A World of Knowledge at Your Fingertips

> Depend upon it, there comes a time when for every addition of knowledge you forget something that you knew before. It is of the highest importance, therefore, not to have useless facts elbowing out the useful ones.
>
> —Sherlock Holmes, in Sir Arthur Conan's Doyle's *Study in Scarlet,* ch. 2

> Mixing one's wines may be a mistake, but old and new wisdom mix admirably.
>
> —The Singer, in the Prologue of Bertolt Brecht's *The Caucasian Chalk Circle*

This third edition of *The Concise Columbia Encyclopedia* places an extraordinary amount of information about the world in handy form at your fingertips. Thousands of facts, old and new, have been assembled to provide useful information on the topics we believe you are most likely to ask as you sit at your desk at home, at school, or in the office. For how long did the lives of Sir Arthur Conan Doyle and Bertolt Brecht overlap? Where is the Caucasus? What is ASCII? What is NAFTA? MRI? To search for and find answers to such questions is to gain knowledge, to advance a step further each time on the road to wisdom. We have tried to make your seeking and finding as easy and pleasurable as possible.

Coverage

The world of knowledge we are putting in your hands encompasses the areas and countries of our planet, the significant events from prehistory to the present, the people who have made history or are making it today. But its boundaries also include our knowledge of the universe as revealed by the most searching telescopes and microscopes, a myriad of life forms besides humanity, works created by nature as well as by people, and of course the abstract worlds of imagination and theory.

Versatility

We have made *The Concise Columbia Encyclopedia* versatile. Its entries are short, so you can check facts fast. But you can also pursue a train of thought in several articles by means of its system of cross-references. When a term within an article is spelled in small capitals, it has a separate article of its own. That article may itself contain terms in small capitals, pointing you to further lines of research you may wish to pursue. This system allows us to present a great quantity of information without duplication. We convey the information about each object, person, place, event, or idea in full sentences as simply and elegantly as possible. We have written the book not only to be dipped into, but settled into.

Currency

Knowledge is not static and neither is the world. Among all the events that have occurred since the publication of the second edition of *The Concise Columbia Encyclopedia,* surely nothing can compare, in its effect on a many-articled, closely interrelated work such as this, with the collapse of Communism in many parts of the world. But thousands of other articles have also been changed for this third edition to take account of all the new leaders, new population figures, new awards, new world records, new events, all those topics that have come to the front of our minds in the mid-1990s.

Authority

To help us ensure the accuracy of our information, we enlisted the help of academic consultants and advisers. At Columbia University and elsewhere we consulted authorities with specialized knowledge of anthropology, architecture, art, astronomy, bioethics, biology, botany, business, chemistry, computer science, dance, economics, education, geography, history, language and linguistics, literature, medicine, music, mythology, philosophy, physics, politics and political science, psychology, reli-

gion, sociology, sports, technology, theater and motion pictures, and many more subjects. Our thanks to these consultants and advisers can be found immediately after this preface.

The Articles

In order to convey so much information in a book that is as easy to use at your desk as a telephone or a calculator, we have followed some necessary principles. Our articles always go beyond the mere definitions you would find in a dictionary. We provide context. On the other hand, we do not summarize the very broadest topics, such as "literature." And our entries in "modern art" and "education" point you to the separate articles that are more likely to be the objects of your search. We have used the Pinyin system for the transliteration of Chinese names selectively, keeping traditional transliterations where they would be expected. We have given pronunciation for proper names that may be difficult to pronounce and for languages and language families. The key to pronunciation is on page xiii. We give metric equivalents for measurements in English standard units, and provide a list of abbreviations on page xiv.

The Maps, Photographs, Drawings, and Tables

The most notable change between the second and third editions of *The Concise Columbia Encyclopedia* is that the book is now more heavily illustrated. Maps now accompany the articles on the continents and countries—visually locating every single country in its immediate geographical environment. Photographs bring people to life before you, exemplify styles mentioned in articles, or present works of art discussed. Drawings help you understand some subjects more easily than words can, and tables collect related facts that would otherwise be scattered throughout the book. We hope that you will derive as much use from *The Concise Columbia Encyclopedia*'s third edition as we have had pleasure in trying to make it useful.

James Raimes

Copy checkers	William Bramlette, Suzanne Cogan, Emulsion-Down Typographers, Lynne Glasner, Andrew G. Lawrence, Jane Dickler Lebow, Katherine A. Lebow, Leah Schanzer

Acknowledgments

The information in this third edition of *The Concise Columbia Encyclopedia* derives not only from the information in the first and second editions, but also from the information in the fifth edition of *The Columbia Encyclopedia*, the closely related work published in 1993. We would therefore like to acknowledge the work of the editors of these books. Judith S. Levey and Agnes Greenhall were the editors of the first edition of *The Concise Columbia Encyclopedia*, and Barbara A. Chernow and George A. Vallasi were the editors of the second edition. Barbara A. Chernow and George A. Vallasi were also the editors of the fifth edition of *The Columbia Encyclopedia*. We thank them again here for their excellent work managing the large team of researchers and writers whose names appear in that work. We thank Robert Rosenbaum for his help updating *The Concise Columbia Encyclopedia* in 1990.

We would also like to thank the following academic specialists who worked on this edition of *The Concise Columbia Encyclopedia* or on the fifth edition of *The Columbia Encyclopedia*.

Consultants for the latter were: in the Humanities, Peter J. Awn; in History, Richard Bulliet; in Geography, Saul B. Cohen; in the Social Sciences, Kelvin J. Lancaster; in the Life Sciences, Don Melnick; in the Physical Sciences, Erick J. Weinberg.

Advisers on areas in the humanities were: African Literature, Susan Hall; American Art, Jonathan K. Crary; American Literature, Andrew Delbanco; Ancient Religion, Holland Hendrix; Architecture, Adolf K. Placzek; the Bible, Richard A. Norris; British Literature up to Dickens, David Scott Kastan; British Literature since Dickens, Michael Seidel; Dance, Irish M. Fanger; East Asian Literature, Marsha L. Wagner; Eastern and Primitive (and other) Art, Vidya Dehejia; Eastern Religion, Paul B. Watt; European Art up to 1600, John Malcolm Russell; European Art since 1600, Janis Thomlinson; Film and Drama, Maurice Charney; French Literature, Antoine Compagnon; German, Dutch, and Yiddish Literature, Inge D. Halpert; Islam, Ali Asani; Italian Literature, Luigi Fontanella and Maristella Lorch; Judaism, Jay harris; Latin and Greek Literature, Holland Hendrix; Minority Religion, Robert Ellwood; Music, Ian Bent, Tom Baker, and James T. Walsh; Philosophy, Charles Larmore; Popular Music, Monica Berger; Print and Broadcast Journalism, Osborn Elliott; Protestantism, Pamela Biel; Roman Catholicism, Robert Somerville; Russian and Slavic Literature, William E. Harkins; Spanish-American Literature, Diane Marting; Spanish, Portuguese, and Brazilian Literature, Irwin Stern.

Advisers on areas in the Social Sciences were: Anthropology and Archaeology, Robert Carneiro; Business, Economics, and Labor, Donald Dewey; Education, Lawrence Cremin and Ellen Condliffe Lagemann; Language, William Labov and Deborah Mandelbaum; Law, Vincent Blasi; Political Science and Government, Robert Jervis; Sociology, Sigmund Diamond; Sports and Games, Benjamin Rader.

Advisers in History were: Africa, Graham Irwin and David Northrup; Ancient History, W.V. Harris; China, Japan, and Korea up to 1900, Gari Ledyard and Robert Hymes; China, Japan, and Korea since 1900, Madeleine Zelin; France, Belgium, and Luxembourg since 1500, Isser Woloch; Germany, Austria, Switzerland, Holland, and Scandinavia since 1600, Willem Smit; Great Britain, Ireland, Australia, and New Zealand up to 1837, Karl Bottigheimer; Great Britain, Ireland, Australia, and New Zealand since 1837, David Cannadine; India and South East Asia, Ainslie T. Embree; Japan and the Pacific Rim since 1900, Carol Gluck and Daniel A. Metraux; Latin America, Robert M. Levine; Medieval Europe, Caroline Walker Bynum; Middle East, North Africa, and Central Asia, Reeva S. Simon; Military History, Alex Roland; Russia and East Europe, Mark Von Hagen; Spain, Portugal, Italy, and Greece since 1500, Edward Malefakis; U.S. History up to 1860; Martin Torodash; U.S. and Canadian History, 1860–1939, James P. Shenton; U.S. and Canadian History since 1939, Mark Carnes.

Advisers in the Life Sciences were: Agriculture, Kenneth Robinson and William C. Kennard; Anatomy and Physiology, Jeffrey T. Laitman and Ermelinda Bonaccio; Botany, Douglas C. Daly; Cell Biology, Biochemistry, and Genetics, Eric Holtzman; Environmental Studies and Conservation, Mary C. Pearl; Food and Nutrition, Ellen C. Dierenfeld and Sharon Akabas; Invertebrate Zoology, Judith E. Winston; Medicine, John D. Frame; Pathology, Stephen M. Factor; Psychology and Psychiatry, Irving I. Gottesman; Vertebrate Zoology, John L. Gittleman.

Advisers in Geography were: Africa, James L. Newman; Australia, Janice Monk; Canada, Victor Konrad; China, Clifton W. Pannell; East Europe, William Berentsen; Former Soviet Union, Baltic Nations, and Italy, Allan Rodgers; France, Julian V. Minghi; Germany, Austria, and Switzerland, Robert Sinclair; Great Britain and Ireland, Neil Reid; Japan and Korea, Kenneth E. Corey; Low Countries, Robert Aangenbrug; Mexico, Central America, and the Caribbean, Thomas D. Boswell; Middle East, Rowland Illick; New Zealand, Gordon R. Lewthwaite; Pacific Islands, Tom McKnight; Polar Regions, Charles R. Bentley; Scandinavia, Robert Ostergren; South America, David J. Robinson; South Asia, John E. Brush; South East Asia, Richard Ulack; Spain and Portugal, Daniel W. Gade; Turkey, Greece, Cyprus, and Malta, Ian R. Manners; United States, Peter O. Muller.

Advisers in the Physical Sciences were: Astronomy, David Helfand and Edwin G. Abel; Earth Sciences, John Mutter; Electrical Engineering, Computers, Chemical Engineering, and Mining, H.E. Meadows, Edwin G. Abel, and Keith Barker; General and Organic Chemistry, Robert M. Kennedy and Edwin G. Abel; Inorganic Chemistry, Metallurgy, and Crystallography, Gerard Parkin; Mathematics, Hyman Bass; Mechanical Engineering, Civil Engineering, and Aerospace, C.K. Chu and Robert A. Gross; Physics, Gerald Feinberg and Erick J. Weinberg.

How to Use the Concise Columbia Encyclopedia

The Concise Columbia Encyclopedia is easy to use. All articles are arranged alphabetically, with article heads in **boldface.** The headings of biographical articles are inverted and alphabetized by the subject's name, e.g., the American composer Stephen Foster appears as **Foster, Stephen Collins.** Exceptions to this rule are made for some figures from history and folklore, e.g., the African-American folk hero John Henry is listed as **John Henry.**

Generally, articles with the same heading are alphabetized in order of persons, places, and things, so that **Washington, George** comes before **Washington** (state), which in turn comes before **Washington, Treaty of.** The order of alphabetization for persons is determined by rank: saints, popes, emperors, monarchs, followed by titled nobility. Monarchs of the same name are listed alphabetically by country and numerically within the country; thus all kings Charles of France appear before any kings Charles of Spain.

The method of alphabetization disregards word breaks. **Capetians,** for example, appears before **Cape Town,** and **artillery** before **art nouveau.** The following special cases of alphabetization should also be noted: (1) Names with **von, de,** and similar prefixes, are alphabetized using the most common form of the name: **Van Gogh, Vincent,** but **Bismarck, Otto von.** (2) Names beginning with **Mc** and **Mac** are treated as though they begin with **Mac;** thus **McGuffey, William Holmes** appears before **Mach, Ernst.** (3) Abbreviations in article headings are treated as though they were spelled out: **St. Clair, Arthur** appears before **Saint Clair, Lake.** (4) Japanese and Chinese names are listed in the traditional order, surname first, without a comma, e.g., **Hosokawa Morihiro;** Americans of Japanese descent are listed in the Western style, e.g., **Noguchi, Isamu.**

Family Articles. In an effort to save space, we have combined similarly named rulers of certain empires and nations into a single article; thus all 18 kings of France named Louis appear as easily recognizable entries under the heading "**Louis,** Frankish kings and kings of France." Likewise, members of the same family are sometimes grouped together: for example, the Rockefellers appear under the heading "**Rockefeller,** family of American industrialists, bankers, and philanthropists." When a family member has been particularly prominent outside the family tradition, however, he or she has a separate entry, as does former U.S. Vice President Nelson Rockefeller.

Some related subjects have also been covered under a single article: for example, air and water pollution have been included in the article **pollution,** and a discussion of the Bill of Rights can be found under the entry **Constitution of the United States.**

Titles of Foreign Works. The titles of works of literature, art, music, and dance are given in English unless the work is well known under the original foreign title. The dates accompanying such works are the dates of original publication, exhibition, or performance.

Cross-references. To utilize space efficiently, whenever possible, information included in one article is not repeated in another. Instead, cross-references are used extensively to lead the reader to articles containing additional material relevant to the entry he or she is consulting. These articles may expand upon the subject at hand, provide background (including important people), or supply clues to other aspects of the subject and to related topics. Because it provides immediate access to pertinent information, this network of cross-references also replaces an index. All cross-references appear in SMALL CAPITALS.

Basically there are four types of cross-references. The first type comprises those found within the text of an article, as at the beginning of the article **solar energy:**

> . . . any form of ENERGY radiated by the SUN, including light, radio waves, and X rays. Solar energy is needed by green plants for the process of PHOTOSYNTHESIS, which is the ultimate source of all food. The energy in fossil fuels (e.g., COAL and PETROLEUM) and other or-

ganic fuels (e.g., WOOD) is derived from solar energy. . . .

The second type of cross-reference consists of those found at the end of an article, referring the reader to related subjects, including biographies. For example:

computer . . . See also ANALOG-TO-DIGITAL CONVERSION; ARTIFICIAL INTELLIGENCE; BAUD; BOOLEAN ALGEBRA; DIGITAL-TO-ANALOG CONVERSION; PROGRAMMING LANGUAGE; VIDEOTEX.

philosophy . . . The many rigorous systems of Eastern philosophy are founded in religion (see BUDDHISM; CONFUCIANISM; HINDUISM; ISLAM; JAINISM; SHINTO; TAOISM; VEDANTA). See also names of individual philosophers, e.g., NIETZSCHE, FRIEDRICH; SCHOPENHAUER, ARTHUR; TEILHARD DE CHARDIN, PIERRE.

Cross-references also refer the reader to tables that combine a variety of facts directly relevant to the article being consulted. For example, at the end of the article on the element **argon,** the following cross-references appear: See ELEMENT (table); PERIODIC TABLE.

The third type of cross-reference appears as a boldface entry within the alphabetical sequence. It may be an acronym (**COBOL:** see PROGRAMMING LANGUAGE); an alternate spelling (**Chou En-lai:** see ZHOU ENLAI) or name (**infantile paralysis:** see POLIOMYELITIS); a real name when a person is known under a pseudonym (**Clemens, Samuel Langhorne:** see TWAIN, MARK); a topic discussed under an entry other than its own name (**alto:** see VOICE); or it may direct the reader to a number of related articles (**firearm:** see ARTILLERY; GUN; SMALL ARMS).

A special category of cross-reference, somewhat different from the three previously mentioned, consists of those referring to a boldface subentry under a main heading. Such cross-references can occur within an article or as a separate entry; often, for clarity, the words "see under" are used. An example of such a cross-reference in the text of an article is that to John Wilkes Booth in the article **Lincoln, Abraham**: ". . . he was shot by the actor John Wilkes Booth (see under BOOTH, JUNIUS BRUTUS)." Two examples of these cross-references as separate entries are: **Richard Lion-Heart:** see Richard I under RICHARD, kings of England; and **Passover:** see under JEWISH HOLIDAYS.

Abbreviations. Although abbreviations have been kept to a minimum, some have been adopted to save space. They usually appear in special constructions designed to convey important information at a glance—as can be seen, for example, in the first sentence of the article on the Churchill River: "**Churchill,** river, NE Canada, called the Hamilton R. until renamed (1965) for Sir Winston Churchill." Common abbreviations include those for compass points, the months of the year, the states of the United States, and such words as Corporation (Corp.) and graduated (grad.). Other, less familiar abbreviations appear in the list entitled "Abbreviations."

Key to Pronunciation

ə	sof*a* (sō′fə), it*e*m (ī′təm), eas*i*ly (ē′zəlē), cann*o*n (kăn′ən), circ*u*s (sûr′kəs)	ŏ	hot (hŏt), body (bŏd′ē)
ă	*a*ct (ăkt), b*a*t (băt)	ō	*o*ver (ō′vər), hope (hōp), gr*ow* (grō)
ā	*a*pe (āp), f*ai*l (fāl), d*ay* (dā)	ô	*o*rbit (ôr′bit), f*a*ll (fôl), s*aw* (sô)
â	*ai*r (âr), c*a*re (kâr)	o͝o	f*oo*t (fo͝ot), wolf (wo͝olf), p*u*t (po͝ot), p*u*re (pyo͝or)
ä	*a*rt (ärt), f*a*ther (fä′<s>thər</s>)	ō͞o	b*oo*t (bō͞ot), l*o*se (lō͞oz), dr*ew* (drō͞o), tr*ue* (trō͞o)
b	*b*ack (băk), la*b*or (lā′bər), ca*b* (kăb)	oi	*oi*l (oil), r*oy*al (roi′əl), b*oy* (boi)
ch	*ch*in (chĭn), ha*tch*et (hăch′ət), ri*ch* (rĭch)	ou	*ou*t (out), cr*ow*d (kroud), h*ow* (hou)
d	*d*ock (dŏk), la*d*y (lā′dē), sa*d* (săd)	p	p*i*pe (pīp), h*a*ppy (hăp′ē)
ĕ	*e*nd (ĕnd), st*e*ady (stĕd′ē), m*e*t (mĕt)	r	*r*oad (rōd), appear*e*d (əpērd′), ca*r*penter (kär′pəntər)
ē	*e*ve (ēv), cl*e*ar (klēr), *see* (sē)	s	*s*o (sō), *c*ite (sīt), ba*s*te (bāst)
f	*f*at (făt), *ph*ase (fāz), cou*gh* (kôf)	sh	*sh*all (shăl), *s*ure (sho͝or), na*ti*on (nā′shən)
g	*g*et (gĕt), bi*gg*er (bĭg′ər), ta*g* (tăg)	t	*t*ight (tīt), be*tt*er (bĕt′ər), *t*alked (tôkt)
h	*h*and (hănd), *a*head (əhĕd′)	th	*th*in (thĭn), ba*th* (băth)
hw	*wh*eel (hwēl), *wh*ich (hwĭch)	<s>th</s>	*th*en (<s>th</s>ĕn), fa*th*er (fä′<s>th</s>ər), ba*th*e (bā<s>th</s>)
ĭ	*i*t (ĭt), p*i*ll (pĭl), m*i*rror (mĭr′ər)	ŭ	b*u*t (bŭt), fl*oo*d (flŭd), *o*me (sŭm)
ī	*i*ron (ī′ərn), *eye* (ī), b*uy*er (bī′ər)	û	c*u*rl (kûrl), *gi*rl (gûrl), *fe*rn (fûrn), w*or*m (wûrm)
j	*j*am (jăm), *g*inger (jĭn′jər), e*dg*e (ĕj)	v	*v*est (vĕst), tri*v*ial (trîv′ēəl), e*v*e (ēv)
k	*k*it (kĭt), ta*ck*le (tak′əl), *c*ook (ko͝ok)	w	*w*ax (wăks), t*w*ins (twĭnz), co*w*ard (kou′ərd)
l	*l*itt*l*e (lĭt′əl), ho*ll*y (hŏl′ē), pu*ll* (po͝ol)	y	*y*ou (yo͞o), on*i*on (ŭn′yən)
m	*m*an (măn), ha*mm*er (hăm′ər), cli*mb* (klīm)	z	*z*ipper (zĭp′ər), ea*s*e (ēz), tread*s* (trĕdz)
n	*n*ew (no͞o), *kn*own (nōn), wi*nn*er (wĭn′ər)	zh	plea*s*ure (plĕzh′ər), rou*g*e (ro͞ozh)
ng	si*ng*ing (sĭng′ĭng), fi*ng*er (fĭng′gər), sa*ng* (săng), sa*nk* (săngk)		

Foreign Sounds	ö	as in French p*eu* (pö), German G*oe*the (gö′tə)
	ü	as in French Cl*u*ny (klünē′)
	kh	as in German a*ch* (äkh), i*ch* (ĭkh); Scottish lo*ch* (lŏkh)
	N	this symbol indicates that the preceding vowel is nasal as in French *cin*q (săNk), *un* (öN), *sans* (säN), tombe (tôNb), *en* (äN)
Accents and Hyphens	′	primary accent, written after accented vowel or syllable: Nebraska (nəbrăs′kə), James Buchanan (byo͞okă′nən)
	″	secondary accent: Mississippi (mĭs″əs-sĭp′ē)
	–	dash, replacing obvious portion of pronunciation: hegemony (hĭjĕm′ənē, hē–, hēj′əmō″nē, hĕg′ə–)
	-	hyphen, to prevent ambiguity in syllabification: Erlanger (ûr′lăng-ər), dishearten (dĭs-här′tən)

Abbreviations

Å = angstrom
abbr. = abbreviation(s), abbreviated
A.D. = *anno Domini* [in the year of the Lord]

Chinese abacus: Numbers are represented by moving beads to the central crossbar

Aachen [ä'khən] or **Aix-la-Chapelle,** city (1989 est. pop. 233,000), North Rhine–Westphalia, W Germany. It is an industrial center producing textiles, machinery, and other manufactures. Its mineral baths have been famous since Roman times. CHARLEMAGNE made it his northern capital, building a palace and cathedral there, and the city was (936–1531) the coronation place of German kings. Later it was taken by France (1801) and then by Prussia (1815). After WORLD WAR I Aachen was occupied by the Allies, and two thirds of it was destroyed during WORLD WAR II.

Aalto, Alvar [äl'tō], 1896–1976, Finnish architect. He adapted Finnish building traditions to modern technology. Among his buildings are the Maison Carré in Paris and Baker House in Cambridge, Mass. (1947–48). He was also famous for his designs for laminated-wood furniture.

aardvark, nocturnal MAMMAL (genus *Orycteropus*) found in Africa. About 6 ft (180 cm) long, it has a long snout, large, erect ears, a body almost devoid of hair, and a long tail. It claws open ant and termite nests with its forefeet and uses its long, sticky tongue to capture insects.

Aaron, in the BIBLE, the first high priest, the brother of MOSES, and his spokesman. Through him Jehovah performed miracles, although Aaron had made the GOLDEN CALF and allowed its worship. His descendants became temple priests.

Aaron, Hank (Henry Louis Aaron), 1934–, American baseball player; b. Mobile, Ala. A right-handed batter, he played with the Braves (1954–74) in Milwaukee and Atlanta and with the Milwaukee Brewers (1975–76). In 1974 he broke Babe RUTH's career record for home runs, finishing with 755. He also holds records for runs batted in (2,297) and extra-base hits (1,477).

abacus, an ancient computing device using movable beads strung on a number of parallel wires within a frame. Each wire represents a decimal place: ones, tens, hundreds, and so on. The beads are grouped to form numbers and shifted in specified patterns to add, subtract, multiply, or divide.

Abadan, city (1976 pop. 296,081), Khuzestan prov., SW Iran, on Abadan Island, in the SHATT AL ARAB delta, at the head of the PERSIAN GULF. After oil was discovered (1908) nearby, Abadan became the terminus of oil pipelines and an oil-refining and shipping center. Iraqi forces damaged Abadan's oil refinery in their invasion of Khuzestan in 1980.

abalone, marine GASTROPOD mollusk (genus *Haliotis*), covered by a single ear-shaped shell perforated with respiratory holes on one side. The abalone is hunted for its large, edible muscular foot and the iridescent MOTHER-OF-PEARL lining of its shell, used for buttons. It feeds by scraping the substrate with its rasping tongue (radula).

Abbas I (Abbas the Great), 1557–1629, shah of PERSIA (1587–1628), of the Safavid dynasty. He broke the power of the tribal chiefs, ended the Uzbek threat, and extended his domain at the expense of the Turks and Portuguese.

Abbasid or **Abbaside,** Arabic family descended from **Abbas,** d. 653, the uncle of MUHAMMAD. They rose to power by massacring the ruling Umayyad family and held the CALIPHATE from 749 to 1258. Prominent Abbasid caliphs include al-MANSUR and HARUN AR-RASHID, under whom the caliphate reached its greatest power. The long Abbasid decline ended with their overthrow (13th cent.) by the Seljuk Turks.

Abbott, George, 1889–, American theatrical director and playwright; b. Forestville, N.Y. He was a master of FARCE and MUSICALS. His hits include *Three Men on a Horse* (1935), *Damn Yankees* (1955), and *Fiorello!* (1960; Pulitzer).

Abbott and Costello, American comedy team. Its members were William "Bud" Abbott, 1895–1974, and Lou (Cristillo) Costello, 1906–59. They performed (1931–57) routines ("Who's on First") on the stage, radio, and television and in a series of successful films, including *Buck Privates* (1941).

Abd al-Hamid, sultans of the OTTOMAN EMPIRE (Turkey). **Abd al-Hamid I,** 1725–89 (r.1774–89), witnessed the decline of Turkey and the rise of Russia as the foremost power in the area. **Abd al-Hamid II,** 1842–1918 (r.1876–1909), suspended (1876) the constitution and ruled as an absolute monarch. The last RUSSO-TURKISH WAR was a disaster, resulting in a great loss of Turkish lands. He was eventually deposed by the Young Turks.

Abd ar-Rahman, Muslim rulers of Spain. **Abd ar-Rahman,** d. 732, governor of Spain (721–32), fought the Franks and was defeated by CHARLES MARTEL. **Abd ar-Rahman I,** d. 788, first Umayyad emir of Córdoba (756–88), escaped to Spain after his family's massacre by the Abbasid. There he defeated (756) the emir of Córdoba and established himself in power. **Abd ar-Rahman III** (891–961), Umayyad emir and first caliph (929–61) of Córdoba, regained lands lost by his predecessors, maintained a powerful military force, and made Córdoba one of the greatest cities in the West.

Abdias: see OBADIAH.

abdomen, in vertebrates, portion of the trunk between the diaphragm and lower pelvis. In humans the abdominal cavity is lined with a thin membrane, the peritoneum, which encloses the STOMACH, intestines, LIVER, and GALL BLADDER. The PANCREAS, KIDNEYS, urinary bladder, and, in the female, reproductive organs are also located within the abdominal cavity. In insects and some other invertebrates the term *abdomen* refers to the rear portion of the body.

Abdul-Jabbar, Kareem, 1947–, American basketball player; b. N.Y.C. as Ferdinand Lewis ("Lew") Alcindor, Jr. He led the Univ. of California, Los Angeles, to three national titles (1967–69) and played center for the Milwaukee Bucks (1969–75) and Los Angeles Lakers (1975–89). The 7 ft 2 in. (218 cm) Abdul-Jabbar was rookie of the year in 1970, won most-valuable-player honors six times, played a record 1,560 NBA games, and scored a record 38,387 points.

Abdullah, 1882–1951, emir of Transjordan (1921–46) and king of JORDAN (1946–51). In the first ARAB-ISRAELI WAR he commanded the

Arab Legion and annexed those portions of Palestine not assigned to Israel.

à Becket, Thomas: see THOMAS À BECKET, SAINT.

Abe Kōbō, 1924–93, Japanese novelist and dramatist. Often compared to KAFKA, he wrote of the human predicament in the 20th cent. in a realistic yet symbolic style. His minute descriptions of surrealistic situations often lend his works a nightmarish quality. Among Abe's novels are *Woman in the Dunes* (tr. 1964) and *Secret Rendezvous* (tr. 1979). His plays include *Friends* (tr. 1969).

Abel, in the BIBLE, son of ADAM and EVE. A shepherd, he was killed by his brother CAIN.

Abel, I(orwith) W(ilbur), 1908–87, American labor leader; b. Magnolia, Ohio. He worked in a Canton rolling mill at 17 and was appointed (1937) staff representative of the organization that became the United Steelworkers of America. He was an Ohio district director of the union (1942–52), became (1953) secretary-treasurer, and served (1965–77) as president.

Abel, Niels Henrik, 1802–29, Norwegian mathematician. One of the greatest mathematicians of the 19th cent., he pioneered in the theory of elliptic functions, investigated generalizations of the binomial theorem, and proved the impossibility of representing a solution of a general equation of fifth degree or higher by a radical expression.

Abelard, Peter [ăb'ələrd], 1079–1142, French philosopher. Because his fame as a dialectician drew so many students, he is regarded as the founder of the Univ. of Paris. His secret marriage to a pupil, Heloïse, ended when her uncle, Canon Fulbert of Notre Dame, hired ruffians to emasculate him. Becoming a monk, he built a hermitage and monastery, the Paraclete, which he later presented to Heloïse, who had become an abbess. Abelard's first theological work had been burned (1121) as heretical; in 1140 the mystic St. BERNARD OF CLAIRVAUX secured his condemnation by the council of Sens, and he retired in submission to Cluny. Following PLATO in theology, Abelard espoused the method of ARISTOTLE's dialectic, holding that the system of LOGIC could be applied to the truths of faith. His view of universals anticipated the conceptualism of St. THOMAS AQUINAS. His most influential and controversial work, *Sic et non,* collected contradictory writings of the Church fathers.

Aberdeen, George Hamilton-Gordon, 4th **earl of,** 1784–1860, British statesman. He served in the cabinets of WELLINGTON and PEEL as foreign secretary (1828–30; 1841–46). In 1842 he settled the Northeast Boundary Dispute with the U.S. by the WEBSTER-ASHBURTON TREATY. As prime minister (1852–55) he was quite successful in home affairs, but he resigned after failing to prevent British involvement in the unpopular CRIMEAN WAR.

Aberhart, William, 1878–1943, premier of ALBERTA (1935–43). He helped to organize (c.1932) the SOCIAL CREDIT movement to make direct payments to all citizens and headed the first Social Credit government.

Abernathy, Ralph, 1926–90, American civil-rights leader; b. Linden, Ala. A Baptist minister, he helped organize the Montgomery bus boycott (1955). He was treasurer, vice president, and, after the assassination of Martin Luther KING, Jr., president of the Southern Christian Leadership Conference (SCLC). An advocate of nonviolence as a means to social change, he led the Poor People's Campaign on Washington, D.C., after King's death. He resigned from the SCLC in 1977.

aberration, in optics, condition that causes a blurring and loss of clearness in the images produced by lenses or mirrors. Spherical aberration is the failure of a LENS or MIRROR of spherical section to bring parallel rays of light to a single focus; it can be prevented by using a more complex parabolic section. Chromatic aberration, the blurred coloring at the edge of an image, arises because some colors of light are bent, or refracted, more than others after passing through a lens; it can be cured by using a corrective lens.

aberration of starlight, angular displacement, caused by the earth's orbital motion, of the apparent path of light from a star, resulting in a displacement of its apparent position from its true position.

Abidjan, city (1986 est. pop. 2,534,000), former capital of Côte d'Ivoire, on the Gulf of Guinea. It is the largest city and administrative center of Côte d'Ivoire. Its port is on an island connected with the rest of the city by two bridges. Coffee, cocoa, timber, pineapples, and plantains are the chief exports. Processed food, textiles, automobiles, and chemicals are among the manufactures. One of Africa's most modern cities, it has an international airport nearby and growing tourism. Abidjan became the capital of France's Côte d'Ivoire colony in 1934. In 1983 YAMOUSSOUKRO was designated as the capital, but most government offices and foreign embassies are still in Abidjan.

Abilene, city (1990 pop. 106,654), seat of Taylor co., W central Texas; inc. 1882. First settled (1881) by buffalo hunters, it grew as a cattle-shipping point. It is a center of industry (e.g., petroleum, aircraft, electronics) and agriculture (e.g., cattle, cotton, sorghum) and serves as headquarters for regional oil interests. It is the site of Abilene Christian Univ., Hardin-Simmons Univ., and McMurry College.

ABM (antiballistic missile): see MISSILE, GUIDED.

abolitionists, in U.S. history, especially from 1830 to 1860, advocates of the compulsory emancipation of African-American slaves. Abolitionists are to be distinguished from free-soilers, who opposed the extension of SLAVERY. The active campaign had its mainspring in the revival (1820s) in the North of evangelical religion, with its moral urgency to end sinful practices. It reached crusading stage in the 1830s, led by Theodore D. Weld, the brothers Arthur and Lewis Tappan, and William Lloyd GARRISON. The American Anti-Slavery Society, established in 1833, flooded the slave states with abolitionist literature and lobbied in Washington, D.C. Writers like J.G. WHITTIER and orators such as Wendell PHILLIPS lent strength to the cause. Despite unanimity on their goal, abolitionists were divided over the method of achieving it, Garrison advocating moral suasion, others direct political action. *Uncle Tom's Cabin,* by Harriet B. STOWE, became an effective piece of abolitionist propaganda, and the KANSAS question aroused both North and South. The culminating act of abolitionism was John BROWN's raid on Harpers Ferry. Abolitionist demands for immediate freeing of the slaves after the outbreak of the CIVIL WAR resulted in Pres. Lincoln's *Emancipation Proclamation.* The abolitionist movement was one of high moral purpose and courage; its uncompromising temper hastened the demise of slavery in the U.S.

abominable snowman or **yeti,** manlike creature associated with the Himalayas. Known through tracks ascribed to it and alleged encounters, it is supposedly 6 to 7 ft (1.8 to 2.1 m) tall and covered with long hair. While many scholars dismiss it as a myth, others claim it may be a kind of ape.

aborigines: see AUSTRALIAN ABORIGINES.

abortion, expulsion of the embryo or fetus before it is viable outside the uterus, i.e., before the 24th week or so after conception, in humans (see REPRODUCTION). Spontaneous abortion, or miscarriage, may be caused by death of the fetus due to abnormality or disease or by trauma to the expectant mother. Abortion may also be induced, the fetus removed from the uterus by such methods as vacuum suction, dilation and curettage, intrauterine saline injection, the "abortion pill" (the drug mifepristone [RU486] in combination with another drug), and hysterotomy (surgical incision of the uterus). Abortion was long practiced as a form of BIRTH CONTROL until pressure from the Roman Catholic Church and changing opinion led in the 19th cent. to the passage of strict antiabortion laws. Attitudes toward abortion have become more liberal in the 20th cent. By the 1970s, abortion had been legalized in most European countries and Japan; in the U.S., according to a 1973 Supreme Court ruling (see ROE V. WADE), abortions are permitted during the first six months of pregnancy. Abortion remains a controversial issue in the U.S., however, and in 1977 Congress barred the use of Medicaid funds for abortion except for therapeutic reasons and in certain other specified instances. Several state legislatures passed restrictive abortion laws in hope that the more conservative Rehnquist Court would overturn Roe v. Wade, but in 1992 the Court reaffirmed the basic principles of the 1973 decision, although it permitted restrictions that do not pose an "undue burden" on women seeking abortions.

Abraham or **Abram,** progenitor of the Hebrews. He is an example of the person devoted to God, as in his willingness to sacrifice his son ISAAC. Revered by several religions, he is principally important as the founder of JUDAISM. He received the promise of CANAAN for his people, who are descended from Isaac. Gen. 11-25. Through

another son, ISHMAEL, he is considered by Muslims an ancestor of the Arabs.

Abram: see ABRAHAM.

Abrams, Creighton Williams, 1914–74, U.S. military officer; b. Springfield, Mass. He served with distinction in World War II, in Korea (1953–54), and in West Germany (1960–62). In 1964 he was promoted to general. After serving as deputy commander of the U.S. forces in the VIETNAM WAR under Gen. William C. WESTMORELAND, he was commanding general (1968–72). He was also U.S. army chief of staff (1972–74).

abrasive, material used to grind, smooth, cut, or polish another substance. Natural abrasives include SAND, PUMICE, CORUNDUM, and ground QUARTZ. Carborundum (SILICON CARBIDE) and ALUMINA (aluminum oxide) are major synthetic abrasives. The hardest abrasives are natural or synthetic DIAMONDS, used in the form of dust or minuscule stones.

Abravanel or **Abarbanel, Judah,** c.1460–c.1523, Jewish philosopher, also known as Leone Ebreo; b. Lisbon. He was influenced by the scholars of the Platonic Academy of Florence and by MAIMONIDES and IBN GABIROL. His *Philosophy of Love* (pub. posthumously, 1535), a classic exposition of platonic love, had a profound effect on philosophers of the 16th and 17th cent., notably BRUNO and SPINOZA.

Absalom [ăb'səlŏm], beloved son of DAVID. He murdered his brother AMNON and fled. After being forgiven by David, Absalom stirred up a rebellion, in which he died.

Abscam, U.S. scandal resulting from an investigation begun in 1978 by the Federal Bureau of Investigation. The FBI created a front (Abdul Enterprises, Ltd., hence, Abscam) for its agents, who, posing as associates of an Arab sheik, offered selected public officials money or other considerations in exchange for special favors. The videotaped meetings resulted in the indictments (1980) and convictions of one senator and four congressmen on charges including bribery and conspiracy; another congressman was convicted on lesser charges. The FBI's tactics raised questions about entrapment, and the conviction of Florida Rep. Richard Kelly was overturned (1982).

abscess, accumulation of pus in tissues as a result of infection. Characterized by inflammation and painful swelling, it may occur in various parts of the body, e.g., skin, gum, eyelid, and middle ear. Many abscesses respond to treatment with ANTIBIOTICS; others require surgical drainage.

absolute value, magnitude of a mathematical expression, disregarding its sign; thus the absolute value is always positive. In symbols, if $|a|$ denotes the absolute value of a number a, then $|a| = a$ for $a > 0$ and $|a| = -a$ for $a < 0$.

absolute zero, the zero point of the ideal gas temperature scale, denoted by 0 degrees on the KELVIN and Rankine temperature scales (−273.15°C; −459.67°F). At this point, the volume of an ideal gas would be zero and, theoretically, all molecular motion would cease. In actuality, all gases condense well above this point. See also TEMPERATURE.

absorption, taking of molecules of one substance directly into another substance. Absorption may be either a physical or a chemical process. Physical absorption depends on the solubility of the substance absorbed, and chemical absorption involves chemical reactions between the absorbed substance and the absorbing medium. See also ADSORPTION.

abstract expressionism, movement in painting that emerged in New York City in the mid-1940s and attained prominence in American art in the following decade; also called action painting and the New York School. Given impetus by the work of Arshile GORKY, abstract expressionism is marked by an attention to surface qualities, i.e., brushstroke and texture; the use of huge canvases; the harnessing of accidents that occur while painting; and the glorification of the act of painting itself. The first important school in American painting to declare independence from European styles and to influence art abroad, abstract expressionism enormously affected the kinds of art that followed it, especially in the use of color and material. Major artists in the movement include Jackson POLLOCK, Willem DE KOONING, Hans HOFMANN, Robert MOTHERWELL, Franz KLINE, and Mark ROTHKO.

Abu al-Ala al-Maari, 973–1057, Arabic poet. He was blind from childhood. Brilliantly original, he discarded classicism for intellectual urbanity. Later he favored ascetic purity and wrote more stereotypical poetry.

Abu al-Faraj Ali of Esfahan, 897–967, Arabic scholar. He is mainly known for his poetic anthology *Kitab al-Aghani* [book of songs], an important source for information on medieval Islamic society.

Abu Bakr, 573–634, 1st caliph, father-in-law and successor of MUHAMMAD. He was probably the Prophet's first convert. During his critical two-year caliphate (632–34), ISLAM began the phenomenal growth that was to make it a world religion.

Abu Dhabi, city (1991 est. pop. 798,000), capital of the UNITED ARAB EMIRATES.

Abu Hanifa, c.699–767, Muslim theologian. A wealthy merchant from Kufa, Iraq, he founded Hanifi, the first of Islam's four orthodox schools of law. His thinking reflects a concern for the solidarity of the Muslim community. Accorded official status in many countries formerly under Ottoman administration, Hanifi is the most widespread of Islamic legal systems.

Abuja, city and federal capital territory (1991 pop. 378,671), Nigeria. Plans to move the capital from LAGOS were approved in 1976, and a 3,000-sq mi (7,770-sq km) capital territory was created near the old town of Abuja (renamed Suleja). The site, near the center of the country, has a good climate and is not associated with any particular ethnic group. Abuja officially became Nigeria's capital in 1991.

Abu Nuwas, d. c.810, Arabic poet. A favorite of the caliphs HARUN AR-RASHID and Amin, he spent much time in Baghdad. His exquisite poetry echoes the extravagance of court life.

Abu Said ibn Abi al-Khair, 967–1049, Persian poet, a Sufi and a DERVISH. He was the first to write rubaiyat (quatrains) in the Sufistic strain that OMAR KHAYYAM made famous.

Abu Simbel or **Ipsambul,** village, S Egypt, on the NILE R. Its two temples, hewn (c.1250 B.C.) out of rock cliffs in the reign of RAMSES II, were dismantled and raised over 200 ft (61 m) to avoid waters rising behind the ASWAN HIGH DAM. The project was completed (1966) with UNESCO aid.

Abu Tammam Habib ibn Aus, c.805–c.845, Arabic poet, compiler of the Hamasa. Often describing historical events, his poems of valor are important as source material.

Abyssinian cat: see under CAT.

Ac, chemical symbol of the element ACTINIUM.

AC: see ELECTRICITY; GENERATOR; MOTOR, ELECTRIC.

acacia, plant (genus *Acacia*) of the PULSE family, mostly tropical and subtropical thorny shrubs and trees. Some have a feathery foliage composed of leaflets; others have no leaves but have flattened leaflike stems containing chlorophyll. Various species yield lac (for shellac), catechu (a dye), gum arabic, essential oils, tannins, and hardwood timber.

Acadia [əkā'dēə], region and former French colony, centered on NOVA SCOTIA, but including also PRINCE EDWARD ISLAND and much of the mainland coast from Quebec to Maine. In 1605 the French founded Port Royal (now ANNAPOLIS ROYAL), the first and chief town. During the FRENCH AND INDIAN WARS, the Peace of Utrecht (1713) gave Britain possession of the Nova Scotian peninsula, and, by the Treaty of PARIS (1763), all of Acadia fell to Britain. Doubting the loyalty of the French inhabitants (called Acadians), the British expelled many of them in 1755 and 1758. Most were scattered among the British colonies to the south, many of them later returning to the area. Other exiles found havens elsewhere, notably the Cajuns of S Louisiana, who still preserve a separate folk culture. The sufferings of the expulsion are depicted in LONGFELLOW's poem *Evangeline*.

Acadia National Park: see NATIONAL PARKS (table).

acanthus, common name for the Acanthaceae, a family of chiefly perennial herbs and shrubs, mostly tropical. Many members have decorative spiny leaves and are cultivated as ornamentals, e.g., bear's breech, whose ornate leaves provided a motif often used in Greek and Roman art and architecture. In Christian art, the acanthus symbolizes heaven.

Acapulco, city (1990 pop. 592,187), winter resort on the tropical Pacific coast of S Mexico, known for its fine beaches, luxury hotels and villas, and deep-sea fishing. Founded (1550) on a natural harbor, it was a base for Spanish explorers and was important in trade

with the Philippines. It became a favored haunt of wealthy vacationers in the 1920s.

acceleration: see MOTION.

accelerator: see PARTICLE ACCELERATOR.

accounting, classification, analysis, and interpretation of the financial, or bookkeeping, records of an enterprise, used to evaluate the progress or failures of a business and to recognize the factors that determine its true condition. In the U.S. accountants who pass a required examination are granted the title Certified Public Accountant (CPA). A branch of accounting is **auditing,** the examination of accounts by persons who have had no part in their preparation. Annual audits are required for all publicly held businesses.

Accra, city (1984 pop. 867,459), capital of Ghana, on the Gulf of Guinea. The nation's largest city and its administrative and economic center, Accra is linked by road and rail with KUMASI, in the interior, and with the seaport of Tema. Manufactures include processed food, wood products, and textiles. The city became (1876) the capital of the British Gold Coast colony and grew economically after completion (1923) of a railroad to the interior. Riots in the city (1948) accelerated the movement for Ghana's independence. Today Accra is a sprawling, modern city with wide avenues; points of interest include a 17th-cent. Danish castle.

acculturation, the more or less continuous interaction between social groups brought about by accommodation and resulting in the intermixture of shared, learned behavior patterns. It may result in almost complete absorption of the culture of one of the groups or a relatively equal merging of traits and patterns from both cultures. Syncretism occurs when a subordinate group molds elements of a dominant culture to fit its own traditions.

acetaminophen, an ANALGESIC and fever-reducing medicine similar in effect to ASPIRIN. It is less irritating to the stomach than aspirin but lacks aspirin's anti-inflammatory effect.

ACE inhibitor or **angiotensin-converting enzyme inhibitor,** drug used to reduce elevated blood pressure (see HYPERTENSION), treat congestive heart failure (see HEART DISEASE), and alleviate strain on hearts damaged by heart attack. ACE inhibitors block production of an enzyme that helps make blood vessels constrict, thus widening the vessels and making it easier for the heart to pump blood through the body. Captopril is a commonly used ACE inhibitor.

acetone, dimethyl ketone, or **2-propanone** (CH_3COCH_3), colorless, flammable liquid. Acetone is widely used in industry as a solvent for many organic substances and is a component of most paint and varnish removers. It is used in making synthetic RESINS and fillers, smokeless powders, and many other organic compounds.

acetylcholine, organic compound containing carbon, hydrogen, oxygen, and nitrogen, essential for the conduction of nerve impulses in animals. It is found in highest concentrations at nerve terminals and is liberated at these nerve cell endings. There is strong evidence that acetylcholine is the transmitter substance that conducts impulses from one cell to another in the parasympathetic nervous system, and from nerve cells to smooth muscle, skeletal muscle, and exocrine glands.

acetylene or **ethyne** (HC≡CH), a colorless gas and the simplest alkyne (see HYDROCARBON). Explosive on contact with air, it is stored dissolved under pressure in ACETONE. It is used to make neoprene RUBBER, PLASTICS, and RESINS. The oxyacetylene torch mixes and burns oxygen and acetylene to produce a very hot flame—as high as 6300°F (3480°C)—that can cut steel and weld iron and other metals.

Achaea [əkē'ə], region of ancient GREECE, in the N Peloponnesus on the Gulf of Corinth, home of the **Achaeans,** the ruling class in the PELOPONNESUS from c.1250 B.C. Before the 5th cent. B.C. the Achaean cities joined in the First **Achaean League,** which was dissolved after it opposed (338 B.C.) PHILIP II of Macedon. The Second Achaean League, formed in 280 B.C., almost drove MACEDON from Achaea but was stopped by SPARTA. In 198 B.C., with Roman aid, the league won power. Later, suspecting pro-Macedonian sympathies, Rome deported many Achaeans (168 B.C.) to Italy. In 146 B.C. Achaea waged a suicidal war against Rome, which easily won, dissolved the league, and ended Greek liberty.

Achaemenids [ăk"əmĕn'ĭdz], dynasty of ancient PERSIA. The Achaemenid rulers (c.550–330 B.C.) included CYRUS THE GREAT, Cambyses, DARIUS I, Xerxes I, and ARTAXERXES I. The dynasty ended with DARIUS III.

Achebe, Chinua, 1930–, Nigerian novelist. His novels, written in English, depict Ibo society and the impact of colonialism, e.g., *Things Fall Apart* (1958) and *A Man of the People* (1966). A former broadcaster and diplomat for Biafra, he has also published poetry, e.g., *Christmas in Biafra* (1973). A later novel is *Anthills of the Savannah* (1987).

Acheson, Dean Gooderham, 1893–1971, U.S. secretary of state (1949–53); b. Middletown, Conn. Serving Pres. TRUMAN, he established the policy of containment of Communist expansion. He also helped to establish the NORTH ATLANTIC TREATY ORGANIZATION.

Achilles, in Greek mythology, foremost hero of the TROJAN WAR; son of Peleus and Thetis. Thetis attempted to make him immortal by bathing him in the river STYX, but the heel she held remained vulnerable. Knowing Achilles was fated to die at Troy, Thetis disguised him as a girl and hid him at Skyros. He was found by ODYSSEUS, who persuaded him to go to war. At Troy he quarreled with AGAMEMNON and sulked in his tent until his friend Patroclus was killed by HECTOR. Filled with grief and rage, Achilles slew Hector and dragged his body to the Greek camp. He was later killed by PARIS, who wounded him in his heel.

acidophilus milk: see FERMENTED MILK.

acid rain, form of precipitation (rain, snow, sleet, or hail) containing high levels of sulfuric or nitric acids (*p*H below 5.5–5.6). Produced when sulfur dioxide and various nitrogen oxides combine with atmospheric moisture, acid rain can contaminate drinking water, damage vegetation and aquatic life, and erode buildings and monuments. It has been an increasingly serious problem since the 1950s, particularly in the NE U.S., Canada, and W Europe, especially Scandinavia. Automobile exhausts and the burning of high-sulfur industrial fuels are thought to be the main causes, but natural sources, e.g., volcanic gases and forest fires, may also be significant. The U.S. Clean Air Act (1970) and its amendments have significantly reduced sulfur dioxide (but not nitrogen oxide) emissions. See also ECOLOGY; POLLUTION; WASTE DISPOSAL.

acids and bases, two related classes of chemicals; the members of each class have a number of common properties when dissolved in a solvent, usually water. Acids in water solutions exhibit the following common properties: they taste sour; turn LITMUS paper red; and react with certain metals, such as zinc, to yield hydrogen gas. Bases in water solutions exhibit these common properties: they taste bitter; turn litmus paper blue; and feel slippery. When a water solution of acid is mixed with a water solution of base, a SALT and water are formed; this process, called neutralization, is complete only if the resulting solution has neither acidic nor basic properties. When an acid or base dissolves in water, a certain percentage of the acid or base particles will break up, or dissociate, into oppositely charged ions. The Arrhenius theory of acids and bases defines an acid as a compound that can dissociate in water to yield hydrogen ions (H^+) and a base as a compound that can dissociate in water to yield hydroxyl ions (OH^-). The Brönsted-Lowry theory defines an acid as a proton donor and a base as a proton acceptor. The Lewis theory defines an acid as a compound that can accept a pair of electrons and a base as a compound that can donate a pair of electrons. Each of the three theories has its own advantages and disadvantages; each is useful under certain conditions. Strong acids, such as HYDROCHLORIC ACID, and strong bases, such as potassium hydroxide, have a great tendency to dissociate in water and are completely ionized in solution. Weak acids, such as acetic acid, and weak bases, such as AMMONIA, are reluctant to dissociate in water and are only partially ionized in solution. Strong acids and strong bases make very good ELECTROLYTES (see ELECTROLYSIS), i.e., their solutions readily conduct electricity. Weak acids and weak bases make poor electrolytes. See also AMPHOTERISM; BUFFER; CATALYST; INDICATORS, ACID-BASE; TITRATION; article on *p*H.

ACLU: see AMERICAN CIVIL LIBERTIES UNION.

Acmeists, school of Russian poets that arose in 1912 in reaction to the SYMBOLISTS; it emphasized concreteness of imagery and clarity

of expression. The leading Acmeists were Nikolai Gumilev, Anna AKHMATOVA, and Osip MANDELSTAM.

acne, inflammatory disease of the sebaceous glands, characterized by blackheads, cysts, and pimples. The lesions appear on the face, neck, chest, back, and arms, and may be mild to severe. Most prevalent during adolescence, acne may appear in adulthood. Its cause is unknown, but contributing factors include genetic predisposition and hormonal changes during puberty. Treatment includes use of cleansers, ANTIBIOTICS, surgical drainage of lesions, and, for severe cases, retinoic acid derivatives.

Acoma or **Ácoma,** pueblo (1990 pop. 2590), W central N. Mex., situated atop a steep-sided 357-ft (109-m) MESA. Founded c.1100–1250, it is considered the oldest continuously inhabited community in the U.S. The resident PUEBLO retain aspects of their 700-year-old culture; the men are weavers, the women highly skilled and renowned potters.

Aconcagua, mountain 22,835 ft (6,960 m) high, in the ANDES of Argentina. It is the highest peak in the Americas.

acorn: see OAK.

acoustics, the science of SOUND, including its production, propagation, and effects. An important practical application of acoustics is in the designing of auditoriums, which requires a knowledge of the characteristics of sound WAVES. Reflection of sound can cause an ECHO, and repeated reflections in an enclosed space can cause reverberation, the persistence of sound. Some reverberation in auditoriums is desirable to avoid deadening the sound of music. Reflection can be reduced through the proper configuration and texture of walls, and by the use of sound-absorbent materials. Another acoustical problem is INTERFERENCE, which can create "dead spots" in auditoriums for certain frequencies.

acquired characteristics, modifications produced in an individual plant or animal as a result of mutilation, disease, use and disuse, or any distinctly environmental influence. Belief in the inheritability of acquired characteristics was accepted by LAMARCK but ultimately rejected by modern geneticists, who have affirmed that inheritance is determined solely by reproductive cells and unaffected by somatic (body) cells.

acquired immunodeficiency syndrome: see AIDS.

acropolis, elevated, fortified section of ancient Greek cities. The Acropolis of Athens was adorned in the 5th cent. B.C. with some of the world's greatest architectural monuments. The remains of the PARTHENON, ERECHTHEUM, and Propylaea still stand.

acrylic. 1 Also called **acrylic fiber,** any of a group of SYNTHETIC TEXTILE FIBERS, such as Arilan and Orlon, that are polymers primarily composed of the acrylonitrile monomer CH_2=CHCN. **2** Also called **acrylic resin,** any of a group of thermoplastic resins that are polymers produced from esters of acrylic acid ($C_3H_4O_2$) or methacrylic acid ($C_3H_6O_2$). They are used in paints (e.g., Lucite) and plastics (e.g., Plexiglas).

Actaeon [ăktē'ən], in Greek mythology, a hunter. Because he saw ARTEMIS bathing naked, she changed him into a stag, and he was killed by his own dogs.

actinide series, the radioactive metals, with atomic numbers 89 through 103, in group IIIb of the PERIODIC TABLE. They are ACTINIUM, THORIUM, PROTACTINIUM, URANIUM, NEPTUNIUM, PLUTONIUM, AMERICIUM, CURIUM, BERKELIUM, CALIFORNIUM, EINSTEINIUM, FERMIUM, MENDELEVIUM, NOBELIUM, and LAWRENCIUM. All members of the series have chemical properties similar to actinium. Those elements with atomic numbers greater than 92 are called TRANSURANIUM ELEMENTS.

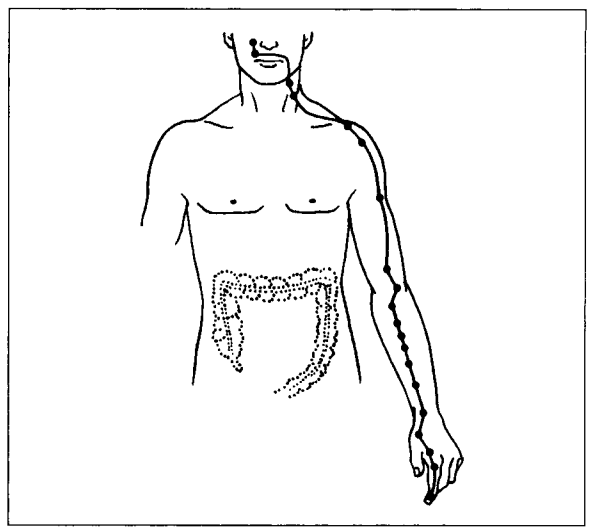
actinium (Ac), radioactive element; discovered in 1899 by André Debierne in uranium residues from pitchblende. Actinium, a silver-white metal, is the first member of the ACTINIDE SERIES. The most stable isotope has a half-life of 21.6 years. See ELEMENT (table); PERIODIC TABLE.

action painting: see ABSTRACT EXPRESSIONISM.

activation energy: see CATALYST.

Acts of the Apostles, fifth book of the NEW TESTAMENT, between the GOSPELS and the EPISTLES. The only contemporary historical account of CHRISTIANITY'S early expansion, it was written between A.D. 60 and 80 as a sequel to the Gospel of St. LUKE, who is its traditional author. The Acts chiefly deal with the work of St. PETER (1–12) and St. PAUL (13–21).

acupuncture, technique of medical treatment, based on traditional Chinese medicine, in which a number of very fine metal needles are inserted into the skin at any of some 800 specially designated points. In China it has long been used for pain relief and treatment of such ailments as ARTHRITIS, HYPERTENSION, and ULCERS. It is also now used as ANESTHESIA for childbirth and some surgery. (Unlike conventional anesthesia, it does not lower blood pressure or depress breathing.) Acupuncture is said to work by manipulating the body's electrical energy flow, allowing the body to balance and heal itself, e.g., by stimulating the production of ENDORPHINS in cases of chronic pain. U.S. research has focused on the use of acupuncture in pain relief and anesthesia, to counteract the side effects of CHEMOTHERAPY, and as an aid in reducing the cravings of former smokers and drug addicts.



Acupuncture points for treating diseases of the large intestine

ADA: see PROGRAMMING LANGUAGE.

Adam [Heb., = man], in the BIBLE, the first person. His story, from his creation to his expulsion (with EVE, his wife) from the Garden of EDEN, is told in Genesis. To St. PAUL, Adam represented the physical aspect of humanity.

Adam, Adolphe Charles [ädäN'], 1803–56, French composer. His more than 50 stage works include the ballet *Giselle* (1841). He also wrote the popular song *Cantique de Noël.*

Adam, Robert, 1728–92, and **James Adam,** 1730–94, Scottish architects, brothers. Robert possessed the great creative talents. They designed public and private buildings in England and Scotland, and numerous interiors, pieces of furniture, and decorative objects. Robert's light, elegant style was a personal reconstitution of Palladian, Renaissance, and antique elements. The Adam manner grew vastly popular and has never disappeared. Interesting examples of Adam planning and decoration are at Osterly Park (1761–80) and Syon House (1762–69), both near London.

Adams, family of distinguished Americans from Massachusetts. **John Adams** was president of the U.S. (see separate article). He and his wife, Abigail (Smith) Adams, were the parents of **John Quincy Adams,** who was also president of the U.S. (see separate article). His son, **Charles Francis Adams,** 1807–86, b. Boston, was U.S. minister to Great Britain (1861–68). He maintained the Northern cause with a wisdom and dignity that won British respect, and he is credited with preventing British recognition of the CONFEDERACY. Later he represented the U.S. in the settlement of the ALABAMA CLAIMS. His son **Charles Francis Adams,** 1835–1915, b. Boston, was an economist and historian. An expert on railroad financing, he was president of the Union Pacific RR (1884–90). His works include *Three Episodes of Massachusetts History* (1892). His brother **Brooks Adams,** 1848–1927, b. Quincy, Mass., was a historian. His belief that civilizations rose and fell according to the growth and decline of commerce was first developed in *The Law*

of Civilization and Decay (1895). Among his other important works are *America's Economic Supremacy* (1900) and *Theory of Social Revolutions* (1913). His ideas influenced another brother, **Henry Adams,** 1838–1918, b. Boston, who was also a writer and historian. In developing a philosophy of history he found a unifying principle in force, or energy, and applied it in two books, *Mont-Saint-Michel and Chartres* (1913) and *The Education of Henry Adams* (1918). He also wrote *History of the United States of America* (9 vol., 1889–91).

Adams, Ansel, 1902–84, American photographer; b. San Francisco. Working against the aesthetic of the 1930s, he produced superb regional landscapes, notably of the American Southwest. He also wrote technical manuals and helped to found the first museum and college photography departments.

Adams, James Truslow, 1878–1949, American historian; b. Brooklyn, N.Y. His works include *The Founding of New England* (1921; Pulitzer), *The Adams Family* (1930), and *The Epic of America* (1931). He was editor of the *Dictionary of American History* (6 vol., 1940).

Adams, John, 1735–1826, 2d president of the U.S. (1797–1801); b. Quincy (then in Braintree), Mass.; father of John Quincy ADAMS. He graduated from Harvard Univ. in 1755 and became a lawyer. As a moderate but forceful leader of the group who opposed British measures leading to the AMERICAN REVOLUTION, he later served in both CONTINENTAL CONGRESSES and argued eloquently for the DECLARATION OF INDEPENDENCE, which he signed. Adams served the new nation as a diplomat, negotiating the Treaty of PARIS (1783) to end the Revolution and serving (1785–88) as envoy to Great Britain. He became Pres. WASHINGTON's vice president (1789–97) and in 1797 succeeded him as president. Adams's administration as president revealed his honest and stubborn integrity. Although allied with Alexander HAMILTON and the conservative, property-respecting Federalists, he was not dominated by them in their struggle with the Jeffersonians (see JEFFERSON, THOMAS). By conciliation he prevented war with France (see XYZ AFFAIR). He did not wholly support the ALIEN AND SEDITION ACTS. After 1801 he lived in retirement in Quincy. His wife, **Abigail (Smith) Adams,** 1744–1818, b. Weymouth, Mass., was the chief figure in the social life of her husband's administration. Lively and intelligent, she was one of the most distinguished and influential of American first ladies.

Adams, John Couch, 1819–92, English astronomer. By mathematical calculation based on irregularities in the motion of the planet Uranus, he and U.J.J. LEVERRIER independently and accurately predicted (1845–46) the position of the then unknown planet NEPTUNE. Adams also made valuable studies of the moon's motions, of the great meteor shower of 1866, and of terrestrial magnetism.

Adams, John Quincy, 1767–1848, 6th president of the U.S. (1825–29); b. Quincy (then in Braintree), Mass; son of John and Abigail ADAMS; father of Charles Francis Adams (see ADAMS, family). As U.S. senator from Massachusetts (1803–8), he angered his fellow Federalists by supporting Jeffersonian policies (see JEFFERSON, THOMAS). He gained fame as secretary of state (1817–25) for Pres. James MONROE, his greatest achievement being the MONROE DOCTRINE. Elected president (1825) in the House of Representatives through the support of Henry CLAY, Adams had an unhappy, ineffective administration, despite his attempts to institute a program of internal improvements. He won new respect as a U.S. representative from Massachusetts (1831–48), eloquently attacking all measures that would extend SLAVERY.

Adams, Samuel, 1722–1803, American Revolutionary patriot; b. Boston. His speeches and writings helped to spark the AMERICAN REVOLUTION. He signed the DECLARATION OF INDEPENDENCE, was a member (1774–81) of the CONTINENTAL CONGRESS, and was governor (1794–97) of Massachusetts.

Adana, city (1990 pop. 931,555), capital of Adana prov., S Turkey, on the Seyhan R. Turkey's fourth largest city, it is the commercial center of a farming region where cotton, grains, and other crops are grown. The city's manufactures include processed food and textiles. An ancient city probably founded by the HITTITES, it prospered from 66 B.C. as a Roman colony. It later declined but was revived (A.D. c.782) by HARUN AR-RASHID. In the 16th cent. it passed to the Ottoman Turks. Near Adana is a Hittite archaeological site.

adaptation, in biology, the adjustment of living matter to environmental conditions, including other living things. Animals and plants are adapted for securing food and surviving even in conditions of drought, great heat, or extreme cold. Adaptations are believed to arise when genetic variations that increase an organism's chances of survival are passed on to succeeding generations. See also ECOLOGY; EVOLUTION; GENETICS.

adaptive radiation, in biology, the evolution of an ancestral species adapted to a particular way of life into several species, each adapted to a different habitat. Illustrating the principle are the 14 species of DARWIN's finches, small land birds of the Galapagos Islands: 3 are ground-dwelling seedeaters, 3 live on cactus plants and are seedeaters, 1 is a tree-dwelling seedeater, 7 are tree-dwelling insect eaters, but all derive from a single species of ground-dwelling, seedeating finch that probably emigrated from the South American mainland.

Addams, Charles Samuel, 1912–88, American cartoonist; b. Westfield, N.J. His work, best known from *The New Yorker* magazine, is famed for its wit, fantasy, and sense of the macabre.

Addams, Jane, 1860–1935, American social worker; b. Cedarville, Ill. In 1889 she and Ellen Gates Starr founded Hull House, a Chicago settlement house that served the neighborhood poor and became a center for social reform activities. A leader of the WOMAN SUFFRAGE and pacifist movements, Addams shared the 1931 Nobel Peace Prize. She wrote several books on social issues and two autobiographical volumes.

addax: see ANTELOPE.

adder: see VIPER.

addiction: see DRUG ADDICTION AND DRUG ABUSE.

Addis Ababa, city (1988 est. pop. 1,686,000), capital of Ethiopia. Addis Ababa is Ethiopia's largest city, its administrative and communications center, and the main trade center for coffee (Ethiopia's chief export), tobacco, grains, and hides; much of its commerce is shipped by rail to the port of DJIBOUTI. Addis Ababa became (1889) Ethiopia's capital and was captured (1936) by the Italians and made the capital of ITALIAN EAST AFRICA. It was retaken by the Allies in 1941 and returned to Ethiopian rule. A modern city, it has been the site of many international conferences and organizations, including the ORGANIZATION OF AFRICAN UNITY. Notable buildings include Coptic and Roman Catholic cathedrals.

Addison, Joseph, 1672–1719, English essayist, poet, and statesman. His *Remarks on Italy* (1705) recorded early travels. The prominence he attained with the epic *Campaign* (1704) on MARLBOROUGH's victory at Blenheim led to political appointments, and he served in Parliament (1708–19). Addison contributed to his friend Richard STEELE's periodical the *Tatler* after 1710. There, and in the *Spectator* and *Guardian,* he raised the English essay to an unequaled height. In prose marked by simplicity, order, and precision, Addison advocated reason and moderation in life.

Addison's disease, progressive disease brought about by atrophy of the outer layer (cortex) of the adrenal gland; also called chronic adrenocortical insufficiency. The deterioration of this tissue causes a decrease in the secretion of vital steroid hormones, producing such symptoms as ANEMIA, weakness, abnormal skin pigmentation, and weight loss. The cause of the disease is unknown. Once thought inevitably fatal, the disease is now treated with adrenocortical hormones.

Adelaide, city (1991 pop. 1,023,617), capital and chief port of South Australia, at the mouth of the Torrens R., on Gulf St. Vincent. It has automotive, textile, and service industries, and exports grains, wool, dairy products, and fruit. Founded in 1836, it was named for William IV's consort. The biennial Adelaide Festival of the Arts, begun in 1960, is held in the Adelaide Festival Centre (opened 1977). It is also known for its parks.

Aden, city (1987 est. pop. 417,000), chief port of Yemen, on the Gulf of Aden near the southern entrance to the Red Sea. The city is built on two peninsulas, each with a high volcanic headland. Most of the population lives on Aden peninsula; Little Aden peninsula has an oil refinery and other industries. Aden has been the chief trade center of S ARABIA since ancient times. It declined with the discovery (15th cent.) of an all-water route around Africa to India, but revived when the SUEZ CANAL opened in 1869. The region was held by Muslim Arabs (7th–16th cent.) and by the Ottoman Turks (from 1538). The British captured Aden in 1839 and made it a crown

colony in 1935. The capital of independent Southern Yemen (see YEMEN) from 1970 to 1990, Aden was designated the economic capital of united Yemen in 1990 and a free-trade zone is planned.

Aden, Gulf of, western arm of the Arabian Sea, 550 mi (885 km) long, between E Africa and SW Asia. It is connected with the RED SEA by the BAB EL MANDEB and is an important link in the MEDITERRANEAN SEA–SUEZ CANAL–INDIAN OCEAN sealane.

Adenauer, Konrad, 1876–1967, West German chancellor (1949–63). He was a member of the Catholic Center party until 1933, when he was imprisoned by the NAZIS. After World War II he was a founder and president of the Christian Democratic Union. As chancellor, he presided over the spectacular rebirth of West GERMANY's economy, and guided that nation's reentry into the European community and recovery in 1955 of its full sovereignty.

adenoids: see TONSILS.

adenosine triphosphate (ATP), organic compound composed of adenine, ribose, and three phosphate units. ATP serves as the major energy source within cells, driving such biological processes as photosynthesis, muscle contraction, and protein synthesis. It is broken down by hydrolysis (reaction with water) to yield adenosine diphosphate (ADP), inorganic phosphate, and energy. ADP can be further broken down by hydrolysis to yield adenosine monophosphate (AMP), inorganic phosphate, and energy. Excess phosphate yielded from these and subsequent reactions is used to produce new ATP from AMP.

adhesion and cohesion, attractive forces between material bodies. Adhesive forces act between different substances, whereas cohesive forces act within a single substance, holding its atoms, ions, or molecules together. Without these forces, solids and liquids would act as gases. SURFACE TENSION in liquids results from cohesion, and CAPILLARITY results from a combination of adhesion and cohesion. FRICTION between two solid bodies depends in part on adhesion.

Adirondack Mountains, forested mountain wilderness area, NE New York, with many scenic gorges, waterfalls, and lakes. The Adirondacks rise to a high point of 5,344 ft (1,629 m) at Mt. Marcy and are geologically a southern extension of the CANADIAN SHIELD. Lake Placid and Lake George are important area resorts. The **Adirondack Park,** a state park encompassing the area (est. 1892), is the largest park in the U.S. outside Alaska, but less than half its land is state-owned preserve.

Adler, Alfred, 1870–1937, Austrian psychiatrist, early associate of Sigmund FREUD and founder of the school of individual psychology. Rejecting Freud's emphasis on sex, Adler maintained that personality difficulties are rooted in a feeling of inferiority (see COMPLEX) deriving from restrictions on the individual's need for self-assertion. His best-known work is *The Practice and Theory of Individual Psychology* (1923).

Adler, Cyrus, 1863–1940, American Jewish educator; b. Van Buren, Ark. Founder of the American Jewish Historical Society, American Jewish Committee, and Jewish Welfare Board, he was president of Dropsie College (1908–40) and the Jewish Theological Seminary (1924–40). He was an editor of the *Jewish Encyclopedia*, and wrote articles and books.

Adler, Felix, 1851–1933, American educator and leader in social welfare; b. Germany. Founder of the ETHICAL CULTURE MOVEMENT (1876) and Society, he also organized the Workingmen's Lyceum, the Workingmen's School, and the Manhattan Trade School for Girls. He was for many years chairman of the National Child Labor Committee, and wrote *Creed and Deed* (1877) and *An Ethical Philosophy of Life* (1918), among other books.

Adler, Larry, 1914–, American harmonica player; b. Baltimore. He played with the world's major symphony orchestras and is generally credited with elevating the harmonica to concert status in the classical music world.

Adonis, in Greek mythology, beautiful youth loved by APHRODITE and PERSEPHONE. When he was killed by a boar, both goddesses claimed him. ZEUS decreed that he spend half the year above the ground with Aphrodite, the other half in the underworld with Persephone. His death and resurrection, symbolic of the seasonal cycle, were celebrated at the festival Adonia.

adoption, act creating the legal relation of parent and child. It was known in antiquity but was not part of the English COMMON LAW. In the U.S. it is governed by statute. Adoption's historical roots include the need to continue a family line where there is no natural heir. Today the usual focus is the child's welfare. A hearing before a judge is generally required, as is consent of the natural parent or guardian and that of the child if he or she is above a certain age. The natural parents generally lose their rights and duties toward the child; the adoptive parents assume them. Many states now permit adoption by unmarried adults; some allow adoption by homosexual couples. Adoption by relatives is most common; in adoption by unrelated adults, the courts have traditionally attempted to ease adjustment to the adoptive family by maintaining secrecy regarding the child's origin. Since the 1970s, however, a growing number of adopted children have attempted to identify their natural parents, and "open adoption," in which adoptive and birth parents maintain a relationship, has become more popular. See also FOSTER CARE.

Adorno, Theodor Wiesengrund, 1903–69, German philosopher, sociologist, and music critic. From 1928, he was closely associated with the Frankfurt Institute for Social Research. When the Nazis came to power, he emigrated to Britain (1934) and then the U.S. (1938), where with Max Horkheimer he wrote the *Dialectic of Enlightenment* (1947) and collaborated on *The Authoritarian Personality* (1950), a study of fascism. He returned to Frankfurt (1949) and was director (1958–69) of the institute.

adrenal glands, pair of small endocrine glands (see ENDOCRINE SYSTEM) situated atop the kidneys. The outer yellowish layer (cortex) secretes about 30 steroid hormones, most importantly aldosterone, which regulates water and salt balance in the body, and cortisol, which controls carbohydrate, fat, and protein metabolism. The inner reddish portion (medulla) of the adrenals secretes the emergency-response hormones EPINEPHRINE (adrenaline) and norepinephrine.

adrenaline: see EPINEPHRINE.

Adrian I, d. 795, pope (772–95). A Roman, he successfully urged CHARLEMAGNE to defeat the LOMBARDS and acquired from him additional lands for the PAPAL STATES. He supported the Byzantine empress Irene in her struggle against ICONOCLASM.

Adrian IV, d. 1159, pope (1154–59). The only Englishman to become pope, he was originally named Nicholas Breakspear. In 1155 he defeated the opposition of Arnold of Brescia and crowned Holy Roman Emperor FREDERICK I. He later quarreled with Frederick and William I of Sicily. His donation of Ireland as a fief to Henry II of England is disputed.

Adrian, Roman emperor: see HADRIAN.

Adriatic Sea, arm of the MEDITERRANEAN SEA, c.500 mi (800 km) long, between Italy (W) and Slovenia, Croatia, Yugoslavia and Albania (E). It is 58–140 mi (93–225 km) wide, with a maximum depth of c.4,100 ft (1,250 m). VENICE is the chief port.

adsorption, the adhesion of molecules to the surfaces of solids, as opposed to ABSORPTION, in which the molecules actually enter the absorbing medium. Charcoal, for example, which has a great surface area because of its porous nature, can adsorb large volumes of gases, including most of the poisonous ones, and thus is used in gas masks and filters.

Advanced Research Projects Agency, U.S. government agency (est. 1958) administered by the Defense Dept. It has been crucial in developing several important technologies, especially military computers. It funds much of the U.S.'s ARTIFICIAL INTELLIGENCE research, as well as microelectronics, materials science, and behavioral science projects.

Advent, Christian penitential season, lasting in the West from the Sunday nearest Nov. 30 until Christmas. It is the first season of the church calendar.

Advent Christian Church: see ADVENTISTS.

Adventists, members of a group of religious denominations whose distinctive doctrine centers in their belief concerning the imminent second coming of Jesus. Adventism is specifically applied to the teachings of William Miller. The largest group, the Seventh-Day Adventists, were formally organized in 1863 and are fundamentally evangelical. In 1990 there were 717,446 Seventh-Day Adventists in the U.S. Other Adventist groups are the Church of God, the Advent Christian Church, and the Primitive Advent Christian Church.

A.E.: see RUSSELL, GEORGE WILLIAM.

Aegean civilization [ējē'ən], cultures of pre-Hellenic GREECE. MINOAN CIVILIZATION flourished on Crete and MYCENAEAN CIVILIZATION on the Greek mainland. Sites of other cultures have been found at TROY and in the Cyclades.

Aegean Sea, arm of the MEDITERRANEAN SEA, off SE Europe, between Greece and Turkey, center of the classical Greek world. The island-studded sea is c.400 mi (640 km) long, 200 mi (320 km) wide, and more than 6,600 ft (2,010 m) deep off N CRETE at its southern limit. Major islands include ÉVVOIA, the Sporades, the CYCLADES, SÁMOS, KHÍOS, LESBOS, Thásos, and the DODECANESE. Sardines and sponges are taken from the sea, and some oil and natural gas has been discovered.

Aegisthus, in Greek mythology, son of Thyestes. Aegisthus revenged his brothers' murder by killing his uncle ATREUS. He was later CLYTEMNESTRA's lover, helped her to slay AGAMEMNON, and was himself killed by ORESTES.

Aeken, Jerom van: see BOSCH, HIERONYMUS.

Aeneas [ĭnē'əs], in classical legend, a Trojan; son of Anchises and VENUS. After Troy's fall he escaped, tarried with DIDO at CARTHAGE, then went to Italy, where his descendants founded Rome. His deeds are celebrated in VERGIL's *Aeneid.*

Aeolians: see GREECE.

aerial: see ANTENNA.

aerobics [Gr., = with oxygen], endurance exercises in which the volume of breathing is increased and the heart is forced to beat faster than usual for a prolonged period of time, thereby pumping an increased amount of oxygen-rich blood to the muscles being used. Such aerobic activities as running, swimming, and cycling can strengthen the cardiovascular system, improving the body's use of oxygen and allowing the heart to work less strenuously.

aerodynamics, study of gases in motion. Because the principal application of aerodynamics is the design of AIRPLANES, air is the principal gas with which this science is concerned. Bernoulli's principle, which states that the pressure of a moving gas decreases as its velocity increases, has been used to explain the lift produced by a wing having a curved upper surface and a flat lower surface (see AIRFOIL). Because the flow is faster across the curved surface than across the flat one, a greater pressure is exerted in the upward direction. Aerodynamics is also concerned with the drag caused by air friction, which is reduced by making the surface area of the craft as small as possible. At speeds close to the speed of sound, or Mach 1 (see MACH NUMBER), there is also a large, sudden increase of drag, which has been called the sonic, or sound, barrier. Aerodynamics is also used in designing automobile bodies and trains for minimum drag and in computing wind stresses on bridges, buildings, and the like. The WIND TUNNEL is one of the basic experimental tools of the aerodynamicist. See SHOCK WAVE; SONIC BOOM.

aerogel, any of a group of extremely light and porous solid materials; the lightest is less than four times as dense as dry air. Aerogels are produced from certain gels (see COLLOID) by heating the gel under pressure, which causes the liquid in the gel to become supercritical (in a state between a liquid and a gas) and lose its surface tension. In this state, the liquid may be removed from the gel by applying additional heat, without disrupting the porous network formed by the gel's solid component. Silica-, melamine-, and carbon-based aerogels have been produced. Silica-based aerogels are among the lightest, and some, nicknamed "solid smoke" or "frozen smoke," are nearly transparent. Heavier aerogels were first developed in 1931 and have been used to detect high-energy particles emitted by PARTICLE ACCELERATORS. Newer, lighter aerogels with relatively high insulating properties are being tested as substitutes for the CHLOROFLUOROCARBON foams used as refrigerator insulation and as replacements for the air between the panes of double-glazed windows.

aeronautics: see AERODYNAMICS; AIRPLANE; AVIATION.

aerosol, a COLLOID in which small solid or liquid particles are suspended in a gas. Natural aerosols such as fog or smoke occur throughout the ATMOSPHERE, which is itself an aerosol. The term is also used to describe a container of paint, insecticide, or other substance held under pressure by a propellant, which releases the substance in the form of a fine spray or foam. The particles produced by an aerosol container, however, are larger than those in a true aerosol. FREON was the most common aerosol propellant, but its use has been banned because Freon is thought to destroy the OZONE LAYER of the stratosphere.

Aeschines, c.390–314? B.C., Athenian orator. He became politically powerful through his oratorical gifts. Opposing resistance to PHILIP II of Macedon, he was the bitter rival of DEMOSTHENES.

Aeschylus [ĕs'kĭləs, ēs'–], 525–456 B.C., Athenian tragic poet. First of the three great Greek tragedians, he preceded SOPHOCLES and EURIPIDES. He wrote perhaps 90 plays, of which seven survive intact. Often credited with inventing TRAGEDY, he added an actor to what had been a dialogue, thus increasing its possibilities. His choral lyrics rank with those of PINDAR. Among his best-known plays are *The Seven against Thebes* and *Prometheus Bound.* His only extant trilogy, the *Oresteia,* a history of the house of ATREUS, is considered by many the greatest Attic tragedy.

Aesop, semilegendary ancient Greek fabulist, supposedly a slave. The fables called Aesop's were preserved by various writers and include "The Fox and the Grapes" and "The Tortoise and the Hare."

aesthetics, branch of philosophy dealing with the nature of art and the criteria of artistic judgment. The conception of art as imitation of nature was formulated by PLATO and developed by ARISTOTLE, both of whom held that beauty inheres in the object itself and may be judged objectively. KANT held that the subject may have universal validity, while other thinkers, e.g., HUME, identified beauty with that which pleases the observer. Modern philosophers especially concerned with aesthetic questions have included CROCE, CASSIRER, John DEWEY, and SANTAYANA.

Æthelbert [ĕ'thəlbərt, ă–], d. 616, king of Kent (560?–616). Although he was defeated (568) by the West Saxons, he later became the strongest ruler in S England. In 597 he was converted to Christianity by St. AUGUSTINE OF CANTERBURY and became the first Christian king of Anglo-Saxon England.

Æthelbert, d. 865, king of WESSEX (860–65), son of ÆTHELWULF. After his father's death in 858, he ruled KENT, Surrey, SUSSEX, and ESSEX, reuniting them with Wessex when in 860 he succeeded his brother Æthelbald in that kingdom.

Æthelflæd [ĕ'thəlflĕd] or **Ethelfleda** [–flē'də], d. 918, daughter of ALFRED and wife of Æthelred, ealdorman of MERCIA. After her husband's death in 911, she ruled the semi-independent Mercia alone and was known as the Lady of the Mercians.

Æthelred [ĕ'thəlrĕd, ă–], 965–1016, king of England (978–1016), called Æthelred the Unready [Old Eng., = without counsel]. He was the son of EDGAR, and the half brother and successor of Edward the Martyr. A weak king, he reigned at the height of Danish power. Although he began paying tribute through the DANEGELD to the Danes in 991, they returned in 997 to plunder his realm, staying until 1000. In 1002 Æthelred married Emma, sister of the duke of Normandy, possibly hoping to gain an ally. Although by 1009 a navy existed, the treason of its commanders rendered it useless. In 1013 the Danish king SWEYN returned to conquer; he was well received in the DANELAW and London capitulated. Æthelred fled to Normandy but was restored in 1014 on Sweyn's death. In 1016 Æthelred's son EDMUND IRONSIDE succeeded him, made a treaty with CANUTE, son of Sweyn, and died. Canute succeeded him and married Æthelred's widow.

Æthelstan: see ATHELSTAN.

Æthelwulf [ĕ'thəlwo͝olf, ă–], d. 858, king of WESSEX (839–56), son of EGBERT and father of ÆTHELBERT and ALFRED. With his son Æthelbald, he won a notable victory over the Danes at Aclea (851). He married Judith of France in 856. A man of great piety, he learned while on a pilgrimage in Rome that Æthelbald would resist his return. He left his son as king in Wessex and ruled in Kent and its dependencies.

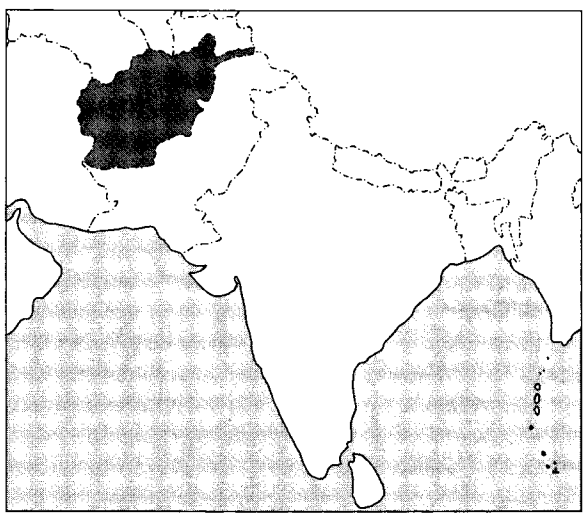
aether: see ETHER, in physics.

Aetna: see ETNA.

Aetolia [ētō'lyə], region of ancient GREECE, N of the gulfs of Corinth and Calydon, E of the Achelous R. It was the center of the **Aetolian League,** formed in the 4th cent. B.C. to oppose the Achaean League (see under ACHAEA) and the Macedonians. With Rome it defeated PHILIP V of Macedon (197 B.C.), but then it allied itself against Rome with ANTIOCHUS III of Syria. His defeat (189 B.C.) marked the end of the league's power.

affirmative action, U.S. program to overcome the effects of past discrimination by giving some form of preferential treatment to ethnic minorities and women. The term is usually applied to those plans that set forth goals and time tables, required since the early 1970s of government contractors and universities receiving public funds. The Equal Employment Opportunities Act (1972) set up a commission to enforce such plans. The establishment of racial quotas in the name of affirmative action brought charges of so-called reverse discrimination in the late 1970s. The U.S. Supreme Court accepted such an argument in 1978 in the UNIVERSITY OF CALIFORNIA REGENTS V. BAKKE, but in 1979 the Court approved the use of quotas in a case involving voluntary affirmative-action programs in unions and private businesses. In the 1980s, under the Reagan administration and as a result of several Supreme Court decisions, the federal government's role in affirmative action was considerably diluted. The 1991 Civil Rights Act, however, restored some of the protections of the earlier laws.

Afghan hound, tall, swift HOUND; shoulder height, 24–28 in. (61–71.1 cm); weight, 50–60 lb (22.7–27.2 kg). Its long, silky coat may be any color. The breed originated in Egypt c.5,000 years ago, was perfected in Afghanistan, and was brought to England after World War I.



Afghanistan, officially Islamic State of Afghanistan, republic (1992 est. pop. 16,096,000), 249,999 sq mi (647,497 sq km), S central Asia, bordered by Iran (W), Pakistan (E and S), Turkmenistan, Uzbekistan, and Tajikistan (N), and China (NE). Principal cities include KABUL (the capital), KANDAHĀR, and HERAT. Most of Afghanistan is mountainous, and the towering ranges of the HINDU KUSH reach a height of more than 24,000 ft (7,315 m); fertile valleys and plains, home of most of the population, nestle in the mountains. The land is mainly dry, and the rivers (unnavigable for the most part) are used for irrigation. Agriculture is the mainstay of the economy, although less than 10% of the land is cultivated and much arable land was damaged by warfare in the 1980s; corn, barley, rice, and fruit are grown, and sheep are raised for skins, wool, and meat. Industry and the development of minerals (except for natural gas, which is exported) are still in the beginning stages. Imports (mostly manufactured goods) greatly exceed exports (wool, hides, fruit). The population is diverse, including Afghans and Pathans, Tajiks, Hazaras, Uzbeks, and nomadic Turkmen. The vast majority are Sunni Muslims, but there is a sizable Shiite minority. Pushtu (Afghan), Dari (Persian), Tajik, and Uzbek are the principal languages.

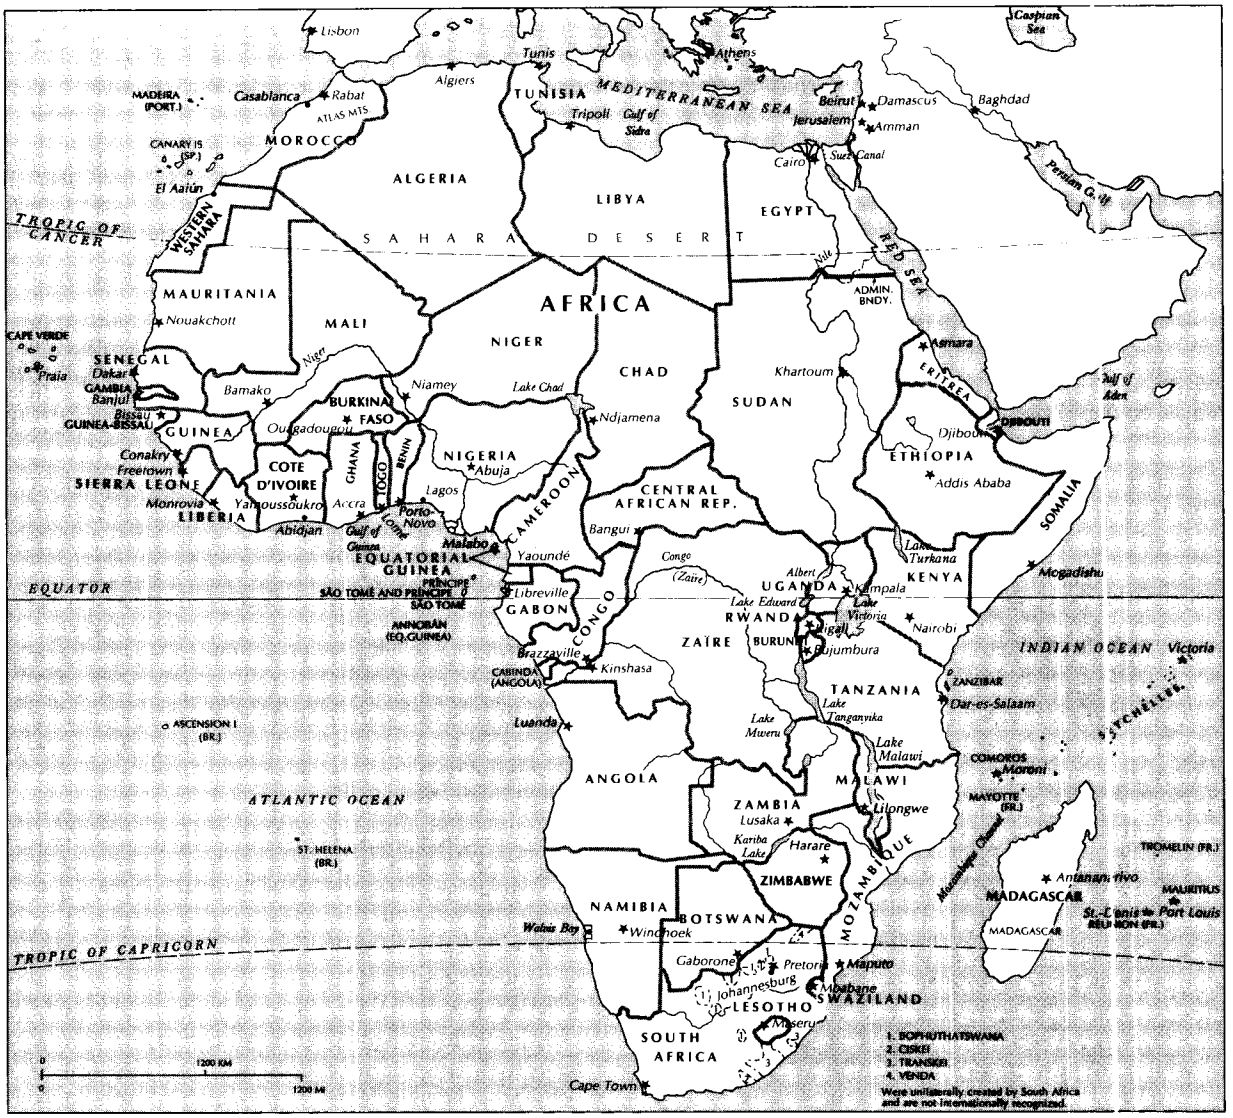
History. Afghanistan, astride the land route to India (through the famed KHYBER PASS), has fallen to many conquerors through the ages, e.g., DARIUS I (c.500 B.C.); ALEXANDER THE GREAT (329–327 B.C.); and numerous Arab invaders (from the 7th cent. A.D.), who established Islam as the dominant culture. Mahmud of Ghazni, who conquered (11th cent.) an empire stretching from Iran to India, was the greatest of Afghanistan's rulers. The country was later conquered by JENGHIZ KHAN (c.1220) and TIMUR (14th cent.). Afghanistan became a united state (1747) under Ahmad Shah, who founded the Durani dynasty. During the 19th cent. Britain, to protect its Indian empire from Russia, tried to establish authority in neighboring Afghanistan; the result was two British-Afghan Wars (1838–42, 1878–80). An agreement (1907) gave Britain control over Afghanistan's foreign affairs, but the emir Amanullah engaged Britain in a third Afghan War (1919), which gave Afghanistan full independence. Amanullah embarked on a modernization program, and in 1926 proclaimed a monarchy to replace the emirate. The last king, Muhammad Zahir Shah, was overthrown in 1973 in a military coup led by Lt. Gen. Muhammad Daoud Khan, who proclaimed a republic. Daoud was killed in a coup (1978) that brought a pro-Soviet regime to power, and in 1979 a coup supported by Soviet troops installed Babrak Karmal as president. Over 5 million Afghans eventually fled to Iran and Pakistan. Losses inflicted by U.S.-supported rebels (mujahedin) eventually led to a Soviet troop withdrawal (1989), but the USSR continued to aid the regime, now headed by Pres. Najibullah. In 1991 the U.S. and USSR agreed to stop arming all sides, and in 1992 Najibullah was ousted and Kabul fell. An interim government, headed by Pres. Burhanuddin Rabbani, was appointed, but fighting broke out among rival rebel factions, and various factions controlled parts of the country. An agreement (1993) that called for power-sharing in the interim government and eventual elections failed to end the bloodshed.

aflatoxins, TOXINS produced by a mold (*Aspergillus*) that grows on stored grains, peanuts, and other food products. Potent CARCINOGENS, aflatoxins are most commonly produced when such foods are improperly stored and often cause disease in farm animals that eat contaminated feed. They can also be produced in the field, particularly if severe climatic changes occur or the plants are attacked by insects.

AFL-CIO: see AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS.

Africa, second largest continent, c.11,677,240 sq mi (30,244,050 sq km) including Madagascar and smaller offshore islands. It is connected to Asia by the narrow Isthmus of Suez. Mt. Kibo (19,340 ft/5,895 m), a peak of KILIMANJARO, in Tanzania, is the highest point; the lowest point, 436 ft (133 m) below sea level, is the Qattarah Depression, in Egypt. E Africa's lake-filled GREAT RIFT VALLEY is the continent's most spectacular feature. Mountain ranges include the ATLAS MTS. (N), the Ethiopian Highlands and Ruwenzori Mts. (E), and the Drakensberg Mts. (S). Chief rivers are the NILE, CONGO (Zaïre), NIGER, and ZAMBEZI. Climatic conditions range from hot and rainy all year near the equator, through tropical savanna with alternating wet and dry seasons immediately north and south of the equatorial region, to hot and dry in the great SAHARA desert, in the north, and the smaller KALAHARI desert, in the south. At its north and south extremities the continent has a Mediterranean-type climate. The countries of Africa are Algeria, Angola, Benin, Botswana, Burkina Faso, Burundi, Cameroon, Cape Verde, the Central African Republic, Chad, the Comoros, Congo, Côte d'Ivoire, Djibouti, Egypt, Equatorial Guinea, Eritrea, Ethiopia, Gabon, Gambia, Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho, Liberia, Libya, Madagascar, Malawi, Mali, Mauritania, Mauritius, Morocco, Mozambique, Namibia, Niger, Nigeria, Rwanda, São Tomé and Principe, Senegal, the Seychelles, Sierra Leone, Somalia, South Africa, Sudan, Swaziland, Tanzania, Togo, Tunisia, Uganda, Zaïre, Zambia, and Zimbabwe; Western Sahara is occupied by Morocco (see separate articles). African peoples, who make up about 10% of the world's population, are divided into more than 50 nations and are further fragmented into numerous ethnic and linguistic groups (see AFRICAN LANGUAGES).

African art, traditional art created by peoples S of the Sahara. The predominant art forms are masks and figures, which were generally used in religious ceremonies. The decorative arts, especially in textiles and in the ornamentation of everyday tools, were a vital art in nearly all African cultures. Established forms evolved long before the arrival (15th cent.) of the Portuguese in Africa, but most works older than 150 years have perished. Their creators valued them for ritual use rather than aesthetic accomplishment. Wood—



often embellished with clay, shells, beads, ivory, metal, feathers, and shredded raffia—was the dominant material. In Sudan and on the Guinea coast the wood-carving style was highly abstract. Distortion often emphasized features of cultic significance. The Bambara of W Mali are famous for their striking wooden headdresses in the form of antelope heads. In NW Guinea the Baga made snake carvings, drums supported by small standing figures, and spectacular masks. The southern groups of Senufu in Côte d'Ivoire made masks representing human features with geometric projections and legs jutting out of each side of the face. During the 18th and 19th cent. the ASHANTI kingdom of Ghana used a system of brass weights to weigh gold dust; these weights were small figures cast by CIRE PERDUE. Among Africa's most remarkable cire perdue bronzes are figures and portraits from Nigeria's BENIN culture, executed from the 12th–19th cent., which exhibit technical sophistication, superb modeling, and naturalistic detail. The Benin people also worked in terra cotta, iron, and ivory. From N Nigeria, the remarkable Nok terra-cotta heads are the earliest African sculpture yet found (c.500–200 B.C.). The art of the Yoruba of S Nigeria is often brilliantly polychromed. On the banks of the Middle Cross R. are about 300 monolithic carvings, supposedly Ekoi ancestor figures from between 1600 and 1900. The small tribes of Cameroon did woodcarvings and sculptures that include large house posts and ritual objects. Among the Fang tribes of Gabon, decorative motifs on stringed musical instruments emphasized the human figure. The Bapende of W Congo made ivory pendants portraying human faces, while the Baluba of SE Congo produced bowls and stools supported by slender figures. The dynamic and expressive free-standing figures of the Badjokwe of S Congo and Angola are particularly outstanding. African art came to European notice c.1905, and modern art, particularly CUBISM, as well as such artists as PICASSO and MODIGLIANI were strongly influenced by it. The Museum of Primitive Art (N.Y.C.) and the Field Museum of Natural History (Chicago) have fine collections of African art.

African languages, geographic rather than linguistic classification of languages spoken on the African continent. These languages do not belong to a single family but are divided among several distinct linguistic stocks having no common origin. The principal linguistic families of Africa are now generally said to be Hamito-Semitic; Niger-Kordofanian (including Niger-Congo); Nilo-Saharan; and Khoisan, or Click. Two other stocks, Indo-European and Malayo-Polynesian, are also represented. For a more detailed categorization of the languages of Africa, see the table accompanying this article.

African literature. Although ancient African Muslim books in Swahili and Arabic exist, African literature before the 19th cent. is almost entirely an oral tradition. The continent's seemingly inexhaustible supply of myths, tales, legends, riddles, and proverbs

The key to pronunciation appears on page xiii.

MAJOR AFRICAN LANGUAGES (**Asterisk indicates a dead language*)

Hamito-Semitic or **Aafroasiatic Languages** (*for Hamito-Semitic languages that were or are spoken in W Asia, see the Hamito-Semitic classification in the table "Major Languages of Europe, Asia, and Some Islands of the Pacific and Indian Oceans" accompanying the* LANGUAGE *article*)

SEMITIC (spoken in North Africa, Ethiopia, and Eritrea)	
Arabic	Egyptian Arabic, Western Arabic
Ethiopic	Amharic (or Abyssinian), Geez (Classical Ethiopic),* Tigré, Tigrinya
HAMITIC	
Egyptian (was spoken in Egypt)	Ancient Egyptian,* Coptic*
Berber (spoken throughout North Africa except Egypt)	Kabyle, Modern Berber, Rif, Siwi, Tamachek, Tuareg, Zanaga
Cushitic (spoken near Ethiopia and adjoining regions)	Agau, Beja, Burji, Geleba, Gimira, Janjaro, Kaffa, Konso, Maji, Oromo, Saho-Afar, Sidamo, Somali
CHAD (spoken near Lake Chad, central Africa, and in W Africa)	Angas, Bolewa, Gwandara, Hausa, Hiji, Kuseri, Mandara, Ngala, Ron, Shirawa, Sokoro

Indo-European Languages (*for a full presentation of the Indo-European language family, see table accompanying the* LANGUAGE *article*)

GERMANIC	
West Germanic	
Low German	Afrikaans (spoken in South Africa), English (spoken in South Africa, Zimbabwe, and other African countries)
ITALIC	
Romance (spoken in a number of African countries)	French, Italian, Portuguese, Spanish

Khoisan or **Click Languages** (*spoken in S and E Africa*)

	Hatsa (or Hadzapi) Sandawe
SOUTH AFRICAN KHOISAN	San, Khoikhoi

Malayo-Polynesian languages (*spoken in Madagascar; for a full presentation of the Malayo-Polynesian language family, see table accompanying the* LANGUAGE *article*)

WESTERN	Malagasy

Niger-Kordofanian Languages

NIGER-CONGO (spoken in S and central Africa and sub-Saharan W Africa)	
West Atlantic	Dyola, Fulani, Gola, Kissi, Temne, Wolof
Mande	Dyula, Malinke, Mende
Gur (or Voltaic)	Dagomba, Mamprusi, Mossi
Kwa	Akan, Ashanti, Bini, Ewe, Ibo, Ijo, Nupe, Yoruba
Benue-Congo	
Bantu	Bemba, Ganda, Kikuyu, Kongo, Lingala, Luba, Makua, Mbundu, Ruanda, Rundi, Shona, Sesotho, Swahili, Thonga, Xhosa, Zulu
Non-Bantu	Efik, Jukun, Tiv
Adamawa-Eastern	Azande, Banda, Sango
KORDOFANIAN (spoken in Sudan)	
Katla	Katla
Koalib	Koalib
Talodi	Talodi
Tegali	Tegali
Tumtum	Tumtum

Nilo-Saharan Languages

SONGHAI (spoken in Mali)	Songhai
SAHARAN (spoken near Lake Chad and in the central Sahara)	Daza, Kanuri, Teda, Zaghawa
MABAN (spoken east of Lake Chad)	Maba
PURIAN (spoken in Sudan)	Fur
KOMAN (spoken in Ethiopia and Sudan)	Ganza, Gule, Gumuz, Koma Mao, Uduk
CHARI-NILE (spoken in Sudan, Zaire, Uganda, Cameroon, Chad, Central African Republic, mainland Tanzania, and Ethiopia)	
Eastern Sudanic	
Nubian	Birked, Midobi
Nilotic	Dinka, Masai, Nandi, Nuer, Shilluk, Suk, Turkana
Central Sudanic	Bongo-Bagirmi, Efe, Mangebetu Berta, Kunama

continues to enrich African writing, which appears in native, especially Bantu, languages, and in French, English, and Portuguese. The African writer best known before the 1930s was the South African Thomas Mofolo, whose novels (in Sesotho) included *Chaka* (tr. 1931). French-African writers in Paris in the 1930s, led by the poet-statesman Léopold Sédar SENGHOR, espoused *négritude*, a rejection of French assimilationist policy. After World War II, writers focused on decaying colonialism and on the "new" Africa. National literatures began to appear, notably in Nigeria with the work of Chinua ACHEBE, Wole SOYINKA, Amos TUTUOLA, and others, and in Senegal and Cameroon. Major African writers in English include Ezekiel Mphahlele and Oswald Mtshali (South Africa), Bessie Head (Botswana), Ayi Kwei Armah (Ghana), and Ngugi wa Thiong'o and Okot p'Bitek (Kenya). Among leading writers in French are Mongo Beti (Cameroon); Camara Laye (Guinea); Birago Diop, Sembene Ousmane, and Mariama Ba (Senegal); David Diop (born in France); and Tchicaya U Tamsi (Congo). One of the best-known writers in Portuguese was Agostinho Neto (1922–79), president of Angola (1975–79).

African Methodist Episcopal Church, a leading African-American denomination of METHODISM, founded (1816) by Richard Allen. The church has over 3,000,000 American members.

African Methodist Episcopal Zion Church, one of the largest African Methodist bodies, founded (1796) by African-American Methodists. The church had a U.S. membership of 1,200,000 in 1991.

African National Congress (ANC), the oldest black (now multiracial) political organization in South Africa; founded in 1912. Prominent in its opposition to APARTHEID, the organization was banned

in 1960 and initiated guerrilla attacks in 1961. In 1964 its leader, Nelson MANDELA, was sentenced to life in prison, and the leadership was forced into exile. Although outlawed, the ANC became the popularly acknowledged vehicle of mass resistance to apartheid in the late 1970s and the 1980s. Following the end of the ban on the ANC and the release of Mandela in 1990, many of its leaders returned from exile, and the ANC negotiated with the government for black enfranchisement and an end to apartheid. In the early 1990s there were violent clashes between supporters of the ANC and Inkatha (see BUTHELEZI, MANGOSUTHU GATSHA). The ANC became a registered political party in 1994 in advance of the first South African elections open to citizens of all races, which they won.

African violet, common name for plants (mostly hybrids of *Saintpaulia ionantha*) of the GESNERIA family, grown chiefly as houseplants for their colorful flowers and fuzzy foliage.

Afrikaans [äf'rəkäns'], one of the official languages of South Africa. It is a Germanic language of the Indo-European family. See AFRICAN LANGUAGES (table).

Ag, chemical symbol of the element SILVER.

Aga Khan III, 1877–1957, Muslim leader. As hereditary ruler of the Muslim Ismaili sect he was born to great power and wealth. He supported the British in India, founded (1906) the All-India Muslim League, and represented India in various international bodies.

Agamemnon, in Greek mythology, leader of the Greeks in the TROJAN WAR; brother of MENELAUS; son of ATREUS. His children by CLYTEMNESTRA were IPHIGENIA, ELECTRA, and ORESTES. To obtain favorable winds for the fleet against Troy, he sacrificed Iphigenia to ARTEMIS, incurring Clytemnestra's hatred. At Troy he quarreled with ACHILLES; that dispute forms a main theme of HOMER'S *Iliad.* He withdrew from the war and returned to Mycenae, where he was murdered by Clytemnestra and her lover, AEGISTHUS. To avenge his death, Orestes and Electra killed Aegisthus and their mother.

Aga Muhammad Khan or **Agha Muhammad Khan,** 1742–97, shah of PERSIA (1796–97), founder of the Kajar, or Qajar, dynasty. In 1794 he killed the last ruler of the Zand dynasty and climaxed his campaign for the throne with a wholesale massacre. Hated by his subjects for his brutality, he was assassinated.

Agana or **Agaña,** city (1990 pop. 4,785), capital of GUAM, W Pacific. It is the adminstrative center of Guam; much of the city's economic activity is related to providing goods and services to the U.S. military bases on Guam. Tourism is also important. Agana was completely destroyed in World War II.

agar, product consisting of the sugar galactose, obtained from some red ALGAE species (see SEAWEED). Dissolved in boiling water and cooled, agar becomes gelatinous; it is used as a culture medium (especially for BACTERIA), a laxative, and a food thickener.

Agassiz, Louis (Jean Louis Rodolphe Agassiz) [ăg'əsē], 1807–73, Swiss-American zoologist and geologist. In 1832 he became professor of natural history at the Univ. of Neuchâtel, which he made a center for scientific study. He also examined glacial movements and deposits before coming to the U.S. in 1846, where he taught at Harvard (from 1848) and strongly influenced a generation of scientists. His writings include *Research on Fossil Fish* (5 vol., 1833–44) and *Contributions to the Natural History of the United States* (4 vol., 1857–62).

agate, extremely fine-grained variety of CHALCEDONY, banded in two or more colors. The banding occurs because agates are formed by the slow deposition of silica from solution into cavities of older rocks. Agates are found primarily in Brazil, Uruguay, India, Mexico, and the U.S. They are valued as semiprecious gems and are used in the manufacture of grinding equipment.

agave: see AMARYLLIS.

Agee, James, 1909–55, American writer; b. Knoxville, Tenn. His works include *Let Us Now Praise Famous Men* (1941), a telling commentary on Depression-era tenant farmers, and *A Death in the Family* (1957; Pulitzer), a poetic novel. His movie criticism and scripts are collected in *Agee on Film* (2 vol., 1958–60).

Agent Orange: see HERBICIDE.

Aggeus [ăgē'əs], Vulgate form of HAGGAI.

aggression, form of behavior characterized by verbal or physical attack. It may be either appropriate and self-protective or destructive. When aggression in adults is not a response to a clear threat, it is often considered a symptom of mental disorder. It may be directed outward, against others, as in explosive personality disorders, or inward, against oneself, leading to self-damaging acts. Some investigators of human behavior, such as Sigmund FREUD and Konrad LORENZ, have argued that aggressive behavior is innate, but others have proposed that it is learned. Brain abnormalities plus hormonal, genetic, and social factors (including poverty and violence in the media) are all being studied for their influence on aggressive behavior.

Agincourt [äzhăNkōōr'], village, N France, where in 1415 Henry V of England defeated an army of French knights in the HUNDRED YEARS WAR. The victory of Henry's longbow men made obsolete the warfare methods of the age of chivalry and enabled England to conquer much of France.

aging: see GERONTOLOGY.

Agnew, Spiro Theodore, 1918–, 39th vice president of the U.S.; b. Baltimore, Md. Governor of Maryland (1967–69), he was vice president (1969–73) in the administration of Pres. Richard M. NIXON. A critic of liberals and VIETNAM WAR protestors, he resigned (Oct. 10, 1973) after evidence revealed political corruption during his years in Maryland politics. He pleaded no contest to the charge of evading income tax, was sentenced to probation, and fined. In 1981 a state court ordered Agnew to repay Maryland over $248,000, for bribes he took while in state office.

Agnon, S(hmuel) Y(osef) [ägnōn'], 1888–1970, Israeli writer; b. Poland as Samuel Josef Czaczkes. Regarded as the greatest modern writer of fiction in Hebrew, he shared the 1966 Nobel Prize in literature. His novels and stories explore Jewish life; they include the novels *The Bridal Canopy* (1919) and *The Day Before Yesterday* (1945).

agnosticism, form of skepticism that holds that the existence of God cannot be logically proved or disproved. Agnosticism is not to be confused with ATHEISM, which denies the existence of God. KANT and Herbert SPENCER considered themselves agnostics.

Agra, former province, N central India. The presidency, or province, of Agra was created in 1833 by the British. In 1902 it became part of the United Provinces of Agra and Oudh. The city of **Agra** (1991 pop. 891,790), Uttar Pradesh state, is on the Jumna R. A district administrative headquarters, it produces shoes, glassware, carpets, and other goods. AKBAR founded Agra, and it was a MOGUL capital until 1658. The British annexed it in 1836. It is noted for its architecture, especially the TAJ MAHAL.

agriculture, science of producing crops and livestock; it aims to increase production and protect the land from deterioration. Branches include AGRONOMY, HORTICULTURE, ENTOMOLOGY, animal husbandry, and DAIRYING. Historically, agriculture has been linked with social, economic, and political organization. Its development among early peoples encouraged stable settlements, and it later became associated with landholding, SLAVERY, and FEUDALISM. During the agricultural revolution (16th and 17th cent.), horticultural knowledge expanded, and crops and farming methods were exchanged internationally. The invention of machines such as McCormick's reaper (1831) and the general-purpose tractor (c.1924) led to mechanized, large-scale farming. Modern Western agriculture also depends on breeding programs; FERTILIZERS and PESTICIDES or INTEGRATED PEST MANAGEMENT; food processing techniques, e.g., REFRIGERATION; efficient marketing; agricultural colleges and research centers; and, in many nations, government subsidies. See also GREEN REVOLUTION; ORGANIC FARMING.

Agriculture, United States Department of, federal executive department established (1862) to administer all federal programs related to food production and rural life. It assists farmers through its research, planning, and service agencies, and aids consumers by inspecting and grading many products; it also administers the Food Stamp Program and issues a wide range of publications on farming and horticulture. The Forest Service and the Soil Conservation Service are part of the department.

agronomy, branch of AGRICULTURE concerned with soil management and with the breeding, physiology, and production of major field crops. It deals mainly with large-scale crops (e.g., cotton, soybeans, and wheat), while HORTICULTURE concerns fruits, vegetables, and ornamentals.

Aguinaldo, Emilio [ägēnäl'dō], 1869–1964, Philippine leader. After leading (1896) a rebellion against Spanish rule, he cooperated with

The key to pronunciation appears on page xiii.

U.S. forces in the SPANISH-AMERICAN WAR. He later rebelled (1899–1901) against U.S. rule.

Ahab [ā'hăb], d. c.853 B.C., king of Israel (c.874–c.853 B.C.), son and successor of Omri. One of the greatest kings of the northern kingdom, he was killed in a war against Damascus. The biblical account of Ahab's reign is mostly concerned with its religious aspects, especially his marriage to Jezebel, a willful woman of Tyre who was attached to foreign cults and behavior. To the devout she represented evil, and she met her match in ELIJAH.

Ahad Ha-Am [äkhäd'hä-äm'] [Heb., = one of the people], 1856–1927, pseud. of Asher Ginsberg, Jewish thinker and Zionist leader; b. Russia. A critic of those who sought immediate settlement in Palestine, he saw Palestine as a "spiritual center" giving strength and direction to Jews in the Diaspora. Some of his essays appear in *Selected Essays of Ahad Ha-Am* (tr. 1912).

Ahasuerus: see ESTHER.

Ahaz [ā'hăz], d. c.727 B.C., king of Judah (c.731–727 B.C.). His reign marked the end of the real independence of Judah. In the BIBLE he is opposed by ISAIAH for his alliance with Assyria against Israel and Syria, and denounced for having heathen abominations and for using the Temple gold to pay tribute to Assyria.

Ahmadabad or **Ahmedabad,** city (1991 pop. 2,873,000), capital of Gujarat state, NW India, on the Sabarmati R. It is an industrial center noted for its cotton mills. Founded in 1412 by the Sultan Ahmad Shah, it fell to AKBAR in 1573 and prospered under the MOGULS, who controlled the city until 1758 when it came under the MAHRATTAS. It has many mosques, tombs, and temples. It came under British control in 1818.

Ahmed, sultans of the OTTOMAN EMPIRE (Turkey). **Ahmed I,** 1589–1617 (r.1603–17), made peace (1606) with Austria, agreeing to Transylvania's independence and recognizing other European rulers as his equals for the first time. **Ahmed II,** 1642–95 (r.1691–95), saw the beginning of the Turks' forced retreat from Hungary. **Ahmed III,** 1673–1736 (r.1703–30), seized (1715) the Peloponnesus and the Ionian Isles (except Corfu) from Venice, but he lost important Balkan territories to Austria. He was overthrown by the JANISSARIES and died in prison.

Ahvenanmaa Islands or **Åland Islands,** Finland, strategically important group of c.7,000 islands (less than 100 inhabited) at the entrance to the Gulf of Bothnia in the Baltic Sea. Originally colonized as part of Sweden, the islands were ceded (1809) to Russia, demilitarized (1856) by international agreement, and confirmed (1921) as part of Finland by the League of Nations. Finland renounced the League's guarantee of autonomy in 1951, but accorded rights of self-government to the islanders, who are largely Swedish.

AIDS or **acquired immunodeficiency syndrome,** disease caused by strains of a virus, known as HIV (human immunodeficiency virus), that attacks certain white blood cells called T4, or CD4, cells. The virus is spread through the exchange of body fluids (primarily semen, blood, and blood products) and can persist in the body for a decade or more without any apparent symptoms. The disease weakens the body's immune system, allowing other diseases, including Kaposi's sarcoma (otherwise a relatively uncommon form of cancer), *Pneumocystis carinii* PNEUMONIA, pulmonary tuberculosis, invasive cervical cancer, and encephalitis, to overwhelm the individual. The drugs AZT, ddI, and ddC, which interfere with HIV's ability to reproduce itself, are used to treat patients with HIV infection and AIDS. Studies are ongoing for an effective vaccine and other treatments. Although AIDS has largely affected male homosexuals, drug abusers, prostitutes, and hemophiliacs in the U.S., heterosexually transmitted infection has increased in the U.S. and reached epidemic proportions in several African and Asian nations.

aids, in FEUDALISM, a type of due paid by a vassal to his lord. Aids varied with time and place, although in England the aids specified in the MAGNA CARTA (1215) were due only on the knighting of the lord's eldest son and the marriage of his eldest daughter, or for ransoming the lord from captivity. Aids were similar to SCUTAGE and TALLAGE. In France, aids continued as a royal tax until the French Revolution (1789).

Aiken, Conrad, 1889–1973, American writer; b. Savannah, Ga. Often concerned with the quest for self-knowledge, he is best known for his richly musical verse, e.g., *Selected Poems* (1929, Pulitzer), *A Letter from Li Po* (1955). His other works include the novels *Blue Voyage* (1927) and *Great Circle* (1933), short stories, critical essays, and an autobiography (1952).

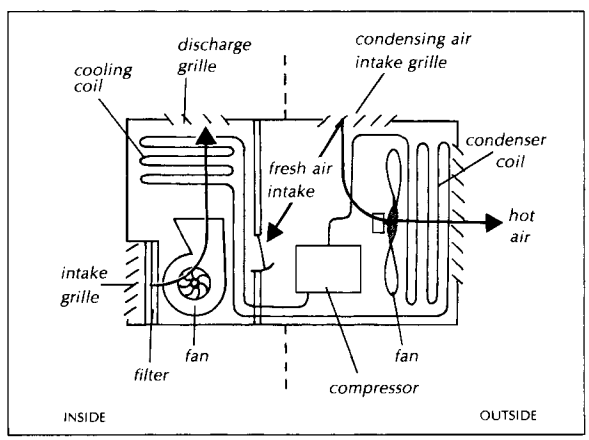
ailanthus, tree (genus *Ailanthus*) of the family Simarubaceae. Ailanthus is native to warm regions of Asia and Australia. Its wood is used in cabinetmaking and for charcoal manufacture. The bark and leaves are used medicinally, and the leaves provide food for silkworms. Females of a species called tree of heaven are cultivated for their attractive foliage and their resistance to smoke and soot; the flowers of the male plant, however, have a disagreeable odor.

Ailey, Alvin, 1931–89, American modern dancer and choreographer; b. Rogers, Tex. He studied with Lester Horton. In the late 1950s, he formed his own company, Alvin Ailey's American Dance Theater, which became noted for its use of African motifs. His best-known works include *Creation of the World* (1954) and *Revelations* (1960).

Ainu, aborigines of Japan, possibly of Caucasoid descent, having both European and Asian physical traits. Invaders from Asia forced the Ainu to the N Japanese island of HOKKAIDO and to Sakhalin and the Kuril Islands, in Russia. Their animistic religion centers on a bear cult. They live by hunting, fishing, farming, and selling crafts to tourists.

air, law of the, law connected with the use of the air (including radio and telegraph communication); more commonly, body of laws governing civil aviation. Spurred by the growth of air transport, the victorious nations of World War I, meeting in Paris in 1919, drew up the International Convention for Air Navigation, commonly called the Paris Convention; this agreement recognized national claims to air space and established rules for aircraft registration and operating safety. U.S. air laws are modeled on the Convention, and are administered by the FEDERAL AVIATION ADMINISTRATION. There are also many general conventions and bilateral agreements between nations. In 1944 a conference of 52 nations established the International Civil Aviation Organization (see UNITED NATIONS, table 3), to ensure the orderly growth of international aviation. The successful launching of SATELLITES necessitated the development of SPACE LAW.

air conditioning, mechanical process for controlling the temperature, humidity, cleanliness, and circulation of air in buildings and rooms. Most air conditioners operate by ducting air across the colder, heat-absorbing side of a REFRIGERATION apparatus, and directing the cooled air back into the air-conditioned space. Small window conditioners vent heat outdoors. Larger systems use circulating water to remove heat. Air conditioning provides the heat, humidity, and contamination controls essential in the manufacture of such products as chemicals and pharmaceuticals.



Cross-section of air conditioning unit

aircraft carrier, ship designed to carry aircraft and to permit takeoff and landing of planes. Its distinctive features are a flat upper deck

(flight deck) that functions as a takeoff and landing field, and a main deck (hangar deck) beneath the flight deck for storing and servicing the aircraft. The aircraft carrier remained an experimental and untested war vessel until WORLD WAR II, when the Japanese wreaked havoc on the British, Dutch, and U.S. navies with carrier-borne aircraft. By 1942 the aircraft carrier had replaced the battleship as the major unit in a modern fleet, and during the war it was indispensable in naval operations against a sea- or shore-based enemy, with two major battles (Coral Sea and Midway, 1942) being fought entirely by aircraft, and the opposing fleets never coming within gunshot range of each other. U.S. carriers of the *Essex* class spearheaded the island-hopping campaign in the Pacific. A new era in carrier design opened when the U.S. launched (1960) the nuclear-powered *Enterprise*, a vessel capable of lengthy voyages without refueling. A nuclear-powered successor, the *Nimitz*, was the largest ship afloat when launched in 1972. Amphibious assault ships are carrierlike ships that use helicopters and VTOL aircraft, such as Harriers, to land and support marines.

air-cushion vehicle (ACV), **ground-effect machine,** or **Hovercraft,** vehicle designed to travel at a short distance above ground or water, moving on a cushion of air that is held in a chamber beneath the vehicle. ACVs offer the potential for very high speeds. The maximum size of ACVs is now over 100 tons and some of those travel at over 100 mph (160 kph). Small ACVs, usually called flarecraft, can carry one to eight people at 150 mi (240 km) per hr.

airedale terrier, largest of the TERRIER group; shoulder height, c.23 in. (58.4 cm); weight, 40–50 lb (18.1–22.7 kg). Its dense, wiry, close-lying coat is a mixture of tan, black, and grizzle. The breed was probably produced from crosses of the extinct black-and-tan terrier and the otterhound.

airfoil, surface designed to develop a desired force by reaction with a fluid, especially air, that is flowing across the surface. Examples of airfoils are the fixed wings of AIRPLANES, which produce lift (see AERODYNAMICS), and control surfaces, such as ailerons, elevators, rudders, and flaps, that are manipulated to produce variable forces. Other airfoils include spoilers, propeller blades, and the blades utilized in turbojet engines.

air force, national military organization for air warfare. Although balloons were used by French forces in Italy in 1859 and by the Union in the U.S. Civil War, air forces in the modern sense date from WORLD WAR I, when the offensive capabilities of the AIRPLANE were first demonstrated. Airplanes were first controlled by national armies and used for reconnaissance and support of ground forces, but as their effectiveness as tactical weapons increased, independent air forces were called for. Arguing that future wars would be won by strategic bombing of an enemy's industrial centers, military leaders, including Italian Gen. Giulio Douhet, U.S. Gen. William MITCHELL, and British Air Chief Marshal Sir Hugh Trenchard urged intensive development of air power. By WORLD WAR II, control of the air over both land and sea proved crucial in most major engagements, and the air force became a separate branch of the armed services in many countries. The first great air battle in history was the Battle of Britain (1940), in which the British Royal Air Force stood off the German Luftwaffe over England. The effect of air power in revolutionizing naval warfare was demonstrated in the 1941 surprise attack by Japanese aircraft, launched from AIRCRAFT CARRIERS, on PEARL HARBOR. Air forces on both sides engaged in strategic and tactical bombing, attacks on naval and merchant ships, transportation of personnel and cargo, mining of harbors and shipping lanes, antisubmarine patrols, and photo reconnaissance, as well as support of ground, naval, and amphibious operations. After World War II, the airplane was largely superseded by the ballistic missile as a strategic weapon, but with helicopters joining the traditional fighter planes, bombers, and cargo planes of the modern air force, air power continued to be of primary importance in tactical operations, particularly in "limited" wars such as those in Southeast Asia and the Middle East. The PERSIAN GULF WAR, which saw the introduction of stealth fighter planes (see STEALTH TECHNOLOGY), produced the first unambiguously decisive air-power victory in warfare.

air navigation, science and technology of determining the position of an aircraft with respect to the surface of the earth and accurately maintaining a desired course (see NAVIGATION). The two most common methods are governed by visual flight regulations (VFR) and instrument flight regulations (IFR). Small airborne computer systems can now give the pilot the plane's position– the Global Positioning System (see NAVIGATION SATELLITE) permits determination of a plane's position to within a few hundred feet--and can carry out dead reckoning by monitoring all course and speed changes. The automatic pilot also interprets data on direction, speed, and altitude to maintain an aircraft in straight, level flight. For landing, the pilot is often guided by radio communication from a controller observing the plane via ground-based radar. Some systems actually land the plane automatically, although the pilot always has the option of overriding manually.

airplane, aeroplane, or **aircraft,** heavier-than-air vehicle, mechanically driven and fitted with fixed wings that support it in flight through the dynamic action of the air. On Dec. 17, 1903, Americans Orville and Wilbur WRIGHT flew the first airplane near Kitty Hawk, N.C. The machine was a biplane with two propellers chain-driven by a gasoline motor. Modern airplanes are monoplanes (airplanes with one set of wings). Airplanes may further be classified as driven by propeller, JET PROPULSION, or ROCKET. The airplane has six main parts: fuselage, wings, stabilizer (or tail plane), rudder, one or more engines, and landing gear. The fuselage is the main body, usually streamlined in form. The wings are the main supporting surfaces. The airplane's lift, or force supporting it in flight, is basically the result of the direct action of air against the surfaces of the wings (see AERODYNAMICS). With the use of jet engines and the resulting higher speeds, airplanes have become less dependent on large values of lift from the wings. Consequently wings have been shortened and swept back so as to produce less drag, especially at supersonic speeds. At the trailing edge of the wings are attached movable surfaces, called ailerons (see AIRFOIL) that are used to gain lateral control and to turn the plane. Directional stability is provided by the tail fin, a fixed vertical airfoil at the rear of the airplane. The stabilizer is a fixed horizontal airfoil at the rear of the airplane used to suppress undesired pitching motion. The elevators, which are movable auxiliary surfaces attached to the stabilizers, are used to produce controlled pitching. The rudder, generally at the rear of the tail fin, is a movable auxiliary airfoil that gives the craft a yawing movement in normal flight The landing gear is the understructure that supports the weight of the craft when on the ground or on the water and that reduces the shock on landing. Modern fly-by-wire control systems rely on computers and electronics rather than cables to operate aircraft control surfaces. See AVIATION; SEAPLANE; SHORT TAKEOFF AND LANDING AIRCRAFT; VERTICAL TAKEOFF AND LANDING AIRCRAFT.

air plant: see EPIPHYTE.

air pollution: see POLLUTION.

airship or **dirigible,** aircraft consisting of a cigar-shaped balloon that carries a propulsion system (propellers), a steering mechanism, and accommodations for passengers, crew, and cargo. The balloon section is filled with a lighter-than-air gas—either helium, which is nonflammable, or hydrogen—to give the airship its lift. The balloon maintains its form by the internal gas pressure in the nonrigid (blimp) and semirigid types of airships; the latter in addition has a rigid keel. The rigid type maintains its form by having a metal framework that holds its shape regardless of the internal gas pressure; inside the hull are a number of small gas-filled balloons. The first successful power-driven airship was built by the French inventor Henri Giffard in 1852. Count Ferdinand von ZEPPELIN of Germany invented the first rigid airship, which was completed in 1900. The German airship *Hindenburg* burned at its mooring mast at Lakehurst, N.J., in 1937. No rigid airship survived World War II. Modern blimps are used in antisubmarine warfare, television photography, and advertising.

air traffic control, system by which aircraft are safely routed into and out of major airports. In the U.S., it is centered on 22 regional control centers that route air traffic to and from control centers at airports. Transponders in every commercial, and many private, aircraft and ground-based radar provide information on location, altitude, and speed to the controllers, who are responsible for maintaining safe distances between the aircraft. See also AIR NAVIGATION.

Aix-la-Chapelle: see AACHEN, Germany.

Aix-la-Chapelle, Treaty of: see AUSTRIAN SUCCESSION, WAR OF THE.

Ajax, in Greek mythology. **1** The Telamonian Ajax, hero of the TROJAN WAR. In the *Iliad* he is a huge man, slow of thought and speech, but very courageous. He and ODYSSEUS rescued the corpse of ACHILLES. When Odysseus was awarded Achilles' armor the disappointed Ajax went mad and committed suicide. **2** The Locrian Ajax, who raped CASSANDRA in the sack of Troy. Shipwrecked by ATHENA, he was saved by POSEIDON, but struck dead by lightning for his defiance.

Akbar, 1542–1605, Mogul emperor of INDIA (1556–1605). An outstanding general, Akbar added AFGHANISTAN, Baluchistan, and N India to his domains. His reign was marked by administrative reform, religious toleration, and the flowering of art and literature.

Akhenaton: see IKHNATON.

Akhmatova, Anna [əkhmä'təvə], pseud. of **Anna Andreyevna Gorenko,** 1889–1966, Russian poet of the ACMEIST school. Her brief, highly emotional lyrics are simply and musically written. Among her most important volumes are *The Rosary* (1914) and *The Course of Time* (1966).

Akiba ben Joseph [əkē'bə], A.D. c.50–c.135, Palestinian rabbi. He compiled a collection of Hebrew Oral Law, *Mishna of Rabbi Akiba* (see MISHNA). After siding with BAR KOKBA in his revolt against Rome, Akiba was imprisoned and, it is said, tortured to death by the Romans.

Akihito [äkē'hētō], 1933–, emperor of Japan (1989–). The son and successor of HIROHITO, he was the first member of the royal family to marry (1959) a commoner, Shoda Michiko.

Akkad [ă'kăd, ä'käd], northern part of later BABYLONIA, in Mesopotamia; the southern part was SUMER. In the 4th millennium B.C. a Semitic city-state appeared, and under Sargon (c.2340 B.C.) Akkad became an imperial power. Akkad and Sumer were united as Babylonia by HAMMURABI. The name Akkad also appears as Accad.

Akkadian [əkā'dēən], language belonging to the Semitic subfamily of the Hamito-Semitic family of languages. Also called Assyro-Babylonian, Akkadian was current in ancient MESOPOTAMIA (now IRAQ) from about 3000 B.C. until the time of Jesus. See LANGUAGE (table).

Akron, city (1990 pop. 223,019), seat of Summit co., NE Ohio, on the Little Cuyahoga R. and the Ohio and Erie Canal; settled 1825; inc. as a city 1865. It is a port of entry and an important industrial and transportation center. With the opening of the first plant in 1870, Akron became the rubber capital of the U.S. Despite the closing of the plants, headquarters of rubber producers are still located there. Heavy machinery, aerospace industries, and polymer research are important. Akron's Art Institute is well known.

Akte: see ATHOS.

Akutagawa Ryunosuke, 1892–1927, Japanese author. One of Japan's finest short-story writers, he derived many of his tales from historical Japanese sources, but told them with psychological insights in an individualistic style. "Rashomon" (1915) and "In a Grove" (1921) were made into the classic 1950 film *Rashomon,* directed by KUROSAWA AKIRA.

al-. For most Arabic names beginning thus, see the second part of the name, e.g., SADAT, ANWAR AL-.

Al, chemical symbol of the element ALUMINUM.

Alabama, state in the SE U.S.; bordered by Tennessee (N), Georgia (E), Florida and the Gulf of Mexico (S), and Mississippi (W).

Area, 51,609 sq mi (133,677 sq km). *Pop.* (1990) 4,040,587, a 3.9% increase over 1980 pop. *Capital,* Montgomery. *Statehood,* Dec. 14, 1819 (22d state). *Highest pt.,* Cheaha Mt., 2,407 ft (734 m); *lowest pt.,* sea level. *Nickname,* Heart of Dixie. *Motto,* We Dare Defend Our Rights. *State bird,* yellowhammer. *State flower,* camellia. *State tree,* Southern (longleaf) pine. *Abbr.,* Ala.; AL.

Land and People. Except for the southern edge of the APPALACHIAN MOUNTAINS, in the northeast, Alabama consists mostly of rolling plains drained by the Alabama and Tombigbee rivers. The fertile Black Belt is located in central Alabama. The climate is subtropical and humid. More than 60% of the population lives in urban areas, principally in BIRMINGHAM, a steel center; MOBILE, a major U.S. port; MONTGOMERY, the capital; and HUNTSVILLE, an aerospace center. The population in 1990 was 73.6% white and 25.3% African American, with the remainder in other groups.

Economy. Cotton remains one of the chief crops; others include peanuts and soybeans. Cattle, poultry, and catfish are raised. Dams on the TENNESSEE R., in the north, provide power for the state's industries, whose leading products are iron and steel, paper and wood products, chemicals, electronics, textiles, and processed foods. Oil is produced in the south, and fishing is important along the coast. Lumbering is a major industry throughout Alabama.

Government. According to the constitution of 1901, the government is headed by a governor elected to a four-year term. The legislature is composed of a 35-member senate and 105-member house of representatives elected to four-year terms. Alabama sends seven representatives and two senators to the U.S. Congress and has nine electoral votes.

History. When Spanish explorers, including Hernando DE SOTO, visited the region during the 16th cent., they found the CREEK, CHEROKEE, CHOCTAW, and CHICKASAW tribes. In 1702 the French established the first white settlement. Andrew JACKSON defeated (1814) the Creek Confederacy at Horseshoe Bend, ushering in a period of rapid settlement. Subsequently, huge plantations utilizing slave labor were established to cultivate cotton. Alabama seceded from the Union in 1861. Following the CIVIL WAR the defeated state was placed under military rule; it was readmitted to the Union in 1868. Alabama slowly recovered from the war and the corruption of RECONSTRUCTION, a process made easier by the beginning of industrialization. Agricultural diversification began after the boll weevil infested the cotton fields during the early 20th cent. The 1954 Supreme Court decision outlawing school segregation ushered in a painful period of INTEGRATION and the growth of the CIVIL-RIGHTS movement. Despite opposition by Gov. George WALLACE and acts of racial violence in the state, most public schools in Alabama had been successfully desegregated by the early 1970s. From the late 1970s to early 90s public attention largely shifted to economic issues, and major efforts were made to assure the state's growth by encouraging further diversification of manufacturing industries.

Alabama claims, claims by the U.S. against Great Britain after the U.S. CIVIL WAR for damage to merchant ships caused by British-built Confederate cruisers. A tribunal (1871–72) at Geneva awarded the U.S. $15.5 million for damage caused by the Confederate ships *Alabama, Florida,* and *Shenandoah.*

alabaster, fine-grained, translucent variety of the mineral GYPSUM, pure white or streaked with reddish brown. Its softness makes it easily carved but also easily broken, soiled, and weathered. Quarried in England and Italy, it is used to make statuary and other decorative objects. The Oriental alabaster of ancient Egyptian and Roman tombs is actually MARBLE, a calcium carbonate, whereas gypsum is a calcium sulfate.

Alain-Fournier [älăN-fōōrnyā'], 1886–1914, French novelist; b. Henri Alban Fournier. His single full-length work, *The Wanderer* (1913), about a youthful search for the ideal, is a delicate blend of symbolism and realism.

Alamein, El [ĕl ăləmān'], or **Al Alamayn** [äl älămān'], town, N Egypt, on the Mediterranean Sea. During WORLD WAR II it was the site of a decisive British victory (1942) against the Germans. The victory saved Egypt for the Allies and led to the defeat (1943) of the Axis powers in North Africa.

Alamo, the [Span., = cottonwood], chapel-fort in San Antonio, Tex., built c.1744. It was held by Davy CROCKETT, Jim Bowie, W. TRAVIS, and about 180 other Texans against a siege by an army of several thousand Mexicans under Gen. SANTA ANNA (Feb. 24–Mar. 6, 1836) during the Texas Revolution. While the defenders died, their resistance rallied others who defeated the Mexicans six weeks later, crying "Remember the Alamo!"

Åland Islands: see AHVENANMAA ISLANDS.

Alarcón, Pedro Antonio de [älärkōn'], 1833–91, Spanish writer and diplomat. His novels, witty and often realistic, include *The Three-Cornered Hat* (1874), on which FALLA based a ballet, and *Captain Venom* (1881).

Alarcón y Mendoza, Juan Ruiz de [ē māndō'thä], 1581?–1639, Spanish dramatic poet; b. Mexico. His brilliant and lively comedies (2 vol., 1628–34) make him a major literary figure of Spain's GOLDEN AGE. The most famous, *The Suspicious Truth,* was the model for *The Liar* by CORNEILLE.

Alaric I, c.370–410, Visigothic king. After the death of Roman Emperor THEODOSIUS I he ravaged the Balkans until stopped by STILICHO, invaded Italy, and sacked Rome (410).

Alas, Leopoldo [ä'läs], pseud. **Clarín,** 1852–1901, Spanish writer. He was a professor of law at the Univ. of Oviedo. His masterpiece is the naturalistic novel *The Regent's Wife* (1885), a detailed analysis of provincial life.

Alaska, largest state in area of the U.S. but second smallest by population (only Wyoming has fewer people), occupying the northwest extremity of the North American continent, separated from the coterminous U.S. by NW Canada. It is bordered by British Columbia and Yukon Territory (E), the Pacific Ocean (S), the Bering Sea (W), and the Arctic Ocean (N).

Area, 586,412 sq mi (1,518,800 sq km). *Pop.* (1990) 550,043, a 37.3% increase over 1980 pop. *Capital,* Juneau. *Statehood,* Jan. 3, 1959 (49th state). *Highest pt.,* Mt. McKinley, 20,320 ft (6,198 m); *lowest pt.,* sea level. *Motto,* North to the Future. *State bird,* willow ptarmigan. *State flower,* forget-me-not. *State tree,* Sitka spruce. *Abbr.,* AK.

Land and People. Along the heavily indented coast are two peninsulas, the Seward Peninsula to the west, and, farther south, the Alaska Peninsula, from which the ALEUTIAN ISLANDS extend. The interior is dominated by rugged mountains, including the Alaska Range, where Denali, or Mount MCKINLEY (20,320 ft/6,198 m), the highest point in North America, is located. Many tourists are attracted by the state's dramatic scenery, some of the most spectacular located in its eight NATIONAL PARKS (see table). Winters in the interiors are very cold; summers are brief but hot. The COAST RANGES dominate the more temperate panhandle region, in the southeast, where the Inside Passage traverses the Alexander Archipelago, located just offshore. Principal lowlands are in the central region—drained by the YUKON R.—and, in the far north, the North Slope, along the Arctic coast. Over 65% of the land is controlled by the federal government. The largest city is ANCHORAGE, followed by FAIRBANKS and JUNEAU; more than 67% of the population lives in urban areas. In 1990 the population was 75% white, 15% ESKIMO and ALEUTS, and the remainder largely African American and Asian American.

Economy. The economy has been transformed since the discovery (1968) of North Slope oil and natural gas deposits, and their exploitation dominates the economy. The Alaska pipeline (built 1974–77) carries oil from PRUDHOE BAY to the port of Valdez, in the south. Coal, platinum, copper, gold, and uranium are among other minerals mined. Alaska has the largest fishing industry in the U.S.; the small manufacturing sector is dominated by the processing of fish and lumber. Fur export is important. Because of the harsh climate and terrain there is little agriculture.

Government. The constitution (adopted 1956) provides for a governor elected to a four-year term. The state legislature is composed of a senate whose 20 members serve four-year terms and a house whose 40 members serve two-year terms. Alaska sends two senators and one representative to the U.S. Congress and has three electoral votes.

History. The first white settlers were Russians who crossed the BERING STRAIT in search of furs and established (1784) the first permanent settlement on Kodiak Island. In 1867 Russia sold Alaska to the U.S. for $7.2 million. The first influx of Americans came in the gold rush of the 1890s and the 1900s. During WORLD WAR II the Japanese occupied (1942) Attu, Agattu, and Kiska, in the Aleutian Islands, but were driven out (1943) by U.S. forces. The war contributed to Alaska's economic development through construction of the Alaska Highway and of defense installations. The state's greatest economic boom occurred after the extensive oil discoveries of 1968, and huge off-shore deposits found in 1980 promised future development. Against strong opposition by state residents favoring private control of resources, the U.S. Congress approved (1980) the Alaska lands bill, which designated more than 104 million acres (42 million hectares) of national parks, wildlife refuges, and wilderness areas. In 1989 an oil tanker bringing oil from PRUDHOE BAY spilled 10 million gallons of oil near the port of Valdez causing severe economic and environmental damage.

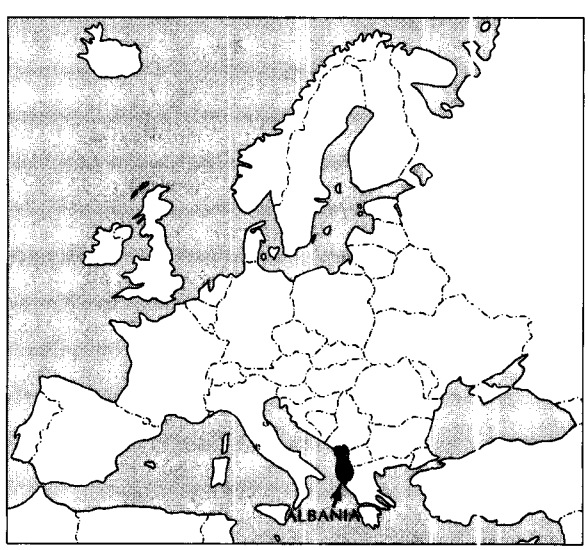
Alaskan malamute, strong, compact WORKING DOG; shoulder height, c.23 in. (58.2 cm); weight, 70–85 lb (31.75–38.5 kg). Its coarse coat, composed of oily, woolly underhairs and a thick cover coat, may be any shade of gray or black, with white markings. The malamute has been raised for centuries as a sled dog.

Alba or **Alva, Fernando Álvarez de Toledo, duque de** [äl'bə, äl'və], 1507?–82, Spanish governor general and regent of the NETHERLANDS (1567–73). A ruthless absolutist, he crushed the rebellious provinces, executing some 18,000 Netherlanders, and defeated (1572) the invading army of WILLIAM THE SILENT. Recalled to Spain, he completed the conquest (1580) of PORTUGAL by capturing Lisbon.

albacore: see TUNA.

Albania, Albanian *Shqipnija* or *Shqiperia,* officially Republic of Albania, republic (1992 est. pop. 3,285,000), 11,101 sq mi (28,752 sq km), SE Europe, on the Adriatic coast of the Balkan Peninsula; bordered by Yugoslavia (N), Macedonia (E), and Greece (S). TIRANË is the capital. Except for the fertile ADRIATIC coast, Albania is mountainous, rising to 9,066 ft (2,763 m) at Mt. Korab, on the Macedonian border. Albania is rich in mineral resources—notably oil and natural gas, lignite, copper, chromium, and limestone—and mining was the largest source of income. The leading industries included food processing, textiles, cement and building materials, petroleum products, and footwear. With the end of Communist rule, however, the mining and industry have largely collapsed, and many Albanians have illegally emigrated to Greece in search of work. About one fifth of the land is cultivated, largely as small, inefficient farms. Olives, grapes, grains, cotton, tobacco, and livestock are the main agricultural products. More than 95% of the population is ethnically Albanian; the Albanian language is an Indo-European tongue with two dialects. The population is predominantly Muslim, with Roman Catholic and Greek Orthodox minorities.

History. Albania was settled in ancient times by Illyrians and Thracians; the area then comprised parts of ILLYRIA and EPIRUS. The Greeks colonized the coast, and the entire region came under Roman and Byzantine rule. SCANDERBEG (d. 1468), Albania's national hero, delayed but did not stop the OTTOMAN EMPIRE's conquest of the area, which was complete by 1478. More than four centuries of Turkish Islamic rule followed, and national aspirations were suppressed until, during the First BALKAN WAR, Albania proclaimed independence (1912). In 1913 an international commission assigned large areas claimed by Albania to MONTENEGRO, SERBIA, and GREECE. The scene of political chaos and a battleground for contending European and Balkan forces after WORLD WAR I, the country came (1925) under the rule of Ahmed Zogu, who proclaimed himself (1928) King ZOG. Italy invaded Albania in 1939, setting up a puppet government that fought with the Axis powers in WORLD WAR II. After 1944, power passed to guerrilla leader Enver HOXHA, a Communist, who proclaimed a republic in 1946. Opposed to de-Stalinization, Albania broke with the USSR in 1961. It became a close ally of China, but that friendship ended in 1978. Albania remained extremely undeveloped economically as a result of its isolation and tight government control. Hoxha died in 1985 and



The key to pronunciation appears on page xiii.

was succeeded by Ramiz Alia, who slowly eased Albania's authoritarian policies and self-imposed isolation. Limited tourism was encouraged, and diplomatic relations were restored with the USSR (1990) and U.S. (1991). The Communists won (1991) in free parliamentary elections, but a deteriorating economy and social unrest forced them to form a coalition government. In new elections (1992) the Socialists (Communists) lost to the opposition Democrats. Alia resigned, and Democratic party leader Sali Berisha became president. Albania's economic problems remain severe, and there is widespread poverty.

Albany, Alexander Stuart or **Stewart, duke of:** see STUART, ALEXANDER, DUKE OF ALBANY.

Albany, city (1990 pop. 101,082), state capital and seat of Albany co., E N.Y., on the Hudson R.; settled 1624, inc. 1686. A deepwater port and trading center for a farm and resort area, it has diversified manufactures, including textiles, paper, chemicals, and automotive parts. The Dutch built (1613) a fur trading post there; the English took control and named the city in 1664. State capital from 1797, it grew with the opening of the Erie and Champlain canals (1820s). The state capitol (1867–98), many old houses, and new state office buildings are prominent in the city, which was redeveloped in the 1960s.

Albany Congress, 1754, a meeting of British colonial representatives in Albany, N.Y. Because of the impending war with France, a treaty was made between seven British colonies and the Iroquois. Benjamin FRANKLIN's Plan of Union for the colonies was also approved, but was later rejected by the colonial legislatures and by the crown.

albatross, sea BIRD (family Diomedeidae) with tapered wings that enable it to excel at gliding and flying. Most are found in the South Pacific, although a few, e.g., the black-footed albatross (*Diomedea nigripes*), frequent the north Pacific. The wandering albatross (*D. exulans*), with a wingspan of 10 to 12 ft (305 to 366 cm), was made famous by COLERIDGE's *Rime of the Ancient Mariner.*

Albee, Edward, 1928–, American playwright; b. Washington, D.C. His clever, often satiric plays include the one-act *The Zoo Story* (1959), and the full-length *Who's Afraid of Virginia Woolf?* (1962), widely regarded as his finest work; *A Delicate Balance* (1967; Pulitzer); *Seascape* (1975; Pulitzer); and *Three Tall Women* (1991; Pulitzer).

Albemarle, George Monck or **Monk,** 1st **duke of:** see MONCK, GEORGE, 1ST DUKE OF ALBEMARLE.

Albéniz, Isaac, 1860–1909, Spanish pianist and composer. Influenced by LISZT and DEBUSSY, he is best remembered for his later piano works, especially *Iberia* (1906–9), which combine Spanish folk material with brilliant pianistic idiom.

Albers, Josef, 1888–1976, German-American artist, designer, and teacher; b. Germany. After working at the BAUHAUS (1920–23), he came to the U.S. As director of the Yale School of Art (1950–58), he was a major figure in American art education. He is best-known for a series of paintings, *Homage to the Square,* which portrays colors in quasi-concentric squares.

Albert, kings of the Belgians. **Albert I,** 1875–1934 (r.1909–34), was the nephew and successor of LEOPOLD II. During WORLD WAR I he led his country in resisting the German invasion (1914). He also improved social conditions in Belgium and the Belgian Congo (see ZAÏRE). His son, LEOPOLD III, succeeded him. **Albert II,** 1934– (r.1993–), is the younger son of Leopold III. He became king when BAUDOUIN I, his brother, died childless.

Albert, 1819–61, prince consort of VICTORIA of Great Britain; son of Ernest I, duke of Saxe-Coburg-Gotha. His initial unpopularity as an alien prince was modified by his devotion to the queen and his concern with public affairs, particularly diplomacy. His insistence on a moderate approach to the TRENT AFFAIR may have avoided war with the U.S.

Alberta, province (1991 pop. 2,545,553), 255,284 sq mi (661,185 sq km), W Canada, bordered by Saskatchewan (E), the Northwest Territories (N), British Columbia (W), and Montana (S). Alberta is a high plateau, rising in the west to the ROCKY MOUNTAINS and the CONTINENTAL DIVIDE. Although it is one of the Prairie Provinces, only about 25% of Alberta's area, chiefly in the south, is treeless. Central Alberta is partly wooded, and the north is principally timberland. The province is drained by the Athabasca, the Saskatchewan, the Red Deer, and other rivers. The population is centered in S and central Alberta, and the principal cities are EDMONTON, the capital, and CALGARY. Until the mid–20th cent., agriculture was Alberta's basic industry. Grain, especially wheat, is the dominant crop, and livestock raising, dairying, lumbering, manufacturing (principally petroleum products and processed food), and service industries are also important. Since the early 1960s, however, mineral exploitation has been the major industry. Alberta is believed to have some of the richest oil deposits in the world—notably the tar beds of the Athabasca River—and has abundant natural gas. Its coal beds contain about one half of Canada's known reserves. Tourists are attracted to the province's outstanding national parks—Jasper, Banff, Waterton Lakes, and Wood Buffalo.

History. Alberta was part of the territory granted (1670) to the HUDSON'S BAY COMPANY and was dominated by the fur trade. In 1870 the company sold the area to the newly created confederation of Canada and in 1872 the mounted police established Fort Macleod in S Alberta. In 1882 the region became an administrative division, and the Canadian Pacific Railway opened the area to settlement. Alberta became a province in 1905. Oil was discovered in 1914, but only when a find was made near Edmonton in 1947 did Alberta's economy begin to change. By the early 1990s Alberta was producing over 80% of Canada's petroleum and some 85% of its natural gas. Politically, Albertans turned to William ABERHART and the SOCIAL CREDIT party in 1935. In 1971 the Progressive Conservatives gained control of the Provincial Assembly. Alberta sends 6 senators (appointed) and 26 representatives (elected) to the national parliament.

Alberti, Leone Battista, 1404–72, Italian architect, musician, painter, and humanist. His treatise *De re aedificatoria* (c.1450), though dependent on the Roman architect Vitruvius, was the first modern work on architecture, and influenced the development of RENAISSANCE architectural style. Among the notable buildings erected from his designs is the Palazzo Rucellai, Florence. Alberti's treatises on painting (1436) and sculpture (c.1464) were also influential.

Albertus Magnus, Saint, or **Saint Albert the Great,** b. 1193 or 1206, d. 1280, scholastic philosopher, Doctor of the Church, called the Universal Doctor. A DOMINICAN, he attempted in his *Summa theologiae* to reconcile Aristotelianism with Christian thought. St. THOMAS AQUINAS was his pupil. Albertus was also deeply interested in natural science and was the first to produce arsenic in a free form. Feast: Nov. 15. See also ARISTOTLE; SCHOLASTICISM.

Albertville, town (1991 est. pop. 18,000), Savoie dept., SE France. Located in the French ALPS on the Arly R. just above its influx into the Isère R., Albertville is a transportation and commercial center in a winter sports region. The 1992 winter Olympic games were based there.

Albigenses, religious sect of S France (12th–13th cent.), whose beliefs were similar in many ways to MANICHAEISM. They were Christian heretics who believed in the coexistence of good and evil. They held that matter was evil and that Jesus only seemed to have a body. Ascetic and enthusiastic, they persisted despite papal opposition. The murder of a papal legate led INNOCENT III to declare (1208) the Albigensian Crusade, which was soon redirected toward political ends. In 1233 the INQUISITION was formed to halt Albigensianism, and slowly over 100 years the movement died.

albino, animal or plant lacking normal pigmentation. The albino body covering (skin, hair, and feathers) and eyes lack pigment. In humans and other animals albinism is inherited as a recessive trait. Breeding has established albino races in some domestic animals.

Albinus: see ALCUIN.

albumin, member of a class of water-soluble, heat-coagulating PROTEINS. Albumins are widely distributed in plant and animal tissues, e.g., ovalbumin of egg, lactalbumin of milk, and leucosin of wheat. Some contain carbohydrates. Normally constituting about 55% of the plasma proteins, albumins adhere chemically to various substances in the blood, e.g., AMINO ACIDS, and thus play a role in their transport. Albumins and other blood proteins aid in regulating the distribution of water in the body. Albumins are also used in textile printing, the fixation of dyes, sugar refining, and other important processes.

Albuquerque, Afonso de, 1453–1515, Portuguese admiral, founder of the Portuguese empire in the East. He captured Goa (1510), Malacca (1511), and Hormuz (1513), built a series of forts in INDIA, and established shipbuilding and other industries. Control of the spice trade and of trade routes were nearly accomplished during his tenure.

Albuquerque, city (1990 pop. 384,736), seat of Bernalillo co., W central N. Mex., on the upper Rio Grande; inc. 1890. It is the largest city in the state, and the industrial and commercial center of a timber and farm area. Its diverse industries include electronics, truck trailer manufacturing, and federal nuclear research and weapons development. The city's downtown was the site of a 1980s urban renewal project. Albuquerque is also noted as a health resort and medical center. The city was founded by the Spanish in 1706 and grew with the arrival (1880) of the railroad.

Alcaeus [ălsē'əs], d. c.580 B.C., Greek poet, early personal lyric writer. Traditionally an associate of SAPPHO, he wrote both light and political verse. The Alcaic strophe was admired and adapted by HORACE.

Alcalá Zamora, Niceto [älkälä' thämō'rä], 1877–1949, president of Spain (1931–36). He helped to lead the republican revolution of 1931 and became the first president of the second Spanish republic. He was deposed (1936) by the CORTES on a Socialist motion and went into exile.

Alcatraz, island in San Francisco Bay, W Calif. Discovered (1769) and fortified by the Spanish, it was (1859–1933) the site of a U.S. military prison and then (1933–63) federal maximum security prison, called "The Rock." It became part of the Golden Gate National Recreational Area in 1972.

Alcestis, in Greek mythology, the devoted wife of a Thessalian king, Admetus. She willingly died in his place, to ensure his immortality. In some myths HERCULES rescued her from the dead; in others PERSEPHONE reunited husband and wife. EURIPIDES dramatized the legend in his *Alcestis*.

alchemy, ancient art or pseudoscience that sought to turn base metals into gold or silver through the agency of a secret substance known by various names (philosopher's stone, elixir, grand magistry). Emerging in China and Egypt by the 3d cent. B.C., alchemy was cloaked in mysticism and allegory, and in time degenerated into superstition. Revived (8th cent.) in Alexandria by the Arabs, it reached W Europe by the Middle Ages. In the 15th–17th cent. experimentation again fell into disrepute, but the base had been laid for modern CHEMISTRY.

Alcibiades [ălsĭbī'ədēz], c.450–404 B.C., Athenian statesman and general. A leader against SPARTA in the PELOPONNESIAN WAR, he was defeated at Mantinea (418 B.C.). He promoted the Sicilian campaign (415) but was accused (probably falsely) of sacrilege. Called home for trial, he fled to Sparta, where he aided Agis I, and then to Persia (413). Recalled to ATHENS, he won a brilliant naval victory (410) and recovered Byzantium (408). Blamed unjustly for the defeat of the Athenian fleet at Notium (c.406), he was sent into exile, and LYSANDER had him murdered.

Alcindor, Lew: see ABDUL-JABBAR, KAREEM.

alcohol, any of a class of organic compounds with the general formula R–OH, where R is an alkyl group made up of carbon and hydrogen and –OH is one or more hydroxyl groups, each made up of one atom of oxygen and one of hydrogen. Although the term *alcohol* ordinarily refers to ETHANOL, the alcohol in alcoholic beverages, the class of alcohols also includes methanol and the amyl, butyl, and propyl alcohols, all with one hydroxyl group; the glycols, with two hydroxyl groups; and glycerol, with three. Many of the characteristic properties and reactions of alcohols are due to the polarity, or unequal distribution of electric charges, in the C–O–H portion of the molecule.

Alcoholics Anonymous (AA), worldwide organization dedicated to the recovery of alcoholics; est. 1935 by two alcoholics. The organization, which functions through local, anonymous self-help groups, is based on a philosophy of life that has enabled countless numbers of people to recover from ALCOHOLISM. In 1992 there were over 2 million members worldwide. **Al-Anon,** for spouses, relatives, and friends of alcoholics, and **Al-Ateen,** for their adolescent children, function similarly.

alcoholism, chronic illness characterized by the habitual consumption of alcohol to a degree that interferes with physical or mental health, or with normal social or occupational behavior. A widespread health problem, it produces both physical and psychological addiction (see DRUG ADDICTION AND DRUG ABUSE). Alcohol is a central nervous system DEPRESSANT that reduces anxiety, inhibition, and feelings of guilt; lowers alertness; impairs perception, judgment, and muscular coordination; and, in high doses, can cause unconsciousness and even death. Long-term alcoholism damages the brain, liver (see CIRRHOSIS), heart, and other organs. Symptoms of alcohol withdrawal can range from a simple hangover to severe delirium tremens (a condition characterized by deliriousness, violent trembling, hallucinations, and seizures). Treatment includes use of disulfiram (Antabuse), a drug that produces discomfort if alcohol is consumed; anti-anxiety drugs to suppress withdrawal symptoms; psychological counseling; and support from groups such as ALCOHOLICS ANONYMOUS.

Alcott, (Amos) Bronson, 1799–1888, American educational and social reformer; b. near Wolcott, Conn. Despite his meager formal education, he became a teacher and founded Temple School in Boston. A leading exponent of TRANSCENDENTALISM, he was (1843) one of the founders of a cooperative vegetarian community, "Fruitlands," and then, as superintendent, reformed the Concord public schools. The poverty that plagued his life was eventually alleviated by the writings of his daughter Louisa May ALCOTT

Alcott, Louisa May, 1832–88, American writer; b. Germantown, Pa.; daughter of Bronson ALCOTT. Educated by her father, she was also influenced by her friends EMERSON and THOREAU. Alcott received notice for *Hospital Sketches* (1863), a collection of letters written while she was a Civil War nurse. She achieved fame with *Little Women* (1868–69), a largely autobiographical novel for young people that portrays Victorian American family life. Its sequels are *Little Men* (1871) and *Jo's Boys* (1886).

Alcuin or **Albinus,** 735?–804, English churchman and educator. Invited (781?) to CHARLEMAGNE's court at Aachen, he was the moving spirit of the CAROLINGIAN renaissance. Alcuin established the study of the seven liberal arts, which became the curriculum for medieval Europe, and encouraged the preservation of ancient texts. His letters are extant.

Aldanov, Mark [əldä'nəf], pseud. of **Mark Aleksandrovich Landau,** 1886–1957, Russian novelist. Aldanov emigrated to France in 1919 and to the U.S. in 1941. His works include *The Thinker* (1923–27), about the era from 1793 to 1821 in France; *The Tenth Symphony* (1931), set in the Vienna of BEETHOVEN's time; and *The Fifth Seal* (1939), which portrays the decay of revolutionary idealism during the SPANISH CIVIL WAR.

alder, deciduous tree or shrub (genus *Alnus*) of the BIRCH family, widely distributed, especially in mountainous, moist areas of the north temperate zone and in the Andes. The bark of the black alder (*A. glutinosa*), once used medicinally, is still used for dyes and tanning. Red alder (*A. rubra*) is the most important hardwood on the Pacific coast of North America.

Aldington, Richard, 1892–1962, English poet and novelist. A leading IMAGIST, he was married to Hilda DOOLITTLE. His poetry, e.g., *Images* (1915), is remarkable for verbal precision; his novels, e.g., *Death of a Hero* (1929) are bitter satires.

Aldrich, Nelson Wilmarth, 1841–1915, U.S. senator from Rhode Island (1881–1911); b. Foster, R.I. A Republican spokesman for big business, he co-authored the PAYNE-ALDRICH TARIFF ACT (1909) and helped shape monetary policy.

Aldrich, Thomas Bailey, 1836–1907, American author; b. Portsmouth, N.H. He is most widely known for his autobiographical *The Story of a Bad Boy* (1870). A skillful writer of light verse, he also served (1881–90) as editor of the *Atlantic Monthly*.

Aldrin, Buzz (Edwin Eugene Aldrin, Jr.), 1930–, American astronaut; b. Montclair, N.J. During the *Apollo 11* lunar-landing mission (July 16–24, 1969), Neil ARMSTRONG (the commander) and Aldrin (the lunar-module pilot) became the first and second persons, respectively, to walk on the moon (see SPACE EXPLORATION, table). Aldrin was pilot of *Gemini 12* (Nov. 11–15, 1966) and, after retiring from NASA, served (1971–72) as commandant of the Aerospace Research Pilots' School at Edwards Air Force Base, Calif.

ale: see BEER.

Aleichem, Sholom: see SHOLOM ALEICHEM.

The key to pronunciation appears on page xiii.

Aleixandre, Vicente [älähän'drā], 1898–1984, Spanish poet. His verse includes the surrealist *Destruction of Love* (1935) and *A Longing for the Light* (tr. 1979). He was awarded the 1977 Nobel Prize in literature.

Aleksey II, 1929–, Russian Orthodox clergyman; b. Estonia, as Aleksey M. Ridiger. He became bishop of Tallinn and Estonia in 1961 and was (1988–90) metropolitan of Leningrad (now St. Petersburg) and Novgorod. In 1990 he was elected patriarch (head) of the Russian church.

Alemán Valdés, Miguel, 1902–83, president of MEXICO (1946–52). The first civilian president after MADERO, he initiated a vigorous program of modernization.

Alembert, Jean le Rond d' [däläNbĕr'], 1717–83, French mathematician and philosopher, a leading figure of the ENLIGHTENMENT. His treatise on DYNAMICS (1743) enunciated d'Alembert's principle, which permitted the reduction of a problem in dynamics to one in STATICS. He did important work on the mechanics of rigid bodies, the motions of fluids and vibrating strings, and the three-body problem in CELESTIAL MECHANICS. DIDEROT made him coeditor of the ENCYCLOPÉDIE, for which he wrote the "preliminary discourse" (1751) and mathematical, philosophical, and literary articles.

