the interpreter of dreams strives to make sense out of somebody's dream or vision (see DREAMS AND SLEEP). This idea is brought home in the following programmatic statement:

Understand that so long as you are in this-worldly life you are asleep, and your waking-up will occur only after death (see DEATH AND THE DEAD; SLEEP), at which time you become fit to see the clear truth face to face. Before that time it is impossible for you to know the realities except when they are molded in the form of imaginative symbols (Ghazālī, *Jewels,* 54).

The only way to gain the knowledge of the true reality of God and his creation is, according to al-Ghazālī, through the renunciation of this world and righteousness. Those who seek "the vanities of this world, eating what is unlawful and following [their] carnal desires" are barred from the understanding of the qur'ānic message. Their corrupt and sinful nature makes them see nothing in the Qur'ān but contradiction and incongruence. Hence, the perception of the qur'ānic allegories and symbols by different people correspond to their level of spiritual purity and intellectual attainment. In commenting on the special virtue of Q 1 (Sūrat al-Fātiḥa, "The Opening"; see FĀTIḤA), which many exegetes consider to be the key to paradise (q.v.), al-Ghazālī argues that a worldly individual imagines the qur'ānic paradise to be a place where he will satisfy his desire for food, drink and sex, while the perfected Ṣūfī gnostic sees it as a site of refined spiritual pleasures and "pays no heed to the paradise of the fools."

Apart from the Fātiḥa, al-Ghazālī singles out the following verses for a special discussion: Q 2:255, "The Throne Verse" (see

THRONE OF GOD), Q 112 (Sūrat al-Ikhlāṣ, "Purity of Faith"), Q 36 (Sūrat Yā Sīn), whereupon he declares the Fātiḥa to be "the best of all sūras" and the "Throne Verse" to be "the chief of all verses." In the subsequent narrative he enumerates 763 "jewel verses" and 741 "pearl verses." Al-Ghazālī never directly addresses the issue of how and why some divine statements can be better than others, although he profusely quotes prophetic reports that assert the special virtues of certain verses and sūras.

Like al-Qushayrī and earlier exegetes, al-Ghazālī is convinced that the depth of one's understanding of the Qur'ān is directly linked to one's level of spiritual purity, righteousness and intellectual progress. It is no wonder that in his ranking of exegetes the highest rank is unequivocally accorded to the accomplished Ṣūfī gnostic *('ārif)*. To him and only to him is disclosed the greatest secret of being. This is stated clearly in al-Ghazālī's *Mishkāt al-anwār* — an esoteric reflection on the epistemic and ontological implications of the "Light Verse" (Q 24:35):

The gnostics ascend from the foothill of metaphor (q.v.; *al-majāz*) to the way-station of the true reality *(al-ḥaqīqa)*. When they complete their ascension, they see directly that there is nothing in existence except God most high (Ghazālī, *Mishkat,* 58).

Therefore, for the gnostics, the qur'ānic phrase "Everything perishes save his face" (Q 28:88) is an expression of the existential truth, according to which "everything except God, if considered from the viewpoint of its essence, is but a pure nonexistence *('adam maḥḍ),*" God being the only reality of the entire universe (*Mishkāt,* 58). This bold idea prefigures the monistic speculations of Ibn al-'Arabī and his followers, who also were to make extensive use of esoteric exegesis in order to showcase their monistic vision of the world.

The blossoming of ecstatic/esoteric exegesis

The works of Persian Ṣūfīs Abū Thābit Muḥammad al-Daylamī (d. 593/1197) and Rūzbihān Baqlī (d. 606/1209) constitute a distinct trend in Ṣūfī exegetical literature that is characterized by "intense visions and powerful ecstasies interpreted in terms of a qur'ānically based metaphysics" (Ernst, *Rūzbihān,* ix). The prevalence of such elements in the exegetical works of these two writers prompted Böwering (Ṣūfī hermeneutics, 257) to describe them as being more "esoteric" than their "moderate" counterparts discussed above. Al-Daylamī, a little known, if original and prolific author, wrote a mystical commentary entitled *Taṣdīq al-ma'ārif* (it is also occasionally referred to as *Futūḥ al-raḥmān fī ishārāt al-Qur'ān*). It creatively combines early Ṣūfī exegetical dicta borrowed from al-Sulamī's *Ḥaqā'iq al-tafsīr* — they constitute about half of al-Daylamī's work — with the author's own elaborations. Surprisingly, al-Daylamī never mentions al-Qushayrī's *Laṭā'if al-ishārāt,* which was composed some one hundred years before his own. As already mentioned, al-Daylamī's own texts reflect his overwhelming preoccupation with "the visionary world of the mystic," which "is seen as totally real and fully identical with the spiritual world of the invisible realm" (ibid., 270). In the absence of an edited and published text of this commentary — which seems to exist in a unique manuscript — one cannot provide a detailed analysis of its content. According to Böwering who discovered the manuscript in a Turkish archive, it is "a continuous yet eclectic commentary on selected koranic verses from all suras presented in sequence" which "consists of two parallel levels of interpretative glosses on koranic phrases, specimens of Ṣūfī sayings,

and items of the author's own explanation." His work foreshadowed "ideas that emerged in the Kobrawi school" [of Ṣūfism] (Böwering, Deylamī), whose exegetical production will be discussed below.

Somewhat better known is the commentary of al-Daylamī's younger contemporary Rūzbihān [al-]Baqlī al-Shīrāzī (d. 606/1209) entitled *ʿArāʾis al-bayān fī ḥaqāʾiq al-Qurʾān*. This massive exegetical opus reflects Rūzbihān's overriding propensity for visions, dreams, powerful ecstasies and ecstatic utterances that "earned him the sobriquet 'Doctor Ecstaticus' *(shaykh-i shaṭṭāḥ)*" (Ernst, Rūzbihān). Like al-Daylamī's *Taṣdīq al-maʿārif, ʿArāʾis al-bayān* was written in Arabic and consists almost equally of earlier exegetical material — mostly borrowed from al-Sulamī — and of the author's own glosses. In contrast to al-Daylamī, Rūzbihān also availed himself of the materials borrowed from al-Qushayrī's *Laṭāʾif al-ishārāt*. Rūzbihān's uses of the Qurʾān in both his commentary and other works, however, are much bolder than those of the Ṣūfī exegetes already described. Not only does he constantly invoke the sacred text in describing his spiritual encounters with and visions of God, but he also claims to have symbolically eaten it (see POPULAR AND TALISMANIC USES OF THE QUR'ĀN). Thus in his *Kashf al-asrār,* "Unveiling of secrets," he provides the following description of his visionary experiences:

When I passed through the atmosphere of eternity (q.v.), I stopped at the door of power (see POWER AND IMPOTENCE). I saw all the prophets present there; I saw Moses with the Torah (q.v.) in his hand, Jesus (q.v.) with the Gospel (q.v.) in his hand, David (q.v.) with the Psalms (q.v.), and Muḥammad with the Qurʾān in his hand. Moses gave me the Torah to eat, Jesus gave me the Gospel to eat, David gave me the Psalms to eat and Muḥammad gave me the Qurʾān to eat. Adam gave me the most beautiful names [of God] and the Greatest Name to drink. I learned what I learned of the elect divine sciences for which God singles out his prophets and saints (Ernst, *Rūzbihān,* 51).

One can hardly be any bolder than this. According to Ernst, this dream is deemed to symbolize Rūzbihān's "complete internalization" of the inspiration of these scriptures. The Qurʾān and its imagery figure prominently in the Ṣūfī's ecstatic visions. Thus he compares his condition in the presence of God with that of Zulaykha in the presence of Joseph (q.v.; Q 12:22-32), as described in the following passage:

He wined me with the wine (q.v.) of intimacy and nearness. Then he left and I saw him as the mirror of creation wherever I faced, and that was his saying, "Whereso-ever you turn, there is the face of God" (Q 2:109 [sic]). Then he spoke to me after increasing my longing for him… and [I] said to myself: "I want to see his beauty without interruption." He said: "Remember the condition of Zulaykha and Joseph…" (Ernst, *Rūzbihān,* 42).

Rūzbihān also draws a bold comparison between himself and Adam and has God say the following:

I have chosen my servant Rūzbihān for eternal happiness, sainthood *(wilāya),* and bounty.… He is my vicegerent *(khalīfa)* in this world and all worlds; I love whosoever loves him and hate whosoever hates him…, for I am "one who acts when he wishes" (Q 107:11 [sic]; Ernst, *Rūzbihān,* 48).

This feeling of mutual love, intimacy and [com]passion between God and his

mystical lover is the hallmark of Rūzbihān's entire mystical legacy. According to Ernst, the very title of Rūzbihān's commentary — *ʿArāʾis al-bayān*, "The brides of explanation" — "invokes the unveiling of the bride in a loving encounter as the model of initiation into the esoteric knowledge of God" (Ernst, *Rūzbihān*, 71). One can argue that Rūzbihān's visionary and ecstatic experiences are virtually permeated by qurʾānic language and imagery. As with early Ṣūfī masters, the Qurʾān serves Rūzbihān as a means of transforming himself and, eventually, achieving the ultimate intimacy with and knowledge of God.

Ibn al-ʿArabī and the Kubrawī tradition

According to Böwering's classification (Ṣūfī hermeneutics, 257), the subsequent stage in the development of Ṣūfī exegesis was dominated by its two major strains: Muḥyī l-Dīn Ibn al-ʿArabī (d. 638/1240) and his followers (mostly in the Muslim east) and Najm al-Dīn Kubrā (d. 618/1221) and the Kubrawī school of Ṣūfism.

One can say that Ibn al-ʿArabī's long-lasting influence on the subsequent Ṣūfī tradition springs from his role as an intellectual bridge between eastern and western strains of Ṣūfism. While Ṣūfī ideas initially spread westwards — from Sahl al-Tustarī and the Baghdādī school to Ibn Masarra al-Jabalī (d. 319/931) and his Andalusī and Maghribī successors — by the sixth/twelfth century western Ṣūfism acquired a distinctive character and was represented by such versatile and original thinkers as Ibn Barrajān (d. 536/1141), Ibn al-ʿArīf (d. 536/1141), Ibn Qasī (d. 546/1151), Abū Madyan (d. 594/1197) and Ibn al-ʿArabī, to name but a few (Gril, 'La lecture', 521-2). Of these Ibn Barrajān deserves special notice as the author of at least one, and possibly two, Ṣūfī commentaries that seem to have had a profound influence on Ibn al-ʿArabī and his numerous followers in the Muslim east.

As with earlier Ṣūfī exegetes, Ibn Barrajān envisioned the realization of the qurʾānic message by the mystic as his progressive immersion into its mysteries, which eventually results in what the Andalusī master called "the paramount reading" *(al-tilāwa l-ʿulyā)* of the Qurʾān. In the process, the very personality of the mystic is transformed by this encounter with the divine word as he passes from its literal message *(ʿibra; iʿtibār)* to its underlying, "crossed over to" truth *(al-maʿbūr ilayhi)* and from a physical perception *(baṣar)* of the sacred text to an interior, intuitive grasp of its inner reality (Gril, 'La lecture', 516). In other words, in the process of "remembering" *(dhikr)* and contemplating the Qurʾān the mystic develops a deep and genuine insight that allows him to realize its true meaning and implications. As a result, he is eventually transformed into the "universal servant" *(al-ʿabd al-kullī)*, whose recitation of the sacred text is twice as effective as the recitation of the ordinary believer or the "partial servant" *(al-ʿabd al-juzʾī)*.

Ibn Barrajān's exegesis displays the following characteristic features that set it apart from the mainstream interpretative tradition (whose elements are duly represented in his work): (1) the insistence that *dhikr* should serve as the means of achieving a total and undivided concentration on the sacred text; (2) the continual awareness of the subtle correspondences between the phenomena and entities of the universe and the "signs" embedded in the scripture; (3) the affirmation that the heart of the "universal servant" is capable of encompassing the totality of existence in the same way as it is contained in the Preserved Tablet; and (4) the notion that the divine word constitutes the supreme reality of human nature, which makes it possible to

erase the boundary that separates the creature from its creator and thereby achieve a cognitive and experiential union between them (ibid., 520-1). Finally, Ibn Barrajān restricts this superior realization of the divine word to a small group of divinely elected individuals, whom he identifies as "the veracious ones" *(ṣiddīqūn)*. His bold ideas were elaborated upon and brought to fruition in the legacy of Ibn al-ʿArabī and his school.

Ibn al-ʿArabī's uses of the Qurʾān are rich and variegated. He claims to have composed a multi-volume commentary on the Qurʾān entitled *al-Jāmiʿ wa-l-tafṣīl fī asrār maʿānī l-tanzīl,* which seems to have been lost. On the other hand, his entire work, including his major masterpieces — *Fuṣūṣ al-ḥikam* and *al-Futūḥāt al-makkiyya* — may be seen as a giant running commentary on the foundational texts of Islam, the Qurʾān and the sunna of the Prophet. His overall approach to the Qurʾān must be considered in the general context of his thought which is characterized by the belief that the true realities of God and the universe are concealed from ordinary human beings behind a distorting veil of images and appearances. These true realities, however, can be rendered accessible to the elect few through a spiritual awakening and special intellectual insight or "unveiling" *(kashf)* bestowed upon them by God. Ibn al-ʿArabī calls the possessors of this insight "the people of the true reality" *(ahl al-ḥaqīqa),* or "divine gnostics" *(ʿārifūn)*. They and only they can decipher the true meaning of the symbols that constitute both the qurʾānic text and the entities and phenomena of the empirical universe, which are likened by Ibn al-ʿArabī to a giant book. For him, both the Qurʾān and the universe are but "books" of God — assemblages of symbols and images behind which lie the ultimate realities of existence that, in the final account, take their origin in and are somehow identical to the divine reality *(al-ḥaqq)*. The deciphering of these symbols and images becomes possible through God's revelatory manifestations *(tajallī)* to his elect "friends" and through their ability to perceive their hidden meaning by means of their imaginative faculties.

Since Ibn al-ʿArabī considered himself to be the greatest *ʿārif* of his age (and possibly of all times) and the spiritual "pole" *(al-quṭb)* of the universe, he saw no reason to legitimize his understanding of the meaning of the scripture or — as he put it, of its "spirit" *(rūḥ)* — by reference to any prior exegetical authority or tradition. In his opinion, he is absolved of such a justification because his "epistemic source" is nothing other than divine inspiration (Nettler, *Ṣūfī metaphysics,* 29). This attitude is evident from his poetic commentaries on selected qurʾānic sūras included in his poetic collection (*Dīwān,* 136-79). Here Ibn al-ʿArabī offers an exegesis aimed at bringing out the "spiritual quintessence" *(rūḥ)* of these sūras. In so doing, he deliberately relegates his role to that of a simple transmitter of the outpourings of divinely induced insights that are dictated to him in the "mystical moment" *(wārid al-waqt)* in which he happens to find himself. He is adamant that he has added nothing to what he has received from this divine source of inspiration (Bachmann, Un commentaire, 503). His use of poetry — an art associated with pre-Islamic paganism (see POETRY AND POETS; PRE-ISLAMIC ARABIA AND THE QURʾĀN) — and his occasional imitation of the meter and rhythm of qurʾānic chapters (see INIMITABILITY; PROVOCATION) no doubt raised many scholarly eyebrows, both during his lifetime and after his death. So did his radical departure from the conventions of traditional exegesis. Thus in elucidating the "spirit" of the Fātiḥa Ibn al-ʿArabī boldly and some-

what incongruously refers to God as "a light not like any other light" — a clear allusion to the Light Verse (*āyat al-nūr,* Q 24:35) — then proceeds to discuss its implications, which have little to do with the sūra that he is supposedly discussing (Bachmann, Un commentaire, 505).

His claim to be a simple mouthpiece of the divine inspirer absolves him, however, of the necessity to justify his exegetical method or to follow any conventional logic. This inspirational exegesis, according to Ibn al-ʿArabī, assures absolute certainty in interpretation of the divine word and overrules all alternative understandings of it. Ibn al-ʿArabī also revisits Q 24:35 in many passages of his magnum opus, *al-Futūḥāt al-makkiyya*. Here his interpretation of this verse reveals three distinct levels of understanding of its meaning: the metaphysical and cosmological, the analogical (built around the implicit correspondences between the universe and the human individual) and the existential-experiential based on the notion — so dear to Ibn al-ʿArabī — of the underlying unity (and union) of God, humankind and the universe (Gril, Le commentaire, 180). In *Fuṣūṣ al-ḥikam* — Ibn al-ʿArabī's controversial meditation on the phenomenon of prophethood and its major representatives — his uses of the qurʾānic text are particularly bold and challenging (the same is true of his uses of the sunna). The Qurʾān radically and dramatically reinterpreted by the Ṣūfī master serves as a showcase for his monistic metaphysics (see also PHILOSOPHY AND THE QURʾĀN). Moreover, for Ibn al-ʿArabī his monistic vision of God, humankind and the universe constitutes the very truth and ultimate meaning of the qurʾānic revelation (Nettler, *Ṣūfī metaphysics,* 13-14). In the *Fuṣūṣ,* the traditional exegetical lore associated with the prophets and other individuals mentioned in the qurʾānic text is inextricably intertwined with "an extremely abstruse 'Ṣūfī metaphysics,'" which for Ibn al-ʿArabī presumably reflected its inner, essential, truth (ibid., 14). This kind of exegesis is so distinctive and unique that it "may be considered an Islamic religious genre in its own right" that can be dubbed "Ṣūfī metaphysical story-telling" (ibid.).

As an example of Ibn al-ʿArabī's exegetical method, one can cite his audacious rendition of the story of Aaron (q.v.), Moses and the golden calf (Q 7:148-55 and Q 20:85-94; see CALF OF GOLD). Here — contrary to the literal meaning of the qurʾānic narrative — Aaron and the worshippers of the golden calf are portrayed as being wiser than Moses, who misguidedly scolds them for lapsing into idolatry (see IDOLATRY AND IDOLATERS). Unlike Moses, they realize that God can be worshipped in every object, for every object, including the golden calf, is but "a site of divine self-manifestation" (*baʿḍ al-majālī l-ilāhiyya; Fuṣūṣ,* 192; Nettler, *Ṣūfī metaphysics,* 53). In this interpretation, the original qurʾānic condemnation of idolatry is completely inverted: the idolaters become "gnostics," who

> *know the full truth* concerning idolatry, but are honor-bound not to disclose this truth, even to the prophets, the apostles and their heirs, for these all have their divinely-appointed roles in curbing idolatry and promoting the worship of God *in their time and their situation* (Nettler, *Ṣūfī metaphysics,* 67).

The ultimate truth, however, is that God is immanent to all things and can be worshipped everywhere. Here, and throughout the *Fuṣūṣ,* Ibn al-ʿArabī's unitive, monistic vision of God and the world is presented within the framework of qurʾānic narratives (q.v.) pertaining to the vicissitudes of the prophetic missions of the past (see PUNISHMENT STORIES). For him, however,

this is not *his* personal vision but *the true and unadulterated* meaning of the divine word (ibid., 94).

The major themes of Ibn al-ʿArabī's legacy were explored and elucidated by his foremost disciple, Ṣadr al-Dīn al-Qūnawī (d. 673/1274), the author of numerous influential works on theoretical Ṣūfism. His major exegetical work, *Ījāz al-bayān fī taʾwīl al-Qurʾān,* is a lengthy disquisition on the metaphysical, epistemological and psychological implications of the first sūra of the Qurʾān based on the assumption that it constitutes the very gist of the revelation. The author's indebtedness to Ibn al-ʿArabī is obvious from the outset, when he states that

> God made the primeval macrocosm *(al-ʿālam al-kabīr)* — from the viewpoint of its [outward] form — a book carrying the images of the divine names… and he [God] made the perfect man — who is but a microcosm *(al-ʿālam al-ṣaghīr)* — an intermediate book from the viewpoint of [its] form, which combines in itself the presence of the names and the presence of the named [i.e. God]. He also revealed the great Qurʾān as a guidance to the human being — who is fashioned in his image — in order to explain the hidden aspect of his way, the secret of his sūra and of his rank (Qūnawī, *al-Tafsīr,* 98).

Al-Qūnawī identifies five levels and realms of existence and their correspondence to the five layers of meaning of the divine word. For the exegete, this task of identification is much more important than the minutia of conventional *tafsīr* with which he claims to have deliberately dispensed (ibid., 103). Al-Qūnawī's emphasis on the hierarchies of the divine names and their ontological counterparts (realms of existence) constitutes probably the most distinguishing feature of this highly technical and recondite mystical commentary, which came to characterize the intellectual legacy of Ibn al-ʿArabī's school of thought as a whole.

In ʿAbd al-Razzāq Kamāl al-Dīn al-Qāshānī (d. 730/1329), a native of the Iranian province of Jibāl, we find another scholar fully committed to Ibn al-ʿArabī's spiritual and intellectual legacy, while remaining an original mystical thinker in his own right. Not only did al-Qāshānī distinguish himself as an advocate of his great predecessor but also as an effective disseminator of the latter's mystical teaching which by that time had come to be known as "the doctrine of the unity/oneness of being/existence" *(waḥdat al-wujūd)*. As a promoter of Ibn al-ʿArabī's ideas, his main achievement lies in his ability to strip them of their original ambiguity, and open-endedness and to present them in a lucid and accessible form to anyone who cared to learn them. Al-Qāshānī excelled in this task to such an extent that his popular mystical commentary, originally titled *Taʾwīl al-Qurʾān,* was for several centuries considered by many to be a work of Ibn al-ʿArabī himself. In fact, its latest edition, which appeared in Beirut in 1968, was entitled *Tafsīr al-Qurʾān al-karīm lil-shaykh al-akbar… Ibn ʿArabī.* A systematic and clear-headed thinker, al-Qāshānī provides a detailed self-reflective exposition of his exegetical method in the introduction to his commentary. Citing a famous prophetic ḥadīth according to which each qurʾānic verse has two aspects — the "outward" *(ẓahr)* and the "inward" *(baṭn)* — al-Qāshānī identifies the understanding of the former as *tafsīr* and of the latter as *taʾwīl* (Qāshānī, *Taʾwīl,* i, 4). His own interpretation is consistently identified as *taʾwīl* throughout the rest of his work. This indicates that by his time the rigid *tafsīr/taʾwīl* dichotomy, which does not seem to have existed in the earlier periods — both

al-Ṭabarī and al-Bayḍāwī (d. prob. 716/1316) had no compunctions about applying the word *ta'wīl* to their conventional commentaries — had become widespread, at least in some Ṣūfī circles (cf. however, Shāh Walī Allāh, who defined *ta'wīl* as a regular historical and contextual commentary; Baljon, *Religion and thought,* 141). In a revealing passage from the introduction to his *Ta'wīl* al-Qāshānī describes his personal relationship with the qur'ānic revelation which, in a sense, epitomizes the Ṣūfī stance *vis-à-vis* the divine word:

For a long time I made the recitation *(tilāwa)* of the Qur'ān my habit and custom and meditated on its meaning with the [full] strength of my faith. Yet, despite my assiduousness at reciting passages from it *(al-awrād),* my chest was constrained, my soul troubled and my heart remained closed to it. However, my lord did not divert me from this recitation until I had grown accustomed and habituated to it and begun to taste the sweetness of its cup and its drink. It was then that I felt invigorated, my breast opened up, my conscience expanded, my heart was at ease, and my innermost self liberated… by these revelations. Then there appeared to me from behind the veil the meanings of every verse such that my tongue was incapable of describing, no capacity able to determine and count, and no power could resist unveiling and disclosure" (*Ta'wīl,* i, 4).

Unlike the authors of "moderate" Ṣūfī commentaries discussed above, al-Qāshānī consciously ignores those passages of the Qur'ān that, in his view, are not susceptible to esoteric interpretation *(kull mā lā yaqbalu al-ta'wīl ʿindī aw lā yaḥtāju ilayhi)*. With more than five centuries of Ṣūfī exegesis behind him, al-Qāshānī no longer feels obligated to pay tribute to the trivia of conventional *tafsīr* and focuses only on those aspects of the sacred text that resonate with his esoteric vision of the world. Even some favorite "Ṣūfī" verses such as Q 7:172 and Q 85:22 are passed over in silence, perhaps because al-Qāshānī feels that their interpretative potential has been exhausted by his predecessors (Lory, *Commentaires,* 31). Addressed to his fellow Ṣūfīs, "the people of [supersensory] unveiling" *(ahl al-kashf),* al-Qāshānī's exegesis brims with classical Ṣūfī terminology and themes borrowed from Ibn al-ʿArabī's monistic ideas and imagery. In many cases, this terminology is not explained, presupposing its prior knowledge by the reader (ibid., 30). Al-Qāshānī is completely at home in dealing with all major levels of exegesis established by his predecessors: the monistic metaphysics with its tripartite division of being into the empirical realm *(ʿālam al-shahāda),* the intermediate realm of divine power *(al-jabarūt)* and the purely spiritual realm of divine sovereignty *(al-malakūt);* the parallelism and correspondence between the universe (the macrocosm) and its human counterpart (the microcosm); the major stages and spiritual states of the mystic's progress to God; the symbolism of the letters of the Arabic alphabet; numerology (q.v.); etc. As a typical example of his method one may his cite his glosses on Q 17:1:

"Glory be to him, who carried his servant," that is — [who] purified him from material attributes and deficiencies associated with [his] creation by means of the tongue of the spiritual state of disengagement [from the created world] *(al-tajarrud)* and perfection at the station of [absolute] servanthood… — "by night" — that is, in the darkness of bodily coverings and natural attachments, for the ascension and rise cannot occur except by means of a body — "from the holy mosque" — that is, from the station of the heart that is pro-

tected from the circumambulation of the polytheism of carnal drives… (*Ta'wīl,* i, 705).

In this passage and throughout, the correspondences between qur'ānic images and Ṣūfī psychology, epistemology and ontology are clearly and firmly established, leaving little room for the ambiguity of reference and referent and a general opacity of meaning that characterize the works of Ibn al-ʿArabī. One can thus conclude that in al-Qāshānī's commentary the esoteric exegesis of the previous centuries receives a succinct, systematic — perhaps overly-systematic — and lucid articulation. The exegetical method derived from Ibn al-ʿArabī and his predecessors has become stabilized. Its subsequent rearticulation by such later Ṣūfīs as Badr al-Dīn Simawī (d. 820/1420), Ismāʿīl Ḥaqqī (d. 1137/1725), Shāh Walī Allāh (d. 1176/1762), and Ibn ʿAjība (d. 1224/1809) — to name but a few — evinces a remarkable continuity that may be construed by some as a lack of originality. In the case of the last two authors, mystical exegesis is offered alongside other types of commentary, of which Ibn ʿAjība, for example, cites as many as eleven in his *al-Baḥr al-madīd* (i, 129-31). His *tafsīr* demonstrates his equal facility with both esoteric and exoteric commentary, without privileging either one of them (Michon, *Le soufi,* 88-9).

While the tradition of Qur'ān interpretation associated with the central Asian Ṣūfī master Najm al-Dīn Kubrā (d. 618/1221) and his followers Najm al-Dīn Dāya [al-]Rāzī (d. 654/1256) and ʿAlā' al-Dawla Simnānī (d. 736/1336) is often treated as a separate school of Ṣūfī exegesis (e.g. Böwering, Ṣūfī hermeneutics, 257), this perception has more to do with two different spiritual and intellectual lineages than with differences in their approaches to the Qur'ān. Unlike the Ṣūfī commentaries discussed above, we are dealing here with what amounts to a collective exegetical work that was started by Kubrā, continued by Dāya [al-]Rāzī and completed by Simnānī, although "it is possible that there are two different continuations to Kubrā's commentary, one by Simnānī and the other by Dāya" (Elias, *Throne carrier,* 205). "It is also conceivable that Dāya revised Kubrā's commentary" (ibid.). In any event, this commentary remains unpublished and our knowledge of its contents is derived from a recent Western study of Simnānī's oeuvre by Jamal Elias (ibid., 107-10).

As with earlier Ṣūfī exegetes, Simnānī spoke of "four levels of meaning [of the Qur'ān] corresponding to four levels of existence" (ibid., 108). Its exoteric dimension corresponds to the realm of "humanity" *(nāsūt);* its esoteric dimension to the realm of divine sovereignty *(malakūt);* its limit *(ḥadd)* relates to the realm of divine omnipotence *(jabarūt);* and its point of ascent, or *anagoge (maṭlaʿ/muṭṭalaʿ)* corresponds to the realm of divinity (*lāhūt,* ibid., 108). These realms, in turn, correspond to four levels of the human understanding of the Qur'ān — that of the ordinary believer *(muslim),* who relies upon his faculty of hearing (see SEEING AND HEARING; HEARING AND DEAFNESS); that of the faithful one *(mu'min),* who relies on divine inspiration; that of the righteous one *(muḥsin),* who should not disclose what he understands except with divine permission *(idhn);* and, finally, the [direct] witness (*shāhid;* see WITNESS TO FAITH) whose understanding is so sublime that he should refrain from disclosing it to anyone for fear of confusion and sedition (ibid.). God's purpose in sending his revelation is to cleanse the hearts and souls of human beings from mundane distractions and thereby lead them to salvation. To this end, he has supplied them with special faculties

or "subtle centers" *(laṭāʾif)* that orient them toward God and, eventually, lead the elect few of them to "a complete revelation of the true nature of reality" (ibid., 85).

Finally, mention should be made of the exegesis that combines esoteric exegesis and mystical metaphysics with Shīʿī theology. Here one thinks primarily of the exegetical works by Ḥaydar-i Āmulī (d. after 787/1385) — who consistently sought to integrate Ibn al-ʿArabī's ideas and exegetical methods into the Shīʿī intellectual universe — and Mullā Ṣadrā (d. 1050/1640) and his school, including what appears to be an extremely rare, if not unique, example of a mystical commentary written by a female scholar from Iran named Nuṣrat bt. Muḥammad Amīn, better known as Bānū-yi Iṣfahānī (d. 1403/1982; Ayāzī, *Mufassirūn,* 310-15, 629-33; Āmulī, *Jāmiʿ al-asrār;* Mullā Ṣadrā, *Asrār al-āyāt;* Amīn, *Tafsīr-i makhzan*).

This survey does not discuss the development of Ṣūfī exegesis in modern times, which in Western scholarship remains largely a terra incognita (see POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QURʾĀN). For some representative works of this genre see Ayāzī, *Mufassirūn,* 833. See also WISDOM; SCIENCE AND THE QURʾĀN; TIME.

Suicide

The act of taking one's own life, killing oneself. Although several qurʾānic verses appear to be relevant to suicide, in particular Q 2:54, 4:66, 4:29 and 2:195, only

the last two prove to be related to self-killing.

Moses (q.v.) said to his people, "My people, you have wronged yourselves by worshipping the calf (see CALF OF GOLD), so repent to your maker and kill yourselves; that is best for you in the eyes of your maker." Then he accepted your repentance: he is all-forgiving and most merciful (Q 2:54; see FORGIVENESS; MERCY; GOD AND HIS ATTRIBUTES).

The majority of the commentators (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL) are in agreement that the phrase "kill yourselves" *(fa-qtulū anfusakum)* means "those who have not worshipped the golden calf should kill those who worshipped it" (e.g. Ṭabarī, *Tafsīr,* i, 326-7). Some commentators, however, emphasize the metaphorical meaning (see METAPHOR; SYMBOLIC IMAGERY), that is, the Israelites are asked to repent through suppression of lustful desires *(bakhʿ)* since such desire was the root cause of their sin (Bayḍāwī, *Anwār,* i, 62; Zamakhsharī, *Kashshāf,* i, 143; see CHILDREN OF ISRAEL; SIN, MAJOR AND MINOR). Another possible reading, collective suicide, is never mentioned by most commentators and is explicitly rejected by a few (e.g. Elmalılı, *Kurʾān Dili,* i, 355-6, who says that collective suicide is clearly not the intended meaning since that would have led to the extinction of the Jews; see JEWS AND JUDAISM; EXEGESIS OF THE QUR'ĀN: EARLY MODERN AND CONTEMPORARY).

The phrase "kill yourselves" also appears in Q 4:66, "If we had decreed to them [the hypocrites; see HYPOCRITES AND HYPOCRISY] 'kill yourselves' or 'leave your homes,' only a few would have done so" but, as in the case of Q 2:54, commentators normally see mutual killing in this verse and, even though collective suicide is mentioned by some as a possible reading (Elmalılı, *Kurʾān Dili,* ii, 1385-6), this is stated to be moot since the verse is not applicable to the Muslims who are commanded not to kill one another (see MURDER; BLOODSHED).

Q 4:29 is much more to the point: "You who believe (see BELIEF AND UNBELIEF), do not consume each other's property (q.v.) unjustly (see JUSTICE AND INJUSTICE), but trade through mutual goodwill is different (see TRADE AND COMMERCE; WEALTH), and do not kill yourselves, for God is the most merciful towards you." Al-Ṭabarī (d. 310/923; *Tafsīr,* iv, 38-9) reads the second part of this verse as a command against the believers' killing each other (see FIGHTING; WAR) and understands God's prohibition of unjust trade and believers' killing each other (except for a just reason) as a sign of his mercy. Al-Bayḍāwī (d. prob. 716/1316-17; *Anwār,* i, 211), however, sees here an injunction against self-killing through suppression of self *(bakhʿ),* placing oneself in danger, or through committing crimes that would incur death or abasement (presumably including usurious trade; see USURY; BOUNDARIES AND PRECEPTS; CHASTISEMENT AND PUNISHMENT), though he clearly does not view any of these as "intentional self-killing." In any case, the recommendation of the verse, he thinks, is for combined protection of self *(nafs)* and property *(māl),* which are joined as "halves." Al-Zamakhsharī (d. 538/1144; *Kashshāf,* i, 492) understands the verse as an injunction against the believers' killing each other and/or killing oneself (cf. Ibn al-Jawzī [d. 597/1200], *Zād,* ii, 61, ad Q 4:29, who maintains that the first meaning of *lā taqtulū anfusakum* is that God forbids his servant from killing himself). And, according to al-Qurṭubī (d. 671/1272; *Jāmiʿ,* v, 156-7, ad Q 4:29), while the text itself *(lafz)* indicates that this phrase deals with (and

urges against) killing oneself intentionally *(bi-qaṣdin minhu lil-qatl)* — by bringing him or herself to the folly that leads to destruction (as in the possible response to situations of boredom or anger: "do not kill yourselves") — the interpreters have agreed that this passage means that people should not kill one another. Elmalılı, a twentieth century Turkish interpreter (*Kurʾān Dili,* ii, 1343-4), rules out the apparent meaning (see POLYSEMY), which is suicide, and argues that the applicable meaning is "forbidding one to cause one's own destruction," which is possible in one of three ways (i) excessive asceticism (q.v.) — according to Elmalılı, this fits the context of the verse —; (ii) behavior that would lead to committing sins that call for killing, including illicit consumption of property of others; and (iii) placing oneself in harm's way, even if for a charitable purpose (see GOOD AND EVIL), where Elmalılı (like al-Ṭabarī) refers to the story of ʿAmr b. al-ʿĀṣ who refrained from taking major ablution with ice cold water on the basis of this verse (he resorted to *tayammum* instead) and the Prophet's acceptance of his practice (see CLEANLINESS AND ABLUTION; RITUAL PURITY).

The relevance of Q 2:195 to suicide is indirect but clear: "Spend in God's cause (see PATH OR WAY) and do not throw [yourselves] with your own hands to danger." Here, the question is about what the phrase "do not throw [yourselves] with your own hands to destruction/danger" means. In his extensive coverage of this question, al-Ṭabarī (*Tafsīr,* ii, 206-12) reports the following different readings: (i) spend in God's cause (no other meaning intended); (ii) spend in God's cause and do not jeopardize yourselves by fighting for God's cause unless there is (sufficient) provision and power; (iii) do not place yourself in harm's way, do not give yourself up to danger because you despair (q.v.) of God's forgiveness on account of your past sins (cf. Q 12:87: "Do not despair of God's mercy — only disbelievers despair of God's mercy," and Q 15:56: "Who except those who are astray despairs of his lord's mercy?"; see LORD); (iv) spend in God's cause and do not quit fighting; (v) a combination of the third and fourth: whoever does not give away in charity what he or she does not need places himself or herself in danger (see ALMSGIVING). Similarly, whoever is despondent because of past sins places herself or himself in danger because of the command in Q 12:87 and whoever quits fighting when fighting is clearly mandatory places herself or himself in danger of incurring God's punishment.

The reality of the temptation to end one's own life has not been denied by Islamic tradition. On the authority of Abū Hurayra (d. ca. 58/678), the Prophet himself is said to have said: "Whoever kills himself with an iron [instrument] *(biḥadīdatin),* his iron [instrument] would be in his hand, poking his belly with it in hellfire forever and ever (see HELL AND HELLFIRE; ETERNITY; REWARD AND PUNISHMENT). And whoever kills himself with poison, then his poison would be in his hand and he would sip from it in hellfire forever and ever. And whoever falls from a mountain killing himself, he would fall in hellfire forever and ever" (Ibn Ḥanbal, *Musnad,* xiii, 185; Muslim, *Ṣaḥīḥ,* i, 103-4, *bāb* 47, ḥadīth no. 175). And, although not qurʾānic, al-Ṭabarī (*Taʾrīkh,* i, 1150; Eng. trans. Watt and McDonald, *History,* vi, 71) preserves a tradition transmitted by Ibn Isḥāq (d. 150/767) that Muḥammad himself contemplated suicide when he first received the revelations (see REVELATION AND INSPIRATION): "I shall take myself to a mountain crag, hurl myself down from it, kill myself and find relief in that way."

In ethical discussions over both the qurʾānic positions on suicide and those developed in later Islamic thought, the motivations (e.g. despondency for one's own personal situation, vs. the decision to go into battle to defend one's community; see EXPEDITIONS AND BATTLES), as well as the results and means (killing oneself, killing others) of the action are considered. In both classical and contemporary discussions, no clear consensus has been reached and debated issues remain: does the benefit of a martyrdom outweigh the sin of killing oneself?; what, exactly, comprises an "unlawful" killing? Especially in the postcolonial period and with the use of suicide or martyr missions to secure political and social change have these questions become particularly pressing (cf. Malka, Must innocents die?; see also POLITICS AND THE QURʾĀN). While neither Q 4:29 nor Q 2:195 can be said to contain a clear injunction against suicide, it is safe to conclude that they may indeed be understood as ruling out killing oneself especially if they are considered in connection with one another. It is also possible to view suicide, at least from an ethical perspective (see ETHICS AND THE QURʾĀN), as a special case of murder, in which case all the qurʾānic verses that prohibit unlawful killing of a human being — in particular Q 6:151 and Q 17:33: "Do not take life that God has rendered sacred except for just cause," Q 5:32: "Whoever kills another, unless for murder or highway robbery (see THEFT; CORRUPTION), it is as though he has killed all humanity," and Q 4:93: "Whoever kills a believer intentionally, his punishment is to dwell in hell forever; God is angry with him (see ANGER), he curses (see CURSE) him and prepares a terrible punishment for him" — would also apply to suicide.

Summer see SEASONS

Sun

Star at the center of earth's solar system. The sun is the brightest and most powerful of all the celestial bodies orbiting — according to the geocentric cosmological view of the world current in antiquity and the Middle Ages (cf. Van Dalen, Shams) — the earth (q.v.; see also PLANETS AND STARS). Not inappropriately, it is mentioned thirty-three times in the Qurʾān. There are hints at its being worshipped in Babylonia (Q 6:74, 78) and in pre-Islamic Arabia (Q 41:37; see PRE-ISLAMIC ARABIA AND THE QURʾĀN; SOUTH ARABIA, RELIGIONS IN PRE-ISLAMIC), especially by the Sabaeans (Q 27:24; cf. Fahd, Shams; see SHEBA), and it is stressed that this was idolatry (see IDOLATRY AND IDOLATERS) and that, conforming to the order of God's

creation, also the sun, like the other celestial bodies, is subject to God's supreme authority (q.v.; Q 22:18). A remnant of such earlier beliefs may be seen in the oath in Q 91:1, "By the sun and its light in the morning (q.v.)," after which the sūra (q.v.) was entitled *al-shams,* "The Sun" (see OATHS; FORM AND STRUCTURE OF THE QUR'ĀN; LANGUAGE AND STYLE OF THE QUR'ĀN; LITERARY STRUCTURES OF THE QUR'ĀN).

The sun (like the moon [q.v.]) has been created to serve humankind (cf. Q 7:54; 13:2; 31:29; 35:13; 39:5; 14:33; 16:12; 29:61; see COSMOLOGY; CREATION). It is the great light (q.v.), *ḍiyā'* (Q 10:5) or *sirāj* (Q 25:61; 71:16; 78:13), by day (see LAMP). It was created *ḥusbānan* or *bi-ḥusbān* (cf. Q 6:96; 55:5), as a means for calculating time (q.v.) and organizing human life (see MEASUREMENT; WEIGHTS AND MEASURES). But its heat may become onerous (Q 18:90; 76:13; see HOT AND COLD). Elements of the physical behavior of the sun are well-known and mentioned on several occasions. Its course is firmly fixed (*li-ajalin/ilā ajalin musammā,* Q 13:2; 31:29; 35:13; 39:5); in its daily rotation, it reaches a resting place, *mustaqarr,* where it abides by night (Q 36:38; see NIGHT AND DAY). It moves in an orb, *falak,* like the moon (Q 21:33; 36:40), and these two can never touch *(tudrika)* each other (Q 36:40). It rises in the east and sets in the west (cf. Q 18:17, 86, 90). The sun has also been employed in the service of Islam as, notably, for the fixing of prayer (q.v.) times. Already in Muḥammad's lifetime, when the system of five daily ritual prayers *(ṣalāt)* had not yet been set up, prayers were prescribed at sunset, *dulūk,* and at dawn (q.v.), *fajr* (Q 17:78), as well as before the sun's rising, *ṭulū',* and setting, *ghurūb* (Q 20:130; 50:39; see also DAY, TIMES OF; EVENING). Observation of the sun's shadow is also mentioned (Q 25:45), though not in connection with the fixing of prayer times. Later, Islamic legal scholars (see LAW AND THE QUR'ĀN) developed several systems for fixing the times of prayer dependent on the sun's position and on shadow observation (cf. King, Mīḳāt). Still later, Muslim astronomers devised many more scientific methods for determining the times of prayer (cf. King, Mīḳāt; id., Mizwala; see SCIENCE AND THE QUR'ĀN). Lastly, the Qur'ān mentions the sun in the eschatological (see ESCHATOLOGY) context of the day of resurrection (q.v.), when "the sun and the moon are joined [or fused]" (*wa-jumi'a l-shamsu wa-l-qamaru,* Q 75:9 — perhaps in distinct contrast to Q 36:40, where it is said that these two can never touch each other) and when "the sun is wrapped up" (*idhā l-shamsu kuwwirat,* Q 81:1; on *kuwwirat,* cf. *WKAS,* i, 427b, 8-16).

In sum, it can be said that the Qur'ān covers the most important aspects of the sun's role in human life, in earlier history as well as for the Islamic community. Within the contemporaneous geocentric understanding of the world, the physical behavior of the sun is correctly described.

Sunna

Arabic term for "way of acting." The ancient Arab concept *sunna* (pl. *sunan*) occurs

eighteen times in the Qurʾān. Generally — that is to say outside the strict context of the Qurʾān — it is defined as a way of acting, whether approved or disapproved, and is normally associated with the people of earlier generations, whose example has to be followed or shunned by later generations. The concept occupies a crucial place in Islam. In the development of Islamic theology, it eventually came to be associated with orthodoxy, the bastion against heterodox innovation (*bidʿa;* see INNOVATION; THEOLOGY AND THE QURʾĀN; for a study of the first adherents of sunna, see Juynboll, Excursus on the *ahl as-sunna*).

As far as the qurʾānic context is concerned, the occurrences of the term can roughly be divided into two categories: "sunna" either denotes God's *way* of dealing with the as-yet unbelieving people of the world, or it is a word for the *behavior* of those rebellious unbelievers who refuse to comply with divine institutions by declining to submit to divine messengers (see INSOLENCE AND OBSTINACY; MESSENGER; BELIEF AND UNBELIEF; REBELLION). Examples of sunna within the first category comprise references to God's treatment of anonymous unbelievers in the Meccan verse Q 40:85 (see CHRONOLOGY AND THE QURʾĀN), or Qurashīs and/or the hypocrites (*munāfiqūn;* see QURAYSH; HYPOCRITES AND HYPOCRISY) in the Medinan verses Q 17:77, 33:38, 62 and 48:23. Examples of sunna within the second category refer in the Meccan sūras to anonymous peoples (cf. Q 15:13, 18:55, 35:43) and in a Medinan sūra to the prophet Muḥammad's Meccan adversaries among the Quraysh (cf. Q 8:38; see OPPOSITION TO MUḤAMMAD). Moreover, in the Medinan verse Q 3:137 the plural *sunan* is glossed by al-Ṭabarī (d. 310/923; *Tafsīr,* iv, 99) as *mathulāt,* i.e. the punitive measures meted out to pre-Islamic peoples like ʿĀd (q.v.) and Thamūd (q.v.), who refused to heed the preaching of prophets sent to them by God (see PROPHETS AND PROPHETHOOD), whereas in the other Medinan verse in which the plural occurs (Q 4:26) it stands for the pious "ways of life" of certain people and prophets of old (see GENERATIONS).

In addition to these uses of the term *sunna* in the Qurʾān, the concept of sunna can be traced along various lines, encompassing a number of different nuances. Some of these were later tentatively traced back to the Qurʾān, that is to say, to qurʾānic lexemes other than *sunna,* where it was thought that sunna was implied. Initially, *sunna* was a neutral term for good or bad precedents set by earlier generations, and it played a crucial role in the evolution of Islamic law, the *sharīʿa* (see LAW AND THE QURʾĀN). In the course of the second/eighth century, sunna came to be considered one of the roots *(uṣūl)* of Islamic law, indeed, after the Qurʾān, the second most important root. It was the legal theoretician al-Shāfiʿī (d. 204/820) who was especially instrumental in raising the concept of sunna to this unassailable level of legal authority. As a legislative source, the Qurʾān contains a fair number of injunctions that are pivotal in the formulation of laws dictating human behavior. But most of these injunctions are worded in terms that are either too broad, or ambiguous (q.v.) or downright opaque. Analyzing, and where possible elucidating, those terms became the task of early Islamic exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). These commentators acted in conformity with the gradually prevailing rule that, rather than an example set by any religious expert, a corroborative prophetic example had to be adduced. Thus these exegetes sought and disseminated reports *(aḥādīth)* which transmitted what the prophet

Muḥammad and the earliest learned authorities *(ʿulamāʾ)* had allegedly said concerning certain qurʾānic verses and, where relevant, their application in daily life (see SĪRA AND THE QURʾĀN; TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY). Among the earliest strata of authorities, the prophet Muḥammad was to play an increasingly important role. One indispensable need was clarification of obscure qurʾānic passages, and this need is reflected in a number of wide-ranging traditions, for which the introduction to the collection of al-Dārimī (d. 255/869) is especially famous. More than his fellow traditionists, it was al-Dārimī who brought together a number of ḥadīths that dealt with the issue of the inter-dependence of Qurʾān and sunna (see ḤADĪTH AND THE QURʾĀN). That most of these sayings are probably of his own making may be deduced from their absence from other early collections ascribed to his peers. Perhaps the most concise among the somewhat later sayings is the one that runs: "the Qurʾān needs [the elucidation contained in the] sunna more than the other way around" (*inna l-Qurʾān aḥwaju ilā l-sunna mina l-sunna ilā l-Qurʾān;* cf. the theologian al-Barbahārī [d. 329/941] in his *Kitāb al-Sunna,* which Ibn Abī Yaʿlā [d. 526/1131] extensively quotes in his *Ṭabaqāt al-Ḥanābila* [cf. ii, 25]).