Alepoudelis, Odysseus: see ELYTIS, ODYSSEUS.

Aleppo or **Alep,** city (1985 est. pop. 1,200,000), NW Syria. Located in a semidesert region where grains, cotton, and fruit are grown, the city produces silk and wool, dried fruits and nuts, hides, and other goods. It was settled perhaps as early as the 6th millennium B.C. and passed to the Assyrians, Persians, and Seleucids. By the 4th cent. A.D. it was a center of Christianity in the Byzantine Empire. The Arabs, Seljuk Turks, and others later held it. Aleppo prospered under the Ottoman Turks (from 1517) and the French (from 1918), and as part of independent Syria (from 1941). Historic structures include the Great Mosque (715) and the Byzantine citadel (12th cent.).

Aleutian Islands, strategically important chain of rugged, volcanic islands, W Alaska, curving westward c.1,200 mi (1,900 km) between the Bering Sea and the Pacific Ocean. Unalaska, the most populous island, is part of the easternmost group, the Fox Islands. Extending west to a point near Russia are the Andreanof, Rat, Near, and Semichi island groups. The Aleutians were discovered in 1741 by Vitus BERING and bought by the U.S. from Russia in 1867 as part of the Alaska purchase. Three western islands—Attu, Agattu, and Kiska—were occupied (1942–43) by Japan.

Aleuts, native inhabitants of the ALEUTIAN ISLANDS and W Alaska. They speak an Eskimo-Aleut language (see NATIVE AMERICAN LANGUAGES) and, like the ESKIMO, resemble Siberian peoples. Their skill in hunting sea mammals was exploited by Russian fur traders, and wars with mainland tribes helped to reduce their numbers from an estimated 20,000 when Vitus BERING encountered them in 1741 to around 3,000 a century later. There were 23,797 Aleuts in 1990.

Alexander III, d. 1181, pope (1159–81), a Sienese born Orlando Bandinelli. His rule was contested by antipopes until 1178. He backed the LOMBARD LEAGUE in opposing Holy Roman Emperor FREDERICK I, who exiled him to France until 1176. A learned canon lawyer, he issued many rules for governing the church. In 1179 he convened the Third Lateran Council.

Alexander VI, 1431?–1503, pope (1492–1503), a Spaniard named Rodrigo de Borja (Ital., Borgia). Notorious in later centuries as a corrupt and worldly pope, he showered his illegitimate children, Cesare and Lucretia BORGIA, with money and favors. Girolamo SAVONAROLA was his outspoken critic. Alexander opposed CHARLES VIII of France and proclaimed (1494) the line of demarcation between Spanish and Portuguese colonial possessions.

Alexander, czars of Russia. **Alexander I,** 1777–1825 (r.1801–25), was the son of PAUL I. He began his reign by relaxing political repression to a degree. In 1805 he joined the coalition against NAPOLEON I, but after Russian defeats he made a tenuous alliance with France by signing the Treaty of Tilsit (1807). After the French invasion of Russia (1812) was repulsed he created the HOLY ALLIANCE, joining with METTERNICH to suppress national and liberal movements. His reactionary domestic policies led to opposition, and when his brother NICHOLAS I succeeded him in 1825 a revolt took place (see DECEMBRISTS). **Alexander II,** 1818–81 (r.1855–81), son of Nicholas I, negotiated an end to the CRIMEAN WAR (1853–56; see PARIS, TREATY OF) and adopted important reforms, principally the emancipation of the serfs (1861; see EMANCIPATION, EDICT OF) and the introduction of limited local self-government (see ZEMSTVO). His foreign policy included the suppression of the Polish uprising of 1863; the annexation of Central Asia (1865–76); and the RUSSO-TURKISH WARS (1877–78). His domestic reforms were seen as insufficient by the intelligentsia, some of whom formed populist groups. Increasing repression led to terrorism, and in 1881 Alexander was assassinated. **Alexander III,** 1845–94 (r.1881–94), was the son of Alexander II. Surrounded by reactionary advisors, he increased police power and censorship; weakened the *zemstvos;* imposed controls on the peasantry; forced Russification on national minorities; and persecuted the Jews. His foreign policy culminated in the TRIPLE ALLIANCE AND TRIPLE ENTENTE. His son NICHOLAS II succeeded him.

Alexander, 1893–1920, king (1917–20) of the Hellenes (Greece). He became Greek king when his father, CONSTANTINE I, was forced by the Allies to abdicate because of his pro-German sympathies. After Alexander's death, his father was restored to the throne.

Alexander III, king of Macedon: see ALEXANDER THE GREAT.

Alexander, kings of Scotland. **Alexander I,** 1078?–1124 (r.1107–24), was the son of MALCOLM III. He opposed English efforts to rule the church in Scotland and established abbeys at Inchcolm and Scone. **Alexander II,** 1198–1249 (r.1214–49), joined the English barons in their revolt against King JOHN but made a tenuous peace with HENRY III. **Alexander III,** 1241–86 (r.1249–86), acquired for Scotland the HEBRIDES and also the Isle of MAN, already claimed from Norway by his father.

Alexander, rulers of SERBIA and YUGOSLAVIA. **Alexander** (Alexander Karadjordjević), 1806–85, prince of Serbia (1842–58), was the son of KARAGEORGE. An ineffectual ruler, he was deposed in favor of Miloš Obrenović. **Alexander** (Alexander Obrenović), 1876–1903, king of Serbia (1889–1903), instituted a conservative regime but, after accepting a somewhat liberal constitution, was assassinated by a clique of army officers. **Alexander,** 1888–1934, king of Yugoslavia (1921–34), the son and successor of PETER I, became (1918) regent of the kingdom of Serbs, Croats, and Slovenes, which he renamed (1929) Yugoslavia. He was assassinated by a Yugoslav terrorist.

Alexander, Harold Rupert Leofric George, 1st **Earl Alexander of Tunis,** 1891–1969, British field marshal. In WORLD WAR II, he commanded the retreats at Dunkirk (1940) and in Myanmar (1942) and the triumphs in N Africa and Sicily (1943). Later he was governor general of Canada (1946–52) and minister of defense (1952–54) in Winston CHURCHILL's cabinet.

Alexander Nevsky, 1220–63, Russian hero. As prince of Novgorod (1236–52) he earned his surname by his victory (1240) over the Swedes on the Neva R. He later defeated the Livonian Knights, invading from Germany (1242), and the Lithuanians (1245). When the TATARS occupied Russia he was made grand duke of Vladimir-Suzdal (1252).

Alexander the Great or **Alexander III,** 356–323 B.C., king of MACEDON. The son of PHILIP II, he was tutored by ARISTOTLE. Upon succeeding to the throne in 336 B.C. he won ascendancy over all of GREECE by putting down uprisings in THRACE and ILLYRIA, and by sacking THEBES. As head of an allied Greek army, viewing himself as the champion of pan-HELLENISM, he started east (334) on what was to be the greatest conquest of ancient times. He defeated the Persians at the battles of Granicus (334) and Issus (333). Tyre and Gaza fell after a year's struggle, and he entered Egypt (332), where he founded ALEXANDRIA. Moving to Mesopotamia, he overthrew the Persian Empire of DARIUS III at the battle of Gaugamela (331). Pushing on through eastern PERSIA (330–327), he invaded northern INDIA (326), but there his forces would go no further. The fleet was sent back to the head of the Persian Gulf, and Alexander himself led his soldiers through the desert, reaching Susa in 324 B.C. He died of a fever a year later, at age 33. He was incontestably one of the greatest generals of all time and one of the most powerful personalities of antiquity.

Alexandra, 1844–1925, queen consort of EDWARD VII of Great Britain, whom she married in 1863. She was the daughter of CHRISTIAN IX of Denmark.

Alexandra Feodorovna, 1872–1918, czarina of Russia, consort of

NICHOLAS II. A granddaughter of Queen VICTORIA and princess of Hesse, she encouraged the czar's reactionary policies under the influence of RASPUTIN. With her family she was shot by the Bolsheviks (see BOLSHEVISM).

Alexandria, city (1986 pop. 2,917,327), N Egypt, on the Mediterranean Sea, W of the Nile R. delta. The city is Egypt's leading port, a commercial and transportation center, and the heart of a major industrial area with such manufactures as refined petroleum, textiles, processed food, paper, and plastics. Founded in 332 B.C. by ALEXANDER THE GREAT, Alexandria was (304 B.C.–30 B.C.) the capital of the PTOLEMIES. The city was the greatest center of Hellenistic and Jewish culture. It had a great university and two celebrated royal libraries, but their valuable collections have not survived. Alexandria became part of the empire of ROME in 30 B.C. and later of the BYZANTINE EMPIRE. The Muslim Arabs took the city in 642 A.D. After Cairo became (969) Egypt's capital, Alexandria declined. It fell to NAPOLEON I in 1798 and to the British in 1801. During WORLD WAR II the city was the chief Allied naval base in the E Mediterranean. At a 1944 meeting in Alexandria, plans for the ARAB LEAGUE were drawn up. A few of Alexandria's ancient monuments are still visible. The Greco-Roman Museum houses a vast collection of Coptic, Roman, and Greek art.

Alexandria, city (1990 pop. 111,183), N Va., on the Potomac R.; inc. 1779. A residential suburb of WASHINGTON, D.C., it also has railroad yards, varied industries, government buildings, office complexes, and research firms. Portions of the city were part of the DISTRICT OF COLUMBIA from 1790 to 1847. Nearby is MOUNT VERNON; in the city are many sites associated with George Washington.

Alexius, Byzantine emperors. **Alexius I** (Comnenus), 1048–1118 (r.1081–1118), nephew of ISAAC I, obtained the crown by overthrowing Nicephorus III. He withstood the Normans under ROBERT GUISCARD and BOHEMOND I, and defeated the Pechenegs (1091) and CUMANS (1095). During the First CRUSADE he persuaded the leaders to pledge to him their Byzantine conquests. In 1108 he forced Bohemond, who had seized Antioch, to acknowledge his suzerainty. In his last years his daughter, Anna Comnena, intrigued against his son, JOHN II. Alexius restored Byzantine power but drained the empire's resources. **Alexius II** (Comnenus), 1168–83 (r.1180–83), son of MANUEL I, ruled under the regency of his mother, Mary of Antioch. His cousin procured the deaths of Mary and Alexius and became Andronicus I. **Alexius III** (Angelus), d. after 1210 (r.1195–1203), deposed his brother ISAAC II, but the act served as pretext for the leaders of the Fourth Crusade to attack (1203) Constantinople and to restore Isaac, with his son **Alexius IV,** d. 1204, as coemperor. **Alexius V** (Ducas Mourtzouphlos), d. 1204, son-in-law of Alexius III, overthrew Isaac and Alexius IV but was killed soon afterward by the Crusaders, who set up the Latin empire of Constantinople.

alfalfa or **lucern,** perennial plant (*Medicago sativa*) of the PULSE family, probably native to Persia and now widely cultivated. It is an important pasture and hay plant. Alfalfa is valued for its high yield of protein, its effectiveness in weed control, its role in crop rotation and nitrogen fixation, and as a source of chlorophyll and carotene.

Al Fatah: see ARAFAT, YASIR; PALESTINE LIBERATION ORGANIZATION.

Alfieri, Vittorio, Conte [älfyĕ'rē], 1749–1803, Italian tragic poet. A Piedmontese, he traveled widely and returned to Italy with a desire to revive national spirit. He wrote 19 tragedies, among them *Philip the Second, Saul,* and *Antigone,* all in the French classical tradition; comedies; satire; and an autobiography. His collected works, published (1805–15) by his friend the countess of Albany, contributed greatly to the rise of Italian nationalism.

Alfonso, kings of ARAGÓN. **Alfonso I,** d. 1134, king of Aragón and Navarre (1104–34), captured many towns from the Moors. **Alfonso II,** 1152–96, king of Aragón (1162–96), inherited Provence and conquered (1171) Teruel. **Alfonso V** (the Magnanimous), 1396–1458, king of Aragón and Sicily (1416–58), conquered NAPLES and was recognized by the pope as its king (1443–58). He maintained a splendid court there and tried to introduce Spanish institutions.

Alfonso, kings of Portugal. **Alfonso I,** 1109?–85, the first king (r.1139–85), extended his territories by defeating (1139) the MOORS and, with the help of allies, captured (1147) Lisbon. His grandson, **Alfonso II** (the Fat), 1185–1223 (r.1211–23), tried to confiscate Roman Catholic Church holdings and was excommunicated (1219). His army won major victories (1212, 1217) over the Moors. His son, **Alfonso III,** 1210–79 (r.1248–79), completed (1249) the reconquest of Portugal from the Moors, instituted many reforms, and encouraged commerce and the development of towns. **Alfonso IV,** 1291–1357 (r.1325–57), warred fruitlessly against CASTILE before both kingdoms combined forces to defeat (1340) the Moors. He countenanced the murder of Inés de CASTRO. **Alfonso V,** 1432–81 (r.1438–81), put down a civil war (1449), invaded Morocco to capture Tangier (1471), and lost a war (1476–79) with Castile. **Alfonso VI,** 1643–83 (r.1656–83), slightly paralyzed and mentally defective, ousted (1662) his mother as regent and appointed as her successor the count of Castelho Melhor, who won the war (1663–65) that secured Spain's recognition (1668) of Portugal's independence. Alfonso's wife and his brother (later PETER II) forced Castelho Melhor from power in 1667, and Alfonso made his brother regent.

Alfonso, Spanish kings. **Alfonso I** (the Catholic), 693?–757, Spanish king of ASTURIAS (739–57), extended its territory with the help of the BERBERS' revolt (740–41) against the MOORS. His grandson, **Alfonso II** (the Chaste), 759–842, king of Asturias (791–842), established his capital at Oviedo and continued the struggle against the Moors. **Alfonso III** (the Great), 838?–911?, king of Asturias (866–911?) recovered LEÓN from the Moors, but after his forced abdication it was divided among his sons. **Alfonso V** (the Noble), 994?–1027, king of León (999–1027), chartered (1020) the city of León, but he was killed in the siege of Viseu. **Alfonso VI,** 1030–1109, king of León (1065–1109) and CASTILE (1072–1109), took Galicia (1073) and became the most powerful Christian ruler in Spain. He conquered (1085) Toledo and other cities, but was defeated twice (1086, 1108) by Muslim armies. **Alfonso VII** (the Emperor), 1104–57, king of Castile and León (1126–57), gained supremacy over other Christian states and had himself crowned emperor (1135). But his conquests of CÓRDOBA (1146) and Almería (1147) from the Moors were soon lost. **Alfonso VIII** (the Noble), 1155–1214, king of Castile (1158–1214), restored order in his kingdom and won a great victory (1212) over the Moors. **Alfonso X** (the Wise), 1221–84, king of Castile and León (1252–84), took CÁDIZ from the Moors (1262). His subjection of the nobles led to a revolt, and a civil war broke out over the succession during his last years. He was a great patron of science and the arts. The Alfonsine Tables of astronomical data were published under his aegis. **Alfonso XI,** 1311–50, king of Castile and León (1312–50), lost Gibraltar to the Moors (1333) but won the great victory of Tarifa (1340) and conquered Algeciras (1344). **Alfonso XII,** 1857–85, king of Spain (1874–85), was a popular monarch who consolidated the monarchy, suppressed republican agitation, and restored order. **Alfonso XIII,** 1886–1941, king of Spain (1886–1931), supported the military dictatorship (1923–30) of Miguel PRIMO DE RIVERA, but social unrest and a republican election victory led to his deposition and exile (1931).

Alfred, 849–99, king of WESSEX (871–99), sometimes called Alfred the Great. The son of ÆTHELWULF, he shared his father's piety. When his brother ÆTHELRED took the Wessex throne (865), Alfred aided him in battles against the Danes, who threatened to overrun England. Unable to establish a clear victory, Alfred rid Wessex of the Danes by paying the DANEGELD when he became king in 871. In 878, however, the Danes returned, and Alfred's flight to Somerset at that time is the basis for the legend about the king and a peasant woman's burned cakes. In May 878, Alfred triumphed over the Danes at Edington. This victory produced relative security, and Alfred began to institute reforms, including a code of laws combining Christian doctrine with a strong, centralized monarchy. His greatest achievements were the creation of a navy, the revival of learning among the clergy, the education of youths and nobles at court, the establishment of Old English literary prose, his own English translation of Latin works, and his influence on the extant form of the ANGLO-SAXON CHRONICLE.

algae, primitive organisms that contain CHLOROPHYLL and carry on PHOTOSYNTHESIS but lack true roots, stems, and leaves. While historically considered plants, many algae are now classified in the kingdoms Monera and Protista. They are abundant both in the sea and freshwater; nearly all SEAWEEDS are marine algae. Algae occur as microscopic single cells (e.g., DIATOMS) and more complex

The key to pronunciation appears on page xiii.

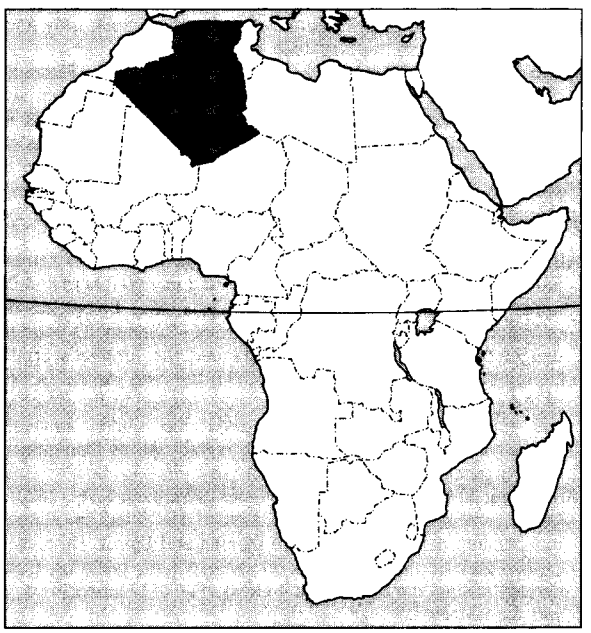
forms of many cells grouped in spherical colonies (e.g., *Volvox*), in ribbonlike filaments (e.g., *Spirogyra*), and in giant forms (e.g., the marine kelps). The cells of colonies are generally similar, but some are specialized for reproduction and other functions. The BLUE-GREEN ALGAE (cyanobacteria) and green algae include most of the freshwater forms, such as pond scum, a green slime found in stagnant water. Brown and red algae are more complex, chiefly marine forms whose green chlorophyll is masked by the presence of other pigments. Algae are primary food producers in the food chain and also provide oxygen for aquatic life. Algae that thrive in polluted water can over-multiply, resulting in an algal bloom and seriously unbalancing their ecosystem.

algebra, branch of MATHEMATICS concerned with operations on sets of numbers or other elements that are often represented by symbols. In elementary algebra, letters are used to stand for numbers, e.g., in the POLYNOMIAL equation $ax^2 + bx + c = 0$, the letters a, b, and c are called the coefficients of the EQUATION and stand for fixed numbers, or constants. The letter x stands for an unknown number, or variable, whose value depends on the values of a, b, and c and may be determined by solving the equation. Much of classical algebra is concerned with finding solutions to equations or systems of equations, i.e., finding the roots, or values of the unknowns, that upon substitution into the original equation will make it a numerical identity. Algebra is a generalization of ARITHMETIC and gains much of its power from dealing symbolically with elements and operations (chiefly addition and multiplication) and relationships (such as equality) connecting the elements. Thus $a + a = 2a$ and $a + b = b + a$ no matter what numbers a and b represent.

Alger, Horatio, 1834–99, American writer of boys' stories; b. Revere, Mass. The heroes of his over 100 books, e.g., *Ragged Dick* (1867), gain success by leading exemplary lives and struggling valiantly against poverty and adversity.

Algeria, Arab. *Al Djazair,* Fr. *Algérie,* officially Democratic and Popular Republic of Algeria, republic (1992 est. pop. 26,667,000), 919,590 sq mi (2,381,741 sq km), NW Africa, bordered by Mauritania, Morocco, and Western Sahara (W), the Mediterranean Sea (N), Tunisia and Libya (E), and Niger and Mali (S). The principal cities are ALGIERS (the capital) and ORAN. The ATLAS MTS. divide northern Algeria into a coastal lowland strip (the Tell) and a semiarid plateau. In the south is the much larger, but arid and sparsely populated, Saharan region; Algeria's highest point, Mt. Tahat (9,541 ft/2,908 m), in the Ahaggar Mts., is located here. About a quarter of Algeria's work force are farmers, producing cereals, wine, citrus fruits, and cork. Mining and manufacturing, developed since the 1960s, contribute the bulk of the national income. Petroleum is the leading export, and much natural gas is produced, with proven reserves that are among the world's largest. The state plays a leading role in planning the economy and owns many important industrial concerns. The great majority of the population are Sunni Muslims of Arab-Berber descent; Europeans, who before independence accounted for 10% of the total, now are only 1% of the population. Arabic is the official language, but French is widely spoken, and a sizable minority speaks a Berber language.

History. The earliest known inhabitants of the region that is now Algeria were Berber-speaking nomads who were settled there by the 2d millennium B.C. As NUMIDIA, it became (9th cent. B.C.) a province of Carthage and then (106 B.C.) of Rome; during the Christian era, St. AUGUSTINE (354–430) was bishop at Hippo (now Annaba). With Rome's decline in the 5th cent. A.D., Algeria was conquered by the Vandals (430–31), the Byzantine Empire (6th cent.), and finally, in the late 7th and early 8th cent., by the Arabs, whose introduction of Islam profoundly altered the character of the area. Spain captured the coastal cities in the 15th cent. but was expelled (mid-16th cent.) with the help of the Ottoman Turks, who assumed control. During this period the Algerian coast was a stronghold of pirates and a center of the slave trade. France invaded Algeria in 1830 and declared it a colony in 1848. Europeans began to arrive in large numbers, dominating the government and the economy, and leaving the native Muslim population with scant political or economic power. A nationalist movement began to develop after World War I, and a war for independence, led by the National Liberation Front (FLN), broke out in 1954. After more than seven years of bitter fighting, in which at least 100,000 Muslim and 10,000 French soldiers were killed, Algeria became independent on July 3, 1962. Since independence, Algeria has been a prominent nonaligned state and a champion of the movements against white minority rule in Africa. It also has supported the protracted struggle of the Polisario Front for the independence of WESTERN SAHARA (formerly Spanish Sahara) from Morocco. Ahmed Ben Bella, prime minister and then president of Algeria after independence, was deposed by Houari Boumedienne in 1965. After Boumedienne's death (1978), Chadli Benjedid succeeded (1979) him as president. Riots in 1988 led Pres. Benjedid to reduce the role of the state economically and of the FLN politically. After Islamic fundamentalists won 42% of the seats in the first round of parliamentary elections in Dec. 1991, the army forced Benjedid to resign (1992) and cancelled the election. A civilian-led state council was installed, but real power resided with the army. The fundamentalist party was banned and its leaders arrested. Fundamentalists launched a guerrilla insurrection, and Algeria was torn by violence from both sides. In 1994 Gen. Liamine Zeroual, the defense minister, was appointed president, replacing the state council.



Algiers, city (1987 pop. 1,507,241), capital of Algeria, N Algeria, on the Bay of Algiers of the Mediterranean Sea. It is a major North African port, a winter resort, and a commercial center. Industries include metallurgy, oil refining, and automotive construction. Founded by the Phoenicians, the city disappeared after the fall of the Roman Empire and was reestablished in the late 10th cent. by the Muslims. The French captured the port in 1830. During WORLD WAR II Algiers was Allied headquarters in North Africa. The city played an important role in the Algerian independence struggle (1954–62). Algiers is divided into the newer, French-built sector and the original Muslim quarter, with its 16th-cent. casbah fortress.

ALGOL: see PROGRAMMING LANGUAGE.

Algonquian [ălgŏng'kwĭn], branch of the Algonquian-Wakashan linguistic family of North America. See NATIVE AMERICAN LANGUAGES (table).

Alhazen: see IBN AL-HAYTHAM.

Ali, Muhammad, 1942–, American boxer; b. Louisville, Ky., as Cassius Marcellus Clay, Jr. He changed (1964) his name when he became a BLACK MUSLIM. After winning (1960) an Olympic gold medal, he defeated (1964) Sonny Liston for the heavyweight crown, but was stripped of the title in 1967 when he refused induction into the U.S. armed forces on religious grounds. In 1971 the U.S. Supreme Court upheld his draft appeal. Ali regained the title in 1974

by defeating George Foreman, lost it to Leon Spinks in 1978, but won it a third time (from Spinks) later that year. Ali lost to Larry Holmes in 1980.

Alice Springs, town (1986 pop. 22,759), Northern Territory, central Australia. It is the center of an area with cattle ranches and aborigine reservations. Tourism is important, and gold and other minerals are mined nearby. The town was called Stuart until 1933.

alien, in law, a resident of a state who is not a national or citizen of that state. A country may exclude individuals or groups it deems undesirable; most, for example, bar criminals, paupers, and the diseased. With some exceptions, e.g., diplomats, aliens are subject to the laws of the country in which they reside. Permanent residents may be liable to taxation and military conscription. In the U.S., aliens are required to register each year; an alien may acquire citizenship by a legal procedure known as naturalization. **Illegal aliens** are citizens of foreign countries who lack legal status in the country in which they are living. In the U.S., most recent illegal aliens have come from Latin America. A 1986 law to stop the flow and end the underground lives of these aliens made it illegal for employers to hire them and granted legal status to those who could prove continuous residence in the U.S. since before Jan. 1, 1982. Special allowances were made for seasonal farm workers. Although an estimated 3.9 million aliens were eligible, only about half applied before the May 1988 deadline.

Alien and Sedition Acts, 1798, four laws passed by the Federalist-controlled U.S. Congress in response to the threat of war with France (see XYZ AFFAIR). Designed to destroy the Jeffersonian Republicans who expressed sympathy for France, the laws lengthened the residency requirement for citizenship, empowered the president to expel "dangerous" aliens, and proscribed spoken or written criticism of the government. The Acts provoked the KENTUCKY AND VIRGINIA RESOLUTIONS.

Ali ibn Abu Talib, d. 661, cousin and son-in-law of MUHAMMAD, fourth caliph of the Islamic community, and martyred hero and first imam of the SHIITE movement in Islam. As a child, he became one of Muhammad's first converts. He married Muhammad's youngest daughter, Fatima, and twice commanded the Prophet's armies. During the civil war that broke out (656) between various factions of the early Muslim community, he was elevated to the caliphate. His murder at Kufa, Iraq, inspired the Shiite movement (shi'ah = "party," i.e., of Ali), which regards Ali as Muhammad's chosen successor.

Ali Pasha, 1744?–1822, Turkish governor of Yannina (1787–1820), a Greek province of the OTTOMAN EMPIRE. He ruled as a quasi-independent despot over most of Albania and Epirus. He resisted (1820) Turkish military efforts to depose him, tying up troops needed against the rebels in the Greek War of Independence. He was assassinated.

alkali, HYDROXIDE of an ALKALI METAL. Alkalies are soluble in water and form strongly basic solutions. They neutralize acids, forming salts and water. Strong alkalies (e.g., those of sodium or potassium) are called caustic alkalies. The term *alkali* is sometimes applied to sodium or potassium carbonate or to the hydroxide of an ALKALINE-EARTH METAL.

alkali metals, elements in group Ia of the PERIODIC TABLE. In order of increasing atomic number, they are LITHIUM, SODIUM, POTASSIUM, RUBIDIUM, CESIUM, and FRANCIUM. They are softer than other metals, and have lower melting points and densities. All react violently with water, releasing hydrogen and forming hydroxides. They tarnish rapidly, even in dry air. They never occur uncombined in nature.

alkaline-earth metals, elements in group IIa of the PERIODIC TABLE. In order of increasing atomic number, they are BERYLLIUM, MAGNESIUM, CALCIUM, STRONTIUM, BARIUM, and RADIUM. They are softer than most other metals and react readily with water. Their properties are exceeded by the corresponding ALKALI METAL.

alkaline earths, oxides of the ALKALINE-EARTH METALS. They are not readily soluble in water and form solutions less basic than those of ALKALIES.

alkaloid, any of a class of organic compounds composed of carbon, hydrogen, nitrogen, and usually oxygen, that are often derived from plants. The name means alkalilike, but some alkaloids do not exhibit alkaline properties. Many alkaloids, though poisons, have physiological effects that render them valuable as medicines. For example, curarine, found in the deadly extract CURARE, is a powerful muscle relaxant; atropine is used to dilate the pupils of the eye; and physostigmine is a specific for certain muscular diseases. Narcotic alkaloids used in medicine include MORPHINE and CODEINE for pain relief and COCAINE as a local anesthetic. Other common alkaloids include CAFFEINE, LSD, QUININE, SEROTONIN, STRYCHNINE, and nicotine.

alkane, alkene, and **alkyne:** see HYDROCARBON.

Allah: see ISLAM.

Allen, Ethan, 1738–89, American Revolutionary hero; b. Litchfield (?), Conn. In 1775 he led the GREEN MOUNTAIN BOYS at the capture of Fort TICONDEROGA and was captured by the British in an expedition against Canada. Exchanged in 1778, he promoted independence and statehood for Vermont. His brother, **Ira Allen,** 1751–1814, was a political leader in Vermont.

Allen, Gracie: see BURNS, GEORGE.

Allen, Woody, 1935–, American film director, writer, and actor; b. Brooklyn, N.Y., as Allen Stewart Konigsberg. His films, mainly comedies that depict neurotic urban characters preoccupied with sex, death, and psychiatry, include *Sleeper* (1973), *Annie Hall* (1977; Academy Award), *Broadway Danny Rose* (1984), *Hannah and Her Sisters* (1987), *Alice* (1990), and *Manhattan Murder Mystery* (1993). In 1992, in a bitter public dispute, Allen sued actress Mia Farrow for custody of their children and lost (1993).

Allenby, Edmund Henry Hynman Allenby, 1st **Viscount,** 1861–1936, British field marshal. In WORLD WAR I, he invaded Palestine and ended Turkish resistance (1918). He later served as British high commissioner for Egypt and the Sudan (1919–25).

Allende, Isabel, 1942–, Chilean novelist. Living abroad since the 1973 coup in which her uncle, Pres. Salvadore ALLENDE, died, she is among the most notable contemporary Latin American writers. Her vivid fiction, which fuses realism with political, often feminist concerns, includes *The House of Spirits* (1982), *Eva Luna* (1987), and *The Infinite Plan* (1993).

Allende Gossens, Salvador [äyän'dā gō'sāns], 1908–73, president of CHILE (1970–73). A founder of the Chilean Socialist party (1933), he was elected president of Chile by a narrow plurality (1970)—the first freely elected Marxist leader in the Americas. His socialist program disrupted the economy and led to inflation and widespread strikes. During the army coup that overthrew (1973) his regime, he either was murdered or committed suicide.

Allentown, city (1990 pop. 105,090), seat of Lehigh co., E Pa., on the Lehigh R.; founded 1762, inc. as a city 1867. It is a commercial and industrial center in the agricultural Lehigh Valley, producing varied electronic and mechanical manufactures. Iron, cement, and mining are the mainstays. The city was settled by members of various German religious groups. Muhlenberg is one of several colleges located there.

allergy, adverse physical reaction of some people to substances that are not toxic per se and are innocuous to other people. Allergens, or allergy-producing substances, cause the release of histamine, an organic compound responsible for allergic symptoms. There are various types of allergens: airborne (e.g., pollen), which may cause sneezing, as with hay fever, or asthma; contactants (e.g., poison ivy and dyes), which often cause rashes; food (e.g., chocolate or fish), which may cause a rash, such as eczema or hives, or a respiratory reaction; or drugs (e.g., sulfa drugs), which in the allergic person can cause a violent reaction. Treatment includes desensitization (injections), antihistamine drugs, and avoidance of allergens.

Alleyn, Edward, 1566–1626, English actor. The only rival of Richard BURBAGE, he played the title roles in Christopher MARLOWE's *Tamburlaine, Jew of Malta,* and *Faustus.*

Alliance for Progress: see ORGANIZATION OF AMERICAN STATES.

alligator, aquatic REPTILE (genus *Alligator*) in the same order as the CROCODILE. The American alligator (*A. mississipiensis*) is found in swamps and streams from North Carolina to Florida and along the Gulf Coast. The young are brown or black with yellow bands; adults are solid black. Males commonly reach a length of 9 ft (2.7 m) and a weight of 250 lb (110 kg). The alligator is protected by law.

Alliluyeva, Svetlana [äl-lĕlōō'yəvə], 1926–, only daughter of Soviet

leader Joseph STALIN. In 1966 she defected to the West, becoming a U.S. citizen. She has written *Twenty Letters to a Friend* (1967) and *Only One Year* (1969). She returned to the USSR from 1984 to 1986.

allotropy, the occurrence of certain chemical elements in two or more forms; the forms are called allotropes. Allotropes generally differ in physical properties, such as color and hardness; they may also differ in molecular structure or in chemical activity but are usually alike in most chemical properties. DIAMOND and GRAPHITE are two allotropes of the element CARBON.

alloy, substance with metallic properties consisting of a METAL fused with one or more metals or nonmetals. An alloy may be a homogeneous solid solution, a heterogeneous mixture of tiny crystals, a true chemical compound, or a mixture of these. Alloys generally have properties different from those of their constituent elements and are used more extensively than pure metals. Alloys of IRON and CARBON are among the most widely used and include CAST IRON and STEEL. BRASS and BRONZE are important alloys of COPPER. Because pure GOLD and SILVER are too soft for many uses, they are often alloyed, either with each other or with other metals, e.g., copper or PLATINUM. Amalgams are alloys that contain MERCURY. Other alloys include BRITANNIA METAL, DURALUMIN, and SOLDER.

All Saints' Day, Nov. 1, feast of the Roman Catholic and Anglican churches, the day God is glorified for all his saints, known and unknown. Roman Catholics are obliged to hear Mass on this day. In medieval England it was called All Hallows; hence the name Halloween (Hallows' eve) for the preceding day (Oct. 31).

allspice: see PIMENTO.

Allston, Washington, 1779–1843, American painter; b. Georgetown co., S.C. Allston traveled to London, where he studied with Benjamin WEST. Many of his greatest works, marked by a controlled romanticism, were done in England (1810–18). Allston's finest paintings are lyrical landscapes, e.g., *Moonlit Landscape* (1819; Mus. Fine Arts, Boston).

Alma-Ata: see ALMATY.

Almagest: see PTOLEMY (Claudius Ptolemaeus).

Al Manamah, city (1988 est. pop. 155,000), capital of Bahrain, on the PERSIAN GULF. It has oil refineries and light industries and is a free port.

Almaty, formerly **Alma-Ata,** city (1989 pop. 1,128,000), capital of Kazakhstan, central Asia, in the foothills of the Trans-Ili Ala-Tau. Almaty is the industrial and cultural center of Kazakhstan. Leading industries include food and tobacco processing and railroad equipment repair. Originally called Verny, the city was founded in 1854 as a Russian fort and trade center.

Almeida, Francisco de [älmā'də], c.1450–1510, Portuguese admiral, first viceroy of Portuguese India (1505–9). He developed Portugal's trade with India by making alliances with Indian rulers and other tactics. He thwarted Egypt's commercial challenge by winning a great sea battle.

Almohads [ăl'məhădz], Berber Muslim dynasty that ruled Morocco and Spain in the 12th and 13th cent. It had its origins in the puritanical sect founded c.1120 by ibn Tumart. By 1174 the Almohads had completely displaced the ruling ALMORAVIDS. The Almohads, in turn, were defeated in Spain by the Spanish and Portuguese in 1212, and in Morocco by the Merenid dynasty in 1269.

almond, name for a small tree (*Prunus amygdalus*) of the ROSE family and for the nutlike edible seed of its drupe fruit. Almonds are now cultivated mainly in E Asia, Italy, Spain, and California. Almond fruit is fleshless; otherwise, the tree closely resembles the peach tree. Almond oil, pressed from the nut, is used for flavoring and in soaps and cosmetics.

Almoravids [ălmôr'əvĭdz], Berber Muslim dynasty that ruled Morocco and Muslim Spain in the 11th and 12th cent. They founded MARRAKESH as the capital of their powerful empire. Called on for help by the Moors in Spain, they defeated (1086) ALFONSO VI of Castile and displaced the local Moorish rulers. Never entirely stable, the dynasty was overthrown by the ALMOHADS in 1174.

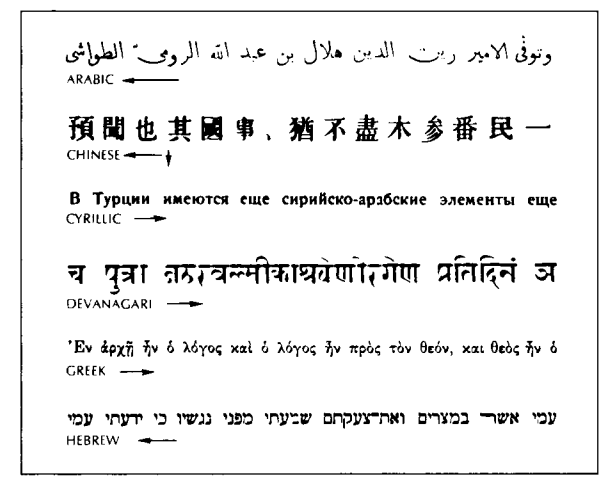
aloe, succulent perennials (genus *Aloe*) of the LILY family, native chiefly to Africa, but cultivated elsewhere. The leaves contain aloin, a purgative. Various drug-yielding species are used medicinally, as well as for X-ray-burn treatment, insect repellent, and transparent pigment. Biblical aloes is unrelated. American and false aloe are agaves of the AMARYLLIS family.

Alonso, Alicia [älōn'sō], 1921–, Cuban ballerina and choreographer. She danced on Broadway before soloing with several companies. She had a huge repertoire that ranged from classical to MODERN DANCE. Her own works, e.g., *La Tinaja* (1942), were created for her Cuban company, founded in 1948, which is now the National Ballet.

alpaca, partially domesticated South American hoofed MAMMAL. The highland tribes of Bolivia, Chile, and Peru breed the alpaca for its wool, which is shaded from black through brown to white and has been exported since 1836. Alpacas feed on grasses and require a pure water supply. Like the LLAMA, the alpaca belongs to the CAMEL family.

Alp Arslan, 1029–72, Seljuk sultan of PERSIA (1063–72). He won great victories over the Byzantine Christians, especially at Manzikert (1071), and conquered Syria. He was murdered by one of his prisoners of war.

alphabet, system of WRITING, theoretically having a one-for-one relation between character (or letter) and phoneme (see PHONETICS). Few alphabets have achieved an ideal exactness. A system of writing is called a syllabary when one character represents a syllable rather than a phoneme, e.g., the kana used in Japanese. The precursors of the alphabet were the iconographic and ideographic writing of ancient peoples, such as CUNEIFORM and the HIEROGLYPHIC writing of the Egyptians. The alphabet of modern Western Europe is the Roman alphabet. Russian, Serbian, Bulgarian, and many languages of the former Soviet republics are written in the Cyrillic alphabet, an augmented Greek alphabet. Greek, Hebrew, and Arabic all have their own alphabets. The most important writing of India is the Devanagari, an alphabet with syllabic features. The Roman alphabet is derived from the Greeks, who had imitated the Phoenician alphabet. The exact steps are unknown, but the Phoenician, Hebrew, Arabic, and Devanagari systems are based ultimately on signs of Egyptian hieroglyphic writing. Two European alphabets of the late Roman era were the RUNES and the ogham. An exotic modern system is the Cherokee syllabary of SEQUOYAH.



Alphabet: Examples of letters in various alphabets (arrows indicate the direction of reading)

alpha particle, one of the three types of radiation resulting from natural RADIOACTIVITY. An alpha particle is an ordinary helium nucleus, which consists of two protons and two neutrons.

Alps, great mountain system of S central Europe, c.500 mi (800 km) long and c.100 mi (160 km) wide, curving in a great arc through parts of France, Italy, Switzerland, Germany, and Austria. The mountains are known for their towering, snowcapped peaks, deep U-shaped glacial valleys, modern glaciers, and many fine lakes such as Geneva, Lucerne, Como, Garda, and Maggiore. Famous winter sports centers in the Alps include Chamonix, SAINT MORITZ,

Kitzbühel, Cortina d'Ampezzo, and INNSBRUCK. The principal peaks include MONT BLANC (15,771 ft/4,807 m), the highest; Gran Paradiso; MATTERHORN; Jungfrau; and Grossglockner. The Alps are crossed by three of the world's longest tunnels—the Simplon, St. Gotthard, and Mont Cénis—and by many routes such as the BRENNER PASS and the Great and Little St. Bernard passes.

Alsace-Lorraine, region of NE France, bounded by Belgium, Luxembourg, and Germany (N and E). Alsace lies to the east of Lorraine. Hops are grown, and vineyards are numerous. Potassium, iron, and coal deposits are exploited. STRASBOURG is Alsace's leading industrial center. Most of the population speaks French, but German is also spoken, especially around Metz. Both Alsace and Lorraine were included in the HOLY ROMAN EMPIRE. Lorraine emerged as a duchy, and Alsace was divided into many fiefs and free cities by the 13th cent. France gradually acquired both regions in the 17th and 18th cent. As a result of the FRANCO-PRUSSIAN WAR (1870–71) much of the area was annexed to Germany and formed the "imperial land" of Alsace-Lorraine. After WORLD WAR I Alsace-Lorraine was returned to France, but it was again annexed (1940–45) to Germany during WORLD WAR II.

Altaic, subfamily of the URALIC AND ALTAIC family of languages. See LANGUAGE (table).

Altamira: see PALEOLITHIC ART.

Altdorfer, Albrecht [ältdôr'fər], 1480–1538, German painter and engraver. His romantic allegorical and biblical works, e.g., *Susannah at the Bath* (1526; Alte Pinakothek, Munich), vibrate with intense movement. He was perhaps the first German to paint pure landscape.

alternating current: see ELECTRICITY; GENERATOR; MOTOR, ELECTRIC.

alternative medicine, techniques for treating and preventing disease that are regarded by modern Western medicine as scientifically unproven or unorthodox. The term *alternative medicine* can encompass a wide range of therapies, including CHIROPRACTIC, homeopathy, ACUPUNCTURE, HERBAL MEDICINE, MEDITATION, BIOFEEDBACK, massage therapy, and various "new-age" therapies such as guided imagery and naturopathy. Although many alternative therapies have long been widely employed in the treatment of disease, the scientifically oriented modern medical establishment has typically been skeptical about, and sometimes strongly opposed to, their use. In 1993 the U.S. National Institutes of Health established the Office of Alternative Medicine to examine the merits of such techniques. See also HOLISTIC MEDICINE.

alternator: see GENERATOR.

Altgeld, John Peter, 1847–1902, American politician, governor (1892–96) of Illinois; b. Germany. A Democrat and a staunch defender of human rights, he pardoned three men convicted for the HAYMARKET SQUARE RIOT of 1886, and protested the sending of federal troops to end the Pullman strike (1894). His liberal actions lost him reelection (1896).

Althing, parliament of ICELAND. The oldest assembly in Europe, first convened in 930, it voted Iceland's independence from Denmark in 1944. It is now a 63-member unicameral body, but until 1991 it comprised a lower house (two thirds of members) and an upper house (one third). Members are elected by a system of proportional representation.

altimeter, device for measuring altitude. The most common type, used in airplanes and balloons and by mountain climbers, consists of an aneroid BAROMETER, calibrated so that the drop in atmospheric pressure indicates the elevation above sea level. The radio altimeter indicates the actual altitude over the earth's surface by measuring the time it takes for a radio signal to travel to earth and back.

altiplano, densely populated upland plateau (alt. c.12,000 ft/3,660 m) in the ANDES of Bolivia and Peru. It has a cool climate and bleak aspect. Corn, wheat, and potatoes are the chief crops; mining is the principal industry. LA PAZ and Oruro, in Bolivia, are the largest cities.

altitude, vertical distance of an object above sea level or another reference point on the earth's or another astronomical body's surface. On earth it is usually measured by the reduction in atmospheric pressure with height, as shown on a BAROMETER or ALTIMETER. Vertical distances on other planets can be determined by means of radar and optical imaging. In surveying and astronomy, altitude is the vertical angle of an observed point, such as a star or planet, above the horizon plane (see ASTRONOMICAL COORDINATE SYSTEMS).

alto: see VOICE.

alumina or **aluminum oxide,** chemical compound (Al_2O_3) that is widely distributed in nature and occurs combined with silica and other minerals in clays, feldspars, and micas, and in almost pure form in CORUNDUM. It is the major component of BAUXITE and is used in the production of ALUMINUM metal. Alumina is also used as an ABRASIVE, in ceramics, in pigments, and in the manufacture of chemicals.

aluminum or **aluminium** (Al), metallic element, used in antiquity but first isolated by Friedrich WÖHLER in 1827. The silver-white metal is ductile and malleable, and conducts heat and electricity. Although very reactive chemically, aluminum resists corrosion by forming a protective oxide (alumina) coating. The most abundant metal in the earth's crust (about 8% by weight), it occurs combined with other elements in such minerals as alum, BAUXITE, CORUNDUM, CRYOLITE, FELDSPAR, and MICA. Aluminum and its compounds are used in paints, foil, jewelry, and welding. Aluminum wire, cheaper and lighter than copper wire, is used in high-tension power transmission. The strong, hard alloy DURALUMIN is used in aircraft. See ELEMENT (table); PERIODIC TABLE.

aluminum oxide: see ALUMINA.

Alvarado, Pedro de [älvärä'thō], 1486–1541, Spanish CONQUISTADOR. A chief lieutenant of Hernán CORTÉS during the conquest of MEXICO, Alvarado conquered GUATEMALA in 1523 and served as governor until his death. Exercising absolute control, he founded many cities and developed the colony while searching for the fabled Seven Cities of Cibola. He was killed quelling a rebellion of indigenous peoples in W Mexico.

Alvarez, Luis Walter, 1911–88, American physicist; b. San Francisco. He was awarded the 1968 Nobel Prize in physics for the development of the liquid-hydrogen bubble chamber (see PARTICLE DETECTOR). He also helped develop the ground-control approach system for aircraft in the 1940s and played an important part in the MANHATTAN PROJECT. He; his son, the geologist **Walter Alvarez,** 1940–, b. Berkeley, Calif.; and others proposed that unusually high levels of iridium at the boundary between Cretaceous and Tertiary rocks indicated a major meteor impact and that this might be the cause of the MASS EXTINCTION of the DINOSAURS.

alyssum, chiefly annual and perennial herb (genus *Alyssum*) of the MUSTARD family, native to the Mediterranean. Some species, with masses of yellow or white flowers, are cultivated as rock-garden and border ornamentals. The annual sweet alyssum has fragrant white or lilac blossoms. Once called madwort or heal-all, alyssum was thought to cure rabies.

Alzheimer's disease, degenerative disease of the brain cells producing loss of memory and general intellectual impairment. It usually affects people over age 65, although it can appear earlier, especially in some familial forms of the disease. As the disease progresses, a variety of symptoms may become apparent, including confusion, irritability, and restlessness, as well as disorientation and impaired judgment and concentration. The cause is unknown, although there appears to be a genetic component; the excessive beta amyloid proteins and the traces of aluminum found in the brains of victims are being studied as possible contributors. There is no cure, but the drug tacrine provides temporary improvement for some patients.

Am, chemical symbol of the element AMERICIUM.

AM: see MODULATION.

Amadeus VIII, 1383–1451, duke (from 1416) of Savoy and antipope (1439–49) with the name Felix V. The last of the antipopes, he was elected at the Council of BASEL, but had few supporters. He yielded his claim when Nicholas V became pope.

Amado, Jorge [əmä'dōō], 1912–, Brazilian novelist. His vibrant novels of the lives of ordinary Brazilians include *The Violent Land* (1942), *Gabriela, Clove and Cinnamon* (1958), the ebullient *Doña Flor and Her Two Husbands* (1966), and *The War of the Saints* (tr. 1993).

Amalekites [ăm'ələkīts], aboriginal people of CANAAN and the Sinai peninsula. They waged war against the Hebrews, until dispersed by SAUL and DAVID.

amalgam: see ALLOY.

Amalric or **Amaury,** Latin kings of Jerusalem. **Amalric I,** c.1137–1174 (r.1162–74), lost the suzerainty of Egypt to the Turkish sultan Nur ad-Din and eventually to SALADIN. **Amalric II,** c.1155–1205 (r.1197–1205), married the daughter of Amalric I. He was also king of Cyprus (1194–1205).

Amalthea, in astronomy, natural satellite of JUPITER.

amaranth, common name for the family Amaranthaceae (also called the pigweed family), herbs, trees, and vines found mainly in warm regions of the Americas and Africa. The genus *Amaranthus* includes several species called amaranth, characterized by a lasting red pigment in the stems and leaves; common weeds, e.g., the green amaranth (*A. retroflexus*); and various plants known as TUMBLEWEED and pigweed. Some species have long been used as potherbs and cereals in the Old and New World. The globe amaranth, or BACHELOR'S BUTTON (genus *Gomphrenia*), and the cockscomb (genus *Celosia*) are tropical annuals that are dried and used in everlasting bouquets.

Amarillo, city (1990 pop. 157,615), seat of Potter co., N Tex.; inc. 1899. A plains city, it is the commercial and industrial center of the Texas Panhandle. Oil, gas, helium, and zinc are produced, along with various manufactures. The city handles grains and livestock raised in the area. It grew with the coming (1887) of the railroad and became an industrial city after the discovery of gas (1918) and oil (1921).

amaryllis, common name for some members of the Amaryllidaceae, a family of mostly perennial plants with flat, narrow leaves and lilylike flowers borne on separate, leafless stalks. Widely distributed, they are found especially in tropical and subtropical lowlands. Ornamentals of the family are mistaken for plants of the LILY family, which differ in the position of the ovary (see FLOWER). The best-known member of the family is the extensively hybridized amaryllis (genus *Hippeastrum*) of commerce, grown as a houseplant (or outside in the South) for its large, showy, variously colored flowers. The family also includes the showy-blossomed true amaryllis, or belladonna lily (*Amaryllis belladonna*); NARCISSUS; and the snowdrops (genus *Galanthus*), whose small, early-blooming flowers are symbolic of consolation and promise. The genus *Agave,* the tropical American counterpart of the African genus ALOE, contains the most economically important plants in the family. Different agaves provide soap, food, beverages, and fiber (see SISAL HEMP).

Amaury. For persons thus named, see AMALRIC.

Amazon, world's second longest river, flowing c.3,900 mi (6,280 km) east across N South America to enter the Atlantic Ocean through a wide delta in N Brazil. It is formed by the junction in N Peru of the Ucayili and Marañón rivers. It has more than 500 tributaries, drains c.40% of the continent, and carries more water than any other river in the world. The Amazon traverses the world's largest rain forest (selva); since the 1960s the population and development in the area have steadily increased. There are no waterfalls or other obstructions along its course, and ships of 14-ft (4-m) draft can travel very nearly its full length (to Iquitos, Peru). Belém and Manaus in Brazil are other ports.

Amazon, in Greek mythology, one of a tribe of warlike women from Asia Minor. The Amazons had a matriarchal society, in which women governed and fought while men performed the household tasks. Several Greek heroes proved their mettle against Amazons, e.g., HERCULES and THESEUS.

amber, yellow to brown fossil RESIN exuded by coniferous trees now extinct; the best amber is transparent. Highly polished amber is used to make small decorative objects, e.g., beads and amulets. When rubbed with a cloth, amber becomes charged with static electricity. Bubbles of air, leaves, bits of wood, or insects, sometimes of extinct species, are often found trapped in amber. The chief source of the world's amber is the Baltic coast of Germany.

ambergris, a waxlike substance that is formed in the intestine of the sperm whale. It is found floating on tropical seas or cast up on the shore in yellow, gray, black, or variegated masses. Greatly valued from earliest times, ambergris is now used as a fixative in perfumes.

Ambler, Eric, 1909–, English novelist. He is the author of popular suspense stories, usually involving international intrigue, e.g., *A Coffin for Dimitrios* (1939), *To Catch a Spy* (1964), and *The Care of Time* (1981).

Amboise, Jacques d': see D'AMBOISE, JACQUES.

Ambrose, Saint, 340?–397, bishop of MILAN, Doctor of the Church. A popular governor in Milan, Ambrose was made (374) bishop by popular demand. He opposed ARIANISM and was an adviser to Emperor Gratian, whom he persuaded to outlaw (379) heresy in the West. His preaching helped to convert St. AUGUSTINE. Ambrose wrote many theological works and is associated with the type of PLAINSONG called Ambrosian chant. Feast: Dec. 7.

ameba or **amoeba,** one-celled PROTOZOAN in the phylum Sarcodina. Amebas constantly change their body shape as they form temporary extensions called pseudopods, or false feet, used for feeding and locomotion. Most amebas range from 5 to 20 microns in diameter. They engulf their prey (diatoms, algae, or bacteria) with their pseudopods, forming vacuoles in which food is digested by ENZYMES. Reproduction is usually by binary fission (splitting) to produce two daughter amebas, the nucleus dividing by MITOSIS; some also reproduce sexually. Amebas live in fresh and marine waters and the upper layers of soil. Many are PARASITES of aquatic and terrestrial animals, and some cause disease, e.g., amebic dysentery.

Ameling, Elly, 1938–, Dutch soprano. Although she has sung opera, she is noted for her sensitive interpretations of French and German art songs, particularly the LIEDER of Schubert. She made her U.S. debut in New York City in 1968.

Amen: see AMON.

Amenemhet I [ä"mĕnĕm'hĕt, ā"–], d. 1970 B.C., king of EGYPT founder of the XII dynasty that initiated the Middle Kingdom. He centralized the government in a virtually feudal form. The dynasty enabled the arts and science to flourish.

Amenhotep I [ä"mĕnhō'tĕp, ā–] or **Amenophis I,** fl. 1570 B.C., king of EGYPT of the XVIII dynasty. A great military leader, he extended Egypt's power E to the Euphrates and S to the second cataract of the NILE. THUTMOSE I succeeded him.

amenorrhea, cessation of MENSTRUATION. Primary amenorrhea is a delay in or a failure to start menstruation; secondary amenorrhea is a cessation in the menstrual cycle. It can be caused by dysfunctioning of the pituitary gland, ovaries, uterus, or hypothalamus, by surgical removal of the ovaries or uterus, by stress or other emotional factors, or by inadequate nutrition. Women with anorexia and female athletes have an increased incidence of amenorrhea.

American Association for the Advancement of Science (AAAS), est. 1848 to foster scientific freedom, improve the effective application of science for human needs, and increase public understanding of science. Headquartered in Washington, D.C., it has over 135,000 members in all fields and 296 affiliated groups. Among its publications is the weekly newsmagazine and journal *Science.*

American Ballet Theatre (ABT), a foremost international dance company of the 20th cent. It was founded as the Mordkin Ballet (1937–40) and was known (1940–56) as the Ballet Theater. It presents newly staged classics and dances with American themes. Choreographers have included George BALANCHINE, Agnes DE MILLE, Jerome ROBBINS, and Antony TUDOR; dancers have included Alicia ALONSO, Erik BRUHN, Maria Tallchief, and Igor YOUSKEVITCH.

American Bar Association (ABA), organization of lawyers admitted to any state bar; est. 1878. It promotes professional activities as well as uniformity of U.S. laws, high professional standards, and improved judicial administration. ABA committees address such topics as legal education, professional ethics, and legal aid for the poor. In 1991 the organization had more than 383,000 members.

American Civil Liberties Union (ACLU), nonpartisan organization devoted to protecting basic rights set forth in the U.S. CONSTITUTION; est. 1920 by Jane ADDAMS, Roger BALDWIN, Norman THOMAS, and others. Its special concerns are expression of opinion, equality before the law, and due process. The ACLU has argued or supported nearly every major U.S. civil liberties court case since its founding and, since the early 1980s, it has emphasized the passage of protective laws as well. The ACLU has some 275,000 members.

American Colonization Society, organized (Dec. 1816–Jan. 1817) to transport free African Americans from the U.S. and settle them in Africa. Land purchases (1821) in Africa by the society led to the

foundation of LIBERIA, and more than 11,000 African Americans were sent there before 1860. The colonization movement was attacked by ABOLITIONISTS and was unpopular with many African Americans; it declined after 1840.

American Federation of Labor and Congress of Industrial Organizations (AFL-CIO), a federation of autonomous trade unions in the U.S., Canada, Mexico, Panama, and U.S. territories. It was formed in 1955 by the merger of the AFL and the CIO. Although it does not participate directly in COLLECTIVE BARGAINING, the AFL-CIO serves as the leading voice of American trade unionism, actively lobbying on the national and state levels and supporting political candidates. From its founding in 1886, the AFL emphasized organization of skilled workers on a craft rather than an industrial basis. Under the successive leadership of Samuel GOMPERS, William GREEN, and George MEANY, the AFL secured higher wages, shorter hours, workers' compensation, child labor laws, and exemption of labor from antitrust legislation. In the early 1930s a strong minority faction within the AFL advocated the organization of workers in basic industries (such as steel, autos, and rubber) on an industry-wide basis. John L. LEWIS led this militant group in forming a Committee for Industrial Organization, which, after expulsion from the parent body in 1938, changed its name to the Congress of Industrial Organizations. The CIO, under the presidency of Lewis and later of Philip MURRAY, enjoyed considerable success. In 1955, however, at a time of growing labor concern over the perceived anti-union policies of the Eisenhower administration, the two organizations merged, with Meany as president, and adopted the present name. Lane KIRKLAND succeeded Meany as president in 1979. Ultimate authority in the AFL-CIO is vested in a biennial convention; the executive council governs between conventions. In 1992 the federation included 88 international unions, with a U.S. membership of about 14.1 million. See also UNION, LABOR.

American foxhound: see FOXHOUND.

American Fur Company, chartered (1808) by John Jacob ASTOR to rival Canadian fur companies. The company gained a virtual monopoly of the Great Lakes trade and expanded W into the Missouri valley and Rocky Mountain areas.

American Indian languages: see NATIVE AMERICAN LANGUAGES.

American Indian Movement (AIM), activist organization of the Native American civil-rights movement, est. 1968. After briefly occupying (Nov. 1972) the Bureau of INDIAN AFFAIRS to protest programs controlling tribal development, AIM members led (1973) 200 SIOUX in a 71-day takeover of WOUNDED KNEE, S.Dak., to demand a review of 300 treaties with the U.S. government. AIM also sponsored talks resulting in the 1977 International Treaty Conference with the UN in Geneva, Switzerland.

American Indians: see MIDDLE AMERICA, INDIGENOUS PEOPLES OF; NORTH AMERICA, INDIGENOUS PEOPLES OF; SOUTH AMERICA, INDIGENOUS PEOPLES OF; and individual peoples. See also AMERICAS, PREHISTORY OF THE; NATIVE AMERICAN LANGUAGES.

American Museum of Natural History, New York City, inc. 1869; est. to promote the study of natural science and related subjects. Buildings on its present site were opened in 1877. The Hayden Planetarium was added in 1935 and the Roosevelt Memorial building in 1936. The museum's explorations and research programs have provided it with specimens and data of great value; it maintains exhibitions in all branches of natural history.

American party: see KNOW-NOTHING MOVEMENT.

American Revolution, 1775–83, struggle by which the THIRTEEN COLONIES that were to become the United States won independence from Britain. By the middle of the 18th cent., differences in life, thought, and economic interests had formed between the colonies and the mother country. The British government, favoring a policy of MERCANTILISM, tried to regulate colonial commerce in the British interest, and provoked colonial opposition. The STAMP ACT passed by Parliament in 1765 roused a violent colonial outcry as an act of taxation without representation. The TOWNSHEND ACTS (1767) led to such acts of violence as the BOSTON MASSACRE (1770), the burning of the H.M.S. *Gaspee* (1772), and the BOSTON TEA PARTY (1773). In 1774 Britain responded with the coercive INTOLERABLE ACTS. The colonists convened the CONTINENTAL CONGRESS and petitioned the king for redress of their grievances. Fighting erupted on Apr. 19, 1775, at LEXINGTON AND CONCORD, and was followed by the capture of Fort Ticonderoga from the British, the battle of BUNKER HILL, and the unsuccessful colonial assault on Quebec (1775–76). The Continental Congress appointed (1775) George WASHINGTON to command the Continental army and, on July 4, 1776, adopted the DECLARATION OF INDEPENDENCE. Many colonists, however remained pro-British Loyalists. The colonial victory in the SARATOGA CAMPAIGN (1777) helped forge a French-American alliance (1778), bringing vital aid to the colonists. Following the terrible ordeal of Washington's army at VALLEY FORGE and the indecisive battle of MONMOUTH (1778), the war shifted to the South during the Carolina campaign (1780–81). The surrender (Oct. 1781) of Gen. CORNWALLIS at the close of the YORKTOWN CAMPAIGN ended the fighting, and the Treaty of Paris (1783) recognized the U.S. as a nation.

American Samoa, unincorporated territory of the U.S. (1990 pop. 46,773), 76 sq mi (197 sq km), comprising the eastern half of the Samoa island chain in the South Pacific. The major islands are Tutuila, the Manu'a group, Rose and Sand, and Swains. Pago Pago, the capital, is on Tutuila. The islands are mountainous and wooded; agriculture, fish canning, and some light industry are conducted. The Polynesian natives, considered U.S. nationals, elect a governor and legislature, and send a nonvoting delegate to Congress. American Samoa, defined by treaty in 1899, was administered by the U.S. Dept. of the Navy until 1951, when it passed to Dept. of the Interior jurisdiction.

American Samoa, The National Park of: see NATIONAL PARKS (table).

American Society for the Prevention of Cruelty to Animals (ASPCA), founded (1866) in the U.S. to shelter homeless animals, assist in livestock care, and help to enforce game laws. It is modeled on England's Royal Society for the Prevention of Cruelty to Animals (founded 1824).

American Standard Code for Information Interchange: see ASCII.

Americans with Disabilities Act (1990), U.S. civil-rights law that forbids discrimination against otherwise qualified individuals on the basis of a physical or mental handicap. The act is also designed to end most physical barriers to disabled persons in employment and in the use of accommodations, transportation, and telecommunications. The law also protects people with AIDS and alcoholics and drug abusers who are in treatment.

Americas, prehistory of the. It is generally agreed that the first people to inhabit the Americas crossed the BERING STRAIT from NE Asia in migration waves perhaps beginning before 30,000 B.C. The earliest evidence of human occupation in North America has been dated at c.19,000 B.C. and in South America at c.30,000 B.C., but there have been questions about the dating of these finds. The CLOVIS CULTURE of North America definitively dates from c.10,000 B.C., and by 8000 B.C. it is clear that peoples had spread throughout the Americas. Between 5000 B.C. and 1000 B.C., agriculture, pottery, and complex social systems throughout the Americas marked the end of the STONE AGE and the rise of the high civilizations. See MIDDLE AMERICA, INDIGENOUS PEOPLES OF; NORTH AMERICA, INDIGENOUS PEOPLES OF; SOUTH AMERICA, INDIGENOUS PEOPLES OF; and articles on individual peoples.

americium (Am), synthetic radioactive element, discovered by Glenn SEABORG and colleagues in 1944 by neutron bombardment of plutonium. The silver-white metal is in the ACTINIDE SERIES. Half-lives of the many isotopes range from 1.3 hr to over 7,000 years. Americium is used in many home smoke detectors See ELEMENT (table); PERIODIC TABLE.

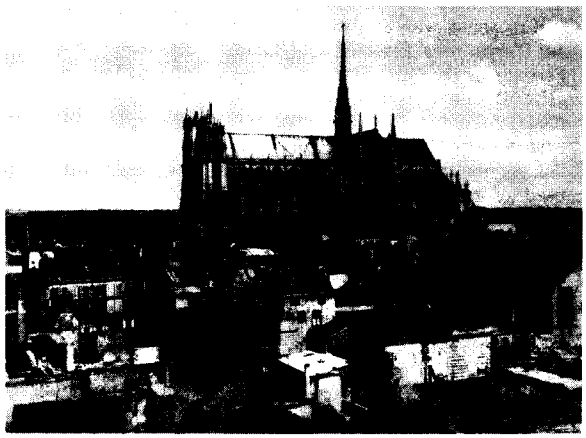
amethyst, most highly valued variety of QUARTZ, violet to purple in color, used as a gem. Amethyst is found in Brazil, Uruguay, Sri Lanka, Siberia, and North America. It has superstitious associations, being regarded as a love charm, a sleeping aid, and a guard against thieves and drunkenness.

Amharic [ămhâr'Ik], language of ETHIOPIA. It belongs to the Ethiopic group of Hamito-Semitic languages. See AFRICAN LANGUAGES (table).

Amherst, Jeffrey Amherst, Baron, 1717–97, British army officer. During the last of the FRENCH AND INDIAN WARS, he commanded British forces at the capture of Louisbourg, N.S. (1758), TICONDEROGA (1759), and Montreal (1760). Amherst, Mass., and Amherst College are named for him.

Amiens [ämyăN'], city (1990 pop. 131,872), capital of Somme dept.,

N France. A textile and farm-market center, it has been occupied by many invaders; after being devastated in both world wars the city was rebuilt. Its Cathedral of Notre Dame (begun c.1220) is France's largest Gothic cathedral.



Amiens Cathedral

Amiens, Treaty of: see FRENCH REVOLUTIONARY WARS.

Amin, Idi, c.1925–, president of UGANDA (1971–79). Seizing control of the government from Milton OBOTE in 1971, he instituted a harsh and brutal regime and expelled Uganda's Asian population. He was driven into exile in 1979.

amino acid, any of a class of organic compounds having a carboxyl group (COOH) and an amino group (NH_2). Some 22 amino acids are commonly found in animals and more than 100 less common forms are found in nature, chiefly in plants. When the carboxyl carbon atom of one amino acid binds to the nitrogen of another with the release of a water molecule, a linkage called a peptide bond is formed. Chains of amino acids, joined head-to-tail in this manner, are synthesized by living systems and are called polypeptides (up to about 50 amino acids) and PROTEINS (over 50 amino acids). Many of the amino acids necessary in metabolism can be synthesized in the human or animal body when needed; these are called nonessential. Others cannot be synthesized in sufficient quantities; these are termed essential and must be provided in the diet.

Amis, Kingsley, 1922–, English novelist. He is best known for *Lucky Jim* (1953), a brilliant satire on academic life. Later novels include *That Certain Feeling* (1955), *Jake's Thing* (1979), *Stanley and the Women* (1985), and *Difficulties with Girls* (1989). Amis also writes espionage novels, poetry, and nonfiction. His son, **Martin Amis,** 1949–, is also a novelist. His bitterly satirical fiction exposes the dark side of contemporary English society. His novels include *Dead Babies* (1975) and *Time's Arrow* (1991).

Amman, city (1990 est. pop. 1,000,000), capital of Jordan, N central Jordan, on the Jabbok R. Jordan's largest city and industrial and commercial heart, Amman is a transportation hub, especially for pilgrims en route to MECCA. It is noted for its colored marble; textiles, leather goods, cement, and other manufactures are produced. Amman is the biblical Rabbah, the Ammonite capital. It fell to King David, Assyria, Rome, and other conquerors. After the Arab conquest (635) it declined, reviving as the capital of Trans-Jordan after 1921. Palestinian refugees swelled the population after the Arab-Israeli Wars of 1948 and 1967. The city's historic structures include a Roman amphitheater.

ammeter, instrument used to measure, in AMPERES, the magnitude of an electric current. An ammeter is usually combined with a VOLTMETER and an OHMMETER in a multipurpose instrument. Although most ammeters are based on the d'Arsonval GALVANOMETER and are of the analog type, digital ammeters are becoming increasingly common.

Ammon: see AMON.

ammonia, chemical compound (NH_3), colorless gas with a characteristic pungent, penetrating odor. It is extremely soluble in water. Ammonia and ammonia vapors are irritating—prolonged exposure and inhalation cause serious injury and may be fatal. The major use of ammonia and its compounds is as FERTILIZERS. Ammonia solutions are used to clean, bleach, and deodorize; to etch aluminum; to saponify oils and fats; and in chemical manufacture. Ammonia is usually produced by direct combination of nitrogen with hydrogen at high temperature and pressure in the presence of a catalyst.

amnesia, condition characterized by loss of memory for long or short intervals. It may be caused by physical injury, shock, senility, or severe illness. In other cases, a painful experience and everything remindful of it, including the individual's identity, is unconsciously repressed (see DEFENSE MECHANISM). Attempts to cure this type of amnesia include efforts to establish associations with the past through suggestion and HYPNOSIS.

amnesty, in law, exemption from prosecution for some criminal action. It is distinguished from a pardon, which is an act of forgiveness following conviction. Amnesties are usually extended to groups of persons involved in disorders or insurrections; after the Civil War the U.S. granted a qualified amnesty to the Confederate forces.

Amnesty International (AI), organization (est. 1961) that campaigns against the detention of political prisoners and against other HUMAN RIGHTS violations throughout the world. It was awarded the Nobel Peace Prize in 1977 after effecting the release of more than 10,000 prisoners. In 1993 the organization had 1.2 million members worldwide.

amniocentesis, diagnostic procedure in which a sample of the amniotic fluid surrounding the fetus is removed from the uterus with a fine needle inserted through the abdomen of the pregnant woman (see PREGNANCY). Fetal cells in the fluid can be grown in the laboratory and studied to detect the presence of certain genetic disorders (e.g., DOWN'S SYNDROME, TAY-SACHS DISEASE) or physical abnormalities. Generally recommended when there is a family history of genetic disorders or when the woman is over age 35, the procedure is usually carried out around the 14th or 15th week of pregnancy, when there is sufficient amniotic fluid and ABORTION is still an option. See also BIRTH DEFECTS; CHORIONIC VILLUS SAMPLING.

Amnon, DAVID's eldest son. He raped his half sister Tamar and was killed for it by her brother ABSALOM.

amoeba: see AMEBA.

Amon [ā'mən, ä'–], **Ammon** [ă'mən], or **Amen** [ä'mĕn], ancient Egyptian deity. Originally the chief god of Thebes, Amon grew increasingly important in Egypt, and eventually, as Amon Ra, he was identified with RA as the supreme deity. He was also identified with the Greek ZEUS (the Roman JUPITER).

Amos, book of the OLD TESTAMENT, 30th in order in the Authorized Version, third of the Minor PROPHETS. The shepherd-prophet preached in the northern kingdom of Israel under Jeroboam II (r. c.793–753 B.C.). The book falls into three parts: God's judgment on Gentile nations, finally on Israel; three sermons on the doom of Israel; five visions of destruction, the last promising redemption.

Amoy: see XIAMEN.

Ampère, André Marie, 1775–1836, French physicist, mathematician, and natural philosopher. He extended the work of Hans OERSTED on the relationship of electricity and magnetism, formulated Ampère's law describing the contribution of a current element to magnetic induction, and invented the astatic needle. The basic unit of electric current, the AMPERE, is named for him.

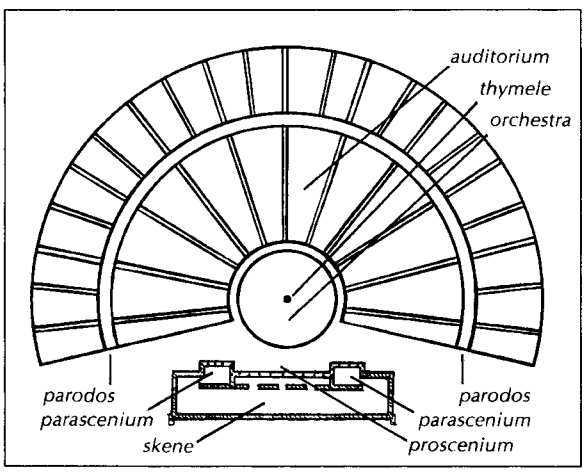
ampere (amp or A), basic unit of electric current and the fundamental electrical unit used with the mks system of units of the METRIC SYSTEM. The ampere is officially defined as the current in a pair of equally long, parallel, straight wires 1 meter apart that produces a force of 0.0000002 newton between the wires for each meter of their length.

amphetamine, any of a class of powerful drugs that act as stimulants (see DRUG) on the central nervous system. Popularly known as "bennies," "speed," or "uppers," amphetamines enhance mental alertness and the ability to concentrate; cause wakefulness, talkativeness, and euphoria; and temporarily reverse the effects of fatigue. They have been used to treat obesity, narcolepsy and minimal brain dysfunction. Amphetamines can produce insomnia,

hyperactivity, and irritability, as well as such severe systemic disorders as cardiac irregularities, elevated blood pressure, and gastric disturbances. The drugs are addictive and easily abused; addiction can result in psychosis or death from overexhaustion or cardiac arrest (see DRUG ADDICTION AND DRUG ABUSE).

amphibian, cold-blooded animal of the class Amphibia, the most primitive of terrestrial VERTEBRATES. Unlike REPTILES, the amphibians, which include FROGS and TOADS, SALAMANDERS and newts, and the limbless CAECILIANS, have moist skins without scales or with small, hidden scales. Most amphibians deposit their eggs in water or a moist, protected place. The young undergo METAMORPHOSIS from aquatic, water-breathing, limbless TADPOLES to terrestrial or partly terrestrial, air-breathing, four-legged adults.

amphitheater, open structure for the exhibition of gladiatorial contests and spectacles, built in cities throughout the Roman Empire, e.g., at Rome (see COLOSSEUM), Arles (France), and Cirencester (England). The typical amphitheater was elliptical, with seats rising around a central arena; quarters for the gladiators and animals were under the arena. The word is now used for various quite unrelated structures.



Amphitheater

amphoterism, in chemistry, the property of certain compounds of acting either as acids or as bases (see ACIDS AND BASES), depending on the reaction in which they are involved. Many hydroxide compounds and organic molecules that contain both acidic (e.g., carboxyl) and basic (e.g., amino) FUNCTIONAL GROUPS are usually amphoteric.

amplifier, device in which a varying input signal controls a flow of energy to produce an output signal that varies in the same way but has a larger amplitude; the input signal may be a current, a voltage, a mechanical motion, or any other signal, and the output signal is usually of the same nature. The ratio of the output voltage to the input voltage is called the voltage gain. The most common types of amplifiers are electronic and use a series of TRANSISTORS as their principal components. In most cases, the transistors are incorporated into INTEGRATED-CIRCUIT chips. Transistor amplifiers are used in RADIO and TELEVISION transmitters and receivers, stereophonic sound reproduction systems, and intercoms.

amplitude modulation: see MODULATION.

Amru al-Kais, fl. 6th cent., Arabic poet, long esteemed by Arabs as the model for erotic poetry. Like much pre-Islamic poetry, his verse is subjective and stylistically perfect.

Amsterdam, constitutional capital and largest city (1991 est. pop. 700,000) of the Netherlands, on the Ij and Amstel rivers. It is a major port joined with the North Sea and the Rhine by canals. One of Europe's great commercial, intellectual, and artistic capitals, it has a major stock exchange and is a diamond-cutting center. It is built on piles and is cut by some 40 canals crossed by about 400 bridges. Chartered c.1300, it joined the HANSEATIC LEAGUE in 1369 and the anti-Spanish Netherland provinces in 1578. An influx of refugees contributed to its growth, and the city reached its apex in the 17th cent. After French rule (1795–1814) it became the Dutch capital. Amsterdam suffered greatly under German occupation (1940–45) during WORLD WAR II. Points of interest include the city hall (16th cent.); the university (est. 1632); the Rijks Museum, with its Rembrandts and other Dutch master paintings; and the municipal museum, with its Van Gogh collection.

Amu Darya, river, E central Asia, known to the ancient Greeks and Persians as the Oxus. It is c.1,600 mi (2,580 km) long and flows generally northwest from sources in the snow-capped Pamirs along the border of Afghanistan and Tajikstan, Uzbekistan, and Turkmenistan through the Kara Kum desert in E Turkmenistan to a large delta on the ARAL SEA in NW Uzbekistan. The waters of the river are used for irrigation in Turkmenistan and Uzbekistan.

Amundsen, Roald [ä'mo͝onsən], 1872–1928, Norwegian explorer. He commanded the first single ship to sail through the NORTHWEST PASSAGE (1903–6) and was the first person to reach the South Pole (1911). In 1926, with the aviator Umberto Nobile and the financier Lincoln ELLSWORTH, Amundsen took part in the first airplane flight over the North Pole. When Nobile crashed in the Arctic in 1928, Amundsen was killed in the rescue attempt. His works, which include *The South Pole* (1913), have added much to knowledge of the polar regions.

Amur, river, c.1,800 mi (2,900 km) long, NE Asia. It flows generally southeast, forming for more than 1,000 mi (1,610 km) the border between Russia and China, then northeast through the Russian Far East, entering the Tartar Strait opposite SAKHALIN Island. Its chief tributaries are the USSURI and SUNGARI. The river is navigable by small craft for its entire length during the ice-free season (May–Nov.)

Amurath. For Ottoman sultans thus named, see MURAD.

amyotrophic lateral sclerosis (ALS), degenerative disease that affects nerve cells in the brain and spinal cord, preventing them from sending impulses to the muscles. The muscles atrophy quickly, causing weakness, paralysis, and eventual death. About half of the inherited cases are caused by a gene mutation on chromosome 21. Lou GEHRIG died of the disease in 1941, bringing it national attention.

Anabaptists, name applied, originally in scorn, to certain Christian sects holding that infant baptism is not authorized in Scripture, but that baptism should be administered only to believers. Prominent in Europe during the 16th cent., they were persecuted everywhere. Their chief leaders were Thomas MÜNZER and JOHN OF LEIDEN. MENNONITES and Hutterites are descended from them.

Anabasis: see XENOPHON.

anabolic steroid or **androgenic steroid,** any of a group of synthetic derivatives of TESTOSTERONE that promote muscle and bone growth. Used therapeutically to treat chronic debilitating diseases, anabolic steroids have also been used by bodybuilders and athletes seeking increased muscle mass and enhanced strength and stamina. Such use is banned by the International Olympic Committee and other governing bodies in sports, and in 1988 a federal law was enacted that made it illegal to distribute anabolic steroids for nontherapeutic uses. Abuse of anabolic steroids may lead to increased aggressiveness, irritability, and other disruptive behavioral effects, including symptoms characteristic of drug addiction; long term effects are not known.

anaconda: see BOA.

Anacreon, fl. c.521 B.C., Greek LYRIC poet, celebrator of love and wine. The Anacreontics, in his style, were written from Hellenistic to late Byzantine times.

anae-. For words beginning thus, see ANE-.

Anaheim, city (1990 pop. 266,406), Orange co., S Calif., SE of LOS ANGELES; founded 1857, inc. 1876. A major tourist center, Anaheim contains the Disneyland theme park (opened 1955); Anaheim Stadium, home of the California Angels baseball and Los Angeles Rams football teams; and the Anaheim Convention Center. It is also the site of a large electronic equipment industry.

analgesic, any agent used to relieve pain. Analgesic drugs include nonnarcotics, such as ASPIRIN and other salicylates, IBUPROFEN, and ACETAMINOPHEN; NARCOTICS, such as MORPHINE and CODEINE; and synthetic narcotics with morphinelike action, such as propoxyphene

(Darvon) and meperidine (Demerol). Techniques that provide analgesia include ACUPUNCTURE, HYPNOSIS, and BIOFEEDBACK.

analog circuit, ELECTRIC CIRCUIT in which the output voltage and current values are considered significant over a continuum. Analog circuits may be used for such purposes as amplifying signals corresponding to sound waves. See also DIGITAL CIRCUITS.

analog computer: see COMPUTER.

analog-to-digital conversion, the process of changing continuously varying data into digital quantities that represent the magnitude of the data at the moment the conversion is made. The most common use is to change analog signals into a form that can be manipulated by digital COMPUTER, as in data communications. See also DIGITAL-TO-ANALOG CONVERSION.

analysis, branch of MATHEMATICS that uses the concepts and methods of the CALCULUS. It includes basic calculus; advanced calculus, in which such underlying concepts as that of a limit are subjected to rigorous examination; differential and integral equations, in which the unknowns are FUNCTIONS rather than numbers; VECTOR and tensor analysis; differential geometry; and many other fields.

analytical chemistry: see CHEMISTRY.

analytic geometry, branch of GEOMETRY in which points are represented with respect to a coordinate system, such as CARTESIAN COORDINATES. Analytic geometry was introduced by René DESCARTES in 1637 and was of fundamental importance in the development of the CALCULUS by Sir Isaac NEWTON and G.W. LEIBNIZ in the late 17th cent. Its most common application—the representation of EQUATIONS involving two or three variables as curves in two or three DIMENSIONS or surfaces in three dimensions—allows problems in ALGEBRA to be treated geometrically and geometric problems to be treated algebraically. The methods of analytic geometry have been generalized to four or more dimensions and have been combined with other branches of geometry.

anarchism, political philosophy and movement that seeks the abolition of government, arguing that people, although naturally good, are corrupted by artificial institutions. Anarchism dates from the ancient Greeks, but its modern form was outlined (18th and 19th cent.) by William GODWIN, P.J. PROUDHON, and others. In Russia, given a violent and collectivist tone by Mikhail BAKUNIN, it was outlawed by the Bolsheviks after the RUSSIAN REVOLUTION. Only in the Latin countries of Europe, where it was linked to SYNDICALISM, did it gain a mass following by the end of the 19th cent. After the HAYMARKET SQUARE RIOT (1886) and the assassination of Pres. MCKINLEY, fear of anarchism caused the U.S. in 1901 to forbid anarchists from entering the country. Today anarchism remains important as a philosophical and political theory, not as an active political movement.

Anatolia, Asian part of Turkey, usually synonymous with ASIA MINOR.

Anatolian languages, subfamily of the Indo-European family of languages. See LANGUAGE (table).

anatomy, branch of biology concerned with the study of the body structure of plants and animals. Comparative anatomy considers structural similarities and differences of various organisms, forming the basis of CLASSIFICATION. Human anatomy emphasizes individual systems composed of groups of TISSUES and organs. See also PHYSIOLOGY.

Anaxagoras [ăn″əksăg′ərəs], c.500–428 B.C., Greek philosopher, thought to have been the teacher of SOCRATES. He held that an all-pervading *nous* (world-mind) ordered the physical world by combining particles from the undifferentiated mass of the universe.

Anaximander [ənăk″sĭmăn′dər], c.611–c.547 B.C., pre-Socratic Greek philosopher. His notions of the infinite or indefinite (*apeiron*) and its processes prefigured the later concept of the indestructibility of matter, while other views anticipated the theory of evolution and certain laws of astronomy.

Anchises [ănkī′sēz], in Greek mythology, Trojan shepherd; father of AENEAS by APHRODITE.

Anchorage, city (1990 pop. 226,338), Anchorage Borough, S central Alaska, at the head of Cook Inlet; inc. 1920. Founded (1915) as a railroad town, it has grown into the state's largest city as well as the administrative and commercial heart of S central and W Alaska. It is one of the nation's major defense centers and a transportation hub. Tourism is important, and there is a busy international airport. The city's rapid growth is due largely to its position as the focus of Alaska's coal, oil, and gas industries.

anchovy: see HERRING.

Andalusia, Span. *Andalucía,* autonomous region (1987 est. pop. 6,842,000), 33,675 sq mi (87,218 sq km), on the Mediterranean Sea, the Strait of Gibraltar, and the Atlantic Ocean. Spain's largest and most populous region, it occupies all of S Spain. Grapes, olives, citrus, cereals, and other crops are grown in its subtropical climate. Mineral resources include copper, iron, and zinc. It was settled (11th cent. B.C.) by the Phoenicians and later ruled by Carthage (6th cent. B.C.), Rome (3d cent. B.C.), and the Visigoths (5th cent. A.D.). In 711 the MOORS conquered Andalusia. Christian Spain ended the long reconquest of the region when GRANADA fell in 1492. In 1713 Spain ceded GIBRALTAR to Britain.

Andersen, Hans Christian, 1805–75, Danish writer of fairy tales. Poverty-ridden and a failure as an actor, Andersen won the generous patronage of King Frederick VI with his poetry. Though noted for a time as a novelist, e.g., *The Improvisatore* (1835), it was his later fairy tales that established him as Denmark's greatest author and a storyteller without peer. His sense of fantasy, power of description, and acute sensitivity contributed to his mastery of the genre. Among his many widely beloved tales are "The Little Match Girl," "The Ugly Duckling," "The Snow Queen," and "The Red Shoes."

Andersen Nexø, Martin [än′dərsĕn nĕksö], 1869–1954, Danish novelist. His famous proletarian novels *Pelle the Conqueror* (1906–10) and *Ditte, Daughter of Mankind* (1917–21) focus attention on conditions of poverty in Denmark.

Anderson, Carl David, 1905–91, American physicist; b. N.Y.C. For his discovery of the positron in 1932, he shared the 1936 Nobel Prize in physics with V.F. Hess. He is also credited as one of the discoverers of the muon (see ELEMENTARY PARTICLES) in 1936.

Anderson, Elizabeth Garrett, 1836–1917, English physician. After obtaining a private medical education under accredited physicians and in London hospitals and becoming licensed (1865) in Scotland, she opened (1866) a dispensary, later a small hospital, for women and children in London, the first in England to be staffed by women physicians. Largely through her efforts, British examining boards opened their examinations to women.

Anderson, Marian, 1897–93, African-American contralto; b. Philadelphia. She was the first African American to be named (1955) a permanent member of the METROPOLITAN OPERA COMPANY, and was also the first African American to perform in the White House. In 1958 she was an alternate delegate to the UN.

Anderson, Maxwell, 1888–1959, American dramatist; b. Atlantic, Pa. His plays, many written in verse, usually concern social and moral problems. His dramas include *What Price Glory?* (1924), *Elizabeth the Queen* (1930), *Winterset* (1935), *Anne of the Thousand Days* (1948), and *The Bad Seed* (1954).

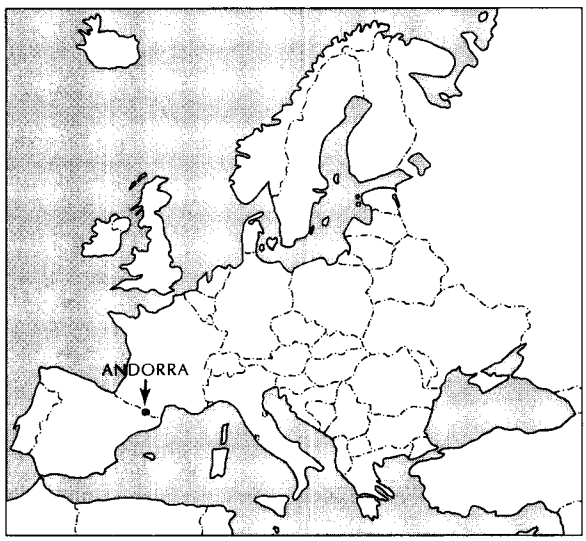
Anderson, Sherwood, 1876–1941, American writer; b. Camden, Ohio. He was a strongly American writer, experimental and poetic, whose greatest novel, *Winesburg, Ohio* (1919), explores the loneliness and frustration of small-town lives. His other novels include *Poor White* (1920) and *Dark Laughter* (1925). Some of his finest work is in his compassionate and penetrating short stories, e.g., the collections *The Triumph of the Egg* (1921) and *Death in the Woods* (1933).

Andersonville, village (1990 pop. 277), SW Georgia, inc. 1881. It was the location of a notorious Confederate prison, now a national historic site, where dreadful conditions led to the deaths of nearly 13,000 Union soldiers. Andersonville National Cemetery, which contains the graves of the prisoners and other soldiers, is nearby.

Andes, great mountain system, extending c.4,500 mi (7,200 km) north to south in South America, generally parallel to the Pacific coast. The mountains reach a high point of 22,835 ft (6,960 m) in ACONCAGUA (highest point in the Western Hemisphere) and include many other snow-capped peaks over 22,000 ft (6,700 m). The system widens in Bolivia and Peru to form multiple ranges and a high, densely populated plateau (ALTIPLANO), where the great civilization of the INCAS had its home. Copper, silver, and tin are mined, and oil has been found in the northern foothills. The Andes are geologically young and still rising. Volcanic eruptions and earthquakes are common.

Ando Hiroshige: see HIROSHIGE.

Andorra, Fr. *Andorre,* officially Principality of Andorra, autonomous parliamentary co-principality (1992 est. pop. 55,000), 174 sq mi (450 sq km), SW Europe, between France and Spain, comprising several high valleys in the E Pyrenees. The capital is **Andorra la Vella** (1986 est. pop. 15,600). The Catalan-speaking, largely Roman Catholic native Andorrans make up about a fifth of the total population. Tourism, including the sale of consumer goods to tourists, is the principal source of income, but sheep-raising, minerals (iron, lead, marble), timber, and banking are also economically important. In 1278 Andorra was put under the joint suzerainty of a French count, whose rights passed to the president of France, and the bishop of Urgel, Spain. It is governed under the 1993 constitution, Andorra's first, by a 28-member parliament.



Andrássy, Julius, Count [ôn'dräsh-shē], 1823–90, Hungarian politician. A leading figure in the unsuccessful Hungarian revolution of 1848–49, he lived in exile until 1858. He later took part (1867) in the creation of the AUSTRO-HUNGARIAN MONARCHY. As premier of Hungary (1867–71) Andrássy established Magyar supremacy over the Slavs in Hungary. He was foreign minister of the Dual Monarchy (1871–79) and signed (1879) the Dual Alliance with Germany. His son **Julius, Count Andrássy**, 1860–1929, also foreign minister, tried (1918) to obtain a separate peace for Austria-Hungary in WORLD WAR I.

Andre, Carl, 1935–, American sculptor; b. Quincy, Mass. His classic, elemental sculptures reflect the philosophy of MINIMALISM. Andre is well known for his floor pieces, e.g., *144 Pieces of Lead* (Mus. of Modern Art, N.Y.C.). In 1988 he was acquitted of the murder of his wife, Ana Mendiata.

André, John, 1751–80, British spy in the AMERICAN REVOLUTION. He was captured and hanged after negotiating with Benedict ARNOLD for the surrender of WEST POINT to the British.

Andrea del Sarto: see SARTO, ANDREA DEL.

Andreotti, Guilio [än"drāätē], 1919–, Italian political leader. A Christian Democrat, he held various ministerial posts in the 1950s and 60s. He was prime minister three times (1972c-ndash73; 1976–79; 1989–91) and also served as minister of foreign affairs (1983–89). In 1993 he was investigated for corruption and ties with the Mafia; previous investigations on similar charges had ended in his exoneration.

Andrew, Saint, one of the Twelve APOSTLES, brother of Simon PETER. He is patron saint of Russia and Scotland.

Andrew II, d. 1235, king of HUNGARY (1205–35). He was forced to issue (1222) the Golden Bull, the "Magna Carta" of Hungary, which extended privileges to the lesser nobles. He took part (1217) in the Fifth CRUSADE.

Andreyev, Leonid Nikolayevich [əndrā'yəf], 1871–1919, Russian writer. His early stories, realistic studies of everyday life, were praised by GORKY, but when the Bolsheviks took power in 1917 he broke with Gorky politically and emigrated to Finland. His popularity declined when he turned to mysticism and allegory. His fiction includes *The Red Laugh* (1905) and *The Seven That Were Hanged* (1908). His best-known play is the expressionistic *He Who Gets Slapped* (1916).

Andrić, Ivo [än'drĭch], 1892–1975, Yugoslav writer. His work includes poetry, essays, short stories, and novels, the best known being his Bosnian historical trilogy (1945) *The Bridge on the Drina, Bosnian Story,* and *Young Miss.* In 1961 he was awarded the Nobel Prize in literature.

Andromache [ăndrŏ'məkē], in Greek myth, wife of HECTOR of Troy; mother of Astyanax. After the TROJAN WAR, ACHILLES' son Neoptolemus abducted her; EURIPIDES and RACINE dramatized her captivity. Later she married Hector's brother Helenus.

Andromeda, in Greek myth, princess of Ethiopia; daughter of Cepheus and Cassiopeia. POSEIDON, angered by her mother's claim that her beauty outshone that of the nereids, sent a sea monster that could be appeased only by her sacrifice. She was rescued by PERSEUS, who slew the monster and married her. Andromeda and her parents became constellations.

Andromeda Galaxy, closest spiral GALAXY (2 million LIGHT-YEARS distant) to our MILKY WAY galaxy. They are similar in shape and composition. The Andromeda galaxy, visible to the naked eye as a faint patch in the constellation Andromeda, is about 120,000 light-years in diameter and contains at least 200 billion stars. In 1993 astronomers discovered that it apparently has a central nucleus consisting of two star clusters.

Andropov, Yuri Vladimirovich, 1914–84, Soviet public official, general secretary of the Communist party of the Soviet Union (1982–84). He was head of the K.G.B. (1967–82), became (1973) a member of the Politburo, and succeeded to the USSR's most powerful office on the death of Leonid BREZHNEV. He was an ideological conservative and potential bureaucratic reformer.

Andros, Sir Edmund, 1637–1714, British colonial governor in America. He was bitterly criticized for his high-handedness as governor (1674–81) of New York. Named (1686) governor of the Dominion of New England, Andros was deposed (1689) by Boston colonists. He was later governor (1692–97) of VIRGINIA.

anemia, condition resulting from a reduction in HEMOGLOBIN content or in number of red blood cells (erythrocytes). Although the causes of anemia vary, because of the blood's reduced capacity to carry oxygen all types exhibit similar symptoms—pallor, weakness, dizziness, fatigue, and, in severe cases, breathing difficulties and heart abnormalities. Therapy includes identifying and treating the underlying cause. See SICKLE-CELL ANEMIA.

anemone or **windflower,** wild or cultivated perennial herb (genus *Anemone*) of the BUTTERCUP family. Anemones, which contain a poisonous compound (anemonin), were once used to treat fevers, bruises, and freckles; they are often associated with evil and death. The purple- or white-blossomed wood anemone *A. quinquefolia* is also called windflower.

anesthesia, loss of sensation, especially that of pain, induced by drugs. General anesthesia, first used in surgical procedures in the 1840s, induces unconsciousness; halothane and sodium pentothal are two widely used general anesthetics. Localized or regional anesthesia is used to desensitize the area around the site of application without loss of consciousness. Regional anesthetics include spinal anesthetics, primarily for lower body surgery; epidural anesthetics for childbirth; and local anesthetics (e.g., novocaine and lidocaine) for dental procedures. Various anesthetics are often used in combination. See also ACUPUNCTURE.

angel, bodiless, immortal spirit, limited in knowledge and power, accepted in the traditional belief of Judaism, Christianity, and Islam. The three choirs of angels appear early in the Christian era; the classes are, from the highest: seraphim, cherubim, thrones; dominations, virtues, powers; principalities, archangels, angels. Angels appear in the Bible, often in critical roles, e.g., visiting Abraham and Lot (Gen. 18; 19) and announcing the Incarnation to Mary (Luke 1). The cult of guardian angels who protect individuals or nations is especially strong in the West. The angels of HELL, or devils, led by SATAN, are viewed as initiators of evil temptations.

The key to pronunciation appears on page xiii.

Angel Falls, waterfall, 3,212 ft (979 m) high, on the Churún R., in the Guiana Highlands, SE Venezuela. It has the world's highest uninterrupted fall (2,648 ft/807 m).

Angelico, Fra [frä änjĕl'ĭkō], c.1400–1455, Florentine painter; b. Guido, or Guidolino, di Pietro; also known as Giovanni da Fiesole. First influenced by GENTILE DA FABRIANO and then MASACCIO, Fra Angelico developed a style remarkable for its purity of line and color. He treated none but religious subjects. His works, including the frescoes *Annunciation* and *Noli mi Tangere* (both: St. Mark's Convent, Florence), show spatial depth and sculptural clarity of form—the artistic innovations of his time. Among his paintings in the U.S. are the *Crucifixion* and *Nativity* (both: Metropolitan Mus.).

Angel Island, largest island in San Francisco Bay, Calif. It was (1863–1946) a U.S. army base and became a missile and radar site in 1952; there is also a state park. From 1910 to 1940 it was the entry point for Asian immigrants to the U.S.

Angell, Sir Norman, 1872?–1967, British internationalist and economist, b. Ralph Norman Angell Lane. He gained fame with *The Great Illusion* (1910), in which he proposed that the common economic interests of nations make war futile. After World War I he worked for a international cooperation and peace. Knighted in 1931, he was awarded the Nobel Peace Prize in 1933.

Angelou, Maya, 1928–, African-American author; b. St. Louis as Marguerite Johnson. Although a playwright, poet, and short-story writer, she is best known for her four-part autobiography (1970–81). In 1993 she read her poem "On the Pulse of Morning" at Pres. CLINTON's inauguration.

Angelus, family name and dynasty of Byzantine emperors (1185–1204) Isaac II, ALEXIUS III, and ALEXIUS IV.

angina pectoris: see under CORONARY ARTERY DISEASE.

angioplasty, any surgical repair of a blood vessel, especially **balloon angioplasty,** or **percutaneous transluminal coronary angioplasty,** a treatment of CORONARY ARTERY DISEASE. In balloon angioplasty a balloon-tipped catheter is inserted through the skin into a blood vessel and maneuvered to the clogged artery. There it is threaded into the blockage and inflated, compressing the plaque against the arterial walls. Frequent postoperative reclogging of the treated area has led to the use of such alternative techniques as **laser angioplasty,** which employs a laser to burn away or vaporize the plaque, and to clinical trials of a stainless steel coil (stent) to hold the plaque back.

angiosperm, plant in which the ovules, or young seeds, are enclosed within an ovary (that part of a FLOWER specialized for seed production), in contrast to the GYMNOSPERMS. Also known as the flowering plants, angiosperms have LEAVES, ROOTS, and STEMS, and vascular, or conducting tissue. Constituting the plant division Magnoliophyta (sometimes called Anthophyta), they are divided into dicotyledons which have two seed leaves (cotyledons) and CAMBIUM tissue in the stems, and monocotyledons which have one seed leaf and generally lack cambium tissue. The most important plant group economically, angiosperms include all agricultural crops and cereal GRAINS, all garden flowers, and almost all broad-leaved trees and shrubs.

Angkor [ăng'kôr], site of several capitals of the KHMER EMPIRE, N of Tônlé Sap, NW CAMBODIA. The ruins extend over 40 sq mi (104 sq km). The first capital was established by Yasovarman I (889–900). A new temple complex, **Angkor Wat,** was built under Suryavarman II (1113–50). This impressive temple, surrounded by a vast moat, is approached by a causeway. Its extensive sculptural ornament exhibits impeccable craftsmanship. In 1177 Angkor was sacked by the Chams and fell into ruins. Jayavarman VII (1181–c.1218) established a new capital, **Angkor Thom,** which was abandoned in 1434. The ruins, overgrown by jungle, were discovered by the French in 1861.

angle, in mathematics, figure formed by two straight lines meeting at a point; the point is known as the vertex of the angle, and the lines are its sides. Angles are commonly measured in degrees (°) or in radians. If the two sides form a single straight line but do not coincide, the angle is a *straight angle,* measuring 180° or π radians (see PI). If the sides are perpendicular, i.e., if they form half of a straight angle, the angle is a *right angle,* measuring 90° or $\pi/2$ radians. An *acute angle* is greater than 0° but less than 90°; an *obtuse angle* is greater than 90° but less than 180°; and a *reflex angle* is greater than 180°. See also TRIGONOMETRY.

Angles: see ANGLO-SAXONS.

Anglican Communion, the worldwide body of churches that are in communion with the Church of England (see ENGLAND, CHURCH OF). Composed of regional churches, provinces, and separate dioceses, the Communion is bound together by mutual loyalty as expressed in the Lambeth Conference of 1930. Member churches include the Protestant Episcopal Church in America (see EPISCOPAL CHURCH, PROTESTANT), the Scottish Episcopal Church, the Church in Wales, and the Church of England in Australia and Tasmania. Doctrinally all member churches are similar, having a ministry of three orders: deacons, priests, and bishops. Worship, though varied in form, is liturgical and sacramental, and regulated by the BOOK OF COMMON PRAYER.

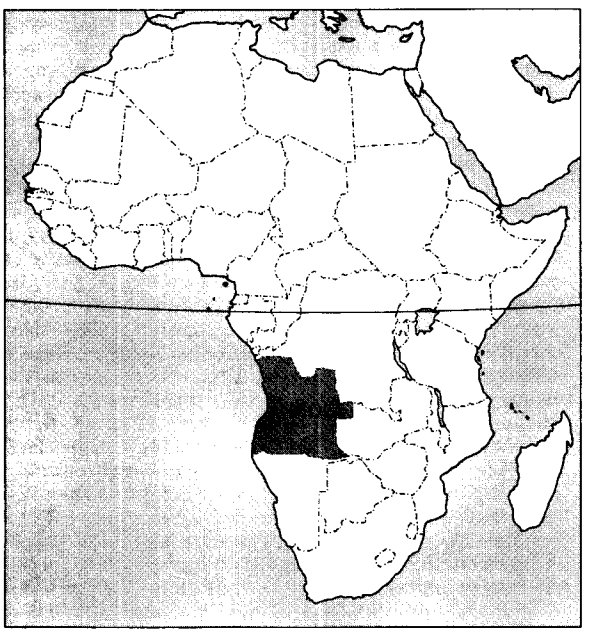
Anglo-Saxon Chronicle, collective name for English monastic chronicles in Anglo-Saxon, stemming from a compilation (c.891) of earlier sources inspired by King ALFRED. The account, from the beginning of the Christian era through 1154, draws on BEDE and adds much original material. Mostly prose, it includes such poems as *The Battle of Brunanburh.*

Anglo-Saxons, name given to the Germanic-speaking peoples who settled in England at the decline of Roman rule there. The Angles probably came from Schleswig late in the 5th cent. and formed foundations for the later kingdoms of EAST ANGLIA, MERCIA, and NORTHUMBRIA. The Saxons, a Germanic tribe, settled in England at the same time; the kingdoms of SUSSEX, WESSEX, and ESSEX were outgrowths of their settlements. The Jutes, a tribe probably from the area at the mouth of the Rhine, settled in Kent and on the Isle of Wight. The term "Anglo-Saxons," denoting non-Celtic settlers of England, dates from the 16th cent. It is now used more loosely to denote any people (or their descendants) of the British Isles.

Angola, officially Republic of Angola, republic (1992 est. pop. 8,902,000), 481,351 sq mi (1,246,700 sq km), SW Africa, bordered by the Atlantic Ocean (W), Zaïre (N), Zambia (E), and Namibia (S). It includes the province of CABINDA, on the Atlantic coast, from which it is separated by a strip of land belonging to Zaïre. Major cities include LUANDA (the capital) and LOBITO. Nearly all of the land is desert or savanna, except for the densely forested valleys of the northeast and a narrow coastal strip in the west. The most prominent physical feature is the Bié Plateau (average altitude, 6,000 ft/1,830 m), which rises abruptly from the coastal lowland and slopes eastward to the CONGO and ZAMBEZI river basins. Formerly dependent on agriculture, Angola today receives over two thirds of its export earnings from oil production, chiefly from reserves offshore of Cabinda. Diamonds, natural gas, and iron ore are also important. Principal crops include coffee (the second largest export), sugarcane, corn, and wheat. Among the leading industries are food processing (notably cereals, fish, palm oil, and meat) and the manufacture of jute, cotton textiles, and paper. The Ovimbundu, Kimbundu, and Bakongo are the largest ethnic groups, and there is a sizable mixed-race population. Most of the people speak a Bantu language; the official language, however, is Portuguese. Traditional religious beliefs prevail, but there is a large minority of Roman Catholics and other Christians.

History. The first Portuguese colony in Angola was established in Luanda in 1575, and, except for a short Dutch occupation (1641–48), Angola remained under Portuguese control until its independence in 1975. (The Mbundu kingdom in central Angola was not subjugated by the Portuguese until 1902). For the Portuguese, Angola was a source of slaves for their colony in Brazil. Modern industrial development began after World War II, and Angola was upgraded from its colonial status to an overseas province in 1951. Repression of the African population continued, and in 1961 a revolt began. When this failed, guerrilla warfare was undertaken from neighboring countries, intensifying in the early 1970s, when more than 50,000 Portuguese troops were engaged against the rebels. In 1972 Angola was made an "autonomous state," and in 1973 elections were held for a legislative assembly. Independence was proclaimed in Nov. 1975, touching off a civil war among rival nationalist groups. By early 1976 the Marxist-Leninist Popular Liberation Movement of Angola (MPLA), supported by the USSR and aided by Cuban troops, controlled the government and much of the

country, but the civil war with the then US-supported UNITA (see SAVIMBI, JONAS) continued. From 1979 to 1988 Angola was the object of military raids by South African troops in NAMIBIA, ostensibly striking at the bases of guerrillas seeking Namibian independence. In 1988 Cuba, South Africa, and Angola agreed to the removal of Cuban and South African troops from Angola. The South Africans left in 1988, and the Cuban withdrawal was completed in 1991. The government and UNITA signed a cease-fire agreement in 1991 that called for unified armed forces, a market economy, and free elections in 1992. When Pres. José Eduardo dos Santos and the MPLA defeated (1992) Savimbi and UNITA in an election regarded as generally fair, UNITA denounced the results as rigged. UNITA resumed fighting and won control of two thirds of Angola before a stalemate ensued.



Ångström, Anders Jöns, 1814–74, Swedish physicist. Noted for his study of light, especially SPECTRUM analysis, he mapped the sun's spectrum, discovered hydrogen in the solar atmosphere, and was the first to examine the spectrum of the AURORA borealis. The length unit angstrom is named for him.

Anguilla, island and British crown colony (1992 est. pop. 7,000), 35 sq mi (91 sq km), West Indies, one of the Leeward Islands. Fishing, stock-raising, salt production, and tourism are the economic mainstays. Formerly part of the associated state of St. Kitts-Nevis-Anguilla, the island seceded in 1967 and returned to British colonial rule in 1971. A new constitution (1982) made the island largely internally self-governing.

animal, any member of the animal kingdom (Animalia). Animals are multicellular and depend on organisms that can manufacture their own food, usually by PHOTOSYNTHESIS (e.g., plants and algae). Their cells do not have cell walls. MAMMALS and other vertebrates represent only a small percentage of the animal kingdom; 95% consists of INVERTEBRATES such as sponges, INSECTS, ARACHNIDS, and worms. Most animals have nervous systems, sense organs, and specialized modes of locomotion, and are adapted for securing, ingesting, and digesting food. Although traditionally contrasted with plants, animals are now usually considered to be one of at least five kingdoms of living things (see CLASSIFICATION). The scientific study of animals is called ZOOLOGY.

animal rights movement, individuals and groups concerned with protecting animals from abuse or misuse. Its supporters have protested the use of animals for medical and cosmetics testing, the killing of animals for fur, sport hunting, and the raising of livestock in inhumane quarters. Historically rooted in the 19th-cent. anti-VIVISECTION movement, the animal rights movement is closely tied to such environmental issues as the slaughter of fur seals and commercial whaling.

animism, belief that a spirit or force residing in every animate and inanimate object, every dream and idea, gives individuality to each. The related Polynesian concept of *mana* holds that the spirit in all things is responsible for the good and evil in the universe. See FETISH; SHAMAN; TOTEM.

anion: see ION.

anise, annual plant (*Pimpinella anisum*) of the CARROT family, native to the Mediterranean but widely cultivated for its aromatic and medicinal qualities. The seedlike fruits (aniseed) are used as flavoring and provide anise oil, which is used in medicinals, perfumes, beverages, and dentifrices. Biblical anise is DILL.

Anjou [äNzhōō'], region and former province, W France. Angers, the historic capital, and Saumur are the chief towns in his fertile lowland traversed by several rivers. Its vineyards produce renowned wines. Occupied by the Andecavi, a Gallic people, Anjou was conquered by the Romans and later (5th cent.) by the FRANKS. By the 10th cent. it was held by the counts of the first Angevin dynasty; it came under English rule when its ruler became (1154) king of England as HENRY II. PHILIP II of France seized (1204) Anjou from the English, and in 1246 LOUIS IX of France gave it to his brother, later CHARLES I of Naples. In 1360 Anjou became a duchy and in 1487 it was definitively annexed to France.

Ankara, city (1990 pop. 2,533,209), capital of Turkey, W central Turkey. The second largest city in Turkey, it is an administrative, commercial, and cultural center. Manufactures include processed food, farm equipment, iron and steel, textiles, and cement. Tourism and service industries are increasingly important. A Hittite trade center (18th cent. B.C.), it became (1st cent. A.D.) the capital of a Roman province; in the ruins of a temple in Ankara have been found tablets valuable as a record of AUGUSTUS's reign. The city fell to the Ottoman Turks in the 14th cent. It declined in the 19th and 20th cent., until Kemal ATATÜRK made it the capital of Turkey in 1923. Atatürk's massive limestone tomb can be seen from most of the city.

Anna, 1693–1740, czarina of Russia (1730–40); daughter of Ivan V and niece of PETER I. She succeeded her cousin Peter II. Allied with Holy Roman Emperor CHARLES VI, she intervened in the War of the POLISH SUCCESSION (1733–35) and attacked Turkey (1736). Her grandnephew, Ivan VI, succeeded her.

Annam, historic region (c.58,000 sq mi/150,200 sq km) and former state, central Vietnam. The region extended nearly 800 mi (1,290 km) along the South China Sea between Tonkin (N) and Cochin China (S). The capital was HUE. After more than 2,000 years of contact with the Chinese the peoples of the Red R. valley came under Chinese rule in 111 B.C. The Annamese drove out the Chinese in A.D. 939 and maintained their independence until the French conquest in the 19th cent. Conflict between ruling dynasties dominated this long period, ending with the establishment (1802) of the empire of VIETNAM by Nguyen-Anh, who had procured French military aid by ceding the port of DA NANG and the Con Son islands. His authority as emperor was recognized by the Chinese in 1803. Mistreatment of French nationals and Vietnamese Christians by his successor provided an excuse for French military operations, which began in 1858 and resulted in the establishment of the French colony of COCHIN CHINA and the protectorates of TONKIN and Annam. The three territories were occupied by the Japanese during WORLD WAR II. After an independence struggle against the French, most of Annam became part of South Vietnam in 1954; the rest went to North Vietnam. Annam was incorporated into united Vietnam after the VIETNAM WAR.

Annapolis, city (1990 pop. 33,187), state capital and seat of Anne Arundel co., central Md., on the Severn R. It is a port of entry and a farm-produce shipping center with seafood, boat-building, and plastics industries. Settled in 1649, it has a rich history, including a period (1783–84) as the capital of the U.S.; it has been Maryland's capital since 1694. The city has many 18th-cent. buildings and is the site of the U.S. Naval Academy and St. John's College.

Annapolis Convention, 1786, interstate convention to discuss U.S. commerce, held at Annapolis, Md. Its call for a meeting to discuss

The key to pronunciation appears on page xiii.

changes in the Articles of CONFEDERATION brought about the FEDERAL CONSTITUTIONAL CONVENTION.

Annapolis Royal, town (1991 pop. 633), W Nova Scotia, E Canada, on the Annapolis R. One of Canada's oldest settlements, it was founded as Port Royal by the French in 1605, destroyed (1613) by the British, and rebuilt to become the chief town of French ACADIA. Often fought over in the 1600s by the English and the French, it was finally taken (1710) by colonists from New England and renamed in honor of Queen Anne. The ruins of its fort are in Fort Anne Historic National Park.

Ann Arbor, city (1990 pop. 109,592), seat of Washtenaw co., S Mich., on the Huron R.; settled 1824, inc. 1851. It is a research and educational center, with government and industrial research firms and the huge Univ. of Michigan. Products include lasers, computers, medical and scientific equipment, and precision machinery.

Anne, 1665–1714, queen of England, Scotland, and Ireland (1702–7), later queen of Great Britain and Ireland (1707–14); daughter of JAMES II; successor to WILLIAM III. The last STUART ruler and a devout Protestant, in 1683 she married Prince George of Denmark. Her reign was one of transition to parliamentary government, but intrigue and the queen's favor could still make and unmake cabinets. The dominant event was the War of the SPANISH SUCCESSION (1702–13). Despite victories won by the duke of MARLBOROUGH (whose wife was long a favorite of the queen), the war's high cost caused political friction. None of Anne's children survived her, and by the Act of SETTLEMENT (1701) GEORGE I succeeded her. Despite her personal mediocrity, Anne's reign was marked by intellectual awakening, the popularization of Palladian architecture, and the growth of parliamentary government.

Anne, 1950–, British princess; daughter of ELIZABETH II. In 1973 she married a British army officer, Mark Phillips, and they had two children. Anne and Mark Phillips were divorced in 1992, and she married Timothy Laurence.

annealing, process in which glass, metals, and other materials are treated to render them less brittle and more workable. The material is heated and then cooled very slowly and uniformly, with the time and temperature set according to the properties desired. Annealing increases ductility and relieves internal strains that lead to failures in service.

Anne Boleyn: see BOLEYN, ANNE.

annelid worm, member of the phylum Annelida, which includes the EARTHWORMS, LEECHES, and marine worms. Also called segmented worms; they are soft-bodied, bilaterally symmetrical, and segmented. Distributed worldwide, they live in protected habitats, often in tubes manufactured with their own secretions. Reproduction is sexual or asexual; some species are HERMAPHRODITES. They range from 1/32 in. (0.5 mm) to 10 ft (3 m) in length.

Anne of Austria, 1601–66, queen consort of France. The daughter of PHILIP III of Spain, she married (1615) the French king LOUIS XIII and gained the enmity of Cardinal RICHELIEU, Louis's chief minister. As regent (1643–51) for her son LOUIS XIV, she entrusted the government to Cardinal MAZARIN.

Anne of Brittany, 1477–1514, queen of France, consort of CHARLES VIII (1491–98) and LOUIS XII (1499–1514). As duchess of Brittany from 1488, she tried to preserve independence from France by marrying by proxy (1490) Maximilian of Austria (later Holy Roman Emperor MAXIMILIAN I). Besieged (1491) by the French, she was forced to annul her marriage and to wed Charles VIII. Widowed in 1498, she then married Louis XII, and Brittany was eventually incorporated (1532) by France.

Anne of Cleves, 1515–57, fourth queen consort of HENRY VIII of England. She was the daughter of a powerful German Protestant prince, and Henry married her in 1540 for political reasons. Finding her dull and unattractive, he divorced her that same year.

Anne of Denmark, 1574–1619, queen consort of JAMES I of England.

annual rings, growth layers of WOOD produced yearly in the stems and roots of trees and shrubs. When well-marked alteration of seasons occurs (e.g., either cold and warm or wet and dry), a sharp contrast exists between the early- and late-season growth—the wood cells are larger earlier when growing conditions are better. In uniform climates, there is little visible difference between annual rings. The number of annual rings reflects the age of a tree; the thickness of each ring reflects environmental and climatic conditions.

Annunzio, Gabriele D': see D'ANNUNZIO, GABRIELE.

anode: see ELECTRODE.

anointing of the sick, SACRAMENT of the ORTHODOX EASTERN CHURCH and the ROMAN CATHOLIC CHURCH; formerly known as **extreme unction.** In it a person who is in danger of death is anointed on the eyes, ears, nostrils, lips, hands, and feet by a priest while he recites absolutions for sins. In the Eastern churches it is normally given by three priests and may be administered to the healthy to prevent sickness.

anomie, a social condition characterized by instability, the breakdown of social norms, institutional disorganization, and a divorce between socially valid goals and available means for achieving them. Introduced into sociology by Emile DURKHEIM in his study *Suicide* (1897), anomie also refers to the psychological condition—of rootlessness, futility, anxiety, and amorality—afflicting individuals who live under such conditions. The importance of anomie as a cause of deviant behavior received further elaboration by Robert K. MERTON.

anorexia nervosa: see EATING DISORDERS.

Anouilh, Jean [änwē'yə], 1910–87, French dramatist. His works contrast romantic dreams with harsh reality. Among his dramas are *Antigone* (1944), *The Waltz of the Toreadors* (1952), and *Becket* (1959).

Anselm, Saint, 1033?–1109, Italian prelate, archbishop of Canterbury, Doctor of the Church. He succeeded (1093) his friend LANFRANC as archbishop of Canterbury. In England, he quarreled with WILLIAM II and HENRY I over lay INVESTITURE and was exiled twice. An influential theologian, he was a founder of SCHOLASTICISM. His famous ontological proof deduces God's existence from man's notion of a perfect being in whom nothing is lacking. Feast: Apr. 21.

Anshan, city (1991 est. pop. 1,390,000) central Liaoning prov., NE China, on the South Manchurian RR. Its huge integrated iron and steel complex is one of the largest in China. Other manufactures include chemicals, tractors, machinery, and cement.

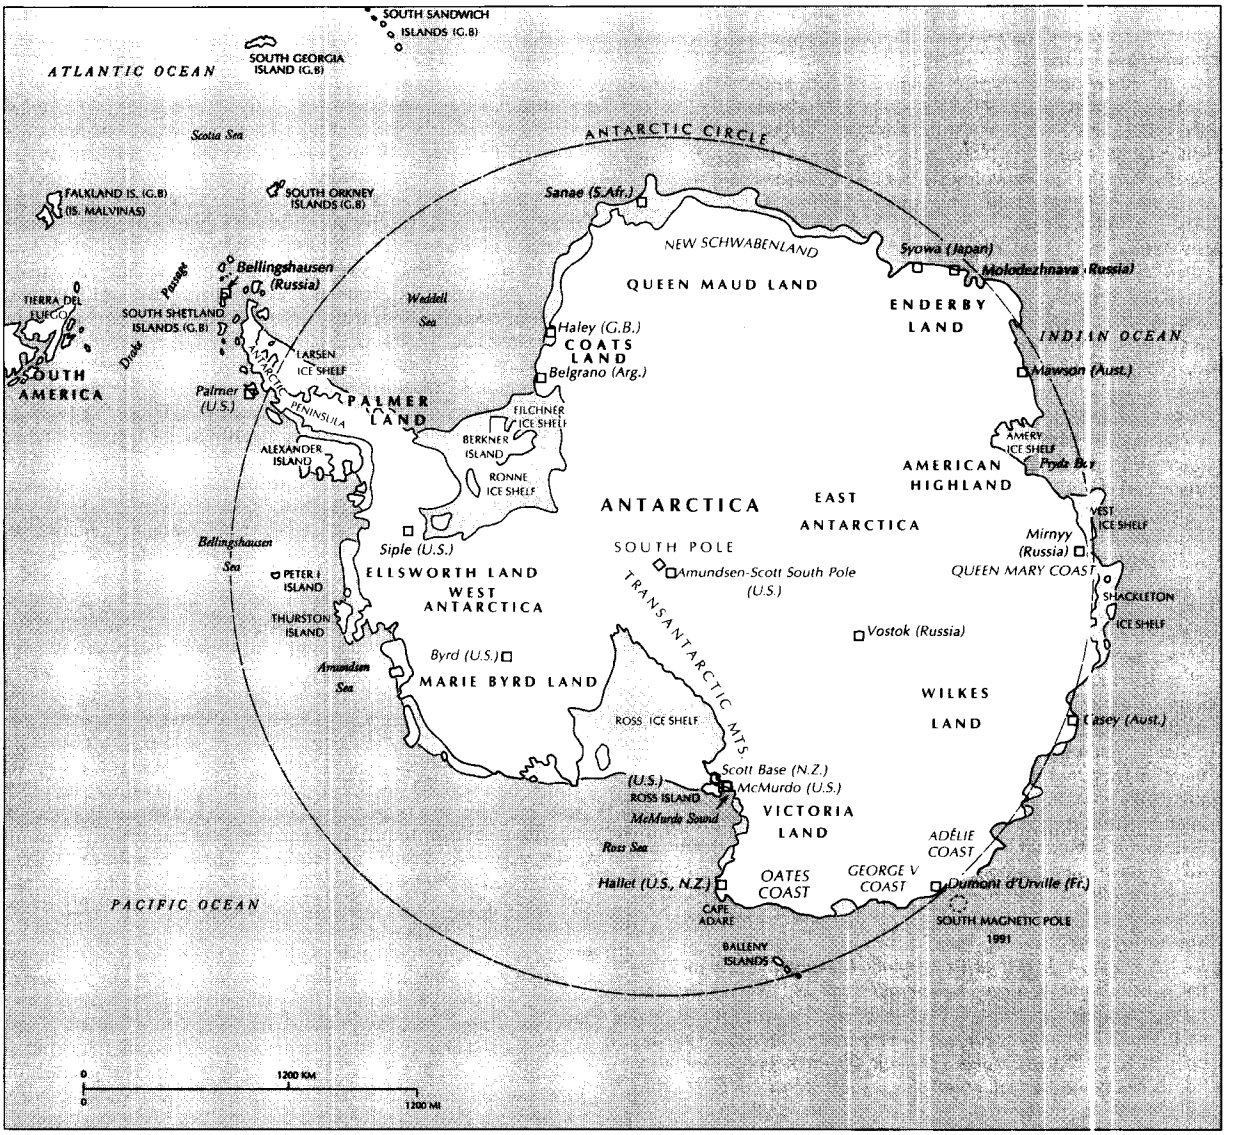
Ansky, Shloime, pseud. of **Solomon Seinwil Rapoport,** 1863–1920, Russian Yiddish author. He incorporated folk elements into his stories of peasants and HASIDIM, e.g., *The Dybbuk* (1916), a tale of demonic possession.

ant, INSECT (family Formicidae) belonging to the same order as the BEE and WASP. Ants have a narrow stalk joining the abdomen and thorax, and biting mouthparts (sometimes used for defense). Some ants have stings, and some can spray poison from the end of the abdomen. All ants show some degree of social organization; many nest in a system of tunnels in the soil, in constructed mounds, or in wood. Ant colonies usually include three castes: winged, fertile females; wingless, infertile females, or workers; and winged males. In some species workers may become soldiers or other specialized types. Army ants travel in columns, overrunning and devouring any animals in their path; fire ants are stinging ants that are serious pests in parts of the S U.S.

Antakya: see ANTIOCH.

Antananarivo or **Tananarive,** city (1990 est. pop. 802,000), capital of Madagascar. The country's largest city and economic and communications center, it is in a productive agricultural region whose main crop is rice. A railroad connects the city with Toamasina, the chief port. Manufactures include food products and cigarettes. Founded c.1625, it became (1797) the residence of the Merina rulers. It was taken by the French in 1895. Today it is a modern city, built on a ridge; at its top stands the old royal residence.

Antarctica, fifth largest continent, c.5,500,000 sq mi (14,245,000 sq km), asymmetrically centered on the SOUTH POLE and located almost entirely S of the ANTARCTIC CIRCLE (66°30'S). It consists of two major regions: W Antarctica, including the mountainous Antarctic Peninsula, which is structurally related to the ANDES of South America and connected to them by way of the Scotia Arc (South Georgia, South Orkney, and South Sandwich islands); and E Antarctica, a continental shield area (see PLATE TECTONICS) with a rock surface near sea level. These two regions are joined into a single continental mass by an ice cap up to 13,000 ft (4,000 m) thick that covers more than 95% of Antarctica. Vinson Massif (16,066 ft/4,897 m) is the continent's highest peak. Great ice shelves up to 4,000 ft



(1,220 m) thick block the ROSS and WEDDELL seas, and a belt of nearly continuous pack ice surrounds the rest of the continent. Summer temperatures (Jan.) are unlikely to be warmer than 0°F (−18°C); winter mean temperatures are −70°F (−57°C). Roald AMUNDSEN was the first explorer to reach the South Pole on Dec. 14, 1911, followed by R.F. SCOTT on Jan. 18, 1912. The first to fly over the pole was Richard E. BYRD, on Nov. 29, 1929. The success of international scientific cooperation in Antarctica during the International Geophysical Year (IGY) of 1957–58 led to the signing (1959) of the Antarctic Treaty, which prohibits military operations, nuclear explosions, and the disposal of radioactive wastes south of latitude 60°S, exclusive of the high seas. In 1985, 32 nations signed an agreement limiting human access to research zones in Antarctica, and a 1991 protocol to the 1959 treaty bans exploration for minerals and oil for 50 years.

Antarctic Circle, imaginary circle on the earth's surface at 66°30′S lat., marking the southernmost point at which the sun can be seen at the summer SOLSTICE (about June 22) and the northernmost point of the southern polar regions at which the midnight sun is visible.

Antarctic peninsula, glaciated mountain region of W ANTARCTICA, extending c.1,200 mi (1,930 km) north toward South America. It was originally named Palmer Land for Nathaniel Palmer, a U.S. captain who explored the region in 1820. The British claimed the peninsula in 1832 and it was later claimed by Argentina (1940) and by Chile (1942). In 1964, by international agreemen it was named the Antarctic Peninsula.

anteater, toothless MAMMAL of three genera of the order Edentata found in tropical Central and South America. It feeds on ants, termites, and other insects. The great anteater, or ant bear (*Myrmecophaga*), has an elongated snout, a coarse-haired body about 4 ft (1.2 m) long, and a long, broad tail; the arboreal collared, or lesser, anteater (*Tamandua*) is less than half the size of the great anteater; and the arboreal two-toed anteater (*Cyclopes*) is about the size of a squirrel.

antelope, any of various hoofed ruminant MAMMALS of the CATTLE family. True antelopes are found only in Africa and Asia. Antelopes usually stand 3–4 ft (90–120 cm) at the shoulder, but range from the 12-in. (30-cm) pygmy antelope to the 6-ft (180-cm) giant eland. Antelope horns, unlike DEER horns, are unbranched and are not shed. Species of antelope include the bushbuck, with its spiral horns and oxlike body; the addax, a large desert antelope of N Africa; the horselike oryx, found in Africa and Arabia; the GNU and its close relative the hartebeest, a swift, horselike animal with U-shaped horns; and the GAZELLE.

antenna or **aerial,** system of wires or other conductors used to transmit or receive radio or other electromagnetic waves (see RADIO; TELEVISION). In a transmitting antenna, the signal from an ELEC-

The key to pronunciation appears on page xiii.

TRIC CIRCUIT causes electrons in the antenna to oscillate; these moving electric charges generate ELECTROMAGNETIC RADIATION, which is then transmitted through space. The distribution pattern of the transmitted wave depends on the design of the antenna; radio broadcast-station antennas are frequently designed to emit waves in all directions, whereas those used for RADAR and for certain communication systems focus the waves in a single direction. In a receiving antenna, electromagnetic waves cause the electrons in the antenna to oscillate, inducing a signal that can be detected by an electric circuit. In general, a longer antenna is used to transmit or receive signals of longer wavelengths. Theoretically, the same antenna can be used both for sending and for receiving signals, but in practice, transmitting antennas are constructed to handle higher power loads than receiving antennas. Phased array antennas, used for long-range radar and radio astronomy, are composed of large groupings of individual antennas that are aimed electronically by changing the relative phase of the signal at each antenna.

Antheil, George [ăn'tīl], 1900–1959, American composer; b. Trenton, N.J. His early work reveals the influence of JAZZ. In 1927 a performance of his *Ballet mécanique*, scored for player piano, car horns, airplane propellers, etc., caused a furor in New York City. Other works include the opera *Transatlantic* (1930), symphonies, and film scores.

Anthony, Saint, 251?–c.350, Egyptian hermit. Living in seclusion, he resisted the many temptations of the devil. A colony of hermits grew up about him, and he ruled them as a community before going away to the desert. He was the father of Christian MONASTICISM. Feast: Jan. 17.

Anthony, Marc: see ANTONY.

Anthony, Susan B(rownell), 1820–1906, American leader of the WOMAN SUFFRAGE movement; b. Adams, Mass. She organized the first women's temperance association, the Daughters of Temperance, and with Elizabeth Cady STANTON secured the first laws in New York guaranteeing women rights over their children and control of property and wages. In 1863 she was coorganizer of the Women's Loyal League to support Lincoln's government, but after the Civil War she opposed granting suffrage to freedmen without also giving it to women. She was president (1892–1900) of the National American Woman Suffrage Association and helped compile vol. 1–3 of *The History of Woman Suffrage* (1881–86).

anthrax, infectious disease of animals that can be transmitted from animals to humans through contact or the inhalation of spores. Primarily affecting sheep, horses, hogs, cattle, and goats, anthrax is usually restricted to people who handle hides of animals (e.g., farmers, butchers, and veterinarians) or sort wool. The disease, usually fatal to animals but not humans, is caused by *Bacillus anthracis*, discovered by Robert KOCH in 1876. Louis PASTEUR developed a method of vaccinating sheep and cattle against anthrax, and the disease is now relatively rare in the U.S.

anthropological linguistics, study of the relationship between language and culture, often focusing on cultures with no written language, e.g., Native Americans. The precise relationship of language to culture is, however, a subject of controversy. See also ANTHROPOLOGY; LINGUISTICS.

anthropology, study of the origin, development, and varieties of human beings and their societies. Emerging as an independent science in the late 18th cent., it developed two divisions: physical anthropology, which focuses on human EVOLUTION and variation (see RACE), using methods of PHYSIOLOGY, anthropometry, GENETICS, and ECOLOGY; and cultural anthropology, which includes ARCHAEOLOGY, ethnology, social anthropology, and LINGUISTICS.

antianxiety drug, drug administered for the relief of ANXIETY; in larger doses, antianxiety drugs produce sleep, sedation, and anesthesia. Those frequently prescribed in the U.S. include the BENZODIAZEPINES alprazolam (Xanax) and clonazepam (Clonopin). Side effects include drowsiness and, with prolonged use, addiction.

antibiotic, any of a variety of substances, usually obtained from microorganisms, that inhibit the growth of or destroy certain other microorganisms. The foundation for the development and understanding of antibiotics was laid during the 19th cent. when Louis PASTEUR proved that one species of microorganism can kill another and Paul EHRLICH developed the idea of selective toxicity: that a specific substance can be toxic to some organisms, e.g., infectious bacteria, but harmless to others, e.g., human hosts. Further pioneering work in the 20th cent. by Alexander FLEMING, René DUBOS, and Selman WAKSMAN led to the discovery of PENICILLIN (1939) and streptomycin (1944). Mass production of antibiotic drugs began during World War II with streptomycin and penicillin. Today antibiotics are produced by various methods, including staged fermentation in huge tanks of nutrient media, synthesis in the laboratory, and chemical modification of natural substances. Antibiotics can be classified according to chemical structure, microbial origin, mode of action, or effective range. The tetracyclines are broad-spectrum drugs, effective against a wide range of bacteria (both gram-positive and gram-negative; see GRAM'S STAIN), rickettsias, and psittacosis-causing organisms. Bacitracin, penicillin, the erythromycins, and the cephalosporins work primarily against gram-positive organisms. Polymyxins and other narrow-range antibiotics are effective against only a few species. Antibiotic drugs may be injected, given orally, or applied to the skin. Some, like penicillin, are allergenic and can cause rashes or shock. Others, like the tetracylines, can alter the intestinal environment, encouraging superinfection by fungi or other microorganisms. Many antibiotics are less effective than formerly because resistant strains of microorganisms have evolved. Antibiotics have been used to enhance the growth of animals used as food, but some authorities question the practice because it encourages the development of resistant strains of bacteria infecting animals, and because continuous low exposure to antibiotics can sensitize human beings, making them unable to take such drugs later to treat infection.

antibody: see IMMUNITY; MONOCLONAL ANTIBODY.

Antichrist, in Christian belief, a person who will lead the forces of evil on earth against the forces of Jesus Christ. He will be destroyed by Jesus at the Second Coming (1 John 2.18–22; 4.3; 2 John 7; and Rev. 13).

anticline: see FOLD.

anticoagulant, substance, such as heparin or derivatives of coumarin, that inhibits blood clotting. Anticoagulants are used to treat blood clots in leg and pelvic veins, in order to reduce the risk of the clots traveling and obstructing blood flow to vital organs (e.g., the heart and lungs) and causing THROMBOSIS or STROKE.

Anti-Corn-Law League, organization formed in 1839 to work for repeal of the English CORN LAWS. Its leading figures were Richard COBDEN and John BRIGHT. The laws were repealed in 1846.

antidepressant, drug used to treat psychic depression. Antidepressants, such as fluoxetine (Prozac) and paroxetine (Paxil), act by allowing certain neurotransmitters to accumulate in the central nervous system. They are given to elevate mood, counter suicidal thoughts, and increase the effectiveness of psychotherapy. Side effects include headache, nervousness, and dry mouth.

Antietam campaign, Sept. 1862, in the U.S. CIVIL WAR. Attempting to invade Maryland and Pennsylvania, R.E. LEE sent Stonewall JACKSON to capture Harpers Ferry, which fell on Sept. 15. Lee's own advance was halted by MCCLELLAN, who attacked him at Antietam Creek, Md., on Sept. 17, the bloodiest day of the war. It was a Union victory only in that Lee's advance was stopped.

Anti-Federalists, in U.S. history, the opponents to the adoption of the Federal CONSTITUTION. Leading Anti-Federalists included George Mason, Elbridge Gerry, Patrick Henry, and George Clinton, and later, supporters of states' rights. Under Pres. Washington, many opposed the policies of the FEDERALIST PARTY and Alexander Hamilton. Under Thomas Jefferson's leadership, they formed the core of the opposition party, known as the Democratic-Republican party, subsequently the DEMOCRATIC PARTY.

antifreeze, substance added to a solvent to lower its freezing point. Antifreeze is typically added to water in the cooling system of internal combustion engines so that it may be cooled below the freezing point of pure water (32°F or 0°C) without freezing. Automotive antifreezes include ethylene glycol (the most widely used), methanol, ethanol, isopropyl alcohol, and propylene glycol.

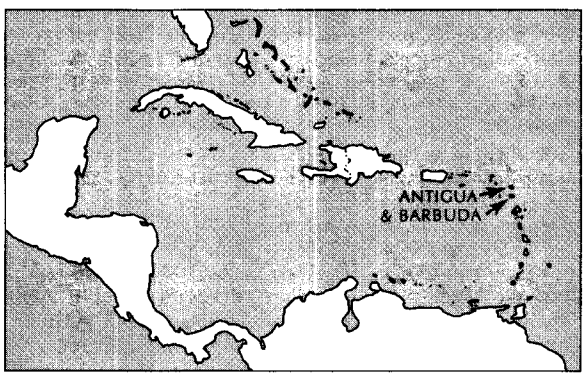
antigen: see IMMUNITY.

Antigone [ăntĭg'ənē], in Greek legend, daughter of OEDIPUS. When her brothers Eteocles and Polynices killed each other, Creon, king of THEBES, forbade the rebel Polynices' burial. Antigone disobeyed

him, performed the rites, and was condemned to death. SOPHOCLES tells her story in *Antigone*.

Antigua or **Antigua Guatemala,** town (1990 est. pop. 27,800), S central Guatemala. Now a trading center in a coffee-growing area, it was once the capital of Spanish Guatemala and, in the 16th cent., one of the richest cities in the New World. Antigua was founded in 1542, after a flood and earthquake destroyed the earlier capital, Ciudad Vieja, but was itself leveled by earthquakes in 1773. The capital was then moved to GUATEMALA City. Today Antigua is a major tourist center with fine Spanish buildings.

Antigua and Barbuda, island nation (1992 est. pop. 64,000), 171 sq mi (442 sq km), West Indies, in the Leeward Islands. It consists of Antigua (108 sq mi/280 sq km) and two smaller islands, sparsely populated Barbuda and uninhabited Redonda. The capital is St. John's. Antigua is a hilly island with farms that grow mainly sugarcane and cotton; Barbuda is a flat coral island. Tourism is the economic mainstay. The country's population is predominantly of African origin. The U.S. maintains two military bases there. Antigua was discovered by Christopher COLUMBUS in 1493. Following brief periods under the Spanish and French, it was successfully settled in 1632 by the British, who introduced sugar planting; the industry declined with the abolition of slavery in 1834. The island, with Barbuda and Redonda as dependencies, became an associated state of the Commonwealth in 1967 and achieved full independence in 1981, despite Barbudan opposition. Barbudan resentment of Antiguan dominance has resulted in unsuccessful demands for autonomy for Barbuda.



antihistamine: see ALLERGY; HISTAMINE.

Antilles: see WEST INDIES.

Anti-Masonic party, American political party founded to counter the supposed political influence of FREEMASONRY. It arose in W New York state after the disappearance (1826) of William Morgan, a former Mason who had written a book purporting to reveal Masonic secrets. Freemasons were said, without proof, to have murdered him. At Baltimore, in 1831, Anti-Masons held the first national nominating convention of any party, and issued the first written party platform. In 1834 they helped form the WHIG PARTY.

antimatter, material composed of antiparticles, which correspond to ordinary protons, electrons, and neutrons but are their "charge conjugates," i.e., they have the opposite electrical charge and magnetic moment. When matter and antimatter collide, both may be annihilated, and other ELEMENTARY PARTICLES, such as photons and pions, are produced. In 1932 Carl D. ANDERSON, while studying cosmic rays, discovered the positron, or antielectron, the first known antiparticle. Any antimatter in our part of the universe is necessarily very short-lived because of the overwhelming preponderance of ordinary matter, by which the antimatter is quickly annihilated.

antimony (Sb), semimetallic element, first described by Nicolas Lemery in 1707. Silvery blue-white, brittle, and easily powdered, it conducts heat and electricity poorly. Chief uses are as alloys and compounds in storage batteries, cable sheathing, and paint pigments. See ELEMENT (table); PERIODIC TABLE.

Antioch or **Antakya,** city (1990 pop. 124,443), S Turkey, on the Orontes R., near the Mediterranean Sea. It is a trade and processing center for a farm area where grains, cotton, grapes, and vegetables are grown. Founded (c.300 B.C.) by SELEUCUS I, king of ancient Syria, it was a military, commercial, and cultural center under Rome and an early center of Christianity. It fell (A.D. 637) to the Arabs but was retaken (1098) by the Crusaders and became a powerful principality under BOHEMOND I. It later became (1516) part of the OTTOMAN EMPIRE, was incorporated into the French mandate of Syria after World War I, and was restored to Turkey in 1939. Many important archaeological finds have been made in or near the city.

Antiochus I, 324–261 B.C., Seleucid emperor. The son of ALEXANDER THE GREAT's general SELEUCUS, he acceded to the throne in 281. He made peace with Macedonia, but lost territories in Asia Minor to Egypt in wars (274–71; 263–61). He led (273) a successful campaign against Gallic invaders in Asia Minor.

Antiochus III, c.242–187 B.C., Seleucid emperor, known as Antiochus the Great. Succeeding (223) his father, Seleucus II, he conquered Parthia, Bactria, Syria, and Palestine, entered into an alliance with PHILIP V of Macedonia, and invaded Thrace. He also gave refuge to HANNIBAL and aroused the enmity of Rome, which checked his western expansion in battles at Thermopylae and Magnesia.

Antiochus IV, c.215–163 B.C., known as Antiochus Epiphanes. Son of Antiochus II, he became king in 175. He is remembered for his infamous attempt to impose Hellenic culture on Judea, which instigated the Maccabean (see MACCABEES) Revolt (167). His preemptive war against Ptolemaic Egypt in 169–68 was lost by the intervention of Rome.

antioxidant, substance that prevents or slows OXIDATION. Antioxidants are used as FOOD ADDITIVES to retard spoilage and color changes. Studies show that antioxidants in the body, such as vitamins E and C and beta-carotene (a vitamin A precursor), can prevent cell damage and other changes caused by oxidation. Antioxidants act by scavenging the oxygen free radicals (molecules with an unpaired electron, which rapidly reacts with other molecules) that cause oxidation.

antiparticle: see ANTIMATTER.

Antipas, in the Bible: see HEROD.

Antipater [ăntĭp'ətər], d. 319 B.C., Macedonian general under ALEXANDER THE GREAT; regent of MACEDON (334–323 B.C.). After Alexander's death he defeated Perdiccas in a struggle for the regency (321). He held the kingdom together; his death was followed by the wars of the DIADOCHI.

Antipater, in the Bible: see HEROD.

antipope, person elected pope whose election was later declared uncanonical and in opposition to a canonically chosen legitimate pontiff (see PAPACY).

Anti-Saloon League, U.S. organization working for the prohibition of the sale of alcoholic beverages. Founded in 1893, it helped to secure the 18th amendment to the CONSTITUTION, establishing PROHIBITION (1919–33). In 1950 it merged with the National Temperance League.

anti-Semitism, prejudice against JEWS. Before the 19th cent. anti-Semitism was largely religious, based on the belief that Jews were responsible for Jesus' crucifixion. It was expressed in the later Middle Ages by sporadic persecutions and expulsions (e.g., the expulsion of Jews from Spain in 1492), economic restrictions (e.g., the restriction of Jews to unpopular or taboo occupations), and personal restrictions. After the Jews' emancipation during the ENLIGHTENMENT, religious and economic anti-Semitism was slowly replaced in the 19th cent. by racial prejudice, stemming from the idea of Jews as a distinct race. The cultural isolation of Orthodox Jews, rising NATIONALISM, pseudoscientific theories of Aryan racial superiority, and spurious charges of Jewish domination encouraged anti-Semitism (see POGROM). These beliefs, incorporated into Adolf Hitler's NATIONAL SOCIALISM, contributed to the extermination of 6 million Jews in the HOLOCAUST of World War II. Since the 1980s anti-Semitic nationalists have become more influential in Russia, Germany, and other European countries. In the U.S. anti-Semitism persists among some extreme right-wing groups and in the practice of excluding Jews from certain clubs, schools, and housing.

antisense, DNA or RNA manipulated in a laboratory so that its components (nucleotides) form a complementary copy (see NUCLEIC

ACID) of normal, or "sense," messenger RNA (mRNA). Antisense techniques are used to deactivate disease-causing or undesirable genes so that they cannot produce harmful or unwanted proteins. In some applications of this technique, the antisense nucleic acid segment is inserted into an inactivated or nonvirulent virus, then introduced into the cell. The antisense segment pairs with the mRNA, preventing the synthesis of protein from the mRNA. Antisense has applications in agriculture and medicine, especially in cancer and antiviral therapy.

antislavery movement: see ABOLITIONISTS; SLAVERY.

antitoxin: see TOXIN.

antitrust laws, legislation under which the U.S. government has acted to break up any large business combination alleged to be acting monopolistically to suppress competition (see TRUST, CORPORATE). The first of these laws, which were based on the constitutional power of Congress to regulate interstate commerce, was the **Sherman Antitrust Act** (1890). It declared illegal every contract, combination, or conspiracy in restraint of interstate and foreign trade. It was supplemented (1914) by the **Clayton Antitrust Act,** which prohibited exclusive sales contracts, intercorporate stock holdings, and unfair price cutting to freeze out competitors. The last provision was strengthened under the terms of the **Robinson-Patman Act** of 1936, and there have been many amendments to these laws over the years. Corporate trusts grew rapidly in the U.S. from 1880 to 1905, by which time Pres. Theodore ROOSEVELT had launched his famous "trust-busting" campaigns. An early federal success came with the Supreme Court decision of 1911 that forced the giant Standard Oil Co. to split up into independent entities. Antitrust action declined in the 1920s, but was vigorously resumed in the 1930s under Pres. F.D. ROOSEVELT. Antitrust enforcement was again deemphasized in the 1980s under presidents REAGAN and BUSH. The growth of huge CONGLOMERATES that control many companies in various, sometimes interrelated, industries has complicated enforcement of antitrust legislation. Antitrust laws have been criticized for hindering the ability of U.S. corporations to compete internationally.

antiviral drug, drug used to treat such viral infections as herpes simplex and herpes zoster, cytomegalovirus, influenza, and certain AIDS-related infections. Antiviral drugs, such as AZT and acyclovir, affect the genetic material of the virus and inhibit the ability of the virus to reproduce.

Antoine, André, 1858–1943, French theater director, manager, and critic. In 1887 he founded the Théâtre Libre to present works of NATURALISM. His work became a model for experimental theaters.

Antonello da Messina [äntōnĕl'lō dä mäs-sē'nä], c.1430–1479, Italian painter. His handling of oils shows strong Flemish influence. Messina's works include *Ecce Homo* (Metropolitan Mus.) and *Pietà* (Venice). He was also an excellent portraitist.

Antonescu, Ion, 1882–1946, Romanian marshal and dictator. King CAROL II named him premier in 1940, and he promptly forced the king's abdication in favor of Carol's son, MICHAEL. In WORLD WAR II Antonescu led the nation into the AXIS camp and gave HITLER virtual control of the country. He was executed at the end of the war.

Antonioni, Michelangelo, 1912–, Italian film director. In such films as *L'Avventura* (1959), *Red Desert* (1964), *Blow-Up* (1966), and *The Passenger* (1975) he depicted modern alienation, subordinating dialogue to visual images.

Antony or **Marc Antony,** Lat. *Marcus Antonius*, c.83 B.C.–30 B.C., Roman politician and soldier. He was of a distinguished family related to Julius CAESAR, who made him a protégé. In 49 B.C. Antony became tribune. He and Quintus Cassius Longinus (see CASSIUS, family), another tribune, vetoed the bill to deprive Caesar of his army. Caesar then crossed the Rubicon, and the civil war began. After Caesar's assassination (44 B.C.), Antony, then consul, aroused the mob against the conspirators. Octavian (later AUGUSTUS) joined forces with him, but they soon fell out. However, Octavian arranged the Second Triumvirate with Antony and Marcus Aemilius Lepidus (see LEPIDUS, family). At Philippi, in 42 B.C., Antony and Octavian crushed the republicans, and the triumvirate ruled the empire for five years. Antony met CLEOPATRA in 42 B.C., and their love affair began. When Antony's wife, Fulvia, died (40 B.C.), he married Octavian's sister, OCTAVIA. In 37 B.C., Antony settled in Alexandria as the acknowledged lover of Cleopatra. In 32 B.C. the senate deprived Antony of his powers, thus making civil war inevitable. In the following year Octavian's forces defeated Antony and Cleopatra in the naval battle at Actium, and Antony returned to Egypt. When Octavian came there (30 B.C.), Antony committed suicide, and Cleopatra killed herself soon afterward. Of the many dramas on the tragedy, the best known by far is SHAKESPEARE'S *Antony and Cleopatra*.

Antwerp, city (1991 est. pop. 470,050, including Berchem, Borgerhout, Deurne, Hoboken, Merksem, and Wilrijk), Flemish N Belgium, on the Scheldt R. It is one of the busiest European ports and a major center of finance, industry, and the diamond trade. Europe's chief commercial city by the mid-16th cent., it declined after its sacking (1576) by the Spanish and the closing (1648) of the Scheldt to navigation. Its modern expansion dates from 1863. In the 20th cent. it was twice occupied and heavily damaged by the Germans. Antwerp has many notable buildings, e.g., its Gothic cathedral (14th–16th cent.), and houses many important paintings, e.g., by RUBENS, MASSYS, VAN DYKE.

anxiety, anticipatory tension or vague dread persisting in the absence of a specific threat. It is characterized by increased pulse rate and blood pressure, quickened breathing, perspiration, and dryness of the mouth. Anxiety is an element of many psychic disorders including phobias, panic attacks, obsessive-compulsive disorders, and post- traumatic stress disorder. ANTIANXIETY DRUGS can effectively alleviate symptoms for many whose anxiety interferes with normal living.

Anza, Juan Bautista de [än'sä], 1735–88, Spanish explorer; b. Mexico. Accompanied by a small expedition, he blazed (1774) a route from Sonora to California. In 1776 he founded SAN FRANCISCO. He later served (1777–88) as governor of New Mexico.

Apache, indigenous people of the Southwest (see NORTH AMERICA, INDIGENOUS PEOPLES OF), six culturally related groups; most spoke dialects of the ATHABASCAN branch of the Nadene linguistic stock (see NATIVE AMERICAN LANGUAGES). Their ancestors entered the area c.1100. The NAVAHO were once joined to the Apaches. Historically the Apaches subsisted on wild game, seed and fruit gathering, livestock, and some horticulture. Men lived with and worked for their wives' families. The Apaches, known as fierce fighters, resisted the Spanish advance but increasingly fought the COMANCHES and other tribes with captured Spanish horses and arms. After the mid-19th cent. COCHISE, GERONIMO, MANGAS COLORADAS, and others led them in strong but futile efforts to stop white expansion westward. Today they live on reservations totaling over 3 million acres in Arizona and New Mexico and retain many tribal customs. Cattle, timber, tourism, and the development of mineral resources provide income. In 1982 the Apaches won a major Supreme Court test of their right to tax resources extracted from their lands. In 1990 there were 50,051 Apaches in the U.S.

apartheid [Afrik., = apartness], former system of racial segregation and white supremacy established in SOUTH AFRICA. First formalized in the 1948 Afrikaner Nationalist party platform, apartheid separated whites from nonwhites, nonwhites—"Coloureds" (persons of mixed race), "Asians" (mainly of Indian ancestry), and "Bantus" (persons of African ancestry)—from each other, and one indigenous African group from another. Under Prime Min. Hendrik VERWOERD a policy of "separate development" established nine BANTUSTANS (homelands) totaling about 14% of the country's land, most of it too poor in quality to support the designated population (roughly 75% of all South Africans). In the homelands Africans could exercise certain rights; elsewhere their activities were strictly curtailed. The policy led to international and domestic protest. In 1961 South Africa withdrew from the Commonwealth in dispute over apartheid. As a result of international economic sanctions and domestic social evolution, many lesser apartheid laws—such as those banning interracial marriage and segregating facilities—were repealed or fell into disuse by 1990. In 1991 Pres. DE KLERK obtained the repeal of the remaining laws and called for the drafting of a new constitution. In 1993 a multiracial, multiparty transitional government was approved, and fully free elections were held in 1994.

apatite, phosphate mineral $(Ca,Pb)_5(PO_4)_3(F,Cl,OH)$, transparent to opaque in shades of green, brown, yellow, white, red, and purple. Apatite, a minor constituent of many types of rock, is mined in

Florida, Tennessee, Montana, N Africa, Europe, and Russia. Large deposits are mined for use in making phosphatic fertilizers, and two varieties are used to a limited extent in jewelry.

ape, PRIMATE of the family Pongidae, or Simiidae, closely related to human beings. The small apes, the GIBBON and siamang, and the smallest of the great apes, the ORANGUTAN, are found in SE Asia; the other great apes, the GORILLA and the CHIMPANZEE, are found in Africa. They vary in size from the 3-ft (1.8-m), 15-lb (6.8-kg) gibbon to the 6-ft (1.8-m), 500-lb (227-kg) gorilla. All are forest dwellers and spend at least some time in trees; unlike MONKEYS, they can swing hand-over-hand. Their brains, similar in structure to the human brain, are capable of fairly advanced reasoning.

Apelles, fl. 330 B.C., Greek painter, the most famous in antiquity, now known only through descriptions. Perhaps his most famous work was a painting of Aphrodite rising from the sea. BOTTICELLI painted Apelles' *Calumny* (Uffizi) from ALBERTI's description.

Apennines, mountain system c.840 mi (1,350 km) long and up to c.80 mi (130 km) wide, extending the entire length of the Italian Peninsula and continuing into Sicily. The earthquake-prone mountains, long since denuded of their original forest cover, reach a high point of 9,560 ft (2,914 m) in Mt. Corno.

aphasia, language disturbance caused by a lesion of the brain, causing partial or total impairment in the individual's ability to speak, write, or comprehend the meaning of spoken or written words. Treatment consists of reeducation; the methods used include those employed in education of the deaf.

aphelion: see APSIS.

apheresis or **hemapheresis,** any procedure in which blood is drawn from a donor or patient and a component is separated out, the remaining blood components being returned to the body. See PLASMAPHERESIS.

aphid or **plant louse,** tiny, usually green, pear-shaped INSECT injurious to vegetation. Aphids feed by sucking plant juices through their beaks. Most species live in large colonies; some species live symbiotically with ants. Many inhabit swellings of plant tissues (galls) that they form with their secretions.

Aphrodite [ăfrədī'tē], in Greek mythology, goddess of love, beauty, and fertility. She was either the daughter of ZEUS and Dione, or she emerged from the sea foam. Married to HEPHAESTUS, she loved and had children by other gods and mortals, e.g., Harmonia was fathered by ARES, and AENEAS was the son of Anchises. Aphrodite was awarded the apple of discord by PARIS, leading to the TROJAN WAR. Probably of Eastern origin, she was similar in attributes to the goddesses ASTARTE and ISHTAR. The Romans identified her with VENUS.

Apia, city (1986 pop. 32,196), capital and chief port of WESTERN SAMOA.

Apicocomplexa, phylum of PROTOZOANS that are characterized by a unique body structure, the apical complex. The spore formers (class Sporozoa) are parasitic and are responsible for many human diseases. MALARIA is caused by the sporozoan *Plasmodium*. Sporozoans also infect domesticated and wild animals, as well as insects and other protozoans.

APL: see PROGRAMMING LANGUAGE.

Apocrypha, appendix to the Authorized (King James) Version of the Old Testament, containing the following books or parts of books: First and Second ESDRAS; TOBIT; JUDITH; ESTHER 10.4–16.24; WISDOM; ECCLESIASTICUS; BARUCH; DANIEL 3.24–90, 13, 14; Prayer of Manasses (see under MANASSEH); and First and Second MACCABEES. All except the Prayer of Manasses and First and Second Esdras are included in the Western canon. Protestants follow the Jewish tradition in treating these books as uncanonical. Jewish and Christian works resembling biblical books but not in the Western or Hebrew canon are called pseudepigrapha.

apogee: see APSIS.

Apollinaire, Guillaume [äpōlēnâr'], 1880–1918, French poet and critic; b. Wilhelm Apollinaris de Kostrowitzky. He was an influential innovator, whose lyric poems, e.g., *Alcools* (1913) and *Calligrammes* (1918), blend modern and traditional verse techniques. He is credited with introducing CUBISM to literature. *The Breasts of Tiresias* (1918), a play, is an early example of SURREALISM.

Apollo, in Greek mythology, one of the most important OLYMPIAN gods; son of ZEUS and Leto, twin brother of ARTEMIS. He was concerned with prophecy, medicine (he was the father of ASCLEPIUS), music and poetry (he was also the father of ORPHEUS and the patron of the MUSES), and the pastoral arts. A moral god of high civilization, he was associated with law, philosophy, and the arts. He was widely known as a god of light, Phoebus Apollo; after the 5th cent. B.C. he was often identified with the sun god HELIOS. Apollo's oracles had great authority; his chief shrine was at DELPHI, where he was primarily a god of purification. In art he was portrayed as the perfection of youth and beauty. The most celebrated statue of him is the **Apollo Belvedere**, a marble copy of the original Greek bronze, now in the Vatican in Rome.

Apollo, Project: see SPACE EXPLORATION (table).

Apollo asteroid: see ASTEROID.

Apollonius Rhodius, fl. 3d cent. B.C., epic poet of ALEXANDRIA and RHODES; librarian at Alexandria. His *Argonautica* is a four-book Homeric imitation on the Argonaut theme (see GOLDEN FLEECE; JASON).

Apollo-Soyuz Test Project: see SPACE EXPLORATION (table).

apostle [Gr., = envoy], one of the prime missionaries of Christianity. The disciples of JESUS who were chosen to be his Twelve Apostles were PETER, ANDREW, JAMES (the Greater), JOHN, THOMAS, JAMES (the Less), JUDE (or Thaddaeus), PHILIP, BARTHOLOMEW, MATTHEW, SIMON, and JUDAS ISCARIOT, who was later replaced by MATTHIAS. St. PAUL and sometimes a few others, e.g., St. BARNABAS, are also classed as apostles.

apothecaries' weight: see ENGLISH UNITS OF MEASUREMENT; WEIGHTS AND MEASURES (table).

Appalachian Mountains, major North American mountain system extending c.1,600 mi (2,570 km) SW from Canada's Quebec prov. to Alabama, with Mt. Mitchell (6,684 ft/2,037 m), in North Carolina, the highest point. Their rugged hills and valleys, the much-eroded remnants of a very old mountain mass, posed a major barrier to westward expansion in the early years of the U.S. Industries include coal mining (in the west) and tourism (see APPALACHIAN NATIONAL SCENIC TRAIL; BLUE RIDGE; Shenandoah and Great Smoky mountains under NATIONAL PARKS, table).

Appalachian National Scenic Trail, world's longest continuous hiking trail, in the Appalachian Mts., extending 2,050 mi (3,299 km) from Mt. Katahdin (Me.) to Springer Mt. (Ga.) and passing through 14 states. It was completed in 1937.

appendix, small, worm-shaped blind tube projecting from the large intestine into the lower right abdominal cavity. It has no function and is considered a remnant of a previous digestive organ. Appendicitis can occur if accumulated and hardened waste matter becomes infected; rupture of such an appendix can spread infection to the peritoneum (abdominal membrane), causing peritonitis.

Appia, Adolphe, 1862–1928, Swiss theorist of stage lighting and decor. His employment of light and shade when staging WAGNER's operas revolutionized modern scene design and stage lighting.

Appian Way, most famous of the Roman roads, built (312 B.C.) under Appius Claudius Caecus (see CLAUDIUS, Roman gens). It connected Rome with Capua and was later extended to Brundisium (Brindisi). It was the chief highway to Greece and the East.

Appius Claudius: see CLAUDIUS, Roman gens.

apple, any tree (and its fruit) of the genus *Malus* of the ROSE family. The common apple (*M. sylvestris*) is the best-known and commercially most important temperate fruit. It is native to W Asia, but has been widely cultivated from prehistoric times. Thousands of varieties exist, e.g., Golden Delicious, Winesap, Jonathan, and McIntosh. The fruit is consumed fresh or cooked, or is used for juice. Partial fermentation of apple juice (sweet cider) produces hard cider (from which applejack liquor is made); fully fermented juice yields vinegar. The hardwood is used in cabinetmaking and as fuel. The fruit of crab apple trees (which are cultivated as ornamentals) is used for preserves and jellies.

Appleseed, Johnny: see CHAPMAN, JOHN.

Appomattox, town (1990 pop. 1,707), seat of Appomattox co., central Va.; inc. 1925. Confederate Gen. Robert E. LEE surrendered to Union Gen. U.S. GRANT at nearby Appomattox Courthouse on April 9, 1865, virtually ending the CIVIL WAR. The surrender site has been made a national historical park.

apricot, tree (*Prunus armeniaca*) of the ROSE family and its fruit, native to Asia. In the U.S., it is cultivated chiefly in California. The

fruit is used raw, canned, preserved, and dried, and in making a cordial and a brandy.

April: see MONTH.

apse, the termination at the sanctuary end of a church, generally semicircular, sometimes square or polygonal. In Roman temples and BASILICAS, it was a recess holding the statue of the deity. Early Christian churches placed the altar in the apse, at the eastern end. Because of its function, the apse became the architectural climax of the interior, and was often highly decorated. Chapels sometimes radiated from it.

apsis, point in the ORBIT of a smaller body where it is at its greatest or least distance from a larger body to which it is attracted. In an elliptical orbit these points are called the apocenter and pericenter; corresponding terms for elliptical orbits around the sun, the earth, and a star are, respectively, aphelion and perihelion, apogee and perigee, and apastron and periastron. The line of apsides, an imaginary straight line connecting the two apsides of an elliptical orbit, may shift because of gravitational influences of other bodies or relativistic effects (see RELATIVITY).

Apuleius, Lucius, fl. 2d cent., Latin writer. His romance *The Golden Ass* or *Metamorphoses* is the only entire Latin novel surviving. The story of a man transformed into an ass, it influenced the development of the NOVEL.

Aqaba, Gulf of, northern arm of the RED SEA, 118 mi (190 km) long and c.10 mi (16 km) wide, between ARABIA and Egypt's SINAI peninsula. The gulf, which gives Israel direct access to the INDIAN OCEAN, is entered through the Straits of Tiran. It was declared an international waterway by the UN in 1958 after Arab states opposed to Israel blockaded it (1949–56). It was blockaded again in the ARAB-ISRAELI WAR of 1967.

aquaculture, the raising and harvesting of fresh- and saltwater plants and animals. The most economically important form of aquaculture is fish farming, a billion-dollar industry that produces 10% of the food fish consumed in the U.S. Common products of aquaculture are catfish, trout, crawfish, oysters, shrimp, and salmon. Some are raised in huge freshwater tanks, others require the running water of rivers or streams, and saltwater species are raised in cages placed in coastal or deeper sea waters. The practice of aquaculture dates back to 1000 B.C. in China.

aquamarine, transparent blue to bluish-green variety of the mineral BERYL, used as a gem. Sources include Brazil, Madagascar, Russia, and parts of the U.S. Oriental aquamarine is a transparent bluish variety of CORUNDUM.

aqua regia [Lat., = royal water], corrosive, fuming yellow liquid prepared by mixing one volume of concentrated NITRIC ACID with three to four volumes of concentrated HYDROCHLORIC ACID. It was so named by the alchemists because it dissolves gold and platinum, the "royal" metals, which do not dissolve in nitric and hydrochloric acid alone.

aquatint, ETCHING technique. A metal plate is coated with resin through which acid bites an evenly pocked surface. When printed, it produces tonal effects that resemble wash drawings. Said to have been invented in the 1760s by J.B. Le Prince, aquatint is often combined with other types of etchings, as in GOYA's series of mixed aquatint etchings.

aqueduct, conduit for conveying water, built chiefly to bring fresh drinking water into cities. Aqueduct types include tunnels cut through rock, pipelines, and the conduits that top the arched, bridgelike structures that stand in many parts of Europe and are legacies of the ancient Roman water supply system. Modern aqueducts utilize gravity, pumps, and the propulsive force of very high pressures in underground tunnels to move water over great distances.

aquifer: see ARTESIAN WELL.