The inter-relatedness of Qurʾān and sunna was transferred gradually to the delicate field of abrogation (q.v.; *naskh*). Initially it went without saying that a qurʾānic passage could abrogate a sunna; but eventually the question was raised whether a sunna laid down, for instance, in a prophetic ḥadīth, could perhaps abrogate a qurʾānic injunction. The statement "sunna may determine the Qurʾān but not vice versa" *(al-sunna qāḍiyatun ʿalā l-Qurʾān wa-laysa al-Qurʾān bi-qāḍin ʿalā l-sunna)* is ascribed to an early authority, Yaḥyā b. Abī Kathīr (d. 132/749) but is probably al-Dārimī's own handiwork (cf. his *Sunan,* i, 153, no. 587). This highly controversial issue kept theologians and jurisprudents occupied for a considerable period. In early *tafsīr* literature there are no discernible attempts to equate certain terms from scripture with sunna or, specifically prophetic sunna *(sunnat al-nabī)*. It was the aforementioned legal scholar al-Shāfiʿī who was the first to try to link an important qurʾānic term with sunna, in an attempt to provide scriptural evidence for his insistence that sunna should automatically be equated with *sunnat al-nabī*. The word chosen by him was *ḥikma,* "wisdom" (e.g. his *Risāla,* 32, 78, etc.); but even after his lifetime this identification does not seem to have caught on with other jurists. The only explanation early exegetes like al-Ḥasan al-Baṣrī (d. 110/728) and Qatāda b. Diʿāma (d. 117/735) are alleged to have offered for *al-ḥikma* was simply the gloss *al-sunna* without further specification (cf. *Tafsīr al-Ḥasan al-Baṣrī,* i, 115, Ṭabarī, *Tafsīr,* i, 557, ad Q 2:129). Then, at the hands of al-Shāfiʿī, that is extended to *sunnat rasūli llāh*. The verse that comes to mind most readily as providing a good opportunity for tracing the concept of sunna of the Prophet and/or that of his faithful followers in the Qurʾān, is Q 33:21: "You had (conceivably: have) in the messenger of God a perfect example…"; but al-Shāfiʿī did not even hint at this verse in his *Risāla*. It is the traditionist Aḥmad b. Ḥanbal (d. 241/855) who mentions the verse (cf. his *Musnad,* ii, 15 = ed. A.M. Shākir, no. 4641) in connection with sunna. The debate was couched in cautious terms, lest a sunna, which is after all a custom instituted by man, be too readily taken to be capable of abrogating or modifying the *prima facie* interpretation of scripture, which is, after all, of divine origin.

Another term bracketed with *al-sunna* next to the Qurʾān is the word *ḥabl,* "rope,

cord," in Q 3:103 (cf. Ibn Ḥajar, *Fatḥ al-bārī,* xvii, 3, apud Bukhārī, *K. al-Iʿtiṣām,* 1). In exegetical literature, however, *ḥabl* is almost exclusively associated with the Qurʾān, or the religion, or the community *(jamāʿa)* of believers, but not with sunna.

The term *sunna* does not occur more often than in the verses dealt with above, whereas there are numerous qurʾānic passages in which *sunna* and/or its derivative *sunnat al-nabī* are quite clearly intended. The frequently repeated command that the believers must obey God and his messenger (cf. Kassis, *Concordance,* s.v. *aṭāʿa,* "to obey"; see OBEDIENCE) can virtually always be construed as pointing to submission to the exemplary behavior of the Prophet.

Sūra(s)

A literary unit of undetermined length within the Qurʾān, often translated as "chapter." In the printed editions of the Qurʾān, but not in the earliest manuscripts (see MANUSCRIPTS OF THE QURʾĀN), it is marked as such by a title section that provides the name of the sūra, followed by a number that defines its place in the sequence of the 114 sūras of the entire corpus. Sūra names are not abbreviations of the content but "catchwords," taking up a particular lexeme from the text that is either a rare word in the Qurʾān (e.g. Q 80, Sūrat ʿAbasa, "He Frowned") and thus easy to remember, or a major issue discussed in the sūra (e.g. Q 4, Sūrat al-Nisāʾ, "The Women"), or, occasionally, the initial word of the sūra. There is no complete agreement about the names of the sūras, some sūras being known under more than one title. Whereas the naming and the ordering of the sūras are later textual adjustments (see MUṢḤAF; CODICES OF THE QURʾĀN), the arrangement of the text as a sequence of sūras goes back to the redaction of the Qurʾān itself, which tradition dates to the reign of the third caliph ʿUthmān b. ʿAffān (r. 23-35/644-56). Although that dating is not confirmed by external evidence, the redaction and official publication should have taken place some time before the Umayyad caliph (q.v.) ʿAbd al-Malik's reign (65-86/685-705), since it is attested among scholars of his time (see Hamdan, al-Ḥasan al-Baṣrī). Inasmuch as the somewhat mechanical arrangement of the sūras according to their length does not betray a particular historical or theological interest on the part of the redactors, but rather an awareness of the already achieved canonical status, the sūras as units should go back to a very early time (see FORM AND STRUCTURE OF

THE QUR'ĀN). There is also no substantial contrary evidence to be gleaned from the findings of Qur'ān fragments at Ṣan'ā', Yemen, whose analysis still awaits publication (Puin, Observations; but cf. ibid., 111 for the variations from the 'Uthmānic codex found in some of these fragments). Although there are no complete copies preserved, folios with overlapping sūra texts confirm the traditional sequence.

Etymologically, the term sūra is difficult to trace (see Jeffery, *For. vocab.*), but may have been derived from Hebrew *shūrah*, "line," as well as from Syriac *shūrayā*, "beginning," or short psalms that are sung before the reading of scripture. None of these etymologies, however, is totally convincing. In Arabic, the word makes its first appearance in the Qur'ān itself.

The word sūra is used ten times in the Qur'ān, all of which being rather late (see CHRONOLOGY AND THE QUR'ĀN): The oldest evidence is Q 10:38, "Say, 'Bring a sūra like it and [for assistance] call upon whom you can besides God'" *(qul fa-'tū bi-sūratin mithlihi wa-d'ū mani staṭa'tum min dūni llāhi)*, a verse belonging to the so-called *taḥaddī*-verses (see Radscheit, *Die taḥaddī-Verse*), i.e. the polemic discourse about the inimitability (q.v.) of qur'ānic speech (see also WORD OF GOD; PROVOCATION; CREATEDNESS OF THE QUR'ĀN). The term "sūra" is part of that debate, and it reappears in Q 11:13 and Q 2:23. "Sūra" is employed in more general contexts to cover an unspecified text unit of the revelation (see REVELATION AND INSPIRATION), mostly in polemical contexts (like Q 9:64, 86, 124; see POLEMIC AND POLEMICAL LANGUAGE). It is only used once — in place of the more usual *kitāb* (see BOOK) — in a hymnal annunciation of a revealed text to be communicated (Q 24:1).

Thus, sūra certainly has to do with "text," but not necessarily with a written text (see ORALITY AND WRITING IN ARABIA). It seems to denote a recited text, more precisely, the quantity that is presented in public on a single occasion (see RECITATION OF THE QUR'ĀN). It is, however, highly questionable if the term sūra was used during the Prophet's lifetime to denote the "chapters" of the Qur'ān in general which were only later designated as sūras.

It appears that the sūra in the qur'ānic context fulfills, to some degree, the function of textual subdivisions familiar from Judaism and Christianity (see below; see SCRIPTURE AND THE QUR'ĀN; JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY). But, whereas the canonical texts in those traditions have been subdivided for liturgical use only after the completion and canonization of the textual corpus, the arrangement of the qur'ānic text *grosso modo* seems to go back to the oral use of the text in the earliest community, a practice that preceded its codification as a whole (see ORALITY). A number of sūras display the character of intended literary units, composed as such for recitation; others seem to have been extended with repeated use; others again appear as collections of text units rather unrelated to each other that may not have had a *Sitz im Leben* in oral transmission. This complex problem still awaits evaluation. The sūra as an entity with a coherent unity has not yet been adequately studied (see LITERARY STRUCTURES OF THE QUR'ĀN), although there have been, more recently, new approaches, often focusing on Q 12, Sūrat Yūsuf ("Joseph"; see Mir, Coherence; id., The sūra as a unity; id., The qur'ānic story of Joseph; Neuwirth, Zur Struktur; De Premare, Joseph et Muḥammad; Sells, *Approaching the Qur'ān;* id., Literary approach; Waldman, New approaches; see also JOSEPH; NARRATIVES).

In the following, an attempt will be made to trace the development of the sūra from early Meccan, to later Meccan and then to Medinan times (see MECCA; MEDINA; LANGUAGE AND STYLE OF THE QUR'ĀN). Finally, a brief comparison to sections in other scriptures will be undertaken.

Early Meccan sūras

To embark on an analysis of the sūra as a literary form we must first define our stance vis-à-vis the Qur'ān as our textual basis. It is one task to discuss the sūra as a fixed textual unit within the transmitted text and an entirely different task to discuss it in its earlier function as an oral communication whose context was not the entire corpus of the Qur'ān but rather single, earlier qur'ānic communications (see OCCASIONS OF REVELATION) and — perhaps more importantly — individual religious debates (see DEBATE AND DISPUTATION) that must have taken place among the early followers of Muḥammad and their neighbors in their particular cultural milieu, Mecca and Medina. Revisionist scholarship has ruled out the possibility of exploring the situation of the first communications of qur'ānic texts, which are indeed impossible to re-construct in full (see POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QUR'ĀN). Still, to confine the analysis to the canonical shape of the Qur'ān, neglecting both its complex referentialities and its hints to the *Sitz im Leben* of particular text units, would render an insufficient reading. What qur'ānic scholarship still must do is consider systematically both intra-qur'ānic and extra-qur'ānic evidence on the religious situation at the time of the Prophet. Not least the largely blank map of the religious setting of central Arabia has made revisionist scholars look for a different milieu for the genesis of the Qur'ān, jumping over, however, the necessary step of a micro-structural reading of the Qur'ān itself. In what follows, a sketch of the pre-canonical development of the sūra as a literary genre will be attempted.

The earliest sūras must have been those that made use of the particular style related to the pre-Islamic *kāhin,* a soothsayer (q.v.) or seer, who claimed super-human origin for his enunciations. This literary form is known as *saj',* and it consists of short syntactical units marked by an expressive rhyme, often ultima-stressed (see RHYMED PROSE). This pattern of phonetic correspondence between the verse endings *(fāṣila)* is not only more loose than the poetic rhyme *(qāfiya),* but is also more flexible, thus allowing semantically related verses to be bracketed by a rhyme of their own and marked off by clearly distinct verse-groups (see VERSES). The highly sophisticated phonetic structures produced by this style have been evaluated by Michael Sells *(Approaching the Qur'ān).* Among these earliest sūras should be counted the following, which are cited in an order that roughly follows the textual chronology: Q 111, 99-108, 77-97, 73-5, 68-70, 55-6, 51-3. As against those sūras that remain close to the *kāhin* speech model attesting the speaker's ecstatic disposition (e.g. Q 111, 101, 100, 99, 84, 82, 81, 79, 77, etc.), there are other early sūras that in their quiet and solemn mood (Q 95, 94, 93, 87, 74, 73, etc.) remind one of Christian hymns or adaptations of psalms (q.v.) rather than of a pagan ritual such as the performance of the *kāhin* (see also POLYTHEISM AND ATHEISM; IDOLATRY AND IDOLATERS). What they still have in common is the shortness of the verses, which do not exceed one syntactically complete sentence. In those sūras that remind one of the pagan model, the expression itself is often enigmatic, thus stressing the strangeness that adheres to a super-human communication. A striking characteristic of

this style is the use of oaths (q.v.) and oath-clusters (see Neuwirth, Images, and also FORM AND STRUCTURE OF THE QUR'ĀN), conjuring heavenly bodies (see PLANETS AND STARS; SUN; MOON), thunderstorms (see WEATHER) and bands of inimical raiders, all of which are phenomena pertaining to the imagination of desert-dwellers rather than to the stock of images in the monotheistic tradition (see NOMADS; BEDOUIN; DESERT; CITY; NATURE AS SIGNS).

There are equally less menacing oaths that conjure sacred places — including monotheistic shrines — and sacred times, times of the day (see DAY, TIMES OF) that have been known as times of prayer (q.v.) in pre-Islamic times (see Neuwirth, Images and metaphors; see also TIME; SACRED PRECINCTS; SACRED AND PROFANE). These texts document a merger between a "pagan" form and a biblically inspired content. Sūras introduced by oath clusters, thus, are not necessarily imprinted by pagan thinking. On the contrary, the oath-cluster — a very dense and rhythmically dynamic section — is sometimes used to convey the urgency, the threatening closeness of the catastrophe that is the only thing that matters in the monotheistic context: the day of judgment (see LAST JUDGMENT; APOCALYPSE). The clusters here serve as a sign of alarm transposed into the language of the standard Arabian warners (see WARNER), the soothsayers. A comparable re-interpretation of pre-Islamic lore is observable with the other oath-clusters: "pagan" sacred times become ritually occupied by monotheistic cultic acts, a development that is mirrored in the text where praises and prayers continue the oath-cluster (see PRAISE; LAUDATION; PRE-ISLAMIC ARABIA AND THE QUR'ĀN). Moreover, many early sūras are replete with hymnal elements that are standard expressions in Christian and Jewish worship (q.v.; see Baumstark, Jüdischer Gebetstypus; Speyer, *Erzählungen*). The assumption of a strong Christian presence in Mecca and an equally strong Jewish one in its vicinity, at least since the emigration (q.v.; *hijra*), and the familiarity of the Prophet and his followers with Christian and Jewish pious texts of worship, are indispensable for the understanding of the early sūras. "Paganism" in the Qur'ān has to be understood not as a fixed system of beliefs but as the larger common denominator of a multiple and unstable set of elements, already strongly imbued with monotheist notions.

Qur'ānic texts and liturgy

Whereas the imperative to worship is always there (Q 96:1: "recite in the name of your lord who created" *[iqra' bi-smi rabbika lladhī khalaq]*; Q 87:1: "glorify the name of your lord the most high" *[sabbiḥi sma rabbika l-a'lā];* Q 96:19: "and bow down and bring yourself closer" *[wa-sjud wa-qtarib];* Q 73:2-4: "stand [for prayer] much of the night… and recite the Qur'ān" *[qumi l-layla illā qalīlan… wa-rattili l-qur'āna tartīlan]*) and God is always mentioned (in the wording "your lord [q.v.]," *rabbuka*), many texts do not seem to be, first and foremost, addressed to the Prophet, but could equally be addressed to the believer. This is a way of expression familiar from the Psalms where the first-person speaker is not necessarily the author of the psalm (see BELIEF AND UNBELIEF; FAITH). It is thus difficult to decide if a sūra like Q 93 is a reflex of the Prophet's biography or not (see SĪRA AND THE QUR'ĀN). There is an unambiguous paraphrase of a psalm (136) in Q 55, which, however, replaces the memory of salvation (q.v.) history with a focus on the eschatological future (Neuwirth, Qur'ānic literary structure; see ESCHATOLOGY). Still, the view, first presented by Lüling *(Urtext)*, later in a cruder form by Luxenberg *(Die syro-aramäische Lesart)* and

taken into consideration again by Böwering (see CHRONOLOGY AND THE QUR'ĀN) that an existing Christian text may underlie some qur'ānic sections, appears to be merely a hypothesis. The familiar formulas do not make up entire sections or strophes — as Lüling would have it — but are embedded in exhortative (see EXHORTATIONS) or polemical contexts, that, in the early sūras, contrary to the later ones, frequently take the shape of projections of the scenario of the Qur'ān recitation itself, e.g. Q 53:59f.: "Do you wonder at this speech, will you laugh and not weep?… Bow down to God and adore [him]" *(a-fa-min hādha l-ḥadīthi taʿjabun wa-taḍḥakūna wa-lā tabkūn… fa-sjudū lillāhi wa-ʿbudū)*. Particularly the cultic framework in which the Qur'ān was recited seems to have met opposition: Q 77:48-50: "and when it was said to them, 'Prostrate!', they did not do so… and what speech after that will they believe?" *(wa-idhā qīla lahumu rkaʿū lā yarkaʿūn… fa-bi-ayyi ḥadīthin baʿdahu yu'minūn);* Q 107:4-5: "and woe to the worshipers who neglect their prayers" *(fa-waylun lil-muṣallīn alladhīna hum ʿan ṣalātihim sāhūn);* Q 96:9-10: "have you seen the one who prevents the servant from praying" *(a-ra'ayta lladhī yanhā ʿabdan idhā ṣallā;* cf. Q 74:43; 75:31; see Neuwirth, Rezitationstext). The missing reference to the persona of the Prophet as the transmitter in early texts may be due to the still undeveloped consciousness of the speaker's own part in the communication.

There are at the same time unequivocal addresses to the Prophet, like Q 74:2 f.: "Arise and warn and magnify your lord" *(qum fa-andhir wa-rabbaka fa-kabbir),* and his figure gradually becomes prominent in the sūras. Many early sūras end with an exhortation to the Prophet to worship God either in vigils (Q 52:48-9: "and glorify the praise of your lord as you stand and glorify him part of the night and at the setting of the stars" *[wa-sabbiḥ bi-ḥamdi rabbika ḥīna taqūm wa-mina l-layli fa-sabbiḥhu wa-idbāra l-nujūm];* see VIGIL) or to praise him (Q 56:96: "and glorify in the name of your lord the mighty" *[fa-sabbiḥ bi-smi rabbika l-ʿazīm];* Q 93:11: "and speak of the bounty of your lord" *[wa-ammā bi-niʿmati rabbika fa-ḥaddith];* Q 108:2: "and pray to your lord and sacrifice" *[fa-ṣalli li-rabbika wa-nḥar]*). Sometimes he is admonished to worship at the very beginning of a sūra (Q 74:1 f.: "O enshrouded one, arise and warn and magnify your lord" *[yā ayyuhā l-muddaththir qum fa-andhir wa-rabbaka fa-kabbir]*). It appears that the early recitation took place in the framework of already existing rituals (see RITUAL AND THE QUR'ĀN), *ṣalāt,* made up of *rukūʿ* and *sajda* (see BOWING AND PROSTRATION), being evidently already a rite celebrated in Mecca before Muḥammad's mission (Q 53:62; 77:48). These may have taken place in privately held vigils as well as publicly performed rituals.

There is, then, an obvious convergence of the early qur'ānic text to liturgy. Some sūras sound like calls for repentance (see REPENTANCE AND PENANCE) in the face of the imminent coming of the day of judgment. This event is the topic of a number of sūras and is extensively elaborated: The catastrophic events that precede the judgment (q.v.) fill large sections of the early sūras, although the scene of judgment is less clearly described. The retribution — either in punishment by fire (q.v.) or in the admittance to lofty gardens (see GARDEN) — is of special interest (see REWARD AND PUNISHMENT). Indeed, the entire corpus of early texts pursue one task: to convince the listeners of the omnipresence of God (see GOD AND HIS ATTRIBUTES) and thus of the moral responsibility (q.v.) to which they will be held on the last day (see also FREEDOM AND PREDESTINATION). As with the Psalms, the

theme of God's generosity and philanthropic concern enhances his claim to human gratitude (see GRATITUDE AND INGRATITUDE). Also as in the Psalms, events from salvation history are recalled: in Q 51 the story of Abraham (q.v.; Ibrāhīm) and Lot (q.v.; Lūṭ), and in Q 79 the story of Moses (q.v.; Mūsā) and Pharaoh (q.v.; Firʿawn). Both are presented as an exhortation (*ʿibra;* cf. Q 79:26) — and dramatize the divine punishment for transgressors (see SIN, MAJOR AND MINOR; BOUNDARIES AND PRECEPTS). Pharaoh's behavior clearly reflects that of the unbelievers, and his punishment is equally historical and eschatological (see CHASTISEMENT AND PUNISHMENT; HELL AND HELLFIRE).

The Qurʾān developed diverse motifs and structures not known from earlier Arabic literature (see FORM AND STRUCTURE OF THE QURʾĀN). Beside the eschatological prophecies (see PROPHETS AND PROPHETHOOD; FORETELLING) that abound in early Meccan sūras, the so-called *āyāt,* "signs" (q.v.; see also VERSES), are also prominent. Several descriptions of the "biosphere," of copious vegetation, fauna, an agreeable habitat for humans, the natural resources at their disposal, and the like, are incorporated into paraenetic appeals to recognize divine providence and accept divine omnipotence since all these benefits are signs *(āyāt)* bearing a coded message (see AGRICULTURE AND VEGETATION; GRACE; BLESSING). Properly decoded, they will evoke gratitude and submission to the divine will. The perception of nature, which in pre-Islamic poetry (see POETRY AND POETS) appears alien and threatening, provoking the poet's heroic defiance of its roughness, has crystallized in the Qurʾān into the image of a meaningfully organized habitat ensuring human welfare and arousing the awareness of belonging (see GEOGRAPHY).

"Signs" *(āyāt)* of divine omnipotence may also manifest themselves in history. Whereas extended narratives are prevalent in later Meccan texts, very short narratives — an invasion of Mecca (Q 105) repelled by divine intervention (see PEOPLE OF THE ELEPHANT), the Thamūd (q.v.) myth about a divine punishment of disbelievers (Q 91:11-15; see PUNISHMENT STORIES), the story of Pharaoh and Moses (Q 79:15-26) — or ensembles of narratives like that in Q 51 including Abraham and Lot, Moses and Pharaoh, the ʿĀd (q.v.), the Thamūd, and Noah (q.v.; Nūḥ) — or evocations of stories (Q 52, 53, 69), occur from the earliest sūras onward. The latter sometimes form lists (Q 89). Somewhat longer narratives are introduced by the formula known from *āyāt* on nature, "have you not seen" *(a-lam tara…),* later "and when…" *(wa-idh [faʿala]…),* i.e. they are assumed to be known to the listeners. It is noteworthy that the longer narratives from early Meccan texts onward are split into equal halves, thus producing proportionate structures (Q 51:24-37; 79:15-26; 68:17-34). Narratives then develop into retribution legends or punishment stories, serving to prove that divine justice (see JUSTICE AND INJUSTICE) is at work in history, the harassed just being rewarded with salvation, the transgressors and the unbelievers punished by annihilation. At the same time, legends that are located in the Arabian peninsula may be read as re-interpretations of ancient Arabian representations of deserted space. Sites no longer lie in ruins due to preordained natural processes, but because of an equilibrium, maintained by divine providence, that balances between human actions and human welfare. Deserted sites thus acquire a meaning; they carry a divine message (see GENERATIONS; GEOGRAPHY).

From the middle Meccan sūras onward, polemical and apologetic sections (see

APOLOGETICS) still do not refer to theoretical, let alone dogmatic, issues in the early sūras. In these middle Meccan texts, polemical utterances are more often than not directed against listeners who do not comply with the exigencies of the behavioral norms of the cult. These listeners are reprimanded by the speaker *in situ* (Q 53:59 f.). Sometimes curses are uttered against absent persons (Q 111:1 f.) or against humankind in general (Q 80:17; see CURSE). In other cases menaces are directed at the ungrateful or pretentious (Q 114:1; see ARROGANCE; INSOLENCE AND OBSTINACY), and these may merge into a catalogue of vices (Q 107:2-7; see VIRTUES AND VICES, COMMANDING AND FORBIDDING). Whereas in most of the early cases the adversaries are not granted an opportunity to reply, later sūras do present the voices of both sides.

Later Meccan surās

Sūras introduced by oath-clusters — the most graphic reference to the *kāhin* speech model — are no longer present once the sūra becomes complex and polythematic. A turn in paradigm occurs with Q 15, a text that triumphantly declares the achievement of another qurʾānic text: Sūrat al-Fātiḥa ("The Opening," Q 1; see Neuwirth, Referentiality; id., Sūrat al-Fātiḥa; see FĀTIḤA). Here, for the first time, an allusion is made to the existence of a particular form of service in which scripture functions as the cardinal section. In such sūras, the references to the Meccan sanctuary *(ḥaram)* as the central warrant for the social coherence of the community have been replaced by new symbols. Instead of introductory allusions to liturgical times and sacred space we encounter an evocation of the book, be it clad in an oath (Q 36:2; 37:3; 38:1; 43:2; 44:2; 50:1) or in a deictic affirmation of its presence (Q 2:2; 10:1; 12:1; 13:1, etc.).

Moreover, a new framework of the message in terms of space is recognizable. Later Meccan sūras broaden the scope of space for the listeners, who are transported from their local surroundings to a distant landscape, the holy land, familiar as the setting where the history of the community's spiritual forebears took place. The introduction of the direction of prayer towards Jerusalem (q.v.), the "first *qibla* (q.v.)," is an unequivocal testimony of this change in orientation (see Neuwirth, Spiritual meaning). The innovation is reflected in Q 17. In view of the increasing interest in the biblical heritage, it comes as no surprise that the bulk of the middle and late Meccan sūras seem to mirror a monotheistic worship service, starting with an initial dialogical section (apologetic, polemic, paraenetic) and closing with a related section, most frequently an affirmation of the revelation. These framing sections have been compared to the ecclesiastic *ecteniae,* i.e. initial and concluding *responsoria* recited by the priest or deacon and responded to by the community. The center of the monotheistic worship service and, similarly, of the fully developed sūra of the middle and late Meccan period is occupied by a biblical reminiscence — in the case of the service, a *lectio,* and in the case of the sūra, a narrative focusing on biblical protagonists. Ritual coherence has thus given way to scriptural coherence, with the more complex later sūras referring to scripture both by their transmission of scriptural texts and by their being themselves dependent on the mnemonic-technicalities of writing for their conservation. It is true, however, that already in later Meccan sūras the distinct tripartite composition often becomes blurred, with narratives gradually being replaced by discursive sections. Many compositions also display secondary expansions — a phenomenon that still re-

quires further investigation. Yet, for the bulk of the middle and late Meccan sūras, the claim of a tripartite composition is sustainable (see Neuwirth, Vom Rezitationstext).

Salvation history

The Qurʾān is often criticized for lacking a chronological framework for the events of pre-qurʾānic history and for the repetitiveness of its narrative. While this accusation may hold true for the earliest qurʾānic discourse, that of eschatology, the situation changes substantially when a new paradigm is adopted. This new paradigm switches the focus from the deserted sites of the real homeland to the orbit of the messengers of the People of the Book (q.v.), whose discourse as intermediaries between God and man is much more sophisticated (see MESSENGER; HEAVENLY BOOK; PRESERVED TABLET).

Although initially embedded in catalogues of narratives of a partly extra-biblical tradition, stories about major biblical figures like Moses and a number of patriarchs known from the Book of Genesis gradually acquire a function of their own. They become the stock inventory of the central part of the longer Meccan sūras and only rarely do they appear in other positions. As mentioned earlier, sūras from the second Meccan period onward often form an ensemble that mirrors the enactment of a monotheistic service where the central position is occupied by the reading of scriptural texts. These sections are often explicitly related to a divine source labeled *kitāb*. In the qurʾānic context, they are embedded in a more extensive recital, whose initiatory and concluding sections may contain liturgical but also less universal elements such as debates about ephemeral community issues. The ceremonial function of the biblically inspired narrative as a festive presentation of the book is underlined by introductory formulas (Q 19:16: "and mention Mary in the book" *[wa-dhkur fī l-kitābi maryam]*). At a later stage, when the particular form of the revelation communicated to the Muslim community is regarded as a virtual scripture of its own, i.e. when community matters are acknowledged as part of salvation history, whole sūras figure as manifestations of *al-kitāb*.

The phenomenon of recurring narratives in the Qurʾān, retold in slightly diverging fashions, has often been interpreted as mere repetitions, i.e. as a deficiency of the Qurʾān. They deserve, however, to be studied as testimonies of the consecutive emergence of a community and thus reflective of the process of canonization. They point to a progressively changing narrative pact, to a continuing education of the listeners, and to the development of a moral consensus that is reflected in the texts. In later Meccan and Medinan sūras, when a large number of narratives are presupposed as being well known to the listeners, the position previously occupied by salvation history narratives is replaced by mere evocations of narratives and debates about them.

As was mentioned above, the early — and densely structured — parts of the Qurʾān reflect an ancient Arabic linguistic *ductus,* termed *sajʿ,* a prose style marked by very short and concise sentences with frequently changing patterns of particularly clear-cut, often phonetically expressive rhymes. Once this style has, in the later sūras, given way to a more loose flow of prose, with verses often exceeding one complete sentence, the rhyme end takes the form of a simple *-ūn* or *-īn* pattern, which in most cases is achieved through a morpheme denoting masculine plural. One wonders how this rather mechanically applied and inconspicuous ending should suffice to fulfill the listeners' anticipation of an end marker of the verse.

Upon closer examination, however, one discovers that the rhyme as such is no longer charged with this end-marker function, but there is instead another device to mark the end. The verse concludes with an entire syntactically stereotypical rhymed phrase, which one may term cadenza — in analogy to the final part of speech units in Gregorian chants which, through their particular sound pattern, arouse the expectation of an ending. In the Qurʾān what is repeated is not only the identical musical sound but a linguistic pattern as well: a widely stereotypical phrasing. The musical sound pattern comes to enhance the message encoded in the qurʾānic cadenza-phrase that in many instances introduces a meta-discourse. Many cadenza-phrases are semantically distinguished from their context and add a moral comment to it, such as "truly, you were one of the sinners" (*innaki kunti min al-khāṭiʾīn,* Q 12:29). They thus transcend the main narrative or argumentative flow of the sūra, introducing a spiritual dimension: divine approval or disapproval. They may also refer to one of God's attributes, like "God is powerful over everything" (*wa-kāna llāhu ʿalā kulli shayʾin qadīran,* Q 33:27; see POWER AND IMPOTENCE), which in the later stages of qurʾānic development become parameters of ideal human behavior. These meta-narrative insertions into the narrative or argumentative fabric which would, of course, in a written text, be meant for silent reading, appear rather disturbing, delaying the information process. They add, however, fundamentally to the impact of the oral recitation (see Neuwirth, Zur Struktur; see also VERSES; RECITERS OF THE QURʾĀN). The Qurʾān thus — as Nicolai Sinai has expressed it — consciously styles itself as a text evolving on different, yet closely intertwined, levels of discourse and mediality. Although it is true that not all multipartite verses bear such formulaic endings, cadenzas may be considered characteristic of the later Meccan and all the Medinan qurʾānic texts. The resounding cadenza, thus, replaces the earlier expressive rhyme pattern, marking a new and irreversible development in the emergence of the text and of the new faith. It immediately creates a new literary form within Arabic literature.

Types of Medinan sūras

In Medina, sūras not only give up their tripartite scheme, but they also display much less sophistication in the patterns of their composition. One type may be aptly termed the "rhetorical" sūra or sermon (Q 22, 24, 33, 47, 48, 49, 57-66; see RHETORIC AND THE QURĀN); they consist of an address to the community whose members are called upon directly by formulas such as *yā ayyuhā l-nās* (Q 22:1, "Oh people"). In these sūras, which in some cases (Q 59, 61, 62, 64) are stereotypically introduced by initial hymnal formulas strongly reminiscent of the biblical Psalms, the Prophet *(al-nabī)* no longer appears as a mere transmitter of the message but as one personally addressed by God (Q 33:28, "Oh Prophet" *[yā ayyuhā l-nabī]*) or as an agent acting synergistically with the divine persona (Q 33:22, "God and his Prophet" *[allāhu wa-rasūluhu]*). A particularly graphic testimony of the new self-positioning of the Prophet is Q 33, particularly Q 33:56.

As against these "monolithic" addresses, the bulk of the Medinan sūras are the most complex of the entire Qurʾān. Most of the so-called "long sūras" (*ṭiwāl al-suwar,* e.g. Q 2-10) cease to be neatly structured compositions, but appear to be the result of a process of collection that we can not yet reconstruct (see COLLECTION OF THE QURʾĀN). Initial attempts to claim an intended structure for some of these sūras have been made by Zahniser (Word of God); but a systematic study of all these sūras is still an urgent desideratum in the field.

Since we have to understand the Qurʾān's

development as one strain of a double process that will result in both a scripture and a cultus, the long sūras are most interesting as milestones of the development of the ritual backdrop of the qurʾānic communication process. Though their structure may be secondary, their message sheds important light on particular ritual changes whose symbolic value cannot be underestimated.

Although occasional regulations — mostly concerning cultic matters — do occur in Meccan sūras, more elaborate regulations about not only cultic but also communal affairs figure prominently in the Medinan context (see LAW AND THE QURʾĀN). Their binding force is sometimes underlined by a reference to the transcendent source: "it is prescribed for you" (*kutiba ʿalaykum,* Q 2:183-7). Among the most important ritual rulings is the ruling concerning the new direction of prayer, the *qibla,* towards Mecca (Q 2:143f.). This ruling marks the separation of the community from the Jewish listeners who earlier had been among the receivers of the Qurʾān — a situation that had provoked a re-reading of earlier texts that had been done from the perspective of particular rabbinical discourses (Neuwirth, Oral scriptures). Other important rulings concern the three pillars of what was to become Islamic cultus and liturgy: the establishment of a weekly communal service, the *ṣalāt al-jumuʿa* (cf. Q 62:9; see FRIDAY PRAYER), the implementation of a fast (see RAMAḌĀN; FASTING), introduced with reference to the Jewish fast — both still preceding the exclusion of the Jews — and the introduction of the *ḥajj* ceremony into the festive canon (Q 2:196 f., 22:27 f.; see PILGRIMAGE). The Medinan regulations do not display any structured composition, nor do they form part of neatly composed units; they suggest, rather, later insertions into loosely connected contexts.

Time, thus, in the Medinan sūras becomes structured by an emerging Islamic cultus. Simultaneously, the historical flow of significant events starts to inform the consciousness of the community; indeed, they enter the Qurʾān as part of salvation history that is now perceived as encompassing the emerging Islamic community (see COMMUNITY AND SOCIETY IN THE QURʾĀN). A new element appearing in Medinan sūras are accounts of contemporary events experienced or enacted by the community, such as the battle of Badr (q.v.; Q 3:123), Uḥud (Q 3:155-74), the expulsion of the Banū l-Naḍīr (Q 59:2-5; see NAḌĪR, BANŪ L-), the siege of Khaybar (Q 48:15), the expedition to Tabūk (Q 9:29-35; see EXPEDITIONS AND BATTLES) or the farewell sermon of the Prophet in Q 5:1-3 (see FAREWELL PILGRIMAGE). It is noteworthy that these reports do not display a special artistic literary shaping, nor do they betray any particular pathos. It comes as no surprise, then, that, unlike the situation in Judaism and Christianity, where biblical history has been fused to form a mythical drama of salvation, no such great narrative has arisen from the Qurʾān itself. A metahistorical blueprint of the genesis of Islam was constructed only later, through the *sīra*.

Sūra — *parashah* — *perikope*

The surely ancient division of the Qurʾān into sections, some of which may already have been called sūras during the Prophet's lifetime, has ruled out a later pericopization such as occurred in Judaism and Christianity (see Neuwirth, Three religious feasts). Both Judaic and Christian orthodoxy bind biblical texts to particular temporal frames. To quote Yerushalmi (*Jewish history,* 15 f.):

The Pentateuchal narratives, which brought the historical record up to the

eve of the conquest of Canaan, together with the weekly lesson from the prophets, were read aloud in the synagogue from beginning to end. The public reading was completed triennially in Palestine, annually in Babylonia (as is the custom today), and immediately the reading would begin again.

In an analogous way, the Gospels (q.v.) in the Orthodox churches — having replaced in Christianity the Torah (q.v.) as the core of scriptures — are distributed over the course of the year, "cut" into pericopes (Greek *perikope*) and thus reflect the Jewish reading of weekly chapters of the Torah (Hebrew *parashah*). This cycle of readings from the core of the scripture is accompanied, as in Judaism, by a second sequence of texts taken from other parts of the scriptures. The Pauline letters (Greek *apostolos*) and additional readings from the historical or prophetic books of the Hebrew Bible (Greek *propheteia*) are meant to elucidate the pericopes from the core texts, the Gospels. This, of course, continues the tradition of the readings from the prophets in Judaism (Hebrew *haftarah*), a corpus undisputed in its rank as a vital complement and a necessary exegetical context for the Torah.

As against that, no annual cycle of scriptural reading exists in Islam; the qurʾānic text has never been divided into required weekly or daily portions to be read out in public services. That means that a continuous recollection of salvation history from creation (q.v.) to redemption, as in Christianity (see also FALL OF MAN), does not take place during the weekly ritual nor is the believers' predicants and salvation — their ever again being saved by divine intervention, as in Judaism —, made present through the weekly service. Sūras as such — even if arranged in an annual cycle of recitations — would not fulfill the task of the *parashah* or *perikope* to "represent" salvation history. Reflective as the sūras are of certain stages of the proto-Muslim communal development, they lack interest in an extended linear memorial representation of salvation history in its entirety. Yet the Qurʾān has been justly credited with having generated "a ceremonial of textual repetition with a pronouncedly obsessional character" (al-Azmeh, Muslim canon). This is, of course, due to its very structure, which predisposes it to be chanted. As the reciter with his chant re-enacts the practice of the Prophet's own recitation, he is — like the Prophet — free to select "whatever is easy for him to recite" (cf. Q 73:20, *mā tayassara mina l-qurʾāni*) be it an entire sūra or only a section of it.

Surrender see WAR; FIGHTING

Suspicion

Feeling, thought or instance of tentative belief without ground or sufficient evidence; an inclination to accuse or doubt the innocence of someone or to question the genuineness or truth of something. The adjective "suspicious" denotes someone or something that arouses distrust, that appears to be neither sound nor trustworthy (see TRUST AND PATIENCE). The meaning of the English word suspicion and various other forms of the verb to suspect are conveyed by a number of Arabic words that can be derived from the roots *z-n-n, r-y-b, sh-b-h, t-h-m, sh-k-k*. Some of these words, however, belong to the semantic field of suspicion only in a wider sense and when accompanied by particular other terms, since they originally denote acts of accusation, expressions of doubt and distrust or other kinds of thought (see UNCERTAINTY).

Suspicion — in the sense of entertaining thoughts without evidence or doubts about the existence of God and his power (see POLYTHEISM AND ATHEISM; GRATITUDE AND INGRATITUDE; POWER AND IMPOTENCE) or about the genunineness of his messengers (see MESSENGER; PROPHETS AND PROPHETHOOD; LIE) — is represented in various places in the Qurʾān as an attitude that displays or leads to unbelief (see BELIEF AND UNBELIEF). For example, in Q 41:22-3 the enemies (q.v.) of God are described as people who wrongly thought *(zanna)* that God would be unable to know what they were doing (see HIDDEN AND THE HIDDEN); such people will be punished on the day of final judgment for the wrongs they commited based on this suspicion (see LAST JUDGMENT; REWARD AND PUNISHMENT). Q 45:24 mentions the lack of knowledge (*ʿilm;* see KNOWLEDGE AND LEARNING;

IGNORANCE) that is compounded by suspicion and speculation *(yazunnūna)* as a trait of the atheists who believe that only time (q.v.) will determine their fate (q.v.). The followers of Muḥammad who failed to support him during his campaign against the enemies of God are described in Q 3:154 as temporarily entertaining suspicious thoughts about God *(yazunnūna bi-llāhi ghayra l-ḥaqqi)* that resemble those that are characteristic for the times of pre-Islamic paganism (see HYPOCRITES AND HYPOCRISY; AGE OF IGNORANCE; EXPEDITIONS AND BATTLES). In Q 6:116 the believer is enjoined not to adopt the opinion of the majority of those living on earth because they follow but their conjecture. Q 10:36 implies that the unbelievers replace firm reliance on the truth (q.v.; *ḥaqq*) as announced by God with pure conjecture *(zann)*. Also in other verses, words of the root *z-n-n* are used to describe the suspicion of those who doubt the capacities of God or his messengers, as in Q 72:7, where Muḥammad, referring to a dream (see DREAMS AND SLEEP), puts those among the jinn (q.v.) who are of the opinion that God is not able to raise anyone on the day of final judgment in the context of unbelief (see RESURRECTION; DEATH AND THE DEAD; ESCHATOLOGY). In Q 12:110 even some messengers of God are described as losing faith (q.v.) and temporarily suspecting *(zannū)* that God has told them lies. There are other passages in the holy scripture where suspicion is mentioned without any reference to words that originate from the root *z-n-n.* For example, this is the case in the episode of Q 24:11-20 in which the Prophet's wife, ʿĀʾisha (see WIVES OF THE PROPHET; ʿĀʾISHA BINT ABĪ BAKR), is suspected of an aberration without any justification and where the believers are enjoined not to speak of something of which they have no knowledge (see GOSSIP).

Firm and unquestioned belief in the power of God and in the truth of his messengers is an indispensible characteristic of the true believers, who distinguish themselves from the unbelievers in that they do not doubt *(lam yartābū)* the existence of God or his messengers (Q 49:15). Suspicion is identified also as ethically reprehensible in Q 49:12, where the believers are called upon to avoid undue suspicion *(zann)* as an act that in some cases is tantamount to a sin (*ithm;* see SIN, MAJOR AND MINOR; ETHICS AND THE QURʾĀN).

Sustenance

Nutritional or financial support. In its various and numerous nominal-verbal forms, the root consonants *r-z-q* provide the key qurʾānic sense of "sustenance" understood more particularly as that which sustains life (q.v.) and health (see ILLNESS AND HEALTH) but in places suggests, too, that which provides a livelihood (see WEALTH). Another word signifying "sustenance" (*aqwāt,* sing. *qūt*) occurs once only (Q 41:10) in a description of God's creation (q.v.) of the world. The great provider or sustainer (Q 5:114; 22:58; 62:11) is, of course, God (see GOD AND HIS ATTRIBUTES), who orders people in Q 2:60 to "Eat and drink of God's sustenance" (and cf. Q 20:131 f.; see FOOD AND DRINK). In other places this sustenance *(rizq)* is described as "honor-

able" (*karīm,* Q 8:4; 22:50; 33:31) or "lawful" (*ṭayyibāt,* Q 7:32; see LAWFUL AND UNLAWFUL), or "goodly" (*ḥasan,* Q 16:67; see GOOD AND EVIL). It constitutes one of God's "signs" (q.v.; *āyāt,* Q 45:5; cf. 40:13); and it is even evidence of the genuineness of prophecy (Q 11:88; see PROPHETS AND PROPHETHOOD; REVELATION AND INSPIRATION). In one instance, a more strictly secular context is found in Q 18:19 where it means provisions purchased from a city (q.v.) market (see MARKETS).

The concept illustrates the central qurʾānic theme of the uniqueness of God over and against other mere pretensions to divinity (see POLYTHEISM AND ATHEISM) and the dependence of everything upon his power (see POWER AND IMPOTENCE), will (see FREEDOM AND PREDESTINATION) and mercy (q.v.). Having created the jinn (q.v.) and humankind to worship (q.v.) him, God has no need that they give him sustenance (Q 51:57). Indeed, Abraham (q.v.) warned his people (see WARNER) that the idols (see IDOLS AND IMAGES) they worshiped could not even provide their daily bread (q.v.), so they should seek instead the bounty of God (Q 2:22; 16:73; 29:17), whose sustenance was better and more abiding (Q 20:131). Compared to God, comments al-Ṭabarī (d. 310/923), idols could neither harm nor benefit, neither create nor provide for their followers. God's power, on the other hand, was such that he could increase or restrict the livelihood of whomsoever he wished (Q 13:26; 29:62; 30:37; 34:36). This applied equally to rewards in the afterlife as in this life (see REWARD AND PUNISHMENT; CHASTISEMENT AND PUNISHMENT; ESCHATOLOGY), as God possessed the keys to both (Q 42:12; also Q 65:1). Al-Ṭabarī observes that he who revelled in the life of this world was ignorant of the favor and felicity of the afterlife that God bestowed on those who believed (see BELIEF AND UNBELIEF) and obeyed (see OBEDIENCE). Yet, whosoever enjoyed God's bounty in greater abundance than others enjoy and was loath to share with those for whom he was responsible denied God's blessings (Q 4:8 f.; 16:71; also Q 22:28, on giving to the distressed and needy; see LIE; POVERTY AND THE POOR). The collections of al-Bukhārī (d. 256/870) and Muslim (d. 261/875) preserve the Prophet's saying that a dependent whom God has placed under one's authority (q.v.) must be fed and clothed in the same measure as one would treat himself (see MAINTENANCE AND UPKEEP; ORPHANS). If conditions of poverty caused fear that one's children (q.v.) could not be fed, clothed and sheltered, they must not be killed, for God would provide for all (Q 6:151; see INFANTICIDE).

The believer's proper response to God's munificence, as throughout the Qurʾān, is gratitude (Q 29:17; see GRATITUDE AND INGRATITUDE). In one passage (Q 36:47), however, the echo of debate with unbelievers (see DEBATE AND DISPUTATION; PROVOCATION) is found in their mocking rejoinder to being urged to spend on others from what God had provided them: "Shall we feed anyone whom, if (your) God had willed, he could have fed himself?"

Ibn Khaldūn (d. 784/1382), citing Q 29:17, "So, seek sustenance from God," distinguishes between God-given "sustenance" and "profit," the latter being that part of a person's livelihood obtained by one's own effort and strength (see WORK). He alludes to, but does not discuss, the Muʿtazilī argument of sustenance that they insist must be rightfully gained and possessed (see MUʿTAZILA; THEOLOGY AND THE QURʾĀN).

Symbolic Imagery

The use of allusion and figurative language to produce vivid descriptions and complex levels of meaning. The symbolic imagery in the Qur'ān arises out of the symbolic imagery of previous revelations as well as out of the poetic conventions of pre-Islamic Arabia (see SCRIPTURE AND THE QUR'ĀN; POETRY AND POETS; PRE-ISLAMIC ARABIA AND THE QUR'ĀN). While a key verse in the Qur'ān (Q 3:7) has sometimes been read to suggest that Muslims should not attempt to interpret its more ambiguous (q.v.) or symbolic passages, most Muslim exegetes (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL) have not shied away from examining the symbolic imagery that radiates from virtually every chapter of the sacred text. Since the Qur'ān is first and foremost an oral text (see ORALITY; ORALITY AND WRITING IN ARABIA; RECITATION OF THE QUR'ĀN), studies of symbolic imagery should not be limited to its visual dimension but should also take into account its aural dimension. At this stage in qur'ānic studies, however, much more attention has been paid to the Qur'ān's visual symbolism and the discussion that follows will focus upon examples of this visual dimension of qur'ānic imagery with particular emphasis on its use of paired symbolic concepts (see PAIRS AND PAIRING).

Symbolic imagery of paradise and hellfire

Passages throughout the Qur'ān use rich figurative language, often employing symbols that refer to desert life (see BEDOUIN; ARABS) or to poetic conventions that would have been familiar to those who first heard the revelations in seventh century Arabia. For example, Angelika Neuwirth has shown how the Qur'ān combines oath statements (see OATHS) with symbolic allusions to tribal raids in order to construct meaning through what she calls a "matrix of images" or *Bildmatrix* (see Neuwirth, Images; see also RHETORIC AND THE QUR'ĀN; FORM AND STRUCTURE OF THE QUR'ĀN). The qur'ānic use of desert imagery takes place on a more mundane level as well, for instance in its juxtaposition of the heat of the open desert with the cool of the oasis (see HOT AND COLD), a contrast that would have been immediately comprehensible to anyone living in such an environment. Understanding this latter type of symbolic imagery helps one to understand the juxtaposition between the tortures of the fire (q.v.) of hell (see HELL AND HELLFIRE) and the pleasures of the garden (q.v.) of paradise (q.v.). In addition, the cool oasis evokes the trope of the fertile garden and the remembrance of the lost beloved that typically opens the early Arabian odes. The example of the garden thus illustrates how pre-existing associations serve as a vast repository of symbols that the Qur'ān draws upon in order to produce meaning in a new Islamic context.