Aquino, (Maria) Corazon "Cory", 1933–, Philippine politician, president of the Philippines (1986–92); b. Maria Corazon Cojuangco. Her husband, **Benigno Servillano Aquino, Jr.,** 1932–83, was Pres. Ferdinand MARCOS's chief political opponent, and in 1983 he was assassinated by government agents as he returned to the Philippines from exile in the U.S. When the accused agents were acquitted, Corazon Aquino declared her candidacy for the presidency. After the election (1986), both sides claimed victory. When Marcos refused to step down, Aquino organized strikes and boycotts. With the nation on the brink of civil war, Marcos accepted asylum in the U.S. and Aquino assumed the presidency, becoming the first woman president of the country. Promised changes and improvements largely failed to materialize during Aquino's term in office, and there were six coup attempts against her.

Aquitaine [ăk'wĭtān], former duchy and kingdom in SW France. Conquered (56 B.C.) by the Romans, it fell to the VISIGOTHS in the 5th cent. In 507 Aquitaine was added to the Frankish kingdom by CLOVIS I, but later regained some independence. CHARLEMAGNE made (781) Aquitaine into a kingdom that was ruled by his son Louis (later Emperor LOUIS I). Late in the 9th cent. it became a duchy enfeoffed to the French crown. ELEANOR OF AQUITAINE's marriage (1152) to the future HENRY II of England gave Henry and his heirs control of the duchy as vassals of the French crown. France completed the recapture of Aquitaine from the English during the HUNDRED YEARS WAR.

Ar, chemical symbol of the element ARGON.

Arabia, peninsula, c.1,000,000 sq mi (2,590,000 sq km), SW Asia, containing the world's largest known reserves of oil and natural gas. It is politically divided between SAUDI ARABIA (the largest and most populous nation), YEMEN, OMAN, the UNITED ARAB EMIRATES, QATAR, BAHRAIN, KUWAIT, and several neutral zones. JORDAN and IRAQ are to the north, the RED SEA to the west, and the PERSIAN GULF to the east. Rugged mountains rising to c.12,000 ft (3,700 m) in the southwest catch what little moisture is available, making the basin-shaped interior of the peninsula one of the world's driest deserts, with less than 4 in. (10 cm) of precipitation annually.

Arabian art and architecture: see ISLAMIC ART AND ARCHITECTURE.

Arabian Gulf: see PERSIAN GULF.

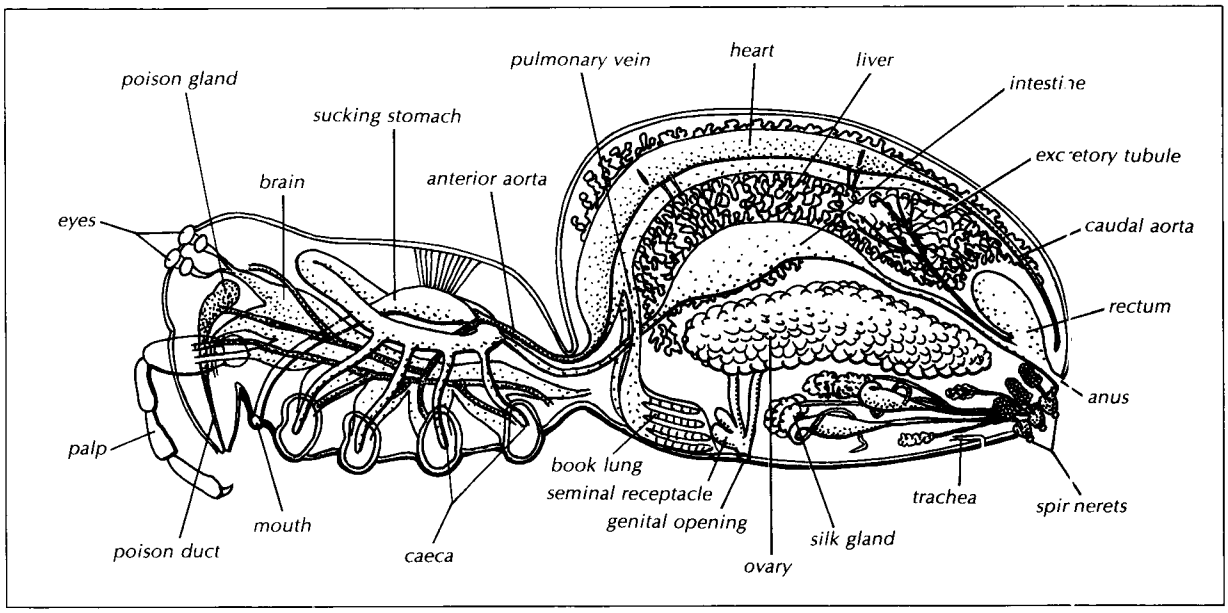
Arabian Nights: see THOUSAND AND ONE NIGHTS.

Arabian Sea, ancient *Mare Erythraeum,* northwestern marginal sea of the INDIAN OCEAN, between Arabia and India. Its principal arms include the Gulf of ADEN, extended by the RED SEA, and the Gulf of Oman, extended by the PERSIAN GULF. ADEN, KARACHI, and BOMBAY are the chief ports.

Arabic languages, members of the Semitic subdivision of the Hamito-Semitic family of languages. See AFRICAN LANGUAGES (table).

Arab-Israeli Wars, conflicts in 1948–49, 1956, 1967, 1973–74, and 1982 between Israel and various Arab states. **1** The 1948–49 war reflected the opposition of the Arab states to the formation of a Jewish state in what they considered Arab territories. Newly created Israel was invaded by forces from Egypt, Syria, Transjordan (later Jordan), Lebanon, and Iraq. A UN-sponsored truce was arranged, but fighting has broken out periodically since then over the basic issue of the existence of Israel. **2** In 1956 Israel, joined by France and Great Britain, attacked Egypt after that country had nationalized the Suez Canal. Intervention by the UN, supported by the United States and the Soviet Union, forced a cease-fire. **3** In 1967, in the Six-Day War, Israel responded to Egyptian provocation with air attacks and ground victories. The result was a humiliating defeat for Egypt. **4** In the Yom Kippur War of 1973–74, Egypt, Syria, and Iraq attacked Israel on the Jewish holy Day of Atonement, catching the Israelis off guard. Israel recouped quickly and forced the Arab troops back from their initial gains, but at great cost to both sides. Again, a cease-fire stopped the fighting, but Egypt and Israel later signed the CAMP DAVID ACCORDS. **5** In 1978 Palestinian guerrillas, from their base in LEBANON, launched an air raid on Israel; in retaliation, Israel sent troops into S Lebanon to occupy a strip 4–6 mi (6–10 km) deep and thus protect Israel's border. Eventually a UN peace-keeping force was set up there, but occasional fighting continued. In 1982 Israel launched a massive attack to destroy all military bases of the PALESTINE LIBERATION ORGANIZATION in S Lebanon and, after a 10-week siege of the Muslim sector of West BEIRUT, a PLO stronghold, forced the Palestinians to accept a U.S.-sponsored plan whereby the PLO guerrillas would evacuate Beirut and go to several Arab countries that had agreed to accept them. Israel withdrew from Lebanon in 1985 but continues to maintain a Lebanese-Christian–policed buffer zone north of its border.

Arab League, association of states formed (1945) to give common expression to the political interests of Arab nations. Its 21 members include nearly all of the Arab states and the PALESTINE LIBER-



Arachnid: Internal anatomy of a spider, a representative arachnid

ATION ORGANIZATION, and its headquarters are in Cairo. Opposed to the formation of a Jewish state in Palestine, league members jointly attacked Israel in 1948 (see ARAB-ISRAELI WARS). Egypt was suspended (1979–89) because of its peace agreement with Israel, and the headquarters moved (1979–1990) to Tunis. Attempts to coordinate Arab economic life are among the league's chief activities.

Arab Maghreb Union: see under MAGHREB.

Arabs, name originally applied to the Semitic peoples of the Arabian peninsula (see SEMITE); now used also for populations of countries whose primary language is Arabic, e.g., Algeria, Egypt, Iraq, Jordan, Lebanon, Libya, Morocco, Syria, and Yemen. Socially, Arabs are divided into the settled *fellahin* (villagers) and the nomadic BEDOUIN. The invasions of Muslims from Arabia in the 6th and 7th cent. diffused the Arabic language and ISLAM, the Arabic religion. At its peak the Arab empire extended from the Atlantic Ocean across North Africa and the Middle East to central Asia. A great Arab civilization emerged in which education, literature, philosophy, medicine, mathematics, and science were highly developed. In Europe the Arab conquests were particularly important in Sicily, from the 9th to late 11th cent., and in Spain, in the civilization of the MOORS. In the 20th cent., Arab leaders have attempted to unite the Arab-speaking world into an Arab nation. Since 1945 most Arab countries have joined the ARAB LEAGUE. In 1982, member nations had a total population estimated at 43 million. Several of these countries control two thirds of the world's oil reserves and are members of OPEC (see ORGANIZATION OF PETROLEUM EXPORTING COUNTRIES). Since 1948 disputes with the state of ISRAEL have resulted in ARAB-ISRAELI WARS.

arachnid, mainly terrestrial ARTHROPOD of the class Arachnida, including the SPIDER, SCORPION, MITE, tick, and DADDY LONGLEGS. The arachnid's body is divided into a cephalothorax with six pairs of appendages and an abdomen. Most are carnivorous, and some use the first two pairs of append ages to crush and kill prey; the others are for walking. Arachnids have simple eyes and sensory bristles; they have no antennae. Respiration is through air tubes or primitive structures called book lungs.

Arafat, Yasir, 1929–, Palestinian commando leader; b. Cairo. Head of the guerrilla group Al Fatah, he became (1969) leader of the PALESTINE LIBERATION ORGANIZATION (PLO). The PLO was weakened when Arafat and his guerrillas were forced to leave their stronghold in West BEIRUT, Lebanon, after the 1982 Israeli siege (see ARAB-ISRAELI WARS). Beginning in the late 1980s, Arafat made tentative peace overtures to Israel, which ultimately culminated in a 1993 accord with Israel that called for limited Palestinian self-rule in Jericho and the GAZA STRIP.

Aragon, Louis [ärägôN'], 1897–1982, French writer. A founder of SURREALISM, he later turned to realistic social and political fiction after becoming a Communist. His works include the surrealist novel *Nightwalker* (1926), the war poems in *Heartbreak* (1941), and the series of love poems (1953, 1959, 1963) to his wife, the novelist Elsa Triolet.

Aragón, autonomous region (1988 pop. 1,208,470), 18,382 sq mi (47,609 sq km) and former kingdom, NE Spain, bordered in the north by France. Much of Aragón is sparsely populated and desertlike. Grains, sugar beets, and other crops are grown in oases and irrigated areas. Manufactures include machinery, electrical equipment, and industrial vehicles. The kingdom was founded (1035) on land won from the MOORS, and in the 12th cent. ZARAGOZA became its capital. Aragón annexed NAVARRE in 1076 and was united with CATALONIA in 1137. Its rulers (see ARAGÓN, HOUSE OF) pursued (13th–15th cent.) an expansionist policy in the Mediterranean. The marriage (1479) of Ferdinand of Aragón (later Spanish King FERDINAND V) to ISABELLA I of Castile led to the union of Aragón and Castile.

Aragón, house of, ruling family of ARAGÓN and other territories in the Middle Ages. Founded (1035) by Ramiro I, the house during the 12th cent. conquered much territory from the MOORS in Spain and also in S France. In the 13th to 15th cent. it acquired SICILY, SARDINIA, and the kingdom of NAPLES. These possessions were usually held by various branches of the house and were seldom united under one ruler as they were under ALFONSO V in 1443–58. The union of the crowns of Aragón and Castile took place in 1479, after the Spanish king FERDINAND V married ISABELLA I of Castile.

Aral Sea, inland sea, the world's sixth largest lake, c.15,000 sq mi (38,900 sq km), on the Kazakhstan-Uzbekistan border. The sea, which is fed by the AMU DARYA and SYR DARYA rivers, is generally less than 220 ft (70 m) deep and is somewhat saline. It was known to medieval Arab geographers as the Khorezm or Khwarazm Sea and to early Russian explorers, who reached it in the 17th cent., as the Sine (Blue) Sea. Since the early 1960s the sea has shrunk by two fifths due to diversion of water from its tributaries.

Aramaic [ârəma'ĭk], Hamito-Semitic language that flourished in SYRIA and the FERTILE CRESCENT around the time of Jesus. See LANGUAGE (table).

Aramburu, Pedro Eugenio [ärämbo͞o'ro͞o], 1903–70, president of Argentina (1955–58). An army general, he participated in the overthrow of Juan PERÓN. As president, he ruled by decree, removed Peronists from important posts, and returned the country to constitutional democracy. He was kidnapped and murdered by Peronist guerrillas in 1970.

The key to pronunciation appears on page xiii.

Arapaho, indigenous people of the Plains (see NORTH AMERICA, INDIGENOUS PEOPLES OF), who speak an Algonquian-Wakashan language (see NATIVE AMERICAN LANGUAGES). Sometimes called "dog eaters" by other tribes, they are divided into the Northern Arapaho (considered the parent group), the Southern Arapaho, and the GROS VENTRE. They stressed age-graded societies, the SUN DANCE, and later the GHOST DANCE. Today the Arapaho lead an agricultural life, and obtain income from leasing land for oil and gas development. In 1990 there were 6,350 Arapaho in the U.S.

Ararat, mountain, E Turkey, with two peaks, Little Ararat (12,877 ft/3,925 m) and Great Ararat (16,945 ft/5,165 m). According to tradition, it was the landing place of Noah's ark. The **kingdom of Ararat** (fl. c.9th–7th cent. B.C.), called in Assyrian Urartu, was located near Lake Van in present-day E Turkey.

Araucanians, South American agricultural peoples (see SOUTH AMERICA, INDIGENOUS PEOPLES OF) occupying most of S central Chile before the Spanish conquest (1540) and speaking languages of the Araucanian group (see NATIVE AMERICAN LANGUAGES). The INCA invaded them (c.1448–82) but were never a strong influence. The Araucanians stoutly resisted the Spanish, rebelling periodically until 1881. Some Araucanians, especially in the 18th cent., had fled to Argentina, where with captured wild horses they became plains wanderers. The Araucanians in Chile today number over 200,000; they are divided between assimilated urban dwellers and those who retain many of their traditional ways.

arbitration, industrial: see under COLLECTIVE BARGAINING.

Arblay, Madame d': see BURNEY, FANNY.

arborvitae, aromatic evergreen tree (genus *Thuja*) of the CYPRESS family, native to Asia and North America. Arborvitaes have tiny cones and flattened branchlets with scalelike leaves. The white cedar (*T. occidentalis*), popular for hedges, and the red cedar (*T. plicata*), important for lumber, both have decay-resistant wood.

Arbuthnot, John, 1667–1735, Scottish author, scientist, and physician. He is best remembered for his five "John Bull" pamphlets (1712), satires on Whig policy that introduced the character John Bull, the typical Englishman. A member of the SCRIBLERUS CLUB, he also wrote medical works.

arbutus, trailing: see TRAILING ARBUTUS.

arc, in mathematics, any part of a CURVE that does not intersect itself; in particular, a portion of the circumference of a CIRCLE.

Arcadia, region of ancient GREECE, in the central PELOPONNESUS. Its inhabitants, the Arcadians, lived a pastoral life. The largest city was Megalopolis.

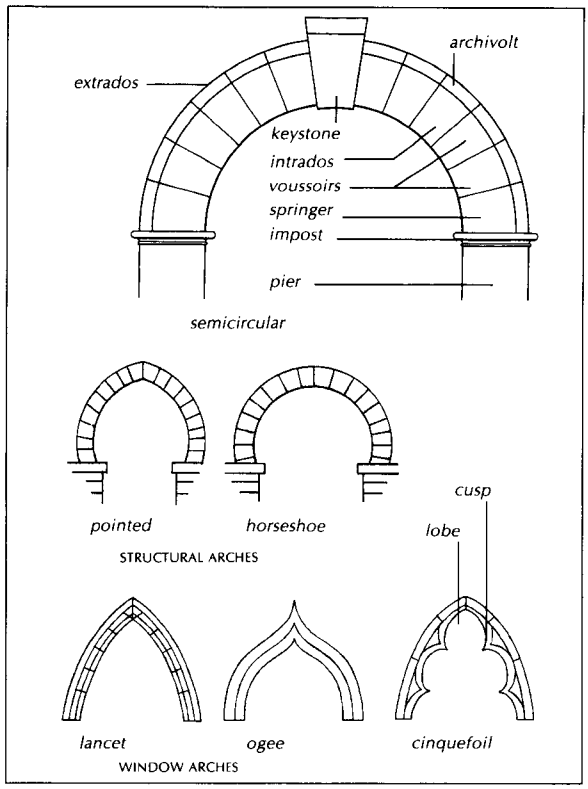
Arcadius, c.377–408, Roman emperor of the East (395–408); son of THEODOSIUS I. His brother HONORIUS inherited the West, which began the division of the empire. During Arcadius's weak reign ALARIC I invaded Greece (395–97).

Arcagnolo: see ORCAGNA.

Arcaro, Eddie (George Edward Arcaro), 1916–, American jockey; b. Cincinnati. During his career (1931–62) he won 4,779 races, and his mounts won $30,039,543 in purses. He rode five Kentucky Derby, six Preakness, and six Belmont winners and twice (1941, 1948) rode Triple Crown winners.

Arc de Triomphe de l'Étoile [ärk də trēôNf' də lātwäl'], triumphal arch in Paris, in the center of the Place de l'Étoile, which is formed by the intersection of 12 avenues, one of them the Champs Élysées. It was built (1806–36) to commemorate NAPOLEON I's victories, from designs of J.F. Chalgrin. In 1920 the body of an unknown French soldier was buried there.

arch, the spanning of a wall opening by means of separate units (e.g., bricks or blocks) assembled into an upward curve that maintains stability through the mutual pressure of a load and the separate pieces. The weight of the load is converted into downward pressures (thrusts) received by the piers (abutments) flanking the opening. The blocks forming the arch are usually wedge-shaped. The arch was used by the Egyptians, Babylonians, and Greeks, chiefly for drains, and by the Assyrians in vaulted and domed chambers. The oldest known arch in Europe is a Roman drain, the Cloaca Maxima (c.578 B.C.). The Roman semicircular arch, drawn from Etruscan structures, was continued in early Christian, Byzantine, and Romanesque architecture. The pointed arch (used by the Assyrians) came into general use in the 13th cent. Possibly rediscovered independently in Europe, it became essential to the Gothic system of design. The round arch regained dominance in the RENAISSANCE. The 19th-cent. invention of steel beams for wide spans relegated the arch to a decorative function.



Arches

archaeology, scientific study of material remains of human cultures to derive knowledge about prehistoric times and to supplement documentary evidence of historic times. Research into the life and culture of the past began in 15th-cent. Italy with the excavation of ancient Greek sculpture. It was advanced in the 18th cent. by excavations at HERCULANEUM and POMPEII. In the 19th cent. public interest was stimulated by the acquisition of the ELGIN MARBLES and by the excavations of Heinrich SCHLIEMANN at Troy and in Greece and those of Arthur EVANS at Crete; Egyptology was born with the recovery of the ROSETTA stone. Stratigraphic excavation of such sites as BARROWS, mounds, and kitchen middens unearthed levels of material culture of the past. Scientific analysis of these material remains led Danish archaeologist Christian Thomsen to classify cultures according to the principal materials used for weapons and tools: STONE AGE, BRONZE AGE, IRON AGE. Realizing that an exact equation of technical tradition with cultural development was too rigid, later interpreters emphasized ECOLOGY and food production. Improved field techniques, new DATING methods, and the study of existing aboriginal groups have enhanced the knowledge of prehistory. See also HUMAN EVOLUTION.

archery, sport of shooting with bow and arrow. The four main types are target, field, flight, and crossbow shooting. In target shooting, the object is to score the most points with arrows aimed at the "bull's-eye"—the innermost of five to ten concentric circles. Once an important military and hunting skill, archery was revived as a sport in Europe in the 17th cent. and became popular in the U.S. in the late 1800s.

Arches National Park: see NATIONAL PARKS (table).

Archimedes [ärkĭmē'dēz], c.287 B.C.–212 B.C., Greek mathematician, physicist, and inventor. His reputation in antiquity was based on several mechanical contrivances, e.g., ARCHIMEDES' SCREW; which he is alleged to have invented. One legend states that during the Second PUNIC WAR he protected his native Syracuse from the besieging armies of Marcus Claudius MARCELLUS for three years by

inventing machines of war, e.g., various ballistic instruments and mirrors that set Roman ships on fire by focusing the sun's rays on them. In modern times, however, he is best known for his work in mathematics, mechanics, and hydrostatics. In mathematics, he calculated that the value of π (see PI) is between $3\frac{10}{71}$ and $3\frac{1}{7}$; devised a mathematical exponential system to express extremely large numbers; proved that the volume of a sphere is two thirds the volume of a circumscribed cylinder; and, in calculating the areas and volumes of various geometrical figures, carried the method of exhaustion invented by EUDOXUS OF CNIDUS far enough in some cases to anticipate the invention (17th cent.) of the CALCULUS. One of the first to apply geometry to mechanics and hydrostatics, he proved the law of the lever entirely by geometry and established ARCHIMEDES' PRINCIPLE. In another legendary story, the ruler Hiero II requested him to find a method for determining whether a crown was pure gold or alloyed with silver. Archimedes realized, as he stepped into a bath, that a given weight of gold would displace less water than an equal weight of silver (which is less dense than gold); and he is said, in his excitement at his discovery, to have run home naked, shouting *"Eureka! Eureka!"* ("I have found it! I have found it!"). He was killed by a Roman soldier, supposedly while absorbed in mathematics.

Archimedes' principle, principle that states that a body immersed in a fluid is buoyed up by a force equal to the weight of the displaced fluid. The principle applies to both floating and submerged bodies, and to all fluids. It explains not only the buoyancy of ships but also the rise of a helium-filled balloon and the apparent loss of weight of objects underwater.

Archimedes' screw, a simple mechanical device used to lift water and such light materials as grain or sand, and believed to have been invented by ARCHIMEDES in the 3d cent. B.C. It consists of a large continuous screw inside a cylindrical chamber. To lift water—for example, from a river to its bank—the lower end is placed in the river, and water rises up the spiral threads of the screw as it is revolved.

Archipenko, Alexander, 1887–1964, Ukrainian-American sculptor. He recognized the aesthetic value of negative form (the void), as in the hollowed-out masses of his marble *Madonna* (Mus. Mod. Art, N.Y.C.). He taught cubist sculpture (see CUBISM) in Paris, Berlin, and New York City.

Arctic, the, northernmost area of the earth, centered on the NORTH POLE. It can be defined as embracing all lands located N of the ARCTIC CIRCLE (lat. 66°30′N) or all lands located N of the 50°F (10°C) July isotherm, which is roughly equivalent to the tree line. It therefore generally includes the ARCTIC OCEAN; the northern reaches of Canada, Alaska, Russia, and Norway; and most of Greenland, Iceland, and Svalbard. Ice sheets and permanent snow cover regions where average monthly temperatures remain below 32°F (0°C) all year; TUNDRA, which flourishes during the short summer season, covers areas where temperatures are between 32°F and 50°F (0°–10°C) for at least one month. The Arctic is of great strategic value as the shortest route between the U.S. and Russia. Since the International Geophysical Year (1957–58), rich oil and natural gas deposits have been discovered on Alaska's North Slope (see PRUDHOE BAY), Canada's Ellesmere Island (1972), and the northern areas of Siberia, in Russia. Traditionally, Robert E. PEARY was credited with being the first explorer to reach (1909) the North Pole, but this claim is disputed.

Arctic Circle, imaginary circle on the earth's surface at 66°30′N lat., marking the northernmost point at which the sun can be seen at the winter SOLSTICE (about Dec. 22) and the southernmost point of the northern polar regions at which the midnight sun is visible.

Arctic Ocean, the world's smallest ocean, c.5,400,000 sq mi (13,986,000 sq km), centering on the NORTH POLE and connecting with the Pacific through the Bering Strait and with the Atlantic through the Greenland Sea. It is covered with ice up to 14 ft (4 m) thick all year, except in fringe areas.

Ardashir I, d. 240, king of PERSIA (226?–240), founder of the Sassanid dynasty. He reunited Persia and established ZOROASTRIANISM as the state religion. His costly victory (232) over Roman Emperor Alexander Severus consolidated Persian power.

Ardennes, wooded plateau, from 1,600 to 2,300 ft (488 to 701 m) high, in SE Belgium, N Luxembourg, and N France. A traditional battleground, the Ardennes saw heavy fighting in both world wars, especially in the Battle of the Bulge (1944–45).

Arecibo Observatory, radio-astronomy facility (completed 1963) located at Arecibo, Puerto Rico; it is operated by Cornell Univ. under contract with the U.S. National Science Foundation. Its fixed antenna of spherical section, 1,000 ft (305 m) in diameter, is the largest radio-telescope antenna in the world.

Arendt, Hannah, 1906–75, German-American political theorist; b. Germany. Fleeing the Nazis in 1941, she came to the U.S. and taught at leading universities. In *The Origins of Totalitarianism* (1951), which established her as a major political thinker, Arendt traced Nazism and Communism to 19th cent. IMPERIALISM and ANTISEMITISM. Other works include *The Human Condition* (1958), *Eichmann in Jerusalem* (1963), and *The Life of the Mind* (1977).

Arensky, Anton Stepanovich, 1861–1906, Russian composer. A pupil of RIMSKY-KORSAKOV, he taught at the Moscow Conservatory and became (1895) conductor of the Imperial Chapel Choir. He wrote operas, symphonic music, songs, and piano works.

Arequipa, city (1993 pop. 620,471), capital of Arequipa dept., S Peru. The commercial center of S Peru and N Bolivia, it produces leather goods, alpaca wool, textiles, and foodstuffs. Founded in 1540 on an INCA site, it was largely destroyed by an earthquake in 1868 but has been restored. It is called "the white city" because of the light-colored stone, sillar, used as a building material.

Ares [âr′ēz], in Greek mythology, OLYMPIAN god of war; son of ZEUS and HERA. The Romans identified him with MARS.

Argentina [ärjəntē′nə], officially Argentine Republic republic (1992 est. pop. 32,901,000), 1,072,157 sq mi (2,776,889 sq km), S South America, bordered by Chile (W); Bolivia (N); Paraguay, Brazil, and Uruguay (NE); and the Atlantic Ocean (SE). The second largest nation of South America, it stretches c.2,300 mi (3,700 km) from the subtropics south to TIERRA DEL FUEGO. Major cities include BUENOS AIRES (the capital), CÓRDOBA, and ROSARIO. Argentina consists of six geographical regions: (1) the Paraná Plateau in the northeast, a wet, forested area; (2) the GRAN CHACO, a flat alluvial plain; (3) the Pampa (see under PAMPAS), a vast grassland between the Atlantic and the Andean foothills; (4) the Monte, an arid region dotted with oases; (5) PATAGONIA, in the south, a bleak plateau that is the chief oil-producing region; and (6) the ANDES Mts., extending the length of the western border and including ACONCAGUA (22,835 ft/6,960 m), the highest point of South America. Most important of these is the Pampa, the chief agricultural and industrial area and site of most of the main cities. Argentina's economy is a mix of agriculture and industry. Grains and livestock are the basis of the nation's wealth; wheat corn, flax, oats, beef, mutton, hides, and wool are the major exports. Domestic oil and gas production makes the nation self-sufficient in energy. The industrial base is highly developed, providing nearly all of its consumer goods. Food processing (meat packing, flour milling, canning) is the principal industry; leather goods and textiles are also important. The population is overwhelmingly of European descent (especially Spanish and Italian), and about 90% are Roman Catholic. Spanish is the official language, but Italian is also spoken.

History. The first European explorers, notably Juan Díaz de Solís, Ferdinand MAGELLAN, and Sebastian Cabot (see under CABOT, JOHN), arrived in the early 16th cent. Buenos Aires was founded in 1536, abandoned after attacks from indigenous peoples, and refounded in 1580. The city was made the capital of a Spanish viceroyalty in 1776. The successful struggle for independence (1810–16) was led by generals Manuel BELGRANO, J.M. de Pueyrredón, and José de SAN MARTÍN. A protracted period of civil war ensued, lasting until the dictatorship of J.M. de ROSAS (1829–52). A new constitution was adopted in 1853 and, with major amendments, remained in effect until 1949, but Argentina continued to suffer political instability and military coups. It belatedly entered (1945) WORLD WAR II on the Allied side after four years of pro-Axis "neutrality." Juan PERÓN, an army colonel who, with a group of colonels, seized power in 1944, won the elections of 1946 and established a popular dictatorship with the support of the army, nationalists, and the Roman Catholic Church. His second wife, the popular Eva Duarte de Perón (see under PERÓN, JUAN) won the backing of trade unions; her popularity among the industrial working class was the major pillar of support for the Perón regime. Her death in 1952, followed

The key to pronunciation appears on page xiii.

by an economic downturn, led to Perón's ouster (1955) by the military. Government during the next 18 years had to contend with the continuing popularity of the Peronist movement. In 1973, Perón returned from exile and won election as president. His third wife, Isabel Martínez de Perón, was elected vice president; she succeeded him upon his death in 1974. During her presidency terrorism by the left and right grew, and inflation worsened; in 1976 she was overthrown in a military coup that established a repressive military junta. In 1982, with Gen. Leopoldo Galteri as president, Argentina occupied the FALKLAND ISLANDS, which it had long disputed with Britain. The Argentine defeat in the ensuing war with Britain led to Galtieri's resignation and to strong public criticism of the military government. In the late 1980s, the government was unable to curb an annual inflation rate of more than 1000%, and in 1989, a Peronist, Carlos Saúl Menem, was elected president. Menem reduced the government's regulation of the economy, privatized state-owned enterprises, and introduced austerity measures to control persistent inflation.

argon (Ar), gaseous element, discovered in 1894 by Sir William RAMSAY and Lord RAYLEIGH. An odorless, tasteless, and colorless INERT GAS, it makes up 0.93% of the atmosphere by volume. Argon is used in light bulbs and neon signs, in refining reactive elements, for protection in arc welding, and in the production of crystals for use in semiconductor devices. See ELEMENT (table); PERIODIC TABLE.

Argonauts: see GOLDEN FLEECE; JASON.

Argus or **Argos,** in Greek mythology. **1** Many-eyed monster who guarded IO after she was changed into a heifer. **2** Builder of the ship on which JASON and the Argonauts sailed in quest of the GOLDEN FLEECE.

Århus, city (1987 pop. 255,932), central Denmark, on Århus Bay. Founded by the 10th cent., it is a prosperous cultural center and a commercial and shipping center, manufacturing beer, metals, textiles, and machinery. Among its landmarks are its theater and the 12th-cent. Cathedral of St. Clemens.

aria, elaborate and often lengthy solo song with instrumental accompaniment, especially in an OPERA, ORATORIO, or CANTATA. The three-part *aria da capo* was developed in the 17th and 18th cent. by A. SCARLATTI, J.S. BACH, and others. The arias of W.A. MOZART often combined dramatic and lyrical elements. Later composers fused aria and RECITATIVE.

Ariadne, in Greek mythology, Cretan princess; daughter of MINOS and Pasiphaë. With her help THESEUS killed the MINOTAUR and escaped from the Labyrinth. He left with her but deserted her at Naxos. There she married DIONYSUS, who is said to have set her bridal crown among the stars.

Arianism, Christian heresy arising from the teaching of the Alexandrian priest Arius, c.256–336. To Arius, Jesus was a supernatural being, not quite human, not quite divine, who was created by God. Arianism spread and was condemned by the First Council of NICAEA (325). The conflict went on, however, and several bishops and emperors sided with Arius. The Catholic tenets of Rome and ATHANASIUS finally triumphed, and the First Council of CONSTANTINOPLE (381) upheld the decrees of Nicaea.

Arias Sánchez, Oscar, 1941–, Costa Rican politician. He was minister of national planning (1972–77), a congressman (1978–82), and president (1986–90). Intent on preserving Costa Rica's neutrality and restoring regional peace, he refused to allow Nicaraguan contras to operate from Costa Rica and negotiated an accord (1987) with other Latin American leaders that called for a cease-fire and government talks with opposition groups. In 1987 he was awarded the Nobel Peace Prize.

Ariel, in astronomy, natural satellite of URANUS.

Arion, Greek poet, fl. 7th cent.? B.C., inventor of the DITHYRAMB. His rescue from drowning by a dolphin charmed by his music is told by HERODOTUS.

Ariosto, Ludovico, 1474–1533, Italian epic and lyric poet, in the service of the Duke of Ferrara. His *Orlando Furioso* (1532), an epic treatment of the ROLAND story intended to glorify the ESTE family, greatly influenced SHAKESPEARE, MILTON, and BYRON.

Aristarchus of Samos, fl. c.310–c.230 B.C., Greek astronomer. He is said to have been the first to propose a heliocentric theory of the universe, anticipating Copernicus by 18 centuries (see COPERNICAN SYSTEM). His only surviving work, *On the Sizes and Distances of the Sun and Moon,* is celebrated for its geometric argument, even though crude observation data led to faulty estimates.

Aristide, Jean-Bertrand [ä"rēstēd'], 1953–, president of Haiti (1990–91). A radical Catholic priest who opposed the DUVALIER dictatorship, he won the 1990 presidential election by a landslide. Ousted by the military seven months after taking office, he went into exile. An agreement (1993) called for his return to power in Oct. 1993.

Aristogiton: see HARMODIUS AND ARISTOGITON.

Aristophanes [ăr"ĭstŏf'ənēz], b. c.448 B.C., d. after 388 B.C., Athenian comic poet, the greatest ancient writer of COMEDY. His plays mix political, social, and literary SATIRE. Invective, burlesque, and direct attack on persons made them suitable for the festival of DIONYSUS. Typically, his characters act naturally in preposterous circumstances; his language is economical and beautiful. Eleven surviving plays include *The Clouds, The Wasps, Lysistrata,* and *The Frogs.*

Aristotle, 384–322 B.C., Greek philosopher. He studied (367–347 B.C.) under PLATO and later (342–339 B.C.) tutored ALEXANDER THE GREAT at the Macedonian court. In 335 B.C. he opened a school in the Athenian Lyceum. During the anti-Macedonian agitation after Alexander's death Aristotle fled (323 B.C.) to Chalcis, where he died. His extant writings, largely in the form of lecture notes made by his students, include the *Organum* (treatises on logic); *Physics; Metaphysics; De Anima* [on the soul]; *Nicomachean Ethics* and *Eudemian Ethics; Politics; De Poetica; Rhetoric;* and works on biology and physics. Aristotle held philosophy to be the discerning, through the use of systematic LOGIC as expressed in SYLLOGISMS, of the self-evident, changeless first principles that form the basis of all knowledge. He taught that knowledge of a thing requires an inquiry into causality and that the "final cause"—the purpose or function of the thing—is primary. The highest good for the individual is the complete exercise of the specifically human function of rationality. In contrast to the Platonic belief that a concrete reality partakes of a form but does not embody it, the Aristotelian system holds that, with the exception of the Prime Mover (God), form has no separate existence but is immanent in matter. Aristotle's work was lost following the decline of Rome but was reintroduced to the West through the work of Arab and Jewish scholars, becoming the basis of medieval SCHOLASTICISM.

arithmetic, branch of mathematics (and the part of ALGEBRA) concerned with the fundamental operations of addition, subtraction, multiplication, and division of numbers. Conventionally, the term *arithmetic* covers simple numerical skills used for practical purposes, e.g., computation of areas or costs. The study of arithmetic also deals abstractly with the laws and properties (e.g., the ASSOCIATIVE LAW, the COMMUTATIVE LAW, and the DISTRIBUTIVE LAW) governing the various operations.

arithmetic progression: see PROGRESSION.

Arizona, state in the SW U.S.; bordered by Utah (N), New Mexico (E), Mexico (S), and, across the Colorado R., Nevada and California (W).

Area, 113,909 sq mi (295,024 sq km). *Pop.* (1990) 3,665,228, a 34.9% increase over 1980 pop. *Capital,* Phoenix. *Statehood,* Feb. 14, 1912 (48th state). *Highest pt.,* Humphreys Peak, 12,633 ft (3,853 m); *lowest pt.,* Colorado R., 70 ft (21 m). *Nickname,* Grand Canyon State. *Motto, Ditat Deus* [God Enriches]. *State bird,* cactus wren. *State flower,* blossom of the saguaro cactus. *State tree,* paloverde. *Abbr.,* Ariz.; AZ.

Land and People. Most of northern and eastern Arizona lies within the arid COLORADO PLATEAU region, and most of the south and west in the flat desert basins (many now irrigated) and jagged mountain ranges of the Basin and Range region. Major rivers are the COLORADO, Gila, and Salt. A total of 20,036,000 acres (8,108,000 hectares), or 38% of all U.S. Native American tribal lands, are in Arizona; the largest are the NAVAHO, HOPI, Fort APACHE, and Papago (TOHONO O'ODHAM) reservations. PHOENIX, TUCSON, and TEMPE are the principal cities; about 87% of the population lives in urban areas. In 1990 Arizona was 81% white, 19% Native American and others. The state has the third largest Native American population, after Oklahoma and California.

Economy. Manufacturing is the leading economic activity, with electronic and aerospace products, primary and fabricated metals, processed foods, and electrical and transportation equipment among the major manufactures. Printing and publishing are also important. Cotton is the chief irrigated crop, and some lettuce, hay, oranges, and grapefruit are also grown in the subtropical south. Large cattle and sheep ranges produce livestock and dairy products. Arizona is a leading U.S. producer of copper, and there is a small lumber industry. The state is also known for its Native American handicrafts. The hot, dry climate, spectacular scenic attractions such as the GRAND CANYON and the Petrified Forest (see NATIONAL PARKS, table), and many Native American reservations attract large numbers of tourists.

Government. The constitution provides for a governor and for a state legislature of 30 senators and 60 representatives elected for two-year terms. Arizona elects two senators and six representatives to the U.S. Congress and has eight electoral votes.

History. Early Spanish explorers included CABEZA DE VACA (1536), Marcos de Niza (1539), and Francisco Vásquez de CORONADO (1540), and several Spanish missions were founded in the late 17th cent. The region came under Mexican control after 1821, and lands north of the Gila R. passed to the U.S. territory of New Mexico at the end of the MEXICAN WAR (1846–48). Lands between the Gila R. and today's southern boundary were added through the GADSDEN PURCHASE (1853). Arizona became a separate territory in 1863, and settlement accelerated after the surrender (1866) of GERONIMO ended 25 years of Apache wars. Rapid development of irrigated agriculture, spurred by construction of the Roosevelt dam (1911), and industrial and urban expansion beginning during World War II strained limited water resources. A 1963 U.S. Supreme Court decision to increase Arizona's allocation of water from the Colorado R. led to construction (1974–91) of the huge Central Arizona project, which diverts water from the Colorado at Parker Dam and carries it across Arizona for use on farms and in the Phoenix-Tucson area.

ark, in the BIBLE. **1** Boat built by NOAH at God's command to save his family and certain animals from the Flood. **2** Ark of the Covenant, the sacred, gold-covered, wooden chest, identified by the Hebrews with God. Touching it meant death. It was carried into battle, as its presence implied victory, and was once captured by the Philistines. Restored many years later, it was placed in SOLOMON's temple.

Arkansas, state in the S central U.S.; bordered by Tennessee and Mississippi, across the Mississippi R. (E), Louisiana (S), Texas and Oklahoma (W), and Missouri (N).

Area, 53,104 sq mi (137,539 sq km). *Pop.* (1990) 2,350,725, an 2.9% increase over 1980 pop. *Capital,* Little Rock. *Statehood,* June 15, 1836 (25th state). *Highest pt.,* Magazine Mt., 2,753 ft (840 m); *lowest pt.,* Ouachita R., 55 ft (17 m). *Nickname,* Land of Opportunity. *Motto, Regnat Populus* [The People Rule]. *State bird,* mockingbird. *State flower,* apple blossom. *State tree,* pine. *Abbr.,* Ark.; AR.

Land and People. The higher terrain of the Ozark Plateau (see OZARKS) and Ouachita Mts., in the west, give way to lowlands in the east, drained mostly by the ARKANSAS and Ouachita rivers. There are many lakes, and the mineral waters of Hot Springs are preserved in the NATIONAL PARK there (see table), contributing to the state's well-developed tourist industry. Arkansas has long, hot summers and mild winters. About 53% of the population lives in urban areas. LITTLE ROCK is the leading city; other important cities are FORT SMITH and PINE BLUFF. In 1990 the population was 83% white and 16% African American.

Economy. Manufacturing, the leading contributor to the state's income, includes processed foods (especially beef and poultry), electrical equipment, chemicals, and paper and wood products. Leading agricultural commodities are soybeans, rice, cotton, poultry (Arkansas is the leading U.S. producer), and cattle. Although it boasts the country's only active diamond mine, Arkansas's most valuable mineral resources are oil, bromine, natural gas, and bauxite.

Government. According to the constitution of 1874, the government is headed by a governor elected to a two-year term. The legislature consists of 35 senators serving four-year terms and 100 representatives elected to two-year terms. Arkansas sends two senators and four representatives to the U.S. Congress and has six electoral votes.

History. The Quapaw, OSAGE, and Caddo inhabited the region when it was visited by Spanish explorers, including Hernando DE SOTO (1541–42). The French explorer Robert Cavelier, sieur de LA SALLE, founded (1682) the first permanent white settlement, Arkansas Post. In 1803 the area passed from France to the U.S. through the LOUISIANA PURCHASE, and many new settlers established cotton plantations. Arkansas soon became a separate territory (1819) and a state (1836). The state seceded from the Union in 1861 and joined the CONFEDERACY. It was readmitted to the Union in 1868 and experienced a turbulent RECONSTRUCTION era. Around the turn of the century its population grew substantially. The discovery of oil in 1921 resulted in new prosperity for Arkansas, but farmers were severely affected by the GREAT DEPRESSION of the 1930s. In 1957 Gov. Orval Faubus became the focus of world attention when he resisted the federal desegregation of Little Rock's public schools. The enrollment of African-American students was subsequently en-

The key to pronunciation appears on page xiii.

forced by the federal government. In 1981 Arkansas passed a controversial law mandating the equal teaching of CREATIONISM and EVOLUTION in the public schools. The law was overturned in federal court the following year. In 1992 Gov. Bill CLINTON became the first Arkansas native to be elected U.S. president.

Arkansas, river, flowing SE c.1,450 mi (2,330 km) from the Rocky Mts. of Colorado to the Mississippi R. in SE Arkansas. Controlled by more than 25 dams, it is navigable to Tulsa, Okla.

Arkhangelsk [ərkhän'gĭlsk] or **Archangel,** city (1990 est. pop. 418,000), NW European Russia, on the Northern Dvina near its mouth on the White Sea. It is a leading port; though icebound much of the year, it can be made usable by icebreakers. Major exports are timber and wood products; other industries are fishing, shipbuilding, and pulp and paper. Founded as Novo-Kholmogory (1584), it was renamed (1613) for the monastery of the Archangel Michael. An Allied supply port in World Wars I and II, it was occupied (1918–20) by Allied and anti-Bolshevik forces.

Arkwright, Sir Richard, 1732–92, English inventor. His construction (1769) of a SPINNING machine, the water frame, was an early step in the INDUSTRIAL REVOLUTION. Arkwright's spinning machine led to the establishment of huge cotton mills and to the beginnings of the factory system.

Arles, kingdom of, was formed in 933, when Rudolf II united his kingdom of Transjurane BURGUNDY with Provence or Cisjurane Burgundy. Holy Roman Emperor CONRAD II annexed the kingdom to the empire in 1034, but its component parts gradually broke away. In 1378 Holy Roman Emperor CHARLES IV ceded the realm to the French dauphin (later CHARLES VI), and the kingdom for all practical purposes ceased to exist.

Arlington, county (1990 pop. 170,936), N Va., across the POTOMAC R. from WASHINGTON, D.C. A residential suburb of Washington, the county is governed as a single unit without subdivisions. Within its boundaries are Arlington National Cemetery, the PENTAGON, Marymount Univ., and Washington National Airport. Arlington was part of the DISTRICT OF COLUMBIA from 1790 to 1847.

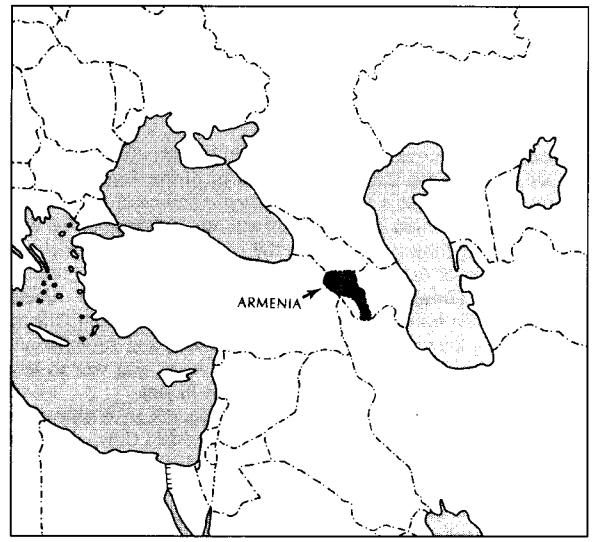
Arlington, city (1990 pop. 261,721), Tarrant co., N Tex., midway between DALLAS and FORT WORTH; inc. 1884. Located in a rapidly growing industrial area, it produces automobiles, containers, rubber and plastic products, and other manufactures. Arlington is the home of Six Flags over Texas, a huge theme park, and the Texas Rangers baseball team. The city has a branch of the Univ. of Texas.

Armada, Spanish, 1588, fleet launched by PHILIP II of Spain for the invasion of England. Commanded by the duque de Medina Sidonia and consisting of 130 ships and a force of 30,000, the Armada was delayed by storms and finally set sail from Lisbon in May. The English fleet, under Charles Howard, sailed from Plymouth and inflicted long-range damage on the Armada but did not break its formation. Anchoring off Calais, Medina Sidonia intended to pick up Alessandro FARNESE's army in Flanders and convey it to England. But on Aug. 7 the English sent fire ships into the anchorage to scatter the Armada and then attacked the fleeing ships at close range off Gravelines. The battered Armada escaped northward, sailed around Scotland and Ireland while buffeted by storms, and returned to Spain after losing about half its ships.

armadillo, armored MAMMAL (order Edentata) found in the S U.S. and Latin America. The head and body are almost entirely covered by an armor of bony, horny plates. Armadillos are usually nocturnal and, although omnivorous, eat mostly insects. The largest species, the giant armadillo (*Priodontes giganteus*), is about 4 ft (120 cm) long; the smallest, the fairy armadillo (*Chlamyphorus truncatus*), about 6 in. (15 cm) long. The only U.S. species is the nine-banded armadillo (*Dasypus novemcinctus*), about 30 in. (76 cm) long and weighing about 15 lb (6.4 kg).

armature: see GENERATOR; MOTOR, ELECTRIC.

Armenia, officially Republic of Armenia, republic (1992 est. pop. 3,416,000), 11,500 sq mi (29,785 sq km), SW Asia, in the S Caucasus; formerly a constituent republic of the USSR. It is a mountainous country bounded by Georgia (N); Turkey (W); Azerbaijan (W and E); and Iran (S). YEREVAN is the capital; other major cities include Giumri (Leninakan), Vanadzor (Kirovakan), and St. Etchmiadzin. Major bodies of water are Lake SEVAN and the Araks and Razdan rivers. Industrial products include chemicals, metals, electrical equipment, and machinery. Grapes, cotton, and tobacco are



major agricultural products, and food-processing, wine-making, fishing and mining of copper, molybdenum, zinc, lead, iron, and other ores are important. In addition to the Armenian majority, there are Azeri, Russian, and Kurdish minorities. The official language is Armenian. The predominant religion is the Armenian Apostolic church, an Monophysitic Christian church (see MONOPHYSITISM.

History. Modern Armenia occupies the eastern part of ancient region and kingdom of Armenia, which also included NE TURKEY and parts of Iranian Azerbaijan. Under Persian rule (6th–4th cent. B.C.), it was conquered in 330 B.C. by ALEXANDER THE GREAT but after his death fell to Syria. Armenia was independent from 189 B.C. to 67 B.C., when it became tributary to Rome. Christianity was adopted in the 3d cent. A.D.; under Persian rule later in that century many Christians were martyred. Persia and Rome partitioned the kingdom in 387; it achieved autonomy in 886 but was invaded in the mid-11th cent. by the Byzantines and Seljuk Turks. Pushed westward, one group of Armenians founded Little Armenia, in CILICIA. In 1386–94 the Mongols, under TIMUR, seized Greater Armenia and massacred much of the population. The Ottoman Turks invaded in 1405 and by the 16th cent. held all of Armenia. Though most Armenians experienced religious persecution, Armenian merchants played an important role in the economy of the OTTOMAN EMPIRE. Eastern Armenia was long disputed by Turkey and Persia; in 1828 Persia ceded to Russia present-day Armenia. From 1894 on, a plan for Armenian extermination was pursued under Sultan ABD AL-HAMID II, culminating in the massacre of 1915. In 1918 Russian Armenia became independent under German auspices (see BREST-LITOVSK, TREATY OF), but in 1920 an autonomous Greater Armenia was created from the Turkish and Soviet Russian areas. In that year, however, Russian Armenia fell to the Communists and was made a Soviet republic; the 1921 Russo-Turkish Treaty established the present boundaries, ending Armenian independence. From 1920 to 1991 Armenia was a republic in the UNION OF SOVIET SOCIALIST REPUBLICS. In the late 1980s, under Soviet Pres. GORBACHEV's policies of *glasnost* and *perestroika,* Armenians began seeking independence. In a 1991 referendum Armenians voted overwhelmingly for independence from the USSR, and the country joined the newly established COMMONWEALTH OF INDEPENDENT STATES when the USSR collapsed (Dec. 1991). Conflicting claims to NAGORNO-KARABAKH, a largely Armenian territory within neighboring AZERBAIJAN, led to war between Armenia and Azerbaijan over the area by 1992 and an Azerbaijani economic blockade of Armenia. Levon Tar-Petrosian has been president of Armenia since 1991.

Armenian language, member of the Thraco-Phrygian sub-family of the Indo-European family of languages. See LANGUAGE (table).

Arminianism: see ARMINIUS, JACOBUS.

Arminius, Jacobus, 1560–1609, Dutch Reformed theologian; b. Jacob Harmenson. In 1603 he became a professor at the Univ. of

Leiden; there he developed his teaching, called **Arminianism.** As fully formulated after his death by Simon Episcopus, it opposed the Calvinist doctrine of predestination by asserting the compatibility of divine sovereignty and human freedom and by denying the irresistibility of God's grace. The teaching was later adopted by John WESLEY.

Armory Show, art exhibition held in 1913 at the 69th-regiment armory in New York City. Including works of the European avant-garde, e.g., DUCHAMP's *Nude Descending a Staircase,* it was a sensational introduction of modern art into the U.S. One of the most important art shows ever held in the country, it helped to change the direction of American painting.

Armstrong, (Daniel) Louis "Satchmo," 1900–1971, African-American JAZZ trumpeter, singer, and bandleader; b. New Orleans. He became known for improvisational genius and strongly influenced the melodic development of jazz. Armstrong was in large part responsible for the rise of the soloist in jazz.

Armstrong, Edwin Howard, 1890–1954, American engineer and radio inventor; b. N.Y.C. A professor at Columbia Univ. after 1930, he made numerous contributions to the development of RADIO, including the invention of the regenerative circuit (1912); the superheterodyne circuit (1918), the basic circuit of nearly all modern radio receivers; and FREQUENCY MODULATION (1925–33).

Armstrong, Neil Alden, 1930–, American astronaut; b. Wapakoneta, Ohio. He commanded the *Gemini 8* mission (Mar. 16, 1966) and the *Apollo 11* mission (July 16–24, 1969), during which he and Buzz ALDRIN became the first and second persons, respectively, to walk on the moon (see SPACE EXPLORATION, table). He was deputy associate administrator for aeronautics (1970–71) at NASA, taught aeronautical engineering (1971–79) at the Univ. of Cincinnati, and served (1985) on the National Commission on Space.

Armstrong, Samuel Chapman, 1839–93, American educator and philanthropist; b. Hawaiian Islands. Appointed an agent of the Freedmen's Bureau after the Civil War, he realized the need for vocational training of emancipated slaves and helped found (1868) the Hampton Inst., which he headed until 1893, to advance that purpose.

Arnim, Achim or **Joachim von** [är'nĭm], 1781–1831, German writer of the romantic school. He is best remembered for his work with his brother-in-law, Clemens BRENTANO, on the folk-song collection *The Boy's Magic Horn* (1806–8) and for his historical novels, notably *Isabella of Egypt* (1812). His wife, **Bettina von Arnim,** 1785–1859, b. Elisabeth Brentano, was also a writer. She corresponded with BEETHOVEN and GOETHE; her publication of *Goethe's Correspondence with a Child* (1835) reflects her own poetic imagination.

Arnold, Benedict, 1741–1801, American Revolutionary general and traitor; b. Norwich, Conn. After excellent service in the colonial assault on Quebec (1775–76) and the SARATOGA CAMPAIGN, he felt slighted regarding promotion. His plot with John ANDRÉ to betray (1780) the American post at WEST POINT was discovered, but Arnold escaped and later fought for the British.

Arnold, Matthew, 1822–88, English poet and critic; son of Thomas Arnold. He was an inspector of schools (1851–86) and professor of poetry at Oxford (1857–67). Arnold wrote superb poetry, usually dealing with the themes of loneliness and pessimism. Among his best-known verses are "Isolation: To Marguerite" (1852), "The Scholar Gypsy" (1853), and "Dover Beach" (1867). His books of literary criticism include *On Translating Homer* (1861) and *Essays in Criticism* (1865; Ser. 2, 1888). *Culture and Anarchy* (1869) is a volume of social criticism. Arnold stressed the necessity for objectivity and advocated a culture based on the best that has been thought and said in the world.

aromatic compound, any of a large class of organic compounds including BENZENE and compounds that resemble benzene in chemical properties. Aromatic compounds contain unusually stable ring structures, often made up of six carbon atoms arranged hexagonally. Some of the compounds, however, have rings with more or fewer atoms, not necessarily all carbon. Furan, for example, has a ring with four atoms of carbon and one of oxygen. Also, two or more rings can be fused, as in naphthalene. The characteristic properties of the class, notably the stability of the compounds, derive from the fact that aromatic rings permit the sharing of some electrons by all the atoms of the ring, which increases the strength of the bonds.

Aroostook War, brief conflict, 1838–39, between the U.S. and Canada concerning the Maine–New Brunswick border. An agreement (March 1839) averted full-scale war. The boundary was settled (1842) by the WEBSTER-ASHBURTON TREATY.

Arp, Jean or **Hans,** 1887–1966, French sculptor and painter. A member of avant-garde groups in Europe, Arp created abstract, organic, witty works in various media. A monumental wood relief (1950) is at Harvard Univ.

Arrhenius, Svante August [ärā'nēəs], 1859–1927, Swedish chemist. For his theory of electrolytic dissociation, or ionization (see ACIDS AND BASES), he won the 1903 Nobel Prize in chemistry. He also investigated osmosis and toxins and antitoxins. He became (1905) director of the Nobel Institute for Physical Chemistry, Stockholm.

arrhythmia, disturbance in the rate or rhythm of the heartbeat. Arrhythmias can be symptoms of serious heart disorders. Tachycardia, or fast heartbeat, can be precipitated by caffeine, shock, or emotional upset. Bradycardia, or slow heartbeat, is often present in athletes. Flutters and fibrillations, rapid uncoordinated contractions of the heart muscles, usually accompany heart disorders. Atrial fibrillation may be associated with clot formation and a risk of embolus.

arrowroot, plant (genus *Maranta*) of the family Marantaceae, found mainly in warm, swampy forests of the Americas. The term *arrowroot* also applies to the easily digested starch obtained from the true, or West Indian, arrowroot (*M. arundinacea*). Plants from other families produce similar starches, e.g., East Indian arrowroot (GINGER family); Queensland arrowroot (Canna family); Brazilian arrowroot, or tapioca (SPURGE family); and Florida arrowroot, or sago.

arrowworm, common name for Chaetognatha, a phylum of slender-bodied, transparent marine invertebrate animals widely distributed, but preferring warm, shallow seas. Most are less than 1 in. (2.5 cm) long. The head is well-developed, with eyes and other sensory organs, grasping spines, teeth, and a protective hood. Arrowworms reproduce sexually.

Arsaces [är'səsēz], fl. 250 B.C., founder of the Parthian dynasty of the **Arsacids,** which ruled Persia from c.250 B.C. to A.D. 226.

arsenic (As), semimetallic element, first described by ALBERTUS MAGNUS in the 13th cent. Arsenic has several allotropic forms (see ALLOTROPY); the most stable is a silver-gray, brittle, crystalline solid that tarnishes in air. Arsenic ores include realgar and arsenopyrite. Combined with other elements, arsenic forms strong poisons; organic compounds of arsenic were widely used medically to treat syphilis and yaws. The metal is used in the manufacture of lead shot and semiconductor devices. See ELEMENT (table); PERIODIC TABLE.

Artaxerxes [är"təzûrk'sēz], name of several ancient Persian kings. **Artaxerxes I,** d. 425 B.C. (r.464–425 B.C.), was a member of the ACHAEMENID dynasty. Artaxerxes is the Greek form of the Persian name Ardashir. He succeeded his father, Xerxes I, in whose assassination he had no part. The later weakness of the Persian empire is commonly traced to his reign. **Artaxerxes II,** d. 358 B.C. (r.404–358 B.C.), was the son and successor of DARIUS II. CYRUS THE YOUNGER attempted to assassinate him but was crushed (401 B.C.). During his reign the provinces of the empire became restless. His son, **Artaxerxes III,** d. 338 B.C. (r.358–338 B.C.), gained the throne by a general massacre of his brother's family. Throughout his reign he continued a policy of terror, and he was finally poisoned by one of his ministers.

art deco, design style popular during the 1920s and 30s, characterized by slender forms, straight lines, and a sleekness expressive of "modern" technology. The style regained popularity in the 1970s and 80s.

Artemis, in Greek mythology, goddess of the hunt. She was the daughter of ZEUS and Leto and the twin sister of APOLLO. Artemis is associated with chastity, marriage, children, wildlife, and, as a complement to the sun god Apollo, with the moon. The Romans identified her with DIANA.

arteriosclerosis, general term for a condition characterized by thickening, hardening, and loss of elasticity of the walls of the arteries. In its most common form, atherosclerosis, fatty deposits,

The key to pronunciation appears on page xiii.

e.g., CHOLESTEROL, build up on the inner artery walls; in some cases calcium deposits also form. The blood vessels narrow, and blood flow decreases; THROMBOSIS, HEART DISEASE, and STROKE may result. Surgical treatment is sometimes effective, but there is no specific cure. A low-cholesterol diet and control of predisposing factors, such as HYPERTENSION, smoking, DIABETES, and obesity, are usually recommended.

artesian well, deep well drilled into an inclined aquifer (layer of water-bearing porous rock or sediment), where water is trapped under pressure between impervious rock layers. When a well is drilled into the aquifer through the overlying impervious rock, pressure forces water to rise in the well. Artesian water is usually desirable for drinking. In North America, artesian systems supply water to the Great Plains and many East Coast cities. The largest artesian system is in Australia.

Artevelde, Jacob van, c.1290–1345, Flemish statesman. A conflict between the count of Flanders and EDWARD III of England cut off English wool imports, ruining the Flemish weavers and merchants. Ghent rebelled, and Artevelde, as head of its government, signed a commercial treaty with England (1338). In 1340 he had the Flemish towns recognize Edward as king of France and thus suzerain of Flanders. He was killed in a riot. His son, **Philip van Artevelde,** 1340–82, led a weavers' revolt against the count of Flanders (1381), taking Bruges and most of Flanders before being killed by the French.

arthritis, inflammation of one or more joints of the body, usually producing pain, redness, and stiffness. It disables more people than any other chronic disorder. A common form is osteoarthritis, a degenerative disease of the joints that commonly occurs with aging. Rheumatoid arthritis, an AUTOIMMUNE DISEASE of unknown cause, is a progressive, crippling joint disorder most common in women between 25 and 50. Symptomatic treatment for arthritis includes use of heat, physical therapy, and ASPIRIN or anti-inflammatory drugs such as IBUPROFEN; remission of symptoms can sometimes be achieved with gold salts, penicillamine, and short-term CORTISONE. Orthopedic surgery, including artificial joint implantation, may be done in severe cases. See also GOUT.

arthropod, invertebrate animal, having a segmented body covered by a jointed exoskeleton with paired jointed appendages; member of the phylum Arthropoda, the largest and most diverse invertebrate phylum. The exoskeleton is periodically shed (molted) to permit growth and METAMORPHOSIS. Arthropods make up more than 80% (800,000) of all known animal species; they include TRILOBITES, HORSESHOE CRABS, ARACHNIDS, SEA SPIDERS, CRUSTACEANS, INSECTS, CENTIPEDES, and MILLIPEDES.

Arthur, king of Britain: see ARTHURIAN LEGEND.

Arthur, dukes of Brittany. **Arthur I,** 1187–1203?, duke 1196–1203?, was the son of Geoffrey, fourth son of HENRY II of England. After the death of RICHARD I of England, Arthur's claim to the English crown was passed over in favor of his uncle JOHN. Arthur allied himself with PHILIP II of France, who invested Arthur with Richard's fiefs in France. Fighting ensued, and Arthur was captured (1202) by John, who is suspected of murdering him. Arthur's story is told in Shakespeare's *King John.* **Arthur III,** 1394–1458, duke 1457–58, was known as comte de Richemont before his accession. As constable of France in the HUNDRED YEARS WAR, he captured (1436) Paris from the English and helped to regain Normandy for France.

Arthur, Chester Alan, 1830?–86, 21st president of the U.S. (1881–85); b. Fairfield, Vt. A lawyer, he was appointed (1871) collector of the port of New York. His removal (1878) by Pres. HAYES angered Sen. Roscoe CONKLING and other New York Republicans, but they were placated in 1880 by Arthur's nomination as vice president on the Republican ticket with James A. GARFIELD. Succeeding to the presidency after Garfield's assassination, Arthur had an honest, efficient, and dignified administration. He supported the civil service reform act of 1883 and vetoed a Chinese exclusion bill that violated a treaty with China.

Arthurian legend, mass of stories, popular in medieval lore, concerning King Arthur of Britain and his knights. The earliest reference to Arthur is in the Welsh poem *Gododdin* (c.600), although later sources place him at the Battle of Mt. Badon, mentioned by Gildas c.540. In Nennius (c.800) he appears as a Celtic victor over Saxon invaders. The legend was greatly elaborated by GEOFFREY OF MONMOUTH in his *Historia* (c.1135), which represents Arthur as the conqueror of Western Europe. Wace's *Roman de Brut* (c.1155) infuses the story with the spirit of chivalric romance, and the *Brut* of LAYAMON (c.1200) pictures Arthur as national hero. The 12th-cent. French poet CHRÉTIEN DE TROYES introduced in *Perceval* the theme of the quest for the Holy Grail. GOTTFRIED VON STRASSBURG, a medieval German poet, wrote the first great treatment of the TRISTRAM AND ISOLDE story. The Middle English *Sir Gawain and the Green Knight* (c.1370) embodied the ideal of chivalric knighthood. Sir Thomas MALORY's *Morte d'Arthur* (1485) was the last important medieval treatment. Since Malory, the legend has appeared in the work of TENNYSON, SWINBURNE, William MORRIS, T.H. WHITE, and others. It is generally accepted that the Arthurian legend developed out of Celtic mythology, as collected in the Welsh MABINOGION. The stories may have coalesced around Irish hero tales and were probably carried to the Continent by Breton minstrels before 1000. Despite innumerable variations, the basic story has remained the same. Arthur, the illegitimate son of Uther Pendragon, king of Britain, wins recognition after his father's death by removing a sword from a stone. Merlin, the court magician, then reveals his parentage. Reigning at CAMELOT, Arthur proves a mighty and noble king. He possesses the great sword Excalibur, given him by the mysterious Lady of the Lake. His enemies include his sorceress sister, Morgan le Fay, and Sir Mordred, usually his nephew, who fatally wounds him. The dying king is borne away to Avalon, whence he will someday return. Among the knights in Arthur's court are Sir Launcelot and Sir Tristram, both involved in illicit and tragic unions, Launcelot with Arthur's wife, Guinevere, and Tristram with Isolde, the wife of his uncle, King Mark. Other figures include Sir Pelleas and Sir Gawain; Sir Galahad, Launcelot's son; Sir Percivale (or Parsifal); and other knights of the Round Table.

artichoke, name for two plants of the COMPOSITE family, both having edible parts. The French, or globe, artichoke (*Cynara scolymus*), of S Europe, is a thistlelike plant whose immature, globular flower heads are used as vegetables; only the lower parts of the fleshy bracts ("leaves") and the center ("heart") are eaten. The other artichoke plant is the JERUSALEM ARTICHOKE.

artificial insemination, technique of artificially injecting sperm-containing semen from a male into a female to cause pregnancy. The technique is widely used in the propagation of cattle, especially to produce many offspring from one prize bull. Artificial insemination is used in humans when normal fertilization cannot be achieved, as with STERILITY or IMPOTENCE in the male or anatomical disorders in the female (see IN VITRO FERTILIZATION). When combined with centrifugal separation of the sperm, it can also to used to select the sex of an offspring.

artificial intelligence (AI), the use of COMPUTERS to model the behavioral aspects of human reasoning and learning. Research in AI is concentrated in some half-dozen areas. In *problem solving,* one must proceed from a beginning (the initial state) to the end (the goal state) via a limited number of steps; AI here involves an attempt to model the reasoning process in solving a problem, such as the proof of a theorem in EUCLIDEAN GEOMETRY. In *game theory* (see GAMES, THEORY OF), the computer must choose among a number of possible "next" moves to select the one that optimizes its probability of winning; this type of choice is analogous to that of a chess player selecting the next move in response to an opponent's move. In *pattern recognition,* shapes, forms, or configurations of data must be identified and isolated from a larger group; the process here is similar to that used by a doctor in classifying medical problems on the basis of symptoms. *Natural language processing* is an analysis of current or colloquial language usage without the sometimes misleading effect of formal grammars; it is an attempt to model the learning process of a translator faced with the phrase "throw mama from the train a kiss." CYBERNETICS is the analysis of the communication and control processes of biological organisms and their relationship to mechanical and electrical systems; this study could ultimately lead to the development of "thinking" robots (see ROBOTICS). *Machine learning* occurs when a computer improves its performance of a task on the basis of its programmed application of AI principles to its past performance of that task. An outgrowth of AI research has been the EXPERT SYSTEM,

a computer program that uses AI techniques to predict the outcome of events or solve problems.

artificial kidney: see DIALYSIS.

artificial life support, systems that use medical technology to aid, support, or replace a vital function of the body that has been seriously damaged. Such techniques include artificial pacemakers, dialysis machines, and respirators. The use of life-support systems to prolong the life of a patient who has suffered apparently irreversible damage to a vital organ system may raise such ethical issues as the quality of life, EUTHANASIA, and the right to die.

artificial respiration, any measure that causes air to flow in and out of a person's lungs when natural breathing is inadequate or ceases. Respiration can be taken over by mechanical devices, e.g., a respirator. In emergency situations, mouth-to-mouth (or, for a small child, mouth-to-nose) procedures are often used. The victim's mouth is cleared of foreign material, and the head is tilted back. Holding the nostrils tightly shut, the person administering artificial respiration places his (or her) mouth over that of the victim and blows air into the lungs, allowing for exhalation after each breath. Twelve vigorous breaths are administered per minute for an adult, twenty shallow breaths per minute for a child.

Artigas, José Gervasio [ärtē'gäs], 1764–1850, Uruguayan independence leader. He joined (1811) the revolution against Spanish rule and became leader in the Banda Orientale (now URUGUAY). Artigas agitated against the territory's annexation (1820) by Brazil and went into exile.

artillery, a term now applied to heavy firearms, as distinguished from SMALL ARMS. It came into use in the mid-14th cent. with the introduction in Europe of GUNPOWDER, which had been discovered many centuries earlier in China. First employed mainly against fortifications, artillery was increasingly used in the field from the early 17th cent. It was characteristically smooth-bore and muzzle-loaded, firing solid, round shot, until the late 19th cent., when breech-loaded, rifled, and shell-firing artillery became standard. Modern artillery includes a variety of long-range guns that fire their shells with rapid muzzle-velocity in a low arc; *howitzers,* which fire on a high trajectory at relatively nearby targets; *antiaircraft guns,* which fire rapidly and at high angles; armor-piercing *antitank guns;* and many field-artillery pieces and small tactical rockets used in support of infantry and other ground operations. Mobility has become a key factor in the usefulness of heavy firearms, most of which now either are self-propelled or can be towed.

art nouveau, decorative art movement begun in Western Europe that lasted from the 1880s to World War I. It was characterized by a richly ornamental, asymmetrical style of whiplash linearity, reminiscent of twining plant tendrils, and was most successful in furniture, jewelry, and book design and illustration. Its themes were symbolic and often erotic. Chief exponents included the illustrators Aubrey BEARDSLEY and Walter Crane in England; the architects Henry van de Velde and Victor HORTA in Belgium; the architect Hector Guimard and the jewelry designer René Lalique in France; the painter Gustav KLIMT in Austria; the architect Antonio GAUDÍ in Spain; the illustrator Otto Eckmann and the architect Peter BEHRENS in Germany; and the glassware designer Louis C. TIFFANY and the architect Louis SULLIVAN in the U.S.

arts and crafts, term for the field of the designing and hand fabrication of functional and decorative objects. The term was invented in late-19th-cent. England to refer to a movement, begun by William MORRIS and others, to revive the hand techniques almost obliterated by industrialization.

Aruba, island (1992 est. pop. 64,700), 69 sq mi (179 sq km), internally self-governing dependency of the Netherlands, in the Leeward Islands off the coast of Venezuela. Oranjestad is the capital. Tourism, oil refining, and offshore financial services are the mainstays of the economy. Part of the NETHERLANDS ANTILLES until 1986 and still linked with them economically, Aruba is scheduled to become independent in 1996.

arum, common name for the Araceae, a family of chiefly tropical and subtropical herbaceous herbs. The characteristic inflorescence consists of a single fleshy spike (spadix), which bears small flowers, and a typically showy flowerlike bract or modified leaf (spathe) surrounding the spadix. The largest plant inflorescence known belongs to the Sumatran krubi (*Amorphophallus titanum*) of this family; its spadix reaches a height of 15 ft (4.6 m). Among other members of the family are the decorative arum lily, or calla (genus *Zantedeschia*); the smaller, showy water arum, or wild calla (*Calla palustris*); the climbing shrub philodendron (genus *Philodendron*), a popular houseplant; and the decorative *Anthurium* and *Caladium.* Some species in this family have large, starchy edible rootstocks (corms). A major food source in the Pacific and E Asia, the corms of elephant's ear, or taro (*Colocasia esculenta*), are the main ingredient of poi. Corms of the jack-in-the-pulpit, or Indian turnip (*Arisaema triphyllum*), and tuckahoe, or Indian bread (*Petandrum* and *Orontium* species) were eaten by natives of E North America.

Aryans, speakers of Indo-European or Indo-Iranian languages. In the 2d millennium B.C., waves of warlike nomadic Aryan tribes spread from S Russia and Turkistan through Mesopotamia and Asia Minor. They invaded India c.1500 B.C., colonizing the PUNJAB. The subsequent Indo-European period was characterized by a pastoral-agricultural economy and the use of bronze objects and horse-drawn chariots. In the 20th cent., NAZI racist propaganda idealized the Aryan conquest and claimed German descent from the Aryans.

As, chemical symbol of the element ARSENIC.

asbestos, common name for any of a group of fibrous silicate minerals resistant to acid and fire. Asbestos usually occurs as veins in rocks and seems to be a product of METAMORPHISM. Chrysotile asbestos ($H_4Mg_3Si_2O_9$), a form of SERPENTINE, the most important commercial asbestos, has curly fibers. Amphibole, the other main type, has needlelike fibers. Asbestos is produced chiefly in Canada; asbestos products include brake and clutch linings, water pipe, and roofing materials. Studies have shown that amphibole asbestos particles in the air can cause lung cancer and the lung disease asbestosis, and many former and all new uses of asbestos in the U.S. have been banned.

Asbury, Francis, 1745–1816, American Methodist bishop; b. England. Arriving as a missionary in 1771, he promoted the CIRCUIT RIDER system as being particularly well suited to American frontier conditions. He became a bishop in 1784.

Ascension, volcanic, largely barren island (1991 est. pop. 1,100), 34 sq mi (88 sq km), in the S Atlantic, part of the British colony of SAINT HELENA. Georgetown is the main settlement. Ascension is the site of a U.S. missile- and satellite-tracking station and space research station.

Ascension, name given to the departure of JESUS from earth. **Ascension Thursday,** a major feast for most Christians, commemorates the event and occurs on the 40th day after Easter.

Asch, Sholem, 1880–1957, American Yiddish novelist and playwright; b. Poland. His writings often depict Jewish life in Europe and the U.S., as in *Three Cities* (1933) and *East River* (1946). Later works, e.g., *Mary* (1949), reflect the common spiritual heritage of Jews and Christians.

Ascham, Roger [ăs'kəm], 1515–68, English humanist. A leading intellectual figure of the Tudor period, he tutored Princess Elizabeth (ELIZABETH I) in the classics and later served as her secretary; he was also Latin secretary to MARY I. He wrote *Toxophilus* (1557), an essay on archery, and *The Scholemaster* (1570), a treatise on the teaching of Latin.

ASCII (American Standard Code for Information Interchange), set of codes used to represent letters, numbers, control characters, and a few symbols, originally designed for teletype systems and widely used in COMPUTERS. The seven-digit (or bit) binary number (see BINARY SYSTEM) set has 128 codes. IBM increased the number of characters to 256 (the IBM extended-ASCII set) by using eight-bit codes when it introduced its personal computer (1981); other operating systems use different eight-bit sets.

Asclepius [ăsklē'pēəs], legendary Greek physician and god of medicine; son of APOLLO and Coronis. The sick were treated in his temples; the serpent and cock were sacred to him.

ascorbic acid: see VITAMIN (table).

ASEAN: see ASSOCIATION OF SOUTHEAST ASIAN NATIONS.

Asgard, in Norse mythology, home of the gods. Also called Aesir, it consisted of luxurious palaces and halls. One of the most beautiful was Valhalla, the hall of dead heroes.

Ásgeirsson, Ásgeir [äs'kĕrsôn], 1894–1972, president of ICELAND (1952–68). He was a member of parliament (1923-52), held vari-

The key to pronunciation appears on page xiii.

ous cabinet posts, and served (1946–52) as governor of the International Monetary Fund.

ash, tree or shrub (genus *Fraxinus*) of the OLIVE family, mainly of north temperate regions. The ashes have small clusters of greenish flowers and long-winged, wind-dispersed fruits. The white ash (*F. americana*) is a source of durable hardwood timber used for sporting goods, furniture, and tool handles; the blue ash (*F. quadrangulata*) provides a blue dye. The mountain ash and prickly ash are not true ashes.

Ashanti or **Asante,** historic and present-day region in central GHANA, inhabited by the Ashanti, one of Ghana's major ethnic groups. In the 17th cent. the Ashanti confederation was forged, with its capital at KUMASI and with the chieftain of the Oyoko clan as king. Ashanti came into conflict with the British colonies along the coast, and the Anglo-Ashanti wars (19th cent.) resulted in the dissolution of the confederation in 1896. In 1901 Ashanti became part of the British colony of the Gold Coast. The people are noted for their goldwork and colorful kente cloth. (See also GHANA, ancient empire.)

Ashbery, John, 1927–, American poet and art critic; b. Rochester, N.Y. His poems are experimental, narrative, and strongly visual. His collections include *Some Trees* (1956), *Self-Portrait in a Convex Mirror* (1975; Pulitzer), *Shadow Train* (1981), and *April Galleons* (1987).

ashcan school: see EIGHT, THE.

Ashe, Arthur (Robert), 1943–93, American tennis player; b. Richmond. He was the first African-American man to win the U.S. Open (1968), the Australian Open (1970), and Wimbledon (1975). In the late 1960s he became active in human rights issues, particularly opposing racial discrimination. He also campaigned for AIDS-related causes after his contraction of AIDS became known in 1992. He wrote *A Hard Road to Glory* (1988), a history of blacks in sports.

Asher: see ISRAEL, TRIBES OF.

Ashgabat or **Ashkhabad,** city (1989 pop. 398,000), capital and largest city of Turkmenistan, S central Asia. Ashgabat has textile, motion picture, and machine-building industries. Founded by Russia in 1881 as a fort, the city was virtually destroyed in 1948 by an earthquake.

Ashton, Sir Frederick, 1906–1988, British choreographer and dancer; b. Ecuador. He studied in England with Léonid MASSINE and Maria Rambert. He joined (1935) the Sadler's Wells Ballet (now the Royal Ballet) as choreographer and later became director (1963–70). His precise, lyrical works include *Cinderella, Ondine,* and *A Month in the Country.*

Ashurbanipal: see ASSURBANIPAL.

Ashurnasirpal II [ä"shŏŏrnä'zĭrpäl], d. 860? B.C., king of ancient ASSYRIA (884–860? B.C.). He conquered considerable territory and helped to create a centralized state.

Ash Wednesday: see LENT.

Asia, the world's largest continent, c.17,139,000 sq mi (44,390,000 sq km), joined in the west with Europe (which may be considered a peninsula of Asia) to form the great Eurasian land mass. It ranges in elevation from 29,023 ft (8,846 m) at Mt. EVEREST, the world's highest mountain, to 1,292 ft (394 m) below sea level at the DEAD SEA, the world's lowest point. It is traversed from east to west by a massive central highland region containing the Tibetan Plateau, the HIMALAYAS, the HINDU KUSH, and other great mountain systems. The continent has every type of climate, from tropical to polar and from desert to rainy. The countries of Asia are Afghanistan, Armenia, Azerbaijan, Bahrain, Bangladesh, Bhutan, Brunei, Cambodia, China, Cyprus, Georgia, India, Indonesia, Iran, Iraq, Israel, Japan, Jordan, Kazakhstan, North Korea, South Korea, Kuwait, Kyrgyzstan, Laos, Lebanon, Malaysia, the Maldives, Mongolia, Myanmar, Nepal, Oman, Pakistan, the Philippines, Qatar, Asian Russia, Saudi Arabia, Singapore, Sri Lanka, Syria, Taiwan, Tajikistan, Thailand, Asian Turkey, Turkmenistan, the United Arab Emirates, Uzbekistan, Vietnam, and Yemen; other political units are Hong Kong and Macao (see separate articles). Asia was the site of some of the world's earliest civilizations and today contains nearly 60% of the world's population. Some of the world's greatest population densities are found in S and E Asia, particularly in the great alluvial river valleys of the GANGES, in India, and the CHANG (Yangtze) and HUANG HE, in China.

Asia Minor, peninsula, W Asia, forming the Asian part of Turkey. Most of the peninsula is occupied by the Anatolian plateau, which is crossed by numerous mountains interspersed with lakes. The first civilization established there (c.1800 B.C.) was that of the HITTITES. The site of TROY and other ancient cities, Asia Minor was subjugated by many invaders, including the Persians, Macedonians, Romans, and Crusaders. Conquered by the Turks between the 13th and 15th cent. A.D., it was part of the OTTOMAN EMPIRE until the establishment of modern Turkey after WORLD WAR I.

Asian drama. Of the three major Asian dramas—Sanskrit, Chinese, Japanese—the oldest is Sanskrit (fl. 1500 B.C.–A.D. 1100).

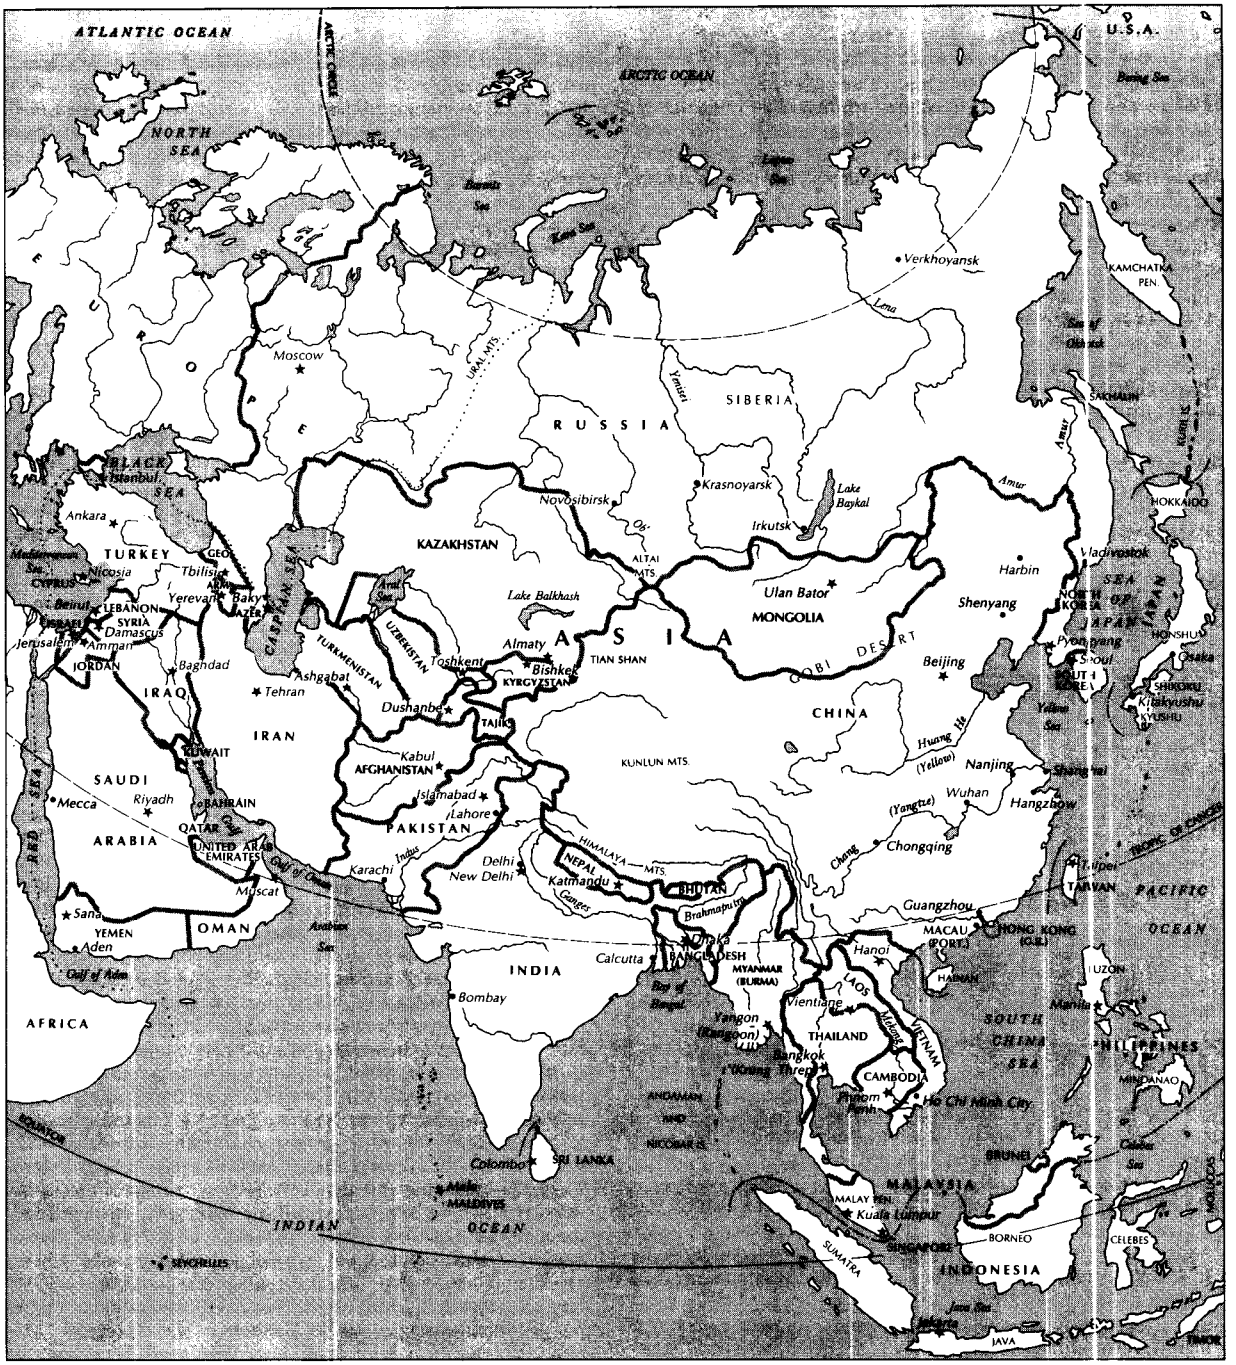
Sanskrit drama. Sanskrit plays were written for the aristocracy, and involve music, dance, and highly stylized gesture and costume. They are full of religious and supernatural elements. Love and heroism are the most common sources of emotion, with a frequent infusion of awe produced by the supernatural. Indeed, some plays center on the supernatural, while others treat political and historical topics and ordinary people. The language of Sanskrit drama alternates between prose and lyric poetry, and Sanskrit, a literary language, is used only by important characters—inferior characters speak Prakrit, the vernacular. Few Sanskrit plays survive. The earliest known playwright was Bhasa (c.3d cent. A.D.); among the most renowned were KALIDASA, Bhavabhuti (c.8th cent.), and Harsha (7th cent.).

Chinese drama. Written for a popular audience, Chinese drama developed in the Yüan dynasty (1260–1328) from the story cycles of professional storytellers. Acting style, character types, stage properties, and other features are highly conventionalized; until the 19th cent. lines were sung or declaimed. There is, however, great narrative freedom in the plays. Although Chinese drama avoids TRAGEDY, it is frequently infused with pathos. Chinese drama is more social and less concerned with romantic love than Sanskrit, and it often propounds Confucian ethics (see CONFUCIANISM). Among the masterpieces of Chinese drama are *The Western Chamber* by Wang Shi-fu (13th cent.), *The Peony Pavilion* by T'ang Hsien-tsu (16th cent.), and *The Palace of Long Life* by Hung Sheng (17th cent.). After World War I a realistic, spoken drama developed, but under the People's Republic of China the theater (except on Taiwan) has usually devoted itself to propaganda.

Japanese drama. Japanese Nō (or Noh) drama contrasts starkly with Sanskrit and Chinese drama. Short and slow-paced, almost plotless, and tragic in mood, Nō plays are highly stylized in performance, and their language is highly symbolic. Performances integrate song, speech, music, dancing, and mime. A striking feature is the use of wood masks by principal, old, and women characters (Nō uses only male actors). Nō's invention is attributed to Kanami Kiyotsugu (1333–84), while his son Zeami Motokiyo (1363–1443) further refined Nō and wrote such classics as *The Well-Curb* and *The Lady Aoi.* In the 16th and 17th cent. two forms of drama developed that have since surpassed the difficult Nō in popularity: the puppet theater and Kabuki. Both also integrate music, movement, and language and, like Nō, Kabuki uses only male actors. The puppet theater and Kabuki, however, place greater emphasis on excitement and conflict in the plot. The most popular Kabuki play is *The Treasury of Loyal Retainers,* a tale of revenge. The puppet theater reached its peak in the 18th cent. in the work of CHIKAMATSU. In the 20th cent. many Western plays have been produced in Japan, but their influence on Japanese drama has not yet been significant. See also CHINESE LITERATURE; JAPANESE LITERATURE; SANSKRIT LITERATURE.

Asimov, Isaac, 1920–92, American biochemist and author; b. Russia. He taught biochemistry at Boston Univ., but he was best known for his many works of science fiction, e.g., *The Foundation Trilogy* (1951–53).

Asmara or **Asmera,** city (1988 est. pop. 319,000), capital of Eritrea. A commercial and industrial center, it is connected by rail with the Red Sea port of Massawa (Mesewa). Manufactures include textiles and beer. The city was occupied (1889) by the Italians, became (1900) the capital of their colony of Eritrea, and was a base for their invasion of Ethiopia (1935–36). It was taken by the British in 1941. Ethiopia annexed Eritrea in 1962; Asmara was the last part of



Eritrea wrested (1991) by Eritrean guerrillas from Ethiopian control. In 1993 the city became the capital of an independent Eritrea.

Asmoneans: see MACCABEES.

Asoka, d. c.232 B.C., Indian emperor (c.273–c.232 B.C.) of the MAURYA dynasty. One of the greatest of the ancient rulers, he brought nearly all of INDIA together. However, he sickened of war, turned (c.257 B.C.) to BUDDHISM, and thereafter professed nonviolence. He sent Buddhist missionaries as far afield as Greece and Egypt, and was largely responsible for transforming Buddhism into a world religion.

asp, popular name for several species of VIPER, one of which, the European asp (*Vipera aspis*), is native to S Europe. It is also a name for the Egyptian COBRA.

asparagus, perennial garden vegetable (*Asparagus officinalis*) of the LILY family, native to the E Mediterranean area, cultivated from antiquity and now grown in much of the world. Its green stems function as leaves, and the true leaves are reduced to scales. Its edible shoots are cut in the spring. Related species, the asparagus fern (*A. plumosus*) and smilax (*A. asparagoides*), are used for decoration.

Aspen, city (1990 pop. 5,049), alt. 7,850 ft (2,390 m) seat of Pitkin co., S central Colo., on the Roaring Fork R.; inc. 1881. Once a booming silver-mining town, it has been transformed into a modern, cosmopolitan ski resort. The Aspen Inst. for Humanistic Studies and Aspen Music School (which holds an annual music festival) are located there.

aspen: see WILLOW.

asphalt, brownish-black substance used in road making, roofing,

and waterproofing. A naturally occurring mixture of HYDROCARBONS, it is commercially obtained as a residue in the DISTILLATION or refining of PETROLEUM. Asphalt varies in consistency from a solid to a semisolid, melts when heated, and has great tenacity. Used in paints and varnishes, it imparts an intense black color. Crushed asphalt rock, a natural mixture of asphalt, sand, and limestone, is used as road-building material.

asphodel, hardy, stemless herbs (genera *Asphodelus* and *Asphodeline*) of the LILY family, native to India and the Mediterranean. Both have showy flower spikes. Other asphodels include the false asphodel (genus *Tofieldia*) and the mountain asphodel, or turkeybeard (*Xerophyllum asphodeliodes*).

Aspin, Les(lie, Jr.), 1938–, U.S. politician and government official; b. Milwaukee, Wis. A Democrat, he was first elected to the U.S. House of Representatives from Wisconsin in 1970. In 1985 he became chairman of the House armed services committee. Aspin served (1993–94) as secretary of defense under Pres. CLINTON.

aspirin, acetyl derivative of salicylic acid, commonly used to lower fever; relieve headache, muscle, and joint pain; and reduce inflammation, particularly that caused by rheumatic fever and arthritis. Known side effects are nausea, vomiting, diarrhea, and gastrointestinal bleeding. ACETAMINOPHEN (Tylenol) is often substituted for aspirin. Because of aspirin's ability to inhibit the formation of blood clots, it is also used in low doses to prevent heart attack and stroke. See also ANALGESIC.

Asquith, Herbert Henry: see OXFORD AND ASQUITH, HERBERT HENRY ASQUITH, 1ST EARL OF.

ass, hoofed, herbivorous MAMMAL (genus *Equus*), related to, but smaller than, the HORSE. Unlike the horse, the ass has a large head, long ears, and small hooves. The two living species are the sandy-colored wild Asian ass (*E. hemonius*), now endangered, and the larger, gray African ass (*E. asinus*), from which domestic donkeys are descended.

Assad, Hafez al-, 1928–, president of SYRIA (1971–). He was defense minister before leading the 1970 military coup that made him premier and then president. A strong anti-Zionist, he is a major supporter of the PALESTINE LIBERATION ORGANIZATION. In 1976 he sent Syrian troops as a peacekeeping force to LEBANON, where they have become a force in Lebanese politics.

Assamese [ăs″əmez′], language belonging to the Indic group of the Indo-Iranian subfamily of the Indo-European family of languages. See LANGUAGE (table).

assault, in law, intentional attempt to use violence to do bodily harm to another. The victim must reasonably believe the perpetrator capable of such violence. See BATTERY.

assemblage: see COLLAGE.

Assemblies of God: see PENTECOSTALISM.

Assis, Joaquim Maria Machado de: see MACHADO DE ASSIS, JOAQUIM MARIA.

Association of Southeast Asian Nations (ASEAN), organization established by the Bangkok Declaration (1967), linking the nations of Indonesia, Malaysia, Philippines, Singapore, and Thailand; Brunei joined in 1984. Headquarters are in Jakarta. It seeks to promote socioeconomic progress and regional stability through cooperation in banking, trade, technology, agriculture, industry, and tourism.

associative law, in mathematics, law holding that for a given operation combining three quantities, two at a time, the initial pairing is arbitrary. Addition and multiplication are associative; thus $(a + b) + c = a + (b + c)$ and $(a \times b) \times c = a \times (b \times c)$ for any three members a, b, c. Subtraction and division, however, are not associative.

assonance: see RHYME.

Assurbanipal or **Ashurbanipal** [ä″sŏŏrbä′nēpäl, ä″shŏŏr–], d. 626? B.C., king of ancient ASSYRIA (669–633 B.C.), son and successor of Esar-Haddon. He was the last of the great kings of Assyria. Under him Assyria reached the height of sumptuous living, and art and learning flourished. A few years after his reign ended, Assyria succumbed to the Medes and the Persians. His great expenditures in wars to preserve the state contributed to its collapse.

Assyria, ancient empire of W Asia, originating around the city of Ashur, on the upper Tigris R., S of its later capital, NINEVEH. At first a small Semitic city-state, Assyria flourished briefly under Tiglathpileser I (d. c.1074 B.C.). Its real importance, however, began in the 9th cent. with the conquests of ASHURNASIRPAL II, who set up an imperial administration. Later kings such as Shalmaneser III, Tiglathpileser III, and Sargon gained hegemony in the Middle East. SENNACHERIB consolidated their holdings, and Esar-Haddon (r.681–668 B.C.) defeated the Chaldaeans and conquered Egypt. Under his successor, ASSURBANIPAL (r.669–633 B.C.), Assyria reached its height of learning, art, and splendor. But Egypt broke away, and Assyria's decline was rapid. Soon after Assurbanipal's death Nineveh was sacked (612 B.C.) and Assyria was absorbed, first by Babylonia and then by the Persian empire.

Assyrian art. An Assyrian artistic style, distinct from that of BABYLONIA, began to emerge c.1500 B.C. and lasted until the fall of NINEVEH in 612 B.C. It took the form of precisely delineated, polychrome carved stone reliefs. These concerned royal affairs, chiefly hunting and war making. Predominance was given to animal forms, particularly horses and lions, which are represented in great detail. Human figures are comparatively rigid and static, but also minutely detailed. Among the best-known Assyrian reliefs are the lion-hunt alabaster carvings showing ASHURNASIRPAL II (9th cent. B.C.) and ASSURBANIPAL (7th cent. B.C.), both of which are in the British Museum. Guardian animals, usually lions and winged beasts with bearded human heads, were sculpted partially in the round for fortified royal gateways. Exquisite examples of Assyrian relief carving may be seen at the British and Metropolitan museums.

Assyrian language, Hamito-Semitic language of ancient times, in the Akkadian group. See LANGUAGE (table).

Astaire, Fred, 1899–1987, American dancer; b. Omaha, Nebr., as Frederick Austerlitz. After dancing in VAUDEVILLE with his sister, Adele, he made many films, often with Ginger Rogers, in which he displayed an elegant style of ballroom dance and tap. He also danced in movies with Eleanor Powell, Rita Hayworth, and Cyd Charisse, and on television with Barrie Chase. His influence on dancing is incalculable. Some classical dancers, notably NUREYEV and BARYSHNIKOV, have acknowledged Astaire's influence on them.

Astarte, Semitic goddess of fertility and love. Dominant in ancient Eastern religions, she was the most important goddess of the Phoenicians, corresponding to the Babylonian ISHTAR and the Greek Aphrodite. See also GREAT MOTHER OF THE GODS.

astatine (At), semimetallic radioactive element, discovered in 1931 by Fred Allison and E.J. Murphy. The heaviest known HALOGEN, it is believed to be similar to iodine in its chemical properties. Astatine-211 (half-life: 7.21 hr) is used as a radioactive tracer because it collects in the thyroid gland. See ELEMENT (table); PERIODIC TABLE.

aster, widely distributed, wild and cultivated perennial flowering plants (genus *Aster*) of the COMPOSITE family. Most species have white, pink, blue, or purple flowers that bloom in the fall. The China aster (*Callistephus chinensis*), the common aster of florists and flower gardens, and the golden asters (genus *Chrysopsis*) are in the same family.

asteroid, planetoid, or **minor planet,** small, usually irregularly shaped body orbiting the sun, most often at least partially between the orbits of Mars and Jupiter. Ceres is the largest asteroid (diameter: 470 mi/750 km) and was the first discovered (1801). Of the more than 2,000 asteroids known, most have been discovered photographically; their paths appear as short lines in a time exposure. Asteroids may be fragments of a planet shattered in the remote past; material that failed to condense into a single planet; or material from the nuclei of old comets. The Trojan asteroids revolve in the same orbit as Jupiter, kept by perturbation effects in two groups 60° ahead of and 60° behind Jupiter. A Trojan asteroid has also been found in Mars' orbit. Some asteroids, such as the Apollo asteroids, cross the earth's orbit; they may be the cause of the earth's several meteorite craters and are a possible location for future mining. The space probe Galileo, which passed near and photographed Gaspra (1991) and Ida (1993), provided the first close images of an asteroid.

asthma, chronic respiratory disorder characterized by labored breathing and wheezing resulting from obstructed and constricted air passages. Although asthma usually results from an allergic reaction (see ALLERGY), specific allergens are not always identifiable. Illness and stress may precipitate an attack. The disorder may be

controlled through the use of inhaled or oral bronchodilators (albuterol, theophylline), breathing exercises, and, if possible, the identification and avoidance of allergens.

astigmatism, visual defect resulting from irregular curvature of the cornea or lens, preventing light rays from converging on the retina (see EYE). With astigmatism, some light rays focus on the retina, while others focus in front of or behind it. Congenital or caused by disease or injury, astigmatism can occur in addition to FARSIGHTEDNESS and NEARSIGHTEDNESS. It may be alleviated with corrective lenses.

Astor, John Jacob, 1763–1848, American merchant; b. Germany. At 21 he arrived in Baltimore, penniless; later he opened a small fur shop in New York City. Shrewd and ambitious, he became a leader of the China trade. His AMERICAN FUR COMPANY (1808) exercised a virtual monopoly on the fur trade in U.S. territories, and at his death Astor was the wealthiest person in the country. His great-grandson **William Waldorf Astor, 1st Viscount Astor,** 1848–1919, b. N.Y.C., was an American-British financier. In 1890 he moved to England, where he contributed huge sums to public causes. He was made a baron in 1916 and a viscount in 1917. His elder son, **Waldorf Astor,** 1879–1952, succeeded him as viscount and married **Nancy Witcher (Langhorne) Astor, Viscountess Astor,** 1879–1964, a British political leader who became the first woman to sit in PARLIAMENT. As a Conservative member (1919–45) she espoused temperance and reforms in women's and children's welfare, and in the 1920s she and her husband were leaders in the "Tory democracy" reform program.

astrolabe, instrument of ancient origin that measured altitudes of celestial bodies and determined their positions and motions. It typically consisted of a wooden or metal disk with the circumference marked off in degrees, suspended from an attached ring. Angular distances were determined by sighting with the alidade—a movable pointer pivoted at the disk's center—and taking readings of its position on the graduated circle. Skilled mariners used astrolabes up to the 18th cent. to determine latitude, longitude, and time of day.

astrology, form of DIVINATION based on the theory that movements of the celestial bodies (stars, planets, sun, and moon) influence human affairs and determine events. The Chaldaeans and Assyrians, believing all events to be predetermined, developed a nondeistic system of divination. The spread of astrological practice was arrested by the rise of CHRISTIANITY, with its emphasis on divine intervention and free will; but in the RENAISSANCE astrology regained popularity, in part due to rekindled interest in science and ASTRONOMY. Christian theologians attacked astrology, and in 1585 SIXTUS V condemned it. At the same time the work of KEPLER and others undermined astrology's tenets, although the practice has continued in the West. Astrology has been utilized by many Hindus for hundreds of years and continues to be relied upon in India today. One's horoscope is a map of the heavens at the time of one's birth, showing the positions of the heavenly bodies in the ZODIAC.

astronaut or **cosmonaut,** crew member on a manned spaceflight mission. The early astronauts and cosmonauts were generally trained aircraft test pilots; later astronauts and cosmonauts, however, have included scientists and physicians. As far as is possible, all conditions to be encountered in space, e.g., the physiological disorientation arising from weightlessness (see SPACE MEDICINE), are simulated in ground training. Using trainers and mock-ups of actual spacecraft, astronauts and cosmonauts rehearse every maneuver from liftoff to recovery; every conceivable malfunction and difficulty is anticipated and prepared for. Prominent Soviet and Russian cosmonauts include Yuri GAGARIN, Valentina TERESHKOVA, and Aleksei LEONOV. Prominent U.S. astronauts include Alan SHEPARD, John GLENN, Edward WHITE, Neil ARMSTRONG, Buzz ALDRIN, and John Young.

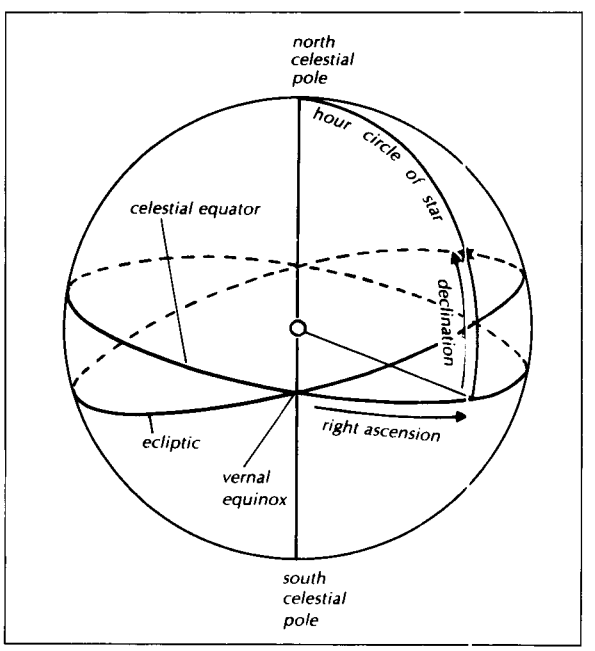
astronomical coordinate systems, four basic systems used to indicate the positions of celestial bodies on the celestial sphere. The latter is an imaginary sphere that has the observer at its center and all other celestial bodies imagined as located on its inside surface.

Equatorial. The celestial equator is the projection of the earth's EQUATOR onto the celestial sphere, and the celestial poles are the points where the earth's axis, if extended, intersects the celestial sphere. *Right ascension* (R.A.) is the angle (in hours, minutes, and seconds, with 1 h = 15°) measured eastward from the vernal EQUINOX to the point where the hour circle (the great circle passing through the celestial poles and the body) intersects the celestial equator. *Declination* is the angle (in degrees, minutes, and seconds, as are all other angles defined hereafter) measured north (+) or south (−) along the body's hour circle between the celestial equator and the body.

Horizon or Altazimuth. Altitude is the angle measured above (+) or below (−) the observer's celestial horizon (the great circle on the celestial sphere midway between the points—zenith and nadir—directly above and below the observer) to the body along the vertical circle passing through the body and the zenith. *Azimuth* is the angle measured along the celestial horizon from the observer's celestial meridian (the vertical circle passing through the nearest celestial pole and the zenith) to the point where the body's vertical circle intersects the horizon. The earth's rotation constantly changes a body's altitude and azimuth for an observer.

Ecliptic or Celestial. The ecliptic poles are the two points at which a line perpendicular to the plane of the ECLIPTIC and passing through the earth's center intersects the celestial sphere. *Celestial latitude* is the angle measured north (+) or south (−) from the ecliptic to the body along the latitude circle through the body and the ecliptic poles. *Celestial longitude* is the angle measured along the ecliptic from the vernal equinox to the latitude circle, in the same sense as R.A.

Galactic. The galactic equator is the intersection of the mean plane of our galaxy with the celestial sphere, and the galactic poles are the two points at which a line perpendicular to the mean galactic plane and passing through the earth's center intersects the celestial sphere. *Galactic latitude* is the angle measured north (+) or south (−) from the galactic equator to the body along the great circle passing through the body and the galactic poles. *Galactic longitude* is the angle measured eastward along the galactic equator from the galactic center.



Equatorial astronomical coordinate system

astronomical unit (AU), mean distance between the earth and the sun. One AU is c.92,960,000 mi (149,604,970 km).

astronomy, branch of science that studies the motions and natures of celestial bodies, such as PLANETS, STARS, and GALAXIES; more generally, the study of matter and energy in the universe at large. Astronomy is perhaps the oldest of the pure sciences. In many primitive civilizations the regularity of celestial motions was rec-

ognized, and attempts were made to keep records and predict events. Astronomical observations provided a basis for the CALENDAR by determining the units of MONTH and YEAR. Later, astronomy served in navigation and timekeeping. The earliest astronomers were priests, and no attempt was made to separate astronomy from the pseudoscience of ASTROLOGY. Astronomy reached its highest development in the ancient world with the Greeks of the Alexandrian school in the Hellenistic period. ARISTARCHUS OF SAMOS determined the sizes and distances of the MOON and SUN and advocated a heliocentric (sun-centered) cosmology. ERATOSTHENES made the first accurate measurement of the actual size of the earth. The greatest astronomer of antiquity, HIPPARCHUS, devised a geocentric system of cycles and epicycles (a compounding of circular motions) to account for the movements of the sun and moon. Using such a system, PTOLEMY predicted the motions of the planets with considerable accuracy (see PTOLEMAIC SYSTEM). One of the landmarks of the scientific revolution of the 16th and 17th cent. was Nicholas COPERNICUS' revival (1543) of the heliocentric theory (see COPERNICAN SYSTEM). The next great astronomer, Tycho BRAHE, compiled (1576–97) the most accurate and complete astronomical observations yet produced. Johannes KEPLER's study of Brahe's observations led him to the three laws of planetary motion that bear his name (see KEPLER'S LAWS). GALILEO Galilei, the first to make astronomical use of the TELESCOPE, provided persuasive evidence (e.g., his discovery of the four largest moons of JUPITER and the phases of VENUS) for the Copernican cosmology. Sir Isaac NEWTON, possibly the greatest scientific genius of all time, succeeded in uniting the sciences of astronomy and PHYSICS. His laws of motion and theory of universal GRAVITATION, published in 1687, provided a physical, dynamic basis for the merely descriptive laws of Kepler. By the early 19th cent. the science of CELESTIAL MECHANICS had reached a highly developed state through the work of Alexis Clairaut, Jean d'ALEMBERT, Leonhard EULER, Joseph LAGRANGE, Pierre LAPLACE, and others. In 1838, Friedrich BESSEL made the first measurement of the distance to a star (see PARALLAX). Astronomy was revolutionized in the second half of the 19th cent. by techniques based on photography and the SPECTROSCOPE. Interest shifted from determining the positions and distances of stars to studying their physical composition (see STELLAR EVOLUTION). With the construction of ever more powerful telescopes (see OBSERVATORY), the boundaries of the known universe constantly increased. Harlow SHAPLEY determined the size and shape of our galaxy, the MILKY WAY. Edwin HUBBLE's study of the distant galaxies led him to conclude that the universe is expanding (see HUBBLE'S LAW). Various rival theories of the origin and overall structure of the universe, e.g., the big bang and steady state theories, were formulated (see COSMOLOGY). Since the mid-20th cent. the frontiers of astronomy have been expanded by SPACE EXPLORATION and observations in new parts of the spectrum, e.g., gamma-ray astronomy, RADIO ASTRONOMY, ultraviolet astronomy, and X-ray astronomy. The new observational techniques have led to the discovery of strange new astronomical objects, e.g., PULSARS, QUASARS, and black holes (see GRAVITATIONAL COLLAPSE).

astrophysics, application of the theories and methods of physics to the study of stellar structure, STELLAR EVOLUTION, the origin of the SOLAR SYSTEM, and related problems of COSMOLOGY. The distinction between astrophysics and modern ASTRONOMY is disappearing in scientific usage.

Asturias, Miguel Ángel [ästōō'ryäs], 1899–1974, Guatemalan writer. His major works are his novels, including *The President* (1946), a study of a dictatorship; *The Green Pope* (1954); and *The Eyes of the Interred* (1960), about banana exploitation in the Caribbean. He also wrote stories and poetry. He received the 1967 Nobel Prize in literature.

Asturias, autonomous region (1988 est. pop. 1,135,000) and former kingdom, NW Spain, S of the Bay of Biscay. The major occupations are the mining of coal, iron, and other resources; steel-making; cattle-raising; fishing; and the growing of apples for cider. When the MOORS conquered 8th–cent. Spain, Christian nobles fled to the Asturian mountains, formed a kingdom, and began the long reconquest of Spain. In the 10th cent. León became the capital of the kingdom, then known as Asturias and León. The kingdom was united (1230) with CASTILE.

Asunción, city (1990 est. pop. 608,000), S Paraguay, capital of Paraguay, on the Paraguay R. It is the nation's principal port and chief industrial and cultural center. Meat-packing is the largest industry. One of the oldest cities in South America, founded in 1537, it retains a colonial aspect. It became a center of early Jesuit missionary activity and was the most important town in the Río de la PLATA region until it was partially eclipsed by BUENOS AIRES during the 18th cent.

Aswan High Dam, one of the world's largest dams, on the Nile R., in Egypt, built (1960–70) c.4 mi (6.4 km) south of the smaller Aswan Dam (completed, 1902; enlarged, 1934). It is 375 ft (114 m) high and 11,811 ft (3,600 m) long. The dam has a hydroelectricity capacity of 10 billion kwh and stores sufficient water in impounded Lake Nasser to irrigate more than 7 million acres (2,809,400 hectares) of farmland. The USSR provided funding and engineers for the project.

asylum, refuge, most often granted by a nation to a fugitive from another nation. It is usually reserved for victims of political, religious, or other discrimination. See also EXTRADITION.

At, chemical symbol of the element ASTATINE.

Atacama, Desert of, extremely arid plateau, c.2,000 ft (610 m) high, in N Chile. It is c.600 mi (970 km) long and has great nitrate and copper wealth. Chile gained sole control of the area from Bolivia in the 1880s (see PACIFIC, WAR OF THE).

Atalanta, in Greek mythology, fleet huntress who joined the Calydonian boar hunt (see MELEAGER). She demanded that each of her suitors race her, the winner to be rewarded with marriage, the losers to die. Hippomenes finally won her by dropping three golden apples that she stopped to retrieve.

Atatürk, Kemal, 1881–1938, Turkish leader, founder of modern Turkey, first president of TURKEY (1923–38). Originally known as Mustafa Kemal, he was an army officer who took part (1908) in the Young Turk movement, distinguished himself in World War I, and, after the collapse of Ottoman power, founded the Turkish Nationalist party. With the Allies controlling the government at Constantinople (Istanbul), he set up a rival government at Ankara. He expelled the Greeks who were occupying Anatolia (1921–22), abolished the sultanate (1922), and forced the European powers to recognize the Turkish republic. He ruled for 15 years as a virtual dictator. He instituted widespread internal reforms in his efforts to Westernize his nation; those changes included abolishing the CALIPHATE (1924), which in effect disestablished Islam. In foreign affairs he pursued a moderate policy, maintaining friendly relations with Turkey's neighbors, especially Russia, with whom he established the Balkan Entente.

Atget, Eugène [ätzhĕ'], 1857–1927, French photographer. At 47 he began to produce his evocative record of Paris and its environs. He sold his work to printers and to the Paris historical monuments society. His images of the parks, vendors, bridges, and prostitutes of Paris go beyond documentation.

Athabascan, group of related indigenous North American languages forming a branch of the Nadene linguistic family, or stock. See NATIVE AMERICAN LANGUAGES (table).

Athanasius, Saint, c.297–373, patriarch of ALEXANDRIA (328–73), Doctor of the Church. At the first Council of NICAEA (325) he took part in the debate against the heresy of ARIANISM. He continued to defend the Nicene orthodoxy, especially in *Discourses Against the Arians,* and was exiled from his see five times between 335 and 365. The Athanasian CREED is no longer ascribed to him but to a 4th-cent. Western writer. Feast: May 2.

atheism, denial of the existence of God or gods and of any supernatural existence, to be distinguished from AGNOSTICISM, which holds that the existence cannot be proved. Since the 19th cent. atheism has been professed by many individuals and groups.

Athelstan or **Æthelstan** [both: ăth'əlstən], d. 939, king of WESSEX (924–39). He built his kingdom on foundations laid by his grandfather ALFRED and by 937 he was overlord of all England. Popular and able, he issued laws that attempted to impose royal authority on customary law.

Athena or **Pallas Athena,** in Greek mythology, one of the most important OLYMPIAN deities, sprung from the forehead of ZEUS. She was the goddess of war and peace, a patron of arts and crafts, a guardian of cities (notably Athens), and the goddess of wisdom.

Her most important temple was the PARTHENON and her primary festival the Panathenaea. A virgin goddess, Athena is represented in art as a stately figure, armored, and wielding her breastplate, the aegis. The Romans identified her with MINERVA.

Athens, city (1981 pop. 885,737), capital of Greece, E central Greece. Greater Athens, a transportation hub including the Aegean port of PIRAIÉVS, accounts for most of the country's industry, including textiles, machine tools, and ships. Tourism is also important. Early Athens, the center of ancient Greek civilization, was rigidly governed by aristocratic archons until the reforms of SOLON (594 B.C.) and CLEISTHENES (506 B.C.) established a democracy of its freemen. It emerged from the PERSIAN WARS (500–449 B.C.) as the strongest Greek city-state, and reached its cultural and imperial zenith in the time of PERICLES (443–429 B.C.). Its citizens included SOCRATES, AESCHYLUS, SOPHOCLES, and EURIPIDES. After defeat by its arch-rival Sparta in the PELOPONNESIAN WAR (431–404 B.C.) it began a long decline that continued under the Macedonians and Romans; yet it could still boast such citizens as ARISTOTLE, ARISTOPHANES, and PLATO. Captured (395 A.D.) by Visigoths, it became the capital of the BYZANTINE EMPIRE, then came in turn under French, Spanish, and Ottoman Turkish rule before becoming (1834) the capital of newly independent Greece. The city escaped damage in World War II. The first modern OLYMPIC GAMES were held there in 1896. Overlooking the city is its foremost landmark, the ACROPOLIS, where the ruins of the PARTHENON, the Propylaea, and the ERECHTHEUM are located.

Athens, city (1990 pop. 45,734), seat of Clarke co., NE Ga., on the Oconee R., in a piedmont area; inc. 1806. It was founded as the site of the Univ. of Georgia and has become a research center. Industries include poultry processing and the manufacture of clocks, electronic equipment, and textiles. The city has many fine CLASSIC REVIVAL houses.

athlete's foot: see RINGWORM.

Athos or **Akte,** peninsula, NE Greece, in the Aegean Sea. At its southern tip is **Mount Athos,** also called Hagion Oros, a religious community (c.30 sq mi/80 sq km) of about 20 Eastern Orthodox monasteries of the Order of St. Basil. Founded c.963, it enjoyed administrative independence under the Byzantine and Ottoman empires and was made (1927) a theocratic republic under Greek suzerainty. Women and female animals are barred.

Atlanta, capital and largest city (1990 pop. 394,017; met. area 2,833,511) of Georgia, seat of Fulton co.; settled 1837, inc. as a city 1847. Located in one of America's fastest-growing urban areas, it is the largest commercial, industrial, and financial center in the SE U.S. and the largest city in Georgia, as well as a transportation hub and a convention center. Many facilities of the federal government are located in the area, which also produces textiles, chemicals, automobiles, aircraft, clothing, and a wide variety of other goods. The city is also a center of international trade and commerce. Atlanta was captured and burned (1864) by Gen. William T. SHERMAN; rebuilt, it prospered and became the state capital in 1868. Among its educational institutions are Emory Univ., the Georgia Inst. of Technology, and Atlanta Univ. Points of interest include the Atlanta Memorial Arts Center, Grant Park, the Fernbank Museum of Natural History, and the grave of Martin Luther KING, Jr. Atlanta will be the site of the 1996 summer Olympic games.

Atlanta campaign, May–Sept. 1864, of the U.S. CIVIL WAR. W.T. SHERMAN concentrated Union forces around Chattanooga, Tenn., and on May 6 moved south with two objectives: to destroy J.E. JOHNSTON's Confederate army and to capture ATLANTA. Sherman repeatedly outflanked the Confederates, forcing them back to the Chattahoochee R. by July. J.B. HOOD, who had replaced Johnston, counterattacked but failed to halt the Union advance. Atlanta's communications were cut on Sept. 1, and Hood withdrew that night. Sherman took the city on Sept. 2.

Atlantic Charter, program of peace aims enunciated on Aug. 14, 1941, by U.S. Pres. F.D. ROOSEVELT and British Prime Min. Winston CHURCHILL. Included among the aims was the list of human rights known as the FOUR FREEDOMS.

Atlantic City, city (1990 pop. 37,986), SE N.J., an Atlantic resort and convention center; inc. 1854. On Absecon Island, a sandbar 10 mi (16 km) long, it was a fishing village until 1854, when the railroad began to transform it into a fashionable resort. It is known for its 6-mi (9.7-km) boardwalk, its convention hall, and its Steel Pier (built 1898; burned 1982). After the state legalized casino gambling there (1976), the city's economy partially revived.

Atlantic Ocean, world's second largest ocean, c.31,800,000 sq mi (82,362,000 sq km), separating North and South America from Europe and Africa. It is narrowest (c.1,600 mi/2,575 km) off NE Brazil and deepest (c.28,000 ft/8,530 m) in the Milwaukee Deep, N of Puerto Rico. The generally narrow continental shelf reaches its greatest widths off NE North America, SE South America, and NW Europe. The ocean is divided lengthwise by the Mid-Atlantic Ridge, a submarine mountain range c.300–600 mi (480–970 km) wide that extends c.10,000 mi (16,100 km) from Iceland to near the Antarctic Circle. This ridge, which has a few peaks that emerge as islands, is constantly widening, filling with molten rock, and pushing the bordering continents farther apart (see PLATE TECTONICS).

Atlantis, in Greek mythology, large island in the western sea. PLATO describes it as a UTOPIA destroyed by an earthquake. Questions as to its existence have provoked speculation over the centuries. One theory holds that it was a part of the Aegean island of THERA that sank c.1500 B.C.

Atlas, in Greek mythology, a TITAN. After the defeat of the Titans by the OLYMPIANS, he was condemned to hold the sky upon his shoulders for all eternity.

Atlas Mountains, mountain system, NW Africa, c.1 500 mi (2,410 km) long. It is widest and most rugged in Morocco, where Jebel Toubkal reaches a high point of 13,671 ft (4,167 m). The mountains are rich in phosphates, coal, iron, and oil.

atmosphere, the mixture of gases and other substances surrounding a celestial body with sufficient gravity to maintain it. Although some details about the atmospheres of the other planets and some satellites are known (see articles on individual planets), a complete description is available only for the earth's atmosphere, the study of which is called METEOROLOGY. The gaseous constituents of the earth's atmosphere are not chemically combined, and thus each retains its own physical and chemical properties. Within the first 40 to 50 mi (64 to 80 km) above the earth, the mixture is of uniform composition (except for a high concentration of OZONE at 30 mi/50 km; see OZONE LAYER). This whole region contains more than 99% of the total mass of the earth's atmosphere. Based on their relative volumes, the gaseous constituents are nitrogen (78.09%), oxygen (20.95%), argon (0.93%), carbon dioxide (0.03%), and minute traces of neon, helium, methane, krypton, hydrogen, xenon, and ozone. Additional atmospheric constituents include water vapor and particulate matter, such as various forms of dust and industrial pollutants. The earth's atmosphere is separated into certain distinct regions, each having a different temperature range. The troposphere, where air is in constant motion (see WIND), extends from the earth's surface to an altitude of 5 mi (8 km) at the poles and 10 mi (16 km) at the equator. Clouds and other WEATHER phenomena occur here. All forms of the earth's animal and plant life exist in the troposphere or in the waters beneath it. Above the troposphere, the stratosphere extends to about 30 mi (50 km), followed by the mesosphere, up to about 50 mi (80 km), the thermosphere, up to about 400 mi (640 km), and finally the exosphere. The ionosphere is in the range (50 to 400 mi/80 to 640 km) that contains a high concentration of electrically charged particles (ions), which are responsible for reflecting radio signals. Above it, out to about 40,000 mi (64,400 km) in a region called the magnetosphere, electrically charged particles are trapped by the earth's magnetic field (see AURORA; VAN ALLEN RADIATION BELTS). The atmosphere protects the earth by absorbing and scattering harmful radiation and causing extraterrestrial solid matter (see METEOR) to burn from the heat generated by air friction.

atoll: see CORAL REEFS; ISLAND.

atom, the smallest unit of a chemical ELEMENT having the properties of that element. An atom contains several kinds of particles. Its central core, the nucleus, consists of positively charged particles, called PROTONS, and uncharged particles, called NEUTRONS. Surrounding the nucleus and orbiting it are negatively charged particles, called ELECTRONS. Each atom has an equal number of protons and electrons. The nucleus occupies only a tiny fraction of an atom's volume but contains almost all of its mass. Electrons in the outermost orbits determine the atom's chemical and electrical

The key to pronunciation appears on page xiii.

properties. The number of protons in an atom's nucleus is called the ATOMIC NUMBER. All atoms of an element have the same atomic number and differ in atomic number from atoms of other elements. The total number of protons and neutrons combined is the atom's MASS NUMBER. Atoms containing the same number of protons but different numbers of neutrons are different forms, or ISOTOPES, of the same element. See also ATOMIC WEIGHT.

History. In the 5th cent. B.C. the Greek philosophers DEMOCRITUS and Leucippus proposed that matter was made up of tiny, indivisible particles in constant motion. Aristotle, however, did not accept the theory, and it was ignored for centuries. Modern atomic theory began with the publication in 1808 by John DALTON of his experimental conclusions that all atoms of an element have exactly the same size and weight, and that atoms of elements unite chemically in simple numerical ratios to form compounds. In 1911 Ernest RUTHERFORD explained an atom's structure in terms of a positively charged nucleus surrounded by negatively charged electrons orbiting around it. In 1913 Niels BOHR used quantum theory to explain why electrons could remain in certain allowed orbits without radiating energy. The development of QUANTUM MECHANICS during the 1920s resulted in a satisfactory explanation of all phenomena related to the role of electrons in atoms and of all aspects of their associated spectra (see SPECTRUM). The quantum theory has shown that all particles have certain wave properties. As a result, electrons in an atom cannot be pictured as localized in space but rather should be viewed as a cloud of charge spread out over the entire orbit. The electron clouds around the nucleus represent regions in which the electrons are most likely to be found. Physicists are currently studying the behavior of large groups of atoms (see SOLID-STATE PHYSICS), and the nature of and relations among the hundreds of subatomic particles (see ELEMENTARY PARTICLES) that have been discovered in addition to the proton, neutron, and electron. See also MOLECULE.

atomic bomb, weapon deriving its great explosive force from the sudden release of NUCLEAR ENERGY through the fission, or splitting, of heavy atomic nuclei. The first atomic bomb was successfully tested by the U.S. near Alamogordo, N.Mex., on July 16, 1945 (see MANHATTAN PROJECT). In the final stages of WORLD WAR II the U.S. dropped atomic bombs on Hiroshima on Aug. 6, 1945, and on Nagasaki three days later to force Japan to surrender. Atomic bombs were subsequently developed by the USSR (1949), Great Britain (1952), France (1960), China (1964), and India (1974), and a number of other nations, particularly Pakistan and Israel, are believed to have atomic bombs or the capability to produce them readily. The USSR's nuclear arsenal has been divided since 1991 among Russia, Ukraine, Kazakhstan, and Belarus. Practical fissionable nuclei for atomic bombs are the isotopes URANIUM-235 and PLUTONIUM-239, which are capable of undergoing chain reaction. If the mass of the fissionable material exceeds the critical mass, the chain reaction multiplies rapidly into an uncontrollable release of energy. An atomic bomb is detonated by bringing together very rapidly (e.g., by means of a chemical explosion) two subcritical masses of fissionable material. The ensuing explosion produces great amounts of heat, a shock wave, and intense neutron and gamma radiation. The region of the explosion becomes radioactively contaminated, and wind-borne radioactive products may be deposited elsewhere as fallout. See also DISARMAMENT, NUCLEAR; HYDROGEN BOMB.

atomic clock: see CLOCK.

atomic energy: see NUCLEAR ENERGY.

Atomic Energy Commission: see NUCLEAR REGULATORY COMMISSION.

atomic force microscope (AFM), device that uses a spring-mounted probe to image individual atoms on the surface of a material. Unlike the SCANNING TUNNELING MICROSCOPE, which is also a scanning probe microscope, the AFM can be used on materials that do not conduct electricity. In the original AFM, the probe traverses the surface, moving upward due to bumps and downward due to depressions; a LASER beam reflected from the tip of the probe measures the up and down movements, and the pattern of reflected light creates an image of the surface. Another type of AFM measures the sideways deflection of the tip caused by friction as the probe moves across the surface; differences in friction can be used distinguish different atoms and molecules on the material. A third variation employs a magnetic probe; this probe does not touch the material but moves up and down in reaction to the magnetic forces between the tip and the surface.

atomic mass: see ATOMIC WEIGHT.

atomic number, often represented by the symbol *Z*, the number of PROTONS in the nucleus of an ATOM. Atoms with the same atomic number make up a chemical ELEMENT. The elements are arranged in the PERIODIC TABLE in the order of their atomic numbers.

atomic weight, mean (weighted average) of the masses of all the naturally occurring ISOTOPES of a chemical ELEMENT; the atomic mass is the mass of any individual isotope. Atomic weight is usually expressed in atomic mass units (amu); the atomic mass unit is defined as exactly 1/12 the mass of a carbon-12 atom. Each proton or neutron weighs about 1 amu, and thus the atomic mass is always very close to the MASS NUMBER (total number of protons and neutrons in the nucleus). Because most naturally occurring elements have one principal isotope and only insignificant amounts of other isotopes, most atomic weights are also very nearly whole numbers. For the atomic weight of individual elements, see PERIODIC TABLE.

atonality, systemic avoidance of harmonies and melodies that imply a keynote (see KEY). The term designates a method of composition in which the composer deliberately rejects the principle of TONALITY in favor of another principle of order, such as the 12-tone system (see SERIAL MUSIC). The move toward atonality has its beginnings in the 19th cent., when WAGNER, Richard STRAUSS, and DEBUSSY obscured basic tonalities in their music. Atonal composers of the 20th cent. include SCHOENBERG, BERG, and IVES.

Atonement, Day of: see JEWISH HOLIDAYS.

ATP: see ADENOSINE TRIPHOSPHATE.

Atreus [ā'trēəs], in Greek mythology, king of Mycenae; son of PELOPS, father of AGAMEMNON and MENELAUS. In retaliation for his brother Thyestes' seduction of his wife, Atreus murdered three of Thyestes' sons and served them to him at a feast. Thyestes then laid a curse on the house of Atreus. Thyestes' son AEGISTHUS killed Atreus, and Thyestes became king.

Attar: see FARID AD-DIN ATTAR.

attention deficit hyperactivity disorder (ADHD), chronic, neurologically-based syndrome characterized by any or all of three types of behavior: hyperactivity, distractibility, and impulsivity. Unlike similar behaviors caused by emotional problems or anxiety, ADHD does not fluctuate with emotional states. Often diagnosed when a child begins school, ADHD is usually accompanied by learning difficulties and social inappropriateness. Treatment may include medication such as methylphenidate hydrochloride (Ritalin), which corrects neurochemical imbalances in the brain; sugar intake is no longer considered to be a factor. Symptoms may decrease after adolescence, although adults can also have ADHD.

Attila, d. 453, king of the HUNS (434–53). From 434 he extorted tribute from the Eastern and Western Roman emperors. In 450 MARCIAN of the East and VALENTINIAN III of the West refused to pay. Valentinian's sister Honoria proposed an alliance with Attila, who took this as a marriage offer and demanded half the Western empire as dowry. Refused, he attacked Gaul but was defeated (451) by the Romans. He invaded (452) Italy but spared Rome, apparently because of a shortage of supplies and an outbreak of pestilence in his army. Although feared for his savagery, he was a just ruler.

Attlee, Clement Richard, 1st **Earl,** 1883–1967, British statesman. A lawyer and social worker, he became leader of the Labour party in 1935. During World War II he served in Winston CHURCHILL's coalition cabinet (1940–45), and in 1945 became prime minister. His government nationalized the Bank of England and much of British industry; enacted social reforms, including the National Health Service; and granted independence to Burma (now Myanmar), India, Pakistan, Ceylon (now Sri Lanka), and PALESTINE. Attlee left office in 1951. He led the opposition until 1955, when he was created Earl Attlee.

Atwood, Margaret (Eleanor), 1939–, Canadian writer. Her powerful novels are concerned with feminism and the intrusiveness of mass society. They include *The Edible Woman* (1969), *Surfacing* (1972), *Bodily Harm* (1981), *The Handmaid's Tale* (1986), and *The Robber Bride* (1993). She has also written poetry and short stories.

Au, chemical symbol of the element GOLD.

Aubrey, John, 1626–97, English antiquarian and writer. Friendly with many famous people, he left copious letters and memoranda. His most celebrated work, *Lives of Eminent Men,* was published in 1813. Only his *Miscellanies* (1696) appeared in his lifetime.

Auckland, city (1991 pop. 315,668), NW North Island, New Zealand, on an isthmus between the Pacific Ocean and the Tasman Sea. It is the country's largest city and its chief port, industrial center, and naval base. Frozen meats and dairy products are important exports. Industries include shipbuilding, food processing, oil refining, and the manufacture of automobiles and chemicals. Auckland was founded in 1840 and was the capital of New Zealand until replaced (1865) by WELLINGTON. The Univ. of Auckland is among the city's educational institutions.

Auden, W(ystan) H(ugh), 1907–73, Anglo-American poet, a major 20th-cent. literary figure. In the 1930s he was associated with SPENDER, MACNEICE, and ISHERWOOD; with the last he wrote the verse plays *The Dog Beneath the Skin* (1935), *The Ascent of F6* (1936), and *On the Frontier* (1938). Some of Auden's most original poetry appeared in the early 1930s. Later volumes, ranging in subject from politics to psychology to Christianity, include *The Double Man* (1941), *Collected Poetry* (1945), *The Age of Anxiety* (1947; Pulitzer), *Nones* (1951), and *About the House* (1965). He also wrote critical essays and opera librettos. A U.S. resident from 1939 and citizen from 1946, Auden divided his last years among England, Italy, Austria, and New York.

auditing: see under ACCOUNTING.

Audubon, John James, 1785–1851, American ornithologist; b. Les Cayes, Santo Domingo (now Haiti). After arriving in the U.S. in 1803, he began the extensive ornithological observations that would lead to the publication of his bird drawings and paintings as *The Birds of America* (1827–38). The accompanying text, called the *Ornithological Biography* (5 vol., 1831–39), was written in collaboration with the Scottish naturalist William MacGillivray. Audubon's drawings and paintings remain one of the great achievements of American intellectual history.

Aue, Hartmann von: see HARTMANN VON AUE.

August: see MONTH.

Augusta. **1** City (1990 pop. 44,639), seat of Richmond co., E Ga., on the Savannah R.; inc. 1798. The trade center for a large area of Georgia and South Carolina, it has diversified industries, including textiles, chemicals, and paper. A river trading port as early as 1717, it grew with tobacco and cotton trade. During the CIVIL WAR it housed the chief Confederate powder works. The city, a popular resort, is known for its golf tournaments and many fine old houses. **2** City (1990 pop. 21,325), state capital and seat of Kennebec co., SW Me., on the Kennebec R.; inc. as a city 1849. Shoes, fabrics, and paper products are among its manufactures. The Plymouth Company established a trading post on the site in 1628; Fort Western was built in 1754. In 1837 manufacturing began with the building of a dam. The Capitol building (1829) was designed by Charles BULFINCH and later enlarged.

Augustine, Saint [ô'gəstēn, -tĭn; ôgŭs'tĭn], 354–430, Doctor of the Church, bishop of Hippo (near present-day Annaba, Algeria); b. near Hippo. Brought up as a Christian by his mother, St. Monica, Augustine gave up his religion while at school in Carthage, then converted to MANICHAEISM. He taught rhetoric in Rome (after 376) and Milan (after 384). In Milan he was drawn to the teachings of St. AMBROSE and to NEOPLATONISM, and finally embraced Christianity, returning (387) to a monastic life in Tagaste. In 391 he was ordained a priest in Hippo, where he remained for the rest of his life, serving as bishop from 396. St. Augustine's influence on Christianity was immense, and theologians, both Roman Catholic and Protestant, look upon him as the founder of theology. His polemics against Manichaeism, Donatism, and Pelagianism are well known, and his autobiographical *Confessions* is a classic of Christian mysticism. *On the Trinity* systematized Christian doctrine, and *The City of God,* his monumental defense of Christianity against paganism, is famous for its Christian view of history. Feast: Aug. 28.

Augustine of Canterbury, Saint, d. c.605, Italian missionary, called the Apostle of the English, first archbishop of Canterbury (from 601). A BENEDICTINE, he was sent by Pope GREGORY I to England, where he converted King ÆTHELBERT and introduced Roman monastic practices. Feast: May 27 (May 26 in England and Wales).

Augustus, 63 B.C.–A.D. 14, first Roman emperor; a grandnephew of Julius CAESAR. Born Caius Octavius, he became on adoption by the Julian gens (44 B.C.) Caius Julius Caesar Octavianus (Octavian); Augustus was a title of honor granted (27 B.C.) by the senate. Caesar made the boy his heir without his knowledge, and after Caesar was killed (44 B.C.), Octavian became dominant at Rome. He made an alliance with ANTONY and Lepidus (d. 13 B.C.; see LEPIDUS, family) known as the Second Triumvirate and with Antony defeated the army of Marcus Junius Brutus (see BRUTUS, family) and Caius Cassius Longinus (see CASSIUS, family) at Philippi (42 B.C.). Octavian's forces next defeated POMPEY at Mylae (36 B.C.). After the naval victory at Actium (31 B.C.) over Antony and CLEOPATRA, Octavian controlled all of the Roman territories. The senate in 29 B.C. made him imperator [Lat., = commander; from it is derived *emperor*] and in 27 B.C. augustus [august, reverend]. The month Sextilis was renamed Augustus (August) in his honor. He enacted many reforms in Rome and in the provinces and tried to hold the Roman borders set by Caesar. His attempt to make a buffer state in German territory led to the revolt of Arminius, in which a Roman army was destroyed. Augustus built Roman roads, beautified Rome, and was munificent to arts and letters. He was a patron of VERGIL, OVID, LIVY, and HORACE. He also established the concept of the Pax Romana [Roman peace]. He was succeeded by his stepson TIBERIUS.

Augustus, Polish kings. **Augustus II,** 1670–1733, was king of POLAND (1697–1733) and, as Frederick Augustus I, elector of Saxony (1694–1733). He succeeded John III as king by becoming a Catholic and by giving the nobility unprecedented powers. In 1700 he involved Poland in the NORTHERN WAR. He was highly unpopular, and his death began the War of the POLISH SUCCESSION. One of its results was that his son, **Augustus III,** 1696–1763, succeeded him as king of Poland (1735–63). He was also, as Frederick Augustus II, elector of Saxony (1733–63). One of the unsuccessful claimants of the Hapsburg lands, he opposed Maria Theresa in the War of the AUSTRIAN SUCCESSION.

auk, swimming and diving BIRD of the family Alcidae, which includes the PUFFIN and guillemot. Clumsy on land, auks seldom leave the water except to nest; they return to the same nesting site every year. The largest species, the flightless great auk (*Pinguinus impennis*), was hunted for its flesh, feathers, and oil; it became extinct c.1844.

Aung San Suu Kyi, 1945–, Burmese political leader. Daughter of Burmese nationalist Aung San, who is regarded as the founder of modern Myanmar, she lived outside Myanmar after 1960. Returning in 1988 to care for her mother, she joined the opposition to U NE WIN and became leader of the National League for Democracy. She was placed (1989–) under house arrest for her outspoken criticism of the government. In 1990 her party won the parliamentary elections, but the military refused to surrender power. She was awarded the Nobel Peace Prize in 1991 for her nonviolent struggle for democracy.

Aurangzeb or **Aurangzib** [ôr'əngzĕb", -zib"], 1618–1707, Mogul emperor of INDIA (1658–1707), son and successor of SHAH JAHAN. He ascended the throne after defeating his three brothers and imprisoning his father. The MOGUL Empire reached its greatest extent under him, but he was fanatically devoted to Islam and persecuted the Hindus (see HINDUISM) and SIKHS, thus fatally weakening Mogul control over the Indian population.

Aurelian (Lucius Domitius Aurelianus), c.212–275, Roman emperor (270–75). He succeeded Claudius II and defended the empire against the barbarians and ambitious rulers (e.g., Zenobia of Palmyra). One of Rome's greatest emperors, he regained Britain, Gaul, Spain, Egypt, Syria, and Mesopotamia and revived the glory of Rome. He was murdered, and Marcus Claudius Tacitus succeeded him.

aurochs: see CATTLE.

Aurora. **1** City (1990 pop. 222,103), N central Colo., a residential suburb of DENVER; inc. 1903. It is the fast-growing trade center for a large livestock and farming area. Electrical products, aircraft parts, and oil-field equipment are manufactured. Tourism, construction, and nearby military bases are important to the local economy. **2** City (1990 pop. 99,581), Kane co., NE Ill., on the Fox River; inc. 1837. It manufactures construction and telephone equip-

ment, electric tools, pumps, and steel products and has rail yards and riverboat gambling. It was one of the first cities to use electricity for street lighting (1881).

aurora, luminous display of various forms and colors in the night sky. The aurora borealis (northern lights) and aurora australis (southern lights) are usually visible at latitudes within, respectively, the Arctic Circle and Antarctic Circle, but they are sometimes seen in middle latitudes. Both are seen most frequently at the time of the equinoxes and at times of great sunspot activity. Auroras occur at altitudes of 35 to 600 mi (56 to 970 km) and are thought to be caused by high-speed particles from the sun excited to luminosity after colliding with air molecules.

Auschwitz, now **Oświęcim,** Poland: see CONCENTRATION CAMP.

Ausonius (Decimus Magnus Ausonius), c.310–c.395, Latin poet; b. Bordeaux. His travel verses (*Mosella*), family sketches (*Parentalia*), and *Order of Noble Cities,* on 20 Roman cities, give portraits of people and places.

Austen, Jane, 1775–1817, English novelist. She spent her first 25 years at her father's Hampshire vicarage, writing novels published much later. *Northanger Abbey,* written early, appeared posthumously (with *Persuasion*) in 1818. Published in her lifetime were *Sense and Sensibility* (1811), *Pride and Prejudice* (1813), *Mansfield Park* (1814), and *Emma* (1816), comedies of manners, depicting the self-contained world of the English counties. Providing husbands for marriageable daughters is a central theme. Austen's work is noted for polished irony, moral firmness, and vivid characterization. She received little notice during her life, but today she is regarded as one of the masters of the English novel.

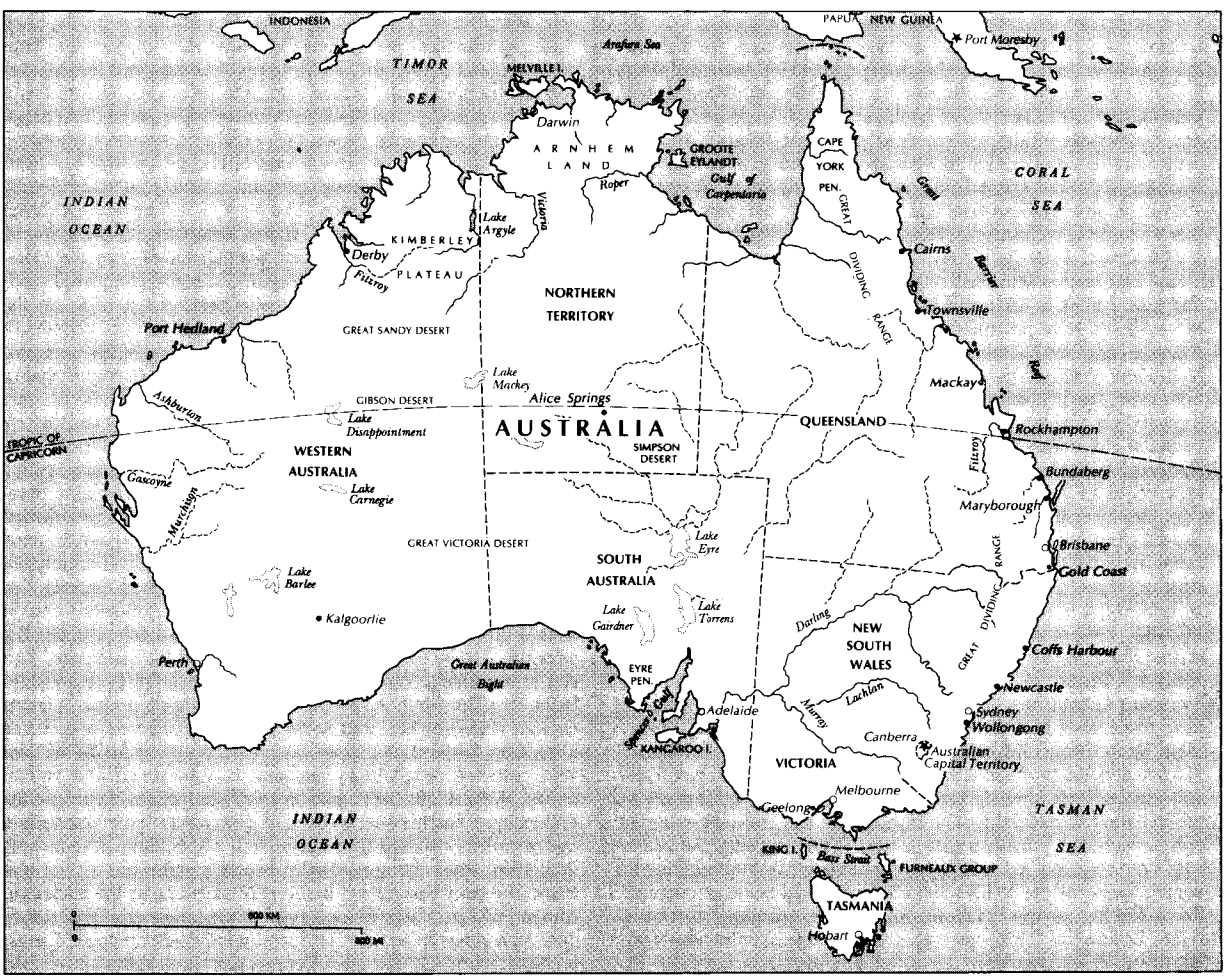
Austerlitz, Czech *Slavkov u Brna,* town, S Czech Republic, in Moravia. An agricultural center with sugar refineries and cotton mills, it was a seat of the ANABAPTISTS from 1528. At Austerlitz, NAPOLEON I won (Dec. 2, 1805) his greatest victory by defeating the Russian and Austrian armies. The town has an 18th-cent. castle and a 13th-cent. church.

Austin, Stephen Fuller, 1793–1836, Texas colonizer, known as the Father of Texas; b. Wythe co., Va. He took up the colonizing plans of his father, **Moses Austin,** 1761–1828, and began (1822) planting settlements in Texas between the Brazos and Colorado rivers. He later forwarded the Texas Revolution (1836) and was briefly secretary of state of the Republic of Texas.

Austin, city (1990 pop. 465,622), state capital and seat of Travis co., S central Tex., on the Colorado R.; inc. 1839. It is the commercial heart of a ranching, poultry, dairy, cotton, and grain area. Hydroelectric development (beginning in the 1930s) has spurred enormous industrial growth; the city now manufactures a wide variety of products, and is a center for electronic and scientific research. The Univ. of Texas' main campus is in Austin. State capital since 1870, it was capital (1839–42) of the Texas Republic.

Australasia, islands of the South Pacific, including AUSTRALIA, NEW ZEALAND, NEW GUINEA, and adjacent islands. The term sometimes includes all of OCEANIA.

Australia, smallest continent, c.2,400 mi (3,860 km) east to west and c.2,000 mi (3,220 km) north to south, only continent occupied by a single nation, the Commonwealth of Australia (1992 est. pop. 17,576,000), 2,967,877 sq mi (7,686,810 sq km). Subdivisions of the nation include the offshore island state of TASMANIA; the five mainland states of QUEENSLAND, NEW SOUTH WALES, VICTORIA, SOUTH AUSTRALIA, and WESTERN AUSTRALIA; the NORTHERN TERRITORY; and the AUSTRALIAN CAPITAL TERRITORY, containing CANBERRA, the federal capital. External territories include CHRISTMAS ISLAND, the COCOS



Cross-references are indicated by SMALL CAPS.

(KEELING) ISLANDS, the CORAL SEA ISLANDS, NORFOLK ISLAND, Heard and McDonald islands, and the Australian Antarctic Territory.

Geography Australia is the flattest and driest of the continents, as well as the oldest and most isolated. Elevations range from 39 ft (12 m) below sea level at Lake EYRE, the lowest point, to a high point of 7,316 ft (2,230 m) at Mt. KOSCIUSKO, in the AUSTRALIAN ALPS near the New South Wales–Victoria border; much of the ancient western plateau is under 2,000 ft (610 m). Two thirds of the continent is either desert or semiarid. Humid climates are restricted to eastern coastal areas and to Tasmania. Alternating wet winters (June–August) and dry summers (November–March) occur in small areas of South Australia and Western Australia, and dry winters and wet summers alternate along the tropical northeastern coast. The MURRAY R. and its major tributaries, the DARLING and MURRUMBIDGEE, form the principal river system. Plant and animal life is distinctive, including many species, such as the giant EUCALYPTUS, KOALA, KANGAROO, and PLATYPUS, found only in Australia.

Economy and People. Australia is the world's leading producer of wool and bauxite, and a significant supplier of iron ore, coal, wheat, meat, dairy products, sugar, and fruit. Manufacturing is highly developed and concentrated mainly in the coastal regions of Victoria and New South Wales. Iron, steel, automobiles, aircraft, electrical equipment and appliances, chemicals, and textiles are leading manufactures. SYDNEY, MELBOURNE, BRISBANE, ADELAIDE, and NEWCASTLE, all located along the southeastern coast, are the largest commercial and industrial centers. New South Wales and Victoria are the most populous states. Most Australians are of British and Irish ancestry. The indigenous population, the Australian aborigines and Torres Strait Islanders, totaled 257,333 in 1991. Immigration contributes significantly to population growth; in 1984 slightly more than 20% of the population had been born in Australia. Racially discriminatory immigration policies were officially ended in 1973, and there has been increased Asian immigration.

History and Government. The AUSTRALIAN ABORIGINES are thought to have come from Southeast Asia more than 40,000 years ago. The area was first visited by Europeans in the 17th cent. but attracted little interest until Capt. James COOK sailed (1770) into BOTANY BAY and claimed the entire eastern coast for Great Britain. The first settlement, a penal colony for "transported" British convicts, was established in 1788 where Sydney now stands. By the middle of the 19th cent. free colonization had replaced the old penal settlements, and the colonies of Tasmania (1825), Western Australia (1829), South Australia (1834), Victoria (1851), and Queensland (1859) had been established. Wool and wheat were early exports, and gold rushes in 1851 and 1892 attracted new settlers. In 1901 the colonies were federated as states of the Commonwealth of Australia, and in 1927 the seat of government was transferred from Melbourne to Canberra. Australia fought on the side of Britain in both world wars. In WORLD WAR II the Japanese bombed or shelled DARWIN, Port Jackson, and Newcastle, and the Allied victory in the battle of the CORAL SEA (1942) probably averted an invasion of Australia. Australia joined regional defense pacts after the war and sent troops to aid the U.S. in the VIETNAM WAR. The nation has a popularly elected bicameral parliament. Executive power rests with the governor general (representing the crown) and a cabinet and prime minister; British intervention in Australian affairs was formally abolished in 1986. In 1983 a Labor party government headed by Prime Min. Bob HAWKE came to power; it was returned to office in 1984, 1987, and 1990. After a severe recession Hawke was ousted (1991) by his party and replaced with Paul KEATING. In 1993 Keating led Labor to its fifth consecutive electoral victory.

Australian aborigines, indigenous people of Australia, thought to have come from Asia some 40,000 years ago. By the early 1990s, there were about 250,000, somewhat less than the estimated 300,000 at the time of colonization (1778). Then consisting of 500–600 groups, they were hunter-gatherers who had extensive intergroup trade and maintained intricate KINSHIP and marriage systems and an elaborate totemism (see TOTEM). Within a century, contact with British settlers led to massive depopulation and extinction for some groups. By the 1940s most aborigines had been assimilated into Australian society as laborers with limited economic and legal rights. Legislation (1976) restored some aboriginal autonomy, and improved living conditions have led to population increase. In 1992 Australia's High Court ruled that aboriginal groups could claim title to land they had once inhabited; the ruling was codified by a 1993 law that also protected existing nonaboriginal land titles.

Australian Alps, mountain chain, SE Australia, forming the southern part of the EASTERN HIGHLANDS. It reaches a high point of 7,316 ft (2,230 m) at Mt. KOSCIUSKO, the highest peak in Australia.

Australian Capital Territory (1992 est. pop. 295,000), 939 sq mi (2,432 sq km), SE Australia, an enclave within NEW SOUTH WALES containing CANBERRA, the capital of Australia. Most of it was ceded to the federal government by New South Wales in 1911 for use as the future capital; a small section on the east coast, at Jervis Bay, was ceded for use as a port in 1915. The territory is administered by the federal government and has an elected House of Assembly with advisory responsibilities.

Australian languages, aboriginal languages spoken by perhaps 130,000 persons on the continent of Australia. These languages, estimated at 100 to 600 in number, do not seem to be related to any other linguistic family and have no writing of their own. Many are already or nearly extinct.

Australopithecus: see MAN, PREHISTORIC.

Austria, Ger. *Österreich,* officially Republic of Austria, federal republic (1992 est. pop. 7,868,000), 32,374 sq mi (83,849 sq km), central Europe; bordered by Slovenia and Italy (S), Switzerland and Liechtenstein (W), Germany and the Czech Republic (N), and Slovakia and Hungary (E). VIENNA is the capital; principal cities include SALZBURG, INNSBRUCK, GRAZ, and LINZ. The ALPS traverse Austria from west to east and occupy three fourths of the country; the highest peak is the Grossglockner (12,460 ft/3,798 m). Austria is drained by the DANUBE R. and its tributaries. Forestry, cattle-raising, and dairying are the main sources of livelihood in the alpine provinces. In the rest of the country tillage agriculture predominates; the chief crops are potatoes, sugar beets, barley, wheat, rye, and oats. Manufacturing (machinery, vehicles, metals, chemicals, foodstuffs, and textiles) and mining (graphite, iron, magnesium, copper, zinc, and lignite) employ nearly half of the labor force. Tourism is very important. Divided into nine provinces, Austria has a mixed presidential-parliamentary form of government. The population is predominantly German-speaking and Roman Catholic.

History. Located at the crossroads of Europe, Austria has been from earliest times a thoroughfare and a battleground. Settled by Celts, the area was conquered (15 B.C.–A.D. 10) by Rome; overrun (from the 5th cent.) by Huns, Goths, Lombards, and Bavarians; conquered (788) by CHARLEMAGNE; taken (after 814) by the Moravians (see MORAVIA) and then the MAGYARS; and reconquered (955) by Holy Roman Emperor OTTO I, who bestowed it (976) on the house of Babenberg. Acquired in 1251 by Ottocar II of BOHEMIA, it was claimed (1282) by RUDOLF I of Hapsburg, king of the Germans, and from that time until its fall in 1918, Austrian history is that of the house of HAPSBURG. (See AUSTRIAN SECESSION, WAR OF THE; AUSTRO-HUNGARIAN MONARCHY; AUSTRO-PRUSSIAN WAR; CONGRESS OF VIENNA; FRENCH REVOLUTIONARY WARS; GERMAN CONFEDERATION; HOLY ALLIANCE; HOLY ROMAN EMPIRE; METTERNICH; SEVEN YEARS WAR; THIRTY YEARS WAR.) Following the collapse of the Austro-Hungarian monarchy at the end of WORLD WAR I, German Austria was proclaimed (1918) a republic. The Treaty of Saint-Germain (1919), which fixed its boundaries, reduced it to a small country of 7 million inhabitants, and deprived it of its raw materials, food, and markets. Unemployment, bankruptcy, and political unrest followed, and in 1934 a corporative totalitarian regime was established under Engelbert DOLLFUSS (who was assassinated) and his successor, Kurt von SCHUSCHNIGG. The nation became part of the German Third Reich in 1938, when it was occupied by German troops. After its capture (1945) by U.S. and Soviet troops, Austria was restored as a republic. Divided into zones, it was occupied by the Allies until 1955, when a peace treaty declared it a sovereign and neutral power. By the 1960s the country enjoyed unprecedented prosperity. Politically, a nearly equal balance of power between conservatives and socialists resulted in a succession of coalition governments until 1966, when the conservative People's party won a clear majority. The party was ousted in the 1970 elections by the Socialists, who, under Chancellor Bruno KREISKY, held power until 1983. Since then Austria has been ruled by Socialist-led coalition governments. In 1986 former UN Secretary General Kurt WALDHEIM was elected

The key to pronunciation appears on page xiii.

president despite evidence that seemed to link him with Nazi atrocities; he was succeeded (1992) by Thomas Klestil.

Austrian Succession, War of the, 1740–48, European war precipitated by the succession of MARIA THERESA to the Hapsburg lands by virtue of the PRAGMATIC SANCTION. She was challenged by the elector of Bavaria (who became Emperor CHARLES VII in 1742), PHILIP V of Spain, and AUGUSTUS III of Poland. FREDERICK II of Prussia, claiming part of Silesia, opened hostilities by invading that region. Prussia was joined by France, Spain, Bavaria, and Saxony. After being promised its Silesian claim, Prussia made a separate peace in 1742. Saxony went over to Austria in 1743, and England (at war with Spain), Holland, and Sardinia became Austrian allies. Fearing Maria Theresa's growing power, Prussia reentered the war in 1744. Maria Theresa's husband was elected emperor, as FRANCIS I, in 1745, on the death of Charles VII. France defeated the English at Fontenoy, and GEORGE II sued for peace. The war dragged on in other areas, including North America (see FRENCH AND INDIAN WARS). In 1748 the Treaty of Aix-la-Chapelle ended the war. Maria Theresa's throne was safe, but Prussia had emerged as a major European power.

Austro-Hungarian Monarchy or **Dual Monarchy,** the HAPSBURG empire from the constitutional compromise (*Ausgleich*) of 1867 until its fall in 1918. The empire was divided into two states. Cisleithania (lands W of the Leitha River) comprised Austria proper, Bohemia, Moravia, Austrian Silesia, Slovenia, and Austrian Poland. Transleithania included Hungary, Transylvania, Croatia, and part of Dalmatia. The Hapsburg monarch ruled Cisleithania as emperor of Austria and ruled Transleithania as king of Hungary. Both states elected separate parliaments for internal affairs and had independent ministries. A common cabinet dealt with foreign affairs, common defense, and common finances. The monarchy was weakened by this ethnic diversity. Czech, Italian, Slavic, and Romanian minorities desired autonomy and later sought to break free of the empire. Archduke FRANCIS FERDINAND apparently had a plan for a South Slavic partner in the monarchy, but his assassination (1914) cut short this hope and precipitated WORLD WAR I. In foreign affairs Austria-Hungary allied (1879) with Germany (see TRIPLE ALLIANCE AND TRIPLE ENTENTE) and in 1908 angered SERBIA by annexing BOSNIA AND HERCEGOVINA. The empire was dissolved at the end of World War I, and Emperor CHARLES I abdicated (1918). The Treaty of VERSAILLES and other treaties established the boundaries of the successor states.

Austronesian [ôs"trōnē'zhən, –shən], name sometimes used for the Malayo-Polynesian languages. See LANGUAGE (table).

Austro-Prussian War or **Seven Weeks War,** June 15–Aug. 23, 1866, between Austria (seconded by the various German states) and Prussia (allied with Italy). It was provoked by BISMARCK as a way of expelling Austria from the GERMAN CONFEDERATION, thereby assuring Prussian hegemony there. The pretext was a dispute between Prussia and Austria over the administration of SCHLESWIG-HOLSTEIN. Prussia quickly overran Holstein and the German states allied with Austria, and was victorious in Bohemia and Italy. The Treaty of Prague ended the war. Austria was excluded from German affairs and forced to cede Venetia to Italy. Prussia demanded no territory from Austria but annexed Hanover, Hesse, Nassau, and Frankfurt, laying the groundwork for the establishment (1871) of the German empire.

autism, developmental disorder, usually appearing before age three, characterized by impaired non-verbal and verbal communication, including abnormal speech patterns or loss of speech; lack of eye contact; a restricted range of interests; resistance to change of any kind; obsessive repetitive body movements, such as hand flapping or spinning; a lack of awareness of the existence or feelings of others; social isolation; and no comfort seeking in times of distress. Symptoms vary from child to child and can range from mild to severe. Treatment is experimental, and few autistic children show significant remission of symptoms.

autoimmune disease, general term for disorders in which the body produces antibodies (see IMMUNITY) against its own substances, resulting in tissue injury. For example, in systemic lupus erythematosus, individuals develop antibodies to their own nucleic acids and cell structures, causing dysfunction of many organs, including the heart, kidneys, and joints. Autoimmune diseases are treated by a variety of nonspecific IMMUNOSUPPRESSIVE DRUGS and STEROIDS.

automation, automatic operation and control of machinery or processes by devices that make and execute decisions without human intervention. Such devices use self-correcting control systems that employ feedback; i.e., they use part of their output to control their input. Because of their ability to store, select, record, and present data, COMPUTERS are widely used to direct automated systems. See also COMPUTER-AIDED MANUFACTURING; DATA PROCESSING; ROBOTICS.