The Qur'ān uses some of its most frequent symbolic imagery to refer to the two abodes of the next life, paradise and hellfire. Although different passages sometimes expand upon distinct aspects of paradise,

this realm is almost invariably depicted as a garden of cool, luxurious abundance through which rivers flow (see WATER OF PARADISE; SPRINGS AND FOUNTAINS). Hellfire, on the other hand, becomes associated with a number of more complex depictions and allusions, evoked through Arabic terms such as *jahannam, jaḥīm, hāwiya, ḥuṭama,* and the most basic, *al-nār,* "the fire." Although these varied terms are connected to the idea of judgment (q.v.) and hellfire in some fashion, to collapse them into one collective term "hell" is to do violence to the subtleties of the qurʾānic symbolic discourse (Sells, *Approaching,* 24-6). The Qurʾān refers to fire in a personified form in a couple of cases (Q 21:40; 70:15-18) and in another as a metonym for idolatry (Q 40:41-2; see Sabbagh, *Métaphore,* 90; see IDOLATRY AND IDOLATERS). It is important to recognize, however, that the Qurʾān does not always use fire as synonymous with hellfire, idolatry or evil (see GOOD AND EVIL). For instance, a verse compares the light (q.v.) of a campfire a person builds to the light of guidance that God is able to take away (Q 2:17; cf. also the fire image in the famous "Light Verse" of Q 24:35).

Just as fire is a multivalent symbol in the Qurʾān, despite its frequent association with hellfire, so water (q.v.) expresses multiple values, despite its frequent association with paradise. As discussed above, references to the rivers of paradise are ubiquitous and the sending down of rain is often connected symbolically to God's sending down of revelations (Q 30:49; 31:34; 42:28; see Toelle, *Coran,* 115-20; cf. Lings, Qoranic symbolism; see REVELATION AND INSPIRATION) or blessings (see BLESSING; GRACE). Water also appears in the Qurʾān with reference to the flood, the treacherous seas and the destructive capacities of rain (see WEATHER; PUNISHMENT STORIES). The complex use of water symbolism also appears in pre-Islamic poetry and evokes the worldview of the desert environment in which the Qurʾān was first revealed.

Symbolic pairs that distinguish belief from unbelief

As with hellfire and paradise, the Qurʾān contains a number of other paired concepts whose symbolic meanings transcend their simple juxtaposition. One of the most important of these paired concepts is the distinction between belief and unbelief (q.v.). This binary relationship forms the basis for a whole series of symbolic binaries in the Qurʾān: from hearing and deafness (q.v.; see also ANATOMY and EARS) to sight and blindness (see VISION AND BLINDNESS; SEEING AND HEARING; EYES); from fertile and withered crops (see AGRICULTURE AND VEGETATION) to the split between humans and animals (see ANIMAL LIFE); from the distinction between the straight path and wandering lost (see ASTRAY; ERROR) to the ubiquitous imagery of light and darkness (q.v.). The juxtaposition between the believers and their adversaries (see ENEMIES) in the Qurʾān provides the basis for some of the most expressive of its similes (q.v.), metaphors (see METAPHOR), and parables (see PARABLE).

For instance, the aforementioned Light Verse (Q 24:35; see VERSES) offers an image of God as light and of God's light as of an oil lamp in a niche. These images form complex symbols that have generated multiple and diverse interpretations by Muslim exegetes. The images are followed by the idea of light as a symbol of God's guidance: "God guides to his light whom he wills, God strikes parables for people, and in all things God is most knowing" (see FREEDOM AND PREDESTINATION; KNOWLEDGE AND LEARNING). This equation between light and guidance is

developed in a number of other passages (e.g. Q 2:257; 4:174; 14:5) and is sometimes explicitly associated with God's revelations of the scriptures (e.g. Q 5:15, 44, 46).

In addition to the "parables" *(amthāl)* mentioned in the Light Verse, the verses that immediately follow it contrast the believers who remember God with the disbelievers who presumably do not (see MEMORY; REMEMBRANCE; GRATITUDE AND INGRATITUDE), the latter of whom are described in a pair of expressive similes:

And [as for] those who disbelieve, their works are like a mirage in a level plain that the thirsty one considers water until he comes to it and finds nothing… Or like darkness in a fathomless sea, covered by wave upon wave, over which are dark clouds, some above others. When one puts out one's hand, one almost cannot see it. He for whom God does not make a light, he does not have a light (Q 24:39-40).

The first of these similes makes use once again of the imagery of the desert, where one who has gone astray and is dying of thirst believes his deeds are bringing him to water, while they are actually bringing him to nothing (cf. Q 13:14). In other passages, the Qurʾān employs different similes to suggest the futility of the deeds of those who deny the qurʾānic message, comparing their deeds to ashes (q.v.) blown about (Q 14:18; see GOOD DEEDS; EVIL DEEDS; AIR AND WIND) or to empty noises and gestures (Q 8:35). In the above passage, the water imagery derives from the idea of paradise as a garden in which rivers flow, a destination that this wayward traveler mistakenly believes is ahead of him. The second simile that follows the famous Light Verse is sometimes known as the Darkness Verse (Q 24:40) and it enriches the image of the light of God's guidance with a description of the darkness surrounding the unbeliever. Not only is such a person without a light but surging and billowing darkness encompasses him or her on all sides: the deep and dark waters below, the layers of wave upon wave all around, the layers of dark clouds above, resulting in darkness so complete that sight is practically impossible. The symbolism of this Darkness Verse not only refers back to the Light Verse that precedes it and the idea of guidance, but it also evokes the vision/blindness binary as a trope for the distinction between belief and unbelief, as mentioned previously.

While images of light and darkness are frequently associated with the idea of guidance or lack thereof, another qurʾānic symbol associated with this idea is that of the straight road or path (*al-ṣirāṭ al-mustaqīm;* see PATH OR WAY). This symbol implies that there are many ways to travel off the straight road, all of which will lead one to wander astray. The "opening" chapter of the Qurʾān, Sūrat al-Fātiḥa (see FĀTIḤA) mentions this trope in its verse, "Guide us on the straight road" (Q 1:6), and this same straight road appears in at least thirty other qurʾānic passages. In a few eschatological passages, this concept of a straight path takes concrete form in the image of the narrow bridge that spans the chasm between this world and the next (see ESCHATOLOGY).

In other passages, the symbol of the road or path appears in a related but somewhat broader symbolic context, for example when the Qurʾān describes righteous behavior as climbing the steep uphill pass (*al-ʿaqaba,* Q 90:11). The text explains the symbol in the following fashion:

What can tell you of the steep pass?
To free a slave (see SLAVES AND SLAVERY)
To feed the destitute on a day of hunger (see FAMINE),
a kinsman orphan (q.v.),

or a poor man in need (see POVERTY AND THE POOR).
Be of those who keep the faith (q.v.), who counsel one another to patience (see TRUST AND PATIENCE), who counsel to compassion. They are of the right (see LEFT HAND AND RIGHT HAND). As for those who cast our signs (q.v.) away, they are of the left; over them a vault of fire (Q 90:12-20).

This passage begins with a mysterious symbolic reference, signaled by the use of the phrase "what can tell you of" *(mā adrāka mā)* which typically introduces terms that require further elaboration. The allusion to the "steep pass" *(ʿaqaba)* here is followed by an explanation of the term as a spiritual metaphor.

The description of the "steep pass" above illustrates another category of binary symbols found in the Qurʾān, the juxtaposition between left and right as morally-charged concepts. While this juxtaposition is obviously an ancient one, the qurʾānic discourse was revealed in the context of an Arabian culture in which the left hand was considered unclean and the right was used for swearing oaths (see CONTRACTS AND ALLIANCES). In addition, the Qurʾān refers to people "whom your right hand possesses" in reference to those people under one's control, such as war captives (q.v.) or slaves (e.g. Q 4:3, 24-5, 33-6; 24:33, 58; 30:28). The passage above, however, shows how other verses in the Qurʾān invest the categories of left and right with moral signification, associating the former with evil and the latter with good (see ETHICS AND THE QURʾĀN). The distinction between the "people of the right" *(aṣḥāb al-yamīn/al-maymana)* and the "people of the left" *(aṣḥāb al-mashʾama/al-shimāl)* in Q 90 above is elucidated at greater length in Q 56. Here the former are said to rest contentedly in a garden paradise, while the latter face punishment in a scorching hellfire (Q 56:8-9, 27-38, 41-56, 90-4; see REWARD AND PUNISHMENT). Yet other passages depict the blessed receiving their book of deeds in their right hands on the last day (see HEAVENLY BOOK; LAST JUDGMENT), as opposed to those unfortunate enough to be given their books in another fashion. Such examples illustrate the symbolic weight that the Qurʾān invests in the concepts of right and left, especially when it comes to eschatological judgment.

Imagery of the last day

Beyond the eschatological references discussed above, the Qurʾān presents graphic descriptions of what the world will be like on the last day (see APOCALYPSE). In these passages, those things thought to be stable are ripped apart, the graves are opened and the earth yields up its secrets as if a mother giving birth (e.g. Q 99). One particularly striking apocalyptic passage is found in Q 101, The Calamity (Sūrat al-Qāriʿa), in which the phrase "what can tell you" appears twice to introduce two presumably unfamiliar concepts:

The *qāriʿa*
What is the *qāriʿa*
What can tell you of the *qāriʿa*
A day humankind are like moths scattered *(ka-l-farāsh al-mabthūth)*
And mountains are like fluffs of wool *(ka-l-ʿihn al-manfūsh)*
Whoever's scales weigh heavy *(thaqulat mawāzīnuhu;* see WEIGHTS AND MEASURES)
His is a life that is pleasing *(rāḍiya)*
Whoever's scales weigh light *(khaffatun mawāzīnuhu)*
His mother is *hāwiya* (see PIT)
What can tell you what she is *(wa-mā adrāka mā hiya)*
Raging fire (*nārun ḥāmiyatun,* Q 101:1-11).

This sūra offers a pair of similes to help describe the "calamity" *(al-qāriʿa)* through

symbolic images. The image of people becoming like "moths scattered" conjures up ideas of confused dispersion, rapid movement and mortal frailty. The image of mountains becoming like "fluffs of wool" illustrates how a thing that many humans see as a symbol of solidity and permanence transforms on the last day into something that will be cut from its roots and pliable. The concept of scales of judgment appears graphically in this sūra, offering a concrete visual image of deeds being literally weighed in the balance on the last day. Michael Sells has argued that the sound quality of the consonants that end the verses (see RHYMED PROSE) help to extend the similes "into more elaborate metaphors," and that the terms "are heavy" *(thaqulat)* and "are light" *(khaffat)* as used in the scale imagery "have onomatopoetic effects" (Sells, *Approaching,* 178). This insight reminds us that when examining the symbolic imagery of the Qurʾān, not only visual images but also aural images ("sound figures") help to generate layers of meaning that deserve scholarly attention.

Syria

In the larger sense, Syria (in Arabic *al-Shām*) extended from the Euphrates River/Amanus Mountains to the Gulf of Clysma/Suez. The region was known to the pre-Islamic Arabs (q.v.), especially the Meccans, whose caravans (see CARAVAN) traversed the spice-route, the two termini of which, Gaza and Buṣrā, were visited by them, as was the Sinai (q.v.) peninsula (see also PRE-ISLAMIC ARABIA AND THE QURʾĀN).

The term Syria or al-Shām does not appear in the Qurʾān but, as al-Shām included the holy land, references to it in the Qurʾān as the land of the biblical prophets and of the scenes of biblical history do occur, however allusively and anonymously (see SCRIPTURE AND THE QURʾĀN; HISTORY AND THE QURʾĀN; GEOGRAPHY). Such are *al-arḍ al-muqaddasa* (Q 5:21), Jerusalem (q.v.) by implication, where the *masjid* and the *miḥrāb* were located (Q 3:37, 39; 17:7; see MOSQUE; SACRED PRECINCTS); the Mount of Olives (Q 95:1); anonymously, the Jordan river (*nahr,* literally "river," Q 2:249; see WATER; SPRINGS AND FOUNTAINS); the villages of Lot (q.v.; *al-muʾtafika,* Q 53:53; cf. 69:9; see PUNISHMENT STORIES); Iram dhāt al-ʿImād,

in present day Wādī Rumm in Trans-Jordan (Q 89:7; see IRAM); al-Raqīm (Q 18:9; see RAQĪM), possibly in al-Balqāʾ in Trans-Jordan; and Sinai (Q 23:20). Although not mentioned by name, Jerusalem represented the strictly Islamic dimension of the holy land for two reasons: it was the destination of the *isrāʾ,* the nocturnal journey of the prophet Muḥammad (Q 17:1; see ASCENSION) and the gateway to his *miʿrāj,* ascent to the seventh heaven (see HEAVEN AND SKY); and it was the *qibla* (q.v.), the spot to which the Muslims turned in their prayers for twelve years before the direction of prayer was changed to Mecca (q.v.).

Al-Shām was known to the prophet Muḥammad before his call. According to tradition (see SĪRA AND THE QURʾĀN), his great-grandfather, Hāshim, was buried in Gaza, and he accompanied his uncle, Abū Ṭālib, during the latter's journeys to al-Shām. Later he led the caravans of Khadīja (q.v.) after he married her — hence his references to places and areas in al-Shām during the twenty-two years of his prophethood: such, among others, were Ṣaffūriyya (Sepphoris) and Ḥabrūn (Hebron) in Palestine, Muʾta and al-Balqāʾ in Trans-Jordan and al-Dārūm in southern Palestine. After the campaign against Tabūk in 630 C.E. (see EXPEDITIONS AND BATTLES), the Prophet concluded treaties (see CONTRACTS AND ALLIANCES) with four of the towns of southern al-Shām, namely Ayla, Adhruḥ, Maqnā and Jarbā, places he had known before his prophetic call.

Al-Shām was the first target of the Muslim conquests. It was the region that Islam conquered immediately after the death of the Prophet. By 635 C.E., the holy land within al-Shām was already in Muslim hands after the two battles of Ajnādayn in Palestine and Fiḥl in Trans-Jordan. In 638 C.E. Jerusalem surrendered to none other than the caliph ʿUmar himself; its surrender clinched the possession of the holy land by Islam and opened the first chapter in the long struggle between Islam and Christianity (see CHRISTIANS AND CHRISTIANITY), which reached its climax in the crusades. The Muslim victory at Yarmūk in 636 C.E. decided the fate of the rest of al-Shām, the cities which surrendered one after the other being Damascus, Ḥims, Ḥamā and Antioch, among others.

The Muslim conquest of al-Shām and the holy land imparted a peculiarly new Islamic dimension to its holiness (cf. the several traditions on the "merits" of Syria/Damascus — and Jerusalem, for example "happy Syria… the angels of the merciful one spread their wings upon it," *ṭūbā li-Shām… inna malāʾikata l-raḥmān bāsiṭatun ajniḥatahum ʿalayhi,* in e.g. Ibn Ḥanbal, *Musnad,* xvi, 38, no. 21499; cf. Gilliot, Traditions, 18; Sivan, Beginning). Those who died in the battles were martyrs (q.v.) for the faith (q.v.) and many of them were *ṣaḥāba,* Companions of the Prophet (q.v.); such were the three commanders who died at Muʾta and others who settled in the region. The conquest was initiated by the Prophet himself before he died, which imparted to it the religious tone of a holy war (q.v.; see also JIHĀD), especially as it was preceded and supported by letters which announced to their recipients the new Islamic kerygma.

It was, however, in the Umayyad period that al-Shām attained the acme of its importance as the metropolitan province of the first Arab dynasty of the Islamic empire. Furthermore, its character as a holy land was ratified by the first Umayyad caliph (q.v.), Muʿāwiya, who announced his caliphate and received allegiance in Jerusalem itself, as did Yazīd and ʿAbd al-Malik after him. But it was the Marwānid Umayyad branch that enhanced the Islamic component in the holy land, when

ʿAbd al-Malik built the Dome of the Rock and al-Walīd, his son, built the Aqṣā Mosque (q.v.), without which the Islamic presence in Jerusalem would have remained unclear, based on sūra 17 in the Qurʾān, entitled Sūrat al-Isrāʾ ("The Night Journey"). The two structures dwarfed architecturally all other structures in Jerusalem and reflected a powerful Islamic presence in the holy city. The future Umayyad caliph Sulaymān enhanced further the importance of the holy land when, during his governorship of Palestine, he built a new city, Ramla, and its White Mosque, and added to the Umayyad structures in Jerusalem. When he became caliph (r. 96-9/715-17), Palestine, the holy land, became the metropolitan province of the vast Muslim empire, which extended from India to Spain.

Islam raised to a higher level of importance not only Jerusalem but the sister city Hebron, where Abraham (q.v.) and his son Isaac (q.v.) and grandson Jacob (q.v.) were buried together with their wives. Hebron had been relatively obscure in the Byzantine period (see BYZANTINES) but Islam revived it, commensurately with the fundamental place of Abraham in the Qurʾān and in Islam.

It was also during the Umayyad period that the concept of the holy land experienced an extension of its boundaries from the old traditional ones to encompass practically the whole of al-Shām. The Umayyad Mosque of Damascus built by al-Walīd contributed to the veneration of the city as a Muslim center and Buṣrā was also venerated as the venue of Muḥammad's encounter with Baḥīrā (see MONASTICISM AND MONKS). The extension of the boundaries of the holy land had started in the Byzantine period, when other cities in the region acquired a certain holiness by association: such was Damascus with St. Paul, Emesa with the head of John the Baptist (q.v.), and Antioch as the place where the followers of Jesus (q.v.) of Nazareth were first called Christians. These *loca sancta* of Christianity were not difficult for the Umayyads to accept in view of the insistence of the Qurʾān on its close relation to Christianity (see POLEMIC AND POLEMICAL LANGUAGE; RELIGIOUS PLURALISM AND THE QURʾĀN; RELIGION), but still more in view of the strong Muslim-Christian symbiosis in al-Shām, accepted and promoted by the Umayyads after being initiated by Muʿāwiya, whose wife Maysūn was a Christian, the mother of his son and successor Yazīd I, who also married a Ghassānid Christian princess, Ramla. In a religious context this symbiosis is reflected in the fact that the mosque in Damascus has within its precinct the tomb of John the Baptist.

With the proliferation of *loca sancta* (see SACRED AND PROFANE), *mashāhīd* and *mazārāt,* in al-Shām, the whole region acquired a certain holiness — so much so that the medieval Muslim traveler, al-Harawī (d. 611/1215), devoted to al-Shām one third of his work on the *loca sancta* of the Islamic world.

T

Table

A supported horizontal surface that facilitates actions like working, writing or eating. There is no precise equivalent in classical Arabic for this English term. Words like *miṇḍada, sufra* and *simāṭ* only signify "table" by derivation; their basic meanings are respectively "a device where mats, carpets or cushions are piled up," "food provision for the traveler," and "a cloth or coat upon which the dishes are put." By contrast, several designations for "table" entered Arabic from neighboring, non-Semitic languages. These include *mēz* and *khiwān* from Persian, *ṭarabēza* from Greek, *ṭāwula* from Latin, and *mā'ida* via Ethiopian, possibly originating from Latin as well (see FOREIGN VOCABULARY). Only this last term occurs in the Qurʾān, where it appears twice, namely in Q 5:112 and 114; it also gives the fifth sūra its title, *al-mā'ida,* "The Table."

Strictly speaking, the table episode — a much debated issue in the Qurʾān — comprises verses Q 5:112 to 115 only. In order to understand the story properly, however, one must consider its broader context. The *leitmotif* of the whole passage is that God's messengers (see MESSENGER) have no knowledge of (see KNOWLEDGE AND LEARNING) — and therefore no responsibility (q.v.) for — the outcome of their missions (Q 5:109). This holds true for Jesus (q.v.) as well. God guided him throughout his lifetime, from when he spoke in the cradle supported by the spirit (q.v.) of holiness (see also HOLY SPIRIT), to his divine protection (q.v.) from the Israelites (Q 5:110; see CHILDREN OF ISRAEL). On God's prompting, the apostles (see APOSTLE) readily professed their belief in him and his messenger (Q 5:111). The passage then reads:

And when the apostles said, "O Jesus son of Mary (q.v.), is your lord able to send down on us a table *(mā'ida)* out of heaven (see HEAVEN AND SKY)?" He said, "Fear you God, if you are believers" (Q 5:112; see BELIEF AND UNBELIEF; MIRACLES; MARVELS; FEAR).

They said, "We desire that we should eat of it and our hearts (see HEART) be at rest; and that we may know that you have spoken true to us, and that we may be among its witnesses" (Q 5:113; see TRUTH; WITNESSING AND TESTIFYING).

Said Jesus son of Mary, "O God, our lord, send down upon us a table out of heaven, that shall be for us a festival, the first and last of us, and a sign from you.

And provide for us; you are the best of providers" (Q 5:114; see SUSTENANCE). God said, "Verily I will indeed send it down to you; whosoever of you hereafter disbelieves, verily I shall chastise him with a chastisement such as I chastise no other being" (Q 5:115; see CHASTISEMENT AND PUNISHMENT).

It was not Jesus who deified himself and his mother Mary. During the time he lived among men, he exhorted them only to serve God alone, his lord and theirs (Q 5:116-17). It is God who punishes or forgives (Q 5:118; see REWARD AND PUNISHMENT; FORGIVENESS).

The broad scholarly consensus is that the qurʾānic table episode basically refers, in one way or another, to the Lord's Supper, although other biblical passages can be adduced as possible reference points as well, such as the feeding of the five thousand, Jesus' discourse on "the bread of life" (John 6: 22 f.), Peter's vision in Acts 10:10 f., or Psalms 78:19 and 23:5. But when it comes to understanding the meaning of the episode, opinions are divided. Are we dealing here with the demand for a miracle (Räisänen, *Jesusbild;* Gräf, Christlichen Einflüssen; Busse, *Theologischen Beziehungen;* and most of the Muslim commentators)? Is the table a sign of God's providence (Bowman, Debt of Islam; al-Nadjdjār, *Qiṣaṣ;* see SIGNS) or a simile (q.v.) for spiritual knowledge (the Ṣūfī interpretation according to al-Bayḍāwī)? Do the apostles want to celebrate a kind of thanksgiving (ʿAbd al-Tafāhum, Qurʾān and communion) or a commemorative meal (Beltz, *Mythen*)? Or is the whole episode finally nothing but confusion (Macdonald, ʿĪsā; Bell, *Origin of Islam;* cf. Comerro, Nouvelle alliance, 305f.; Radscheit, Iconography, 172f.)? The question of the meaning of the table motif in the Qurān has proved to be especially intractable.

Nevertheless, two explanations present themselves. On the one hand, as stated above, the word *māʾida* is borrowed from Ethiopian, where it signifies the lord's table (see CHRISTIANS AND CHRISTIANITY). This original usage probably had the double meaning of the altar of the Eucharist (which in early times was a simple table) and of the Eucharistic offering, viz. bread (q.v.) and wine (q.v.). If one assumes that this word still carried both meanings after its adoption in Arabic, it is possible that the apostles' request for *māʾida* sent down from heaven does not refer to "a table," but rather to "food" (see FOOD AND DRINK). In fact, the *Lisān al-ʿArab* even asserts that this is the basic meaning of *māʾida*. On the other hand, the table episode may be considered an instance of qurānic allusion to visual representations. In all the varying interpretations of the Lord's Supper in early Christian theology, the Eucharist is always regarded as closely related to Christ's being the son of God. Christian depictions of the Lord's Supper can therefore be considered to represent the core of Christian belief. The Qurʾān, however, categorically denies the divine nature of Jesus (see POLEMIC AND POLEMICAL LANGUAGE). Any qurʾānic reference to the Lord's Supper, then, can only occur in a polemic, i.e. a reinterpreting, form. Although the table motif is admittedly rather marginal in the Gospels' account of the Lord's Supper, the table is nevertheless one of the necessary elements in the Christian depictions of the event: it is the place where Jesus and the apostles reclined for the Passover meal. Yet in a Christian interpretation of such a picture, the table still has no function of its own; it merely serves to hold the food. Here one may argue that the Qurʾān, in a deliberate reinterpretation of the Lord's Supper, takes its visual elements — Jesus, the apostles and the table itself — at face value and

re-contextualizes them in such a way that the element "table" receives a prominent place.

No matter whether the linguistic or the cross-media explanation for the presence of *mā'ida* is more likely, in order to understand the meaning of the table episode, it must be noted that the major theme in Q 5 is the notion of "covenant" (q.v.; cf. Comerro, Nouvelle alliance). Q 5:12 is a reminder of God's covenant with the Children of Israel (cf. Q 5:70); Q 5:14 mentions his covenant with "those who say 'We are Christians' " (cf. Q 5:111); and Q 5:7 recalls to mind the covenant God made with the actual community of believers (cf. Q 5:3, "Today I have perfected your religion [q.v.] for you, and I have completed my blessing [q.v.] upon you, and I have approved *al-islām* for your religion"; see ISLAM). But both the Israelites and the Christians broke their respective covenants, the first by disobeying God and his messengers (cf. Q 5:13, 20-6, 70; see DISOBEDIENCE), the latter by violating true monotheism (cf. Q 5:14, 17, 72-6; see POLYTHEISM AND ATHEISM; IDOLATRY AND IDOLATERS). Since the anti-Trinitarian argumentation in Q 5:116-17 (see TRINITY) stresses that the covenant with the Christians was broken only after God took Jesus to himself, it seems likely that the preceding verses also refer to this very covenant. Q 5:111, then, marks the moment the (twelve) apostles consent to this covenant (cf. the motif of the twelve chieftains of Israel in Q 5:12 and of the twelve men of the first ʿAqaba in the *Sīra* [see SĪRA AND THE QUR'ĀN]; for references to the apostles' speech [q.v.] act, see Q 5:7 and, in a distorted form, Q 2:93). Seen in this light, Q 5:112-14 must be understood as a request to establish a commemoration feast *('īd)* for this event. In the motif of the heaven-sent food one may detect the early Christian belief that the Holy Spirit comes down in the Eucharist. But what is more, the two ideas that food is a divine gift and that God sends down "tranquility into the hearts of the believers" are firmly rooted in the Qur'ān, too (cf. for the former Q 2:57; 50:9-11; 56:10-26, for the latter Q 48:4; see SHEKHINAH). Finally, since the early Church considered Judas to be the prototype of a traitor in the community, in the singular threat in Q 5:115 it is possible to see a transformation of Jesus' prophecy of woe for Judas (*Mt* 26:24; *Mk* 14:21) into a general verdict against all those who break the covenant (Q 5:13; cf. Gräf, Christlichen Einflüssen, who suggests a connection with 1 *Cor* 11:27-9).

To sum up, although the table episode carries strong biblical overtones (see SCRIPTURE AND THE QUR'ĀN; NARRATIVES), it is basically a re-reading of the Lord's Supper. In this reinterpretation, the person of Jesus loses its paramount importance and his being the son of God is expressly denied. Instead, the Eucharist is interpreted as confirmation and remembrance of God's covenant with the apostles. With that, the Eucharist is added to the line of covenants God has made both with the Children of Israel previously and with the new community of believers afterwards.

Talent

A gift, ability or propensity provided by God. There is no specific qurʾānic term for talent although meanings related to this concept may be associated with ideas such as degrees, ability, capacity and gifts (see GIFT AND GIFT-GIVING; GRACE; BLESSING). In modern Arabic, terms derived from the root *w-h-b,* "gifts," and *ʿ-d-d,* "preparation," refer to talent, but these roots and their derivations are not employed in this sense in the Qurʾān. In addition, *istiṭāʿa,* "ability, capacity," is an important theological concept in Islam (see THEOLOGY AND THE QURʾĀN), but it is usually discussed more in terms of the extent to which humans have the independent strength and ability to make choices and perform actions (cf. Gardet, Istiṭāʿa; see FREEDOM AND PREDESTINATION).

The concept of exceptional or distinctive abilities may be extrapolated from qurʾānic expressions regarding preferring *(faḍḍala)* or degrees and rankings *(darajāt).* These terms usually convey the idea that certain people are raised by degrees both in this world and in the next life (see REWARD AND PUNISHMENT; ESCHATOLOGY), on the basis either of their effort (Q 4:95; see PATH OR WAY), belief (Q 58:11; see BELIEF AND UNBELIEF) or good deeds (q.v.; Q 46:19). Sometimes, however, this idea of degree seems to be innate, as in the passage asserting that males have been preferred above females (Q 4:34; see GENDER; WOMEN AND THE QURʾĀN; PATRIARCHY). This verse has attracted attention in the modern period on the part of modernists and Muslim feminists who interpret the words as indicating male responsibility (q.v.) derived on the basis of material resources (see WEALTH; PROPERTY; MAINTENANCE AND UPKEEP) rather than innate male superiority or talent (Wadud, *Qurʾān and woman,* 65-9; see FEMINISM AND THE QURʾĀN). Inasmuch as ultimately all guidance and provision (see SUSTENANCE; ERROR; ASTRAY) has a divine source according to the Islamic perspective, diversity in human talents, inclinations and abilities is understood as being part of God's plan. All of these degrees in livelihood arise from God's mercy (q.v.; *raḥma*) that is apportioned or measured (*q-s-m;* see WEIGHTS AND MEASURES; MEASUREMENT) by God alone (Q 43:32).

The idea of developing the inherent propensities or potentialities of each individual may be found in the thought of Ṣūfī mystics such as Ibn al-ʿArabī (d. 638/1240; see ṢŪFISM AND THE QURʾĀN). This is based

on emanationist cosmology (q.v.), in which the pre-eternal creative act of God projects the divine names and attributes (see GOD AND HIS ATTRIBUTES) into creation (q.v.) and therefore into individuals as well. It is individual receptivity *(qabūl)* or preparedness *(istiʿdād)* that must be discerned and developed through appropriate contemplation and action (Chittick, *Ṣūfī path,* 91; see REMEMBRANCE).

Taxation

Extraction of a part of communal wealth for its social redistribution and for its use in maintaining governing authority (q.v.), its various institutions, and public works. The Qurʾān offers no trace of the fiscal system first developed under ʿUmar b. al-Khaṭṭāb (r. 2-12/634-44), in substance a reformulation of Byzantine and Sasanian models (see Jeffery, *For. vocab.* and relevant *EI²* articles — e.g. Cahen, Djizya; Zysow, Zakāt; Cahen, Kharādj — for discussion of the foreign origins of taxation terminology in the Qurʾān; see also FOREIGN VOCABULARY). That fiscal system was a product of empire (see Dennett, *Conversion;* al-Dūrī, *Nuzum;* Løkkegaard, *Islamic taxation*), itself the fruit of post-prophetic conquests (see CONQUEST), eventually being detailed by state servitors in administrative handbooks (e.g. Qudāma b. Jaʿfar's [d. 337/948] *Kitāb al-Kharāj wa-ṣināʿat al-kitāba*) or legal treatises (e.g. Abū Yūsuf's [d. 182/798] *Kitāb al-Kharāj*) and by religious scholars seeking to define imperial administration in Islamic terms (e.g. Abū ʿUbayd al-Qāsim b. Sallām's [d. 224/839] *Kitāb al-Amwāl*).

Taxation in the imperial context was oriented primarily towards the legal status of land (e.g. conquered, state, private); in contrast, the Qurʾān says nothing of a concept of land-based taxation, with only a single (and vague) reference at Q 23:72 to *kharāj* (the term later used to designate land tax) as the bounty of the lord (q.v.; cf. *Jalālayn,* ad loc., where it is referred to as *ajr,* "recompense"; see also BLESSING; GRACE). Nor is there any evidence in the ḥadīth that the Prophet instituted such a system of taxation. State control of communal wealth (q.v.) became a point of contention, Khārijīs (q.v.) seeing it as a threat to the sovereignty (q.v.) of God (Sayf b. ʿUmar, *Ridda,* i, 357) and Shīʿīs (see SHĪʿISM AND THE QURʾĀN) viewing it as a transgression of the authority of the Imāms (Madelung, Shīʿite; see IMĀM). Moreover, the Qurʾān's single reference to *jizya* at Q 9:29 suggests tribute and not poll tax (q.v.) in the sense of a tax per capita, as the term was to be defined in the imperial context (the Prophet may have instituted a poll tax of sorts, which was assessed according to the number of adults [*ḥālim*] but imposed on a subordinate group as a whole, e.g. Yaḥyā b. Ādam, *Kharāj,* 107f.). Finally, the Qurʾān makes no mention of the tithe *(ʿushr)* levied

on Muslim-owned land (especially within the confines of the Arabian peninsula).

Rather, if taxation of any kind is to be read in the Qurʾān, it must be seen through two lenses: (1) a nascent Medinan polity attempting to extend its political authority and religious message over a largely tribally oriented society (see TRIBES AND CLANS; MEDINA) by managing the distribution of booty (q.v.); and (2) a charity-oriented economy of exchange, in which deserving groups (warriors, orphans [q.v.], the poor, etc.; see POVERTY AND THE POOR) were supported through almsgiving (q.v.) as a function of the qurʾānic call to renounce the luxuries of this world in favor of the one to come (cf. Rippin, Commerce; see also TRADE AND COMMERCE). Both lenses reflect a broader qurʾānic message, namely God's singular sovereignty and thus right to consume all material goods even if he permits their distribution to his "vassals," i.e. those faithful to his lordship — a message echoed in the Bible, which makes the similar claim that the spoils of war, even if designated for the communal good of the Israelites (see CHILDREN OF ISRAEL; ELECTION), belong ultimately to God in recognition of his exclusive sovereignty (e.g. *Josh* 6:17; see also *Josh* 7 which tells the tale of Achan and his kinsmen who, although Israelites, are wiped out for violating the holy ban instituted by God; cf. Q 9:79, which speaks of the punishment awaiting those who deride believers for their material and personal support of the cause of God; cf. also *Acts* 5:1-10; see also PATH OR WAY; CHASTISEMENT AND PUNISHMENT). If there is any connection between the "fiscal" message of the Qurʾān and the later imperial system of taxation, it may lie in this idea of religious sovereignty over (and potential consumption of) all material goods, represented in the Qurʾān by God and his messenger (q.v.) and later in the imperial context by the caliphal (or sultanic) ruler and his various military and administrative servitors.

The fiscal program of the Qurʾān was generally conceived in terms of material (and also personal) support *(nafaqa)* of the Islamic cause (i.e. as set by God and his messenger), to be given by Muslims (i.e. Companions of the Prophet [q.v.]) and their tribal allies (see Ṭabarī, *Tafsīr,* ad Q 9:103, who connects *nafaqa* [support of the Islamic cause], *jihād* [q.v.; struggle in the way of God] and *ṣadaqa* [charitable donation]). In support of this, later exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) note the strong rhetorical opposition in the Qurʾān between those who support *(munfiq)* the Islamic cause and those who support the enemy: al-Zamakhsharī (d. 539/1144, *Kashshāf,* ad Q 2:270) explains this as an option — given to the qurʾānic audience — of making expenditure in the path (or way) of God *(fī sabīl Allāh)* or in the path of Satan (*fī sabīl al-shayṭān;* see ENEMIES; PARTIES AND FACTIONS; DEVIL). The Constitution of Medina, an early attempt to define the nature of the first Muslim polity, also strongly exhorts its addressees to contribute *nafaqa* to the communal cause. This qurʾānic vision of communal wealth, reenacted in Medina, is detailed in later works on law and the prophetic tradition under three categories (see LAW AND THE QURʾĀN): division of booty, alms-giving and tribute. Discussion here will be limited to the first two categories (as these relate to the two fiscal lenses of the Qurʾān mentioned above). Tribute, later expanded into poll tax *(jizya)* and land tax *(kharāj),* is discussed elsewhere (see POLL TAX).

Division of booty

The legal *(fiqh)* and prophetic *(ḥadīth)* compendia treat division of booty as a distinct category, *qism al-fayʾ,* reflecting an attempt

by piety-minded jurists and traditionists to keep intact the qurʾānic vision of communal wealth alongside state efforts to immobilize land under its own domain and extract taxes from those cultivating it. The fiscal message of the Qurʾān originated in the Prophet's practice of dividing the spoils of raids *(ghazawāt)* and expeditions (*maghāzī;* see EXPEDITIONS AND BATTLES), first as a means of livelihood and then as part of the struggle to preserve the Islamic cause (see, in general, the accounts of Ibn Isḥāq [d. 150/767] and al-Wāqidī [d. 207/822]), with a first share — later identified as the "choice" share *(al-ṣāfī)* — going to the Prophet as leader of the Muslim community and distributed to those whom the Qurʾān had defined as worthy recipients such as the Prophet's kin, orphans, the poor, wayfarers (cf. Q 59:7 and Q 8:41, although some scholars thought the latter verse abrogated the former).

The Qurʾān uses three terms for booty: *maghnam* (only in the plural, *maghānim,* Q 4:94; 48:15, 19, 20; and twice in verbal form, *ghanimtum,* Q 8:41, 69); *nafl* (also only in the plural, *anfāl,* Q 8:1, for which Q 8 — Sūrat al-Anfāl — is named); and *fayʾ* (only in verbal form, *afāʾa,* Q 33:50; 59:6, 7), which has the general sense of bounty bestowed by God upon those faithful to his cause (see BELIEF AND UNBELIEF; TRUST AND PATIENCE). Exegetes understood booty to function as an incentive (*taḥrīḍ;* see Ṭabarī, *Tafsīr,* ad Q 8:1) to work for the Islamic cause, as implied in the qurʾānic claim that Muslims can expect not merely earthly booty but heavenly-bestowed booty (Q 4:94, *fa-ʿinda llāhi maghānimu kathīra;* the three other instances of the term in reference to Ḥudaybiya [q.v.] also suggest an eschatological conception of booty, cf. Rippin, Commerce; see ESCHATOLOGY). In other words, the Qurʾān has reoriented a common tribal notion to the purposes of its prophetic message of God's final sovereignty in settling all accounts on judgment day (see LAST JUDGMENT).

The "tax" to be extracted from the division of booty and distributed by Medinan leadership is called the fifth *(khums),* as mentioned at Q 8:41:

> And know that whatever you take as booty *(ghanimtum),* a fifth [of it] is for God, the messenger, relations [of the messenger], orphans, the poor [or helpless] *(masākīn),* and the wayfarer *(ibn al-sabīl),* if you believe in God and that which we have revealed to our servant on the day of criterion (q.v.; *yawma l-furqān,* i.e. between right and wrong, but here in reference to the battle of Badr [q.v.]), when the two groups met [in battle]. God is master over all.

Income, then, is to play a significant role in the formation of the values of the Muslim community as a religio-political entity in which recognition of the sovereignty of God and the corresponding authority of his messenger is embodied in the redistribution of wealth to worthy recipients — those genealogically close to the Prophet and those in material need of some kind (see also PEOPLE OF THE HOUSE; OPPRESSED ON EARTH, THE). Emphasis on the redistribution of wealth is confirmed at Q 59:7. Since, however, this is not framed as "the fifth," Simonsen (*Studies,* 61-70) suggested that all booty — regardless of origin — was subject to division only in practice but fell entirely to the prophet Muḥammad in principle. He argued that the fifth is a post-prophetic innovation ascribed retroactively to prophetic decree in the battle of Badr to give Islamic legitimacy to the tribal practice of distributing the bulk of the booty, four-fifths in this case, to the warriors who captured it:

That which God has bestowed as booty upon his messenger from [the spoils of] the people of the villages [i.e. in the vicinity of Medina] is for God, the messenger, relations [of the messenger], orphans, the helpless, and the wayfarer, lest it circulate [only] among the wealthy among you. And take what the messenger gives you and refrain from what he forbids (see FORBIDDEN). Fear (q.v.) God, for God is severe in the infliction of punishment (see REWARD AND PUNISHMENT).

Finally, Q 8:1: "They ask you [Muḥammad] about the spoils *(anfāl)*. Say: The spoils belong to God and the messenger. So fear God, repair what is between you [i.e. communal disharmony] and obey God and his messenger (see OBEDIENCE), if you are believers." This is explained by al-Zamakhsharī (*Kashshāf,* ad Q 8:1) to mean that judgment (q.v.) in the division of the spoils is reserved for God and his messenger (in echo of the biblical vision; see SCRIPTURE AND THE QUR'ĀN). Here, like Q 59:7, no mention is made of "the fifth"; this is explained by al-Zamakhsharī who defines *anfāl* as booty promised to a warrior beyond his normal share as an incitement to battle. So defined, such booty would not be subject to the fifth. If read on its own terms, however, this verse associates booty-division with communal harmony *(wa-aṣliḥū dhāta baynikum)*. Al-Ṭabarī (d. 310/923; *Tafsīr,* ad Q 8:1) cites a report that attributes the occasion for the revelation of this latter part of the verse (see VERSES; OCCASIONS OF REVELATION) to the complaint brought to the Prophet by the weaker members of the community *(ahl al-ḍa'f)*, who protested that the strong had made off with the spoils *(dhahaba ahl al-quwwa bi-l-ghanā'im)*, leaving the weaker members of the community with nothing (Zamakhsharī, *Kashshāf,* ad loc., echoes this by interpreting the verse as a call for a just/equitable distribution of communal wealth: *iqtasimū… bi-l-'adl*). The upshot of all this is the intimate link between claims of the Medinan leadership (i.e. the Prophet) to authority over the nascent community in general and its adjudication of the just distribution of communal wealth (see JUSTICE AND INJUSTICE) in a way that engendered communal solidarity between its various members, both rich and poor (cf. *Deut* 15:11 and *Rom* 15:25-9), strong (i.e. the fighting members of the community) and weak (i.e. the rest of the community; cf. *Num* 31:25-47).

It should be mentioned as an aside that the caliphal state (especially the 'Abbāsid dynasty) and its scholarly servitors did turn to the Qur'ān to establish canonical justification for its fiscal system in general and the land tax specifically (see Heck, *Construction,* chap. 4; see CALIPH). The legal framework for the land tax drew a distinction between lands conquered by force *('anwa)* and lands which submitted to the Muslim conquerors peacefully *(ṣulḥ)*, a distinction of paramount importance for determining a region's tax terms and land ownership. Still, the Qur'ān and sunna (q.v.) had to be at least referenced to ensure Islamic legitimacy for this framework.

The belief that the Prophet had, in principle, divided the proceeds of conquest — both land and moveable property (q.v.), including captives (q.v.; see Q 8:67-71; cf. Paret, *Kommentar,* 192) — was met by the state position, based on Q 59:7-9, that the canon also made provision for Muslims yet to come, a recognition of the need to extend the idea of communal solidarity to future members. The community was ongoing (and no longer eschatological) and subsequent generations who would "emigrate" to Islam as had the

first Emigrants *(al-muhājirūn)* were equally entitled to a share in the community's revenues (see EMIGRATION; EMIGRANTS AND HELPERS). This would be accomplished by immobilizing the land and levying a tax on those cultivating it, payable to the communal treasury *(bayt al-māl),* a practice initiated by the Companion (see COMPANIONS OF THE PROPHET) and second Rightly-Guided Caliph, ʿUmar b. al-Khaṭṭāb.

This qurʾānic justification of the land tax was eventually accepted by piety-minded circles (see PIETY), although when is not exactly clear. (Interestingly, Q 23:72, the sole qurʾānic attestation of *kharāj,* is not used as a rationale.) The distinction between poll tax and land tax is often attributed to the Umayyad caliph, ʿUmar b. ʿAbd al-ʿAzīz (r. 99-101/717-20; see Heck, *Construction,* 163-5), but Mālik b. Anas (d. 179/796) makes no mention of the land tax and understands taxation in Islam in strictly religious terms *(farīḍa)*. For his part, al-Shāfiʿī (d. 204/820) is indecisive, first looking down upon the state's decision to immobilize the lands of conquest as extra-canonical but then deciding to leave the decision — to divide or immobilize — to the judgment of the leader (*Umm,* iv, 103, *bilād al-ʿanwa wa-bilād al-ṣulḥ*). ʿAbd al-Razzāq (d. 211/826) mentions the land tax in scattered places (e.g. *Muṣannaf,* entry 10,133) without treating it systematically. The canonical status of the land-tax, as mentioned above, never a dead issue, was at play especially in Sunnī-Shīʿī polemic (see Modarressi, *Kharāj*), partly as a function of competition over the share in communal wealth due to the successor of the Prophet (see Modarressi, *Crisis*).

Almsgiving

Almsgiving, the second important lens for qurʾānic notions of taxation, is charity extended mainly to those in need of some kind. It functions primarily in a ritual way, hence its inclusion as one of the five pillars of the religion, i.e. as a means by which the salvation (q.v.) of one's soul (q.v.) is sought. It is designated in the Qurʾān by two terms, *zakāt* and *ṣadaqa,* which are used interchangeably in the early period. The later distinction between them (although never decisively made; see Weir/Zysow, Ṣadaḳa) as obligatory and voluntary alms, respectively, is not specified in the Qurʾān. Yet they are never used in identical fashion or paired in a single verse. It is the exegetical tradition that for good reason (see below) defined *zakāt* as a religious duty (e.g. Ṭabarī, *Tafsīr,* ad Q 2:177, *al-zakāt al-mafrūḍa*), hence one of the five pillars of Islam (see RELIGION; RITUAL AND THE QURʾĀN).

In line with Q 59:7, which is concerned with the monopoly of wealth by the rich, almsgiving in the Qurʾān functions practically as a way to redistribute communal wealth, thus serving to define a charity-based economy with a particular interest in the poor, needy and dispossessed (see Bonner, Poverty; see ECONOMICS). It is not, however, simply a matter of charity but an eschatological-oriented charity for the sake of one's own salvation (or, in the case of its neglect, damnation; see Q 69:34; 89:17-20; 90:13-20; 107:3). *Zakāt,* mentioned thirty times, mainly in Medinan verses, is thus a way of purifying not merely one's wealth but one's soul, giving a ritual efficacy to its practice — charity in the function of gaining one's salvation. As Q 92:18 indicates, "Whoever gives from his wealth is made pure *(yatazakkā)*" — purification of one's soul (i.e. being made acceptable to God, *qurb*) through a religiously ordained exhortation to material giving (cf. Q 9:99). Those who give alms can expect a reward *(ajr)* from God (Q 2:277; 4:162; cf. 2:110) in the next life (Q 27:3; 31:4), effectively securing God's protection (q.v.; Q 22:78), which makes almsgiving an essential part of true

religion, being included in the primordial covenant (q.v.; *mīthāq*) made between God and humankind (Q 2:83; 4:154; cf. 5:12 which speaks of it in terms of both reward and covenant). This is summed up in creed-like form at Q 2:177:

… the righteous are those who believe in God, judgment day, the angels (see ANGEL), scripture (*al-kitāb;* see BOOK), the prophets (see PROPHETS AND PROPHETHOOD), and give wealth *(māl)* out of love (q.v.) of him [or in spite of love for it, cf. Q 76:8 and Ṭabarī, *Tafsīr,* ad loc.], to relatives [presumably indigent ones; see FAMILY; KINSHIP], orphans, the helpless *(al-masākīn),* the wayfarer, beggars *(al-sā'ilīn),* and to ransom captives; and who undertake ritual prayer (q.v.) and give alms….

The religious quality of almsgiving here suggests association with the patriarchs of Israel (Q 21:73; see CHILDREN OF ISRAEL) and the life of Jesus (q.v.; Q 19:31). It enjoys sufficient religious status that its payment by a polytheist (*mushrik;* see POLYTHEISM AND ATHEISM) requires a Muslim to cease fighting (q.v.) him (Q 9:5; Ṭabarī, *Tafsīr,* ad loc., identifies it as repentance, *tawba,* on the part of the polytheist) and, instead, to consider him a brother in religion (Q 9:11; see BROTHER AND BROTHERHOOD). There is no clearer sign of the salvific (i.e. ritually efficacious) character of *zakāt* than its almost exclusive coupling (twenty-eight out of thirty occurrences) with ritual prayer, "undertaking prayer and giving alms" *(iqāmat al-ṣalāt wa-ītā' al-zakāt)*, which constituted grounds for its later designation as a religious duty (*farīḍa;* see Ṭabarī, *Tafsīr,* ad Q 2:83, *mā kāna llāh faraḍa ʿalayhim fī amwālihim min al-zakāt;* cf. Siddiqui, Zakāt, who sees this coupling as epitomizing the religion itself, prayer representing the vertical relation of the love of God and alms the horizontal one of love of other). The connection was later to become the crux of the "wars of apostasy" (q.v.; see Shoufani, *Riddah*) conducted by the first caliph Abū Bakr (q.v.) against those tribes claiming that loyalty (q.v.) and tribute owed to Medina ceased upon the Prophet's death and that undertaking prayer was enough to make one a Muslim.

This raises many questions about the nature of almsgiving in early Islam: Was it conceived as tribal tribute in recognition of Medina as regional hegemon (for a more recent example of this, see Wilson, Hashemites, 216), making its payment a state concern (on the development of Islamic administrative institutions in general, see Sijpesteijn, *Shaping a Muslim state*)? Or was it a mark not of state authority over communal wealth but of communal/confessional solidarity? Q 58:13 mentions that tribal groups were expected to pay *zakāt* prior to an audience with the Prophet and, yet, as we have seen, *zakāt* in the Qur'ān is decidedly salvific. The two points of view, however, need not be viewed as mutually exclusive, especially when the Prophet, as messenger of God, is the foundational reference point in representing the pronouncements of God (see REVELATION AND INSPIRATION). So, if almsgiving is a means for seeking the face of God (q.v.; i.e. salvation, Q 30:39, in contrast to the practice of usury [q.v.] which yields no return from God), it is also a part of the process of binding men and women together in moral solidarity under the authority of God and his messenger (Q 9:71). It is partly for this reason that jurists later associated *zakāt* with the tithe *('ushr)* on agricultural produce, a "tax" only on Muslims, assessed at five or ten percent depending on irrigation method (natural or human). Q 6:141, known as "the verse of almsgiving" *(āyat al-zakāt),* was used to support this association: "And give [him] his due on the day of his

harvest" (see Ibn Ādam, *Kharāj,* 146-51). The alms-tax, generally assessed at two and one-half percent of property, has a more complex formulation in the case of livestock and agricultural produce (see Aghnides, *Mohammedan theories,* 203-95).

Ṣadaqa (pl. *ṣadaqāt,* also occurring in verbal form, *taṣaddaqa*) shares the basic meaning of charity (e.g. Q 12:88, where Joseph's [q.v.] brothers ask him to be charitable to them in their need) and is used interchangeably with *zakāt* in exegetical and legal literature (e.g. equated with *zakāt* and treated as the tithe by Ibn Ādam, *Kharāj,* entry 356) and even with *nafaqa* (ibid., entry 428: *al-nafaqa fī l-Qurʾān hiya l-ṣadaqa*). Still, the term has its own semantic range in the Qurʾān. It is considered a voluntary offering (Q 9:79, the verse used by jurists to characterize it as voluntary in distinction from the obligatory *zakāt*), with the amount to be given left to the discretion of the benefactor. It also carries a religio-moral connotation, serving (1) to purify the benefactor (Q 9:103; Ṭabarī, *Tafsīr,* ad loc., says that it transforms belief from hypocrisy to sincerity, *wa-tarfaʿuhum fī khasīs manāzil ahl al-nifāq bihā ilā manāzil ahl al-ikhlāṣ;* see HYPOCRITES AND HYPOCRISY), (2) to test the right intent of those seeking the counsel *(najwā)* of the Prophet (Q 58:12) and (3) to expiate *(takfīr)* evil deeds (q.v.; *sayyiʾāt,* Q 2:271) or to compensate for the failure to perform — as a result of illness (see ILLNESS AND HEALTH) — the ritual obligation of not shaving while on pilgrimage (q.v.; Q 2:196). Debt (q.v.) forgiveness is also designated charity (Q 2:280; cf. 4:92 and 5:45 where remission of the blood-payment for murder [q.v.] is labeled charity; see BLOOD MONEY).

In other words, *ṣadaqa* signifies a proper response to God's abundant grace (*faḍl,* Q 9:75; cf. Bonner, Poverty), in the sense of gratitude (see GRATITUDE AND INGRATITUDE) for his sustenance (q.v.; *rizq*) embodied in care for others. Hence, *ṣadaqa* was never reduced to material gift (see GIFT AND GIFT-GIVING) but included recognition of a beggar with a smile when one had nothing to give, and also lawful sexual intercourse (*ṣadāq,* cognate with "righteous," *ṣiddīq;* see LAWFUL AND UNLAWFUL; SEX AND SEXUALITY). Its purposeful use for those in need implies distributive justice (Q 9:60; cf. 2:276 where it is contrasted to *ribā,* i.e. [self-] interest), but also — since its recipients at Q 9:60 include "those who work upon (for?) it" (understood as "collecting agents" but also likened, e.g. by Ibn Ādam, *Kharāj,* entry 354, to holy warrior *[mujāhid]*) and hearts to be reconciled (i.e. swayed to the prophetic cause, e.g. Meccan tribal leaders) — as a religious duty *(farīḍa)* set by God (cf. Q 2:273). Such charity, it is explained, should not be thought to relieve the benefactor of proper moral behavior (Q 2:263-4) and is better undertaken in secrecy (Q 2:272; 4:114; cf. *Prov* 21:14 and *Matt* 6:3-4; Zamakhsharī, *Kashshāf,* ad Q 2:271-2, says that *ṣadaqa* as a voluntary act is best done secretly whereas *zakāt* as an obligatory one should be done openly to avoid any accusation of failing to perform one's religious duty).

It should be noted that Simonsen (*Studies,* 32-5), largely on the basis of Q 58:12, strips *ṣadaqa* of any religious significance, viewing it as a payment required of Bedouin (q.v.; *aʿrāb*) for an audience with the Prophet. Once the social matrix shifts, he argues, from the tribally oriented caravan city of Medina (see CARAVAN; CITY) that was attempting to consolidate control of trade in the Arabian peninsula to a vast empire built upon the heritage of former empires, the logic of *ṣadaqa* as Bedouin tribute was tabled in view of richer sources of fiscal exploitation (lands of conquest), finally coming to be conflated with *zakāt* (cf. Sijpesteijn, *Shaping a Muslim state*). This

hypothesis is borne out in certain passages in Ibn Saʿd's (d. 230/845) account of tribal delegations to the Prophet. He relates (*Ṭabaqāt,* e.g. i, 293) an incident where the Banū Tamīm renounce certain *ṣadaqa* conditions, forcing the collector to inform the Prophet, but not in others (ibid., i, 300, where a letter from the Prophet is read to the Banū Kilāb delegation, calling them, among other things, to respond to God and his messenger, who will take *ṣadaqa* from the rich and distribute it to the poor). In yet another passage (ibid., i, 307), the Prophet is depicted writing out *ṣadaqa* obligations (*farāʾiḍ al-ṣadaqa;* cf. Abū ʿUbayd, *Amwāl,* entry 1848, which shows al-Zuhrī [d. 124/742] recording the prophetic precedent *[sunna]* on *ṣadaqa* assessment for the Umayyad caliph ʿUmar b. ʿAbd al-Azīz).

The qurʾānic conceptualization of *ṣadaqa,* however, cannot be reduced to such a politico-economic view; its religious significance remained constant even if collection and distribution took on different forms in different times. As in the case of *zakāt* what stands out is its salvific role, not merely as charity but also as a sacrificial offering of sorts (see SACRIFICE) that indicates a penitent heart (q.v.). Q 9:104 states: "Do they not know that it is God who accepts repentance from his servants (see SERVANT) and takes alms *(ṣadaqāt)* and that it is God who grants repentance and mercy [q.v.; i.e. salvation]." Alms thus becomes an important soteriological stage in seeking the face of God (Q 2:271-3; cf. 30:39), making almsgiving a sub-category of gift-giving to God as ultimate recipient (the gift thus being irrevocable) and to his messenger as proxy in support *(nafaqa)* of God's cause. This is not to discount the tribal context but rather to note the close association of material sacrifice with a true desire to encounter the face of God as icon of salvation, for it is in sacrifice and self-denial that the will of the believer is humbled and God's glorified (e.g. Ṭabarī, *Tafsīr,* ad Q 2:271-3). To seek the face of God, one must prepare by purification — confirmed via alms payment — of one's sinfulness (Ṭabarī, *Tafsīr,* ad Q 9:103, where *ṣadaqa* removes the stain of sin; see SIN, MAJOR AND MINOR). Since, in the qurʾānic view, the rule of God and authority of the Prophet were so closely intertwined (see KINGS AND RULERS), sacrificial offering became part and parcel of building up the Medinan polity under the leadership of Muḥammad — sacrificial alms as a kind of "taxation" in support of God's cause.

Teaching

The act of instructing; imparting knowledge and information. Most of the numerous teaching-related passages in the Qurʾān are dedicated to the sound instruction of the believers in the faith (q.v.) and to their spiritual growth as individuals and members of the community (see BELIEF AND UNBELIEF; KNOWLEDGE AND LEARNING; IGNORANCE). These passages include instruction on the creed, worship and other aspects of religious life. Some passages in the Qurʾān, however, also provide detailed instruction on secular matters (human relations; political, social, and legal affairs, etc.; see ETHICS AND THE QURʾĀN; VIRTUES AND VICES, COMMANDING AND FORBIDDING; LAW AND THE QURʾĀN).

Matters related to teaching are dealt with in the Qurʾān in a wide variety of ways and are to be found in passages containing the following lexemes and concepts: 1) *ʿallama:* to teach, instruct, train; to make somebody know; 2) other terms implying the idea of teaching; 3) teaching principles; 4) certain approaches and techniques promoting the Qurʾān's teaching(s), such as: a) passages devoted to specific instructions; b) language signs and literary devices used as didactic tools (see PARABLE; SIMILES; METAPHOR; SYMBOLIC LANGUAGE; NATURE AS SIGNS; LITERARY STRUCTURES OF THE QURʾĀN); and 5) pedagogical and didactic elements significant for a more general context.

To teach, instruct, train

The verb *ʿallama* (with various subjects and objects) is found a total of forty-two times: as *ʿallama* (perfect active, twenty-two times), *yuʿallimu* (imperfect active, sixteen times), *ʿullima* (perfect passive, three times), and the passive participle *muʿallam* (once).

God teaches prophets

God "taught Adam the names of all [things]" (Q 2:31; see ADAM AND EVE; ANIMAL LIFE; CREATION; COSMOLOGY). After David (q.v.) slew Goliath (q.v.), David was given "the kingship, and the wisdom (q.v.), and he taught him such as he willed" (Q 2:251; see KINGS AND RULERS). David was also taught "the fashioning of [armor]…, to fortify [his people] against [the] violence [q.v.; they directed against each other]" (Q 21:80). David's heir, Solomon (q.v.), "said, 'People, we have been taught the speech of birds *(manṭiqa l-ṭayri)*'" (Q 27:16; for this topic and for relevant biblical passages, see Speyer, *Erzählungen,* 384-5). Jacob (q.v.), ancestor of all the Israelites, "was possessed of knowledge for that we had taught him" (*la-dhū ʿilmin li-mā ʿallamnāhu,* Q 12:68; see also ISRAEL). Joseph (q.v.), one of Jacob's sons, was taught the interpretation of tales and events (Q 12:6, 21, 101; see NEWS) and of dreams (Q 12:36-7; see DREAMS AND SLEEP). Moses' (q.v.) servant (*fatā,* associated by most commentators with al-Khiḍr; see KHAḌIR/KHIḌR) "had [been] given mercy (q.v.) from us, and… taught… knowledge proceeding from us" (Q 18:65); thus Moses asked his servant: "Shall I follow you so that you teach me of what you have been taught?" (Q 18:66; see also Wensinck, al-Khaḍir). Jesus (q.v.) had been taught "the book (q.v.) and the wisdom, the Torah (q.v.), and the Gospel" (q.v.; Q 5:110), in order to "be a messenger (q.v.) to the Children of Israel" (q.v.; Q 3:48-9). To Muḥammad, God revealed "the book and the wisdom, and taught [him] that which [he] knew not [before]" (Q 4:113; see UMMĪ; ILLITERACY; REVELATION AND INSPIRA-

tion). Muḥammad was "taught by one mighty in power" (Q 53:5), the archangel Gabriel (q.v.), "who brought [the Qurʾān] down upon [his] heart (q.v.) by the leave of God, confirming what was before it, and for a guidance and good tidings of the believers" (Q 2:97; see GOOD NEWS; ASTRAY). Muḥammad, however, had not been "taught poetry, [for] it [was] not seemly for him" (Q 36:69; see POETRY AND POETS).

God teaches humankind/common people

Q 96 (Sūrat al-ʿAlaq, "The Clot"), which the Islamic tradition usually considers to be the very first revelation to Muḥammad, gives priority to the fact that God "taught man that which he knew not" (Q 96:5) and that God did so "by [the use of] the pen" (Q 96:4), possibly indicating that God taught humankind "the holy scriptures" or "writing" (cf. also Q 2:282; see LITERACY; WRITING AND WRITING MATERIALS; ORALITY AND WRITING IN ARABIA; and Günther, Muḥammad, 4-5).

God taught humankind the Qurʾān (Q 55:2) and "the explanation" (*al-bayān,* Q 55:4; see also NAMES OF THE QURʾĀN), i.e. "articulated speech" (*nuṭq;* cf. *Jalālayn* and others on Q 55:4; see also Q 43:52, *wa-lā yakādu yubīnu*); or "the names of all things" *(asmāʾ kulli shayʾin)* or "all the languages" (*al-lughāt kullahā*; Qurṭubī, *Jāmiʿ*, xvii, 152-3; see LANGUAGE, CONCEPT OF; ARABIC LANGUAGE). It is said to "remember God, as he taught you the things that you knew not [before]" (Q 2:239; see REMEMBRANCE; MEMORY; REFLECTION AND DELIBERATION).

God orders Muḥammad to warn people about the previous generations (q.v.) who did not measure God "with his true measure" (see WARNER; PUNISHMENT STORIES; WEIGHTS AND MEASURES), denying that God had "sent the book… [to] Moses… as a light (q.v.) and a guidance to humankind *(bashar)*…" (see LIE). The unbelievers are addressed directly: "you were taught what you knew not, you and your fathers" (Q 6:91; see also Q 2:151, 239; 4:113; and Q 2:282; 96:4). That God taught humans how to train ("teach") animals is stated in Q 5:4.

God teaches the angels

God taught the angels (see ANGEL) so they said "We know not save what you have taught us" (Q 2:32). Nonetheless, the angels did not have Adam's knowledge, for God had taught him the names of all things — which resulted in God's setting Adam and humankind on the earth as his viceroy instead of the angels (see CALIPH).

Prophets teach

God's messengers (see PROPHETS AND PROPHETHOOD) were sent to the people to "teach them the book and the wisdom, and to purify them" (Q 2:129; cf. 2:151). Muḥammad was instructed "to recite his signs (q.v.) to them, and to purify them, and to teach them the book and the wisdom, though before that they were in manifest error" (q.v.; Q 62:2).

Pharaoh's (q.v.) accusation that Moses taught sorcery is implied in Pharaoh's threat to his sorcerers: "Have you believed him (Moses) before I gave you leave? Why, he is the chief of you, the same who taught you sorcery" (Q 20:71; cf. 26:49; see MAGIC; MIRACLES; MARVELS).

Humans teach

Certain humans (Muslims) are warned against wanting to "teach" God; this is evident in God's command to Muḥammad: "Say: 'What! Would you (people) teach God what your religion (q.v.) is…?'" (Q 49:16).

The *rabbāniyyūn,* "masters (in the scripture), people of the lord (q.v.)," are reminded of their twofold obligation: to teach and to continue studying. It is stated:

"Be you masters in that you teach the book [to your brethren in faith], and in that you [yourselves] study [it]" (*kūnū rabbāniyyīna bi-mā kuntum tuʿallimūna l-kitāba wa-bi-mā kuntum tadrusūna,* Q 3:79). According to Ibn ʿAbbās (d. 68/687-8), "the father of qurʾānic exegesis" (Veccia Vaglieri, ʿAbd Allāh b. al-ʿAbbās; see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL), the *rabbāniyyūn* are "scholars" and "teachers," for he remarks: "Be *rabbāniyyūn,* wise, erudite and learned men; and it is said that a [good] *rabbānī* is someone who [starts] instructing people in simple [things], before [dealing with] complex ones" (*kūnū rabbāniyyīna ḥukamāʾ, fuqahāʾ, ʿulamāʾ; wa-yuqālu: al-rabbānī lladhī yurabbī l-nāsa bi-ṣighāri l-ʿilmi qabla kibārihi;* cf. Bukhārī, *Ṣaḥīḥ, K. al-ʿIlm, bāb* 10; Khan, *Translation,* i, 59-60). *Rabbāniyyūn* is also a synonym for "erudite men" (*ḥukamāʾ;* see Dārimī, *Sunan,* n. 329). A different nuance in meaning is stressed by al-Rāzī (d. 606/1210) quoting Sībawayhi (d. ca. 180/796): "A *rabbānī* is [somebody] belonging to the lord, in the sense of his being knowledgeable of him and being persistent in obeying him" (*al-rabbānī l-mansūb ilā l-rabb, bi-maʿnā kawnihi ʿāliman bihi wa-muwāẓiban ʿalā ṭāʿatihi;* Rāzī, *Tafsīr,* xviii, 119; and the etymology offered in Horovitz, *Proper names,* 57; ed. Ohio, 201). In Q 5:44, 63, *rabbāniyyūn* is used in conjunction with the *aḥbār* (Jewish/non-Muslim doctors, teachers; see also Horovitz, *KU,* 63-4; *Proper names,* 53-4, 56-7; ed. Ohio, 197-8, 200-1; Paret, *Kommentar* 39, 122; for the Aramaic word *rabb, rabbī,* and the derived form *rabbūnī,* meaning "[my] master/teacher," also a title of a Palestinian scholar, see Sokoloff, *Aramaic,* 511, 513, 514; Buttrick, *Interpreter's dictionary,* iv, 522-4). In this context, it is worth noting that *al-rabb* in the Qurʾān — when referring to God, mostly translated as "the lord" — implies the meaning of the "supreme master, divine teacher," to whom humans feel close despite his omnipotence (see CLIENTS AND CLIENTAGE; POWER AND IMPOTENCE).

Humans shall "train, teach" animals as God has taught them before, as it is mentioned in the context of slaughtering animals and dietary rules (see SLAUGHTER; FOOD AND DRINK; LAWFUL AND UNLAWFUL): "The good things are permitted to you, and such hunting creatures you teach, training them as hounds, and teaching them as God has taught you (see HUNTING AND FISHING) — eat what they seize for you, and mention God's name over it!" (Q 5:4; see BASMALA).

Furthermore, mention is made of Muḥammad's opponents (see OPPOSITION TO MUḤAMMAD) and of their attempts to discredit him and his message by claiming that he had not been receiving revelations but was being "taught" instead by a human teacher: "And we know very well that they say, 'Only a human *(bashar)* is teaching him'" (Q 16:103) — perhaps an allusion to a monk known as Sergius (Sargis Baḥīrā; cf. Günther, Muḥammad, 25-6, n. 124; see CHRISTIANS AND CHRISTIANITY; MONASTICISM AND MONKS; INFORMANTS). Along these lines, Muḥammad was accused of being a man "tutored *(muʿallam)*, possessed" (Q 44:14; see INSANITY).

Angels/devils teach

The Qurʾān refutes the idea that Solomon knew and taught sorcery: "Solomon disbelieved not, but the satans *(al-shayāṭīn)* disbelieved, teaching the people sorcery, and that which was sent down [from heaven] upon the two angels in Babylon, Hārūt and Mārūt (q.v.); they [the two angels] taught not anyone [sorcery] without saying, 'We are but a temptation; do not disbelieve'" (Q 2:102), for Solomon was considered to be the originator of sorcery, an idea apparently prevalent among the Jews in Medina (q.v.; see Ṭabarī, *Tafsīr,* ii, 408; Fück, Das Problem, 5-6; Asad, *The*

message, 21 n. 82; for *shayṭān* meaning satan, cf. Ṭabarī, *Tafsīr,* ii, 405, and passim; abr. Eng. trans. Cooper, *The commentary,* 475-91; see DEVIL; JEWS AND JUDAISM).

Other terms

This account of Solomon includes the only two qurʾānic references to *taʿallum,* "learning," the linguistic counterpart of *taʿlīm,* "teaching." It is said that the people in Babylon "learned [from the two fallen angels Hārūt and Mārūt] how they might separate a man from his wife…; and they learned what hurt them, and did not profit them…" (Q 2:102; see also Fahd, Siḥr).

Also relevant here is the concept of *dirāsa,* "to investigate, search [the scriptures]" (see Q 3:79; 6:105, 156; 7:169; 34:44; 68:37; also Horovitz, Proper names, 199, and the references given there; see also TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY; TEACHING AND PREACHING THE QURʾĀN).

Most of the numerous other expressions, implying more or less directly the idea of "teaching," relate to the notion of "God teaching the prophet(s)" and "the prophet Muḥammad instructing the people"; examples are *amara,* "to order" (cf. Q 3:80), *dhakara,* "to mention" (e.g. Q 7:2), *dhakkara,* "to remind" (cf. Q 14:5; 51:55), *qaraʾa* and *talā,* "to read aloud, recite" (e.g. Q 11:17; 18:27; see RECITATION OF THE QURʾĀN). *Adrā,* "to cause to know, to teach" (occurring seventeen times) is used in God's orders to Muḥammad and the Muslims to reply to those who doubt the message of the Qurʾān (see UNCERTAINTY): "Say, 'Had God willed, I would not have recited it to you, neither would he have taught you it'" (Q 10:16; see also the rhetorical questions introduced by *mā adrāka,* "What will teach you? What makes you conceive?" in Q 69:3; 74:27; 77:14; 82:17, 18; 83:8, 19; 86:2; 90:12; 97:2; 101:3, 10; 104:5; and *mā yudrīka,* Q 33:63; 42:17; 80:3; see EXHORTATIONS).

Further relevant terminology includes *tadabbara,* "to ponder, contemplate, seek to understand" (e.g. Q 4:82; 47:24), *istaftā,* "to ask for a legal opinion" (cf. Q 4:127), the indicative designation "those who were given knowledge" from God (*ūtū l-ʿilma,* Q 16:27; 17:107; 22:54; 28:80; 29:42; 30:56; 34:6; 47:16; 58:11), and terms for "explanation," such as *bayān, tabyīn, tafṣīl, tafsīr* and the like.

In addition, the Qurʾān often employs *ʿalima,* "to know," to mean "to gain knowledge of something, to receive knowledge of something." Its qurʾānic counterpart, *jahila,* connotes "to be ignorant, not to know" (see AGE OF IGNORANCE). *Darā* is often used figuratively in the Qurʾān to mean "to learn of something, to know," while *shaʿara* connotes "to know, to realize," and its counterpart *ghafala,* "not to know, to be unmindful" (for these latter terms, see Fück, Das Problem, 12-19). *Tadrīs,* "teaching," and *taʾdīb,* "educating," do not occur in the Qurʾān. While *sharḥ* can imply "explanation, explaining," in the Qurʾān, derivatives of *sh-r-ḥ* connote "acceptance, opening, expanding," so they are not included in this overview.

Teaching principles

The Qurʾān seems to suggest a number of teaching principles, such as to be patient (Q 17:11; 18:60-82; 75:16; see TRUST AND PATIENCE), and to be attentive (Q 7:204; 50:37) while receiving instruction; to train the mind and improve the memory by reading aloud, repeating and pondering (Q 4:82; 38:29; 47:24; 87:6); to instruct people in their native language (Q 12:2; 14:4); to dispute only in matters of which one is knowledgeable (Q 3:66; see DEBATE AND DISPUTATION); to argue in a courteous manner (Q 16:125; 29:46); and to instruct by use of examples and evidence, as the many biblical narratives (q.v.) in the Qurʾān illustrate (for instance, by

suggesting that lessons be drawn from the past and the experiences of others; e.g. Q 5:32; 11:89); similarly for the passages teaching humans confidence (Q 11:38, 120; see also Speyer, *Erzählungen,* 87, 462-92; al-Gisr, Islamic education, 18-21; Jamālī, *Falsafa,* 13; Siddiqi, *Qurʾānic concept,* 1-10).

Methods and techniques

As for the question of what methods and techniques the qurʾānic text utilizes to promote its teaching(s), two points must be made. First, there are passages expressly dedicated to teaching; Q 2:282-3, for example, provides detailed instruction on how to handle legal matters:

> O believers, when you contract a debt (q.v.) one upon another for a stated term, then write it down! And let a writer *(kātib)* write it down between you justly. And let not any writer refuse to write it down, as God has taught him (i.e. the art of writing). So let him write it down. And let the debtor dictate!… And if the debtor be a fool, or weak, or unable to dictate himself, then let his guardian dictate justly… (see MATURITY; GUARDIANSHIP). And be not loath to write it down, whether it (i.e. the amount) be small or great…! That is more equitable in God's sight… And take witnesses whenever you are trafficking one with another (see WITNESSING AND TESTIFYING)! And let neither a scribe nor a witness suffer harm.… And if you are upon a journey (q.v.), and you do not find a writer, then a pledge *(rihān)* in hand [should be required].

Second, there are textual characteristics and literary devices that emerge as sophisticated pedagogical and didactic tools. Examples are rhetorical questions, such as "Have you not seen…?" "Do you not know…?" (see RHETORIC AND THE QURʾĀN); textual elements that add force to already powerful passages (cf. Welch, Formulaic features, 77; see FORM AND STRUCTURE OF THE QURʾĀN); notions of forensic activity, such as proving (see PROOF), explaining, making manifest, and debating (cf. McAuliffe, Debate, 164); and literary signs, such as parallelism, repetition, metaphor, parable, simile (see also PAIRS AND PAIRING). The question as to how and to what extent the Qurʾān actualizes itself — as an aesthetic object — in the consciousness of its recipients seems to gain in significance in the context of "teaching and the Qurʾān" (see also Kermani, *Gott ist schön,* chap. 2; see LANGUAGE AND STYLE OF THE QURʾĀN; TEACHING AND PREACHING THE QURʾĀN).

Pedagogical and didactic elements

If "teaching (and learning)" were to be understood in a wider sense, the pedagogical and didactic elements in the Qurʾān extend to issues such as the developmental stages, habits and socialization of the human being (for the child, see Q 2:233; 40:67; 46:15; 65:6; see CHILDREN; PARENTS); ethical norms and values related to education (for orphans [q.v.], see Q 2:215; 76:8; 90:15-16; 89:17; for piety [q.v.] towards parents, see Q 2:83; 4:36; 6:151; 17:23-4; 18:80; 19:14; 29:8; 31:14-15; 46:15; see also Izutsu, *Concepts,* 207-10); human psychology (Q 3:135; 11:9-10; 12:53; 17:11; 21:37; 41:49; 96:6-7); and the appeal to the mind, reason and understanding (also in matters of faith) evident, for example, in the frequent phrase *a-fa-lā taʿqilūna,* "do you not understand?" (Q 2:44; see INTELLECT), and in the epitome of qurʾānic praise for the learned: "[Only] the erudite among his servants [truly] fear God" (Q 35:28).

Teaching and Preaching the Qurʾān

Since the earliest days of Islam, the Qurʾān has been considered the foundation of all knowledge and moral behavior. Originally, its study and transmission took place via lessons and sermons in the mosque from which the informal educational model of *madrasa* schools developed, as well as the master-student model, where students sought out teachers for their particular knowledge and studied with them for varying lengths of time. These two models formed a more or less uniform system that lasted for over a thousand years and actually still exists in modernized forms in various countries. There were no exams, no tables or chairs, and no distinction between religious and secular subjects. In some countries venerable mosque-universities developed, such as al-Azhar [University] in Cairo.

Students moved in and out of these educational structures and, depending on the years and intensity of their study, took up positions in the hierarchy of scholars (see KNOWLEDGE AND LEARNING; SCHOLAR). Some, wearing the mantle of their teacher's scholarship, became *ʿulamāʾ:* scholars of Islam who were qualified to participate in the science of interpreting the Qurʾān (*tafsīr;* see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) and developing jurisprudence (*fiqh;* see LAW AND THE QURʾĀN). They were expected to have a deeper knowledge of the Qurʾān and its sciences than imāms (see IMĀM), leaders in the mosque who on Friday delivered the ritual sermon *(khuṭba),* or held a variety of religious positions outside the mosque. The prophet Muḥammad was the first preacher, addressing his followers in his house-mosque in Medina (q.v.; beginning in 622 C.E.), and those preaching the Friday sermon *(khaṭīb)* still stand in the

tradition of his religious authority (see also FRIDAY PRAYER).

By the nineteenth century, this traditional system of transmitting the Qurʾān and its sciences (see TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY) was more or less destroyed when, under colonial influences, Middle Eastern countries started to replace the *madrasa*s with secular institutions that could produce teachers, medical doctors and engineers. This led not only to a crisis in the traditional educational system, forcing the classical institutions to re-invent themselves; it also involved a breakdown in the traditional authority of those considered the custodians of the Qurʾān.

Over time, those carrying the message of Islam graduated from secular institutions as well. This was, among others, facilitated by the reformist movement initiated by Muḥammad ʿAbduh (1849-1905) that allowed direct study of the Qurʾān and ḥadīth (see ḤADĪTH AND THE QURʾĀN) while bypassing the sources of jurisprudence *(fiqh)*. Several influential teachers and preachers of Islam, such as the philosopher of the Muslim Brotherhood Sayyid Quṭb (d. 1966), did not receive their training in the traditional schools that teach the classical qurʾānic sciences. Some of the most famous contemporary orators, such as the Egyptian Canadian Jamal Badawi and the Indonesian Abdullah Gymnastiar, hold graduate degrees in business, which they studied in addition to the Qurʾān.

Concomitant with changes in education, new media such as radio, TV, cassettes and the Internet developed, all contributing to what Patrick Gaffney has called a "fragmentation of Islamic religious authority" (*Prophet's pulpit,* 35).

As the media became a platform for non-ritual preaching and the educational level of Muslims in general rose, those delivering the message were no longer men only but also included women who had become more learned in religious topics (see WOMEN AND THE QURʾĀN). With Muslims emigrating to the West, converts to Islam such as the African American Siraj Wahaj and US-born Hamzah Yusuf gained prominence as charismatic preachers, especially among the second and third generation Muslims who were born in the West.

Through the activities of reformist Islamic movements, the act of preaching changed as well (see POLITICS AND THE QURʾĀN). Non-ritual preaching that is not constrained by the strict parameters of the mosque sermon *(khuṭba)* came to serve as a tool of mission or propagation (*daʿwa;* see INVITATION). In order to make the message more attractive, new methodologies and modes of delivering it developed. Some preachers chant or sing during their sermon, others allow room for remarks from the audience.

From the beginning of Islam, Friday worship has had more than just religious significance. Muslim believers also gathered in the mosque (q.v.) to intensify a sense of solidarity among the members of the community and to discuss public issues. The message of inspired preachers, inside and outside the mosque, can have profound spiritual, social and political ramifications. It can instill a strong sense of religious purpose in those within their audience, or bring them to the point of revolting against a regime or other power. In July 2004, the Yemeni firebrand preacher Ḥusayn Badr al-Dīn al-Ḥūthī caused an uprising that left 300 people dead. At the other end of the spectrum, the messages preached by Farid Esack and ʿAbdur Rashid Omar in South Africa promoted what they called "progressive Islam" among the black Muslim population which helped bring about the demise of the Apartheid regime. It also promoted gender

equality (see GENDER; FEMINISM AND THE QUR'ĀN) and the development of an Islamic liberation theology.

Despite the fact that sermons, especially the Friday *khuṭba,* can be a barometer of social and political trends in Muslim societies, before the terrorist attacks in the United States on September 11, 2001, preaching had been largely ignored as a serious topic for study.

Terminology

The English term "preaching" has a variety of meanings in Arabic. The foremost act of preaching is the sermon, the *khuṭba,* that is delivered during the ritual of the Friday service, the two major feasts (see FESTIVALS AND COMMEMORATIVE DAYS) or during specific gatherings such as prayers for rain (see PRAYER FORMULAS). Preaching other than in the ritual Friday setting is called a *waʿẓ,* or *waʿẓa,* "sermon, lesson, moral warning," or *dars,* "lesson," in Arabic, but, depending on the local language, has many other translations. In Indonesia, for example, it is called *pengajian,* "the act of reciting the Qurʾān" (see also RECITATION OF THE QURʾĀN), or *majelis taʾlim,* "educational meeting."

The art of preaching the Qurʾān took and takes place on several levels. By the fourteenth century, depending on the audience's literacy, there were different specialists delivering the qurʾānic messages for a variety of listeners. Apart from the ritual aspects (see RITUAL AND THE QURʾĀN), there was and is little to distinguish the various types of preachers and their sermons and speeches from each other. The *khaṭīb,* delivering the *khuṭba* or *khuṭbat al-jumaʿ,* carried some of the authority of the Prophet. The *wāʿiẓ* told stories of the early heroes of Islam, while the *qāṣṣ* recited passages he had memorized from the Qurʾān and ḥadīth and encouraged his audience to fulfill their religious duties. Storytelling and preaching were mixed, and so were the roles of their performers; some were highly educated jurists, others based their knowledge on a few years of education in a *madrasa,* or had memorized the lessons of a *shaykh*.

Those preaching the Friday sermon continue to be called *khaṭīb* (preacher), while nowadays the words *imām* (leader of the ritual prayer, who also is the preacher) or (in the Middle East) *shaykh* are used as well. Influenced by trends of Islamic resurgence, *dāʿī* (one who performs *daʿwa,* a call or summons that invites or proselytizes) has become another term for those preaching non-ritual sermons. In the wake of the reformist movement the term *muballigh,* from *tablīgh* (to communicate, fulfill or implement a mission), which developed in response to colonialism and Christian missionary activities, has gained prominence as well.

Since the beginning of the twentieth century, preaching in general became identified as *daʿwa,* a qurʾānic term whose meaning has evolved over time and differs according to its context. "Preaching is *daʿwa,*" according to an Islamic scholar working at the Islam-online website. The basis for the call to exhort believers with the message of Islam is in the Qurʾān; a frequently-cited reference is Q 3:104, which refers to "A band of people *(ummatun)* inviting to all that is good, enjoining what is right and forbidding what is wrong" (see GOOD AND EVIL; VIRTUES AND VICES, COMMANDING AND FORBIDDING). Another is Q 16:125: "Invite (all) to the way of your lord (q.v.) with wisdom (q.v.) and beautiful preaching.…"

The proliferation of *daʿwa* was further enhanced by the advent of the reformist movement that contributed to the democratization of knowledge by stressing the

importance of education so that the text of the Qurʾān could become accessible to a general audience. Complex traditions of interpretation were bypassed and reading the original text was stressed. In countries where Arabic was not the local language (see ARABIC LANGUAGE), the reformists translated the text of the Qurʾān (see TRANSLATIONS OF THE QURʾĀN) and stopped giving sermons in Arabic, as this language was understood by few.

Tablīgh

In the wake of the reformist movement, the term *tablīgh* (from *b-l-gh,* form II, "to inform, communicate a message"), became interchangeable with *daʿwa,* including the phrase *tablīgh al-daʿwa*. According to reformist interpretation, for example, as espoused by Muḥammad Rashīd Riḍā (1865-1935), *tablīgh* became the duty of every Muslim who had knowledge of the language and of Islamic laws. In non-ritual preaching it is the preacher's duty to communicate and warn others to follow the truth (q.v.) and thus its goal has ranged from strengthening Muslim believers to inviting non-Muslims to accept Islam (see BELIEF AND UNBELIEF).

Khuṭba and *khaṭīb*

Neither the term *khuṭba* nor *khaṭīb* is mentioned in the Qurʾān. The *khuṭba* is part of the ritual Friday service, during which it is delivered from a *minbar* (pulpit), precedes the *ṣalāt* (see PRAYER), and consists of two parts. Since it replaces two of the four customary *rakʿāt* (see BOWING AND PROSTRATION) of the noon (q.v.) prayer, listening to it is considered an act of *ʿibāda,* worship (q.v.), and hence should be observed with appropriate reverence.

In principle, the authority to deliver the *khuṭba* belongs to the successor of the Prophet and in the early years of Islamic history it was held by the caliph (q.v.) himself or his governor. As the Islamic domain expanded, the ruler appointed a scholar learned in religious matters to represent him as the official *khaṭīb*. *Khuṭba*s were of political importance and customarily mentioned the name of the ruler as a recognition of his legitimacy (see KINGS AND RULERS; AUTHORITY). As time went by, their function expanded to providing religious instruction and moral guidance. Depending on the political conditions, the *khuṭba* remained a political tool, and was, for example, used as a form of protest against colonialism in modern times.

The *khaṭīb* often serves as the imām of the mosque and leads the daily prayers; many of them used to be trained in a *madrasa*. Nowadays they are trained in one of the schools for traditional Islamic higher education such as al-Azhar in Egypt or IAIN (Institut Agama Islam Negeri, State Institute for Higher Islamic Studies) in Indonesia. Those working in state-owned mosques are part of the state bureaucracy. The state not only provides their salaries but also exercises a certain amount of control over the topics and contents of their sermons, and, via its publications, guides the *khaṭīb* in the preparation of his material. Especially because of the potentially important political ramifications of a sermon, local governments regularly interfere in its text, sometimes prescribing standard pre-screened sermons for state-owned mosques.

The preacher's authority is based on various definitions of knowledge *(ʿilm)*. In principle the *khaṭīb* is a scholar, gifted in oratory skills and drawn from among the religiously-trained scholars *(ʿulamāʾ)*. Since these have been the custodians of the Islamic tradition for more than a millennium, it is crucial that their authority be based on solid knowledge of the Qurʾān, Islamic doctrine, and traditional learning.

Teaching

In the pre-colonial era Islamic education took place mostly in *madrasa*s that ranged from the elementary to the university level, or via the master-student model. During the twentieth century, these traditional structures were replaced by modern institutions. As Muslims emigrated to non-Muslim countries, the complexity of teaching and preaching the Qurʾān increased. As many Muslims achieved higher levels of education, teaching went beyond the schooling of children and future religious leaders and expanded to include activities on the pre-school level, after-school mosque instruction and forms of continuing adult education. The Qurʾān (Q 3:110) refers to the importance of teaching (q.v.) its injunctions, since they shape the character of a good and devout Muslim and since the Qurʾān is the foundation of all knowledge, its memorization becomes the cornerstone of Islamic learning.

After the traditional forms of education broke down, its institutions lost ground and became incorporated into the modernized national school systems. In many countries this not only interrupted the traditional teaching models of qurʾānic learning, but in places such as Morocco, led for a period of time to outright neglect of religious education. Other countries, such as Nigeria and Tanzania, were hardly affected by these trends and students continued to follow the model of seeking knowledge from a master or *shaykh*.

In the struggle to replace the classical models of Islamic education, some countries were more successful than others in creating contemporary alternatives. Nowadays, in many countries, kindergartens and private institutions continue to teach children the fundamentals of Islam. In countries such as Pakistan, Indonesia, Nigeria and Tanzania, *madrasa*s still exist and have incorporated the curriculum of elementary school subjects. Furthermore, in those countries, some *madrasa*s offer secondary and higher levels of education. Apart from these formal institutions of learning, informal programs in schools and mosques, Islamic organizations, and educational media such as websites play important roles in the formation and education of Muslims and of those who go on to become specialists in the Qurʾān.

While in earlier times education often ended at the *madrasa,* nowadays, depending on the accreditation of the *madrasa,* upon graduation students can continue their education in secular universities or in an Islamic institution for higher learning such as al-Azhar University in Cairo, the International Islamic Universities in Islamabad, Pakistan and Kuala Lumpur, Malaysia, and the IAIN and the Islamic State University networks in Indonesia.

Elementary education

Until the nineteenth century, the first level of traditional Islamic education in the Middle East took place in the *kuttāb, maktab* (Iran), or *mektep* (Turkey) where for a period of two to five years boys learned verses (q.v.) from the Qurʾān, a limited number of ḥadīths and some basic principles of Islamic law *(fiqh)*. Contemporary Islamic education on the elementary level takes different forms but Muslims agree that inculcation of Islamic values and knowledge should start as early in life as possible, especially nowadays when television and other media compete with religion in the formation of children. In many instances, teaching the children also provides an opportunity to include mothers in the educational process.

In her book about teaching qurʾānic recitation *(Perfection makes practice. Learning, emotion, and the recited Qurʾān in Indonesia),* Anna Gade provides several examples from

Indonesia, showing how a close connection is formed between preaching and Qurʾān recitation in order to create a new cadre of religious leaders. During the 1970s, when the reformists realized the lack of recitation skills among their preachers, they started a movement (AMM, Angkatan Muda Masjid dan Musholla, Youth groups for mosque and prayer house) that tried to counter the influence of television by teaching children Qurʾān recitation. This resulted in an extra-curricular schooling system for children under five (TKA, Taman Kanak-kanak Al-Quran), for elementary-school age children (TPA, Taman Pendidikan Anak-anak), and for youth. In order to instill enthusiasm for the Qurʾān in children, these educational institutions organized events such as mass recitations by children and a large pilgrimage (q.v.; *ḥajj*) simulation. The curriculum for these courses includes memorization of the ritual prayers, short sūras (q.v.), and daily non-ritual prayers; studying ḥadīth and the rules of Qurʾān recitation *(tajwīd);* writing Arabic and practicing rituals such as the ablution before prayer (*wuḍūʾ;* see CLEANLINESS AND ABLUTION; RITUAL PURITY). Mothers whose children participate in these courses often form their own groups to learn to read the Qurʾān.

*Madrasa*s

A *madrasa* is an endowed, private educational institution that originated in the Middle East around the eleventh century. Originally, it was an instructional center connected with a mosque, or a mosque complex where students could stay overnight. It evolved into an institution that until the nineteenth century came to preserve Islamic learning and orthodoxy. *Madrasa*s produced *ʿulamāʾ,* the cadre of religious scholars, judges and teachers, although, at their more elementary levels, an important aim was to inculcate the practices, knowledge and principles that shape the ethical and moral principles of a good Muslim (see ETHICS AND THE QURʾĀN). All students learned the reading and recitation of the Qurʾān in an accurate way (see READINGS OF THE QURʾĀN), since this is foundational to the transmission of the faith (q.v.).

In 459/1067 the first formally institutionalized *madrasa,* the Niẓāmiyya *madrasa,* opened in Baghdād. Its founder, Niẓām al-Mulk (d. 485/1092), vizier to the Saljūq sultans, envisioned a school that would teach orthodox Sunnī Islam in order to counter the prevailing heterodoxies, both theological and philosophical (see THEOLOGY AND THE QURʾĀN). The Niẓāmiyya *madrasa* served as the nucleus for the development of scores of *madrasa*s that provided education in Islamic sciences. In addition to study and memorization of the Qurʾān, the curriculum included traditionally transmitted sciences such as *tafsīr* (exegesis), ḥadīth, *uṣūl al-fiqh* (principles of jurisprudence); the ancillary Arabic-language sciences of grammar (see GRAMMAR AND THE QURʾĀN), rhetoric (see RHETORIC AND THE QURʾĀN) and literature (see LITERATURE AND THE QURʾĀN); theology; and the classical or "rational" sciences such as logic, philosophy (see PHILOSOPHY AND THE QURʾĀN), astronomy, and arithmetic (see SCIENCE AND THE QURʾĀN). Learning took place with the students sitting on the floor around a teacher while memorizing and repeating certain texts. Arabic was the primary medium of instruction, and students memorized the Qurʾān and ḥadīth and, lacking books, took notes while committing to memory the words of the teacher. There were no exams, but students were certified in particular texts when they reached a certain

level of mastery of them. Other famous *madrasa*s were al-Zaytūna in Tunis, al-Qarawiyyīn in Fez and al-Sulaymāniyya in Istanbul.

For the most part, *madrasa* education was traditionally for men only and guaranteed careers as religious leaders, as, for example, imāms in local mosques. Where they still exist *madrasa*s continue to attract students from the poorer and middle classes because of their lower tuition fees. In Pakistan, for example, they offer a second chance and possible upward mobility to dropouts from state schools. Those who can afford it prefer to send their children, especially male children, to secular schools since its diplomas open to students a broader range of graduate programs or of job opportunities. For this reason, in certain *madrasa*s, for example those in Indonesia, the number of female students has been gradually surpassing that of male students.

With the demise of the traditional institutions for Islamic education, private or state-owned mosques and institutes started to offer alternative religious curricula. Here children receive basic education in the Qurʾān. Some institutes such as al-Azhar University in Cairo continue to offer the elementary, middle and higher level courses that were the curriculum of the *madrasa*s. In Morocco, the state has established religious institutes at the secondary and post-secondary level. Several renowned institutes of classical learning, such as the Yūsufiyya mosque-university, became integrated with the Qarawiyyīn University. In 1924, Turkey abolished its *medrese*s, replacing them with a secular school system, and opening special secondary schools to train imāms and *khaṭīb*s. This system proved unsatisfactory, and by the 1950s the *imam-hatip okulları* were established in order to provide comprehensive religious education while the Faculty of Theology at Ankara University became the most important institute for Islamic higher education.

Generally speaking, the *madrasa* system that offers a comprehensive Islamic education is still most vibrant in countries where Arabic is not the national language, such as in some sub-Saharan African countries, India, Pakistan, Malaysia, and Indonesia. In these places, children have to master Arabic as a second language before they can continue to study the Qurʾān-related sciences. In several African countries (e.g. Nigeria), new Islamic schools have proliferated; these combine traditional and modern features in their curriculum. Through teacher training colleges for male students they offer the traditional *madrasa* curriculum where students concentrate on Arabic and Islamic studies intensively for four years. In Kano, northern Nigeria, such a school exists exclusively for women.

Since the 1960s, the Indian and Pakistani governments have attempted to reform the religious curricula of the *madrasa*s so that their students can meet the standards accepted by state schools and can enter the mainstream education. These efforts have been met with severe criticism from the established *ʿulamāʾ* who considered the introduction of secular subjects a threat to their religious authority and an attempt to weaken Islam. After it became known that leaders of the radical Taliban movement that ruled Afghanistan were trained in certain Deobandi *madrasa*s (especially the Darul Uloom Haqqania; see DEOBANDIS), the Pakistani government tried to press more forcefully for the modernization of such institutions.

As secular models of education grew in prominence, an unresolved tension arose concerning the status of those graduating from *madrasa*s. While these graduates

possessed the traditional knowledge of Islam required for sustaining Islamic scholarship, they secured little respect in a society that had come to prefer professions, such as engineering or medicine, for which one had to have studied at secular schools. At the same time, *madrasa* graduates were no longer the sole custodians of Islamic knowledge, since "new" religious intellectuals emerged who had obtained their religious education elsewhere. Responding to this challenge that redefined the place of religion and religious authority in society, *madrasa*s and other institutions of Islamic learning all over the Muslim world started to introduce secular subjects into their curricula.

India and Pakistan

While there is evidence that *madrasa*s existed in north India since the twelfth century, the most vigorous *madrasa*s of the subcontinent grew out of reformist movements whose *da'wa* activities needed trained workers. In 1867, this led to the establishment of the Dār al-'Ulūm Deobandi *madrasa*s where those qualified to work in *tablīgh* were educated. This model became rapidly replicated in other parts of the country. One of the most prominent changes in reformist Deobandi *madrasa*s was increased attention to the study of ḥadīth in order to combat local, non-orthodox beliefs and rituals (see POPULAR AND TALISMANIC USES OF THE QUR'ĀN; HERESY). The curriculum followed in most *madrasa*s in India and Pakistan derives from a corpus of texts referred to as *Dars-i Nizami* that was introduced by Mulla Nizam al-Din Muḥammad (d.1748). In most cases these texts were composed between the ninth and the eighteenth centuries by Iranian, central Asian and Indian scholars.

The Deobandi schools emulated the British educational system in introducing a set curriculum, a separation of academic levels, and examinations (Metcalf, *Islamic revival,* 87-137). Concurrent with the Deobandi movement, the organization of Nadwat al-'Ulama' set up the Dar al-'Ulum *madrasa*s that aimed at producing scholars of Islam who could guide the believers in both religious and non-religious matters. Currently it is estimated that there are 30,000 *madrasa*s in India.