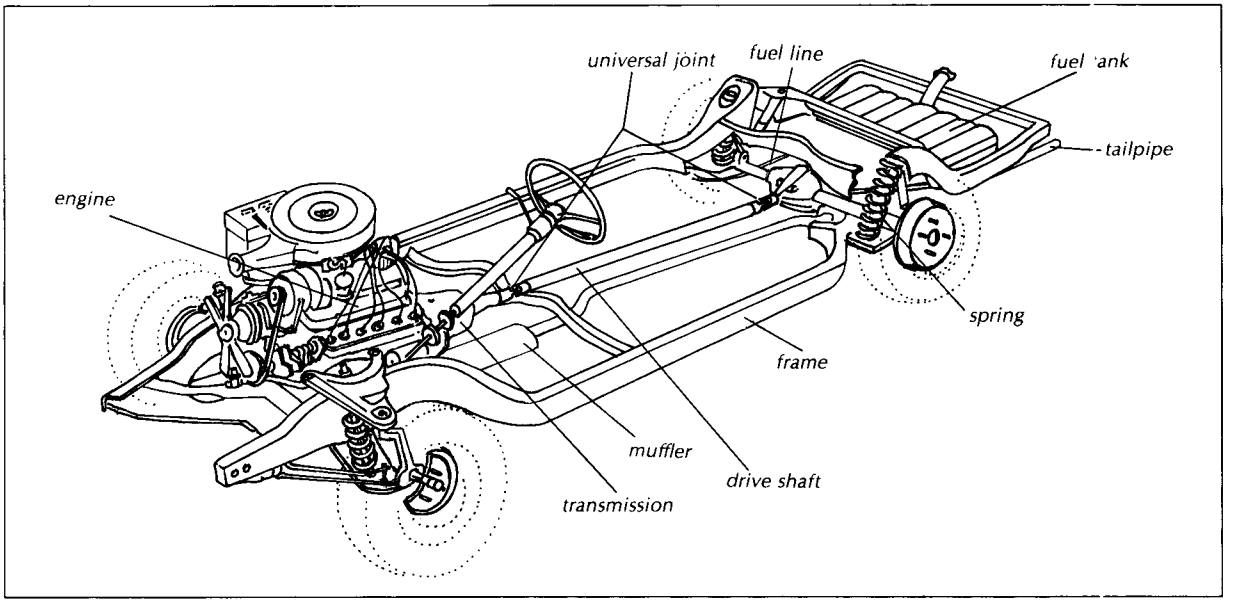
automobile, self-propelled vehicle used for travel on land. The fundamental structure of the automobile consists of seven basic systems: the engine, usually mounted in front and driving either the two front, two rear, or all four wheels; the fuel system, using a CARBURETOR or FUEL INJECTION to produce the optimal combustible mixture of fuel and air; the electrical system, including a battery that provides a power source to the ignition; the cooling, steering and suspension, and BRAKE systems; and the TRANSMISSION, which transmits power from the engine crankshaft to the wheels by means of a series of gears. Evolving from earlier experiments with steam-powered vehicles, models using the gasoline-fueled INTERNAL-COMBUSTION ENGINE were first developed by the German engineers Karl BENZ (1885) and Gottlieb DAIMLER (1886). U.S. leadership in automobile production began with Henry FORD's founding (1903) of the Ford Motor Co., its production (1908) of the inexpensive Model T, and its development of assembly-line techniques. General Motors, Ford's principal competitor, became the world's largest automobile manufacturer in the 1920s, and U.S. dominance of the field continued until the 1970s, when it was challenged by growing sales of Japanese and German cars. Concern about pollution from gasoline combustion has led to the development of cars powered by electricity from rechargeable storage batteries and by the combustion of natural gas, but such vehicles have been limited in the distance they can travel and have only been used on a small scale, largely in metropolitan areas. See also AUTOMOBILE RACING; DIESEL ENGINE; POLLUTION; SMOG.

automobile racing, sport in which high-speed, specially constructed automobiles are raced on outdoor or indoor courses. The basic types of competition are grand prix, a series of races in several countries that leads to the designation of a world-champion driver; Indy car, with the cars used for the Indianapolis 500; stock car, using standard cars with special equipment; sprint car; sports car; and drag racing, involving acceleration tests over a ¼-mi. (.4025-km) track. The sport originated in France in 1894. The best-known U.S. race is the Indianapolis 500, first held in 1911.

autumnal equinox: see EQUINOX.

Averroës [avĕr'ōēz], Arabic *Ibn Rushd,* 1126–98, Spanish-Arabian philosopher. His greatest work, his commentaries on ARISTOTLE, remained influential in the West well into the Renaissance. Averroës held that the domains of faith and reason did not conflict, and that philosophic truth derives from reason rather than faith (see SCHOLASTICISM). In this he was opposed by St. THOMAS AQUINAS.

Avery, Milton, 1893–1965, American painter; b. Altmar, N.Y. A master colorist in the tradition of MATISSE, he is known for figurative works that display bold massing of forms and for landscapes that



Automobile: View of a six-cylinder, gasoline-fueled engine

verge on complete abstraction, e.g., *Dunes and Sea II* (1960; Whitney Mus., N.Y.C.).

Avestan [əvĕs'tən], language belonging to the Iranian group of the Indo-Iranian subfamily of the Indo-European family of languages. See LANGUAGE (table).

aviation, operation of heavier-than-air aircraft and related activities. Aviation can be divided into military aviation (see AIRCRAFT CARRIER; AIR FORCE), air transport (commercial airline operations), and general aviation (agricultural, business, charter, instructional, and pleasure flying). The first successful flights of a motor-powered airplane carrying a human were made by Orville and Wilbur WRIGHT near Kitty Hawk, N.C. on Dec. 17, 1903. The first successful SEAPLANE was constructed in 1911–12. During the early 1900s, aviators demonstrated the feasibility of air travel to various parts of the world. World War I provided additional motivation for aviation research and development. The availability of cheap, surplus aircraft in the U.S. after the war encouraged barnstorming and stunt-flying; the result was a more airplane-conscious public. Private companies in America contracted the carrying of airmail after 1925. Technological improvements in WIND TUNNEL testing, engine and airframe design, and maintenance equipment combined in the 1930s to provide faster, larger, and more durable airplanes. The transportation of passengers became profitable, and routes were extended to include several foreign countries. Transpacific airmail service began in 1934, and was soon followed by a similar service for passengers. In 1939 the first transatlantic service for mail and passengers was inaugurated. The application of JET PROPULSION to commercial air transportation began in 1952. The first supersonic transports (SST) for passenger service were put into service during the mid-1970s, but commercial aviation was transformed by jumbo jetliners that carry hundreds of passengers on a single flight. See also AIRSHIP; BALLOON; GLIDER; HELICOPTER.

Avicenna [ăvĭsĕn'ə], Arabic *Ibn Sina,* 980–1037, Persian philosopher and physician, the most renowned philosopher of medieval Islam. His interpretation of ARISTOTLE followed that of the NEOPLATONISTS. Avicenna's *Canon of Medicine,* a classic text, was particularly influential from 1100 to 1500.

Avignon [ävēnyôN'], city (1990 pop. 86,939), capital of Vaucluse dept., SE France, on the Rhône R. It has a wine trade and many manufactures. The papal see during the Babylonian Captivity (1309–78), it was later (1378–1408) the residence of several antipopes (see PAPACY and SCHISM, GREAT). Avignon was joined to France after a plebiscite (1791). Medieval ramparts and the papal palace are highlights of the city.

avocado, tropical American broad-leaved evergreen tree (genus *Persea*) of the LAUREL family, and its pear-shaped fruit The fruit has a tough, inedible, usually dark green skin and an oily flesh surrounding a large, hard seed. The flesh is eaten fresh, chiefly in salads.

Avogadro, Amadeo, conte di Quaregna, 1776–1856 Italian physicist. In 1811 he advanced the hypothesis (since known as Avogadro's law) that equal volumes of gases under identical conditions of pressure and temperature contain the same number of molecules. This hypothesis led to the determination by other physicists of the value of Avogadro's number, i.e., the number of molecules in one MOLE, or gram-molecular weight, of any gas.

Avogadro's number: see MOLE, in chemistry.

avoirdupois weight: see ENGLISH UNITS OF MEASUREMENT; WEIGHTS AND MEASURES, table.

Awami League, political party in PAKISTAN and BANGLADESH. Founded in 1949, it became the vehicle for the political interests of East Pakistan. When East Pakistan won independence (1971) as Bangladesh, the league became the new nation's dominant political party, but in 1981 and again in 1991 the National party defeated the league in national elections.

axiom, in MATHEMATICS and LOGIC, general statement accepted without proof as the basis for logically deducing other statements (THEOREMS). Examples of axioms used widely in mathematics are those related to equality (e.g., "If equals are added to equals, the sums are equal") and those related to operations (e.g., the ASSOCIATIVE LAW). A postulate, like an axiom, is a statement that is accepted without proof; it deals, however, with specific subject matter (e.g., properties of geometrical figures), not general statements.

Axis, 1936–45, coalition of countries in WORLD WAR I headed by Germany, Italy, and Japan. They were opposed, and defeated, by the Allies, headed by the United States, Great Britain, the Soviet Union, and China.

Ayacucho, city (1990 est. pop. 102,000), capital of Ayacucho dept., S central Peru. It is a commercial and tourist center in a region of rich gold, silver, and nickel mines. On the nearby plains of Ayacucho, Antonio José de SUCRE won (1824) a military victory that secured Peru's independence from Spain and assured the liberation of South America.

Ayala, Ramón Pérez de: see PÉREZ DE AYALA, RAMÓN.

Ayatollah Ruhollah Khomeini: see KHOMEINI, RUHOLLAH.

Ayckbourn, Alan, 1939–, English playwright. He is known for such ingenious antibourgeois FARCES as *How the Other Half Loves* (1970); *Absurd Person Singular* (1973); *The Norman Conquests* (1974), a trilogy; *Bedroom Farce* (1975), and the darker *A Small Family Business* (1987).

Aylwin Azócar, Patricio, 1918–, Chilean political leader. A founder of the Christian Democratic party (1957) and a senator (1964–73), he led a coalition that opposed PINOCHET in the late 1980s. After a national plebiscite ended military rule, Aylwin was elected president (1990). He has sought to maintain Chile's economic prosperity and strengthen civilian government.

Aymara, indigenous people of the Lake TITICACA basin in Peru and Bolivia (see SOUTH AMERICA, INDIGENOUS PEOPLES OF). Their language is classified as a separate unit (see NATIVE AMERICAN LANGUAGES). Believed to be the originators of the great culture seen in the ruins of TIAHUANACO, they were subjugated by the INCA (15th cent.) and by the Spanish (16th cent.) but retained their pastoral civilization and patrilineal society. Still dominant in the region today, the Aymara have adopted some aspects of Spanish culture and Christian belief.

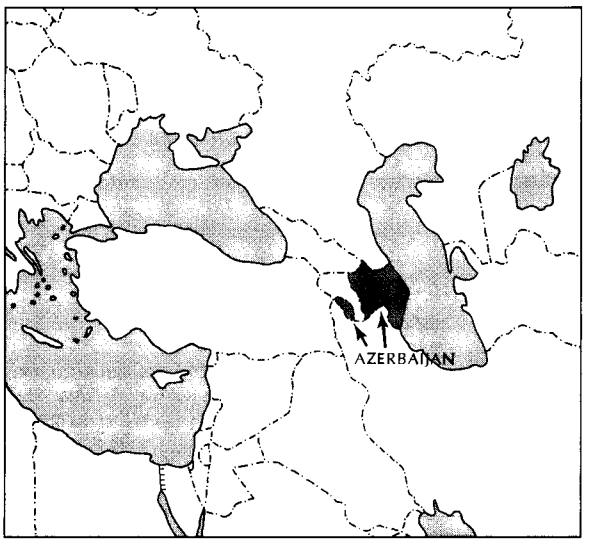
Ayub Khan, Muhammad, 1907–74, president (1958–69) of PAKISTAN. After 1951 he was commander of the Pakistani armed forces, and in 1958 he led a military coup and became president. Although he inaugurated far-reaching reforms and a new constitution, unrest grew; despite his reelection in 1965, he bowed to pressure and resigned in 1969.

azalea, shrubs (genus *Rhododendron*) of the HEATH family, distinguished by typically deciduous leaves and large clusters of pink, red, orange, yellow, purple, or white flowers. Most grow in damp acid soils of hills and mountains, and are native to North America and Asia. Native American azaleas include the flame azalea (*R. calendulacea*) and the fragrant white azalea (*R. viscosa*), also called swamp honeysuckle. Most of the brilliantly flowered garden varieties are from China and Japan.

Azaña, Manuel [äthä'nyä], 1880–1940, president of Spain (1936–39). A leader of the republican revolution of 1930, he served as premier (1931–33) in the first republic. He headed the Loyalist government in the SPANISH CIVIL WAR but held little real power.

Azerbaijan or **Azerbaidzhan** [both: ä"zərbījän'], officially Republic of Azerbaijan, republic (1992 est. pop. 7,451,000), 33,428 sq mi (86,579 sq km), SW Asia, in Transcaucasia; formerly a constituent republic of the USSR. It is bounded by Russia and Georgia (N); the Caspian Sea (E); Iran (S), where the Araks R. divides it from Iranian Azerbaijan; and Armenia (W). The NAKHICHEVAN region is an exclave separated from the country by Armenia. BAKY (Baku) is the capital and largest city; other major cities include Ganje (Gyandzha) and Sumgait. The country is rich in oil and natural gas and iron, copper, lead, zinc, and other ores. Manufactures include machinery, electrical and oil drilling equipment, cement, and steel. Grains, fruit, grapes, cotton, silk, and tobacco are the major crops. In addition to the Turkic-speaking Shiite Muslim Azeri (Azerbaijani) majority, there are Russian, Armenian (largely in the Nagorno-Karabakh region), and other minorities.

History. The republic of Azerbaijan comprises the northern half of historic Azerbaijan; the southern half is in NW Iran. The area was linked to the history of ARMENIA and later PERSIA, particularly after its conquest (4th cent.) by Shapur II. Overrun later by Mongols (13th cent.) and TIMUR (14th cent.), it was divided after the fall (15th cent.) of the Timurid empire into several principalities. After 1603 the area was part of Persia until acquired by Russia between 1813 and 1828. Briefly independent after the RUSSIAN REVOLUTION, Azerbaijan was conquered (1920) by the Red Army and incorporated into the USSR. Part of the Transcaucasian Soviet Federated Republic after 1922, it became a separate constituent republic in 1936. Under Soviet Pres. GORBACHEV, Azeris began demanding greater independence from the central Soviet government. In NAGORNO-KARABAKH, a mainly Armenian territory in W Azerbaijan, Armenians demanded (1988) autonomy; fighting in the enclave led to warfare with Armenia by 1992 and spilled into Azerbaijan proper by 1993. In the aftermath of the failed coup (1991) against Gorbachev, Azerbaijan declared its independence from the USSR, and nationalist Abulfez Elchibey was elected (1992) president. Elchibey was ousted by the parliament after a military mutiny, and Heydar Aliyev, who was Azerbaijan Communist party leader from 1969 to 1982, succeeded him as president. Azerbaijan is a member of the COMMONWEALTH OF INDEPENDENT STATES.



azimuth: see ASTRONOMICAL COORDINATE SYSTEMS.

Azoic time: see GEOLOGIC ERA (table).

Azores, island group belonging to Portugal (1987 est. pop. 254,000), 905 sq mi (2,344 sq km), located in the Atlantic Ocean, c.900 mi (1,448 km) W of mainland Portugal. The nine main islands are São Miguel (the largest) and Santa Maria in the southeast; Terceira, Pico, Fayal, São Jorge, and Graciosa in the center; and Flores and Corvo in the northwest. Ponta Delgado, on São Miguel, is the largest city. The islands are divided into three districts named after their capitals: Ponta Delgado, Angra do Heroísmo (on Terceira), and Horta (on Fayal). The U.S. maintains NATO air bases on the islands.

Azorín: see MARTÍNEZ RUIZ, JOSÉ.

AZT or **zidovudine,** drug used to treat patients infected with the human immunodeficiency virus (HIV), which causes AIDS; also called azidothymidine. It inhibits the virus's ability to reproduce and may decrease the frequency of infection by other diseases, enhancing the lives of HIV-infected patients, but it does not cure AIDS. Adverse effects include anemia and a reduction in the number of certain white blood cells. A drug that acts similarly to AZT, ddI (didanosine or dideoxyinosine), is used to treat patients who do not respond to or cannot tolerate AZT. A third similarly acting drug, ddC (zalcitabine or dideoxycytidine), is given in combination with AZT.

Aztec, indigenous people dominating central Mexico (see MIDDLE AMERICA, INDIGENOUS PEOPLES OF) at the time of the Spanish conquest (16th cent.), with a Nahuatlan language of the Uto-Aztecan stock (see NATIVE AMERICAN LANGUAGES). Until the founding of their capital, Tenochtitlán (c.1325), the Aztec were a poor nomadic tribe in the valley of Mexico. In the 15th cent. they became powerful, subjugating the Huastec to the north and the MIXTEC and ZAPOTEC to the south, and achieving a composite civilization based on a TOLTEC and Mixteca-Puebla heritage. Engineering, architecture, art, mathematics, astronomy, sculpture, weaving, metalwork, music, and picture writing were highly developed; agriculture and trade flourished. The nobility, priesthood, military, and merchant castes predominated. War captives were sacrificed to the many Aztec gods, including the god of war, Huitzilopochti. In 1519, when CORTÉS arrived, many subject peoples willingly joined the Spanish against the Aztecs. Cortés captured MONTEZUMA, who was subsequently murdered, and razed Tenochtitlán.

B

B, chemical symbol of the element BORON.

Ba, chemical symbol of the element BARIUM.

Baade, Walter [bä'də], 1893–1960, German-American astronomer. He presented evidence for the existence of two different stellar populations of older and newer stars. Baade knew that, at the then-accepted distance of the Andromeda galaxy, cluster-type variable stars should have appeared on photographs that he took with the 200-in. (5.08-m) telescope at Palomar Observatory. Because they did not, he correctly reasoned (1952) that the distances to this galaxy and other extragalactic systems must be doubled.

Baal [bā'əl], plural **Baalim** [Semitic, = possessor], the OLD TESTAMENT term for the deity or deities of CANAAN. First applied to local gods, it was later the name of the chief deity. His cult practiced holy PROSTITUTION and child sacrifice. In Israel it was denounced by Hebrew Prophets. The name is synonymous with evil, hence Beelzebub (see SATAN).

Baal-Shem-Tov [Heb., = master of the good name, i.e., the name of God], c.1698–1760, Jewish founder of modern HASIDISM; b. Poland as Israel ben Eliezer. He was called Baal-Shem-Tov because of his reputation as a miracle healer. Central to his teachings is the notion that one must worship God in all activities—and with joy. From his large circle of followers developed communities of modern HASIDIM.

Ba'ath movement [bä'äth], Arab movement that advocates a single, socialist pan-Arab nation. Founded in Damascus in the early 1940s and claiming to draw its philosophical tenets from Islam, Ba'athism opposed imperialism and colonialism and favored nonalignment. It spread to Iraq after the 1958 revolution. The movement spawned the Ba'ath party, a faction-riven group that has been strongest in Syria and Iraq and that governed those nations during the 1960s and 70s.

Babbage, Charles, 1792–1871, English mathematician and inventor, famous for his attempts to develop a mechanical computational aid he called the "analytical engine." Although it was never constructed and was decimal rather than binary in conception, it clearly anticipated the modern digital COMPUTER. A scientist with extremely broad interests, Babbage probed the roles of learned societies and government in advancing science, and wrote on mass production and on what is now called operational research.

Babbitt, Irving, 1865–1933, American scholar; b. Dayton, Ohio. A professor of French literature at Harvard (1912–33), he helped initiate New Humanism, a movement based on classical moderation. His works include *The New Laokoön* (1910) and *On Being Creative* (1932).

Babbitt, Milton, 1916–, American composer; b. Philadelphia. His "total serialization" attempts to apply 12-tone principles to all the elements of composition: dynamics, timbre, and rhythm, as well as melody and harmony (see SERIAL MUSIC; TWELVE-TONE MUSIC). In 1959 he became director of the Columbia-Princeton Electronic Music Center (N.Y.C.).

Babel, Isaac Emmanuelovich [bä'bəl], 1894–1941, Russian writer. A brilliant stylist, he won fame with *Odessa Tales* (1923–24), depicting Jewish ghetto life, and *Red Cavalry* (1926), which drew on his Civil War experiences. His also wrote the novel *Benia Krik* (1927) and the play *Sunset* (1928). He was arrested in 1939 and died in a labor camp.

Babel [bā'bəl], in the BIBLE, Babylonian city where NOAH's descendants (who spoke one language) tried to build a tower reaching to heaven. For this presumption they lost the ability to speak intelligibly to each other.

Bab el Mandeb, strategic strait between Arabia and NE Africa, 17 mi (27 km) wide, connecting the RED SEA with the Gulf of ADEN. It is a vital link in the MEDITERRANEAN SEA–SUEZ CANAL–INDIAN OCEAN sea lane.

Babeuf, François Noël [bäböf'], 1760–97, French revolutionary activist. In 1794 he founded a political journal that argued for economic and political equality. Imprisoned in 1795, he grew surer of his communist views. He formed a secret society called the Conspiracy of Equals and plotted to overthrow the government of the DIRECTORY. The plot was discovered, and Babeuf was executed.

Babington, Anthony, 1561–86, English conspirator. He was executed for plotting the murder of ELIZABETH I and the freeing of MARY QUEEN OF SCOTS. The proof against him convinced Elizabeth that it was necessary to behead Mary.

Babism, a 19th-cent. Persian sect, an outgrowth of SHIITE Islam that was founded by Mirza Ali Muhammad of Shiraz, who proclaimed himself the Bab [gate] in 1844. Babism, incorporating elements of SUFISM, GNOSTICISM, and Shiite Islam, centered on a belief in the coming of the Promised One. Oppressed from 1845, the movement declared its complete secession from ISLAM in 1863, and in 1863 the Babists were expelled from Persia. After 1868 a division had its center in Acre, under the leadership of BAHA ULLAH, the founder of BAHA'ISM.

baboon, large, powerful, ground-living MONKEY (genus *Papio*), also called dog-faced monkey, related to the MANDRILL. Found in the open country of Africa and Asia, baboons have close-set eyes under heavy brow ridges, long, heavy muzzles, powerful jaws, cheek pouches for storing food, and sharp, tusklike upper canine teeth. Baboons have a highly developed social structure.

Babur, 1483–1530, founder of the MOGUL empire in INDIA. A descendant of TIMUR, he invaded India from Afghanistan. He defeated (1526) the sultan of Delhi, captured Agra and Delhi, and later conquered most of N India. Babur was a poet; his autobiography is his major work.

Babylon, ancient city of Mesopotamia, on the Euphrates R. It became one of the most important cities of the ancient Middle East when HAMMURABI made it the capital of his kingdom of BABYLONIA. The city was destroyed (c.689 B.C.) by the Assyrians under SENNACHERIB, but it was rebuilt. The brilliant color and luxury of Babylon became legendary from the days of NEBUCHADNEZZAR (d. 562 B.C.). The Hanging Gardens were one of the SEVEN WONDERS OF THE WORLD. The Persians captured the city in 538 B.C.

Babylonia, ancient empire of Mesopotamia. Historically the name refers to the first dynasty of Babylon established by HAMMURABI (c.1750 B.C.) and to the Neo-Babylonian period after the fall of the Assyrian empire. Hammurabi, who had his capital at BABYLON, issued a famous code of laws for the management of the empire. Babylonian religion and cuneiform writing were derived from the older culture of SUMER and the quasi-feudal society was divided into classes. These Babylonian institutions influenced ASSYRIA and so contributed to the later history of the Middle East and of Western Europe. Babylonia degenerated into anarchy (c.1780 B.C.), but flourished once again as a subsidiary state of the Assyrian empire after the 9th cent. B.C. Later, Nabopolassar established (625 B.C.) what is generally known as the Chaldean or New Babylonian empire, which reached its height under his son NEBUCHADNEZZAR. In 538 B.C. the last of the Babylonian rulers surrendered to CYRUS THE GREAT of Persia.

Babylonian art: see SUMERIAN AND BABYLONIAN ART.

Babylonian captivity, in the history of Israel, the period from the fall of Jerusalem (586 B.C.) to the reconstruction in Palestine of a new Jewish state (after 538 B.C.). Following the capture of the city by the Babylonians, thousands of JEWS were deported to Mesopotamia. In 538 B.C. the Persian King CYRUS THE GREAT decreed the restoration of worship at Jerusalem. The century following this decree was the time of Jewish reintegration into a national and religious unit.

The key to pronunciation appears on page xiii.

baby's breath, name for a plant of the PINK family, for the white bedstraw of the MADDER family, and for grape HYACINTH of the LILY family.

Bacchanalia, in Roman religion, festival honoring BACCHUS, god of wine. Originally a religious ceremony, it led to drunken, licentious excesses and was outlawed (186 B.C.).

Bacchus [bāk'əs], in Greek and Roman religion, god of wine, vegetation, and fertility. His worship was celebrated in orgiastic rites such as the Bacchanalia.

Bach [bäkh], German family of distinguished musicians who flourished from the 16th through the 18th cent., its most renowned member being **Johann Sebastian Bach** (see separate article). **Johannes,** or **Hans, Bach,** 1580–1626, was a carpet weaver and musical performer at festivals. His sons and descendants were noted organists and composers. One grandson, **Johann Ambrosia Bach,** 1645–95, a musician, was the father of Johann Sebastian Bach. **Johann Christoph Bach,** 1671–1721, Johann Sebastian's eldest brother, was an organist; he took his younger brother in and taught him after their parents' death. Of the 20 children of Johann Sebastian, several were noted as musicians. The eldest son, **Wilhelm Friedemann Bach,** 1710–84, was a brilliant organist and well-known composer, but his life ended in poverty and dissolution. A younger son was **Carl Philipp Emanuel Bach,** 1714–88, also a composer and for 28 years (1740–68) the harpsichordist of Frederick the Great. He wrote an important treatise, *Essay on the True Art of Playing Keyboard Instruments* (1753). The youngest son, **Johann Christian Bach,** 1735–82, known as the "English Bach," became (1762) music master to King GEORGE III. A popular composer in the rococo style, he influenced the young MOZART.

Bach, Alexander, 1813–93, Austrian politician. As minister of the interior (1849–59) he instituted the **Bach system** for the centralization and Germanization of Hapsburg lands. It also ended internal tariffs. The system met opposition, especially in Hungary, and was replaced after 1859.

Bach, Johann Sebastian, 1685–1750, German composer and organist, one of the greatest composers of the Western world. Born into a gifted family, Bach was trained in music from childhood by his father, Johann Ambrosia, and later by his brother Johann Christoph. He held a variety of posts, serving as organist in Arnstadt (1703–7), Mühlhausen (1707–8), and Weimar (1708–17) before becoming (1717) musical director for Prince Leopold at Cöthen. After the death (1720) of his first wife, Maria Barbara Bach, he married (1721) Anna Magdalena Wülken. He had in all 20 children, several of whom became noted as musicians (see separate article). In 1723, Bach became cantor and music director of St. Thomas Church, Leipzig, a distinguished post that he held until his death. In his instrumental and choral works, Bach perfected the art of POLYPHONY and brought the era of BAROQUE music to its culmination. During his lifetime he was better known as a virtuoso organist than as a composer, but since the 19th cent. his genius has been recognized, and his reputation has grown steadily. In his early years as organist, he composed a series of works for organ that culminated in the great preludes and FUGUES written at Weimar. At Cöthen he focused on instrumental compositions, such as the Brandenburg Concertos, and keyboard works, such as Book I of the celebrated *Well-Tempered Clavier.* His superb religious compositions from the Leipzig period include the *St. John Passion* and the *Mass in B Minor,* and some 300 sacred CANTATAS, of which nearly 200 are extant. His last notable pieces are the *Musical Offering,* composed (1747) for Frederick the Great, and the *Art of the Fugue* (1749).

bachelor's button, popular name for several plants usually characterized by rounded flowers, such as the CORNFLOWER and globe AMARANTH.

Bach system: see under BACH, ALEXANDER.

backgammon, game of chance and skill played by two persons on a specially marked board divided by a space (bar) into two "tables," each of which has 12 alternately colored points (elongated triangular spaces) on which each player places 15 pieces (disks) in a prescribed formation. Two dice are thrown to determine moves. The object is to be the first to move one's pieces around and off the board. The game has very ancient roots in the Middle East.

Bacon, Francis, 1561–1626, English philosopher, essayist, and statesman. After his opposition (1584) to Queen Elizabeth I's tax program retarded his political advancement, he was favored by the earl of Essex, whom Bacon later helped to prosecute (1601). Under James I he advanced from knight (1603) to attorney general (1613) to lord chancellor (1618). In 1621 he pleaded guilty to charges of accepting bribes and was fined and banished from office; he spent the rest of his life writing in retirement. Bacon's best-known writings are his aphoristic *Essays* (1597–1625). He projected a major philosophical work, the *Instauratio Magna,* but completed only two parts: the *Advancement of Learning* (1605), later expanded in Latin as *De Augmentis Scientarum* (1623); and the *Novum Organum* (1620). His major contribution to philosophy was his application of INDUCTION, the approach used by modern science, rather than the a priori method of medieval SCHOLASTICISM.

Bacon, Francis, 1909–92, English painter; b. Ireland. Self-taught, he expressed the satirical, horrifying, and hallucinatory in such works as *Three Studies for Figures at the Base of a Crucifixion* (1944; Tate Gall., London).

Bacon, Nathaniel, 1647–76, leader of Bacon's Rebellion in colonial Virginia. Dissatisfied with the government of Sir William BERKELEY, and its neglect of frontier defense, Bacon led (1676) a popular uprising. He drove Berkeley from JAMESTOWN, but his death from malaria ended the revolt.

Bacon, Roger, c.1214–94?, English scholastic philosopher and scientist, a FRANCISCAN. A celebrated teacher at Oxford, Bacon had an interest far in advance of his times in natural science and accurate observation of phenomena, without, however, abandoning his faith. Three of his most important works, summarizing his studies, were written for Pope CLEMENT I in one year (1267–68): the *Opus majus, Opus minor,* and the *Opus tertium.* Deeply interested in alchemy, Bacon was credited by contemporaries with great learning in magic. Many discoveries have been attributed to him, including the invention of gunpowder and the first examination of cells through a microscope, but much doubt has been cast on the authenticity of such claims.

bacteria, unicellular, generally microscopic organisms having three typical forms: rod-shaped (bacillus), round (coccus), and spiral (spirillum). The cytoplasm of most bacteria—the oldest life-forms on earth—is surrounded by a cell wall; the nucleus contains DNA but lacks the nuclear membrane found in higher plants and animals. Many forms are motile, propelled by movements of a filamentlike appendage (flagellum). Reproduction is chiefly by transverse fission (MITOSIS), but conjugation (transfer of nucleic acid between two cells) and other forms of genetic recombination also occur. Some bacteria (aerobes) can grow only in the presence of free or atmospheric oxygen; others (anaerobes) cannot grow in its presence; and a third group (facultative anaerobes) can grow with or without it. In unfavorable conditions, many species form resistant spores. Different types of bacteria are capable of innumerable chemical metabolic transformations, e.g., PHOTOSYNTHESIS and the conversion of free nitrogen and sulfur into AMINO ACIDS. Bacteria are both useful and harmful to humans. Some are used for soil enrichment with leguminous plants (see NITROGEN CYCLE), in alcohol and cheese fermentation, to decompose organic wastes and clean up toxic waste sites, and in GENETIC ENGINEERING. Others, called pathogens, cause a number of plant and animal diseases, including CHOLERA, SYPHILIS, TYPHOID FEVER, and TETANUS.

bacteriological warfare: see BIOLOGICAL WARFARE.

bacteriophage or **phage,** VIRUS that infects BACTERIA, sometimes destroying them. A phage has a head composed of PROTEIN with an inner core of NUCLEIC ACID and a hollow protein tail. It infects a host by attaching its tail to the bacterial cell wall and injecting nucleic acid (DNA) into its host, whose chemical energy it uses to produce new phage particles. Eventually the bacterial cell is destroyed by lysis, or dissolution, releasing the phage particles to infect other cells. Phages are highly specific, with a particular phage infecting only certain species of bacteria; they are important tools in studies of bacterial genetics and cellular mechanisms.

Bactria [bāk'trēə], ancient Greek kingdom in central Asia. Its capital was Bactra (now Balkh, in N Afghanistan). A satrapy of the Persian Empire, it fell to ALEXANDER THE GREAT in 328 B.C. It declared its independence in 256 B.C. and became a powerful state, carrying

its conquests deep into N India. Later Bactria fell (c.130 B.C.) to the nomadic Sakas and did not rise again as a state.

Baden-Powell of Gilwell, Robert Stephenson Smyth Baden-Powell, 1st Baron, 1857–1941, British soldier, founder of the BOY SCOUTS. For his work in organizing (1908) the Boy Scout and Girl Guide movements, he received a peerage in 1929.

badger, any of several related members of the WEASEL family. Most are large, nocturnal burrowers with broad, heavy bodies, long snouts, sharp claws, and long, grizzled fur. The Old World badger (*Meles meles*), found in Europe and N Asia, weighs about 30 lb (13.6 kg) and feeds on rodents, insects, and plants. The smaller American badger (*Taxidea taxus*) has short legs and a white stripe over the forehead and around each eye; a swift burrower, it will pursue prey into their holes and may construct its own living quarters 30 ft (9.1 m) below ground level.

Badlands National Park: see NATIONAL PARKS (table).

badminton, game played by two or four persons in which a shuttlecock (small, cork hemisphere with feathers) is volleyed over a net with light, gut-strung rackets. For singles play the court measures 17 ft (5.18 m) by 44 ft (13.40 m); the doubles court is 3 ft (.91 m) wider. The game, which is generally similar to tennis, probably originated in India. It was introduced into the U.S. in the 1890s.

Badoglio, Pietro [bädô'lyō], 1871–1956, Italian soldier and premier (1943–44). In 1936 he victoriously ended the conquest of Ethiopia. After MUSSOLINI's fall he became premier and negotiated an armistice (1943) with the Allies.

Baeda: see BEDE, SAINT.

Baedeker, Karl, 1801–59, German publisher of travel guides. Issued in many editions, the "Baedekers" provided historical data. Auto touring guides were issued after 1950.

Baer, Karl Ernst von, 1792–1876, Estonian biologist. Considered a founder of modern embryology, he discovered the notochord and the mammalian egg in the ovary. His *History of the Development of Animals* (2 vol., 1828–37) presented the theory of embryonic germ layers (consisting of cells from which body tissues and organs develop) and showed that early embryonic development is similar in all animals.

Baez, Joan, 1941–, American folk singer; b. N.Y.C. Singing ballads and SPIRITUALS in a clear, soprano voice, she greatly influenced the popularity of FOLK SONG in the 1960s. She was also involved in nonviolent social action.

Baffin, William, c.1584–1622, British arctic explorer. Although he failed to find the NORTHWEST PASSAGE on two expeditions (1615–16), he discovered BAFFIN BAY. His belief that the Northwest Passage did not exist delayed arctic exploration for a time.

Baffin Bay, ice-clogged body of water with hazardous icebergs, c.700 mi (1,130 km) long, between Greenland and Baffin Island (NE Canada), linked with the N Atlantic Ocean by the Davis Strait. Visited (1585) by John Davis and explored (1616) by William BAFFIN, it was an important whaling station in the 19th cent.

Baffin Island, 183,810 sq mi (476,068 sq km), NE Canada, largest island in the Arctic Archipelago and fifth largest in the world. Largely tundra in the west and mountains in the east, it is inhabited mainly by ESKIMOS. Iqaluit, in the southeast, is the largest settlement. Early explorers were Martin FROBISHER (1576–78) and William BAFFIN (1616).

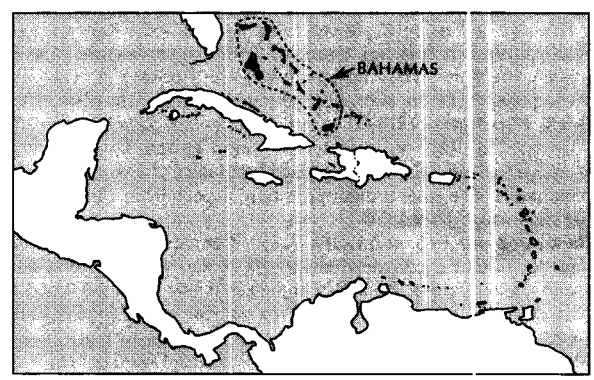
Bagehot, Walter [băj'ət], 1826–77, English social scientist. Editor (1860–77) of the highly regarded *Economist,* he studied the English banking system (*Lombard Street,* 1873) and economy (*Economic Studies,* 1880). His classic *English Constitution* (1867) distinguished effective government institutions from those in decay, while *Physics and Politics* (1872) was an early application of DARWINISM to the social sciences. He was also a noted literary critic.

Baghdad or **Bagdad,** city (1987 pop. 3,236,000), capital and largest city of Iraq, central Iraq, on both banks of the Tigris R. Most of Iraq's industries are in Baghdad; they produced refined oil, carpets, leather, textiles, and cement. The present city was founded (A.D. 762) by the ABBASIDS and became their capital. Under the caliph HARUN AR-RASHID it developed into one of the great cities of Islam. The Mongols sacked Baghdad in 1258; it became (1638) part of the Ottoman Empire, and during World War I it was captured (1917) by the British. In 1921 the city was made the capital of newly created Iraq. Baghdad is rich in archaeological remains and has several museums. Many government offices and other structures were destroyed in the PERSIAN GULF WAR.

Bagot, Sir Charles [băg'ət], 1781–1843, British diplomat. As minister to the U.S. (1815–20), he negotiated the RUSH-BAGOT CONVENTION, which limited armaments on the U.S.–Canadian border. He was later governor general of Canada (1841–43).

bagpipe, musical instrument, most widely used in Ireland and Scotland, consisting of an inflated bag, usually leather; one or two chanters (or chaunters), melody pipes with finger holes; and one or more drones, which produce one tone each. The bagpipe is an ancient instrument, probably carried E and W from Mesopotamia by Celtic migrations.

Baha'ism, religion founded by BAHA ULLAH, a doctrinal outgrowth of BABISM, with Baha Ullah as the Promised One of the earlier religion. Emphasizing simplicity and charity, Baha'is believe in the unity of all religions, in universal education, in world peace, and in the equality of men and women, and also advocate an international language and government. Baha'is have been severely persecuted in Iran under the Islamic republic, which regards the religion as an Islamic heresy. In the 20th cent. Baha'i teachings have spread across the world, particularly to Africa. The administrative center of the world faith is in Haifa, Israel; its U.S. headquarters is in Wilmette, Ill.



Bahamas, officially Commonwealth of the Bahamas, independent nation (1992 est. pop. 256,000), 4,403 sq mi (11,404 sq km), in the Atlantic Ocean, consisting of some 700 islands and islets and about 2,400 cays, beginning c.50 mi (80 km) off SE Florida and extending c.600 mi (970 km) SE, nearly to Haiti. Most of the islands are low, flat, and riverless, and many are uninhabited. The capital is NASSAU, on New Providence island, which, although smaller than many of the other islands, is the major population center. Other islands, called "out islands," include Grand Bahama, Great and Little Abaco, the Biminis, and Great and Little Inagua. The Bahamas' fine beaches, lush vegetation, and colorful coral reefs have made it one of the Western Hemisphere's most popular winter resort areas. Tourism is the major industry, although banking and sugar and oil refining have been developed to diversify the economy. The population is mostly black and mulatto, and the language is English.

History. Christopher COLUMBUS set foot in the New World in the Bahamas (1492), presumably on San Salvador. The British settled the Bahamas in the 1600s and imported blacks to work cotton plantations, which disappeared in the mid-19th cent., after the slaves were freed. Black Bahamians won control of the government from the white minority when Lynden PINDLING and the Progressive Liberal party came to power in 1967. Independence was granted in 1973. In the 1980s there were recurrent charges against Pindling's government of corruption and ties to drug traffickers. Elections in 1992 brought the Free National Movement, led by Hubert A. Ingraham, to power.

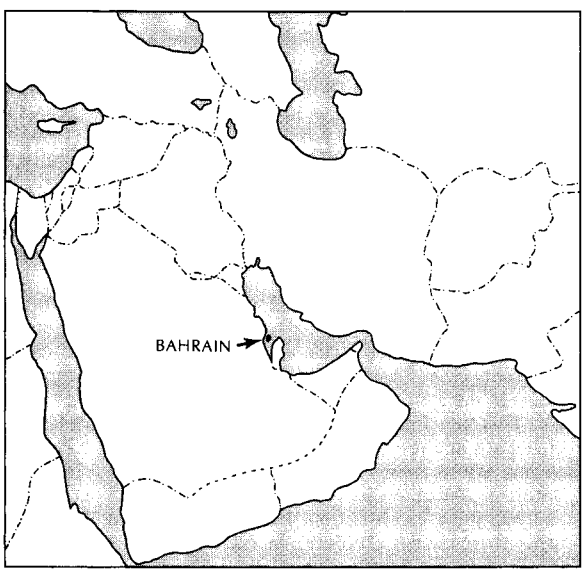
Bahasa Indonesia [bähä'sä], another name for Indonesian, one of the Malayo-Polynesian languages. See LANGUAGE (table).

Baha Ullah or **Baha Allah,** 1817–92, Persian religious leader, originally named Mirza Husayn Ali Nuri. One of the first disciples of

BABISM, in 1863 (shortly before being exiled to Constantinople) he declared himself to be the Promised One expected by Babists. He then founded BAHA'ISM and wrote its fundamental book, *Kitabi Ikan* (tr. *The Book of Certitude*, 1943).

Bahrain or **Bahrein** [bärān'], officially State of Bahrain, independent sheikhdom (1992 est. pop. 552,000), 231 sq mi (598 sq km), an archipelago in the PERSIAN GULF between the Qatar Peninsula and Saudi Arabia. The two main islands are Bahrain (the largest) and Al Muharraq, which are linked to each other and Saudi Arabia by causeway. The capital and chief port is AL MANAMAH. Flat and sandy, with a few low hills, Bahrain has a hot, humid climate. The economy is based on oil, and oil revenues have financed modernization projects, particularly in health and education. Oil reserves are expected to be depleted during the 1990s, and attempts are being made to establish such industries as shipyards and aluminum and turbine manufacturing. The majority of the population are Muslim Arab Bahrainis, but other Arabs and Iranians, Indians, and other Asians make up over 35% of the inhabitants. Arabic is the official language, but English, Farsi, and Urdu are also spoken.

History. Ruled successively by Portugal (16th cent.) and Persia (intermittently from 1602, and long claimed by Iran), Bahrain became a sheikhdom in 1783 and a British protected state in 1861. Independence was declared in 1971. A constitution, adopted in 1973, limited the sheikh's powers and gave women the vote, but in 1975 the sheikh dissolved the National Assembly, and elections have not been held since then. In the early 1980s Bahrain established closer ties with other Persian Gulf states, particularly Saudi Arabia.



Baikal, Lake: see BAYKAL, LAKE.

Bairiki, town (1979 est. pop. 1,800) on TARAWA atoll, capital of KIRIBATI.

Baja California [bä'hä] or **Lower California,** peninsula, NW Mexico, separating the Gulf of California from the Pacific Ocean. It is c.760 mi (1,220 km) long and 30 to 150 mi (48 to 241 km) wide, and is divided between the states of Baja California (N) and Baja California Sur (S). The peninsula is generally mountainous and arid, with irrigated agriculture in the north, around Mexicali. Resort ranches and deep-sea fishing facilities along the scenic coasts support a growing tourist industry. U.S. forces occupied (1847–48) the peninsula during the MEXICAN WAR.

Bakelite for its inventor, Leo Baekeland, a synthetic thermosetting phenol-formaldehyde RESIN with an unusually wide variety of industrial applications ranging from billiard balls to electrical insulation.

Baker, Howard Henry, Jr., 1925–, U.S. public official; b. Huntsville, Tenn. As a conservative moderate Republican senator (1966–85) from Tennessee, he gained (1973) national attention as a member of the Senate committee investigating the WATERGATE AFFAIR. He became (1977) Senate minority leader and served (1981–85) as Senate majority leader after the Republican victory in the 1980 elections. He also was White House chief of staff (1987–88) under Pres. Reagan.

Baker, James A(ddison), III, 1930–, U.S. government official; b. Houston. A lawyer, Baker served (1975–76) as undersecretary in the Commerce Dept. during the Ford administration. Campaign chairman for George BUSH's unsuccessful bid for the 1980 Republican presidential nomination, he became Pres. REAGAN's chief of staff in 1981 and helped secure passage of the Kemp-Roth tax cut and other legislation. In 1985 Baker became treasury secretary, resigning in 1988 to manage Vice Pres. Bush's successful presidential campaign. Under Bush, Baker was secretary of state (1989–92), negotiating arms reduction treaties with the USSR and lending U.S. support to Germany's reunification. He was also instrumental in marshalling international opposition to Iraq's invasion of Kuwait (1990; see PERSIAN GULF WAR) and succeeded in convening (1991) a Middle East peace conference. He resigned to serve (1992–93) as White House chief of staff, with responsibility for domestic policy and for overseeing Bush's unsuccessful reelection campaign.

Baker, Dame Janet, 1933–, English mezzo-soprano. Acclaimed as an ORATORIO and LIEDER singer, she also appeared in such operas as Berlioz's *The Trojans* and Mozart's *Cosi fan tutte.* In 1991 she became chancellor of the Univ. of York, England.

Bakersfield, city (1990 pop. 174,820), seat of Kern co., S central Calif., at the S end of the SAN JOAQUIN valley; inc. 1898. Petroleum was discovered in the area in 1899. The city is an oil drilling and refining, mining, and agricultural center. Cotton, citrus fruits, potatoes, and roses are grown, and plastics and drugs are manufactured.

Baki: see BAKY.

baking soda: see SODIUM BICARBONATE.

Bakke Case: see UNIVERSITY OF CALIFORNIA REGENTS V. BAKKE.

Bakst, Léon Nicolaevich, 1866–1924, Russian painter, b. Lev Samuilovich Rosenberg. A painter of the eclectic school, he sought closer ties with the West before the Revolution through his involvement with the artists' group known as *Mir Iskusstva* or "World of Art." He is noted for his elaborate stage and costume designs for the Russian ballet, e.g., *L'Après-midi d'un Faune* (1912).

Baku: see BAKY.

Bakunin, Mikhail [bəkōō'nyĭn], 1814–76, Russian revolutionary and leading exponent of ANARCHISM. After taking part (1848–49) in revolutions in France and Saxony, he was exiled to Siberia. He escaped (1861) to London, where he worked with Aleksandr HERZEN. In the first International Workingmen's Association he clashed with Karl MARX and was expelled (1872); their philosophical split led the International to dissolve (1876). Bakunin held that human beings are inherently good and deserve absolute freedom; he advocated the violent overthrow of existing governments. His works include *God and the State* (1882).

Baky, Baki, or **Baku,** city (1990 est. pop. 1,149,000), capital of AZERBAIJAN, SW Asia, on the Caspian Sea. Baky is a major port and a center for oil drilling, refining, and shipbuilding. Under independent Shirvan shahs the city was a medieval center of trade and crafts. It was under Persian rule from 1509 to 1806 when it was annexed by Russia. From 1920 until Azeribaijan's independence in 1991, it was part of the USSR.

Balaguer, Joaquín [bälägār'], 1907–, president of the Dominican Republic (1960–62, 1966–78, 1986–). He served in dictator TRUJILLO MOLINA's government as vice president (1957–60) and president until ousted (1962) by the military. During his second tenure, he restored financial stability, but political protest led him to resort to repression. He ran unsuccessfully for president in 1978 and 1982 but was reelected on a conservative platform in 1986 and 1990, despite his advanced age and blindness.

Balakirev, Mili Alekseyevich [bələkē'ryĕf], 1837–1910, Russian composer and conductor, leader of the group called the FIVE. His music, combining ROMANTICISM with Russian folk songs, includes the symphonic poem *Tamara.*

balalaika: see STRINGED INSTRUMENT.

balance of payments, relation between all payments in and out of

a country over a given period. It is an outgrowth of the concept of BALANCE OF TRADE, which it includes; it also includes the movement of government and private capital between countries (e.g., investments and debt payments). The INTERNATIONAL MONETARY FUND was created (1945) to deal with problems relating to the balance of payments. The U.S., which has generally experienced an unfavorable balance of payments since the late 1950s, sought to improve the balance in the early 1970s through DEVALUATION of the dollar. The increase in imported oil prices (1973–74) and U.S. monetary policies in the 1980s, however, had a negative effect on the balance of payments.

balance of power, system of international relations in which nations shift alliances to maintain an equilibrium of power and prevent dominance by any single state. Its modern development began in the 17th cent. with efforts of European countries to contain the France of LOUIS XIV. The balance of power was of primary concern to European nations from 1815 to 1914, particularly to contain the rising power of GERMANY, and was attacked as a cause of WORLD WAR I. It declined with the rise of the U.S. and the USSR as superpowers after 1945, but after the 1960s, with the emergence of China and the THIRD WORLD, a revived Europe and Japan, and the later collapse of the USSR, it reemerged as a component of international relations.

balance of trade, relation between the value of a nation's exports and imports. The concept first became important in the 16th and 17th cent. with the growth of MERCANTILISM, whose theorists held that a nation should have an excess of exports over imports (i.e., a favorable balance); although challenged by Adam SMITH and other economists, the idea is still widely believed. The balance of trade is a major element in a nation's BALANCE OF PAYMENTS. In the 1980s and 90s the value of U.S. imports greatly exceeded exports, resulting in large trade deficits that complicated the U.S.'s relations with its trading partners, particularly Japan.

Balanchine, George, 1904–83, American choreographer and ballet dancer; b. Russia. A member of Sergei Pavlovich DIAGHILEV's BALLETS RUSSES (1924–28), he moved (1933) to the U.S. and helped to found (1934) the School of American Ballet. In 1948 he became artistic director and principal choreographer of the NEW YORK CITY BALLET. His many works, e.g., *Serenade, Agon,* emphasize form, often abstract. He was one of the most important figures in ballet in the 20th cent.

Balboa, Vasco Núñez de, c.1475–1519, Spanish CONQUISTADOR, discoverer of the PACIFIC OCEAN. Fleeing HISPANIOLA in 1510, he hid in a vessel that took the explorer Enciso to Panama. After reaching Darien, he seized command from Enciso and, with the aid of friendly indigenous peoples, marched across the isthmus. He reached the Pacific in Sept. 1513, claiming it and its shores for Spain. He was later accused of treason and beheaded.

Balch, Emily Green, 1867–1961, American economist and pacifist; b. Jamaica Plain, Mass. She taught at Wellesley College until her dismissal (1918) for opposing U.S. involvement in World War I. Co-founder (with Jane ADDAMS) of the Women's International League for Peace and Freedom, Balch shared the 1946 Nobel Peace Prize with J.R. Mott.

bald cypress, common name for the Taxodiaceae, a family of deciduous or evergreen CONIFERS with needlelike or scalelike leaves and woody cones. Most species are native to E Asia; some, e.g., the big trees and redwoods (see SEQUOIA) and bald cypresses, are native to North America. Almost all are cultivated for ornament. The common bald cypress (*Taxodium distichum*), valued for its softwood, forms dense forests in the SE U.S. and is common in the EVERGLADES. Bald cypresses are called "bald" because of their deciduous character, unusual in conifers. True CYPRESSES belong to a separate family.

Balder, beautiful and gracious Norse god of light; son of Odin (see WODEN) and FRIGG. Invulnerable to everything but mistletoe, he was killed by a mistletoe dart made by LOKI.

Baldwin, Latin emperors of CONSTANTINOPLE. **Baldwin I,** 1171–1205 (r.1204–5), was a leader in the Fourth CRUSADE as count of Flanders. Elected emperor of Constantinople, he was taken in battle by the Bulgarians (1205) and died in captivity. His brother, HENRY OF FLANDERS, succeeded him. **Baldwin II,** 1217–73 (r.1228–61), was the last Latin emperor of Constantinople. To obtain funds, he sold part of the True Cross to LOUIS IX of France and pawned his own son to the Venetians. When MICHAEL VIII of Nicaea stormed Constantinople, Baldwin fled to Italy.

Baldwin, Latin kings of Jerusalem. **Baldwin I,** 1058?–1118 (r.1100–18), was a brother of GODFREY OF BOUILLON, whom he accompanied in the First CRUSADE. He gained the chief ports of Palestine and aided other Latin rulers against the Muslims. His cousin and successor, **Baldwin II,** d. 1131 (r.1118–31), was also in the First Crusade. As king he warred with the Turks in N Syria. During his reign TYRE and Antioch became Jerusalem's dependents **Baldwin III,** 1130–62 (r.1143–62), the son of Fulk of Anjou, ruled as Latin power in the East began to decay. Edessa fell (1144) to the Muslims, the Second Crusade failed, and the Turkish sultan Nur ad-Din took (1154) N Syria. His nephew **Baldwin IV** (the Leper), c.1161–85 (r.1174–85), defended his kingdom constantly against SALADIN. When his leprosy became worse, he had his child-nephew crowned (1183) **Baldwin V** (d. 1186).

Baldwin, James, 1924–87, African-American author b. N.Y.C. His works, dealing with African Americans and relations between the races, include novels, e.g., *Go Tell It on the Mountain* (1953) and *Just Above My Head* (1979); essay collections, e.g., *Notes of a Native Son* (1955); plays; and short stories.

Baldwin, Robert, 1804–58, Canadian statesman. A reform leader in Upper CANADA, he proposed (1836) representative government for the entire country. After the reunion (1841) of Upper and Lower Canada, Baldwin and LA FONTAINE formed a coalition government (1842), and won an overwhelming victory in the 1847 election. Their second coalition (1847–51), called the "great ministry," implemented responsible government. Among its accomplishments was the Baldwin Act, which reformed local government in ONTARIO.

Baldwin, Roger Nash, 1884–1981, American civil libertarian; b. Wellesley, Mass. He helped to found (1920) the AMERICAN CIVIL LIBERTIES UNION and was its director until 1950 and its adviser on international affairs thereafter. He also taught at the New School for Social Research (1938–42) and the Univ. of Puerto Rico (1966–74).

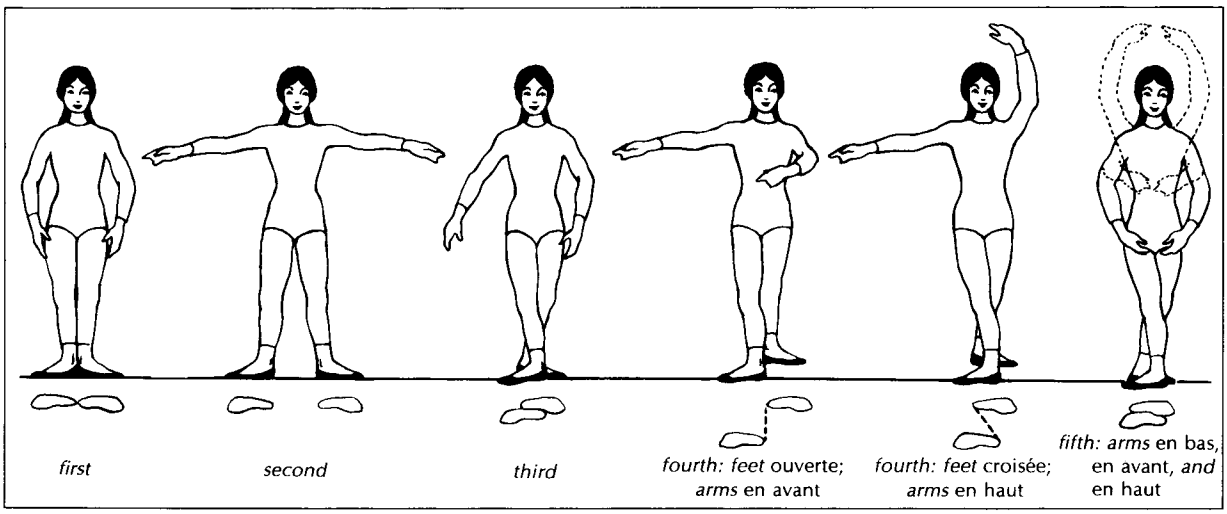
Baldwin, Stanley, 1867–1947, British statesman. A Conservative, he was three times prime minister (1923–24; 1924–29; 1935–37). He broke the 1926 general strike and secured the abdication of EDWARD VIII. An able politician, Baldwin has been criticized for his apparent blindness to the threat to peace indicated by the rise of fascism in Europe.

Balearic Islands, archipelago and autonomous region (1991 pop. 709,138) of Spain, in the W Mediterranean Sea. The three principal islands are Majorca, Minorca, and Ibiza. All have a mild climate and are popular tourist centers. The Balearics were occupied by Moors in the 8th cent. and captured (1229–35) by James I of Aragón. They were included (1276–1343) in the independent kingdom of Majorca and reverted to the Aragonese crown under Peter IV.

Balfour, Arthur James Balfour, 1st **earl of** [băl'fo͝or], 1848–1930, British statesman. A Conservative, he held many cabinet positions and was prime minister from 1902 to 1905. As foreign secretary under LLOYD GEORGE (1916–19), he issued the Balfour Declaration (1917), pledging British support for a Jewish national home in Palestine.

Bali, island and (with two offshore islets) province (1990 est. pop. 2,785,000), S Indonesia, c.2,200 sq mi (5,700 sq km), separated from JAVA (W) by the narrow Bali Strait. The fertile, scenic, and densely populated island is largely mountainous and volcanic, reaching a high point of 10,308 ft (3,142 m) at Mt. Agung. Rice, vegetables, fruits, and coffee are grown, and livestock is important. Industries include food processing, tourism, and handicrafts. The Balinese people retain their Hindu religion in a predominantly Muslim nation and are known for their uniquely ritualistic and beautiful music, folk drama, dancing, and architecture.

Baliol, John de [bāl'yəl], d. 1269, English nobleman; founder of Balliol College, Oxford. A regent for ALEXANDER III of Scotland, he was removed from office and later fought for HENRY III of England in the BARONS' WAR. His third son, **John de Baliol,** 1249–1315, king of Scotland (1292–96), claimed the throne at the death of MARGARET MAID OF NORWAY. EDWARD I of England supported him over ROBERT I in return for feudal overlordship, and he was crowned. In 1296 he renounced his oath of fealty, was defeated,



The five classical positions in ballet

and surrendered to Edward. He was imprisoned until 1299, when he retired to France. His son, **Edward de Baliol,** d. 1363, king of Scotland, invaded Scotland (1332) with the aid of EDWARD III and defeated supporters of DAVID II. After David's return from France (1341), he never held power.

Balkan Peninsula, generally mountainous land area, SE Europe, projecting south from the line of the Sava and Danube rivers between the Black, Aegean, Mediterranean, Ionian, and Adriatic seas. It comprises all or parts of nine nations—Albania, Bosnia and Hercegovina, Bulgaria, Croatia, Greece, Macedonia, Romania, Turkey, and Yugoslavia—collectively referred to as the **Balkan states.** The peninsula, which was at times part of ancient Greece and the Roman and Byzantine empires, was ruled by Turks as part of the Ottoman Empire from the late 15th cent. until the end of the BALKAN WARS in 1913.

Balkan Wars, two short wars (1912, 1913) fought for possession of the European territories of the deteriorating OTTOMAN EMPIRE (Turkey). In the first war, Serbia, Bulgaria, Greece, and Montenegro expelled Turkey from all of its European possessions except Constantinople (now Istanbul). The second war was brought on by Serbia (joined by Greece, Romania, and Turkey), which demanded that Bulgaria cede to it the larger part of Macedonia. Bulgaria lost and was forced to cede territories to all four victors. The nationalism heightened by the Balkan Wars was one of the causes of WORLD WAR I.

Ball, Lucille, 1911–89, American actress and producer; b. Jamestown, N.Y. An accomplished comedienne, she starred (1951–74) in three popular television series, beginning with *I Love Lucy.* She also headed Desilu Productions (1962–67) and Lucille Ball Productions (1967–89). Her films include *Stage Door* (1937) and *Mame* (1974).

ballad, in literature, short narrative poem usually relating a dramatic event. Folk ballads date from c.12th cent., literary ballads from the 18th. The anonymous folk ballad was originally sung, passed along orally, and changed in transmission. It was short, simple, and formulaic, often with a stock refrain. From the late 18th cent. hundreds were collected—historical, romantic, supernatural, nautical, or heroic. American ballads deal with cowboys, outlaws, folk heroes, and African Americans. Mid-20th cent. FOLK MUSIC has drawn on the tradition. The literary ballad is more elaborate, a prime example being S.T. COLERIDGE's *Rime of the Ancient Mariner.*

ballade, in literature, French 14th–15th cent. verse form, usually consisting of three eight-line stanzas and a concluding four-line envoy (a summary or address). Ballades by François VILLON and, in English, by Geoffrey CHAUCER are famous.

Balladur, Édouard, 1929–, French political leader. A Gaullist, he served under Premier POMPIDOU in the 1960s and was finance minister under Premier CHIRAC from 1986 to 1988. Appointed premier in 1993, he advocated a strict law-and-order policy, PRIVATIZATION of state-owned businesses, and promoted new taxes under an austerity budget.

ballet [Ital. *ballare,* = to dance], classic, formalized solo or ensemble dancing of a disciplined, dramatic nature, performed to music. Foreshadowed in mummeries and masquerades, it emerged as a distinct form in Italy before the 16th cent. The first ballet combining dance, decor, and special effects was presented in 1581 at the French court of CATHERINE DE' MEDICI. The 17th-cent. court ballets, danced until 1681 by males only, incorporated OPERA and drama. In 1708 the first ballet for public performance marked the appearance of a separate art form. Choreographic notation came into being and mythological themes were explored. Italian influence brought elevated and less horizontal movement, and Pierre Beauchamps established the five basic foot positions (see diagram). Marie Camargo introduced a shortened skirt, tights, and the first ballet slippers, allowing great freedom of movement. Her rival, Marie Sallé (the first female choreographer), wore a liberating, Grecian-style costume. The ballet d'action, developed c.1760 by Jean Georges Noverre, told a story through movement and facial expression. Modern ballet technique, stressing the turned-out leg and resulting variety of movement, was set down in 1820 by Carlo Blasis. With *La Sylphide* (1832) the romantic period began. Brilliant choreography emphasized the beauty and virtuosity of the prima ballerina; the male dancer functioned only as her partner until the 20th cent., when virtuoso male dancing revived. Conflicts of reality and illusion, flesh and spirit were revealed in romantic love stories and fairy tales. Under the pressure of NATURALISM in the theater, ballet declined through the mid-19th cent., but after 1875 a renaissance in romantic ballet began in Russia, where Marius Petipa and other European masters created many of the great standard ballets, e.g., *Sleeping Beauty* and *Swan Lake.* In 1909 the Russian impresario Sergei DIAGHILEV brought his Ballets Russes to Paris. In the following 20 years the Russian style, with the revolutionary music of composers like STRAVINSKY and modified by the MODERN DANCE influences of Isadora DUNCAN and others, brought a ballet renaissance to Europe and America. Paris, London, and New York City became major centers. Today Russian and English ballet continue to exemplify one major trend, toward storytelling and lavish production. In American ballet an opposing tendency toward abstraction in theme and simplicity in design, due largely to the influence of George BALANCHINE, is often displayed. In the late 20th cent. ballet enjoyed enormous popularity in the U.S.; New York City remained its center, but many companies flourished elsewhere. International touring expanded, and ballet was increasingly receptive to techniques and music from other dance forms. See articles on major dance companies and individual dancers.

Ballet Gran Folklórico de México, Mexico's national dance company. It was founded (1952) by Amalia Hernández at the National Institute of Fine Arts, Mexico City, to produce dances based on

Mexican folklore for television. Artistic excellence has led to its recognition as one of the world's finest "ethnic" ballets.

Ballets Russes: see DIAGHILEV, SERGEI PAVLOVICH.

ballistics, science of projectiles, such as bullets, bombs, rockets, and missiles. Interior ballistics deals with the propulsion and motion of a projectile within a gun or firing device. Exterior ballistics is concerned with the motion of the projectile while in flight, and includes the study of the trajectory, or curved flight path, of the projectile. Terminal ballistics is concerned with the phenomena occurring at the termination of the projectile's flight; such termination may result from impact on a solid target or explosion of the projectile. In criminology, the term *ballistics* is applied to the identification of the weapon from which a bullet was fired. Microscopic imperfections in a gun barrel make characteristic scratches and grooves on bullets fired through it.

balloon, lighter-than-air craft without a propulsion system, lifted by inflation of one or more containers with a gas lighter than air or with heated air. During flight, altitude is gained by discarding ballast, e.g., bags of sand, and lost by releasing some of the lifting gas from its container. In some late designs using air heated by a gas-fired burner, the altitude is controlled by varying the temperature of the heated air. The balloon was invented by the French brothers Joseph and Jacques Étienne MONTGOLFIER, who in 1783 caused a linen bag about 100 ft (30 m) in diameter to rise in the air. Using a Montgolfier balloon, Pilâtre de Rozier and the marquis d'Arlandes made the first manned balloon flight on Nov. 21, 1783. The Americans Ben Abruzzo, Maxie Anderson, and Larry Newman made (1978) the first successful transatlantic balloon crossing. Today WEATHER BALLOONS equipped with radio transmitters (see RADIOSONDE) and other instruments transmit meteorological readings to ground stations at regular intervals. High-altitude balloons are used in astronomy, especially in the study of cosmic rays and the photography of other planets. See also AIRSHIP; PICCARD, AUGUSTE.

balloon angioplasty: see ANGIOPLASTY.

balsa: see BOMBAX.

Balthazar: see WISE MEN OF THE EAST.

Balthus, pseud. of Balthasar Klossowski, Count de Rola, 1908–, Polish-French artist. A reclusive artist widely regarded as one of the most important modern figurative painters, Balthus is noted for his poetic, calm, yet oddly disorienting paintings. Many are extremely large with thickly built-up surfaces and feature dreamy, sensual, and enigmatically posed adolescent girls. Other typical subjects are brooding landscapes and distinctive portraits.

Baltic languages, a subfamily of the Indo-European family of languages. See LANGUAGE (table).

Baltic Sea, N Europe, arm of the Atlantic Ocean, c.163,000 sq mi (422,170 sq km), bordered by Denmark, Germany, Poland, Russia, Lithuania, Latvia, Estonia, Finland, and Sweden. Shallow and partly frozen in winter, it is connected to the Atlantic by several straits, including the Kattegat and SKAGERRAK, and by the Kiel Canal. Principal arms of the Baltic are the gulfs of Bothnia, Finland, and Riga.

Baltimore, David, 1938–, American microbiologist, b. New York City. In 1970 he and his wife, Alice Huang, discovered reverse transcriptase, an enzyme that allows RNA to synthesize DNA in RETROVIRUSES. He shared the 1975 Nobel Prize in physiology or medicine with Renato Dulbecco and Howard Temin. Appointed president of Rockefeller Univ. in 1990, he resigned the next year after a scientific fraud scandal. A paper he coauthored contained fraudulent data from another author; Baltimore was criticized for his vehement defense of the paper despite the evidence and for possibly attempting a coverup.

Baltimore, George Calvert, 1st Baron: see CALVERT, GEORGE.

Baltimore, city (1990 pop. 736,014; met. area 2,382,172), N Md., on the Patapsco R. estuary, a branch of CHESAPEAKE BAY; settled early 17th cent., inc. 1745. The largest city in Maryland, Baltimore is a major seaport, industrial center, and railhead. Shipbuilding, food processing, metal and oil refining, and the production of aerospace equipment and chemicals are among the leading industries. The city grew phenomenally with the opening (1818) of the NATIONAL ROAD and the founding (1827) of the Baltimore & Ohio Railroad. Largely rebuilt after a fire in 1904, it became famous for its white-stepped, red-brick row houses. Johns Hopkins Univ., Goucher College, and the Peabody Conservatory of Music are among the city's many educational institutions. Cultural features include the Baltimore Museum of Art and the Enoch Pratt Free Library. H.L. MENCKEN, Babe RUTH, and Billie HOLIDAY were among Baltimore's best-known natives. The city's sights include the first U.S. Roman Catholic cathedral (1806–21), designed by B.H. LATROBE; the Inner Harbor area, including the U.S.S. *Constellation* and the National Aquarium; and the nation's third oldest zoo.

Balts, peoples of the E coast of the Baltic Sea, namely the Latvians, Lithuanians, and now-extinct Old Prussians. The Estonians are related to the Finns rather than to the Balts. In the 13th cent. the TEUTONIC KNIGHTS and Livonian Brothers of the Sword conquered and Christianized Estonia and Latvia, which remained under German economic dominance until the 20th cent. The Lithuanians, who resisted annexation and adopted Christianity in 1387, formed a powerful state that united (1569) with Poland. Estonia passed in 1561 to Sweden and in 1721 to Russia, which by 1795 controlled all the Baltic lands. Independent after World War I, LATVIA, LITHUANIA, and ESTONIA were forcibly incorporated into the USSR in 1940. Under the more liberal policies of Soviet Pres. GORBACHEV noncommunist nationalists gained control of the Baltic states' parliaments and sought to restore the nations' independence. The Soviet government recognized their independence (1991) in the aftermath of the failed hard-line coup against Gorbachev.

Baluchi [bəlo͞o'chē], language belonging to the Iranian group of the Indo-Iranian subfamily of the Indo-European family of languages. See LANGUAGE (table).

Balzac, Honoré de [bälzäk'], 1799–1850, French writer, among the great masters of the NOVEL. Half starving in a Paris garret, he began his career by writing sensational novels to order under a pseudonym. His great work, called "The Human Comedy," written over a 20-year period, is a collection of novels and stories recreating French society of the time, picturing in precise detail individuals of every class and profession. Chief among them are *Père Goriot* (1835) and *Cousin Bette* (1847). His short stories include some of the best in the language.

Bamako, city (1987 pop. 646,163), capital of Mali, a port on the Niger R. It is a major regional trade center connected by rail to DAKAR, on the Atlantic Ocean. Manufactures include processed meat, textiles, and metal goods. Bamako was a center of Muslim learning under the MALI empire (c.11th–15th cent.). It became (1908) the capital of the Sudan, a province of French West Africa. It has a botanical and zoological park, gardens, and several educational institutions.

bamboo, plant (genus *Bambusa*) of the GRASS family, chiefly of warm or tropical regions. The genus contains the largest grasses, sometimes reaching 100 ft (30 m). Bamboo stalks are hollow, usually round, and jointed, with deciduous leaves. Bamboo is used as wood, and for construction work, furniture, utensils, fiber, paper, fuel, and innumerable other articles. Bamboo sprouts (shoots) and the grains of some species are eaten. Native American bamboo is a CANE.

banana, name for a family of tropical herbs (the Musacae), for a genus (*Musa*) of herbaceous plants, and for the fruits they produce. Bananas are probably native to tropical Asia, but are widely cultivated. They are related to the economically valuable MANILA HEMP and to the BIRD-OF-PARADISE FLOWER. Banana plants have a palmlike aspect and large leaves, the overlapping bases of which form the so-called false trunk. Only female flowers develop into the banana fruit (botanically, a berry), each plant bearing fruit only once. The seeds are sterile; propagation is through shoots from the rhizomes. Bananas are an important food staple in the tropics.

Bancroft, George, 1800–1891, American historian and public official; b. Worcester, Mass. Bancroft was secretary of the navy (1845–46) under Pres. POLK and established the U.S. Naval Academy. Later he was minister to Britain (1846–49) and Prussia (1867–74). He supported Pres. LINCOLN in the CIVIL WAR. His *History of the United States* (10 vol., 1834–74) is anti-British and intensely patriotic but remains valuable because of its extensive use of source materials.

Bancroft, Hubert Howe, 1832–1918, American historian; b. Granville, Ohio. A wealthy publisher, he produced, with a staff of researchers and writers, a prodigious history of the U.S. West, Central America, and Mexico (39 vol., 1874–90). In 1905 he presented

his collection of 60,000 books, manuscripts, maps, and personal narratives to the Univ. of California, and as the Bancroft Library it remains an outstanding repository of the history of the West.

Banda, Hastings Kamuzu, 1902?–, president of MALAWI (1966–). A physician, he was a leading nationalist in Nyasaland, becoming prime minister and leading it to independence as Malawi in 1964. He became president for life under a new constitution in 1966 and suppressed opposition to his rule. The stoppage of Western aid (1992) forced him to grant a referendum (1993) on one-party rule, which he lost. The life presidency was abolished in 1993, but Banda remained in office.

Bandaranaike, Sirimavo (Ratwatte Dias) [bändränī'kē], 1916–, prime minister (1960–65, 1970–77) of SRI LANKA (formerly Ceylon). She was largely responsible for the constitution of 1972 that transformed Ceylon into the republic of Sri Lanka. In 1980 she was expelled from Parliament and stripped (1980–82) of her civil rights because of abuses as prime minister. She was an unsuccessful candidate for president in 1988.

Bandar Seri Begawan, formerly Brunei, city (1986 est pop. 50,500), capital and chief port of BRUNEI.

Bandung or **Bandoeng,** city (1990 est. pop. 1,910,000), capital of West Java prov., Indonesia, 75 miles (120 km) SE of JAKARTA. Founded by the Dutch in 1810, it became the administrative and military headquarters of the Netherlands East Indies. Third largest city in Indonesia, Bandung is an industrial hub, a famous educational and cultural center, and a tourist resort. It is a textile center and site of the country's quinine industry.

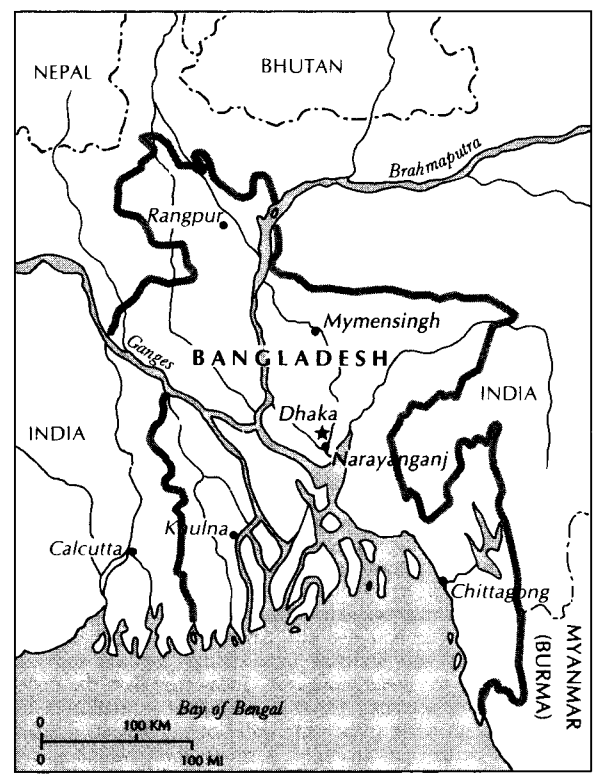
Bandung Conference, 1955, meeting of diplomats from 29 African and Asian countries held at BANDUNG, Indonesia. It promoted economic and cultural cooperation and opposed colonialism. The People's Republic of China played a prominent part.

Bangalore, city (1991 pop. 2,651,000), capital of Karnataka state, S central India. It is an industrial center producing electronic and other high-technology equipment, computer software, aircraft, textiles, and other products. Founded in 1537, it became the administrative seat of Mysore (now Karnataka) in 1831. The city has many parks and several institutes of learning.

Bangkok, city (1990 est. pop. 7,380,000), capital of Thailand, S central Thailand, on the east bank of the Chao Phraya R., near the Gulf of Thailand. Thailand's largest city, its financial and industrial hub, and a leading city of Southeast Asia, Bangkok lies in the rice-growing region. Rice, tin, teak, and rubber are shipped from the city's port. Manufactures include processed food, textiles, lumber, refined oil, motor vehicles and electrical equipment. The city is also a famous jewelry-trading center. Ethnic Chinese dominate commerce and industry. A city that contrasts ancient and modern structures, Bangkok contains the vast, walled Grand Palace and over 400 Buddhist temples and is noted for its numerous canals. It is the site of five universities, as well as the National Museum. It became the nation's capital in 1782. **Thon Buri,** part of metropolitan Bangkok, is an industrial city on the river's west bank. It was the capital of Siam (1769–82).

Bangladesh, officially People's Republic of Bangladesh, republic (1992 est. pop. 119,412,000), 55,126 sq mi (142,776 sq km), S Asia, bordered by India (W, N, and E), Myanmar (SE), and the Bay of Bengal (S). Principal cities include DHAKA (the capital) and CHITTAGONG. A low-lying alluvial region, Bangladesh is composed mainly of the combined delta of the GANGES, BRAHMAPUTRA, and Meghna rivers. The climate is tropical monsoonal, and there are frequent, devastating floods and cyclones (hurricanes). The economy is largely agricultural; jute (of which Bangladesh produces over 50% of the world supply), rice, sugarcane, and tea are the principal crops. The principal manufactures include jute products, textiles, paper, processed food, and fertilizers. Bangladesh has the highest population density in the world. The majority of the people are Bengalis. About 90% are Muslims; there are Hindu, Buddhist, and Christian minorities. The official language is Bengali, but English is also spoken.

History. Governed for centuries by Afghan, Mogul, and Muslim rulers, the area that is now Bangladesh became part of British India in the late 18th cent. When Pakistan achieved independence in 1947, Bangladesh, then called East Bengal and, after 1955, East Pakistan, became an eastern province of Pakistan, from which it is separated by more than 1,000 miles. A movement for greater autonomy was spearheaded by Sheikh Mujibar Rahman, whose AWAMI LEAGUE won a majority in the federal Pakistani assembly in 1970. The government postponed assembly sessions, and on Mar. 26, 1971, the Awami League declared the province independent as Bangladesh. Civil war ensued, and an estimated 1 million Bengalis were killed before India intervened on Bangladesh's behalf and Pakistan was defeated in Dec. 1971. Famine, disastrous weather, and political unrest have plagued Bangladesh since independence. Rahman was assassinated in a military coup in 1975. Two countercoups quickly followed, bringing to power Gen. Ziaur Rahman, who was elected president in 1978. He brought some stability to the country and reintroduced civilian rule, but was killed in an abortive coup in 1981. Another coup, led by Lt. Gen. Hossain Mohammad Ershad, and the introduction of martial law followed in 1982. Ershad declared (1983) himself president and later won (1986) a disputed election. In 1990 violent protests forced his resignation, and he was later convicted of corruption and jailed. Free elections were held in 1991. The National party, led by Khaleda Zia, Ziaur Rahman's widow, won, and she became prime minister.



Bangor, city (1990 pop. 33,181), seat of Penobscot co., S Me., at the confluence of the Penobscot and Kenduskeag rivers; inc. as a city 1834. It is a port of entry, commercial center, and gateway to a large resort and lumber area. Shoes, paper, lumber, and electronic equipment are produced. Settled in 1769 (as Sunbury), it was an important 19th-cent. shipbuilding center with a trade in ice, lumber, and stone.

Bangui [bäng-gē'], city (1988 pop. 451,690), capital of the Central African Republic. A port and light industrial center on the Ubangi R., it handled most of the country's international trade until 1978, when an overland route was opened through Cameroon. The city is being developed as a tourist center for the country's large wildlife reserves and national parks. Bangui was founded (1889) by French explorers. It has a university (est. 1970).

banjo: see STRINGED INSTRUMENT.

Banjul, formerly Bathurst, port city (1983 pop. 44,188), capital of Gambia, on St. Mary's Island where the Gambia R. enters the At-

lantic Ocean. It is Gambia's only large city and its administrative and economic center. Peanut processing, the chief industry, provides the leading export. The city was founded (1816) by the British as a trading post and a base for suppressing the slave trade.

Bank for International Settlements (BIS), financial institution established (1930) in Basel, Switzerland, by bankers and diplomats of Europe and the U.S.; there are now 27 European members plus the U.S., Canada, Japan, Australia, and South Africa. The BIS is run by a board dominated by West European central bank governors. As a meeting place for the governors of West and East European central banks, the BIS serves to promote international financial cooperation. The bank is also the representative of several important West European financial enterprises.

banking, primarily the business of dealing in money and instruments of credit. Banks were traditionally differentiated from other financial institutions by their principal functions of accepting deposits—subject to withdrawal or transfer by check—and of making loans. The deregulation of the 1980s, however, has blurred the distinctions between various U.S. financial institutions. Banking, in the form of making loans at interest, dates back to antiquity. It developed rapidly in the 18th and 19th cent. to support the expansion of industry and trade. The first bank in the U.S. was the Bank of North America, established (1781) in Philadelphia. Congress chartered the first BANK OF THE UNITED STATES in 1791 to engage in commercial banking and to act as fiscal agent of the government but failed to renew its charter in 1811. A similar fate attended the second Bank of the United States. In 1838 New York adopted the Free Banking Act, which permitted anyone to engage in banking, upon compliance with certain charter provisions. The idea spread rapidly, and from 1840 to 1863 all banking business was done by state-chartered institutions (state banks). The National Bank Act (1863) created a system of banks to be chartered by the federal government (national banks). Both types of banks continue in existence today. The FEDERAL RESERVE SYSTEM was established in 1913 to oversee the U.S. banking system. The FEDERAL DEPOSIT INSURANCE CORPORATION (FDIC; 1933) provides for insurance of bank deposits. International banking grew in importance after World War II. The International Bank for Reconstruction and Development (World Bank) makes loans to governments and private investors, and the International Monetary Fund provides members with technical assistance in international banking. Many of the world's major banks operate branches in other countries. Two major types of banks in the U.S. are commercial banks and mutual savings banks, but since the 1980s the distinctions between them have largely disappeared. The 12,000 commercial banks are the mainstay of the U.S. banking system. Known as full-service banks, they render a wide range of services, in addition to their primary functions of making loans and investments and handling demand (checking) as well as savings and other time deposits. Savings banks were exclusively state-chartered and accepted only savings deposits and made loans mainly for home mortgages. Today they have the right to offer checking accounts, either as a result of legislation or indirectly through NOW (negotiable order of withdrawal) accounts; they may be federally chartered. A similar thrift institution is the SAVINGS AND LOAN ASSOCIATION. Types of financial institutions that perform one or more banking functions include building and loan associations, CREDIT UNIONS, and the investment companies known as NONBANKS, including mortgage companies, finance companies, securities brokers, and investment bankers. By the early 1980s, sweeping changes brought about by improved communications and computers enabled the nation's nonbanks to pose a serious challenge to the traditional banks. The sharp rise of MONEY-MARKET FUNDS, the widespread use of COMMERCIAL PAPER for loans, and the creation of financial conglomerates siphoned off billions of dollars of banking business. In the late 1980s and early 1990s many U.S. banks and other financial institutions failed as a result of bad loans and a slowed economy, severely stressing the resources of the FDIC and bankrupting the Federal Savings and Loan Insurance Corporation. Computers have also enabled the development of automated teller machines and various electronic banking services, including computer programs that permit individuals to pay bills through the electronic transfer of funds.

Bank of the United States, name of two national banks created by the U.S. Congress. The first bank (1791–1811), proposed by Alexander HAMILTON and the Federalists, aroused opposition, especially from the West, for its conservative policies. Its charter was allowed to expire. Difficulties in financing the WAR OF 1812 caused the creation of a second bank (1816–36). It prospered under the management of Nicholas BIDDLE, but was viewed as a tool of Eastern commercial interests by the Jacksonians. Pres. JACKSON vetoed its rechartering and in 1833 began depositing government funds in state banks.

bankruptcy, legal proceeding to deal with the liabilities of an insolvent debtor (individual or business). Its purpose is to distribute the bankrupt's assets equitably among the creditors and, in most cases, to free the bankrupt from further liability. Bankruptcy may be instituted by the debtor (voluntary) or by the creditors (involuntary). In the U.S., bankruptcy is governed by federal laws.

Banks, Sir Joseph, 1743–1820, English naturalist and patron of the sciences. He accompanied Capt. James COOK on his voyage (1768–71) around the world, collecting biological specimens, most previously unclassified. He was chiefly responsible for making Kew Gardens an important botanical center and was president (1778–1820) of the Royal Society.

Bannister, Sir Roger (Gilbert), 1929–, British athlete. He was the first person to run the mile in under 4 min, clocking 3 min 59.4 sec at Oxford, England, in 1954. He was knighted in 1975.

Banting, Sir Frederick Grant, 1891–1941, Canadian physician. He and John MACLEOD won the 1923 Nobel Prize in physiology or medicine for isolating (1921), together with Charles BEST, the pancreatic hormone later called INSULIN. He made valuable studies of the cortex of the adrenal glands, of cancer, and of silicosis. He was knighted in 1934.

Bantu, ethnic and linguistic group of Africa. They inhabit most of Africa S of the Congo R., except the extreme southwest. The classification is primarily linguistic, and there are almost 100 Bantu languages, including Luganda, Zulu, and Swahili. Few cultural generalizations concerning the Bantu can be made. There were some highly developed Bantu states, and several Bantu confederations were formed in the 19th cent., e.g., the Zulu and the Basuto. Other Bantu peoples include the Ndebele and the Shona. In South Africa the term *Bantu* has been used to refer to the indigenous African population, which was subject to the policies of APARTHEID.

Bantu languages, group of African languages forming a subdivision of the Benue-Niger division of the Niger-Congo branch of the Niger-Kordofanian language family. See AFRICAN LANGUAGES (table).

bantustan, territory that was set aside under APARTHEID for black South Africans and slated for eventual independence. Ten bantustans (now generally referred to as homelands), covering 14% of the country's land, were created from the former "native reserves." Four were proclaimed independent—TRANSKEI (1976), BOPHUTHATSWANA (1977), VENDA (1979), and CISKEI (1981)—but no foreign government recognized them. Citizens of independent homelands lost the limited rights they had as South Africans. Under the interim South African constitution that was approved in 1993 and ended white rule. South African citizenship was restored to homeland residents and the homelands were abolished.

baobab, huge tree (*Adansonia digitata*) of the BOMBAX family, native to India and Africa. The trunk diameter of this relatively short tree is exceeded only by that of the SEQUOIA, and the trunks of living trees are hollowed out for dwellings. The bark is used for rope and cloth, the leaves yield condiments and medicines, and the gourdlike fruit (monkeybread) is eaten.

baptism [Gr., = dipping], in most Christian churches a SACRAMENT. Usually required for membership in a church, it is a rite of purification by water, invoking the grace of God to regenerate a person and cleanse him or her of sin. Formal baptism is performed by immersion (as among the BAPTISTS) or by pouring or sprinkling water on the person to be baptized. Some churches baptize infants; others withhold baptism until a relatively mature age.

Baptists, denomination of Protestant Christians holding that baptism is only for believers and solely by immersion, begun (c.1608) by English SEPARATISTS in Amsterdam. The first American congregation was founded (1639) by Roger WILLIAMS in Providence, R.I. The churches are congregational, with nongoverning general as-

The key to pronunciation appears on page xiii.

sociations, e.g., the Southern Baptist Convention and the National Baptist Convention, U.S.A., Inc. Baptist churches are the largest Protestant denomination in the U.S., with over 34 million members in 1992.

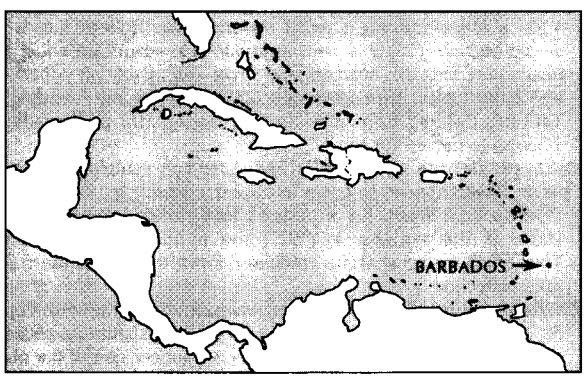
Bar, Confederation of (1768–72), union formed at Bar, Podolia (now W Ukraine), by a faction of Polish nobles and the Roman Catholic clergy for the purpose of defending Polish independence and Roman Catholicism, and of opposing Russian interference in Polish affairs. It also opposed the Russian-backed king, STANISLAUS II. In 1772 the confederation fought a bitter war against Russia; it ended with the dissolution of the confederation and the First Partition of Poland.

Barabbas [bərăb'əs], bandit whose release was granted to the mob by PONTIUS PILATE instead of JESUS.

Baraka, Amiri, 1934–, African-American author and political activist; b. Newark, N.J., as LeRoi Jones. His works often express the African American's hatred for white society. Among his plays are *Dutchman, The Toilet,* and *The Slave* (all: 1964). He has also published poetry and prose, including essays and an autobiography (1984).

Barbados, island state (1992 est. pop. 255,000), 166 sq mi (430 sq km), WEST INDIES, E of St. Vincent in the Windward Islands. The capital is Bridgetown. The easternmost of the major islands in the Windward chain, Barbados is generally low-lying, rising to no more than 1,104 ft (336 m), with no rivers, but ample rainfall from June to December. The porous soil and moderate warmth are ideal for the growing of sugarcane, historically the island's major occupation. Rum and molasses are exported, there is commercial fishing, and some light industry and banking were introduced in the 1970s and early 1980s. However, the largest source of foreign exchange is tourism, the island having long been a favorite resort area. The population is mostly rural, and about 95% are of African origin.

History. Although Barbados was probably once inhabited by Arawaks, it had been depopulated when the Portuguese discovered and named it. The island was settled in the early 1600s by the British. The sugar economy that they introduced survived the abolition of slavery in 1834, and for a time Barbados served as the administrative capital of the Windward Islands. It became a separate colony of Britain in 1885 and an independent associated state of the Commonwealth in 1966. The Democratic Labor party, currently led by Prime Min. Erskine Sandiford, has been in power since 1986.



Barbarossa (Khayr ad-Din), c.1483–1546, Turkish corsair. He and his brother Aruj seized Algiers from Spain in 1518, and placed it and the other BARBARY STATES under Turkish suzerainty. As admiral of the Turkish fleet under SULAYMAN I, he twice defeated (1533, 1544) the Italian admiral Andrea DORIA and ravaged the coasts of Greece, Italy, and Spain.

Barbarossa, Frederick: see Frederick I under FREDERICK, rulers of the Holy Roman Empire.

Barbary States, term historically applied to the North African states of Tripolitania, TUNISIA, ALGERIA and MOROCCO. In the 16th cent., led by the corsair BARBAROSSA, they came under Turkish suzerainty despite efforts by Holy Roman Emperor Charles V to defeat the Turks. As Turkish hold on them weakened, they became the home base for pirates who demanded booty, ransom, and slaves from raids on Mediterranean (and occasionally Atlantic) shipping and ports. The major European naval powers in general found it more convenient to pay tribute to the Barbary States than to try to destroy them. By the 19th cent., however, opposition to them was strong, and the TRIPOLITAN WAR reflected U.S. opposition. In 1830 France captured Algiers, and c.1835 Morocco was forced to abandon plans to rebuild its fleet—in effect ending Barbary Coast piracy.

Barber, Samuel, 1910–81, American composer; b. West Chester, Pa. His music is lyrical and generally tonal. Among his major compositions are *Adagio for Strings* (1936); *Knoxville: Summer of 1915* (1947), for soprano and orchestra; and the operas *Vanessa* (1956; Pulitzer) and *Antony and Cleopatra* (1966), commissioned to open the new METROPOLITAN OPERA House, at LINCOLN CENTER (N.Y.C.).

Barbie, Klaus, 1913–91, Nazi war criminal known as the "Butcher of Lyons." Gestapo chief in Lyons, France (1942–44), he was responsible for the deaths of French Resistance members and thousands of Jews. After the war he secretly served as a U.S. army agent in Germany. In 1951, he fled Europe for Bolivia with U.S. help. Identified by Nazi-hunters in the early 1970s, he was expelled from Bolivia in 1983 after a civilian government came to power. He was tried in France, found guilty of crimes against humanity, and sentenced to life imprisonment.

Barbirolli, Sir John [bär"bərō'lē], 1899–1970, English conductor and cellist. He succeeded TOSCANINI as conductor of the New York Philharmonic (1937–42) and later conducted (1960–67) the Houston Symphony Orchestra (see ORCHESTRA, table).

barbiturate, any depressant drug derived from barbituric acid. In low doses, barbiturates have a tranquilizing effect. Increased doses are hypnotic or sleep-inducing, and still larger doses act as anticonvulsants and anesthetics. Barbiturates were widely used as SLEEPING PILLS; such use may lead to psychological dependency, physiological tolerance, and even death by overdose (see DRUG ADDICTION AND DRUG ABUSE). Barbiturates do not relieve pain.

Barbizon school, an informal association of French landscape painters that flourished c.1830–c.1870. Its name derives from the village of Barbizon, a favorite residence of members of the group. Théodore ROUSSEAU led the group, which also included Jules Dupré, Narciso Diaz de la Peña, Constant Troyon, and Charles DAUBIGNY. They rendered landscape from direct observation of nature, in a straightforward, anticlassical manner much influenced by 17th-cent. Dutch masters, including RUISDAEL and HOBBEMA. COROT and MILLET, although often linked with the group, stand outside its main line of development. The Barbizon school influenced late-19th- and early-20th-cent. American landscape painting.

Barbuda: see ANTIGUA AND BARBUDA.

Barca, surname of members of a powerful Carthaginian family. See HAMILCAR BARCA; HANNIBAL; HASDRUBAL.

Barcelona, city (1988 est. pop. 1,714,000), capital of Barcelona prov. and the chief city of CATALONIA, NE Spain, on the Mediterranean Sea. It is Spain's second largest city and largest port. Among its manufactures are textiles, machinery, motor vehicles, locomotives, and aircraft. Founded by settlers from CARTHAGE, it was held by the Romans and Visigoths; fell to the MOORS (8th cent.) and to CHARLEMAGNE (801); and was ruled from the 9th cent. by the counts of Barcelona. It reached its peak c.1400 as a center of trade, banking, and cloth-making. The center of the Catalan revolt against Spain (1640–52), it was the capital of the Catalan autonomous government (1932–39) and the seat of the Spanish Loyalist government (1938–39). Barcelona is a modern city with striking new buildings. Notable older structures include the Cathedral of Santa Eulalia (14th–15th cent.) and the Church of the Sagrada Familia (begun 1882), designed by Antonio GAUDÍ. The 1992 summer Olympic games were held in Barcelona.

bar code, computer coding system that uses a printed pattern of lines or bars to identify products, mail and packages, customer accounts, and the like. In a linear bar code system, the code itself contains no information about the item to which it is assigned but represents a string of identifying numbers or letters. When the code is read by an optical scanner linked to a computer, the computer can provide and record information about the item, such as its price or the quantity sold, from and to databases. The Universal

Product Code (UPC) uses a set of two dark (usually black) and two light (usually white) bars of specified thicknesses to represent numbers. Each item is assigned a unique numeric code, which is printed as a bar code on the item's packaging. So-called "two-dimensional" (2D) bar codes permit the encoding of information about an item in addition to an identifying code. In a 2D bar code, two axes, or directions, are used for recording and reading the codes and the bar size is reduced, increasing the space available for data in the way that a column of words improves on a column of letters. Some 2D codes do not use bars at all, such as the United Parcel Service's hexagon-based Maxicode.

Bardeen, John, 1908–91, American physicist; b. Madison, Wis. He was known for his studies of semiconductivity and other aspects of SOLID-STATE PHYSICS. The first to win a Nobel Prize twice in the same field, Bardeen shared the 1956 physics prize with Walter Brattain and William Shockley, for work in developing the TRANSISTOR, and the 1972 physics prize with Leon Cooper and John Schreiffer, for their theory of SUPERCONDUCTIVITY.

Barenboim, Daniel, 1942–, Israeli pianist and conductor; b. Argentina. He made his debut in Buenos Aires at seven. He has played chamber music and recorded widely and was music director of the Orchestre de Paris (1975–1988) and of the Bastille Opera (1987–89). In 1991 he succeeded SOLTI as music director of the Chicago Symphony, and in 1992 he became artistic director of the Berlin State Opera.

Barents Sea, arm of the Arctic Ocean, off N Norway and NW Russia, partially enclosed by Franz Josef Land (N), Novaya Zemlya (E), and Svalbard (W). Remnants of the North Atlantic Drift, a continuation of the GULF STREAM, keep its ports, including MURMANSK and Vardö, ice-free throughout the year.

Barentz or **Barents, Willem,** d. 1597, Dutch navigator. He made three expeditions to the arctic (1594, 1595, 1596–97) in search of the NORTHWEST PASSAGE. His importance lies in the extent of his explorations and the accuracy of his charts.

Bar Harbor, town (1990 pop. 4,443), SE Me., on Mount Desert Island and Frenchman Bay; settled 1763, inc. 1796. One of the most famous 19th-cent. resorts, it is near Acadia National Park (see NATIONAL PARKS, table) and has summer ferry service to Nova Scotia. A 1947 fire destroyed much of Bar Harbor. The renowned Jackson Laboratory for biological research (est. 1929) is located there.

barite, barytes, or **heavy spar,** white, yellow, blue, red, or colorless barium sulfate mineral ($BaSO_4$). Abundant worldwide in tabular crystals or in granular or massive form, barite is used as a commercial source of the element BARIUM, as a filler in the manufacture of linoleum, oilcloth, rubber, and plastics, and as a mud for sealing oil wells during drilling.

baritone: see VOICE.

barium (Ba), metallic element, isolated by electrolysis in 1808 by Sir Humphry DAVY. It is a soft, silver-white ALKALINE-EARTH METAL. Its principal ore is BARITE. Various barium compounds are used as paint pigments, rat poison, a drying agent, an X-ray imaging agent, and a water softener, and in pyrotechnics. See ELEMENT (table); PERIODIC TABLE.

bark, outer covering of the STEM of woody plants, composed of waterproof CORK cells (the outer bark) protecting a layer of food-conducting tissue (the inner bark or phloem). As the stem grows in size (see CAMBIUM), the outer bark gives way by splitting, shredding, or peeling in patterns typical of the species. Various barks are sources of textile fibers (e.g., HEMP, FLAX, and JUTE), tannin, cork, dyes, flavorings (e.g., CINNAMON), and drugs (e.g., QUININE).

Barker, Harley Granville-: see GRANVILLE-BARKER.

Bar Kokba, Simon [kōkh'bə], d. A.D. 135, leader of an unsuccessful Jewish revolt against Rome (A.D. 132–135). In excavations at MASADA, Israeli archaeologists have found letters in his handwriting.

Barlach, Ernst [bär'läkh], 1870–1938, pioneer German expressionist sculptor, graphic artist, and writer. He produced compact, angular sculptures and WOODCUTS that convey intense emotion and compassion. The NAZIS destroyed much of his work. He illustrated his own poems and plays.

barley, annual cereal plant (*Hordeum vulgare*) of the GRASS family, widely cultivated except in hot and humid climates. Barley was known to the ancients and was the chief bread grain in Europe as late as the 16th cent. Today, each of the many varieties grown has a special purpose, e.g., for stock feed, for malting, as a minor source of flour, and in soups.

Barlow, Joel, 1754–1812, American writer and diplomat; b. Redding, Conn. A CONNECTICUT WIT, he is known for his verse epic *The Vision of Columbus* (1787; rev. ed., *The Columbiad,* 1807) and his mock heroic eulogy *The Hasty-Pudding* (1793). His prose works include *Advice to the Privileged Orders* (1792) and a critique of the French Constitution of 1791. Barlow served as U.S. consul to Algiers, where he negotiated several treaties. He was killed during Napoleon I's retreat from Moscow.

bar mitzvah, Jewish ceremony in which a young male (traditionally at age 13) is initiated into the religious community and performs his first act as an adult, reading in the synagogue from the weekly portion of the TORAH. The **bat,** or **bas, mitzvah** is a comparable 20th-cent. ceremony for girls of 12 or 13.

Barnabas, Saint, Cypriot Christian apostle, relative of St. MARK; companion of St. PAUL on his first missionary journey. An epistle attributed to him is in the pseudepigrapha.

barnacle, sedentary marine animal (subclass Cirripedia), a CRUSTACEAN. Barnacles permanently attach themselves to a substrate by means of an adhesive cement. They secrete a calcareous shell around themselves and form conspicuous encrusting colonies on rocks, pilings, boats, and some marine animals (e.g., whales, turtles). The attached end of the animal is the head; jointed legs (cirri) sweep food particles through the shell opening to the mouth. Some barnacles lack shells and are PARASITES of other invertebrates.

Barnard, Christiaan Neethling, 1923–, South African surgeon. In 1958 he was appointed director of surgical research at Groote Schuur Hospital, Cape Town, where on Dec. 3, 1967, he completed the first human heart transplant. Barnard has designed artificial heart valves and developed surgical procedures for organ transplants.

Barnard, Edward Emerson, 1857–1923, American astronomer; b. Nashville. An astronomer at Lick and Yerkes observatories, he discovered 16 comets, Jupiter's satellite Amalthea (1892), and Barnard's star (1916), a star having the largest observed proper motion. He took important photographs of comets, planets, nebulae, and the Milky Way.

Barnard, Frederick Augustus Porter, 1809–89, American educator; b. Sheffield, Mass. While president (1864–89) of Columbia College (now Columbia Univ.) Barnard expanded the curriculum, added departments, and increased the enrollment from 150 to 1,500 students, turning a small undergraduate college into what would become (1896) a great university. He advocated equal education for men and women, and wrote extensively on education and other topics. He encouraged N.M. BUTLER in the founding of Teachers College, Columbia. Barnard College, for undergraduate women, is named for him.

Barnard, George Grey, 1863–1938, American sculptor; b., Bellefonte, Pa. Influenced by RODIN in his early work, e.g., *Two Natures* (Metropolitan Mus.), he is perhaps best known for his colossal statue of Abraham Lincoln (1917; now in Manchester, England). The French medieval art he purchased forms the core of the CLOISTERS collection.

Barnard, Henry, 1811–1900, American educator; b. Hartford, Conn. As a member (1837–39) of the Connecticut legislature he secured passage in 1838 of an act providing better supervision of the common schools. He and Horace MANN became leaders in the reform of the country's common schools, and Barnard did pioneer work in school inspection, recommendation of textbooks, and organization of teachers' institutes and parent-teacher associations. The first U.S. commissioner of education (1867–70), he edited and published the *American Journal of Education* (31 vol., 1855–81).

Barnard College: see COLUMBIA UNIVERSITY.

Barnes, Djuna, 1892–1982, American author; b. Cornwall, N.Y. She is best known for *Nightwood* (1936), a novel marked by horror and decay. Other works include poetry, short stories, and a verse tragedy, *Antiphon* (1958).

Barneveldt, Johan van Olden: see OLDENBARNEVELDT, JOHAN VAN.

Barnum, P(hineas) T(aylor), 1810–91, American showman; b. Bethel, Conn. In 1842 he opened his American Museum in New York

City and immediately became famous for his extravagant advertising and his exhibits of freaks, including "Gen. TOM THUMB" and the original SIAMESE TWINS. Barnum managed the hugely successful U.S. tour of the Swedish singer Jenny LIND in 1850. In 1871 (after a brief political career) he opened his famous circus, "The Greatest Show on Earth." Merged with its chief competitor in 1881, it continued as Barnum & Bailey.

Barocchio, Giacomo: see VIGNOLA, GIACOMO DA.

Baroja y Nessi, Pío [bärō'hä ē näs'sē], 1879–1956, Spanish novelist from the BASQUE PROVINCES. His popular cyclical works include *The Struggle for Existence* (3 vol., 1904), about the Madrid underworld, and *Memoirs of a Man of Action* (22 vol., 1913–34), about 19th-cent. Spain.

barometer, instrument for measuring atmospheric pressure. The mercurial barometer consists of a mercury-filled glass tube that is sealed at one end and inverted in a cup of mercury. Pressure on the surface of the mercury in the cup supports the mercury in the tube, which varies in height depending on variations in atmospheric pressure. At 32°F (0°C), standard sea-level pressure (1 standard atmosphere) is 14.7 lb/in.^{2} (1,030 g/cm^2), which is equivalent to a column of mercury 29.92 in. (76 cm) in height. The aneroid barometer contains a sealed, partially evacuated metallic box. As the air pressure on it varies, one of its surfaces expands or contracts; this motion is transmitted by a train of levers to a pointer, which shows the pressure on a graduated scale. In WEATHER forecasting, a rising barometer usually indicates fair weather; a rapidly falling barometer, stormy weather.

Baron, Salo Wittmayer, 1895–1989, American Jewish historian and educator; b. Galicia, Austria-Hungary. He taught at Columbia from 1930 to 1963, holding the first professorship of Jewish history in a U.S. university. His major work is the monumental *Social and Religious History of the Jews* (vol. I–XVII, 2d ed., 1952–80).

Barons' War, in English history, war of 1263–67 between HENRY III and his barons. In 1261 Henry reasserted his power and renounced the PROVISIONS OF OXFORD. Led by Simon de MONTFORT, the barons resorted to arms. They failed to establish control over the crown but helped prepare for the constitutional developments in the reign of EDWARD I.

baroque, in art and architecture, style developed in Europe, England, and Latin America during the 17th and 18th cent. Its essential characteristic is an emphasis on unity, a balance among diverse parts. Architecture took on the plastic aspects of sculpture and, along with sculpture, was enhanced by the chiaroscuro (high-contrast) effects of painting. Works in all media were produced on a grand scale. Illusionism increased an unequaled sense of drama, energy, and mobility of form. Baroque buildings, e.g., VERSAILLES, Christopher WREN's churches, compelled order upon overwhelming multiple forms. Throughout Europe undulating facades and complex ground plans abounded. Fountains burst forth as joyous geysers and cascades. Deep perspective was developed in painting, e.g., by RUISDAEL and de HOOCH. Chiaroscuro intensified the works of CARAVAGGIO, ZURBARÁN, Georges de LA TOUR, and REMBRANDT. Color was superbly exploited to diverse effect by VERMEER, RUBENS, CLAUDE LORRAIN, and Pietro da CORTONA. Sculptors used multiple materials for a single work, e.g., BERNINI's *Ecstasy of St. Theresa,* which also exemplifies the baroque fascination with intense emotional states. Landscape subjects were ennobled by the CARRACCI, Ruisdael, HOBBEMA, Rembrandt, Salvator ROSA and Claude Lorrain, and genre and still life by Vermeer, STEEN, de Hooch, and the LE NAINS. In the *Early Baroque* (c.1590–c.1625), the Roman artists Caravaggio, the Carracci, DOMENICHINO, and Guido Reni were preeminent; their influence spread widely to RIBERA, TERBRUGGHEN, and Rubens. The *High Baroque* (c.1625–c.1660) was dominated by Bernini, BORROMINI, Pietro da Cortona, and Claude Lorrain, and outside Italy by Rembrandt, Rubens, VELÁZQUEZ, Vermeer, HALS, VAN DYCK, Ruisdael, and Zurbarán. In the *Late Baroque* (c.1660–c.1725) Italy lost her dominant position to France. Painters such as MURILLO used lighter colors and softer forms, and the baroque style gradually gave way to the ROCOCO.

baroque, in music, the period and style of composition and performance prevailing from the last decades of the 16th cent. to the beginning of the 18th cent. The 16th-cent. revolt against the POLYPHONY of the Renaissance gave rise to an emphasis on the character of individual voices and instruments and also on the use of HARMONY in composition. Use of the older church modes was replaced by major and minor TONALITY as the basis of composition. Principal forms of vocal writing of the period included the OPERA, ORATORIO, and CANTATA; instrumental writing included the SONATA, CONCERTO, and OVERTURE. Later baroque forms were the FUGUE, choral prelude, and the toccata, a free form for keyboard instruments. Famous composers of the period include MONTEVERDI, SCHÜTZ, A. SCARLATTI, VIVALDI, A. CORELLI, J.S. BACH, PURCELL, HANDEL, and LULLY.

The baroque Trevi Fountain in Rome

Barozzi, Giacomo: see VIGNOLA, GIACOMO DA.

barracuda, slender, elongated, ferocious FISH (family Sphyraenidae) with a long snout and projecting lower jaw edged with large, sharp teeth. Found in tropical seas, barracudas will strike at anything that gleams and are excellent game fish. The great barracuda (*Sphyraena barracuda*), up to 10 ft (3 m) in length, is dangerous to swimmers.

Barranquilla, city (1985 pop. 920,695), N Colombia, on the Magdalena R., 8 mi (12.9 km) from the Caribbean Sea. Founded in 1629, it developed as a port in the mid-19th cent., with the advent of steam navigation, and is now Colombia's principal port. Manufactures include aluminum sheets, chemicals, processed foods, ships, and automobiles. The city's carnivals are renowned.

Barrie, Sir J(ames) M(atthew), 1860–1937, Scottish playwright and novelist. Best remembered for his play *Peter Pan* (1904), a fantasy about a boy who refused to grow up, Barrie was a journalist and published Scottish sketches before the success of his novel *The Little Minister* (1891). Its dramatization (1897) established him as a playwright.

Barron, James, 1769–1851, U.S. naval officer; b. Hampton, Va. He was court-martialed for failing to clear his ship, the *Chesapeake,* for action during an 1807 incident with the British ship *Leopard.* In 1820 he mortally wounded Stephen DECATUR in a duel.

Barrow, Sir John, 1764–1848, British geographer. As second secretary of the admiralty, he promoted scientific voyages and instigated arctic expeditions by John ROSS and William Parry. He helped found (1830) the Royal Geographical Society. Point Barrow, Cape Barrow, and Barrow Strait bear his name.

Barrow, city (1990 pop. 3,469), N Alaska, inc. 1958. The main trade center of N Alaska, it has government and military facilities. The population is predominantly ESKIMO, and the area has been inhabited for centuries. Hunting, fishing and whaling, and Eskimo crafts are important.

barrow, in archaeology, burial mound, built usually of earth and stone or timber, perhaps to simulate cave burial. In W Europe long barrows date from the New STONE AGE and round barrows from the BRONZE AGE. More recent Asian round barrows (STUPAS) usually house Buddhist relics. See also MOUND BUILDERS.

Barry, Philip, 1896–1949, American playwright; b. Rochester, N.Y. He is primarily known for his satirical comedies, e.g., *Holiday* (1928), *Tomorrow and Tomorrow* (1931), *The Animal Kingdom* (1932), and *The Philadelphia Story* (1939).

Barrymore, Anglo-American family of actors. The first of the name, **Maurice Barrymore,** 1847–1905, was an Englishman; b. India as Herbert Blythe. A handsome leading man, he came to the U.S. in 1875 to appear with Augustin Daly's company. His wife, **Georgiana Drew Barrymore,** 1856–93, b. Philadelphia, was a great comedienne. She began her career with the company of her parents, Louisa and John DREW, and acted with her husband in Mme Modjeska's troupe. Their elder son, **Lionel Barrymore,** 1878–1954, b. Philadelphia, was a much admired character actor remembered for his film roles in *A Free Soul* (1931; Academy Award) and *Dinner at Eight* (1933), and for his annual radio portrayal of Scrooge in *A Christmas Carol.* His sister, **Ethel Barrymore,** 1879–1959, an actress of dignity and warmth, achieved success in *Captain Jinks of the Horse Marines* (1901) and is remembered for *The Corn Is Green* (1940) and the film *None but the Lonely Heart* (1944; Academy Award). Their brother, **John Barrymore,** 1882–1942, a tempestuous matinee idol, was also a distinguished actor, famous for his electrifying *Hamlet* (1922). His films include *Grand Hotel* (1932) and *Twentieth Century* (1934).

Barth, Karl, 1886–1968, Swiss Protestant theologian, one of the leading thinkers of 20th-cent. Protestantism. A Swiss minister, he became a professor (1921–35) in Germany, and opposed the Nazi regime. Deported to Switzerland, he later taught at Basel, where he continued to expound his views, known as dialectical theology or theology of the word. Barth sought to reassert the principles of the Reformation. He saw the central concern of theology as the word of God and His revelation in Jesus, which he thought was the only means for God to reveal Himself to humans, who must listen in awe, trust, and obedience. Among his many works is his *Church Dogmatics* (vol. I–IV, 1932–62).

Barthelme, Donald, 1931–89, American writer; b. Philadelphia. He used idiosyncratic language and symbol to fit his vision of an absurd reality. His work includes the novels *Snow White* (1967) and *The Dead Father* (1975) and the short-story collections *City Life* (1971) and *Sixty Stories* (1981).

Barthes, Roland, 1915–80, French literary critic, the major theorist of semiology (see SEMIOTICS; STRUCTURALISM). In *Writing Degree Zero* (1953) he attempted to distinguish "scription," the act of writing, from conventional categories of language and style. He followed that work with controversial studies of aspects of French culture. In *Elements of Semiology* (1964), Barthes systematized the study of signs proposed earlier by Ferdinand de SAUSSURE. In his other works he applied his linguistic theories to clichés of national culture, the work of individual writers, photography, and other topics.

Bartholdi, Frédéric Auguste [bärtōldē'], 1834–1904, French sculptor; b. Alsace. He produced numerous monumental sculptures, including the *Lion of Belfort* and his most famous work, *Liberty Enlightening the World,* on Liberty Island, New York Bay (see LIBERTY, STATUE OF).

Bartholomew, Saint, one of the Twelve APOSTLES; identified with NATHANAEL. By tradition he was a missionary in India.

Bartholomew I, 1940–, Orthodox patriarch of Constantinople; b. Dimitrios Archontonis. Chief adviser and administrator for Patriarch Dimitrios I, he was elected patriarch after his predecessor's death (1991). He has worked to find common ground with Roman Catholicism and aid ORTHODOX EASTERN CHURCHES in E Europe.

Bartók, Béla [bär'tōk], 1881–1945, Hungarian composer and collector of folk music. Utilizing folk elements, ATONALITY, and traditional techniques, he achieved an original modern style that has had great influence on 20th-cent. music. Bartók became known for his compositions for piano, e.g., *Mikrokosmos* (1926–27); for violin, e.g., *Music for Strings, Percussion, and Celesta* (1936), and for orchestra, e.g., *Concerto for Orchestra* (1943). In 1940 he emigrated to the U.S. and was commissioned by Columbia Univ. to transcribe a large collection of Yugoslav folk melodies.

Barton, Clara, 1821–1912, American humanitarian; b. Oxford, Mass. Called the Angel of the Battlefield, she set up a supply service during the CIVIL WAR, was nurse in army camps and on battlefields, and led searches for the missing. After working behind German lines for the International Red Cross in the FRANCO-PRUSSIAN WAR, she organized (1881) the American RED CROSS, which she headed until 1904.

Bartram, John, 1699–1777, pioneer American botanist; b. near Darby, Pa. He planted the first botanical garden in the U.S. His exchange of many plants with the great European botanists introduced many American plants into Europe and established some European species in the New World. In search of new plants he made many journeys around the North American continent, including trips to the Alleghenies, the Catskills, the Carolinas, and Florida.

Baruch, Bernard Mannes, 1870–1965, U.S. financier and government adviser; b. Camden, S.C. An industrial and economic adviser to the government during both world wars, Baruch was U.S. representative (1946) to the UN Atomic Energy Commission.

Baruch, book included in the OLD TESTAMENT of the Western canon and the Septuagint but not in the Hebrew Bible, and placed in the APOCRYPHA in the Authorized Version. Named for a Jewish prince, Baruch (fl. 600 B.C.), a friend of the prophet JEREMIAH and the editor of his book, it includes a message from exiled Jews to those still at home, a famous messianic allusion, a consolation, and a letter of Jeremiah.

baryon: see ELEMENTARY PARTICLES.

Baryshnikov, Mikhail [bərĭy'shnikäk'v], 1948–, Russian–American dancer and choreographer; b. Riga, Latvia. He studied in Riga and performed with the KIROV BALLET (1966–74). He defected (1974) to the West, danced with the AMERICAN BALLET THEATRE (ABT; 1974–78) and the NEW YORK CITY BALLET (1978–79), and was director of the ABT (1979–89). In 1990 he founded the White Oak Dance Project, a touring dance company.

barytes: see BARITE.

Barzun, Jacques [bär'zən], 1907–, American scholar; b. France. He began teaching history at Columbia Univ. in 1928. Later he was dean of the graduate faculties (1955–58) and dean of faculties and provost (1958–67). He has written on a variety of subjects, e.g., *Darwin, Marx, Wagner* (1941).

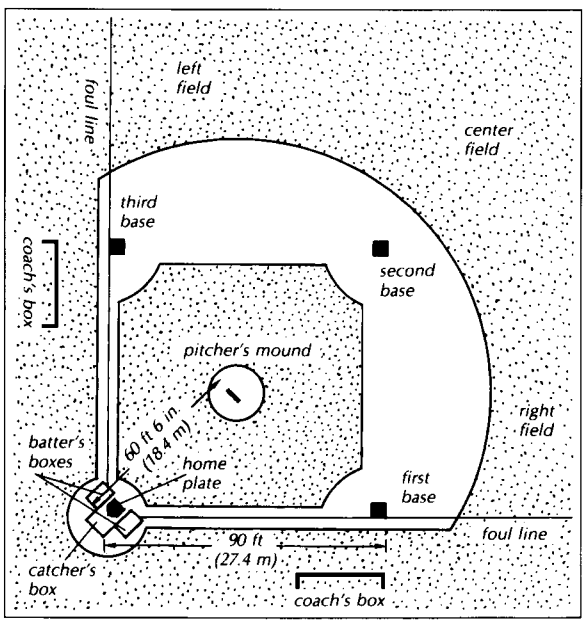
basal metabolism: see METABOLISM.

basalt, fine-grained igneous ROCK of volcanic origin with a high percentage of iron and magnesium, in a range of dark colors. Its texture varies depending on conditions of cooling. Most of the world's great LAVA flows (e.g., the COLUMBIA PLATEAU in the NW U.S.) are basalt. It underlies the sediment cover in the world's oceans and is believed to underlie the CONTINENTS as well. Many of the lunar rocks obtained by the Apollo astronauts are basalt.

base, in chemistry: see ACIDS AND BASES.

baseball, the "national game" of the U.S., popular also in Japan and in Cuba, Puerto Rico, Mexico, and other Latin American countries. It derives its name from the four bases, spaced 90 ft (27.43 m) apart on the inner playing field (the diamond). Cowhide-covered hard balls, wooden or aluminum bats, and padded gloves constitute the basic equipment. A game is played by two opposing teams of nine players each—a pitcher, a catcher, four infielders, and three outfielders. To win, a team must score more runs in nine innings than its opponent, a run being a complete circuit of the bases. Extra innings are played to resolve ties. A form of baseball, doubtless derived from the English games of CRICKET and rounders, was played in the early 19th cent. The belief that Abner Doubleday invented the modern game in 1839 has been largely refuted. In the U.S., two main professional associations form the major leagues. The National League (NL; organized 1876) and the American League (AL; 1900) comprise a total of 28 teams representing U.S. and two Canadian cities. Champions of each league meet annually

in the World Series. Major-league baseball became truly national in scope with the westward migration of several franchises, beginning in 1953, when the Boston Braves moved to Milwaukee. During the 1960s the number of clubs expanded from 16 to 24, with two divisions in each league. In 1977 the AL added two more franchises. The NL expanded to 14 teams in 1993, and in 1994 the number of divisions in each league was increased to three. The game's greatest figures are elected to the National Baseball Hall of Fame, at Cooperstown, N.Y. (opened 1939). Baseball is also played by minor-league professional clubs and by semiprofessional, amateur, college, and school teams and since 1992 has been an Olympic sport as well.



The regulation baseball field. Minimum distance to the outfield fence is 250 ft; professional baseball fields constructed since 1958 have been at least 325 ft deep along the foul lines and 400 ft deep in center field.

Basel [bä'zəl] or **Basle** [bäl], city (1990 pop. 169,587), N Switzerland, divided by the Rhine R. A river port and financial center, it is the seat of the Swiss chemical and pharmaceutical industries. Founded by the Romans, it became (7th cent.) an episcopal see and (11th cent.) a free imperial city. It was the residence of prince-bishops, expelled after Basel accepted (1523) the Reformation. Its university attracted ERASMUS (who is buried in the 11th-cent. cathedral), HOLBEIN the Younger, John CALVIN, and NIETZSCHE. The city houses a valuable collection of Holbein's work.

Basel, Council of, 1431–49, council of the Roman Catholic Church. Called primarily to discuss the HUSSITE heresy it accepted the conciliar theory that ultimate authority in the church rests in the council and not with the pope. After being denounced (1437) by Pope EUGENE IV, the council deposed him and elected (1439) AMADEUS VIII (antipope Felix V). Lacking support, Felix resigned (1449); the council then recognized Eugene's successor and dissolved.

basenji, medium-sized HOUND; shoulder height, c.17 in. (43.2 cm); weight, c.23 lb (10.4 kg). Its short, silky coat is chestnut, red, black, or black and tan, with white markings. Bred in ancient Africa and at the courts of Egypt's pharaohs, it whines rather than barks and cleans itself like a cat.

Basho (Matsuo Basho), 1644–94, usually considered the foremost Japanese HAIKU poet. He did not in fact write haiku but composed stanzas of *haikai no renga* (a sequence of linked verses, usually by a group of poets). The 17-syllable opening, and most important, stanza (*hokku*) was later separated as the verse form haiku. A master of both *hokku* and the integration of verses in a sequence, Basho imbued what was formerly a social pastime with the spirit of ZEN BUDDHISM, attending to the often lowly details of everyday life in the context of the eternal.

BASIC: see PROGRAMMING LANGUAGE.

basic oxygen process, method of producing STEEL from molten PIG IRON. A furnace similar to the one used in the BESSEMER PROCESS is employed but pure oxygen (instead of air) is used to oxidize impurities. The basic oxygen process is faster than the OPEN-HEARTH PROCESS, pollutes less than methods that use air, and also yields carbon monoxide, which can be used as a fuel or in producing various chemicals.

Basie, Count (William Basie), 1904–84, African-American JAZZ pianist and bandleader; b. Red Bank, N.J. He worked in New York City and Kansas City, where he formed (1935) a highly influential band that continues to present a powerful yet relaxed style of music featuring his own laconic piano.

Basil, Byzantine emperors. **Basil I** (the Macedonian), c.813–86 (r.867–86), was the favorite of and co-ruler (866) with MICHAEL III, whose murder (867) he ordered. Basil reformed finance and law, protected the poor, and restored the empire's military prestige. Art and architecture flourished during his rule. He tried to prevent an open break between the Eastern and Western churches. **Basil II,** c.958–1025 (r.976–1025), followed the usurpers NICEPHORUS II and JOHN I as co-ruler with his debauched brother, Constantine VIII. Basil suppressed rebellious landowners and strengthened the laws against them. He annexed (1018) Bulgaria and extended the empire east to the Caucasus. The schism between the Eastern and Western churches increased during his reign.

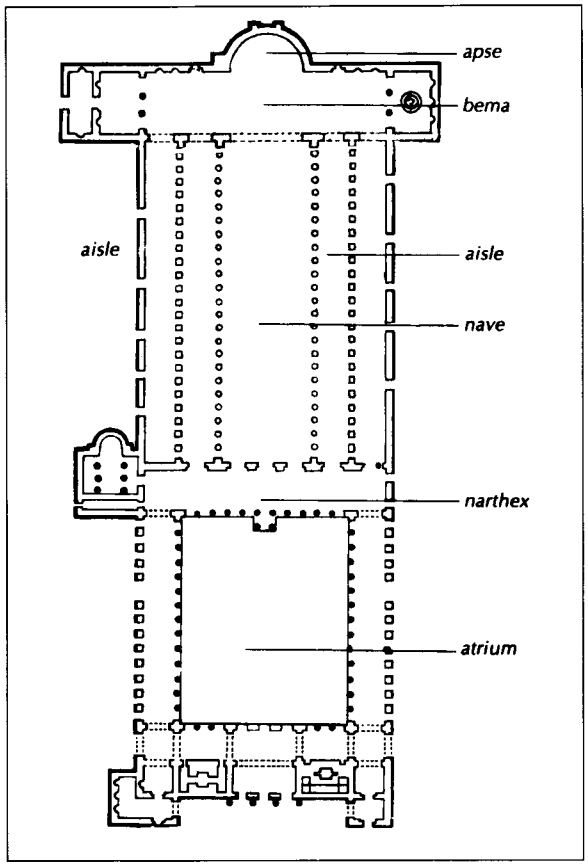
basil, tender herb or small shrub (genus *Ocimum*) of the MINT family, cultivated for the aromatic leaves. Common, or sweet, basil (*O. basilicum*) is used for seasoning. Holy basil and bush basil are related plants.

basilica, large Roman building used to transact business and legal matters. Often rectangular, with a roofed hall, it usually had an interior colonnade, with an APSE at one or both ends. The wide central aisle was usually higher than the flanking aisles, so that light could penetrate through the clerestory windows. Early examples are in Rome and Pompeii. In the 4th cent. Christians began to build places of worship related in form in Europe and the Middle East, e.g., the Church of the Nativity at Bethlehem (6th cent.). The massive Romanesque churches still retained the fundamental plan of the basilica.

basketball, game played generally indoors by two opposing teams of five players each. At each end of the court—usually about 92 ft (28 m) long and 50 ft (15 m) wide—is a bottomless basket made of cord net and suspended from a metal ring attached 10 ft (3.05 m) above the floor to a backboard. The ball may be passed, batted, or dribbled (bounced), but the players may not run with it. Players of one team attempt to shoot the ball through one basket while seeking to keep the opposition from scoring through the other basket. Each field goal, or basket, scores two points (sometimes three points in professional basketball); foul shots, awarded mostly for illegal body contact, count one point. Overtime periods are played to break ties. Basketball was originated (1891) in Springfield, Mass., by Dr. James Naismith of the YMCA. It quickly grew into a leading U.S. school and college sport and spread throughout the world, becoming (1936) a part of the OLYMPIC GAMES. Professional basketball gained great popularity in the U.S. after the formation (1949) of the National Basketball Association (NBA); the NBA is now made up of 27 teams in two conferences, each of which has two divisions. U.S. women's basketball has also grown enormously on the collegiate and high school levels, but attempts to form a viable women's professional league have been unsuccessful.

Baskin, Leonard, 1922–, American artist; b. New Brunswick, N.J. Known for his powerful figurative graphics and sculpture, e.g., *Man with a Dead Bird* (Mus. Mod. Art, N.Y.C.), Baskin is also an influential teacher.

Basque Country or **Basque Provinces,** Basque *Euskadi,* autonomous region (1987 est. pop. 2,143,000), Spain, comprising the provinces of Álava, Guipúzcoa, and Vizcaya, N Spain, on the Bay of Biscay, bordering France in the northeast. In Álava and Guipúzcoa the major occupations are the mining of iron, lead, copper,



Floor plan of a basilica

and zinc; shipbuilding; metalworking; and fishing. Álava is largely agricultural. Nationalism is strong among the BASQUES, and in 1980 the provinces were granted regional autonomy. Basque terrorists and a separatist party continue to press for total independence, but they have lost support in recent years.

Basques, people of N Spain and SW France, numbering 2 million. Probably the oldest ethnic group in Europe, they preserve their ancient, unique language, and their customs and traditions. Since Paleolithic times the Basques have been genetically and culturally distinct. Long mostly peasants, shepherds, fishermen, navigators, miners, and metalworkers, they have produced such famous figures as St. IGNATIUS OF LOYOLA and St. FRANCIS XAVIER. The Basques accepted Christianity late (3d–5th cent.). In the 6th cent. they expanded northward into Gascony, to which they gave their name. The kingdom of NAVARRE, founded in 824, united almost all Basques, but after its conquest (1512) by CASTILE Basque prosperity declined. Of the Basque provinces (see BASQUE COUNTRY), only Navarre supported the Franco forces in the SPANISH CIVIL WAR (1936–39). Basque nationalism in Spain, often involving violent incidents, continued into the 1980s, but Basque terrorists and a separatist party lost support in the early 1990s.

Basra, city (1986 est. pop. 616,000), SE Iraq, on the SHATT AL ARAB. Iraq's only port, it has a commercially advantageous location near oil fields and 75 mi (121 km) from the PERSIAN GULF. Since 1948 many oil refineries have been built in the city. Basra was founded (A.D. 636) by the caliph Umar I and was a cultural center under HARUN AR-RASHID. The area around Basra was the scene of heavy fighting in the IRAN-IRAQ WAR, was bombed heavily during the PERSIAN GULF WAR, and was the site of an unsuccessful Shiite uprising after the latter conflict.

bass, any of various FISHES of the families Serranidae (sea basses) and Centrarchidae (black basses and sunfishes). Sea basses, a large, diverse family of fishes with oblong, rather compressed bodies, inhabit warm and temperate seas worldwide and are highly valued as food and game fish. The largest sea basses are GROUPERS. Sunfishes, spiny-finned, freshwater fishes with flattened bodies, are found in North America. Black basses, averaging 2 to 3 lb (.9 to 1.4 kg), are the most valuable American freshwater game fishes.

bass: see VOICE.

Bassano, Jacopo [bäs-sä'nō], c.1515–1592, Venetian mannerist painter (see MANNERISM); b. Jacopo da Ponte. Primarily a painter of biblical themes, he introduced vignettes of country life into his works, e.g., *Annunciation to the Shepherds* (National Gall., Wash., D.C.). His sons **Francesco Bassano,** 1549–92, and **Leandro Bassano,** 1558–1623, were also painters.

basset hound, short-legged, long-bodied HOUND; shoulder height, 12–15 in. (30.1–38.1 cm); weight, 25–50 lb (11.3–22.7 kg). Its short, dense coat is black, tan, or white, or a combination. The breed was developed centuries ago in France to hunt game in heavy ground cover.

bassoon: see WIND INSTRUMENT.

basswood: see LINDEN.

Bastille [băstēl'], fortress and prison in Paris, begun c.1369, now demolished. The Bastille became a hated symbol of absolutism because it was used for arbitrary and secret imprisonment by the crown. On July 14, 1789, a Parisian mob stormed the prison, hoping to seize its store of ammunition, but found only seven prisoners. This marked the start of lower-class participation in the FRENCH REVOLUTION. July 14—Bastille Day—became a national holiday in France.

bat, the only MAMMAL (order Chiroptera) capable of true flight. Numbering between 1,000 and 2,000 species, bats range in size from less than 1 in. (2.5 cm) to 15 in. (45 cm), with a wingspan of from less than 2 in. (5 cm) to 5 ft (150 cm). The body is furry and mouselike, with the forelimbs and extensions of the skin of the back and belly modified to form wings. Bats are most abundant in the tropics, and temperate species often hibernate or migrate to warmer areas in the winter. Most species frequent crevices, caves, or buildings, and are active at night or twilight; they roost during the day, often in large numbers and usually hanging by their feet. Most bats see well but depend on echolocation to navigate in the dark. Bats are fruit-eaters (fruit, nectar, pollen) or insect-eaters (fruit, insects, small animals, and fish); one species, the South American vampire bat, feeds exclusively on the blood of living animals, chiefly mammals.

Bataan, peninsula and province (1990 pop. 426,000), W Luzon, the Philippines, between Manila Bay and the South China Sea. The capital is Batanga. A mountainous jungle region with bamboo forests, Bataan has a pulp and paper mill, fertilizer plant, and oil refinery. Subsistence farming is also carried on. U.S. and Filipino troops captured on Bataan (April 1942) by the Japanese in WORLD WAR II underwent a brutal "death march" to a prison camp; thousands died.

Batavian Republic, name for the United Provinces of the Netherlands (1795–1806) after their conquest by the French in the FRENCH REVOLUTIONARY WARS. In 1806 NAPOLEON I made Batavia into the kingdom of Holland under his brother Louis Bonaparte (see BONAPARTE family).

Bates, Henry Walter, 1825–92, English naturalist and explorer. His pioneering theory of mimicry, explaining similarity among species, was used by Charles DARWIN as a proof of his theory of natural selection. During travels (1848–59) along the upper Amazon R., he collected specimens of nearly 15,000 animal species (mostly insects), more than 8,000 previously unclassified.

Bath, city (1986 est. pop. 84,400), Avon, SW England. In the 1st cent. A.D. the Romans built elaborate baths at the natural hot springs. Bath became England's most fashionable spa in the 18th cent., and the Georgian architecture and Roman baths remain tourist attractions.

batholith, enormous mass of igneous ROCK, granitic in composition, with steep walls and without visible floors. Batholiths commonly extend over thousands of square miles. Their method of formation is controversial; most appear to have moved up through the earth's crust in a molten state, shattering and incorporating the overlying rock.

Báthory [bä'tôrē], Hungarian noble family. **Stephen Báthory,** 1477–1534, a supporter of JOHN I of Hungary, was made (1529)

voivode [governor] of Transylvania. His younger son, STEPHEN BÁTHORY, became (1575) king of Poland and was succeeded as prince of Transylvania by his brother, **Christopher Báthory**, 1530–81. Christopher's son and successor, **Sigismund Báthory**, 1572–1613, was mentally unbalanced. He abdicated for brief periods in 1597 and 1599 and finally in 1602. Other family members included **Elizabeth Báthory**, d. 1614, who was reputed to be a werewolf. To renew her youth, she is said to have slaughtered virgins and bathed in their blood. **Gabriel Báthory**, 1589–1613, became (1608) prince of Transylvania and was killed in a revolt by nobles against his rule.

Bath-sheba, in the BIBLE, wife of Uriah the Hittite. DAVID seduced her, effected the death of her husband, and married her. She was the mother of SOLOMON.

batik, method of decorating fabric used for centuries in Indonesia. With melted wax, a design is applied to the cloth (cotton or, sometimes, silk), which is then dipped in cool vegetable dye. Areas covered by wax do not receive the dye and display a light pattern on the colored ground. The process may be repeated several times. When the design is complete, the wax is removed in hot water. A crackling effect occurs if dye has seeped into cracks of hardened wax. The same or similar patterns have been used for c.1,000 years. Batik was brought to Europe by Dutch traders, was adopted in the 19th cent. by Western craftsmen, and is still widely used.

Batista y Zaldívar, Fulgencio, 1901–73, Cuban dictator (1933–44, 1952–59). An army sergeant, he took part in the 1933 military coup and, as army chief of staff, became de facto ruler of CUBA and its elected president (1940–44). He accepted his candidate's defeat in 1944, but in 1952 he seized power and had himself elected president (1954, 1958). His corrupt rule caused popular discontent, and he fled (1959) the country during the CASTRO revolution.

bat mitzvah: see under BAR MITZVAH.

Baton Rouge [Fr., = red stick], city (1990 pop. 219,531), state capital and seat of East Baton Rouge parish, SE La., on the Mississippi R.; inc. 1817. A deepwater port and trade hub, it is a major center of petrochemical production with large refineries and machine shops. The city was founded in 1719 and was alternately French, English, and Spanish. Acquired by the U.S. in 1815, it became state capital in 1849. The old (1882) and new (1932) capitols, many antebellum homes, and Louisiana State Univ. are among the points of interest.

Batory: see STEPHEN BÁTHORY and BÁTHORY, family.

battery, electric, device that consists of a group of CELLS that are connected to act as a source of direct current. The term is also commonly used for a single cell, such as the alkaline dry cell used in flashlights and portable tape players. A **storage battery** usually consists of several wet cells (cells with a liquid electrolyte) connected in series, and can be recharged many times. In the U.S. the lead storage battery is commonly used in automobiles. Its cells consist of alternate plates of lead (negative plates) and lead coated with lead dioxide (positive plates) immersed in a sulfuric acid solution (the electrolyte). Negative plates are connected to form a cell's negative electrode; positive plates similarly form the positive electrode.

Battle above the Clouds: see CHATTANOOGA CAMPAIGN.

Battle of Britain: see WORLD WAR II.

baud, measure of the rate at which signals are transmitted over a telecommunications link. It is equivalent to the number of elements or pulses transmitted in one second, e.g., in COMPUTER input/output, 2400 baud typically equals 2400 bits per second. Because modern data compression techniques can combine several bits in one baud, bits per second has replaced baud as a measure of MODEM speed.

Baudelaire, Charles [bōdlâr'], 1821–67, French poet whose work has been a major influence on Western poetry. His poems, classical in form, introduced symbolism (see SYMBOLISTS). Baudelaire was moody and rebellious, imbued with an intense religious mysticism, and his work reflects an unremitting inner despair. His main theme is the inseparable nature of beauty and corruption. His major work, *The Flowers of Evil* (1857), originally condemned as obscene, is recognized as a masterpiece, especially remarkable for the brilliant phrasing, rhythm, and expressiveness of its lyrics.

Baudouin I, 1930–93, king of the Belgians (1951–93). He joined his father, LEOPOLD III, in exile (1945–50) in Switzerland and became king when Leopold abdicated. He was succeeded by his brother, ALBERT II.

Bauhaus [bou'hous], school of art and architecture in Germany. It was founded at Weimar in 1919 and headed by Walter GROPIUS; its faculty included Paul KLEE, Lyonel FEININGER, Wassily KANDINSKY, Laszlo MOHOLY-NAGY, and Marcel BREUER. The teaching concentrated on functional craftsmanship applied to industrial problems of mass production. Bauhaus style was characterized by severely economic, geometric design and by respect for materials. Enormously controversial and unpopular, the school moved in 1925 to Dessau. Gropius resigned in 1928 and was succeeded by Johannes Meyer, who was replaced in 1930 by MIĒS VAN DER ROHE. The Bauhaus moved again to Berlin in 1932 and was closed by the NAZIS in 1933. Its influence in design of architecture, furniture, typography, and weaving found international acclaim and continued to flourish in the U.S., especially at the Chicago Institute of Design, founded by Moholy-Nagy.

Baum, L(yman) Frank, 1856–1919, American journalist, playwright, and author of juvenile stories; b. Chittenango, N.Y. His most famous work is *The Wonderful Wizard of Oz* (1900), which was made into a movie in 1938. Baum published 13 more Oz books.

bauxite, mixture of hydrated aluminum oxides usually containing oxides of iron and silicon. A noncrystalline substance formerly thought to be a mineral, bauxite is claylike, ranging from white to brown or red in color, and is the chief source of ALUMINUM and its compounds. It is widely distributed, with important deposits in Africa, South America, France, Russia, the West Indies, and the U.S.

Bavaria, Ger. *Bayern,* state (1990 est. pop. 11,222,000), 27,239 sq mi (70,549 sq km), S Germany. It is the largest state of Germany. Forestry and agriculture are important occupations, but industry, centered in MUNICH, the capital, has grown enormously since World War II. The region, whose boundaries have often varied, was conquered (15 B.C.) by the Romans and invaded (6th cent. A.D.) by the Baiuoarii, who set up a duchy. In 788 CHARLEMAGNE added Bavaria to his empire. It was ruled (788–911) by the CAROLINGIANS and in 1070 passed to the GUELPH family. In 1180 the Holy Roman Emperor bestowed the duchy on the WITTELSBACH family, who ruled it until 1918. In 1806 it became a kingdom. Bavaria joined the German Empire in 1871 and became the chief German state after Prussia. The monarchy was overthrown in 1918, and Bavaria later joined the Weimar Republic. From 1949 until German reunification in 1990, Bavaria was part of West Germany.

Bavarian Succession, War of the, between Austria and PRUSSIA, 1778–79. In 1777 Charles Theodore, the duke of Bavaria, in a secret treaty with JOSEPH II, the Holy Roman emperor, ceded Lower BAVARIA to Austria. The Bavarian heir apparent, advised by FREDERICK II of Prussia, protested the transfer. The resulting war, with no significant engagements, ended with Austria's renunciation of all but a small portion of Lower Bavaria.

Bax, Sir Arnold Edward Trevor, 1883–1953, English composer. He studied piano at the Royal Academy of Music. Known for his symphonic poems, *The Garden of Fand* (1916) and *Tintagel* (1917), he also wrote seven symphonies, each dedicated to a favorite composer. He became (1941) Master of the King's Music. Influenced by Irish folklore, he wrote poetry and prose in Ireland under the name Dermot O'Byrne.

Bayamón, city (1990 pop. 202,103), NE Puerto Rico, a residential and industrial suburb of San Juan. Bayamón was established in 1772. Fruit is a major product; manufactures include clothing, metal products, and automotive parts.

bayberry, common name for the Myricaceae, a family of chiefly temperate and subtropical aromatic trees and shrubs. The waxy gray berries of some species (mainly *Myrica cerifera*) are used to make bayberry candles, scented soap, and sealing wax. Sweet gale (*M. gale*) yields tannic acid; sweet fern (*Comptonia peregrina*) is used for medicines and tea.

Bayeux tapestry [bäyōō'], an embroidery chronicling the Norman conquest of England (see under WILLIAM, kings of England). It is a strip of linen, 230 ft by 20 in. (70 m by 51 cm) in the Bayeux Museum, France. Attributed to William's wife, Queen Matilda, it is a valuable document on the history and costumes of the time.

Baykal or **Baikal, Lake** [both: bīkäl'], lake, SE Siberian Russia. Nearly 400 mi (650 km) long, it is the largest (12,160 sq mi/31,494 sq km) freshwater lake in Eurasia. It is also believed to be the deepest lake in the world, its maximum known depth being 5,714 ft (1,742 m). The lake is in danger of pollution because of industrial development near its shores.

Bay of Pigs Invasion, 1961, unsuccessful invasion of Cuba by U.S.-backed Cuban exiles. On Apr. 17, 1961, about 1,500 Cuban exiles landed in the Bahía de Cochinos (Bay of Pigs) with the aim of ousting the Communist regime of Fidel CASTRO. They had been trained in Guatemala by the CIA, supplied with U.S. arms. Most were captured or killed by the Cuban army. The U.S. government was severely criticized for the attack at home and abroad. In December 1962, Cuba traded 1,113 captured rebels for $53 million in food and medicine raised by private donations in the U.S.

Bayreuth Festival: see WAGNER, RICHARD.

bazooka, military weapon consisting of a portable, lightweight tube that serves as a rocket launcher, usually operated by two soldiers. Developed by the U.S. as an infantry weapon for use against TANKS, pillboxes, and bunkers, it was widely employed during World War II and the Korean War but was later superseded by more powerful, accurate weapons, notably recoilless weapons and antitank missiles.

Be, chemical symbol of the element BERYLLIUM.

Beach, Moses Yale, 1800–1868, American journalist; b. Wallingford, Conn. As owner of the New York *Sun,* Beach vied with his chief competitor, James Gordon BENNETT of the *Herald,* in employing ingenious means of getting news fast, e.g., carrier pigeons. Rising costs led to the formation of the New York Associated Press, partly at Beach's instigation. His weekly *American Sun* was the first European edition of an American paper.

Beaconsfield, Benjamin Disraeli, 1st **earl of:** see DISRAELI, BENJAMIN.

Beadle, George Wells, 1903–89, American geneticist; b. Wahoo, Nebr. For their work on the bread mold *Neurospora crassa,* which showed that genes control cellular production of enzymes and thus the basic chemistry of cells, Beadle and Edward Tatum shared the 1958 Noble Prize in physiology or medicine with Joshua LEDERBERG.

beagle, small, compact HOUND; shoulder height, 10–15 in. (25.4–38.1 cm); weight, 20–40 lb (9.1–18.1 kg). Its short, close-lying, harsh coat is usually black, tan, and white. Developed in England to hunt hares, it was introduced into the U.S. in the 1870s.

bean, name for seeds of trees and shrubs of the PULSE family, and for various plants of the family having edible seeds or seed pods. True beans are in the genus *Phaseolus.* The COWPEA, CAROB, and CHICKPEA are sometimes considered beans. Cultivated worldwide, beans are an important food staple. They are high in protein and often used as a meat substitute.

bear, large MAMMAL of the family Ursidae, found almost exclusively in the Northern Hemisphere. Bears have large heads, bulky bodies, short, powerful, clawed limbs, and coarse, thick fur; almost all are omnivorous. In cold climates, bears do not hibernate (see HIBERNATION) but sleep most of the winter; their metabolism remains normal, and they may wake and emerge during warm spells. North American brown bears include the Kodiak bear and the grizzly. The Kodiak, the largest bear, sometimes stands 9 ft (2.7 m) high and weighs over 1,600 lb (730 kg). The grizzly, characterized by silver-tipped (grizzled) fur, is more highly carnivorous than most bears and preys on large mammals such as deer. The most widespread North American bear is the black bear, smaller than the brown bears and ranging in color from light brown to black. The large, white polar bear is an arctic species. A solitary, fearless hunter, it is a powerful swimmer and feeds mostly on marine animals.

Beard, Charles A(ustin), 1874–1948, American historian; b. near Knightstown, Ind. As a professor at Columbia Univ. he taught that history encompasses all aspects of civilization. He was particularly interested in the relationship of economics and politics and in 1913 published *An Economic Interpretation of the Constitution.* Beard helped to found the New School for Social Research. With his wife, Mary Ritter Beard (1876–1958), he wrote *The Rise of American Civilization* (2 vol., 1927) and its sequels (vol. 3 and vol. 4), *America in Midpassage* (1939) and *The American Spirit* (1943).

Beard, James, 1903–85, American cooking teacher and writer; b. Portland, Oreg. He maintained (1955–84) an influential cooking school, promoted American cuisine, and wrote some two dozen cookbooks.

Bearden, Romare, 1914–88, American painter; b. Charlotte, N.C., raised in Harlem. Rendered in vibrant, flat planes, often with collage, his works deal with the African-American experience in America. His work appears in many museum collections.

Beardsley, Aubrey Vincent, 1872–98, English illustrator and writer. His unique, largely self-taught work was influenced by Greek vase painting, Japanese woodcuts, and the French ROCOCO. He developed a superbly artificial, flat, linear, black-and-white style, illustrating macabre, often erotic themes for books, e.g. Oscar WILDE's *Salome* (1894), and periodicals, e.g., *The Yellow Book* (1894–96), for which he was art editor. He died at 26 of tuberculosis.

bearing, machine part used to reduce FRICTION between moving surfaces and to support moving loads. There are two principal types. A *plain,* or *journal, bearing* is a cylinder that supports a rotating shaft such as a motor shaft; its inner lining, the bushing, is usually made of a metal softer than that of the shaft, so that any slight misalignment of the shaft can be adjusted by an equivalent wearing of the bushing. An *antifriction bearing* is a cylinder containing a movable inner ring of small steel balls (the ball bearings used primarily in light machinery) or larger cylindrical or conical rollers. The rotating machine part fits into a center of the ring, which takes up the motion of the rotating part, distributing and reducing friction through the movement of its bearings. Magnetic bearings use magnetic repulsion to reduce friction even more.

beat frequency, half of the difference of the frequencies of two sets of waves traveling in the same direction. Sets of waves combine to form a beat, which has a varying amplitude and a fixed frequency. The number of beats occurring in one second is equal to twice the beat frequency. Beats are an example of interference, and, in sound waves, can be used for practical purposes, such as piano tuning.

beat generation, certain American artists and writers popular in the 1950s. Influenced by Eastern religions, e.g., ZEN BUDDHISM, and the rhythms of "progressive" JAZZ, they rejected traditional forms and sought expression in intense experiences and beatific illumination. Novelists in the movement included William Burroughs and Jack KEROUAC. Among the "beat" poets were Allen GINSBERG and Lawrence FERLINGHETTI.

Beatitudes, eight blessings spoken by Jesus at the beginning of the Sermon on the Mount (Mat. 5.3–12). Luke 6.20–26, a parallel passage, names four blessings and four woes.

Beatles, The, English rock music group (1959–69). Members were John Lennon (1940–80), Paul McCartney (1942–), George Harrison (1943–), and Ringo Starr (Richard Starkey) (1940–). Influenced by Americans like Elvis PRESLEY, the Beatles dominated ROCK MUSIC in the 1960s with their wit, stage presence, and music that evolved from tight rhythm and blues to allusive lyricism. The lyrics and music for their songs were written mostly by Lennon and McCartney. The group recorded numerous albums, made films, and toured widely.

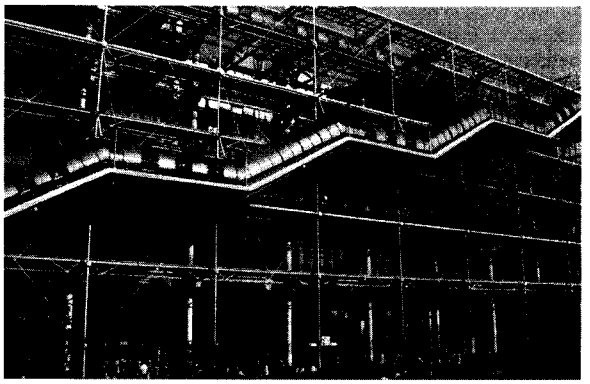
Beaton, Sir Cecil, 1904–80, English stage and costume designer, photographer, writer, and painter. His credits include the designs for the Broadway shows *My Fair Lady* (1956) and *Coco* (1969), and photographic portraits of many famous people.

Beatrice Portinari, 1266–90, Florentine woman thought to be the Beatrice of DANTE's *Divine Comedy* and *Vita nuova.*

Beatrix, 1938–, queen of the Netherlands (1980–). She ascended the throne upon the abdication of her mother, JULIANA. She is married to a German, Claus von Amsberg, and has three sons.

Beaubourg, popular name for the **Centre National d'Art et de Culture Georges Pompidou,** derived from the district of Paris in which it is located. Proposed by French Pres. POMPIDOU in 1969, the center was designed by Renzo Piano and Richard Rogers and completed in 1977. Its industrial style, with architectural elements such as the steel superstructure, escalator tunnels of clear plastic, and brightly colored elevators and utility pipes exposed on the outside of the building, generated much controversy. The Beaubourg contains a modern art museum, a public library, and music and industrial design centers.

Beaufort scale, a scale of wind velocity. It was devised by Admiral



The Beaubourg, Paris

Sir Francis Beaufort of the British navy and an adaptation is used by the U.S. National Weather Service. It employs numbers from 0 to 12, representing calm, light air, light breeze, gentle breeze, moderate breeze, fresh breeze, strong breeze, moderate gale, fresh gale, strong gale, whole gale, storm, and hurricane. Zero (calm) is a wind velocity of less than 1 mi (0.6 km) per hour and 12 (hurricane) represents a velocity of over 75 mi (120 km) per hour.

Beaufort Sea, an arm of the Arctic ocean between Point Barrow, Alaska, and the Canadian Arctic Archipelago. The MACKENZIE R. flows into the sea, which is always covered with pack ice.

Beauharnais, Alexandre, vicomte de [bōärnā'], 1760–94, French general. He fought in the AMERICAN REVOLUTION and in the FRENCH REVOLUTIONARY WARS. After he was guillotined in the REIGN OF TERROR, his widow married NAPOLEON I and became the Empress JOSEPHINE. His son, **Eugène de Beauharnais,** 1781–1824, was also a French general who served with distinction under his stepfather, Napoleon. Made viceroy of Italy in 1805, he retired to Munich after Napoleon's fall. Eugène's sister, **Hortense de Beauharnais,** 1783–1837, married Louis BONAPARTE and was queen of Holland (1806–10).

Beaumarchais, Pierre Augustin Caron de [bōmärshā'], 1732–99, French dramatist. His brilliant comedies, *The Barber of Seville* (1775) and *The Marriage of Figaro* (1784), are the bases for celebrated operas by ROSSINI and MOZART, respectively. Distinguished by their clever dialogue and intricate plots, they satirize the upper class. Beaumarchais was frequently in litigation, and the pamphlets he wrote about his cases were witty and effective.

Beaumont, Francis, 1584?–1616, English dramatist, best known for collaborations with John FLETCHER. Beaumont is generally considered the superior dramatist, and to him sole authorship of *The Woman Hater* (1607) and the burlesque *Knight of the Burning Pestle* (c.1607) is usually ascribed.

Beaumont, William, 1785–1853, American physician; b. Lebanon, Conn. He was the author of *Experiments and Observations on the Gastric Juice and the Physiology of Digestion* (1833), an exhaustive account of a famous medical case involving a youth whose abdomen, opened by a gunshot, would not close. Realizing that this situation afforded a unique opportunity to study the digestive process, Beaumont conducted about 238 experiments over several years that revolutionized knowledge of this process.

Beaumont, city (1990 pop. 114,323), seat of Jefferson co., E Tex.; settled 1827, inc. 1838. A port of entry with deepwater facilities on a ship channel, Beaumont is a major oil-refining center. The world's first great oil gusher came in (1901) at nearby Spindletop, revolutionizing what is still, to a degree, a farming and lumbering economy. Lamar Univ. is located in the city.

Beauregard, Pierre Gustave Toutant, 1818–93, Confederate general in the U.S. CIVIL WAR; b. St. Bernard parish, La. In 1861, after directing the bombardment of FORT SUMTER, he was second in command at the first battle of BULL RUN. He became (1862) Confederate commander at the battle of SHILOH after the death of A.S. JOHNSTON. He later (1863) defended Charleston.

Beauvoir, Simone de [bōvwär'], 1908–86, French author. An exponent of EXISTENTIALISM, she was a close associate and companion of SARTRE. Her novels include *The Mandarins* (1955), which interprets the existential dilemma, *The Second Sex* (1949–50), a profound analysis of the status of women, and *The Coming of Age* (1970), a study of society's treatment of the aged. She also wrote a lively series of memoirs.

beaver, large, aquatic RODENT (*Castor fiber*). Once widespread in the Northern Hemisphere, beavers are from 3 to 4 ft (91 to 120 cm) long, including the distinctive broad, flattened tail; they usually weigh about 60 lb (27 kg). Known for their engineering feats, beavers create ponds by building dams of sticks, logs, and mud; they build habitations, or lodges, in the same way.

Beaverbrook, William Maxwell Aitken, 1st Baron, 1879–1964, British statesman and newspaper owner; b. Canada. He amassed a fortune in business before going to England in 1910. There he gained control of the *Daily Express* (1916) and the *Evening Standard* (1923), and began the *Sunday Express* (1918); these newspapers trumpeted his imperialist, isolationist views. A Conservative, he held several posts in Winston CHURCHILL's wartime cabinet (1940–45).

Beccaria, Cesare Bonesana, marchese di, 1738–94, Italian criminologist, economist, and jurist. His famous *Essay on Crimes and Punishments* (1764), arguing against CAPITAL PUNISHMENT and cruel treatment of criminals, influenced Jeremy BENTHAM and the utilitarians and stimulated penal reform throughout Europe. As an economist, Beccaria anticipated the wage and labor theories of Adam SMITH.

Becker, Boris, 1967–, German tennis player. Noted for his powerful serve-and-volley game, he gained public notice in 1985 as the teenage winner of Wimbleton. He repeated there in 1986 and 1989 and has also the U.S. (1989) and Australian (1991) opens.

Becket, Thomas: see THOMAS À BECKET, SAINT.

Beckett, Samuel, 1906–89, French novelist and playwright; b. Ireland. He won the 1969 Nobel Prize in literature. His novels, e.g., *Murphy* (1938) and *Molloy* (1951), portray an individual's entrapment by grotesque situations in an apparently normal world. In his theater of the absurd, typified by the popular but controversial *Waiting for Godot* (1952) and *Endgame* (1957), Beckett combined poignant humor with an overwhelming sense of anguish and loss.

Bécquer, Gustavo Adolfo [bā'kĕr], 1836–70, Spanish romantic poet and prose writer. His *Rhymes* (1871), published after his death, are among the finest 19th-cent. LYRIC poetry. His prose includes *Legends* (1860–64).

Becquerel, Antoine Henri [bĕkərĕl'], 1852–1908, French physicist. Professor at the École polytechnique, Paris, from 1895, he discovered RADIOACTIVITY in URANIUM in 1896. Further investigations of the phenomenon were made by Pierre and Marie CURIE, and the three shared the 1903 Nobel Prize in physics.

bedbug, small, flatbodied, blood-sucking BUG of the family Cimicidae. Distributed worldwide, bedbugs are parasites of warm-blooded animals. They are reddish-brown and about ¼ in. (6 mm) long.

Bede, Saint or **Baeda,** 673?–735, English historian, a Benedictine monk, also called the Venerable Bede. His *Ecclesiastical History of the English Nation,* in Latin, is still an important primary source for English history from 597 to 731.

Bedford, John of Lancaster, duke of, 1389–1435, English nobleman, son of HENRY IV of England and brother of HENRY V. Made protector of HENRY VI in 1422, he devoted himself to English affairs in France.

Bedlington terrier, long-legged TERRIER; shoulder height, c.16 in. (40.6 cm); weight, 22–24 lb (9.9–10.8 kg). When its thick, wiry outercoat is trimmed to the fleecy undercoat for exhibition, it resembles a lamb. It may be blue, liver, or sandy, solid or marked with tan. It was developed (19th cent.) by cross-breeding in England's Border districts.

Bedouin [Arab., = desert dwellers], primarily nomadic, Muslim Arab peoples of the Middle East. Camel- and sheep-breeding provide their main livelihood. Roving tribal groups, headed by a sheikh, traditionally traveled a defined area of land. However, the settlement policies of various governments in the 20th cent. have forced many Bedouins into a sedentary life.

bee, flying INSECT of the superfamily Apoidae, having enlarged hind feet for pollen gathering and a dense coat of feathery hairs on the

head and thorax. Bees feed on POLLEN and nectar; the latter is converted to HONEY in the digestive tract. Most have stings connected to a poison gland. Bees may be social, solitary, or parasitic in the nests of other bees. Social bees include bumblebees, stingless bees, and honeybees. A typical colony of social bees has an egg-laying queen, sexually undeveloped females (workers), and fertile males (drones). Workers gather nectar, make and store honey, and protect the hive. They care for the queen and larvae and perform complex patterned dances to communicate the location of pollen sources to one another. After being fertilized by a drone, the queen spends her life (usually several years) laying eggs. Honeybees are raised commercially for honey and for the WAX they produce for their nests (combs) and as agricultural cross-pollinators. So-called "killer bees" are essentially African honeybees that are much more aggressive than common honeybees when disturbed. They were introduced into the New World in Brazil during the mid-1950s and have since spread north to the U.S.

beech, common name for the Fagaceae, a family of trees and shrubs mainly of temperate and subtropical regions in the Northern Hemisphere. The principal genera, CHESTNUT, chinquapin, beech, and OAK, are dominant forest trees valued for their hardwood timber. Some species are also grown for their fruits and as ornamentals. The beeches have smooth, silvery gray bark and pale green leaves. The American beech (*F. grandifolia*) grows over much of the NE U.S. and Canada. The European beech (*F. sylvatica*) is an important forest tree, prized for its wood and nut oil. Several of its varieties, e.g., purple and copper beeches, are cultivated in America as ornamental trees.

Beecham, Sir Thomas, 1879–1961, English conductor of international fame. He organized (1932) the London Philharmonic Orchestra and (1946) the Royal Philharmonic Orchestra, also of London, and appeared in the U.S. with the New York Philharmonic and the METROPOLITAN OPERA (see ORCHESTRA, table).

Beecher, Lyman, 1775–1863, American Presbyterian minister; b. New Haven, Conn. A preacher on temperance, he served congregations in New York, Connecticut, and Massachusetts. He was a founder of the American Bible Society (1816) and later president (1832–52) of Lane Theological Seminary, Cincinnati. Among his 13 children were Harriet Beecher STOWE and **Henry Ward Beecher,** 1813–87, American Congregational preacher, orator, and lecturer, b. Litchfield, Conn. After serving congregations in Indiana, he became pastor of the Congregational Plymouth Church in Brooklyn, N.Y., in 1847. He championed reforms, especially the abolition of slavery and woman suffrage, and advocated the theory of evolution. He was accused of adultery by Theodore Tilton. The trial (1875) ended in jury disagreement, and Beecher continued in his influential position for the rest of his life.

Beelzebub, in the Bible: see SATAN.

beer, one of the oldest known alcoholic beverages. At first brewed chiefly in the household and monastery, it has been a commercial product since late medieval times and is made today in most industrialized countries. Color, flavor, and alcoholic content (usually 3%–6%) may vary, but the process in brewing is similar: A mash of malt (usually barley), cereal adjunct (e.g., rice and corn), and water is heated and agitated. The liquid is boiled with hops and cooled. Yeast is then added, and fermentation occurs. In England ale is any light-colored beer; in the U.S. it is a pale, strongly hopped beverage. Porter is a strong, dark ale brewed with roasted malt; stout is darker, stronger, and maltier than porter. Bock beer is dark, heavy, and usually drunk in the spring. Light, or low-calorie, beer is lower in alcohol content. Ice beer is a higher-alcohol beer produced by chilling below 32°F (0°C) and filtering out the ice crystals that form.

Beerbohm, Sir Max, 1872–1956, English essayist, caricaturist, and parodist. Best known today for his witty caricatures of late Victorian writers, e.g., D.G. ROSSETTI and WILDE, he also wrote brilliant parodies, e.g., *A Christmas Garland* (1912), and a popular satire on Oxford, *Zuleika Dobson* (1911).

Beersheba, city (1989 est. pop. 128,000), S Israel, principal city of the NEGEV Desert. Beersheba is a trading center, and its manufactures include chemicals and textiles. Once one of the southernmost towns of biblical PALESTINE, Beersheba contains a well believed to have been dug by ABRAHAM. It is the seat of the Arid Zone Research Institute.

beeswax: see WAX.

beet, biennial or annual root vegetable (*Beta vulgaris*) of the goosefoot family, cultivated since pre-Christian times. Numerous varieties exist, e.g., red, or garden, beet; sugar beet; and Swiss chard. Both the roots and foliage of the red beet are edible, as is the foliage of the Swiss chard. The widely cultivated sugar beet, containing up to 20% sucrose, provides about one third of the world's sugar supply.

Beethoven, Ludwig van [bā'tōvən], 1770–1827, German composer, universally recognized as one of the greatest composers who ever lived. Young Beethoven's musical gifts were acknowledged by MOZART and HAYDN, and his piano virtuosity and extraordinary compositions won him the generous support of the Viennese aristocracy despite his notoriously boorish manners. Despite the onset (1801) of deafness, which became progressively worse and was total by 1817, his creative work was never restricted. Beethoven's work may be divided into three distinct periods. The early works, influenced by the tradition of Mozart and Haydn, include the First and Second Symphonies, the first three piano concertos, and a number of piano sonatas, including the Pathétique. From 1802, his work broke the formal conventions of classical music. This most productive middle period included the Third Symphony (Eroica); the Fourth through Eighth Symphonies; his one Violin Concerto; and his sole opera, *Fidelio.* Beethoven's final period, dating from about 1816, is characterized by works of greater depth, including the Hammerklavier Sonata; the monumental Ninth Symphony, with its choral finale based on SCHILLER's *Ode to Joy;* the *Missa Solemnis;* and the last five string quartets. A prolific composer, Beethoven produced numerous smaller works besides his major symphonies, concertos, sonatas, and quartets. His work crowned the classical period and initiated the romantic era in music.

beetle, mainly terrestrial INSECT (order Coleoptera). Beetles have chewing mouthparts; well-developed antennae; and a pair of hard, opaque, waterproof wings (elytra) which cover and protect the flight wings and the body. Some species are brilliantly colored and patterned, but most are dull. They range in size from less than 1/32 in. (1 mm) to more than 6 in. (15 cm) in length. Beetles are generally plant eaters, but some are parasitic.

beet sugar: see BEET; SUCROSE.