The strong Indian *madrasa*s did not expand to Pakistan with its establishment in 1947. There, religious leaders had to build a new system. Pakistan tried to reconfirm its commitment to Islam through opening and reforming the *madrasa*s. In Punjab alone, for example, the number of *madrasa*s (called *dini madaris*) grew from 137 in 1947, to 2,500 in 1994. State initiatives of 1962, 1979 and 2001 gradually introduced secular modern subjects while also reforming the religious subjects. President Muhammad Zia ul-Haq (1977-1988), in particular, tried to bring the *dini madaris* under government supervision and into the mainstream educational system while preserving their character as the custodians of Islamic learning. In 2001 the Pakistani state issued regulations that aimed at unifying the curriculum of the *dini madaris* in order to provide a comprehensive Islamic as well as a general education and so that the degrees these *madrasa*s granted could be recognized in the national system. As part of this effort, the new curriculum comprised subjects such as English, mathematics, computer science (see also COMPUTERS AND THE QUR'ĀN), economics (q.v.), and political science (see also SOCIAL SCIENCES AND THE QUR'ĀN).

Southeast Asia

Institutions of Islamic education in Singapore, Indonesia, Malaysia and Thailand not only serve to educate the Muslim populations but also provide a link

to the Middle East where students often go to complete their religious education. This exchange guarantees a regular flow of Islamic thought between the Middle East and the Far East. Indonesia, the largest Muslim country with over 210 million Muslims, has a large and very efficient system of Islamic education that supplies preachers and teachers of the Qurʾān. Currently, many *madrasa*s offer levels of kindergarten *(Raudlatul Athfal),* elementary *(Ibtidaʾiya),* middle *(Tsanawiya),* and high school *(Aliya)*. The current curriculum is divided into 70% general education and 30% religious education, although some *madrasa*s continue to offer religious education only. There are 37,362 *madrasa*s (85 percent of which are private) with nearly six million students. Almost fifty percent of the students are women, while more women than men study at the *Aliya* level (Jabali and Jamhari, *IAIN,* 130).

In southeast Asia an indigenous system of schools to teach Islamic sciences, called *pesantren,* developed and spread from Indonesia to the regions of Kedah and Kelantan in Malaysia and to southern Thailand. The *pesantren,* also called *pondok pesantren* (allegedly from *funduq,* hostel), is an Islamic boarding school where students (called *santri*) share cramped quarters in dormitories where they cook or buy their own food, wash their own clothes and spend the entire day following a discipline of studying or doing study-related activities. The majority of the *pesantren* are situated in the countryside. They are always independent and often set up by a charismatic teacher *(kiai)* who attracts students that can number into the thousands. Since the 1950s several *pesantren* have allowed female students who live in segregated dorms and have their own classes, often with female teachers. There are *pesantren* all over Indonesia; on the island of Java alone their number is nearly 10,000. Originally the *pesantren* curriculum was entirely religious. This changed in the 1980s, as a result of which 30 percent of the *pesantren* now offer three to four levels of mixed general and religious education. In many *pesantren* students attend state schools while studying the Qurʾān and related sciences for four to six hours a day before and after school. There are two types of *pesantren:* those belonging to the networks of the traditionalist Nahdlatul Ulama (NU) organization and the modernist ones. The Gontor *pesantren* on Java is a modernist *pesantren,* famous for an innovative curriculum that students can follow in English or Arabic. Around one quarter of the students of both types of *pesantren* continue their studies in the Middle East, mostly in Mecca, Medina and Cairo.

In the traditionalist *pesantren,* the daily schedule is organized around the cycle of ritual prayers. Apart from learning the Qurʾān by heart, there is emphasis on the study of the *fiqh* and on the practice of spiritual disciplines similar to those of *taṣawwuf* (see ṢŪFISM AND THE QURʾĀN). The topics studied can be classified into several groups: *qirāʾa* or *tilāwa,* the recitation of the Qurʾān with its subdivisions of syntax and morphology; jurisprudence *(fiqh);* the sources of jurisprudence; tradition (ḥadīth); Qurʾān interpretation *(tafsīr);* the unity of God (*tawḥīd;* see GOD AND HIS ATTRIBUTES); mysticism *(taṣawwuf),* ethics, history of Islam and rhetoric. The texts in Arabic are called *Kitab Kuning,* "yellow books," and are made up of loose leaflets that can be taken out for study. *Pesantren* students are expected to become religious leaders who can deliver engaging sermons. In their "free time" students learn to give speeches *(pidato)* and practice the art of debating *(diskusi)*. The system is based on rote learning which leaves little room for creative thinking or questioning the *kiai*'s teachings. There are no final exams: when

a *santri* masters a certain text she proceeds to the next, more complicated one. A major milestone is to become a *ḥāfiẓ* or *ḥāfiẓa,* i.e. someone who has memorized the Qurʾān (see MEMORY; RECITERS OF THE QURʾĀN). This is celebrated with much pomp in a "graduation" ceremony during which the public calls out random verses to be recited and assures itself that those graduating know the Qurʾān by heart.

Martial arts and other types of sports are especially popular among male *santri*. Apart from the academic curriculum, many *pesantren* organize vocational training courses and income-generating activities such as agricultural projects and business cooperations. To the surrounding communities, *pesantren* serve as centers for intensified expressions of religion. For example, during Ramaḍān (q.v.) the *santri* recite the entire Qurʾān daily following *tarwiya* prayers.

In Indonesia, the focus on memorizing the Qurʾān and becoming a *ḥāfiẓ* has produced unexpected results for women. As women learned the Qurʾān by heart, they asked that the Nahdlatul Ulama produce a *fatwā* allowing them to recite in public. As a result, the Nahdlatul Ulama decided in the 1970s that women had the same obligation to spread the faith of Islam as men, and they were allowed to recite the Qurʾān in public. Consequently, women started to compete in national Qurʾān recitation contests, and Maria Ulfa became the first woman to win the international Qurʾān recation contest in Malaysia in 1980. The following year she opened her own institute for Qurʾān studies for women (IIQ , Institut Ilmu Al-Qurʾān), which is modeled on al-Azhar University, with a subsequent division for men. Graduates from this institute perform regularly on television and radio (see MEDIA AND THE QURʾĀN) and among them there were two women who in 2000, and based on their religious scholarship, gained access to the official bodies of male religious authority. They were appointed members of the national councils of the Nahdlatul Ulama and Majelis Ulama Indonesia (MUI), both of which issue *fatwā*s. Although most *pesantren* are run by men, some women run their own. Tutty Alawiya is among the most famous preachers who heads her own *pesantren* in Jakarta.

Since the religious orientation of a *pesantren* depends on the views of its *kiai,* some have received ample press coverage because their *kiai*s' radical interpretations of Islam inspired students to join extremist groups such as those who were responsible for the Bali bombings in 2002. This event did not, however, precipitate a radical reformation of the *pesantren* system because such a transformation had already been going on since the 1970s. Especially *pesantren* within the Nahdlatul Ulama network had designed several projects in order to strengthen the Islamic learning of their graduates so that they could be custodians of the orthodox truth, while at the same time filling relevant positions in society. This reformation aimed at producing a counter discourse that could address urgent issues concerning human, women's and democratic rights. This movement was based on the re-interpretation of *fiqh* texts so that these could become a hermeneutical tool to negotiate social pluralism. A leader in this process is Abdurrahman Wahid, the long-time national chair of the Nahdlatul Ulama and former president of Indonesia. His innovative approach to the interpretation and teaching of the Qurʾān is based on his education as a classical scholar of Islam — he studied in Iraq and Egypt — combined with a rigorous training in Western philosophy and political science (see CONTEMPORARY CRITICAL PRACTICES AND THE QURʾĀN).

Through some of these projects, many

women studying and teaching in the *pesantren* began re-interpreting the *fiqh* texts concerning women. Among other consequences, this resulted in a unique effort to address women's reproductive rights as understood in Islam, including taboo topics such as marital rape, a phenomenon which Islamic scholars do not technically admit as a legal category (see MARRIAGE AND DIVORCE; SEX AND SEXUALITY).

The condition of the *pesantren* in Thailand illustrates the importance of the indigenous institutes of Islamic education. Since the early 1960s these schools have come under the control of the Thai state. As a result, future specialists in Islam receive their education mainly in Libya and Saudi Arabia. Upon their return these students propagate the ultra-conservative interpretations of Islam that are practiced in those countries.

Iran and Iraq

The town of Qom in Iran has long been among the leading centers for Shīʿī Islamic learning, with a *madrasa* tradition that provides the graduate levels of teaching necessary for a student to become a *mujtahid,* an authoritative doctor of the law. In the so-called *ḥawza ʿilmiyya* (center of religious learning), the most famous *madrasa*s are centered around ayatollahs or *marājiʿ taqlīd* who are the most authoritative religious authorities in the *ḥawza*. Their advice and learning spreads beyond Qom, and Shīʿites all over the world follow their opinions. These authorities give specialized lectures at advanced levels. Most *madrasa*s offer the traditional curriculum with courses in doctrine and jurisprudence. During the 1970s new *madrasa*s were added that introduced modern teaching methods and subjects such as English. Although by the nineteenth century Qom's educational system had lost its vigor, the Ayatollahs rehabilitated it and during the 1940s it had become a center of resistance to the Pahlavi monarchy. In the 1960s, reformist ayatollahs tried to modernize the traditional *madrasa*s by setting up institutes with alternative curricula. After the 1979 revolution of Ayatollah Ruhollah Khomeini, Qom served as the center of educational and political organizations of Shīʿī clergy.

In Iraq, the shrine cities of Najaf and Karbala became strongholds of Shīʿite Islam after the center of Shīʿite religious learning shifted from Iran to Iraq in the mid-eighteenth century. Until the 1920s, especially Najaf exercised both political and religious influence far beyond its borders. Its *madrasa*s produced experts in religious law and Iraqi literary figures of renown. By the 1920s these cities lost their prominence when Iranian scholars returned home and the number of pilgrims and amount of charitable income from Iran diminished. Nowadays the cities remain centers of religious study and leadership for Iraqi Shīʿite Muslims.

Western countries

Since the 1960s increasing numbers of Muslims have moved to the West in search of work, freedom of expression, and upward mobility. This has led to a proliferation of institutes, organizations and schools that teach children Islamic learning and values. Many offer religious classes during the weekend, in schools that are often called *madrasa,* where children learn the basics of the Qurʾān, Arabic and Muslim ethics. In several European countries, supported by state money, Muslims opened their own schools with mixed curricula of religious and non-religious subjects. In the United States and Canada four Muslim school organizations have established over one hundred private schools that provide education based on the Qurʾān and Islamic principles.

Beyond the middle school level, however,

there are limited options for further religious education. Few schools continue to the high school level, and there is little interest among students and their parents for more advanced study towards a career in religious education. In most countries the position of imām is not officially recognized, and that means that individual mosques take it upon themselves to hire their imāms. Hence the salaries of imāms and other religious specialists are very low. Following a new trend, the few who do graduate with advanced degrees in Islamic studies move into specialized professions and serve as imāms in prisons, hospitals or the army, while others become teachers and social workers. A lack of home-grown leadership, especially imāms, is the single most important concern facing Muslims in the West today.

The great shortage of western-born imāms in Europe and North America has prompted communities to invite imāms from various Muslim countries. Unfortunately, these leaders often lack knowledge of the local culture and language and are not familiar with problems and ethical issues that members of their community face in their new country. One of the main imāms in Copenhagen continues to preach in English and Arabic — after nearly two decades in Denmark — and that forces half of his audience to wear headphones for simultaneous translation. After the events of 11 September 2001 this problem has become more evident as governments have found that some clerics use their *khuṭba*s and Qurʾān lessons to incite violence (q.v.), while others espouse views that violate basic human rights, such as those concerning wife beating (see INSOLENCE AND OBSTINACY). In some cases this led to mandatory "integration" courses about the values of the host country. In December 2004, the French government decided that it would only accredit imāms trained in a French university.

Other governments are trying to create "Europeanized" imāms by encouraging local Islamic institutions of higher learning. For example, in the Netherlands the Turkish community opened the Islamic University of Rotterdam (IUR, 1997) that since 2001 has been dominated by the Nurculuk, a modern Turkish religious movement founded by Said Nursi (d. 1960). A break-off group from IUR started the Islamic University of Europe (IUE) in Schiedam and seeks neutrality and cooperation with all Muslim groups present in the Netherlands. The Dutch government has tried to provide for the needs of Muslim communities by launching the Godsdienst Islam, De Educatieve Faculteit Amsterdam (EFA), a community college where Muslim students are taught the basics of the Islamic sciences. Only a few who graduate from this school, however, become imāms; rather, the graduates seek teaching jobs or consider their education as an opportunity to enhance their personal Islamic knowledge. In 2005 the Dutch Ministry of Education decided officially to establish a program that provides BA and MA degrees in a combination of Islamic and Christian theology at the Free University of Amsterdam.

As a result of the diversity of Muslim populations in various western European countries, few Muslim communities in these countries have managed to find satisfactory solutions for the need to train local imāms. In several instances institutions such as the Muslim College in London have been funded and influenced by Libya, Algeria or Saudi Arabia.

In the United States, imāms who work with government and health care institutions are required to complete a master's degree. So far there are few schools where

they can prepare for this type of chaplaincy. The School of Islamic and Social Sciences in Virginia offers a fledgling program for the training of imāms, while in a few cases Muslim programs cooperate with Christian schools to pool resources. Hartford Seminary in Connecticut has a program for Islamic chaplaincy in hospitals, the military and prisons, while some students of the American Islamic College in Chicago attend classes at the Lutheran School of Theology. (Few students were willing to commit to this College full-time and the College failed to obtain accreditation.) In an attempt to fill the gap of Islamic education, organizations such as the Islamic Society of North America (ISNA) organize part-time imām-training workshops. ISNA recently established a center to set standards for the education of imāms and chaplains. The struggle to create appropriate venues to educate Muslim teachers and preachers means that also in Western countries all roads lead to the Middle East where many Muslims return for graduate education at Islamic institutes for higher learning.

The institutes of higher learning

In most countries with significant Muslim populations students can pursue advanced degrees in Islamic studies at the undergraduate and graduate levels in state or private universities. The most illustrious of these graduate institutions is al-Azhar University in Cairo, set up in 361/972, initially to spread Fāṭimid Shīʿī doctrines. After Ṣalāḥ al-Dīn (d. 589/1193; Eng. "Saladin") and his Ayyūbid dynasty restored Sunnī Islam in Egypt, al-Azhar became one of the most important Islamic universities, educating students from all over the Muslim world. It developed satellite branches throughout Egypt and in several countries, such as Syria and Indonesia. Concurrent with the changes in the traditional educational systems, starting in 1872 it has undergone several reforms in efforts to streamline and modernize its curriculum. Since then, it has changed from an institution where students gathered at the feet of their professor as he lectured from a designated pillar in the mosque, to a modern school with classrooms, desks, grade-levels, exams and academic departments and administrators. After education in Egypt was gradually transferred to secular state schools, al-Azhar continued to offer religious curricula from the elementary to high school level, an undergraduate-level university degree, and specialized courses of study in Islamic law, theology, pedagogy and preaching and guidance.

Although pushed by reformers such as Muḥammad ʿAbduh (d. 1905) and Muṣṭafā al-Marāghī (d. 1945), reform did not come easily to al-Azhar because it had positioned itself as the conservative custodian of traditional knowledge and the methods of transmitting it. Reality overtook it several times when Egyptian authorities opened alternative schools that could train professionals more effectively. At the beginning of the twentieth century, the Egyptian government opened the Dār al-ʿUlūm teacher training college and the school for judges (*qāḍīs*), both of which offered severe competition to al-Azhar. This trend forced al-Azhar to become a university, and in 1961 the state passed a law that mandated the addition of secular subjects to its curriculum. Especially Maḥmūd Shaltūt (1893-1963), at that time al-Azhar's president, or Shaykh al-Azhar (1958-1963), envisioned an institute that would educate well-prepared scholars who could fight religious fanaticism and unite the global Islamic community. Under his auspices, al-Azhar opened non-religious colleges for engineering, medicine, commerce, science,

agriculture, and education. Students at these colleges were obliged to take a preparatory year of religious studies. He tried to raise al-Azhar's international profile by instituting a Department of Culture and Islamic Missions *(Idārat al-Thaqāfa wa-l-Buʿūth al-Islāmiyya)* which sent al-Azhar graduates to teach and preach in other countries. Primary and secondary Islamic institutions *(maʿāhid azhariyya)* graduated both men and women missionary preachers (*dāʿīs*) to work inside and outside of Egypt. Finally, a Girl's College *(Kulliyyat al-Banāt)* was added; it offers degrees in Islamic, Arabic and social studies, as well as technical subjects and European languages.

Although nowadays many professors at al-Azhar send their own children to secular universities, al-Azhar continues to maintain its old aura of authority throughout the Muslim world. From the *pesantren* in Indonesia to the *madrasa*s in Tanzania or the USA, for many future *ʿulamāʾ* the road to learning eventually leads to Cairo. The *Kulliyyat al-Daʿwa* (Faculty for Islamic Mission) provides full-time programs and short courses in *daʿwa* and trains many future teachers and preachers whose religious authority is socially and culturally reinforced for the Muslim audiences. Al-Azhar graduates can deliver their sermons in classical Arabic and a mediocre preacher from outside the Arabic-speaking countries, even after a cursory stay in the Middle East, can claim an exorbitant amount of religious authority upon return to the homeland. Al-Azhar ordinarily produces graduates who are conservative and moderate in their interpretation of Islam. Through its censorship activities, al-Azhar guards Islamic standards by banning books of those considered "heretics." In its ongoing efforts to keep pace with the times, in 2004 it chose Muḥammad Ṭanṭāwī as the Shaykh al-Azhar.

Some other institutes outside the Middle East that have become prominent institutes for Islamic learning are the International Islamic University at Kuala Lumpur, Malaysia, the International Islamic University of Islamabad, Pakistan, and the network of IAIN schools in Indonesia. They are not as international as al-Azhar University but do serve local and regional needs. The International Islamic University was set up by the Malaysian government in 1983 and is co-sponsored by seven other Muslim countries. Inspired by the recommendations of the first World Conference on Muslim Education (Mecca, 1977), it aims at the integration of Islamic knowledge and secular sciences. It offers a large number of non-religious disciplines, all infused with Islamic values and knowledge. In 1985, the International Islamic University of Islamabad established the Daʿwa Academy, which publishes material on *daʿwa* and organizes leadership programs, as well as courses and workshops to train *imām*s, community leaders, and professionals in Islamic knowledge.

The network of IAIN schools (Institut Agama Islam Negeri, State Institute for Higher Islamic Studies) in Indonesia was established in the 1950s to create a balance between traditional Islamic knowledge and indigenous modes of learning. Initially working with professors visiting from al-Azhar, these schools now have their own professors who have obtained Ph.D.'s from universities both in the West and in the Middle East. The curriculum is predominantly religious and provides a channel for advanced education and upward mobility for students from schools that do not offer the secular curriculum. Some of Indonesia's most prominent public scholars, such as Bahtiar Effendy and Komaruddin Hidayat, graduated from the IAIN network.

IAIN schools cooperate closely with

McGill University in Canada, Leiden University in the Netherlands and al-Azhar University. Unique to the IAIN are some undergraduate and graduate programs in comparative religions. Their founders stressed the application of Islam in society, and envisioned a well-rounded education in moderate Islam based on rationalism (see INTELLECT), modernity and tolerance of other religions (see TOLERANCE AND COMPULSION; RELIGIOUS PLURALISM AND THE QUR'ĀN). While it offers traditional subjects, its staff has ventured into new directions, which has led to innovative projects of learning and research. For example, IAIN Jakarta (the largest IAIN, which became a university in 2001) has an institute for research on Islam and society (PPIM) that is active in developing an Islamic discourse on civil society and democracy. IAIN Yogyakarta operates a Women's Study Center (PSW) which has prepared material that helps faculties of all IAIN's to re-evaluate their educational material from a gender-sensitive point of view. Several alumni and professors of IAIN have become well-known advocates for human rights and social justice based on Islam (see JUSTICE AND INJUSTICE).

Preaching

Ritual preaching: The khuṭba

While there are no rules for non-ritual preaching, there are several for the *khuṭba* and the one who offers it, the *khaṭīb.* Preferably, the *khaṭīb* or preacher stands on the *minbar* or, if this is not available, on any elevated place. Facing the people, he pronounces at the outset the greeting *al-salāmu ʿalaykum wa-raḥmatu llāh wa-barakātuhu*. After the response of the audience, he sits down to hear the call to prayer *(adhān)* before the *khuṭba*.

The *khuṭba* is encased in a formal ritual framework consisting of two parts. The first part, *al-khuṭba al-waʿziyya,* sermon of admonishing or warning, is longer than the second part. It begins with two repetitions of "Praise (q.v.) be to God" (the *ḥamdala;* see LAUDATION; GLORIFICATION OF GOD), the declaration of faith (*shahāda;* see WITNESS TO FAITH), the *ṣalāt* on the Prophet ("May God bless him and greet him with peace"); and must contain at least one verse from the Qur'ān. The second part, *al-khuṭba al-naʿtiyya,* the descriptive or qualifying sermon, should end with peace and blessings on the Prophet and his Companions (see COMPANIONS OF THE PROPHET) and prayer or supplication *(duʿā')* on behalf of all the Muslims (see INTERCESSION). Prayer manuals teach that the sermon should be short in accord with the Prophet's saying: "Make your *ṣalāt* long and your *khuṭba* short." Traditionally, in the manner of the Prophet, the *khaṭīb* delivered the sermon standing while holding a staff in his hand, a pre-Islamic symbol of ceremony and authority (see ROD). In the Arabic-speaking countries the *khaṭīb* says "now then" *(ammā baʿd)* to indicate the beginning of his sermon.

The *khuṭba* admonishes and calls the believers to action. Although the contents of the sermons vary, there are certain recurring themes taken from the Qur'ān, tradition, Islamic history, the political situation and current events. To prepare the *khuṭba* preachers rely as sources, on the Qur'ān, ḥadīth, qur'ānic commentaries (for example, the *Tafsīr al-Jalālayn* written by Jalāl al-Dīn al-Maḥallī, d. 864/1459, and his student Jalāl al-Dīn al-Suyūṭī, d. 911/1505, is a popular source, and so is the *tafsīr* of al-Ṭabarī, d. 310/923), and writings by scholars such as al-Ghazālī (d. 505/1111) and Ibn Taymiyya (d. 728/1328). In his book describing the work of a rural preacher, Richard Antoun provides lists of titles from the preacher's library (*Muslim preacher,* 96-100) and remarks that the

preacher does not use his many books on Islamic jurisprudence *(fiqh)* to prepare the *khuṭba* but reserves those books for other lessons on the Qurʾān.

Originally, Arabic was the language used for preaching *khuṭba*s all over the Muslim world. Since most people in many countries did not know Arabic they were unable to comprehend what they were hearing. During the medieval period, *khuṭba*s and other sermons or moral lessons formed a seamless part of Middle Eastern and other societies in which knowledge was transmitted orally (see ORALITY). By the nineteenth century, however, even in Arabic-speaking countries the *khuṭba* had become fossilized into forms of standardized discourse. The classical Arabic text for a sermon was often taken from a medieval source and repeated with minimal chance for comprehension by the mostly illiterate audience (see LITERACY; ILLITERACY). Influenced by the reformist movements this changed, although the sermons of medieval preachers such as Ibn al-Jawzī (d. 597/1200) are still readily available in the bookstalls around al-Azhar university.

There has been some debate about whether or not the *khuṭba* should be in Arabic. Some scholars consider it part of the ritual prayer *(ṣalāt)* and argue that it should. In 1975, hundreds of imāms and *ʿulamāʾ* at the World Conference of Mosques in Mecca agreed that it could be delivered in local languages. But the discussion continued and as late as 2001, the Mufti of Egypt (Shaykh Dr. Naṣr Farīd Wāṣil) ruled that it was admissible to deliver the Friday sermon in a language other than Arabic provided that qurʾānic verses were recited in Arabic, followed by translation. Even when the *khuṭba* is delivered in a language other than Arabic, it is still commonly laden with many Arabic quotes and expressions.

Medieval preaching

Collections of sermons of famous Muslim preachers from the medieval period inspired those coming after them and testify to the importance of preaching in the transmission of the Qurʾān during that time frame. The sermons of famous preachers such as Ibn Nubāta al-Fāriqī (d. 374/984-5) and ʿAbd al-Raḥmān b. ʿAlī b. al-Jawzī (d. 597/1200) were delivered by many minor preachers after them. Preaching often overlapped with what was taught in the *madrasa*s. Some preachers are reported to have attracted audiences of over thirty thousand while others so inspired listeners that they fought to touch the preacher after he had descended from the *minbar*.

Depending on the context and the time, sermons could be politically charged. Ibn Nubāta called for *jihād* (q.v.) when preaching in a court on the Byzantine frontier while ʿIzz al-Dīn b. ʿAbd al-Salām al-Sulamī (d. 660/1262) reprimanded the Ayyūbid sultan of Damascus for handing over property to the Crusaders. Preaching had potentially great impact. In the early centuries, while the legal schools were taking shape and theological battles raged, preachers contributed to the legitimization of Ashʿarite theology over and against Muʿtazilī teachings (see MUʿTAZILA). Sermons were a battleground about which interpretations of the Qurʾān should be considered the most authoritative. As the rapprochement between Ṣūfism and more formal Islam took shape, Ṣūfī preachers became among the most popular. At times this created tensions: for example, the sermons of famous Ṣūfī preachers such as Shaykh Shuʿayb al-Ḥurayfīsh (d. 801/1398-9) vexed the legalistic mind of many a jurist.

The Ḥanbalī jurist and theologian Ibn al-Jawzī not only drew crowds of thou-

sands with his moving sermons, but was also moved to admonish the popular preachers (the *quṣṣāṣ;* sing. *qāṣṣ*) who in his view broke the conventional boundaries of religious authority. In his famous work *Kitāb al-Quṣṣāṣ wa-l-mudhakkirīn,* "The Book of Storytellers and Remonstrators," he reminds them of their potential power in transmitting and explaining religious knowledge, since their words reach all levels of society while the teachings of jurists are known only in limited circles. Preachers could jeopardize the Islamic heritage of knowledge by spreading false stories and unsound traditions, and by the ninth/fifteenth century famous scholars such as Jalāl al-Dīn al-Suyūṭī continued to write treatises against the "lies" spread by the *qāṣṣ.* Others were vexed by the salaries some preachers commanded. The themes of sermons were matters close to peoples' hearts: poverty (see POVERTY AND THE POOR), suffering (q.v.), death (see DEATH AND THE DEAD) and redemption (see SALVATION; FALL OF MAN). Also popular were the *qiṣaṣ al-anbiyāʾ,* the stories about the pre-Islamic prophets (derived sometimes from *Isrāʾīliyyāt;* see JEWS AND JUDAISM; SCRIPTURE AND THE QURʾĀN; CHRISTIANS AND CHRISTIANITY), especially those about Moses (q.v.) and Joseph (q.v.). Preachers challenged the boundaries of religious authority and sometimes those of gender, especially when women flocked to the mosques to hear them as well. They could elicit raw emotions from their critics because, unless they uttered blasphemies (see BLASPHEMY), given the absence of a formal ecclesiastical structure in Islam, and short of direct interference by the sultan or state, their words were hard to control. In the end, the issue at stake was about legitimate religious knowledge and its corollary, religious authority.

Contemporary preaching

Debates about who holds the authority to interpret and preach Islam have never completely disappeared and have recently acquired the public's attention as governments in Muslim and non-Muslim countries have begun to realize the impact of sermons, formal or informal. Both in the West and in countries with a Muslim majority, or a substantial Muslim minority, there is an increasing tendency to control the mosques and the message.

Those bringing the message of the Qurʾān, be it in the *khuṭba* or other non-ritual forums, are expected to demonstrate high moral standards. Considered to be *duʿāt* (sing. *dāʿin*), propagandists or callers to Islam, Q 41:33 refers to them in its saying "Who is better in speech (q.v.) than one who calls [people] to God." The Prophet is reported to have said in a ḥadīth that "The best among you are those who study and teach the Qurʾān."

Based on their high calling, those preaching and teaching the Qurʾān are expected to practice the virtue of *ikhlāṣ,* sincerity and purity of intentions and actions. Secondly, having thorough knowledge of the topic discussed is an essential obligation for a preacher (cf. Q 12:108). Thirdly, they should imitate the Prophet's behavior and translate excellence of character into patience (see TRUST AND PATIENCE), tolerance and forbearance (Q 3:159; 16:125; 20:44). Preachers cannot be effective unless they possess excellent moral character and conduct: they should exemplify what they preach since the Qurʾān states (Q 61:2-3): "why do you say that which you do not do? Grievously odious is it in the sight of God that you say that which you do not do."

Standards of morality and learning are important because not all preachers are scholars of Islam. In principle, preachers or imāms can be of any background and

many of them also have professional careers as engineers, economists or business men. Whatever their background, they practice *daʿwa,* calling others to Islam, and emphasize correct behavior and attitude. Scholars of Islam, the *ʿulamāʾ,* are expected to have a more advanced religious education. They are expected to have studied the Arabic language intensively and to use their deep knowledge of the Qurʾān, *fiqh* and *sharīʿa* to offer interpretation *(tafsīr)* and guide the believers, particularly through the *fatwā*s they issue. With their writings, scholars guide preachers who are not trained as *ʿulamāʾ* in the preparation of their messages. In the hierarchy of learning, *ʿulamāʾ* need deeper training in religion than *khaṭīb*s, and the demands of learning for those delivering non-ritual messages are less than those of the *khaṭīb*s. Perhaps this is the reason that in the 1990s the participation of women in non-ritual preaching began to grow rapidly in some Muslim countries.

Demanding strict moral and educational guidelines for preachers is also crucial, since in most countries they are woefully underpaid. This reality has forced preachers nowadays and in the past to find other means of income, for example, as merchants or schoolteachers. In Indonesia, it has long been held that the *kiai* in the *pesantren* should not benefit in material ways from preaching and teaching the Qurʾān. Hence many still offer their service for free, earning money by running a business, writing, and speaking engagements.

Frequent topics

Friday sermons often consist of a mix of Islamic teachings, exhortations and references to local and international events. The themes depend on the place and time a sermon is given. The Jordanian village-*shaykh* described by Antoun (*Muslim preacher,* 137) addressed mainly matters of belief, ethics, family (q.v.), society and the specific religious occasion, while his colleagues in Amman and Jerusalem referred regularly to colonialism, Jews and Zionism. Often the first part of the sermon contains the religio-spiritual message while the second part refers to political or other current issues, especially those concerning Palestine, Iraq and places where Muslims suffer oppression (q.v.; see also OPPRESSED ON EARTH, THE). In Indonesia and Malaysia, where non-Muslim minorities and pre-Islamic ideas still pervade society, preachers stress the centrality of the Qurʾān as a guide and tend to refer repeatedly to the need to behave correctly, to perform the ritual duties, and to the parents' (q.v.) role in raising children (q.v.). Occasionally they also discuss doctrinal points such as predestination (see FREEDOM AND PREDESTINATION) and the right to practice *ijtihād,* individual interpretation of the Qurʾān (inspired by the ongoing debate between modernists and traditionalists; see EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY). Of course, other subjects such as Islam in the modern world, daily concerns and political themes are prevalent as well. Imāms preaching the *khuṭba* in Western countries face a complicated social environment that poses questions about moral and ethical issues such as dating, homosexuality (q.v.), and the relationship between Muslims and non-Muslims. Most of these topics are of little relevance in Muslim-majority countries.

During Shīʿī ritual preaching, the names of the Imāms have to be mentioned and *qunūt* prayers are pronounced on behalf of them. A Shīʿī preacher needs to communicate in a precise, attractive way in order to gain followers. Their sermons stress signs and symbols peculiar to Shīʿism. They refer to ʿAlī (his wisdom, ingenuity, and fairness in contrast to the behavior of

the other three caliphs; see ʿALĪ B. ABĪ ṬĀLIB), the Prophet's daughter Fāṭima (q.v.), his granddaughter Zaynab and, of course, to the martyrdom of Ḥusayn b. ʿAlī (see SHĪʿA; FAMILY OF THE PROPHET; PEOPLE OF THE HOUSE). This last theme is especially popular during the month of Muḥarram when preachers also recount the sufferings of the Imāms, sometimes engaging in anti-Sunnī polemics.

For several decades, governments of Muslim countries have tried to influence the tone of sermons by sending around suggestions to preachers or, at times, complete texts. Not only do those suggestions aim to curb religious extremism, they are also a tool to familiarize the believers with government policies such as those on birth control (q.v.). Some groups of Muslim activists have started to emulate this governmental pattern. In an attempt to combat the increasingly aggressive attempts by Muslim conservatives to promote polygyny, an Indonesian women's group called YKF mined the Qurʾān, ḥadīth and *fiqh* sources for a counter discourse and sent texts for Friday sermons based on this research to every mosque in Java (see PATRIARCHY).

Star preachers

The influence of preachers who have risen to stardom is enormous. Sermons by Ibn al-Jawzī from the sixth/twelfth century were repeated for centuries. Nowadays, popular preachers (who preach ritual and non-ritual sermons) expand their audience through the media of newspaper columns, cassettes, CD's, DVD's, television and the Internet. Most of these preachers stand out because of the clarity and simplicity of their speech that directly connects with the audience, addressing issues of daily life (see EVERYDAY LIFE, THE QURʾĀN IN). During the 1990s several came on the scene who were especially popular with youth and women. Their messages are open to modern life and stress the individual responsibility to purify one's heart. The platforms of such preachers are no longer limited to mosques, and governments find it hard to control their activities.

It is impossible to mention all the star preachers operating in the Muslim world. Some, however, are noteworthy because they have strongly influenced other preachers and also public opinion. Others stand out for combining preaching with social action. The examples of three popular preachers from Egypt illustrate how the use of media and new types of education are influencing contemporary models of preaching and causing the centers of traditional religious authority to shift from the traditional, conservative al-Azhar graduates to a new type of lay preacher who does not follow classical paths of training. An important factor in the audio and visual media is that they convey the colloquial language and emotions of the preachers that cannot be transmitted via the written, edited sermons in which the colloquial is often replaced by classical Arabic.

The al-Azhar-trained blind shaykh, ʿAbd al-Ḥamīd Kishk (b. 1933), once called "the star of Islamic preaching," was immensely popular during the 1970s and 1980s. Early in his career he was barred from preaching in official state mosques in Egypt because he used his sermons to promote the ideology of the Muslim Brotherhood. Although boycotted by the Egyptian mass media during the Sadat era, his sermons were widely distributed via cassettes and pamphlets that served as what Gilles Kepel *(Prophet and pharaoh)* has called "antidotes to official discourse." Chanting his sermons, he stressed personal and private piety — a message attractive to Ṣūfīs as well. But his preaching also had strong political implications, for example when he attacked Jews and Christians (see CHRISTIANS AND

CHRISTIANITY; POLEMIC AND POLEMICAL LANGUAGE; APOLOGETICS).

Chronologically, Shaykh Muḥammad Mutawallī l-Shaʿrāwī's (1911-98) star rose as that of Shaykh Kishk waned. His sermons were televised on the Friday prime-time slot, immediately following the Friday prayers. Egyptians could see him in a mosque, surrounded by a male-only audience. Delivering a *khuṭba* or *dars,* he was cloaked in the mantle and ambiance of a traditional al-Azhar scholar. In his presentations he could switch from classical Arabic to pedestrian colloquial, explaining complex Islamic principles with simple language and examples drawn from everyday life. His speech and traditional views, interspersed with jokes, were especially attractive to the lower and middle classes. He attacked non-Muslims, exhorted actresses to halt their sinful work and, with one sermon in which he condoned the practice of female genital mutilation, he virtually destroyed years of activist work against it. After his death, his sermons and religious sessions were — and are still — televised, and can be found in the form of booklets and pamphlets on the streets of Cairo.

The star of the 1990s, ʿAmr Khālid is a lay preacher. Not trained at al-Azhar, the former accountant refrains from practicing *tafsīr* or issuing *fatwā*s. His informal preaching takes place on a talk show on television (*Kalām min al-qalb,* "Words from the heart"), and in mass gatherings that are not gender segregated. His speeches are available via MP3 recordings, DVD's, CD's, cassettes and booklets. He is a master of new media technologies and techniques, such as holding on-line dialogues with his audience. He is popular with youth and women from the elite classes, reminding them of the futility of life and the possibility of sudden death. Unlike Kishk and Shaʿrāwī he is not addressed as *shaykh* or *ustādh* ("university teacher") but is called a *dāʿiya*. Comparable to a born-again evangelical television preacher, he brings a moderate message that allows youth to moderate the injunctions of Islam with the demands of modern life. ʿAmr Khālid's influence is enormous and he has used his fame to launch a drive against smoking, for example. He embodies a new search and desire among young people to be good Muslims while remaining trendy. For challenging traditional notions of religious authority, the Egyptian government more or less exiled him in 2002.

These Egyptian preachers have counterparts all over the Muslim world. Before becoming a politician, the Indonesian H. Zainuddin M.Z. (b. 1951), nicknamed "*Da'i* of Thousands" *(Da'i Berjuta Umat)* rose to prominence during the 1980s. A graduate of IAIN and the Malaysian Universitas Kebangsaan, he delivered conservative, clear and straightforward messages laced with humor that at times were intolerant of religious pluralism. By the end of the 1990s, K.H. Abdullah Gymnastiar (b. 1962) came on the scene. Mixing his lessons with songs, this owner of fifteen media ventures preaches about "managing the heart." Using the style of evangelistic theatrics, he urges the faithful to improve themselves instead of blaming others. He brings crowds of both Muslims and Christians to tears and is one of the few Muslims ever to have preached in a church (in Palu, Sulawesi). It is said that he derived his knowledge from a three-day "direct inspiration" experience with a guru rather than through cumbersome years of learning.

A Canadian professor of economics, Jamal Badawi, was the *dāʿi* of the 1980s. His enormous conservative output, often about Muslim-Christian dialogue, consists of a 352-segment television series on Islam, and cassettes and lessons that are readily

available on the Internet. His counterpart in Europe is Tariq Ramadan, the Swiss-educated grandson of Ḥasan al-Bannā, the founder of the Muslim Brotherhood. Nowadays, the US convert to Islam, Shaykh Hamza Yusuf (b. 1959), is influencing Muslim youth in the West with Ṣūfī-inspired talk about "purification of the heart" and how to live as a Muslim in the United States. He lived many years in the Middle East where he studied at universities and with individual *shaykh*s. Young Muslim adults born in the US consider him an antidote to conservative clerics from the Middle East whose message about the West they perceive to be too harsh. In the United States there are several charismatic African American preachers who arouse audiences to clapping and shouting responses. The charismatic Imam Siraj Wahhaj is an African-American convert to Islam who studied in Mecca. He currently leads a mosque in New York City where he has gained fame with his anti-drugs program.

In Shīʿī circles, various *marājiʿ* living in Qom, Najaf, or Kerbala, guide the believers from their respective countries of residence. They are considered the highest juridical authorities who can interpret the Islamic message to meet the challenges of modernity. Through their religious deputies, *marājiʿ* such as the Iraqi ayatollah, ʿAlī Ḥusaynī l-Sistānī, try to formulate answers for questions and needs of Shīʿīs living in the West. In 1999, al-Sistānī published a *Code of practice* for Muslims in the West.

The Lebanese *marjaʿ* ayatollah, Muḥammad Ḥusayn Faḍl Allāh, runs a website in Arabic and English where believers can read his Friday sermons. He holds conference calls by phone with believers in the West and his accessibility, pragmatism and leniency have made him popular with Shīʿī youth. His teachings about gender equality have also gained him an audience among women. Finally, the messages of a convert to Shīʿism from Sunnite Islam, Tunisian-born Muḥammad al-Tijānī al-Samāwī, have attracted many in prison to Shīʿite Islam.

Women teachers and preachers

In early and medieval Islamic works there are references to women who became specialists in ḥadīth and the names of women figure in some chains of transmission. Yet during most of Islamic history women's role in the transmission of the Qurʾān and its sciences was peripheral at best. Women were not allowed access to *madrasa*s, and this led to the demise of female activity in the transmission of ḥadīth and other forms of Islamic learning. Later, and in isolated cases they attended the *kuttāb* but were denied access to the institutes of higher Islamic learning. This began to change in the 1970s as the general level of education for women has risen as a result of mandatory public education for boys and girls in many countries. Limited numbers of women (less than five percent) were allowed to attend, for example, the Umm al-Qurā institute in Mecca. In Indonesia they obtained degrees in *pesantren* and the IAIN and Islamic State Universities. In Iran, the seminaries in Qom were opened for women between the ages of sixteen to twenty. Nigerian schools with a *madrasa* curriculum started to admit women during the 1980s-1990s. This is slowly producing women *ʿulamāʾ*.

In Western countries, Islamic education has become popular among women who want a career as teachers in Muslim elementary schools. Although some south Asian Deobandi and Tablighi-oriented mosques are still closed to women, in Europe mosques organize Qurʾān courses for women and girls, and some associations allow women to become imāms for other women. The Turkish Ṣūfī-oriented Süley-

manlis, for example, encourage women to complete advanced religious studies in Turkey in order to serve as "madam imām" *(hoca hanım)*. During Ramaḍān, some of these women preachers conduct preaching tours in Western countries. In the past, many scholars allowed women to lead other women in the ritual prayers. Thus women are actually re-capturing their former leadership positions in worship.

Women's preaching and teaching activities take place outside the men's mosques, in prayer houses, homes, community centers or schools. For example, in central Asian countries (such as Kazakhstan, Uzbekistan and Tajikistan) the wives of imāms, called *Biblikhalifa*s, or *Bibiotun*s, organize religious educational circles for teenage girls. Several countries, such as China, Iran and Indonesia, have a history of women preachers who have had some basic knowledge of the Qurʾān, *tafsīr* and ḥadīth, and in some cases they have acquired the same level of knowledge as the male *ʿulamāʾ*.

Shīʿī women in Iran have long held religious meetings exclusively for women (forbidden to men). Since the Islamic revolution of 1979, the number of women with religious educations who could lead these meetings increased considerably. The meetings take place at home and are led by women preachers whose Islamic knowledge is gender specific. Apart from reciting the Qurʾān, the material discussed can be religious rituals, Islamic teachings, holy Shīʿī texts, *tafsīr,* special prayers, and readings on the occasion of Ramaḍān or feasts. Female preachers often have studied the Qurʾān with their fathers or other scholars. Nowadays they can study at religious schools or colleges. They need to have knowledge of Arabic, philosophy, logic, *fiqh,* and *tafsīr,* and to have studied for at least four years. The women preachers gain high social status among their followers because of their piety and dedication to religion. At times, some female *khaṭībāt* are invited to the United States to preach to women's groups, like during the major feasts.

In north, northwest and northeast China special mosques for women (*quinzhen nusi* or *nusi*) appeared as early as the nineteenth century. Adjacent to men's mosques, they are presided over by a female religious leader called *nu ahong* whose duties encompass teaching, ritual and worship guidance, sermons and counseling. The position of the *nu ahong* is controlled by the male leadership of the main mosque and is carefully mapped out within a system of strict gender segregation.

Women's agency is based on Chinese paradigms that were developed between the sixteenth and eighteenth centuries to promote women's virtuous and religious development. When adopted by Chinese Muslims, these values were translated into the call for Islamic education for women in order to construct an ideal of Muslim womanhood. Consecutive revival movements of Islamic reformism in the late nineteenth century and the 1980s stressed women's participation in religion. The level of training that female *ahong*s can obtain in the religious schools for women *(nuxue),* however, is far inferior to that of the male leaders. Chinese Islamic colleges do not admit women, and this has perpetuated the limited education of women leaders.

Indonesian women connected to the reformist Muhammadiyya organization started preaching activities as early as 1917. During the 1920s they built their own prayer houses supervised and funded by women. Since women have started to graduate from *pesantren,* IAIN and other Islamic universities, there are women preachers and teachers who have reached the same level of knowledge as male scholars of Islam. Women preach not only in segre-

gated gatherings, but also deliver sermons in mixed, non-ritual meetings. The cassettes of some women star preachers such as Tutty Alawiyah are sold widely. Female preachers appear on television regularly and many participate in talk shows and call-in shows.

All over the world, new classes of educated Muslim women have started to demand better religious education and more religious rights. This has resulted in a variety of initiatives, either mounted by women or orchestrated by the state. For example, the Turkish Diyanet, the government body that oversees the country's mosques, has appointed women preachers and women who act as deputies to muftis. The task of these deputies is to supervise the work done in mosques as that relates to women. Women in India recently announced that they want a mosque of their own, while women from the Progressive Muslims Union in the United States stated that the time has come for appointing women imāms. In 1994, the African American scholar of Islam, Amina Wadud-Muhsin, preached a Friday sermon at the South African Claremont Main Road Mosque. She delivered the text standing on the rostrum in front of the *minbar,* while afterwards the imām climbed the *minbar* and performed the required rituals for the liturgical sermon. The same pattern is now followed regularly in a mosque in Johannesburg. In March 2005, Wadud-Muhsin created a world-wide avalanche of comments and protests when in New York she led a group of women and men in Friday prayers. This immediately led to a *fatwā* by Yūsuf al-Qarḍāwī insisting that leadership in prayer is reserved to Muslim men only.

Women have more religious room to move in countries far from the Middle Eastern heartland of Sunnī Islam. Occasionally, we do hear of women, even in Saudi Arabia, holding Qurʾān circles in their houses but, on the whole, their preaching and teaching activities remain hidden from the public eye. Influenced by the Islamist trends within contemporary Egyptian society, women preachers there urge women to become more observant Muslims and to strengthen themselves in piety, patience and perseverance. These preachers obtain their religious knowledge from private institutes and Islamic voluntary associations that offer religious classes for women or from the al-Azhar College for Girls. They meet with women in buildings adjacent to mosques and at times earn bitter public criticism from those who find them inept and their sermons "futile."

Women preachers often address topics specific to women. Universal are basic teachings from the Qurʾān and guidance during the feasts and Ramaḍān. Furthermore, the correct execution of rituals connected to womanhood and children (see MENSTRUATION; BIRTH) as well as forms of ablutions, and issues of morality are important topics (see MODESTY). Depending on the local culture, sexual ethics and health care connected with the Islamic concepts of cleanliness and purity can be important as well.

Islamic organizations

During the twentieth century several organizations — mostly reformist — emerged that aimed at reviving and strengthening Islam via *daʿwa* and its manifold related activities. Through their courses, instructions, and handbooks, these organizations became influential gateways in recruiting and training missionary preachers. Nowadays their use of multimedia facilitates the dissemination of their material. Most organizations have their own web pages that provide support for preachers as well as model sermons, and on-line courses. Several organizations have

set up their own schooling system from elementary to university level, thus providing informal and formal Islamic education. Some of these organizations have remained local while others have transformed themselves into global networks.

In 1912, inspired by the reformist teachings of Muḥammad ʿAbduh and Rashīd Riḍā, the Indonesian *kiai* Ahmad Dahlan (1868-1923) initiated the Muhammadiyya movement that currently counts around twenty million followers. Through its Department for Tabligh it trains thousands of male and female missionary preachers who are active all over the Archipelago. In 1927, Mawlānā Muḥammad Ilyās (1885-1944) started a movement that grew into the Tablīghī Jamāʿat that now counts several millions of followers. Reacting to increasingly aggressive Hindu efforts to convert Muslims, it aimed at reinvigorating Islamic beliefs and practices among the Muslims of the Indo-Pakistani subcontinent. Abū l-Aʿlā Mawdūdī (d. 1979), the founder of Jamāʿat-i Islāmī, elaborated on the method of *tablīgh,* stressing that it did not require coercion. By the 1960s, deliberate attempts were made to create comprehensive international networks such as the Higher Council of Islamic Affairs *(al-Majlis al-Aʿlā lil-Shuʾūn al-Islāmiyya)* that was founded in Cairo, in 1960. In 1961, an Islamic university opened in Medina to train missionaries who could work in minority communities, and in 1962, the transnational Muslim World League *(Rābiṭat al-ʿĀlam al-Islāmī)* was founded in Mecca. Its constitution states the wish to "spread the Muslims' word," and its training center produces *daʿwa* workers who operate all over the world.

The Muslim Brotherhood *(Jamʿiyyat al-Ikhwān al-Muslimīn)* set up in 1928 by the Egyptian Ḥasan al-Bannā (1906-49), together with the Jamāʿat-i Islāmī, became among the most influential forces guiding Muslims in Western countries. Both entered North America through the Muslim Student Association (MSA), which was founded in 1963. Naturally their ideas about *daʿwa* were heavily influenced by the philosophies of Ḥasan al-Bannā and Abū l-Aʿlā Mawdūdī. In 1981, the MSA merged into the large umbrella organization of ISNA (the Islamic Society of North America). Through national and regional conferences, publications and a website, ISNA has become instrumental in guiding Muslims in North America. Websites also serve as important transnational tools of guidance and education. The Islam-Online site, for example, has special sections in English and Arabic to serve preachers.

Tears see WEEPING

Technology see MEDIA AND THE QUR'ĀN; COMPUTERS AND THE QUR'ĀN

Teeth

Hard bony appendages found in the mouths of vertebrates that assist in the chewing of food, as well as in defense and the capturing of prey. The word for tooth *(sinn)* occurs once in the Qur'ān, in a verse that refers to the biblical *lex talionis* (law of retaliation [q.v.]): "We prescribed for them [the Jews; see JEWS AND JUDAISM] therein [in the Torah (q.v.)]: life (q.v.) for life, eye for eye (see EYES), nose for nose, ear for ear (q.v.), tooth for tooth, and for injuries like retaliation. If someone forgoes (retaliation) out of charity, it shall be an expiation for him. Whoever judges not by that which God has revealed: such are wrong-doers" (Q 5:45; see JUDGMENT; REVELATION AND INSPIRATION; EVIL DEEDS; VIRTUES AND VICES, COMMANDING AND FORBIDDING). This statement occurs in the course of a passage discussing Jews and Christians (see CHRISTIANS AND CHRISTIANITY) who resort to the prophet Muḥammad for the adjudication of legal disputes (Q 5:42-50).

The basic principle established in the Qur'ān is that legal disputes within each religious community should be settled by reference to that community's sacred text. Disputes among Jews should be settled by reference to the Torah, disputes among Christians should be settled by reference to the Gospel (q.v.) and disputes among Muslims should be settled by reference to the Qur'ān, no matter who is acting as judge. This passage makes it clear that each community *(umma)* has its own law (Q 5:48) and that this law is contained in the scripture (see LAW AND THE QUR'ĀN). The important role played by the sacred text in judgment is recognized in several ways. The Prophet or others are said to judge between disputants by that which God has revealed (Q 5:44, 45, 47). In other passages, the sacred text is personified and itself gives a verdict or judges between disputants: "Have you not seen how those who have been given a portion of the scripture invoke the scripture of God (in their disputes) that it may judge between them, then a faction of them turns away, opposed (to it)?" (Q 3:23; see PARTIES AND FACTIONS).

In addition, mention of the *lex talionis* shows an awareness in the Qur'ān of specific biblical legal rulings (see SCRIPTURE AND THE QUR'ĀN): "Anyone who maims another shall suffer the same injury in return: fracture for fracture, eye for eye, tooth for tooth; the injury inflicted is the injury to be suffered" (*Lev* 24:20; see also *Exod* 21:24; *Deut* 19:21). The principle of like retaliation *(qiṣāṣ)* was adopted in Islamic law as well, but was supplemented by an alternative regime of monetary compensation. For the life of a free, adult male (see MURDER; BLOODSHED), compensation was set at one hundred camels and for the loss of limbs and other injuries, as well as for the death or injury of women (see WOMEN AND THE QUR'ĀN), children (q.v.), and slaves (see SLAVES AND SLAVERY), various fractions of that amount were awarded

(see VENGEANCE; REVENGE; BLOOD MONEY).

Temporary Marriage

Financial contract between a man and an unmarried woman permitting sexual relations for a fixed amount of time upon compensation of the woman. Although the Arabic term for this concept *(mutʿa)* does not occur in the Qurʾān, the tenth verbal form of the root *m-t-ʿ* is employed at Q 4:24, likely with reference to this practice as a pre-Islamic Arabian tradition (despite the explanations of many exegetes; cf. e.g. the traditions preserved in Ṭabarī, *Tafsīr,* ad loc., which identify *al-istimtāʿ* with *"nikāḥ"* or *"tazwīj";* cf. also Heffening, Mutʿa). This practice developed into a complex Shīʿī religious institution about which there has been much cultural and moral ambivalence, yet in Iran, since the revolution of 1979, it has become more commonplace (Haeri, *Law of desire*).

Literally "marriage of pleasure," *mutʿa* is a form of a pre-Islamic tradition in Arabia (Robertson-Smith, *Kinship and marriage;* see PRE-ISLAMIC ARABIA AND THE QURʾĀN) that still retains legitimacy among the Twelver Shīʿīs who live predominantly, though not exclusively, in Iran (see SHĪʿISM AND THE QURʾĀN). Legally, *mutʿa*-marriage is a contract *(ʿaqd)* in which a man and an unmarried woman decide how long they want to be married to each other and how much money, or bride-price, is to be given to the temporary wife (see CONTRACTS AND ALLIANCES; MARRIAGE AND DIVORCE; BRIDEWEALTH). Unlike in the case of permanent marriage *(nikāḥ)* a temporary wife is not legally entitled to financial support *(nafaqa)* above and beyond the bride-price, even in the event of pregnancy, unless it is agreed upon beforehand (see MAINTENANCE AND UPKEEP). Doctrinally, the Shīʿī jurists distinguish temporary marriage from permanent marriage by stating that the objective of *mutʿa* is sexual enjoyment, while that of *nikāḥ* is procreation (Ṭūsī, *Nihāya,* 497-502; Ḥillī, *Sharāʾiʿ,* 524; Kāshif al-Ghiṭāʾ, *Āyīn-i ma;* Ṭabāṭabāʾī, *Shiʿite Islam;* Muṭahharī, *Niẓām-i ḥuqūq-i zan,* 38; Khomeini, *Tawḍīḥ al-masāʾil;* id., Mutʿa; Levy, *Introduction;* Murata, *Temporary marriage;* Haeri, *Law of desire*).

According to Shīʿī literature, the second caliph ʿUmar (r. 13-23/634-44; see CALIPH) outlawed the custom of *mutʿa* marriage in the first/seventh century and threatened its practitioners with stoning (q.v.). The Shīʿīs have systematically contested the caliph's decision. They argue, on the basis of the qurʾānic reference to *mutʿa* (*mā stamtaʿtum bihi minhunna,* Q 4:24) and the lack of any unambiguous prophetic ḥadīth banning its practice (see ḤADĪTH AND THE QURʾĀN), that ʿUmar's *fatwā* lacks legitimacy (al-Amīnī, *al-Ghadīr;* Ṭabāṭabāʾī, *Shiʿite Islam;* Shafāʾī, *Mutʿa;* ʿĀmilī, *Mutʿa;* Haeri, *Law of desire,* 61-4; see LAW AND THE QURʾĀN).

Indeed the Shīʿīs point to the fact that temporary marriage was common at the time of the prophet Muḥammad and that many of the early converts were children of *mutʿa* marriages: ʿAdī, son of Ḥātim and Māwiyya, is an example (al-Amīnī, *al-Ghadīr,* vi, 129, 198-240; Robertson-Smith, *Kinship and marriage,* 81; cf. Ṭabāṭabāʾī, *Shiʿite Islam,* 227).

The Sunnīs and Shīʿīs have not ceased to dispute the religious legitimacy and moral propriety of temporary marriage. Although strongly opposed by the Sunnī *ʿulamāʾ* (see SCHOLAR), the custom of temporary marriage has apparently continued among some Sunnīs into modern times (Snouck Hurgronje, *Mekka,* 12-13).

Rules and procedures regarding *mutʿa* developed piecemeal and by analogical reasoning. Its present form is the result of dialogues and debates among Shīʿī scholars, the most prominent of whom was the sixth imām (q.v.), Jaʿfar al-Ṣādiq (d. 148/765; Ṭūsī, *Nihāya,* 497-502; Ḥillī, *Sharāʾiʿ,* 515-28; Ghazanfarī, *Khudāmūz-i lumʿa,* ii, 126-34; Kāshif al-Ghiṭāʾ, *Āyīn-i ma,* 372-92; Khomeini, *Tawḍīḥ al-masāʾil;* Muṭahharī, *Niẓām-i ḥuqūq-i zan,* 21-54; Imāmī, *Ḥuqūq-i madanī;* Levy, *Introduction,* i, 131-90; Fayzee, *Outlines,* 117-21; Murata, *Temporary marriage;* Haeri, *Law of desire*).

Arabic in origin, the term *mutʿa* has multiple meanings: "that which gives benefits, for a short while," "enjoyment, pleasure" (i.e. to saturate), "to have the usufruct of something" (Dihkhudā, Ṣīgha, 318). Although the specified purpose of temporary marriage is sexual pleasure (specifically male pleasure), the religious language that describes it places — or misplaces — the emphasis on its marital aspect, thereby creating the impression that *mutʿa* is simply a form of marriage but with a built-in time limit. Outside of religious circles, everyday language in Iran has remained more faithful to the literal meaning of *mutʿa,* which has colloquially been substituted with the vernacular Persian term *ṣīgha*. Used in both nominal and verbal forms, properly speaking *ṣīgha* means "form" or "type" of a contract. It is a pejorative term that has been applied to a woman who is temporarily married but not to the man who engaged her services.

Primarily an urban phenomenon, temporary marriage is culturally stigmatized and is popularly perceived to be similar to "legalized prostitution." Ironically, it is also believed to be more prevalent around the pilgrimage centers in Iran than elsewhere in the country (cf. e.g. Haeri, *Law of desire,* 9-10). Temporary marriage is a form of contract that may be performed privately and in any language as long as the partners agree on the exact period the marriage shall last and the amount of bride-price to be given to the temporary wife *(ṣīgha)*. A temporary marriage need not be witnessed or registered (Ṭūsī, *Nihāya,* 498). Presently, however, the Islamic state in Iran requires its registration, ostensibly to ascertain the legality of a woman's claim in case she may become pregnant.

At the end of the specified period, the temporary marriage automatically comes to an end without any divorce ceremony. Regardless of its length, women must keep a period of sexual abstinence, *ʿidda,* after it ends (see WAITING PERIOD). Also a feature of permanent marriage and divorce, the *ʿidda* of temporary marriage is shorter by one month. It is two menstrual cycles for women who menstruate regularly, and forty-five days for women who are at an age where they normally ought to menstruate but for some reason they do not. *ʿIdda* is not required of menopausal women. Temporary spouses do not legally inherit from each other, though theoretically they may negotiate such a condition in their contract. In addition to the four wives religiously allowed all Muslim men, a Shīʿī

man may simultaneously contract as many temporary marriages as he wishes and renew any of them for as many times as the partners desire it, provided that certain conditions are met. A Shīʿī woman is permitted only one marriage at a time, be it temporary or permanent.

Temporary marriage is an institution in which the relationship between the sexes (see SEX AND SEXUALITY), marriage, sexuality, morality, religious rules, secular laws and cultural practices converge. At the same time it is a kind of custom that puts religion and popular culture at odds. Despite its legality and religious sanctity, temporary marriage has never enjoyed widespread support culturally, particularly among the more "secular" middle and upper middle classes in Iran, Iraq and Lebanon, where a substantial number of Shīʿīs live.

Tents and Tent Pegs

Portable shelters for nomadic peoples and the means to affix them in the ground. Arabic lexicographical works and dictionaries provide us with a considerable variety of terms designating a tent (see TOOLS FOR THE STUDY OF THE QURʾĀN). Most of this vocabulary goes back to Arab philologists of the eighth/ninth centuries C.E. like al-Aṣmaʿī (d. 213/828), Abū ʿUbayda (d. 209/824-5) and Abū Zayd al-Anṣārī (d. 215/830) to whom later lexicographers owe most of their knowledge about pre-Islamic Arabs, their culture and language (see ARABS; PRE-ISLAMIC ARABIA AND THE QURʾĀN; ARABIC LANGUAGE; ARABIC SCRIPT). Only four of the terms designating a tent occur in the Qurʾān: *bayt, khayma, zulla,* and *surādiq*.

The Bedouin (q.v.) calls his tent a *bayt*. That is the common Semitic root for

"dwelling," regardless if what is meant is the tent of the Bedouins or a house built of brick or stone for sedentary people (see NOMADS; CITY). The more precise term for a tent is *bayt shaʿr,* "hair tent," which indicates the material used for making it (see HIDES AND FLEECE). The preferred fiber for the Bedouin tent is goat hair the color of which gives the tent its characteristic "blackness," even though "black tents" are often not black at all but are dyed in other colors (Iṣfahānī, *Aghānī,* viii, 65 mentions red tents: *ahlu l-qibābi l-ḥumr*). Many tents are made of pure goat hair because it is stronger and warmer in winter than other sorts of wool. Furthermore, rain water slides off the surface of goats' hair so that the tent inside remains dry. Often sheep or camel wool or a plant fiber are added; a certain percentage of goat hair, however, is always needed because sheep wool stretches too much and camel wool is too short and weak (see CAMELS; ANIMAL LIFE).

The origin of the black tent is connected with the domestication of goats and sheep, the animals which provided the material for the tent cloth. The earliest mention of goat hair as tent material can be found in the Bible (*Exod* 26:7): "You shall also make the curtains of goats' hair for a tent over the tabernacle…." There are two basic types of black tent — the eastern or Persian type and the western or Arab type (according to Feilberg, *La tente noire*). The Persian black tent seems to be closer to the black tents of biblical times which are of the simple construction described in Exodus. The Arab black tent is used by the Bedouin tribes of Arabia, Iraq (q.v.) and Syria (q.v.) and the tribes to the west of them (Rackow, Beduinenzelt; see TRIBES AND CLANS). The shape of the Arab tent is an extended cube. The length of a tent can vary from 4-5 meters to about 40 or 50 meters. The more rooms the tent has, the more wooden center poles are erected. Secondary poles are used for supporting the side and the open front of the tent. The most important component of a tent is the cloth panels: For a two-room tent about eight panels are needed, each ten or twelve meters long and 60 or 70 centimeters wide, which are stitched together. In addition to the tent cloth of the Persian type, the Arab type has tension bands sewn across the cloth breadths. These tension bands serve as reinforcement of the tent cloth.

Pre-Islamic Arabic poetry gives only scanty information on the construction of tents and materials used for them (see the examples in Jacob, *Leben,* 41-3; see POETRY AND POETS). The Qurʾān itself does not describe the characteristics of the tent any further. The term *bayt* occurs only once in the sense of "tent," in Q 16:80, whereas in all other cases *bayt* denotes a holy place or "God's house" (see HOUSE, DOMESTIC AND DIVINE). The same verse mentions leather (skins) as the material used for making the tent: "God has appointed for you from your tents *(buyūt)* a rest, and from the skins of the cattle *(julūd al-anʿām)* he has appointed for you houses *(buyūt)* which were light for you on the day you strike them and the day you set them up…." The term *khayma,* interpreted by early Arabic lexicographers as some sort of tent-like shelter, occurs in Q 55:72 in the plural *(al-khiyām)* as tent for the houris (q.v.): "cloistered in (cool) pavilions." This term is found again in the same meaning in classical poetry (see also *Lisān al-ʿArab,* xii, 193; about a possible origin of the word from Ge'ez see Leslau, *Dictionary,* 269; see FOREIGN VOCABULARY). Al-Aṣmaʿī holds that a *khayma* is built only of branches of trees, and that otherwise it is called *bayt* (similarly in Muṭarrizī, *Mughrib,* 94); other lexicographers hold that it is made with pieces of cloth and tent ropes. The term *zulla* occurs in Q 7:171 and could denote some sort of unstable shelter:

"And when we shook the mountain above them as if it were a *zulla*" (cf. other translations of the term as "covering" or "shadow"). The commentators (e.g. Bayḍāwī, *Anwār,* ad loc.) conceive this passage to mean that God lifted the mountain like a roof. Arabic lexicographers interpret the term as a "thing that covers, or protects one, overhead" (Lane, 1916). According to A.S. Yahuda (Contribution, 285), the Jews in Arabia used *zulal* (pl. of *zulla*) for the "booths" (Heb. *sikkot*) that they erected for the Feast of Tabernacles (see JEWS AND JUDAISM). The *Lisān al-ʿArab* (xi, 416-17) says that *zulla* is of Aramaic ("Nabatean") origin. Yahuda therefore proposes as translation "booths of foliage made for shelter." In European translations of the Qurʾān the word is similarly translated as "canopy" (Arberry; Bell, *Qurʾān*) or "Hütte" (Paret, *Koran*), whereas Blachère has "dais." According to Arabic dictionaries, *surādiq* denotes a pavilion or a cloth tent of quite large dimensions. *Surādiq* is a Persian loanword *(sarāparda)* signifying a curtain, especially at the door of a pavilion (Jeffery, *For. vocab.,* 167; Asbaghi, *Persische Lehnwörter,* 157; see also Jawālīqī, *Muʿarrab,* 90). Arabic lexicographers interpret this word, besides the above-mentioned meaning, as an awning extended over the interior court of a house or as a tent-enclosure without a roof (e.g. Muṭarrizī, *Mughrib,* 130). The wording in Q 18:29, "We have prepared for the evildoers a fire (q.v.), whose *surādiq* encompasses them" (Arberry: "pavilion"; Bell, *Qurʾān:* "awnings"; Blachère: "flammes"; Paret, *Koran:* "Zeltdecke"), evokes the image of a wall of flames surrounding the sinners, indicating that the term should be understood rather in the sense of an enclosure or a surround (see also *Lisān al-ʿArab,* x, 157-8; see HELL AND HELLFIRE; REWARD AND PUNISHMENT; SIN, MAJOR AND MINOR; GOOD AND EVIL).

Of the components of a tent only tent-pegs (*awtād,* pl. of *watad*) are mentioned in the Qurʾān. The term occurs twice, in Q 38:12 and Q 89:10, in connection with Pharaoh (q.v.) where he is described as *dhū l-awtād,* "possessor of the pegs" (Bell, *Qurʾān:* "possessor of the stakes"; Blachère: "Maître des Épieux"; Paret, *Koran:* "der mit den Pfählen"). No satisfactory explanation of this epithet has been found; most of the commentators interpret the passage as a metaphor (q.v.) for power or grandeur (see POWER AND IMPOTENCE; SYMBOLIC IMAGERY). J. Horovitz (*KU,* 130) suggests that it refers to his buildings, and H. Speyer (*Erzählungen,* 238) sees in it an allusion to the tower of Babel. It is often supposed to refer to some form of torture (impale) practiced by Pharaoh, which seems to be the most acceptable explanation (see Bell, *Qurʾān,* ii, 451; also Kratchkovsky, *Koran,* 632). A third passage, Q 78:6, "Have we not made… the mountains as pegs?," reminds one of the biblical idea of the sky as tent (*Ps* 104:2; *Is* 40:12) stretched out (*Is* 40:22) and fitted out with pillars (2 *Sam* 22:8; see HEAVEN AND SKY). The concept of a pavilion as an image of the sky is widespread in Christian literature (see for Syriac and Coptic examples Lumpe and Bietenhard, Himmel, 207; see CHRISTIANS AND CHRISTIANITY) and plays also a role in the Persian symbolism of power. Plutarch (*Vit. Alex.,* 37:3) describes the golden pavilion of Alexander the Great (see DHŪ L-QARNAYN) representing the sky (other examples in L'Orange, *Studies,* 74f.). The Qurʾān seems to refer here obviously to common cosmological conceptions in the Near East (see COSMOLOGY).

Textual Criticism of the Qurʾān

Introduction

Anyone who writes on textual criticism should begin with definitions. So let it be said from the outset that textual criticism has nothing to do with the criticism of music, art or literature. In simplest terms, textual criticism is the correction of errors in texts. Classical scholars are, however, a bit more sophisticated. A. E. Housman (Application, 67) defines textual criticism as the "science of discovering error in texts and the art of removing it." But he goes on to say that it is not an exact science, so perhaps we might be justified in calling textual criticism "the art of discovering error in texts and the art of removing it." Regardless of how we define it, it is unfortunately true that qurʾānic studies have not profited much from it. Most Muslim scholars have been unwilling to "discover and remove error" in the qurʾānic text, and most non-Muslim scholars have followed suit, preferring to devote themselves to aspects of qurʾānic studies that do not impinge directly on the text. There have been, however, a few exceptions to this rule, some of which we shall mention later on. Classicists divide the process of textual criticism into three phases: recension, examination and emendation. Recension is the establishment of a preliminary text; one examines it to determine whether it is the best possible text and, where it is not, one tries to emend. If the work is well done, the result should be a revised version that is closer to the author's original. Since the standard Egyptian edition of the Qurʾān is quite good, there is no need to produce a recension of the qurʾānic text, which would be impossible in any case, since there is not sufficient manuscript material to prepare a fully documented recension (see MANUSCRIPTS OF THE QURʾĀN). It is, however, important to get an idea of just what this extant recension consists of, since it differs considerably from what we would expect in an ordinary literary text.

The Qurʾān began as a work of oral composition which took twenty-odd years

to complete (see ORALITY; ORALITY AND WRITING IN ARABIA; RECITATION OF THE QUR'ĀN). Parts, if not all, of it were copied at the Prophet's dictation, but because the Arabic alphabet has no vowels, only the consonantal outline *(rasm)* of the words could be written (see ARABIC SCRIPT). Moreover, the diacritics that distinguish some consonants from others, though they existed at the time, were not used, probably because the copyists had to write quickly to keep up with the dictation. These features of the orthography (q.v.) can make the reading of individual words uncertain — although this difficulty is often exaggerated. The great majority of words in the Qur'ān can be read in only one way, determined by sense and syntax (see GRAMMAR AND THE QUR'ĀN). Oral transmission was the norm, however, and there is no evidence that anyone in the early years ever read the Qur'ān from a written text in public (see RECITERS OF THE QUR'ĀN). The oral tradition dominated until an official written version, known as the ʿUthmānic recension, was produced (see CODICES OF THE QUR'ĀN; COLLECTION OF THE QUR'ĀN). But even thereafter, the oral tradition remained of primary importance. Readers reciting in public, whether they were dependent on the ʿUthmānic recension or not, could not simply omit ambivalent words (see AMBIGUOUS), nor could they recite one or two variants of a single *rasm*. They had to make choices.

Qur'ānic recitation soon became professionalized and many reciters made collections of variants for their own use. The results were rather chaotic but gradually some order was introduced as the ʿUthmānic recension was accepted by more and more readers. Ultimately compatibility with the ʿUthmānic recension became a *sine-qua-non* for any acceptable reading (see MUṢḤAF; ʿUTHMĀN; POLITICS AND THE QUR'ĀN). The sacrality of the ʿUthmānic recension for Muslims is demonstrated by the fact that it has been faithfully transmitted, including its errors, for over 1300 years (see EVERYDAY LIFE, THE QUR'ĀN IN; TEACHING AND PREACHING THE QUR'ĀN). One cannot really doubt that it was the ʿUthmānic recension that preserved the Qur'ān from complete disintegration. Competing recensions, ascribed to Ibn Masʿūd (d. 32/652-3), Ubayy b. Kaʿb (d. bet. 19/640 and 35/656), ʿAlī (d. 40/660; see ʿALĪ B. ABĪ ṬĀLIB) and others, were eclipsed by the ʿUthmānic recension and were ultimately declared non-canonical. Likewise the variant readings that could be applied to the ʿUthmānic recension were much reduced, and in the early fourth/tenth century, a scholar named Ibn Mujāhid declared that only seven systems of readings were canonical; the others were *shādhdh*, "deviant," and could not be used for ritual recitations (see READINGS OF THE QUR'ĀN). Not everyone agreed with his decision but in the course of time even more of them fell out of use, so that today only two are in common use. Another progressive feature was the development of vowel signs and the regular use of diacritics (see ORNAMENTATION AND ILLUMINATION). These have been incorporated into the bare text so that a copy of the Qur'ān purchased today combines the ʿUthmānic recension with one particular reading. To be precise, the recension used today is the ʿUthmānic recension, to which has been affixed the reading of ʿĀṣim b. Abī l-Najūd, a Kūfan scholar (d. 127 or 128/744-6), as transmitted by his student Ḥafṣ b. Sulaymān (d. ca. 190/805-6). The printed edition most frequently used, referred to as the Egyptian Qur'ān, or the Royal Egyptian Qur'ān, since it was produced under the sponsorship of

King Fuʾād of Egypt in 1342/1923-4, is much superior to all previous editions (see PRINTINGS OF THE QURʾĀN).

The next step is to examine the text with the purpose of isolating possible errors. The most important clue that an error may have occurred is the lack of good sense in the word or passage and the resulting variety of opinion among scholars as to what it means (see TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY; EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). Another clue is when the word is transmitted in more than one form. Different views about the meaning and/or form of a particular word make it likely that the word is wrong. Still another clue is when the word in question is said by the commentators to be dialectal or foreign (see DIALECTS; FOREIGN VOCABULARY). Such claims may indicate that the word was unfamiliar to the scribes and reciters and so probably could be a mistake. In proposing emendations of my own, and in judging the emendations of others, I have followed rules laid down by the classicists. In order to be acceptable, an emendation must make better sense than the received text; it must be in harmony with the style of the Qurʾān (see LANGUAGE AND STYLE OF THE QURʾĀN; FORM AND STRUCTURE OF THE QURʾĀN; RHETORIC AND THE QURʾĀN); it should be paleographically justifiable; and, finally, it should show how the corruption occurred in the first place. The most important of these is the semantic criterion.

The earliest generation of reciters and transmitters of the ʿUthmānic recension soon realized that it contained mistakes, some of which they claimed were copyists' errors. The problems of recitation presented by these mistakes were solved in three ways: Some simply corrected the text (i.e. emended it), others retained the text as it was and corrected only their recitation; still others — and this was the most common solution — recited the text as it was written. G. Bergsträsser (in Nöldeke, *GQ*, iii, 2f.) notes several of these early-identified mistakes. For example, in Q 20:63 we find the consonantal structure *(rasm) ʾn hdhn lshrn* read by Ḥafṣ as *in hādhāni la-sāḥirāni*. This is wrong since *in* in the construction *in… la-…* introduces verbs only, most of which begin with *kāf,* especially *kāna* and *kāda* (see Rabin, *Ancient West-Arabian,* 169f.). I prefer to read *inna hādhayni la-sāḥirāni,* accepting the emendation of Abū ʿAmr b. al-ʿAlāʾ (d. 154/771), a Baṣran scholar, and one of those approved by Ibn Mujāhid (Dānī, *Taysīr,* 151). The *yāʾ* was lost not because the scribe was ignorant of grammar but because of bad handwriting. *Yāʾ* before a final *nūn* and after a space is often minuscule and can easily be missed. More important, however, the same story — Moses (q.v.) before Pharaoh (q.v.) — is told twice again in the Qurʾān with the same construction but in the singular: *inna hādhā la-sāḥirun ʿalīmun* (Q 7:109; 26:34) and once more with reference to Muḥammad: *inna hādhā la-sāḥirun mubīnun* (Q 10:2; see NARRATIVES). Although *hādhā* does not change for the accusative, *inna* indicates that an accusative was understood, so there is no good reason to read Q 20:63 differently (see also Gilliot, *Elt,* 196-7 on Q 20:63). In the second chapter of his study (Zur Sprache des Korans), Th. Nöldeke deals with stylistic and syntactic peculiarities in the text. He points out a number of peculiarities in qurʾānic style but does not go so far as to note errors or propose emendations. A possible exception (p. 27) is the passage in Q 12:17 where Joseph's (q.v.) brothers (see BROTHER AND BROTHERHOOD) tell their father that he has been eaten by a wolf and then add: *wa-mā anta bi-muʾminin lanā wa-law kunnā ṣādiqīn,* "but you would not believe us even if we

were telling the truth." Nöldeke calls this "zu ungeschickt," since they are in effect admitting that they are lying. What they really mean is "You do not believe us even though we are telling the truth." Despite this, Nöldeke tries to save the text by suggesting that Muḥammad might be putting his own condemnation of the speakers in their own mouths. One should note, however, that Reckendorf (*Arabische Syntax,* 494) gives several examples of *law* where, he says, it is not used to convey what is counter factual but only more strongly than *in,* gives "the mere mental object" (die blosse Gedachtheit) of the case, or sometimes, of the point in time, and so is related in sense and use to *idhā*. The statement by Nöldeke just quoted reveals very clearly the attitude of nineteenth-century scholars towards the qurʾānic text. If Muḥammad's audience was unaware of the flaws of expression, then he, too, must have been unaware of them. Consequently, no one admitted that they existed until they were discovered by later scholars and were rescued from this strange limbo of unawareness. Nöldeke was wise not to emend them, and one important lesson we can draw from his study is never to assume that flaws of expression are always errors.

Another method of emendation is employed by J. Barth (Studien zur Kritik und Exegese des Qorans), who tries to test the inner connections ("Zusammenhänge") of the sūras (q.v.) and their possible disjunctions, and to point out insertions in the original contexts as well as to make other critical and text-critical contributions. Most of Barth's proposals are based on the assumption that the text has been disarranged and that many verses, phrases and words are out of place and should be returned to their original locations. He thus inaugurates the method that was applied on a larger scale by R. Blachère, and was carried to an extreme by R. Bell (see POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QURʾĀN). Few later scholars refer to Barth though Blachère cites him occasionally in the notes to his translation (see TRANSLATIONS OF THE QURʾĀN). An example of Barth's method can be seen in his treatment of Q 97:4-5: *tanazzala l-malāʾikatu wa-l-rūḥu fīhā* (i.e. *fī laylati l-qadri*) *bi-idhni rabbihim min kulli amrin; salāmun hiya ḥattā maṭlaʿi l-fajri*. He claims that *min kulli amr* cannot be construed since it cannot mean *bi-kulli amr,* nor "wegen jeder Sache," since this would be indicated by *min*. He proposes to read the last portion: *bi-idhni rabbihim ḥattā maṭlaʿi l-fajr; salāmun hiya min kulli amr,* "Sie ist ungefochten von jeder (bösen) Sache" (Barth, Studien, 19). In my view, if emendation is necessary, which is doubtful, it would be much simpler to emend *min* to *fī,* thus correcting a mistake that is frequently found in later manuscripts. Barth can, however, be given credit for one emendation which is undoubtedly correct. In Q 37:78, 108, 119, and 129 he reads, instead of *taraknā ʿalayhi fī l-ākhirīna,* which makes no sense, *bāraknā ʿalayhi fī l-ākhirīn,* "we blessed him among later generations." (Note that Q 37:113 correctly reads *bāraknā*.) Luxenberg (*Syro-Aramäische Lesart,* 138) also prefers *bāraknā* but does not note that Barth was the first to make this emendation.

Scholars, like Barth and Blachère, who try to restore the original by moving bits and pieces of text from one place to another have great difficulty in fulfilling the fourth requirement for an acceptable emendation, namely showing how the corruption came about. If they claim that these textual rearrangements are the Prophet's revisions and alterations (see REVISION AND ALTERATION; CORRUPTION; FORGERY), they must admit that in the end he did not really care whether the text made sense or not. If they ascribe them to the mistake of reciters, copyists, or editors,

they argue for a level of corruption that cannot be admitted since the assumed dislocations run into the hundreds. Such a high level of corruption could have occurred with a written text only if someone had taken the original, i.e. correct, text and worked through it systematically, shifting passages to wrong locations, thus leaving it for later scholars to put right, something that no one would suggest. The simultaneous presence of oral and written transmissions of the qurʾānic text complicates this further and the most elaborate effort to explain textual misplacement — that of Richard Bell — remains unconvincing to me.

Almost from the beginning of Islamic studies in Europe, controversy arose between two groups of scholars, one of which believes that Judaism, the other that eastern (Syrian) Christianity, exercised the greater influence on Muḥammad, the Qurʾān and the subsequent development of Islam (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY; RELIGIOUS PLURALISM AND THE QURʾĀN). The supporters of Christianity have until now made little use of textual criticism in their arguments, although it has always been admitted that the Arabic of the Qurʾān contains a large number of borrowings from Syriac. Recently, however, a book has appeared under the name of Christoph Luxenberg, in which the author, who prefers to write under a pseudonym, deals critically with what he deems to be traces of Syriac in the qurʾānic text, which include single words, phrases and syntactic constructions. This work should be carefully reviewed by someone familiar with the methods of textual criticism and equally at home in both Arabic and Syriac. Here, in some of the examples that follow, I shall have to limit myself to citing a few instances of Luxenberg's emendations in order to contrast them with my own, so that the reader can get some idea of the type of textual criticism he is practicing.

Selected emendations

In the proposed emendations that follow, because of limitations of space, I have omitted most of the discussions that accompanied the original publications, which consisted by and large of proposals by Western scholars and the comments of Muslim commentators (see TOOLS FOR THE STUDY OF THE QURʾĀN; CONTEMPORARY CRITICAL PRACTICES AND THE QURʾĀN). This material is instructive for the history of *tafsīr* and displays the difficulties that scholars have had in coming to grips with the text, but in my judgment it is misguided and does not contribute much to the correction of the text. I shall, however, mention those comments of the commentators which are helpful in emending the text. For many, Arabic was their native language, so they could sometimes sense the correct meaning of a difficult passage (see DIFFICULT PASSAGES) and "redefine" the crucial word accordingly, even when this was lexically impossible. The modern textual critic has only to emend following their lead. There are several examples of this redefinition in the following emendations.

Ḥaṣab: fuel. Read *ḥaṭab,* with Ubayy b. Kaʿb, in Q 21:98. *Ḥaṣab* cannot mean "fuel"; *ḥaṭab* occurs with this meaning in Q 111:4 and Q 72:15. The mistake was caused by a copyist omitting the vertical stroke of the *ṭāʾ,* turning it into a *ṣād* (Bellamy, Some proposed emendations, 564).

Ummah: time, while, Q 11:8 and Q 12:45. Read *amad,* which has this meaning four times, in Q 3:30; 18:12; 57:16; 72:25. Final *dāl* was turned into *hāʾ,* either because the copyist's pen fed too much ink or his hand was unsteady and twitched upward and to the right after the *dāl* was complete

(Bellamy, Some proposed emendations, 564).

Abban: fodder, pasturage, Q 80:31. Read *lubban,* "nuts." *Abb* has no acceptable meaning here but *lubb* fits in well with the other blessings that God has bestowed on humankind (Q 80:27-31; see GRACE; BLESSING). The copyist's pen as it turned to the left after the *lām* briefly ceased to flow, breaking the connection with the following *bāʾ* and converting the *lām* into *alif* (Bellamy, Some proposed emendations, 564).

Sijill: writer of a document, Q 21:104. Read *musjil* or *musajjil. Sijill* means only "document." In older hands, *mīm* after the definite article does not turn back under the *alif* as in later hands but is no more than a thickening of the line between the *lām* and the following letter. A leaky pen may have run the *mīm* into the first tooth of the *sīn,* causing the *mīm* to lose its identity; possibly one of the teeth of the *sīn* was indistinct, thus facilitating the misreading (Bellamy, Some proposed emendations, 566).

Ḥiṭṭah: forgiveness, Q 2:58; 7:161; read *khiṭatan.* This word has nothing to do with *ḥaṭṭa,* which means "put down," but comes from the verb *khaṭiʾa,* which in the Ḥijāzī dialect would become *khaṭiya* "commit a sin," with *maṣdar khiṭah,* omitting the *hamza.* The spelling is like that of *shṭh* = *shaṭʾahu* "its sprout" in Q 48:29. The people are appealing for forgiveness (q.v.), but they first must confess their sins (see SIN, MAJOR AND MINOR; REPENTANCE AND PENANCE). *Khiṭatan,* with the implied omission of the verb *khaṭīnā* < *khaṭiʾnā,* is the equivalent of "we have sinned" (Bellamy, Some proposed emendations, 566).

Ṣurhunna ilayka: incline them (the birds) toward you, Q 2:260. Read *jazzihinna (wa-) lbuk,* or *wa-labbik.* Abraham (q.v.; Ibrāhīm) is instructed by God, "Take four birds and incline them towards yourself *(fa-ṣurhunna ilayka)* then put a part of them on each mountain, then call them, and they will come to you flying." Al-Ṭabarī (d. 310/923; *Tafsīr,* iii, 35f.; cf. Gilliot, *Elt,* 107) cites the two major views on the meaning of *ṣur,* "incline" and "cut up," and chooses the latter because the majority of the exegetes accept it; he takes issue with a few Kūfan lexicographers who maintain that *ṣur* never means "cut up." Each group, however, is right in its own way. *Ṣur* never means "cut up" but the meaning must be "cut to pieces and mix them up." With the emendation suggested above the meaning would be, "make them into pieces and mix them up." Emending *ṣād* to *jīm* is simple; *jazzi* is the classical *jazzi,* since in the Ḥijāzī dialect, all the *hamza*s had been lost. The meaningless *ilayka* is removed by reading *ulbuk* with no change in the *rasm;* the *wāw* was dropped when the word was misread as *ilayka.* Another possibility is that the phrase originally read *wa-labbik,* which has the same meaning, on the assumption that the *wāw* was mistaken for an *alif* (Bellamy, Some proposed emendations, 567).

Sabʿan mina l-mathānī: seven *mathānī* (?). This and the following two emendations are of special interest since they depend on assuming the same mistake. One can argue that they were copied by the same scribe with a certain peculiarity in his handwriting. *Mathānī* occurs in Q 15:87: "We have given you seven *mathānī* and the mighty Qurʾān," and again in Q 39:23: "God has sent down the best account, a book (q.v.) alike (in its parts), *mathānī,* at which the skins of those who fear (q.v.) their lord (q.v.) creep.…" Read: *matālīyi* and *matālīya,* the broken plural of *matlūw,* meaning "recitations," literally "something that has been or is to be recited." The copyist mistook the *lām* for a *nūn* because it was too short. We also emend *sabʿan* to *shayʾan.* The scribe wrote a small loop instead of the minim of the *yāʾ.* The next scribe, seeing what he

took to be a *sīn* and an *ʿayn,* could hardly do anything but add the *bāʾ*. So Q 15:87 should read *wa-la-qad ātaynāka shayʾan mina l-matālīyi wa-l-qurʾāna l-ʿazīm,* "We have given you some recitations and the mighty Qurʾān" (Bellamy, Some proposed emendations, 567).

Tamannā; fī umniyatihi: to desire, in his desire. In Q 22:52 we read: "We have not sent down before you any messenger or prophet but that when he desired *(idhā tamannā)* Satan injected (something) into his desire *(fī umniyatihi)* but God cancels what Satan injects, then God makes his signs (q.v.) strong" (see ABROGATION; DEVIL; SATANIC VERSES). The word "desire" (verb and noun) makes little sense here; the sense required is recite, recitation, which was recognized by some commentators, who redefine *tamannā* to mean *qaraʾa,* even inventing *shawāhid* in support of this redefinition (Ibn Isḥāq, *Sīra,* 370 f.). The redefinition is correct. We emend *tamannā* to *yumlī* and *umniyatihi* to *imlāʾihi,* "dictates" and "in his dictation." The latter word was originally written *ʾmlyh,* with no *alif* for the long *ā*. The *nūn* was written for *lām* because it was too short as in *mathānī,* and one of the minims was lost. After *yumlī* was corrupted to *tamannā, umniyatihi* was inevitable (Bellamy, Some proposed emendations, 568).

Illā amāniyya: except desires. Read *amāliyya,* "dictations." Q 2:78 *wa-minhum ummiyyūna* (i.e. ignorant people who do not know the scriptures; see IGNORANCE; UMMĪ; SCRIPTURE AND THE QURʾĀN) *lā yaʿlamūna l-kitāba illā amāniyya wa-in hum illā yaẓunnūna,* "And among them are *ummiyyūna* who do not know the book except desires and they can only guess." The exegetes were not satisfied with *amāniyya,* and try to redefine it. Al-Ṭabarī (*Tafsīr,* i, 297f.) prefers the meaning "lies, falsehoods," but the best suggestion comes from al-Zajjājī (d. 311/923), who says plainly "They do not know the book except by recitation" (*illā tilāwatan, Lisān al-ʿArab,* xv, 294; Bellamy, Some proposed emendations, 569).

Ṣibghat Allāh: God's religion, Q 2:138. Read *ṣanīʿa* or *kifāya*. "But if they turn away, they are in schism, but God will take care of them for you [Muḥammad; *fa-sayakfīkahumu llāhu*] for he hears and knows (see SEEING AND HEARING; KNOWLEDGE AND LEARNING); the *ṣibgha* of God and who is better at *ṣibgha* than God" (Q 2:137-8). The word *ṣibgha* refers to the Christian baptism (q.v.), so the exegetes were obliged to redefine it. They take it to mean *dīn* or *īmān,* or they equate it with the *millat Ibrāhīm,* in Q 2:135, which they take to mean Islam (see RELIGION; FAITH). It seems inconceivable that one should find in the Qurʾān the name of a Christian sacrament used — even metaphorically — for Islam or *īmān*. The whole idea runs counter to the general attitude toward Christianity and Judaism in the Qurʾān (see POLEMIC AND POLEMICAL LANGUAGE; APOLOGETICS), and is so disturbing that the word practically announces itself as a mistake. In my view, *ṣibghat Allāh* refers to the words immediately preceding, *fa-sayakfīkuhum Allāh*. Taken thus, *ṣibgha* is an exclamatory accusative, used in praise of God's action in sparing the Prophet the trouble of dealing with his own enemies (q.v.; see also OPPOSITION TO MUḤAMMAD). There are two emendations that would give this sense. The first is to read *ṣanīʿa,* "favor." This emendation can be effected without altering the *rasm* if we assume that the original *ṣād* did not have the little nub on the left — this is often omitted in manuscripts — but that the next copyist took the *nūn* to be the nub. Otherwise it is possible to add a minim to the *rasm,* a minor change. The second possibility is to read *kifāya,* the *maṣdar* of *kafā,* which would have been spelled *kfyh,* the long *ā* without *alif*. In older manuscripts, *kāf* is often written without the diagonal stroke that we add

separately, but is written first and then turns left and under to complete the letter. The copyist misread *kāf* as *ṣād,* and then took the loop of the *fāʾ* for a minim. Initially, it was my assessment that *ṣanīʿa* was preferable, since fewer changes were necessary to bring it into line (Bellamy, Some proposed emendations, 570), but *kifāya* is what should be expected, given *sayakfīkuhum* and good sense should take precedence over paleography.

Aṣḥāb al-aʿrāf: the People of the Heights (q.v.), Q 7:48 (cf. Q 7:46). The verses refer to a group of men who are situated in some vantage point from which they can observe both the blessed in heaven and the damned in hell (see REWARD AND PUNISHMENT; PARADISE; HELL AND HELLFIRE). "Between them is a curtain *(ḥijāb)*, and on the *aʿrāf (ʿalā l-aʿrāf)* are men who know each by their mark, and they call to the people of heaven… and the people of the *aʿrāf* call to men whom they know by their mark; they say 'Your collecting [of money] has not helped you nor has your arrogance (q.v.).'" The word *aʿrāf* is the plural of *ʿurf,* which means "mane" or "comb" of a cock, and it may not be incorrect. It could be used metaphorically of some high place on which these observers are located. What makes it a bit suspicious is that the metaphor (q.v.) does not appear to have been used either before or after the revelation of this passage. Furthermore, if the word refers to the top of the *ḥijāb* (see VEIL), as some think, one should expect *ʿalā aʿrāfihi*. Two emendations can be proposed here, neither of which has to be metaphorical, though the second may be. The first is *ajrāf,* pl. of *jurf* or *juruf,* which means "bank," specifically of a *wādi* that has been undercut by the current, or, simply, "a bank that rises abruptly from a torrent or stream" (Lane, 411). Paleographically there is no difficulty. Sometimes in early manuscripts and papyri initial *ḥāʾ* begins with a lead-in line like a small arc with the concavity facing right, which then continues toward the right completing the main body of the letter. If this arc is exaggerated the whole letter can be mistaken for an *ʿayn*. The other suggestion is *aḥruf,* pl. of *ḥarf,* which means, among other things, "point, ridge, brow, ledge, of a mountain" (Lane, 550). The same emendation, *ʿayn* to *ḥāʾ* is needed here as in *ajrāf,* and the *alif* presents no problem. It might have been introduced at the time of the ʿUthmānic recension, or it could have been added by ʿUbaydallāh b. Ziyād, who during his governorship of Kūfa (53-9/673-9) instituted a reform in qurʾānic spelling, which consisted of the introduction of about 2,000 *alif*s into the text (Nöldeke, *GQ,* iii, 255f.). Taken this way, *aḥruf* is not metaphorical but we find the singular *ḥarf* used metaphorically in Q 22:11: "And among the people there are those who serve God on a *ḥarf* and if good comes to them they are at ease with it but if trouble comes to them, they turn back to their (old) ways" (see GOOD AND EVIL; TRUST AND PATIENCE). These people who serve God on a ridge *(ḥarf)* are fence-sitters who are not sure which way they will jump since circumstances can vary. The same is true of the *aṣḥāb al-aʿrāf,* who are not sure whether they will end in heaven or hell, since it depends on God's will, which they do not yet know (see FREEDOM AND PREDESTINATION). The two usages are not exactly parallel, since *aʿrāf* is plural and definite and *ḥarf* is singular and indefinite; nevertheless the similarity is striking. In general, I prefer the reading *aḥruf* but would suspend judgment on whether it should be taken metaphorically or not (Bellamy, Some proposed emendations, 571).

Wa-inna kullan lammā la-yuwaffiyannahum rabbuka aʿmālahum, Q 11:111. The crux is the word *lammā,* for which we find the variants *la-mā, lamman* (acc.), which is said to mean

"all" *(jamīʿan)*; or, *inna* is changed into negative *in,* and *lammā* given the sense of *illā* "except." Barth (Studien, 136) must be correct in saying that *lammā* cannot be construed and ought to be deleted. Once this is done the sentence is good grammatical Arabic and fits perfectly in the context: "Surely to all, your lord will give full requital for their deeds" (see GOOD DEEDS; EVIL DEEDS; HEAVENLY BOOK). Barth does not explain, however, how *lammā* got into the text; that is, he ignores the fourth requirement for an acceptable emendation. The copyist's eye, after he had written *kullan,* strayed back to verse 108, where we find *wa-innā la-muwaffūhum naṣībahum,* "Indeed we shall give them their full portion." He proceeded to write *la-muwaffūhum* but caught his mistake after writing only *lām* and *mīm,* which he cancelled with a vertical stroke. This stroke was read by a later copyist as *alif* after the *mīm,* thus producing the meaningless *lammā* (Bellamy, More proposed emendations, 196).

The earliest version of the story of the prophet Shuʿayb (q.v.) is found in Q 26:177-89, in which it is told how he was sent to the People of the Thicket (q.v.; *aṣḥāb al-ayka,* cf. Q 26:176), whom he urged to obey God and the prophet. He was rejected by his people and they were punished by a day of shadow. There are two problems in the story: the form of the prophet's name, and the identity of the *aṣḥāb al-ayka*. The name Shuʿayb does not appear in pre-Islamic sources or in proto-Arabic inscriptions and it does not have a good Arabic etymology. It does, however, contain an *ʿayn,* which argues for a Semitic origin, so the natural place to look for the original is the Hebrew Bible. I believe that Shuʿayb is a mistake for Shaʿyā (spelled with final *alif*), the Arabic form of Isaiah. The difference between Shaʿyā and Shuʿayban (in the accusative) is only a single minim, so the name in the original (Arabic) source was probably in the accusative. The next step is to turn to the book of Isaiah to see if we can find any features common to the text of Isaiah and that of the Qurʾān that will corroborate our claim that the two are the same. In Isaiah 21:13-17 we find:

the oracle concerning Arabia. In the thickets of Arabia you will lodge, O caravans of Dedanites. To the thirsty bring water, meet fugitives with bread, O inhabitants of the land of Tema, for they have fled from the swords, from the drawn sword, from the bent bow, and from the press of battle. For the Lord said to me, "Within a year, according to the years of a hireling, all the glory of Kedar will come to an end; and the remainder of the archers of the mighty men of the sons of Kedar will be few, for the Lord, the God of Israel has spoken" (Oxford translation).