Menachem Begin

Begin, Menachem, 1913–92, Israeli prime minister (1977–83); b. Poland. Before Israeli independence, he commanded the Irgun, an anti-British terrorist group. He sat in the Knesset after 1949 as

leader of the right-wing Herut party. In 1977 he formed a right-wing Likud coalition government. Begin signed a peace treaty with Egypt in 1979 (see CAMP DAVID ACCORDS), and he and Egyptian President Anwar al-SADAT shared the 1978 Nobel Peace Prize. In 1982 he authorized a massive Israeli invasion of LEBANON in order to destroy military bases of the PALESTINE LIBERATION ORGANIZATION located there (see ARAB-ISRAELI WARS). Israeli forces shelled BEIRUT, and Begin's government (particularly Defense Min. Ariel SHARON) was criticized for allowing the massacre of Palestinian civilians by Israel's Lebanese Christian allies. He retired in 1983.

begonia, common name for the Begoniaceae, a family of succulent, perennial herbs of the American tropics, and for members of the genus *Begonia.* Begonia species are common houseplants, some grown for their showy, variously colored leaves and others for their white, pink, or yellow flowers.

Behan, Brendan, 1923–64, Irish dramatist. An outspoken man jailed for Irish Republican Army activities, he is noted for his prison drama *The Quare Fellow* (1956); *The Hostage* (1958), a farce; and his autobiography, *Borstal Boy* (1958).

behaviorism, school of psychology that seeks to explain behavior entirely in terms of observable responses to environmental stimuli. Influenced by the conditioned-reflex experiments of PAVLOV, behaviorism was introduced in 1913 by J.B. WATSON, who, denying both the value of introspection and the concept of consciousness, emphasized laboratory techniques. B.F. SKINNER, the major modern proponent, concerned himself exclusively with the relationship of observable responses to stimuli and rewards.

behavior therapy or **behavior modification,** active psychotherapeutic approach aimed at modifying undesirable behaviors by reinforcing acceptable behavior and suppressing (by nonreinforcement) undesirable behavior. After observing the behavior and factors that trigger and maintain it, the therapist employs any of various techniques of reward and/or punishment (e.g., aversion therapy, desensitization, guided imagery). A form of PSYCHOTHERAPY developed from the work of B.F. SKINNER and others, behavior therapy is used in private and institutional therapy in group and individual settings to treat such disorders as DRUG ADDICTION, ALCOHOLISM, and PHOBIAS. It has been criticized for treating symptoms rather than causes.

Behmen, Jakob: see BOEHME, JAKOB.

Behn, Aphra, 1640–89, first professional English female author. She wrote verse under the pseudonym Astrea, adopted during a career as a spy. *The Rover* (1677), bawdy and humorous, brought her fame as a playwright. *Oroonoko* (1688) was the first English philosophical novel. Behn led a notoriously bohemian life.

Behrens, Peter [bā'rəns], 1868–1940, German architect. His utilitarian style was both clear and impressive. He is known for his factory buildings, which based a simple, effective design on the frank terms of modern construction. LE CORBUSIER, GROPIUS, and MIĒS VAN DER ROHE were his students.

Behring, Emil Adolph von, 1854–1917, German physician. A pioneer in serum therapy, he received the 1901 Nobel Prize in physiology or medicine for his work on immunization against diphtheria (1890) and tetanus (1892) by injections of antitoxins (a word he introduced).

Behrman, S(amuel) N(athaniel), 1893–1973, American dramatist; b. Worcester, Mass. His sophisticated comedies include *The Second Man* (1927) and *Lord Pengo* (1962). He also wrote film scripts and biographies.

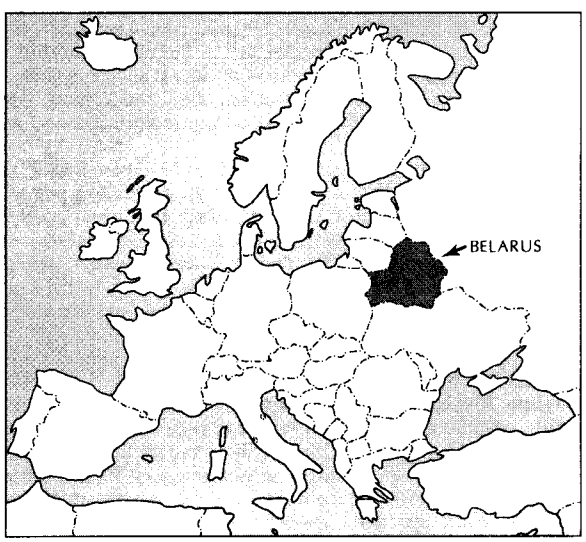
Beijing or **Peking** [Chin. = northern capital], city (1990 est. pop. 7,000,000), capital of China. It is located in central Hebei prov., but administered directly by the central government. The second largest city in China (after SHANGHAI), Beijing is the political, financial, educational, and transportation center of the country. It has become a major industrial area, with factories producing an array of heavy and light industrial goods such as iron and steel, textiles, machinery, chemicals, refined oil, and electronic equipment. A city of broad avenues, narrow lanes, and intricate residential courtyards, its landmarks include the Forbidden City, the Gate of Heavenly Peace, Tiananmen Square, and the Imperial Summer Palace; its cultural institutions include a ballet, the national library, many educational institutions, a renowned zoo, and a modern international airport. Serving (13th cent.) as KUBLAI KHAN's capital, the city became China's capital (1421–1911; 1949–). It was the site of important events such as the BOXER UPRISING (1900), the May Fourth Movement (1919), the founding of the People's Republic of China and its reestablishment as capital (1949), and the deaths of ZHOU ENLAI and MAO ZEDONG. In 1989 pro-democracy demonstrations in the city were put down by the military with substantial loss of life.

Beirut, city (1991 est. pop. 1,150,000), W Lebanon, capital of Lebanon, on the Mediterranean Sea. An important port, Beirut became a major financial center with food-processing industries. It was a Phoenician city and was called Berytus in ancient times. A prominent city under both the Seleucids and Rome, Beirut was captured by the Arabs in A.D. 635. It was part of the Latin Kingdom of Jerusalem from 1110 to 1291. After 1517 the DRUSES controlled the city under the OTTOMAN EMPIRE. It fell (1918) to France in World War I and became the capital of Lebanon in 1920 under the French mandate. Beirut suffered severe damage during the Lebanese civil war (1975–76) between Muslims and Christians and was left a divided city that was no longer an important financial center. A 1982 siege by Israeli forces led to the expulsion of PLO guerrillas from its western sector and further devastated Beirut. A multinational peacekeeping force was established after some 1,000 Palestinians were massacred by Israel's Lebanese Christian allies, but France and the U.S. withdrew (1984) after nearly 300 troops were killed (1983) in terrorist attacks. In 1990 Christian and Muslim militias withdrew, ending the division of Beirut and returning it to the control of the national government.

Béjart or **Béjard** [bāzhär'], French family of actors in a company associated (after 1643) with MOLIÈRE. The eldest was **Joseph Béjart,** c.1616–1659. His sister **Madeleine Béjart,** 1618–72, a fine actress, was Molière's mistress. Their sister, **Geneviève Béjart,** 1624–75, and brother, **Louis Béjart,** 1630–78, also acted in the company. **Armande Grésinde Béjart,** c.1640–1700, Madeleine's sister or daughter, married Molière in 1662 and played most of his heroines. After merging with two other companies, the troupe became the Comédie Française (see THEATER, table).

Béjart, Maurice, 1927–, French BALLET and opera director; b. Maurice Berger. His style incorporates JAZZ and avant-garde music, nontraditional dance forms, e.g., acrobatics, and unusual settings. He headed (1954–59) the Ballets de l'Étoile, Paris, and (1959–87) the highly influential Ballet of the 20th Century, Brussels, Belgium. In 1987 he organized the Béjart Ballet Lausanne in Lausanne, Switzerland.

Béla Kun: see KUN, BÉLA.



Belarus, or **Byelarus** [both: byĕ"lərōōs'], officially Republic of Belarus, republic (1992 est. pop. 10,374,000), c.80,150 sq mi (207,600 sq km), E central Europe, formerly a constituent republic of the USSR; it is sometimes called White Russia. It borders Poland

(W); Russia (E); Ukraine (S); and Lithuania and Latvia (N). MINSK is its capital and largest city; other large cities include Homyel (Gomel), Mahilyow (Mogilev), Vitsyebsk (Vitebsk), Hrodna (Grodno), and Brest. Peat, which along with other swampy soils covers one third of the land, and timber are the leading natural resources; minerals include limestone, clay, sand, chalk, and dolomite. Potatoes, flax, sugar beets, and grains are the chief agricultural products. Belarus's industries, which have grown since the 1970s as a result of the contruction of oil and gas pipelines, produce machinery, motor vehicles, chemicals, textiles, and electrical equipment. The majority of the people are Belarussians; Russians, Poles, and Ukrainians are among the minorities. The main religions are the Orthodox Eastern and Roman Catholic churches. Belarussian is the official language.

History. Settled by East Slavic tribes (5th–8th cent.), the region became part of KIEVAN RUSSIA (12th cent.), of the grand duchy of Lithuania (14th cent.), and of the Russian Empire (18th cent.) and was devastated by the Russian-Polish wars (16th–18th cent.), the Napoleonic invasion (1812), World War I (1914–18), and the Soviet-Polish war (1919–20). The last ended with the western part of the region ceded to Poland and the eastern part becoming the Belorussian Soviet Socialist Republic, or Belorussia. In 1939, the western portion was occupied by Soviet troops. During the German occupation (1941–44), Belorussia's large Jewish population (dating from the 14th cent.) was decimated. After 1945 most of W Belorussia remained part of the Belorussian SSR. Following the failure of the hard-line coup (1991) against Soviet Pres. Gorbachev, conservative Belorussian leaders were ousted. Stanislav Shushkevich became head of state, and the republic declared its independence and later joined Russia and Ukraine in initiating the establishment of the COMMONWEALTH OF INDEPENDENT STATES. The official name of the new nation in English was changed to Belarus in 1991. In 1994 former Communists in the parliament voted to replace Shushkevich with Mechislav Grib, a former national police official. Since independence Belarus has moved slowly on market reforms and maintained a neutral foreign policy.

Belau: see PALAU.

Belaúnde Terry, Fernando [bäläōōn'dā tā'rē], 1912–, president of Peru (1963–68, 1980–85). An architect, he effected social, educational, and land reforms in his first term as president. In 1968 he was deposed by an army coup and went into exile. Restored to the presidency in 1980, he attempted to combat inflation by denationalizing industries and encouraging foreign investment in the petroleum industry.

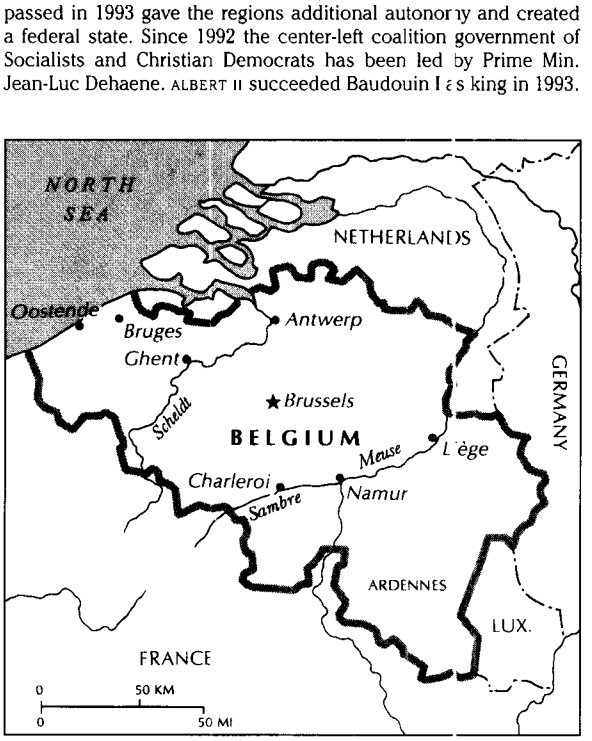
Belém or **Pará,** city (1990 est. pop. 1,203,000), N Brazil, capital of Pará state, on the Pará R. It is the chief commercial center and port of the AMAZON R. basin. Founded by the Portuguese in 1616, it prospered during the rubber boom of the late 19th cent. and again after World War II with the development of rail and highway links. The Goeldi museum holds ethnological and zoological collections of the region.

Belfast, capital city (1991 est. pop. 287,000) of Northern Ireland, on an inlet of the Irish Sea, at the mouth of the Lagan R. A port and industrial center, Belfast is known for its shipyards and linen industry. Agricultural and livestock products are the chief exports. The city was founded in 1177. French HUGUENOT settlers, who arrived in the late 17th cent., stimulated the growth of the linen industry. Since the 19th cent. the city has been scarred by violent strife between the majority Protestants and the minority Catholics, with the most recent round beginning in the late 1960s.

Bel Geddes, Norman: see GEDDES, NORMAN BEL.

Belgium, Flemish *België,* Fr. *La Belgique,* officially Kingdom of Belgium, constitutional monarchy (1992 est. pop. 10,017,000), 11,781 sq mi (30,513 sq km), NW Europe; bordered by the Netherlands and the North Sea (N), Germany and Luxembourg (E), and France (W and SW). BRUSSELS is the capital and ANTWERP the chief commercial center and port. Low-lying, except for the forested Ardennes Mts. in the south, Belgium is crossed by the MEUSE and Scheldt rivers and a network of canals. It is one of the most densely populated, heavily industrialized nations in Europe, but while the emphasis is on heavy industry, such as production of steel, chemicals, and petrochemicals, the traditional industries of lace-making and diamond-cutting continue to flourish. Iron, zinc, and other industrially important minerals are now largely imported, and coal production has declined as other fossil fuels and nuclear power have become important. Belgium is a leader in shipping, and its economy depends on its exports. Agricultural activities include cattle-raising and dairying; cereals are the chief crops, and food processing is a major source of income. Tourism is also important. Belgium is divided culturally and ethnically into Flemish-speaking Flanders in the north and French-speaking Wallonia or Wallony, in the south. Brussels is bilingual, and German is spoken in areas bordering Germany. Virtually the entire population is Roman Catholic.

History. The Franks first appeared in the Roman province of Belgica in the 3d cent. A.D., and the area became the cradle of the CAROLINGIAN dynasty. After the death (814) of CHARLEMAGNE, most of the region was made part of LOTHARINGIA and, later, of Lower Lorraine. By the 12th cent. this had broken up into the duchies of Brabant and LUXEMBOURG, and the histories of these feudal states and of FLANDERS and Hainaut constitute the medieval history of Belgium. In the 15th cent. the area of present-day Belgium passed to the dukes of Burgundy and then to the HAPSBURGS (see NETHERLANDS, AUSTRIAN AND SPANISH). Annexed by France in 1797, the region was given to the Netherlands by the Treaty of Paris (1815). Resentment of Dutch rule led (1830) to rebellion and an independent (1831), "perpetually neutral" (1838) state was established. Under LEOPOLD I and LEOPOLD II there was rapid industrialization and also colonization, notably in the Congo (see ZAÏRE). Belgian neutrality was violated by the Germans, who occupied the country in WORLD WAR I and WORLD WAR II. Following World War II the unpopular LEOPOLD III, who had surrendered the country unconditionally to the Germans in 1940, abdicated (1951) in favor of his son BAUDOUIN I. Postwar recovery was rapid, but crises arising from longstanding tensions between the Flemish- and French-speaking elements toppled several governments in the 1960s. Constitutional reform begun in the early 1970s created three partially autonomous regions (Flanders, Wallonia, and Brussels) and three politically recognized ethnic communities (French, Flemish, and German), but ethnic discord continued throughout the 1980s. New reforms passed in 1993 gave the regions additional autonomy and created a federal state. Since 1992 the center-left coalition government of Socialists and Christian Democrats has been led by Prime Min. Jean-Luc Dehaene. ALBERT II succeeded Baudouin I as king in 1993.



Belgrade, Serbo-Croatian *Beograd,* city (1987 est. pop. 1,131,000), capital and largest city of Yugoslavia and of its constituent republic SERBIA, at the confluence of the Danube and Sava rivers. It is the

industrial, political, and cultural center of the country. Manufactures include metals, chemicals, and textiles. A harbor for Rome's Danubian fleet, it was later held by the Byzantines, Bulgars, and Serbs. After 1521 it was a major fortress of the Ottoman Turks. Belgrade became the capital of the kingdom of Serbia in 1882 and the capital of Yugoslavia after World War I. In World War II it was severely damaged by the German occupation (1941–44). Belgrade is noted for its fine parks, palaces, museums, and churches. The Kalemegdan citadel is now a military museum.

Belgrano, Manuel, 1770–1820, Argentine revolutionist. A political figure and journalist, he was a leader of the May 1810 revolution and a member of the first patriot governing junta. Later he commanded the Army of the North (1812–14, 1816–19).

Belisarius, c.505–565, Byzantine general under JUSTINIAN I. He suppressed (532) the Nika riot caused by internal political strife, and defeated (533–34) the Vandals, a Germanic tribe. In command (535) of the war against the OSTROGOTHS in Italy, he took NAPLES and ROME (536), as well as MILAN and RAVENNA (540). Justinian replaced him (548) with NARSES, but Belisarius returned (559) to drive the Bulgarians out of Constantinople. After a brief political imprisonment (562) he returned to favor.

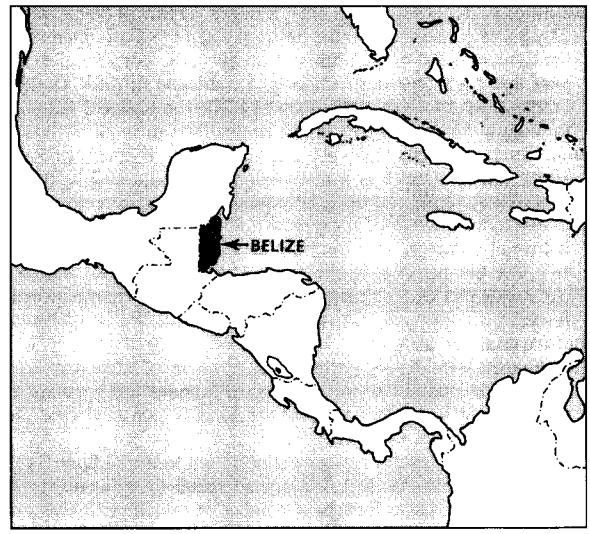
Belize [bəlēz'], independent nation (1991 pop. 192,877), 8,867 sq mi (22,965 sq km), Central America; bordered by Mexico (N), Guatemala (S and W), and the Caribbean Sea (E). The land is generally low-lying, forested, and undercultivated, with a swampy coastline and some low mountains in the south. The capital is BELMOPAN, and the chief port and largest city is Belize (1991 pop. 44,087). The major products are mahogany and other woods, sugar, clothing, citrus fruits, and fish, but timber exports are declining due to overharvesting. The population is about equally divided between English speakers of largely African descent and Spanish speakers of Spanish-Mayan descent. English is the official language. The majority of the population are Roman Catholic, but there is a large Protestant minority.

History. Once a part of the MAYA civilization, the region was probably traversed by CORTÉS on his way to HONDURAS, but the Spanish did not colonize the area. Buccaneers founded Belize city in the early 1600s and were followed by British Jamaicans, who exploited its timber. Spain long contested British possession, but in 1859 Guatemala and Britain agreed on British Honduras's boundaries. In 1940 Guatemala declared the agreement invalid. British Honduras was granted internal self-government in 1964, but full independence was delayed by GUATEMALA's claim. Negotiations appeared to resolve that problem, though, and on Sept. 21, 1981, British Honduras, as Belize, became the last British crown colony on the American mainland to achieve independence. However, the Guatemalan-British agreement did not hold, and not until 1988 did Guatemala give de facto recognition to Belize. A British force remained in Belize to guarantee its independence but is due to be withdrawn by the end of 1994. In 1993 Manuel Esquivel, of the United Democratic party, became prime minister.

Bell, Alexander Graham, 1847–1922, Scottish-American scientist, inventor of the TELEPHONE. For many years he studied and experimented in the area of teaching the deaf to speak, conducting his own school of vocal physiology in Boston. As early as 1865 he conceived the idea of transmitting speech by electric waves, and in 1876 he perfected and demonstrated the first telephone apparatus. Under Bell's influence the magazine *Science* was founded (1880); his patronage of scientists interested in aviation resulted in the development of the HYDROFOIL.

Bell, Daniel, 1919–, U.S. sociologist. After 20 years as a journalist, he took a degree in sociology and went on to teach at Columbia and Harvard. He has written on contemporary capitalist society and the individual's place within it.

belladonna or **deadly nightshade,** poisonous perennial plant (*Atropa belladonna*) of the NIGHTSHADE family. Native to Europe and now wild in the U.S., the plant has reddish, bell-shaped flowers and shining black berries. Extracts of the leaves and roots dilate the pupils of the eye and were once so used by women—hence the name *belladonna,* meaning "beautiful lady" in Italian. Belladonna has also been employed as a poison, a sedative, and, in medieval times, a HALLUCINOGENIC DRUG. The ALKALOID drug atropine, an extract of belladonna, is frequently used to relax muscles and suppress glandular and mucous secretions.



Bellamy, Edward, 1850–98, American author; b. Chicopee Falls, Mass. He became famous with the influential *Looking Backward, 2000–1887* (1888), a utopian romance of the future under state socialism. His other works include short stories and the novels *Miss Ludington's Sister* (1884) and *Equality* (1897), a sequel to *Looking Backward.*

Bellay, Du: see DU BELLAY.

Bellerophon [bəlĕr'əfŏn, -fən], hero in Greek mythology. Given a number of seemingly impossible tasks by King Iobates, he performed them all. Most notable was the killing of the monster Chimera, accomplished with the aid of the winged horse PEGASUS. Grown proud, Bellerophon attempted to ride Pegasus to Mt. OLYMPUS, but was thrown, crippled, and blinded.

Bellini [bĕl-lē'nē], illustrious family of Venetian painters of the RENAISSANCE. **Jacopo Bellini,** c.1400–1470, was the father and teacher of Giovanni and Gentile. Few of his works survive, but two of his notebooks dealing with problems of perspective, landscapes, and antiquity are his most important legacy. **Gentile Bellini,** 1429–1507, painted contemporary Venetian life. After his visit to Constantinople in 1479, a distinct Middle Eastern flavor appeared in his paintings, including the portrait of Muhammad II (National Gall., London). **Giovanni Bellini,** c.1430–1516, became the teacher of TITIAN and GIORGIONE. His works are characterized by serenity, majesty, and luminous color. They include the altarpieces of the Frari and San Zaccaria in Venice; *St. Job* (Acad., Venice); *St. Francis in Ecstasy* (Frick Coll., N.Y.C.); and many mythological scenes.

Bellini, Vincenzo, 1801–35, Italian opera composer. His most celebrated works, *La Sonnambula* and *Norma* (both: 1831), exemplify the virtuosic bel canto tradition of 18th-cent. vocal composition (see VOICE). His last OPERA, *I Puritani* (1835), was influenced by the dramatic style of French grand opera.

Belloc, Hilaire, 1870–1953, English author; b. France. A Catholic apologist, he wrote poetry, satire, and essays, including *The Bad Child's Book of Beasts* (1896) and *The Path to Rome* (1902). With G.K. CHESTERTON he propounded distributionism, a medieval socialist philosophy.

Bellow, Saul, 1915–, American novelist; b. Canada. Moral in tone, his novels are concerned with the individual in an indifferent society. They include *Herzog* (1964), *Mr. Sammler's Planet* (1970), *Humboldt's Gift* (1975; Pulitzer), *More Die of Heartbreak* (1987), and *The Bellarosa Connection* (1989). Bellow was awarded the 1976 Nobel Prize in literature.

Bellows, George Wesley, 1882–1925, American painter; b. Columbus, Ohio. A student of Robert HENRI, Bellows is known for his direct realism. *Forty-two Kids* (Corcoran Gall., Wash., D.C.) and *Stag at Sharkey's* (Mus. Art, Cleveland) are characteristic paintings. Bellows was also noted for his lithographs (see LITHOGRAPHY), e.g., *Dempsey and Firpo.*

Belmopan, city (1991 pop. 3,558), E Belize, capital of Belize. A new city, it was constructed on the Belize R., 50 mi (80 km) inland from the former capital of then British Honduras, the port city of Belize, after that city's near destruction by a hurricane in 1961. The government was moved to Belmopan in 1970. The National Assembly Building's design is based on an ancient Mayan motif.

Belo Horizonte, city (1990 est. pop. 2,416,000), E Brazil, capital of Minas Gerais state. It is a distribution and processing center for agricultural goods and the gold, manganese, and precious stones mined in the state; a banking center; and the hub of a burgeoning industrial complex, with furniture and textile manufacturing. Brazil's first planned metropolis (built 1895–97), laid out with spacious avenues and plazas, it is a cultural center and a popular resort.

Belorussia: see BELARUS.

Belshazzar [bĕlshăz'ər], in the BIBLE, the son of NEBUCHADNEZZAR and the last king of Babylon. At his feast, handwriting appeared on the wall that was interpreted by DANIEL as a sign of doom. That night Babylon fell to Cyrus.

Belvedere, court of the VATICAN connecting it to a villa built (1485–87) for INNOCENT VIII. It was designed (1503–4) by BRAMANTE for JULIUS II, and was to include a number of buildings. It was only partially completed. Now a museum, the Belvedere contains the *Laocoön* and the *Apollo Belvedere* as well as other rare works of classical antiquity.

Bely, Andrei [byĕ'lē], pseud. of **Boris Nikolayevich Bugayev,** 1880–1934, Russian writer of the SYMBOLIST school. He attempted to fuse all the arts in the poetic *Symphonies* (4 vol., 1901–8). His best prose is contained in the novels *The Silver Dove* (1910), *Petersburg* (1912), and the experimental, Joycean *Kotik Letayev* (1917).

Bemis Heights, battle of: see SARATOGA CAMPAIGN.

Ben Ali, Zine el-Abidine, 1936–, president of Tunisia (1987–). A military officer, he was minister of national security (1984–86) and interior minister (1986–87) before becoming prime minister (Oct. 1987) under Pres. Habib BOURGUIBA. In Nov. 1987 he deposed Bourguiba and succeeded him as president.

Benares: see VARANASI.

Benavente y Martínez, Jacinto [bā"nävān'tā ē märtē'nĕth], 1866–1954, Spanish dramatist. Of his sparkling social SATIRES, the best known are *Bonds of Interest* (1907) and *The Passion Flower* (1913). His plays introduced a more natural diction. He received the 1922 Nobel Prize in literature.

Ben Bella, Ahmed, 1919–, Algerian prime minister (1962–65). A leader of the Algerian nationalist movement, he headed Algeria's first government after independence. In 1965 his government was toppled in a coup led by BOUMEDIENNE. He was imprisoned from 1965 until 1980.

Benchley, Robert Charles, 1889–1945, American humorist; b. Worcester, Mass. Drama critic for *Life* (1920–29) and the *New Yorker* (1929–40), he is best remembered as the writer and star of short, satirical films, e.g., *The Treasurer's Report* (1928). His wry commentary appears in *My Ten Years in a Quandary* (1936) and *Benchley beside Himself* (1943).

bends: see DECOMPRESSION SICKNESS.

Benedict, Saint, d. c.547, Italian monk, founder of the BENEDICTINES, called Benedict of Nursia. He became a hermit and later founded the first Benedictine monastery, at Monte Cassino. He devised the Rule of St. Benedict, the chief rule of Western MONASTICISM. Feast: July 11.

Benedict XIII, antipope: see LUNA, PEDRO DE.

Benedict XIV, 1675–1758, pope (1740–58), an Italian named Prospero Lambertini. Renowned for his learning, he protected Eastern Catholic rites from Latinization. He denounced the cruelty in the disbanding of the settlements of indigenous peoples established by the JESUITS in Paraguay.

Benedict XV, 1854–1922, pope (1914–22), an Italian named Giacomo della Chiesa. In World War I he kept the Vatican neutral and worked strenuously to restore peace. He founded the Vatican service for prisoners of war.

Benedict, Ruth Fulton, 1887–1948, American anthropologist; b. N.Y.C. A student and colleague of Franz BOAS at Columbia Univ., she did field work among Native Americans, and studied contemporary European and Asian cultures. Stressing the role of culture in personality formation, her books attacked racism and ethnocentrism. Among her writings are *Patterns of Culture* (1934), *Race* (rev. ed. 1943), and *The Chrysanthemum and the Sword* (1946).

Benedictines, monks of the Roman Catholic Church following the rule of St. BENEDICT [Lat. abbr., = O.S.B.]. Unlike earlier groups, they stress moderation rather than austerity. Their waking hours are spent in worship and work, chiefly manual labor. The first Benedictine abbey was at Monte Cassino (founded c.529), Italy. Benedictines such as St. GREGORY I, St. AUGUSTINE OF CANTERBURY, and St. BONIFACE spread the order's influence across Europe. The Cluniac and the Cistercian orders resulted from 10th- and 11th-cent. reforms among the Benedictines.

Beneš, Eduard [bĕ'nĕsh], 1884–1948, Czechoslovakian president (1935–38, 1946–48). He was a follower of T.G. MASARYK and succeeded him as president in 1935. A liberal and a nationalist, he resigned after the MUNICH PACT. After World War II he again headed the nation, but the Communist coup of 1948 brought his presidency to an end.

Benét, Stephen Vincent, 1898–43, American writer; b. Bethlehem, Pa. He is known for his vivid literary treatments of American folklore and history. Benét is famous for *John Brown's Body* (1928; Pulitzer), a long narrative ballad of the Civil War, several volumes of verse, including *Heaven and Earth* (1920) and *The Burning City* (1936), and masterful short stories, particularly 'The Devil and Daniel Webster."

Ben Ezra: see IBN EZRA, ABRAHAM BEN MEIR.

Bengal, region, 77,442 sq mi (200,575 sq km), E India and Bangladesh, on the Bay of Bengal. Its inland mountains slope to the fertile GANGES-BRAHMAPUTRA alluvial plains and delta. The heavy monsoon rains and warm climate make possible two harvests a year. From the empire of ASOKA (3d cent. B.C.) Bengal passed to the Buddhist Pala kings, the Hindu Sena dynasty, and Muslims of Turkic descent. It was in MOGUL hands when Portuguese and British traders arrived (16th–17th cent.). The latter, under Robert CLIVE, defeated the Muslims in 1757 and formed the Bengal presidency. When India became independent in 1947, **West Bengal** (1991 pop. 67,982,732), 33,928 sq mi (87,874 sq km), primarily Hindu, was created as a state in India, with CALCUTTA as its capital. It has jute mills, steel plants, chemical industries, and coal reserves. **East Bengal,** overwhelmingly Muslim, became East Pakistan in 1947 and gained independence as BANGLADESH in 1971.

Bengal, Bay of, arm of the INDIAN OCEAN, off E India and W Myanmar, separated from the Andaman Sea by the Andaman and Nicobar islands. It is some 1,300 mi (2,090 km) long and 1,000 mi (1,610 km) wide, and is generally shallow. Coastal areas are subject to heavy monsoon rains and destructive cyclones. MADRAS, CALCUTTA, and CHITTAGONG are the chief ports.

Bengali, language belonging to the Indic group of the Indo-Iranian subfamily of the Indo-European family of languages. See LANGUAGE (table).

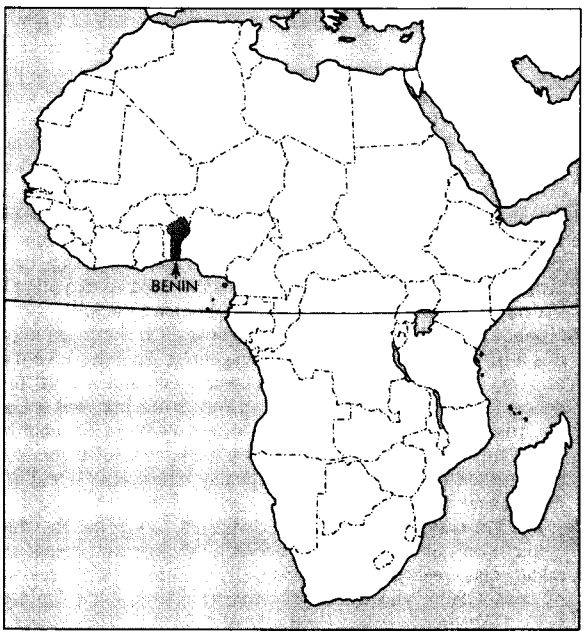
Bengasi or **Benghazi,** city (1984 pop. 485,386), a Mediterranean seaport, NE Libya. It is an administrative and commercial center. Manufactures include processed food, textiles, and cement. Bengasi was cocapital (with TRIPOLI) of Libya (1951–72). The site of Hesperides, a Greek colony (7th cent. B.C.), the city was conquered by the Romans (1st cent. B.C.), Vandals (5th cent. A.D.), Arabs (7th cent.), and Ottoman Turks (mid-16th cent.). Italy held Bengasi from 1911 until it fell (1942) to the British during WORLD WAR II.

Ben-Gurion, David [ben-gōō'rēōn], 1886–1973, Israeli statesman and 1st prime minister (1949–53, 1955–63); b. Poland as David Grün. He settled in Palestine in 1906, devoted his life to ZIONISM, and was a founder of the Mapai (later Labor) party. During the struggle (1947–48) for independence he headed Israel's defense efforts, and once independence was achieved he became prime minister.

Benin [bĕnēn'], former kingdom, situated in present-day SW Nigeria. Ruled by the *oba* (to whose family human sacrifices were made) and by a sophisticated bureaucracy, the African state flourished (14th–17th cent.). Benin sold slaves as well as ivory, pepper, and cloth to Europeans. After a period of decline, it revived (19th cent.) with a trade in palm products. The modern Nigerian city of **Benin** (1987 est. pop. 183,000) served as the capital and was con-

The key to pronunciation appears on page xiii.

quered and burned by the British in 1898. Iron work, carved ivory, and bronze busts made in Benin rank with the finest art of Africa.



Benin, officially Republic of Benin, republic (1992 est. pop. 4,998,000), 43,483 sq mi (112,622 sq km), W Africa, formerly Dahomey; bordered by Togo (W), Burkina Faso and Niger (N), Nigeria (E), and the Bight of Benin, an arm of the Gulf of Guinea (S). PORTO-NOVO is the capital; COTONOU is the largest city and chief port. There are four major geographical zones: a narrow, lagoon-fringed coastal area in the south; a flat, fertile area crossed by the wide Lama marsh further north; forested mountains in the northwest; and savanna-covered highlands in the northeast. Benin's economy is largely agricultural, with most workers engaged in subsistence farming. Chief crops are maize, cassava, millet, sorghum, peanuts, pulses, cacao, cotton, and palm nuts; palm oil is a major export. Although there are rich mineral deposits, notably of offshore petroleum, chromite, and iron and other metal ores, only petroleum and limestone are extracted on a large scale. Most of Benin's few manufactures are processed agricultural products or consumer goods. The population is made up of four main ethnolinguistic groups—Fon, Yoruba, Voltaic, and Fulani. French is the official language, and Fon, the language of the largest ethnic group, is widely spoken. Most of the people follow traditional religions, but there are large Roman Catholic and Muslim minorities.

History. According to oral tradition, southern Benin was settled (12th or 13th cent.) by the Aja. The kingdom they founded, Great Ardra, reached its height in the 16th and early 17th cent. The Aja gradually mixed with the local people to form the Fon, or Dahomey, ethnic group. By the late 17th cent. the Dahomey were raiding their neighbors for slaves to be sold to European traders, a practice that continued until the late 19th cent. The Dahomey kingdom came under French influence in 1851 and was made part of FRENCH WEST AFRICA in 1899. Under the French, a port was constructed at Cotonou, railroads were built, and the output of palm products increased. In 1958 the area became an autonomous state (called Dahomey) within the FRENCH COMMUNITY; it gained full independence in 1960. The independent nation was plagued by governmental instability caused by economic insufficiency, ethnic rivalries, and social unrest. Beginning in 1963 a series of military coups produced several short-lived regimes. A three-member presidential council was established in 1970 but overthrown by the army, led by Maj. Mathieu Kérékou, in 1972. The country was renamed Benin in 1975. A new constitution was promulgated, providing for a national revolutionary assembly, but Benin remained essentially a one-party military dictatorship under the leadership of Kérékou, who was elected president in 1980. Unrest in 1989 and 1990 forced Kérékou to permit a multiparty democracy, and he lost the presidency to Nicéphore Soglo in a free election in 1991.

Benjamin, in the BIBLE, youngest son of JACOB and RACHEL, ancestor of one of the 12 tribes of Israel (See ISRAEL, TRIBES OF). He was the favorite of his family. The name survived in the High Gate of Benjamin of the Temple at Jerusalem. SAUL was the most noted son of the House of Benjamin.

Benjamin, Walter, 1892–1940, German essayist and critic known for his synthesis of eccentric Marxist theory and Jewish messianism. His essays on BAUDELAIRE and KAFKA and his speculation on symbolism, allegory, and the function of art in a mechanical age have profoundly affected contemporary criticism. When the Nazis invaded France, Benjamin, who had moved (1933) there, fled for Spain. Denied entry, he committed suicide.

Bennett, Arnold, 1867–1931, English novelist and dramatist, noted for realistic novels about the industrial Midlands. Influenced by ZOLA'S NATURALISM, Bennett depicted regional life in *The Old Wives' Tale* (1908) and *These Twain* (1916). His plays include *Milestones* (1912, with Edward Knoblock).

Bennett, James Gordon, 1795–1872, American newspaper proprietor; b. Scotland. His New York *Herald,* started in 1835 as a penny paper of four four-column pages, made many innovations in American journalism—editorials critical of all political parties; new fields of news, notably Wall Street finance; use of European correspondents (1838); extensive use of the TELEGRAPH; and illustrations for news articles. It gained an excellent reputation for accurate reporting, especially in the CIVIL WAR. His son, **James Gordon Bennett,** 1841–1918, b. N.Y.C., took over management of the *Herald* in 1867 and maintained its reputation. He financed (1869–71) Henry M. STANLEY'S expedition to find David LIVINGSTON in Africa and also supported (1879–81) the ill-fated expedition of the explorer George Washington De Long to the Arctic. In addition he established London and Paris daily editions of the *Herald* and helped organize (1883) the Commercial Cable Company to handle European dispatches.

Bennett, Richard Bedford, 1870–1947, Canadian prime minister (1930–35). As Conservative leader during the GREAT DEPRESSION, he signed (1932) preferential trade agreements with Britain and the dominions, and proposed (1934) reform social legislation at home. In 1941 he was created a viscount.

Benny, Jack, 1894–1974, American comedian; b. Waukegan, Ill., as Benjamin Kubelsky. His shows on radio (1932–55) and television (1950–65) made famous his miserliness, reproachful silences, and violin. His films include *To Be or Not to Be* (1942).

Benozzo Gozzoli: see GOZZOLI, BENOZZO.

Bent, Charles, 1799–1847, American fur trader; b. Charleston, Va. He helped build a prominent trading firm in the Southwest and was chosen governor of New Mexico after the U.S. occupation in the Mexican War. His brother **William Bent,** 1809–69, managed BENT'S FORT, the company's famous trading post.

Bentham, Jeremy, 1748–1832, English philosopher, jurist, political theorist; founder of UTILITARIANISM. Educated as a lawyer, Bentham devoted himself to the scientific analysis of morals and law. His *Introduction to the Principles of Morals and Legislation* (1789) held that the greatest happiness of the greatest number should govern our judgment of every institution and action. The 19th-cent. reforms of criminal law, of judicial organization, and of the parliamentary electorate owe much to Bentham's active work in English legislative reform, and his thought strongly influenced that of John Stuart MILL.

Bentley, Eric, 1916–, American critic, editor, and translator; b. England. Particularly noted for his drama criticism, he is the author of such books as *The Playwright as Thinker* (1946) and *What Is Theatre?* (1956). Bentley is also known for his translations of BRECHT and PIRANDELLO.

Bentley, Richard, 1662–1742, English critic and philologist, considered the greatest of English classical scholars. His exposure of the 4th-cent. forgery *The Epistles of Phalaris* is his most celebrated work.

Benton, Thomas Hart, 1782–1858, U.S. statesman; b. Hillsboro, N.C. As a Democratic senator (1821–51) from Missouri, he sup-

ported currency measures to benefit the common people, and drew up Pres. JACKSON's Specie Circular (1836). Benton favored Western development and opposed the extension of slavery. He served as U.S. representative (1853–55).

Benton, Thomas Hart, 1889–1975. American painter; b. Neosho, Mo.; grandnephew of Sen. Thomas Hart BENTON. The best-known American muralist of the 1930s and early 40s, he won fame for such murals as those at the New School for Social Research (N.Y.C.). Benton is noted for his dramatization of American themes, as in *July Hay* (1943; Metropolitan Mus.).

Bentsen, Lloyd (Millard, Jr.), 1921–, U.S. politician and government official; b. Mission, Tex. He was a bomber pilot in the Army Air Corps during World War II, served in the House of Representatives (1948–55), started a successful insurance business, and was elected (1970) to the U.S. Senate. In 1987 he became chairman of the Senate finance committee. He ran unsuccessfully for vice president on the Democratic ticket headed by Michael DUKAKIS in 1988. In 1993 Pres. CLINTON appointed Bentsen treasury secretary.

Bent's Fort, noted American trading post on the Arkansas R., in present-day Colorado. The trading company of Charles BENT and Ceran St. Vrain completed the fort in 1833. On a branch of the SANTA FE TRAIL, it was used by many famous MOUNTAIN MEN and by the U.S. Army during the MEXICAN WAR. By 1852 it was abandoned; its manager, William BENT, erected Bent's New Fort downstream in 1853.

Ben Yehudah, Eliezer, 1858–1922, Jewish scholar; b. Lithuania. He settled in Palestine in 1881. A leader in the revival of Hebrew as the national language, he compiled the *Dictionary of Ancient and Modern Hebrew* (16 vol.).

Benz, Karl, 1844–1929, German engineer, credited with building (1885) the first AUTOMOBILE powered by an INTERNAL-COMBUSTION ENGINE. His car had three wheels, an electric ignition, and differential gears. In 1926, Benz's company merged with that of Gottlieb DAIMLER and became the manufacturer of the Mercedes-Benz automobile.

benzene (C_6H_6), colorless, flammable toxic liquid with a strong odor. A HYDROCARBON, benzene is the parent substance of the AROMATIC COMPOUNDS. It consists of an unusually stable hexagonal ring of six carbon atoms, each of which is bonded to a hydrogen atom. Derivative compounds include phenol and aniline. Obtained from coal tar and petroleum, benzene and its derivatives are used in making dyes, drugs, and plastics. Benzene has been identified as a carcinogen.

benzodiazepine, any of a group of tranquilizers prescribed for their antianxiety, sedative, and muscle relaxing effects, including alprazolam (Xanax), diazepam (Valium), clonazepam (Klonopin), temazepam (Restoril), and triazolam (Halcion). They are considered to be highly addictive.

Ben-Zvi, Yizhak [bĕn-tsvē], 1884–1963, president of ISRAEL (1952–63); b. Russia as Issac Shimshelevitz. He settled in Palestine in 1907 and was one of the creators of the Jewish state. In 1952 he succeeded WEIZMANN as president. He was an historian and a scholar in the field of Jewish ethnology.

Beowulf [bā'əwo͞olf], oldest English epic, probably composed in the early 8th cent. by a Northumbrian bard, and drawn from Scandinavian history and folk sources. It recounts Beowulf's struggle with the water monster Grendel and Grendel's mother; the hero's victory in old age over a dragon; and his death and funeral. The poem, in alliterative verse, fuses Christian elements with a picture of old Germanic life.

Berbers, aboriginal Caucasoid peoples of N Africa who form a large part of the populations of Libya, Algeria, and Morocco. Except for the nomadic TUAREG, they are small farmers living in loosely joined tribal villages. Local industries are mining, pottery, weaving, and embroidery. They are SUNNI Muslims, speaking languages of the Hamitic group. Despite a history of conquests, their culture dates back before 2400 B.C. In classical times they formed such states as MAURETANIA and NUMIDIA. Most were Christians until the 7th-cent. Arab conquest. In the 9th cent. they supported the FATIMID dynasty; when the Fatimids left N Africa, fighting among the Berbers reduced the region to anarchy until the ALMORAVIDS and ALMOHADS imposed order. The plains Berbers were eventually absorbed by the Arabs; the mountain Berbers retained their warlike traditions, fiercely resisting French and Spanish occupation of N Africa and in the 1960s helping to drive the French from ALGERIA.

Berenson, Bernard, 1865–1959, American art critic and connoisseur; b. Lithuania. A conversationalist, wit, and arbiter of taste, Berenson selected work for many art collectors, much of it now in museums, e.g., the Isabella Stewart GARDNER Museum. Many of his judgments in art history, made in his early books, have been criticized by later scholars. His works include *Venetian Painters of the Renaissance* (1894) and *Rumor and Reflection* (1952).

Berg, Alban [bĕrk], 1885–1935, Austrian composer. A pupil and close friend of Arnold SCHOENBERG, he adopted ATONALITY and later combined the 12-tone system (see TWELVE-TONE MUSIC) with the lyric and dramatic qualities of the Viennese romantic tradition. His masterpiece, the opera *Wozzeck* (based on the play by BÜCHNER, 1925) aroused protest, but has since been acclaimed as a major 20th-cent. work. His unfinished opera *Lulu* (based on two plays by WEDEKIND) adhered more strictly to the 12-tone principle.

Bergen, city (1987 pop. 208,809), SW Norway. On North Sea inlets, it is a major shipping and shipbuilding center. Founded c.1070 by OLAF III, it was medieval Norway's largest city and a royal residence. From c.1350 to 1560 the HANSEATIC LEAGUE imposed unpopular rule on the city. Bergen was Norway's foremost city until the rise of OSLO in the 19th cent. Impressive monuments of its medieval past include Haakon's Hall (1261; largely rebuilt after World War II) and several churches.

Berger, Thomas, 1924–, American novelist; b. Cincinnati. He writes comic novels about the chasm between the American dream and middle-class reality. They include *Crazy in Berlin* (1958), *Reinhart in Love* (1962), and *Reinhart's Women* (1981); *Little Big Man* (1965); *Nowhere* (1985); *Orrie's Story* (1990); and *Meeting Evil* (1992).

Berger, Victor Louis, 1860–1929, U.S. socialist leader; b. Austria-Hungary. A Milwaukee journalist, Berger was (1911–13) the first socialist member of Congress. He was reelected (1918, 1919), but Congress excluded him for sedition, for which he was sentenced to a 20-year prison term. The U.S. Supreme Court reversed (1921) that decision, and he returned (1923–29) to Congress.

Bergman, Hjalmar [bĕr'yəmän], 1883–1931, Swedish author. His many popular works, characterized by insight into the ambivalence of human emotions, include the novel *God's Orchia* (1919) and the play *The Swedenhielm Family* (1925).

Bergman, (Ernst) Ingmar, 1918–, Swedish film director. His films, often treating man's search for God, are usually studies of human loneliness. They include *The Seventh Seal* (1956), *The Silence* (1963), *Cries and Whispers* (1972), *Autumn Sonata* (1978), and *Fanny and Alexander* (1983; Academy Award). He also wrote the screenplays for *The Best Intentions* (1992) and *Sunday's Children* (1993).

Bergman, Ingrid, 1915–82, Swedish film actress. A radiant, gifted actress, she made such films as *Casablanca* (1942) *For Whom the Bell Tolls* (1943), *Notorious* (1946), *Anastasia* (1956; Academy Award), and *Autumn Sonata* (1978).

Bergson, Henri, 1859–1941, French philosopher. He became a professor at the Collège de France in 1900. Bergson's dualistic philosophy holds that the world contains two opposing tendencies, the life force and the resistance of matter against that force. The individual knows matter through intellect but through intuition perceives the life force and the reality of time, which is not a unit of measurement but duration in terms of life experience. Bergson was awarded the 1927 Nobel Prize in literature. Among his works are *Time and Free Will* (1889) and *The Creative Mind* (1934).

Beria, Lavrenti Pavlovich, 1899–1953, Soviet leader. He became Communist party secretary in Georgia and the Transcaucasus in 1931, head of the Soviet secret police (NKVD) in 1938, and a member of the politburo in 1946. In the power struggle following the death of Joseph STALIN he was executed.

beriberi, disease caused by a deficiency of thiamine (vitamin B_1), resulting in neurological and gastrointestinal disturbances. See table under VITAMIN.

Bering, Vitus Jonassen [bār'ĭng], 1681–1741, Danish explorer in Russian employ. He explored the far northeast of SIBERIA for PETER I. In 1728 he sailed through the BERING STRAIT. In 1741 Bering

Ingrid Bergman

landed a party on the Alaskan coast. The expedition was later wrecked on Bering Island, where he died.

Bering Sea, c.878,000 sq mi (2,274,000 sq km), northern arm of the Pacific Ocean, screened from the Pacific proper by the ALEUTIAN ISLANDS. It is usually frozen from October to June. Its migratory seal herd, threatened with extinction at the time of the **Bering Sea Fur-Seal Controversy** (1886), has gradually been rebuilt following an international agreement (1911) regulating open-ocean sealing.

Bering Strait, c.55 mi (90 km) wide, connecting the Arctic Ocean and the Bering Sea and separating Siberia and Alaska. The Diomede Islands are in the strait, which is usually frozen from October to June.

Berio, Luciano, 1925–, Italian composer. He was introduced to SERIAL MUSIC by Luigi DALLAPICCOLA in 1952 and composed ELECTRONIC MUSIC from 1954. His works include a series of *Sequences* (1957–1975), each for a different instrument; *Sinfonia* (1968) and *Coro* (1976), for orchestra and voices; and *La vera storia* (1982), an opera with acrobats and a wordless soprano.

Berkeley, Busby, 1895–1975, American film director; b. Los Angeles as William Berkeley Enos. In such musicals as *42nd Street* (1933), *Footlight Parade* (1933), and *The Gang's All Here* (1942), directing either the dance sequences or the entire production, he created a striking, often surreal visual style.

Berkeley, George [bär'klē, bûr–], 1685–1753, Anglo-Irish philosopher and clergyman; b. Ireland. Going beyond the teachings of John LOCKE, Berkeley's subjective IDEALISM holds that there is no existence of matter independent of perception; the observing mind of God makes possible the continued apparent existence of material objects. Among his more important works are his *Essay towards a New Theory of Vision* (1709), *A Treatise Concerning the Principles of Human Knowledge* (1710), and *Three Dialogues between Hylas and Philonous* (1713).

Berkeley, Sir William, 1606–77, British colonial governor of Virginia (1642–52, 1660–77). Poor frontier defense and favoritism to his friends in his second term led to the rebellion (1676) of Nathaniel BACON, which he ruthlessly suppressed.

Berkeley, city (1990 pop. 102,724), W Calif., on the eastern shore of San Francisco Bay; inc. 1878. The city is the site of the main campus of the Univ. of California. Manufactures include pharmaceuticals, chemicals, and metal and other products.

berkelium (Bk), synthetic radioactive element, discovered in 1949 by Glenn SEABORG, S.G. Thompson, and Albert Ghiorso by alpha-particle bombardment of americium-241. It is in the ACTINIDE SERIES; nine isotopes exist. See ELEMENT (table); PERIODIC TABLE.

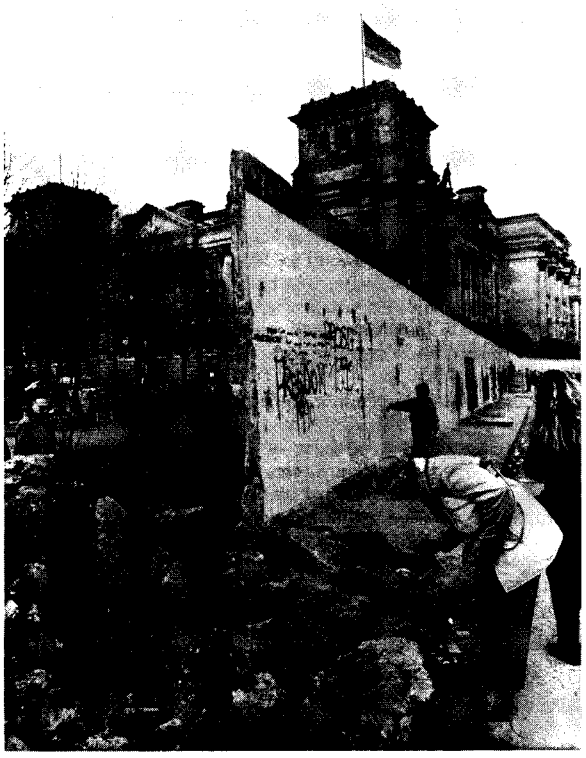
Berkman, Alexander, 1870?–1936, U.S. anarchist; b. Russia. He emigrated to the U.S. c.1887 and attempted (1892) to kill industrialist H.C. FRICK. He was imprisoned for 14 years. Deported (1919) to Russia with Emma GOLDMAN for obstructing the draft, he became disillusioned with the Bolsheviks, left Russia, and later committed suicide in France.

Berle, Milton, 1908–, American entertainer; b. N.Y.C. as Milton Berlinger. His success came with television, where his comedy routines had such broad appeal that his show is credited with contributing to the growing popularity of the medium. His extremely successful "Texaco Star Theater" (1948–54) earned him the nickname "Mr. Television."

Berlin, Irving, 1888–1989, American songwriter; b. Russia as Israel Baline. He wrote nearly 1,000 songs, many of them for Broadway musicals and reviews and films. His first big hit was "Alexander's Ragtime Band" in 1911; "God Bless America" is perhaps his best-known work.

Berlin, Sir Isaiah, 1909–, English political scientist; b. Latvia. He was a professor of social and political theory at Oxford Univ. (1957–67) and president of Wolfson College, Oxford (1966–75). His writings include *Karl Marx* (1939) and essays collected in such volumes as *Four Essays on Liberty* (1969), *Russian Thinkers* (1978), and *Against the Current* (1979).

Berlin, city and state (1991 est. pop. 3,450,000), 341 sq mi (883 sq km), in E Germany on the Spree and Havel rivers, de jure capital of the country. It is within, but administratively not a part of, BRANDENBURG. Berlin is Germany's largest city, its historic capital, and a major cultural center. The city's manufactures include electrical equipment, chemicals, and clothing. Among its many cultural institutions are the renowned Berlin Philharmonic, the gallery of the Charlottenberg Palace, with its collection of Rembrandts, and the Pergamum museum, known for classical art. Formed from two villages chartered in the 13th cent., Berlin was a leading member of the HANSEATIC LEAGUE and became prominent as a commercial, cultural, and communications center of Central Europe. It was the capital of PRUSSIA and of the German Empire after 1871 and the



The Berlin Wall

Weimar Republic (see GERMANY) after WORLD WAR I. In WORLD WAR II it was badly damaged by Allied bombing and a Soviet artillery attack. In 1945 it was divided into British, American, and French occupation zones (West Berlin) and a Soviet zone (East Berlin). The status of divided Berlin became a major COLD WAR issue, and in 1948–49 the Western powers carried out a large-scale airlift to supply West Berlin during a Soviet land and water blockade. In 1949 East Berlin was made the capital of East Germany; in 1950 West Berlin was established as a state within, and the de jure capital of, West Germany, with BONN as the de facto capital. In Aug. 1961 East German authorities erected the 29-mi (47-km) Berlin Wall along the line of partition to halt the exodus of refugees to the West. As the East German Communist regime collapsed (1989–90), the Wall was breached (Nov. 9, 1989). Upon German reunification in Oct. 1990, the new, all-German parliament held a symbolic session in Berlin in the old Reichstag building, and in 1991 it voted to move the federal government to the city. The move is to be completed by the end of the year 2000; some government offices will remain in Bonn.

Berlin, Conference of, 1884–85, international meeting aimed at settling colonial problems in Africa. Attending were all European nations, with the U.S. and Turkey. In effect, the conference legitimized the sovereignty these nations were already exercising over their African colonies.

Berlin, Congress of, 1878, international meeting called primarily to thwart Russian expansion in the OTTOMAN EMPIRE (Turkey). Included were all the European powers, RUSSIA, and Turkey, with Otto von BISMARCK as the chairman. The treaty that resulted significantly changed the existing political situation in eastern Europe. Montenegro, Serbia, and Romania were recognized as independent; Bosnia and Hercegovina were assigned to Austria-Hungary; the boundary lines between Greece and Turkey were redrawn; S Bessarabia was ceded to Russia; and Cyprus was put under British occupation. Russia was angered at Bismarck's handling of the conference, thus ending the first THREE EMPERORS' LEAGUE.

Berlioz, Louis-Hector [bĕrlyōz'], 1803–69, French romantic composer. He abandoned medical study to enter the Paris Conservatory. His *Symphonie fantastique* (1830) marked a new development in program music, and that year Berlioz won the Prix de Rome. In the next decade he wrote the symphonies *Harold in Italy* and *Romeo and Juliet.* Other works included the operas *The Damnation of Faust* (1846) and *The Trojans* (1856–59) and the successful ORATORIO *The Childhood of Christ* (1850–54). Berlioz's ideas of orchestration influenced many later composers.

Bermuda, British dependency (1992 est. pop. 60,200), 20 sq mi (52 sq km), comprising some 150 coral rocks, islets and islands, in the Atlantic Ocean, c.650 mi (1,050 km) SE of Cape Hatteras, N.C. The capital is Hamilton. Tourism is the mainstay of Bermuda's economy, but offshore banking is also important. Probably discovered by the Spanish in the early 16th cent., the islands remained uninhabited until colonists bound for Virginia were shipwrecked there in 1609. Bermuda's government became the responsibility of the British crown in 1684; internal self-government was granted in 1968. The U.S. operates a naval and air force base there. Sir John Swan, of the United Bermuda party, has been prime minister since 1982.

Bermuda Triangle, area in the Atlantic Ocean off Florida where a number of ships and aircraft have vanished. Also known as the Devil's Triangle, it is bounded at its points by Melbourne, Fla.; Bermuda; and Puerto Rico. Storms are common in the region, and investigations to date have not produced scientific evidence of any unusual phenomena involved in the disappearances.

Bern or **Berne,** city (1990 pop. 134,393), capital of Switzerland and of Bern canton, W central Switzerland, within a loop of the Aare R. A university, administrative, and industrial center, it manufactures such products as precision instruments, textiles, and machinery. It is the seat of the Universal Postal Union, the International Copyright Union, and other world agencies. Said to have been founded in 1191, it joined the Swiss Confederation in 1353 and became its leading member. Bern accepted the REFORMATION in 1528 and adopted a liberal constitution in 1831. It became the Swiss capital in 1848. Its historic buildings include a medieval clock tower and a 15th-cent. town hall.

Bernadotte, Count Folke [bĕrnädôt'], 1895–1948, Swedish internationalist. Active in the Swedish RED CROSS, which he headed after 1946, he arranged (1945) the evacuation of Danish and Norwegian prisoners from Germany. He was assassinated by Jewish extremists while serving as UN mediator in Palestine.

Bernadotte, Jean Baptiste Jules: see Charles XIV under CHARLES, kings of Sweden.

Bernanos, Georges [bĕrnänōs'], 1888–1948, French author. His novels *The Star of Satan* (1926) and *The Diary of a Country Priest* (1936) reflect his mystical, Catholic bent. A Royalist until the Spanish civil war, Bernanos condemned FRANCO's policies in *A Diary of My Times* (1938).

Bernard, Saint: see BERNARD OF CLAIRVAUX, SAINT.

Bernard, Claude [bĕrnär'], 1813–78, French physiologist. One of the great scientific investigators, he is known as the founder of experimental medicine through his work on the digestive process and on the vasomotor mechanism.

Bernard of Clairvaux, Saint, 1090?–1153, French churchman, Doctor of the Church. He founded (1115) a Cistercian monastery at Clairvaux, where he remained as abbot for the rest of his life, despite efforts to move him higher. His holiness, intellect, and eloquence made him one of the most powerful figures of his day; he brought about the condemnation of Peter ABELARD and preached the Second CRUSADE. His writings exerted a profound influence on Roman Catholic spirituality, especially that known as *devotio moderna.* He was canonized in 1174. Feast: Aug. 20.

Bernhardt, Sarah, 1844–1923, French actress; b. Rosine Bernard. Called "the divine Sarah" by Oscar WILDE, she was the queen of French romantic and classical tragedy. She became famous for her superb portrayals in *Phèdre* (1874), in Victor HUGO's *Ruy Blas* (1872), and in *Adrienne Lecouvreur* (1880). She also starred in works by SARDOU and ROSTAND, and wrote some of her own vehicles. She made tours of Europe and the U.S., including many "farewell tours" after her leg was amputated in 1915. She played Hamlet at her own Théâtre Sarah Bernhardt in 1899.

Bernini, Giovanni Lorenzo or **Gianlorenzo,** 1598–1680, Italian sculptor and architect, the dominant figure of the Italian BAROQUE. Working for the major patrons of his day, he produced brilliantly vital, dynamic sculpture in reaction against mannerist traditions (see MANNERISM) and dramatic, impressive works of architecture enriched with sculpture. For Cardinal Borghese he produced *David* (pre-1620), *Rape of Proserpine* (1622), and *Apollo and Daphne* (1625; all: Borghese Gallery, Rome). He designed churches, chapels, fountains, monuments, tombs, and statues for the popes. In 1629 he became architect of ST. PETER'S CHURCH, designing interior details and the great, embracing, elliptical piazza in front of the church. His other Roman works include the Churches of Santa Maria della Vittoria (which houses his great sculpture the *Ecstasy of St. Theresa*) and Sant'Andrea al Quirinale, and the fountains of the Piazza Navona.

Bernoulli, Swiss family distinguished in scientific and mathematical history. **Jakob, Jacques,** or **James Bernoulli,** 1654–1705, was one of the chief developers of both the ordinary calculus and the calculus of variations. His *Ars conjectandi* (1713) was an important treatise on the theory of probability. His brother, **Johann, Jean,** or **John Bernoulli,** 1667–1748, was famous for his work on integral and exponential calculus; he was also a founder of the calculus of variations and contributed to the study of geodesics, complex numbers, and trigonometry. His son, **Daniel Bernoulli,** 1700–1782, has often been called the first mathematical physicist. His greatest work was his *Hydrodynamica* (1738), which included the principle now known as Bernoulli's principle and anticipated the law of conservation of energy and the kinetic-molecular theory of gases developed a century later. He also made important contributions to probability theory, astronomy, and the theory of differential equations. Other members of the family were noted in the fields of mathematics, physics, astronomy, and geography.

Bernoulli's principle: see AERODYNAMICS.

Bernstein, Leonard, 1918–90, American composer and conductor; b. Lawrence, Mass. He composed symphonic works (*Kaddish Symphony,* 1963); chamber music; ballets (*Fancy Free,* 1944); MUSICALS (*On the Town,* 1944; *Candide,* 1956; *West Side Story,* 1957); and choral music (*Chichester Psalms,* 1965). His *Mass* (1971), "a the-

ater piece for singers, dancers, and players," was performed at the opening of the John F. Kennedy Cultural Center, Washington, D.C. From 1958 to 1969 he was musical director of the New York Philharmonic (see ORCHESTRA, table).

Berrettini, Pietro: see CORTONA, PIETRO DA.

Berry, Chuck (Charles Edward Anderson Berry), 1926–, American rock music guitarist, singer, and songwriter; b. San Jose, Calif. A rock music pioneer, he had a string of hits in the late 1950s, including "Maybellene" and "Johnny B. Goode." His distinctive guitar style and witty lyrics influenced England's pop renaissance.

Berryman, John, 1914–72, American poet; b. McAlester, Okla. His verse is complex, dramatic, and personal, often mirroring the anguish of a trivial age. Among his works are *Homage to Mistress Bradstreet* (1956), *77 Dream Songs* (1964; Pulitzer), *His Toy, His Dream, His Rest* (1968), and *Delusions, etc.* (1972).

Berthelot, Pierre Eugène Marcelin [bĕrtəlō'], 1827–1907, French chemist. Professor at the École Supérieure de Pharmacie and later at the Collège de France, he became a member of the French Academy in 1900. A founder of modern organic chemistry, he was the first to synthesize organic compounds (e.g., methanol, ethanol, benzene, and acetylene), thereby dispelling the old theory of a vital force inherent in organic compounds. He also worked in thermochemistry and in explosives.

Berthollet, Claude Louis, Comte [bĕrtōlā'], 1748–1822, French chemist. Noted for his ideas on chemical affinity and his discovery of the reversibility of reactions, he supported Antoine LAVOISIER's theory of combustion and collaborated with him in reforming chemical nomenclature. He analyzed ammonia and prussic acid and discovered the bleaching properties of chlorine.

beryl, extremely hard beryllium and aluminum silicate mineral ($Be_3Al_2Si_6O_{18}$), occurring in crystals that may be of enormous size and are usually white, yellow, blue, green, or colorless. It is commonly used as a gem, the most valued variety being the greenish EMERALD; the blue to bluish-green variety is AQUAMARINE. Beryl is the principal raw material for the element BERYLLIUM and its compounds.

beryllium (Be), metallic element, first isolated in 1828 independently by Friedrich WÖHLER and Antoine Bussy. The silver-gray, ALKALINE-EARTH METAL is light, strong, high-melting, and resistant to corrosion. It is used as a window material for X-ray tubes, as a shield and a moderator in nuclear reactors, and extensively in aerospace industries. See ELEMENT (table); PERIODIC TABLE.

Berzelius, Jöns Jakob, Baron, 1779–1848, Swedish chemist. He developed the modern system of symbols and formulas in chemistry, made a remarkably accurate table of atomic weights, analyzed many chemical compounds, and discovered the elements SELENIUM, THORIUM, and CERIUM. He coined the words *isomerism, allotropy,* and *protein.*

Besant, Annie (Wood), 1847–1933, English theosophist and reformer. Rejecting Christianity and advocating free thought and socialism, Besant edited the *National Reformer* with Charles Bradlaugh. Her atheism and unconventionality led the courts in 1879 to take away her children. After embracing THEOSOPHY in 1889, she went to India, where she campaigned for nationalism, founded (1898) the Central Hindu College (1898) and the Indian Home Rule League (1916), and became president (1917) of the Indian National Congress. In 1926–27, Besant proclaimed the Indian mystic Jiddu Krishnamurti to be the new Messiah. She published prolifically, particularly works on theosophy.

Bessel, Friedrich Wilhelm, 1784–1846, German astronomer and mathematician. His discovery of the parallax of the fixed star 61 Cygni, announced in 1838, was the first fully authenticated measurement of a star's distance from the earth. By 1833 Bessel had increased to 50,000 the number of stars whose positions and proper motions were accurately determined. He established a class of mathematical functions, named for him, as a result of his work on planetary perturbation.

Bessemer process, industrial process for the manufacture of STEEL from molten PIG IRON. The process is carried out in a large steel container, called the Bessemer converter. IRON is introduced through an opening in the narrow upper end. When air is forced upward through perforations in the bottom, impurities such as manganese, silicon, and carbon unite with oxygen to form oxides. The carbon monoxide burns off, and the other impurities form slag. The steel is then poured from the upper opening into molds, and the slag is left behind. The Bessemer process has been superseded by the OPEN-HEARTH PROCESS and BASIC OXYGEN PROCESS.

Best, Charles Herbert, 1899–1978, Canadian physiologist; b. West Pembroke, Me. He, Sir Frederick BANTING, and John MACLEOD were the first to isolate (1921) the hormone INSULIN from the pancreas and demonstrate its use in the treatment of diabetes mellitus. Best discovered the antiallergic enzyme histaminase, the anticoagulant heparin, and the vitamin choline.

beta blocker or **beta adrenergic blocking agent,** drug that reduces the symptoms connected with HYPERTENSION, cardiac arrhythmias, MIGRAINE headaches, and other disorders related to the sympathetic nervous system. Within the sympathetic nervous system, beta receptors are located mainly in the heart, lungs, kidneys, and blood vessels. Beta blockers compete with EPINEPHRINE for these receptor sites and interfere with the action of epinephrine, lowering blood pressure and heart rate, stopping arrhythmias, and preventing migraine headaches. Propranolol is a commonly used beta blocker.

Betancourt, Rómulo [bĕtänkōōr'], 1908–81, president of VENEZUELA (1945–48, 1959–64). He founded (1935) the left-wing party that became *Acción Democrática.* When he came to power (1945) by a military coup, he instituted universal suffrage, social reforms, and oil royalties for the government. After his exile (1948–58) by a junta, he was elected president (1959) and continued to promote his reforms.

beta particle, one of the three types of radiation resulting from natural RADIOACTIVITY; it is a high-speed ELECTRON. A NEUTRINO is emitted along with the electron. In some forms of induced, or artificial, radioactivity, the electron's antiparticle, the positron, is emitted.

betel, masticatory made from seeds of the betel palm (*Areca catechu*). Slices of the seeds (also called betel nuts), together with other aromatic flavorings and lime paste, are smeared onto a betel pepper (*Piper betle*) leaf, which is then rolled up and chewed. Betel contains a narcotic stimulant and has been chewed in S Asia since ancient times.

Bethany, village at the southeastern foot of the Mount of Olives, modern Al Ayzariyah (West Bank), 2 mi (3.2 km) E of Jerusalem. Home of LAZARUS, Martha, and MARY, it was frequently visited by JESUS and is closely associated with the final scenes of his life.

Bethe, Hans Albrecht [bā'tə], 1906–, American physicist; b. Germany; came to U.S. in 1935. He was director (1943–46) of the theoretical physics division of the Los Alamos Scientific Laboratory and scientific adviser (1958) to the U.S. at the Geneva nuclear test-ban talks. Known for his brilliant theories on atomic properties, Bethe received the 1967 Nobel Prize in physics for work on the origin of solar and stellar energy.

Bethlehem, town (1980 est. pop. 14,500), in the Israeli-occupied WEST BANK; the birthplace of JESUS. It is a place of pilgrimage and the trade center of a farming area. The biblical book of RUTH is set in Bethlehem, and it was DAVID's home. CONSTANTINE I built the Church of the Nativity (completed 333) on the traditional site of Jesus' birth. There St. JEROME produced the Vulgate text of the BIBLE. Crusaders held the town from 1099 to 1187. Annexed to the Ottoman Empire in 1571, it was part of Britain's Palestine mandate (1922–48) and then of Jordan. Israel occupied it in 1967.

Bethlehem, city (1990 pop. 71,428), E Pa., on the Lehigh R.; settled 1740–41, inc. as a city 1917. It is the site of the headquarters of the Bethlehem Steel Corp.; steel, chemicals, machines, cement, and textiles are produced. Bethlehem was settled by MORAVIAN CHURCH members and contains several early Moravian buildings. The city is noted for its Bach Choir, and Lehigh Univ. and Moravian College are located there.

Bethune, Mary McCleod, 1875–1955, African-American educator; b. Mayesville, S.C.; grad. Moody Bible Institute, Chicago, 1895. The 17th child of former slaves, she taught (1895–1903) in a series of southern mission schools until founding (1904) the Daytona Normal and Industrial Inst. for Negro Girls (later Bethune-Cookman College) and the National Council of Negro Women (1935). She was special adviser on minority affairs to Franklin D. ROOSEVELT.

Betjeman, Sir John, 1906–84, English poet, POET LAUREATE (1972–

84). His works, which combine a witty appraisal of his time with nostalgia, especially for the Victorian era, include *Mt. Zion* (1933) and *Collected Poems* (1971). He was named POET LAUREATE in 1972.

Bettelheim, Bruno, 1903–90, American psychologist; b. Austria. In the same year that he earned his Ph.D. from the Univ. of Vienna (1938) he was interned in the Dachau and Buchenwald CONCENTRATION CAMPS. Released in 1939, he emigrated to the U.S., where he published (1943) a world-famous article about the camps, "Individual and Mass Behavior in Extreme Situations." He also treated the subject in his book *The Informed Heart* (1960). He was (1944–73) director of a school for the rehabilitation of emotionally disturbed children, many of them autistic (see AUTISM), at the Univ. of Chicago. His numerous works on child psychology and child-rearing include *Love Is Not Enough* (1950), *The Empty Fortress* (1967), and *The Uses of Enchantment* (1976). He also wrote *Freud and Man's Soul* (1983), a critique of medicine's influence on psychoanalysis.

Better Business Bureau, organization established by business firms to protect and educate consumers and business people; to combat false advertising and unethical selling practices; and to support voluntary self-regulation in advertising and business. The first such local bureau was founded in Minneapolis in 1912; 200 autonomous organizations now operate in the U.S., Canada, and Israel, with the Virginia-based Council of Better Business Bureaus functioning as the U.S. national liaison office.

Betterton, Thomas, 1635?–1710, English actor and manager of the RESTORATION stage. He was a great Hamlet and Macbeth with the producer William D'Avenant's company. As a manager he presented and played in adaptations of SHAKESPEARE, notably by DRYDEN and himself. His company opened the Haymarket Theatre in 1705. His wife, **Mary Saunderson Betterton,** d. 1711, was the first woman to play Shakespeare's great female roles.

Betti, Ugo [bət'tē], 1892–1953, Italian dramatist and poet. A judge who gained literary recognition late in life, he is ranked second only to PIRANDELLO among 20th-cent. Italian dramatists. His plays, often pessimistic and moralizing, include *The Mistress* (1927), *The Flood* (1943), and *Crime on Goat Island* (1950).

Bevan, Aneurin [bĕ'vən], 1897–1960, British politician. A coal miner and trade unionist, he served as a Labour member in Parliament (1929–60). As minister of health (1945–51), he administered the National Health Service. He was leader (1951–60) of the Labour party's left wing.

Beveridge, William Henry, 1879–1963, British economist; b. India; knighted in 1919. An authority on social problems and unemployment, Beveridge was the director of the London School of Economics (1919–37). In *Social Insurance and Allied Services* (1942), he proposed a social security system "from the cradle to the grave" for all British citizens. He was made 1st Baron Beveridge of Tugwell in 1946.

Beverly Hills, city (1990 pop. 31,971), S Calif., completely surrounded by the city of LOS ANGELES; inc. 1914. Mainly residential, it is the home of many film and television personalities.

Bevin, Ernest [bĕv'ən], 1881–1951, British labor leader and statesman. He was an orphan who had earned his living from childhood. In 1921 he merged his dock workers' union with others to form the powerful Transport and General Workers' Union. A member of the Labour party, he was minister of labor in Winston CHURCHILL's wartime cabinet (1940–45). As foreign minister in the Labour government (1945–51), he worked to build up Western Europe and to establish NATO.

Bewick, Thomas [byōō'ĭk], 1753–1828, English wood engraver. He revived the art of original wood engraving. His chief works include illustrations for John GAY's *Fables* (1779) and for Ralph Beilby's *General History of Quadrupeds* (1790) and the print *Chillingham Bull* (1789).

Beyazid, sultans of the OTTOMAN EMPIRE (Turkey), also spelled Bayazid, Bajazet, and Bayazit. **Beyazid I,** 1347–1403 (r.1389–1402), triumphed over Byzantine Emperor Manuel II, the Turkish rulers of E Anatolia, and Sigismund of Hungary, who was on a crusade, but he was defeated (1402) by TIMUR, who routed his armies and took him prisoner. **Beyazid II,** 1447–1513 (r.1481–1512), was a peace-loving monarch who did little to advance Ottoman power but much to further Ottoman culture. With the aid of the JANISSARIES he putdown a revolt of his brother Jem, but he lost Cilicia to the Mamluks of Egypt and Cyprus to Venice.

Beyle, Marie Henri: see STENDHAL.

Bhagavad-Gita [Skt., = song of the Lord], Sanskrit poem incorporated into the MAHABHARATA, one of the classics of HINDUISM, consisting of a dialogue between Lord KRISHNA and Prince Arjuna on the eve of the battle of Kurukshetra. Arjuna is overcome with anguish when he sees his kinsmen and friends in the opposing army, but Krishna persuades him to fight by instructing him in spiritual wisdom and the means of attaining union with God (see YOGA) through selfless action, knowledge, and devotion. The *Gita* is essentially related to the UPANISHADS in content.

Bhattacharya, Bhabhani, 1906–, Indian novelist, journalist, and translator. His novels, written in English, deal with India's social problems. They include *So Many Hungers!* (1948), *A Goddess Named Gold* (1960), and *Shadow from Ladakh* (1966).

Bhave, Vinoba 1895–1982, Indian religious figure. He was a disciple of Mohandas GANDHI and after Gandhi's death (1948) was widely accepted as his successor. In 1951 he founded the Bhoodan, or land-gift, movement, seeking donations of land for redistribution to the landless.

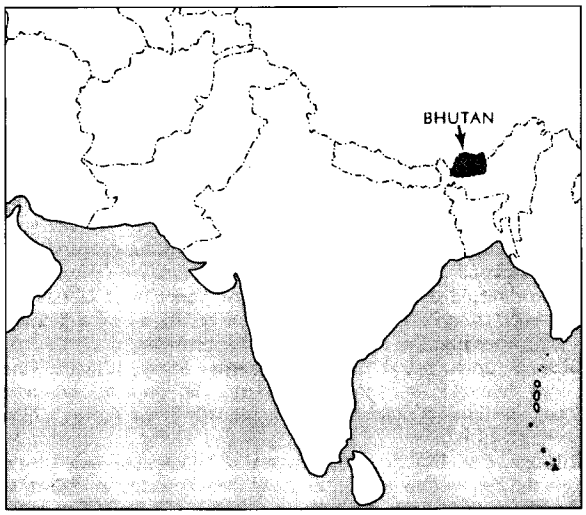
Bhopal, city (1991 pop. 1,063,662), central India, capital of Madhya Pradesh state. Founded in 1728, Bhopal is a railway junction and industrial center, producing electrical equipment, textiles, and jewelry. Landmarks include the old fort (built 1728) and the Taj-ul-Masajid mosque, the largest in India. On Dec. 3, 1984, the worst industrial accident in history occurred there when a toxic gas leak from a Union Carbide insecticide plant killed some 4,000 people and seriously injured 30,000–40,000. The Indian government sued on behalf of over 500,000 victims and in 1989 settled for $470 million in damages and exempted company employees from criminal prosecution. The Indian judiciary rejected that exemption in 1991, and the company's Indian assets were seized (1992) after its officials failed to appear to face charges.

Bhumibol Adulyadej [pōō'mĕpôl" ädōōl'yädĕt"], 1927–, king of THAILAND (1946–); b. Cambridge, Mass. He became king when his brother, King Ananda, died (1946) under mysterious circumstances, and ruled with a regent until he was formally crowned King Rama IX in 1950. Although his power is largely ceremonial, he has actively promoted development projects and has intervened several times to resolve governmental crises.

Bhutan [bōōtän'], officially Kingdom of Bhutan, kingdom (1992 est. pop. 1,660,000), 18,147 sq mi (47,000 sq km), E Asia, in the Himalayas, bordered by India (S and E), the Tibet region of China (N), and Sikkim (W). The official capital is Thimphu; Punaka is the traditional capital. Bhutan is a land of great mountain ranges, rising in the north to Kula Kangri (24,784 ft/7,554 m), and intensively cultivated valleys. The climate ranges from humid subtropical at the lower altitudes to temperate in the high mountains. Small-scale subsistence farming, with rice and other grains and potatoes the main crops, and the raising of livestock dominate the economy. Metal, wood, and leather working; papermaking; and weaving are also important. The country exports some fruit and coal, stone, and cement. Tourism, although restricted, is a significant source of income. Bhutan's people are mostly Bhutias, or Drukpas, ethnically related to Tibetans. Their religion is closely related to TIBETAN BUDDHISM; many Bhutanese live in monasteries. There is a significant Gurkha, or Nepalese, minority in S Bhutan; they are largely Hindus. The national language of Bhutan is Dzongkha.

History. In the 16th cent. the Tibetans conquered Bhutan's native tribes, and in 1720 China claimed suzerainty over the area. British interests in Bhutan date from the arrival of a trade mission in 1774. Britain annexed part of Bhutan in 1865, and in 1910 Bhutan's first hereditary king agreed to let Britain direct the country's foreign affairs; in 1949 Bhutan agreed to consult with India on foreign policy, but since the 1980s Bhutan has acted as a fully independent nation. After Communist forces occupied (1950) Tibet, Bhutan became a point of contest between China and India, and the China-Bhutan border was closed. Relations with China improved in the 1980s. Jigme Singye Wangchuk became king in 1972 (crowned 1974).

Bhutto, Benazir [bōōt'to], 1953–, prime minister (1988–90, 1993–)



of PAKISTAN. The daughter of Zulfikar Ali BHUTTO, she lived in exile from 1984 to 1986 but returned to Pakistan to oppose Gen. Mohammad ZIA UL-HAQ, the country's military ruler. After Zia's death (1988), her party won the elections, and she became prime minister and the first female leader of a Muslim nation. She accomplished little before Pres. Ghulam Ishaq Khan dismissed (1990) her as prime minister, accusing her, her husband, Asif Ali Zadari, and her party of corruption. Zadari was held (1990–93) on various charges, and Bhutto's party lost (1990) the subsequent elections. In 1993 she again became prime minister.

Bhutto, Zulfikar Ali, 1928–79, president (1971–73) and prime minister (1973–77) of PAKISTAN. He came to power after Pakistan's defeat in the war over BANGLADESH's independence. He was overthrown (1977), tried for state crimes, and executed (1979).

Bi, chemical symbol of the element BISMUTH.

Biafra, Republic of, former African secessionist state, formed in SE Nigeria. Biafra was established in 1967 by Ibos, an ethnic group who feared they could not survive within Nigeria. The new state was led by Lt. Col. C.O. Ojukwu. Soon after secession, fighting erupted between Nigerian and Biafran forces. More than one million Biafran civilians are believed to have died of starvation during the war, which ended with Biafra's defeat in 1970.

Bialik, Hayyim Nahman [byä'lĭk], 1873–1934, Ukrainian poet and novelist who wrote mainly in Hebrew. His style—some times majestic, sometimes simple—had a great effect on modern Hebrew literature. His poems include "In the City of Slaughter" (1903). As an editor and publisher in Odessa, Berlin, and Tel Aviv, Bialik spread the ideas of the *Haskalah,* the renaissance of Jewish culture.

biathlon, a sporting event composed of two activities. The best-known type of biathlon is the winter event, combining cross-country skiing and target shooting, which has been part of Olympic competition since 1960. A combined running and swimming event, instituted in Great Britain in 1968, is also called a biathlon.

Bible, term used since the 4th cent. for the Christian Scriptures and later, by extension, for those of various religious traditions. (For the composition and canon of the Bible, see OLD TESTAMENT, NEW TESTAMENT, APOCRYPHA, and articles on individual books.) The traditional Christian view is that the Bible was written under the guidance of God and is, therefore, entirely true, literally or couched in allegory. Interpretation of the Bible is a main point of difference between Protestantism, which holds that individuals have the right to interpret the Bible for themselves, and Roman Catholicism, which teaches that individuals may read the Bible only as interpreted by the church. In the 20th cent. many Protestants have been influenced by biblical criticism that has applied scientific and historical methods to Bible study ("higher criticism"); FUNDAMENTALISM, on the other hand, emphasizes the absolute inerrancy of the Bible. Noted extant manuscripts of the Bible include Codex Vaticanus (Greek, 4th cent.), at the Vatican; Codex Alexandrinus (Greek, 5th cent.), in the British Museum; and Codex Bezae (Greek and Latin, 6th cent.), at Cambridge, England. Among the DEAD SEA SCROLLS are the oldest fragments of the Hebrew text known; the New Testament has come down to us in Greek. The first great translation of the whole Bible was the Latin Vulgate of St. JEROME. The Greek text generally accepted in the East is, for the Old Testament, the Septuagint. Great names in the history of the English Bible are John WYCLIF (d. 1384), whose name appears on two translations; William TYNDALE, whose New Testament (1525–26) was the first English translation to be printed; and Miles Coverdale, who published (1535) a translation of the entire Bible. The greatest English translation (and one of the most influential English prose works) is the Authorized Version (AV), or King James Version (KJV), of 1611, made by a group of churchmen and scholars led by Lancelot Andrewes. The Rheims-Douay Version was produced by Roman Catholic scholars at Rheims (New Testament, 1582) and Douai (Old Testament, 1610), France. In the 19th cent., the Authorized Version was revised as the English Revised Version and the American Revised Version (pub. 1880–90). American scholars published (1952) the influential Revised Standard Version (RSV). New translations are the New English Bible (1970) and such Roman Catholic translations as the Westminster Version and the New American Bible (1970); an English translation of the French Catholic Bible de Jerusalem appeared as the Jerusalem Bible (1966).

bicameral system: see LEGISLATURE.

bicarbonate of soda: see SODIUM BICARBONATE.

bicycle, light, two-wheeled vehicle driven by pedals. A model using pedals, cranks, drive rods, and handlebars was introduced c.1839 in Scotland; it was followed by the development of the hollow steel frame, ball bearings, metal wheel spokes, and rubber-rimmed wheels. The front wheel, directly powered by the pedals, was at one time much larger than the rear wheel. The first bicycle with a sprocket-chain drive powering an equal-size rear wheel was made in England in 1885; an improved pneumatic tire was invented by John B. Dunlop in 1888. Later improvements included handlebar-mounted brake cables and gearshift systems to facilitate changes in speed. The mountain bicycle, developed in the 1980s, is especially designed for travel on dirt trails and hilly countryside. The bicycle's popularity brought about major improvements in roads in 19th-cent. Europe and America, and the vehicle continues to be far more widely used than the automobile in many parts of the world today.

Bidault, Georges [bēdō'], 1899–83, French political leader. A leader of the French underground in WORLD WAR II, Bidault was a postwar premier (1949–50) and several times foreign minister. He joined the terrorist opponents of Algerian independence and fled (1962) into exile, returning to France in 1968.

Biddle, John, 1516–62, founder of English UNITARIANISM. After losing his belief in the TRINITY, he stated his conclusions in *Twelve Arguments Drawn Out of Scripture,* for which he was imprisoned (1645). He was banished for publishing his *Two-fold Catechism* (1654). Returning in 1658, he taught and preached until again imprisoned (1662).

Biedermeier, style of German furniture, 1816–48. The name derives from a humorous pseudonym used by several German poets. Comfortable and inexpensive, it featured simplified forms of the EMPIRE STYLE and the DIRECTOIRE STYLE and of some 18th-cent. English styles. Black lacquer substituted for costly ebony, and peasant-style painted decoration was applied.

Bierce, Ambrose Gwinett, 1842–1914?, American writer; b. Meigs co., Ohio. After Civil War service he turned to journalism, eventually becoming the literary arbiter of the West Coast. Bierce achieved real distinction in his short stories, collected in such volumes as *In the Midst of Life* (1891) and *Can Such Things Be?* (1893). He is equally famous for a collection of sardonic definitions, *The Devil's Dictionary* (1906). His work is marked by distilled satire, crisply precise language, and a realistically developed sense of horror. He disappeared in Mexico in 1913.

Bierstadt, Albert, 1830–1902, American painter; b. Germany. He journeyed to the West (1859) and is best known for his immense canvases emphasizing the drama of western scenery, e.g., *The Settlement of California* (Capitol, Wash., D.C.).

big bang theory: see COSMOLOGY.

Big Ben, the bell in Parliament tower (Westminster Palace), London; also the tower clock. Installed in 1856, it was named for the commissioner of works, Sir Benjamin Hall.

Big Bend National Park: see NATIONAL PARKS (table).

Bigelow, John, 1817–1911, American editor, author, and diplomat; b. Malden, N.Y. As joint owner and editor (1848–61), with William Cullen BRYANT, of the New York *Evening Post,* he wrote vigorous anti-SLAVERY editorials. Appointed consul general at Paris (1861) and later (1865–66) U.S. minister to France, he was largely instrumental in preventing French recognition of the CONFEDERACY during the CIVIL WAR.

Bigfoot or **Sasquatch,** apelike creature reportedly sighted hundreds of times in the U.S. and Canada (most often in the Pacific Northwest) since the mid-19th cent. Similar to Asia's ABOMINABLE SNOWMAN, Bigfoot is variously described as standing 7–10 ft (2–3 m) tall and weighing over 500 lb (227 kg), with footprints 17 in. (43 cm) long. Most scientists discount the existence of such a creature.

Biggs, E(dward George) Power, 1906–77, American organist; b. England. Through his many performances and recordings, he introduced the ORGAN as a serious concert instrument to the American public, most notably with music of the BAROQUE period and the 20th cent.

bighorn or **Rocky Mountain sheep,** wild SHEEP (*Ovis canadensis*) of W North America. It is a heavy, grayish brown animal with a white patch on the hindquarters; the male has curling horns. Once plentiful, bighorn have diminished in number as a result of indiscriminate hunting, disease, and habitat encroachment.

Big Island: see HAWAII, island.

bignonia, common name for the Bignoniaceae, a family of woody vines, shrubs, and trees of the American tropics. Members of the family include the tropical calabash tree, which bears large fruits used as carrying gourds (called calabashes) and whose wood is used to make pipes; and the ornamental shade trees of the genus *Catalpa,* whose wood is used for lumber.

Bigordi, Domenico: see GHIRLANDAIO, DOMENICO.

Bikini, atoll, c.2 sq mi (5.2 sq km), W central Pacific Ocean, in the MARSHALL ISLANDS. Comprising 36 islets on a reef 25 mi (40 km) long, it was used (1946–58) for U.S. nuclear-bomb tests. Bikinians were evacuated (1946), allowed to return (1969), and reevacuated (1978) when new data showed high levels of residual radioactivity. A U.S.-assisted cleanup, begun in 1988, is expected to take 10–15 years.

Biko, Steven, 1946–77, South African political leader. A leader of the radical "black consciousness" movement, he helped found the all-black South African Students Organization (1969) and the Black People's Convention (1972). Banned in 1973, he was arrested in 1977 for subversion and died brutally in police custody. See also APARTHEID.

Bilderdijk, Willem [bĭl'dərdīk], 1756–1831, Dutch poet. Ranked among the great Dutch poets, he is best known for an unfinished epic, *The Destruction of the First Creation* (1820), and other religious verse. His translations catalyzed the romantic movement in Dutch literature.

bile, bitter, alkaline fluid of a yellow, brown, or green color that aids in the digestion of fats (see DIGESTIVE SYSTEM). Composed of water, bile salts, bilirubin (a pigment), cholesterol, and lecithin, bile is secreted by the LIVER and stored in the GALL BLADDER. It is emptied into the upper intestine to breakdown fats and enable them (and fat-soluble VITAMINS) to be absorbed through the intestinal wall. Bile is also a route of excretion for cholesterol, heme, and many drugs. JAUNDICE may result if the flow of bile is impeded.

bilingual education, the sanctioned use of more than one language in U.S. education. The Bilingual Education Act (1968), confirmed by a Supreme Court decision (1974) and mandating help for students with limited English proficiency, requires instruction in the native languages of students. Critics, maintaining that some students never join the mainstream culture, have attempted to make English the "official" language of several states and cities; proponents have emphasized the preservation of ethnic heritage and culture and the need to educate non-English-speaking students in all subjects, not just English.

billiards, any of several games played with a leather-tipped stick (cue) and various numbers of balls on an oblong, cloth-covered table with raised, cushioned edges. The three main types are carom billiards, played with three balls on a pocketless table; pocket billiards (or pool), using a cue ball and 15 object balls on a table with six pockets; and snooker, similar to pool but with 21 object balls. Variants were popular in England and France in the 16th cent.

Billings, John Shaw, 1838–1913, American surgeon and librarian; b. Switzerland co., Ind. Under his direction (1864–95) the National Library of Medicine became one of the great medical library systems in the world. He initiated the *Index Catalogue* and *Index Medicus* and compiled (1889) the *National Medical Dictionary.* He also directed development of the New York Public Library (see LIBRARY, table); suggested what became punched-card technology; and supervised the 1880 and 1890 U.S. censuses.

Billings, Josh, pseud. of **Henry Wheeler Shaw,** 1818–85, American humorist; b. Lanesboro, Mass. His popular, humorous sketches in rural dialect appeared annually in the *Farmer's Allminax* (1869–80).

Billings, city (1990 pop. 81,151), seat of Yellowstone co., S Mont., on the Yellowstone R.; inc. as a city 1885. Founded in 1882 by the Northern Pacific RR, it became a shipping and fur-trading center. Oil and sugar refining, meat packing, and flour milling are now its main industries. The center of a recreational area, it is surrounded by seven mountain ranges; Yellowstone National Park (see NATIONAL PARKS, table) is nearby.

Bill of Rights, 1689, in British history, one of the fundamental instruments of constitutional law. It incorporated by statute the Declaration of Rights accepted by WILLIAM III and MARY II, and registered the results of the struggle between the STUART kings and PARLIAMENT. The Bill of Rights stated that no Roman Catholic would rule England; it gave inviolable civil and political rights to the people and political supremacy to Parliament. It was supplemented (1701) by the Act of SETTLEMENT.

Bill of Rights, in U.S. history: see under CONSTITUTION OF THE UNITED STATES.

Billy the Kid, 1859–81, American outlaw; b. N.Y.C. A large-scale cattle rustler in Lincoln co., N.M., from 1878, he was hunted and fatally shot by Sheriff Pat Garrett. Billy's real name was William H. Bonney.

Biloxi, city (1990 pop. 46,319), SE Miss., on a peninsula between Biloxi Bay and Mississippi Sound, on the Gulf of Mexico; settled 1699, inc. as a city 1896. Almost tropical in climate, it is a popular resort, with riverboat casino gambling. Fishing, especially for shrimp and shellfish, is a major industry, as is boat-building. French Old Biloxi (est. 1699) was the first white settlement in the lower Mississippi valley; New Biloxi (est. 1719) was the capital of French Louisiana until 1722. Beauvoir, the last home of Jefferson DAVIS, is nearby.

bimetallism, in economic history, a monetary system in which two commodities, usually gold and silver, were used as a standard and coined at a fixed ratio. The system was designed to create a monetary unit with more stability than one based on a single metal. In a bimetallic system, the ratio, which is determined by law, is expressed in terms of weight, e.g., 16 oz of silver equal 1 oz of gold, or a ratio of 16 to 1. The legal ratio has no relationship to the commercial value of the metals, which fluctuates constantly. This discrepancy between the commercial and face values of the two metals made bimetallism too unstable for most modern nations. The system was practiced in the U.S. and other countries (except England, where gold was used) in the 18th and 19th cent.

binary star, pair of stars that are held together by their mutual gravitational attraction and revolve about their common center of mass. True binary stars are distinct from optical doubles—pairs of stars that lie along nearly the same line of sight from the earth but are not physically associated. A visual binary is a pair of stars that can be seen by direct telescopic observation to be a distinct pair with shared motion. A spectroscopic binary cannot be distinguished telescopically as two separate stars, but spectral lines from the pair show a periodic DOPPLER EFFECT that indicates mutual revolution. An eclipsing binary has the plane of its orbit lying in the line of sight and shows a periodic fluctuation in brightness (see VARIABLE STAR) as one star passes in front of the other.

The key to pronunciation appears on page xiii.

binary system: see NUMERATION.

bindweed: see MORNING-GLORY.

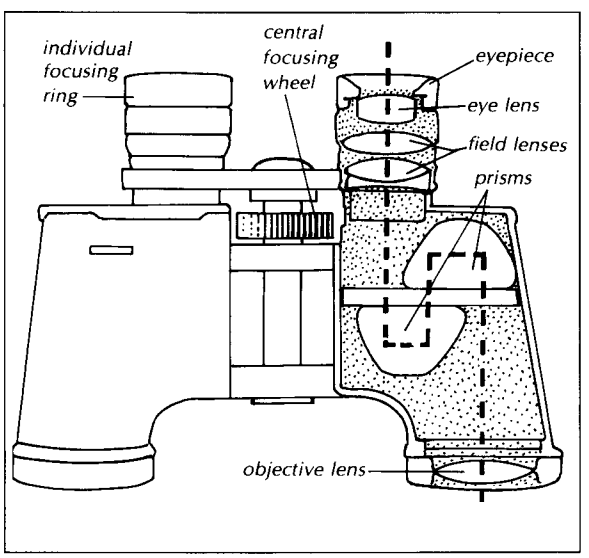
Binet, Alfred [bēnā′], 1857–1911, French psychologist. With Théodore Simon, Binet devised (1905–11) a series of tests of human INTELLIGENCE that, with revisions, came into wide use in schools, industry, and the army.

Bingham, George Caleb, 1811–79, American painter and politician; b. Augusta co., Va. His vigorous genre scenes accurately picture their time and locale. They include *Fur Traders Descending the Missouri* (Metropolitan Mus.) and *Raftsmen Playing Cards* (City Art Mus., St. Louis). Bingham was elected to the Missouri legislature in 1848, served as state treasurer (1862–65), and became state adjutant general in 1875.

Bingham, Hiram, 1789–1869, American Congregationalist missionary; b. Bennington, Vt. In 1819 he founded the first Protestant mission in the Hawaiian Islands. He adapted the Hawaiian language to writing and translated the Bible into Hawaiian. His son **Hiram Bingham,** 1831–1908, b. Honolulu, was also a missionary. In 1857 he founded a mission in the Gilbert Islands and later adapted the island language to writing.

Bingham, Hiram, 1875–1956, American archaeologist and statesman; b. Honolulu. At Yale Univ. (1907–23), he led expeditions that discovered the Inca cities of Vitcos and Machu Picchu. He was governor of Connecticut (1925) and U.S. senator (1925–33).

binoculars, small optical instrument, consisting of a pair of TELESCOPES mounted on a single, usually adjustable frame, that is used for magnifying distant objects. Light entering each telescope through its objective LENS is bent by a pair of PRISMS before passing through one or more additional lenses in the eyepiece. The prisms turn the image—inverted by the objective lens—right side up again and allow the distance between the objective lenses to be twice as far apart as that between the eyepieces, thus enhancing the viewer's depth perception. The usually less powerful opera and field glasses are also classed as binoculars, although both use Galilean telescopes, which do not employ prisms.



Binoculars

biochemistry, science concerned chiefly with the chemistry of biological processes. From its roots in chemistry, chiefly organic and physical chemistry, biochemistry has broadened to encompass any biological problem amenable to the investigative techniques of both chemistry and physics. Biochemists study such things as the structure and function of proteins, carbohydrates, and enzymes; the chemical regulation of metabolism; and the molecular basis of the action of genes. A milestone in the growth of the field was the elucidation of the structure of DNA.

biodiversity: see BIOLOGICAL DIVERSITY.

bioengineering, use of engineering and biological principles for the identification of the functions of living systems and for the development of (1) therapeutic devices, especially artificial body parts and systems, e.g., artificial blood vessels, PACEMAKERS, DIALYSIS equipment, and artificial limbs that function like their prototypes; and (2) equipment for monitoring the performance of healthy and diseased organisms.

bioethics, branch of ETHICS concerned with health-care and biological-sciences issues, including the morality of ABORTION, EUTHANASIA, new research in GENETIC ENGINEERING, and organ transplants. Bioethics emerged as a specialized discipline in the 1970s, and many hospitals now employ bioethicists to advise on treatment of the terminally ill and allocation of limited resources.

biofeedback, method for learning to increase one's ability to control biological responses, such as blood pressure, muscle tension, and heart rate. Sophisticated instruments are often used to measure physiological responses and make them apparent to the patient, who then tries to alter and ultimately control them without the aid of monitoring devices. Biofeedback programs have been used to teach patients to relax muscles or adjust blood flow in the case of headache, to help partially paralyzed stroke victims activate muscles, and to alleviate anxiety in dental patients.

biography, reconstruction in print of the lives of real people. With the autobiography—an individual's interpretation of his own life—it shares a venerable tradition. Ancient Egyptian and Assyrian inscriptions proclaimed the deeds of kings. Among the first biographies of ordinary individuals, the Dialogues of PLATO (4th cent. B.C.) reveal their subject, SOCRATES, by letting him speak for himself. A balanced assessment of character is achieved in PLUTARCH's *Parallel Lives* (2d cent. A.D.), where subjects are paired, e.g., DEMOSTHENES with CICERO. St. Augustine turned a searching critical judgment on himself in his *Confessions* (4th cent.). In the medieval lives of saints, human flaws were bypassed for saintly traits, but the few secular biographies of the period, e.g., Einhard's *Life of Charlemagne* (9th cent.), contain lively portraits of real people. The RENAISSANCE interest in worldly power and self-assertion is reflected in CELLINI's *Autobiography* (16th cent.). By the 17th cent. informality and intimacy had been introduced, e.g., John AUBREY's *Brief Lives.* In the 18th cent. Dr. JOHNSON's *Lives of the Poets* (1780–81) set the example for literary biographies, notably James BOSWELL's *Life of Samuel Johnson* (1791). The first definitive biography, it was drawn from personal recollection, letters, memoirs, and interviews. Later developments include the psychoanalytic biography, e.g., Sigmund FREUD's *Leonardo Da Vinci* (1910); the debunking biography, e.g., Lytton STRACHEY's *Eminent Victorians* (1918); and the thematic biography, e.g., Thomas MERTON's *Seven Storey Mountain* (1948), which follows the analogue of DANTE's *Inferno.* In the 20th cent. films and television have adapted the form to their own needs in documentaries, interviews, oral histories, and fictionalized biographies.

biological diversity or **biodiversity,** the number of species in a given habitat or ecosystem. A number of studies have suggested that a species-rich ecosystem can tolerate and recover from extreme events, such as drought, better. Scientists have variously estimated that there are from 3 to 30 million existing species, of which 1.4 million have been classified, including 750,000 insects, 41,000 vertebrates, and 250,000 plants; the remainder are other invertebrates, fungi, algae, and microorganisms. Although other species remain to be discovered, many are becoming extinct through deforestation, pollution, and human settlement. A 1992 UN treaty designed to help preserve earth's biological diversity has been signed by over 160 nations.

biological warfare, bacteriological warfare, or **germ warfare,** employment in war of microorganisms to injure or destroy human beings, animals, or crops. Although "first use" of both biological and chemical weapons (see CHEMICAL WARFARE) was prohibited by the 1925 Geneva Convention, several nations subsequently conducted research into detection and defense systems, and developed microorganisms (including strains of smallpox and the plague) suitable for military retaliation. Such organisms can be delivered by animals, especially rodents or insects, or by AEROSOL packages—built into artillery shells or the warheads of ground-to-ground or air-to-ground missiles and released into the atmosphere

to infect by inhalation. Research in this area did not end after 1972, despite an agreement that year by more than 100 nations, including the U.S. and the USSR (now Russia), to prohibit the development, testing, and stockpiling of biological weapons. The treaty does allow research for defensive purposes, such as to develop antidotes to biological weapons.

biology, science dealing with living things, broadly divided into ZOOLOGY, the study of animal life, and BOTANY, the study of plant life. Subdivisions include ANATOMY and PHYSIOLOGY; GENETICS; MOLECULAR BIOLOGY, the study of cells (cytology), tissues (histology), embryonic development (see EMBRYO), and microscopic forms of life; as well as CLASSIFICATION, EVOLUTION, and paleontology (the study of FOSSILS).

bioluminescence, production of light by living organisms resulting from the conversion of chemical energy to light energy. Bioluminescent plants include certain MUSHROOMS and BACTERIA that emit light continuously. The dinoflagellates, a group of marine algae, produce light only when disturbed. Bioluminescent animals include such organisms as COMB JELLIES, annelid worms, MOLLUSKS, insects such as FIREFLIES, and FISH. Some animals seem to use luminescence in courtship and mating, to divert predators, or to attract prey.

biomass energy: see ENERGY, SOURCES OF.

biome: see ECOLOGY.

Bion, fl. 2d cent.? B.C., Greek bucolic poet, an imitator of THEOCRITUS. The *Lament for Adonis* (attributed to him) was the model for P.B. SHELLEY's *Adonais*.

bionics, study of living systems with the intention of applying their principles to the design of engineering systems. Drawing on interdisciplinary research in the mechanical and life sciences, bionics has been used to develop audiovisual equipment based on human eye and ear function, to design air and naval craft patterned after the biological structure of birds and fish, and to incorporate principles of the human neurological system in data-processing systems. Another application has been the development of artificial limbs controlled by recognition of the electrical patterns in muscle tissue.

biophysics, application of various tools, methods, and principles of physical science to the study of biological problems. In biophysics, physical mechanisms and mathematical and physical models have been used to explain life processes such as the transmission of nerve impulses, the muscle contraction mechanism, and the visual mechanism.

biopsy, examination of cells or tissues removed from a living organism to aid medical diagnosis. Samples may be removed surgically, as in excision of breast tissue, or by aspiration of cells through a special needle, as in the case of bone marrow.

biorhythm or **biological rhythm,** cyclic pattern of changes in physiology or in activity of living organisms, often synchronized with daily, monthly, or yearly environmental changes. Rhythms that vary according to the time of day (circadian rhythms), in part a response to daylight or dark, include the opening and closing of flowers and the nighttime increase in activity of nocturnal animals. Circadian rhythms also include activities that occur often during a 24-hour period, such as blood pressure changes and urine production. Annual cycles, called circannual rhythms, respond to changes in the relative length of periods of daylight and include such activities as migration and animal mating. Marine organisms are affected by tide cycles. Although the exact nature of the internal mechanism is not known, various external stimuli—including light, temperature, and gravity—influence the organism's internal clock; in the absence of external cues, the internal rhythms gradually drift out of phase with the environment.

biosphere, irregularly shaped envelope of the earth's air, water, and land, encompassing the heights and depths at which living things exist. The biosphere is a closed and self-regulating system (see ECOLOGY) sustained by grand-scale cycles of energy and materials.

Biosphere 2, privately funded ecological research project in which eight people lived sealed in a 3.15-acre (1.28-hectare) structure for two years (Sept. 26, 1991–Sept. 26, 1993). Located in Oracle, Ariz., about 35 mi (56 km) north of Tucson, and dependent on the outside only for electricity and sunlight, Biosphere 2 was designed to test the feasibility of a self-sustaining space colony. It contains over 3,500 plant and animal species and attempts to reproduce five ecosystems (see ECOLOGY)—desert, grassland, marsh, ocean, and rain forest. The human inhabitants (four men and four women) were to grow their own food and recycle their wastes but used some seed stocks as food. The project's validity was questioned by scientists who criticized the plan to use outside electricity, the presence of stores of food and animal feed, and other aspects. A decline in the oxygen level led to the pumping of oxygen into the complex in 1993. More flexible stays inside the structure, beginning in Mar. 1994, are planned.

biotechnology, the use of biological processes, as through the exploitation of living organisms or biological systems, as a component in the development or manufacture of a product, in the technological solution to a problem, and the like. For example, GENETIC ENGINEERING techniques have been used to create custom-designed bacteria capable of producing drugs and other substances. Such bacteria can be grown in quantity in "bioreactors' and then processed to extract the substance produced; specially cultured plant and animal cells can be similarly grown and processed. Often the extracted substance is not the final product and needs further chemical processing. The field of biotechnology also includes genetically enhanced livestock (see PHARMING); plants and foods with genetically engineered qualities, such as improved disease resistance or prolonged shelf life; custom-designed drugs, fertilizers, and pesticides; and therapies to repair genetic defects (see GENE THERAPY).

bipolar disorder: see MANIC- DEPRESSION.

birch, common name for some members of the Betulaceae, a family of deciduous trees or shrubs widely distributed in the Northern Hemisphere. Growing mainly in the Northeast, the genera native to the U.S. are the birches, ALDER, HAZEL, and hornbeam and hop hornbeam (both called ironwood). Some birches are valued for their fine hardwoods, e.g., the yellow birch (*Betula lutea*). White-barked birches are often used as ornamentals, notably the paper birch (*B. papyrifera*) of the N United States and Canada, whose bark was used by Native Americans for canoes and baskets. Various birches produce edible fruits, sugar, vinegar, tea from leaves, and birch beer from sap.

Bird, Larry Joe, 1956–, American basketball player; b. French Lick, Ind. Beginning in 1979, he played for the Boston Celtics of the National Basketball Association (NBA), spurring them to championships in 1981, 1984, and 1986. In 13 seasons with the Celtics, Bird scored 21,791 points and was NBA Rookie of the Year in 1980 and Most Valuable Player from 1984 to 1986. He retired in 1992.

bird, warm-blooded, egg-laying VERTEBRATE of the class Aves, having its body covered with FEATHERS and its forelimbs modified into wings. Like MAMMALS, birds have a four-chambered heart; they have a relatively large brain and acute hearing but little sense of smell. Believed to have evolved from REPTILES, birds are highly adapted for flight. Their feathers, though light, protect against cold and wet and have great strength. Intricate courtship displays are performed by many species during breeding season, when birdsong is most pronounced; singing ability is usually restricted to, or superior in, the male. Most birds build some kind of nest for their eggs, which vary in size, shape, color, and number according to species. The chief domestic birds are the CHICKEN, DUCK, GOOSE, TURKEY, and guinea fowl. Among the game birds hunted for food and sport are GROUSE, PHEASANT, QUAIL, and duck.

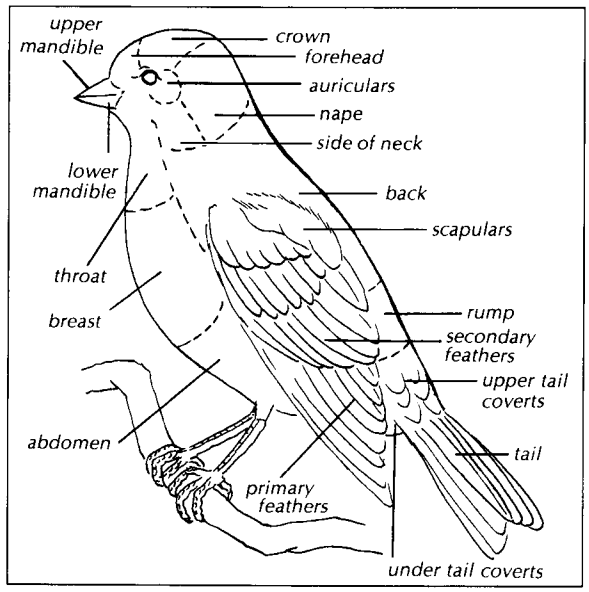
bird-of-paradise flower, large tropical herb (*Strelitzia reginae*) of the BANANA family, native to S Africa. Its blue and orange blossom resembles an exotic bird of that name.

Birdseye, Clarence, 1886–1956, American inventor and founder of the frozen-food industry; b. Brooklyn, N.Y. His successful experiments with food-freezing processes led to the founding (1924) of the General Foods Co. By 1949, Birdseye had perfected the anhydrous process, which reduces the time needed for food freezing from 18 to 1½ hr.

Bird Woman: see SACAJAWEA.

Birkhoff, George David, 1884–1944, American mathematician; b. Overisel, Mich. He is known for his work on linear differential equations and difference equations. His introduction of the concepts of minimal or recurrent sets of motion and establishment of their existence under general conditions began a new era in the

The key to pronunciation appears on page xiii.



General anatomy of a bird

study of dynamical systems. He also wrote on the foundations of relativity and quantum mechanics.

Birmingham, second largest British city (1991 pop. 961,041), W Midlands, England. It is a major industrial and transportation center with such manufactures as automobiles, motorcycles, and machine tools. A market town by the 15th cent., Birmingham developed rapidly in the 17th and 18th cent. because of nearby deposits of iron and coal. In the 1870s the city underwent extensive municipal improvement, and much of the center was rebuilt after being bombed in WORLD WAR II.

Birmingham, city (1990 pop. 265,968), seat of Jefferson co., N central Ala., in the Jones Valley, near the southern end of the Appalachians; inc. 1871. The largest city in Alabama, it is the leading iron and steel center in the South. The area's coal, iron, and other resources supply its plants and factories. Its industry has diversified, and its manufactures include transportation equipment, chemicals, and textiles. Birmingham is also a governmental, research, and trade center, connected by canal with the Gulf of Mexico. It is the site of several colleges and cultural institutions.

Birney, James Gillespie, 1792–1857, American abolitionist; b. Danville, Ky. After freeing (1834) his inherited slaves, he helped organize (1835) the Kentucky Anti-Slavery Society and was active in the American Anti-Slavery Society. The acknowledged leader of ABOLITIONISTS favoring political action, he ran for president on the Liberty party line in 1840 and 1844.

birth control, practice of preventing conception for the purpose of limiting the number of births; also called contraception and family planning. The modern movement for birth control began in Britain, where the writings of MALTHUS stirred interest in the problems of overpopulation. The first birth-control clinic in the U.S. was opened in 1916 by birth-control leader Margaret SANGER. On an international level, birth control is led by the International Planned Parenthood Federation (founded 1952), and in some countries (e.g., Sweden, Japan, and China) the government provides birth-control assistance to its people in order to limit population growth. The Roman Catholic Church has provided the main opposition to the birth control movement, approving only the so-called rhythm method, or abstinence from intercourse around the time of ovulation. Other contraceptive methods include, for males, withdrawal before ejaculation; use of a condom, or sheath, over the penis; and sterilization by VASECTOMY. Contraception for women includes precoital use of spermicidal vaginal suppositories, foams, and jellies; use of a diaphragm, a cup-shaped rubber device inserted into the vagina before intercourse to prevent sperm from traveling to the egg; use of a contraceptive sponge containing spermicide in the vagina; use of an INTRAUTERINE DEVICE; "the pill" (see ORAL CONTRACEPTIVE); injection of a contraceptive every three months; and implantation under the skin of capsules that slowly release a contraceptive into the blood and are effective for up to five years. Surgical sterilization for women includes tubal ligation (sealing of the Fallopian tubes). See also ABORTION.

birth defects, abnormalities in physical and/or mental structure or function that are present at birth. They range from minor to seriously deforming and/or life-threatening, with some major defect occurring in approximately 3% of births. Defects may be genetic in origin (as in DOWN'S SYNDROME, TAY-SACHS DISEASE, SICKLE-CELL ANEMIA, and HEMOPHILIA) or may be caused by infectious agents (e.g., HERPES SIMPLEX, RUBELLA, SEXUALLY TRANSMITTED DISEASES). Other teratogenic (malformation-causing) agents include drugs or hormones taken by the mother (e.g., THALIDOMIDE; DES) and maternal illnesses (e.g., DIABETES). The mother's nutrition, alcohol and smoking habits, and exposure to toxic chemicals and radiation can also affect the developing fetus. Smoking, drugs, toxic chemicals, and the like can also damage the father's sperm, which may pass on the defect in fertilization. Certain birth defects can now be detected prenatally through AMNIOCENTESIS and CHORIONIC VILLUS SAMPLING, and surgical procedures are being explored to correct certain disorders before birth.

birthstone: see MONTH.

Biscayne National Park: see NATIONAL PARKS (table).

Bishkek, formerly **Frunze,** city (1989 pop. 616,000), capital of Kyrgyzstan (Kirghizia), central Asia, on the Chu R. Bishkek is a transportation hub and the industrial and cultural center of Kyrgyzstan. Its industries include meatpacking and other food processing, the manufacture of agricultural machinery, motor vehicles, textiles and clothing, and building materials, and metalworking. Founded (1846) as an Uzbek fortress, it was taken in 1862 by the Russians, who called it Pishpek. In 1925 it was renamed Frunze in honor of Soviet Gen. M.V. Frunze, and in 1936 it became the capital of the Kirghiz SSR. The city was renamed Bishkek in 1991.

Bishop, Elizabeth, 1911–79, American poet; b. Worcester, Mass. Her penetrating and detached poetic vision is evident in such volumes as *Poems: North and South—A Cold Spring* (1955; Pulitzer) and *Geography III* (1976).

Bishops' Wars, two brief campaigns (1639, 1640) of the Scots against CHARLES I of England. Opposing his attempt to impose episcopacy, the COVENANTERS pledged a return to Presbyterianism. They invaded England and forced Charles to sign the Treaty of Ripon (Oct. 1640). See also ENGLISH CIVIL WAR.

Bismarck, Otto von, 1815–98, German statesman, known as the Iron Chancellor; premier of Prussia (1862–90) and chancellor of Germany (1871–90). Upon becoming premier, following the wishes of WILLIAM I, he unconstitutionally dissolved parliament and illegally levied taxes for the army. In order to expel Austria from the GERMAN CONFEDERATION (as a first step toward unification of the German states), he provoked war with Denmark (1864) and Austria itself (1866) over the SCHLESWIG-HOLSTEIN question. The Austro-Prussian war resulted in a quick defeat of Austria, and Bismarck then formed the North German Confederation, from which Austria was excluded. He exploited the German states' fears of France in order to bring them into the Prussian orbit. He provoked the FRANCO-PRUSSIAN WAR (1870–71), which ended in France's humiliating defeat. Bismarck now easily brought the German states under the crown of Prussia, and William was proclaimed emperor. Bismarck became the empire's first chancellor, and ruled thereafter as virtual dictator. His system of alliance and alignments made him the acknowledged leader of Europe (see THREE EMPERORS' LEAGUE; BERLIN, CONGRESS OF; TRIPLE ALLIANCE AND TRIPLE ENTENTE). Domestically, the German economy flourished. Bismarck's struggle with the Church resulted in his cooperation with the liberals. Partly to weaken the appeal of the socialists, he initiated (1883–87) revolutionary social reforms, including child labor laws, maximum hours legislation, and extensive old age, illness, and unemployment insurance. Bismarck's economic policies resulted in the rapid growth of German industry and the acquisition of overseas colonies. The accession (1888) of WILLIAM II, a longtime enemy, brought Bismarck's career to a close; the new emperor dismissed him in 1890.

Bismarck, city (1990 pop. 49,256), state capital and seat of Burleigh co., S central N.Dak., on hills over the Missouri R.; inc. 1873, territorial capital from 1883. Bismarck developed in the 1870s when the Northern Pacific RR reached a steamboat port there. The trade center for the region, it is a major wheat, grain, and livestock producer.

bismuth (Bi), metallic element, established as a separate element by Claud J. Geoffroy in 1753. The silver-white element is the poorest heat conductor of all the metals except mercury. Its soluble compounds are poisonous; its insoluble compounds are used to treat certain gastric disorders and skin injuries. It is also used in low-melting alloys, such as Wood's metal, used in fuses and automatic sprinkler systems. See ELEMENT (table); PERIODIC TABLE.

bison, hoofed MAMMAL (genus *Bison*) of the CATTLE family, with short horns and heavy, humped shoulders. The European wisent (*B. bonasus*) is larger than the North American bison (*B. bison*), commonly called BUFFALO, which may reach a shoulder height of 5 ft (1.5 m) and a weight of 2,500 lb (1,130 kg). Bison roamed America in vast herds until slaughter by settlers for sport, hides, and meat reduced them to near extinction. They are now thriving, and some are raised for their meat.

Bison

Bissau, city (1988 est. pop. 125,000), capital of Guinea-Bissau, on the Geba estuary, off the Atlantic Ocean. It is the country's largest city, major port, and administrative center. Exports include peanuts, hardwood, palm oil, coconuts, and rubber, and there is some transit trade. Food and beverage processing is the main industry. Founded (1687) by the Portuguese as a fortified port and trading center, the city was the capital (1942–74) of Portuguese Guinea.

bit: see COMPUTER.

Bithynia, ancient country of NW Asia Minor, in present-day Turkey. At first an independent Thracian state, it became an autonomous part of the Persian empire, and after the death of ALEXANDER THE GREAT, it was an independent kingdom (3d–1st cent. B.C.). King Nicomedes IV willed it to Rome (74 B.C.). Joined with Pontus as a single colony soon afterward, Bithynia declined in the 2d cent. A.D.

bittern, migratory marsh BIRD of the HERON family. The American bittern, widely distributed in E North America, is 2 to 3 ft (61 to 91 cm) tall. When pursued, the bittern escapes detection by standing motionless with uplifted bill, its yellow and brown markings blending with the marsh grasses.

bitterroot: see PURSLANE.

bittersweet, name for two unrelated fall-fruiting, woody vines. One (*Solanum dulcamara*) belongs to the NIGHTSHADE family. Its twigs and stems yield a medicinal narcotic poison similar to belladonna. The more popular bittersweet (*Celastrus scandens*) is in the staff tree family. Both grow in North America.

bivalve, MOLLUSK of the class Bivalvia (sometimes called Pelycypoda) with a laterally compressed body and an external shell consisting of two dorsally hinged valves. Bivalves lack eyes and tentacles; most have a muscular foot, used for burrowing. Shells range in size from 1/16 in. (2 mm) to over 4 ft (120 cm). Bivalves are an important food source and include CLAMS, COCKLES, MUSSELS, OYSTERS, SCALLOPS, and SHIPWORMS.

Bizet, Georges [bēzā'], 1838–75, French operatic composer. He is celebrated for his immensely popular opera *Carmen* (1875), based on a story by MÉRIMÉE. His other works include the opera *The Pearlfishers* (1863), the Symphony in C Major (1868), and incidental music to DAUDET's *L'Arlesienne*.

Bjerknes, Vilhelm Frimann Koren [byĕrk'nĕs], 1862–1951, Norwegian physicist and pioneer in modern meteorology. He applied hydrodynamic and thermodynamic theories to atmospheric and hydrospheric conditions in order to predict future weather conditions. His work in meteorology and on electric waves was important in the early development of wireless telegraphy. He and his son **Jakob Bjerknes,** 1897–1975, evolved the polar-front theory of cyclones.

Bjørnsone, Bjørnstjerne [byörn'sōn], 1832–1910, Norwegian writer, a seminal figure in 19th-cent. Norwegian literature and a lifelong champion of liberal causes. He sought to free the Norwegian theater from Danish influence and to revive Norwegian as a literary language. As director of Bergen's Ole Bull Theater (1857–59) and of the Oslo Theater (1863–67), he recreated Norway's epic past in sagalike dramas, e.g., the trilogy *Sigurd Slembe* (1862). He was named national poet of Norway, and his poem *Yes, We Love This Land of Ours* became the national anthem. Other major works include the novel *The Fisher Girl* (1868), the epic poem *Arnljot Gelline* (1870), and the play *Pastor Sang* (1893). He received the 1903 Nobel Prize in literature.

Björnsson, Sveinn [byörn'sôn], 1881–1952, Icelandic diplomat and political leader. He served as minister to Denmark (1920–41), regent of Iceland (1941–44), and, after independence from Denmark, Iceland's first president (1944–52).

Bk, chemical symbol of the element BERKELIUM.

Black, Hugo Lafayette, 1886–1971, associate justice of the U.S. SUPREME COURT (1937–71); b. Harlan, Ala.; LL.B., Univ. of Alabama (1906). As a U.S. senator (1927–37), he was an ardent supporter of the NEW DEAL. Although his appointment to the Supreme Court was strongly opposed because he had been a member of the KU KLUX KLAN, Black led the Court in the battle for civil rights.

Black, Joseph, 1728–99, Scottish chemist and physician; b. France. Professor of chemistry at Glasgow and then at Edinburgh, he is best known for his theories of latent heat and specific heat. He discovered carbon dioxide ("fixed air") and helped establish chemistry as an exact science.

Blackbeard, d. 1718, English pirate. His name was probably Edward Teach or Thatch. Originally a privateer in the War of the SPANISH SUCCESSION, he preyed on the West Indies and along the Atlantic coast. He was killed by the British.

blackberry: see BRAMBLE.

blackbird, perching BIRD belonging to the family Icteridae, related to the BOBOLINK and ORIOLE. Except during breeding season, blackbirds travel in flocks; these may number as many as 5 million birds and often do serious crop damage. Common species are the red-winged, yellow-headed, and brewer blackbirds. The European blackbird is a THRUSH.

blackbody, in physics, an ideal substance that absorbs all and reflects none of the radiant energy falling on it. An approximate blackbody is lampblack, which reflects less than 2% of incoming radiation. A study of blackbody radiation led Max PLANCK to develop quantum theory (see QUANTUM MECHANICS) in 1900.

Black Death: see PLAGUE.

Black English, distinctive DIALECT spoken at times by as many as 80% to 90% of African Americans. Long considered merely substandard English, it is in fact a distinct form. African slaves confronting white culture, and themselves speaking many different languages, developed a PIDGIN, mixing for the most part English vocabulary and African syntax, that developed into Black English. Much in Black English that seems grammatically incorrect actually represents consistent application of African structural principles. A social, rather than regional, dialect, it is similar in all parts of the U.S., as research since the 1960s has shown. Its role in public education is a source of controversy because its effect on the process of learning to read and write is not clearly understood. In

The key to pronunciation appears on page xiii.

addition, its exclusive use by individuals has usually limited their opportunities for social advancement. See also GULLAH.

black-eyed bean or **black-eyed pea:** see COWPEA.

black-eyed Susan or **yellow daisy,** weedy biennial North American daisylike wildflower (*Rudbeckia hirta*) of the COMPOSITE family, with yellow rays and a dark brown center. This and other species in the genus are also called yellow coneflowers.

Blackfoot, indigenous people of the Plains (see NORTH AMERICA, INDIGENOUS PEOPLES OF), who spoke an Algonquian language of the Algonquian-Wakashan stock (see NATIVE AMERICAN LANGUAGES). The Blackfoot, so called because they wore black-dyed moccasins, were unremittingly hostile to most other Native American peoples and usually to white settlers, efficiently repelling intrusion. In the early 19th cent. they lived in a large territory around the upper Missouri and N Saskatchewan rivers, ranging W to the Rocky Mts. They developed a nomadic Plains culture, based on the horse and buffalo. Their only crop was tobacco, employed in such rituals as the SUN DANCE. The killing off of the buffalo by the whites brought the Blackfoot almost to starvation. Today they are mostly farmers and ranchers, living in Montana and Canada. In 1990 there were 32,234 Blackfoot in the U.S.

Black Forest, block mountain range, SW Germany, extending c.90 mi (145 km) along the Rhine rift valley. It is named for its cover of dark pine forests. A popular resort area, it is known for its cuckoo clock and toy industries. Baden-Baden and Freiburg are the chief cities.

Black Friday, Sept. 24, 1869, in U.S. history, day of financial panic. To corner the gold market, speculators, including Jay GOULD and James FISK, sought the support of federal officials of the GRANT administration. The attempt failed when government gold was released for sale. The drive ended on a Friday, when thousands were ruined. Other days of financial panic have also been called Black Friday.

black gum, ornamental deciduous tree (*Nyssa sylvatica*), native to E North America. The tough wood is used for wheel hubs. Black gum is also called sour gum, tupelo, and pepperidge. The genus *Nyssa* may be derived from an ancestral dogwood and is sometimes classified in the DOGWOOD family.

Black Hawk War, 1832, conflict between the U.S. and the SAC AND FOX. An 1831 treaty compelled the Sac and Fox to move W of the Mississippi, but in 1832, under Chief Black Hawk, a group returned to Illinois. Fighting ensued, and most of Black Hawk's band were killed on the Bad Axe R. (in present-day Wisconsin) by a force under Henry Atkinson.

Black Hills, forested mountains rising above the GREAT PLAINS in SW South Dakota and NE Wyoming. Harney Peak (7,242 ft/2,207 m) is the highest point. Gold mining (begun in 1874) and tourism are chief industries.

black hole: see GRAVITATIONAL COLLAPSE.

black lead: see GRAPHITE.

blackleg or **black quarter,** acute infectious bacterial disease of cattle and sometimes sheep, characterized by muscle inflammation and pain in the affected areas. TOXINS formed by the BACTERIA (genus *Clostridium*) produce severe muscle damage, and mortality is high.

black lung disease: see PNEUMOCONIOSIS.

black magic: see MAGIC.

blackmail: see EXTORTION.

Black Monday, Oct. 19, 1987, in U.S. history, day of financial panic. The DOW JONES AVERAGE fell 508.32 points, a drop of 22.6%, the largest since 1914. The point decline as well as the volume, 604.33 million shares, exceeded previous records. Among the possible causes were investors' anxiety about U.S. international trade and federal deficits, U.S. criticism of West Germany's economic policies, the cascading effect of the automatic selling of stocks, and the drop in stock-index futures triggered by computerized trading programs. Stocks throughout the world joined the slide. By mid-1988 the stock market had recovered, and the U.S. economy was largely unaffected by the crash.

Blackmore, Richard Doddridge, 1825–1900, English novelist. Though he wrote many novels, he is famous for *Lorna Doone* (1869), a romance about 17th-cent. outlaws.

Blackmun, Harry Andrew: see SUPREME COURT, UNITED STATES (table 1).

Black Muslims, popular name for members of an African-American nationalist religious movement in the U.S. Founded (1930) in Detroit, the sect, then called the Nation of Islam, was led (1934–75) by Elijah MUHAMMAD, under whom the sect greatly expanded. Its members lived austerely, and the sect advocated a separate autonomous nation within the U.S. for its adherents. In the 1960s tension between Muhammad and MALCOLM X, a Black Muslim minister, developed. Malcolm X's assassination (1965) may have been instigated by Muhammad's followers. Warith Deen Mohammed (Wallace D. Muhammad) succeeded his father as leader in 1975 and has steered the sect (renamed the World Community of Islam in the West and later the American Muslim Mission) toward SUNNI Islamic practice. A splinter group, known by the original name, the Nation of Islam, and led by Louis Farrakhan, has continued to follow the teachings of Elijah Muhammad.

Black Panther party, U.S. African-American militant political organization (founded 1966) advocating violent revolution to achieve African-American liberation. Its members became involved (late 1960s) in clashes with the police, and, after close FBI scrutiny, Huey Newton and Bobby Seale, the party's founders, were tried in a number of court cases, but were acquitted. Another leader, Eldridge Cleaver, left (1975) the party, which was torn by rival factions. By the 1980s the Black Panther party had ceased to play an important part in the African-American movement.

Black Prince: see EDWARD THE BLACK PRINCE.

black quarter: see BLACKLEG.

Black Sea, c.159,600 sq mi (413,360 sq km), SE Europe, connected with the MEDITERRANEAN SEA via the DARDANELLES and BOSPORUS. Bordered by Ukraine (N), Russia and Georgia (E), Turkey (S), and Bulgaria and Romania (W), it is c.750 mi (1,200 km) wide at its greatest extent and has a maximum depth of 7,364 ft (2,245 m). Almost tideless, it is ice-free in winter. The CRIMEA, a peninsula on its northern shore, is a major resort area. ODESSA and Constanţa are the chief ports.

Blackstone, Sir William, 1723–80, British jurist. At Oxford, after 1758, he was the first at a British university to teach English, as opposed to Roman, law. In his great work *Commentaries on the Laws of England* (1765–69) Blackstone ordered and elucidated the bulk of English law, showing it to be comparable to Roman law and to the civil law of the Continent. Although criticized, by BENTHAM among others, for a failure to analyze social and historical factors, Blackstone's work had a tremendous effect on the profession and study of law, both in Britain and in the U.S.

Black Watch or **Royal Highland Regiment,** Scottish infantry regiment. It was formed (1739–40) to guard against Scottish rebels and keep the peace. It became known as the Black Watch because of the dark colors of the regimental tartan.

Blackwell, Alice Stone: see under STONE, LUCY.

Blackwell, Elizabeth, 1821–1910, American physician; b. England. An 1849 graduate of the Geneva (N.Y.) Medical College, she was the first woman in the U.S. to receive a medical degree. She helped to found the New York Infirmary for Women and Children (1857) and its Women's Medical College (1868).

Blackwell, Henry Brown: see under STONE, LUCY.

black widow, poisonous SPIDER (genus *Latrodectus*) found in the Americas. Adults are black with a red to orange hour glass-shaped abdominal marking. The female is not quite ½ in. (1.3 cm) long; she may eat the smaller male after mating. The bite venom, a neurotoxin, is sometimes fatal to children.

bladder: see URINARY SYSTEM.

Blades, Rubén, 1948–, Panamanian singer, songwriter, and bandleader. He is internationally known for his salsa music, which often incorporates sociopolitical themes. A Harvard-trained lawyer, Blades became a candidate for the Panamanian presidency in 1993.

Blaine, James Gillespie, 1830–93, American politician; b. West Brownsville, Pa. He was a U.S. representative from Maine (1863–76), Speaker of the House (1869–75), U.S. senator (1876–81), and U.S. secretary of state (1881, 1889–92). Blaine failed to capture the 1876 Republican presidential nomination after a scandal; it was alleged that he had improperly secured a land grant for an Arkan-

sas railroad. The leader of the "Half-Breed" Republicans who opposed the regular or "Stalwart" faction, he was the party's nominee in 1884. He was defeated by Grover CLEVELAND, in part because he failed to disavow a supporter's remark that characterized the New York Democrats as the party of "rum, Romanism, and rebellion." As secretary of state, he fostered close U.S.–Latin American relations and brought about the first Pan-American Congress.

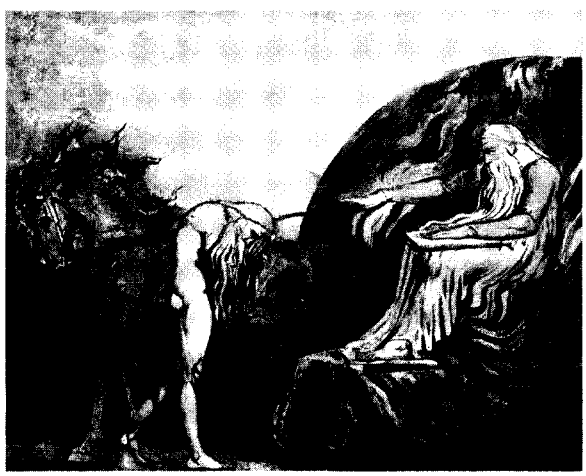
Blair, Bonnie Kathleen, 1964–, American speed skater; b. Cornwall, N.Y. A sprint racer and an outstanding technical skater, she won five Olympic gold medals from 1988 to 1994, the most ever won by an American woman. Her total of six Olympic medals is the most ever won by any American winter-sports athlete.

Blair, Eric Arthur: see ORWELL, GEORGE.

Blair, Francis Preston, 1791–1876, American journalist and politician; b. Abington, Va. Blair was an ardent supporter of Andrew JACKSON and a member of the Kitchen Cabinet. In 1830 he founded the Washington *Globe.* He was also among the founders of the REPUBLICAN PARTY and was an adviser to Pres. LINCOLN. His son **Francis Preston Blair,** 1821–75, was a Union general in the U.S. CIVIL WAR and a U.S. senator (1871–73). Another son, **Montgomery Blair,** 1813–83, was the first U.S. solicitor in the Court of Claims (1855–57), in which capacity he served as counsel to Dred Scott in the DRED SCOTT CASE. He was also Lincoln's postmaster general (1861–64).

Blake, Eubie (James Hubert Blake), 1883–1983, African-American pianist and composer; b. Baltimore. His career has extended from ragtime (see JAZZ) to the 1980s. With the songwriter Noble Sissle he produced early African-American Broadway musicals, e.g., *Shuffle Along* (1921). His most famous songs are "Memories of You" and "I'm Just Wild about Harry."

Blake, Nicholas: see DAY LEWIS, CECIL.



William Blake engraving Elijah in the Fiery Chariot

Blake, William, 1757–1827, English poet and artist who exerted a great influence on English ROMANTICISM. His first book, *Poetical Sketches* (1783), was the only one published conventionally during his life. With the help of his wife, Catherine Boucher, he illustrated and published all his other major poetry himself. *Songs of Innocence* (1789) and *Songs of Experience* (1794), containing "The Lamb," "The Tyger," and "London," are written from a child's point of view, directly, simply, and unsentimentally. Blake was a visionary and a mystic, and in his "Prophetic Books," including *The Book of Thel* (1789), *The Marriage of Heaven and Hell* (c.1790), *Milton* (1804–8), and *Jerusalem* (1804–20), he created his own mythology in which love, energy, and imagination vie with the forces of reductive rationalism and repression. Blake's paintings and engravings, notably his illustrations of his own works, works by Milton, and the Book of Job, are realistic in their representation of human anatomy and other natural forms, but also radiantly imaginative, often depicting fanciful creatures in exacting detail. All of Blake's works were ignored or dismissed until long after his death.

Blanc, Louis [bläN], 1811–82, French socialist and journalist; b. Spain. In his *Organization of Work* (1840) he outlined an ideal social order based on the principle "From each according to his abilities, to each according to his needs." As a first stage he advocated a system of "social workshops" controlled by workers. A member of the 1848 provisional government, he was implicated in a workers' revolt and fled to England, where he wrote his *History of the French Revolution* (12 vol., 1847–64). On his return to France (1871) he became a member of the national assembly.

Blanco, Antonio Guzmán: see GUZMÁN BLANCO.

Bland-Allison Act, 1878, passed by the U.S. Congress to provide freer coinage of silver. Offered by Rep. Richard P. Bland and amended by Sen. William B. Allison, the act required the U.S. Treasury to purchase between $2 million and $4 million worth of silver bullion monthly, to be coined into silver dollars. Attempts of the Western FREE SILVER forces to replace the act with provision for unlimited coinage failed, as did attempts of the gold-standard forces to repeal it altogether. It remained law until passage (1890) of the SHERMAN SILVER PURCHASE ACT.

blank verse: see PENTAMETER.

Blantyre, city (1987 pop. 331,588), S Malawi, in the Shire Highlands. It is Malawi's main commercial and industrial center and is connected by rail to the Indian Ocean port of Beira Mozambique. Manufactures include cement and textiles. Founded in 1876 by Scottish missionaries, it was named for the birthplace of the explorer David LIVINGSTONE.

Blasco Ibáñez, Vicente [blä'skō ēbä'nyāth], 1867–1928, Spanish novelist and politician. For his anti-monarchist activities he was imprisoned 30 times. His World War I novel *The Four Horsemen of the Apocalypse* (1916), the best known of his many in the naturalistic vein, made him world famous.

blast furnace, structure used chiefly in SMELTING, i.e., extracting METALS, mainly IRON and COPPER, from their ORES. The principle involved is that of the reduction of the ores by the action of CARBON MONOXIDE, i.e., the removal of oxygen from the metal oxide in order to obtain the metal. PIG IRON prepared in the blast furnace is converted to STEEL by the BESSEMER PROCESS. Copper ore treated in a blast furnace yields a copper sulfide mixture, which is usually further refined by electrolytic methods (see ELECTROLYSIS).

Blau, Joseph Leon, 1909–86, American Jewish scholar and educator; b. Brooklyn, N.Y. Professor of religion (1962–77) at Columbia, he examined cross-cultural influences on Judaism's development in *The Story of Jewish Philosophy* (1962), *The Jews of the United States* (ed. with S.W. BARON, 1963), and *Judaism in America* (1976).

Blaue Reiter, Der [dĕr blou'ə rī'tər] [Ger., = the blue rider], German expressionist art movement (see EXPRESSIONISM) lasting from 1911 to 1914. It was named for KANDINSKY's painting *Le cavalier bleu.* The movement was led by Kandinsky, KLEE, MARC, and MACKE, in Munich. Their works ranged from pure abstraction to romantic imagery, attempting to express spiritual truths. Common to the group was a philosophical spirit, an intellectual approach to technique, and a lyrical spontaneity. A number of their illustrations and articles were published as the *"Blaue Reiter" Album* (1911).

bleaching, the process of whitening a substance by exposure to the sun, or by chemical processes. Chemical methods include OXIDATION AND REDUCTION and ADSORPTION. In 1799 Charles Macintosh invented the first modern chemical bleach, chloride of lime, known as bleaching powder. Previous bleaching agents included chlorine, sulfuric acid, and milk. Bleaching is applied to a variety of products, including textiles, wood pulp, wood, and flour.

Blériot, Louis [blārēō'], 1872–1936, French aviator and inventor. He invented an automobile searchlight, then turned to designing and constructing monoplanes. On July 25, 1909, he was the first person to cross the English Channel in a heavier-than-air machine.

Bligh, William, 1754–1817, British admiral. He is chiefly remembered for the mutiny on his ship, the BOUNTY, in 1789. He was later governor of NEW SOUTH WALES (1805–8).

blight, any sudden, severe plant disease characterized by the withering and death of the plant; also, the causative agent of such a disease. Most blights are caused by BACTERIA (e.g., bean blights),

VIRUSES, (e.g., soybean bud blight), or a FUNGUS (e.g., chestnut blight, potato blight).

blimp: see AIRSHIP.

blindness, partial or complete loss of sight. Blindness may be congenital or caused by injury or disease. Lesions of the brain, CATARACT, GLAUCOMA, or retinal detachment can result in loss of vision, as can changes in the EYE associated with disorders such as DIABETES and HYPERTENSION. In retinitis pigmentosa, a genetically transmitted disorder, visual impairment develops in childhood and gradually progresses to complete blindness. The BRAILLE system enables the blind to read and write. See BIRTH DEFECTS; COLOR BLINDNESS.

Blixen, Karen: see DINESEN, ISAK.

Bloch, Ernest [blŏk], 1880–1959, Swiss-American composer; b. Switzerland. He taught in the U.S. and Switzerland. His music is classical, but personal and Hebraic in tone, e.g., the Hebrew rhapsody *Schelomo,* the symphonic poem *Israel* (both: 1916), and *Cinq pièces Hébraïque* (1951). He also wrote concertos, string quartets, and pieces for chorus and orchestra.

Bloch, Konrad Emil, 1912–, American biochemist; b. Germany. For his discoveries concerning the mechanism and regulation of cholesterol and fatty-acid metabolism, he shared with Feodor Lynen the 1964 Nobel Prize in physiology or medicine.

Bloch, Marc [blôk], 1886–1944, French historian. An authority on medieval feudalism, he wrote *Feudal Society* (1939, 1940), a brilliant synthesis on the subject. His other works include *French Rural History* (1931), and *The Historian's Craft* (1949). Active in the French Resistance during World War II, he was executed by the Germans.

Block, Herbert Lawrence: see HERBLOCK.

block book, book printed from engraved wooden blocks, one for each page. Although produced in Europe before and after the invention of PRINTING, block books have a richer history in China and Japan, where the large number of written characters made printing from movable type impractical.

Bloemfontein [blo͞om'fŏntān"], city (1985 pop. 104,381), capital of the Orange Free State and judicial capital of South Africa. It is a transportation and industrial center. The city was founded in 1846 by Boer settlers and was captured (1900) by the British during the SOUTH AFRICAN WAR. It was the site of negotiations that led to the founding (1910) of the Union of South Africa, and of the conference (1912) that founded the AFRICAN NATIONAL CONGRESS.

Blois [blwä], town (1982 pop. 49,422), capital of Loir-et-Cher dept., central France, known for its trade in wine and brandies. From the 10th cent. the counts of Blois were France's most powerful lords. With the accession (1498) of Louis XII (who was born in its Renaissance chateau), Blois passed to the French crown.

Blok, Aleksandr Aleksandrovich [blôk], 1880–1921, Russian poet, considered the leading Russian SYMBOLIST. Influenced by Vladimir Soloviev, he voiced mysticism and idealistic passion in *Verses about the Beautiful Lady* (1904). *The Unknown Woman* (1906) expresses his later despair. He celebrated the Bolshevik Revolution in *The Twelve* (1918) and *The Scythians* (1920).

blood, fluid that is pumped by the HEART and circulates through the body via arteries, veins, and capillaries, carrying oxygen and nutrients to the body tissues, and carbon dioxide and wastes away from them (see CIRCULATORY SYSTEM). It is also involved in tissue repair, cell METABOLISM, infection resistance, and other life-sustaining activities. Blood is made up of plasma, a colorless fluid containing red blood cells (erythrocytes), which carry on oxygen-carbon dioxide exchange; white blood cells (leukocytes), which defend the body from foreign agents; platelets that function in blood clotting; HORMONES; and essential salts and PROTEINS. There are about 6 quarts (5.6 liters) of blood in an average-sized adult male human. Blood is classified into BLOOD GROUPS. A deficiency of red blood cells is ANEMIA; abnormal proliferation of leukocytes is known as LEUKEMIA. See also BLOOD BANK; BLOOD TRANSFUSION.

blood bank, site for collecting, processing, typing, and storing whole BLOOD and blood products. Whole blood may be preserved up to 21 days without losing its usefulness in BLOOD TRANSFUSIONS. Blood plasma, the fluid portion of the blood, may be frozen and stored indefinitely. All blood donated in the U.S. is now screened for infectious agents, including the AIDS virus and several forms of HEPATITIS. Many blood banks have facilities for APHERESIS, bone marrow donations, and related procedures.

blood groups, classifications of human BLOOD based on immunological properties. The most widely used blood classification system is the ABO system, described by LANDSTEINER. It divides blood into A, B, AB, and O groups, depending on the presence of specific chemical substances on the surface of the red blood cells (A, B, or AB), or their absence (O). These substances act antigenically, i.e., to cause the formation of specific antibodies when injected into a recipient (see IMMUNITY). Because the formation of antibodies can create a potentially dangerous condition in an individual receiving a BLOOD TRANSFUSION, the blood of a donor must be compatible with that of the recipient. Another blood-group system important in blood transfusion compatibility is the RH FACTOR.

bloodhound, large HOUND; shoulder height, c.25 in. (63.5 cm); weight, 80–110 lb (36.3–49.9 km). Its short, smooth coat is black and tan, red and tan, or tawny. The skin hangs infolds on the face. The oldest hound, known in Europe over 2,000 years ago, it was brought to the U.S. in the 19th cent. It has a superb sense of smell and is used for tracking.

blood poisoning: see SEPTICEMIA.

blood pressure, force exerted by blood upon the walls of the arteries. It is initiated by the pumping action of the heart, and pressure waves can be felt at the wrist and other PULSE points. Blood pressure is strongest in the aorta, where the blood leaves the HEART, and diminishes progressively in the smaller vessels. Contraction of the heart (systole) produces the highest pressure, while heart relaxation (diastole) reduces the pressure to its lowest point. Pressure is measured at the brachial artery in the forearm (for consistency) in millimeters of mercury; pressures of about 120/80 (systolic/diastolic) are considered normal in young people. Conditions involving high blood pressure include HYPERTENSION and STROKE.

bloodstone or **heliotrope,** green CHALCEDONY spotted with red, used as a gem. It is found in India, the U.S., Brazil, and Australia.

blood substitute, substance that mimics the function of HEMOGLOBIN, the molecule that carries oxygen through the body. Blood donated by humans must be refrigerated, can be contaminated by such diseases as AIDS and hepatitis, and is often in short supply. Designers of blood substitutes hope to eliminate these problems and develop genetically engineered or chemical products that will be tolerated by people of all blood types.

blood transfusion, transfer of blood from the venous system of one person to that of another, or from one animal to another of the same species. A transfusion using a person's own blood, or autologous transfusion, can be done in some cases if the blood has been donated ahead of time or if blood lost in surgery is collected and cleansed. Transfusions are performed to replace a large loss of blood (as in hemorrhage, severe bleeding during surgery, SHOCK, and severe BURNS) and as supportive treatment in certain disorders (e.g., HEMOPHILIA). In whole blood transfusions, the BLOOD GROUPS (including the RH FACTOR) must be compatible with that of the recipient; if not, red blood cells will rupture and clump, a condition that can result in JAUNDICE, kidney damage, and death. People with blood group O are universal donors, having blood that is compatible with all other groups; those with blood group AB are universal recipients, able to accept blood from all other groups. When whole blood is not needed or is unavailable, the fluid part of the blood (plasma) may be given.

Bloody Assizes: see JEFFREYS OF WEM, GEORGE JEFFREYS, 1ST BARON.

Bloomer, Amelia Jenks, 1818–94, American reformer; b. Homer, N.Y. She edited (1848–54) the *Lily,* dedicated to women's rights and temperance. In 1851 she adopted the full trousers that became known as the Bloomer costume, or bloomers.

Bloomfield, Leonard, 1887–1949, American linguist; b. Chicago. His masterpiece, *Language* (1933), a standard text, is a clear statement of principles that have become axiomatic: that language study must always be centered in the spoken language; that the definitions used in grammar should be based on the forms of the language; and that a given language at a given time is a complete system of sounds and forms existing independently of the past, so that the history of a form does not explain its meaning.

Bloomsbury group, influential literary and intellectual group (fl.

1904–c.1939) that made Bloomsbury Square, London, its center. Its members included Lytton STRACHEY, Virginia WOOLF, Leonard Woolf, E.M. FORSTER, V. SACKVILLE-WEST, Roger FRY, Clive Bell, and John Maynard KEYNES.

Blücher, Gebhard Leberecht von [blü'khər], 1742–1819, Prussian field marshal. He helped to defeat NAPOLEON I at Leipzig (1813) and at Laon (1814). Napoleon defeated him at Ligny (June 15, 1815), but Blücher's timely arrival at WATERLOO three days later helped the duke of WELLINGTON to turn that battle into a great victory.

blueberry, widely distributed shrubs or small trees (genus *Vaccinium*) of the HEATH family, usually found in acid soils. They are related to HUCKLEBERRY and CRANBERRY. Blueberries are a popular food and are commercially important. The most cultivated are the high-bush blueberry (*V. cerymbosum*) and the low-bush blueberry (*V. augustifolium*).

bluebird, migratory BIRD of the THRUSH family. The Eastern bluebird (*Sialia sialis*), vivid blue with a red breast, usually nests in orchards or on the edge of woodlands; it eats insects and wild fruits.

bluefish, stout-bodied, delicately flavored marine FISH of the family Pomatomidae, resembling the POMPANO but more closely related to the sea BASS. Averaging 30 in. (75 cm) in length and 10 to 12 lb (4.5 to 5.5 kg) in weight, the bluefish is found in warm waters of the Atlantic and Indian oceans and Mediterranean Sea. It is an excellent game fish.

blue-green algae, common name for cyanobacteria, widespread organisms of great importance in carbon and nitrogen cycles. Blue-green algae lack cell nuclei; some are unicellular, but most are filamentous or colonial. Most are photosynthetic. They were formerly considered ALGAE and placed in the plant kingdom, but they are now usually considered MONERANS.

blue jay: see JAY.

blue laws, U.S. state laws regulating private and public conduct and morals, especially Sabbath observance. The term is derived from the blue paper on which some 17th-cent. laws were printed. Blue laws, which usually forbade work or sport on Sunday, were most common and most strict in Puritan New England. They declined after the American Revolution but many were revived in the 20th cent. during PROHIBITION. Many states retain blue laws today.

Blue Rider: see BLAUE REITER, DER.

Blue Ridge, eastern range of the APPALACHIAN MTS., extending S from S Pennsylvania to N Georgia. Heavily forested and long a barrier to early colonial expansion, the area is noted for its resorts and its scenery.

blues: see JAZZ.

Blum, Léon [blōōm], 1872–1950, French Socialist statesman. He was premier (1936–37) in the first Popular Front government (a coalition of Radical Socialists, Socialists, and Communists) and passed important labor reforms. Arrested (1940) by the VICHY government, he was imprisoned by the Germans until 1945. Blum grew more moderate in his later years and was again premier (1946–47) in a Socialist government.

Blunt, Anthony Frederick, 1907–83, English art historian. He was director of the Courtauld Institute, professor of art at the Univ. of London, and Surveyor of the Queen's Pictures. His major writings include *Artistic Theory in Italy, 1450–1600* (1940) and *Art and Architecture in France, 1500–1700* (1953). Knighted in 1956, he was divested of the title in 1979, when it became known that he had been a Soviet agent.

Bly, Robert, 1926–, American poet; b. Madison, Minn. His personal, precisely observant poems are collected in such volumes as *The Light Around the Body* (1967) and *Loving a Woman in Two Worlds* (1985). Also a publisher, he has printed translations of lesser-known foreign poets. Since the early 1980s Bly has been active in the "men's movement," concerned with establishing a new idea of masculinity in contemporary society. His book *Iron John* (1990) deals with the passage from boyhood to manhood.

B'nai B'rith, American Jewish service organization, est. 1843. Its broad-based program includes orphanage and hospital work, disaster relief, and vocational training. The Hillel Foundation (for Jewish students), the Anti-Defamation League (est. 1913 to combat ANTI-SEMITISM), and B'nai B'rith Women are branches. It has some 500,000 members.

boa, live-bearing constrictor SNAKE of the family Boidae, which also includes the PYTHONS, found mostly in the Americas. Boas suffocate their prey by squeezing it. Best known are the boa constrictor (*Constrictor constrictor*), which lives in terrestrial habitats from S Mexico to central Argentina and averages 6 to 9 ft (1.8 to 2.7 m); and the South American anaconda, the longest (up to 25 ft/7.9 m) and thickest (3 ft/90 cm in girth) boa.

Boa constrictor

Boadicea [bō"ədĭsē'ə], d. A.D. 61, British queen of the Iceni (of Norfolk). She led the Iceni in revolt against the Romans. Her army was crushed, and she took poison.

boar: see SWINE.

Boas, Franz, 1858–1942, German-American anthropologist; b. Germany. No one has more greatly influenced American anthropology. Boas reexamined the premises of physical anthropology and pioneered in the use of statistical methods. His field work began with observations of the Central Eskimos (1883) and of indigenous British Columbian peoples (1886). Associated with the American Museum of Natural History from 1895 to 1905, he became (1899) the first professor of anthropology at Columbia Univ., a position he held for 37 years. In his studies of NATIVE AMERICAN LANGUAGES Boas stressed the importance of internal linguistic structure, and the strict methodology of his contributions gave them scientific value. Among his works are *The Mind of Primitive Man* (1911, rev. ed. 1938), *Primitive Art* (1927, repr. 1955), *Race, Language and Culture* (1940), and *Race and Democratic Society* (1945).

Boaz: see RUTH.

bobcat: see LYNX.

bobolink, American songbird (*Dolichonyx oryzivorus*) of the family Icteridae. The spring plumage of the male is black and white; after the breeding season, it is yellowish and brown-streaked like the female. In the north, bobolinks are insectivorous, but may feed on rice crops during southern migration; once hunted because of this destructive feeding habit, they are now protected.

bobsledding, sport in which a bobsled (an open, steel-bodied vehicle with runners) hurtles down an icy, steeply banked, twisting course. Sleds accommodate either two or four persons, including a driver and brakeman in each type, and can attain speeds of 90 mi (145 km) per hr. It has been an Olympic event since the first Winter Games (1924).

bobwhite, American henlike BIRD of the PHEASANT family. Bobwhites feed on insects and travel in coveys, sleeping at night in a tight circle, tails to center. In spring the coveys disperse, and each male selects a nesting territory. The characteristic call of "bob-white" functions to attract a mate and warn off other males. Hunted as game birds, bobwhites are often called QUAIL or PARTRIDGE. The eastern bobwhite quail (*Colinus virginianus*) is c.10 in. (25 cm) long; the male has mixed brown, black, and white plumage.

Boccaccio, Giovanni [bōk-kät'chō], 1313–75, Italian poet, storyteller, and humanist; b. Paris. His early works include *Filocolo* (c.1340), a vernacular prose romance; *Filostrato,* a poem infusing the Troilus and Cressida legend with a Neapolitan court atmosphere; the allegorical *Amorosa visione,* imitative of DANTE; and a psychological romance, *Amorous Fiametta.* From 1348 to 1353 he wrote his secular classic, the *Decameron,* a collection of 100 witty and sometimes licentious tales set against the somber backdrop of the Black Death. In the *Decameron,* medieval courtly themes began to give way to modern society; the masterful style of the work became a model for later Italian prose. In Florence after 1341, Boccaccio met PETRARCH, who inspired him to devote his later life to the study of Greek and other humanistic concerns, producing important critical works in anthropology, biography, and mythology.

Boccherini, Luigi [bôk-kĕrē'nē], 1743–1805, Italian composer and cellist. His masterful classical style is often compared to that of HAYDN. Boccherini wrote more than 400 works, including 4 cello concertos, some 90 string quartets, and about 125 string quintets.

Boccioni, Umberto [bŏtchō'nē], 1882–1916, Italian futurist, painter and sculptor. He was the major figure of FUTURISM (1910–14). His principal works include the painting *The City Rises* (1910) and the sculpture *Unique Forms of Continuity in Space* (1913; both: Mus. Mod. Art, N.Y.C.).

Bocskay, Stephen [bôch'kī], 1557–1606, Hungarian noble, voivode [governor] (1604–6) and prince (1605–6) of Transylvania. In 1604, with Turkish support, he led a revolt against Holy Roman Emperor RUDOLF II's attempt to impose Roman Catholicism on Hungary. In 1606 he negotiated a treaty at Vienna legalizing the partition of Hungary among the HAPSBURGS, the Turkish sultan, and the prince of Transylvania. It guaranteed constitutional and religious freedom to Hungary.

Bode's law: see TITIUS-BODE LAW.

Bodin, Jean [bôdăN'], 1530?–1596, French social and political philosopher. A lawyer, he was dismayed by the chaos resulting from conflict between Roman Catholics and Huguenots (see RELIGION, WARS OF) and argued in his most important work, *Six Bookes of the Commonweale* (1576), that the well-ordered state required religious toleration and a fully sovereign monarch. His writings made a major theoretical contribution to the rise of the modern nation-state.

Bodley, Sir Thomas, 1545–1613, English scholar and diplomat, organizer of the Bodleian Library at Oxford Univ. (see LIBRARY, table). He offered (1598) to restore Duke Humphrey's library and spent most of his life and fortune on it.

Boece (Anicius Manlius Severinus Boethius): see BOETHIUS.

Boehme [bē'mə], **Böhme,** or **Behmen, Jakob,** 1575–1624, German religious mystic. In *De signatura rerum* and *Mysterium magnum,* he describes God as the abyss, the nothing and the all, from which the creative will struggles to find manifestation and self-consciousness. Evil results when single elements of the Deity strive to become the whole. Boehme had many followers in Germany, Holland, and England.

Boeotia [bē'ō'shə], region of ancient GREECE, N of the Gulf of Corinth. The Boeotian League, formed (c.7th cent. B.C.) by the cities of the region, was dominated by THEBES, which fought many battles to prevent encroachment by the other great CITY-STATES. The league was disbanded when the Greeks besieged Thebes (479) and after a brief revival was defeated by ATHENS (457), which annexed the Boeotian cities. Thebes resumed leadership of the league in 446; after Thebes defeated Sparta (371) the history of Boeotia was absorbed into that of Thebes. Boeotia was the home of the poets HESIOD and PINDAR.

Boer, inhabitant of SOUTH AFRICA of Dutch or French Huguenot descent. Boers are more commonly known as Afrikaners.

Boerhaave, Hermann [bo͝or'hävə], 1668–1738, Dutch physician and humanist. An influential clinician and teacher, he helped to revive the Hippocratic method of bedside instruction. Through post-mortem examinations he demonstrated the relation of symptoms to lesions, thereby instituting the clinico-pathological conference still in use today. His works include *Institutiones Medicinae* (1708) and *Elementa Chemiae* (1732), long used as standard texts.

Boer War: see SOUTH AFRICAN WAR.

Boethius [bō'thēəs], **Boetius** [bō'shəs], or **Boece** [bō'ēs'] (Anicius Manlius Severinus Boethius), c.475–525, Roman philosopher and statesman. A consul (510) in Rome, he became minister under Emperor Theodoric, but was falsely accused of treason, imprisoned, and sentenced to death. According to tradition, he wrote his great work, *The Consolation of Philosophy,* while awaiting execution. His treatise on ancient music was for many centuries the unquestioned authority on Western music.

bog: see SWAMP.

Bogan, Louise, 1897–1970, American poet; b. Livermore, Me. Her verse, intense, personal, and metaphysical in tone, is included in such volumes as *Collected Poems* (1954) and *The Blue Estuaries* (1968). She also wrote literary criticism.

Bogardus, James, 1800–1874, American architect; b. Catskill, N.Y. He was among the first to use cast iron in constructing facades. The Iron Building, N.Y.C., is the best known of his commercial building designs.

Bogart, Humphrey (DeForest), 1899–1957, American film actor; b. N.Y.C. He played tough, cynical heroes in such films as *The Maltese Falcon* (1941), *Casablanca* (1942), and *The African Queen* (1954; Academy Award).

Boğazköy or **Boghazkeui** [bŏäz'köy], village, N central Turkey. Boğazköy was the chief center of the HITTITE empire (1400–1200 B.C.). Hugo WINCKLER found Hittite inscriptions there that greatly added to the knowledge of Hittite civilization.

Bogotá, city (1990 est. pop. 4,820,000), central Colombia, capital of Colombia. Built on a high plateau (c.8,560 ft/2,610 m), it is the financial, political, and cultural center of the republic. Manufactures include processed food and tobacco, chemical, tires, and drugs. Founded in 1538, it was long the capital of the Spanish colonial viceroyalty of New Granada and a leading Latin American religious and intellectual center. It became the capital of the independent confederation called Greater Colombia in 1819 and of what was later called Colombia in 1830. A picturesque city, it is known for its colonial architecture, its collection of pre-Colombian gold art, and its bookshops.

Bohemia, historic region (20,368 sq mi/52,753 sq km) and former kingdom, W Czech Republic, bordered by Austria (SE), Germany (W, NW), Poland (N, NE), and MORAVIA (E). The traditional capital is PRAGUE. Bohemia is the Czech Republic's most urbanized and industrialized area, with such manufactures as machinery, munitions, and textiles. Grains, sugar beets, hops, and other crops are grown, and coal, silver, and other resources are mined. Bohemia emerged (9th cent.) under the Premysl dynasty and became part (950) of the HOLY ROMAN EMPIRE. It became a kingdom within the empire in 1198 and under Emperor CHARLES IV (r.1355–78) was the empire's seat. In the 15th cent. Bohemia was the scene of the HUSSITE religious movement. The HAPSBURG dynasty of Austria dominated the kingdom after 1526; a revolt (1618) against Hapsburg rule began the THIRTY YEARS WAR. In 1627 the kingdom was demoted to an imperial crown land. After WORLD WAR I it became the core of the new nation of CZECHOSLOVAKIA. The MUNICH PACT (1938) transferred the SUDETENLAND area of Bohemia to Germany, which occupied (1939–45) all of Bohemia during WORLD WAR II. Bohemia was abolished as a province of Czechoslovakia in 1948; in 1960 it was divided into five regions and the city of Prague. With the dissolution of Czechoslovakia (1993), the region became part of the Czech Republic.

Bohemond I, c.1056–1111, prince of Antioch, Turkey (1099–1111), the son of ROBERT GUISCARD and a leader in the First CRUSADE. Breaking his oath of fealty to Byzantine Emperor ALEXIUS I, he made himself prince of Antioch. Defeated (1108) in a crusade against

Alexius, he acknowledged the emperor's suzerainty. He retired and TANCRED became regent.

Böhm, Karl, 1894–1981, Austrian conductor. He directed the Vienna State Opera (1943–45; 1954–56) and the Salzburg Festival, and appeared internationally with many orchestras, specializing in the works of Mozart and Richard Strauss.

Bohr, Niels Henrik David [bōr], 1885–1962, Danish physicist and one of the foremost scientists in modern physics. He was professor of theoretical physics at the Univ. of Copenhagen and was later director of its Institute for Theoretical Physics, which he helped to found. Bohr was awarded the 1922 Nobel Prize in physics for his work on atomic structure. Classical theory had been unable to explain the stability of the nuclear model of the ATOM, but Bohr solved the problem by postulating that electrons move in restricted orbits around the atom's nucleus and explaining how the atom emits and absorbs energy. He thus combined the quantum theory (see QUANTUM MECHANICS) with this concept of atomic structure.

Boileau-Despréaux, Nicolas [bwälō' dāprāō'], 1636–1711, French critic and poet, known for his poetic satires on the clergy, on life in Paris, and on women. His critical precepts, embodied in *L'Art poétique* (1674), established him as the champion of CLASSICISM.

boiler, device for generating steam. Two types are common: fire-tube boilers, containing long steel tubes through which the hot gases from a furnace pass and around which the water to be changed to steam circulates, and water-tube boilers, in which the conditions are reversed. A boiler must be equipped with a safety valve for venting the steam if pressure becomes too great.

boiling point, the temperature at which a substance boils, or changes from a liquid to a vapor or gas (see STATES OF MATTER), through the formation and rise to the surface of bubbles of vapor within the liquid. In a stricter sense, the boiling point of a liquid is the temperature at which its vapor pressure is equal to the local atmospheric pressure. Decreasing (or increasing) the pressure of the surrounding gases thus lowers (or raises) the boiling point of a liquid. The quantity of heat necessary to change 1 g of any substance from liquid to gas at its boiling point is known as its latent heat of vaporization.

Boise [boi'sē, -zē], city (1990 pop. 125,738), state capital and seat of Ada co., SW Idaho, on the Boise R.; inc. 1864. It is the largest city in Idaho, and a trade and transportation center. Food processing, lumber, high-technology and other light industries, construction, and government offices provide employment. In its early years a gold-mining trade center, it later became oriented toward the agriculture of the region.

Boito, Arrigo [bō'ētō], 1842–1918, Italian composer and librettist. His opera *Mefistofele* (1868, rev. 1875), influenced by Richard WAGNER's music-drama, became very popular. Boito wrote the librettos for VERDI's *Otello* and *Falstaff*.

Bok, Edward William, 1863–1930, American editor; b. the Netherlands. He founded the *Brooklyn Magazine* (later *Cosmopolitan*) in 1883. As editor (1889–1919), he made *The Ladies' Home Journal* a leading woman's magazine. His autobiographical *Americanization of Edward Bok* (1920) won a PULITZER PRIZE.

Bokassa, Jean-Bédel, 1921–, president of the CENTRAL AFRICAN REPUBLIC (1966–79). An army officer, he overthrew David DACKO in 1966, assumed the presidency, and declared (1976) the country the Central African Empire and himself Emperor Bokassa I. Erratic, opportunistic, and violent, he was ousted in 1979 and went into exile. On his return in 1987, he was arrested, convicted of murdering several political opponents, and sentenced to death (later commuted to life in prison). He was freed in 1993.

Boleslaus, Polish rulers. **Boleslaus I,** c.966–1025, king of POLAND (992–1025), was the first Polish ruler to style himself king. He succeeded his father, Mieszko I, duke of Poland. As king, he greatly expanded Polish territories. **Boleslaus II,** c.1039–1081, duke (1058–76) and king (1076–79) of Poland, sided with the pope against the Holy Roman emperor but was deposed after killing the bishop of Kraków. **Boleslaus III,** 1085–1138, duke of Poland (1102–38), reunited Poland by defeating (1109) his brother Zbigniew, who had the support of Holy Roman Emperor HENRY V. He added (1135) Pomerania and Rügen to his domains.

Boleyn, Anne, 1505–36, second queen consort of HENRY VIII of England; mother of ELIZABETH I. Henry divorced KATHARINE OF ARAGÓN to marry her. The marriage was unpopular, and when she did not produce a male heir, his ardor cooled. She was executed for alleged adultery and incest.

Bolingbroke, Henry of: see Henry IV under HENRY, kings of England.

Bolívar, Simón [bōlē'vär], 1783–1830, revolutionary leader who liberated much of South America from Spanish rule; b. Caracas, Venezuela. He joined (1810) the Venezuelan revolution against Spain and won notable victories in COLOMBIA before a royalist army crushed (1815) his forces. After fleeing to Jamaica and Haiti, he invaded (1816) VENEZUELA and met disaster, forcing his return to Haiti. Recalled (1817) to command the rebel forces, he seized the lower Orinoco basin. In 1819 he boldly defeated the Spanish at Boyacá, and he became president of Greater Colombia. Cooperating with such other rebel leaders as SUCRE and SAN MARTÍN, he won further victories, culminating (1824) in PERU at Junín and AYACUCHO, which sealed the triumph of the revolution. Now the most powerful person on the continent, Bolívar organized (1824) the government of Peru and created (1825) BOLIVIA. His vision of a united South America was not to be, however, for his dictatorial methods were widely resented and separatist movements shook the union. Venezuela and ECUADOR seceded from Greater Colombia, and he resigned (1830) as president. Although bitterly hated at the time of his death, today Bolívar is revered as Latin America's greatest hero and as its liberator.

Bolivia [bōlĭv'ēa], officially Republic of Bolivia, republic (1992 est. pop. 7,323,000), 424,162 sq mi (1,098,581 sq km), W South America. One of the two inland countries of the continent, it is bordered by Chile and Peru (W), Brazil (E, N), Paraguay (SE), and Argentina (S). SUCRE is the legal capital, but LA PAZ is the administrative capital and seat of government. Bolivia's topography is one of sharp contrasts. In the west are the ANDES, whose snow-capped peak of Illampú reaches 21,276 ft (6,485 m), and a high plateau (ALTIPLANO), 12,000 ft (3,660 m) above sea level, which is the population center of the country. The east is dominated by tropical rain forests, which, in the southeast, merge into the plains of the GRAN CHACO. In the north, on the border with Peru, is Lake TITICACA, the largest freshwater lake in South America; this region, with its ruins of TIAHUANACO, was the home of one of the great pre-Columbian civilizations. Bolivia has some of the richest mineral resources in the world. It is one of the leading producers of tin, and silver,

copper, tungsten, bismuth, antimony, and zinc are also mined. Natural gas is exported, and there are major petroleum deposits. Despite these mineral riches, most Bolivians are subsistence farmers, raising sugarcane, potatoes, corn, wheat, and rice; cotton and soybeans are the major cash crops. The illegal trade in coca leaf, the source of cocaine, and processed cocaine is a major source of foreign exchange. More than half the population is pure Aymará or Quechua, but Bolivia's politics and economy are dominated by persons of European and mixed descent. Spanish is the official language; Aymará and Quechua are widely spoken. Most of the people are Roman Catholic.

History. The Aymará of Bolivia had been absorbed into the INCA empire long before the Spanish conquest of Bolivia (1538) by Gonzalo and Hernando PIZARRO. Attracted by Bolivia's mineral wealth, Spanish exploiters poured into the area, developing mines, textile mills, and great estates—all with forced native labor. Bolivia was attached to the viceroyalty of Peru until 1776 and later to that of La Plata. Revolt against Spanish rule first erupted in 1809, but Bolivia remained Spanish until the campaigns of José de SAN MARTÍN and Simon BOLÍVAR and the victory by Antonio José de SUCRE at AYACUCHO in 1824. Independence was formally proclaimed in 1825. Political instability became a hallmark of independent Bolivia, with coups and revolutions occurring, on average, more than once a year. A series of disastrous border wars, including the War of the Pacific (1879–84) against Chile and the Chaco War (1932–35) against Paraguay, cost Bolivia valuable territory, including its outlet to the sea. In 1952 the nationalistic, pro-miner Nationalist Revolutionary Movement (MNR) won control of the government, nationalizing the tin mines and launching a program of agrarian reform. They were overthrown by the military in 1964, and Bolivia resumed its history of political strife and instability, marked by recurring military coups until a civilian government assumed leadership in 1982. In 1993 Gonzalo Sánchez de Lozada, a mining entrepreneur and former planning minister, was elected president.

Böll, Heinrich [böl], 1917–85, German writer. His novels and stories present his critical, antimilitarist view of modern society. Among his works are the story collection *Traveller, If You Come to Spa* (1950) and the novels *Billiards at Half Past Nine* (1959) and *The Safety Net* (tr. 1982). Böll was awarded the Nobel Prize in literature in 1972.

Bologna, Giovanni, or **Giambologna** [bōlō'nyä, jäm"bōlō'nyä], 1524–1608, Flemish mannerist sculptor (see MANNERISM); b. Jean Bologne or Boulogne. Identified with the Italian RENAISSANCE, he is best known for *The Rape of the Sabines* (Florence), with its spiralling forms, and *Flying Mercury* (Bargello, Florence).

Bologna, city (1990 pop. 417,410), capital of Emilia-Romagna, N central Italy, at the foot of the Apennines. It is a commercial and industrial center, with such manufactures as farm and transportation equipment, metal goods, and food products. An Etruscan town, it came under Roman (189 B.C.), Byzantine (6th cent.), and papal rule. Its famous university (founded c.1088) made it an intellectual center. Political control turned on rivalries among great families (13th–15th cent.) until papal rule was restored, lasting, nearly unbroken, from 1506 until Italian unification (1860). There are many notable medieval and Renaissance buildings.

Bologne, Jean: see BOLOGNA, GIOVANNI.

Bolshevism and Menshevism, the two main branches of Russian socialism from 1903 to 1918. In 1903 the Russian Social-Democratic Workers' party split into two factions. One, led by LENIN, had a temporary majority and was thereafter known as the *Bolsheviki* [majority members]; their opponents, led by PLEKHANOV, were dubbed *Mensheviki* [minority members]. The Bolsheviks favored a small party of professional revolutionaries and the establishment of a dictatorship of the proletariat and peasantry. The Mensheviks wanted a loosely organized mass party and held that before reaching socialism Russia must develop a bourgeois-democratic stage. In the 1917 RUSSIAN REVOLUTION the Mensheviks took part in the KERENSKY provisional government, which was overthrown by the Bolsheviks in the October Revolution. The Bolsheviks became the Russian Communist party in 1918 and had suppressed all rival political groups by 1921. In 1952 the party changed its name to the Communist party of the Soviet Union. See COMMUNISM; UNION OF SOVIET SOCIALIST REPUBLICS.

Bolshoi Ballet, the principal ballet company of Russia. It began (1773) as a dancing school for the Moscow Orphanage. Opened in 1856, the Bolshoi Theatre at first competed with the Maryinsky Theatre of St. Petersburg. Alexander Gorsky revitalized it in the early 20th cent. In the 1930s, Igor Moiseyev (see MOISEYEV DANCE COMPANY) experimented with folk-dance ballets at the theater. The company is internationally acclaimed and tours with such classics as *Giselle* and *Swan Lake*.

Boltzmann, Ludwig, 1844–1906, Austrian physicist, known for his important contributions to the KINETIC-MOLECULAR THEORY OF GASES. By investigating the relationship between the temperature and the energy distribution of molecules in a gas, he laid the foundations of statistical mechanics. In 1883 he demonstrated theoretically a law (sometimes called the Stefan-Boltzmann law) describing the radiation from a BLACKBODY that had earlier been found experimentally by the Austrian physicist Josef Stefan.

Bolyai, János or **Johann** [bō'lyoi], 1802–60, Hungarian mathematician. In 1823 he independently developed hyperbolic geometry, a form of NON-EUCLIDEAN GEOMETRY. His father, **Farkas,** or **Wolfgang, Bolyai,** 1775–1856, was also a Hungarian mathematician. Farkas's *Tentamen* (1823–33), a systematic treatment of geometry, arithmetic, algebra, and analysis, contains as an appendix his son's theory of absolute space.

bombax, common name for the Bombacaceae, a family of tall, thick-trunked deciduous trees, found chiefly in the American tropics. Many members of the family are commercially important, e.g., the BAOBAB; balsa, or corkwood, which yields the lightest lumber in the world; and the ceiba tree, source of KAPOK.

Bombay, city and former province of British India, on the Arabian Sea. The region was ruled by dynasties from Central India. In the 18th cent. it came under the control of the MAHRATTAS. The islands on which the city is built were under Portuguese control from 1534, and came under the British in 1661. The surrounding areas were incorporated into Bomby Presidency (or province) after the defeat of the Mahrattas in the early 19th cent. Bombay became a state when India gained independence in 1947; it was split into the states of Gujarat and Maharashtra in 1960. The city of **Bombay** (1991 pop. 12,571,720), India's largest city and the capital of Maharashtra state, occupies two islands off the coast. It has the only natural deepwater harbor in W India. Manufactures include textiles, automobiles, chemicals, and petroleum products, and the city is the center of the Indian entertainment and financial industries. It has the largest community of PARSIS in India. Bombay was convulsed by anti-Muslim riots in 1993.

Bonaparte, Ital. *Buonaparte,* family name of NAPOLEON I of France. Besides Napoleon, this Corsican family produced many other notable figures. Napoleon's older brother, **Joseph Bonaparte,** 1768–1844, was king of Naples (1806–8), but he proved to be an inefficient administrator. As king of Spain (1808–13), he failed to cope with the PENINSULAR WAR and was forced to abdicate. He lived from 1815 to 1841 in the U.S., but died in Italy. Napoleon's brother **Lucien Bonaparte,** 1775–1840, helped Napoleon to overthrow the DIRECTORY in the coup of 18 Brumaire (1799), but later criticized him. They were reconciled while Napoleon was on Elba, and Lucien supported his brother during the Hundred Days. Another brother, **Louis Bonaparte,** 1778–1846, reluctantly married (1802) Hortense de BEAUHARNAIS; their son became NAPOLEON III. Louis was king of Holland (1806–10), but Napoleon forced him to abdicate for ignoring France's Continental System in favor of Dutch interests. Napoleon's youngest brother, **Jérôme Bonaparte,** 1784–1860, king of Westphalia (1807–13), was extravagant and irresponsible. On a visit to the U.S. he married (1803) Elizabeth Patterson, but Napoleon had the marriage annulled and married him to a German princess. Jérôme commanded a division at Waterloo and later received honors at the court of his nephew, Napoleon III.

Bonaventure or **Bonaventura, Saint,** 1221–74, Italian scholastic theologian, cardinal, Doctor of the Church, called the Seraphic Doctor. After teaching at the Univ. of Paris, he was made (1257) general of the FRANCISCANS. His writings reconcile ARISTOTLE's learning with Augustinian Christianity. His later mystical works bring the

teachings of BERNARD OF CLAIRVAUX to full flower. Feast: July 15. See also AUGUSTINE, SAINT; SCHOLASTICISM.

bond, in finance, a formal certificate of indebtedness issued by governments or business corporations in return for loans. It bears a fixed rate of interest and promises to repay the funds borrowed after a certain period, usually 10 years or more. A bond is generally protected by security; debentures are bonds unsecured by a pledge against specific assets. Bonds were sold by the U.S. government to help finance both world wars and are still an important money-raising device. Bonds issued by city and state governments are exempt from federal income taxes.

bone, hard substance that forms the SKELETON in vertebrate animals. Bone consists of a gelatinous organic material called collagen, together with minerals (mainly calcium and phosphorus). In the very young, the mineral content is low and the bones are mostly cartilage, which is pliable. With age, as their mineral content increases, bones become more brittle. Bone tissue has a three-layered structure: the spongy inner layer; the compact layer surrounding the inner layer, providing support for the body; and the tough outer membrane. The inner spaces of long bones, as those in the arms and legs, are filled with marrow, important in the formation of BLOOD cells.

Bonhoeffer, Dietrich [bôn'höfər], 1906–45, German Protestant theologian. Influenced by Karl BARTH, he urged a conformation to the form of Jesus as the suffering servant in a total commitment of self to others. He was imprisoned for two years and hanged for his role in a plot to overthrow HITLER. His writings were published posthumously.

Bon Homme Richard: see JONES, JOHN PAUL.

Boniface, Saint, c.675–754?, English missionary monk and martyr, called the Apostle of Germany. From 718 he devoted himself to the conversion of pagan Germany, where he founded many bishoprics and abbeys. He was named metropolitan of Germany (731) and archbishop of Mainz (745). He was martyred by pagans in Friesland. Feast: June 5.

Boniface VIII, 1235–1303, pope (1294–1303), an Italian named Benedetto Caetani. Boniface became pope after the abdication of CELESTINE V, and, to avoid schism, he imprisoned Celestine for life. Trying to assert papal authority, Boniface interfered unsuccessfully in Sicily and further aggravated the quarrel of the GUELPHS AND GHIBELLINES. He was involved in a bitter struggle with PHILIP IV of France. The pope tried to prevent Philip from his illegal levies on the clergy with the bull *Clericis laicos* (1296), but was forced to back down. The struggle was renewed after new troubles, and Boniface issued *Ausculta fili* (1301) and *Unam sanctam* (1302), the latter being an extreme statement regarding the duty of princes to be subject to the pope. As a result, Philip sent an agent to depose Boniface at Anagni, but after the agent's companion struck the pope, the outraged townspeople drove the emissaries out. Boniface died soon afterward and was succeeded by Benedict XI. Philip later forced Pope CLEMENT V to repudiate many of the acts of Boniface. An able canon lawyer, Boniface issued (1298) a new revision of the code called the *Sext*.

Boniface, d. 432, Roman general. In AFRICA as a semi-independent governor, he was named count of Africa by VALENTINIAN III. Recalled to Rome in 427, he rebelled, causing a civil war between Africa and Rome. The struggle prepared the way for the invasion of Africa by the Vandals under GAISERIC. After a truce was arranged, Boniface attacked the Vandals and was defeated and besieged (430) at Hippo. He died of wounds received in a battle with a rival Roman general, Aetius.

Bonifácio, José [bônēfä'sēō], 1763–1838, Brazilian scientist and architect of Brazilian independence. An eminent geologist, he influenced the Portuguese prince regent, Dom Pedro, to declare (1822) Brazil an independent monarchy with himself as Emperor PEDRO I. Bonifácio served as first minister (1822–23) of the new empire, and many of his ideas were included in the 1824 constitution.

Bonin Islands, volcanic island group, c.40 sq mi (100 sq km), in the W Pacific Ocean, c.500 mi (800 km) S of Tokyo. Principal products of the sparsely populated archipelago are timber, bananas, and pineapples. The islands were claimed by Britain (1827) and Japan (1875). A Japanese stronghold in WORLD WAR II, the Bonins were captured (1945) by the U.S. They were returned to Japan in 1968.

Bonn, city (1986 est. pop. 291,000), de facto capital of Germany, North Rhine–Westphalia, W Germany, on the Rhine R. It is the administrative center of Germany, but in 1991 the German parliament voted to move the federal government to Berlin. The move is to be completed by the end of the century, but some government offices will remain in Bonn. Manufactures include ceramic and metal goods, chemicals, and pharmaceuticals. Founded (1st cent. A.D.) by the Romans, it was later (1238–1794) the residence of the electors of Cologne. From 1949 to 1990, it was the capital of West Germany (see GERMANY). BEETHOVEN was born in Bonn.

Bonnard, Pierre [bônärd'], 1867–1947, French painter, lithographer, and illustrator. He excelled at domestic interiors that emphasized light effects similar in exuberance to IMPRESSIONISM, e.g., *Bowl of Fruit* (1933; Philadelphia Mus. Art). His late works are intensely colorful.

Bonneville Salt Flats, desert area in Tooele co., NW Utah, c.14 mi (22.5 km) long and 7 mi (11.2 km) wide. It is part of Great Salt Lake Desert, the former bed of Lake Bonneville, whose area, once c.19,500 sq mi (50,500 sq km), shrank at the end of the Pleistocene epoch. The smooth salt surface of the Flats is ideal for auto racing, and several world speed records have been set there.

Bonnie Prince Charlie: see under STUART, JAMES FRANCIS EDWARD.

bonsai, the art of cultivating dwarf trees, and the plants developed by this method. Bonsai, developed over 1,000 years ago in Japan, derives from the Chinese practice of growing miniature plants. In bonsai cultivation, the plants are kept small and in true proportion to their natural models by growing them in small containers, feeding and watering only enough for healthy growth, pruning, and forming branches to the desired shape by applying wire coils. The selection of containers, the plant's position in a container, and the choice of single plants or a group are important aesthetic considerations.

Bontemps, Arna, 1902–73, African-American writer; b. Alexandria, La. He is best remembered as the author of the novel *God Sends Sunday* (1931), the basis of the play *St. Louis Woman* (1946); and of *Black Thunder* (1936), a tragic account of the slave insurrection led by Gabriel Prosser in Richmond, Va., in 1800. Bontemps was also an editor, anthologizer, and historian.

booby, large, streamlined sea BIRD of the family Sulidae, called gannets in northern waters. Boobies have heavy bodies, long, pointed wings, long, wedge-shaped tails, and short, stout legs. They fish by diving on their prey from great heights and pursuing it under water. Gullible and unwary, as its name indicates, the booby is easy prey for hunters and is diminishing in number.

Book of Changes (I Ching), ancient Chinese book of prophecy and wisdom. Its earliest parts are thought to date from the century before CONFUCIUS. It consists of eight trigrams, corresponding to the powers of nature. They are used to interpret the future with the textual help of supplementary definitions, intuitions, and Confucian commentary.

Book of Common Prayer, title given to the service book used in the Church of ENGLAND and in other churches of the ANGLICAN COMMUNION. The first Prayer Book (1549), mainly the work of Thomas CRANMER, was essentially derived from the breviary and the missal. This was revised (1552), but was suppressed under MARY I. Revised under ELIZABETH I, it was again suppressed (1645–60) by the Commonwealth and the Protectorate. A new revision was made compulsory by the Act of Uniformity (1662). The first U.S. revision was adopted by the Episcopal Church in 1789; the latest edition is that of 1979.

book of hours, form of devotional book developed in the 14th cent. containing prayers and meditations appropriate to seasons, months, days, and hours. Many are masterpieces of illumination; among the greatest is *Très Riches Heures* (c.1415; Musée Condé, Chantilly), made by the LIMBOURG BROTHERS and other artists for the renowned collector Jean, duc de Berry.

Book of the Dead, Egyptian funerary literature. The texts consist of charms, spells, and formulas for use by the deceased in the afterworld. At first inscriptions, the texts were later papyrus rolls placed inside the mummy case. Essential ideas of Egyptian religion are

known through them. The earliest collection is from the XVIII dynasty (1580–1350 B.C.).

Boole, George, 1815–64, English mathematician and logician. Boolean algebra, his form of symbolic LOGIC, is central to the study of the foundations of pure mathematics and is the basis of computer technology. Boole wrote *An Investigation of the Laws of Thought* (1854), as well as works on calculus and differential equations.

Boolean algebra, an abstract mathematical system primarily used in COMPUTER science and in expressing the relationships between SETS (groups of objects or concepts). The notational system was developed by the English mathematician George BOOLE about 1850 to permit an algebraic manipulation of logical statements. Such manipulation can demonstrate whether or not a statement is true and show how a complicated statement can be rephrased in a simpler, more convenient form without changing its meaning. When used in set theory, Boolean algebra can demonstrate the relationship between groups, indicating what is in each set alone, what is jointly contained in both, and what is contained in neither. The expression of electrical networks in Boolean notation has aided the development of switching theory and the design of computers.

Boone, Daniel, 1734–1820, American frontiersman; b. near Reading, Pa. In March 1775, as advance agent for the Transylvania Company, he blazed the WILDERNESS ROAD and founded Boonesboro, Ky. In 1779 he helped defend Boonesboro against Native American tribes. Boone moved (1799) to Missouri after his land titles in Kentucky were overturned. His legendary adventures, many disproved by historical scholarship, were popularized in a so-called autobiographical account (1784) by John Filson.

Booth, family prominent in the SALVATION ARMY. **William Booth,** 1829–1912, was an evangelist in London, where he and his wife, **Catherine Mumford Booth,** 1829–90, established (1865) a movement that became (1878) the Salvation Army. Their eldest son, **Bramwell Booth,** 1856–1929, succeeded his father in 1912 as general of this organization. Another son, **Ballington Booth,** 1859–1940, was commander of the Salvation Army in Australia (1885–87) and in the U.S. (1887–96), withdrawing (1896) to found the Volunteers of America. A daughter, **Evangeline Cory Booth,** 1865–1950, commander of the Salvation Army in Canada (1895–1904) and the U.S. (1904–34), was general (1934–39) of the international Salvation Army.

Booth, Junius Brutus, 1796–1852, Anglo-American actor. He came from England to the U.S. in 1821 and became the foremost tragic actor of his day. His son **Edwin Booth,** 1833–93, b. near Bel Air, Md., toured with his father and scored great successes in Shakespearean tragedies. His 100-night run of *Hamlet* in New York City in 1864 was famous. The next year he retired briefly from the stage because of the scandal involving his brother (see below). He built Booth's Theatre in New York City (1869) and was the founder (1888) and first president of the Players' Club. Another son, **John Wilkes Booth,** 1838–65, won acclaim in Shakespearean roles but is best known as the assassin of Abraham LINCOLN. A Southern sympathizer (unlike the rest of his family) during the CIVIL WAR, he plotted with six fellow conspirators to assassinate Union leaders. On Apr. 14, 1865, he shot Pres. Lincoln during a performance of *Our American Cousin* at Ford's Theater in Washington, D.C., vaulted to the stage (breaking a leg), and escaped. A search party cornered him in a burning barn near Bowling Green, Va., on Apr. 26, and Booth was fatally shot, either by himself or by one of his pursuers.

Bophuthatswana [bäpo͞othäswä'nä], black South African homeland, or BANTUSTAN, (1990 est. pop. 2,000,000), c.17,000 sq mi (44,000 sq km), declared independent by South Africa in 1977. Mmabatho is the capital. The "state," which has seven separate areas (one on the Botswana border), is the designated homeland for the Tswana people. South Africa forcibly reinstalled Kgosi Lucas Mangope as president after a 1988 coup attempt.

borage, common name for the Boraginaceae, a family of widely distributed herbs and tropical shrubs and trees characterized by rough or hairy stems; four-part fruits; and, usually, fragrant blossoms. Species of forget-me-not (*Myosotis*) and species of heliotrope (*Heliotropium*) are cultivated in and native to North America.

Borah, William Edgar, 1865–1940, U.S. senator from Idaho (1907–40); b. near Fairfield, Ill. Sometimes called "the great opposer," he was a Republican noted for his independent stands and his interest in foreign policy. He opposed the LEAGUE OF NATIONS, but advocated disarmament. Borah also opposed economic monopolies and the growth of big government.

borax or **sodium tetraborate decahydrate,** chemical compound ($Na_2B_4O_7{\cdot}10H_2O$) occurring as a colorless, crystalline salt or a white powder. Borax is used as an antiseptic, cleansing agent, water softener, corrosion inhibitor in anti freeze, and flux for silver soldering, and in the manufacture of fertilizers, Pyrex glass, and pharmaceuticals.

Bordeaux [bôrdō'], city (1990 pop. 210,336), capital of Gironde dept., SW France, on the Garonne R. It is a busy port, accessible to the Atlantic, with important shipyards and industries. Wine is its major product, with Bordeaux the generic name of the region's wine. A prosperous Roman city, it flourished (11th cent.) as the seat of the dukes of AQUITAINE. ELEANOR OF AQUITAINE precipitated war between France and the English, who ruled the city (1154–1453). The city reached its height of prosperity in the 18th cent. It was the temporary seat of French government in 1914 and 1940.

Borden, Gail, 1801–74, American inventor; b. Norwich, N.Y. His process (patented 1856) of evaporating MILK was of great value for the army during the Civil War, and its use spread rapidly afterward. Borden also patented processes for concentrating fruit juices and other beverages.

Borden, Lizzie Andrew, 1860–1927, American woman tried for the ax murders (1892) of her father and stepmother; b. Fall River, Mass. Claiming that she was out of the house when the murders occurred, she was acquitted. The case is unsolved.

Borden, Sir Robert Laird, 1854–1937, Canadian prime minister (1911–20). He headed the Conservative government (1911–17) and a Union coalition (1917–20) during World War I. It was largely through his efforts that CANADA and other British dominions attained new self-governing status.

Bordet, Jules [bôrdā'], 1870–1961, Belgian serologist and immunologist. He received the 1919 Nobel Prize in physiology or medicine for his work in immunity. With Octave Gengou he devised (1900) the technique of the complement-fixation reaction (applied by August WASSERMANN to the diagnosis of syphilis) and discovered (1906) the bacillus of whooping cough.

Borg, Björn, 1956–, Swedish tennis player. As a teenage star he led (1975) Sweden to its first Davis Cup victory. Before losing to John McEnroe in 1981, he captured five successive Wimbledon titles, a tournament record. He also won the French Open six times (1974–75, 1978–81) and U.S. Open three times (1974–76).

Borges, Jorge Luis [bôr'hās], 1899–86, Argentine poet, critic, and short-story writer. Perhaps the foremost contemporary Spanish-American author, he wrote his early poetry, beginning with *Fervor of Buenos Aires* (1923), under the influence of *ultraísmo,* a movement for pure poetry that followed MODERNISMO. He was director of the National Library and professor of English at the Univ. of Buenos Aires. His imaginative poetry is collected in *Selected Poems: 1923–1967* (1967). His philosophical and literary essays appear in such collections as *Other Inquisitions* (1952). He is known for his original short fiction, e.g., *A Universal History of Infamy* (1935), *Ficciones* (1944), *The Book Of Imaginary Beings* (1957), and *The Book of Sand* (1975).

Borghese [bōrgā'zā], noble Roman family. It produced one pope, Paul V; several cardinals; and many prominent citizens.

Borgia [bōr'jä], Spanish-Italian family whose members included the popes CALIXTUS III and ALEXANDER VI, and Saint Francis Borgia. **Cesare Borgia,** 1476–1507, a son of Pope Alexander VI, was an outstanding figure of the Italian Renaissance. A cardinal by 1493, Cesare resigned after the death (1498) of his elder brother (in whose murder he was probably involved) and entered politics. An ally of LOUIS XII of France, he overran the cities of Romagna. He then lured his chief enemies to a castle, where he had some of them strangled. He hoped to make his position independent of the papacy, but the death of his father and the election of Pope JULIUS II were fatal to his plans. Louis XII turned against him, and Julius demanded the surrender of Cesare's lands. Cesare was imprisoned in Spain, escaped, and found refuge (1506) with the king of Navarre,

for whom he died fighting at Viana. Intelligent, cruel, treacherous, and opportunistic, he has long been considered the model of the Renaissance prince, the prototype of MACHIAVELLI's *Prince.* His sister was **Lucretia Borgia,** 1480–1519. Her first marriage was annulled (1497), and her second husband, Alfonso of Aragón, was murdered (1500) by her brother, Cesare Borgia. She then married (1501) Alfonso d'Este, who became (1505) the duke of Ferrara, and set up a brilliant court. Her beauty and kindness won her much esteem. The stories of her crimes and vices are unfounded, although she is best known for her wicked legend portrayed in dramas and operas.

Borglum, (John) Gutzon (de la Mothe), 1867–1941, American sculptor; b. Idaho. His first commission was a statue of Abraham Lincoln (Capitol, Wash., D.C.). A figurative sculptor, Borglum is famous for the monumental works he designed for, and helped to carve on, mountainsides, especially the enormous busts of four U.S. presidents at MOUNT RUSHMORE NATIONAL MEMORIAL, S.D., begun in 1927.

Boris, rulers of Bulgaria. **Boris I,** d. 907, khan ruler of Bulgaria (852–89), was a Christian convert and introduced Byzantine Christianity into Bulgaria. In 889 he abdicated, entering a monastery. **Boris III,** 1894–1943, czar (1918–43), ruled constitutionally until 1935 and thereafter as a dictator. He joined the Axis in 1940 and died mysteriously soon after visiting HITLER in Berlin.

Boris Godunov: see GODUNOV, BORIS.

Borlaug, Norman Ernest, 1914–, American agronomist; b. Cresco, Iowa. Associated with the Rockefeller Foundation in Mexico from 1944, he headed a team of scientists experimenting with improvement of grains. He won the 1970 Nobel Peace Prize for his efforts to eradicate hunger and build international prosperity. His "green revolution," using improved wheat seed, new types of higher-yield rice, and more efficient use of fertilizers and water, improved food production in many less-developed countries.

Bormann, Martin, 1900–1945, German NAZI leader. In 1942 he became HITLER's private secretary. Although he was rumored to have escaped to Argentina in 1945, his skeleton was unearthed and identified in West Berlin in 1973.

Born, Max, 1882–1970, German physicist. For his statistical interpretation of QUANTUM MECHANICS, he shared the 1954 Nobel Prize in physics. Born was head (1921–33) of the physics department at the Univ. of Göttingen. After Nazi policies forced him to leave Germany, he taught at Cambridge Univ. and the Univ. of Edinburgh before returning to Germany in 1954.

Borneo, island (1985 est. pop. 7,722,000), SE Asia, world's third largest island, c.287,000 sq mi (743,330 sq km), in the Malay Archipelago. It is divided among Indonesia, which holds about 70% of the island (called Kalimantan), Brunei, and the Malaysian states of Sabah and Sarawak. Dense jungles and rain forests cover much of the mountainous island, which reaches a high point of 13,455 ft (4,101 m) at Mt. Kinabalu. The hot, humid climate has a prolonged monsoon season lasting from Nov. to May. DYAKS occupy the sparsely populated interior; Malays predominate in coastal regions. Oil, discovered in 1888, and timber are the chief resources.

Borodin, Aleksandr Porfirevich [bôrôdyēn'], 1833–87, Russian composer. He was one of the group known as The FIVE. His principal works include the SYMPHONIC POEM *In the Steppes of Central Asia* (1880) and the unfinished opera *Prince Igor.*

Boroimhe, Brian: see BRIAN BORU.

boron (B), nonmetallic element, isolated by Sir Humphry DAVY in 1807. As a dark-brown to black amorphous powder, boron is more reactive than its jet-black to silver-gray crystalline metallike form. BORAX and boric acid are common compounds. Boron is used in the shielding material and in some control rods of nuclear reactors and in a light, strong boron fiber and plastic composite material. See ELEMENT (table); PERIODIC TABLE.

Borromini, Francesco, 1599–1677, major Italian BAROQUE architect. His innovations in palace and church architecture were influential in Italy and N Europe. Among his buildings is San Carlo alle Quattro Fontane, Rome, noted for its undulating rhythm of architectural elements within a geometric plan.

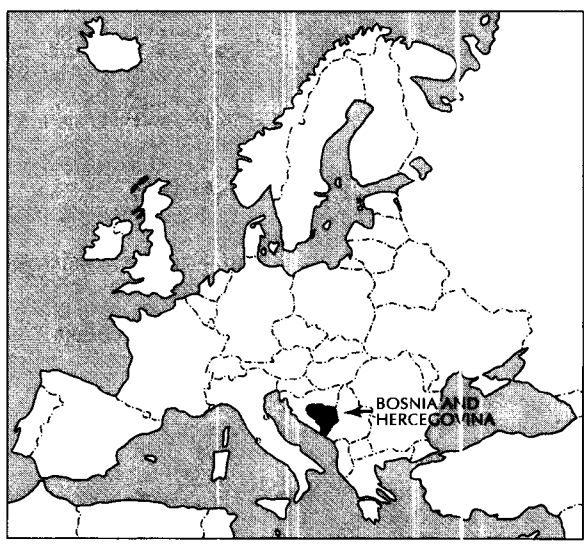
Boru, Brian: see BRIAN BORU.

borzoi, tall, swift HOUND; shoulder height, 26–31 in. (66–81.2 cm); weight, c.85 lb (38.6 kg). Its long, silky coat may be flat, wavy, or curly, and any color (usually white with markings). Developed in Russia in the early 17th cent. to hunt wolves and hares, it is also called a Russian wolfhound.

Bos, Jerom: see BOSCH, HIERONYMUS.

Bosch, Hieronymus, or **Jerom Bos** [bôs], c.1450–1516, Flemish painter. His surname was van Aeken. A great influence on Pieter Brueghel, the Elder (see BRUEGEL, family), and hailed in the 20th cent. as a forerunner of SURREALISM, Bosch had a passion for the grotesque and macabre. His paintings, e.g., *Adoration of the Magi* (Metropolitan Mus.), are filled with bizarre plants animals, and figures suggested perhaps by folk legends or moralizing religious literature. He was a favorite of PHILIP II of Spain, who collected such works as *Garden of Earthly Delights* (Prado) and the *Temptation of St. Anthony* (Lisbon).

Bose, Sir Jagadis Chunder, 1858–1937, Indian physicist and plant physiologist. Professor of physical science (1885–1915) at Presidency College, Calcutta, he is noted for his researches in plant life, especially his comparison of the responses of plant and animal tissue to various stimuli. One of his inventions is the crescograph, a device for measuring plant growth.



Bosnia and Hercegovina [bŏz'neə, hĕrtsəgōvē'nə], country (1991 est. pop. 4,364,000), 19,741 sq mi (51,129 sq km), S Europe, on the Balkan peninsula; formerly a constituent republic of Yugoslavia. The country is bordered by Croatia (SW, W, and N) and Yugoslavia (E and SE) and is almost entirely landlocked except for a narrow, undeveloped outlet to the Adriatic along the Neretva R. Since independence (1992), the nation has been splintered and devastated by ethnic warfare. SARAJEVO is the capital and largest city. Bosnia lies to the north of Hercegovina; both are largely within the Dinaric Alps. Despite rich deposits of lignite and iron, copper, and other ores and extensive hydroelectric resources, the republic was one of the poorer areas of Yugoslavia. About half of the land is forested; one fourth is cultivated, with grains, tobacco, and cotton among the major crops. Bosnia is ethnically diverse, but ethnic fighting since independence has displaced many, especially Bosnian Muslims. About 40% of the population are Bosnian Muslims, 30% are Serbs, and 18% are Croats; all speak Serbo-Croatian. The Serbs largely belong to the Serbian Orthodox Church, and the Croats to the Roman Catholic Church.

History. The region, part of the Roman province of Illyricum, was settled (7th cent.) by the Serbs and was independent by the 12th cent. By the late 14th cent. Bosnia reached the height of its power, but the area fell to the Turks in the late 15th cent. and many Bosnians accepted Islam. Medieval social structures and serfdom persisted into the 19th cent., when a peasant revolt (1875) led to the Russo-Turkish war of 1877–78. Bosnia and Hercegovina were placed (1878) under Austro-Hungarian administration, and Austria

The key to pronunciation appears on page xiii.

annexed the region in 1908. The assassination (1914) of Austrian Archduke FRANCIS FERDINAND by a Serbian nationalist in Sarajevo precipitated WORLD WAR I. Bosnia and Hercegovina were annexed to Serbia in 1918. During WORLD WAR II they were (1941–45) part of the German puppet state of CROATIA. In 1946 they were combined as one of the six constituent republics of Yugoslavia. After Slovenia and Croatia left Yugoslavia (1991), Bosnians voted (1992) for independence, and ethnic warfare erupted. Well-armed Serbs, many from the Yugoslav army, gained control of over two thirds of Bosnia, and Croats seized about half of the remainder. Both established ethnic "republics," and Serbs began exiling, imprisoning, and killing non-Serbs, especially Muslims, under a policy of "ethnic cleansing." Atrocities also occurred in Croat- and Muslim-held areas. Bosnian government forces also fought (1993) Muslim rebels for control of Bihać, a largely Muslim enclave in NW Bosnia; the rebels had signed peace accords with Serb and Croat forces. In 1993, after increased successes by government forces, regular army units from Croatia were reported fighting in Bosnia.

boson, any of a group of ELEMENTARY PARTICLES that have integral values of the quantum mechanical property called spin and are "gregarious" in that an unlimited number of them can exist in the same quantum state. Bosons, which include the PHOTON, gluon, W AND Z PARTICLES and the proposed graviton, carry the fundamental FORCES of nature. Bose-Einstein statistics describe the behavior of systems of bosons. See FERMION, STATISTICAL MECHANICS.

Bosporus, strait, c.20 mi (30 km) long and c.2,100 ft (640 m) wide at its narrowest, separating European and Asian Turkey. The fortified strait connects the Black Sea with the Sea of Marmara. As a part (with the DARDANELLES) of a passage linking the BLACK and MEDITERRANEAN seas, it is a critically important shipping lane for Russia and Ukraine. A bridge (3,524 ft/1,074 m long) spans the Bosporus at Istanbul, near the southern end of the strait.

Boston, city (1990 pop. 574,283; met. area 2,870,911), state capital and seat of Suffolk co., E Mass., on Boston Bay; inc. 1822. The largest city of New England, it is a major financial, government, and educational center, and a leading port. Industries include publishing, food processing, and the manufacture of shoes, textiles, machinery, and electronic equipment. Established by John WINTHROP as the main colony of the MASSACHUSETTS BAY COMPANY in 1630, Boston was an early center of American PURITANISM, with a vigorous intellectual life. A focus of opposition to the British, it was the scene of several actions in the AMERICAN REVOLUTION. The city prospered in the 19th cent., and shipbuilding, commercial, and industrial magnates such as the Cabots, Lowells, and Lodges patronized the arts, making Boston the "Athens of America." The arrival of many immigrants (at first mainly Irish) helped transform Boston into an industrial metropolis with expanded city limits. Today the city cherishes its landmarks, among them Paul REVERE's house, Old North Church, and Faneuil Hall. Boston's great cultural institutions include its Museum of Fine Arts, Symphony Orchestra, Public Library, and Athenaeum. Boston Univ., Northeastern Univ., New England Medical Center, and Harvard Medical School are among the institutions that make Boston world famous as an educational, medical, and research center.

Boston Massacre, 1770, incident prior to the AMERICAN REVOLUTION in which five members of a rioting crowd were killed by British soldiers sent to Boston to maintain order and enforce the TOWNSHEND ACTS.

Boston Tea Party, Boston, Mass., Dec. 16, 1773, a protest against the British tea tax retained after the repeal of the TOWNSHEND ACTS. Angry colonists disguised as Native Americans boarded three tea ships and threw the tea into Boston harbor.

Boston terrier, small, lively NONSPORTING DOG; shoulder height, 14–17 in. (35.6–43.2 cm); weight, 13–25 lb (5.9–11.3 kg). Its short, smooth coat may be brindle or black, with white markings. One of the few breeds native to the U.S., it was developed by cross-breeding in the mid-19th cent.

Boswell, James, 1740–95, Scottish author; b. Edinburgh. The son of a judge, he reluctantly studied law and practiced throughout his life. His true interest was in a literary career and in associating with the great individuals of the time. He met Samuel JOHNSON in 1763 and, having himself achieved fame with his *Account of Corsica* (1768), produced *Journal of a Tour of the Hebrides with Samuel Johnson, LL.D.* (1785). His great work, *The Life of Samuel Johnson, LL.D.* appeared in 1791. Boswell recorded Johnson's conversation so minutely that Johnson is better remembered today for his sayings than for his own literary works. The curious combination of Boswell's own character (he was vainglorious and dissolute) and his genius at biography has led later critics to call him the greatest of all biographers. Masses of Boswell manuscript, discovered in the 20th cent. near Dublin, have enhanced his reputation.

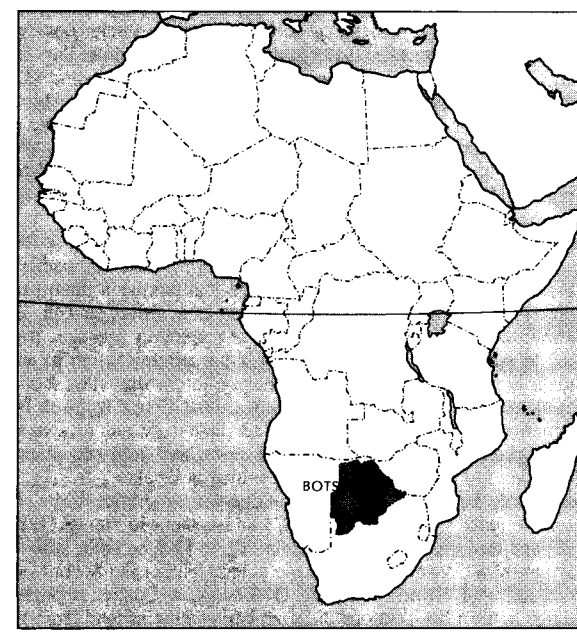
botany, science devoted to the study of plants, a major branch of BIOLOGY. In the 17th cent. the work of LINNAEUS on the CLASSIFICATION of organisms contributed greatly to the growth of the science, and the introduction of the MICROSCOPE marked the beginning of the study of plant anatomy and cells. Modern botany has expanded into all areas of biology, e.g., plant breeding and GENETICS. Practical areas of botanical study include AGRICULTURE, AGRONOMY, FORESTRY, and HORTICULTURE.

Botany Bay, inlet, New South Wales, SE Australia, just S of Sydney. It was visited in 1770 by Capt. James COOK and named for the interesting flora on its shores. Australia's first penal colony, often called Botany Bay, was at Sydney.

Botha, Louis [bō'tə], 1862–1919, South African soldier and statesman. He commanded the Boer troops in the SOUTH AFRICAN WAR (1899–1902). He was prime minister (1907–10) of the Transvaal and, as leader of the Unionist party, prime minister (1910–19) of the Union of SOUTH AFRICA.

Botha, Pieter Willem, 1916–, South African politician, prime minister (1978–84) and president (1984–89). Leader of the National party, he worked for limited reforms in his nation's policy of APARTHEID and continued the creation of BANTUSTANS as homelands for the black population. Botha also served (1965–80) as defense minister.

Bothwell, James Hepburn, 4th **earl of,** 1536?–1578, Scottish nobleman, third husband of MARY QUEEN OF SCOTS. After the murder of her secretary RIZZIO by conspirators, among them her husband, Lord DARNLEY, Mary trusted only Bothwell. Accused of murdering Darnley, Bothwell was acquitted in a rigged trial and married Mary (1567). The Scottish aristocracy attacked him and forced Mary to give him up. He fled to Denmark, where he was imprisoned and died insane.



Botswana [bŏtswä'nə], officially Republic of Botswana, republic (1992 est. pop. 1,292,000), 231,804 sq mi (600,372 sq km), S central Africa, bordered by Namibia (W and N), Zambia (N), Zimba-

bwe (E), and South Africa (S and E). GABORONE is the capital. The terrain is mostly an arid plateau (c.3,000 ft/910 m high) of rolling land, with hills in the east, the KALAHARI Desert in the south and west, and the Okavango Swamp in the northwest. Cattle-raising is the chief agricultural activity, and beef is exported. Crop production is severely hampered by drought and lack of water resources; cotton, peanuts, and sunflowers are the main cash crops. Botswana has vast mineral resources, discovered in the 1960s, and mining has developed rapidly, making Botswana one of the wealthiest S African nations. Diamonds are the principal export, and copper, nickel, asbestos, manganese, and coal are also extracted. Because of its landlocked location, however, the country remains economically dependent on its neighbors, particularly SOUTH AFRICA. The population is mainly Tswana, who speak a Bantu language and are divided into eight major groups. English and Tswana are the official languages. The majority of Botswanans are Christian, but some adhere to traditional beliefs.

History. The region was originally inhabited by the San (Bushmen), who were supplanted by the Tswana in the 18th cent. In the early 1800s Khama, chief of the largest Tswana tribe, curbed expansion by the Zulu and Ndebele tribes into the territory and established a fairly unified state. A new threat arose in the late 19th cent. when, after gold was discovered in the region (1867), neighboring Transvaal sought to annex parts of Botswana. This move was opposed by the British, who took the area under supervision (1885) as a protectorate called Bechuanaland. A British plan to incorporate Bechuanaland into the Union of South Africa was eventually abandoned because of South Africa's apartheid policy, and in 1966, as Botswana, it gained full independence under the leadership of Sir Seretse Khama (grandson of Khama) of the Botswana Democratic party. After his death (1980), he was succeeded as president by Quett Masire, who was last reelected in 1989.

Böttger, Johann Friedrich [böt'gər], 1682–1719, German chemist and originator of Dresden china. He developed various glazes, used gold and silver decoration, and in 1715 perfected white PORCELAIN.

Botticelli, Sandro [bôt"tĭchĕl'lē], c.1444–1510, Florentine RENAISSANCE painter; b. Alessandro di Mariano Filipepi. He was a student of Fra Filippo LIPPI, whose influence can be seen in the delicate coloration of his early work; this later gave way to the more vigorous style of Pollaiuolo (see POLLAIUOLO, family) and VERROCCHIO, e.g., *Portrait of a Young Man* (Uffizi). He became a favorite of the MEDICI and was influenced by their Neoplatonic circle. Botticelli was one of the great colorists and a master of rhythmic line. His enchanting mythological scenes, *Spring, Birth of Venus,* and *Mars and Venus* allude to the triumph of love and reason over brutal instinct. In his last years, his popularity probably declined, and he turned to religious scenes. His piety is evident in the *Nativity* (National Gall., London) and *Last Communion of St. Jerome* (Metropolitan Mus.). In the 19th cent. he was rediscovered by the PRERAPHAELITES.

botulism, acute, often fatal food poisoning from ingestion of food containing toxins produced by *Clostridium botulinum* bacteria. Most cases are caused by canned food that has been improperly processed. The disease causes disturbances in vision, speech, and swallowing and, ultimately, paralysis of respiratory muscles, leading to suffocation. Treatment involves the administration of antitoxin as soon as possible after exposure to contaminated food.

Bouaké, city (1983 est. pop. 275,000), central Côte d'Ivoire. It is a commercial and transportation center linked by rail to ABIDJAN. Farm products are processed in the town, and gold and manganese are found nearby. A variant spelling is Bwake.

Bouchard, Lucien, 1938–, French-Canadian separatist leader. He served under Mulroney as Canada's ambassador to France (1985–88) and environment minister (1989–90). In 1990 he broke with the Progressive Conversatives over the failed Meech Lake Accord (see CANADA) and formed the Bloc Québécois, a Quebec separatist party. In the 1993 elections the party became the second largest in the Canadian parliament.

Boucher, François [bōōshā'], 1703–70, French painter. Boucher's art reflected the spirit of his day: elegant, frivolous, and artificial. A prodigy, he was influenced by WATTEAU and became the most fashionable and prolific artist of his day, producing a vast number of pictures, decorations, tapestry designs, stage settings for ballet and opera, and fine ETCHINGS. His best-known works are brilliant, voluptuous decorations, e.g., those in the Frick Collection (N.Y.C.). FRAGONARD was his pupil.

Boudin, Eugène Louis [bōōdăN'], 1824–98, French painter. His small paintings of Brittany beach scenes are noted for their pervasive clarity and directness. He painted from nature and greatly influenced MONET. Examples of his work are in the Metropolitan Museum.

Bougainville, Louis Antoine de [bōōgăNvēl'], 1729–1811, French navigator. He was an aide-de-camp to Gen. MONTCALM in Canada. From 1767 to 1769 he made a voyage around the world, rediscovering the SOLOMON ISLANDS, the largest of which is named for him. In the AMERICAN REVOLUTION he fought Adm. Hood at Martinique. His *Description of a Voyage around the World* (2 vol., 1771–72) popularized the theories of ROUSSEAU.

Bougainville [bōō'gənvĭl], volcanic island (1981 est. pop. 110,000), c.3,880 sq mi (10,050 sq km), SW Pacific, largest of the SOLOMON ISLANDS but politically part of PAPUA NEW GUINEA. Rugged and forested, it produces copra, rubber, copper, coffee, and cocoa. French navigator Louis de Bougainville explored (1768) the island, which became (1884) German, then (1914) Australian, and was held by Japan in World War II. A bloody secessionist uprising, begun in 1989, continued into the 1990s.

bougainvillea or **bougainvillaea,** chiefly tropical plant (genus *Bougainvillaea*) of the four-o'clock family. Bougainvilleas are woody vines with brilliant purple or red bracts.

Boulanger, Nadia, 1887–1979, French conductor and musician. As the teacher of such American composers as Aaron COPLAND and Virgil THOMSON, she profoundly influenced American music. She was noted for her teaching of composition and for her conducting of choral works.

Boulder, city (1990 pop. 83,312), seat of Boulder co., N central Colo.; inc. 1871. It is a major ROCKY MOUNTAIN resort, and the site of the Univ. of Colo. and the National Center for Atmospheric Research. Manufactures include aircraft and electronic equipment.

Boulez, Pierre [bōōlĕz'], 1925–, French composer and conductor. His works apply the techniques of SERIAL MUSIC not only to melody and COUNTERPOINT but also to RHYTHM and dynamics. They include *Pli selon pli* (1957–62) and *Mémoriales* (1973–75). From 1971 to 1977 he was music director of the New York Philharmonic (see ORCHESTRA, table). He headed (1975–92) the Institute for Research and Coordination of Acoustics and Music at the BEAUBORG, Paris, where he developed equipment for the electronic manipulation of musical sound.

Boulogne, Jean: see BOLOGNA, GIOVANNI.

Boult, Sir Adrian, 1889–1983, English conductor. He led the BBC Symphony Orchestra (1930–50) and the London Philharmonic (1950–57). His handbook on the technique of conducting appeared in 1968.

Boumedienne, Houari [bōōmĕdēĕn'], 1932?–78, Algerian president and prime minister (1965–78). He came to power in a coup that toppled Ahmed BEN BELLA. His government assumed a rigorous anti-Israeli stance.

Bounty, British naval ship, scene of a noted mutiny (1789) while on a trading voyage in the Pacific. Capt. BLIGH and 18 crew members were set adrift in a small boat; they sailed 3,618 mi (5,822 km) to TIMOR. Some of the mutineers were captured; others settled on PITCAIRN ISLAND.

Bourassa, Henri [bōōräsä'], 1868–1952, Canadian politician and publisher. He founded the opposition Nationalist party in QUEBEC, which caused the fall (1911) of the Liberal government of Sir Wilfrid LAURIER. He also founded (1910) and edited a Montreal daily newspaper, *Le Devoir.*

Bourassa, Robert, 1933–, Canadian political leader. Elected (1966) to the Quebec legislature, he became (1970) leader of the Quebec Liberal party and was provincial premier until 1976. Returning to politics in 1983, he again served as Quebec's premier (1986–94), advocating the province's autonomy within Canada.

Bourbaki, Nicolas, collective pseudonym of a group of French mathematicians who in 1939 began publishing a highly influential general survey of mathematics. The writers, whose identities remain secret, have attempted to develop mathematics from a few

broad axioms and have divided it into general structural categories, rather than adhering to traditional mathematical classifications.

Bourbon, royal family that ruled in France, Spain, the TWO SICILIES, and Parma; a cadet branch of the CAPETIANS. It takes its name from the now ruined castle of Bourbon in France. In 1272 Robert of Clermont, sixth son of LOUIS IX of France, married the heiress of Bourbon. His son Louis was created (1327) 1st duc de Bourbon. A younger son of the first duke founded the line of Bourbon-Vendôme. His descendant Antoine de Bourbon, 1518–62, duke of Vendôme, became king of Navarre by marrying (1548) Jeanne d'Albret, later queen of NAVARRE. From his brother Louis descend the houses of CONDÉ and Conti. Antoine's son became (1589) the first Bourbon king of France as HENRY IV. His direct descendants ruled France (except from 1792 to 1814) until 1830, when CHARLES X was deposed, and died out in 1883 with Henri, comte de Chambord. The younger branch of Bourbon-Orléans gave France King LOUIS PHILIPPE. The house of **Bourbon-Spain** began in 1700 when LOUIS XIV's grandson PHILIP V ascended the Spanish throne. The succession in Spain was contested (19th cent.) by the CARLISTS against ISABELLA II. ALFONSO XIII was deposed in 1931, but the monarchy was restored in 1975 with his grandson JUAN CARLOS I. The house of **Bourbon-Sicily,** sprung from the Spanish line, was founded (1759) by Ferdinand I of the Two Sicilies and ceased to rule when Francis II was deposed (1860). The house of **Bourbon-Parma** was founded (1748) in the duchy of Parma by a younger son of Philip V of Spain. Robert, the fifth duke in the line, was deposed in 1859.

bourbon: see WHISKEY.

Bourdelle, Émile Antoine [bōōrdĕl'], 1861–1929, French sculptor. He studied with RODIN and achieved his greatest success with Greek- and Gothic-inspired heroic monuments, e.g., *Hercules* (cast; Metropolitan Mus.), and with portrait heads.

bourgeoisie, name given in Europe to the middle class. Emerging among the merchants and craftsmen of medieval cities, it played a major role in the 16th cent. in uprooting vestiges of FEUDALISM and from the late 18th cent. in spearheading democratic reform. Following the INDUSTRIAL REVOLUTION, the high bourgeoisie (industrialists and bankers) came to be distinguished from the petty bourgeoisie (tradespeople and white-collar workers). From the time of MOLIÈRE, the bourgeoisie was ridiculed by some for its preoccupation with status and material gain. In Karl MARX's theory of class struggle, it was seen as an ultimately reactionary force trying to prevent the ascendancy of the wage-earning proletariat.

Bourguiba, Habib, 1903–, president of TUNISIA (1957–87). As leader of Tunisia's nationalist movement after 1934, he was several times imprisoned and forced to leave the country. He became premier when Tunisia achieved independence in 1956. A year later he deposed the bey and became president.

Bourke-White, Margaret, 1904–71, American photojournalist; b. N.Y.C. On the staff of *Fortune*, *Life*, and *Time*, she produced notable photographs of World War II, the rural South during the Great Depression, mining in South Africa, and guerrilla warfare in Korea, as well as portraits of world leaders.

Bournonville, Auguste [bōōrnôNvēl'], 1805–79, Danish ballet dancer, choreographer, and teacher. He studied in Copenhagen and Paris before joining (1828) the ROYAL DANISH BALLET. As a soloist, he developed a distinctive style. He choreographed over 50 works.

bourse: see STOCK EXCHANGE.

Boutros-Ghali, Boutros, 1922–, Egyptian government official and diplomat, secretary general of the UNITED NATIONS (1992–). A professor of international law at Cairo Univ. (1949–79), he became Egyptian minister of state for foreign affairs in 1977 and was part of the Egyptian delegation that negotiated (1978) the CAMP DAVID ACCORDS with Israel. He also served as Egypt's delegate to the UN and other international bodies and conferences. In May 1991, a few months before his election as UN secretary general, he was appointed Egypt's deputy prime minister for foreign affairs. The first African and Arab head of the UN, Boutros-Ghali has moved to reorganize and streamline the Secretariat (see UNITED NATIONS, table 2) and strengthen the UN's peacekeeping role.

Bovet, Daniele [bōvā'], 1907–92, Italian pharmacologist; b. Switzerland. He was awarded the 1957 Nobel Prize in physiology or medicine for work in developing antihistamines, sulfa drugs, and curare derivatives and other muscle relaxants for use in surgery. He also studied the effects of mental illness on the brain's chemistry.

Bowdler, Thomas, 1754–1825, English editor. His prudish textual expurgations, especially of Shakespeare and the Bible, gave rise to the term *bowdlerize*.

Bowen, Elizabeth, 1899–1973, Anglo-Irish author; b. Dublin. Her complex psychological novels include *The Hotel* (1927), *The House in Paris* (1936), *The Death of the Heart* (1938), and *The Heat of the Day* (1949). She also wrote short stories and reminiscences.

Bowie, James, c.1796–1836, Texas hero; b. Logan co., Ky. He was a leader of the Americans in TEXAS who opposed Mexican rule. A colonel in the Texas Revolution (1835–36), he died at the ALAMO. Legend credits him with inventing the bowie knife.

Bowles, Paul, 1910–, American author; b. N.Y.C. Originally a composer, he is best known for his fiction. A longtime resident of Morocco, Bowles often records the collision between the civilized and the primitive. Among his many works are the novel *The Sheltering Sky* (1949) and the short-story collection *The Delicate Prey* (1950). His wife, **Jane Auer Bowles,** 1917–73, b. N.Y.C., was also a writer. Her original, idiosyncratic works include *Two Serious Ladies* (1943), a novel, and *In the Summer House* (1954), a play.

bowling, indoor sport, also called **tenpins,** in which a ball is rolled at 10 maple pins down an alley of polished wood. A regulation alley is 41 to 42 in. (104.1 to 106.7 cm) wide and 60 ft (18.3 m) from the foul line to the head pin. A ball, usually weighing 16 lb (7.26 kg) and having three finger holes, is rolled at the pins, set up in a triangular array. Scoring is based on the number of pins knocked down; a perfect game is 300 points. Bowling originated in ancient Germany and was introduced in America by the Dutch. The American Bowling Congress (founded 1895) and the Women's International Bowling Congress (1916) hold yearly championships. Duck pins, candle pins, and barrel pins are similar games played with much smaller balls and pins.

Bowman, Isaiah, 1878–1950, American geographer; b. Canada. He taught at Yale (1905–15), was director of the American Geographical Society (1915–35), and was president of Johns Hopkins Univ. (1935–48). He was an adviser to Pres. Wilson at Versailles and an adviser to the Dept. of State in World War II. One of the great modern authorities on political geography, he wrote on many subjects, including the Andes, the Atacama desert, and forest physiography.

box, common name for the Buxaceae, a family of trees and shrubs with leathery green leaves, native to tropical and subtropical regions of the Old World and Central America. Boxes (genus *Buxus*) are widely cultivated as hedge plants and for their close-grained, strong hardwood. Boxwood takes a high polish and is used for wood engraving, carving, and turning, and for making musical instruments.

boxer, medium-sized, muscular WORKING DOG; shoulder height, 21–25 in. (53.3–63.5 cm); weight, 60–75 lb (27.2–34 kg). Its short, smooth coat is fawn or brindle, often with white markings. First used for fighting, the breed originated in 16th-cent. Europe and was perfected in 19th-cent. Germany.

Boxer Uprising, 1898–1900, antiforeign movement in China. By the late 19th cent. the West and Japan had wide interests in China. The dowager empress TZ'U HSI favored expelling the foreigners and encouraged an antiforeign society called I Ho Ch'uan [Chinese, = righteous, harmonious fists] or, in English, the Boxers. The movement grew menacing in 1899, and in June 1900 some 140,000 Boxers occupied Beijing and besieged Westerners and Chinese Christians there. The siege was lifted in August by an international force of British, French, Russian, U.S., German, and Japanese troops. In 1901 China was compelled to pay an indemnity of $333 million, to amend commercial treaties in favor of foreign nations, and to allow foreign troops to be posted in Beijing.

boxing, sport of fighting with fists, also called pugilism and prizefighting. Boxers compete in a roped-off area, or ring, about 20 ft (6.1 m) square, and fight for a prescribed number of 3-min rounds, separated by 1-min rest periods. Bouts may be decided by a knockout, when a floored contestant is unable to rise within 10 sec, or

by the decision of the officials. Professional boxers are divided into eight weight classes, ranging from flyweight (under 112 lb/50.81 kg) to heavyweight (over 175 lb/79.38 kg). One of the oldest forms of competition known, boxing died out after the fall of Rome but was revived in England in the early 18th cent. Modern boxing began with the code of rules introduced (1865) by the marquess of QUEENSBERRY, which called for the use of gloves. In the U.S., boxing was illegal for many years before New York became the first state to legalize it (1896). Today professional boxing is regulated in each state by an athletic or boxing commission. Boxing has been an Olympic sport since 1904.

boyars, upper nobility in Russia from the 10th to the 17th cent. They occupied the highest state offices, advising the princes of Kiev through a council. Although they retained their influence after power shifted (14th–15th cent.) to Moscow, it was gradually eroded; PETER I abolished the rank.

Boyce, William, c.1710–1779, English composer. The major English-born composer of his day, he wrote symphonies, stage works, and much vocal music. His *Cathedral Music* (3 vol., 1760–68) is a compilation of English church music.

Boyd, Louise Arner, 1887–1972, American arctic explorer; b. San Rafael, Calif. She led a series of scientific explorations on the east coast of GREENLAND (1933–41). In 1955 she became the first woman to fly over the NORTH POLE.

Boyd Orr, John Boyd Orr, 1st **Baron,** 1880–1971, British nutritionist and agronomist. He made notable contributions to the science of nutrition and to the solution of world food problems, winning the 1949 Nobel Peace Prize for advocating a world food policy based on need rather than trade interests. He was director general (1946–47) of the UN Food and Agriculture Organization.

Boyle, Robert, 1627–91, Anglo-Irish physicist and chemist. Often referred to as the father of modern chemistry, he separated chemistry from alchemy and gave the first precise definitions of a chemical element, a chemical reaction, and chemical analysis. He invented a vacuum pump and used it in the discovery (1662) of what is known as **Boyle's law** (see GAS LAWS). His diverse experimental and theoretical work supplemented Sir Isaac NEWTON'S achievements in establishing the dominance of mechanistic theory.

Boy Scouts, organization of boys from 7 to 18 years of age, founded (1908) in Great Britain by Sir Robert BADEN-POWELL, incorporated 1910 in the U.S. Activities of the Boy Scouts aim at mental, moral, and physical development, stressing outdoor skills and training in citizenship and lifesaving. The basic scout unit is a troop of about 15 boys, under the leadership of an adult scoutmaster. There is also a coeducational program for young adults between the ages of 14 and 21. In 1993 there were some 4.1 million Boy Scouts in the U.S. The Supreme Court affirmed the organization's right to limit membership to those who believe in God in 1993. See also GIRL SCOUTS.

boysenberry: see BRAMBLE.

Bozeman Trail, a shortcut through Native American lands from the East to the goldfields of Colorado and Montana, made by John M. Bozeman in 1862–63. The trail was used by a few parties, but after the Fetterman Massacre (1866) it was abandoned.

Br, chemical symbol of the element BROMINE.

Bradbury, Ray, 1920–, American science fiction writer; b. Waukegan, Ill. His fiction skillfully combines poetic fantasy with criticism of society and technology. His best-known works include *The Martian Chronicles* (1950), a short story collection, and the novel *Fahrenheit 451* (1953).

Braddock, Edward, 1695–1755, British general in the FRENCH AND INDIAN WARS. While on an expedition (1755) to take Fort Duquesne from the French, he was set upon by a force of some 900 French and Native Americans at the Monongahela R. Many of his troops bolted; more than half were killed, and he was mortally wounded.

Bradford, William, 1590–1657, governor of Plymouth Colony; b. England. He succeeded John CARVER as governor in 1621 and was reelected 30 times. He was largely responsible for the success of the colony. His *History of Plymouth Plantation* (first published 1856) is famous.

Bradford, William, 1663–1752, English printer in the American colonies. He emigrated (1685) and set up the first press in Philadelphia. Moving to New York City (c.1693), he became royal printer, and issued some 400 items over 50 years, including the first American BOOK OF COMMON PRAYER (1710). In 1725 he began the *Gazette,* the first New York newspaper. His son, **Andrew Bradford,** 1686–1742, b. Philadelphia, established his own press in 1712. In 1719 he began the *American Weekly Mercury,* the first Pennsylvania newspaper. Imprisoned for political publishing, he defended himself, establishing a precedent for ZENGER. **William Bradford,** 1722–91, grandson of William and nephew of Andrew, founded in Philadelphia the anti-British *Weekly Advertiser,* and became a leader of the SONS OF LIBERTY and printer to the first CONTINENTAL CONGRESS.

Bradford, city (1991 pop. 457,344), West Yorkshire, N central England. A center of the worsted industry since the Middle Ages, Bradford now also produces synthetic fabrics, machinery, automobiles, and other manufactures.

Bradley, Francis Herbert, 1846–1924, English philosopher. His metaphysics was influenced by HEGEL. In *Appearance and Reality* (1893) he held that IDEALISM, in which the world of appearance is characterized by apparent contradictions, is opposed to the absolute, in which all contradictions are transcended.

Bradley, James, 1693–1762, English astronomer. He discovered the ABERRATION OF STARLIGHT (announced in 1729) and the NUTATION, or "nodding," of the earth's axis (announced in 1748). Bradley became astronomer royal and director of the Royal Greenwich Observatory in 1742.

Bradley, Omar Nelson, 1893–1981, U.S. general; b. Clark, Mo. During WORLD WAR II, he led the U.S. 1st Army in the invasion of Normandy (1944). He was chairman (1949–53) of the Joint Chiefs of Staff and became general of the army in 1950.

Bradley, Tom (Thomas Bradley), 1917–, African-American politician; b. Calvert, Tex. A former police officer and a lawyer, he served (1963–73) on the Los Angeles city council. In 1973 he was elected mayor of Los Angeles, becoming the city's first African-American mayor. A liberal Democrat, he was reelected four times and served until 1993. He ran unsuccessfully for governor of California in 1982 and 1986.

Bradley, William (Bill), 1943–, U.S. politician; b. Crystal City, Mo. After a successful basketball career with the New York Knicks (1967–77), he was elected (1978) Democratic senator from New Jersey. He actively supported passage of the tax reform act of 1986.

Bradstreet, Anne (Dudley), c.1612–1672, American poet; b. Northampton, England; came to Massachusetts with her father and husband, both later governors of the colony. The first important woman author in America, she is known for poems that, while derivative and formal, are often realistic and genuine. Her volumes of verse include *The Tenth Muse Lately Sprung Up in America* (1650) and *Several Poems* (1678).

Brady, Diamond Jim (James Buchanan Brady), 1856–1917, American financier; b. N.Y.C. After amassing a fortune selling railroad supplies, he collected diamonds and other jewels and became famous for his lavish life-style. He funded (1912) the Brady Urological Institute at Johns Hopkins Hospital (Baltimore).

Brady, Mathew B., c.1823–1896, American photographer; b. Warren co., N.Y. Brady opened his New York City studio in 1844 and gained widespread fame as a portraitist. He photographed Pres. LINCOLN often and produced an invaluable record of the CIVIL WAR, now in the Library of Congress.

Braga, Teófilo, 1843–1924, Portuguese intellectual and political leader. His teachings and writings, e.g., his general history of Portuguese literature (10 vol., 1870–71), exerted a great influence on Portuguese intellectual life. A republican and anticlericalist, he was the first president of the new republic of Portugal (1910–11; 1915).

Braganza [brəgän'zä], royal house that ruled PORTUGAL (1640–1910) and BRAZIL (1822–89). The line was descended from Alfonso, the natural son of JOHN I, and its first king was JOHN IV. The family's Brazilian rulers were PEDRO I and his son, PEDRO II.

Bragg, Braxton, 1817–76, Confederate general in the U.S. CIVIL WAR; b. Warrenton, N.C. As commander of the Army of Tennessee, he tried unsuccessfully (1862) to invade Kentucky. In the CHATTANOOGA CAMPAIGN, he was defeated (1863) by Gen. GRANT. He then became military adviser to Jefferson DAVIS.

Bragg, Sir William Henry, 1862–1942, English physicist. He was

Matthew Brady photo of Union naval officers in the Civil War

on the faculties of the Univ. of Adelaide, Australia, the Univ. of Leeds, and the Univ. of London and director from 1923 of the Royal Institution's research laboratory. With his son, **Sir William Lawrence Bragg,** 1890–1971, he shared the 1915 Nobel Prize in physics for studies, with the X-ray spectrometer, of X-ray spectra and of crystal structure. The younger Bragg was professor of physics at Victoria Univ. (Manchester) and Cambridge and was director (1938–53) of the Cavendish Laboratory at Cambridge.

Brahe, Tycho [brä], 1546–1601, Danish astronomer. His exact observations of the planets were the basis for KEPLER'S LAWS of planetary motion. Studies of the moon's motion and of a supernova (1572) and improvements of instruments were among his contributions. Brahe never fully accepted the COPERNICAN SYSTEM, compromising between that and the PTOLEMAIC SYSTEM. In his system, the earth was the immobile body around which the sun revolved, and the five planets then known revolved around the sun.

Brahma [brä'mə], one of the supreme gods of HINDUISM; in the Hindu trinity he is the creator (see also SHIVA; VISHNU).

Brahman or **Brahma,** in VEDANTA, the ultimate reality or Self from which the world has come into being. See HINDUISM.

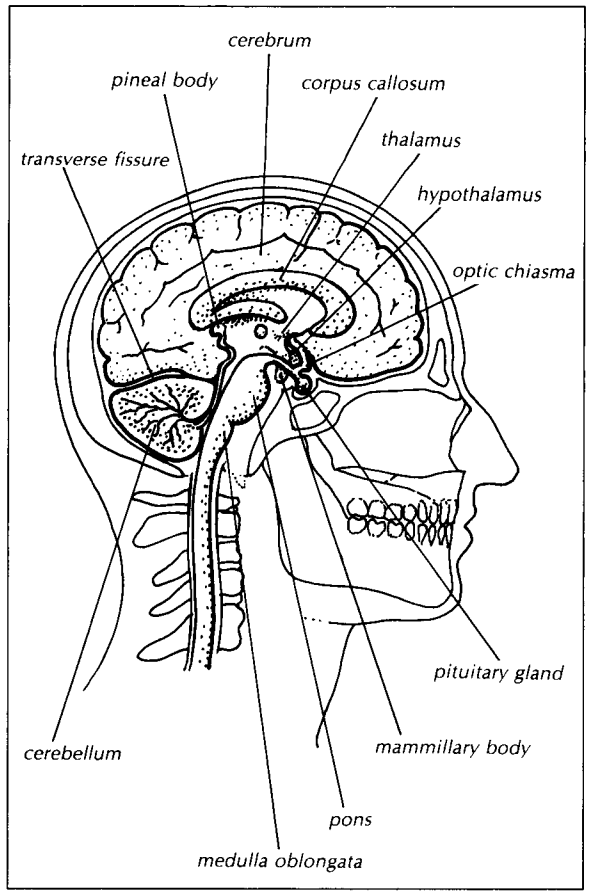
Brahman or **Brahmin,** member of the highest, or priestly, caste of the Hindus; see HINDUISM.

Brahmaputra, major river of S Asia, flowing c.1,800 mi (2,900 km) from the Kailas range of the Himalayas to join the GANGES R. at a vast delta on the Bay of BENGAL. It is called Yarlung Zangbo in Tibet (where it forms the principal river valley), the Brahmaputra in Assam (NE India), and the Jamuna in Bangladesh. The river's lower course is sacred to Hindus. Large craft navigate the river c.800 mi (1,290 km) upstream.

Brahms, Johannes [brämz], 1833–97, German composer, ranked among the foremost masters. He earned a living in Vienna as a moderately successful composer, incorporating the romantic impulse with classical spirit. His conservative style sparked controversy between his supporters (among them Robert and Clara SCHUMANN) and those of the dramatic romantic style of LISZT and Richard WAGNER. His four SYMPHONIES are considered among the greatest in symphonic music. Other well-known works are the *German Requiem* (1866), the Violin Concerto in D (1878), and the Piano Concerto in B Flat (1878–81). He composed in almost every genre except opera, devoting special attention to chamber music and song. His LIEDER are worldwide favorites.

Brahui, Dravidian language of Baluchistan. See LANGUAGE (table).

Braille, Louis, 1809?–1852, French inventor of the Braille system of printing and writing for the blind. Blind from an accident at age three, he attended and later taught at the Institution des Jeunes Aveugles, Paris. He evolved a system of writing with points based on Charles Barbier's method, though much simpler. The **Braille system** consists of six raised points used in 63 possible combinations; it is in use, in modified form, for printing, writing, and musical notation.



Brain

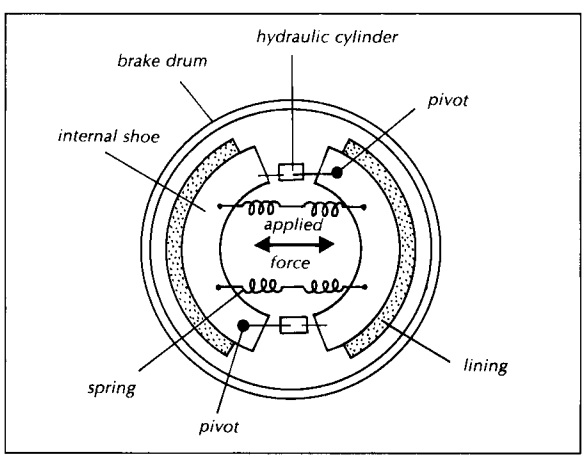
brain, supervisory center of the NERVOUS SYSTEM in all vertebrates. The brain controls both conscious behavior (e.g., walking and thinking) and most involuntary behavior (e.g., heartbeat and breathing). In higher animals, it is also the site of emotions, memory, self-awareness, and thought. It functions by receiving information via nerve cells (neurons) from every part of the body, evaluating the data, and then sending directives to muscles and glands or simply storing the information. Information, in the form of electrochem cal signals, moves through complex brain circuits, which are networks of the billions of nerve cells in the nervous system. A single neuron may receive information from as many as 1,000 other neurons. Anatomically, the brain occupies the skull cavity (cranium) and is enveloped by three protective membranes (meninges). The adult brain weighs 2¼ to 3¼ lb (1–1.5 kg). It has several parts, each with a loosely associated function. The *brainstem* (hindbrain), monitoring involuntary activity (e.g., breathing), and the *cerebellum,* coordinating muscular movements and posture, are together the basic machinery for survival and reproduction. The *forebrain,* composed of the limbic system and cerebral cortex, regulates higher functions. The limbic system (including the thalamus, hypothalamus, pituitary, amygdala and hippocampus, and olfactory cortex) is associated with vivid emotions, memory, sexuality, and smell. The forebrain's cerebral cortex, in the uppermost portion of the skull, has some areas concerned with muscle control and the senses and others concerned with language and anticipation of action. The cerebral cortex is split into two hemispheres, each controlling the side of the body opposite to

it. In addition, the right hemisphere is associated with perception of melody, nonverbal visual patterns, and emotion, while the left hemisphere is associated with verbal skills. Brain function is monitored by ELECTROENCEPHALOGRAPHY.

Braine, John, 1922–86, English author. His first novel, *Room at the Top* (1957), was a bitter analysis of class structure in an English factory town. His other works include *Writing a Novel* (1974).

Brain Trust, an academic group of close advisers to Franklin Delano ROOSEVELT as N.Y. governor and as U.S. president. His advisers on the NEW DEAL included Columbia professors Raymond Moley, Adolf A. Berle, Jr., and Rexford G. Tugwell.

brake, device used to slow or stop the motion of a mechanism or vehicle. Friction brakes, the most common kind, operate on the principle that friction can be used to convert the mechanical energy of a moving object into heat energy, which is absorbed by the brake. Friction brakes consist of a rotating part—such as a wheel, axle, disk, or brake drum—and a stationary part that is pressed against the rotating part to slow it or stop it. The stationary part usually has a lining, called a brake lining, that can generate a great amount of friction yet give long wear. The simplest brake form is the single-block brake, a wooden block shaped to fit against the rim of a wheel or drum. In disk brakes, two blocks press against either side of a disk that rotates with the wheel. Drum brakes have two semicircular brake shoes inside a rotating brake drum; when actuated, they press against the inner wall of the drum. Automobiles use hydraulic pressure to power disk and drum brakes (see HYDRAULIC MACHINERY). Additional braking pressure may be supplied by a "power" brake, which utilizes the vacuum created within the running engine to hold a brake shoe away from a drum. The shoe presses against the drum when the vacuum is destroyed. An antilock braking system (ABS) uses sensors to identify when a wheel is locking and then applies and releases the brake automatically several times per second to prevent lockup. ABS can prevent skids, permitting controlled stops, and decreases the amount of time and distance needed to stop a car. The air brake, invented (1868) by George WESTINGHOUSE, uses compressed air to power block brakes on trains.



Shoe brake

Bramante, Donato, 1444–1514, Italian architect and painter. His buildings in Rome are the most characteristic examples of High Renaissance style. He favored central plans and a sense of noble severity. He designed much of Santa Maria presso San Satiro, Milan, painting its choir in perspective to give the illusion of depth. From 1499 he was in Rome, where his works include the Tempietto in the courtyard of San Pietro in Montorio; the Belvedere courtyard at the Vatican; and the original central plan for St. Peter's.

bramble, plants (genus *Rubus*) of the ROSE family, with representatives worldwide. Members include the blackberries, raspberries, loganberries, boysenberries, and dewberries. The plants are typically shrubs with prickly stems (canes) and edible fruits that botanically are not berries but aggregates of drupelets (see FRUIT). The underground parts of brambles are perennial and the canes biennial; only second-year canes bear flowers and fruits. Berries are grown commercially for sale as fresh, frozen, and canned fruit, and for use in preserves, beverages, and liqueurs. Other thorny shrubs are also called brambles.

Brampton, town (1991 pop. 234,445), S Ontario, Canada, part of the regional municipality of Peel (1991 pop. 732,798). It is one of Canada's chief automobile-producing centers.

bran, outer coat of cereal GRAINS such as wheat, rye, and corn. Various brans are used as food and livestock feed, and are important in dyeing and calico printing.

Brancusi, Constantin [brănkyo͞o'zē], 1876–1957, Romanian sculptor. The radical, economical style of his abstract sculptures, e.g., *The Kiss* (1908), *Sleeping Muse* (1910), and the portrait of Mlle Pogany (1923; Musée national d'art moderne, Paris), caused much controversy. *Bird in Space* (1919; Mus. Mod. Art, N.Y.C.) exemplifies his simple forms and organic, symbolic characterization.

Brandeis, Louis Dembitz, 1856–1941, associate justice of the U.S. SUPREME COURT (1916–39); b. Louisville, Ky.; LL.B., Harvard Univ. (1877). A Boston public interest attorney, he revolutionized legal practice by introducing sociological and economic facts—the "Brandeis brief"—in his arguments before the Supreme Court in *Muller* v. *Oregon* (1908). An enemy of industrial and financial monopoly, he formulated the economic doctrine of Woodrow Wilson's New Freedom. He earned a high reputation for judicial liberalism, and after 1933 he was one of the few justices who voted to uphold most of the NEW DEAL legislation.

Brandenburg, state (1990 est. pop. 2,640,000), c.10,400 sq mi (26,940 sq km), E Germany. POTSDAM is the capital. The city of BERLIN is within, but not administratively a part of, Brandenburg. A Slavic principality, it was acquired (12th cent.) by the German margrave Albert the Bear and was later ruled by electors of the HOLY ROMAN EMPIRE. In 1417 it passed to the HOHENZOLLERN family, who added (1618) the duchy of Prussia (later EAST PRUSSIA) to their holdings. The later history of Brandenburg is that of PRUSSIA. Brandenburg was (1949–90) part of East Germany and was dissolved from 1952 to 1990, when it became a state of reunified Germany.

Brandes, Georg Morris Cohen [brän'dəs], 1842–1927, Danish literary critic. He exposed Scandinavia to contemporary European thought. A disciple of TAINE and an opponent of ROMANTICISM, he helped direct Scandinavian literature toward REALISM and social consciousness. A major work is *Main Currents in Nineteenth-Century Literature* (6 vol., 1872–90).

Brando, Marlon, 1924–, American film actor; b. Omaha, Nebr. He is noted for the naturalism of his acting. His films include *A Streetcar Named Desire* (1952), *On the Waterfront* (1954; Academy Award), *The Godfather* (1972; Academy Award), *Apocalypse Now* (1979), and *A Dry White Season* (1988).

Brandt, Willy, 1913–92, German political leader; b. Herbert Ernst Karl Frahm. A Social Democrat, he opposed HITLER and fled (1933) to Norway. Returning after World War II, he was elected mayor of West Berlin (1957–66) and was (1966–69) West German foreign minister. He became chancellor of West Germany in 1969 and instituted peace talks with Eastern European countries, including East Germany. He was awarded the 1971 Nobel Peace Prize. Brandt resigned in 1974 after an East German spy was discovered within his administration.

brandy, strong alcoholic spirit distilled from wine. Manufactured in many countries, brandy is most notable in the form of cognac, made from white grapes in the Charente district of France. Most fine brandies are distilled in pot stills, blended and flavored, and stored in casks (preferably oak) to mellow. Brandies are also made from fruits other than the grape, such as plum (slivovitz) or peach.

Brandywine, battle of the, in the AMERICAN REVOLUTION, fought Sept. 11, 1777, along the Brandywine Creek in SE Pennsylvania, between Sir William Howe (see under HOWE, RICHARD HOWE, EARL) and Gen. WASHINGTON. Howe's strategy of attacking the American right flank forced Washington to retreat, and the advancing British took Philadelphia.

Branson, city (1990 pop. 3,706), Taney co., SW Mo.; inc. 1904. Primarily residential, the city has over 30 theaters that present

country music and draw millions of tourists annually. Nearby is the College of the Ozarks.

Brant, Joseph, or **Thayendanegea,** 1742–1807, influential Mohawk (see IROQUOIS CONFEDERACY) chief who bound Native Americans to the British side in the AMERICAN REVOLUTION. He fought at Oriskany (1777) in the SARATOGA CAMPAIGN and joined Walter Butler in the Cherry Valley Massacre (1778). After the war he failed to settle Native American land claims in the U.S. but gained land and subsidies for Mohawks in Canada. An educated man and a Christian, Brant translated the BOOK OF COMMON PRAYER and the Gospel of MARK into Mohawk.

Braque, Georges [bräk], 1882–1963, French painter. Among the developers of FAUVISM, he later met PICASSO, and the two explored form and structure, which in turn led to CUBISM. *Nude* (1907–8; Cuttoli Coll., Paris), exemplifies the analytical stage of that movement, with its orderly decomposing of objects. After leading the way to COLLAGE, he produced works, e.g., *The Table* (Pulitzer Coll., St. Louis), that are more curvilinear in style.

Brasília, city and federal district (1990 est. pop. 1,803,000), E central Brazil, capital of Brazil. One of the world's newer cities, it was laid out (1957) in the shape of an airplane by the Brazilian architect Lúcio Costa and replaced RIO DE JANEIRO as capital in 1960. The sparsely settled region is dominated by ultramodern public buildings designed by Oscar NIEMEYER. Extensive residential developments were built in the 1960s, and highways linking Brasília with the major cities of southern and central Brazil were completed in 1982.

Braşov [bräshov'], city (1989 est. pop. 353,000), central Romania, in Transylvania, at the foot of the Transylvanian Alps. It is an industrial center known for transport vehicles, chemicals, and textiles, and a winter sports center. Founded in the 13th cent., Braşov was ceded to Romania by Hungary in 1920. It has several old churches and the remains of a 17th-cent. citadel.

brass, ALLOY having COPPER (55% to 90%) and ZINC (10% to 45%) as its essential components. Its properties vary with the proportion of copper and zinc and with the addition of small amounts of other elements. Cartridge brass is used for cartridge cases, plumbing and lighting fixtures, rivets, screws, and springs. Aluminum brass has greater resistance to corrosion than ordinary brass. Brass containing tin (naval brass) resists seawater corrosion. Brass can be forged or hammered into various shapes, rolled into thin sheets, drawn into wires, and machined and cast. See also SOLDER.

Bratislava, Ger. *Pressburg,* Hung. *Pozsony,* city (1990 est. pop. 443,000), SW Slovakia, on the Danube R. near the Austrian and Hungarian borders. The capital and largest city of SLOVAKIA, it is a major Danubian port, with textile, chemical, and armament industries. A Roman outpost by the 1st cent. A.D., it was later ruled (9th cent.) by MORAVIA. From 1541 to 1784 it was the capital of Hungary. It became part of Czechoslovakia in 1918 and capital of an independent Slovakia in 1993. Landmarks include several 13th-cent. buildings, e.g., St. Martin's Cathedral.

Braudel, Fernand, 1902–85, French historian. He studied under Lucien Febvre and was a founder of the *Annales* school of historiography. As a German prisoner-of-war during World War II, he wrote his monumental *The Mediterranean and the Mediterranean World in the Age of Philip II* (1949). After the war, he was professor at the Collège de France in Paris, (1949–72), editor of the journal *Annales*, a founder (1963) of the Maison des Sciences de l'Homme, and president of the VIth Section of the École des Hautes Études (1952–56).

Braun, Eva, 1912–45, mistress and later wife of German dictator Adolf HITLER. She entered Hitler's household in 1936, but they were married just a few days before their double suicide. She had no influence on the Nazi government.

Brauwer, Adriaen: see BROUWER, ADRIAEN.

Brazil [brəzil'], Port. *Brasil,* officially Federative Republic of Brazil, republic (1992 est. pop. 158,200,000), 3,286,470 sq mi (8,511,965 sq km), E South America, bordered by Venezuela, Guyana, Suriname, and French Guiana (N); Colombia, Peru, and Bolivia (W); Paraguay, Argentina, and Uruguay (SW); and the Atlantic Ocean (E). It is a federation of 26 states and the federal district of Brasília. The capital is BRASÍLIA, and principal cities include SÃO PAULO, RIO DE JANEIRO, RECIFE, BELO HORIZONTE, and SALVADOR. The largest

South American country and the fifth most populous country in the world, Brazil occupies nearly half the continent and has a varied topography and climate, ranging from tropical in the rain forests of the great AMAZON basin in the north to temperate in the highlands of the heavily populated east and south, which make up two thirds of the country's land and contain its chief economic centers. Brazil is the economic giant of South America and has become increasingly industrialized since the 1960s. It still depends heavily on agriculture, however, which accounts for nearly 50% of its exports. It is an important cattle producer; major commercial crops are coffee (of which it is the world's leading producer), cocoa, cotton, sugarcane, citrus fruit, corn, tobacco, bananas, and soybeans. Industrial production is led by motor vehicles, steel, cotton textiles, paper, fertilizer, cement, and machinery. The country's vast mineral wealth includes some of the finest iron resources in the world, as well as quartz, coal, manganese, chromium, industrial diamonds, uranium, and platinum. Petroleum deposits have not been fully developed; petroleum accounts for 40% of imports. The vast Amazonian rain forest was extensively cut and burned during the 1980s for wood and wood products and to clear land for farming and grazing, but the government has slowed development since the late 1980s. Inflation, which has averaged over 1000% since the late 1980s, and unchecked government spending are major economic problems. The population is diverse in origin, an amalgam of indigenous, African, and European peoples. Many native tribes live on reserves, but few are truly insulated from contemporary Brazilian society. Portuguese is the official language. Roman Catholicism is the predominant religion, but there is a large Protestant minority.

History. Although the Spaniard Vicente Yáñez Pinzón (see under PINZÓN, M.A.) and possibly others visited the coast earlier, the Portuguese, under Pedro Alvares CABRAL, claimed the land in 1500. The first permanent European settlement, at São Vicente in present-day São Paulo, was not made until 1532; development of the region now known as the Northeast began at the same time. Portuguese claims did not go unchallenged: French HUGUENOTS had to be expelled from a base in Rio de Janeiro harbor in 1567, and the Dutch held the Northeast for almost 20 years before they were driven out in 1654. When NAPOLEON invaded Portugal, Portugal's king, JOHN VI, fled (1807) to Brazil, and on his arrival (1808) in Rio de Janeiro that city became the capital of the Portuguese empire. In 1821 John returned to Portugal, leaving behind as regent his son, who in 1822 declared Brazil independent and himself Emperor PEDRO I. Forced by his restrictive policies to abdicate, he was succeeded by his son, the popular PEDRO II, whose long reign (1831–89) saw the development of Brazil as a modern nation; wars

with Argentina (1851–52) and Paraguay (1865–70) brought little benefit to Brazil, however. The abolition of slavery (1888) helped bring on a bloodless revolution that established Brazil as a republic in 1889. Large-scale European immigration, an expanding coffee market, and a wild-rubber boom brought wealth to Brazil in the late 19th and early 20th cent. Later, under the presidency of Getúlio VARGAS (1930–45, 1950–54), who came to power in a revolution (1930), industrial expansion and diversification of agriculture was stressed. Brazil joined the Allies in World War II (as in World War I), enjoying a new boom (chiefly in rubber and minerals). To spur development of the interior, Juscelino Kubitschek, elected president in 1955, undertook the building of the planned city of Brasília, which replaced Rio de Janeiro as the national capital in 1960; he also inaugurated an ambitious program of highway and dam construction. Political strife and economic chaos led to a coup in 1964 and the installation of a rightist military regime. The military rulers borrowed heavily to finance industrial expansion, causing the third world's largest foreign debt and hyperinflation. In 1985 they voluntarily surrendered power to a conservative civilian government. President José SARNEY (1985–90) proved unable to cope with mounting financial problems. In 1989, in the first popular election in 29 years, Fernando Collor de Mello won the presidency. Collor's presidency was marred by corruption, and he was impeached in 1992 and resigned. Vice Pres. Itamar Augusto Franco became president. Inflation, at over 2,500% in 1993, and a recession that began in 1990 remained problems.

Brazil nut, common name for the Lecythidaceae, a family of tropical trees. Members include the West Indian anchovy pear (*Grias cauliflora*); several lumber trees of South America, e.g., the cannonball; and the Brazil nut trees (genus *Bertholletia*). Brazil nut trees are found chiefly along the Amazon and Orinoco rivers. The edible nuts are oil-rich seeds that grow clumped together in hard, grapefruit-sized, woody seed pods.

Brazzaville, city (1984 pop. 585,912), capital of the Congo. The country's largest city, and an important port on the Congo R., it receives wood, rubber, and agricultural products from the region and ships them by rail to POINTE-NOIRE on the Atlantic Ocean. The city was founded (1880) by French explorers and was the capital (1910–58) of FRENCH EQUATORIAL AFRICA. It was an important outpost of Free France in the Vichy period. A meeting there in 1944 began the process of independence for France's African colonies.

breadfruit: see MULBERRY.

Breakspear, Nicholas: see ADRIAN IV.

breast: see MAMMARY GLAND.

Breasted, James Henry, 1865–1935, American Egyptologist; b. Rockford, Ill. While Egyptology professor (1905–33) at the Univ. of Chicago and director (1895–1901) of its Haskell Oriental Museum and (after 1919) Oriental Institute, he directed research in Mesopotamia and made important discoveries in Egypt. His many books include *History of Egypt from the Earliest Times to the Persian Conquest* (rev. ed. 1928), *Dawn of Conscience* (1933), and translations of Egyptian historical records.

Brébeuf, Jean de, Saint [brāböf'], 1593–1649, French Roman Catholic missionary, one of the JESUIT Martyrs of North America. A missionary to the HURON, Brébeuf with his colleague Gabriel Lalemant was killed by the Iroquois. Feast: Oct. 19 (in the U.S.).

Brecht, Bertolt [brĕkht], 1898–1956, German dramatist and poet; b. Berthold Brecht. In the late 1920s he turned to EXPRESSIONISM, as in *Man is Man* (1926), and began to develop his revolutionary "epic theater," designed to create—through the use of effects such as bright lights, films, and mottoes displayed on cards—a politically conscious distance between the spectator and the stage. *The Threepenny Opera* (1928), with music by Kurt WEILL, reflects Brecht's social views. During the NAZI period he went into exile in Denmark and then settled in the U.S. His later works include *Mother Courage and Her Children* (1941), *The Good Woman of Setzuan* (1943), and *The Caucasian Chalk Circle* (1955). A Marxist, Brecht lived from 1948 in East Berlin, where he directed the state-supported Berliner Ensemble.

Breckinridge, John, 1760–1806, American statesman; b. Augusta co., Va. In the Kentucky legislature, he won passage (1798) of the Kentucky Resolutions (see KENTUCKY AND VIRGINIA RESOLUTIONS). In the U.S. Senate (1801–5), he sponsored Western interests. He was attorney general (1805) under Pres. JEFFERSON. His grandson, **John Cabell Breckinridge,** 1821–75, b. Lexington, Ky., was vice president of the U.S. under Pres. BUCHANAN. He later served the CONFEDERACY as a brigadier general and as secretary of war (1865).

breeder reactor: see NUCLEAR REACTOR.

Breed's Hill: see BUNKER HILL, BATTLE OF.

Bremen, city (1989 est. pop. 535,000), N Germany, on the Weser R. It is the oldest German port city and Germany's second largest port. Shipbuilding and steel-making are among its industries; the service sector is increasingly important. Made an archbishopric in 845, it became a leading member (1358) of the HANSEATIC LEAGUE and a free imperial city (1646). It prospered as an overseas trading center during the 18th and 19th cent. During WORLD WAR II it was badly damaged, but such structures as the Gothic city hall (1405–9) and the Romanesque-Gothic cathedral (begun 1043) remain.

Brennan, William Joseph, Jr., 1906–, associate justice of the U.S. SUPREME COURT (1956–90); b. Newark, N.J.; grad. Harvard Law School (1931). He was a justice on the New Jersey supreme court from 1952 until his appointment to the U.S. Supreme Court by Pres. Dwight D. Eisenhower. In the 1970s and 80s, Brennan was the most influential liberal on an increasingly conservative Court.

Brenner Pass, Alpine Pass, 4,495 ft (1,370 m) high, connecting Innsbruck, Austria, with Bolzano, Italy. The lowest of the principal passes in the ALPS, it was an important Roman route through which many invasions of Italy were made.

Brentano, Clemens [brĕntä'nō], 1778–1842, German poet of the romantic school; brother of Bettina von Arnim. With Achim von ARNIM he collaborated on *The Boy's Magic Horn* (1806–8), a folk-song collection that influenced HEINE, and the brothers GRIMM, among others. Brentano wrote plays, lyric poems, fairy tales, and novellas.

Brentano, Franz, 1838–1917, German philosopher and psychologist. He believed that mental processes are the data of psychology, to be regarded as acts rather than as passive processes. In *Psychology from an Empirical Standpoint* (1874) he tried to establish psychology as an independent science. His students included HUSSERL and FREUD.

Bresson, Robert [brĕsôN'], 1907–, French film director. His films, which tend to be austere and have spiritual themes, include *Diary of a Country Priest* (1950), *The Trial of Joan of Arc* (1961), *Lancelot of the Lake* (1976), and *Money* (1983).

Brest, city (1990 pop. 147,956), Finistère dept., NW France, on an inlet of the Atlantic Ocean. It is a commercial port and naval station. Clothing and electronic equipment are the chief manufactures; the French naval academy and a national engineering school are there. The spacious, landlocked harbor was created in 1631. During WORLD WAR II Brest was a major German submarine base and was almost completely destroyed by Allied bombing.

Brest-Litovsk, Treaty of, separate peace treaty of WORLD WAR I, signed by Soviet Russia and the Central Powers on Mar. 3, 1918, at present-day Brest, Belarus (Belorussia). It followed the removal of Russia from the war by the Bolsheviks after they seized power in Nov. 1917. By its terms, considered humiliating to the Russians, Russia ceded large areas to the Central Powers and recognized the independence of Poland, the Baltic states, Georgia, and Ukraine. Later Russia agreed to pay a large indemnity. In the general armistice of Nov. 1918, the Allies forced the Central Powers to renounce the treaty.

Brethren, German Baptist sect. Known also as Dunkers (from Ger., = to dip), they practice baptism by triple immersion. Organized in 1708, the Brethren are opposed to war and advocate a simple life. In the U.S. there are several denominations, of which the largest is the Church of the Brethren.

Breton, André [brətôN'], 1896–1966, French writer. At first a Dadaist, he later became the founder of SURREALISM, for which he wrote three manifestos (1924, 1930, 1934), and opened a studio for "surrealist research."

Breuer, Josef [broi'ər], 1842–1925, Austrian physician. His cathartic method of therapy and his theory of HYSTERIA, when developed by Sigmund FREUD, became the basis for PSYCHOANALYSIS. Together with Freud, Breuer wrote *Studies in Hysteria* (1895).

Breuer, Marcel Lajos [broi'ər], 1902–81, American architect and furniture designer; b. Hungary. In the 1920s he was associated with

the BAUHAUS and won fame for his tubular chair. In the U.S. he was associated (1937–41) with Walter GROPIUS in building houses. Among his well-known buildings is the Whitney Museum, N.Y.C. (1966).

Breughel, family of painters: see BRUEGEL.

Brewster, Sir David, 1781–1868, Scottish physicist and natural philosopher. His invention of the kaleidoscope was one result of his notable light-polarization studies. He improved the spectroscope and devised the dioptic system of lighthouse illumination. Among his many writings is a major biography (1855) of Sir Isaac NEWTON.

Brezhnev, Leonid Ilyich [brĕzh'nĕf], 1906–82. Soviet leader. Rising through the Communist party, he became chairman of the presidium of the Supreme Soviet in 1960 and, when Nikita KHRUSHCHEV fell in 1964, first secretary (later general secretary) of the party. He shared power with Alexei KOSYGIN but emerged as the chief Soviet leader. In 1977, retaining his party post, he became president of the USSR. Brezhnev's hard line toward democratic or independent trends in neighboring countries, evidenced by the Soviet invasions of Czechoslovakia (1968) and Afghanistan (1979), often conflicted with his attempts at DÉTENTE with the West.

Brian Boru or **Brian Boroimhe** [both: brī'ən, brēn; bərōō, bərō], 940?–1014, king of Ireland. A clan prince, he became high king by subjugating all Ireland. He annihilated the coalition of the Norse and his Irish enemies at Clontarf in 1014, but he was murdered soon after. His victory ended Norse power in Ireland, but the nation fell into anarchy.

Briand, Aristide [brēäN'], 1862–1932, French statesman. He was premier 10 times between 1909 and 1921. After WORLD WAR I, he emerged as a leading proponent of international peace and cooperation. As foreign minister (1925–32) Briand was the chief architect of the LOCARNO PACT (1925) and the KELLOGG-BRIAND PACT (1928). He shared the 1926 Nobel Peace Prize with Gustav STRESEMANN and advocated a plan for a United States of Europe.

brick, building material made by shaping CLAY into blocks and then hardening them in a kiln. Sun-dried bricks are among the most ancient building materials. Examples from c.5,000 years ago have been discovered in the Tigris-Euphrates basin. The Romans faced brick buildings with stone or marble, but Byzantine and later European builders used the brick itself to provide a decorative surface. The many varieties of modern brick include firebrick, made of special clays that can be fired at very high temperatures.

bridge, structure spanning and giving passage over a waterway, a depression, or some other obstacle. Early bridges ranged from suspended rope walkways to arched structures of stone or brick. The mid-19th-cent. development of steel allowed for longer spans, the use of the steel truss in place of stone or masonry arches, and steel-wire suspension CABLES of great tensile strength. Movable bridges, whose center portions can be raised, are generally constructed over waterways where it is impossible to build a fixed bridge high enough for water traffic to pass under it. Military bridges—temporary structures that can be erected rapidly—include the pontoon bridge, which uses air-filled floats called pontoons to support the roadway. See also AQUEDUCT; BROOKLYN BRIDGE; GOLDEN GATE BRIDGE; VERRAZANO-NARROWS BRIDGE.

bridge, card game derived from whist, played with 52 cards by four players in two partnerships. It probably originated in the Middle East. In contract bridge, a now popular form, the cards rank from ace down to two; in bidding, suits rank spades, hearts, diamonds, and clubs. After all the cards are dealt, the auction begins. Players bid to win a stated number of tricks over six (a trick being the three cards played in rotation after the lead) with a named suit as trump or with no-trump. The highest bid becomes the contract after three consecutive passes end the bidding. The player who first named the suit (or no-trump) is the declarer; his partner's hand is the dummy and is played by the declarer face-up as he attempts to win at least enough tricks to fulfill his contract. Duplicate bridge, in which prearranged hands are played, is the main form of competitive bridge. The governing principles of bidding were delineated by Ely CULBERTSON, and the currently popular point-counting system in bidding was introduced by Charles H. GOREN.

Bridgeport, city (1990 pop. 141,686), SW Conn., on Long Island Sound; inc. 1836. A port, it is Connecticut's largest city and chief industrial center. Manufactures include electrical appliances, firearms, helicopters, engines, trucks, and aerosol sprays. Settled in 1639, it grew as a fishing community. Noteworthy is the Barnum Inst., commemorating the city's resident, P.T. BARNUM.

Bridger, James, 1804–81, American fur trapper, one of the most noted of the MOUNTAIN MEN; b. Virginia. A fur trader and guide, with Louis Vasquez he opened (1843) Fort Bridger on the OREGON TRAIL. He was a picturesque figure who won fame for his "tall tales."

Bridges, Harry, 1901–90, American labor leader; b. Australia, as Alfred Renton Bridges. Arriving in San Francisco in 1920, he became a longshoreman and militant labor organizer. In 1937 he set up the International Longshoremen's and Warehousemen's Union (ILWU), serving as its president for the next 40 years. Efforts by the U.S. government to deport him as a Communist alien failed, and he became a citizen in 1945. Bridges was convicted and sentenced (1950) to prison for perjury in denying Communist party membership, but the U.S. Supreme Court overturned the conviction in 1953. Bridges led his last major strike in 1971–72.

Bridges, Robert Seymour, 1844–1930, English lyric poet. The philosophical poem *The Testament of Beauty* (1929) is considered his greatest work. Bridges also wrote two major works on prosody and published the poems of his friend G.M. HOPKINS.

Bridgetown, city (1990 pop. 6,720), capital of BARBADOS.

Bridgman, Percy Williams, 1882–1961, American physicist; b. Cambridge, Mass. A professor at Harvard, he won the 1946 Nobel Prize in physics for his work in high pressures. He also studied electrical conduction in metals and the properties of crystals, and wrote on the philosophy of modern science.

Bright, John, 1811–89, English statesman and orator. Noted for his LAISSEZ FAIRE views, he was, with COBDEN, the greatest 19th-cent. champion of the middle class. In 1839 he helped found the ANTI-CORN-LAW LEAGUE and used his formidable oratory to urge repeal of the CORN LAWS. A member of Parliament for many years (1847–57, 1858–89), he also served in GLADSTONE's cabinets (1868–70, 1873–74, 1880–82).

brimstone: see SULFUR.

Brinkley, David McClure, 1920–, American television journalist; b. Wilmington, N.C. From 1956–70 he and Chet Huntley coanchored the *Huntley–Brinkley Report*, the popular nightly news program. Since 1981 he has hosted *ABC This Week*, a weekly news program examining national politics.

Brisbane, city (1991 est. pop. 1,327,000), capital and chief port of Queensland, E Australia, on the Brisbane R., above Moreton Bay. The third largest city in Australia, it has shipyards; oil refineries; and food-processing, textile, and automotive industries. Sugar, bananas, and bauxite are exported. Brisbane was first settled (1824) as a penal colony. The Univ. of Queensland is here.

Bristol, city (1991 pop. 376,146), Avon, SW England. A leading international port, Bristol has been a trading center since the 12th cent. Its manufactures include general and nuclear machinery, aircraft, and tobacco and food products. Although the city was heavily bombed during WORLD WAR II, many historic buildings remain.

Britain: see GREAT BRITAIN.

britannia metal, ALLOY of TIN with ANTIMONY, COPPER, and, sometimes, BISMUTH and ZINC. Similar in appearance to pewter but harder, it is used in manufacturing tableware.

British Columbia, province (1991 pop. 3,282,061), 366,252 sq mi (948,596 sq km), W Canada, bounded by Alberta (E), Montana, Idaho, and Washington (S), the Pacific Ocean and Alaska (W), and the Yukon and Northwest Territories (N). The province is almost totally mountainous, with the ROCKY MOUNTAINS in the east and the COAST MOUNTAINS along the Pacific; hydroelectric power is highly developed. The coast is deeply indented with many offshore islands, including VANCOUVER ISLAND. The chief rivers include the FRASER, the upper COLUMBIA, and the Skeena. Nearly 75% of the land is covered with forests, and lumbering and related enterprises (such as pulp and paper manufacture) are the major industries. The province is rich in copper and coal (its principal mineral resources) as well as oil, natural gas, silver, gold, iron ore, zinc, and lead. It ranks first among the provinces in fishing. Tourism is also important, with visitors attracted by the province's scenic mountain ranges. Large areas of N and central British Columbia are sparsely settled, and almost 75% of the population is crowded into the

southwestern coastal strip. VANCOUVER and VICTORIA, the capital, are the chief cities.

History. The area was originally inhabited by indigenous peoples of the Pacific Northwest. In 1774 the Spaniard Juan Pérez probably sailed along the coast, and in 1778 James COOK explored the shoreline and claimed the area for Britain. Rival British and Spanish claims were resolved (1790) and George VANCOUVER mapped (1792–94) the coast for Britain. In the early 19th cent. fur traders of the NORTH WEST COMPANY and the HUDSON'S BAY COMPANY established posts in the area, and in 1846 the border with the U.S. was set at the 49th parallel. Vancouver Island became (1849) a crown colony and a new colony was formed (1858) on the mainland. The two were merged (1866) and in 1871 British Columbia voted to join the Canadian confederation. The Canadian Pacific Railway reached Vancouver in 1885, making the city a busy port. The Alaskan boundary dispute with the U.S. was settled in 1903. During the 20th cent. the province grew as its enormous wealth of natural resources was exploited. British Columbian politics were dominated since the early 1950s by the SOCIAL CREDIT party, but the New Democratic party has been in office since 1991. The province sends 6 senators (appointed) and 32 representatives (elected) to the national parliament.

British East India Company: see EAST INDIA COMPANY, BRITISH.

British Empire, overseas territories linked to Great Britain in a variety of constitutional relationships. Established over three centuries, the empire resulted primarily from commercial and political motives, and from emigration. At its height in the late 19th and early 20th cent. it included 25% of the world's population and area.

The First British Empire. The foundations of the empire were laid in the late 16th cent. by the chartered companies, commercial ventures encouraged by the crown. In the 17th cent. sugar and tobacco plantations were founded in the Caribbean and in SE North America, and religious dissenters emigrated to NE North America. An integrated imperial trade arose, involving the exchange of African slaves for West Indian molasses and sugar, English cloth and manufactures, and American fish and timber. The theories of MERCANTILISM were implanted by the NAVIGATION ACTS. The BRITISH EAST INDIA COMPANY furthered expansion into India, and during the SEVEN YEARS WAR (1756–63) Britain ousted France from Canada and India. The financial burdens of the war, however, caused difficulties in the American colonies, and the success of the AMERICAN REVOLUTION marked the end of the first British Empire.

The Second British Empire. The voyages of James COOK and further conquests in India began a new phase of British expansion. The FRENCH REVOLUTIONARY WARS and Napoleonic Wars (see NAPOLEON I) added further possessions, e.g., the Cape Colony, Ceylon, British Guiana, and Malta, and Britain's INDUSTRIAL REVOLUTION lent greater force to the ideas of free trade. Humanitarian concerns led to the abolition of the slave trade (1807) and of slavery (1833). The BRITISH NORTH AMERICA ACT of 1867, which granted CANADA internal self-rule as a dominion, inaugurated a pattern by which Britain surrendered its direct governing powers in European-settled colonies, e.g., AUSTRALIA and NEW ZEALAND. Concurrently, Britain established greater control in Africa and India.

From Empire to Commonwealth. WORLD WAR I brought the British Empire to the peak of its expansion. Imperial contributions had considerably strengthened the British war effort, and victory brought Britain mandates over new territories, e.g., Palestine, Iraq, and German territories in Africa. In 1931 the statute of Westminster officially recognized the independent and equal status under the crown of the former dominions within a British COMMONWEALTH OF NATIONS. After WORLD WAR II, self-government advanced in many parts of the empire, often as a result of violent struggle by the colonized nations. In 1947 India was partitioned and independence was granted to the new states of INDIA and PAKISTAN. Other parts of the empire, notably in AFRICA, gained independence and subsequently joined the British Commonwealth. Britain still administers many dependencies throughout the world, e.g., BERMUDA, GIBRALTAR, and HONG KONG.

British Honduras: see BELIZE.

British Imperial System of weights and measures: see ENGLISH UNITS OF MEASUREMENT; WEIGHTS AND MEASURES (table).

British Indian Ocean Territory, archipelago, c.1,180 mi (1,900 km), NE of Mauritius, in the central Indian Ocean. The islands, which form the Chagos Archipelago, were administered by MAURITIUS before they became a British dependency in 1965. Their importance is strategic; the U.S. and Britain maintain a major naval facility on the main island, DIEGO GARCIA.

British Museum, the national repository in London for treasures in science and art. It has departments of archaeology, antiquities, prints and drawings, coins and medals, and ethnography. Established (1753) with the acquisition of several collections, its exhibits now include the ROSETTA STONE, the ELGIN MARBLES, the CARYATID from the ERECHTHEUM, and the remains of a Saxon ship (c.660), with its gold and silver treasures, from the English archaeological site at Sutton Hoo. The **British Library,** est. 1973 as a separate entity, is a nonlending reference library and copyright depository. It houses one of the world's outstanding collections of rare books and manuscripts, including BEOWULF and the MAGNA CARTA. The great domed reading room at the British Museum, one of several sites now operated by the library, was finished in 1857. A new home for the library, at a separate site in London, is expected to be completed in 1996.

British North America Act, law that provided for the unification of CANADA and functioned as its constitution until 1982; passed by the British Parliament in 1867 and called the **Constitution Act, 1867** since 1982. It spelled out provincial powers and granted residual authority to the dominion government. Under it, the power of amendment was nominally vested in the British Parliament, which in practice acted only at the request of Canada's Parliament. It was superseded by the CONSTITUTION ACT, 1982.

British thermal unit (Btu), unit of energy required to raise the temperature of 1 lb of water by one degree Fahrenheit (from 59.5° to 60.5°F). 1 Btu = 251.996 calories = 778.26 foot-pounds = 1054.8 joules.

Brittany, region and former province, NW France, a peninsula between the English Channel and the Bay of Biscay. Its economy is based on farming, fishing, and tourism. Breton, a Celtic language, is spoken in some rural and traditionalist areas. Brittany got its modern name when it was settled (c.500) by Britons whom the ANGLO-SAXONS had driven from Britain. It struggled for independence from the FRANKS (5th–9th cent.), from the dukes of Normandy and the counts of Anjou (10th–12th cent.), and finally from England and France. Brittany was absorbed by France after the accession (1488) of ANNE OF BRITTANY and formally incorporated into France in 1532.

Brittany spaniel, medium-sized SPORTING DOG; shoulder height, c.19 in. (48.3 cm); weight, 30–40 lb (13.6–18.1 kg) Its dense, flat or wavy coat is dark orange and white or liver and white. It dates back hundreds of years, to France and Spain, and is the only spaniel that points its quarry.

Britten, Benjamin, Baron Britten of Aldeburgh 1913–76, English composer. His most popular works, all written in a traditional vein, include *A Ceremony of Carols* (1942). *A Young Person's Guide to the Orchestra* (1945), and the great *War Requiem* (1962). His operas include *Peter Grimes* (1945), *The Turn of the Screw* (1954), and *Death in Venice* (1973). In 1976 Queen Elizabeth II named him a life peer.

brittle star, marine invertebrate animal (class Ophiuroidea). An ECHINODERM, it has five long, slender arms that radiate from a central disk, and the water-vascular system and tube feet common to echinoderms. Their arms break off readily, but new arms are easily regenerated. Most brittle stars are less than 1 in. (2.5 cm) across the central disk.

Brno [bûr'nô], Ger. *Brünn,* city (1990 est. pop. 392,000), central Czech Republic, at the confluence of the Svratka and Svitava rivers. The second largest Czech city and MORAVIA's chief city, it produces textiles, tractors, and other manufactures. Brno flourished (13th–14th cent.) as a free city within the kingdom of BOHEMIA. The Spielberg castle in Brno was a notorious HAPSBURG prison (1740–1855).

Broadbent, John Edward, 1936–, Canadian political leader. He was elected in 1968 to parliament and served (1975–89) as leader of the New Democratic party. In 1990 he became president of the International Centre for Human Rights and Democratic Development.

broadcasting, transmission of sound or images to a large number

The key to pronunciation appears on page xiii.

of RADIO or TELEVISION receivers. The first regularly scheduled radio broadcasts in the U.S. began in 1920. The sale of advertising began in 1922, establishing commercial broadcasting as an industry. A coast-to-coast hookup began early in 1924, and expansion of both audience and transmission facilities continued rapidly. By 1992, 4,963 commercial AM and 6,312 FM radio stations existed in the U.S. Experiments in broadcasting television began in the 1920s but were interrupted by World War II. By 1992 the U.S. had 1,505 television stations, and CABLE TELEVISION systems in the U.S. served over 56 million households.

Broadway, street in New York City. One of the world's longest streets, it extends c.150 mi (241 km) from lower Manhattan N to Albany. Its theater district is known as the "Great White Way" for its dazzling electric lights and signs. The world-famous intersection of Times Square is formed by Broadway, Seventh Ave., and 42d St.

broccoli, variety of CABBAGE grown for the edible immature flower panicles. It is the same variety as cauliflower (*Brassica oleracea botrytis*) and similarly cultivated.

Brock, Sir Isaac, 1769–1812, British general in Canada. As the commander (1806–12) of British forces, he defeated an American army and captured (1812) DETROIT early in the WAR OF 1812. Brock died in battle while defending the Niagara frontier.

Brodsky, Joseph (Iosif Aleksandrovich Brodsky), 1940–, Russian poet. He has lived in the U.S. since 1972 and writes in English as well as Russian. Brodsky is highly regarded for the formal technique, depth, irony, and wit displayed in his poetry, which often treats the themes of loss and exile. Among his works in English translation and in English are *A Part of Speech* (tr. 1980), *Less Than One* (tr. 1986), and *To Urania* (1988). He was awarded the 1987 Nobel Prize in literature and was named U.S. poet laureate for 1991–92.

Broglie, Louis Victor, prince de [brôglē'], 1892–1987, French physicist. From his hypothesis that particles should exhibit certain wavelike properties, wave mechanics, a form of QUANTUM MECHANICS, was developed. Experiments proved (1927) the existence of these waves; he was awarded the 1929 Nobel Prize in physics for his theory.

Broken Hill, city (1986 pop. 26,650), New South Wales, SE Australia, near the South Australia border. It is the site of one of the world's richest silver-lead and zinc deposits (first developed in 1884).

bromeliad, common name for some members of the family Bromeliaceae, chiefly epiphytic herbs and small shrubs native to the American tropics and subtropics. A typical bromeliad has strap-shaped leaves clustered in a rosette around a central cup; the flowers are found in the central cup or above it on a spike. The central cup retains water, enabling tropical bromeliads to survive dry spells. Bromeliad species such as those of the genus *Aechmea* and *Cryptanthus* are often grown as house and conservatory plants for their colorful flowers and foliage. Other members of the family include SPANISH MOSS and the PINEAPPLE.

bromine (Br), volatile liquid element, discovered in 1826 by Antoine J. Balard. A HALOGEN, it is a reddish-brown fuming liquid with an offensive odor. Bromine corrodes the skin, and its vapor irritates the eyes and the membranes of the nose and throat. The only nonmetallic element that is liquid under ordinary conditions, bromine occurs in compounds in seawater, mineral springs, and salt deposits. Its compounds are used in photographic film, in flame retardants, and in conjunction with an antiknock compound in gasoline. See ELEMENT (table); PERIODIC TABLE.

bronchitis, inflammation of the bronchial tubes caused by viral or bacterial infection or by the inhalation of irritating fumes (e.g., tobacco smoke, air pollutants). Symptoms include cough, fever, and chest pains. Acute bronchitis may subside, or, particularly with continued exposure to irritants, may persist and progress to chronic bronchitis or PNEUMONIA. Bronchitis can be treated with antihistamines, cough suppressants, bronchodilators, or ANTIBIOTICS.

Brontë, Charlotte [brŏn'tā], 1816–55, **Emily Jane Brontë,** 1818–48, and **Anne Brontë,** 1820–49, English novelists and poets. As children in a Yorkshire parsonage, the sisters created an imaginary literary world. In 1846 they published a pseudonymous collection of their poems, and in 1847 Anne's novel *Agnes Grey*, Emily's *Wuthering Heights*, and Charlotte's *Jane Eyre* all appeared. Tragedy struck, however, soon after. Emily died in Dec. 1848, and Anne (whose *Tenant of Wildfell Hall* came out in 1848) died in 1849, both from tuberculosis. Charlotte's career, however, burgeoned with *Shirley* (1849) and *Villette* (1853). She married her father's curate, Arthur Bell Nichols, in 1854 but died a year later. *The Professor* was published in 1857. Charlotte's *Jane Eyre*, the strong, violently emotional story of a governess and her passionate love for her employer, Mr. Rochester, articulates the theme of a woman's need for both love and independence; it ranks among the great English novels. Emily's *Wuthering Heights*, the intense story of the almost demonic love between Catherine Earnshaw and Heathcliff—less characters than forces—is considered a work of genius. Her lyric poems are among the best in English poetry.

bronze, ALLOY of COPPER, PHOSPHORUS, TIN, ZINC, and, sometimes, small amounts of other elements. It is harder than BRASS, and its properties depend on the proportions of its components. ALUMINUM bronze, with its high strength and corrosion resistance, is used for bearings, valve seats, and machine parts; leaded bronze is cast into heavy-duty bushings and bearings; silicon bronze is used for telegraph wires and chemical containers; and bronze with 20% to 24% tin is used for casting bells. Bronze is used for coins, medals, steam fittings, and GUNMETAL, and in artistic castings, engravings, and forgings.

Bronze Age, technological period when metals were first used to make tools and weapons. The earliest stage, when pure copper and bronze were used interchangeably, has been called the Copper Age. CASTING was well established in the Middle East by 3500 B.C.; in the New World the first bronze was cast A.D. c.1100. Development of a metallurgical industry coincided with urbanization, growth of an artisan class, and trade for raw materials, laying the foundation for the IRON AGE.

Brook, Peter, 1925–, English theatrical director. Since 1962 he has been codirector of the Royal Shakespeare Company (see THEATER, table). His innovative, controversial productions include Peter WEISS's *Marat/Sade* (1965), *A Midsummer Night's Dream* (1970), and the nine-hour *Mahabharata* (1985). He has also directed films, e.g., *Lord of the Flies* (1963), and *King Lear* (1971).

Brooke, Edward William, 1919–, U.S. senator from Massachusetts (1967–79), the first African-American U.S. senator since RECONSTRUCTION; b. Washington, D.C. A Republican, he served (1967) on the President's Commission on Civil Disorders, which investigated the causes of race riots. Although he was defeated for reelection (1978) in part because his fiscal records were investigated by the Senate Ethics Committee, he was later exonerated of any wrongdoing.

Brooke, Sir James, 1803–68, rajah of Sarawak on BORNEO. He was made (1841) rajah for helping the sultan of Brunei to suppress rebel tribes. He was succeeded by his nephew, **Sir Charles Anthony Johnson Brooke,** 1829–1917, who made the country prosperous. His son and successor, **Sir Charles Vyner Brooke,** 1874–1963, was forced out of Sarawak by the Japanese in WORLD WAR II. He ceded (1946) the country to Britain.

Brooke, Rupert, 1887–1915, English poet. His social charm, wit, and tragic death during World War I made him a legend. He wrote *Poems* (1911) and *1914 and Other Poems* (1915). The romantic patriotism of his war poems contrasts sharply with the bitterness of OWEN and SASSOON.

Brook Farm, 1841–47, experimental farm at West Roxbury, Mass.; founded by the Unitarian minister George Ripley. It was based on cooperative living and the principles of TRANSCENDENTALISM and fostered shared manual labor and a stimulating intellectual life. Nathaniel HAWTHORNE was a member, and visitors included R.W. EMERSON, Margaret FULLER, and Horace GREELEY. Brook Farm adopted the ideas of Charles FOURIER in 1844. It was disbanded shortly after its central building burned in 1846.

Brookhaven National Laboratory, scientific research center, Upton, Long Island, N.Y.; founded (1947) and operated by Associated Universities Inc. under contract to the U.S. Dept. of Energy. The laboratory's equipment includes a number of highly sophisticated nuclear reactors, particle accelerators, and computers; there is also a medical research center for work in nuclear medicine.

Brookings Institution, at Washington, D.C.; chartered in 1927 as a

consolidation of the Inst. for Government Research (est. 1916), the Inst. of Economics (est. 1922), and the Robert S. Brookings Graduate School of Economics and Government (est. 1924). The institution makes social science research available to government and business by financing projects and publishing findings, sometimes working under government contract.

Brooklyn, borough of NEW YORK CITY (1990 pop. 2,300,664), 71 sq mi (184 sq km), coextensive with Kings co., SE N.Y., at the SW extremity of LONG ISLAND; settled 1636, chartered as part of New York City 1898. The largest of New York's five boroughs, it has diverse industries and a waterfront handling foreign and domestic commerce. From Dutch and Walloon settlements it became the village of Brooklyn Ferry (1816) and the city of Brooklyn (1834), absorbing settlements like Flatbush and Gravesend as it grew; it became (1855) the third largest U.S. city. Points of interest include Prospect Park, the Brooklyn Botanic Garden, and Coney Island.

Brooklyn Bridge, the first steel-wire suspension bridge in the world, built 1869–83, over the East R., linking the boroughs of Manhattan and Brooklyn in New York City. Designed by J.A. and W.A. ROEBLING, it was the world's longest suspension bridge at the time of its completion.

Brookner, Anita, 1928–, English writer and art critic. After establishing an academic career at London's Courtauld Institute of Art, she began (1980) writing fiction. Her novels are usually about middle-aged women unable to establish relationships with those around them, e.g., *Hotel du Lac* (1984) and *A Misalliance* (1986).

Brooks, Gwendolyn, 1917–, African-American poet; b. Topeka, Kans. Treating the African-American experience, her poems are in such volumes as *Annie Allen* (1949; Pulitzer) and *Riot* (1970). She is also the author of *Maud Martha* (1953), a novelette, and an autobiography (1972). Brooks was the first African-American woman to win the Pulitzer Prize for poetry.

Gwendolyn Brooks

Brooks, Mel, 1927–, American film director, writer, and actor; b. N.Y.C. as Melvin Kaminsky. His comic movies, often parodies of popular film genres, include *The Producers* (1968), *Blazing Saddles* (1974), *Young Frankenstein* (1975), *High Anxiety* (1977), and *Robin Hood: Men in Tights* (1993).

Brooks, Van Wyck, 1886–1963, American critic; b. Plainfield, N.J. An extremely prolific writer, he concentrated in his early work on the influence of Puritanism on American culture, e.g., *The Wine of the Puritans* (1909), and on critical biography, e.g., *The Ordeal of Mark Twain* (1920). His masterpiece, the series *Makers and Finders: A History of the Writer in America, 1800–1915,* which began with the Pulitzer Prize-winning *The Flowering of New England* (1936), is a humanistic interpretation of American literary history.

Brouwer or **Brauwer, Adriaen** [both: brou'wər], c 1606–38, Flemish painter. His later depictions of peasant life and humorous single figures, such as *Drinkers at a Table* (Brussels) and *The Smokers* (Metropolitan Mus.), were often monochromat c.

Browder, Earl Russell, 1891–1973, American Communist leader; b. Wichita, Kan. He was the Communist party's candidate for president in 1936 and 1940. In 1946 the party expelled him for urging Soviet cooperation with the West.

Brown, Ford Madox, 1821–93, English historical painter; b. France. Closely affiliated with the PRE-RAPHAELITES, he painted *Work* (1852–63; Manchester Art Gall.) and 12 FRESCOES (in the town hall of Manchester) showing the city's history.

Brown, George, 1818–80, Canadian journalist and statesman. After emigrating from Scotland at the age of 24 he founded (1844) the Toronto *Globe* and made it a powerful political journal. A member of the Canadian assembly (1851–67), he worked for political representation by population and for the confederation of CANADA.

Brown, Jerry (Edmund Gerald Brown, Jr.), 1938–, American politician, governor of California (1975–83); b. San Francisco. A lawyer, he served (1971–75) as California's secretary of state. Although basically a liberal Democrat, as governor he gained a reputation for austerity and unpredictability. He ran unsuccessfully for the Democratic presidential nomination in 1976, 1980, and 1992 and for the U.S. Senate from California in 1982. His father, **Edmund Gerald (Pat) Brown, Sr.,** 1905–, b. San Francisco, was also governor of California (1959–67).

Brown, Jim, 1936–, American football player; b. St. Simon Island, Ga. An All-American (1956) at Syracuse Univ., he became one of the greatest fullbacks in the game's history while with the Cleveland Browns (1957–65) of the National Football League (NFL). He set NFL career records (since broken) for most yards gained rushing (12,312) and touchdowns scored rushing (106), scored a career-record 126 touchdowns, and had the second-highest career rushing average (5.22 yards per carry). After 1965 he became a movie actor.

Brown, John, 1800–1859, American ABOLITIONIST; b. Torrington, Conn. Raised in Ohio, he moved to Kansas in 1855. In 1856, in retaliation for the sack of LAWRENCE, he led the murder of five proslavery men on the banks of the Pottawatamie R., asserting that he was an instrument in the hand of God. On Oct. 16, 1859, having initiated a plan to liberate Southern slaves through armed intervention, Brown and 21 followers captured the U.S. arsenal at HARPERS FERRY, Va. (now W.Va.). It was taken the next morning by Robert E. LEE, and Brown was hanged on Dec. 2. The dignity and sincerity that he displayed during his widely reported trial led many to regard him as a martyr.

Brown, Robert, 1773–1858, Scottish botanist and botanical explorer. He went as a naturalist and collector to Australia (1801) and described its flora in his *Prodromus florae Novae Hollandiae* (1810). Librarian to the Linnaean Society and British Museum curator, he observed BROWNIAN MOVEMENT in 1827 and discovered the cell nucleus in 1831.

Browne, Charles Farrar: see WARD, ARTEMUS.

Browne, Sir Thomas, 1605–82, English author and physician. In *Religio Medici* (c.1635) he attempted to reconcile science and religion. Other works, including *Hydriotaphia: Urn Burial* (1656), express a philosophy now chiefly of historical interest. The quality of Browne's faith and his mode of expression make him an outstanding figure in English literary history.

brown hematite: see LIMONITE.

Brownian movement or **motion,** irregular, zigzag motion of minute particles of matter suspended in a fluid. First observed (1827) by the botanist Robert Brown, the effect is a result of collisions between the particles and the fluid molecules, which are in constant thermal motion.

Browning, Robert, 1812–89, English poet. His psychological por-

traits in verse and his experiments in diction and rhythm have made him an important influence on 20th-cent. poetry. Browning was master of the dramatic monologue, e.g., "My Last Duchess," "Fra Lippo Lippi," "Andrea del Sarto," "The Bishop Orders His Tomb." In 1846, after a secret courtship, he married the poet Elizabeth Barrett and took her to Italy, where they lived until her death in 1861. He returned to England and published *Dramatis Personae* (1864), *Dramatic Idylls* (1879–80), and *Asolando* (1889). His masterpiece is *The Ring and the Book* (4 vol., 1868–69). His wife, **Elizabeth Barrett Browning,** 1806–61, published *Poems* in 1844. This volume brought her both fame and Browning's attention. Defying her poor health and a tyrannical father, she married Browning in 1846. E.B. Browning's highly individual gift for lyric poetry is shown in *Sonnets from the Portuguese* (1850), her greatest work. Other works include *Casa Guidi Windows* (1851) and *Aurora Leigh* (1857), a novel in verse.

brown recluse spider or **violin spider,** poisonous nocturnal SPIDER, *Loxoceles reclusa,* most common in the SE and S central U.S. Adults are ⅜ in. (10 mm) long and are light brown with a dark, violin-shaped mark on the back near the head. In humans their venom kills the tissue surrounding a bite and leaves a deep sore, but only rarely does a bite result in death.

Brownsville, city (1990 pop. 98,962), seat of Cameron co., extreme S Tex., on the Rio Grande near the Gulf of Mexico, across the river from Matamoros, Mexico; inc. 1850. A deep water channel accommodates seagoing vessels, and the city has oil and gas, shrimp, and electronics industries. Fort Texas was attacked (1846) by the Mexicans, precipitating the MEXICAN WAR; it was renamed Fort Brown for its defender, Major Jacob Brown. Brownsville grew around the fort. In 1906 a group of African-American soldiers were blamed for a gun raid that killed a resident. Their controversial dishonorable discharge by Pres. Theodore ROOSEVELT was reversed in 1972.

Brown v. Board of Education of Topeka, Kansas, case decided in 1954 by the U.S. SUPREME COURT, holding that de jure segregation in public schools was a violation of the equal protection clause of the 14th amendment to the U.S. CONSTITUTION. A unanimous Court stated that racial separation, no matter how equal the facilities, branded minority children as inferior, thus hindering their development. The "separate but equal" doctrine of PLESSY V. FERGUSON was reversed. In 1955 the Court added that schools must desegregate "with all deliberate speed." The *Brown* decision gave impetus to the civil-rights movement of the 1950s and 60s, and hastened the end of segregation in all public facilities.

Bruce, Scottish royal family, descended from an 11th-cent. Norman duke, Robert de Brus, who aided WILLIAM I in his conquest of England. In the struggle following the death of MARGARET MAID OF NORWAY, the Bruces claimed succession to the Scottish throne. Robert the Bruce was a claimant in 1290, rivaled by John de BALIOL. His grandson was the famous Robert the Bruce, ROBERT I of Scotland. Edward Bruce, brother of Robert I, was crowned king of Ireland in 1316. The youngest son of Robert I succeeded him as DAVID II. He was succeeded by his nephew, ROBERT II, the first STUART king.

Bruce, earls of Elgin: see ELGIN, THOMAS BRUCE, 7TH EARL OF.

Bruce of Melbourne, Stanley Melbourne, Viscount, 1883–1967, Australian prime minister (1923–29). He advocated close relations between Australia and the empire and was later Australian delegate to the LEAGUE OF NATIONS. He was Australian high commissioner in London (1933–45).

Bruch, Max [brōōkh], 1838–1920, German composer. His Violin Concerto in G Minor (1868) and his variations on the *Kol Nidre* (1881) for cello and orchestra are well known.

Brücke, Die [Ger., = the bridge], German Expressionist art movement lasting from 1905 to 1913 (see EXPRESSIONISM). Founded in Dresden by KIRCHNER, SCHMIDT-ROTTLUFF, and the painter Erich Heckel, the group at first lived and worked communally, developing an intense, violent style with primitive and demonic qualities. Their exhibits, influenced by *Jugendstil* (the German equivalent of ART NOUVEAU) and VAN GOGH, displayed brutally deformed, boldly colored subjects, a reaction against IMPRESSIONISM and REALISM. Unlike contemporaneous FAUVISM, Die Brücke lacked coherent definition; the group disbanded because of disagreements over a statement of its aims.

Bruckner, Anton, 1824–96, Austrian composer and organist. Influenced by Richard WAGNER's orchestral grandeur and use of the chromatic SCALE, he employed complex, extended melody in such works as the MASSES in D Minor (1864), E Minor (1866), and F Minor (1867–71); a *Te Deum* (1881–84); and nine symphonies.

Bruegel, Brueghel, or **Breughel** [all: brö'gəl], outstanding family of Flemish genre and landscape painters. The foremost, **Pieter Bruegel,** the Elder, c.1525–69, portrayed in vibrant colors the living world of field and forest in which lively, robust peasants work and play, e.g., *The Harvesters* (Metropolitan Mus.) and *Peasant Wedding* (Vienna). BOSCH's influence is seen in *The Fall of the Rebel Angels* (Brussels). Bruegel also painted religious histories, parables, and rhythmic landscapes based on diagonal lines unfolding into the distance. **Pieter Bruegel,** the Younger, 1564–1637, often copied his father's works and was known for his pictures of the infernal regions. His brother **Jan Bruegel,** 1568–1625, called Velvet Bruegel, specialized in still life and landscapes. He occasionally supplied floral ornament for works from RUBENS's shop and shared his father's popularity.

Bruges or **Brugge,** city (1991 est. pop. 118,000), NW Flemish Belgium, connected by canal to the North Sea. Founded in the 9th cent., it was (13th cent.) a major port of the HANSEATIC LEAGUE. At its zenith (14th cent.) it was a great commercial center, particularly for the wool industry. It has revived as a commercial and tourist center in this century. Once (14th–15th cent.) the cradle of Flemish art, its churches and museums house many works by such masters as Jan van EYCK and Gerard David.

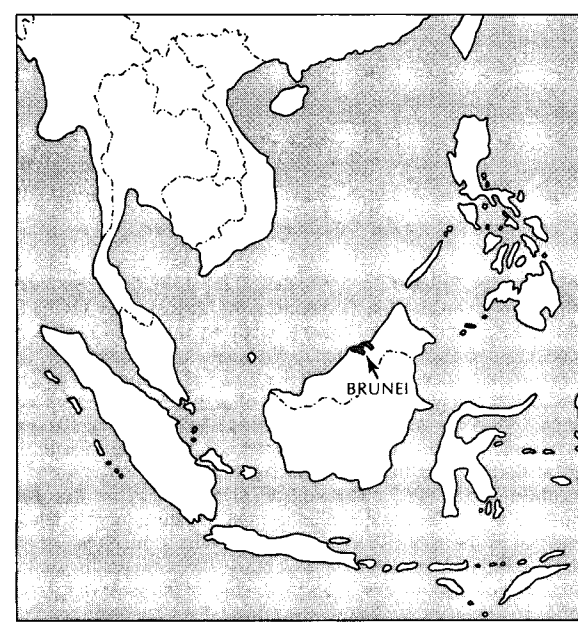
Bruhn, Erik [brōōn], 1928–1986, Danish ballet dancer. He joined (1947) the ROYAL DANISH BALLET and was (1953–58) a permanent member of the American Ballet Theatre. He was known for his dramatic, precise style in such ballets as *Giselle* and *Swan Lake.*

Brummell, Beau (George Bryan Brummell), 1778–1840, English dandy and wit. A friend of the prince regent (later George IV), he popularized dark, simply cut clothes, elaborate neckwear, and trousers rather than breeches.

Brundtland, Gro Harlem, 1939–, Norwegian politician. A physician and member of the Labor party, she was environment minister (1974–79) and deputy Labor party leader (1975–81) before her election to parliament (1977). Briefly prime minister in 1981, she has since led minority governments from 1986 to 1989 and from 1990.

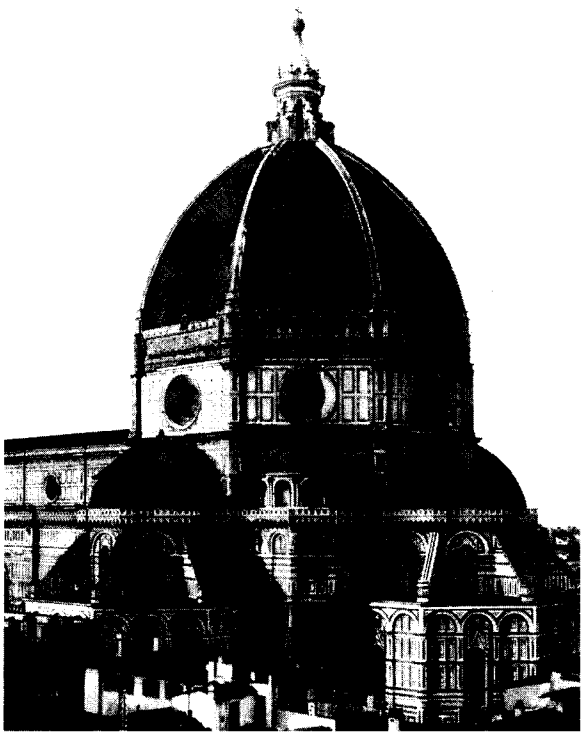
Brunehaut, Frankish queen: see BRUNHILDA.

Brunei [brōōnī'] or **Brunei Darussalam,** officially State of Brunei Darussalam, sultanate (1992 est. pop. 269,000), 2,226 sq mi (5,765



sq km), NW Borneo, in two coastal enclaves surrounded by SARAWAK, Malaysia. The capital and major port is Bandar Seri Begawan. Crude oil, natural gas, and petroleum products are the chief exports, but since independence the government has attempted to promote economic diversification. The majority of the population are Malays, but the minority Chinese dominate the economy. Malay and English are the official languages. Islam is the official religion, but there are Buddhist and Christian minorities. The native sultanate, established in the 15th cent., at one time ruled all Borneo, but its territory shrank to its present size by the late 19th cent. A British protectorate after 1888, Brunei was granted self-government in 1971 and became independent in 1984.

Brunel, Sir Marc Isambard, 1769–1849, English engineer and inventor; b. France. His most important work was the construction of the Thames Tunnel (begun 1825), in which a shield was used for the first time. His son, **Isambard Kingdom Brunel,** 1806–59, an English civil engineer, is best known for his design and construction of three oceangoing STEAMSHIPS: the *Great Western* (1838), the first transatlantic steam vessel; the *Great Britain* (1845), the first ocean screw steamship; and the *Great Eastern* (1858), the largest steam vessel of its time.



Brunelleschi's dome for the cathedral in Florence

Brunelleschi, Filippo [brōōnĕllĕs'kē], 1377–1446, first great Italian Renaissance architect, a Florentine. After his trial panel (1401) for the bronze doors of the Florence baptistery was not accepted, he concentrated on architectural planning. His Church of San Lorenzo, Florence, with its systematic use of perspective, and his Foundling Hospital, with its series of arches supported on columns, were tremendously influential. In 1420 he began a great octagonal ribbed DOME for the cathedral in Florence, one of the great domical constructions in architectural history.

Brunhild [brōōn'hĭld], **Brünnehilde** [brün"əhĭld'ə], or **Brynhild** [brĭn'hĭld], in Germanic mythology and literature, mighty female warrior. In the medieval NIBELUNGEN epic she is the queen of Iceland, defeated by SIEGFRIED, whose death she contrives. In the Icelandic VOLSUNGASAGA she is Brynhild, chief of the VALKYRIES. Loved and later deserted by Sigurd, she brings about his death, and destroys herself on his funeral pyre. As Brünnehilde, a Valkyrie, she figures in Richard WAGNER's operatic cycle *Ring of the Nibelungs.*

Brunhilda or **Brunehaut,** d. 613, Frankish queen, wife of Sigebert I of Austrasia. She was the real ruler, through her son and grandsons, of Austrasia and BURGUNDY. She played a leading part in the bloody war (567–613) against Neustria. Clotaire I of Neustria, her nephew, put her to death.

Brunhoff, Jean de, 1899–1937, French author and illustrator of children's books. Beginning with *The Story of Babar, the Little Elephant* (1932), he published several books about an elephant who runs away from the jungle to live in Paris. His son **Laurent de Brunhoff,** 1925–, has continued the series.

Bruno, Giordano, 1548–1600, Italian philosopher. A Dominican, Bruno was accused of heresy, left the order (c.1576), and became a wandering scholar. His works were regarded as heretical, and he was arrested (1591), tried before the INQUISITION, and burned at the stake. His major metaphysical works, *On the Infinite Universe and Worlds* and *The Infinite* (both 1584), drew heavily from Hermetic gnosticism and other works on magic and the occult. His defense of Copernicus was based not on mathematics but on animist and religious grounds. Bruno held that there are many possible modes of viewing the world, because we cannot postulate absolute truth. He was the first to state what is now called the cosmic theory: that the physical world is composed of irreducible elements (monads) in constant motion, and that the universe is infinite in scope. This view, reflected in the works of LEIBNIZ and SPINOZA, accounts for Bruno's position as a forerunner of modern science.

Brussels, Fr. *Bruxelles,* city (1991 est. pop. 140,050), capital of Belgium. An important manufacturing center, it is also a seat of the EUROPEAN UNION and of NATO. Brussels was inhabited by the Romans and later (7th cent.) by the Franks. It developed into a center of the wool trade in the 13th cent. and became (1430) the seat of the dukes of Burgundy and later (1477) of the governors of the Spanish (after 1714, Austrian) Netherlands. In 1830 it became the capital of an independent Belgium. Its historic buildings include the Maison du Roi (13th cent.), Gothic city hall (15th cent.), and parliament building (18th cent.).

Brussels sprouts, variety (*gemmifera*) of CABBAGE, producing small edible heads (sprouts) along the stem. Cultivated like cabbage, it was first developed in Belgium and France in the 18th cent.

Brut, Brute, or **Brutus,** a Trojan, the legendary first king of England, a descendant of AENEAS. His name titles long poems by Wace and LAYAMON.

Brutus, in ancient Rome, a surname of the Junian gens. **Lucius Junius Brutus,** fl. 510 B.C., was the founder of the Roman Republic. Roman historians tell how he led the Romans in expelling the TARQUINS after the rape of Lucrece and how he executed his sons for plotting a Tarquinian restoration. **Marcus Junius Brutus,** 85? B.C.–42 B.C., was the principal assassin of Julius CAESAR. He had sided with POMPEY, but after the battle of Pharsala (48 B.C.), Caesar pardoned him. Nevertheless, he joined Caius Cassius Longinus (see CASSIUS, family) in the plot against Caesar. After Caesar's murder (44 B.C.), Brutus went east and was defeated at Philippi in 42 B.C. by Octavian (later AUGUSTUS) and Antony. Brutus then committed suicide. His character has long been disputed. A lesser member of the conspiracy was **Decimus Junius Brutus,** d. 43 B.C., a partisan of Caesar against Pompey and a favorite of the dictator. After Caesar's death, Brutus was killed by ANTONY.

Brutus, Dennis, 1924–, South African poet. He was imprisoned and later (1966) exiled because of his antiapartheid activities. His poetry, collected in *Letters to Martha* (1969) and *Salutes and Censures* (1984), reflects his prison experiences, struggle for justice, and political exile.

Bryan, William Jennings, 1860–1925, American political leader; b. Salem, Ill. He was a member (1891–95) of the U.S. House of Representatives. At the 1896 Democratic national convention he made his famous "Cross of Gold" speech in defense of FREE SILVER. He was nominated for president but lost to MCKINLEY that year and in 1900; in 1908 he lost to W.H. TAFT. In 1912 he helped to elect Woodrow WILSON, who named him secretary of state (1913–15). Bryan negotiated treaties with some 30 nations providing for investigation of disputes. An advocate of religious FUNDAMENTALISM, he appeared for the prosecution in the 1925 SCOPES TRIAL. Many of

The key to pronunciation appears on page xiii.

the reforms he urged were later adopted, e.g., the INCOME TAX and WOMAN SUFFRAGE.

Bryant, William Cullen, 1794–1878, American poet and editor; b. Cummington, Mass. In his youth he was well known for his poems, e.g., "Thanatopsis," and "To a Waterfowl." He practiced law until 1825, when he moved to New York City. He became editor (1826), then part owner (1829–78) of the *Evening Post,* in which he advocated free trade, abolition of slavery, and other reforms. The earliest American theorist on poetry, Bryant also translated the *Iliad* (1870) and the *Odyssey* (1872).

Bryce Canyon National Park: see NATIONAL PARKS (table).

Bryn Mawr College, at Bryn Mawr, Pa.; founded 1885 by the Society of Friends. The first women's college in the U.S. to offer graduate degrees, Bryn Mawr now has a coeducational graduate school. Its library includes famous medieval and rare book collections. It shares many facilities with Haverford College, a coeducational institution nearby.

bryophyte, member of a group of primitive green land plants consisting of the MOSSES, LIVERWORTS, and hornworts. Since they lack the true stems, roots, and leaves of ferns, cone-bearing plants, and flowering plants, bryophytes must absorb moisture directly from the air or the ground. Their reproductive cycle involves alternating GAMETOPHYTE and sporophyte generations.

Brythonic [brĭthŏn'ĭk], group of languages belonging to the Celtic subfamily of the Indo-European family of languages. See LANGUAGE (table).

Brzezinski, Zbigniew [brəzhĭn'skē], 1928–, American political scientist and public official; b. Poland. While teaching (1960–77) at Columbia Univ., he became an acknowledged expert on political affairs in the Communist world. As Pres. CARTER's national security adviser (1977–81), he advocated a harder line toward the USSR. He returned to Columbia in 1981.

Btu: see BRITISH THERMAL UNIT.

bubble chamber: see PARTICLE DETECTOR.

Buber, Martin, 1878–1965, Jewish philosopher; b. Austria. He taught Jewish philosophy and religion in Germany until he was forced (1938) to leave the country; he settled in Jerusalem. The mysticism of the HASIDIM and the Christian existentialism of KIERKEGAARD influenced him. His major work, *I and Thou* (1923), which posited a personal and direct dialogue between God and the individual, has had a great impact on contemporary Christian and Jewish theology.

bubonic plague: see PLAGUE.

Bucer or **Butzer, Martin** [byōō'sər, bōōt'sər], 1491–1551, German Protestant reformer. Influenced by LUTHER's preaching, he joined (1523) the REFORMATION movement in Strasbourg. He promoted Protestant education and brought about (1536) the Wittenberg Concord on the doctrine of the Eucharist. At the invitation of Thomas CRANMER, he spent his last years in England, teaching at Cambridge.

Buchan, John, 1st **Baron Tweedsmuir,** 1875–1940, Scottish author and statesman. He wrote history, biography, and popular adventure novels, including *The Thirty-nine Steps* (1915). In 1935 he was appointed governor general of Canada.

Buchanan, Franklin, 1800–1874, U.S. naval officer; b. Baltimore. The first superintendent (1845–47) of the U.S. Naval Academy, he was the ranking officer in the Confederate navy in the CIVIL WAR. Wounded at Hampton Roads (1863), he surrendered to Adm. FARRAGUT in the battle of Mobile Bay (1864).

Buchanan, James, 1791–1868, 15th president of the U.S. (1857–61); b. near Mercersburg, Pa. A learned lawyer, he was a congressman (1821–31) and senator (1834–45) from Pennsylvania. At first a Federalist, he became a conservative Democrat and was Pres. POLK's secretary of state (1845–49) during the MEXICAN WAR. Under Pres. PIERCE, he was (1853–56) minister to Great Britain and helped draft the OSTEND MANIFESTO. In 1856 he was elected president. Believing slavery was morally wrong but not unconstitutional, he tried to keep the "sacred balance" between proslavery and antislavery factions, but his views alienated radicals in both North and South. After the 1860 election was won by Abraham LINCOLN, Buchanan was faced with the crisis of secession. Believing that states did not have the right to secede nor the federal government the right to coerce them, he promised there would be no hostile moves during negotiations. U.S. troops were, however, moved to FORT SUMTER; shortly after he left office, gunfire there set off the CIVIL WAR.

Bucharest, Rom. *Bucureşti,* city (1986 est. pop. 1,989,000), capital and largest city of Romania, SE Romania, on the Dîmboviţa R., a tributary of the Danube. It is Romania's chief industrial and communications center and produces farm and transport equipment, petroleum products, and textiles. Founded in the 14th cent., it became the capital of WALACHIA in 1698 and of Romania in 1861. During World War I the city was occupied (1916–18) by the Central Powers. After Romania's surrender to the Allies (Aug. 1944) in World War II, the Germans bombed it severely. Soon after, Soviet troops entered the city. Bucharest contains many old churches, e.g., Metropolitan Church (1649).

Buchman, Frank Nathan Daniel [bōōk'mən], 1878–1961, American evangelist; b. Pennsburg, Pa. After preaching "world-changing through life-changing" at Oxford in 1921, he became the head of a movement called the Oxford Group or Buchmanism. In 1938 he founded the controversial Moral Re-Armament movement (MRA).

Büchner, Georg [bükh'nər], 1813–37, German dramatist. A student of medicine and a political agitator, Büchner wrote a powerful drama, *Danton's Death* (1835); the fragmentary tragedy *Wozzeck* (1850), which Alban BERG adapted for his opera; and a comedy, *Leonce and Lena* (1850).

Buchwald, Art, 1925–, American newspaper columnist; b. Mount Vernon, N.Y. Specializing in political and social satire, his columns appear in about 500 newspapers. He was awarded the Pulitzer prize for commentary in 1982.

Buck, Pearl S(ydenstricker), 1892–1973, American author; b. Hillsboro, W.Va. Until 1924 she lived in China, where she, her parents, and her first husband were missionaries. She is famous for her vivid, compassionate novels about life in China, the finest of which is thought to be *The Good Earth* (1931; Pulitzer). Buck published over 85 books, including novels, children's books, plays, biographies, and non-fiction. She was awarded the Nobel Prize in literature in 1938.

buckeye: see HORSE CHESTNUT.

Buckingham, George Villiers, 1st **duke of** [vĭl'yərz], 1592–1628, English nobleman, a royal favorite. He arrived (1614) at the English court as JAMES I was tiring of Robert Carr and rose rapidly, becoming lord high admiral in 1619. By 1620 he was dispensing the king's patronage. He gained popularity with Parliament by urging war with Spain, then lost it by negotiating CHARLES I's marriage to HENRIETTA MARIA, a Catholic princess of France. He remained powerful after Charles came to the throne. After the failure of several expeditions, notably one against Cádiz (1625), he was impeached by Parliament, but the king dissolved Parliament to prevent his trial. Villiers was at Portsmouth preparing an expedition to relieve the HUGUENOTS at La Rochelle when he was killed by a discontented naval officer. His son, **George Villiers,** 2d **duke of Buckingham,** 1628–87, was a royalist in the ENGLISH CIVIL WAR. He served CHARLES II in exile, but intrigues and his marriage to the daughter of a Puritan lord caused estrangement. He regained favor after the RESTORATION and became an extremely powerful courtier. Vain and ambitious, he was noted for his temper, recklessness, and dissoluteness. He was a member of the CABAL but was dismissed for misconduct in 1674. Despite earlier opposition to JAMES II, he regained favor in 1684. A scholar with exquisite tastes, he wrote poetry and plays, including *The Rehearsal* (1671).

Buckingham Palace, residence of British sovereigns since 1837, Westminster, London. Built (1703) by the Duke of Buckingham, it was purchased (1761) by GEORGE III and remodeled (1825) by John NASH. The palace has nearly 600 rooms.

Buckle, Henry Thomas, 1821–62, English historian. Using a scientific method, he undertook the ambitious plan of writing a history of civilization rather than of battles and wars. At the time of his death, he had completed the first two volumes of his *History of Civilization in England* (1857–61), which profoundly influenced liberal thought and later historians.

Buckley, William F(rank), Jr., 1925–, American editor and writer; b. N.Y.C. A witty spokesman for the conservative viewpoint, he founded the magazine *National Review* in 1955, hosted the weekly television show "Firing Line" from 1966, and wrote a syndicated

newspaper column. His books include *God and Man at Yale* (1951) and several spy novels.

buckthorn, common name for some members of the Rhamnaceae, a family of widely distributed woody shrubs, small trees, and climbing vines. The buckthorns (some species of the genus *Rhamnus*) and the jujube (*Zizyphus jujuba*) are cultivated as ornamentals. Jujube was also used as a flavoring and in confectionery. Some members of the family yield dyes; others are used for lumber, e.g., cogwood. Other American species of *Rhamnus* are the redberry, the Indian cherry, and *R. purshiana,* which yields the purgative cascara sagrada.

buckwheat, common name for some members of the Polygonaceae, a family of herbs and shrubs found chiefly in north temperate areas and having a characteristic pungent juice containing oxalic acid. Members of the family include the knotweeds and smartweeds (genus *Polygonum* or *Persicaria*), some sorrels (the common name is used also for the unrelated OXALIS), and the economically important rhubarb (genus *Rheum*) and buckwheat (genus *Fagopyrum*).

buckyball, a colloquial term for buckminsterfullerene, a roughly spherical molecule consisting of 60 carbon atoms. **Buckytube** is a generic term for cylindrical fullerenes. See FULLERENE.

bucolics: see PASTORAL.

Budapest, city (1990 pop. 2,016,100), capital and largest city of Hungary, N central Hungary, on both banks of the Danube R. About half of Hungary's industrial output comes from Budapest and its suburbs; major products include machinery, chemicals, and iron and steel. One of the capitals of the AUSTRO-HUNGARIAN MONARCHY, the city was formed in 1873 by the union of Buda and Óbuda, on the right bank of the Danube, with Pest, on the left bank. The area may have been settled in the Neolithic era. Under Roman rule from the 1st cent. A.D., the cities were destroyed by the Mongols in 1241. Buda became the capital of Hungary in 1361 and fell to the Turks in 1541. From 1686 to 1918 the cities were under HAPSBURG rule; after World War I Budapest became the capital of independent Hungary. During World War II Budapest was occupied (1944–45) by the Germans and was largely destroyed during a 14-week siege by Soviet troops. In 1956 it was the center of an unsuccessful uprising against the Communist government.

Buddha [Skt., = the enlightened one], title given to the founder of BUDDHISM, Siddhartha Gautama, c.563–c.483 B.C.; b. S Nepal. A soothsayer is said to have predicted at Siddhartha's birth that he would become a world ruler or a world teacher. His father, King Suddhodana, of the warrior caste, raised him in great luxury, but at the age of 29 Siddhartha renounced the world to become a wandering ascetic and search for a solution to the problems of death and human suffering. After six years of spiritual discipline, he achieved supreme enlightenment at the age of 35 while meditating under a pipal tree at Bodh Gaya. He spent the rest of his life teaching his doctrines and establishing a community of monks, the *sangha,* to continue his work.

Buddhism, religion and philosophy founded in India in the 6th and 5th cent. B.C. by Siddhartha Gautama, called the BUDDHA. One of the great Asian religions, it teaches the practice of MEDITATION and the observance of moral precepts. The basic doctrines include the "four noble truths" taught by the Buddha: existence is suffering; the cause of suffering is desire; there is a cessation of suffering, called NIRVANA, or total transcendence; and there is a path leading to the end of suffering, the "eightfold noble path" of right views, right resolve, right speech, right action, right livelihood, right effort, right mindfulness, and right concentration. Buddhism defines reality in terms of cause-and-effect relations, thus accepting the doctrine common to Indian religions of *samsara,* or bondage to the repeating cycle of births and deaths according to one's physical and mental actions (see KARMA). The ideal of early Buddhism was the perfected saint, *arahant* or *arhat,* purified of all desires. Of the various Buddhist schools and sects that arose, the Theravada [doctrine of the elders] school of Ceylon (now Sri Lanka) is generally accepted as representative of early Buddhist teaching. Mahayana [great vehicle] Buddhism has as a central concept the potential Buddhahood innate in all beings. Its ideal for both layman and monk is the *bodhisattva,* the perfected one who postpones entry into *nirvana* (although meriting it) until all others may be similarly enlightened. Buddhism was greatly strengthened in the 3d cent. B.C. by the support of the Indian emperor ASOKA, but it declined in India in succeeding centuries and was virtually extinct there by the 13th cent., while it spread and flourished in Ceylon (3d cent. A.D.) and Tibet (7th cent. A.D.; see TIBETAN BUDDHISM). In the 1st cent. A.D. Buddhism entered China, where it encountered resistance from CONFUCIANISM and TAOISM, and from there spread to Korea (4th cent. A.D.) and to Japan (6th cent. A.D.). Two important sects that became established in the 5th cent. A.D. and have greatly increased in popularity are ZEN BUDDHISM, featuring the practice of meditation to achieve "sudden enlightenment," and Pure Land Buddhism, or Amidism, a devotional Mahayana sect centered on the worship of the Buddha Amitabha, who vowed to save all sentient beings by bringing them to rebirth in his realm, the "Western Paradise." Buddhism still flourishes in Asia and has an influence in the modern Western world.

Budge, Don (John Donald Budge), 1915–, American tennis player; b. Oakland, Calif. He won the U.S. and Wimbledon singles titles in 1937 and 1938, and in 1938 he was the first to achieve the tennis grand slam (U.S., British, Australian, and French championships). He turned professional in 1939.