I believe that the *aṣḥāb al-ayka* are the Dedanite merchants who were driven into the thickets of Arabia by an incursion of the sons of Kedar, who are to be punished for their sins. That there is some confusion between the two versions over who the real sinners were is not serious enough to invalidate this piece of evidence, which, taken together with the emendation, is sufficient not only to identify the *aṣḥāb al-ayka,* but also to confirm that Shuʿayb and Isaiah are the same (Bellamy, More proposed emendations, 197).

Q 74:49-51 describes the rejection by the Meccans of Muḥammad's message: "Why do they turn away from the reminder (q.v.) as if they were frightened asses fleeing from a *qaswara?*" There is much uncertainty among the exegetes and lexicographers about this word, which is usually translated as "lion." I believe that it derives from the Syriac *pantōrā* "panther," which goes back ultimately to the Greek *panther*.

The Greek was transcribed into Syriac with the ambivalent letter *p/f*; this in turn was transliterated into Arabic with the ambivalent letter *f/q*, which closely resembles Syriac *p*, and which of course was left without dots. The only real mistake in the qurʾānic *rasm* is a minim error which occurred when a copyist wrote a *sīn* instead of *n-t*. Panther is a better comparison in this passage than lion, since it is unlikely that Arabs ever had the opportunity to see a lion chasing an onager. The cheetah, however, under the name *fahd*, which also means "leopard" and "panther," was well known to the Arabs as a hunting animal. *Fantūrah* does not present a perfect rhyme, probably because it derives from a written source that was neither pointed nor vocalized, so the reader who first attempted to pronounce the unfamiliar word changed the vowel *ū* to the consonant *w*, just as he read q for f. If *pantūrah* had been borrowed orally it would probably have been pronounced *bamtūrah*, since *p* in foreign words borrowed into Arabic becomes *b* (Bellamy, More proposed emendations, 198).

An alternative emendation is given by Luxenberg (*Syro-Aramäische Lesart*, 45f.) who derives *qaswarah* from the Syriac root *q-ṣ-r* (Arabic *qaṣura*, "be incapable"), from which a dialect word *qusrā,* also *quṣrā,* is found, which means "decrepit old ass unable to carry a load." The spectacle of asses fleeing from a tired decrepit ass is explained as a foolish action, unjustified because there is no real threat. Likewise there is no good reason for men to flee from the reminder. The Arabic has preserved the classical Syriac pattern *qasōrā.*

The name of the prophet or holy man Dhū l-Kifl (q.v.) appears twice in the Qurʾān: "And Ishmael (q.v.; Ismāʿīl) and Idrīs (q.v.) and Dhū l-Kifl were of those who were patient and we caused them to enter into our mercy" (Q 21:85-6); and "and remember Ishmael, Elisha (q.v.; al-Yasaʿ), and Dhū l-Kifl, they were all of the best" (Q 38:48). *Kifl* can mean "pledge, guarantee" and "double," but no satisfactory interpretation of the name has been offered. I think that Dhū l-Kifl is a copyist's error for Dhū l-Ṭifl, "he of the child," and that it, like the story of Shuʿayb and the *aṣḥāb al-ayka,* goes back ultimately to the book of Isaiah. In Isaiah 9:6 we read: "for to us a child is born, to us a son is given, and the government shall be upon his shoulder, and his name will be called 'wonderful counselor, mighty God, everlasting father, prince of peace'" and in Isaiah 11:6, "the wolf will dwell with the lamb, and the leopard shall lie down with the kid and the lion and the fatling together, and a little child shall lead them." These verses were regarded by Christians as foretelling the coming of Christ, so they would be the parts of Isaiah most likely to be widely circulated among Christians, and so most likely to be picked up by Muḥammad or his source. The use of the particle *dhū* is a bit puzzling, but since the child is mentioned in the book of Isaiah, the phrase Dhū l-Ṭifl probably refers to Isaiah himself. He was of course a prophet and so deserves to be mentioned along with Ishmael, Idrīs, and Elisha. Confusion of *ṭ* and *k* is a common mistake in Arabic manuscripts (Bellamy, More proposed emendations, 199).

In Q 44:23 God orders Moses to lead the Children of Israel (q.v.) through the Red Sea: "Make my servants travel by night *(fa-asri bi-ʿibādī laylan);* indeed you will be pursued; and leave the sea gaping wide *(wa-truki l-baḥra rahwan);* indeed they are an army that will be drowned" (Q 44:23-4; see DROWNING). The crux lies in the words of command which the exegetes assume God addressed to Moses after the Israelites had crossed over, although the first clause could only have been spoken before they started

out. The word *rahwan* is taken by most exegetes to mean "gaping wide," and most translators accept this, though Blachère (170) notes that the phrase makes no sense to the commentators and that *rahwan* means only "marcher doucement." The necessary emendation is obvious. One should read *wa-nzili l-baḥra rahwan,* "and descend into the sea at an easy pace." There is no longer any need to shift the scene from before to after the crossing, and *rahwan* now has its most common meaning. Confusion of isolated *lām* and *kāf* is common in Arabic manuscripts (Bellamy, More proposed emendations, 198).

In Q 70:10-14 the Qurʾān describes the desperate situation of those sinners who are about to be punished on judgment day (see LAST JUDGMENT): "And friends will not ask friends *(wa-lā yasʾalu ḥamīmun ḥamīman);* they will be made to see them *(yubaṣṣarūnahum);* the sinner would like to rescue himself from the punishment of that day by his children (q.v.), his wife, and his brother, and his kinfolks (see KINSHIP) who give him refuge and everyone on earth, then (he thinks) this would save him." *Yubaṣṣarūnahum* makes little sense in the context. Blachère (94) and Paret (*Koran,* 482) note that the meaning is uncertain. Since *lā yasʾalu* requires a second object, the best emendation here is to read *yanṣurūnahum* without altering the *rasm,* and translating, "Friends will not ask friend to help them." Since they are willing to ransom themselves with the whole world, they would not consider asking mere friends for help (see FRIENDS AND FRIENDSHIP; INTERCESSION). The word *ḥamīm* may be used as a plural justifying the plural verb (Lane, 637). When *an* is omitted, the following verb is in the indicative. Another qurʾānic example is found in Q 39:64; *a-fa-ghayra llāhi taʾmurūnnī aʿbudu,* "Do you command me to worship (q.v.) other than God?" This construction is found after verbs of command, including *qāla,* refusing, forbidding, knowing, and in oaths and asseverations (Reckendorf, *Arabische Syntax,* 384). Since asking is a mild form of command, it is reasonable to admit the construction here, although I have not found another example with *saʾala* (Bellamy, More proposed emendations, 200).

The word *sūra* occurs nine times in the Qurʾān in the singular and once in the plural *suwar*. The word always refers to a portion of the divine revelation but not as yet a specific portion. The problem with *sūra* is not its meaning but its derivation, and on this point there is much variation among the Muslim exegetes and the non-Muslims scholars alike. For an extensive survey of the proposals by the latter, see Jeffery (*For. vocab.*, 180-2); none of them is convincing. The lexicographers are equally at a loss. They etymologize the word, trying to derive it from *s-w-r* or *s-ʾ-r*. The word *sūra* may mean "eminence of nobility, exalted state, rank," as well as "row of bricks or stones in a wall" (Lane, 1465). *Suʾra* means "a remnant of food or drink left in a vessel" or "remnant of youthful vigor." But one cannot really believe that Muḥammad would employ a word meaning "dregs" and "orts" or "row of bricks" as a metaphor for a divine revelation. In emending the text, the main consideration is to find a word that is fitting and appropriate for a revelation sent down by God from on high (see REVELATION AND INSPIRATION). I believe we can find it in the Heb. *beʿsôrāh,* which means "tidings, good tidings, news (q.v.; see also GOOD NEWS)." The mistake is another instance of a minim error in which the copyist wrote three minims instead of four. As in the case of Shuʿayb and *qaswara,* the error did not originate in the qurʾānic tradition, but was already present in the source from which *sūra* was taken. The borrowing must have been fairly old, since the word had already

acquired a broken plural (Bellamy, More proposed emendations, 201).

In Exodus 3:1-5, the lord speaks to Moses from the burning bush: "Do not come near; put off your shoes from your feet (q.v.), for the place on which you are standing is sacred ground" (see SACRED AND PROFANE). In the story as retold in the Qurʾān (Q 20:12), the lord says: "I am your lord, so take off your sandals; verily you are in the sacred valley, Ṭuwā" (q.v.; *bi-l-wādi l-muqaddasi ṭuwan*). The best that the exegetes could offer is that *ṭuwan* is the name of the valley, but they do not know what it means. There is an episode in the Bible, however, that will give us a clue as to the meaning of *ṭuwan*. In Joshua 5:15 the commander of the lord's army comes to Joshua and says, "Put off your shoes from your feet, for the place where you stand is holy, and Joshua did so." The event occurred in a place near Jericho called Gilgāl, where the Israelites were encamped. The Bible, with a play on words, associates Gilgāl with the *g-l-l*, which in the *qal*-form means "to roll." By changing the vowel *ḍamma* in *ṭuwā* to *fatḥa* we get a verb *ṭawā*, which means among other things "to roll" (transitive), literally "he rolled." It is reasonable to assume that *ṭawā* is a translation of the exegetical definition of Gilgāl. The discrepancy between Mount Horeb and Gilgāl and between Moses and Joshua should not give us pause, since the Qurʾān in telling biblical stories often modifies them. No emendation of the *rasm* is necessary; however, the *ḍamma* in Ṭuwā may have been influenced by the fact that there is a locality near Mecca (q.v.) called Dhū Ṭuwā, where the pilgrims rest up before coming into the city (Bellamy, Textual criticism, 2; see PILGRIMAGE).

Q 4:51 states that those who have been given (only) a portion of the book believe in the *jibt* (q.v.) and the *ṭāghūt* (see IDOLS AND IMAGES). No one really knows who or what the *jibt* is or are. The Muslim commentators equate it with the *ṭāghūt*, that is "idol, priest, sorcerer" (see MAGIC; POLYTHEISM AND ATHEISM; PRE-ISLAMIC ARABIA AND THE QURʾĀN). For the views of non-Muslim scholars, see Jeffery (*For. vocab.*, 99). If, however, we emend *jibt* very slightly, by moving the dot from beneath the *bāʾ* to above the letter, we get *al-jinnat*, which means the jinn (q.v.), a word that also occurs frequently in the Qurʾān. The only unusual thing about it is the use of the long *tāʾ*, instead of *tāʾ marbūṭa*, for the feminine singular ending. *Jinnah*, which also means "madness" (see INSANITY), occurs ten times in the Qurʾān, always spelled with *tāʾ marbūṭa*. G. Bergsträsser (in Nöldeke, *GQ*, iii, 27), however, lists thirty-six instances in the Qurʾān where feminine singular ending is long *tāʾ*, and a number of cases where it may be either singular or plural. The fact that all the other occurrences of the word have *tāʾ marbūṭa* may have been responsible for the readers' not recognizing the word here. In the time of Muḥammad the jinn or jinna were impersonal gods: "The Arabs of Mecca asserted the existence of a kinship *(nasab)* between them and Allāh (Ḳurʾān XXXVII, 158), made them companions of Allāh (VI, 100), offered sacrifices to them (VI, 128), and sought aid of them (LXXII, 6)" (Macdonald/Massé, Djinn, 547; see SACRIFICE; IDOLATRY AND IDOLATERS). Particularly close to the phrase "they believe in the *jibt* = *jinnat*" *(yuʾminūna bi-l-jibt)* is Q 72:6, "there are people of mankind who seek refuge with the people of the jinn" *(yaʿūdhūna bi-rijālin mina l-jinni)*. Here again we do not need to emend the *rasm* (Bellamy, Textual criticism, 3).

In Q 6:74 Abraham asks his father Āzar (q.v.), "Do you take *(a-tattakhidhu)* idols as gods?" The problem is that in the Bible Abraham's father is not Āzar but Teraḥ. (See Jeffery, *For. vocab.*, 54f. for the opinions

of Western scholars on this name.) More useful is the view of some Muslim exegetes who believe that Āzar is an expression of blame; it is like *yā aʿraj,* "O limper," as if he were saying to his sinful father, "O sinner, O dotard, O old man," or that it is a word of rebuke or forbidding wrong-doing (*Tāj al-ʿarūs,* x, 46f.). Although the canonical reading *(ʾ-r-r)* does not vary, there is an unusual *shādhdh* reading, ascribed to Ibn ʿAbbās, which takes the *alif* of the following word as the last letter of the previous word. Jeffery thinks the reading was originally *ʾa-ʾizran,* with the first *alif* representing two *hamza*s and the last the *tanwīn* of the accusative. This, he says, was the reading of Ismāʿīl al-Shāmī (Jeffery, Marginalia, 137). *Izr* is a variant of *wizr,* "burden," but it can hardly be correct; it does not occur in the Qurʾān, whereas *wizr* and its plural *awzār* occur twelve times, so it is clearly the form preferred by Muḥammad. Combining the insight of the Muslim exegetes noted above (that the word is some kind of reproach) with the deviant reading just mentioned, the result is the reading *ʾ-r-r-ʾ,* which can be vocalized *ʾizrāʾan,* and translated "contemptuously": that is, "when Abraham said to his father contemptuously 'You take idols as gods.'" The only objection that one might make is that *azrā* takes the prepositions *bi-* or *ʿalā* before the object; but one can argue here that the *maṣdar* is used absolutely, so it is not necessary to mention the object, which is clear from the context. No real change in the *rasm* is necessary (Bellamy, Textual criticism, 3).

Three names which have created difficulties for the Muslim exegetes and Western scholars alike are Idrīs, ʿUzayr (see EZRA), and al-Rass (q.v.). I believe that all three refer to the same person, Esdras or Ezra, the presumed author and protagonist of the Jewish apocalyptic book 2 Esdras (4 Esdras in the Catholic Bible). Idrīs is mentioned twice in the Qurʾān: "And mention in the book Idrīs; verily he was truthful and a prophet, and we raised him to an exalted place" (Q 19:56-7; see PROPHETS AND PROPHETHOOD), and again in Q 21:85-6, where he is mentioned along with Ishmael and Dhū l-Kifl. The Muslim commentators identify him with the biblical Enoch because "Enoch walked with God, and he was not, for God took him" (*Gen* 5:24), which seems to refer to his "exalted place" in Q 19:57. Among non-Muslim scholars, P. Casanova correctly suggested that the reference was to Esdras, and Bell in his translation of the Qurʾān (p. 288) agrees with Casanova that Idrīs is probably Esdras. The connection between Esdras and Idrīs is obvious. Arabic does not admit consonantal clusters, so when a foreign word is borrowed that has one, either an epenthetic vowel is inserted or one of the consonants is dropped, which reduces the cluster to two; in this case the *sigma* has been dropped. The following consonant *yāʾ* was pronounced *ōē* or *ē* as a result of the *imāla* of the *alif*. There is moreover in 2 Esdras 14:9 a clear statement that Esdras will be raised up. God says to him: "You shall be taken up from among men and henceforth you shall live with my son and with those who are like you until the times are ended." This is clearer than the statement in Genesis about Enoch. No emendation of the *rasm* is necessary.

In Q 9:30 we read: "The Jews say: 'Uzayr is the son of God,' and the Christians say, 'The Messiah is the son of God.'" Even more curious than the form of the name is the statement that ʿUzayr was believed by the Jews to be the son of God (see PEOPLE OF THE BOOK). I believe that we can solve both problems. Jeffery says that the form of the name is difficult but that it must come from the biblical ʿEzrā. "The form may be due to Muḥammad himself not properly grasping the name, or possibly giving it the

contemptuous diminutive form" (Jeffery, *For. vocab.,* 214f.). The last statement is most unlikely since the Qurʾān does not elsewhere treat biblical figures with contempt. The first step in solving the textual problem is to take the *alif* from the beginning of *ibn* and attach it to ʿUzayr, as we did in the case of Āzar. This gives us ʿUzayrā, which could be the diminutive of ʿEzrā. It is, however, a feminine form (Howell, *Grammar,* i/3, 1232f.), and probably would not have been used of a prophet who was a man. Moreover, the Arabic diminutive form *fuʿayl* is used only when it is formed from a noun with three consonants and no long vowel, e.g. *faʿl, fuʿl,* etc. (see ARABIC LANGUAGE). So ʿUzayr could not be a diminutive of ʿEzrā. I do not believe, however, that a diminutive was intended, but that the *yāʾ* is intrusive, caused by a rough spot in the papyrus or vellum, or by an overflowing pen. Once this is eliminated, two possibilities present themselves. First we have *ʿ-z-r-ʾ,* an exact transliteration of the biblical ʿEzrā. We note, however, that the word *ibn* in the Qurʾān is always written with the *alif,* but in later texts the *alif* is often omitted contrary to the rules, and the orthography may have been standardized sometime after the original recording. A second, even more likely, possibility is that the long *ā* was shortened in recitation because of the cluster *bn* which follows. The scribe may simply have reproduced what he heard the Prophet say, which was *ʿazrabnu,* retaining, however, the conventional *alif* in *ibn*. The question why the Jews are said to believe that ʿUzayr is the son of God can be answered by again referring to 2 Esdras 14:9. There is, however, an even more pertinent reference in 2 Esdras 2:42-8. Esdras on Mount Zion sees a vision of a young man who is placing crowns on the heads of a multitude of people. He asks an angel who the young man is, and is told: "He is the son of God, whom they confessed in the world." It is clear that Muḥammad or his informant confused the name of the prophet Esdras, which is also the name of the book, with the son of God seen by Esdras in his vision.

The phrase *aṣḥāb al-rass* occurs in two lists of people who disbelieved in the prophets sent to them and so perished (Q 25:37-8; 50:12-14; see PUNISHMENT STORIES). The word *rass* has several meanings but the one adopted by most commentators, and consequently by some translators, is "well," so the *aṣḥāb al-rass* become the People of the Well. The commentators, however, do not agree on who they were, where the well was located, or precisely what the name of their prophet was. This is not surprising, since *al-rass* is nothing more than Idrīs misspelled. The *rāʾ* was written too close to the *dāl*, which was then read as a *lām*. The *yāʾ*, which has only one minim, was probably lost through a flattening-out of the minims. It may never have been there, however, since the following vowel could have been read as long *ā*, but pronounced without *imāla* and so not reproduced in the writing. The only other letter that could have been read instead of *dāl/dhāl* is *kāf*, but the roots *k-r-s* and *k-r-sh* gave no satisfactory meaning. So in sum, Idrīs and al-Rass go back to Esdras and ʿUzayr goes back to ʿEzrā, and in the apocryphal tradition Esdras and ʿEzrā are the same (Bellamy, Textual criticism, 4).

Perhaps the most mysterious textual problem in the Qurʾān is the name ʿĪsā, which is the name given to Jesus (q.v.). No one has yet satisfactorily explained why the Qurʾān should call Jesus ʿĪsā, since he is referred to by eastern Christians as Yasūʿ or Īsōʿ. ʿĪsā does not occur before the Qurʾān but Yasūʿ is used in personal names at an early period. The fact that ʿĪsā has no satisfactory derivation and no pre-qurʾānic history should have suggested to scholars that the word might be a mistake. I had

originally emended the text to *m-s-y-y,* to be read Massīya, which I thought derived ultimately from the Greek *messias* without the nominative singular ending. I now prefer to derive it from the Arabic al-Masīḥ, from which the definite article has been dropped. This involves emending the *ʿayn* to *mīm,* and dividing the four minims into *sīn* and *yāʾ,* then emending the final *yāʾ* to final *ḥāʾ.* It is much more likely that the Prophet would have known the Arabic term than the Greek, so we do not have to assume that he vacillated between Greek and Arabic. The real problem is why Muḥammad would have rejected Yasūʿ for any alternative. I believe that his choice was dictated by the fact that Yasūʿ could have been turned into an obscene insult by his enemies. The verb *aswaʿa* and also apparently *sāʿa, yasūʿu* refer to the action of the two Cowper glands, which secrete a fluid when sexually stimulated (*Tāj al-ʿarūs,* xxi, 243). The *rasm*s of the two verbs are the same, *y-s-w-ʿ.* The phrases "Yasūʿ Yasūʿ" or "Yuswiʿ Yasūʿ" could have been used to ridicule Muḥammad's claim that Jesus was a prophet (Bellamy, Textual criticism, 6; id., Further note, 587-8). Luxenberg (*Syro-Aramäische Lesart,* 26f.), on the other hand, derives ʿĪsā from the biblical Īšay, (Jesse, in the English Bible) the father of David (q.v.). The eastern Syrians weaken initial *ʿayn* so that it is realized by *hamza,* and the final *ʿayn* vanishes completely. This agrees with Mandaean spelling in which *ʿayn* is used for *hamza,* and final *ʿayn* is dropped. The diphthong *– ay –* was eventually monophthongized to *ā,* a common feature in eastern Syriac.

The tale of the Seven Sleepers of Ephesus is told in Q 18 (see MEN OF THE CAVE). In Q 18:9 God speaks to the Prophet: "Or did you think that the companions of the cave and (of) al-Raqīm (q.v.; *anna aṣḥāba l-kahfi wa-l-raqīmi*) were one of our marvelous signs?" The word *al-raqīm* has not been satisfactorily explained, which makes it likely that the word is wrong. I suggest that it is a mistake for *al-ruqūd,* pl. of *rāqid,* "sleeping, sleeper," so the phrase should read *aṣḥāba l-kahfi l-ruqūdi,* "the sleeping companions of the cave." The corruption began with the loss of the final *dāl;* detached letters when final are sometimes omitted through carelessness. The other mistakes occurred because of the effort of a copyist to correct the text. The remaining letters *rqw* make no sense, so he mistook *w* for *m,* and added *y* to give the word a common nominal pattern, but since the new word does not fit with what precedes, he added the conjunction to make it a separate phrase. We note further that *ruqūd* is also found in Q 18:18, *wa-taḥsibuhum ayqāzan wa-hum ruqūdun,* "you would think them awake but they are sleeping" (Bellamy, Al-raqīm, 115). Similarly, Luxenberg (*Syro-Aramäische Lesart,* 65f.) emends *al-raqīm* to *al-ruqād,* "sleep," taking the *yāʾ* as representing long *ā,* reading "the people of the cave and of the sleep." This goes against the orthography of the Qurʾān, in which *ā* after *qāf,* which occurs hundreds of times, is either omitted or is represented by *alif.* Exceptions occur when *alif* is *alif maqṣūrā,* as in *ʾ-sh-q-y* = *ashqā* (Q 87:11), and is retained when a suffix follows, e.g. *ʾ-sh-q-h-ʾ* = *ashqāha* (Q 91:12); this represents the pronunciation *– ay* (see Rabin, *Ancient West-Arabian,* 115f. and 160, who treats the matter in detail). In Q 3:28, however, we do find *t-q-y-h* = *tuqāt,* but in Q 3:102, with attached pronoun, *t-q-ʾ-t-h* or *t-q-t-h* = *tuqātihi* (Nöldeke, *GQ,* iii, 40). This word made difficulties for some readers: Yaʿqūb al-Ḥadramī and Ḥasan al-Baṣrā (d. 110/728) read *taqīyatan* (ibid., n. 4). This one exception, which is probably a mistake itself, is not sufficient to justify the reading *al-ruqād.*

In Q 101:6-11 we read "As for him whose scales are heavy (see WEIGHTS AND

MEASURES), he shall be in a pleasing way of life, as for him whose scales are light *fa-ummuhu hāwiyah,* but how should you know what that is? A hot fire." Even though the phrase in Q 101:9 is defined in verse 11, no one has been able to explain how the phrase can mean what it surely must mean (see PIT). The literal meaning is "his mother shall perish" or "his mother shall be bereft," but "hot fire" cannot explain it. Of the several Western scholars who have commented on this passage, Blachère (p. 26) comes close to solving the problem. He admits that the phrase does not make good sense; he translates it, "s'acheminera vers un abîme," but he thinks it would be simpler to take *umm* (perhaps to be read *amm*) as a verbal noun of *amma,* "se diriger vers, aller vers un but." I, however, believe that what is required is an ordinary feminine noun, which was supplied by *ummuhu,* but which is inappropriate here. Read instead, without changing the *rasm, ummatun* "path, way, course," and translate "then a steep course downward shall be his." *Ummatun hāwiyatun* is an incomplete nominal sentence, which can easily be completed by reference to the context. Such sentences are common in the Qurʾān; they occur most often in the apodoses of conditional sentences, as in this passage (see Q 2:265; 4:92; 56:88-94, for other examples; also Bellamy, Fa-ummuhu hāwiyah, 485).

Textual History of the Qurʾān

see UNITY OF THE TEXT OF THE QURʾĀN; MUṢḤAF; TEXTUAL CRITICISM OF THE QURʾĀN; COLLECTION OF THE QURʾĀN; CODICES OF THE QURʾĀN

Thamūd

An ancient tribe, mentioned twenty-six times in the Qurʾān, counted among many peoples who rebelled against God and his messengers (see MESSENGER; PROPHETS AND PROPHETHOOD). The story of Thamūd forms part of a repeated trope of human rebellion (q.v.) and subsequent destruction (see PUNISHMENT STORIES; GENERATIONS) appearing in reference to other lost peoples such as the ʿĀd (q.v.) and the people of Lot (q.v.), Noah (q.v.), Midian (q.v.), Pharaoh (q.v.), Tubbaʿ (q.v.), Iram (q.v.) and the *aṣḥāb al-rass*

(see PEOPLE OF THE THICKET; see also GEOGRAPHY).

Most often the Thamūd are mentioned along with the ʿĀd and represent lost pre-Islamic Arabian tribes (see TRIBES AND CLANS; PRE-ISLAMIC ARABIA AND THE QURʾĀN) that fit the pattern of rebellion and destruction. The Thamūd succeed the ʿĀd and live in homes hewn out of the earth (Q 7:74; 26:149). Ṣāliḥ (q.v.) is God's Thamūdic prophet (Q 7:73; 11:61; 26:141-2; 27:45) and the Qurʾān retains the oral memory (see ORALITY AND WRITING IN ARABIA): "And to Thamūd their brother Ṣāliḥ. He said: 'O my people! Serve God. You have no other god save him' " (Q 11:61; see WORSHIP; POLYTHEISM AND ATHEISM). Ṣāliḥ's people acknowledge his qualities (Q 11:62) but refuse to abandon the ancestral, polytheistic, tradition. They repudiate him because he is only mortal (Q 26:154; 54:24) and demand a sign (see SIGNS). He provides a she-camel, a camel (q.v.) of God (Q 7:73), and requires that she not be harmed or that both she and the people drink their well water on equal terms (Q 11:64; 26:155-6; 54:27-8). They respond by wounding or hamstringing her (Q 7:77; 11:65; 26:157; 54:29; 91:14); the term for this, *ʿ-q-r,* is far less common than *j-r-ḥ* and, in some of its forms (e.g. *ʿāqir,* a barren [woman]), connotes infertility. As a result the Thamūd are destroyed except for their messenger Ṣāliḥ, or Ṣāliḥ and a few righteous survivors (Q 11:66; 27:53; 41:18). The Thamūd are destroyed by an earthquake (*rajfa,* Q 7:78, associated with the last day in Q 79:6; see LAST JUDGMENT; APOCALYPSE), a thunderbolt (*ṣāʿiqa,* Q 41:13, 17; 51:44), a shout (*ṣayḥa,* Q 54:31), a terrible storm (*ṭāghiya,* associated linguistically with a common term for transgression, *ṭ-gh-y,* Q 69:5) or by burying (*damdama ʿalayhim,* Q 91:14). It is interesting to note that these forms of destruction correlate with the *sajʿ* rhyme of the different passages in which the story is placed (see RHYMED PROSE; FORM AND STRUCTURE OF THE QURʾĀN; LANGUAGE AND STYLE OF THE QURʾĀN). In Q 27, the story blends into a narrative reminiscent of biblical and midrashic sources treating the destruction of Sodom, with nine evil, violent, plotting people who caused the destruction (Q 27:48-51), followed by direct reference to Lot (Q 27:54; see NARRATIVES; SCRIPTURE AND THE QURʾĀN).

The story is expanded in the exegetical traditions (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) in ways that provide meaning to obscure scriptural verses, but with some renderings (i.e. Kisāʾī, *Qiṣaṣ,* 117-28) utterly fantastic. The Thamūd was a mighty people living in al-Ḥijr (see ḤIJR) who served idols (see IDOLS AND IMAGES), were corrupt, and failed to heed the warnings of their prophet, Ṣāliḥ, unless he would show them a miracle (see WARNER; MIRACLES). He asked them to tell him what he should show them, so they called on him to bring forth a specific kind of pregnant camel from solid rock. When he did so, some immediately agreed to follow the prophet and encouraged others to join them but were forbidden by powerful tribesmen. The camel gave birth to a foal and would drink all the water in a certain well every other day, after which she would give huge amounts of milk to the people. On the other days, the Thamūd would drink abundantly and store enough until it was again their turn. The camel's behavior harmed some of the people's other flocks and Ṣāliḥ made enemies inadvertently in other ways as well. Certain women are included among the ringleaders in the plot to hamstring the camel, and nine people lead in the process that would result in the wounding and eventual destruction of the camel. When the prophet warns them of their impending doom, they try but fail to kill him. He warns them that their

punishment would come in three days and that each morning they would awake to find the color of their skin changing to yellow, red and, on the final day, black. This terrified the Thamūd as they observed the changing color of their skin, but by that time it was too late, with horrific destruction as a result.

A people called Thamūd are mentioned in non-Arabian sources such as Ptolemy *(Geography)* and Pliny *(Natural history)*. The earliest mention is in a list of tribes defeated by the Assyrian Sargon II (721-705 B.C.E.). The name and other features of the qurʾānic story may be found in poetry attributed to Umayya b. Abī l-Ṣalt, a contemporary of Muḥammad.

According to Ibn Saʿd (d. 230/845; *Ṭabaqāt,* i, 37), the Thamūd were the Nabateans. Al-Bukhārī (d. 256/870; *Ṣaḥīḥ,* iv, 358-60) relates a tradition in which, when traveling northward through "the land of Thamūd, al-Ḥijr," Muḥammad forbade his troops from drinking the water from its wells or using it in food production. He further forbade them to enter the ruined dwellings "unless weeping, lest occur to you what happened to them." Some traditions find the Thaqīf tribe of Ṭāʾif to have derived from a Thamūdic survivor or slave of Ṣāliḥ. Popular legend associates the cliff dwellings, inscriptions and sculptures in or near the northern Ḥijāzī town of Madāʾin Ṣāliḥ ("The towns of Ṣāliḥ") with the Thamūd (see YEMEN; SOUTH ARABIA, RELIGIONS IN PRE-ISLAMIC). These "Thamudic inscriptions" reference a real community that is no longer extant.

Thanksgiving

see GRATITUDE AND INGRATITUDE

Theft

The unlawful taking of another's property (q.v.) entailing, in some cases, a punishment stipulated by the Qurʾān (see also CHASTISEMENT AND PUNISHMENT; LAW AND THE QURʾĀN; LAWFUL AND UNLAWFUL; SIN, MAJOR AND MINOR).

One of the better-known legislative passages in the Qurʾān provides: "As for the thief, whether male or female, for each, cut off the hands in punishment for what they did, as an exemplary punishment *(nakālan)* from God" (Q 5:38). The Arabic *wa-l-sāriq wa-l-sāriqa fa-qṭaʿū aydiyahumā* closely parallels the syntax of another qurʾānic legislative pronouncement concerning adultery: As for "the adulteress and the adulterer, whip each one of them . . ." (Q 24:2, *al-zāniya wa-l-zānī fa-jlidū kulla wāḥidin minhumā;* see ADULTERY AND FORNICATION). Muslim jurists came to include the crime of theft among the so-called *ḥudūd* (sing. *ḥadd,* "limit"), the small group of transgressions defined by the Qurʾān that constitute Islamic penal law (see Schacht, *Introduction,* 175-8; see also BOUNDARIES AND PRECEPTS). Although the Companion

ʿAbdallāh b. ʿAbbās (d. 68/687; see COMPANIONS OF THE PROPHET) is said to have declared the theft verse "unrestricted" in its application (*al-āya ʿalā l-ʿumūm,* Ṭabarī, *Tafsīr,* x, 296), the jurists rapidly undertook to ameliorate its harsh penalty by developing numerous exceptions that led to a narrow and highly technical definition of theft *(sariqa)*. Discussions of specific exceptions are reported among early Meccan jurists such as ʿAṭāʾ b. Abī Rabāḥ (d. 115/733) and his student Ibn Jurayj (d. 150/767; see ʿAbd al-Razzāq, *Muṣannaf,* x, e.g. 195, 207, 232) and are also preserved in early compilations of Iraqi jurisprudence such as that attributed to Zayd b. ʿAlī (d. 122/740; *Corpus juris,* 817-20, probably before 184/800). Most jurists came to consider that the scope of the verse had been considerably narrowed by various prophetic ḥadīths (see ḤADĪTH AND THE QURʾĀN), making the verse itself "restricted" in its application (*khāṣṣ,* e.g. Ṭabarī, *Tafsīr,* x, 296, who objects to the characterization of Ibn ʿAbbās; for a summary of the jurisprudence, see Schacht, *Introduction,* 179-80, and for later legal-hermeneutical approaches, see Weiss, *Spirit,* 101-8). Legal reform and changing sensibilities led to a further decline in application of the *ḥudūd* punishments in later centuries (see e.g. Peters, Islamic and secular law).

With regards to forceful theft (robbery), Islamic jurisprudence has looked to another qurʾānic passage (Q 5:33) for penal guidelines. This passage decrees execution, crucifixion (q.v.), the amputation of the opposing hand and foot or exile for those who war against God and his messenger and strive to sow "corruption" (q.v.; *fasād*) throughout the land. This has been variously interpreted in the penalties for robbery found in Islamic law: for robbery that involved murder, execution or crucifixion; for simple robbery (i.e. in which no death is involved), amputation of the opposing hand and foot (cf. Heffening, Sariḳa; Carra de Vaux/Schacht, Ḥadd).

In addition to the aforementioned prohibition found in Q 5:38, the Qurʾān also contains a second though more oblique injunction against theft. After the treaty of Ḥudaybiya (6/628; see ḤUDAYBIYA), certain Meccan women are said to have come to Muḥammad to offer him allegiance (see WOMEN AND THE QURʾĀN; CONTRACTS AND ALLIANCES), and Q 60:12 stipulated that the Prophet should accept their pledge and also prescribed its form, which included an undertaking not to commit theft: "O Prophet, if believing women come to you to pay you homage, pledging not to associate anything with God (see POLYTHEISM AND ATHEISM), steal, commit adultery, kill their children (q.v.; see also INFANTICIDE), come up with a lie (q.v.) they invent between their hands and feet or disobey you in any honorable matter (see DISOBEDIENCE; OBEDIENCE), then accept their homage and ask God's forgiveness (q.v.) for them" (see Nöldeke, *GQ,* i, 219). Known as the "pledge of women" *(bayʿat al-nisāʾ),* this text is considered to be substantially identical to the first pledge of ʿAqaba, made to Muḥammad in 621 by a group of Medinans (Ibn Isḥāq, *Sīra,* i, 433; Ibn Isḥāq-Guillaume, 198-9; Watt, *Muhammad at Mecca,* 146; for affinities with the Decalogue, see Weiss, Law and covenant, 53-4).

Finally, a false accusation of theft plays a role in the qurʾānic (as in the biblical) story of Joseph (q.v.). When Joseph's brothers return to Egypt (q.v.) with Benjamin (q.v.), Joseph causes a goblet to be put in Benjamin's bag in order to create a pretense for detaining the brothers (episode beginning at Q 12:70; compare *Gen* 44). Joseph's subordinate accuses the brothers of being thieves (Q 12:70; *Gen* 44:4, not in the Hebrew) and they deny that they have

stolen (Q 12:73; *Gen* 44:8). The subsequent qur'ānic elaboration of the narrative contains several intricacies not found in the biblical version (see SCRIPTURE AND THE QUR'ĀN; NARRATIVES).

Theology and the Qur'ān

The Qur'ān displays a wide range of theological topics related to the religious thought of late antiquity and through its prophet Muḥammad presents a coherent vision of the creator, the cosmos and man. The main issues of Muslim theological dispute prove to be hidden under the wording of the qur'ānic message, which is closely tied to Muḥammad's biography (see SĪRA AND THE QUR'ĀN).

Preliminary remarks

Dealing with theology and the Qur'ān means looking in two different directions at the same time. On the one hand, the qur'ānic message plays an important role in the religious history of late antiquity, representing a specific step within the development of monotheism as derived from the Torah (q.v.) and its Hellenistic exegesis (see POLYTHEISM AND ATHEISM; IDOLATRY AND IDOLATERS; SCRIPTURE AND THE QUR'ĀN). On the other hand, one has to study the view of the creator and the universe (see CREATION; GOD AND HIS ATTRIBUTES) as expounded in a corpus of heterogeneous texts (see FORM AND STRUCTURE OF THE QUR'ĀN), which share the characterization of having been revealed to the prophet Muḥammad (see REVELATION AND INSPIRATION). Neither of these two aspects must be neglected, although it would be disadvantageous to combine them in this essay. Therefore, in the interest of a better understanding of the different issues, two separate lines of inquiry will be followed here. The first treats the place of qur'ānic monotheism in the religious history of the Middle East. This problem will be tackled by scrutinizing the qur'ānic narrative (see NARRATIVES) about Abraham (q.v.), one that indicates the far-reaching changes that the concept of the one god underwent after the age of the Torah. There is no need to discuss the parallels between the qur'ānic story and its presumed sources, since this kind of research has been done frequently and it is unlikely that substantially new results can be obtained. But beyond the field of literary history (see also LITERARY STRUCTURES OF THE QUR'ĀN; RHETORIC AND THE QUR'ĀN; MYTHS AND LEGENDS IN THE QUR'ĀN), the qur'ānic narratives offer valuable clues, which have rarely been used to deepen our understanding of how Muḥammad conceived the divine and of how his conceptions were related to those current in the Middle East of his time.

The answer to these questions will lead to the second major line of investigation, which will focus on the qur'ānic text itself (see COLLECTION OF THE QUR'ĀN; CODICES OF THE QUR'ĀN; MUṢḤAF; LANGUAGE AND

STYLE OF THE QUR'ĀN). This investigation will include a detailed review of the main theological topics of the Qur'ān, following an order determined by the emergence of particular concerns faced by the new community during the vicissitudes of the Prophet's career. In other words, this analysis of the theological contents of the Qur'ān will be conducted in close relationship to the material of the *sīra*. That religious arguments cannot be understood if divorced from their historical contexts is accepted as an indispensable hermeneutic principle in both Muslim and non-Muslim scholarship (see MUḤAMMAD; OCCASIONS OF REVELATION). In the sūras (q.v.) there is no theological concept that remains untouched by the circumstances under which it was pronounced by the Prophet (see SPEECH; RECITATION OF THE QUR'ĀN). The bulk of what the Qur'ān says about the creator and the role he assigned to humans as his viceregents in the world (Q 2:30; see CALIPH; ADAM AND EVE; CORRUPTION) seems to have been important at least to some of Muḥammad's contemporaries who were concerned with the divine and its meaning in human life. Research on the intellectual environment in which the Qur'ān was revealed has been overshadowed by the Muslim view that there was an abrupt change from the error (q.v.) of *jāhiliyya* (see AGE OF IGNORANCE) to the truth (q.v.) of Islam (q.v.). But if one takes the ample material on the pre-Islamic civilization of the Arabs (q.v.; see also BEDOUIN; NOMADS; PRE-ISLAMIC ARABIA AND THE QUR'ĀN) seriously — and there is no convincing reason to discard it in advance — one gets a distinct impression of a society in unrest, looking for some new and trustworthy guidance, and of a Prophet sensitive to that unrest who considers himself and his received revelations to be the remedy for what was felt to be going wrong. His personality and his strength of mind were the decisive additions that forged the Qur'ān out of a wealth of sundry ideas current in the Arabian peninsula of those days (see ORALITY AND WRITING IN ARABIA; ETHICS AND THE QUR'ĀN).

The Qur'ān within the theological thought of late antiquity

Although a great deal of research has been done on the question of whether the Qur'ān was influenced by Jewish or Christian theological conceptions (see CHRISTIANS AND CHRISTIANITY; JEWS AND JUDAISM), no certainty has been reached on this point. The issue requires a fresh approach, but is beyond the scope of this article. Even focusing the argument on matters of theology alone would not do justice to even the most important aspects of the problem. Nevertheless, a few tentative steps are necessary in order to gain some insight into the contributions of the Qur'ān to the religious history of the Middle East. As indicated above, the qur'ānic figure of Abraham will serve as a guide.

The Abraham portrayed in the Qur'ān is a Meccan citizen (see MECCA). Already in the earliest passages where he is mentioned the reader notices very close connections between Muḥammad's own reasoning and his idea of Abraham, whom he considers his most important predecessor. In Q 51:25-34, for example, Abraham welcomes three guests unknown to him; before leaving him they convey a warning to him or, rather, to his people (see WARNER): "We have been sent to a people who are sinners (see SIN, MAJOR AND MINOR) that we may let loose upon them stones of clay (q.v.; see also STONE), marked by your lord (q.v.) for the extravagant *(al-musrifīn)*." The Meccans would have recognized that the reproach of extravagance was directed against them, too, or even them primarily; extravagance, as Muḥammad understood

it, was tantamount to a fatal lack of compliance with divine guidance (see ARROGANCE; INSOLENCE AND OBSTINACY; DISOBEDIENCE; OBEDIENCE), and God would punish the frivolous in the same way that he had annihilated those who a few decades ago had dared to wage war (q.v.) against Mecca (cf. Q 10:87; 21:9; 40:28, 34; 105:4; see also ABYSSINIA). There is much evidence showing how the Qur'ān's concept of the Meccan Abraham and the person of Muḥammad the Prophet were overlaid. It is sufficient to quote Q 14:35-8, where Abraham implores the lord to make Mecca a place of security and to prevent his children from worshipping idols (see IDOLS AND IMAGES): "O lord, I have caused some of my offspring to settle in an unfruitful valley, near your holy house… Grant therefore that the hearts of some men may be affected with kindness toward them; and bestow on them all sorts of fruits that they may give thanks (see GRATITUDE AND INGRATITUDE)…."

Most frequently, however, the Meccan revelations (see CHRONOLOGY AND THE QUR'ĀN) deal with Abraham's struggle to convince his people to put an end to idolatry (Q 19:41; 21:51; 26:69; 29:16; 37:83; 43:26). These passages can be read to reflect Muḥammad's difficult experiences with his unbelieving countrymen (see BELIEF AND UNBELIEF), but they also reveal much about the theology behind the qur'ānic text, which sometimes seems strikingly simple to the modern non-Muslim reader. The most complete rendering of the story is to be found in Q 6:74-83 and dates back to the time shortly before the emigration (q.v.; *hijra*) to Medina (q.v.). It reads: "(Recall) when Abraham said to his father Āzar (q.v.): 'Do you take idols as gods? Verily, I think that you and your people are in manifest error.' Thus do we show Abraham [our] power *(malakūt)* over the heavens and the earth (q.v.; see also HEAVEN AND SKY; SOVEREIGNTY; POWER AND IMPOTENCE), and [it is] in order that he may be one of the convinced. When the night came down upon him (see DAY AND NIGHT), he saw a star (see PLANETS AND STARS); said he: 'This is my lord,' but when it vanished, he said: 'I love not the things which vanish.' Then when he saw the moon (q.v.) shining forth, he said: 'This is my lord,' but when it vanished, he said: 'Truly, if my lord guides me not, I shall be of the people who go astray (q.v.).' Then when he saw the sun (q.v.) shining forth, he said: 'This is my lord, this is greater,' but when it vanished, he said: 'O my people, I am quit of what you associate (with God). Towards him who opened up *(faṭara)* the heavens and the earth, I have set my face as a *ḥanīf* (q.v.), and I am not one of the polytheists.' But his people disputed with him; he said: 'Do you dispute with me in regard to God, though he has guided me; I fear not what you associate with him except [it be] that my lord will something [against me]; my lord's knowledge (see KNOWLEDGE AND LEARNING) is wide enough for everything; will you not then be reminded (see REMEMBRANCE; MEMORY)? How should I fear what you have associated (with him), when you are not afraid to associate with God what he has not sent you down any authority (q.v.) for? Which of the two parties is the better entitled to feel secure, if you have any knowledge?' Those who have believed and have not confused their belief with wrong-doing — theirs is the security, and they are the guided. That argument of ours we gave to Abraham against his people; we raise in rank whomsoever we will; verily, your lord is wise, knowing."

During the fifth century, Sozomenos [Sozomen], born at Bethelea near Gaza, wrote an ecclesiastical history covering the period from 324 to 422 C.E. In this work there is to be found the oldest evidence of

some sort of popular veneration of Abraham: At the ancient holy place of Mamre near Hebron, Jews, Christians and pagan Arabs were accustomed to gather once a year. The pagans would commemorate the apparition of the angels (q.v.) to Abraham and they would sacrifice (q.v.) some animals like an ox or a cock. Furthermore, they would abstain from sexual intercourse (see SEX AND SEXUALITY; CHASTITY; ABSTINENCE) in order to avoid the wrath of the lord, whom they thought to be present at that holy place (Sozomène, *Histoire ecclésiastique,* 244-9). The scene of the angels announcing divine guidance to Abraham goes back to Genesis 18:1-16. The Bible tells us that Mamre was the place where Abraham was dwelling when a stranger with two companions visited him; they predicted that Sarah would give birth to a son, a prophecy that made Sarah laugh because she knew that she was barren (see ISAAC). In Q 51:24-34 the visitors add the words quoted above, which point to Mecca's recent past and to the moral deficiencies of its citizens. One might assume that those sentences are only a digression, but there is much more behind them. In a treatise entitled *De Deo,* Philo of Alexandria comments on Genesis 18:2. The passage can be summarized as follows: When (Abraham) raised his eyes, he saw a stranger with two companions: Those who study the holy scripture are given the capacity to perceive the hidden qualities of creation (see HIDDEN AND THE HIDDEN; SECRET); they gain insight into nature and its divine foundations and in this way they understand the true meaning of being God's creature. The creator, manifest in and through nature, bears witness to himself by the process of constantly creating. Calling Abraham's attention to this truth is the main reason for the visit those men pay him. They open his eyes and he can see how the creator "makes the earth and the water (q.v.), the air (see AIR AND WIND) and the heaven so that (these phenomena) would be suspended from himself… raising the world as if protecting it through guardians…" (Siegert, Abrahams Gottesvision, 82).

Thus Abraham is portrayed as a visionary whose experience testifies to God as the indefatigable creator; everything that exists in this world is dependent on his continuous activity. Philo's commentary points to a wide range of religious concepts which were alien to the original text of Genesis 18. Before going into more detail about Philo's understanding of this passage, it is worthwhile taking a look at the Book of Jubilees, which was composed a few decades before Philo's treatise. The author of this work, a revision of Genesis and Exodus, is convinced that he has reproduced the original text of the scriptures which Moses wrote down on Mount Sinai (q.v.), taking dictation from an angel or from God himself (see ORALITY). Nevertheless, the unknown author of the Book of Jubilees does not aim at replacing the Torah; he only wants to corroborate its text. In Exodus 19-24, Moses receives the Ten Commandments (see COMMANDMENT); in the Book of Jubilees God orders an angel to dictate, in addition, a complete record of the events from the beginning of creation until the erection of the sanctuary, which is to last for ever. Comparing these two accounts, the figure of Abraham undergoes some remarkable changes, too. In Genesis he is tempted by God who tells him to sacrifice Isaac. In the Book of Jubilees one reads about further temptations: When he is fourteen years old, Abraham recognizes the futility of idolatry; he forsakes his father and begins to venerate the one creator of the world and prays to him that he may save him from error. Without hesitating, he complies with God's order and leaves his country. While

roaming through the holy land (see SYRIA; JERUSALEM), Abraham worships the creator in the way the Jews will do after Moses has delivered the tablets to them; he is a Mosaic Jew *avant la lettre* (Kratz, Wie Abraham Hebräisch lernte). Reflecting on what is expressed in the Book of Jubilees and what has been quoted above in a greatly abridged form, it is not surprising to note that Judaism does not accommodate itself to the Hellenistic Weltanschauung by referring to the figure of Moses; the divine law revealed to him on Mount Sinai obviously segregates Judaism from any other community and plays against the cosmopolitan ethos of Hellenism.

It is Abraham, therefore, father of a powerful people and the man chosen by God to bear witness to his will to bless humankind as a whole (see GRACE; BLESSING; ELECTION), who proves most attractive as a symbol of religious universalism compatible with the cosmopolitanism then penetrating Judaism. Whoever will be well-meaning towards Abraham and his offspring will pass his life in happiness (*Gen* 12:3). It is this interpretation of the figure of Abraham that Philo has in mind when writing his treatise *De Deo,* where he unfolds his ideas about the creator and his relationship to the universe. The God of the Pentateuch creates the world; he expels Adam and Eve (q.v.) from paradise (q.v.); later he annihilates the sinful, saving only Noah (q.v.) and his family to make a new start for human history, a history which culminates in Moses' encounter with him on Mount Sinai (see THEOPHANY). This is the internal logic of the events as narrated in Genesis and Exodus; taking possession of the holy land (see SACRED PRECINCTS) means the fulfillment of divinely-guided history and the god who has caused those events to happen is the god of Israel (see CHILDREN OF ISRAEL). But now, centuries after the composition of the Pentateuch, the perception of the world has changed and the image of the creator has changed, too.

The Septuagint refers to God as *kyrios* and as *theos*. Do these two names point to different beings? Philo asks himself in *De specialibus legibus*. He answers in the negative. It is due to God's remoteness from the world that people discern the different ways in which God's overwhelming creative power takes effect within the universe (see NATURE AS SIGNS). Therefore humans give him names with reference to the different ways of his acting, names that no longer point to Israel, his people, but to the cosmos as a whole, as Philo expounded in *De Deo*. The God of the Pentateuch has become a universal deity; he might still maintain a special relationship with Israel, but his never-ceasing creative actions pertain to the universe and to humanity as a whole, regardless of nationality or place of dwelling (see STRANGERS AND FOREIGNERS). When God reveals himself to Moses in the burning bush, the prophet asks him in whose name he is to accompany the Israelites out of Egypt and God answers: "I am,"or "I shall be," "who I shall be." In the Septuagint this sentence is rendered as *Ego eimi ho ōn,* "I am the existing one." This translation of the somewhat enigmatic Hebrew phrase of Exodus 3:14 is indicative of the changed conception of the creator that we have just outlined, and it is in this way that Philo interprets it in *De specialibus legibus*. God discloses his identity by stressing the personal character of himself — *ho ōn,* not *to on* — but at the same time he remains the hidden one, who himself cannot be perceived by man in this world (see FACE OF GOD; ANTHROPOMORPHISM). The fact that God is the existing one can only be known indirectly, by regarding the effects of his uninterrupted creative actions which constitute the cosmos, as Philo tells us in his treatise *De Deo* (Siegert, Abrahams

Gottesvision, 79). As the builder and indefatigable ruler of the cosmos the "existing one" is as near to the Israelites as to any other people regardless of their paganism, the history of Israel being just one sign among innumerable others of his being at work (see SIGNS; SHEKHINAH).

Attention can now be turned back to the Qur'ān. In the famous sūra "The Star" (Sūrat al-Najm, Q 53), Muḥammad relates the two visions (q.v.) he has had and connects them to his understanding of the divine. This sūra proved problematic for later Muslim commentators who grappled with the question of God's invisibility in this world and, as a rule, declared that it was the angel Gabriel (q.v.) who had appeared to Muḥammad — an interpretation that retrojects conceptions developed by the Prophet at a later date to an earlier time. In Q 53, the Qur'ān speaks frankly about Muḥammad's encounter with the one God, repudiating the reproaches of Muḥammad's fellow Meccan citizens who consider him a fool for what he relates (see OPPOSITION TO MUḤAMMAD). But what he relates is nothing but "an inspiration he is inspired with, taught by one, strong in power, forceful. He stood straight, upon the high horizon, then he drew near and let himself down, until he was two bowlengths off or nearer and inspired to his servant what he inspired. The heart (q.v.) did not falsify what it saw. Do you debate with him as to what he sees? He saw him, too, at a second descent, by the lote tree at the nearest boundary, near which is the garden of the abode (see GARDENS; TREES; AGRICULTURE AND VEGETATION), when the lote tree was strangely enveloped. The eye turned not aside nor passed its limits. Verily, he saw one of the greatest signs (q.v.) of his lord" (q.v.; Q 53:4-18).

The following verses (q.v.) in the same sūra (Q 53:19-30), denouncing al-Lāt, al-ʿUzzā, and Manāt, three of the goddesses worshipped in pagan Mecca (see SOUTH ARABIA, RELIGIONS IN PRE-ISLAMIC), as powerless names, might be a later insertion, as Bell suggests. The argument made against their divine character is in keeping with the pagan milieu in which daughters were not much appreciated (see CHILDREN; INFANTICIDE; GENDER; WOMEN AND THE QUR'ĀN; PATRIARCHY). Thus ascribing daughters to God, the mighty one, is tantamount to giving offence to him. After this subject has been discussed at length, touching upon the male gender of the angels and emphasizing the incomparable power of the lord (see POWER AND IMPOTENCE), Muḥammad embarks on a description of the extent to which God governs the cosmos (Q 53:33-48): "Have you considered him who turns his back, gives little and is niggardly? Is knowledge of the unseen with him so that he sees? Or has he been told of what is in the pages of Moses, and Abraham who fully performed (his task; see BOOK; HEAVENLY BOOK)? That no burden-bearer bears the burden of another one; that man gets exactly (the result of) his striving; and that (the result of) his striving will in the end be seen; then he will be recompensed with the fullest recompense (see REWARD AND PUNISHMENT); that to your lord one comes at last; that it is he who causes laughter (q.v.) and weeping (q.v.); that it is he who causes to die and causes to live (see DEATH AND THE DEAD; LIFE; PAIRS AND PAIRING); that he created the pairs, male and female, from a drop emitted in desire; that upon him it rests to produce a second time (see RESURRECTION); that it is he who makes rich and gives possession (see WEALTH; PROPERTY)."

In the same manner the lord directs history (see HISTORY AND THE QUR'ĀN; GENERATIONS). It is he who destroyed the peoples of ʿĀd (q.v.) and Thamūd (q.v.) and who drowned the people of Noah (see DROWNING) after he had ordered him to

warn them against their frivolous way of life (see PUNISHMENT STORIES; CHASTISEMENT AND PUNISHMENT). One cannot cast doubt on the overwhelming power of the lord, who now has summoned Muḥammad to warn his countrymen, for the day of judgment has drawn near (cf. Q 53:50-8; see LAST JUDGMENT; APOCALYPSE).

This is the content of Q 53, to the exclusion of the passages identified as late insertions by R. Bell. The text brings to the fore the main theological subjects of the Hellenistic interpretation of Abraham's religious experiences pointed out above: The lord reveals himself to Muḥammad as the mighty one, who not only determines every being's fate (q.v.; see also DESTINY) but also the history of humankind as a whole; his power cannot be resisted, therefore it is wise to comply with his ordinances. What is added to this conception of the divine is Muḥammad's prophetic self-confidence: he alludes to Noah as his predecessor, a topic which is displayed at some length in Q 71 (Sūrat Nūḥ, "Noah") with clear reference to his failure with the Meccans. Furthermore, it should be remembered that both Moses and Abraham are said to have received "pages." When one reflects on the following verses, one must conclude that those "pages" did not contain the divine law (see LAW AND THE QUR'ĀN), but were registers of events to come and, perhaps, of God's judgment (q.v.) on those who had lived sinful lives (see VIRTUES AND VICES, COMMANDING AND FORBIDDING; EVIL DEEDS). The seeds of the theological question about the extent of a human's capacity to determine his or her own actions (see FREEDOM AND PREDESTINATION) can be discerned in this qur'ānic passage; later on they will germinate in Medina, as shall be seen. Suffice it here to remark that Q 53:38-9 ("That no burden-bearer…") will later, in Khārijī polemics, be interpreted as evidence of human responsibility for actions — which, in Khārijī thought (see KHĀRIJĪS), originates in the human capacity to do so. This is a striking example of distorting the original meaning of a qur'ānic passage to accord with political circumstances (see POLITICS AND THE QUR'ĀN).

In comparison with Q 53 the verses of Q 6 quoted above do not, at first sight, prove to be indicative of the Qur'ān's identification of Muḥammad with Abraham. The story is told of how Abraham came to know the identity of the one creator, and there are themes in this passage that can be traced back to what is told in the Book of Jubilees: Abraham denounces idolatry, thereby kindling the wrath of his people. But there is another remarkable detail in this passage. Q 6:75 seems to be an enigmatic insertion interrupting the flow of the narrative: "Thus do we show Abraham (our) holding sway over the heavens and the earth, and (it is) in order that he may be one of the convinced." Such a guiding vision of God is the necessary condition for knowing him (see INTELLECT). This knowledge cannot be deduced from nature or from the course of history through human reflection (see REFLECTION AND DELIBERATION). On the contrary, humans must be guided by the creator to be open to deliberation of the kind expounded in the following verses. The cosmos as a whole is a sign of God's unceasing creative power, but humans are not able to decipher this sign without his assistance. That means that the creator is not an anonymous force asserting itself in this world in which humans must find access to some understanding of its nature; if the human mind were restricted to its own very deficient capacities, it would fail. The creator, as conceived of by Philo and as he reveals himself to Abraham in Q 6, is the existing one — *ho ōn* — i.e. he has

an individuality, a personal character. Certainly his individuality is unfathomable, but because of this personal character God is characterized by volition, too. It was his intention to show Abraham his all-effecting being, as it is now his intention to reveal himself to Muḥammad. Were it not for God's intention, Abraham would not have been one of the guided ones; he would have gone astray like his countrymen. One must also admit that the creator's volition may be to the detriment of humanity; this possibly grievous consequence of the Abrahamic conception of God is hinted at in Q 6:81: idolatry is not forbidden because it proves futile; it must be dismissed from one's mind because God has not sent down any authority for it. Indirectly, the question of independent human reasoning is raised here and this shall be touched upon.

The last subject to mention when treating the position of Islam within the religious history of late antiquity is the cult of Abraham. As Sozomenos told us, there was a sort of pagan pilgrimage to the grove of Mamre. One might suppose that the cult of Mamre was emulated at Mecca; the sources on the — legendary — history of Mecca and the Quraysh (q.v.) abound in references to the influence of Palestine and Syria on the Ḥijāz, and tell us a lot about the Quraysh interest in the area on the northwestern fringe of the peninsula. Once more, it is necessary to look at Q 6: At that crucial moment when Abraham becomes aware of the futility of idolatry he sets "(his) face towards him who opened up *(faṭara)* the heavens and the earth, as a *ḥanīf*" (Q 6:79) and he dissociates himself from polytheism. Turning one's face towards the lord is the spontaneous corollary of knowing the creator. As a rule, this gesture is expressed in the Qur'ān by the verb *aslama,* and the person who has gained such knowledge is referred to as *ḥanīf:* "Who is better with regard to his religious practice *(dīn)* than he who surrenders *(aslama)* his face to God, doing good meanwhile (see GOOD DEEDS), and follows the creed *(milla)* of Abraham as a *ḥanīf*?" (Q 4:125; see also RELIGION). The *ḥanīf*s are men who transform into a ritual the singular gesture indicating their attainment of true knowledge (see RITUAL AND THE QUR'ĀN); they reiterate that gesture several times a day, thus confirming that overwhelming truth and giving it a stability which is required in order to conduct their lives in keeping with it. The ritual prayer (q.v.), the center of Muslim religiosity, has its roots immediately in the history of Abraham, as it evolved in late antiquity. Except for the meager information in Sozomenos there seems to be no further evidence about the rites of the pagan cult of Abraham. But it is known for certain that the *ṣalāt* was not initiated by Muḥammad. It was the *ḥanīf* Zayd b. ʿAmr who used to practice it at Mecca. In al-Shām he had become acquainted with the Abrahamic veneration of the one God; back in Mecca, he preached against idolatry and performed a *ṣalāt* every evening (Nagel, Abraham in Mecca, 143).

Abraham is the key figure who leads us to a better understanding of the place of Islam in religious history. Using this key figure, fundamental theological conceptions of the Qur'ān can be related to an amalgam of ideas of Jewish and Hellenistic origin: God is the one creator and untiring governor of the cosmos; he determines everything; humanity is guided to know him according to his volition and after that people interpret everything in the universe with respect to this knowledge; the ritual of prayer is symbolic of the act of attaining that ultimate knowledge and testifies to an individual's

willingness to live his life before the face of the One.

The main theological themes of the Qur'ān: God and creation

A very short summary of the qur'ānic idea of the divine is found in Q 112:1-3: "Say: 'He is God, one, God, the uniform one *(al-ṣamad)*; he brought not forth, nor has he been brought forth; co-equal with him there has never been any one.'" God is the one and uniform god; that means there is nothing with him or in him which is not of the divine, transcendent nature of his essence and for that reason he cannot be equal to any created being. The anti-Christian polemical tone of these verses is evident (see POLEMIC AND POLEMICAL LANGUAGE).

The almost dogmatic statement in Q 112 does not, however, mark the starting-point of qur'ānic theological reflection. In the earliest revelations pure monotheism is not called for. Those who listen to Muḥammad's preaching — one should avoid speaking of "the Meccans" at that stage of his career — are urged to pay veneration to the "lord, the most high." A human must purify himself (see CLEANLINESS AND ABLUTION), a very prominent demand, especially in the early sūras, because he is thought to have earned his wealth in an unlawful manner (see LAWFUL AND UNLAWFUL). Though one may do more than just one's duty with respect to this demand, one must not ask God for any compensation. One is to do good to the poor (see POVERTY AND THE POOR) simply "out of desire for the countenance of one's lord, the most high" (Q 92:20). The "countenance," literally the face of God, in this early revelation and also in later qur'ānic speech (e.g. Q 13:22) is the *pars-pro-toto* expression by which God's transcendent being is rendered conceivable in human thought. When the process of recognizing the oneness of the creator attains its aim, as has been demonstrated by Abraham, one turns one's face to God, thus establishing a face-to-face relationship with him, and this relationship is renewed every time one devotes oneself to one's ritual duties. "The lord, the most high," of course, still is not the One whom Q 112 preaches in uncompromising words. "The most high lord" implies there are "less high" divine beings. Muḥammad had to make his way to absolute clarity in this matter through painful struggles, which are echoed in Q 53 and in the famous story about the so-called Satanic verses (q.v.). Though Q 112 is an unmistakable plea for radical monotheism and untainted transcendence and therefore sheds at least some light on Q 92:20 — to which Q 87:1 should be added —, the face-to-face concept of that early revelation has been preserved and proves fundamental in the various kinds of Muslim ritual. There is thus a characteristic tension between a fully elaborated intellectual monotheism, on the one hand, and an eager search for some kind of immanence that is tolerable within the framework of sound theological reasoning and indispensable for an emotional experience of the ritual, on the other. This tension may be deduced from Muḥammad's career because he grew up in a polytheistic milieu; but it may also be due to the conception of the continuously acting creator that had evolved in late antiquity, as has been shown above. At any rate, this tension, present in the qur'ānic interpretation of deity, will encroach on Muslim theological speculation and will cause a rupture between pure metaphysics and the study of the *sharī'a*, i.e. "applied theology."

"Glorify (see GLORY; GLORIFICATION OF GOD) the name of your lord (see BASMALA) the most high, who created and formed, who assigned power and guided, who brought forth the pasture, then made it

blackened drift" (Q 87:1-4). Already the "lord, most high" is the one power that determines everything in this world, the good and the bad things. His image is that of a sovereign governor who rules without paying attention to the benefit of his subjects; or at least they are not in a position to discern the motives behind his decree. According to his volition, which is inaccessible to human reason, he created the world out of nothing, and since that time he has been caring for it, even looking after the tiniest details. The Qur'ān frequently stresses this idea, making use of the impressive picture of a ruler sitting on his throne (see THRONE OF GOD; KINGS AND RULERS): this is the posture befitting an omnipotent creator. By comparison with this idea, the reminiscence of creation in biblical history is rather shadowy: "We have created the heavens and the earth and what is between them in six days (see DAY; DAYS OF GOD), without being affected by fatigue (see SLEEP; SABBATH)." Thus reads Q 50:38. Here God's indefatigability is pointed out in order to encourage Muḥammad to perform the prayers assiduously. In other passages concerned with creation, God is referred to as "your lord" (Q 7:54; 10:3), "God" (Q 32:4), or "he" (cf. Q 11:7; 25:59; 57:4). In each of these six references we are told nothing more than that God created the world (q.v.) in six days; what God did on each of these days is passed over in silence. But in each case God's throne is mentioned, e.g. Q 7:54: "Verily your lord is God, who created the heavens and the earth in six days, then seated himself on the throne causing the night to cover the day, following it quickly, and the sun and the moon and the stars, subjected to service by his command; is it not his to create and to command? Blessed be God, lord of the worlds." Only in Q 11:7 is there a faint reminder of what the Bible says about creation: "He it is who created the heavens and the earth in six days, and his throne was upon the water.…" But again it is the throne, symbol of God's unquestionable sovereignty, that Muḥammad bears in mind and the Qur'ān employs — not the biblical "spirit" (q.v.) of God, which seems less instrumental in portraying the creator as the ruler of an empire.

In the qur'ānic text the idea of continuous creation is closely connected with two further theological themes: the first is that God's incessant creative action is indicative of his all-embracing care for his world, and the second that human beings should consider this care as an irrefutable proof of the truth of resurrection and final judgment. To begin with the first theme, the Qur'ān says that God's creative action is tantamount to his unlimited mercy (q.v.); both are almost synonymous in the qur'ānic conception of the creator. The famous Q 55 (Sūrat al-Raḥmān, "The Merciful") bears witness to this most vividly: The merciful lord created this wonderful world to the benefit of humankind; neither they nor the jinn (q.v.) can deny this; everyone in this world will pass away, except "the face of your lord full of glory" (*dhū l-jalāli wa-l-ikrāmi,* Q 55:27); "Those in the heavens and the earth make request of him, each day he [is engaged] in something.… O company of jinn and men *(al-ins),* if you are capable of passing through any of the regions of the heavens and the earth, pass through; you will not pass through without authorization… There will be sent upon you a flame of fire and smoke, and you two will not find help… Then when the heaven is rent and becomes rosy like [burning] oil, which then of the benefits of your lord will you two count false?" (Q 55:29-38).

No creature can act without God's permission, and when he decides to destroy this world, thereby doing the utmost harm

to humankind, even this will be to humanity's benefit; it will be part of God's mercy. In addition to that, God's capacity for incessant creative action is the Prophet's best argument to warn his unbelieving countrymen about resurrection and judgment; to quote Q 11:7 again, this time passing to its concluding phrases: "… and his throne was upon the water; that he might try you as to which of you is best in deed (see TRIAL; TRUST AND PATIENCE). If you say: 'Verily you will be raised up after death!' those who have disbelieved will say: 'This is only magic (q.v.) manifest.…'"

We have already pointed to the contradiction which arises from the assumption that the totally transcendent creator to whom nothing is equal (Q 42:11) is simultaneously experienced as the omniscient and wise one who takes care of human welfare and is therefore "nearer to him [each person] than [his] jugular vein" (Q 50:16; see ARTERY AND VEIN). Is there anything bridging the gap between transcendence and immanence, which is felt already in Philo's idea of *ho ōn?*

"God it is who created the heavens and the earth and what is between them in six days, and then sat firm upon the throne — apart from him you have neither patron nor intercessor (see CLIENTS AND CLIENTAGE; FRIENDS AND FRIENDSHIP; INTERCESSION); will you not then be reminded? He manages the affair from the heaven to the earth, then it mounts up to him in a day, the length of which is a thousand years as you reckon" (Q 32:4-5). God knows everything, whether concealed or open; his creation testifies to his unsurpassable skill. These verses use the Arabic word *amr* that refers to an essence which is capable of linking God's creative power to the results of its activity, thus making his continuous determining of this world conceivable to humanity. Bell translates *amr* with "affair" (cf. Q 10:3; 16:1; 17:85; 97:4) or "command" (Q 7:54), a rendering which, in the opinion of the present writer, does not suit the qur'ānic meaning of the word. To grasp the idea expressed by the term let us look at the following two qur'ānic passages: "The *amr* of God has come, seek not to hasten it; glory be to him and exalted be he above all that they associate [with him]!" (Q 16:1). The *amr* of God has come; it is now present in his work and it is just for this *amr* that God is the exalted One. *Amr* is something like his decree, an uninterrupted influx of his volition into this world. There is no clear statement as to the ontology of *amr*. But as soon as the Prophet's understanding of the revelation becomes connected with the idea of transmitting a heavenly book, the term is interpreted as denoting God's all-embracing, incessant determination of things in this world. Part of this *amr* is the "spirit" manifest in the words of the qur'ānic revelation: "They ask you about the spirit; say: 'The spirit belongs to my lord's *amr,* but you have no knowledge bestowed upon you except a little'" (Q 17:85; see also HOLY SPIRIT). When dealing with prophecy below, this question will be revisited.

Humankind

The contradiction within Muḥammad's conception of the divine — the transcendent, inaccessible lord, essentially different from his creation versus the omnipresent and omniscient care-taker — reasserts itself within the qur'ānic understanding of humankind, and the twofold roots of qur'ānic theology become more palpable in this context. Q 32:5-9 can serve as a starting-point of analysis: "He manages the *amr* from the heaven to the earth… That is the knower of the hidden and the revealed, the sublime *(al-ʿazīz),* the compassionate, who has made well everything that he has created. He created man at the first from clay; then appointed his progeny

to be from an extract of a base fluid. Then he formed him and breathed into him of his spirit, and gave you hearing and sight (see HEARING AND DEAFNESS; VISION AND BLINDNESS; SEEING AND HEARING; EYES; EARS) and hearts — little gratitude (see GRATITUDE AND INGRATITUDE) do you show." The shaping of humans means the natural process of procreation, as can be inferred from many other passages of the Qur'ān (see BIOLOGY AS THE CREATION AND STAGES OF LIFE; SEX AND SEXUALITY). Yet there seems to have been a remarkable development of this conception in the Qur'ān. In the very early sūras only natural procreation is mentioned (Q 53:45f.; 75:37-9; 77:20-3; 86:5-7); the growth of the embryo in the womb (q.v.) is the clearest evidence of God's creative power (Q 96:2). Then the Genesis account of the history of the creation of man finds its way into Muḥammad's revelations (see UMMĪ).

In addition to Q 32:5-9 quoted above, Q 18:37, 22:5, 23:12, and 40:67 must be considered; in each case God creates man from clay and immediately after that makes his "progeny from an extract of a base fluid *(nutfa)*." At the outset of Muḥammad's prophetic career, the natural world and course of nature are the best evidence of the creator's activity; there seems in the qur'ānic revelations to be no place for human singularity, which would separate humans to some extent from the rest of created beings. Then this idea is introduced into the qur'ānic reasoning by way of the biblical traditions that go back to Genesis: "At first" man is formed out of clay. God breathes the spirit into him, thus endowing him with "hearing and sight and a heart," i.e. with reason. It is this act of being created from clay which establishes humankind's special relationship with God, as expressed several times in the Qur'ān: By shaping the human being from clay before the beginning of mundane history God has honored him by giving him his special attention; no other beings were considered worthy of a primordial shaping before being initiated into the continuous process of creation. It is for this reason that God orders the angels to prostrate themselves before Adam (see BOWING AND PROSTRATION). All except Iblīs (see DEVIL), who deems himself nobler than Adam, obey; therefore God expels Iblīs from paradise (q.v.): " 'Verily you are stoned *(rajīm;* see STONING) and upon you is the curse (q.v.) until the day of judgment.' (Iblīs) said: 'O my lord, grant me respite then till the day of their being raised up.' (God) said: 'You are one of the respited *(munẓarīn)* till the day of the time appointed.' (Iblīs) said: 'O my lord, as you have perverted me, I will make things appear beautiful to them in the earth, and I will pervert *(aghwā)* them all together, except those of them who are your single-hearted *(al-mukhlaṣīn)* servants" (Q 15:34-40; see SERVANT; FALL OF MAN). This is granted to Iblīs by God but his faithful servants will not be seduced; they will enjoy paradise in the hereafter, whereas the perverted will suffer eternal pain (see SUFFERING) in hell (*jahannam,* Q 15:28-40; cf. 38:71-85; see HELL AND HELLFIRE).

To what extent is the human being burdened with individual responsibility (q.v.)? This question arises when one reads the story in which humans are declared subject to a bet made by their creator and Satan. Those who are God's servants will resist the seducer's suggestions, the others will not — the individual's fate after the day of judgment seems to be predetermined. Here one should recall that for a human to know the one creator is due to God's volition, too. Thus humans are not just part of nature, whose growing and passing away is the manifestation of God's decree in this world; humans must do something about good and evil (q.v.), otherwise there would

be no reason for judgment (q.v.), for eternal reward or punishment. A creator who withdraws from his work at least temporarily, thus asserting his transcendence, would be appreciated as a neutral judge of humans; but what about the "creator of everything" — the sinful acts of his creature included — a creator nearer to each human than his jugular vein? In fact, qur'ānic theology has no systematic conception of the human being as a responsible actor. One may suppose that this deficiency is due to the qur'ānic understanding of the divine as analyzed above. God's *amr,* permeating everything extant in the cosmos, reminds one of something like pagan animism or fatalism, as interpreted in the light of the belief in the one creator and further overshadowed by reminiscences of the biblical tradition, which tends to give prominence to individual responsibility.

In the *sīra,* the Prophet's Meccan enemies sometimes call him a Sabian (q.v.; see e.g. Balādhurī, *Ansāb,* v, 14; see also RELIGIOUS PLURALISM AND THE QUR'ĀN). Although this may be for polemical reasons, there is an interesting remark in al-Shahrastānī (fl. sixth/twelfth cent.) that comments on the religion of the ancient Sabians which, as must be inferred from the context, was well-known in Arabia in Muḥammad's time. The Sabians, al-Shahrastānī tells us, believe in the acquisition *(kasb)* of actions whereas the *ḥanīf*s "maintained the innate disposition of man" *(fiṭra)*. Turning to the Qur'ān we find evidence of both ideas. The term *kasb* occurs very often, e.g.: "But how (will it be) when we gather them to a day of which there is no doubt, and each one will be paid in full what he has acquired *(kasabat),* without being wronged?"(Q 3:25; cf. 2:281 and many other references). Acquisition is not to be understood as the actions of human beings directed by their own will and performed according to their own deliberations. This absence of self-determination must be inferred from God's comprehensive care for his creation and creatures; it is also clearly pronounced in the Qur'ān itself: "They have no power over anything that they may have acquired, and God does not guide the people of the unbelievers" (Q 2:264). It is God who allots the means of subsistence *(rizq):* "My lord makes generous provision for whom he wills, or stints, but most of the people have no knowledge" (Q 34:36; numerous other references). Following the theological discussion that was to evolve in the first centuries after the Prophet's death, the "acquisition of actions" has to be interpreted as the manifestation of God's decree (*amr)* to be discerned when one observes a certain individual; in fact, the individual is nothing but the substance needed for making God's incessant acts of governing perceptible in this world and to its inhabitants. Insofar as it is the individual who makes perceptible a certain act wrought by God, this individual acquires the respective act. One might argue that in the Qur'ān the impersonal power of fate has assumed the character of a series of the personalized orders of the creator, tailored for the individual on his or her way through this life.

The second idea mentioned by al-Sharastānī claims a certain disposition which is innate and unchangeable in human beings; this *fiṭra,* says he, is part of the belief of the *ḥanīf*s, who, as can be concluded from the Qur'ān (cf. Q 16:120), are the followers of Abraham's ritual. *Fiṭra* only occurs once, in Q 30:30, and dates back to the middle or even late Meccan period of Muḥammad's career: "Set your face towards religious practice as a *ḥanīf* — the innate disposition laid down by God upon which he has created people *(nās)*; there is no alteration of the creation of God. This is the eternal religious

practice, but most of the people do not know." Looking back at the story of how Abraham came to know the one creator (Q 6:74-83) and how he responded to the vision granted to him, we are now in a position to fathom its meaning: Of course, everything one does is wrought by God; this is borne out by the idea of acquisition; but the frightening consequences of this conception are warded off by the establishment of Islam, the face-to-face relationship between humans and their creator. This relationship, stabilized by ritual — "Set your face towards religious practice," has to occupy the center of human life; one has to be aware of God's untiring activity, has to suppress every impulse of self-conceit including the misperception that one's actions are one's own. Bearing this in mind, acquisition of good or evil will no longer be a cause of concern: Professing and living Islam is tantamount to preserving the innate disposition un-spoilt; Islam eclipses the perpetual challenge of right or wrong. The function of ritual in Muslim life and its preeminence over dogmatic ethics become apparent. What counts most is a human's trustful devotion to his creator, a behavior which almost automatically will save him from doing evil: "Recite what has been suggested to you of the book (q.v.), and observe the prayer, for the prayer restrains from indecency (*al-faḥshā';* see ADULTERY AND FORNICATION) and what is disreputable (*al-munkar),* and surely the remembrance *(dhikr)* of God is greater…" (Q 29:45).

Muslim edifying literature dwells at length upon the importance of unlimited devotion to God's actions, on the necessity of strict observance of the ritual and on remembering the creator, which is developed into a refined skill of continuous spiritual presence before him. This leads us back to reason and its role in human life. In accordance with the concepts of *kasb* and *fiṭra,* reason could not serve as a tool to find one's way through the activities and dangers of this world. As must be inferred from the precedent of Satan's condemnation, the function of reason is only to justify and effect total obedience to God's orders: Satan refused to prostrate himself before Adam, who had been made of clay, explaining his refusal by pointing out that his own nature, made of fire, was nobler than Adam's (Q 38:76). Reasoning, in this case within the framework of analogy (see LITERARY STRUCTURES AND THE QUR'ĀN), is subordinate to God's will, as has already been elucidated in the story of Abraham's way to the knowledge of the one creator. It is not because of Abraham's reasoning that idolatry is futile, but because God does not authorize human beings to practice idolatry. Keeping to the gist of this argument, humans could discern that their reasoning, if not immediately guided by God, may be successful as measured by the yardstick of mundane affairs, but its success according to the measure of the creator remains inherently doubtful. Success in mundane affairs may be tantamount to sin; for instance, a cunning businessman might multiply his profit by giving interest-bearing loans, thus trying to acquire more than the livelihood (*rizq,* e.g. Q 16:71) God had allotted to him (see USURY; TRADE AND COMMERCE). Such reasoning means to turn one's face away from God and to become entangled in passions for created things. It is from this point of view that usury *(ribā)* is prohibited. There is only one exception to this rule: fighting (q.v.) for the victory (q.v.) of God's Prophet and his community means lending to God a good loan (see DEBT), which he will double (Q 57:10-11; see also EXPEDITIONS AND BATTLES; JIHĀD). To encourage the believers to do so, Q 9:111 was revealed: "God has bought from the believers their persons and their goods at the price of the garden (q.v.; in store) for

them, fighting in the way of God and killing and being killed (see BLOODSHED) — a promise (see also OATHS; CONTRACTS AND ALLIANCES; BREAKING TRUSTS AND CONTRACTS) binding upon him in the Torah (q.v.), the Gospel (q.v.), and the Qur'ān; and who fulfils his covenant (q.v.) better than God? So rejoice in the bargain you have made with him.…"

Faith (q.v.; *īmān*) is proved by ruthless fighting against the non-Muslim enemies (q.v.). Those of the Prophet's adherents who do not protect their own lives will be superior to their fellows (e.g. Q 4:96) in the hereafter (see MARTYRS); they are sure to be rewarded with paradise, whereas normally God grants high ranks in the world to come according to his own impenetrable discretion (e.g. Q 12:76). In any case, during the decisive years of struggle the Qur'ān came to allude to the crucial theological subject of a person's justification by way of individual merit, an idea that proves substantially alien to the fundamental conception of the divine underlying Islam.

Prophecy

This is an illuminating example of the wide range within which the qur'ānic theological conceptions would oscillate according to the circumstances (see PROPHETS AND PROPHETHOOD). The same is true of the understanding of prophecy, which undergoes far-reaching changes over the life of the Prophet and the qur'ānic revelations. Here these changes will only be discussed as far as theology is concerned. A first step will embark on a short inquiry into the scope of knowledge transmitted to humankind through revelation; a second will attempt to explain the qur'ānic concepts of the relationship between transcendence and immanence in the context of the various stages of Muḥammad's prophetic career.

God creates Adam to be his vicegerent in this world. To fulfill this duty, Adam is dependent on a sufficient amount of skill, which, as has been shown, he cannot acquire on his own; he needs divine guidance. Accordingly, the creator does not withhold knowledge from him: "[God] taught Adam all the names. Then he mustered [all things created] before the angels and said: 'Tell me the names of these, if you speak the truth!' They said: 'Glory be to you! We have no knowledge but what you have taught us (see TEACHING; IGNORANCE). You are the knowing, the wise (see WISDOM).' He said: 'O Adam, tell them the names [of the things created]!' Then when Adam told them the names, God said: 'Did I not say to you that I know the secret [things] of the heavens and the earth?'…" (Q 2:31-3).

Adam, considered as the first prophet, received complete knowledge of everything in this world. Therefore he is capable of being the creator's vicegerent; he is to act within God's cosmos in accordance with the divine decree, continuously remaining face to face with God. As a prophet, Adam is granted the knowledge of which humanity is destined to make use. Revelation means the act of granting that knowledge, which is not specified as divine or theological but pertains to all mundane affairs as well as to ritual and eschatology (q.v.) and to those attributes of God that human beings are allowed to understand.

Knowledge transmitted by revelation is as all-embracing as God's decree and its effects are manifest everywhere in the cosmos (see COSMOLOGY AND THE QUR'ĀN). We have already stated that in the qur'ānic view revelation is closely related to the concept of *amr.* This relationship becomes even more apparent if we analyze the meaning of the Arabic root *w-ḥ-y,* which is used throughout the Qur'ān, even at an early stage, to describe the event of revelation: Abraham was a *ḥanīf:* "We bestowed

upon him in this world a goodly (portion), and verily, in the hereafter he is among the upright. Then we suggested *(awḥaynā)* to you: 'Follow the creed of Abraham, as a *ḥanīf,* and he was not of the polytheists!'" (Q 16:122-3; cf. 16:120). It should be noted that in this and related contexts (e.g. Q 12:15), translating *w-ḥ-y* as "suggestion," as Bell does, does not imply a specific fixed wording, suitable for a heavenly book (q.v.). In other cases (e.g. Q 7:117 and 160) the expression is followed by God's order reflecting an actual situation: "We suggested to [Noah]: Make the ship under our eye and according to our suggestion…" (Q 23:27; see ARK). Yet it is not only the prophets who receive divine suggestions: "(God) finished them (as) seven heavens and inspired *(awḥā)* each heaven [with] its command" (*amr,* Q 41:12).

From perhaps the beginning of the second half of the Meccan revelations, there is a remarkable change in the conception of prophecy, though the older concept is never completely abandoned: "Thus we have suggested to you a spirit *(rūḥ)* belonging to our affair *(amr)*. You did not [formerly] know what the book and the faith were. But we have made it a light (q.v.) by which we guide whomsoever we please of our servants, and verily you will guide to a straight path, the path of God…" (Q 42:52-3; see PATH OR WAY). Here "suggestion" is more than a single command and more than God's decree; it has become the text of a law teaching humans to behave according to the creator's prescriptions, a text suitable to be written down in a book (see LITERACY; ILLITERACY). Still, "suggestions" have their origin in the realm of *amr* which is hidden from human senses (cf. Q 3:44; 11:49; 12:102), but part of this *amr* makes itself manifest as a holy message valid beyond time (q.v.). The creator, at work without interruption, becomes more and more personalized as the revelations progress; the human beings are gradually deprived of their shelter in the midst of nature, though they still remain completely dependent on God's determination; the feeling of existential insecurity arising from this loss of sheltering is compensated for by turning to God *(islām)* and this compensation may be enhanced by delivering oneself to fighting for the sake of God (Q 9:111) or to incessant remembrance of him (Q 29:45). At this critical stage of the evolution of qurʾānic theological conceptions, the Prophet is seen to become more than a warner — namely the transmitter of divine law, summoned by the creator to pronounce his legislation, his guidance of the obedient and his punishment of the disobedient. This legislation, together with the record of divine guidance and punishment, are to be recited as a heavenly book (see PRESERVED TABLET).

In the Qurʾān there are traces of a discussion between Muḥammad and the Meccans about such a heavenly book. The Prophet's enemies evidently argued that he should ascend to heaven in order to procure a divine message for them or for himself. In fact, al-Wāqidī (d. 207/822) relates that Muḥammad found himself raised into heaven (see ASCENSION) on the seventeenth of Ramaḍān (q.v.), some eighteen months before the *hijra,* which is dated to Ṣafar of the first year of the Muslim calendar (Ibn Saʿd, *Ṭabaqāt,* i/i, 143). "They say: 'We shall not give you credence till you cause a spring to bubble up for us from the earth (see SPRINGS AND FOUNTAINS; MIRACLES; MARVELS)… or you ascend into heaven; nor shall we give credence to your ascent until you bring down to us a writing *(kitāb)* which we may read'" (Q 17:90-3). It should be noted that now, near the end of Muḥammad's Meccan years, revelation tends to be conceived of as a sending down *(tanzīl)* of the divine message. The personalized God establishes personal

relations with his messenger (q.v.); this is a very important innovation in the Prophet's view of himself and his mission. In Medina, where he is free of the sharp criticism of the Meccans, the far-reaching consequences of this innovation will be realized. The majority of the Meccans, it is true, were not much impressed by his claim to have received a divine book: "If we were to send down a book (written) upon parchment and they were to touch it with their hands, those who have disbelieved would say: This is nothing but magic manifest" (Q 6:7; see SCROLLS; SHEETS; WRITING AND WRITING MATERIALS). Even if God had made his messenger an angel, that angel must have assumed the shape of a human being in order to transmit the message, and therefore the Meccans would have rejected him as well. "Messengers have been mocked before you…" (Q 6:10; see MOCKERY).

Q 97 (Sūrat al-Qadr, "Night of Destiny/Power"), celebrating the "Night of Power" (q.v.), seems to legitimate the new mode of revelation; in that night "the angels and the spirit (cf. Q 17:85) let themselves down, by the permission of their lord, [bringing] all kinds of divine decree" (*amr*, Q 97:4). In Medina, the month of Ramaḍān is chosen for commemorating the Prophet's vision which he had been granted eighteen months before leaving Mecca. As Q 2 (Sūrat al-Baqara, "The Cow") is said to have been revealed about eighteen months after his arrival in Medina, the famous verse of Q 2:185 may highlight the third anniversary of the event, now considered decisive for the Prophet's career. As an aside, the problem of the change in the understanding of revelation is closely related to the question of writing down the revealed texts, i.e. making a palpable book of "parchment" (see MUṢḤAF; MANUSCRIPTS OF THE QUR'ĀN; EPIGRAPHY AND THE QUR'ĀN). But since the focus here is the theological implications, it is only possible to discuss the last stage of Muḥammad's image of himself as a prophet.

It is evident that most of the qur'ānic texts dealing with divine legislation and with divine comments on actual situations the Prophet and his community endured are of Medinan origin. When reading these parts of the Qur'ān one gets the impression that the creator has become an alter ego of his Prophet. The formula "God and his messenger" is now smoothly incorporated in his speech. For instance, the Qur'ān enjoins his followers to pay unquestioned obedience to Muḥammad and to those he appoints to some duty or other: "O you who have believed, obey God and obey the messenger and those of you who have the command, and if you quarrel about anything, refer it to God and the messenger…" (Q 4:59; cf. 3:32, 132; 4:80; 8:24, 27). It is not surprising that this kind of revelation for a particular occasion (cf. Q 58:1; 59:2; 33:37-40) would be met with sharp criticism from the Medinan Jews (see NAḌĪR; QAYNUQĀʿ; QURAYẒA) — and on the part of some among the Aws and Khazraj (see TRIBES AND CLANS). It takes a considerable amount of credulity to believe in the divine origin of verses like those. But the Qur'ān stresses the certainty that Muḥammad is the messenger of the one personalized creator, whose *amr* has not ceased to be at work since time began and that part of this *amr* manifest in every affair has been transmitted to him through the spirit and thereby converted into human speech. The Qur'ān maintains this view against the Jews, who would have considered revelation an event which occurred in distant history, and against the skeptic pagans, by its praise for the one God of creation: "To God belongs what is in the heavens and the earth; verily God is the rich (*al-ghaniyy*), praiseworthy (see

PRAISE; LAUDATION). If all the trees in the earth were pens, and the sea with seven seas after it to swell it, the words of God (see WORD OF GOD) would not give out; verily God is sublime, wise" (Q 31:26-7; cf. 18:109).

Final remarks

Freeing oneself from the *petitio principii* that all Arabic literary tradition showing "qur'ānic" ideas and ascribed to authors prior or contemporary to Muḥammad must be a forgery (q.v.; see also CORRUPTION; MUSAYLIMA; PROVOCATION), one succeeds in setting into vivid relief the historical background of the intellectual world of early Islam as depicted in the Qur'ān. As expressed in the Qur'ān, Muḥammad's vision of God and the universe governed by him does not imply a history of salvation (q.v.). Therefore theology first of all is concerned with the cosmos and the creator manifesting himself in it and through it. His incessant creative activity may have been plausible even to the pagans; he revealed himself to Abraham, announcing the birth of a son to him, and it is for this impressive example of his all-embracing power, and perhaps for others similar to it, that humans should venerate him. Muḥammad felt that the Meccans fell short of this duty for several reasons, and when he was sure that he was summoned by the "lord, most high" to warn his countrymen against frivolous negligence towards the one power to which they owed their existence, he answered this call.

It is a reasonable assumption that in this situation Muḥammad would have looked for some elaborate theological tradition that could furnish him with a system of notions suitable to express his ideas. Eventually the belief of the *ḥanīf*s and their interpretation of Abraham's path to the knowledge of the one creator seemed to fit with his experiences. These tended to crystallize in the image of a highly personalized God who was on intimate terms with his Prophet, although he was to remain the transcendent omnipotent one. As for theology, this led to the contradictions outlined above, which lie at the base of later Muslim theological discussions. To attain to a more elaborate analysis of later discussions than has yet been achieved, a great deal of further research on the theological meaning of Muḥammad's message and its contemporary intellectual and spiritual background is necessary.

The following few lines may give an instructive, albeit superficial impression of what this means. Human beings cannot account for their actions because it is the one creator who makes them apparent in this world, and even if one were to endeavor to avoid a certain action, one could not escape God's decree. The *amr,* emanating from him into the cosmos, causes a human being to acquire *(kasaba)* that action. Later, Sunnī theology will discuss the problem of whether the capability of acquiring a certain action has been deposited in the individual human before that action comes about or whether it is granted to the individual by God simultaneously with the coming about of that action. The second view came to be preferred in Ash'arism, which is said to have carried predestination to its extreme. This, of course, is the opinion of the Westerner who has the problem of freedom of will in his mind; for him this is the idea which sets the standard for the evaluation of conceptions of humankind's position in this world. This is not the background of the Muslim view of the question. Their theological reasoning is based on the qur'ānic picture of the relationship between the creator and man. Nevertheless there are verses which seem to suggest one's responsibility for one's actions; therefore the freedom of will should be granted. "That day [the earth]

will tell its news (q.v.), as your lord has prompted *(awḥā)* it; that day the people will come forward separately that they may be shown their works. Whoever has done a particle's weight of good, shall see it…" (Q 99:4-7; see WEIGHTS AND MEASURES; MEASUREMENT). This revelation dating from the early Meccan period can be considered valid evidence of each person's obligation to act according to his or her own decisions. Yet this line of argumentation is completely mistaken. The early Meccan passages of the Qur'ān do not plead at all for freedom of will. On the contrary, they advocate the all-embracing power of the creator's decree, and in Q 99 the believers are reminded of God's knowledge, which is all-embracing, too: On the day of judgment not a single action that has been "acquired" by a human being will be forgotten. "… No burden-bearer bears the burden of another;… man gets exactly [the result of] his striving" (Q 53:38f.). The one God "who causes to die, and causes to live… who makes rich and gives possession" (Q 53:44, 48) will look strictly into everybody's record of actions. It is only in Medina that the believers become responsible for a certain type of action, i.e. those greatly needed heroic deeds that would save Islam from annihilation. The believers now are summoned to sell their lives to God who will make them enter paradise as a recompense for fighting the enemies of Islam. It is remarkable that some Muslim scholars hold that Q 99 belongs to this Medinan period of Muḥammad's life. They seem to be conscious of the possibility of interpreting Q 99 as an allusion to one's responsibility for one's actions and one's fate in the hereafter. Nevertheless, the Westerner must be aware of the fact that verses like Q 99 or Q 53:38 do not aim at liberating the human being from divine decree; they only point to a rather limited range of actions left to human choice because God "has sent down authority" (cf. Q 6:81) for the individual to do them.

Therefore the question of human freedom of will in Muslim theology is neither concerned with some capacity of reason and power independent of God nor with ethics. It refers to the limits of "authority" granted to one by one's creator. This is even true of Mu'tazilī thought (see MU'TAZILĪS) which does not confront the individual with the cosmos allowing each to find his or her own way, but rather obliges the creator to aim at the best *(aṣlaḥ)* for his creatures. Of course, under such conditions it is more plausible that God will do justice to the individual on the last day (see JUSTICE AND INJUSTICE); but, strictly speaking, God's authority still far surpasses human responsibility. This requires finally an examination of the human position in this world as intended by the personalized creator, who "each day [is engaged] in something" (Q 55:29). The Qur'ān confines itself to calling Adam God's vicegerent (*khalīfa,* e.g. Q 2:30). In the main, Islamic theological reasoning has conceived two different answers, both of them rooted in the qur'ānic message of the one God. The first answer is the elaborated system of *sharī'a* law; if one keeps to all of its regulations scrupulously, seeing to the best for oneself and for the community of the believers, one will attain the rank of God's vicegerent on earth because God's volition and human action will be in perfect harmony (Shāṭibī, *Muwāfaqāt,* i, 251f.; see BOUNDARIES AND PRECEPTS). The second answer takes Q 51:56 into consideration: "I have not created jinn and men but that they may serve me (see WORSHIP)." The human being is God's servant, a fact that is reflected in the dependence of human reason on the creator's authority. A human being cannot act on his own but has to acquire every action, right or wrong, wrought by God. And it is this unques-

tioned compliance with God's decree *(amr)* that is looked upon as the quintessence of one's service to one's creator: By his incessant creative actions he realizes himself as the omnipotent one, and through the sinful (and righteous) actions he causes humans to acquire, he assures himself and humankind of his being the one legislator. Rendering this inestimable service to him, humans prove to be his indispensable vicegerents. This idea, elaborated in detail by Ibn al-ʿArabī (d. 638/1240) and his Sunnī interpreters, is the deepest understanding of qurʾānic theology ever arrived at. Both answers do not pertain to the Western concept of humankind hinted at above. The careful analysis of the qurʾānic message and its historical background will guide one, as has been demonstrated by this example, to a more appropriate understanding of Islam and Islamic theology and may be instrumental in establishing a reliable method of scientific hermeneutics.