Buenos Aires, city and federal district (1991 pop. 2,780,092), E Argentina, capital of Argentina, on the Río de la Plata. It is one of the largest cities of Latin America, a major world port, and Argentina's commercial and social center. Heavily industrialized, the city is one of the world's leading exporters of processed foods. It was founded in 1536, abandoned, then resettled in 1580, and was the first Latin American city to revolt (1810) against Spanish rule. Officially independent in 1816, it became the capital of a united Argentina in 1862. It grew into an urban colossus in the late 19th cent., when railroads into the agriculturally abundant PAMPA to the west began to supplement the great inland river transportation system that linked the city with Uruguay, Paraguay, and Brazil, and immigration from Europe increased. Famous landmarks include the 19th-cent. cathedral, the opera house, and the many beautiful municipal parks.

Buffalo, city (1990 pop. 328,123; met. area 968,532), seat of Erie co., W N.Y., on Lake Erie and the Niagara and Buffalo rivers; inc. 1832. One of the major grain-distributing ports in the U.S. and a railroad hub, it has automobile, electrochemical, electrometallurgical, and steel industries. Laid out in 1803, it was almost entirely destroyed by fire in the WAR OF 1812. Transportation, particularly after the opening (1825) of the ERIE CANAL, was primary to the city's development. Its downtown area underwent major renewal in the 1970s and 80s. Buffalo is the site of a branch of the State Univ. of N.Y., the Albright-Knox Art Gallery, and other noted institutions. The Peace Bridge (1927) connects it with Fort Erie Canada.

buffalo, name commonly applied to the North American BISON but correctly restricted to related African and Asian hooted MAMMALS of the CATTLE family. The water, or Indian, buffalo (*Bubalus bubalis*) is a large, strong, dark gray animal with widespread curved horns, domesticated for draft. Wild forms live near rivers, where they wallow; they feed on grass and have fierce tempers.

Buffalo Bill (William Frederick Cody), 1846–1917, American scout and showman; b. near Davenport, Iowa. He worked as an army scout and hunted buffalo for railroad camps. He organized (1883) and then toured with Buffalo Bill's Wild West Show.

buffalo soldiers, name given to the African-American U.S. Army regiments commissioned by Congress to patrol the American West after the Civil War. Consisting of two infantry and two cavalry regiments, they were the first such units chartered in peacetime. The regiments continued in Army service until U.S. armed forces were integrated in 1952.

buffer, solution that can keep its *p*H, i.e., its relative acidity or alkalinity, constant despite the addition of strong acids or bases (see ACIDS AND BASES). Buffer solutions contain either a weak acid or weak base and one of their salts. See article on *p*H.

Buffon, George Louis Leclerc, comte de [büfôN'], 1707–88, French naturalist and author. From 1739 he was keeper of the Jardin du Roi (later Jardin des Plantes) in Paris, making it a center of research during the Enlightenment. His works include his monumental compendium on natural history, *Histoire naturelle* (44 vol.,

1749–1804). On his reception into the French Academy in 1753, he delivered his famous *Discours sur le style.*

bug, name correctly applied to INSECT of the order Hemiptera, although other insects are also referred to as bugs. True bugs have partially thickened, partially membranous front wings and piercing-sucking mouthparts in the form of a beak. Most bugs are terrestrial but many are aquatic (e.g., WATER BUGS). Most suck plant juices (e.g., squash bug); some suck the blood of other insects and spiders. Others feed on humans and other animals (e.g., BEDBUG).

Buganda: see UGANDA.

bugle: see WIND INSTRUMENT.

building and loan association: see SAVINGS AND LOAN ASSOCIATION.

Buisson, Ferdinand Édouard [büēsôN'], 1841–1932, French educator and 1927 Nobel Peace Prize winner. A professor of pedagogy at the Sorbonne, he produced the *Dictionnaire de pédagogie* (1882–93) and was an ardent pacifist and civil-liberties advocate.

Bujumbura, city (1986 est. pop. 273,000), capital of Burundi, W Burundi. A port on Lake TANGANYIKA, it is the country's largest city and economic center, and has a growing tourist industry. Coffee, cotton, hides, and tin ore are shipped via the lake to Tanzania and Zaïre. The city became (1899) a military post in German East Africa. After World War I it was the administrative center of Ruanda-Urundi, a Belgian MANDATE. It was called Usumbura until 1962.

Bukharin, Nikolai Ivanovich, 1888–1938, Soviet Communist leader and theoretician. After the 1917 RUSSIAN REVOLUTION he edited the newspaper *Pravda* and was a COMINTERN leader. A full member of the politburo after 1924, he lost his major party posts in 1929 for advocating slow agricultural collectivization, in opposition to the Stalinist majority. In 1938 he was tried for treason and executed.

Bulawayo, city (1983 est. pop. 429,000), SW Zimbabwe. The country's second largest city, it is an important commercial, railroad, and industrial center that produces textiles, motor vehicles, and metal products. The city was founded by the British in 1893. Nearby are the 18th-cent. ruins of Khami.

bulb, thickened, fleshy plant bud, usually formed below the soil surface, which stores food from one blooming season to the next. Bulbs have either layers (e.g., onion and hyacinth) or scales (e.g., some lilies). Structures that serve similar functions include the TUBER of the potato and the RHIZOMES of some irises. All are specialized STEMS.

Bulfinch, Charles, 1763–1844, American architect; b. Boston. He was chairman of the Boston board of selectmen (equivalent to mayor) from 1799 to 1818. He designed the first theater in New England, the Federal Street Theater (1794; now demolished). Remaining are his chief monumental works—the statehouse, Boston (1799); University Hall at Harvard (1815); and Massachusetts General Hospital (1820). Bulfinch's completion (1818–30) of the CAPITOL at Washington inspired state capitol architects throughout the U.S.

Bulfinch, Thomas, 1796–1867, American author; b. Newton, Mass. He wrote works that popularized myth and fable, e.g., *The Age of Fables* (1855) and *The Age of Chivalry* (1858).

Bulgakov, Mikhail Afanasyevich [bo͝olgä'kəf], 1891–1940, Russian author. *The White Guard* (1925), a novel, and *The Days of the Turbines* (1926), a play, are about the RUSSIAN REVOLUTION (1917). His masterpiece is *The Master and Margarita* (published in a censored edition in 1967–68; tr. 1967), a satiric, philosophical fantasy about Satan's visit to Moscow.

Bulganin, Nikolai Aleksandrovich, 1895–1975, Soviet leader. He was mayor of Moscow (1931–37), chairman of the state bank (1937–41), and defense minister under STALIN and MALENKOV, whom he succeeded as premier (1955). In 1958, forced from office by KHRUSHCHEV, he was expelled from the Communist party central committee.

Bulgaria, officially Republic of Bulgaria, republic (1992 est. pop. 8,869,000), 42,823 sq mi (110,912 sq km), SE Europe, on the E BALKAN PENINSULA. It is bordered by the Black Sea (E), Romania (N), Macedonia and Yugoslavia (W), Greece (S), and European Turkey (SE). SOFIA is the capital. Central Bulgaria is traversed from east to west by the Balkan Mts.; the Rhodope range, with the country's highest peak, Musala Mt. (9,592 ft/2,923 m), is in the southwest. The principal river is the DANUBE. Bulgaria has been considerably industrialized since World War II, but agriculture (chiefly wheat, corn, barley, sugar beets, grapes, and livestock) remains the principal occupation. The leading industries are food processing, engineering, metallurgy, and the production of machinery, chemicals, and electronics. Mineral resources include lignite, iron and lead ores, and petroleum and natural gas. The population consists chiefly of Bulgars (86%) and Turks (9%). The Bulgarian Orthodox church is the predominant religion, but most Turks and some ethnic Bulgarians are Muslims. Bulgarian is the official language.

History. In A.D. 679–80 ancient THRACE and Moesia, site of modern Bulgaria, were conquered by Eastern Bulgars, who gradually merged with earlier Slavic settlers and adopted their language. The first Bulgarian empire was established in 681, introduced to Christianity by BORIS I (r.852–89) in 865, at the height of its power under SIMEON I (r.893–927), and subjugated by the Byzantines in 1018. The second Bulgarian empire rose in 1186 and reached its apex under Ivan II (r.1218–41). In 1396 it was absorbed by the OTTOMAN EMPIRE, which ruled it for almost five centuries. Turkey's suppression of a Bulgarian revolt (1876) was one of the reasons for the RUSSO-TURKISH WAR of 1877–78. The Treaty of San Stefano, which created a large, autonomous Bulgaria, was revised by the Congress of BERLIN, which divided Bulgaria into three parts. In 1908 FERDINAND of Saxe-Coburg-Gotha proclaimed Bulgarian independence, with himself as czar. The country's borders were changed significantly by the BALKAN WARS, and Bulgarian claims in MACEDONIA prompted Bulgaria to side with Germany in WORLD WAR I. Under Boris III (r.1918–43) Bulgaria was often in political turmoil, and in 1935 Boris established a personal dictatorship. In WORLD WAR II Bulgaria again allied (1941) with Germany. The Soviet Union occupied the country in 1944, and Communists took over the government. The monarchy was abolished, and a republic proclaimed in 1946. Bulgaria's Communist dictatorship was one of the most repressive in the Soviet bloc and attempted to forcibly assimilate its Turkish minority during the 1980s. In Nov. 1989, Bulgarian president and party boss Todor I. ZHIVKOV abruptly resigned, and the National Assembly later ended the Communist party's monopoly of political power, though the ruling Socialist (formerly Communist) party was returned to power in June 1990. A new constitution (1991) established a parliamentary republic, and in the subsequent elections the Socialists lost to the Union of Democratic Forces. No party, however, was able to establish a long-term government, and major economic reforms proved difficult to enact.

Bulgarian language, member of the South Slavic group of the Slavic subfamily of the Indo-European family of languages. See LANGUAGE (table).

Bulgars, Eastern, Turkic-speaking people who appeared on the middle Volga R., E European Russia, by the 8th cent.; also called Volga or Kama Bulgars. One branch moved west into Bulgaria and there merged with the SLAVS. The Eastern Bulgars accepted ISLAM in the 10th cent. and founded a powerful state; it survived the Mongol conquests of 1237 and 1361 but disappeared after its capture by the grand duke of Moscow in 1431.

bulimia: see EATING DISORDERS.

bull, letter containing an important pronouncement of the pope. In modern times encyclicals (letters to all bishops) are usually used for doctrinal statements, whereas bulls are employed for solemn or grave pronouncements.

bulldog, thick-set NONSPORTING DOG; shoulder height, 13–15 in. (33–38.1 cm); weight, 40–50 lb (18.1–22.7 kg). Its short, flat-lying coat is brindle, white, red, or fawn. It has a low-slung body and undershot jaw and was developed in Britain for bullbaiting and pitfighting.

bullfighting, national sport of Spain, also popular in Mexico and other Latin American countries and S France. The object is for one of the bullfighters, the matador, to kill an untamed bull with a sword in a manner largely prescribed by tradition. The matador is assisted by two mounted picadors and three capemen on foot (*banderilleros*), who sting the bull with lances and barbed sticks to spur his charge. In the final act, the matador makes daring passes at the bull with his cape, or *muleta,* before thrusting his sword between the animal's shoulder blades into the heart. Although a matador's performance is often one of grace and beauty, critics have denounced bullfighting as an inhumane spectacle. The Portuguese practice a style of bullfighting from horseback in which the bull is not killed.

Bull Moose party: see PROGRESSIVE PARTY.

Bull Run, small stream, NE Va., c.30 mi (50 km) SW of Washington, D.C.; the site of two Union defeats in the CIVIL WAR. The **first battle of Bull Run** (or Manassas) was the first major clash of the war, on July 21, 1861. On July 16, Union Gen. Irvin McDowell began to move on Confederate Gen. P.G.T. BEAUREGARD at Manassas Junction. McDowell attacked Beauregard's soldiers, who were joined by some forces of Gen. Joseph E. JOHNSTON, near the stone bridge over Bull Run and drove them to the Henry House Hill. But Confederate Gen. Stonewall JACKSON checked the Union advance and, reinforced, routed the raw Union troops. In the **second battle of Bull Run,** Aug. 29–30, 1862, Jackson was attacked by Union Gen. John Pope just as Gen. James LONGSTREET arrived with reinforcements; together they twice repulsed Pope, who withdrew to Washington. Both battlefields are in Manassas National Battlefield Park.

bull terrier, large, muscular TERRIER; shoulder height, 19–22 in. (48.3–55.9 cm); weight, 30–36 lb (13.6–16.3 kg). Its short, flat-lying, harsh coat is glossy white or brindle with white markings. It was developed for dogfighting in England c.1835.

Bülow, Hans Guido, Freiherr von, 1830–94, German pianist and conductor. He studied with LISZT, married his daughter Cosima (who left him to marry Richard WAGNER), and became a champion of BRAHMS. He was the first modern virtuoso conductor.

bulrush: see SEDGE.

Bultmann, Rudolf Karl [bo͝olt'män], 1884–1976, German existentialist theologian. Influenced by Martin HEIDEGGER, he is best known for his work on the New Testament, which he reduced—with the exception of the Passion—to basic elements of myth. His approach is termed "demythologization." His classic work is *Theology of the New Testament* (tr. 1951).

Bulwer-Lytton, Edward George Earle Lytton, 1st **Baron Lytton,** 1803–73, English novelist. Best remembered for his popular, extremely well-researched historical novels, particularly *The Last Days of Pompeii* (1834) and *Rienzi* (1835), he also wrote novels of manners and successful plays. He served in Parliament and as colonial secretary. His son, **Edward Robert Bulwer-Lytton,** 1st **earl of Lytton,** pseud. **Owen Meredith,** 1831–91, was a diplomat and poet. He was viceroy of India (1876–80) and, later, ambassador to France. His poetry includes *Lucile* (1860) and the epic fantasy *King Poppy* (1892).

Bunau-Varilla, Philippe Jean [büno'-värēyä'], 1859–1940, French engineer. He organized the company that built the PANAMA CANAL. He was a leader in the conspiracy that successfully wrested PANAMA from Colombia. As minister of the new Panamanian republic, he negotiated the treaty (1903) that gave the U.S. control of the waterway.

bunchberry: see DOGWOOD.

Bunche, Ralph Johnson, 1904–71, U.S. diplomat; b. Detroit. He was (1945) the first African American to be a division head in the U.S. Dept. of State. He entered the UN in 1946 as director of the Trusteeship Division. For his work (1947) as principal secretary of the UN Palestine Commission he was awarded (1950) the Nobel Peace Prize. He later served as undersecretary general for special political affairs (1958–71).

Bunin, Ivan Alekseyevich [bo͞o'nĭn], 1870–1953, Russian writer. He came to world attention with *The Village* (1910), a pessimistic novel of peasant life. Best known are his short stories, e.g., the title story in the collection *The Gentleman from San Francisco* (1916), an ironic study of vanity and death; and his autobiographical novel *The Well of Days* (1930). An aristocrat, he lived in exile after 1919. He received the 1933 Nobel Prize in literature.

Bunker Hill, battle of, in the AMERICAN REVOLUTION, June 17, 1775; actually fought on nearby Breed's Hill, Charlestown, Mass. Colonial militia defended the height against Gen. William Howe (see under HOWE, RICHARD HOWE, EARL) until their powder gave out. The British victory failed to break the Patriots' siege of Boston, and the gallant American defense heightened colonial morale and resistance.

Bunsen, Robert Wilhelm, 1811–99, German scientist. A professor (1852–89) at Heidelberg, he studied organic compounds of arsenic and developed a method of gas analysis from studies on blast furnaces. With Gustav KIRCHHOFF he discovered by spectroscopy the elements CESIUM and RUBIDIUM. He invented and improved various kinds of laboratory equipment, e.g., the Bunsen burner.

Bunshaft, Gordon, 1909–90, American architect; b. Buffalo. As chief designer for the firm of Skidmore, Owings, & Merrill, he was responsible for Lever House, New York City's first glass-wall SKYSCRAPER (1952), which was widely imitated. Among his other works are the Albright-Knox Art Gallery, Buffalo, and the HIRSHHORN MUSEUM, Washington, D.C.

Buntline, Ned, pseud. of **Edward Zane Carroll Judson,** 1823–86, American writer; b. Stamford, N.Y. In 1845 he founded *Ned Buntline's Own,* a sensationalist magazine. Buntline, who lived a life of violent adventure, wrote over 400 action novels that were the forerunners of America's DIME NOVELS.

Buñuel, Luis [bo͞onyo͞oĕl'], 1900–1983, Spanish film director. His critical, often witty, studies of social hypocrisy include *L'Age d'or* (1930), *Los Olvidados* (1949), *The Exterminating Angel* (1962), and *That Obscure Object of Desire* (1977).

Bunyan, John, 1628–88, English author. A tinker by trade and a Parliamentary soldier, he became a Baptist lay preacher and wrote to defend his beliefs. Arrested in 1660 for unlicensed preaching, he spent 12 years in prison. There he wrote his spiritual autobiography, *Grace Abounding to the Chief of Sinners* (1666), and other books. Imprisoned a second time, he began his masterpiece, *Pilgrim's Progress from This World to That Which Is to Come* (1678, second part 1684). An allegory of Christian's journey from the City of Destruction to the Celestial City, it is written in a prose that unites biblical eloquence with the clarity of common speech.

Bunyan, Paul, legendary American lumberjack of fantastic size and strength, hero of many "tall tales" popular in the Western timber country. His prized possession was the huge Babe the Blue Ox, whose horns were 42 ax handles apart.

Buonaparte: see BONAPARTE and NAPOLEON I.

Buonarroti, Michelangelo: see MICHELANGELO BUONARROTI.

Buoninsegna, Duccio di: see DUCCIO DI BUONINSEGNA.

buoyancy: see ARCHIMEDES' PRINCIPLE.

Burbage, Richard, 1567?–1619, first great English actor. He originated the title roles in SHAKESPEARE's *Hamlet, King Lear, Othello,* and *Richard III.* He also acted in the premieres of many plays by Thomas KYD, BEAUMONT and FLETCHER, Ben JONSON, and John WEBSTER.

Burbank, Luther, 1849–1926, American plant breeder; b. Lancaster, Mass. He developed many new varieties of fruits, vegetables, and flowers, including the Burbank potato and the famous Shasta daisy. His methods and results are described in his books *How Plants Are Trained to Work for Man* (1921) and, with Wilbur Hall, *Harvest of the Years* (1927) and *Partners of Nature* (1939).

Burbidge, (Eleanor) Margaret, 1925–, Anglo-American astronomer. She was (1972–73) the first woman appointed director of the Royal Greenwich Observatory and was named (1982) president of

the American Association for the Advancement of Science. Burbidge; her husband, Geoffrey Burbidge; William Fowler; and Sir Fred Hoyle showed (1956) how heavier elements can be built up from lighter ones in the interiors of stars.

Burckhardt, Jacob Christoph [bŏŏrk'härt], 1818–97, Swiss historian, one of the founders of the cultural interpretation of history. His *Civilization of the Renaissance in Italy* (1860) remains the great classic on the Renaissance. He influenced his friend NIETZSCHE and the work of J.A. SYMONDS.

Burger, Warren Earl, 1907–, 15th chief justice of the U.S. SUPREME COURT (1969–86); b. St. Paul, Minn.; grad. St. Paul College of Law (1931). He was a judge of the U.S. Court of Appeals for the District of Columbia from 1956 until his appointment as Supreme Court chief justice by Pres. Nixon. A conservative and an advocate of judicial restraint, he led a court that was generally more conservative than the one headed by his predecessor, Earl WARREN.

Burgess, Anthony, 1917–93, English novelist; b. John Anthony Burgess Wilson. Of his surreal, darkly comic novels, the best known is the futuristic thriller *A Clockwork Orange* (1962). Others include *Inside Mr. Enderby* (1961), *MF* (1971), *Earthly Powers* (1980), and *Any Old Iron*(1989).

Burghley or **Burleigh, William Cecil,** 1st **Baron** [both: bûr'lē], 1520–98, English statesman. He was chief adviser to ELIZABETH I, whom he served faithfully for 40 years—as her chief spokesman in Parliament (1558–98) and as secretary (1558–72) and lord treasurer (1572–98). A supporter of the Anglican church, he suppressed Catholic revolts and convinced Elizabeth to execute MARY QUEEN OF SCOTS.

burglary, in COMMON LAW, the nighttime breaking into and entering of a dwelling of another to commit a FELONY. Some modern statutes have amended the common-law definition of burglary to include breaking into and entering any building during the day or night to commit any crime.

Burgoyne, John [bərgoin'], 1722–92, British general. A hero of the SEVEN YEARS WAR, he was elected to Parliament in 1761. In the AMERICAN REVOLUTION he led a poorly equipped army in the SARATOGA CAMPAIGN and surrendered (Oct. 1777).

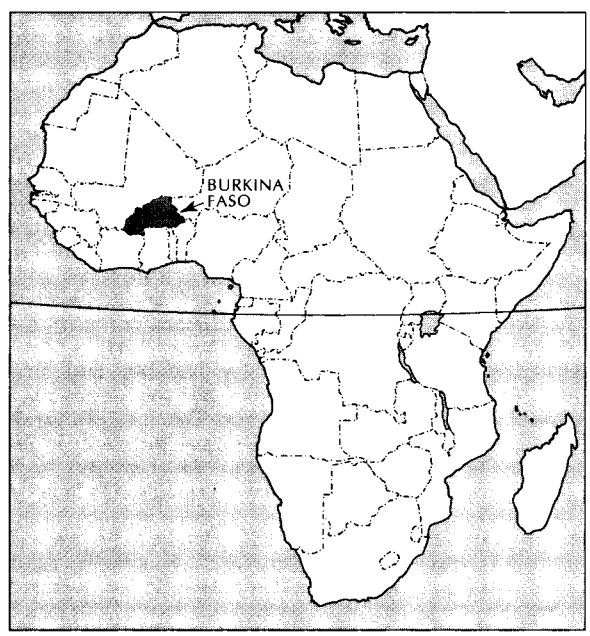
Burgundy, historic region, E France. Dijon is the historic capital. Burgundy, centered in the fertile Saône and upper Rhone river valleys, is famous for its fine wines. The Burgundii, a tribe from Savoy, conquered (c.480) the area from Rome and established the First Kingdom of Burgundy, comprising SE France and W Switzerland. Burgundy was partitioned after it fell (534) to the Franks, but it was later united to form (933) the kingdom of ARLES. The duchy of Burgundy, roughly the area of the present region, was created in 877. In 1364 JOHN II of France bestowed it upon his son, PHILIP THE BOLD. Under Philip and his successors, JOHN THE FEARLESS, PHILIP THE GOOD, and CHARLES THE BOLD, Burgundy became a great power and acquired vast territory, including much of the Low Countries. After the accession (1477) of MARY OF BURGUNDY, most of Burgundy's possessions came under HAPSBURG rule; the duchy itself was incorporated into France.

Burke, Edmund, 1729–97, British political writer and statesman; b. Ireland. He was a member of Samuel JOHNSON's literary circle. His early writings concerned aesthetics and philosophy. In 1765 he became private secretary to the marquess of Rockingham (then prime minister) and entered Parliament. In *Thoughts on the Cause of the Present Discontents* (1770), he was the first to argue the value of political parties. As a member of Parliament he called for conciliation with the American colonists and warned against taxing them excessively. Attempting to reform the British EAST INDIA COMPANY in the 1780s, he instigated the impeachment of Warren HASTINGS, governor general of India, on corruption charges. His most famous work, *Reflections on the Revolution in France* (1790), expresses his opposition to the Revolution. Burke's writings greatly influenced 19th-cent. conservative political theory.

Burke, Kenneth (Duva), 1897–1993, American literary critic; b. Pittsburgh. A writer and music critic, he was known as a theorist of literary forms. He believed that literature is a form of "symbolic action," and his insights drew on data from the social sciences. His writings include *A Grammar of Motives* (1945) and *A Rhetoric of Motives* (1950).

Burkina Faso or **Burkina,** formerly Upper Volta, republic (1992 est. pop. 9,654,000), 105,869 sq mi (274,200 sq km), W Africa, bordered by Mali (W and N), Niger (NE), Benin (SE), and Togo, Ghana, and Côte d'Ivoire (S). The capital is OUAGADOUGOU. The country is made up of vast, semidesert plains, except in the southwest, where the low hills are covered by savanna. Rainfall is sparse, and the soil is of poor quality. Burkina Faso is an impoverished agricultural nation, with the great majority of its work force engaged in subsistence farming or livestock-raising. Cotton, oilseeds, shea (karité) nuts, live animals, meat, and hides are exported. Manganese, phosphates, and gold-bearing quartz are mined. The country is economically dependent on foreign aid, and many Burkina Faso citizens migrate for work to Côte d'Ivoire and Ghana. The Mossi, Mande, and Fulani are the largest ethnic groups. Most people adhere to traditional religious beliefs, but about 40% are Muslims and 10% Roman Catholics. French is the official language.

History. Mossi invaders from present-day Ghana conquered the region around A.D. 1100 and, although far outnumbered by their subjects, created powerful states that endured for more than 500 years. France gained control of the country in the 1890s, administering it as part of what is now MALI until 1919, when it became the separate territory of Upper Volta. From 1932 to 1947 it was divided between neighboring French territories for administrative convenience. The country gained full independence in 1960 as Upper Volta (changed to Burkina Faso in 1984). The new nation alternated between civilian and military governments. A new democratic constitution was adopted in 1978, but coups in 1980, 1982, 1983, and 1987 brought successive military factions to power. Capt. Blaise Compaoré has been head of a leftist government since 1987. In 1992 the country held its first multiparty parliamentary elections since 1978; Compaoré's party unexpectedly won over two thirds of the seats amid charges of fraud.



Burleigh, William Cecil, 1st Baron: see BURGHLEY, WILLIAM CECIL, 1ST BARON.

burlesque [Ital., = mockery; from the *burleschi* of Francesco Berni, a 16th-cent. Italian poet], an entertainment that, unlike COMEDY or FARCE, works by caricature, ridicule, and distortion, but, unlike SATIRE, has no ethical element. Early English burlesque, e.g., GAY's *Beggar's Opera* (1728), often ridiculed celebrated literary works or sentimental drama. Extravaganza and burletta were similar to burlesque; the latter was a musical production. American burlesque (from 1865) began as a variety show characterized by vulgar dialogue and broad humor; Al JOLSON, Fanny Brice, and W.C. FIELDS

were famous stars. By 1920 the term had come to mean a "strip-tease" show. Burlesque fell victim to the popularity of nightclubs, movies, and television.

Burlington, town (1991 pop. 129,575), SE Ontario, Canada, part of the regional municipality of Halton (1991 pop. 313,136). Located on Lake ONTARIO, it is part of the rapidly growing lakefront industrial area between TORONTO and HAMILTON.

Burlington, city (1990 pop. 39,127), seat of Chittenden co., NW Vt., on Lake Champlain; settled 1773, inc. 1865. The largest city in Vermont, it has such manufactures as ordnance parts, machinery, textiles, and wood and steel products. During the WAR OF 1812, the city was the target of an abortive British naval attack. The Univ. of Vermont is in Burlington.

Burma: see MYANMAR.

Burma Road, road extending c.700 mi (1,150 km) from Kunming, Yunnan prov, S China, to Lashio, a railhead in Myanmar (Burma). A major feat of engineering, it was built (1937–38) over mountainous terrain by the Chinese. It achieved its greatest importance during WORLD WAR II, when Japan controlled the E Asian coast and it served as a vital artery for the transport of Allied military supplies to China.

Burmese, language belonging to the Tibeto-Burman subfamily of the Sino-Tibetan family of languages. See LANGUAGE (table).

Burmese cat: see under CAT.

burn, injury resulting from exposure to heat, electricity, radiation, or caustic chemicals. First-degree burns, characterized by simple reddening of the skin, can be treated locally with ice baths and ointments. Second-degree burns, characterized by formation of blisters, may require the care of a doctor to prevent infection. Third-degree burns, with destruction of upper and lower SKIN layers, are serious and often fatal; they require prompt medical attention to reduce pain and prevent SHOCK and infection. BLOOD TRANSFUSION may be necessary to replace body fluids; long-term treatment may include TRANSPLANTATION of natural or artificial skin grafts.

Burne-Jones, Sir Edward, 1833–98, English painter and decorator. A PRE-RAPHAELITE and lifelong friend of William MORRIS, he described a dreamlike, medieval world in such popular paintings as *King Cophetua and the Beggar Maid* (1884; Tate Gall., London) and *Depths of the Sea* (Birmingham Gall.).

Burnet, Sir Macfarlane, 1899–1985, Australian virologist and physician. An expert on viruses, he contributed to the understanding of influenza and the development of immunity against it. For work in immunological tolerances, specifically the reactions of the body to the transplantation of foreign living tissues, he shared with Peter MEDAWAR the 1960 Nobel Prize in physiology or medicine.

Burnett, Frances Eliza Hodgson, 1849–1924, American author; b. England. She is known for her children's books, particularly *Little Lord Fauntleroy* (1886) and *The Secret Garden* (1911).

Burney, Fanny, later **Madame D'Arblay,** 1752–1840, English novelist. *Evelina* (1778) made her famous, and she became part of Samuel JOHNSON's circle. She later wrote *Cecilia* (1782), *Camilla* (1796), and *The Wanderer* (1814). Her theme is the entry into society and the coming of age of a virtuous, inexperienced young girl. Burney's diaries and letters vividly depict English society from 1768 to 1840.

Burnham, Daniel Hudson, 1846–1912, American architect and city planner; b. Henderson, N.Y. With John W. Root, he built many major buildings in Chicago. The 20-story Masonic Temple Building (1892) was the first important skeleton SKYSCRAPER. Other projects included the "Rookery," the first suitably planned modern office building. Other works include the Flatiron Building, N.Y.C., and Union Station, Washington, D.C. Burnham and Root designed the greatly influential general plan for the 1893 Columbian Exposition at Chicago.

Burns, Arthur F., 1904–87, American economist; b. Austria. While teaching at Rutgers (1927–44) and Columbia Univ. (1944–59), he was associated (from 1933) with the National Bureau of Economic Research (president, 1957–67), where he did important work in analyzing business cycles. He served as chairman (1953–56) of the Council of Economic Advisers under Pres. Eisenhower and economic counselor (1969–70) to Pres. Nixon. As chairman (1970–78) of the board of governors of the FEDERAL RESERVE SYSTEM, he advocated fiscal and monetary restraint. He later (1981–85) served as ambassador to West Germany.

Burns, George, 1896–, b. N.Y.C. as Nathan Birnbaum, and **Gracie Allen,** 1906–64, b. San Francisco, American comedy team (1923–58). On radio (1932–50) and television (1950–58) and in films, they played an endlessly patient husband and scatterbrained wife. For his role in *The Sunshine Boys* (1975) Burns won an Academy Award.

Burns, Robert, 1759–96, Scottish poet. Raised on a farm, as a boy he read Scottish poetry, as well as POPE, LOCKE, and SHAKESPEARE. He wrote early but did not publish until, in 1786, hoping to emigrate to Jamaica, he sold *Poems, Chiefly in the Scottish Dialect,* which became an immediate success. Burns did not emigrate and spent the rest of his life in Scotland, failing as a farmer but producing hundreds of songs, among them "Flow Gently, Sweet Afton," "My Heart's in the Highlands," "Auld Lang Syne," and "Comin' thro' the Rye." Burns is noted for his humor and humanitarianism, and for the descriptive power he brings to bear on Scottish rural life. His use of dialect brought needed freshness into English poetry, but his scope far exceeds his apparent regionalism.

Burr, Aaron, 1756–1836, American political leader; b. Newark, N.J. After service in the AMERICAN REVOLUTION, he was (1791–97) U.S. senator from New York. He tied with Thomas JEFFERSON in the presidential election of 1800. Through the efforts of Alexander HAMILTON, the House of Representatives named Jefferson president and Burr vice president. Hamilton's hostility also figured in Burr's defeat (1804) for governor of N.Y. His political career ended when he mortally wounded Hamilton in a duel. Burr plotted with Gen. James WILKINSON to colonize the Southwest and was tried (1807) for treason; he was found not guilty and retired from public life.

Burroughs, Edgar Rice, 1875–1950, American novelist. He wrote *Tarzan of the Apes* (1914) and many other thrillers.

bursitis, acute or chronic inflammation of a bursa, a fluid-filled sac located close to a joint. Caused by infection, injury, or diseases like ARTHRITIS and GOUT, the inflammation produces pain, tenderness, and restricted motion. Treatment includes rest, application of heat, use of NONSTEROIDAL ANTI-INFLAMMATORY DRUGS, antibiotics, corticosteroid drugs, and occasionally surgery.

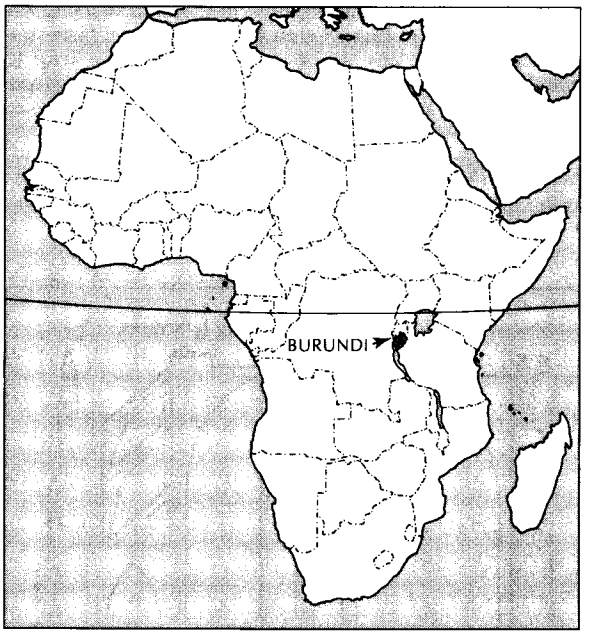
Burt, Cyril Lodowic, 1883–1971, British psychologist. Educated at Oxford and Würzburg, he made significant contributions to educational psychology and is noted for his development of factor analysis in psychological testing. After his death, some of his research on inheritance and intelligence was found to have been falsified, partially diminishing his reputation.

Burton, Richard, 1925–84, Anglo-American actor; b. Wales as Richard Jenkins. He starred in Shakespeare plays; in the musical *Camelot* (1960, 1980); and in films, e.g., *The Robe* (1953) and *Becket* (1964).

Burton, Sir Richard Francis, 1821–90, English explorer, linguist, and writer. Fluent in Arabic, he journeyed (1853) in disguise to the forbidden cities of MECCA and MEDINA. In 1858 he and J.H. SPEKE tried unsuccessfully to find the source of the NILE R. In 1865 he explored Santos, in Brazil. His works include a translation of the *Arabian Nights* (1885–88).

Burton, Robert, 1577–1640, English clergyman and scholar. His *Anatomy of Melancholy* (1621), on the causes and effects of melancholy, ranged widely into social and historical questions in an idiosyncratic, anecdotal style.

Burundi [bərün'dē], officially Republic of Burundi, republic, (1992 est. pop. 6,022,000), 10,747 sq mi (27,834 sq km), E central Africa, formerly part of Ruanda-Urundi, bordered by Rwanda (N), Tanzania (E), Lake Tanganyika (SW), and Zaïre (W). BUJUMBURA is the capital. The three main geographic zones are a narrow area, part of the GREAT RIFT VALLEY, in the west; a central region of mountains reaching a height of c.8,800 ft (2,680 m); and, in the east, an area of broken plateaus and somewhat lower elevations (c.4,500–6,000 ft/1,370–1,830 m), where most of the people live. Burundi is one of the smallest, most densely populated, and poorest countries in Africa. The predominant occupation is subsistence agriculture. Coffee is the most important cash crop and the major export; cotton and tea are also grown. There is a little mining, and nickel and vanadium deposits could be important in the future. Manufacturing is largely limited to basic consumer goods. The two main ethnic



groups are the Hutu (about 85% of the population) and the Tutsi (about 14%), who, despite their relatively small numbers, historically have dominated the government and army. The remaining 1% are the Twa, who are PYGMIES. French and Kurundi (a Bantu language) are the official languages; Swahili is also spoken. A majority of the people are Christian (mostly Roman Catholic); the rest follow traditional religions.

History. The original inhabitants, the Twa (Pygmies), were followed (c.1200) and then outnumbered by the Hutu, who in turn gave way to the migrating Tutsi in the 15th cent. By the 19th cent. the Tutsi had established dominance, and a Tutsi king (mwami) ruled the country. In 1890 Burundi was incorporated into German East Africa. During WORLD WAR I it was occupied by Belgian forces, and in 1919 it became part of the Belgian League of Nations mandate of RUANDA-URUNDI (made a UN trust territory in 1946). Burundi became an independent kingdom in 1962, but the monarchy was overthrown in 1966 and a military republic established. The years following independence have been marked by bitter fighting between the Tutsi and Hutu, resulting in thousands of Hutu deaths in the 1970s. The early 1980s saw reduced military influence and efforts at Tutsi-Hutu reconciliation, but a military coup in 1987 brought Maj. Pierre Buyoya to power. In 1988 there were bloody ethnic clashes again. Subsequently, Pres. Buyoya attempted to ameliorate the Hutu's situation. In mid-1993 Melchior Ndadaye, a Hutu, won Burundi's first free presidential election, but four months later he was overthrown and killed by Tutsi soldiers. Burundi was convulsed by ethnic violence in which thousands, both Hutu and Tutsi, died, and many fled the country. The coup collapsed, but civilian authority was restored slowly. In 1994 Cyprien Ntaryamira, agriculture minister and a Hutu, was chosen as president by parliament.

Bush, George Herbert Walker, 1924–, 41st president of the U.S. (1989–93); b. Milton, Mass. A graduate of Yale Univ., he was a Navy fighter pilot in World War II and after 1953 headed an oil-drilling firm in Texas. In 1966 he was elected to the first of two terms as a Republican representative from Texas. He was ambassador to the UN (1971–73), chairman of the Republican National Committee (1973–74), chief of the U.S. liaison office in China (1974–75), and director of the CIA (1976–77). After losing the 1980 Republican presidential nomination to Ronald REAGAN, Bush served as his vice president (1981–89). In 1988, Bush and running mate Dan QUAYLE defeated Michael DUKAKIS in the presidential election. Faced with escalating budget deficits, he abandoned his electoral pledge of "no new taxes" and accepted a tax package that was designed to reduce the deficit but largely failed to do so as recession and an anemic recovery combined to produce the lowest growth rate since the GREAT DEPRESSION. In foreign affairs, he ordered an invasion of Panama (1989) to depose Manuel NORIEGA, and in 1990 he committed the U.S. to the reversal of Iraq's invasion of Kuwait, which was achieved (1991) in the PERSIAN GULF WAR. Bush signed (1991, 1992, 1993) nuclear DISARMAMENT agreements with the USSR and Russia that called for substantial cuts in nuclear arms and (1992) the NORTH AMERICAN FREE TRADE AGREEMENT with Canada and Mexico. In 1992 he was defeated in his bid for reelection by Democrat Bill CLINTON.

Bush, Vannevar, 1890–1974, American electrical engineer and physicist; b. Everett, Mass. While professor and dean of engineering at the Massachusetts Institute of Technology (1923–38), Bush designed the differential analyzer, an early computer. During World War II, he led the U.S. Office of Scientific Research and Development, directing such programs as the development of the first atomic bomb.

bushbuck: see ANTELOPE.

Bushmen: see SAN.

Bushnell, Horace, 1802–76, American Congregational minister; b. Bantam, Conn. As pastor of the North Church, Hartford, Conn. (1833–59), he repudiated the austerity of Calvinism and stressed the divine in humanity and nature. He had profound influence on liberal Protestant thought.

business cycle, a fluctuation in economic activity characterized by a period of growth, which reaches a peak and begins a downturn, followed by a period of negative growth (recession), which ends in a trough before the next upturn. French physician Clement Juglar first proposed that such cycles were an economic norm in 1862. There is no conclusive explanation of the underlying causes of business cycles, but many attempts to moderate them by altering monetary and fiscal policy have been made. Such 20th-cent. theorists as John Maurice Clark and Joseph SCHUMPETER have attempted to cure economic instability rather than merely describe it as a natural phenomenon, as 19th-cent. theorists did.

Busoni, Ferruccio Benvenuto [bo͞ozo͞'nē], 1866–1924, Italian pianist and composer. Influenced by LISZT, he taught widely, transcribed J.S. BACH's organ works for piano, edited Bach's *Well-tempered Clavier,* and composed piano music.

Bustamante, Sir Alexander, 1884–1977, Jamaican politician. Of Irish and African descent, he founded the country's largest trade union and (1943) the Jamaica Labour party. He served as chief minister (1953–55) and was prime minister from 1962, the year Jamaica gained independence within the British Commonwealth, until 1967. He launched an ambitious program of public works and land reform.

Buthelezi, Mangosuthu Gatsha, 1928–, black South African political leader. A Zulu chief and chief minister of the BANTUSTAN KwaZulu (1970–, initially as head of the Zululand Territorial Authority), he revived Inkatha, a Zulu cultural group, in 1975 as an antiapartheid organization, now the Inkatha Freedom party. In the 1980s he became a prominent critic of the AFRICAN NATIONAL CONGRESS (ANC) and its support for guerrilla warfare and international sanctions against APARTHEID. The early 1990s saw increasingly violent clashes between Inkatha and ANC supporters. Inkatha boycotted (1993) the multiparty talks that wrote a new South African constitution but participated in the 1994 multiracial elections.

Butler, Benjamin Franklin, 1818–93, American politician and Union CIVIL WAR general; b. Deerfield, N.H. He was made military governor of NEW ORLEANS (1862), but his harsh rule caused his removal. He commanded (1864) the Union expedition to seize Fort Fisher, N.C., but it failed, and he was removed from command. As a U.S. representative from Massachusetts he favored the radical Republican policy of RECONSTRUCTION and led the impeachment proceedings against Pres. Andrew JOHNSON.

Butler, Nicholas Murray, 1862–1947, American educator; b. Elizabeth, N.J. As president of the Industrial Education Association (1886) he helped found the institution that became Teachers College, Columbia Univ. Instrumental in the expansion of Columbia College into Columbia Univ., he was president from 1902 to 1945 and instituted the school of journalism, the medical center, and other units. An advocate of peace through education, he established the Carnegie Endowment for International Peace (president

1925–45), and shared the 1931 Nobel Peace Prize with Jane ADDAMS.

Butler, Samuel, 1612–80, English poet and satirist. His best-known work is *Hudibras* (in three parts—1663, 1664, 1678), a venomous satire against the Puritans given as the mock-heroic story of the "Presbyterian knight," Sir Hudibras.

Butler, Samuel, 1835–1902, English author, painter, and composer. After amassing a fortune in New Zealand as a sheep rancher, he returned to England, where he did work in the arts and in biology. He is best known as a writer. *Erewhon,* a novel in which he satirized English social and economic injustices, appeared in 1872, and *Erewhon Revisited* in 1901. His ironic, witty attack on Victorian life, the autobiographical *The Way of All Flesh* (1903), is ranked among the great English novels.

Butor, Michel [bütôr'], 1926–, French novelist. His experimental novels use shifting time sequences and the interior monologue. They include *Passage to Milan* (1954), *Degrees* (1960), and *Third Below* (1977).

Butte, city (1990 pop. 33,336), seat of Silver Bow co., SW Mont.; inc. 1879. Mining has dominated Butte since its founding (1862). Copper is the major resource; others are silver, zinc, manganese, molybdenum, gold, lead, and arsenic. Copper was discovered c.1880, and Marcus Daly, whose company would become Anaconda Copper Mining, and others began to exploit it. Anaconda's giant open-pit mine forced relocation of one fifth of the city. That mine was abandoned in 1982, but copper and molybdenum mining have resumed in the area.

butte, an isolated hill with steep sides and a flat top, resulting from the more rapid erosion of the surrounding areas. Many occur in the plains of the W U.S. See MESA.

butter, dairy product obtained by churning milk or cream until its fat solidifies. Cow's milk is generally the basis for butter, but milk from goats, sheep, and mares has also been used. Butter was known by 2000 B.C., and as it became a staple food various kinds of hand churns were developed. Traditional butter-making involves cooling milk in pans, allowing the cream to rise and skimming it off, letting the cream ripen by natural fermentation, then churning it. Farm-made until 1850, butter has since then increasingly become a factory product. Commercially made butter usually contains 80% to 85% milk fat, 12% to 16% water, and 2% salt. Butter without salt is known as sweet butter. The world's leading butter producers are Russia, France, Germany, the U.S., and India. Clarified butter (butterfat with milk solids removed) is widely used in Egypt and in India, where it is known as ghee. The high dietary value of butter is due to its large proportion of easily digested fat and its vitamin A and vitamin D content.

butter-and-eggs, perennial plant (*Linaria vulgaris*) of the figwort family, originally native to Europe but now common in the U.S. It has small, snapdragonlike flowers of yellow and orange and is consequently also known as wild snapdragon. Other yellow and orange flowers are sometimes called butter-and-eggs.

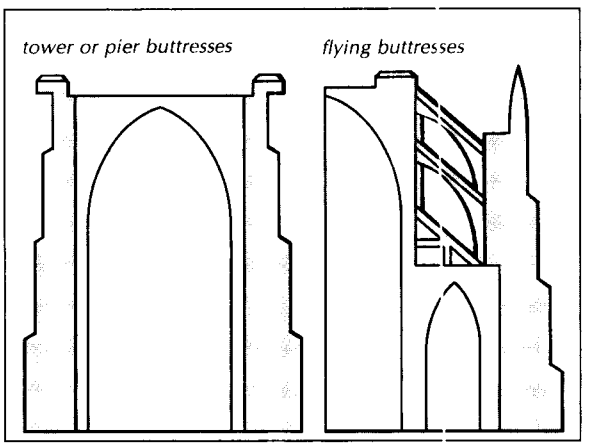
buttercup or **crowfoot,** common name for the Ranunculaceae, a family of chiefly annual or perennial herbs of cool regions of the Northern Hemisphere. Primitive plants, they typically have a simple flower structure. The buttercups and crowfoots comprise the largest genus (*Ranunculus*). Found mainly in the arctic, north temperate, and alpine regions, most have glossy yellow flowers and deeply cut leaves. A dozen or more species are common in every part of the U.S. The family also includes many other wildflowers and cultivated ornamentals. Some of these are the ANEMONE, CLEMATIS, COLUMBINE, LARKSPUR, and PEONY.

butterfly, flying INSECT that with the MOTH comprises the order Lepidoptera. Butterflies have coiled, sucking mouthparts; two pairs of wings that function as one; and antennae with knobs at the tips. Most feed on nectar from flowers and are active by day. The butterfly larva (caterpillar) is transformed into a pupa (chrysalis) with a hardened outer integument within which it changes into the adult (see METAMORPHOSIS). Adults of most species live only about a month.

butternut: see WALNUT.

buttonwood: see PLANE TREE.

buttress, mass of masonry built against a wall to strengthen it, particularly when a vault or arch places a heavy load or thrust on one section. The decorative possibilities were known in Mesopotamia (3500–3000 B.C.). In larger Roman buildings, internal buttresses served also as partitions; the basilica of Constantine in Rome is typical. Buttresses evolved from simple 11th-cent. piers to bold and complex Gothic structures. The flying buttress, a masonry arch, abutted the exterior wall of a building. Buttresses were often enriched with gables and sculpture; pinnacles were added to increase their weight. In cathedrals like Notre-Dame de Paris, buttresses express the elasticity and equilibrium of Gothic architecture.



Types of buttresses

Butzer, Martin: see BUCER, MARTIN.

Buxtehude, Dietrich [bo͝oks"təho͞o'də], 1637–1707, Danish-German composer and organist. From 1668 he was organist at Lübeck, where his concerts attracted musicians from all over Germany, including J.S. BACH, whom he greatly influenced.

buzzard, HAWK of the genera *Buteo* or *Pernis.* Honey buzzards (*Pernis*) feed on insects, wasp and bumblebee larvae, and small reptiles. The term *buzzard* is often incorrectly applied to various hawks and New World VULTURES.

Byatt, A(ntonia) S(usan), 1936–, British novelist and literary critic; sister of Margaret DRABBLE. Her novels are richly complex, witty, sophisticated, and scholarly. They include *The Virgin in the Garden* (1978), *Still-Life* (1985), and *Possession* (1989), her best-known work.

Byelarus or **Byelorussia:** see BELARUS.

Byng, Julian Hedworth George, 1st **Viscount Byng of Vimy,** 1862–1935, British general. In WORLD WAR I Canadian troops under his command stormed (1917) Vimy Ridge, in N France. He was later governor general of Canada (1921–26).

Bynner, Witter, 1881–1968, American poet; b. Brooklyn, N.Y. Adept at mimicking other writers and cultures, he was coauthor of the poetic parody *Spectra* (1916) and cotranslator (from the Chinese) of *The Jade Mountain* (1929). He wrote several volumes of lyric poetry, as well as plays and essays.

Byrd, Richard Evelyn, 1888–1957, American explorer; b. Winchester, Va. He was a naval flier. In 1926 he and Floyd Bennett became the first persons to fly over the NORTH POLE. Byrd is remembered mainly for his five expeditions to ANTARCTICA: 1930, 1933, 1939–40, 1946–47, 1955–56. He was promoted to rear admiral in 1930 and set up a base in Antarctica; from there he conducted major explorations. In 1933 he spent several months close to the South Pole alone; *Discovery* (1935) and *Alone* (1938) are records of this trip. He was made commander of all U.S. Antarctic activities in 1955. His explorations form the basis of U.S. claims in Antarctica.

Byrd, Robert Carlyle, 1917–, U.S. senator from W.Va. (1959–); b. North Wilkesboro, N.C., as Cornelius Calvin Sale, Jr. Before entering the Senate, he served (1953–59) in the U.S. House of Representatives. In 1971 he defeated Sen. Edward KENNEDY for the position of Senate majority whip and was later Senate majority leader

RULERS OF THE BYZANTINE EMPIRE (*including dates of reign*)

Constantine I (the Great), 330–37
Constantius, 337–61
Julian (the Apostate), 361–63
Jovian, 363–64
Valens, 364–78
Theodosius I (the Great), 379–95
Arcadius, 395–408
Theodosius II, 408–50
Marcian, 450–57
Leo I (the Great or the Thracian), 457–74
Leo II, 474
Zeno, 474–75
Basiliscus, 475–76
Zeno (restored), 476–91
Anastasius I, 491–518
Justin I, 518–27
Justinian I (the Great), 527–65
Justin II, 565–78
Tiberius II Constantinus, 578–82
Maurice, 582–602
Phocas, 602–10
Heraclius, 610–41
Constantine III and Heracleonas, 641
Heracleonas, 641
Constans II Pogonatus, 641–68
Constantine IV, 668–85
Justinian II Rhinotmetus, 685–95
Leontius, 695–98
Tiberius III, 698–705
Justinian II (restored), 705–11
Philippicus Bardanes, 711–13
Anastasius II, 713–15
Theodosius III, 716–17
Leo III (the Isaurian or the Syrian), 717–41
Constantine V Copronymus, 741–75
Leo IV (the Khazar), 775–80
Constantine VI, 780–97
Irene, 797–802
Nicephorus I, 802–11
Stauracius, 811
Michael I, 811–13
Leo V (the Armenian), 813–20
Michael II (the Stammerer), 820–29
Theophilus, 829–42
Michael III (the Drunkard), 842–67
Basil I (the Macedonian), 867–86
Leo VI (the Wise or the Philosopher), 886–912
Alexander, 912–13
Constantine VII Porphyrogenitus, 913–19
Romanus I Lecapenus, 919–44
Constantine VII (restored), 944–59
Romanus II, 959–63
Basil II Bulgaroktonos, 963
Nicephorus II Phocas, 963–69
John I Tzimisces, 969–76
Basil II (restored), 976–1025
Constantine VIII, 1025–28
Zoë and Romanus III Argyrus, 1028–34
Zoë and Michael IV (the Paphlagonian), 1034–41
Zoë and Michael V Calaphates, 1041–42
Zoë and Theodora, 1042
Zoë, Theodora, and Constantine IX Monomachus, 1042–50
Theodora and Constantine IX, 1050–55
Theodora, 1055–56
Michael VI Stratioticus, 1056–57
Isaac I Comnenus, 1057–59
Constantine X Ducas, 1059–67
Michael VII Ducas (Parapinaces), 1067–68
Romanus IV Diogenes, 1068–71
Michael VII Ducas (restored), 1071–78
Nicephorus III Botaniates, 1078–81
Alexius I Comnenus, 1081–1118
John II Comnenus, 1118–43
Manuel I Comnenus, 1143–80
Alexius II Comnenus, 1180–83
Andronicus I Comnenus, 1183–85
Isaac II Angelus, 1185–95
Alexius III Angelus, 1195–1203
Isaac II (restored) and Alexius IV Angelus, 1203–4
Alexius V Ducas, 1204
Theodore I Lascaris, 1204–22
John III Vatatzes or Ducas, 1222–54
Theodore II Lascaris, 1254–58
John IV Lascaris, 1258–61
Michael VIII Palaeologus, 1259–82
Andronicus II Palaeologus, 1282–1328
Andronicus III Palaeologus, 1328–41
John V Palaeologus, 1341–76
John VI Cantacuzenus (usurper), 1347–55
Andronicus IV Palaeologus, 1376–79
John V Palaeologus (restored), 1379–91
John VII Palaeologus (usurper), 1390
Manuel II Palaeologus, 1391–1425
John VII Palaeologus (restored as coemperor), 1399–1412
John VIII Palaeologus, 1425–48
Constantine XI Palaeologus, 1449–53

(1977–79, 1987–88) and Senate minority leader (1980–87). Since 1989 he has chaired the appropriations committee.

Byrd, William, 1674–1744, American colonial writer and official. After inheriting extensive lands in Virginia, he served in the house of burgesses and as a Virginia council member. In 1737 he had the city that was to be Richmond laid out on one of his estates. He kept wise and witty journals and diaries, excerpts from which were published posthumously. At his death he left a library of some 4,000 volumes at his Westover estate.

Byrd, William, 1543–1623, English composer and organist. He was favored by ELIZABETH I, and, although Catholic, wrote MASSES, anthems, and other music for both English and Roman services. He performed and published music with TALLIS.

Byrne, Jane, 1934–, American politician; b. Chicago as Margaret Jane Burke. She was Chicago's consumer sales commissioner (1968–77) under Mayor Richard DALEY before being elected (1979) the first woman mayor of the city. Under Byrne, the city faced severe financial problems. In 1983 she ran for reelection but lost the Democratic primary to Harold Washington.

Byron, George Gordon Noel Byron, 6th Baron, 1788–1824, one of the great English romantic poets. In his life and in his poetry, Lord Byron epitomizes ROMANTICISM. Born with a clubfoot, he grew to be a dark, handsome man, beloved by, but contemptuous of, women. When an early work, *Hours of Idleness* (1807), was ridiculed by the *Edinburgh Review,* he replied with *English Bards and Scotch Reviewers* (1809), a satire that made him famous. His many love affairs before and after his ill-fated marriage (1815–16) to Anne Isabella Milbanke (notably with Lady Caroline Lamb, wife of Viscount MELBOURNE, and Claire Clairmont, SHELLEY's sister-in-law) made him notorious. Byron settled in Venice in 1817. After wandering restlessly about Europe, he died working for Greek independence. Byron's writings include long romances and stories in verse, e.g., *Childe Harold* (1812–18), *The Bride of Abydos* (1813), *The Corsair* (1814), *Manfred* (1817), *Beppo* (1818), and *Mazeppa* (1819); shorter works such as *The Prisoner of Chillon;* and lyrics. His masterpiece is *Don Juan* (1819–24), an epic-satire.

byte: see COMPUTER.

Byzantine art and architecture include not only works done in the city of Byzantium after it became the capital of the Roman Empire (A.D. 330), but also work done under Byzantine influence, as in Italy, Syria, Greece, Russia, and other Eastern countries. A blend of Hellenistic and Middle Eastern traditions, Byzantine art emphasized decorativeness and flat line harmony. Except for the interruption of ICONOCLASM (726–843), when content was restricted to ornamental forms and symbols such as the cross, the style persisted until the fall of CONSTANTINOPLE in 1453. The pillaging of Constantinople in 1204 was followed by a late flowering of Byzantine art that brought impressive achievements in MOSAIC decoration. Mosaics depicting sacred personages placed in descending order of importance were applied to all available surfaces in Byzantine churches. The stylized gestures of the figures and luminous shimmer of the gold backgrounds made the entire church a tangible evocation of celestial order. The cult of icons also played a leading role in Byzantine art. The icons were made using the ENCAUSTIC technique. Little scope was given to individuality, since the effectiveness of the image was held to depend on its fidelity to a prototype. A large group of icons has been preserved in the monastery of St. Catherine on Mt. Sinai. The development of Byzantine painting can also be seen in manuscript illumination, e.g., the 9th cent. *Homilies of Gregory Nazianzus* and the 10th-cent. *Paris Psalter.* Byzantine enamel, ivory, and metalwork objects such as reliquaries, devotional panels, and ivory caskets were highly prized throughout the Middle Ages. Byzantine architecture was based on the great legacy of Roman formal and technical achievements. The

5th cent. BASILICA of St. John of the Studion is the oldest extant church in Constantinople and an early example of Byzantine reliance on traditional Roman models. The most imposing example of Byzantine architecture is the Church of Holy Wisdom (HAGIA SOPHIA), which is the culmination of several centuries of experimentation with a unified space of monumental dimensions. These centrally planned religious structures were greatly favored and had in common a central domed space flanked by smaller domes and half-domes spanning the peripheral spaces. Two of the great achievements of Byzantine architecture are the Italian octagonal church of San Vitale in Ravenna (547) and ST. MARK'S CHURCH in Venice. In its later phases, the Byzantine prototype became more ornate, e.g., the Moscow Cathedral. Byzantine secular architecture has left few traces. Best known are the ruins of the 5th-cent. walls of Constantinople, consisting of an outer and an inner wall, each of which was originally studded with 96 towers, of which some can still be seen.

Byzantine Empire, successor state to the Roman Empire (see ROME), also called the Eastern or East Roman Empire. It was named for ancient Byzantium, which CONSTANTINE I rebuilt in A.D. 330 as his capital, Constantinople. The Roman Empire split permanently (395) into East and West, but after the Western Empire fell (476) the Eastern Empire claimed the entire Roman world. Boundaries shifted, but the core of the Byzantine Empire was ASIA MINOR and the S BALKAN PENINSULA. Throughout its 1,000 years of existence the empire was continually beset by invaders. Also, there was constant religious controversy (see ORTHODOX EASTERN CHURCH; ICONOCLASM; MONOPHYSITISM; MONOTHELETISM) and internal political strife. Nevertheless, despite a complex administration, gross violence, and moral decay, the empire carried on Graeco-Roman civilization, blended with Middle Eastern influences, while the West was in chaos. It regained vigor in the 6th-cent. reign of JUSTINIAN I, under whom Byzantine art and architecture reached their peak, but his successors lost vast lands to the LOMBARDS and ARABS. The schism between the Eastern and Western churches arose soon after CHARLEMAGNE became emperor of the West (800). The reigns of BASIL I (9th cent.) and his successors brought renewed imperial splendor and vigor until the defeat by the Seljuk TURKS (1071) and the loss of Asia Minor. The empire was further weakened by the attacks of the Norman leaders ROBERT GUISCARD and Bohemond. After a brief resurgence under ALEXIUS I, a century of decay ended with the Fourth CRUSADE, the fall of Constantinople (1204), and the breakup of the empire into NICAEA, TREBIZOND, and EPIRUS. The weak Latin empire was conquered by the Nicaean emperor MICHAEL VIII, who restored the Byzantine Empire. Gradually, however, the empire was encircled by the OTTOMAN Turks, and despite a desperate defense under CONSTANTINE XI, Constantinople fell (1453) to MUHAMMAD II. The modern era is traditionally reckoned from that date.

Byzantium, ancient city of Thrace, on the site of present-day Istanbul, Turkey. Founded by Greeks in 667 B.C., it was chosen (A.D. 330) by CONSTANTINE I as the site for Constantinople, later the capital of the BYZANTINE EMPIRE.

C

C, chemical symbol of the element CARBON.

C: see COMPUTER LANGUAGE.

Ca, chemical symbol of the element CALCIUM.

Cabal, inner circle of advisers to CHARLES II of England. Their initials form the word—Clifford of Chudleigh, Ashley (Lord Shaftesbury), BUCKINGHAM (George Villiers), Arlington (Henry Bennet), and Lauderdale (John Maitland). One or more of this group dominated court policy from 1667 to 1673.

cabala [Heb., = traditional lore], mystical Jewish system of interpretation of the Scriptures. Cabala is based on the belief that every word, letter, number, and even accent of the Scriptures contains mysteries. Cabalistic signs and writings are used as amulets and in magical practices. Cabala has two principal written sources. The first, *Sefer Yezira,* probably written in the 3d cent., is a series of monologues supposedly delivered by the patriarch Abraham. The second, *Zohar,* is a mystical commentary on the Pentateuch written by Moses de León (13th cent.) but attributed to Simon ben Yohai, a great scholar of the 2d cent. The movement appears to have arisen in 11th-cent. France and spread, most notably to Spain. After the expulsion of the Jews from Spain in 1492, cabala became messianic in emphasis, especially as developed by Isaac LURIA. This form of cabala had many adherents, including the pseudo-Messiah SABBATAI ZEVI. It was also a major influence in the development of 18th-cent. HASIDISM.

cabbage, leafy garden vegetable of many widely dissimilar varieties, all probably descended from the wild, or sea, cabbage (*Brassica oleracea*) of the MUSTARD family, found on European coasts. Cabbage is used as food for humans and animals. Varieties include BROCCOLI, BRUSSELS SPROUTS, CAULIFLOWER, collards, KALE, and kohlrabi. All grow best in cool moist climates. Chinese cabbage is a separate species.

Cabell, (James) Branch, 1879–1958, American author; b. Richmond. Popular in the 1920s, many of his anti-realistic novels, e.g., *Jurgen* (1919), are set in an imaginary medieval kingdom and can be considered moral allegories.

Cabeza de Vaca, Álvar Núñez [käbā'thä dā vä'kä], c.1490–c.1557, Spanish explorer. During an expedition to FLORIDA in 1528 he was shipwrecked on a TEXAS island and enslaved by the natives. He escaped and wandered over the Southwest, reaching Mexico in 1536. His reports of the PUEBLO towns gave rise to the myth of the Seven Cities of Cibola. He was later governor of a region of PARAGUAY but was deposed in 1544.

cabildo, Spanish autonomous municipal council, important in governing Spanish America from the 16th cent. Presided over by an alcalde, it exercised considerable legislative, executive, and judicial powers. In the 19th cent. it was an important forum for voicing nationalist ideas.

Cabinda, (1988 est. pop. 114,000), exclave of ANGOLA, from which it is separated by Zaïrian territory. Situated on the Atlantic Ocean, Cabinda has produced oil from large offshore reserves since 1968, accounting for most of Angola's output. The region, however, has not benefited from the oil wealth, fueling resentment of the government and persistent fighting by Cabindan separatists. Cabinda was the scene of heavy fighting during the war for independence from Portugal (1961–75).

cabinet, group of advisers to the head of government who are also usually the heads of administrative government departments. In Great Britain, where cabinet ministers are drawn from the majority party in the House of Commons, its modern status developed after the establishment of the sovereignty of PARLIAMENT and the emergence of party government in the 18th cent. In multiparty systems, e.g., that of France, coalition cabinets are more common. The U.S. cabinet, not specifically established by the Constitution, has evolved through custom and is now defined by statute. Its members are appointed by the president and approved by the Senate.

The key to pronunciation appears on page xiii.

The first cabinet appointments (1789) were the secretaries of state, treasury, and war. The executive departments whose secretaries are in the cabinet are (in order of establishment) the departments of STATE; the TREASURY; DEFENSE (formerly departments of War and Navy); the INTERIOR; AGRICULTURE; JUSTICE; COMMERCE; LABOR; HEALTH AND HUMAN SERVICES (formerly Health, Education, and Welfare); HOUSING AND URBAN DEVELOPMENT; TRANSPORTATION; ENERGY; EDUCATION; and VETERANS AFFAIRS.

Cable, George Washington, 1844–1925, American author; b. New Orleans. He is chiefly known for his early works describing picturesque Louisiana Creole life, e.g., *Old Creole Days* (1879) and *The Grandissimes* (1880). His later essays, e.g., *The Negro Question* (1890), reflect his social concern.

cable, originally, high-strength wire cord or heavy metal chain used for hauling, towing, supporting the roadway of a suspension bridge, or securing a large ship to its anchor or mooring. Today the term often refers to an electrically conductive wire used for the transmission of electrical signals. A **coaxial cable,** virtually immune to external electromagnetic interference, consists of two concentric conductors separated by an insulator. The current in the inner conductor draws the current in the outer one toward the center, rather than letting it dissipate outwards. By means of coaxial cables a large number of telegraph and telephone messages, as well as television images (see CABLE TELEVISION), can be simultaneously transmitted. An intertwined and insulated group of wires that conducts electricity from generator to consumer is also called a cable. FIBER-OPTIC cable employs a glass fiber and carries impulses of light instead of electricity.

cable television, form of BROADCASTING that sends programs to paying subscribers by means of coaxial CABLE or a combination of FIBER-OPTIC and coaxial cable rather than through the airwaves. It originated (1949) to serve areas where reception was poor or nonexistent, and expanded rapidly in the mid-1970s with the easing of government restrictions and the use of COMMUNICATIONS SATELLITE transmission. Further programming and audience growth came in the early 1980s, when the government moved to deregulate the industry. In addition to providing the programming of the local television broadcasting stations, cable TV operators offer additional channels of movies, sports events, home-shopping services, news, and the like. The most advanced systems offer two-way, or interactive, communication; information services such as VIDEOTEX; burglar- and fire-alarm protection; and radio broadcasts that can be played on a stereophonic system.

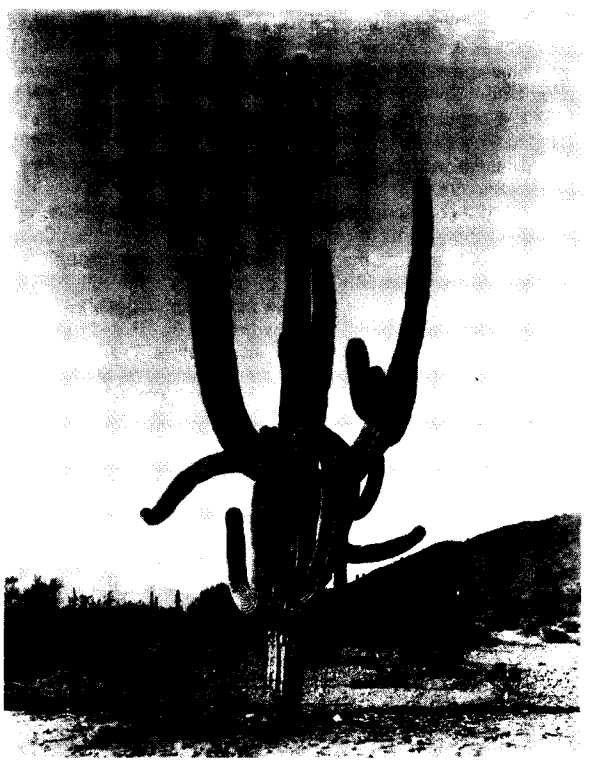
Cabot, John, fl. 1461–98, English explorer; probably b. Genoa, Italy. Under a patent granted by HENRY VII, he sailed W from Bristol in 1497, probably seeking the riches of E Asia and the Indies, and touched the North American coast. His second expedition (1498) disappeared. English claims in NORTH AMERICA were based on his discovery. His son, **Sebastian Cabot**, b. 1483–86?, d. 1557, was an explorer in English and Spanish service. In 1509 he was part of an expedition in search of the NORTHWEST PASSAGE and may have reached HUDSON BAY. Later he explored (1526–30) the Río de la Plata region of Brazil for the Spanish. In 1548 he became governor of a joint-stock company in England (later the MUSCOVY COMPANY), which negotiated a commercial treaty with Russia.

Cabral, Pedro Alvares [kəbrāl'], c.1467–c.1520, Portuguese navigator. On an expedition to INDIA in 1500, he went far west of his course and reached BRAZIL, which he claimed for Portugal. He finally reached India, but his high-handed practices in trade and religion angered the Indians, and he returned to Portugal. His landing in Brazil, accidental or prearranged, was not the first European visit there, though the question of who actually discovered Brazil is still debated.

Cabrini, Saint Frances Xavier, 1850–1917, American nun; b. Italy. She founded in Italy the Missionary Sisters of the Sacred Heart of Jesus; in 1889 she was sent by the pope to the U.S. to aid Italian immigrants. She was the first U.S. citizen to be canonized (1946). Feast: Nov. 13 (in the U.S.).

cacao, tropical tree (*Theobroma cacao*) of the sterculia family, native to South America and now widely cultivated in the Old World. The fruit is a pod that contains a sweet pulp with rows of embedded seeds (the cocoa "beans" of commerce). Cocoa is obtained by fermenting the pods and then curing and roasting the extracted seeds. The resulting clean kernels, or cocoa nibs, are then processed. Cacao products have high food value due to their fat, carbohydrate, and protein content. CHOCOLATE is one product; other uses are in cosmetics and medicines.

cactus, common name for the Cactaceae, a family of succulent plants found almost entirely in the New World. Cactus plants have fleshy green stems that function as leaves (the leaves are typically insignificant or absent), and, usually, spines of various colors, shapes, and arrangements. The large, showy, delicate flowers are commonly yellow, white, red, or purple. Cactus fruits are berries, some of which are edible. The reduced leaf surface and fleshy stem make cacti well fitted for water storage and retention. An extensive, ramified root system makes the plants adaptable to hot, dry regions, although cacti are not restricted to the desert. Most cacti blossom briefly in the spring, sometimes for only a few hours. Blossoms are especially sensitive to light, and different species bloom at different times of the day, e.g., the night-blooming cereus, whose fragrant blossoms unfold after sunset and last one night. Many species are cultivated for food or ornamentals; the hallucinatory drug PEYOTE comes from a cactus of that name.



Cactus

CAD: see COMPUTER-AIDED DESIGN.

Cadillac, Antoine de la Mothe [kädēyäk'], c.1658–1730, French colonial governor in North America; founder (1701) of Detroit. In 1711 he became governor of Louisiana, but after quarrels in his administration, he was recalled (1716).

Cádiz [kä'dēth], city (1988 est. pop. 157,000), capital of Cádiz prov., SW Spain, in Andalusia, on the Bay of Cádiz. It is a port with such industries as shipbuilding and fishing. Founded c.1100 B.C. by the Phoenicians, it passed to Carthage (c.500 B.C.), Rome (3d cent. B.C.), the Moors (A.D. 711), and ALFONSO X of Castile (1262). It became a New World trade center but declined when Spain lost its American colonies. The clean, white city has palm-lined promenades and parks and a 13th-cent. cathedral.

cadmium (Cd), metallic element, discovered in 1817 by Friedrich Stromeyer. Cadmium is a silver-white, lustrous, malleable, ductile metal. Its major use is as an electroplated coating on iron and steel

to prevent corrosion: it is also used in nickel-cadmium batteries. See ELEMENT (table); PERIODIC TABLE.

Cadmus, in Greek myth, son of Agenor; founder of THEBES. He killed the sacred dragon that guarded the spring of ARES. As instructed by ATHENA, he sowed the dragon's teeth; from them sprang the Sparti, ancestors of the Theban nobility. He married Harmonia, daughter of Ares and APHRODITE.

caecilian, legless, tailless tropical AMPHIBIAN (family Caecilidae). Most are c.1 ft (30 cm) long. Resembling earthworms superficially, but having vertebrate characteristics such as jaws and teeth, caecilians eat animals like termites and earthworms and are found in swampy places. Their eyes are nearly functionless; a groove on either side of the head contains a retractable sensory tentacle.

Caedmon, fl. 670, English poet, said by BEDE to have written early English versions of OLD TESTAMENT stories. A herdsman reputed to have received poetic powers through a vision, he later became a lay brother at the abbey of Whitby.

Caesar, (Caius) Julius, 102? B.C.–44 B.C., Roman statesman and general. Although he was born into the Julian gens, one of the oldest patrician families in Rome, Caesar was always a member of the democratic or popular party. In 82 B.C., SULLA proscribed Caesar, who fled from Rome (81 B.C.). On Sulla's death, Caesar returned (78 B.C.) to Rome and began his political career as a member of the popular party. In 69 B.C. he helped POMPEY to obtain the supreme command for the war in the East. He himself returned to Rome from Spain in 68 B.C. and continued to support the enactment of popular measures and to prosecute senatorial extortionists. In 63 B.C., as pontifex maximus, he undertook the reform of the calendar with the help of Sosigenes; the result was one of his greatest contributions to history, the Julian CALENDAR. In 60 B.C. he organized a coalition, known as the First Triumvirate, made up of Pompey, commander in chief of the army; Marcus Licinius Crassus (see CRASSUS, family), the wealthiest person in Rome; and Caesar himself. In the years 58 to 49 B.C. he firmly established his reputation in the GALLIC WARS. Caesar made explorations into Britain in 55 and 54 B.C. and defeated the Britons. By the end of the wars Caesar had reduced all Gaul to Roman control. These campaigns proved him one of the greatest military commanders of all time and also developed the personal devotion of the Roman legions to Caesar. Crassus's death (53 B.C.) ended the First Triumvirate and set Pompey and Caesar at odds. In 50 B.C. the senate ordered Caesar to disband his army, but two tribunes faithful to Caesar, Marc ANTONY and Quintus Cassius Longinus, vetoed the bill. They fled to Caesar, who assembled his army and got the support of the soldiers against the senate. On Jan. 19, 49 B.C., Caesar crossed the Rubicon, the stream bounding his province, to enter Italy, and civil war began. His march to Rome was a triumphal progress. At Pharsala in 48 B.C., Caesar defeated Pompey, who fled to Egypt, where he was killed. Caesar, having pursued Pompey to Egypt, remained there for some time, living with CLEOPATRA and establishing her firmly on the Egyptian throne. On his return to Rome, he set about reforming the living conditions of the people by passing agrarian laws and by improving housing accommodations. In 44 B.C. he became dictator for life. His dictatorial powers had aroused great resentment in his enemies, but when a conspiracy was formed against him, it was made up of his friends and protégés, among them Cimber, Casca, Cassius, and Marcus Junius Brutus (see BRUTUS, family). On March 15 (the Ides of March), 44 B.C., he was stabbed to death in the senate house. His will left everything to his 18-year-old grandnephew Octavian (later AUGUSTUS). Caesar made the Roman Empire possible by uniting the state after a century of disorder, by establishing an autocracy in place of the oligarchy, and by pacifying Italy and the provinces. He has always been one of the most controversial characters of history, either considered the defender of the rights of the people against an oligarchy or regarded as an ambitious demagogue who forced his way to power and destroyed the republic. That he was gifted and versatile there can be little doubt. His commentaries on the Gallic Wars (seven books) and on the civil war (three books) are literary masterpieces as well as classic military documents. He was married three times: to Cornelia, to Pompeia, and to CALPURNIA.

Caesarean section: see CESAREAN SECTION.

Caetano, Marcello [käətä'nōō], 1906–80, Portuguese statesman. A law professor and close associate of António SALAZAR, he helped to plan Portugal's corporate state and served as prime minister (1968–74). His government was overthrown by a military coup, and he was exiled.

caffeine, odorless, slightly bitter ALKALOID found in coffee, tea, COLA nuts, MATÉ, and cocoa (see CACAO). In moderation, caffeine is a mild stimulant that increases urination and the heart rate and rhythm. Excessive intake can cause restlessness, insomnia, heart irregularities, and delirium.

Cage, John (John Milton Cage, Jr.), 1912–92, American composer; b. Los Angeles. He became famous for his unorthodox theories and experimental compositions. His early works featured percussion instruments, including a piano "prepared" with objects attached to the strings. His most famous work, *4'33"* (1952), in which a pianist is silent, emphasizes the "music" of the sounds of the concert hall. He also composed aleatory or "chance" music, e.g., *Music of Changes* (1951), in which elements were derived by use of the *I Ching,* and *Imaginary Landscape No. 4* (1951), scored for 12 radios tuned at random. Cage strongly influenced Philip GLASS and other minimalists and the development of PERFORMANCE ART.

Cagney, James, 1904–86, American film actor; b. N.Y.C. A tough guy in such films as *Public Enemy* (1930) and *White Heat* (1949), he also made musicals, e.g., *Yankee Doodle Dandy* (1942; Academy Award).

Caiaphas (Joseph Caiaphas) [kā'yəfəs], fl. A.D. 18–36, high priest of the Jews. In the BIBLE, he presided at the council that condemned Jesus to death. Archaeologists discovered his tomb in Jerusalem in 1990.

Cain, in the BIBLE, eldest son of ADAM and EVE, a tiller of the soil. In jealousy he killed his brother ABEL and became a fugitive.

Cain, James M., 1892–1977, American novelist; b. Annapolis, Md. His "hard-boiled" books, many made into movies, often concern middle-class lovers driven to violence. His novels include *The Postman Always Rings Twice* (1934) and *Mildred Pierce* (1941).

cairn terrier, small working TERRIER; shoulder height, c.10 in. (25 cm); weight, c.14 lb (6.4 kg). Its tough double coat has a soft, furry underlayer and a profuse, hard outercoat of any color but white. It was originally bred (19th cent.) on the Isle of Skye for hunting vermin and otters.

Cairo, city (1986 pop. 6,052,836), capital of Egypt, N Egypt, a port on the Nile R., near the head of its delta. Cairo is Egypt's administrative center and, along with ALEXANDRIA, the heart of its economy. Manufactures include textiles, food products, chemicals, and plastics. It was founded in A.D. 969 by the FATIMID dynasty as capital of Egypt. In 1517 it became part of the OTTOMAN EMPIRE. Cairo fell to NAPOLEON I in 1798 and to the British in 1801. During WORLD WAR II it was Allied headquarters in the Middle East. In the late 1970s Cairo became an important Middle Eastern financial and commercial center. Cairo has many mosques, palaces, museums, and universities, and the headquarters of the ARAB LEAGUE are there.

caisson, chamber of steel, wood, or concrete used in constructing foundations or piers in or near water. Types of caissons include open (a cylinder or box, open at the top and bottom, that is sunk and then filled with concrete) and pneumatic (a cylinder or box with an airtight bulkhead permitting people to work under it; air pressure is high enough to prevent water entry).

Calais, city (1990 pop. 75,309), N France, on the Strait of Dover. An industrial center, it has been a major seaport and communications link with England since the Middle Ages and is near the site of the Channel Tunnel. England held it from 1347 to 1558, when the Duke of GUISE recovered it. Calais was almost razed in World War II.

Calamity Jane (Martha Jane Canary), c.1852–1903, American frontier character; b. Princeton, Mo. In 1876 she appeared in Deadwood, S.D., dressed in men's clothes, and boasted of her exploits as a pony-express rider and army scout. She later toured the West in a burlesque show.

calcia: see CALCIUM OXIDE.

calcite, widely distributed calcium carbonate mineral ($CaCO_3$) that ranges from white or colorless through a great variety of colors, owing to impurities. Its crystals are noted for their perfect cleavage. Calcite also occurs in a number of massive forms, including MARBLE, LIMESTONE, and CHALK. Other forms include ICELAND SPAR, STA-

LACTITE AND STALAGMITE formations, Oriental ALABASTER, and marl. It is used as a building stone and is the raw material for quicklime (CALCIUM OXIDE) and CEMENT.

calcium (Ca), metallic element, first isolated in 1808 by Sir Humphry DAVY. It is a silver-white, soft, malleable ALKALINE-EARTH METAL. The fifth most abundant element (3.64%) of the earth's crust, it is not found uncombined but occurs in numerous compounds, e.g., APATITE, CALCITE, DOLOMITE, ICELAND SPAR, LIMESTONE, and MARBLE. Calcium acts as a reducing agent in the preparation of other metals. It occurs in most plant and animal matter, and is essential for the formation and maintenance of strong bones and teeth. Calcium helps to regulate the heartbeat and is necessary for blood clotting. See ELEMENT (table); PERIODIC TABLE.

calcium carbonate: see CALCITE; CHALK; LIMESTONE.

calcium-channel blocker, any of a class of drugs used in treating HYPERTENSION, angina pectoris (see CORONARY ARTERY DISEASE), and certain ARRHYTHMIAS. They prevent the calcium ions needed for muscle contraction from entering the cells of smooth and cardiac muscle. This causes blood vessel walls to relax and blood to flow more freely to the heart, lowering blood pressure and relieving angina pain. Some calcium-channel blockers, such as nifedipine, slow the electrical impulses that run through heart muscle, thus regulating arrhythmias.

calcium oxide or **calcia,** chemical compound (CaO), also called lime, quicklime, or caustic lime. A colorless crystalline or white amorphous substance, it has wide industrial uses, e.g., in making porcelain and glass; in purifying sugar; in preparing bleaching powder, calcium carbide, and calcium cyanamide; in water softeners; in mortars and cements; and in treating acidic soil (liming).

calculator, electronic, electronic device for performing numerical computations. Electronic calculators became available in the early 1960s, and in the early 70s miniature types, some pocket size, were marketed as consumer items. Electronic calculators have ten keys that can be used to enter numbers into the machine; additional keys are provided to enable the user to perform a range of operations, from basic arithmetic in simple devices to the generation of complex mathematical functions in more advanced types. The results are either shown on an electronic display or printed. Some of these machines are actually small COMPUTERS with limited memory and programming capabilities.

calculus, branch of MATHEMATICS that studies continuously changing quantities. It was developed in the 17th cent. independently by Sir Isaac NEWTON and G.W. LEIBNIZ. The calculus is characterized by the use of infinite processes, involving passage to a limit. The differential calculus arises from the study of the rate at which a FUNCTION, usually symbolized by y or $f(x)$, changes relative to a change in the independent variable, usually x. This relative rate can be computed from a new function—the derivative of y with respect to x, denoted by dy/dx, y', or $f'(x)$—arrived at by a process called differentiation. Formulas have been developed for the derivatives of all commonly encountered functions. For example, if $y = x^n$ for any real number n except -1, then $y' = nx^{n-1}$, and if $y = \sin x$, then $y' = \cos x$ (see TRIGONOMETRY). In physical applications, the independent variable is frequently time, e.g., if $s = f(t)$ expresses the relation between the distance s traveled and the time t elapsed, then $s' = f'(t)$ represents the rate of change of distance with time, i.e., the speed or velocity (see MOTION) at time t. Geometrically, the derivative is interpreted as the slope of the line tangent to a curve at a point. This view of the derivative yields applications, e.g., in the design of optical mirrors and lenses and the determination of projectile paths. The *integral calculus* arises from the study of the limit of a sum of elements when the number of such elements increases without bound while the size of the elements diminishes. Conventionally, the area A under the curve $y = f(x)$ between the two values $x = a$ and $x = b$ is symbolized by $A = \int_a^b f(x)dx$, called the definite integral of $f(x)$ from a to b. The area is approximated by summing the products of $f(x)$ and dx for each of the infinitely small distances (dx) that comprise the measurable distance between a and b. This method can be used to determine the lengths of curves, the areas bounded by curves, and the volumes of solids bounded by curved surfaces. The connection between the integral and the derivative is known as the Fundamental Theorem of the Calculus, which, in symbols, is $\int_a^b f(x)dx = F(b) - F(a)$, where $F(x)$ is a function whose derivative is $f(x)$. The calculus has been developed to treat functions not only of a single variable but also of several variables and is the foundation for the larger branch of mathematics known as ANALYSIS.

Calcutta, city (1991 pop. 10,916,272), capital of West Bengal state, E India, on the Hooghly R. It is India's second largest city, and the chief port and industrial center of E India. Jute is milled, and textiles, chemicals, paper, and metal products are manufactured. Nearly 60 languages are spoken in the city, which suffers from poverty, overcrowding, and high unemployment. It was founded 1696 by the British EAST INDIA COMPANY. In 1756 the nawab of Bengal captured the garrison, many of whom died when imprisoned in a small, stifling room known as the "black hole." Robert Clive retook the city in 1757. It became (1912) the capital of British India. It is one of the great cultural centers of India.

Caldecott, Randolph [kôl'dəkət], 1846–86, English artist. His colored illustrations for 16 picture books, e.g., *The House That Jack Built* and *The Grand Panjandrum Himself,* inspired the Caldecott Medal for children's-book illustration.

Calder, Alexander, 1898–1976, one of the most innovative modern American sculptors; b. Philadelphia. Famous for his MOBILES, brightly colored constellations of moving shapes, he is also known for his witty wire portraits, imaginative jewelry, colorful and complex miniature zoo (1925; Whitney Mus., N.Y.C.), and abstract immobile sculptures called stabiles.

Calderón de la Barca, Pedro [käldārōn' dā lä bär'kä], 1600–1681, Spanish dramatist, last major figure of the GOLDEN AGE. He wrote more than 100 plays, including 70 *autos sacramentales* (one-act religious plays) for the Corpus Christi festival; cloak-and-dagger thrillers; and comedies of manners like *The Mayor of Zalamea* (c.1640). His philosophical drama *Life Is a Dream* (1635) is considered a masterpiece.

Caldwell, Erskine, 1903–87, American author; b. White Oak, Ga. His realistic, earthy novels of the rural South include *Tobacco Road* (1932) and *God's Little Acre* (1933). His short stories appear in many collections, e.g., *Jackpot* (1940).

Caldwell, Sarah, 1924–, American opera director and conductor; b. Maryville, Mo. In 1957 she founded the Boston Opera Group, later renamed the Opera Company of Boston. Under her direction, the company became noted for its innovative productions of such operas as MOUSSORGSKY's *Boris Godunov* and SCHOENBERG's *Moses and Aaron.* In 1976 she became the first woman to conduct the METROPOLITAN OPERA.

calendar, system of reckoning time usually based on a recurrent natural cycle, such as the cycle of the sun through the seasons (see YEAR) or the moon through its phases (see MONTH). Because the solar year is 365 days 5 hr 48 min 46 sec and the lunar year (12 synodic months of 29.53 days) is 354 days 8 hr 48 min, people have been confronted from ancient times with the problem of the discrepancy. Because the year is not exactly divisible by months and days, the practice arose of making arbitrary divisions and inserting extra (intercalary) days or months. The Gregorian calendar, generally accepted today, evolved from the Roman calendar reformed (46 B.C.) by Julius CAESAR. In the Julian calendar April, June, September, and November had 30 days, February 28 days (29 days every fourth, or leap, year), and all other months 31 days. The date was computed by counting backward from the Kalends (the 1st day), the Nones (the 7th day in March, May, July, and October; the 5th day in other months), and the Ides (the 15th day in March, May, July, and October; the 13th day in other months); hence Jan. 10 was the 4th day of the Ides of January. Because the Julian year of 365 days 6 hr was too long, by the 16th cent. the vernal equinox was displaced from March 21 to March 11. Pope GREGORY XIII ordained that 10 days be dropped in 1582 and that years ending in hundreds be leap years only if divisible by 400. The non–Roman Catholic countries were slow to accept the Gregorian (New Style) calendar; it was adopted in England in 1752 and by the Eastern Church in the 20 cent. The Christian ecclesiastical calendar was based on the belief that JESUS' resurrection was on a Sunday, hence Easter should fall on Sunday. The First Council of NICAEA (325) decreed that Easter be the Sunday following the first full moon after the vernal EQUINOX; today the date varies from the astronomical reckoning because certain factors of the lunar period are not con-

sidered. Other calendars include the Jewish calendar (12 months, plus intercalary months 7 times in 19 years) and the Muslim lunar calendar.

Calgary, city (1991 pop. 710,677), S Alberta, Canada, at the confluence of the Bow and Elbow rivers. It is a major center for the region's expanding oil and natural-gas industry, and also an agricultural processing and wholesaling center. The Calgary Stampede, begun in 1912, is an annual rodeo usually held in July. Built at the site of a fort established (1875) by the Northwest Mounted Police, Calgary is now one of Canada's fastest growing cities. The 1988 winter Olympic games were held there.

Calhoun, John Caldwell, 1782–1850, American statesman; b. near Abbeville, S.C. He was the great defender of the agrarian South against the industrial North, and of the sovereign power of STATES' RIGHTS. After serving in the House of Representatives (1811–17) and as secretary of war (1817–25), he was vice president (1825–32) under J.Q. ADAMS and Andrew JACKSON. He and Jackson disagreed, however, over the nature of the Union, and Calhoun directed passage (1832) of South Carolina's NULLIFICATION of an increased tariff inimical to its interests. As a U.S. senator (1832–43, 1845–50), he eloquently defended slavery and SECESSION. As secretary of state (1844–45) under Pres. TYLER, he secured the admission of Texas to the Union as a slave state.

Cali, city (1985 pop. 1,492,026), W Colombia, capital of Valle del Cauca dept., on the Cali R. It is an industrial center, shipping minerals, lumber, and food products and manufacturing tires, textiles, paper, and chemicals. Founded in 1536, it has doubled its population since 1950, largely because of a regional hydroelectric power project. In the late 1980s and early 90s Cali gained notoriety for the cocaine "cartel" based there.

Caliari, Paolo: see VERONESE, PAOLO.

California, most populous state in the U.S., located in the Far West; bordered by Oregon (N), Nevada and Arizona, across the Colorado R. (E), Mexico (S), and the Pacific Ocean (W).

Area, 158,693 sq mi (411,015 sq km). *Pop.* (1990) 29,760,021, a 25.7% increase over 1980 pop. *Capital,* Sacramento. *Statehood,* Sept. 9, 1850 (31st state). *Highest pt.,* Mt. Whitney, 14,491 ft (4,417 m); *lowest pt.,* Death Valley, 282 ft (86 m) below sea level. *Nickname,* Golden State. *Motto, Eureka* [I Have Found It]. *State bird,* California valley quail. *State flower,* golden poppy. *State tree,* California redwood. *Abbr.,* Calif.; CA.

Land and People. The COAST RANGES extend along the Pacific, and in the north are the famous giant redwood forests. The SAN ANDREAS FAULT has caused severe earthquakes and tremors in the coastal region. To the west of the Coast Ranges is the fertile Central Valley, drained by the SACRAMENTO and SAN JOAQUIN rivers. Farther east is the dramatic SIERRA NEVADA range, location of Kings Canyon, Sequoia, and Yosemite national parks (see NATIONAL PARKS, table), and of Mt. WHITNEY. California is also the site of Channel Islands, Lassen Volcanic, and Redwood national parks (see table). The state's eastern section, largely desert, includes DEATH VALLEY and Joshua Tree national monuments. About 60% of the land is controlled by the federal government. The climate of California is extremely varied. In general, there are two seasons: a rainy period from October to April and a dry period from May to September. Temperatures, mainly mild, are warmer in the south than in the central and northern sections, extremely hot in the deserts, and cold in the mountains. Almost 93% of the population lives in metropolitan areas. LOS ANGELES proper is the country's second largest city, while greater Los Angeles is the second largest metropolitan area in the U.S. Other major California cities are SAN DIEGO, SAN JOSE, SAN FRANCISCO, LONG BEACH, OAKLAND, SACRAMENTO, and FRESNO. California has large, well-established Hispanic and Asian populations and the second largest Native American population (after Oklahoma). In 1990, 69% of the population was white, 9.6% was Asian, and 7.4% was African American; nearly 26% was of Hispanic descent.

Economy. California's economy is dominated by manufacturing. Leading products include transportation equipment, printed matter, primary and fabricated metals, electronic and electrical equipment, machinery, and processed foods. Leading all states in the value of its agricultural output, California produces a wide variety of fruits and vegetables, including grapes for wine and citrus fruits. More than two thirds of the farms are irrigated. The raising of cattle and the growing of cotton and flowers are also important. The most profitable minerals extracted are oil and natural gas, and asbestos, boron, gypsum, and tungsten are also important. Fishing is important along the coast. The state—and in particular, Disneyland—is a favorite destination for tourists.

Government. The constitution of 1879 provides for a governor serving a four-year term. The legislature is composed of a senate whose 40 members serve four-year terms and an assembly with 80 members elected every two years. California elects 2 senators and 52 representatives to the U.S. Congress and has 54 electoral votes.

History. The Spanish first explored the southern coast in 1542. Father Junípero SERRA, a Franciscan missionary, founded (1769) the first of many missions. American settlers began to move to California during the 1840s. After Mexico's defeat in the MEXICAN WAR California was ceded (1848) to the U.S. In the same year gold was discovered, bringing thousands of new settlers. Many Chinese laborers came to work on the Transcontinental Railroad (completed 1869), which linked the state with the East. Industry expanded rapidly during World War II. California is the nation's center of defense-related industries, many of which were hit hard in the recession of the early 1990s and by cutbacks following the end of the COLD WAR). The state is also the hub of U.S. motion-picture and television film production. Since the 1960s the area around San Jose (SILICON VALLEY) has become a center for high-technology industries. In the early 1990s California faced a continuing recession and high unemployment, revenue shortfalls, environmental problems (especially in the allocation of scarce water resources), and many urban ills.

California, Gulf of, or **Sea of Cortés,** arm of the Pacific Ocean, NW Mexico. It is c.700 mi (1,130 km) long and 50–130 mi (80–209 km) wide, and it separates BAJA CALIFORNIA from the Mexican mainland. The gulf, which is part of a structural depression that extends north to the Coachella Valley of S Calif., reaches a maximum depth of c.8,500 ft (2,590 m) in the south.

California, University of, at nine campuses, main campus at Berkeley; chartered 1868. It offers a very wide range of undergraduate and graduate training, and operates a statewide extension service. The enrollment of over 160,000 is one of the largest in the U.S. The institution began by taking over the College of California (est. 1853) at Oakland. It moved to Berkeley in 1873 and acquired or established its other branches in the 20th cent., the first being at Los Angeles (1919). The university's Scripps Institution of Oceanography, at La Jolla, became the nucleus of the campus at San Diego. Other branches are at Davis, Santa Barbara, Riverside, Irvine, and Santa Cruz, and a campus devoted entirely to medical sciences is in San Francisco. The university also operates the Los Alamos Scientific Laboratory, the Lick Observatory, and the Lawrence Berkeley and Livermore laboratories.

California holly: see CHRISTMASBERRY.

californium (Cf), synthetic, radioactive, metallic element, produced in 1950 by Glenn SEABORG and colleagues by alpha-particle bombardment of curium-242. It is in the ACTINIDE SERIES. Californium-252, produced in nuclear reactors, is a neutron source. See ELEMENT (table); PERIODIC TABLE.

Caligula, A.D. 12–41, Roman emperor (A.D. 37–41), son of Germanicus Caesar and Agrippina I. His real name was Caius Caesar Germanicus; as a small child he wore military boots, whence his nickname *caligula* = little boots. On the death of TIBERIUS the army helped make Caligula emperor. Shortly afterward he became severely ill; it is widely believed that he was thereafter insane. He earned a reputation for ruthless and cruel autocracy. He was assassinated, and CLAUDIUS I succeeded to the throne

caliphate, the rulership of ISLAM. Since Islam is theoretically a theocracy, the caliph is ideally both temporal and spiritual leader of the Muslims. When MUHAMMAD the Prophet died, ABU BAKR was chosen as the first caliph. After the caliphate of Ali (656–61) the caliphate split between the Umayyads, who ruled from Damascus, and the ABBASIDS, who ruled from Baghdad. The Abbasids massacred the Umayyads in 750, but one member escaped to Spain, where he established the Western Caliphate, or the Caliphate of Córdoba; it lasted until 1031. A third caliphate, established by the Fatimid sect in Africa, lasted from 909 to 1171. After the rise of the

The key to pronunciation appears on page xiii.

Ottoman Turks, the sultans assumed the title of caliph. The title died out with the last sultan in 1924.

calisthenics: see GYMNASTICS.

Calixtus I, Callixtus I, or **Callistus I, Saint,** c.160–c.222, pope (217–222), a Roman. As archdeacon to Pope Zephyrinus, he established the famous Calixtus Cemetery in Rome. As pope, Calixtus was opposed by the antipope Hippolytus and extended absolution to many classes of sinners thought to be unforgivable. Feast: Oct. 14.

Calixtus II, Callixtus II, or **Callistus II,** d. 1124, pope (1119–24), a Burgundian named Guy. Succeeding Gelasius II, Calixtus triumphed over the antipope Gregory VIII and ended the INVESTITURE controversy when Holy Roman Emperor HENRY V signed (1122) the Concordat of Worms. Calixtus then called (1123) the First Lateran Council.

Calixtus III, Callixtus III, or **Callistus III,** 1378–1458, pope (1455–58), a Spaniard named Alonso de Borja (Ital., Borgia). He supplied aid to John Hunyadi and SCANDERBEG to fight the Turks and quarreled with ALFONSO V of Aragón. His nepotism established the BORGIA family in Italy.

Callaghan, (Leonard) James, 1912–, British statesman. He was elected a Labour member of Parliament in 1945. Later he served as chancellor of the exchequer (1964–67), resigning when forced to accept devaluation of the pound; home secretary (1967–70); and foreign secretary (1974–76). Upon the resignation of Harold WILSON in 1976 he became prime minister. His government was plagued by inflation, unemployment, and its inability to restrain unions' wage demands. In 1979 the Labour party lost the election to the Conservatives, led by Margaret THATCHER. Callaghan resigned as party leader in 1980 and was created Baron Callaghan of Cardiff in 1987.

Callao [käyou'], city (1990 est. pop. 589,000), capital of Callao dept., W Peru, on Callao Bay of the Pacific Ocean. It is 8 mi (13 km) W of the Peruvian capital, LIMA, and, as Peru's chief seaport, handles well over half of the nation's foreign trade. Callao has survived foreign attack, tidal waves, and at least two major earthquakes, in 1746 and 1940.

Callas, Maria, 1923–77, Greek-American operatic soprano; b. N.Y.C. to Greek parents. She made her debut at Verona, Italy, in 1947 and at the METROPOLITAN OPERA in 1956. Noted for her dramatic intensity, she excelled in CHERUBINI's *Medea,* BELLINI's *Norma,* and PUCCINI's *Tosca.*

Calles, Plutarco Elías [kä'yās], 1877–1945, president of MEXICO (1924–28). His revolutionary administration initiated economic reforms, enforced anticlerical laws, and unified the government under the National Revolutionary party. After leaving office he remained political chieftain of the nation until he opposed CÁRDENAS and was exiled (1936–41).

Calley, William L.: see MY LAI INCIDENT.

Callicrates, 5th cent. B.C., Greek architect. With ICTINUS he built (447–432 B.C.) the PARTHENON at Athens. At Athens he also designed (c.427) the Temple of Nike.

Callimachus, fl. c.265 B.C., Greek poet and critic. At ALEXANDRIA he drew up a catalogue constituting a full literary history. Among his over 800 hymns, epigrams, and poems is *Aetia,* a collection of legends.

Calliope: see MUSES.

Callisto, in astronomy, natural satellite of JUPITER.

Callistus: see CALIXTUS.

Callixtus: see CALIXTUS.

Callot, Jacques [kälō'], c.1592–1635, French etcher and engraver. An influential innovator, he developed a hard varnish that allowed for more flexibility and finesse in etching. In the service of Cosimo de' Medici he created such works as the vast *Fair at Impruneta* (1620). Commissioned to engrave the sieges of Breda, Rochelle, and Ré, he was deeply affected by the scenes of carnage and in 1633 executed *Miseries of War,* his masterpiece. Callot produced nearly 1,500 plates and 2,000 drawings, influencing such masters as REMBRANDT and WATTEAU.

calorie (cal), unit of energy required to raise the temperature of one gram of water one degree Centigrade (from 14.5° to 15.5°C); 1 cal = 4.1840 joules. Nutritionists use the kilocalorie (1,000 cal) to state the heat content of food.

Calpurnia, d. after 44 B.C., Roman matron. The daughter of Lucius Calpurnicus Piso Caesoninus, she was married to Julius CAESAR in 59 B.C. She was loyal to him despite his many infidelities and his neglect.

Calvary [Lat., = a skull] or **Golgotha** [gôl'gəthə], place where JESUS was crucified, outside the walls of JERUSALEM. Its location is not certainly known. The traditional site is now occupied by the Church of the Holy Sepulcher.

Calvert, George, 1st **Baron Baltimore,** c.1580–1632, English colonizer in America. After holding high offices in England, he was granted (1623) Avalon peninsula in Newfoundland, but the colony he founded failed. In 1632 James I granted him territory that eventually became Maryland, but he died before the colony's charter was accepted.

Calvin, John, 1509–64, French Protestant theologian of the Reformation; b. Noyon, Picardy. Having studied theology and law, he experienced (1533) a "sudden conversion" and turned his attention to the cause of the REFORMATION, for which he was persecuted and hunted. His work in Geneva began in 1536, but the system he tried to impose was rejected, and he was banished (1538). After a stay at Basel and Strasbourg, he was welcomed back to Geneva in 1541. Calvin had begun the work of systematizing Protestant thought in his *Institutes of the Christian Religion* (1536). His theology diverged from Catholic doctrine in such fundamental ways as rejection of papal authority and acceptance of justification by faith alone, and the doctrine of PREDESTINATION. He also maintained that the Bible was the sole source of God's law, and that it was man's duty to interpret it and to preserve the orderly world that God had ordained. It was such a system that he sought to realize at Geneva by founding a government based solely on religious law. From his teachings grew one of the principal Christian religious systems, CALVINISM, whose extension to all spheres of human activity was extremely important in a Europe changing from an agrarian to a commercial economy.

Calvinism, term used in several different senses. It can mean the teachings of John CALVIN himself; all that developed from his doctrine and practice in Protestant countries in social, political, ethical, and theological aspects of life and thought; or the system of doctrine, distinctive in its rejection of consubstantiation in the Eucharist and in its doctrine of predestination, that was accepted by the Reformed churches (see PRESBYTERIANISM). Calvinism produced the church-dominated societies of Geneva and Puritan New England. It stressed that only those whom God elects are saved, and that a person does nothing to effect his or her salvation. The doctrine challenged LUTHERANISM in Europe, spread to Scotland, and influenced the Puritans of England and New England. It receded under rationalism (18th-19th cent.), but found new expression in the Reformed theology of Karl BARTH.

Calvino, Italo, 1923–85, Italian novelist; b. Cuba. He wrote in a variety of genres and styles. Among his works are *The Path to the Nest of Spiders* (1947), a realistic novel about World War II; *Cosmicomics* (1965), 12 science fiction tales; and *If on a Winter's Night a Traveler* (1979), a novel composed of fragments of 10 stylistically different novels.

Calvo, Carlo, 1824–1906, Argentine diplomat and historian, writer on international law. His principle known as the **Calvo Doctrine** would prohibit diplomatic intervention to enforce private claims before local remedies had been exhausted. The **Calvo Clause** found in statutes, treaties, and contracts is the concrete application of his doctrine.

Calvo Sotelo, Leopoldo, 1926–, Spanish engineer and political leader. He held (1975–77) ministerial posts before becoming (1980) deputy prime minister for economic affairs. After leading the Union of the Democratic Center to victory in 1981, he was confirmed as prime minister despite an abortive military coup in which the parliament was seized. He resigned before the 1982 elections in which the Socialist party, led by Felipe GONZÁLEZ MÁRQUEZ, was victorious.

Calypso, nymph, daughter of ATLAS, in HOMER's *Odyssey.* She entertained ODYSSEUS on the island of Ogygia for seven years before he rejected her offer of immortality and continued home.

CAM: see COMPUTER-AIDED MANUFACTURING.

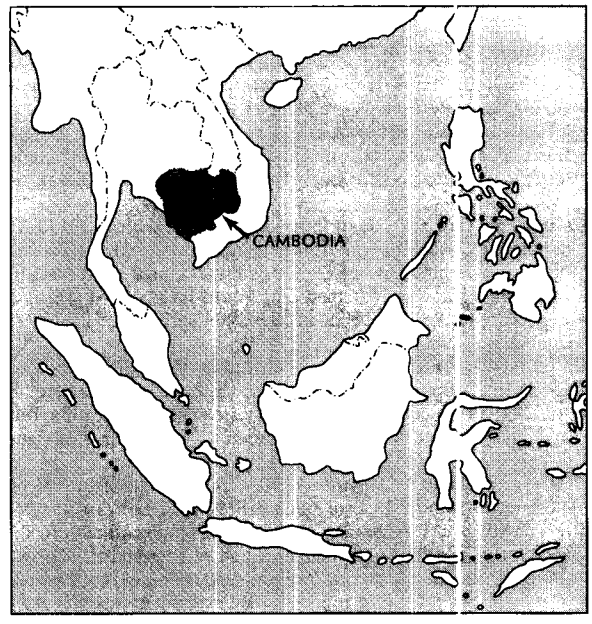
Camagüey, city (1986 est. pop. 258,000), E Cuba, capital of Camagüey prov. The island's third largest city, it is a commercial and

transportation center with meat-packing and other food-processing industries. Founded in the early 16th cent., it produced salted beef for Spanish fleets and was often sacked by pirates. It has retained a Spanish colonial atmosphere.

cambium, thin layer of reproductive tissue lying between the BARK and the wood of a STEM, most active in woody plants. In herbaceous plants the cambium is usually inactive; in monocotyledons (see ANGIOSPERM) it is absent. Producing thin layers of phloem on the outside and xylem on the inside (see WOOD), cambium growth increases the diameter of the stem. Its seasonal growth is responsible for ANNUAL RINGS.

Cambodia, officially Kingdom of Cambodia, constitutional monarchy (1992 est. pop. 7,296,000), 69,898 sq mi (181,035 sq km), SE Asia. It is bordered by Thailand (N and W), Laos (N), Vietnam (E), and the Gulf of Thailand (S). The capital is PHNOM PENH. The heart of the country consists of a large central alluvial plain, drained by the MEKONG R. and including the Tônlé Sap (Great Lake). Mountains flank the plain in the northwest and southwest. Cambodia has a tropical monsoonal climate ideal for growing rice, the chief crop. Corn, vegetables, peanuts, tobacco, and sugar palm are also grown. The industrial sector centers on the processing of agricultural products. Mineral resources are limited to various kinds of stone and salt. Both the industrial and agricultural sectors were devastated during the civil war and strife of the 1970s and 80s. About 90% of the population is ethnic Khmer (Cambodian). Minorities include Chinese, Vietnamese, Cham-Malays, and a number of hill tribes. Theravada Buddhism is the dominant religion; the Cham-Malays are Muslims. Khmer is the national language, but French is widely spoken.

History. The early history of Cambodia is that of the KHMER EMPIRE. After the empire's fall (15th cent.), Cambodia fell prey to Siam and later (17th cent.) to ANNAM. It was declared (1863) a French protectorate and became (1887) part of French-ruled INDOCHINA. Cambodia was occupied by the Japanese in World War II. It became self-governing (1946) and gained full independence (1953) as the Kingdom of Cambodia. NORODOM SIHANOUK led the country until he was deposed (1970) in a military coup led by Gen. LON NOL. Cambodia became (1970) the Khmer Republic and was a major battlefield of the VIETNAM WAR. The ousted Sihanouk formed a government in exile in Beijing, and the Communist KHMER ROUGE waged a successful full-scale civil war that overthrew (1975) the Lon Nol government. Sihanouk was restored as head of state, and a new socialist constitution (1976) renamed the country Democratic Kampuchea. Sihanouk was soon succeeded by Khieu Samphan, and POL POT became prime minister. The economy deteriorated following massive collectivization in which urban dwellers were evacuated to work in the countryside. Many fled to Thailand, and perhaps 1.5 million were killed or died from enforced hardships. Border conflicts (1977–78) with Vietnam led to a Vietnamese invasion and installation (1979) of a pro-Vietnamese Communist government under Heng Samrin. The country was renamed (1979–89) the People's Republic of Kampuchea. The Vietnamese withdrew in 1989, leaving the government of Prime Min. Hun Sen to face a rebel coalition (including the Khmer Rouge) supported by China and Thailand. In 1991 all factions signed an accord calling for a cease-fire, disarmament of 70% of all forces, UN peacekeepers, and UN-supervised elections. Sihanouk denounced the Khmer Rouge, aligned himself with Hun Sen, and again became head of state. The Khmer Rouge subsequently withdrew (1992) from the peace process and resumed fighting. Royalists won the largest bloc of national assembly seats (58 out of 120) in the 1993 elections, but a government that included Hun Sen's party was formed. A new constitution reestablished the monarchy, and Sihanouk became (1993) king.



Cambrai, Treaty of: see ITALIAN WARS.

Cambrian period: see GEOLOGIC ERA (table).

Cambridge, city (1991 pop. 91,933), Cambridgeshire, E central England, on the Cam R. An ancient market town that now has some light industry on its outskirts, it is famous as the site of Cambridge Univ. (est. 13th cent.). In addition to the magnificent college buildings, the city abounds in medieval churches, old inns, and narrow, winding streets.

Cambridge, city (1990 pop. 95,802), a seat of Middlesex co., E Mass., across the Charles R. from BOSTON; settled 1630 as New Towne, inc. as a city 1846. A famous educational and research center, it is the seat of Harvard Univ. (est. 1636), the Massachusetts Institute of Technology, and other colleges and seminaries. Its industries include electrical and scientific manufactures, and rubber and glass goods. Printing has been important since c.1639. The city, which was the home of such notable people as H.W. LONGFELLOW and J.R. LOWELL, has numerous historic sites.

Cambridge Platform, declaration of principles of church government and discipline, forming a constitution of the Congregational churches. Adopted (1648) by a synod in Cambridge, Mass., it is the basis of temporal church government. Connecticut Congregationalists subscribed (1708) to more centralized church government in the Saybrook Platform.

Cambridge University, at Cambridge, England. It originated in the early 12th cent., possibly earlier than OXFORD UNIV., and was organized into residential colleges by the end of the 13th cent. There are now 31 colleges (including three women's colleges). Cambridge was a center of the new learning in the Renaissance and of Reformation theology. In modern times it offers a wide range of subjects, excelling in science. The university's famous Cavendish Laboratory of experimental physics (opened 1873) has had many of the world's outstanding physicists on its faculty. The Cambridge University Press dates from the 16th cent.

Camden, city (1990 pop. 87,492), seat of Camden co., W N.J., a port of entry on the Delaware R. opposite Philadelphia settled 1681, inc. 1828. In the 19th cent. it became a commercial shipbuilding, and manufacturing center. Since the 1960s many important industries, e.g., steel, chemicals, and oil, have declined significantly. Of interest are Walt Whitman's home, an aquarium, and a Rutgers Univ. campus.

camel, hoofed ruminant (family Camelidae). The family consists of the true camels of Asia, the wild guanaco and domesticated ALPACA and LLAMA of South America, and the vicuña of South America. The two species of true camel are the single-humped Arabian camel, or dromedary (*Camelus dromedarius*), a domesticated animal of Arabia and N Africa; and the two-humped Bactrian camel (*C. bactrianus*) of central Asia. Their humps are storage places for fat. Ranging in color from dirty white to dark brown, camels are well adapted for desert life and can go without water for several days.

camellia, evergreen shrub or small tree (genus *Camellia*) of the TEA family, native to Asia, now widely cultivated for the white, red, or variegated showy blossoms and glossy, dark-green foliage. Teaseed oil, from the seeds of *C. sasanqua,* is used in cooking, and in soap and textile manufacturing.

The key to pronunciation appears on page xiii.

Camelot, in ARTHURIAN LEGEND, the seat of King Arthur's court, frequently located in Somerset of Monmouthshire.

cameo, small relief carving, usually on striated precious or semiprecious stones or on shell. The design, often a portrait head, is cut in the light-colored vein; the dark vein becomes the background. Glass of two colors in layers may also be cameo-cut. The art originated in Asia and spread to ancient Greece and Rome; it was revived during the Renaissance and in the Victorian era.

camera, in PHOTOGRAPHY, device for recording an image on film or some other light-sensitive material. It consists of a lightproof box; a LENS through which light enters and is focused; a shutter that controls the size of the lens opening and the length of time it is open; a mechanism for moving the film between exposures; and a viewfinder, or eyepiece, that shows the user the image the lens sees. The camera developed from the **camera obscura** [Lat., = dark chamber], an artist's tool dating from the Middle Ages. It was a light-tight box with a convex lens at one end and a screen that reflected the image at the other; the artist traced the image. Joseph Nicéphore Niépce produced the first negative image in 1826. Modern cameras often employ automatic focusing and exposure controls, and some models can be computer controlled. See also PHOTOGRAPHY, STILL; POLAROID CAMERA. The **motion picture camera,** perfected in the late 1880s, comes in a variety of sizes; all operate on the same basic principle. As film goes through the camera it stops briefly to expose each frame, usually at a rate of 18 or 24 frames per second. A rotary shutter—basically a half-circle of metal that spins—usually opens and closes the aperture. A small metal device (a claw) pops into holes in the film, pulls the film down, retracts while the frame is exposed, and then repeats the process for the next frame. Modern movie cameras are powered by a tiny electric motor.

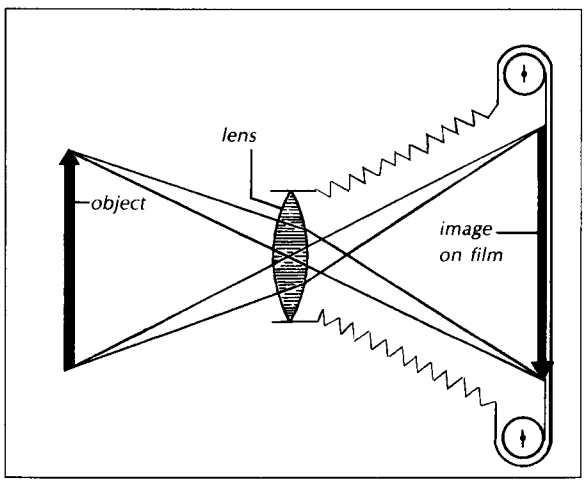


Image formed by a camera

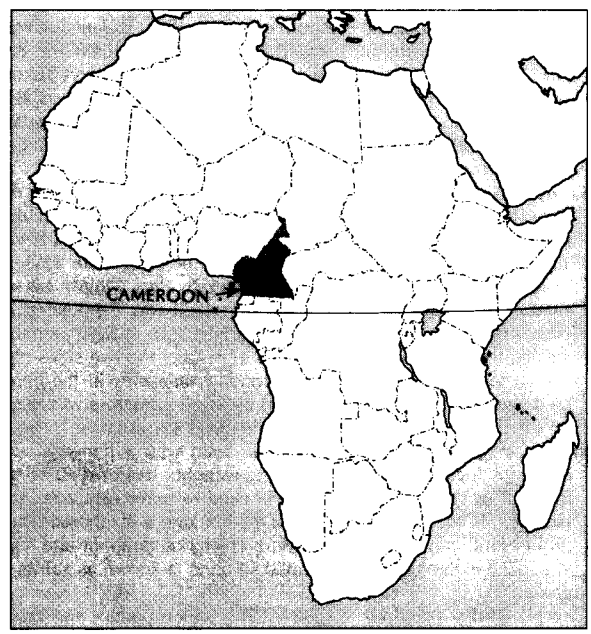
Cameron, Julia Margaret, 1815–79, English pioneer photographer; b. India. In 1864 she began to photograph her many illustrious friends, e.g., Alfred, Lord TENNYSON and Ellen TERRY. Her superb portraits appeared as *Victorian Photographs of Famous Men and Fair Women* (rev. ed. 1973).

Cameroon, officially Republic of Cameroon, republic (1992 est. pop. 12,658,000), 183,568 sq mi (475,442 sq km), W central Africa, bordered by the Gulf of Guinea (W, SW), Nigeria (NW), Chad (NE), the Central African Republic (E), and Congo, Gabon, and Equatorial Guinea (S). Major cities are YAOUNDÉ (the capital) and DOUALA. Cameroon consists of a coastal region of swamps and dense rain forests, an interior plateau covered with forests and savanna, and an arid northern region. Volcanic peaks near the coast rise to 13,354 ft (4,070 m). The economy is based on a varied agriculture that makes the country self-sufficient in food. Cameroon is a leading producer of cocoa which, along with crude oil, coffee, bananas, palm products, cotton, rubber, timber, and aluminum, constitute the chief exports. Aluminum smelting, oil refining, and paper milling are the principal industries. Cameroon's diverse population includes more than 150 ethnic groups. French and English are the official languages. Traditional religious beliefs are dominant, but there are large minorities of Christians and Muslims, the latter in the north.

History. The first Europeans to arrive in the region were the Portuguese (1472), who developed a large-scale slave trade. By the 19th cent. palm oil and ivory had become the main items of commerce. The British established commercial hegemony over the coast in the early 1800s, but were supplanted by the Germans, who made the area a protectorate in 1884. The area was occupied by French and British troops in WORLD WAR I, after which it was divided into French and British mandates under the League of Nations. These became UN trust territories in 1946. In the 1950s guerrilla warfare, sparked by demands for independence, raged in the French Cameroons; the French granted self-government in 1957 and independence in 1960. Following a UN plebiscite in 1961, the southern zone of the much smaller British Cameroons was incorporated into the new country (the northern zone joined NIGERIA), which became a federal republic with two prime ministers and two legislatures but a single president; Ahmadou Ahidjo, who had led the French Cameroons to independence, became president of the republic. A one-party state was established in 1966, and a new constitution adopted in 1972 created a unitary state to replace the federation. Paul Biya succeeded Ahidjo as president in 1982. In 1991 a prolonged nationwide strike by the opposition led Biya to end one-party rule. Biya won a multiparty presidential election in 1992, but the result was tainted by fraud.



Cameroons, former German colony, W Africa, in the region that is now Cameroon and Nigeria. After World War I the colony was divided into British Cameroons and French Cameroons, both League of Nations mandates. Both colonies became UN trust territories and then achieved independence after World War II. French Cameroons and the southern part of British Cameroons became CAMEROON, and the northern section of British Cameroons joined NIGERIA.

Camões or **Camoens, Luis de** [kəmoiNsh'], 1524?–1580, Portugal's national poet and greatest literary figure. Among the events of his turbulent life were study at the Univ. of Coimbra; banishment from court (1546); loss of an eye in the Moroccan campaign; imprisonment for street-fighting; military service in India; dismissal from an official post in Macao; and shipwreck on his return (1570) to Por-

tugal. *The Lusiads* [Port. *Os Lusíadas* = sons of Lusus, i.e., the Portuguese] (1572), a Vergilian epic encompassing the voyage of Vasco da GAMA and much of Portuguese history, is his masterpiece. Camões received a meager royal pension but died in poverty. His sonnets and lyrics appeared posthumously.

Campbell, Alexander, 1788–1866, clergyman, cofounder of the DISCIPLES OF CHRIST; b. Ireland. His father, **Thomas Campbell,** 1763–1854, came to the U.S. in 1807 and settled in Pennsylvania, where he withdrew his congregation from the Presbyterian Church. Alexander came to the U.S. in 1809 and joined his father's followers, known as Campbellites. Nominally Baptists (c.1812–c.1827), they advocated a return to scriptural simplicity and became the Disciples of Christ. Alexander founded (1840) Bethany College in West Virginia.

Campbell, Kim (Avril Phaedra Campbell), 1947–, Canadian politician, prime minister of Canada (1993). Originally a member of the SOCIAL CREDIT party, she held (1983–88) appointed and elected provincial positions in British Columbia. After joining the PROGRESSIVE CONSERVATIVE PARTY, she was elected (1988) to parliament. She served as justice minister and attorney general (1990–93) and defense minister (1993) under Prime Min. MULRONEY. In 1993 she succeeded Mulroney, becoming Canada's first woman prime minister. Shortly thereafter she and all but two of her party's candidates lost (1993) their seats in the national elections.

Campbell, Mrs. Patrick, 1865–1940, English actress; b. Beatrice Stella Tanner. She won fame in PINERO's *Second Mrs. Tanqueray* (1893). A friend of G.B. SHAW, she created the part of Eliza Doolittle in his *Pygmalion* (1913).

Campbell, Robert: see ROB ROY.

Campbell, Robert, 1808–94, Canadian explorer; b. Scotland. As a fur trader for the HUDSON'S BAY COMPANY he explored (1834–52) the Mackenzie R. region and discovered the Pelly R. At its junction with the Lewes R. to form the YUKON R. he established (1848) Fort Selkirk. Later (1850–51) he followed the Yukon as far as Fort Yukon.

Camp David, woodland camp in the Catoctin Mts., Md., used as a retreat by U.S. presidents since F.D. Roosevelt. Many important meetings have been held here, e.g., the conference that produced the CAMP DAVID ACCORDS.

Camp David accords, popular name for the 1979 peace treaty between Israel and Egypt, named for the U.S. presidential retreat (Camp David) in Maryland where the agreement was forged. It was signed Mar. 26, 1979, in Washington, D.C., by Menachem BEGIN of Israel and Anwar SADAT of Egypt, with U.S. Pres. Jimmy CARTER signing as a witness. Under the pact, which was denounced by other Arab states, Israel agreed to return the SINAI to Egypt, a transfer that was completed in 1982. In a joint letter the two sides also agreed to negotiate Palestinian autonomy measures in the occupied WEST BANK and GAZA STRIP, but virtually no progress was made on this issue until the 1990s. See also ARAB-ISRAELI WARS.

camphor ($C_{10}H_{16}O$), white, crystalline solid with a pungent odor and taste. It can be obtained from the camphor tree or synthesized from oil of TURPENTINE. Camphor is used to make CELLULOID and lacquers. In medicine it is used as a stimulant, a diaphoretic, and an inhalant; camphor ice, a mixture chiefly of camphor and WAX, is applied externally. The alcoholic solution is known as spirits of camphor.

Campi, Giulio [käm'pē], c.1500–c.1572, Italian painter and architect, founder of a school of painters at Cremona. Influenced by CORREGGIO and RAPHAEL, he did many altarpieces in Milan and Cremona. His pupils included his brothers Cavaliere **Antonio Campi,** c.1536–1591; **Vincenzo Campi,** 1532–91, a painter of portraits and still lifes; and **Bernardino Campi,** 1522–c.1590, known for frescoes in San Sigismondo, Cremona.

Campian, Thomas: see CAMPION, THOMAS.

Campin, Robert [käm'pĭn], 1378–1444, Flemish painter who with the van EYCKS was a founder of the Netherlandish school. He has been identified as the Master of Flémalle on the basis of three panels said to have come from the abbey of Flémalle, near Liège, Belgium. The *Mérode Altarpiece* (Cloisters, N.Y.C.) has also been attributed to him. His robust realism and concern for details of daily life reflected the values of the rising middle class.

Campion, Saint Edmund, c.1540–81, English JESUIT martyr. He early found favor with ELIZABETH I, but had Roman Catholic leanings and fled to the Continent, where he joined (1573) the Society of Jesus. He returned (1580) to England as a missionary and converted many, but was arrested, tortured, and executed. He was canonized in 1970. Feast: Dec. 1.

Campion or **Campian, Thomas,** 1567–1620, English poet and composer. He wrote poems and lute music, e.g., five *Books of Airs* (1601–17); a treatise on COUNTERPOINT; and a treatise on poetry.

Camus, Albert [kämü'], 1913–60, French writer and thinker; b. Algiers. His belief in the absurdity of the human condition identified him with EXISTENTIALISM, but his courageous humanism distinguished him from that group. The characters in his novels and plays, although keenly aware of the meaninglessness of the human condition, assert their humanity by rebelling against their circumstances. His best-known works are the novels *The Stranger* (1942), *The Plague* (1947), and *The Fall* (1956) and the essays *The Myth of Sisyphus* (1942) and *The Rebel* (1951). Camus was awarded the 1957 Nobel Prize in literature.

Cana, ancient town of Galilee. According to the Bible, JESUS performed his first miracle here by turning water into wine at a wedding.

Canaan, name for ancient PALESTINE. It was the Promised Land of the Israelites, which they conquered after their delivery from Egypt. Its inhabitants, who were probably related to the Amorites, were called Canaanites.

Canada, independent nation (1991 pop. 27,296,859), second largest country in the world (3,831,012 sq mi/9,922,330 sq km), occupying all of North America east of Alaska and north of a 5,335-mi-long (8,892-km) border with the U.S., and including adjacent islands of the Arctic Archipelago. It comprises 10 provinces and 2 federal territories. The provinces are ALBERTA, MANITOBA, and SASKATCHEWAN, collectively known as the Prairie Provinces; NEW BRUNSWICK, NOVA SCOTIA, PRINCE EDWARD ISLAND, and NEWFOUNDLAND, known as the Atlantic Provinces (the first three also being called the Maritime Provinces); and BRITISH COLUMBIA; ONTARIO; and QUEBEC. The territories are the YUKON TERRITORY and the NORTHWEST TERRITORIES; a new territory, NUNAVUT, will be created from the E Northwest Territories. Canada is a member of the COMMONWEALTH OF NATIONS. Its capital is OTTAWA.

Land and People. Occupying more than half of the nation's land area in the east and north is the vast CANADIAN SHIELD, a sparsely populated expanse of ancient, metamorphic rocks locally rich in iron, nickel, gold, and other minerals. Its rim extends from Labrador in the east, along the northern edge of Canada's urban-industrial heartland (the SAINT LAWRENCE R. valley and the peninsula of S Ontario), through WINNIPEG and the GREAT SLAVE and Great Bear lakes to the ice-clogged ARCTIC OCEAN in the north. Southeast of the Shield, occupying the Maritime Provinces and the island of Newfoundland, are the worn-down northern ranges of the APPALACHIAN MOUNTAINS system. To the west, in SW Manitoba and most of Alberta and Saskatchewan, are the great wheat-growing, oil-rich plains, or prairies, underlain by sedimentary rock in the Interior Lowlands region. The plains continue north through the PEACE R. and Athabasca districts to the area at the mouth of the MACKENZIE R., in the far north. West of the plains, along the western boundary of Alberta and in British Columbia and the Yukon, is the c.500-mi-wide (800-km) complex of high mountains and plateaus known as the Western Cordillera. It includes the ROCKY MOUNTAINS (E) and COAST MOUNTAINS (W), and reaches an elevation of 19,524 ft (5,951 m) at Mt. LOGAN, Canada's highest point, in the Yukon. Canada's climate ranges from temperate, with short, mild winters, in the southwest, to bitter, Arctic cold. It is temperate, with long, cold, and usually snowy winters in E Canada and the Prairie Provinces. Climatic conditions become progressively harsher to the north, where permafrost severely limits development. Most Canadians live along the southern edge of the nation, within 100 mi (160 km) of the U.S. border. More than half are concentrated in S Ontario and S Quebec. TORONTO, MONTREAL, EDMONTON, VANCOUVER, and CALGARY are the largest urban areas. The population is predominantly of British or French origin, with smaller minorities of other Europeans, some Asians, and an indigenous population of over 493,000 (many on reservations), including 28,000 Inuit (ESKIMO). Roman Catholicism and Protestantism are the largest faiths; the main Protestant sects are the United Church of Canada, Anglican Church of

Canada, and Presbyterian. French (spoken by a majority in Quebec) and English are both official languages.

Economy. Manufacturing, heavily concentrated in S Quebec and Ontario, is the chief economic activity, with major manufactures including motor vehicles, processed food, chemicals, aluminum, and iron and steel. Canada, a leading mineral exporter, produces zinc, asbestos, silver, and nickel for export, and also mines potash, sulfur, uranium, copper, and iron. Coal, oil, and natural gas are abundant in Alberta and to a lesser extent in Saskatchewan. Huge hydroelectric installations on the St. Lawrence, CHURCHILL, COLUMBIA, Peace, and other rivers supply additional energy in fuel-deficient regions. The extensive forest cover just north of the settled fringe supports large exports of newsprint, pulp and paper, and other forest products; and there are major exports of wheat and other grains from the Prairies, as well as fruit and meat. Tourism and financial services are also important. The U.S. is the leading trading partner and principal foreign investor. A trade agreement that took effect in 1989 will eliminate all tariffs between the U.S. and Canada by 1999. The GREAT LAKES–SAINT LAWRENCE SEAWAY is the chief trading artery.

Government. Canada's constitution was patriated (i.e., returned to full Canadian control by the British Parliament in London) by the CANADA ACT (1982). It is derived from the British North America Act of 1867 (now called the Constitution Act, 1867). Under the constitution the head of state is the British monarch, acting in Canada through an appointed governor general. Legislative power is vested in a bicameral Canadian Parliament, consisting of a House of Commons (295 elected members) and a Senate (maximum 112 appointed members). The head of government is the prime minister, a member of the House. Each province has its own parliament.

History. Newfoundland and the eastern seaboard were discovered for England in 1497 by John CABOT and the mouth of the St. Lawrence R. and the GASPÉ PENINSULA for France in 1524 by Jacques CARTIER. Port Royal (now ANNAPOLIS ROYAL), Canada's first known permanent mainland settlement, was founded by the French in 1605, and, traveling out from the colony of New France (made a royal colony in 1663), French fur traders, explorers, and missionaries rapidly extended French influence deep into the North American interior. British interest was sparked by the commercial efforts of the HUDSON'S BAY COMPANY after 1670. Through the 18th cent. Anglo-French hostility in Europe kept spilling over into the New World (see FRENCH AND INDIAN WARS). In 1713 Britain gained control of Nova Scotia (the heart of the French colony called ACADIA), Newfoundland, and the Hudson Bay region. The rest of French Canada fell to the British in 1763, following the defeat (1759) of Gen. MONTCALM by James WOLFE on the Plains of Abraham, near the city of Quebec. French residents, then in the majority, were granted rights to their own language and religion and given other concessions under the Quebec Act of 1774. Tensions mounted, however, as British settlement accelerated, especially after the American Revolution, with an influx of loyalists from the former American colonies (see UNITED EMPIRE LOYALISTS). In an effort to deal with the growing Anglo-French antagonism, Quebec was divided (1791) into English-speaking Upper Canada (now Ontario) and French-speaking Lower Canada (present-day Quebec). Following revolts in both colonies and the report by the earl of DURHAM in 1839, Upper and Lower Canada were again merged (1841) to form a single colony called Canada Province. The union lasted until confederation: the creation (1867), under the British North America Act, of a self-governing Dominion of Canada. Ontario and Quebec (as separate provinces), New Brunswick, and Nova Scotia were the four founding members at confederation. They were later joined by Manitoba (1870), British Columbia (1871), Prince Edward Island (1873), Alberta and Saskatchewan (1905), and Newfoundland (1949). The Northwest Territories were purchased from the Hudson's Bay Company to become (1869) a federal territory, from which the Yukon was created as a separate territory in 1898. A strong, sometimes violent French Canadian separatist movement in Quebec, seeking independence or sovereignty for the province, gathered momentum in the late 1960s. In the 1970s new regional strains arose as residents of the rapidly developing western provinces (especially oil-rich Alberta) chafed under a federal system that, in their view, deprived them of the full benefits of their resources. Such controversies pointed to the need for reform of the federal-provincial power arrangement and led to agitation for the patriation of the constitution. In 1982 Canada's constitution was returned to the Canadians, together with an amending formula and a Charter of Rights and Freedoms. In the same year first steps toward the redistribution of federal and provincial powers were taken by Prime Min. Pierre TRUDEAU. In 1984 Trudeau retired, and his successor, John Turner, called an election. The Progressive Conservatives won a sweeping majority, and Brian MULRONEY became prime minister. Mulroney signed free trade agreements with the U.S. (1988) and with the U.S. and Mexico (1992). In 1990 the 1987 Meech Lake accord, which recognized Quebec as a "distinct society," failed to win provincial approval; a similar but broader set of constitutional revisions was rejected (1992) in a national referendum. Mulroney resigned in 1993 and was briefly succeeded by fellow party-member Kim CAMPBELL, Canada's first woman prime minister. Elections (1993) led to a Liberal victory and a Progressive Conservative rout, and Jean Chrétien became prime minister. Two relatively new parties, the Bloc Québécois (based in Quebec) and Reform party (based in W Canada), won nearly all the remaining parliamentary seats.

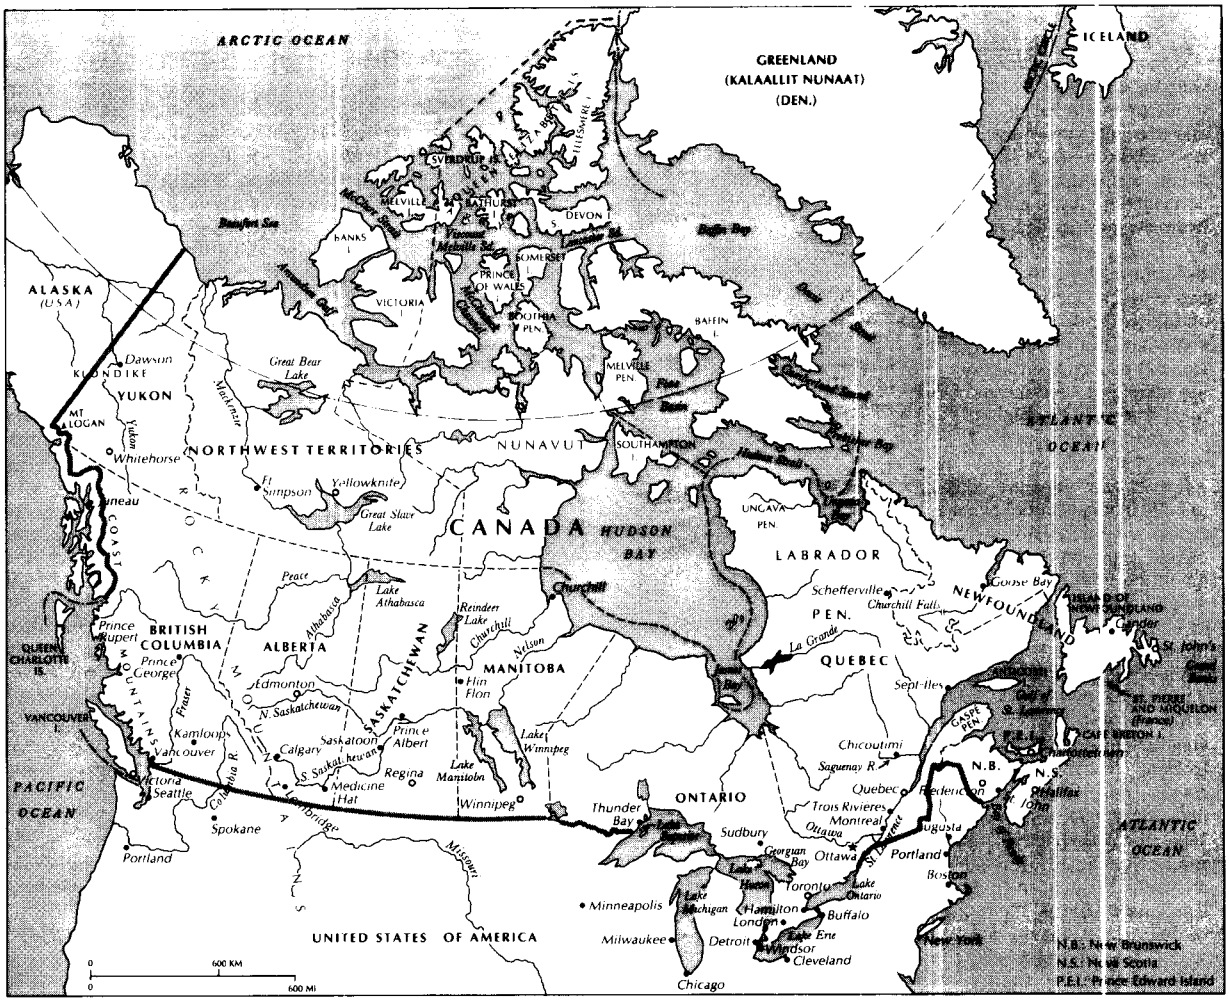
CANADIAN PRIME MINISTERS SINCE CONFEDERATION
(including party and dates in office)

Sir John A. Macdonald [Conservative] 1867–73
Alexander Mackenzie [Liberal] 1873–78
Sir John A. Macdonald [Conservative] 1878–91
Sir John J. C. Abbott [Conservative] 1891–92
Sir John S. D. Thompson [Conservative] 1892–94
Sir Mackenzie Bowell [Conservative] 1894–96
Sir Charles Tupper [Conservative] 1896
Sir Wilfred Laurier [Liberal] 1896–1911
Sir Robert L. Borden [Conservative/Unionist] 1911–20
Arthur Meighen [Conservative] 1920–21
W. L. M. King [Liberal] 1921–26
Arthur Meighen [Conservative] 1926
W. L. M. King [Liberal] 1926–30
Richard B. Bennett [Conservative] 1930–35
W. L. M. King [Liberal] 1935–48
Louis St. Laurent [Liberal] 1948–57
John G. Diefenbaker [Progressive Conservative] 1957–63
Lester B. Pearson [Liberal] 1963–68
Pierre Elliott Trudeau [Liberal] 1968–79
Joseph Clark [Progressive Conservative] 1979–80
Pierre Elliott Trudeau [Liberal] 1980–84
John Turner [Liberal] 1984
Brian Mulroney [Progressive Conservative] 1984–93
Kim Campbell [Progressive Conservative] 1993
Jean Chrétian [Liberal] 1993–

Canada Act, 1982, act of the British Parliament that superseded the BRITISH NORTH AMERICA ACT of 1867 as the basic constitution of Canada. It combines the provisions of the British North America Act, subsequent amendments to that act by the British Parliament, and the CONSTITUTION ACT, 1982, which established procedures by which Canadians could amend their own constitution. It was passed in response to the Canada Bill (1981), an act of Canada's Parliament that resulted from months of negotiations between the federal and provincial governments (except of Quebec). Despite protests from Canadian tribal groups and from Quebec prov., the act was signed into law by Queen Elizabeth II in Ottawa on Apr. 17, 1982.

Canada Day (July 1), national holiday of Canada; formerly Dominion Day. It is the anniversary of the union (1867) of Upper and Lower Canada, New Brunswick, and Nova Scotia as the Dominion of Canada.

Canada Company, land settlement company chartered in 1826 that acquired government land along the Lake Huron side of the ONTARIO peninsula, and founded Guelph and Goderich. Its first sec-



retary in Canada was the Scottish novelist John GALT. It remained in existence until the 1950s.

Canada First movement, short-lived political party founded after Canada's confederation (1867) to promote Canadian nationalism, and to encourage immigration and native industry. Its ideals were absorbed by older political parties.

Canadian football: see under FOOTBALL.

Canadian Shield or **Laurentian Plateau,** a region of ancient, mostly metamorphic rock forming the geologic nucleus of North America. Rich in minerals and water-power potential, it occupies E Canada, from the Great Lakes and the St. Lawrence N to the Arctic Ocean. It also covers much of Greenland and extends S into the U.S. as the ADIRONDACK MTS. and the Superior Highlands.

Canal, Antonio: see CANALETTO.

canal, an artificial waterway constructed for navigation or for the movement of water, e.g., irrigation, drainage of wetlands, and flood control. Irrigation canals probably date back to the beginnings of agriculture. Navigation canals developed later and for a long time were level, shallow cuts or had inclined planes up which vessels were hauled from one level to the next. The **canal lock,** a stretch of water enclosed by gates at each end, provides another means of raising or lowering vessels. When a vessel enters a lock through one gate, the gate is closed behind it. Water is let into or drained out of the lock until its level equals that of the water ahead. The vessel then passes out through the forward gate. Canal locks developed separately in China (10th cent.) and Holland (13th cent.). The GRAND CANAL of China is the world's longest canal. Europe developed a complex system of canals, and in the U.S. canal-building boomed after the opening (1825) of the ERIE CANAL. The rise of railroads, however, brought a decline in the use of canals as inland waterways. Canals have also been built to shorten sea routes, e.g., the PANAMA CANAL and the SUEZ CANAL.

Canaletto, 1697–1768, Venetian painter; b. Antonio Canal. Unsurpassed as an architectural painter, he executed such finely detailed works as *View on the Grand Canal* (National Gall., London) and *The Piazzetta, Venice* (Metropolitan Mus.). He also produced superb etchings and drawings that were not preparatory but complete in themselves. His nephew and pupil, Bernardo Bellotto, was also called Canaletto.

canary, small BIRD of the FINCH family, descended from either the wild serin finch or the wild canary (*Serinus canarius*) of the CANARY ISLANDS, MADEIRA ISLANDS, and AZORES. The wild birds are usually gray or green; breeding has yielded plain and variegated birds, mostly yellow and buff. Captive canaries are trained to sing and can live for 15 years or more.

Canary Islands, group of seven islands, 2,808 sq mi (7,273 sq km), constituting an autonomous region and two provinces of Spain, in the Atlantic Ocean off the coast of NW Africa. Tenerife, Palma, Gomera, and Hierro islands are part of Santa Cruz de Tenerife prov.; Grand Canary, Lanzarote, and Fuerteventura are part of Las Palmas prov. The islands are of volcanic origin and rise to 12,162 ft (3,707 m) in Mt. Teide, the highest point in Spain. With their warm climate and fine beaches, the Canaries are a popular tourist center.

canasta: see RUMMY.

Canberra, city (1991 pop. 278,894), capital of Australia, in the AUSTRALIAN CAPITAL TERRITORY, SE Australia. The site chosen (1908) for the capital was developed by the American architect Walter Burley

Griffin, whose plans won (1911) an international competition. Parliament first met there in 1927. The federal government is the city's largest employer.

cancer, common term for tumors (neoplasms) characterized by uncontrolled growth. Unlike normal cells, cancer cells are atypical in structure and do not have specialized functions. They compete with normal cells for nutrients, eventually killing normal tissue. Cancerous, or malignant, tissue can remain localized, invading only neighboring tissue, or can spread to other tissues or organs via the LYMPHATIC SYSTEM or blood (i.e., metastasize); virtually all tissues and organs are susceptible. Cancer symptoms, which are often nonspecific, include weakness and loss of appetite and weight. The causes are thought to include chemical agents that alter the cell's nucleic acids, e.g., nitrogen mustard; toxic substances, e.g., ASBESTOS, pollutants, substances in cigarette smoke; hormonal imbalances, possibly brought on by drugs, e.g., DES; genetic tendencies for certain types of cancer, e.g., of the breast or stomach; physical agents such as X rays and radioactivity; and VIRUSES. Methods of detection include visual observation, palpation, X-ray study, endoscopy (see ENDOSCOPE), CAT SCANS, ULTRASOUND, and BIOPSY. Tumors caught early, before metastasis, have the best cure rates. Cancer is traditionally treated by surgery, CHEMOTHERAPY, and RADIATION but more specific treatments with fewer side effects, such as hormonal products, vaccines, cryosurgery (freezing the tumor), and GENE THERAPY, have been developed or are under research. The branch of medicine concerned with diagnosis, treatment, and research into the causes of cancer is oncology.

Cancún [känkōōn], city (1990 pop. 172,425), SE Mexico, on the Yucatán peninsula. A popular coastal resort initially developed in the early 1970s, it is known for its beautiful beaches, agreeable climate, and luxurious hotels.

candytuft, low-growing Old World plant (genus *Iberis*) of the MUSTARD family, often cultivated as a rock garden and border ornamental. Candytufts have flat-topped or elongated clusters of variously colored flowers.

cane, in botany, name for a hollow or woody, usually slender, jointed plant stem (e.g., RATTAN and some bamboos) and for some tall GRASSES (e.g., SUGARCANE and SORGHUM). Giant cane (*Arundinaria macrosperma* or *gigantea*), a BAMBOO grass native to the U.S., often forms impenetrable thickets, the canebrakes of the South.

cane sugar: see SUCROSE.

Canetti, Elias, 1905–, German writer; b. Bulgaria. He has lived in England since 1938 and is best known for two works: *Auto da fé* (1935), a searing picture of humanity as degraded and evil, and *Crowds and Power* (1960), a study of mass psychology. He also wrote plays; a study of KAFKA, and autobiographical works. He was awarded the 1981 Nobel Prize in literature.

cannabis: see HEMP.

cannibalism, practice of eating human flesh, found among some peoples of Africa, South America, the South Pacific islands, and the West Indies. Victims for rites of life- or power-transfer are usually sought among alien groups, although some peoples eat part of a kinsman's corpse as a gesture of respect for the deceased. HEADHUNTING may have evolved from cannibalism. Cannibalism has also occurred among isolated groups desperate to survive, e.g. the DONNER PARTY.

Canning, George, 1770–1827, British statesman. A TORY, he served (1807–9) as foreign minister during the wars against NAPOLEON I and was influential in military affairs. After CASTLEREAGH's suicide, he was again foreign minister (1822–27). He refused to cooperate in the suppression of European revolutions, aided the MONROE DOCTRINE by recognizing the independence of Spanish colonies in America, and arranged the Anglo-French-Russian agreement that resulted in Greek independence. He was prime minister in 1827.

canning, process of hermetically sealing cooked food for future use, including meat, poultry, fruits and vegetables, seafood, milk, preserves and pickles, jams and jellies. Developed early in 19th-cent. France by Nicolas Appert, a chef, the method spread throughout Europe and the U.S., where it was patented around 1815. The process was widely used to provide foodstuffs to soldiers during the U.S. Civil War. The early glass and tin containers were later supplanted by tin-plated steel cans, mass-produced in America since 1847 and now the basis of a modern industry. In home as in factory canning, the process involves cleaning and preparing the raw product (with rapid handling necessary to prevent vitamin loss, bacterial spoilage, or enzyme changes). Once filled, the containers are thermally exhausted to release gases, then subjected to heat to destroy any microorganisms.

Cannon, Annie Jump, 1863–1941, American astronomer; b. Dover, Del. A staff assistant (from 1896) and curator of astronomical photographs (1911–38) at the Harvard College Observatory, she developed the definitive Harvard system of spectral classification (see SPECTRAL CLASS) and published spectral classifications of over 350,000 stars appearing on Harvard photographic plates. In the course of her work she discovered more than 300 variable stars, many through their spectral characteristics.

Cannon, Joseph Gurney, 1836–1926, Speaker of the U.S. House of Representatives (1903–11); b. Guilford co., N.C. A lawyer from Illinois, he ruled the House dictatorially in the interest of "Old Guard" Republicans until a bill reforming House rules (1910) broke his power.

Cannon, Walter Bradford, 1871–1945, American physiologist. He was the first to use (1897) bismuth as a contrast medium in an X-ray examination of the gastrointestinal tract. His interest in the physiological effects of emotional stimuli, especially on digestion, led to publication (1919) of his *Bodily Changes in Pain, Hunger, Fear and Rage.* Cannon also introduced (1932) the concept of homeostasis.

cannon, in warfare: see ARTILLERY.

canon, in music, a type of COUNTERPOINT in which all the instruments or voices have the same melody, beginning at different times, with successive entrances at the same or different pitches. A well-known vocal form is the round, of which the earliest known example is the medieval song *Sumer is Icumen in.* The Canon in D for string orchestra by the 17th-cent. German composer Johann Pachelbel was popular in the U.S. in the 1970s. The canon is an essential device for SERIAL MUSIC.

canonization: see SAINT.

canon law, in the ROMAN CATHOLIC CHURCH, law of the church courts, based on legislation of councils, popes, and bishops. It deals with the governance of the clergy and the church, including administration of the sacraments. The present code was promulgated in 1917, but has been undergoing revision since the 1960s. It has a long development, begun with the early letters of the popes. The greatest figure in canon law was Gratian, whose compilation was the basis of all later collections. The Council of TRENT added much to the law.

Canova, Antonio, 1757–1822, Italian sculptor. Leading examples of neoclassicism, his statues and bas-reliefs—e.g., the monuments to Clement XIV (1782–87; Church of the Apostles, Rome) and Clement XIII (1792; St. Peter's, Rome)—are executed with grace, polish and purity of contour. His portraits include two nudes of Napoleon I as a Roman emperor.

cantaloupe: see GOURD; MELON.

cantata, composite musical form similar to a short unacted opera or brief ORATORIO, developed in Italy in the BAROQUE period. In France and Italy the secular cantatas included arias and recitatives; the sacred cantatas of Germany had choral and instrumental sections. J.S. BACH utilized hymn verses in his chorale cantatas.

Canterbury, city (1991 pop. 123,947), Kent, SE England, on the Stour R. The seat of the primate of the Church of England and the spiritual center of the country, it is a major attraction. Following his arrival (597) in England, St. AUGUSTINE founded an abbey there and became the first archbishop of Canterbury. After the murder (1170) of THOMAS À BECKET, the city became the object of pilgrimage, as described in CHAUCER'S *Canterbury Tales.* The magnificent cathedral (1070–1180; 1379–1503) embodies the styles of several periods. Although the city was bombed during WORLD WAR II, the cathedral and many other historic buildings survive.

Canterbury Tales: see CHAUCER, GEOFFREY.

Canticles: see SONG OF SOLOMON.

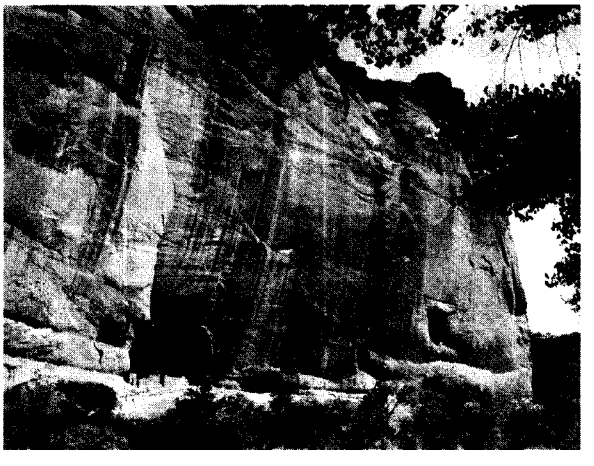
Canton: see GUANGZHOU.

Cantor, Georg, 1845–1918, German mathematician; b. Russia. His work on transfinite numbers (see INFINITY) and SET theory revolu-

tionized mathematics and led to a critical investigation of its foundations.

Canute [kənōōt'], 995?–1035, king of England, Norway, and Denmark. The younger son of SWEYN of Denmark, he invaded England with his father in 1013 and forced ÆTHELRED to flee to Norway. On Sweyn's death (1014) he withdrew to Denmark. He reinvaded England in 1015 and, after the Danish victory at the battle of Assendun, divided the country with EDMUND IRONSIDE. On Edmund's death (1016), Canute was accepted as sole king. He gave England peace, restored the church to a high place, and codified English law. He married Emma, the widow of Æthelred. In 1018 he succeeded to the throne of Denmark. After several expeditions to Norway, he threw out OLAF II in 1028, thus becoming ruler of three kingdoms. He made his son Harthacanute king of Denmark and his son Sweyn king of Norway. Canute also established friendly relations with the HOLY ROMAN EMPIRE.

Canyon de Chelly National Monument, area near Chinle, Ariz., including a canyon known for its ruins of spectacular cliff dwellings, built in A.D. 350–1300 by the people known as the basket makers and their successors, the PUEBLO. The NAVAHO, who now live and farm there, settled in the canyon c.1700.



Canyon de Chelly

Canyonlands National Park: see NATIONAL PARKS (table).

capacitance, in electricity, the capability of a body, a system, or an ELECTRIC CIRCUIT for storing electric CHARGE. Capacitance, measured in units of farads (F) and fractions of a farad, microfarads (μF) and picofarads (pF), is expressed as the ratio of stored charge in coulombs to the applied potential difference in volts. In electric circuits, devices designed to store charge are called CAPACITORS. When alternating current flows through a capacitor, the capacitor produces a reactance, inversely proportional to the capacitance, that resists the current flow (see IMPEDANCE).

capacitor or **condenser,** device for storing electric charge. Simple capacitors usually consist of two plates made of an electrically conducting material (e.g., a metal) separated by a nonconducting material, or DIELECTRIC (e.g., air, ceramic, glass, mica, oil, paper, paraffin, or plastic). If an electric POTENTIAL (voltage) is applied to the capacitor plates, the plates will become charged, one positively and one negatively. If the externally applied voltage is then removed, the capacitor plates remain charged, and the electric charge induces an electric potential between the two plates. This phenomenon is called electrostatic INDUCTION. The capacity of the device for storing electric charge (i.e., its CAPACITANCE) can be increased by increasing the area of the plates, by decreasing their separation, or by varying the substance used as an insulator. The dielectric constant is a measure of the increase in capacitance due to a particular insulator used to separate the plates. The **Leyden jar,** a form of capacitor invented at the Univ. of Leiden in the 18th cent., consists of a narrow-necked glass jar coated on part of its inner and outer surfaces with conductive metal foil.

Cape Breton Island, island, 3,970 sq mi (10,282 sq km), in NE Nova Scotia, separated from the Canadian mainland by the Gut (or Strait) of Canso. It was discovered by the English navigator John CABOT in 1497. Under French control (1623–1763), it was renamed Île Royale and fortified (at LOUISBURG) by French loyalists (the Acadians) after the rest of NOVA SCOTIA passed to the English in 1713. It was a separate colony from 1784 to 1820, with its capital at Sydney.

Cape Canaveral, low promontory, E Florida (called Cape Kennedy, 1963–73). Since 1947 it has been the chief U.S. launching site for long-range test missiles and manned space flights.

Cape Cod, hook-shaped, sandy peninsula, SE Massachusetts, extending 65 mi (105 km) E and N into the Atlantic Ocean. It is a popular resort area. Parts of it constitute the **Cape Cod National Seashore** (44,600 acres/18,050 hectares; est. 1961). **Cape Cod Canal,** built 1910–14, cut the New York–Boston shipping distance by 75 mi (121 km).

Čapek, Karel [chä'pĕk], 1890–1938, Czech writer. He wrote two brilliant satirical plays attacking technological and materialist excess: *R.U.R. (Rossum's Universal Robots,* 1921), which introduced the word *robot;* and *The Insect Play* (1921), written with his brother Josef. His other works include *The Makropoulos Secret* (1922), a play on which JANÁČEK based an opera; *The War with the Newts* (1936), a satirical science-fiction attack on totalitarianism; philosophical novels; travel sketches; and volumes of conversations with Thomas MASARYK. **Josef Čapek,** 1887–1945, was a writer and painter.

Cape Kennedy: see CAPE CANAVERAL.

caper, common name for members of the family Capparidaceae, chiefly Old World tropical plants closely related to the MUSTARD family. The pickled caper, used as a condiment, is the flower bud of *Capparis spinosa,* cultivated in the Mediterranean area. The family also includes the spiderflower (*Cleome spinosa*), a common garden annual.

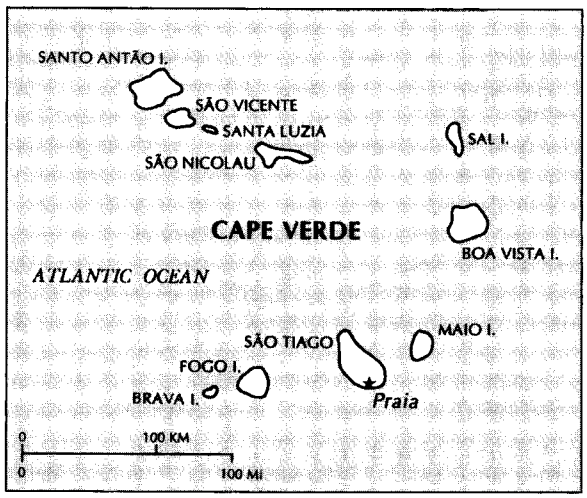
Capetians [kəpē'shənz], royal house of France, named for HUGH CAPET, who became king in 987. His direct descendants ruled France until the death of CHARLES IV in 1328. The throne then passed to the collateral branch of VALOIS.

Cape Town or **Capetown,** city (1985 pop. 776,617), legislative capital of South Africa and capital of Cape Province, an important port on the Atlantic Ocean. It is a commercial and industrial center, linked by road, rail, and airlines to other South African cities. Situated at the foot of Table Mt. (c.3,570 ft/1, 090 m), Cape Town is a tourist resort with fine beaches and a pleasant climate. The city, founded in 1652, is the site of a fortress, church, museum, and other buildings dating to the early Dutch settlement

Cape Verde, Port. *Cabo Verde,* officially Republic of Cape Verde, republic (1992 est. pop. 398,000), c.1,560 sq mi (4,040 sq km), W Africa, in the Atlantic Ocean, about 300 mi (480 km) W of Senegal. Cape Verde is an archipelago made up of 10 islands and 5 islets, divided into two main groups—the Barlavento, or Windward, in the north, which include Santo Antão, São Vicente, Santa Luzia, São Nicolau, Boa Vista, and Sal; and the Sotavento, or Leeward, which include São Tiago, Fogo, Maio, and Brava. Praia, the capital, is located on São Tiago, the largest island. The islands are mountainous and of volcanic origin; the only active volcano, and the archipelago's highest point, is Cano (c.9,300 ft/2,830 m), on Fogo. Farming, the main economic activity, is limited by the small annual rainfall. Occasionally, severe drought, as in the 1970s and 80s, further reduces production of the main crops (corn, bananas, sweet potatoes, beans, sugarcane, and coffee). Tuna and lobster are the major fishing catches. The main mineral resource is salt. Many of the islanders work in Portugal and the U.S., and their remittances, along with foreign assistance, help to support the weak economy. About 70% of the population is of mixed African and European descent; most of the rest are of African descent. Roman Catholicism is the main religion. Portuguese and a Portuguese-African creole are the national languages.

History. Cape Verde was discovered in 1456 by Luigi da Cadamosto, a navigator in the service of Portugal. Portuguese colonists began to settle in the islands, which were probably uninhabited, in 1462, and soon began importing West Africans as slaves. Slavery was abolished in the islands in 1876. Cape Verde became an over-

seas province in 1951 and gained its independence in 1975. A movement for union with Guinea-Bissau was blocked by a 1980 coup in Guinea-Bissau, which brought to power leaders opposed to the union. In 1991 the leftist party that had held power since independence lost control of parliament, and Antonio Mascarenhas Monteiro defeated Pres. Aristides Pereira, who had led the country since 1975, in a free election. The nation has been plagued with a prolonged drought that caused staggering economic problems and large-scale emigration, an 80% unemployment rate, and the need to import most of its food.



capillarity or **capillary action,** phenomenon in which the surface of a liquid is elevated or depressed when it comes in contact with a solid. The result depends on the outcome of two opposing forces, ADHESION AND COHESION. Adhesion between glass and water causes the water to rise along a glass wall until this force is balanced by the cohesive force acting to minimize the liquid's surface area (see SURFACE TENSION). When adhesion is less than cohesion, as with glass and mercury, the surface is lowered. The upward flow of water in soil and in plants is partially caused by capillarity.

capital gains tax, levy on profits earned by the sale of capital assets, such as stocks, bonds, and real estate. In the U.S., long-term gains on assets held for one year or more may be taxed at a somewhat lower rate than short-term gains if total taxable income is within a certain range.

capitalism, economic system characterized by private ownership of property and of the means of production. Generally the capitalist, or private enterprise, system embodies the concepts of individual initiative, competition, SUPPLY AND DEMAND, and the profit motive. Capitalism and SOCIALISM are the two major economic systems in the world. The modern importance of capitalism dates from the INDUSTRIAL REVOLUTION, which started in the 18th cent. when bankers, merchants, and industrialists began to displace landowners in importance, especially in Britain. By the early 20th cent. capitalism had created vast credit, manufacturing, and distributing institutions, and the social and economic effects of the system had largely transformed world culture. However, it was also held responsible for various abuses, notably the exploitation of labor. Complete freedom of economic action has been circumscribed since the late 1800s by the growth of strong labor UNIONS, the NATIONALIZATION in some countries of certain basic industries, and ANTITRUST LAWS limiting the power of MONOPOLIES, as well as by social reforms, ENVIRONMENTALISM, and legislation ensuring product safety. See also LAISSEZ-FAIRE.

capital levy: see TAXATION.

capital punishment, imposition of the death penalty by the state. Applied from ancient times in most societies, it has been used as punishment for crimes ranging in gravity from petty theft to murder. Modern opposition to capital punishment arose in France in the 18th cent. and spread through W Europe, where most nations abolished such laws in the 20th cent. In the U.S. the death penalty was applied with decreasing frequency after World War II, and in 1972 the U.S. Supreme Court voided all federal and state laws calling for the death penalty on the grounds that condemned persons were being subjected to "cruel and unusual punishment," in violation of the 8th amendment to the CONSTITUTION. The court left open, however, the possible enactment of new, constitutional laws, and since then most states have passed new measures imposing the penalty in specified kinds of murder cases.

Capitol, seat of the U.S. government, at Washington, D.C., built on an elevated site chosen by WASHINGTON and Major Pierre L'ENFANT. The building is the work of several architects. William Thornton's 1792 plan was initiated in 1793. E.S. Hallet, George Hadfield, and James Hoban succeeded Thornton. In 1814 the British burned the uncompleted building, and B.H. LATROBE and Charles BULFINCH restored and completed it (1818–30). The House and Senate wings and the dome were added (1851–65) by T.U. Walter. The dome is 288 ft (90 m) high.

Capitoline Hill or **Capitol,** highest of the seven hills of ancient Rome, historic and religious center of the city in ancient times. In the Middle Ages the Capitol remained the political center of Rome, and it is the center of municipal government in modern Rome. In the 16th cent. MICHELANGELO designed the Capitol's present plan.

Capitol Reef National Park: see NATIONAL PARKS (table).

Capone, Al(phonse), 1899–1947, American gangster; b. Brooklyn, N.Y. His crime syndicate terrorized Chicago in the 1920s, controlling gambling and prostitution there. In 1931 he was sentenced to prison for federal income-tax evasion.

Capote, Truman, 1924–84, American author; b. New Orleans. His fiction reflected a world of grotesque and strangely innocent people. He wrote novels, e.g., *The Grass Harp* (1951); short stories, e.g., *Breakfast at Tiffany's* (1958); nonfiction; and the "nonfiction novel" *In Cold Blood* (1966).

Cappadocia, ancient region of Asia Minor, in present E central Turkey. The name was applied at different times to territories of varying size. Before 1800 B.C., Cappadocia was the heart of an old HITTITE state; later, it was controlled by the Persians. During the 3d cent. B.C. it developed as an independent kingdom. In A.D. 17 Rome annexed the region.

Capra, Frank, 1897–1991, American film director; b. Sicily. *It Happened One Night* (1934), *Mr. Deeds Goes to Town* (1936), and *You Can't Take It with You* (1938), mixing "screwball" comedy and populism, won Academy Awards. Among his other films is *It's a Wonderful Life* (1946).

Caprivi Strip, panhandle area of NE Namibia, 300 mi (480 km) long and 50 mi (80 km) wide, between Botswana (S) and Angola and Zambia (N). It was obtained from Great Britain by Germany in 1890 to give German South West Africa (now NAMIBIA) access to the ZAMBEZI R.

capybara, largest living RODENT, reaching a length of 4 ft (120 cm) and a weight of 75 to 100 lb (34 to 45 kg). Found in Central and much of South America, it has coarse, scant, brownish hair flecked with yellow. An expert swimmer, the capybara is also called the water hog.

Caracalla, 188–217, Roman emperor (211–17); son of Septimius SEVERUS. Born Marcus Aurelius Antoninus; he received his nickname from the caracalla, a Gallic tunic he regularly wore. His reign was infamous for its cruelty and bloodshed. Caracalla did pacify the German frontier and extended Roman citizenship to all free inhabitants of the empire. In 217 he was murdered by his successor, Macrinus.

Caracas, city (1991 pop. 1,824,892), N Venezuela, capital and largest city of Venezuela. An extremely cosmopolitan city, it is a major industrial center, shipping through the nearby Caribbean port of La Guaira. Caracas was founded in 1567 and was the base for Spanish colonization of Venezuela. It was the birthplace of the liberators Francisco de MIRANDA and Simón BOLÍVAR. Caracas retains an old section, with many examples of colonial architecture. The oil boom of the 1950s made possible massive public building projects, transforming much of Caracas into an ultramodern metropolis famed for such futuristic complexes as University City and the Centro Bolívar government center. A cultural hub, the city is the

site of a large performing arts center, three orchestras, an opera, a ballet, and three major art museums.

Caramanlis, Constantine: see KARAMANLIS, CONSTANTINE.

carambola or **star fruit,** orange fleshy fruit of *Averrhoa carambola,* a shrub of the wood sorrel family. It has prominent ridges that when cut in cross-section create a five-pointed star. It has a sour taste; its juice is used in stain remover.

Caravaggio, Michelangelo Merisi da [käräväd'jō] or **Amerigi da Caravaggio,** 1573–1610, Italian painter. After his early years in Rome doing genre paintings, e.g., *Concert of Youths* (Metropolitan Mus.) and the *Fortune Teller* (Louvre), Caravaggio devoted himself to religious works and portraits. His use of models from lower walks of life in religious works was thought irreverent, but his strong chiaroscuro technique, partially illuminating figures against a dark background, was adopted by his contemporaries. His wide influence can be seen in the works of REMBRANDT and RIBERA.

caraway, biennial plant (*Carum carvi*) of the CARROT family, cultivated in Europe and North America for its aromatic, spicy seeds. The seeds are used to flavor pastry, cabbage, sausage, cheese, and liqueurs.

carbohydrate, any member of a large class of chemical compounds that includes sugars, starches, cellulose, and related compounds. Carbohydrates are produced naturally by green plants from carbon dioxide and water (see PHOTOSYNTHESIS). Essential nutrients, they are the human body's main source of both quick and sustained energy. The three main classes of carbohydrates are monosaccharides, which are the simple SUGARS, e.g., FRUCTOSE and GLUCOSE; disaccharides, which are made up of two monosaccharide units and include LACTOSE, MALTOSE, and SUCROSE; and polysaccharides, which are polymers with many monosaccharide units and include CELLULOSE, GLYCOGEN, and STARCH.

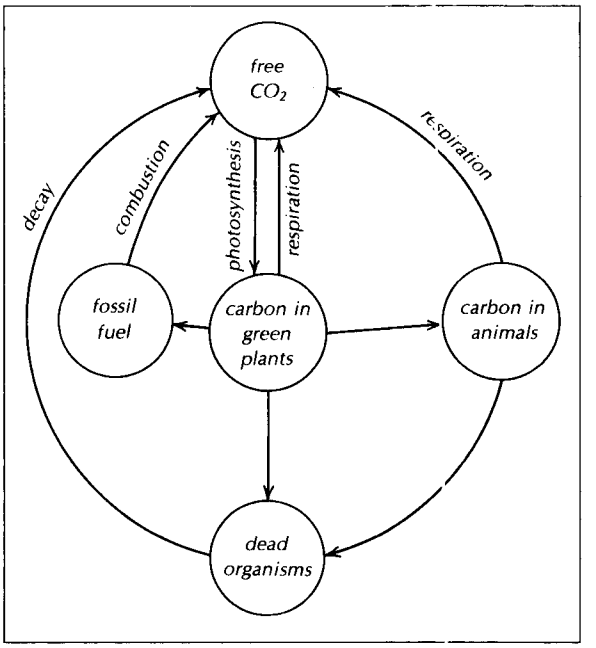
carbon (C), nonmetallic element, known since ancient times. Pure carbon forms are amorphous carbon, found in such sources as CHARCOAL, COAL, COKE, LIGNITE, and PEAT; and the crystals GRAPHITE, a very soft, dark-gray or black, lustrous material; and DIAMOND, the hardest substance known. ORGANIC CHEMISTRY is the study of carbon compounds. All living organisms contain carbon. Carbon has seven isotopes; carbon-12 is the basis for ATOMIC WEIGHTS; carbon-14, with a half-life of 5,730 years, is used to trace chemical reactions and to date geologic and archeologic specimens (see DATING). See CARBON CYCLE; CARBON DIOXIDE; CARBON MONOXIDE; ELEMENT (table); FULLERENE; PERIODIC TABLE.

carbon cycle, in biology, the exchange of carbon between living organisms and the nonliving environment. Carbon, the central element in the compounds of which organisms are composed, is derived from free carbon dioxide found in air or dissolved water. Plants incorporate carbon into carbohydrates and other complex organic molecules by means of PHOTOSYNTHESIS; during RESPIRATION, or OXIDATION, they combine oxygen with portions of the carbohydrate molecule, releasing carbon in the form of carbon dioxide and water. Carbon is also returned to the environment when plants die and their organic material is broken down by bacteria and other microorganisms. Animals obtain carbon by feeding on plants and other animals; they release carbon through respiration and, after death, indirectly through the respiration of microorganisms that consume them.

carbon dioxide (CO_2), chemical compound, occurring as a colorless, odorless, tasteless gas that is about 1½ times as dense as air under ordinary conditions. It does not burn and will not support combustion of ordinary materials. Its weakly acidic aqueous solution is called CARBONIC ACID. The gas, easily liquefied by compression and cooling, provides the sparkle in carbonated beverages. Solid carbon dioxide, or dry ice, is a refrigerant. Dough rises because of carbon dioxide formed by the action of yeast or baking powder. Carbon dioxide is a raw material for PHOTOSYNTHESIS in green plants, and is a product of animal RESPIRATION and of the decay of organic matter. Carbon dioxide occurs both free and combined in nature, and makes up about 1% of the volume of dry air. It can cause death by suffocation if inhaled in large amounts.

carbon-14 dating: see DATING.

carbonic acid (H_2CO_3), a weak dibasic acid (see ACIDS AND BASES) formed when CARBON DIOXIDE dissolves in water; it exists only in solution. With bases it forms the CARBONATE and bicarbonate salts.



Carbon cycle

Carboniferous period: see GEOLOGIC ERA (table).

carbon monoxide, chemical compound (CO), colorless, odorless, tasteless, extremely poisonous gas that is less dense than air under ordinary conditions. It burns in air with a characteristic blue flame, producing carbon dioxide. It is a component of the artificial fuels producer gas and WATER GAS. As a reducing agent, it removes oxygen from many compounds and is used in the reduction of metals from ores. When air containing as little as 0.1% carbon monoxide by volume is inhaled, the oxygen carried by hemoglobin is replaced by the carbon monoxide, resulting in fatal oxygen starvation throughout the body.

carburetor, device in a gasoline engine that vaporizes the gas and mixes it with a regulated amount of air for efficient combustion in the engine cylinders. Land vehicles, boats, and light aircraft have a float carburetor, in which a float regulates the fuel level in a reservoir from which the fuel is continuously sucked into the intake manifold at a restriction called a venturi. In many modern vehicles, the carburetor has been replaced by a FUEL INJECTION system. See also INTERNAL-COMBUSTION ENGINE.

carcinogen, any agent that causes cancer in animal tissue. Ubiquitous indoors and out, in the workplace and at home, carcinogens can be inorganic, such as asbestos and arsenic, or organic, such as certain molds and viruses. Others include various types of radiation, such as ultraviolet and X rays. Carcinogens can be inhaled (radon and tobacco smoke), ingested (nitrites), or absorbed through the skin (DDT and other pesticides). Using a procedure called the Ames test, potential carcinogens can be tested for their propensity to damage DNA and cause mutations. It has been predicted that 30% of Americans will die of cancer caused in part by environmental carcinogens before they reach the age of 74.

carcinoma: see TUMOR.

cardamom: see GINGER.

Cárdenas, Lázaro, 1895–1970, president of MEXICO (1934–40). He fought (1913–17) as a general in the Mexican revolution and was elected president. He expropriated foreign-held properties, distributed land to peasants, and instituted reforms to benefit indigenous peoples and Mexican workers. His influence in advancing constitutional processes was great. His son, **Cuauhtémoc Cárdenas Solórzano,** 1934–, was a member of the ruling Institutional Revolutionary party and served as a senator, government minister, and governor of Michoacán. In 1988 he formed a leftist opposition group and ran unsuccessfully for president.

Cardiff, city (1991 pop. 279,055), S Glamorgan, S Wales, on the

Bristol Channel. It is capital, largest city, and chief port of Wales. The service sector is economically the most important; manufactures include machinery and processed food. Cardiff was one of the world's greatest coal-shipping ports in the 19th and early 20th cent. The ruins of Cardiff Castle, built (1090) on the site of a Roman fort, are of special interest.

cardinal, a member of the highest body within the Roman Catholic Church below the pope—the college of cardinals, having the duty of electing the pope (since 1059) and all the duties of a privy council to him. Its members are appointed by the pope and are of three classes: cardinal bishops, bishops of the seven sees around Rome and the Eastern rite patriarchs; cardinal priests, mostly archbishops outside the Roman province; and cardinal deacons, priests with functions within papal government. A cardinal's insignia resemble those of a bishop except for the red, broad-brimmed, tasseled hat, which is conferred by the pope but not subsequently worn. Pope SIXTUS V set the number of cardinals at 70. Since the pontificate of JOHN XXIII, the number has increased, but only 120 may participate in a papal election.

cardinal or **redbird,** North American songbird of the FINCH family. The eastern cardinal (*Richmondena cardinalis*) male is bright red with a black throat and face; the female is brown with red patches. Both have crests and red bills.

cardiopulmonary resuscitation (CPR), emergency procedure used to treat victims of cardiac and respiratory arrest. Special training is recommended for CPR, which combines external heart massage (to keep the blood flowing through the body) with ARTIFICIAL RESPIRATION (to keep air flowing in and out of the lungs). The victim is placed face up and prepared for artificial respiration. The person administering CPR places his or her hands (one on top of the other, with fingers interlocked) heel down on the victim's breastbone, leans forward, and presses down rhythmically about 60 times a minute. This procedure is alternated with mouth-to-mouth artificial respiration.

Cardozo, Benjamin Nathan, 1870–1938, associate justice of the U.S. SUPREME COURT (1932–38); b. N.Y.C.; A.B., Columbia Univ. (1889). A New York attorney and judge of considerable stature, on the Court he was an eloquent and influential supporter of liberal social and economic views. His published lectures are considered classics of jurisprudence.

Carducci, Giosuè, 1835–1907, Italian poet and teacher. Professor of literature at the Univ. of Bologna from 1860 to 1904, he was a scholar, editor, orator, critic, and patriot. He was awarded the 1906 Nobel Prize in literature. His verse, classic in design, with great emotional range, ranks him among leading Italian poets. His works include *Hymn to Satan* (1865) and *Lyrics and Rhythms* (1899).

Carey, George Leonard, 1935–, archbishop of Canterbury (1991–). From a working-class background, he was appointed bishop of Bath and Wells in 1987 and was enthroned as the 103d archbishop of Canterbury in 1991, succeeding Robert RUNCIE. Opposed to "extreme" liberalism in the Church of ENGLAND, he has strong ties to the church's Anglo-Catholic and evangelical wings and is a strong champion of the ordination of women. Carey became known as the "green bishop" for his environmentalism while bishop of Bath and Wells. He has written several books on religious issues.

cargo cults, nativistic religious movements in Melanesia holding that at the millennium ancestor spirits will bring cargoes of modern goods to believers. Dating from the 19th cent., these cults expanded after World War II forces left surplus goods in the islands and contact with the West increased.

Caribbean Sea, tropical sea, c.750,000 sq mi (1,942,500 sq km), an arm of the Atlantic Ocean bordered by the West Indies (N, E), South America (S), and Central America (W). Its waters are clear and warm (averaging 75°F/24°C), with almost no tidal range. Bartlett Trench (22,788 ft/6,946 m below sea level), between Cuba and Jamaica, is the deepest point. After its discovery (1493) by Christopher COLUMBUS the sea was controlled by Spain, but other European nations later established colonies on its western fringe. Since the MONROE DOCTRINE of 1823, and especially after the opening (1914) of the PANAMA CANAL, the U.S. has tried to exclude foreign powers from this strategic area (see CUBAN MISSILE CRISIS) and has often intervened in the region's domestic affairs, e.g., in the DOMINICAN REPUBLIC in 1965. See also WEST INDIES.

caribou, name in North America for the DEER (genus *Rangifer*) from which the REINDEER was domesticated. Found in arctic and subarctic regions, caribou are the only deer of which both sexes have antlers.

caricature, a satirical portrait in art or literature that, through exaggeration and distortion of features, makes its subject appear ridiculous. The comic tradition in art was established in 17th-cent. Italy by the CARRACCI. Caricature flourished in 18th-cent. England in the works of HOGARTH, ROWLANDSON, and Gillray. Expanding to include political and social satire, the genre developed into the CARTOON. Caricature was extremely popular in European and American periodicals of the 19th cent., many of which included work by such artists as DAUMIER, CRUIKSHANK, TENNIEL, and Art Young. Notable modern caricaturists include BEERBOHM, Ronald Searle, Al Hirschfeld, and David Levine. In literature, caricature has been a popular form since the ancient Greeks. Perhaps the most striking and pervasive use of literary caricature in English is in the work of Charles DICKENS.

Carleton, Guy, 1st **Baron Dorchester,** 1724–1808, British governor and commander of QUEBEC in the AMERICAN REVOLUTION. He repelled (1775) an American attack on Fort Quebec and seized (1776) Crown Point, N.Y. He was replaced (1776–77) as commander and governor, but served as commander (1782–83) of British forces in America and as governor (1786–96) of British North America.

Carl Gustaf: see Charles XVI Gustavus under CHARLES, kings of Sweden.

Carlists, partisans of Don Carlos (1788–1855) and his successors in their claims to the Spanish throne. After FERDINAND VII changed the law to enable his daughter, ISABELLA II, to succeed him (1833), his brother, Don Carlos, claimed the throne and initiated an unsuccessful civil war (1833–40). The conservative, clericalist Carlists revived the claim (1860) for Don Carlos's son, Don Carlos, conde de Montemolin (1818–61), and again (1869, 1872) on behalf of the latter's nephew, Don Carlos, duque de Madrid (1848–1909). They seized most of the Basque provinces and other territory and fought another civil war (1873–76), which failed. The Carlists supported the Nationalists in the SPANISH CIVIL WAR (1936–39), but FRANCO ended their dynastic claim in 1969 by naming the Bourbon prince, JUAN CARLOS, as his successor.

Carlos. For Spanish rulers thus named, see CHARLES.

Carlos, Don: see CARLISTS.

Carlsbad Caverns National Park: see NATIONAL PARKS (table).

Carlson, Chester Floyd, 1906–68, American inventor; b. Seattle, Wash. A patent lawyer, he invented (1938) xerography (see PHOTOCOPYING), a method of electrostatic printing, and made a fortune from the Haloid Co. (later the Xerox Corp.). The first Xerox copier was marketed in 1959.

Carlstadt, Karlstadt, or **Karolstadt,** c.1480–1541, German Protestant reformer, originally named Andreas Rudolph Bodenstein. During LUTHER's stay at Wartberg (1521–22), Carlstadt became the leader at Wittenberg and implemented his radical beliefs. Luther later accused him of betrayal. Accused of revolutionary political activity, Carlstadt fled to Switzerland, where he taught theology at Basel.

Carlyle, Thomas, 1795–1881, English author; b. Scotland. He first gained attention as an interpreter of German ROMANTICISM with his *Life of Schiller* (1825) and a translation of Goethe's *Wilhelm Meister* (1824). In 1826 he married Jane Baillie Welsh, an ambitious woman who did much to aid his career. A trenchant critic of materialism, he expressed his views in a sort of spiritual autobiography, *Sartor Resartus* (1833–34), and in his interpretative rather than historical *French Revolution* (1837). He attacked laissez-faire theory and parliamentary democracy and stressed his belief in strong government and great individuals in *On Heroes, Hero-Worship, and The Heroic in History* (1841) and *Past and Present* (1843), in an edition of the writings of Oliver CROMWELL (1845), and in a biography of Frederick the Great (1858–65). Carlyle had great influence on the literary world of his day; his style, tortuous yet effective, is unique.

Carmelites, Roman Catholic order of mendicant friars. Originating apparently as hermits on Mt. Carmel in Palestine, they were made into a Western order by St. Simon Stock (d. 1265) and became

prominent in university life. An enclosed order of Carmelite nuns was established. After a decline, the Carmelites were revived by the reforms of St. THERESA of Ávila and St. JOHN OF THE CROSS in 16th-cent. Spain. The now larger reformed order is known as the Discalced Carmelites.

Carmichael, Hoagy (Hoagland Howard Carmichael), 1899–1981, American songwriter; b. Bloomington, Ind. His melodies reflect early JAZZ influence. "Stardust" (1929) is his best-known song; others include "Georgia on My Mind" and "Skylark." He also appeared in films, e.g., *To Have and Have Not* (1944).

Carnap, Rudolf, 1891–1970, German-American philosopher. One of the most influential of contemporary thinkers, he was a founder of LOGICAL POSITIVISM and made important contributions to logic, semantics, and the philosophy of science. He defined philosophy as "the logic of the sciences" and considered it a general language whose only legitimate concern could be to describe and criticize the language of the particular sciences. Through linguistic analysis he revealed the inadequacies of everyday speech. Carnap later modified this extreme view, which rejects almost all traditional philosophy. His works include *The Logical Syntax of Language* (1934) and *Introduction to Symbolic Logic* (1954).

Carnarvon, George Edward Stanhope Molyneux Herbert, 5th earl of, 1866–1923, English Egyptologist who, with Howard CARTER, excavated (1906–22) in the Valley of the Kings, Luxor, Egypt. The tomb of TUTANKHAMEN was their final discovery (1922).

carnation: see PINK.

Carnegie, Andrew, 1835–1919, American industrialist and philanthropist; b. Scotland, emigrated to the U.S. 1848. As a superintendent (1859–65) for the Pennsylvania RR he invested in iron manufactures. In 1873 he began to acquire firms that later became the Carnegie Steel Co., which by 1900 was producing a quarter of the steel in the U.S. and controlled iron mines, ore ships, and railroads. His partnership with Henry C. FRICK aided his success. In 1901 he sold his interests to the U.S. Steel Corp. and retired. Believing that wealth should be used for the public good, he donated c.$350 million, establishing such philanthropic organizations as the Carnegie Corp. of New York, the Carnegie Endowment for International Peace, and over 2,800 libraries.

Carnegie Corporation of New York: see FOUNDATION.

carnivorous plants: see PITCHER PLANT; VENUS'S-FLYTRAP.

Carnot, Lazare Nicolas Marguerite [kärnō'], 1753–1823, French revolutionary. He organized the republican armies and masterminded a successful strategy in the FRENCH REVOLUTIONARY WARS. A member of the DIRECTORY, he later held high posts under NAPOLEON I and wrote a classic work on fortification (1810).

Carnot, (Nicholas Léonard) Sadi, 1796–1832, French physicist, son of Lazare CARNOT. He studied the relation between heat and mechanical energy and devised an engine whose operations showed that even under ideal conditions a heat engine must reject some heat energy instead of converting it all into mechanical energy. This illustrates the second law of THERMODYNAMICS, formulated later.

Caro, Joseph ben Ephraim, 1488–1575, Jewish codifier of law; b. Spain, d. Palestine. His chief work is *Shulhan Arukh* [the table set], still an authority for Orthodox religious and legal disputes. Caro was also a cabalist (see CABALA).

carob, evergreen tree (*Ceratonia siliqua*) of the PULSE family, native to the Mediterranean but cultivated in other warm areas. Its large, red pods have been a food source since prehistoric times, and the pods and their extracts have many common names, e.g., St. John's bread and locust bean gum. Carob is used as a food stabilizer and a caffeine-free chocolate substitute; carob pods are used as livestock feed.

Carol, kings of ROMANIA. **Carol I** or **Charles I,** 1839–1914, prince (1866–81) and first king (1881–1914), was a Prussian of the Hohenzollern-Sigmaringen dynasty. He achieved full independence for Romania at the Congress of BERLIN (1878). He married ELIZABETH of Wied. **Carol II,** 1893–1953, was forced (1925) to renounce his right to succession in favor of his infant son, MICHAEL, but in 1930 he proclaimed himself king, dethroning Michael. He instituted a personal dictatorship in 1938, but was dethroned by ANTONESCU in 1940, and Michael again became king.

carol, popular, joyful hymn, celebrating an occasion such as EASTER or CHRISTMAS. English carols date from the 15th cent. Like the FOLK SONG, the carol is characterized by simplicity of thought and expression.

Carolina, city (1990 pop. 177,806), Puerto Rico. Located 7 mi (11 km) SE of San Juan, it is a residential suburb of the capital. There are tourist facilities and sugar, tobacco, and textiles are produced.

Caroline Affair. In 1837 a group of U.S. citizens sided with a Canadian rebellion headed by W.L. MACKENZIE. A small American ship, the *Caroline,* carried reinforcements and supplies to the rebels, who were on Navy Island, above NIAGARA FALLS. Loyal Canadians set fire to the ship and sent it over the falls. One American was killed. After this incident, anti-British feeling contributed to tense U.S. relations with Britain until the WEBSTER-ASHBURTON TREATY of 1842.

Caroline of Brunswick, 1768–1821, consort of GEORGE IV of England. She married George in 1795, separated from him in 1796, and lived abroad after 1814. When George became king in 1820, she returned to claim her rights as queen. The king instituted divorce proceedings on the grounds of adultery. The charges were probably true, but Caroline's persecution by a profligate husband aroused sympathy, and they were dropped.

Carolingian architecture and art. In the 8th cent. under CHARLEMAGNE changes in Western culture and art reached their apex. In architecture, the small, boxlike structures of the Merovingian period gave way to centrally planned, spacious BASILICAS. But of incalculable importance to the later Middle Ages was the new emphasis given to the western facade of the church, called the westwork. Its function is still debated, but it was flanked by symmetrical towers and was several stories high. A vaulted vestibule was below, and the room above may have been a chapel for dignitaries. The outstanding Carolingian structure still in existence is the palatine chapel at Aachen (805), in Germany, which may have been based partly on the 5th-cent. Church of San Vitale in Ravenna, Italy. The best-preserved artistic works of the period are small objects—illuminated manuscripts, ivory carving, and metalwork. They show a fusion of Anglo-Saxon and Irish ornamental motifs with figures derived from antiquity, e.g., in the Gospel book by Godescalc (783). The nervous, flickering illustrations of the Utrecht Psalter are unparalleled in early Western art. Carved ivory book covers are rare, and metalwork is rarer, but the gold altar of Sant' Ambrogio (835, Milan), the portable altar of Arnulf (Munich), several splendid book covers, and other sumptuously decorated objects provide insights into the artistic accomplishments of the period, which ended in the late 9th cent.

Carolingians, Frankish dynasty founded (7th cent.) by Pepin of Landen. They ruled as mayors of the palace under the MEROVINGIANS until 751, when PEPIN THE SHORT made himself king. His son, CHARLEMAGNE, who was crowned emperor in 800, brought the dynasty to its zenith. In 840, on the death of LOUIS I, the Treaty of Verdun split the empire among his three sons: Lotharingia went to Lothair I; Germany went to Louis the German; and France went to Charles II. In 870 Lotharingia was divided between Louis and Charles. The dynasty died out in Germany in 911 and in France in 987.

carp, freshwater, bottom-feeding FISH (*Cyprinus carpio*), largest of the MINNOW family, native to Asia but now found throughout Europe and America. Carp may be up to 3 ft (90 cm) and 25 lb (11.3 kg). They have four "whiskers" (barbels) around the mouth, and are usually dark greenish or brown with red on the fins

Carpaccio, Vittore, c.1450–1522, Venetian painter. He was influenced by Giovanni Bellini (see BELLINI, family). The rich color and wealth of detail in his St. George series and the *Presentation in the Temple* (all: Acad., Venice) show the pageantry of 15th-cent. Venice and a fanciful view of life in Asia.

carpal tunnel syndrome: see REPETITIVE STRESS INJURY.

Carpathians or **Carpathian Mountains,** major mountain system of central and E Europe, c.930 mi (1,500 km) long. A continuation of the Alps, they curve in a great arc through the Czech Republic, Slovakia, Poland, and Ukraine, and extend into Romania as the Transylvanian Alps, or Southern Carpathians. Gerlachovka (8,737 ft/2,663 m) is the highest point.

Carpeaux, Jean-Baptiste, 1827–75, French sculptor and painter. Freedom and force distinguish his sculptures, e.g., *Ugolino* (1860–

62; Louvre) and *Neapolitan Shellfisher* (Louvre), and paintings, e.g., *Bal costumé aux Tuileries* (Louvre).

carpet or **rug,** thick fabric, originally woolen but now often synthetic, most commonly used as a floor covering. Of ancient origin, the art of carpet weaving reached its height in the handloomed Oriental carpets from 16th-cent. Persia, Turkey, and central Asia. European carpets, with many outstanding examples dating from the 17th cent. in France and the 18th cent. in England, were handmade until Erastus Bigelow introduced (1841) the power loom. Although handmade rugs are still produced, contemporary carpet manufacturing is a mechanized industry. Classifications of both antique and modern carpets include Oriental, European handwoven, velvet, chenille, rag, hooked, straw, and fiber.

carpetbaggers, Southern term for Northerners who went to the South during RECONSTRUCTION. Although regarded as transients because they carried their belongings in carpetbags, most intended to settle in the South and make money there. The African-American vote won them important posts in Republican state governments. Those who were corrupt made the term synonymous with outsiders who profit from an area's political troubles.

Carracci [kärät'chē], family of Italian painters, founders of an important school of painting. **Lodovico Carracci,** 1555–1619, a pupil of TINTORETTO, established, with his cousins and Anthony de la Tour, a school of painting in Bologna that sought to unite in one system the best characteristics of the great masters. The academy was one of the outstanding schools in Italy, and its noted pupils include DOMENICHINO. An excellent painter, Lodovico was best known for his *Sermon of John the Baptist* (Pinacoteca, Bologna) and *Vision of Hyacinth* (Louvre). His cousin **Agostino Carracci,** 1557–1602, at first a goldsmith, later joined the academy and participated in numerous joint painting commissions such as the Farnese Palace gallery. His best-known work, *Celestial, Terrestrial and Venal Love,* is in the Casino, Parma. Agostino's brother **Annibale Carracci,** 1560–1609, worked in the academy and also on the Farnese gallery, with its influential feigned architectural and sculptural forms. Among his best-known works are *The Dead Christ* (Louvre) and *The Temptation of St. Anthony* (National Gall., London).

Carranza, Venustiano, 1859–1920, Mexican political leader. He fought in the Mexican revolution and helped to overthrow (1914) Gen. HUERTA. He became president (1914) and, aided by Gen. OBREGÓN, survived a civil war (1915). When he did not enforce the reform constitution of 1917 and tried to prevent Obregón from becoming president, the latter revolted (1920). Carranza fled the capital and was murdered.

Carrel, Alexis, 1873–1944, American surgeon and experimental biologist; b. France. For his work in suturing blood vessels, in transfusion, and in transplantation of organs, he was awarded the 1912 Nobel Prize in physiology or medicine. With Charles A. LINDBERGH he invented an artificial heart, with which he kept alive a number of different kinds of tissues and organs.

Carroll, John, 1735–1815, American Roman Catholic churchman, the first Roman Catholic bishop in the U.S.; b. Maryland. A JESUIT, he supported the AMERICAN REVOLUTION and was a friend of Benjamin FRANKLIN. In 1784 he became superior of the missions in the U.S. In 1790 he was made bishop of Baltimore and in 1808 archbishop. Carroll battled anti-Catholic feeling in the U.S. and founded various educational institutions, including Georgetown Univ.

Carroll, Lewis, pseud. of **Charles Lutwidge Dodgson,** 1832–98, English writer and mathematician. He lectured on mathematics at Oxford, but his fame rests on the fantasy novels *Alice's Adventures in Wonderland* (1865) and *Through the Looking Glass* (1872). These books grew out of stories he told to children, among them Alice Liddell, the daughter of H.G. Liddell, dean of Christ Church, Oxford. An amateur photographer, Carroll photographed children.

carrot, common name for some members of the Umbelliferae (also called parsley family), a family of mainly perennial or biennial herbs of north temperate areas. Most are typified by aromatic foliage, a dry fruit that splits when mature, and an umbellate inflorescence (in which the floret stems of the flattened flower cluster arise from the same point, like an umbrella). The seeds and leaves of many of these herbs are used for seasoning or as greens, e.g., ANISE, CARAWAY, CORIANDER, CUMIN, DILL, FENNEL, and PARSLEY. The carrot, CELERY, and PARSNIP are commercially important vegetables. The common carrot (*Daucus carota sativa*) is a root crop, probably derived from the wild carrot (or QUEEN ANNE'S LACE). Carrots are rich in carotene (vitamin A), especially when cooked; in antiquity they were used medicinally. Some types, e.g., button snakeroot and sweet cicely, are used as aromatic ornamentals. A few members of the family, e.g., POISON HEMLOCK, produce lethal poisons.

Carrucci, Jacopo: see PONTORMO, JACOPO DA.

Carson, Johnny, 1925–, American television entertainer; b. Corning, Iowa. Earlier a magician, comedy writer, and quiz show host, he is best known for hosting (1962–92) *The Tonight Show.* His monologues, sketches, and interviews made it television's most popular late-night program.

Carson, Kit (Christopher Carson), 1809–68, American frontiersman; b. Madison co., Ky. In 1825 he went to Taos, N.Mex., and served as cook, guide, and hunter for exploring parties, including those of J.C. FRÉMONT. In 1853 he became an Indian agent. He was a Union general in the CIVIL WAR.

Carson, Rachel Louise, 1907–64, American writer and marine biologist; b. Springdale, Pa. Her book *Silent Spring* (1962) was an influential study on the dangers of insecticides. Some of her other popular works include *The Sea Around Us* (1951) and *The Edge of the Sea* (1954).

Carson City, city (1990 pop. 40,443), state capital, W Nev., in the Carson valley; settled 1858, inc. 1875. It is a trade center for a mining and agricultural area. The discovery (1859) of the COMSTOCK LODE brought early development. The capital of the newly created (1861) Nevada Territory, it became state capital in 1864. The U.S. Mint, closed 1893, is now the Nevada State Museum.

Cartagena, city (1985 pop. 563,949), capital of Bolívar dept., NW Colombia, a port on the Bay of Cartagena, in the Caribbean Sea. Oil-refining and the manufacture of leather, textile, and tobacco goods are major industries, and there is an expanding petrochemical complex. Founded in 1533, Cartagena became the treasure city of the SPANISH MAIN, where precious New World minerals awaited transshipment to Spain. It was often sacked despite its massive fortifications, some of which still stand. It declared its independence from Spain in 1811 and was incorporated into Colombia in 1821. Its rapid development in the 20th cent. was due largely to the discovery of oil in the Magdalena basin. One of the most picturesque of Latin American cities, with shady plazas and cobblestone streets, Cartagena attracts many tourists.

Carter, Elliott (Cook, Jr.), 1908–, American composer; b. N.Y.C. His music is organized into intellectualized contrapuntal patterns. He uses TEMPO as an element of form. His works include the ballet *Pocahontas* (1938), four string quartets (1950, 1959, 1973, 1986), and a concerto for orchestra (1969).

Carter, Howard, 1873–1939, English Egyptologist who, with Lord CARNARVON, excavated (1906–22) in the Valley of the Kings at Luxor, Egypt, and discovered (1922) the tomb of TUTANKHAMEN.

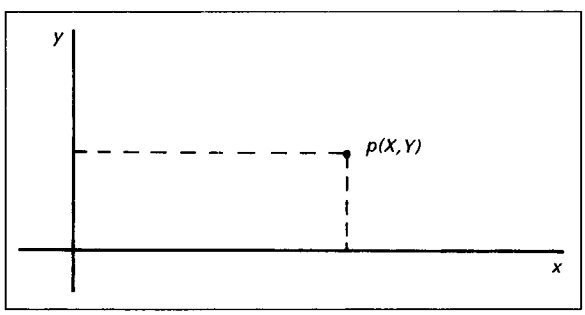
Carter, Jimmy (James Earl Carter, Jr.), 1924–, 39th president of the U.S. (1977–81); b. Plains, Ga. A graduate of the U.S. Naval Academy at Annapolis, Md. (1946), he served in the U.S. navy and in 1953 returned to his family's peanut farm, which he built into a prosperous business. As governor of Georgia (1970–75), he reorganized the state executive branch and sponsored consumer and land-use legislation. After a spectacularly successful campaign for the 1976 Democratic presidential nomination, Carter, although a Southerner and political outsider, narrowly defeated the Republican candidate, Pres. Gerald FORD; his running mate was Walter MONDALE. Carter's presidency was plagued by difficult relations with Congress, which ratified his two Panama Canal treaties (1977) giving eventual control of the canal to Panama, but would not ratify his arms limitation treaty with the Soviet Union (1979). He was successful, however, in effecting (1979) a peace treaty between Egypt and Israel (see CAMP DAVID ACCORDS). During Carter's term of office the U.S. suffered high interest rates, inflation, and then recession, all of which he had little success in controlling. In Nov. 1979 a group of Muslim militants in Teheran, Iran, took some 50 U.S. citizens hostage and held them until Jan. 1981. Carter's failure to attain their release before the 1980 presidential election contributed to his defeat by Ronald REAGAN. Since leaving office, Carter

has been active in human rights issues, often serving internationally as an observer during first-time free elections. He also works with Habitat for Humanity, an organization that helps working-class people build and finance new homes.

Carter, Nick, fictional detective character in DIME NOVELS. Said to have been created by J.R. Coryell, Carter appears in over 1,000 stories by various authors.

Carteret, Sir George, c.1610–1680, British proprietor of East Jersey, part of New Jersey. He commissioned his fourth cousin, **Philip Carteret,** 1639–82, as the first governor (1665–76) of New Jersey.

Cartesian coordinates, system for representing the relative positions of points in a plane or in space. In a plane, the point P is specified by the pair of numbers (x, y) representing the distances of the point from two intersecting straight lines, referred to as the x-axis and the y-axis. The point of intersection of these axes, which are called the coordinate axes, is known as the origin. If the axes are perpendicular, as is commonly the case, the coordinate system is called rectangular; otherwise it is oblique. In either type the x-coordinate, or abscissa, of P is measured along a line parallel to the x-axis, and the y-coordinate, or ordinate, along a line parallel to the y-axis. A point in space may be similarly specified by the triple of numbers (x, y, z) representing the distances from three planes determined by three intersecting straight lines not all in the same plane. Named for the French philosopher and scientist René DESCARTES, Cartesian coordinates allow certain questions in geometry to be transformed into questions about numbers and resolved by means of ANALYTIC GEOMETRY.



Cartesian coordinates

Carthage [kär'thĭj], ancient city of N Africa, on the Bay of Tunis and near modern Tunis. Founded (traditionally by DIDO) by Phoenicians from Tyre in the 9th cent. B.C., it eventually grew to be a mercantile CITY-STATE under an oligarchy, with explorers (e.g., Hanno) going far and wide to gather trade. Carthage's greatest weakness lay in the rivalry of two blocs of leading families who contended for control. By the 6th cent. B.C. the Carthaginians had established themselves on Sardinia, Malta, and the Balearic Islands. Their attempt to conquer Sicily in the 5th cent. B.C. was set back by the victory of Gelon of Syracuse at Himera (480 B.C.). Later Carthaginian excursions into Sicily led to the PUNIC WARS. The contest between Rome and Carthage was hotly pursued, and the greatest general involved was a Carthaginian, HANNIBAL. Nevertheless, Carthage was finally defeated at the battle of ZAMA (202 B.C.), and the Carthaginian commercial empire fell. The city itself was destroyed by Scipio Africanus Minor at the end of the Third Punic War (146 B.C.). A new city was founded in 44 B.C. and under AUGUSTUS became an important center of Roman administration. Carthage was later (A.D. 439–533) the capital of the Vandals, a Germanic tribe, and was briefly recovered (533) for the Byzantine Empire by Belisarius. Although practically destroyed by the Arabs in 698, the site was populated for many centuries afterward. LOUIS IX of France died there (1270) while on crusade.

Cartier, Sir Georges Étienne [kärtyā'], 1814–73, Canadian statesman. A leader of the French Canadians and the co-leader of the Macdonald-Cartier (see MACDONALD, Sir J.A.) ministry (1857–62), he was chiefly responsible for persuading French Canadians to accept the proposals for CANADA's confederation (1867).

Cartier, Jacques, 1491–1557, French explorer in CANADA, discoverer of the SAINT LAWRENCE R. In three voyages between 1534 and 1542 he discovered the Magdalene Islands and PRINCE EDWARD ISLAND, and ascended the St. Lawrence to the modern sites of Quebec and Montreal. French claims to the St. Lawrence valley were based on his explorations.

Cartier-Bresson, Henri [kärtēā'-brĕsôN'], 1908–, French photojournalist. His superb images convey a strong sense of the rush of time arrested. Among his many books are *The Decisive Moment* (1952) and *Henri Cartier-Bresson: Photographer* (1979).

cartoon, in the fine arts, a full-sized preliminary drawing for a work in fresco, oil, mosaic, stained glass, or tapestry. Some Italian Renaissance painters, e.g., RAPHAEL, made complete cartoons for their frescoes, and many are considered masterpieces in themselves. The use of the term *cartoon* to mean a humorous or satirical drawing began in the mid-19th cent. The first political cartoons preceded the terminology by some three centuries, appearing in 16th-cent. Germany during the Reformation. In 18th-cent. England the cartoon was an integral part of journalism. By the mid-19th cent. editorial cartoons had become regular features of American newspapers, with the work of Thomas NAST particularly influential. With the development of the color press in the late 19th cent., humorous nonpolitical cartoons became popular, soon evolving into narrative comic strips. Some noted 20th-cent. cartoonists are Bill MAULDIN, HERBLOCK, Charles ADDAMS, James THURBER, Gary Larson, and Roz Chast.

Cartwright, Edmund, 1743–1823, English inventor of a power loom (patented 1785) that made possible the weaving of wide cotton cloth and led to the development of the modern loom. Cartwright also invented a wool-combing machine (1789), a ropemaking machine (1792), and an alcohol-fueled engine (1797) and, with Robert FULTON, experimented with steam navigation.

Caruso, Enrico, 1873–1921, Italian operatic tenor. The beauty, range, and power of his voice made him one of the greatest of all singers. He sang more than 50 roles in Europe, the U.S., and Latin America, excelling in works by VERDI and PUCCINI. After his death his recordings perpetuated his fame.

Carver, George Washington, 1864?–1943, African-American agricultural chemist; b. Diamond, Mo. Born a slave, he was director (1896–1943) of agricultural research at Tuskegee Institute. Carver dedicated his life to bettering the position of African Americans and to improving the economy of the South through soil improvement and crop diversification; he discovered hundreds of uses for the peanut, sweet potato, and soybean, and devised many products from cotton waste.

Carver, John, c.1576–1621, first governor (1620) of the PLYMOUTH COLONY. A man of wealth, he was the chief figure in arranging the PILGRIMS' migration to America, hiring and provisioning the MAYFLOWER, and selecting the Plymouth site.

Carver, Raymond, 1938–88, American author; b. Clatskanie, Oreg. His short stories and poems depicted blue-collar characters and focused on everyday life. Among his volumes of short stories is *Where I'm Calling From* (1988).

Cary, (Arthur) Joyce (Lunel), 1888–1957, English author. He is best known for two trilogies exploring English social change. The first consists of *Herself Surprised* (1941), *To Be a Pilgrim* (1942), and *The Horse's Mouth* (1944). The second includes *Prisoner of Grace* (1952), *Except the Lord* (1953), and *Not Honour More* (1955).

caryatid, sculptured female figure serving as an ornamental support, in place of a column or pilaster. It was a frequent motif in architecture, furniture, and garden sculpture during the Renaissance, the 18th cent., and, notably, the CLASSIC REVIVAL of the 19th cent., when caryatids were popular as mantelpiece supports. Caryatids appeared in Egyptian and Greek architecture, the most celebrated example being the Porch of the Caryatids at the ERECHTHEUM.

Casablanca, city (1990 est. pop. 3,210,000), W Morocco, on the Atlantic Ocean. It is the country's largest city and major commercial and industrial center, producing one half of Morocco's industrial output and exporting phosphates and importing petroleum products. The Hassan II mosque (1993), one of the world's largest, is here. Almost destroyed by an earthquake (1755), rebuilt in 1757,

Casablanca was occupied by the French in 1907. In WORLD WAR II it was a site for the Allied invasion (1942) of N Africa and for a conference (Nov. 1943) between F.D. Roosevelt and Winston Churchill.

Casablanca Conference, Jan. 12–14, 1943, WORLD WAR II meeting of U.S. Pres. F.D. ROOSEVELT and British Prime Min. Winston CHURCHILL at Casablanca, French Morocco. The policy of unconditional AXIS surrender was enunciated there.

Casals, Pablo (Pau), 1876–1973, Spanish cellist and conductor, the greatest cellist of the 20th cent. He began his concert career in 1891 and conducted his own orchestra in 1919. He was especially noted for his performance of J.S. BACH's unaccompanied suites and for the music festivals he directed at Prades, France, and after 1956 in Puerto Rico.

Casanova de Seingalt, Giovanni Giacomo, 1725–98, Venetian adventurer and author. He traveled all over Europe supporting himself by gambling, spying, writing, and seducing women. In 1756 he escaped from Venice's state prison; in Paris, he became director of the lottery and amassed a fortune. In 1785 he retired to the castle of Dux, Bohemia, where he worked as a librarian. A man of wide interests, learning, and taste, Casanova left memoirs that became world-famous, although not published in full until 1960.

Casas, Bartolomé de las: see LAS CASAS.

Cascade Range, forested mountain chain in the western part of the North American cordillera, extending c.700 mi (1,130 km) from British Columbia to N California. Prominent peaks include Mts. Rainier (the highest, 14,410 ft/4,392 m), Shasta, and Hood, and volcanically active LASSEN PEAK and Mt. SAINT HELENS.

casehardening, in metallurgy, a process to harden steel by increasing the percentage of carbon at its surface. This is done by packing the STEEL in charcoal and then heating it; by heating it in a furnace with a hydrocarbon gas atmosphere; or by heating it in a molten-salt bath containing potassium and sodium cyanides.

casein, a group of proteins found especially in milk, providing many essential nutrients. When milk is treated with acid, casein separates as an insoluble white curd; it is used in cheese, adhesives, and water paints. Rennet casein curd is used to make cheese and a plastic from which imitation gemstones and other objects are made.

Cash, Johnny, 1932–, American singer; b. Kingsland, Ark. He went to Memphis in 1955 and began to record such hits as "I Walk the Line." Cash is a major figure in COUNTRY AND WESTERN MUSIC. He is noted for his performances at prisons and has appeared widely in concert, on television, and in films.

cashew, tropical American tree (*Anacardium occidentale*) of the SUMAC family, valued chiefly for its kidney-shaped nut, whose sweet, oily kernel is used for food and yields an oil used in cooking. The nut grows at the end of a red, white, or yellow pear-shaped fleshy stalk, or cashew apple, which is also eaten or pressed to extract the juice, which may be fermented to make wine. The acrid sap of the cashew tree is used to make a varnish that protects woodwork from insects.

Casimir, Polish rulers. **Casimir I,** c.1015–58, duke of POLAND (c.1040–58), reunited the Polish lands under the hegemony of the Holy Roman Empire. **Casimir II,** 1138–94, duke of Poland (1177–94), deposed his brother and secured for his descendants the hereditary right to the crown. **Casimir III,** 1310–70, king of Poland (1333–70), known as **Casimir the Great,** extended Polish territories, codified the law, improved the lot of peasants and Jews, founded (1364) Kraków Univ., and in general greatly increased royal power. **Casimir IV,** 1427–92, king of Poland and Lithuania (1447–92), successfully ended (1466) the war with the Teutonic Knights.

Caspar: see WISE MEN OF THE EAST.

Casper, city (1990 pop. 46,742), seat of Natrona co., E central Wyo., on the North Platte R.; inc. 1889. At a ford on the OREGON TRAIL, it was founded (1888) with the coming of the railroad. In 1890 an oil boom started; today Casper produces oil, gas, coal, and uranium, and is the center of a rich agricultural region. The area also attracts many tourists.

Caspian Sea, world's largest lake, c.144,000 sq mi (373,000 sq km), enclosed by Azerbaijan, Russia, Kazakhstan, Turkmenistan, and Iran, on the traditional border between Europe and Asia. The salty lake is 92 ft (28 m) below sea level and reaches a maximum depth of 3,200 ft (980 m) in the south. More than 75% of its waters are derived from the VOLGA R., whose flow is now diminished by dams and lakes. Beluga caviar is a major product of the shallow waters in the north. Baky and Astrakhan are the chief ports.

Cass, Lewis, 1782–1866, American statesman; b. Exeter, N.H. He was governor of Michigan Territory (1813–31). As secretary of war (1831–36), he favored moving Native Americans W of the Mississippi. A U.S. senator from Michigan (1845–48, 1849–57), he was the unsuccessful Democratic candidate for president in 1848. He was also (1857–60) secretary of state.

Cassander, 358–297 B.C., king of MACEDON (316–297 B.C.); one of the DIADOCHI. The son of ANTIPATER, he deposed the regent, Polyperchon. To consolidate his power, he procured the murder (316) of OLYMPIAS, mother of ALEXANDER THE GREAT, and (311) of Alexander's widow, ROXANA, and their son; he married Alexander's half sister, Thessalonica (316). One of a coalition that defeated Antigonus and DEMETRIUS I at Ipsus (301), he ruled Macedonia and Greece.

Cassandra, in Greek mythology, Trojan princess; daughter of Priam and HECUBA. She was given the power of prophecy by APOLLO, but when she spurned him he decreed that she should never be believed. A slave of AGAMEMNON after the TROJAN WAR, she was killed with him by CLYTEMNESTRA.

Cassatt, Mary, 1845–1926, American painter; b. Pittsburgh. She lived mainly in France, where she embraced IMPRESSIONISM. Her paintings are simple, vigorous, and pleasing in color. Her favorite subject was motherhood, e.g., versions of *Mother and Child* (Metropolitan Mus.; Mus. Fine Arts, Boston). She also excelled in ETCHING and pastels.

cassava or **manioc,** plant (genus *Manihot*) of the SPURGE family, native to Brazil. The roots are the source of cassava starch, cassava flour, and tapioca; they are also fermented to make an alcoholic beverage and have other uses. The raw roots of bitter cassava (*M. esculenta*), chief source of cassava flour, contain potentially lethal amounts of prussic acid, which must be dispelled in preparation. Sweet cassava roots contain less acid and can be eaten raw.

Cassini, Gian Domenico, 1625–1712, Italian-French astronomer. He determined rotational periods for the planets Jupiter, Mars, and Venus, discovered four of Saturn's satellites, and studied the division in Saturn's ring system that is named for him. He and three generations of descendants directed the Royal Observatory in Paris from its founding (1669) to the time (1793) of the French Revolution.

Cassiopeia, in Greek mythology: see ANDROMEDA.

Cassirer, Ernst, 1874–1945, German philosopher. A Neo-Kantian, he devoted himself, in *Substance and Function* (1910), to a critical-historical study of the problem of knowledge. In *Philosophy of Symbolic Forms* (3 vol., 1923–29) he characterized the human being as a "symbolic animal," holding that all cultural achievements result from the human ability to conceptualize experience in artificial signs, or symbols.

Cassius, ancient Roman family. **Quintus Cassius Longinus,** d. 45 B.C., served with ANTONY as a tribune, and in 49 B.C. vetoed the attempts of the senate to deprive Julius CAESAR of his army. Cassius died in a shipwreck. The best-known family member was **Caius Cassius Longinus,** d. 42 B.C., leader in the successful conspiracy to assassinate Julius Caesar on the Ides of March in 44 B.C. When the people were aroused by Antony against the conspirators, Cassius went to Syria and joined Marcus Junius Brutus (see BRUTUS, family). Antony and Octavian (later AUGUSTUS) met them in battle at Philippi in 42 B.C. In the first engagement, Cassius, thinking the battle lost, committed suicide.

cassowary, flightless forest BIRD of Australia and the Malay Archipelago, smaller than the OSTRICH. The plumage is dark and glossy, with a brilliantly-colored head and neck. Nocturnal and mostly herbivorous, they are fast runners. Cassowaries are notoriously vicious, and have killed people with their sharp, spikelike toenails.

Castagno, Andrea del [kästä'nyō], c.1423–57, Florentine painter. In c.1445 he began the Passion of Christ cycle for the church of Sant' Apollonia in Florence. Best known of these scenes is *The Last Supper* with its harsh perspective and metallic light. DONATELLO's

influence is seen in his later heroic figures of Dante and Petrarch in the Villa Pandolfini.

castanets: see PERCUSSION INSTRUMENT.

caste, ranked hereditary social group. Rigidly restricted occupationally and socially, members may not marry outside the caste. Caste is strongest and most complex in Hindu India, where a hierarchy of thousands of distinct *jatis*, or castes, reflect religious practice, occupation, locale, culture status, or tribal affiliation. In addition, society is divided into four *varna*, or social classes—the Brahmans, priests and scholars; Kshatriyas, the military and rulers; Vaisyas, farmers and merchants; and Sudras, peasants and laborers. Below the Sudras were the untouchables, who performed the most menial tasks. Untouchability was legally abolished in 1949, and some occupational barriers have broken down, but strong social distinctions remain resistant to change, especially in rural areas.

Castelo Branco, Humberto [kəshtē'lōō bräng'kōō], 1900–1967, president of BRAZIL (1964–67). An army officer, he helped oust (1964) Pres. Goulart in a coup and became provisional president. He curtailed political freedoms but imposed economic reforms that spurred the country's growth.

Castiglione, Baldassare, Conte [kästēlyō'nā], 1478–1529, Italian author and statesman. His *Book of the Courtier* (1528), a treatise on etiquette, social problems, and intellectual accomplishments, contributed to a Renaissance ideal of aristocracy embodied in the life of Sir Philip SIDNEY.

Castile, region and former kingdom, central and N Spain, traditionally divided into Old Castile (N) and New Castile (S) and now divided between the autonomous regions of Castile and León and Castile-La Mancha. It is a vast, sparsely-populated area surrounding the highly industrialized city of MADRID. In Castile and León, which contains Old Castile, grains are grown and sheep raised. The fertile areas, especially in Castile-La Mancha, produce olive oil and grapes. Castile became a kingdom in 1035 and was united with LEÓN in 1230. Castilian kings were prominent in the fight against the MOORS, from whom they wrested New Castile. The privileges of the nobles were limited by PETER THE CRUEL (r.1350–69). In 1479 a personal union of Castile and ARAGÓN was established by ISABELLA I of Castile and her husband, Spanish King FERDINAND V. Castile was the core of the Spanish monarchy, centralized in Madrid (the capital after 1561).

casting or **founding,** the shaping of METAL by melting and pouring into a mold. Most castings are made in sand molds. Sand, mixed with a binder to hold it together, is pressed around a wooden pattern that leaves a cavity in the sand. Molten metal is poured into the cavity and allowed to solidify. *Investment casting* is used for small, complex shapes. Wax or plastic replicas of the parts are covered with sand in a box. When the whole mold is heated, the replica melts, leaving behind a cavity into which the metal is poured. *Die casting*, in which molten metal is forced under pressure into metal molds, is used to make large numbers of small, precise parts with metals of low melting points.

cast iron, form of IRON made from pig iron remelted in a small cupola furnace and poured into molds to make castings. It usually contains from 2% to 6% carbon, and scrap iron or steel is often added to vary the composition. Cast iron is used extensively to make machine parts, engine cylinder blocks, stoves, pipes, radiators, and many other products.

Castle, Vernon, 1887–1918, English dancer. He made his debut in 1907. In 1911 he married **Irene Foot,** 1893–1969, b. New Rochelle, N.Y. Together they won international acclaim for their original dances, such as the "Texas Tommy," the "Castle Walk," and the "hesitation" waltz.

castle, fortified dwelling characteristic of the Middle Ages. In the 9th cent. feudal lords began to develop private fortress-residences suitable to conditions of warfare. The castle of W Europe was a Norman creation, an outgrowth of the 10th- and 11th-cent. mound castle, which was essentially an artificial mound of earth, surrounded by a ditch, and surmounted by a blockhouse and palisade. Until the 12th cent., the only English development was the addition of a masonry keep inside the palisade, e.g., the TOWER OF LONDON. With evolving siegecraft, provisions for vigorous defense were needed. Outer masonry walls came into use, with gates, flanking towers, and earthworks. Subterranean passages and curving walls were developed. Castles were designed for security, not comfort. Defenders fought from galleries atop the walls; with successive series of defenses, the loss of one did not mean complete defeat, as those inside could retreat until they were within the keep. Gunpowder and the development of artillery rendered the castle obsolete. It was replaced by the manor house, but its effect on architecture still continues.

Castlereagh, Robert Stewart, 2d **Viscount** [kă'səlrā], 1769–1822, British statesman; b. Ireland. As acting chief secretary for Ireland, he suppressed the French-aided rebellion of 1798. He was secretary of war (1805–6, 1807–9) during the wars with NAPOLEON I, coordinating British land and sea power and, after early disasters in the PENINSULAR WAR, putting the duke of WELLINGTON in command. He resigned (1809) after what he considered to be a political betrayal by George CANNING (with whom he fought a duel). As foreign secretary (1812–22), he helped form the final coalition against Napoleon and obtained (1814) the "concert of Europe," later confirmed by the QUADRUPLE ALLIANCE. He advocated a moderate peace settlement for France, and was a dominant figure at the Congress of VIENNA. A great statesman, Castlereagh was personally cold and never popular. He became (1821) the 2d marquess of Londonderry on his father's death, but committed suicide the next year.

Castor and Pollux, in classical mythology, twin heroes called the Dioscuri; Castor was the son of LEDA and Tyndareus, Pollux the son of Leda and ZEUS. Castor was a skilled horseman, Pollux a boxer. They were famous warriors, noted for their devotion to each other. In one legend, Zeus created the constellation Gemini in their honor. Patrons of mariners, the Dioscuri were especially honored by the Romans.

castrato: see VOICE.

Castries, city (1991 pop. 51,994), capital of SAINT LUCIA.

Castriota, George: see SCANDERBEG.

Castro, Fidel, 1926–, Cuban revolutionary and political leader, premier (1959–76) and president (1976–) of CUBA. He opposed the BATISTA dictatorship and unsuccessfully attacked an army post on July 26, 1953. After being imprisoned and released (1955), he went to Mexico, where he organized the 26th of July revolutionary movement. He invaded (1956) SE Cuba and, with his brother Raúl, "Che" GUEVARA, and nine other rebels, hid out in the Sierra Maestra Mountains, from where they attracted supporters and fought a guerrilla campaign that toppled (1959) Batista. A brilliant propagandist and charismatic orator, Castro became premier and established a totalitarian government that benefited the working class at the expense of the middle class, many of whom fled. A declared Marxist-Leninist, he nationalized industry, confiscated foreign-owned property, collectivized agriculture, and increasingly depended on economic assistance from the USSR. He weathered the severance of economic and political ties by the U.S. and Latin American nations, the BAY OF PIGS INVASION (1961), a U.S. economic blockade, and the CUBAN MISSILE CRISIS (1962). He supported revolutionary movements in other Latin American countries and in Africa and became a symbol of revolution in Latin America. In 1976, under a new constitution, he became president. The end of the COLD WAR and Cuba's worsening economic difficulties and growing international isolation have greatly diminished his international stature.

Castro, Inés de, or **Inez de Castro,** d. 1355, Spanish noblewoman at the Portuguese court. Her love affair with the crown prince, Dom Pedro (later PETER I), ended in tragedy; she bore him four children but was murdered with the connivance of his father, ALFONSO IV, to preserve the legitimate succession to the throne. Her life has been a favorite theme of Portuguese and Spanish writers.

cat, carnivorous MAMMAL of the family Felidae, including the domestic cat (*Felis catus*), the great cats (e.g., LION, TIGER, LEOPARD, and CHEETAH), and the smaller wild cats (e.g., LYNX and OCELOT). Highly adapted for hunting and devouring their prey, cats have short muzzles, large eyes, sensitive whiskers, and sharp claws and teeth. Most have long tails, and all have a flexible musculoskeletal system. Lions and cheetahs live in groups called prides, but most cats are solitary. Cats have been domesticated since prehistoric times and were often the objects of veneration or superstitious fear. Domestic cats vary in size, with males usually weighing 9–14 lb (4.1–6.4 kg) and females 6–10 lb (2.2–4.5 kg). They have coats of var-

ious lengths and many colors (black, white, and shades of red, yellow, brown, and gray) in a variety of patterns. Besides the common house cat, the species *F. catus* includes many recognized breeds maintained by selective mating. Most breeds are shorthaired. **Abyssinian cats** have ruddy brown coats with ticking (marking on each hair) of darker brown or black. **Burmese cats** are small and muscular with medium- to dark-brown coats; the **Manx cat** is a variously colored, tailless breed with hind legs longer than its forelegs, elevating the rump. **Siamese cats** have almond-shaped blue eyes and white, cream, or fawn coats with brown or gray areas (points) on the feet, tail, ears, and head. The **Russian Blue cat,** with green eyes and a blue-gray coat, is distinguished by two layers of short, thick fur, and the **Rex cat,** the only curly-haired cat, has a woolly coat that may be any color. **Persian cats** are stocky and long-haired and may be a variety of colors; the other long-haired breed, the **Himalayan cat** (a Persian-Siamese cross), has Siamese coloring.

catacombs, large underground vaults and galleries serving as cemeteries for early Christians, who did not follow the Greek and Roman practice of cremation. They were built in Italy, N Africa, Asia Minor, and other Christian areas from the 1st to the 5th cent. A.D. The main ones, outside the city gates of Rome, lie from 22 to 65 ft (6.7 to 19.8 m) below ground and occupy 600 acres (240 hectares) of space in multilevel passages lined with tiers of niches for bodies. Plaster walls and ceilings were frescoed. Goths and later invaders plundered the catacombs; by the 8th cent. most bodies had been transferred to churches and the labyrinths forgotten. Rediscovery began in 1578, and preservation is now controlled by the papacy.

Catalan language, member of the Romance group of the Italic subfamily of the Indo-European family of languages. See LANGUAGE (table).

Çatal Hüyük [kətäal′ həyōōk′], neolithic settlement (fl. c.6500–c.5800 B.C.) on the Konya Plain in S Turkey. Excavated (1961–65) by British archaeologist James Mellaart, the 32-acre (12.8-hectare) site is divided into 12 horizons (levels of development). The settlement's rectangular dwellings were of mud brick, and its economy was apparently based on farming and some cattle raising.

Catalonia, Catalan *Catalunya,* autonomous region, NE Spain, stretching from the Pyrenees at the French border southward along the Mediterranean Sea. BARCELONA is the historic capital. Catalonia produces one third of Spain's wine; grows olives and grains; and manufactures textiles, chemicals, automobiles, airplanes, and other products. The counts of Barcelona became (9th cent.) the most powerful lords of the region, and in 1137 Catalonia was united with ARAGÓN. In the 13th and 14th cent. Catalan traders rivaled those of GENOA and VENICE. It briefly won autonomy in the 1930s and became an autonmous region in 1980.

catalpa: see BIGNONIA.

catalyst, substance that causes a change in the rate of a chemical reaction without itself being consumed by the reaction. Catalysts, which work by changing a reaction's activation energy, or minimum energy needed for the reaction to occur, are used in numerous industrial processes. Substances that increase the reaction rate are called positive catalysts, or simply catalysts, whereas substances that decrease the reaction rate are called negative catalysts, or inhibitors. The presence of a small amount of an acid or base may catalyze some reactions. Finely divided metals (e.g., platinum, copper, iron, palladium, rhodium) or metal oxides (e.g., silicon dioxide, vanadium oxide) may also serve as catalysts. Biological catalysts are called ENZYMES.

cataract, opacity of the lens of the EYE, causing impairment of vision. Most commonly caused by aging, cataracts may also be congenital or result from eye inflammations or certain diseases, such as DIABETES. Cataracts can be treated by the use of corrective lenses and, if needed, surgical removal of the lens and implantation of an artificial lens.

catastrophism, originally, the outdated geological doctrine that the physical features of the earth's surface, e.g., mountains and valleys, were formed during violent worldwide cataclysms, e.g., earthquakes and floods. This theory, easily correlated with religious beliefs, was systematized by Georges CUVIER, who argued that all living things were destroyed and replaced with wholly different forms during these cataclysmic events. In the 18th cent. the doctrine was attacked by James HUTTON, who advanced the doctrine of UNIFORMITARIANISM. Late 20th-cent. theories of meteorite or comet impacts upon the earth (see MASS EXTINCTION) have revived elements of catatrophism, and modern geological theories are somewhat of a synthesis of the two doctrines.

catbird: see MIMIC THRUSH.

catchment area or **drainage basin,** area drained by a stream or other water body. The amount of water reaching a RIVER, reservoir, or LAKE from its catchment area depends on the size of the area, amount of precipitation, and loss through evaporation and absorption.

Cateau-Cambrésis, Treaty of: see ITALIAN WARS.

catechism, originally oral instruction in religion, later written instruction. Catechisms, usually in the form of questions and answers, were used to instruct converts and children. Famous catechisms include the Lutheran Small Catechism (1529), the Anglican catechism contained in the Book of Common Prayer, and the Baltimore Catechism, which was long the standard Roman Catholic catechism in the U.S.

catecholamine, any of several structurally related compounds found in the body that help regulate the sympathetic NERVOUS SYSTEM. They include EPINEPHRINE (or adrenaline), NOREPINEPHRINE, and dopamine—substances that prepare the body to meet emergencies such as cold, fatigue, and shock. Epinephrine and isoproterenol, a synthetic catecholamine, are used as drugs to treat diseases such as EMPHYSEMA, BRONCHITIS, and ASTHMA.

categorical imperative: see KANT, IMMANUEL.

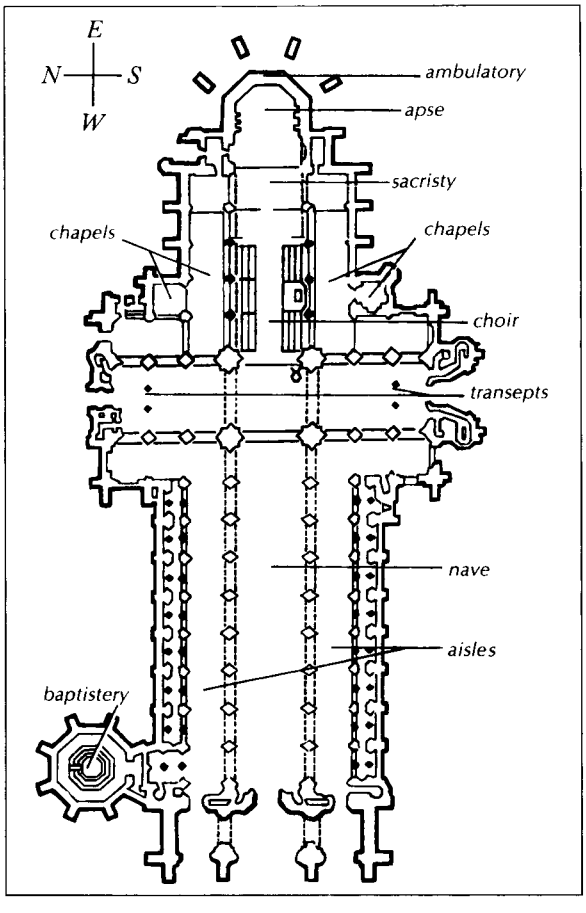
caterpillar: see BUTTERFLY.

catfish, freshwater FISH (suborder Nematognathi) with barbels, or whiskers, around a broad mouth, fleshy, rayless posterior fins, scaleless skin, and sharp defensive spines on the pectoral and dorsal fins. One species, the electric catfish, discharges electricity (see ELECTRIC FISH). Catfish range in size from a few inches to 13 ft (3.9 m) or more. Omnivorous feeders and scavengers, they are important food fish and are raised on fish farms in the S U.S.

cathedral, church in which a bishop presides, regardless of size or magnificence. Romanesque cathedrals (see ROMANESQUE ARCHITECTURE AND ART) were massive, domed, heavily vaulted structures based on the BASILICA form, reflecting the style dominant in Europe c.1050 to c.1200. The tall, wide nave was flanked by narrow side aisles, crossed by transepts, and illuminated by a clerestory pierced with small windows. The great cathedrals of the 13th and 14th cent. are the crowning achievement of GOTHIC ARCHITECTURE AND ART. These buildings are distinctive in their use of ribbed VAULTS, pointed ARCHES, ROSE WINDOWS, BUTTRESSES, geometric tracery, and STAINED GLASS, combined in a rich and complex design. In the intricacy of the glass, exterior facade, and buttresses, the building's structure is almost entirely subordinated to detail. Among the most important cathedrals are: *France*—Amiens, Beauvais, Chartres, Notre-Dame de Paris, Rheims, Rouen; *England*—Canterbury, Durham, Ely, Winchester, York; *Germany*—Cologne, Ulm; *Belgium*—Louvain; *Italy*—Florence, Milan; *Spain*—Ávila, Toledo; *Sweden*—Lund, Uppsala. A noted modern adaptation of the form is at Coventry, England (1962).

Cather, Willa Sibert, 1876–1947, American author; b. Winchester, Va. She celebrated the frontier in *O Pioneers!* (1913) and *My Ántonia* (1918), and showed the artist's need for freedom from inhibiting influences in *The Song of the Lark* (1915). Cather later turned to the North American past for *Death Comes for the Archbishop* (1927). She also wrote short stories and several essays on fiction. Her own clear, charming, and stately style is among the finest in 20th-cent. American literature.

Catherine, czarinas of Russia. **Catherine I,** 1683?–1727 (r.1725–27), was born Martha Skavronskaya, a Livonian peasant. She became the mistress of MENSHIKOV, an advisor to PETER I, and then of Peter, who married her in 1712 and had her crowned czarina in 1724. When he died without naming a successor she was raised to the throne by Menshikov, who dominated her rule. PETER II succeeded her; her daughter ELIZABETH became czarina in 1741. **Catherine II** or **Catherine the Great,** 1729–96 (r.1762–96), b. Princess Sophie of Anhalt-Zerbst, married the future PETER III in 1744. She became thoroughly Russian and was popular with pow-



Floor plan of a cathedral

erful groups opposed to her eccentric husband. In June 1762, conspirators headed by Grigori Orlov, her lover, deposed Peter and proclaimed her ruler; shortly afterward Peter was murdered. Catherine's rule began with projects of reform, but after the peasant uprising led by PUGACHEV (1773–74) and the FRENCH REVOLUTION she strengthened serfdom and increased the privileges of the nobility within a system of provinces that survived until 1917. Her foreign policy was imperialistic: she increased Russian control of the Baltic provinces and Ukraine; began colonization of Alaska; annexed the Crimea and in two wars with Turkey made Russia dominant in SW Asia; and secured for Russia the major share in the partitions of Poland (1772, 1793, 1795). A patron of art and literature, she corresponded with VOLTAIRE and other French thinkers, and wrote memoirs, comedies, and stories. Of her many lovers, only Orlov and POTEMKIN influenced her policies. Her son, PAUL I, succeeded her.

Catherine de' Medici [mĕd'ĭchē], 1519–89, queen consort of HENRY II of France, daughter of Lorenzo de' MEDICI, duke of Urbino. Married in 1533, she was neglected in the reigns of Henry and her eldest son, FRANCIS II, but was regent (1560–63) and adviser (1563–74) for her son CHARLES IX. At first conciliatory toward the French Protestants, she later helped plan the SAINT BARTHOLOMEW'S DAY massacre. HENRY III was her son.

Catherine of Braganza, 1638–1705, queen consort of CHARLES II of England; daughter of JOHN I of Portugal. Her dowry included Bombay and Tangier. A Roman Catholic, she was never popular. Titus OATES accused her of plotting to poison the king, but Charles protected her. After his death, she returned home and in 1704 acted as regent for her brother, PETER II.

Catherine of Siena, Saint, 1347–80, Italian DOMINICAN, mystic and diplomat, Doctor of the Church. In response to a vision she entered public life and in 1376 influenced Pope GREGORY XI to end the "Babylonian captivity" of the PAPACY and return to Rome. She was later papal ambassador to Florence. Catherine caused a spiritual revival almost everywhere she went, and her mysticism contains an overwhelming love of God and humanity. She dictated *The Dialogue*, a notable mystical work. Feast: Apr. 29.

Catherine of Valois [văl'wä], 1401–37, queen consort of HENRY V of England; mother of HENRY VI; daughter of CHARLES VI of France. Some time after Henry V's death (1522), she married Owen TUDOR. The Tudor kings are descended from them.

Catherine the Great: see Catherine II under CATHERINE, czarinas of Russia.

cathode: see ELECTRODE.

cathode-ray tube, ELECTRON TUBE in which electrons are accelerated by high-voltage anodes, formed into a beam by focusing ELECTRODES, and projected toward a phosphorescent screen that forms the face of the tube. The electron beam leaves a bright spot wherever it strikes the screen. To form the screen display, or image, the electron beam is deflected in the vertical and horizontal directions either by the electrostatic effect of electrodes within the tube or by magnetic fields produced by coils located around the neck of the tube. Some cathode-ray tubes, made for COMPUTER TERMINALS and monitors, OSCILLOSCOPES, and TELEVISION receivers, can produce multiple beams of electrons and have phosphor screens that can display more than one color. See also RADAR.

Catholic Church: see ROMAN CATHOLIC CHURCH.

Catholic Emancipation, term applied to the process by which Roman Catholics in the British Isles were relieved of civil disabilities, dating back to HENRY VIII. In 1791 most of the disab lities in Great Britain were repealed. Agitation in Ireland, led by Daniel O'CONNELL, resulted in the Catholic Emancipation Act (1829), which lifted most other restrictions.

Catiline (Lucius Sergius Catilina), c.108 B.C.–62 B.C., Roman politician and conspirator. In 66 B.C. he was barred from candidacy for the consulship by accusations of misconduct in office, charges that later proved false. Feeling that he had been cheated, he concocted a wild plot to murder the consuls. He and the other conspirators were acquitted (65 B.C.). When in 63 B.C. he ran again for consul, he found CICERO, the incumbent, and the conservative party anxious to stop his election at any cost. Catiline was defeated, prompting him to try for the consulship by force. Learning of the plot, Cicero arrested the conspirators still in Rome, but Catiline had fled. On Dec. 5 they were condemned to death and executed, in spite of an appeal from Julius CAESAR to use moderation. Catiline did not surrender; he fell in battle at Pistoia a month later.

cation: see ION.

Catlin, George, 1796–1872, American traveler and artist; b. Wilkes-Barre, Pa. His trips to the American West, the first c.1832, resulted in several volumes and hundreds of portraits of Native Americans and tribal scenes. He also painted indigenous groups in South and Central America. Much of his work is housed in the Catlin Gallery of the National Gallery of Art (Wash., D.C.).

catnip or **catmint,** strong-scented perennial herb (*Nepeta cataria*) of the MINT family, native to Europe and Asia. Catnip best known for its stimulating effect on cats, is also used to make a home-remedy tea.

Cato the Elder or **Cato the Censor** (Marcus Porcius Cato), 234–149 B.C., Roman statesman and moralist. He fought in the Second PUNIC WAR and later served as consul (195) and censor (184). He was renowned for his devotion to the old Roman ideals—simplicity of life, honesty, and courage. He told the senate to destroy Carthage and thus helped to bring on the Third Punic War, in which Carthage was vanquished. He also wrote many works, most of which are now lost. **Cato the Younger** or **Cato of Utica** (Marcus Porcius Cato), 95 B.C.–46 B.C., Roman statesman, was the great-grandson of Cato the Elder. He showed an intense devotion to the principles of the early republic. He had one of the greatest reputations for honesty and incorruptibility of anyone in ancient times, and his Stoicism put him above the graft and bribery of his day. His politics were extremely conservative. Thus he opposed Julius CAESAR and supported POMPEY. After Pompey's defeat at Pharsala in 48 B.C., Cato went to Africa to continue the struggle and took command at Utica. When Caesar clearly had gained

power, Cato committed suicide, bidding his people make their peace with Caesar.

CAT scan or **computerized axial tomography,** X-RAY technique allowing relatively safe, painless, and rapid diagnosis in previously inaccessible areas of the body. An X-ray tube, rotating around a specific area of the body, delivers an appropriate amount of X radiation for the tissue being studied and takes pictures of that part of the internal anatomy from different angles. More recent scanners have a stationary X-ray tube and use deflecting coils and special reflectors to position the X-ray beam. A computer then assists in forming a composite, readable image. CAT scanning has revolutionized medicine, especially neurology, by facilitating the diagnosis of brain and spinal cord disorders, CANCER, and other conditions.

Catt, Carrie Chapman, 1859–1947, American suffragist; b. Ripon, Wis. As an organizer and president (from 1900) of the National American Woman Suffrage Association, she campaigned for a constitutional amendment on WOMAN SUFFRAGE. When the 19th amendment to the U.S. CONSTITUTION passed (1920), she organized the LEAGUE OF WOMEN VOTERS and later worked for the peace movement.

cattail or **reed mace,** perennial herb (genus *Typha*), found in open marshes. Cattails, or clubrushes, have long, narrow leaves and one tall stem with tiny male flowers above the female flowers. Pollinated female flowers form the familiar cylindrical spike of fuzzy brown fruits; the male flowers drop off. The starchy rootstocks are edible.

cattle, ruminant MAMMALS (genus *Bos*), especially a domesticated species. The term *oxen* is often used synonymously, although strictly speaking *ox* refers to a mature, castrated male used for draft purposes. Western, or European, domestic cattle (*B. taurus*) are thought to be descended from the aurochs, a large wild ox domesticated in the STONE AGE. The ZEBU is the domesticated species of Asia and Africa. A grown male is called a bull; a grown female, a cow; an infant, a calf; a female that has not given birth, a heifer; and a young castrated male, a steer. Cattle are bred for beef and DAIRYING and for use as draft animals. Beef breeds include the Angus, Charolais, and Hereford; dairy breeds include Brown Swiss, Guernsey, Holstein-Friesian, and Jersey; dual-purpose (beef-dairy) breeds include the Red Poll and Shorthorn.

Catullus (Caius Valerius Catullus), 84?–54? B.C., Roman poet, one of the greatest LYRIC poets. His poems, addressed to the faithless Lesbia, his friend Juventius, and others, include elegies (see ELEGY), EPIGRAMS, and other pieces and range from gay and tender to obscenely derisive. "On the Death of Lesbia's Sparrow" is well known.

Caucasian and **Caucasoid:** see RACE.

Caucasian languages, family of languages spoken by about five million people in the CAUCASUS region. See LANGUAGE (table).

Caucasus, great mountain system, extending c.750 mi (1,210 km) between the Black and Caspian seas, forming part of the traditional border between Europe and Asia. Mt. ELBRUS (18,481 ft/5,633 m) is the highest peak. The mountains are usually divided into North Caucasia, a region of semiarid northern slopes in SW Russia, and the southern slopes of Transcaucasia, encompassing GEORGIA, AZERBAIJAN, and ARMENIA. Oil is a major resource. The Caucasus are inhabited by a great variety of ethnic and linguistic groups, including Abkhazians, Georgians, Armenians, and Azerbaijanis in the south and Ossetians, Chechens, Ingush, Cherkess (Circassians), and Dagestani in the north. Russia gained control in the 19th cent. after a series of wars with Persia (now Iran) and Turkey. With the disintegration of the USSR, several Caucasian ethnic groups, particularly the Abkhazians, Chechens, Ingush, and Ossetians, began campaigning for independence. Fighting erupted in North Caucasia and Georgia, and Armenians and Azerbaijanis fought for control of NAGORNO-KARABAKH.

Cauchy, Augustin Louis, Baron [kōshē'], 1789–1857, French mathematician who was influential in every branch of MATHEMATICS. In calculus, he invented the notion of continuity, gave the first adequate definition of the definite integral as a limit of sums, and defined improper integrals. He provided the first comprehensive theory of complex numbers, established fundamental theorems on complex functions, published the first comprehensive treatise on determinants, and founded the mathematical theory of elasticity.

cauliflower, variety of CABBAGE (var. *botrytis*), with an edible head of condensed flowers and stems. Another cultivation of the same variety is broccoli. Both have been grown since Roman times.

Cavafy, Constantine [kävāfē'], 1863–1933, Greek poet; b. Egypt. He lived most of his life in Alexandria. The background of his poetry is a mythic, Hellenistic world peopled with historical and imaginary figures. Many of his poems treat homosexual love. Although his output was small (about 150 poems), he is one of the great modern Greek poets.

cavalry, mounted troops trained to fight from horseback. In use since the time of the ancient Hittites, horsemen remained at a disadvantage against well-disciplined infantry until the introduction (4th cent. A.D.) of the saddle. In medieval Europe the mounted KNIGHT became the typical warrior. Despite the invention of SMALL ARMS, cavalry remained important in warfare until the end of the 19th cent. The elite of the fighting forces in Europe, it was often recruited from the nobility and landed gentry. On the African, U.S., and British Indian frontiers the cavalry's mobility was essential against the lightly armed natives, but its value was drastically diminished by the development of rapid-fire rifles and machine guns. It was ultimately superseded by mobile TANK and armored units in World War II. The modern U.S. 1st Cavalry Division consists of helicoptered airborne troops.

cave, a hollow in earth or ROCK. Caves are formed by the chemical and mechanical action of water on soluble rock, by volcanic activity (the formation of large gas pockets in lava or the melting of ice under lava), and by earthquakes. LIMESTONE formations, due to their solubility, almost invariably have caves, some notable for their STALACTITES AND STALAGMITES. Among famous U.S. caves are the Carlsbad Caverns in New Mexico (see NATIONAL PARKS, table). See also SPELEOLOGY.

cave art: see PALEOLITHIC ART; ROCK CARVINGS AND PAINTINGS.

Cavendish, Henry, 1731–1810, English physicist and chemist; b. France. He determined the specific heats for numerous substances (although these heat constants were not recognized until later), did research on the composition of water and air, and studied the properties of a gas that he isolated and described as "inflammable air" (later named HYDROGEN). In a now-famous experiment (1798), he determined the value of the constant of proportionality in Newton's law of GRAVITATION.

Cavour, Camillo Benso, conte di, 1810–61, Italian statesman, premier of Sardinia (1852-59, 1860–61). Cavour introduced liberal internal reforms and involved Sardinia in the CRIMEAN WAR. He became the chief architect of Italian unification under VICTOR EMMANUEL II (see RISORGIMENTO).

Caxton, William, c.1421–1491, English printer, the first to print books in English. Apprenticed as a mercer, he was later a diplomat, and learned printing in Cologne, Germany, in 1471–72. At Bruges, Belgium (1475), he printed with Colard Mansion *The Recuyell of the Historyes of Troye,* the first book printed in English. At Westminster (1477) he printed *Dictes or Sayengis of the Philosophres,* the first dated book printed in England. He is known to have printed about 100 books, having translated about one third of them himself.

Cayenne, city (1990 est. pop. 41,500), capital of FRENCH GUIANA, on Cayenne Island. It exports timber and rum, and gives its name to cayenne pepper, found on the island. Founded (1643) by France, it was held (1808–16) by Britain and Portugal. Many residents descend from inmates of French prison colonies (1851–1946).

Cayley, Sir George, 1773–1857, English scientist, recognized as the founder of AERODYNAMICS. In his studies on the principles of flight, he experimented with wing design; distinguished between lift and drag; and formulated the concepts of vertical tail surfaces, steering rudders, rear elevators, and air screws. Although powered flight was not possible in his time, he was able to calculate the power required for various speeds and loads.

Cayman Islands, British dependency (1992 est. pop. 29,100), c.100 sq mi (259 sq km), West Indies, consisting of three main islands, of which Grand Cayman is the largest. The capital is George Town. The Caymans have prospered as a major international offshore

banking center, rivaling even Switzerland. Sighted (1503) by Christopher COLUMBUS, the islands are now popular tourist attractions.

Cayuga: see IROQUOIS CONFEDERACY.

CB radio: see RADIO.

Cd, chemical symbol of the element CADMIUM.

CD: see COMPACT DISC.

Ce, chemical symbol of the element CERIUM.

Ceauşescu, Nicolae [choushĕs'kōō], 1918–89, Romanian Communist leader and president of ROMANIA (1967–89). After the Communist takeover in 1948 he rose steadily in the party and the government. At the death (1965) of GHEORGHIU-DEJ he became party leader. He maintained Romanian independence from the USSR and close ties with China and the West, but he also reduced his country to poverty while ruthlessly pursuing modernization and brutally suppressing ethnic minorities and dissidents. Ceauşescu was overthrown in 1989, and he and his wife were executed.

Cecil, Robert: see SALISBURY, ROBERT CECIL, 1ST EARL OF.

Cecil, Robert Arthur Talbot Gascoyne: see SALISBURY, ROBERT ARTHUR TALBOT GASCOYNE-CECIL, 3D MARQUESS OF.

Cecil, William: see BURGHLEY, WILLIAM CECIL, 1ST BARON.

cedar, common name for a number of mostly coniferous evergreen trees. The true cedars (genus *Cedrus*), of the PINE family, are all native to the Old World; some, e.g., the cedar of Lebanon (*C. libani*) and the fragrant deodar cedar (*C. deodara*), are cultivated elsewhere. In North America, the name cedar refers to the JUNIPER (red cedar), ARBORVITAE (white cedar), and other conifers of the CYPRESS family. Several tropical American trees (genus *Cedrela*) of the MAHOGANY family are also called cedars.

Cedar Rapids, city (1990 pop. 108,751), seat of Linn co., E central Iowa, on the Cedar R.; inc. as a city 1856. One of Iowa's chief commercial and industrial cities, it is the distribution center for an agricultural area. Its manufactures include cereals, farm machinery, communications equipment, and paper and plastic products.

Celebes or **Sulawesi,** island (1990 est. pop. 12,510,000), largest island in E Indonesia, c.73,000 sq mi (189,070 sq km), separated from BORNEO by the Makasar Strait. Irregular in shape, it comprises four large peninsulas. The terrain is almost wholly mountainous, with many active volcanoes. Valuable stands of timber cover much of the island; mineral resources include nickel, gold, diamonds, and sulfur. The inhabitants are Malayan, with some indigenous peoples in the interior. The Dutch took control of Celebes from the Portuguese in the 1600s. In 1950 it became a province of the newly created Indonesia. Makasar is the chief city and port.

celery, biennial plant (*Apium graveolens*) of the CARROT family, widely distributed and cultivated in north temperate areas. Once used as a medicine and flavoring, it is now used chiefly as a food, especially in soups and salads; the seeds are still used for seasoning.

celesta: see PERCUSSION INSTRUMENT.

celestial equator and **celestial horizon:** see ASTRONOMICAL COORDINATE SYSTEMS.

celestial mechanics, the study of the motions of astronomical bodies as they move under the influence of their mutual GRAVITATION. The calculation of such motions is complicated because many separate forces are acting at once and all bodies are moving simultaneously. Celestial mechanics is based on Isaac NEWTON's laws of motion and theory of universal gravitation. Only the problem of two isolated moving bodies mutually attracted by gravitation can be solved exactly. Because the sun is the dominant influence in the solar system, an application of the two-body problem leads to the simple elliptical ORBITS as described by KEPLER'S LAWS, which give a close approximation of planetary motion. Problems that consider the additional effects, or perturbations, of other less dominant bodies (such as the other planets in the solar system) cannot be solved exactly except in a few special cases. Methods have been devised, however, to allow successive refinements of an approximate solution to be made to almost any degree of precision.

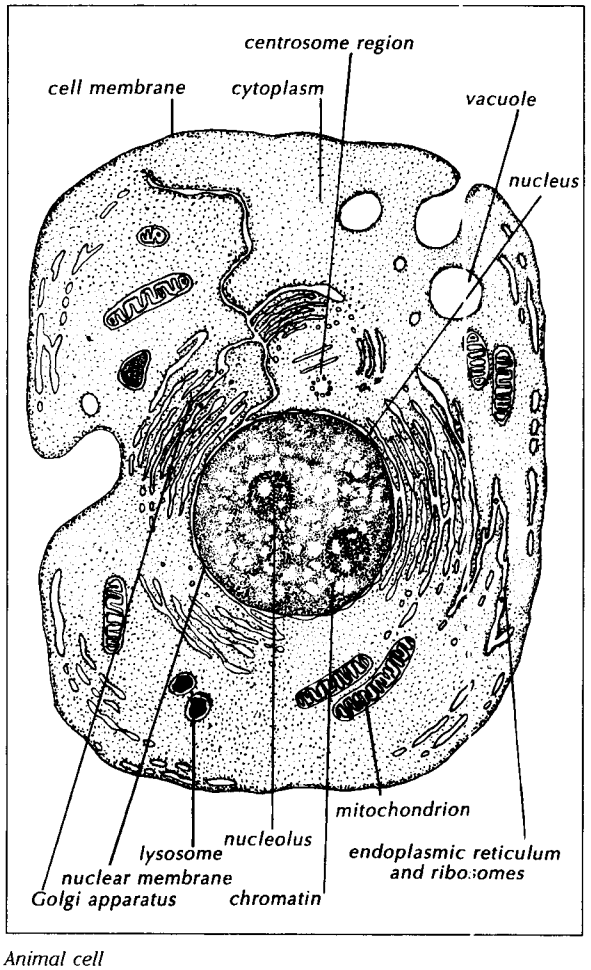
celestial meridian, celestial pole, and **celestial sphere:** see ASTRONOMICAL COORDINATE SYSTEMS.

Celestine I, Saint, d. 432, pope (422–432), an Italian. He advanced orthodoxy by sending a delegation to the Council of Ephesus to oppose NESTORIANISM. Feast: July 27.

Celestine V, Saint, 1215–96, pope (July 5–Dec. 13, 1294), an Italian named Pietro del Murrone. Elected to end the two-year deadlock in finding a successor to Nicholas IV, Celestine was a hermit who had attracted a following of extremists (called Celestines). His papacy was chaotic and was dominated by Charles II of Naples; it lasted but five months before he resigned. His successor, BONIFACE VIII, confined Celestine for life to avert schism. Feast: May 19.

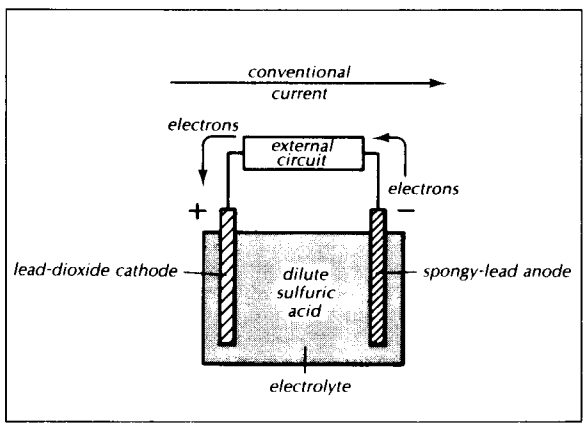
Céline, Louis Ferdinand [sālēn'], 1894–1961, French author; b. Louis Ferdinand Destouches. He wrote sensationally misanthropic but influential novels, e.g., *Journey to the End of Night* (1932). Based on his experiences as a doctor during World War I, his works portray the vileness of humanity through frank, often obscene, language. Céline later wrote a chaotic trilogy (1957–61) recounting the last days of the Third Reich in Germany.

cell, in biology, the unit of structure and function of which all plants and animals are composed. The cell is the smallest unit in the living organism that is capable of carrying on the essential processes of life: sustaining METABOLISM for producing energy and reproducing. There are many one-celled organisms (e.g., PROTOZOANS and BACTERIA) in which the single cell performs all life functions. In higher organisms groups of cells are differentiated into specialized tissues. The cell is composed of the cytoplasm: the cell membrane, which surrounds it; and the nucleus, which is contained within it. Plant cells also have a thickened cell wall, composed chiefly of CELLULOSE. Included in the cytoplasm are mitochondria, which produce energy; lysozymes, which break down unneeded molecules; Golgi apparatuses, which synthesize, store, and secrete substances; ribosomes, the sites of protein synthesis; and CHLOROPLASTS (in green plants only), in which PHOTOSYNTHESIS occurs. The nucleus contains CHROMOSOMES, which store the genetic information for the whole cell and pass on their information to daughter cells by replicating themselves (see MITOSIS).



Animal cell

cell, in electricity, device that converts chemical energy into electrical energy, commonly called a battery. A cell consists of two dissimilar substances, a positive ELECTRODE and a negative electrode, and a third substance, the ELECTROLYTE, that acts chemically on the electrodes. The ELECTROMOTIVE FORCE, or voltage produced between the positive and negative electrodes, depends on the chemical properties of the substances used but not on the size of the electrodes or the amount of electrolyte. When the electrodes are connected externally by a piece of wire, electrons flow from the negative electrode, through the wire, and into the positive electrode. There are several kinds of cells, differing in electrode material and electrolyte. The Leclanché cell has a zinc negative electrode, a carbon positive electrode, and an electrolyte consisting of ammonium chloride solution. It is the basis of the common dry cell (the standard flashlight "battery"), so called because the electrolyte is in the form of a paste instead of a liquid. An alkaline dry cell, which can operate up to ten times longer than common dry cells, has a zinc negative electrode, a manganese dioxide positive electrode, and an electrolyte of potassium hydroxide. A mercury dry cell, with a zinc negative electrode, a mercuric oxide positive electrode, and a potassium hydroxide electrolyte, has a constant output voltage and may be stored for many years. Rechargeable flashlight batteries are nickel-cadmium (ni-cad) cells or alkaline cells. A wet cell contains a number of alternately positive and negative plates in a liquid electrolyte. Positive plates are connected to form the positive electrode; negative plates are similarly connected. A true BATTERY consists of a group of cells that are connected to act as a source of direct current.



Cell, in electricity: At the lead-dioxide cathode, electrons from the circuit combine with lead dioxide and sulfuric acid to form lead sulfate and water. At the spongy-lead anode, lead reacts with sulfate ions to form lead sulfate and release electrons.

Cellini, Benvenuto [chĕlē'nē], 1500–71, Italian sculptor, metalsmith, and author. Under the patronage of Pope CLEMENT VII, he made medals, jewel settings, caskets, vases, candlesticks, metal plates, and ornaments. His work, with its decorative quality and exquisite detail, is among the best of the period. Though most of his works have perished, the famous gold and enamel saltcellar of FRANCIS I of France and the gold medallion of *Leda and the Swan* (both: Vienna Mus.) still remain. His late Florentine sculptures include the bust of Cosimo I (Bargello, Florence) and *Perseus with the Head of Medusa* (Loggia dei Lanzi, Florence). Cellini was a true RENAISSANCE man, and his autobiography (1558–62) is one of the most important documents of the 16th cent.

cello: see VIOLIN.

cellophane, thin, transparent sheet or tube of regenerated CELLULOSE. Used in packaging and for DIALYSIS, cellophane is made by mixing alkali-treated cellulose with carbon disulfide to form viscose. After aging, the viscose is forced through a slit into dilute acid. The regenerated cellulose that results has a lower molecular weight and a less orderly structure than cellulose.

celluloid, transparent, colorless synthetic PLASTIC made by treating CELLULOSE nitrate with CAMPHOR and alcohol. The first important synthetic plastic, celluloid was widely used as a substitute for more expensive substances, such as ivory, amber, and tortoiseshell. It is highly flammable and has been largely superseded by newer plastics.

cellular telephone or **cellular radio,** telecommunications system in which a portable or mobile radio transmitter and receiver, or "telephone," is linked via MICROWAVE radio frequencies to base transmitter and receiver stations that connect the user to a conventional telephone network. The geographic region served by a cellular system is subdivided into areas called cells. Each cell has a central base station and two sets of assigned transmission frequencies; one set is used by the base station, and the other by mobile telephones. To prevent radio interference, each cell uses frequencies different from those used by its surrounding cells, but cells sufficiently distant from each other can use the same frequencies. When a mobile telephone leaves one cell and enters another, the telephone call is transferred from one base station and set of transmission frequencies to the next using a computerized switching system. The first cellular telephone system began operation in Tokyo in 1979, and the first U.S. system began operation in 1983 in Chicago.

cellulose, a carbohydrate of high molecular weight that is the chief constituent of the CELL walls of plants. Raw cotton is 91% cellulose. Other important natural sources are flax, hemp, jute, straw, and wood. Cellulose has been used to make PAPER since the 2d cent. A.D. Cellulose derivatives include guncotton (fully nitrated cellulose), used for EXPLOSIVES; CELLULOID (the first PLASTIC); and cellulose acetate, used for plastics, lacquers, and fibers such as RAYON.

Celsius temperature scale: see TEMPERATURE.

Celtic Church, name given to the Christian church founded 2d or 3d cent. in the British Isles before the mission (597) of St. AUGUSTINE OF CANTERBURY from Rome. It spread in the 5th cent. through the work of St. Ninian in Scotland, St. Dyfrig in Wales, and St. PATRICK in Ireland, but was all but extinguished in England by the Saxon invasions, beginning c.450. At the Synod of Whitby (663) differences in Celtic and Roman church practices were largely resolved.

Celtic languages, subfamily of the Indo-European family of languages. See LANGUAGE (table).

Celts, Indo-European-speaking tribal groups who dominated central Europe during the IRON AGE, developing the LA TÈNE culture. Mounted raiders with iron weapons, they spread rapidly over Europe in the 6th and 5th cent. B.C. from their home in SW Germany, reaching the British Isles, France, Spain, Italy, Macedonia, and Asia Minor. Their social hierarchy included kinglike chiefs and priests known as DRUIDS. A richly ornamental art and colorful folklore were their important cultural legacies. The term *Celts* also refers to natives of areas where a Celtic language is (or, until the 20th cent., was) spoken, i.e., Ireland, the Scottish Hebrides and Highlands, the Isle of Man, Wales, Cornwall, and Brittany.

cement, hydraulic, building material typically made by heating a mixture of limestone and clay until it almost fuses and then grinding it to a fine powder. Once it is mixed with water, cement will harden even if immersed in water. The most common cement, Portland cement, is made by mixing and then heating substances containing lime, silica, alumina, and iron oxide, with gypsum added during the grinding process. Quick-setting aluminous cement is made from limestone and bauxite. See also CONCRETE.

Cenozoic era: see GEOLOGIC ERA (table).

censorship, official restriction of any expression believed to threaten the political, social, or moral order. Although most often imposed by totalitarian, autocratic, or theocratic regimes or in times of war, censorship has also long existed in the U.S. Such materials as school texts, films, and literary works have often been suppressed as morally or ideologically subversive by religious organizations, government agencies (such as the U.S. Post Office or elected local school boards) or private groups (such as the Watch and Ward Society in Boston, Anthony COMSTOCK's New York Society for the Suppression of Vice, the MORAL MAJORITY, and feminists opposed to pornography). At times, systems of self-censorship (e.g., the film industry's "Hays Code" of the 1930s) have been established to reduce the threat of outside censorship or boycott. U.S. Supreme Court rulings in 1973 and 1987 granted to state gov-

ernments the right to decide what is subversive or obscene. Official secrecy, or federal censorship of information about government operations, was greatly reduced in the U.S. under the FREEDOM OF INFORMATION ACT (1966), supplemented by the Privacy Act of 1974. See also PRESS, FREEDOM OF THE; PRIVACY, RIGHT OF.

centaur, in Greek myth, a creature half-man, half-horse, descended from IXION. Most were savage followers of DIONYSUS, but some, like CHIRON, taught humans.

center of mass, the point at which all the mass of a body or group of objects is considered to be concentrated. This point is often the same as the **center of gravity** (the point at which all the weight of a body may be considered to be concentrated). The motions of several colliding elementary particles, or of the earth and moon around the sun, are sometimes analyzed from the point of view of the center of mass of the entire system of objects.

Centers for Disease Control and Prevention (CDC), agency of the U.S. Public Health Service since 1973, with headquarters in Atlanta; est. (1946) as the Communicable Disease Center. The CDC administers national programs for the prevention and control of communicable diseases, develops and implements programs for dealing with environmental health problems, directs quarantine activities, and conducts epidemiological research. It also provides consultation on an international basis for the control of preventable diseases.

centigrade temperature scale: see TEMPERATURE.

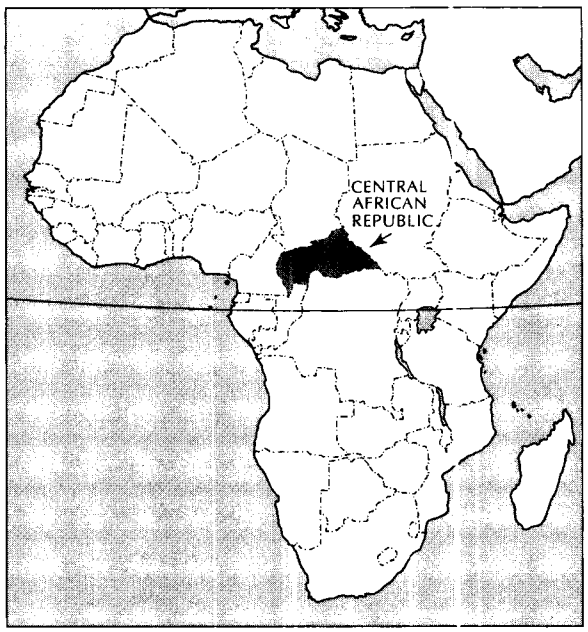
centimeter: see METRIC SYSTEM; WEIGHTS AND MEASURES, table.

centipede, invertebrate animal of the class Chilopoda, an ARTHROPOD. The flattened body is divided into a head and trunk comprised of segments (somites). The average number of legs is 35 pairs, one pair per segment except for the first one and last two. The appendages of the first segment are modified into claws equipped with poison glands, used to capture prey. The largest tropical species may reach 12 in. (30 cm) in length; temperate species are usually about 1 in. (2.5 cm) long.

Central African Republic, republic (1992 est. pop. 3,029,000), 240,534 sq mi (622,983 sq km), central Africa, bordered by Chad (N), Sudan (E), Zaïre and Congo (S), and Cameroon (W). BANGUI is the capital. Situated on a savanna-covered plateau 2,000–3,000 ft (610–910 m) above sea level, the country has tropical forests in the south and a semidesert area in the east. Of the numerous rivers, only the Ubangi is commercially navigable. Agriculture is the chief economic activity, engaging about 90% of the people, mostly in subsistence farming. The principal cash crops and exports are cotton, tobacco, and coffee; other exports include diamonds and timber. Uranium is also mined. There are no railroads and few adequate paved roads; rivers are the chief means of transportation. The chief ethnic groups are the Mangia-Baya, Banda, Mbaka, Sara, and Azande. French is the official language, but Sango is the lingua franca. About half the population practice Christianity, with the rest roughly divided between Islam and traditional beliefs.

History. In the 19th cent. various tribes fleeing the slave trade arrived in the region. The French occupied the area in 1887 and organized it (1894) as the colony of Ubangi-Shari; it was united administratively with CHAD in 1906 and incorporated into FRENCH EQUATORIAL AFRICA in 1910. Despite periodic rebellions sparked by French concessionaires' use of forced labor, the population supported the Free French forces in WORLD WAR II. The colony was given its own territorial assembly in 1946, received autonomy and took its present name in 1958, and gained full independence in 1960 under Pres. David DACKO. In 1965 the parliamentary government was overthrown in a military coup led by Col. Jean-Bédel BOKASSA, who in 1976 changed the country's name to Central African Empire and had himself crowned Emperor Bokassa I. During his brutal regime it was alleged that he personally took part in a 1979 massacre of children protesting human rights violations. Shortly thereafter, control was regained by Dacko, who restored republican government. In 1981 Dacko was ousted in a coup led by Gen. André Kolingba, who established a dictatorial one-party state. Kolingba ended the ban on opposition parties in 1992 and Ange-Félix Patassé won the presidency in a free election in 1993.

Central America, collective term applied to the six nations of North America lying SE of Mexico—BELIZE, COSTA RICA, EL SALVADOR, GUATEMALA, HONDURAS, and NICARAGUA—and usually also including PANAMA, on the Isthmus of Panama. The region is predominantly mountainous in the interior, with an active zone of volcanoes and earthquakes marking the junction of North America's mountain systems and outliers of South America's ANDES chain. Tajumulko (13,846 ft/4,210 m), a volcano in Guatemala, is the highest point. The climate varies with altitude from tropical to cool, with heavy rainfall occurring in the east. Bananas, coffee, and cacao are the chief commercial crops. The population is mainly Spanish-speaking, Roman Catholic, and mestizo (of mixed European and indigenous descent). Though rich culturally, the area has suffered chronic political and economic problems, due largely to the persistence of a landholding system that leaves a vast gap between rich and poor.



central bank, financial institution designed to regulate and control a nation's fiscal and monetary activities. Usually state-owned, central banks issue notes to be used as legal tender, maintain adequate reserve backing for the nation's banks, and control the flow of money and precious metals. By regulating the supply of MONEY and CREDIT they influence INTEREST rates and, to some extent, the whole national economy. Most central banks are modeled after the Bank of England (1694), the first to fill a central banking role. Other notable central banks include the U.S. FEDERAL RESERVE SYSTEM, the Bank of Canada, France's Banque de France, and Germany's Deutsche Bundesbank.

Central Intelligence Agency (CIA), U.S. agency established (1947) by the National Security Act. It conducts intelligence and counterintelligence activities outside the U.S. (see INTELLIGENCE GATHERING). It also engages in domestic counterintelligence operations, but only in coordination with the FEDERAL BUREAU OF INVESTIGATION and subject to the attorney general's approval. These limitations were mandated by a 1978 executive order, issued in the wake of abuses related to the WATERGATE AFFAIR and of a presidential commission's charge (1975) that the CIA had engaged in "unlawful" domestic spying. The CIA has also been criticized for taking an active role in the internal affairs of foreign governments.

Central Powers: see WORLD WAR I.

central processing unit: see COMPUTER.

Central Valley, great trough of central Calif., c.450 mi (720 km) long and c.50 mi (80 km) wide, between the SIERRA NEVADA and COAST RANGES. The Sacramento and San Joaquin rivers drain the valley before converging in a huge delta and flowing into San Francisco Bay. California's leading agricultural area, this irrigated valley has the largest single concentration of fruit farms and vineyards in the U.S.

centrifuge, device using centrifugal force to separate substances of

different density, e.g., cream from milk. Substances are placed in containers that are spun at speeds high enough to cause the heavier elements to sink. The first successful centrifuge was built in 1883 by the Swedish engineer Carl G.P. de Laval.

centripetal force and centrifugal force, action-reaction force pair associated with circular motion. Centripetal ("center-seeking") force is the constant inward force necessary to maintain circular motion. The centripetal force F acting on a body of mass m is given by the equation $F = mv^2/r$, where v is its velocity and r is the radius of its path. The centripetal force—the action—is balanced by a reaction force, the centrifugal ("center-fleeing") force, which acts not on the circling object but on the source of centripetal force, usually located at the circle's center. The two forces are equal in magnitude and opposite in direction.

cephalopod, free-swimming MOLLUSK (class Cephalopoda) with a long body and a ring of sucker-bearing arms (tentacles) encircling the mouth. The head is large, with prominent eyes. Only the NAUTILUS has an external shell; in the SQUID and CUTTLEFISH the shell is internal and reduced, and in the OCTOPUS it is completely absent. Most cephalopods are aggressive carnivores that move by means of a kind of jet propulsion.

Cepheid variables, small class of VARIABLE STARS that brighten and dim in regular periods ranging from 1 to 50 days. The periods of Cepheids, which are yellow supergiant stars that swell and contract in size, depend on their intrinsic brightness, or absolute MAGNITUDE, in a known way: the brighter the star, the greater its period. By comparing the Cepheid's absolute magnitude to its apparent magnitude, one can determine its distance. The period-luminosity relation of Cepheids make them invaluable in estimating interstellar and intergalactic distances.

ceramics, materials made of nonmetallic minerals, such as clay, that have been permanently hardened by firing at a high temperature. Most ceramics resist heat and chemicals. Ceramic materials are used in all forms of pottery, from crude earthenware to the finest PORCELAIN, and in industrial and engineering products. Ceramic products include art objects, such as figurines; ABRASIVES, such as ALUMINA; building materials, such as BRICK; cooking utensils; dinnerware; electrical equipment, such as insulators in spark plugs; and refractories, such as the heat shield on the SPACE SHUTTLE.

Cerberus [sûr'bərəs], in Greek mythology, many-headed dog with a mane and a tail of snakes; guardian of HADES. One of the 12 labors of HERCULES was to capture him.

cereal: see GRAIN; GRASS.

cerebral palsy, disorder in which muscular control and coordination are impaired, and speech and hearing problems and mental retardation may occur. It is most commonly caused by brain damage occurring before or during birth, and varies greatly in severity. Treatment involves physical, occupational, and speech therapy; braces; orthopedic surgery; and drugs to reduce muscle stiffness and spasticity.

Ceres, in astronomy: see ASTEROID.

Ceres [sēr'ēz], in Roman mythology, goddess of grain; daughter of SATURN and Ops. Her worship involved fertility rites and rites for the dead, and her chief festival was the Cerealia. She was identified with the Greek DEMETER.

cerium (Ce), metallic element, purified in 1875 by W.F. Hillebrand and T.H. Norton. Iron-gray, soft, and malleable, it is the most abundant RARE-EARTH METAL. It is used as a core for the carbon electrode of arc lamps. Cigarette- and gas-lighter flints are cerium alloys. See ELEMENT (table); PERIODIC TABLE.

CERN, officially the **European Laboratory for Particle Physics,** principal European center for research in particle physics, est. 1954 as the European Center for Nuclear Research. Seventeen European countries sponsor CERN, which straddles the Franco-Swiss border W of Geneva.

Cervantes Saavedra, Miguel de [sərvän'tēs, Span. thĕrvän' tās sä"ävā*th*rä], 1547–1616, Spanish novelist, dramatist, and poet, author of *Don Quixote.* Little is known of Cervantes's youth. In 1569, in the service of a cardinal, he went to Italy, where he studied literature and philosophy. At the naval battle of Lepanto (1571) his left arm was permanently crippled. Returning to Spain (1575), he was captured by Barbary pirates and sold as a slave. After many escape attempts he was ransomed at ruinous cost from the viceroy of Algiers in 1580. As a government purchasing agent (1588–97) he was jailed several times for financial irregularities. His first published work was *La Galatea* (1585), a PASTORAL romance in prose and verse. Part I of his masterpiece, *Don Quixote de la Mancha* (1605), was an immediate success. The addled idealism of Don Quixote, a country gentleman who has read too many chivalric romances, and the earthy acquisitiveness of his squire, Sancho Panza, propel them into a series of adventures involving characters from every level of society. The appearance of a spurious sequel prompted Cervantes to publish Part II in 1615. The work had an indelible effect on the development of the European NOVEL. Among his other works are poems; many plays; the *Exemplary Novels* (1613), a collection of 12 tales; and *The Travails of Persiles and Sigismunda* (1617), a prose epic.

cesarean section, delivery of an infant by surgical removal from the uterus through an abdominal incision. It is usually performed when childbirth is considered hazardous, as when the mother's pelvis is too narrow or the fetus is in an abnormal position. Subsequent deliveries were traditionally also by cesarean section, but the practice is dimishing. The name comes from the legend that Julius CAESAR was born in this manner.

cesium (Cs), metallic element, discovered by spectroscopy in 1860 by Robert BUNSEN and Gustav KIRCHHOFF. Ductile, soft as wax, and silver-white, it is the most alkaline element (see ALKALI METALS) and the most reactive metal. Cesium metal is used in photoelectric cells and various optical instruments; cesium compounds, in glass and ceramic production. The cesium-137 radioactive isotope is used to treat cancer. See ELEMENT (table); PERIODIC TABLE.

Cetewayo, Cetywayo, or **Ketchwayo,** c.1836–1884, king of the ZULUS. He succeeded his father, Mpanda, as king in 1872. Refusing to submit to British rule, he successfully resisted (1878–79) a British campaign until Zulu forces were thoroughly defeated at Ulundi (July, 1879). He spent most of the rest of his life in exile.

Ceuta [thāōō'tä], city (1986 pop. 71,403), c.7 sq mi (18 sq km), NW Africa, a Spanish possession, on the Strait of Gibraltar. An enclave in Morocco administered as part of Cádiz prov., Spain, Ceuta is a free port with such industries as fishing, food processing, and tourism. An ancient city, it was seized (1415) by Portugal and in 1580 passed to Spain.

Cézanne, Paul [sāzän'], 1839–1906, French painter. Strongly influenced by PISSARRO, he became a leading figure in the revolution toward abstraction. His early work is marked by heavy use of the palette knife; these fantastic, dreamlike scenes anticipate the expressionist idiom of the 20th cent. (see EXPRESSIONISM). After meeting MANET and the impressionist painters, Cézanne became interested in using color to create perspective (see IMPRESSIONISM), but he was utterly unconcerned with transitory light effects. *House of the Hanged Man* (1873–74; Louvre) is characteristic of his impressionist period. He sought to "recreate nature" by simplifying forms and utilizing color and distortion, as in *Mont Sainte-Victoire* (1885–87; Phillips Coll., Wash., D.C.), *The Kitchen Table* (1888–90; Louvre), *The Card Players* (1890–92; one version, S.C. Clark Coll., N.Y.C.), and vital portraits. He also developed a new type of spatial pattern, portraying objects from shifting viewpoints. His simple forms are always represented with almost classical structural stability, as in *Bathers* (1898–1905; Philadelphia Mus. Art), a monumental embodiment of several of his visual systems. Cézanne's influence on the course of modern art, particularly CUBISM, was enormous and profound, and his theories spawned a whole new school of aesthetic criticism.

Cf, chemical symbol of the element CALIFORNIUM.

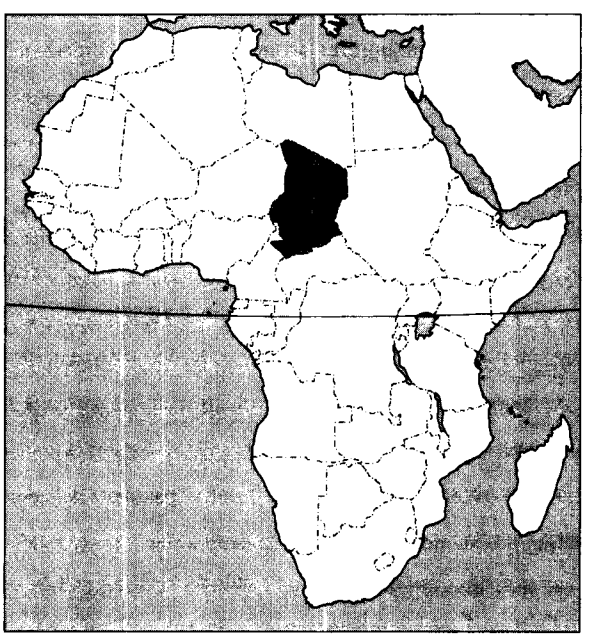
CFC: see CHLOROFLUOROCARBON.

cgs system: see METRIC SYSTEM.

Chad, Fr. *Tchad,* officially Republic of Chad, republic (1992 est. pop. 5,239,000), 495,752 sq mi (1,284,000 sq km), N central Africa, bordered by the Central Africa Republic (S), Sudan (E), Libya (N), and Cameroon, Niger, and Nigeria (W). NDJAMENA is the capital. The terrain in the south is wooded savanna, becoming brush country near Lake Chad, on the western border. Northern Chad is a desert that merges with the S SAHARA and includes the mountainous Tibesti region. Chad is one of the poorest nations in Africa; its economy is based largely on subsistence farming, livestock-

raising, and fishing. The single important cash crop is cotton, which also supports a textile industry. Deposits of petroleum, tungsten, and uranium have not been exploited. The population is made up of two distinct, often hostile, groups: settled agricultural peoples, mostly Christians but with some adherents of traditional African beliefs, in the politically dominant south; and seminomadic or nomadic Muslim peoples, including Arabs and Toubou, who engage in herding, in the north. French and Arabic are the official languages.

History. Long a focal point for trans-Saharan trade routes, the region was penetrated in the 7th cent. by Arab traders. Shortly thereafter nomads from N Africa established the state of Kanem, which reached its peak in the 13th cent. The successor state of Bornu was joined by the rival Wadai and Bagirmi empires, all of which fell to the Sudanese conqueror Rabih by the early 1890s. French expeditions moved into the region in 1890 and by 1913 had defeated the Sudanese and conquered Chad, which became a colony in FRENCH EQUATORIAL AFRICA. It gained autonomy in 1958 and full independence in 1960. Internal strife between the Muslim north and the Christian and animist south has dominated the country's affairs, flaring into guerrilla warfare (with the main Muslim group receiving active support from LIBYA, which claimed and occupied part of N Chad—the Aouzou strip—in 1973) and precipitating numerous changes of government. The country's first president, Ngarta Tombalbaye, was killed in a coup in 1975. In 1979 a coalition government, headed by Goukouni Oueddei, a former rebel from the north, assumed power, but fighting broke out again in 1980. In 1982 Goukouni's government was overthrown by the forces of former prime minister Hissène Habré. He moved to include all factions in his government and defeated the Libyans in 1987, but they retained control of the Aouzou strip. Habré was ousted (1990) by Libyan-backed rebels led by Idriss Déby, who became president. A national democracy conference established (1993) a transitional government, with Déby remaining president, and called for free elections within a year. In 1994 the International Court of Justice rejected Libya's claim to the Aouzou strip and other Chadian territory.



Chadwick, Sir James, 1891–1974, English physicist. He worked on radioactivity under Ernest Rutherford and was assistant director (1923–35) of radioactive research at the Cavendish Laboratory, Cambridge. For his discovery of the NEUTRON he received the 1935 Nobel Prize in physics.

Chagall, Marc, 1889–1985, Russian painter. He lived mainly in France. A forerunner of SURREALISM, he drew subject matter from Jewish life and folklore and rendered it with deceptive fairy-tale naïveté, as in *I and the Village* (1911; Mus. Mod. Art, N.Y.C.) and *The Rabbi of Vitebsk* (Art Inst., Chicago). He designed sets and costumes for STRAVINSKY's ballet *The Firebird* (1945); 12 stained-glass windows (1962) for Hadassah-Hebrew Univ. Medical Center synagogue, Jerusalem; and two vast murals for New York City's Metropolitan Opera House (1966). A museum of his work opened (1973) in Nice.

Chagas' disease, disease of South and Central America caused by the parasite *Trypanosoma cruzi.* Symptoms include fever, swelling and redness around the eyes, and, in some cases, serious or fatal inflammation of the brain and heart tissues. It usually affects children and young adults and is transmitted by infected insects, typically the assassin bug. There is no vaccine and no satisfactory treatment.

Chain, Ernst Boris, 1906–79, English biochemist; b. Germany. For their work in isolating and purifying penicillin, he and Sir Howard FLOREY shared with Sir Alexander FLEMING the 1945 Nobel Prize in physiology or medicine. Chain held various teaching and research positions in Berlin, Rome, and London and at Oxford and Cambridge.

Chalcedon, Council of, 451, 4th ecumenical council. It stated that Jesus' divine nature and human nature are distinct, but inseparably united—Jesus is both truly God and truly human. This dictum refuted EUTYCHES, and became the test of orthodoxy for the Roman Catholic Church.

chalcedony, form of QUARTZ with microscopic crystals. Some varieties of chalcedony are AGATE, BLOODSTONE, JASPER, and ONYX.

chalcopyrite or **copper pyrites,** copper and iron sulfide mineral ($CuFeS_2$), brass yellow and sometimes with an iridescent tarnish. It is found in crystal form but is most often massive. Occurring worldwide in igneous and metamorphic rocks, it is an important ore of COPPER.

Chaliapin, Feodor Ivanovich [shəyä'pyĭn], 1873–1938, Russian operatic bass. He lived outside the USSR after 1921. His powerful voice, tremendous physique, and acting ability made him one of the great performers in operatic history. He was particularly effective in MOUSSORGSKY's *Boris Godunov.*

chalk, a calcium carbonate mineral, similar in composition to limestone but softer. Chalk has been deposited throughout geologic time. The chief constituents are the shells of minute animals called foraminifera; however, the dominant component of the best-known formations, the Cretaceous chalks (e.g., the White Cliffs of Dover, England), are coccolith algae. Chalk is used to make putty, plaster, cement, quicklime, and blackboard chalk. Harder forms are used as building stones, and poor soils with high clay content are sweetened with chalk.

Challenger, U.S. space shuttle. It exploded (Jan. 28, 1986), 73 seconds into its flight, killing all seven crew members, including a civilian schoolteacher, Christa McAuliffe. The disaster was caused by a faulty gasket design. As a result of the explosion, the U.S. did not send astronauts into space for three years as NASA redesigned a number of features of the space shuttle.

Chamberlain, (Arthur) Neville, 1869–1940, British statesman. A former Conservative chancellor of the exchequer (1923–24, 1931–37), he succeeded Stanley BALDWIN as prime minister in 1937. His belief that HITLER was a rational statesman resulted in the policy of "appeasement" of the AXIS powers that culminated in the MUNICH PACT (1938). He remained in office following the outbreak of WORLD WAR II, but he resigned (1940) after the British debacle in Norway.

Chamberlain, Wilt(on Norman), 1936–, American basketball player; b. Philadelphia. Twice an All-American at the Univ. of Kansas, he starred (1959–73) in the National Basketball Association (NBA) with Philadelphia (Warriors and 76ers), San Francisco, and Los Angeles. With his height (over 7 ft 1 in./216 cm) and agility, he was the top NBA scorer in 7 consecutive seasons and the leading rebounder in 11. He set records (since broken) for most points (31,419) and highest career average (30.1).

Chamberlin, Thomas Chrowder, 1843–1928, American geologist; b. Mattoon, Ill. He taught at the Univ. of Chicago (1892–1919) and was chief geologist of the geological survey of Wisconsin (1873–82). With the American astronomer F.R. Moulton he formulated the

The key to pronunciation appears on page xiii.

planetesimal hypothesis of the origin of the SOLAR SYSTEM. His works include *The Origin of the Earth* (1916) and *Two Solar Families* (1928).

Chambers, Sir William, 1723–96, English architect. He designed decorative architecture for Kew Gardens. The foremost official architect of his day, he continued the neo-Palladian tradition.

chameleon, small- to medium-sized LIZARD of the family Chamaeleonidae, found in sub-Saharan Africa, with a few species in S Asia. Chameleons have laterally flattened bodies ornamented with crests, horns, or spines and bulging, independently rotating eyes. Their skin changes color in response to stimuli such as light, temperature, and emotion, not in response to background color. The so-called common chameleon (*Chamaeleo chamaeleon*) is found around the Mediterranean. The American chameleon, not a true chameleon, belongs to the IGUANA family.

Chamisso, Adelbert von [shəmĬ'sō], 1781–1838, German poet and naturalist; b. France as Louis Charles Adelaide de Chamisso. His poetic cycle *Frauenliebe und Leben* (1830) was set to music by SCHUMANN. His tale of Peter Schlemihl, the man who sold his shadow to the devil (1814), has become legend.

chamois, hollow-horned, hoofed MAMMAL (*Rupicapra rupicapra*) found in the mountains of Europe and the E Mediterranean. About the size of a large GOAT, it is brown with a black tail and back stripes; its horns are erect with terminal hooks. The skin was the original chamois leather, a name now also given to the skins of other animals.

chamomile or **camomile,** name for some herbs of the COMPOSITE family, especially the perennial English, or Roman, chamomile (*Anthemis nobilis*) and the annual German, or wild, chamomile (*Matricaria chamomilla*). The former is the chamomile most used for ornament and for a tea, made from the dried flower heads containing a volatile oil. The oil from wild chamomile flowers is chiefly used as a hair rinse.

Champa, kingdom of the Chams in Vietnam, fl. 2d cent. A.D.–17th cent. The Chams warred successively with China, the KHMER EMPIRE, and ANNAM. The Cham kingdom finally fell to the Annamese, and its people were scattered.

Champagne, Philippe de: see CHAMPAIGNE.

Champagne [shäNpä'nyə], region, NE France. Champagne is a generally arid, chalky plateau cut by the Aisne, Marne, Seine, Aube, and Yonne rivers. Agriculture and sheep-grazing are the traditional activities; textile and metal goods are manufactured. A small fertile area around Rheims and Epernay produces virtually all of France's celebrated champagne wine. Champagne enjoyed an early commercial prosperity, and in the Middle Ages its great fairs, particularly those at Troyes and Provins, attracted merchants from all over W Europe. Cultural life also flourished, culminating in the work of CHRÉTIEN DE TROYES and in the Gothic cathedral at RHEIMS. The county of Champagne passed to the counts of Blois in the 11th cent., and was incorporated into the French royal domain in 1314. WORLD WAR I devastated much of the region, but parts of the area have been reforested.

champagne, sparkling white wine, traditionally made from a mixture of grapes grown in the old French province of Champagne; the best is from the Marne valley. It was reputedly developed in the 17th cent. by a monk, Dom Perignon. The fermented and blended wine is bottled, then sweetened and allowed to ferment further. The carbonic acid left in the bottle after the final fermentation gives champagne its sparkle.

Champaigne or **Champagne, Philippe de** [both: shäN pä'nyə], 1602–74, French painter; b. Belgium. His best-known works, including the FRESCOES at Vincennes and the Tuileries, show the influence of RUBENS and VAN DYCK. His portraits, such as those of Richelieu and of his own daughter, a nun at Port-Royal (both: Louvre), have an air of static majesty.

Champlain, Samuel de, 1567–1635, French explorer, chief founder of New France. In 1605 he founded Port Royal, in NOVA SCOTIA, and in 1608 brought his colonists to QUEBEC. He explored as far W as Lakes Huron and Ontario, and S to Lake CHAMPLAIN, in New York, which bears his name. He extended French claims as far W as WISCONSIN.

Champlain, Lake, lake, 490 sq mi (1,269 sq km), mainly in NE U.S., extending 125 mi (201 km) south from S Quebec to form part of the New York-Vermont border. Its maximum width is 14 mi (23 km). Discovered (1609) by Samuel de CHAMPLAIN, it was the scene of battles in the FRENCH AND INDIAN WAR, the AMERICAN REVOLUTION (Crown Point; TICONDEROGA), and the WAR OF 1812.

Champollion, Jean François, 1790–1832, French Egyptologist. The founder of Egyptology, he discovered the key to Egyptian HIEROGLYPHICS while deciphering (1821) the ROSETTA stone. Sometimes called Champollion le jeune, he was trained in archaeology by his elder brother, **Jean Jacques Champollion-Figeac,** 1778–1867.

Chancellorsville, battle of, May 2–4, 1863, in the U.S. CIVIL WAR. Gen. Robert E. LEE and his Army of Northern Virginia attacked Joseph HOOKER's Union Army of the Potomac, which was entrenched near Chancellorsville, Va. Lee was brilliantly supported by Stonewall JACKSON, who in a flank attack against the Union right surprised and routed Hooker's army. Jackson was mortally wounded by his own troops. On May 3–4, Confederate generals Jubal EARLY and J.E.B. STUART drove the Union army across the Rappahannock R. Chancellorsville was Lee's last great victory; it led to his invasion of the North in the GETTYSBURG CAMPAIGN.

Chan Chan, ruins of a pre-Inca city near Trujillo, N Peru. It is believed to have been built after A.D. 800 and to have been the capital of the CHIMU civilization. Covering c.11 sq mi (28 sq km), it included at least nine self-contained, walled compounds and may once have had a population of 200,000.

Chandler, Raymond T(hornton), 1888–1959, American writer; b. Chicago. His well-plotted, brutally realistic detective novels, all featuring the tough yet honorable Philip Marlowe, include *The Big Sleep* (1939) and *The Long Goodbye* (1953).

Chandragupta (Chandragupta Maurya) [chändrəgo͝op'tə], fl. c.321–c.298 B.C., Indian emperor, founder of the MAURYA dynasty and grandfather of ASOKA. He conquered the Magadha kingdom in N India, defeated (305 B.C.) the invading army of Seleucus I, and may have expelled the last of ALEXANDER THE GREAT's army from India.

Chandrasekhar, Subrahmanyan, 1910–, American astrophysicist; b. Lahore, India (now Pakistan). He is a major figure in the research on energy transfer by radiation in stellar atmospheres. In 1983, he and William A. Fowler won the Nobel Prize in physics for work on WHITE DWARF stars.

Chang or **Yangtze,** great river of China, c.3,450 mi (5,550 km) long, and longest river in Asia; also called Chang Jiang [Mandarin, = long river]. It rises as the Jinsha in SW China, forms the Chang R. proper at Yibin, and continues generally east c.1,500 mi (2,410 km) through rich agricultural and industrial regions to enter the EAST CHINA SEA in a vast delta near Shanghai. The river is China's chief commercial artery and is navigable by ocean vessels c.600 mi (970 km), to Wuhan. The Gezhouba Dam was built near Yichang to regulate seasonally fluctuating water levels and harness the river's hydroelectric potential, and in 1993 preliminary construction began upriver on the controversial Three Gorges project, potentially the largest hydroelectric dam in the world.

Changchun [chäng'-cho͞on], city (1990 est. pop. 2,110,000), capital of Jilin prov., China, on the railroad between HARBIN and DALIAN. The former capital of the Japanese puppet state of Manchukuo (1932–45), Changchun is a major industrial city and the center of China's vehicular industry. It also produces tires, drugs, motors, and textiles. The city is a major educational and cultural center of NE China.

change ringing, a form of bell-ringing that developed during the 17th cent. in England simultaneously with the development of carillon playing in the Low Countries. A group of ringers, each ringer controlling the rope pull of one bell, use a peal (set) of 5 to 12 bells tuned to the diatonic scale; the bells are rung full circle in various predetermined orders, but without repeating any order. The result is a sound that is not melodious, but complex and compelling.

Chang Jiang: see CHANG.

Changkiakow: see ZHANGJIAKOU.

Changsha, city (1990 est. pop. 1,330,000), capital of Hunan prov., S China, on the Xiang R. Changsha is an agricultural distribution and market center producing diverse manufactures. Founded in the 3d cent. B.C., it has long been noted as a literary and educational

center. It was the capital (10th cent.) of the Chu kingdom and became a treaty port in the early 1900s. MAO ZEDONG spent his early years in and around the city.

Channel Islands, archipelago (1992 est. pop. 143,000), 75 sq mi (194 sq km), 10 mi (16 km) off the coast of France in the English Channel. The principal islands are Jersey, Guernsey, Alderney, and Sark; they are dependencies of the British crown. Agriculture, dairying, and tourism are the mainstays of the economy. English is spoken, but French is the official language of Jersey. The natives speak a Norman patois and maintain Norman customs. The islands became possessions of the duke of Normandy in the 10th cent. and were joined to the English crown at the NORMAN CONQUEST. They were occupied by the Germans during WORLD WAR II.

Channel Islands National Park: see NATIONAL PARKS (table).

Channing, William Ellery, 1780–1842, American minister and author; b. Newport, R.I. A great preacher, called "the apostle of Unitarianism," he advocated tolerance in religion. His writings on slavery, war, labor problems, and education were extremely progressive and influenced many American authors, including EMERSON and other exponents of TRANSCENDENTALISM, HOLMES, and BRYANT. His works (6 vol., 1841–43) passed through many editions.

chansons de geste [Fr., = songs of deeds], a group of epic poems of medieval France written from the 11th through the 13th cent. The oldest extant chanson, and also the best and most famous, is the *Chanson de Roland* [song of Roland], composed c.1098–1100.

chant, general name for one-voiced, unaccompanied liturgical music, usually referring to melodies of the Orthodox, Roman Catholic, and Anglican branches of Christianity. The texts of Anglican chant are from the BOOK OF COMMON PRAYER, and its melodies, unlike the Roman Cathoiic PLAINSONG, are harmonized.

chantey or **shanty,** work song with marked rhythm, particularly one sung by sailors at work, but also by shore gangs or lumbermen. It often has solo stanzas sung by a leader, alternating with a chorus by the entire group.

Chanukah: see Hanukkah under JEWISH HOLIDAYS.

Chao Phraya [chou präyä'], **Mae Nam Chao Phraya,** or **Menam Chao Phraya,** chief river of Thailand, formed by the confluence of the Nan and Ping rivers at Nakhon Sawan. It flows generally south c.140 mi (230 km) past the capital city of Bangkok to a large delta on the Gulf of Thailand. Its valley is the country's main rice-producing region.

Chaos, in Greek mythology, the vacant, unfathomable space from which everything arose. In the OLYMPIAN myth GAEA sprang from Chaos and became the mother of all things.

chaos, in science, field of study devoted to processes that exhibit complex, apparently random behavior, such as cloud formation or fluctuations of biological populations. Attempts to predict the behavior of these systems led to the development of an interdisciplinary science, NONLINEAR DYNAMICS.

chaparral, type of plant community in which shrubs are dominant, occurring usually in areas drier than forests and wetter than deserts. The species of shrub vary in different areas. The chaparral in Colorado, E Utah, and N New Mexico is mostly deciduous, while that of S California, Nevada, and Arizona is primarily evergreen. Chaparral is well exemplified in the W and SW U.S., but similar growth is found in many other parts of the world.

Chaplin, Charlie (Sir Charles Spencer Chaplin), 1889–1977, English film actor and director. A comic genius, he became famous as the wistful Little Tramp. His films include *The Kid* (1920), *The Gold Rush* (1924), *City Lights* (1931), *The Great Dictator* (1940), and *Limelight* (1952).

Chapman, George, 1559?–1634, English dramatist, translator, and poet. A classical scholar, he translated HOMER's *Iliad* (1612) and *Odyssey* (1614–15). His works include the tragedy *Bussy d'Ambois* (1607) and the comedy *Eastward Ho!* (1605).

Chapman, John, 1774–1845, American pioneer popularly known as Johnny Appleseed; b. Massachusetts. Raggedly dressed, he wandered for 40 years through Ohio, Indiana, and W Pennsylvania, sowing apple seeds. Chapman inspired many legends.

Chapultepec [chäpo͞ol"täpĕk'], fortified hill, S of Mexico City. A traditional home of Spanish viceroys and Mexican rulers, it was the site of a brave defense to the death by Mexican cadets (the "boy heroes") when it was stormed and taken (1847) by U.S. forces during the MEXICAN WAR. The castle is maintained as a historical museum.

Charlie Chaplin

Char, René, 1907–88, French poet. His verse and aphorisms reflect his Provençal origins and his participation in the French resistance. Marked by extreme stylistic economy, they seek to endow language with an authenticity lost in everyday use. His *Selected Poems* was published in 1982.

char: see SALMON.

charcoal, nonvolatile residue obtained when organic matter, usually wood, is heated in the absence of air. Largely pure CARBON, charcoal yields more heat per volume than wood. Charcoal obtained from bones is called bone black or animal charcoal. Finely divided charcoal, with its porous structure, efficiently filters the adsorption of gases and of solids from solution. In activated charcoal, this property is increased by heat or chemical processing. Charcoal is used in sugar refining and in water and air purification.

Charcot, Jean Martin [shärkō'], 1825–93, French neurologist. He developed at the Salpêtrière, Paris, the greatest clinic of his time for diseases of the nervous system. His insight into the nature of hysteria was credited by Sigmund Freud, his pupil, as having contributed to early psychoanalytic formulations on the subject.

Chardin, Jean-Baptiste-Siméon [shärdăN'], 1699–1779, French painter. He favored simple still lifes and unsentimental domestic interiors. His muted tones and ability to evoke textures are seen in *Benediction* and *Return from Market* (both: Louvre) and *Blowing Bubbles* and *Mme Chardin* (both: Metropolitan Mus.). His unusual abstract compositions had great influence.

charge, in ELECTRICITY, property of matter that gives rise to all electrical phenomena. The basic unit of charge, usually denoted by *e*, is that on the PROTON or ELECTRON; that on the proton is designated as positive ($+e$) and that on the electron is designated as negative ($-e$). All other charged ELEMENTARY PARTICLES have charges equal to $+e$, $-e$, or some whole number times one of these, with the exception of the QUARK, a particle whose charge is $\frac{1}{3}e$ or $\frac{2}{3}e$. Every charged particle is surrounded by an electric FIELD of force such that it attracts any charge of opposite sign brought near it and repels any charge of like sign. The magnitude of this force is described by COULOMB'S LAW. This force is much stronger than the gravitational force between two particles and is responsible for holding protons and electrons together in ATOMS and in chemical bonds. Any physical system containing equal numbers of positive and negative charges is neutral. Charge is a conserved quantity; the net electric charge in a closed physical system is constant. Although charge is conserved, it can be transferred from one body to another. Electric current is the flow of charge through a conductor (see CONDUCTION).

charismatics, neo-Pentecostal Christians whose worship emphasizes the gifts of the Spirit (charismata) listed by St. Paul in Corinthians, especially healing and speaking in tongues (glossolalia). Contemporary charismatics are distinguished from other Pentecostals by their origins in non-Pentecostal (especially mainline Protestant and Roman Catholic) churches during the "charismatic renewal" movements of the 1960s.

Charlemagne (Charles the Great) or **Charles I** [shär'ləmān], 742?–814, emperor of the West (800–814), Carolingian king of the Franks (768–814). The son of PEPIN THE SHORT, he consolidated his rule in his own kingdom, invaded Italy in support of the pope, and in 774 was crowned king of the Lombards. He took NE Spain from the MOORS (778) and annexed Bavaria (788). After a long struggle (772–804) he subjugated and Christianized the Saxons. In 800 he restored LEO III to the papacy and was crowned emperor by him on Christmas Day, thus laying the basis for the HOLY ROMAN EMPIRE and finalizing the split between the Byzantine and Roman empires. Charlemagne ruled through a highly efficient administrative system. He codified the law in his various dominions, and his court at AACHEN was the center for an intellectual and artistic renaissance. The end of his reign was troubled by raids by the NORSEMEN. His son, LOUIS I, was named co-emperor in 813 and succeeded on his father's death. Charlemagne's legend soon enhanced and distorted his actual achievements, and he became the central figure of a medieval romance cycle.

Charles, emperors (see HOLY ROMAN EMPIRE). **Charles II** or **Charles the Bald,** 823–77, emperor of the West (875–77) and king of the West Franks (843–77), was the son of Emperor LOUIS I by a second marriage. Louis's attempts to create a kingdom for Charles were responsible for the almost constant warfare with Charles's elder brothers, LOTHAIR I and LOUIS THE GERMAN. In 843 Charles received what is roughly modern France, and in 870 he divided LOTHARINGIA with Louis. Charles became emperor upon the death of his nephew LOUIS II. His brief reign saw the rise of the power of the nobles and serious threats by the NORSEMEN. **Charles III** or **Charles the Fat,** 839–88, emperor of the West (881–87), king of the East Franks, or Germany (882–87), and king of the West Franks, or France (884–87), was the son of Louis the German. He inherited Swabia (876) and was crowned king of Italy (881). When he became king of France, he briefly reunited the empire of Charlemagne. A weak ruler, he was deposed in 887 after he failed to stop the inroads of the Norsemen. **Charles IV,** 1316–78, Holy Roman emperor (1355–78), succeeded his father, John of Luxembourg, as king of BOHEMIA (1346) and was elected antiking to Emperor Louis IV, after whose death he made his claim. As emperor he promulgated the Golden Bull, which strengthened the German ELECTORS at the expense of the emperor. He founded Charles Univ. at PRAGUE. **Charles V,** 1500–58, Holy Roman emperor (1519–58) and, as Charles I, king of Spain (1516–56), was the son of PHILIP I and JOANNA of Castile, and grandson of Emperor MAXIMILIAN I and MARY OF BURGUNDY. Charles was the greatest of all HAPSBURG emperors. He inherited a vast empire: the Spanish kingdoms, Spanish America, Naples, Sicily, the Low Countries, and the hereditary Austrian lands. The chief problems he faced were the Protestant REFORMATION in Germany; the dynastic conflict with FRANCIS I of France, particularly for supremacy in Italy; and the Ottoman Turks, then at the height of their power. He also had difficulties with his Spanish subjects, who at first regarded him as a foreigner. Initially successful against the Protestant princes in Germany, he eventually was forced to compromise with them and to accept (1555) the Peace of Augsburg. He was more successful in promoting the Catholic REFORMATION. The imperialist struggle with France was a Pyrrhic victory for Spain. His efforts to halt the advance of the Ottomans under SULAYMAN I resulted in at best a standoff. As king of Spain, he was triumphant. The conquest of Mexico and Peru represented the high point of the Spanish empire. In 1556 Charles abdicated all his titles and retired to a monastery. His son PHILIP II received Spain, America, Naples, and the Netherlands; and his brother became emperor as FERDINAND I. **Charles VI,** 1685–1740, Holy Roman emperor (1711–40) and, as Charles III, king of Hungary (1712–40), was, before his accession, involved in both the War of the SPANISH SUCCESSION and the War of Polish Succession (1333–35). The PRAGMATIC SANCTION, whereby he settled his Hapsburg lands on his daughter MARIA THERESA, was challenged after his death. **Charles VII,** 1699–1745, Holy Roman emperor (1742–45) and, as Charles Albert, elector of BAVARIA (1726–45), refused to recognize the Pragmatic Sanction, and joined the coalition against Maria Theresa in the War of the AUSTRIAN SUCCESSION. He was elected emperor, but lost his own Bavaria to Austrian occupation.

Charles I, 1887–1922, last emperor of Austria and, as Charles IV, king of Hungary (1916–18). After his accession during WORLD WAR I, he put out peace feelers, causing friction between Germany and Austria. After Austria's defeat he was unable to save the AUSTRO-HUNGARIAN MONARCHY, and he abdicated (Nov. 1918). In 1921 he tried twice to regain the Hungarian throne, without success.

Charles, kings of England, Scotland, and Ireland, of the STUART house. **Charles I,** 1600–49 (r.1625–49), was the son and successor of JAMES I. Upon his accession, he offended his Protestant subjects by marrying HENRIETTA MARIA, a Catholic French princess. Also, the foreign ventures of his favorite, the duke of BUCKINGHAM, were unsuccessful and expensive. His reign soon became the bitter struggle between king and Parliament for supremacy that resulted in the ENGLISH CIVIL WAR. Charles supported the Anglican bishops under LAUD. Parliament, largely Puritan, controlled money grants and developed the tactic of withholding money until its grievances were redressed. Charles dismissed Parliament in 1625 and 1626, but called it again in 1628 and signed the PETITION OF RIGHT in return for a subsidy. After 1629 he ruled without Parliament. Civil and religious liberties reached a low point, and large emigrations to America took place. A crisis was reached when Charles's attempt to force episcopacy upon Scotland resulted in the BISHOPS' WARS. Eventually the Long Parliament (1640) was called. Led by John Hampton, PYM, and VANE, it secured itself against dissolution and effected the death of the earl of STRAFFORD, the abolition of STAR CHAMBER courts, and the end of arbitrary taxation. Fear of the king and of Catholics mounted, and civil war broke out. Defeated at Marston Moor (1644) and Naseby (1645), Charles surrendered to the Scottish army (1646) and finally fell into the hands of the English. He was tried by a high court controlled by his enemies, convicted of treason, and beheaded. Often stupid and obstinate, Charles brought about his own downfall as much by his weakness of character as by his religious and political beliefs. His son, **Charles II,** 1630–85 (r.1660–85), fled to France in 1646. On his father's death, he was proclaimed king of Scotland and, after accepting the terms of the COVENANTERS, was crowned there in 1651. He then marched into England but was defeated by Oliver CROMWELL and escaped to France. In 1660 he issued the conciliatory Declaration of Breda. Later that year, Gen. MONCK engineered Charles's RESTORATION to the throne. He made the earl of CLARENDON his chief minister. Episcopacy was restored and nonconformity weakened by the CLARENDON CODE, although the king favored toleration. The great London plague (1665) and fire (1666) took place during the second DUTCH WAR (1664–67). In 1667 the CABAL ministry replaced Clarendon. As a result of a secret treaty with LOUIS XIV of France, Charles entered the third Dutch War in 1672. It was unpopular, and he was forced to approve the TEST ACT (1673) and make peace (1674). His French alliance was broken by the marriage of his niece Mary to William of Orange. He intervened in the Titus OATES affair to protect the queen, CATHERINE OF BRAGANZA. In 1681 he dissolved Parliament to block passage of the Exclusion act that prevented his brother, the duke of York (later JAMES II), from succeeding him, and ruled absolutely thereafter. Although he fathered illegitimate children by several mistresses (e.g., Nell GWYN), he had no legitimate children and was succeeded by James II. His reign, the brilliant Restoration period, was marked by an increase in the power of Parliament, the rise of political parties, and advances in colonization and trade.

Charles, kings of France. **Charles I:** see CHARLEMAGNE. **Charles II** and **Charles III** (the Fat): see CHARLES II and CHARLES III, emperors of the West. **Charles III** (the Simple), 879–929 (r.893–923), was the son of LOUIS II and joint king with Eudes, count of Paris, until 898. He ceded (911) part of Normandy to the Norse leader Rollo and was defeated and imprisoned (923) by nobles who made Raoul of Burgundy king. **Charles IV** (the Fair), 1294–1328 (r.1322–28), succeeded his brother PHILIP V and was the last king of the CAPETIAN dynasty. **Charles V** (the Wise), 1338–80 (r.1364–80), the son of JOHN II, was regent during John's captivity (1356–60, 1364) in England. As regent Charles dealt with the JACQUERIE and the reformist movement of Étienne Marcel. During his reign his general Bertrand DU GUESCLIN nearly drove the English out of France. With his ministers, Charles strengthened royal power, founded a standing army, reformed taxation, and patronized the arts. His son **Charles VI** (the Mad or the Well Beloved), 1368–1422 (r.1380–

1422), was intermittently insane after 1392. France was ruled and plundered by his uncle PHILIP THE BOLD and by his brother Louis d'Orléans. Their rivalry led to a civil war that laid France open to an invasion (1415) by HENRY V of England. By the Treaty of Troyes (1420) Charles named Henry his successor. His disinherited son **Charles VII** (the Victorious or the Well Served), 1403–61 (r.1422–61), repudiated the treaty. Still called the DAUPHIN, he ruled indolently over what parts of France remained to him S of the Loire, but in 1429 JOAN OF ARC spurred him to action and had him crowned king at Rheims. In 1435 he won the alliance of Burgundy against England, and in 1453 he ended the HUNDRED YEARS WAR by expelling the English from most of France. He reorganized the army and, with the help of Jacques CŒUR, restored the finances. The PRAGMATIC SANCTION of Bourges (1438) and the suppression of the Praguerie (1440), a revolt of the nobility, strengthened royal authority. Charles's last years were troubled by the intrigues of his son, the future LOUIS XI. **Charles VIII,** 1470–98 (r.1483–98), was the son of Louis XI. His sister Anne de Beaujeu was regent during his minority and arranged his marriage (1491) to ANNE OF BRITTANY. In 1495 Charles began the ITALIAN WARS with the short-lived conquest of Naples. **Charles IX,** 1550–74 (r.1560–74), was at first under the regency of his mother, CATHERINE DE' MEDICI. Later he chose Gaspard de COLIGNY as chief adviser, but was persuaded to take part in the massacre of SAINT BARTHOLOMEW'S DAY (1572). **Charles X,** 1757–1836 (r.1824–30), known as the comte d'Artois before he succeeded his brother, LOUIS XVIII, in 1824, led the powerful ultraroyalist group before his accession and as sovereign had reactionaries as premiers. Liberal and capitalist forces joined to bring about the JULY REVOLUTION of 1830. Charles abdicated and died in exile.

Charles, kings of Hungary. **Charles I,** 1288–1342 (r.1308–42), was the grandson of CHARLES II of Naples and son-in-law of Stephen V of Hungary. In 1308 he was elected king by the Hungarian diet and thus founded the Angevin dynasty in Hungary. He reorganized the army on a feudal basis and increased the privileges of the cities. His eldest son became King Louis I of Poland. **Charles II:** see CHARLES III, king of Naples. **Charles III**: see CHARLES VI, Holy Roman emperor. **Charles IV:** see CHARLES I, emperor of Austria.

Charles, rulers of Naples. **Charles I** (Charles of Anjou), 1227–85, king of Naples and Sicily (1266–85), was a brother of LOUIS IX of France. Charles championed the papal cause against MANFRED in Naples and Sicily, and as a reward the pope crowned him (1266) king. He founded the Angevin dynasty in Naples. Heavy taxes to support his wars against the Byzantine Empire led to a rebellion (1282) in Sicily (see SICILIAN VESPERS). The ensuing war with PETER III of Aragón, who was chosen king by the rebels, continued into the reign of his son, **Charles II** (the Lame), 1248–1309, king of Naples (1285–1309). Charles II's great-grandson, **Charles III** (Charles of Durazzo), 1345–86, king of Naples (1381–86), was adopted by Joanna I of Naples, who later repudiated him in favor of Louis of Anjou (later Louis I of Naples). Charles deposed Joanna, was crowned king (1381), and repulsed Louis's attacks. In 1385 Charles was elected king of Hungary over Holy Roman emperor SIGISMUND, but he was assassinated soon afterward.

Charles II (the Bad), 1332–87, king of Navarre (1349–87). He carried on a long feud with his father-in-law, JOHN II of France, and allied himself with EDWARD III of England. Charles helped to suppress the JACQUERIE (1358) and was chosen by Étienne Marcel to defend Paris against the DAUPHIN (later King CHARLES V), but he betrayed this trust.

Charles, kings of Spain. **Charles I:** see CHARLES V, Holy Roman emperor. **Charles II,** 1661–1700, king of Spain, Naples, and Sicily (1665–1700), was a mentally retarded cripple whose mother, Mariana of Austria, ruled as regent. During his reign Spain continued to lose influence abroad and to suffer a decline in its economy and intellectual life. His choice of an heir provoked the War of the SPANISH SUCCESSION. **Charles III,** 1716–88, king of Spain (1759–88) and of Naples and Sicily (1735–59), was Spain's greatest BOURBON king. He conquered and ruled NAPLES and SICILY before becoming king of Spain. By involving Spain in the SEVEN YEARS WAR on the side of the defeated French, he lost Florida to England. But he fought on the colonists' side in the AMERICAN REVOLUTION and thereby regained (1783) Florida. His reign was noteworthy for Spain's prosperity and for his expulsion of the JESUITS. **Charles IV,** 1748–1819 (r.1788–1808), was an ineffective ruler who allowed his chief minister, GODOY, to pursue disastrous policies. Spain suffered major naval defeats by England at Cape Saint Vincent (1797) and TRAFALGAR (1805), and it suffered reverses (1808) in the PENINSULAR WAR, which forced his abdication.

Charles, kings of Sweden. **Charles IX,** 1550–1611 (r.1604–11), was the youngest son of GUSTAVUS I. As regent after the death of his brother, John III, he made Lutheranism the state religion. By his efforts the Catholic heir, SIGISMUND III of Poland, was deposed (1599). Charles became king after Sigismund's brother, John, renounced the Swedish crown. In 1600 he began the Polish-Swedish wars that ended only in 1660. His son, GUSTAVUS II, succeeded him. **Charles X,** 1622–60 (r.1654–60), was the nephew of Gustavus II. He succeeded on the abdication of his cousin, CHRISTINA. He invaded Poland (1655) but soon suffered reverses. After Denmark and Russia entered the war, Charles forced the Danes (1658) to cede territory that extended Sweden's southern boundaries to the sea. His son **Charles XI,** 1655–97 (r.1660–97), succeeded him. A council of regency ruled until he was 17. In the third of the DUTCH WARS he was defeated by FREDERICK WILLIAM of Brandenburg (1675). Under Charles, royal power was increased at the nobles' expense. **Charles XII,** 1682–1718 (r.1687–1718), was the son of Charles XI. Facing (1699) a coalition of Russia, Poland, and Denmark in the NORTHERN WAR, he forced Denmark to make peace (1700); invaded Poland and had STANISLAUS I enthroned (1704); and, with MAZEPA, invaded Russia, where his army was crushingly defeated (1708). He fled to Turkey and persuaded AHMED III to declare war on Russia (1710). After Turkey and Russia made peace (1711), Charles refused to leave Turkey and was imprisoned. At Swedish-occupied Stralsund (1714–15) he fought the Prussians and Danes. When Stralsund fell, he fled to Sweden and invaded (1716) Norway, where he was killed in battle. His sister, Ulrica Leonora, succeeded him under a new constitution that strengthened the nobles and clergy. **Charles XIII,** 1748–1818, was king of Sweden (1809–18) and Norway (1814–18). He was regent for his nephew, GUSTAVUS IV, after the assassination (1792) of his brother GUSTAVUS III. Called to the throne at the forced abdication of his nephew, Charles accepted a new constitution limiting royal power, signed treaties with Denmark and France, and ceded Finland to Russia. **Charles XIV** (Charles John; Jean Baptiste Jules Bernadotte), 1763–1844, king of Sweden and Norway (r.1818–44), was a French Revolutionary general. He served under Napoleon in Italy (1796–97), was French ambassador at Vienna (1798), and was minister of war (1799). In 1810 the aging and childless Charles XIII of Sweden adopted him, and he was elected crown prince by the Riksdag. He allied Sweden with England and Russia against NAPOLEON I and took part in his defeat at Leipzig (1813). In 1814 he forced Denmark to cede Norway, which was united with Sweden under a single king. He succeeded to the throne in 1818, having held the reins of government since 1810. His son, Oscar I, succeeded him. **Charles XV,** 1826–72 (r.1859–72), was the son of Oscar I. A liberal ruler, he agreed to such reforms as a bicameral parliament. He was succeeded by his brother, Oscar II. **Charles XVI Gustavus** (Carl Gustaf), 1946– (r.1973–), is the grandson and successor of GUSTAVUS VI and the son of Prince Gustaf Adolf of Sweden. A new Swedish constitution, passed shortly before his grandfather's death and effective in 1975, made the king a ceremonial figurehead.

Charles, 1948–, prince of Wales, eldest son of ELIZABETH II of Great Britain and heir apparent to the British throne. He was created prince of Wales in 1958. Prince Charles has become an outspoken critic of modern architecture, and in 1992 he established an architectural institute to promote more traditional approaches to building. In 1981 he married Lady Diana Spencer (see DIANA, princess of Wales); they separated in 1992. They have two sons, William and Henry.

Charles, 1771–1847, archduke of Austria, brother of Holy Roman Emperor FRANCIS II. Despite his epilepsy, he was an able Austrian commander. In 1809 he defeated NAPOLEON I at Aspern (May) but was beaten at Wagram (July).

Charles, Jacques Alexandre César [shärl], 1746–1823, French physicist. He discovered (1787) Charles's, or Gay-Lussac's, law (see GAS LAWS); invented a thermometric hydrometer; and was the first to use hydrogen gas in balloons.

The key to pronunciation appears on page xiii.

Charles, Ray (Ray Charles Robinson), 1930–, African-American musician and composer; b. Albany, Ga. Blinded at age seven, he rose to fame in the 1950s singing rhythm-and-blues songs to the accompaniment of his piano and orchestra. His work, rooted in GOSPEL MUSIC, influences, and is influenced by, JAZZ.

Ray Charles

Charles Edward Stuart: see under STUART, JAMES FRANCIS EDWARD.

Charles Martel, 688?–741, Frankish ruler, illegitimate son of PEPIN of Heristal and grandfather of CHARLEMAGNE. Although never king, he ruled as mayor of the palace (714–41). He united all MEROVINGIAN kingdoms under his rule and halted the European invasion of the MOORS. His sons, PEPIN the Short and Carloman, divided the Frankish lands at his death.

Charles's law: see GAS LAWS.

Charles the Bald, French king: see Charles II under CHARLES, emperors.

Charles the Bold, 1433–77, duke of BURGUNDY (1467–77), son of PHILIP THE GOOD. He opposed the growing power of LOUIS XI of France and allied himself with England. Master of the Low Countries, Charles dreamed of reestablishing the kingdom of LOTHARINGIA, to which end he tried to acquire Alsace and Lorraine. The Swiss, roused by his actions, routed him at Grandson and Morat (1476) and in 1477 defeated and killed Charles at Nancy. Burgundy then disintegrated.

Charles the Fat, French king: see Charles III under CHARLES, emperors.

Charles the Great, Frankish king, emperor of the West: see CHARLEMAGNE.

Charleston. **1** City (1990 pop. 80,414), seat of Charleston co., SE S.C.; founded 1680, inc. 1783. On a peninsula between the Ashley and Cooper rivers, it is a major regional port. U.S. naval operations provide much employment; chemicals, steel, and other products are manufactured. The oldest city in the state, it was the scene of the first incident of the CIVIL WAR, the firing on FORT SUMTER (Apr. 12, 1861); it fell to Gen. SHERMAN's army in 1865. A major tourist center and the site of the Spoleto Festival U.S.A. Charleston is famous for its picturesque streets, houses, and other 18th-cent. monuments, reminders of its early importance as a prosperous, cosmopolitan port. **2** City (1990 pop. 57,287), state capital and seat of Kanawha co., W central W.Va., on the Kanawha R. where it meets the Elk R.; inc. 1794. The largest city in the state, it is a major chemical, glass, and metal producer. The region provides salt, coal, natural gas, clay, sand, timber, and oil for the city's manufactures. The city, which grew around Fort Lee (1788), was the home (1788–95) of Daniel BOONE. It was state capital from 1870–75 and after 1885.

Charlotte, city (1990 pop. 395,934; met. area 1,162,093), seat of Mecklenburg co., S N.C.; inc. 1768. It is the largest city in North Carolina, the commercial and industrial center of the Piedmont region, a major U.S. banking center, and a distribution hub for the Carolina textile manufacturing belt, which utilizes Catawba R. hydroelectric power. An early center of rebellion against British rule, it was the site of the signing of the MECKLENBURG DECLARATION OF INDEPENDENCE (May 1775).

Charlotte Amalie, city (1990 pop. 12,331), on St. Thomas, capital of the U.S. VIRGIN ISLANDS.

Charlottetown, city (1991 pop. 15,396), capital, chief port, and only city of Prince Edward Island, E Canada. Food processing, fishing, and tourism are major industries. Charlottetown was laid out by the British in 1768 and named for George III's queen. It was noted in the mid-1800s for the sailing ships built there. The Charlottetown Conference (1864) was the first step toward Canadian confederation. The Charlottetown Festival, held every summer in the Confederation of the Arts Centre (built 1960s), is a major cultural event.

Charon, in astronomy, natural satellite of PLUTO.

Chartism, worker's political reform movement in Great Britain, 1838–48. It derived its name from the People's Charter, drafted by the London Working Men's Association, which called for such reforms as universal male suffrage.

Chartres, city (1982 pop. 37,119), capital of Eure-et-Loir dept., NW France. The probable site of DRUIDS' assemblies, it became a royal possession (1286) and a duchy (1528). Its magnificent Gothic cathedral (12th–13th cent.) is renowned for its spires and stained-glass windows; there the Second Crusade was preached (1146) and Henry IV crowned (1594).

Charybdis: see SCYLLA AND CHARYBDIS.

Chase, Salmon Portland, 1808–73, 6th chief justice of the U.S. SUPREME COURT (1864–73); b. Cornish, N.H.; grad. Dartmouth College (1826). A zealous abolitionist, he served as U.S. senator (1849–55; 1861) and as governor of Ohio (1855–59). As chief justice he presided over the impeachment trial of Pres. Andrew JOHNSON with scrupulous fairness. His greatest achievement, however, was as secretary of the treasury (1861–64), when he created a national bank system.

Chase, William Merritt, 1849–1916, American painter; b. Williamsburg, Ind. He is known for his portraits and still lifes in oil, e.g., *Carmencita* and *Lady in Black* (Metropolitan Mus.). Chase was also an important art teacher.

château, royal or seignorial residence and stronghold of medieval France, counterpart of the English CASTLE. The fortified château culminated in the late 15th cent., e.g., Pierrefonds, near Compiègne. Sixteenth-cent. châteaux, with gardens and outbuildings, usually had a moat, but were little fortified. Notable châteaux are those of the Loire, Indre, and Cher valleys, e.g., Chambord, Amboise, Chenonceaux.

Chateaubriand, François René, vicomte de [shätōbrēäN'], 1768–1848, French writer. A founder of ROMANTICISM in French literature, he visited the U.S. in 1791 and until 1800 was an émigré in England. A Royalist, he was minister of foreign affairs (1823–24). He made his mark with *The Genius of Christianity* (1802) and two tragic love stories about Native Americans, *Atala* (1801) and *René* (1805), exemplifying the melancholy, poetic style that became typical of romantic fiction. He spent his final years with the celebrated beauty and social figure Mme Récamier, composing his *Memoirs from beyond the Tomb* (1849–50).

Chattanooga, city (1990 pop. 152,466), seat of Hamilton co., E Tenn., on both sides of the Tennessee R. near the Ga. line; inc. 1839. From a trading post (est. 1810) the port city grew into a major shipping point for salt and cotton. It was of great strategic importance in the CIVIL WAR (see CHATTANOOGA CAMPAIGN). Textile, chem-

ical, and metal industries are important. The city is surrounded by mountains, e.g., Lookout Mt., and is a tourist center, with the world's largest freshwater aquarium.

Chattanooga campaign, Aug.–Nov. 1863, in the U.S. CIVIL WAR. Union Gen. William Rosecrans maneuvered (Aug.–Sept.) Confederate Gen. Braxton BRAGG out of strategic Chattanooga, Tenn., but Bragg routed the Union right wing at the Battle of Chickamauga (Sept. 19–20). The Union left, under Gen. George H. THOMAS, withdrew to Chattanooga, which Bragg besieged from Missionary Ridge. Rosecrans, although reinforced by Gen. Joseph HOOKER, needed help, and Gen. U.S. GRANT took command. Hooker drove the Confederates from Lookout Mt. in the Battle above the Clouds (Nov. 24). Grant attacked and carried Missionary Ridge (Nov. 25), and Bragg was forced to retreat to Georgia.

Chatterjee, Bankim Chandra, 1838–94, Indian nationalist writer. His historical novels, written in Bengali, include *Anandamath* (1882), from which India's national anthem was derived, and *Krishna Kanta's Will* (tr. 1895).

Chatterton, Thomas, 1752–70, English poet. At age 12 he was composing the "Rowley poems" and claiming they were copies of 15th-cent. manuscripts. He came to London, failed to get his work published, and killed himself at 17. An original genius as well as an adept imitator, he used 15th-cent. language but a modern approach. He was a hero to the Romantics.

Chaucer, Geoffrey, c.1340–1400, English poet. The facts of Chaucer's life are fragmentary. A London vintner's son, he served as a court page, in the army, and on frequent diplomatic missions, then held various official positions in London. His literary activity falls into three periods. In the first (to 1370), he worked largely from French models, including the *Roman de la rose,* which he partially translated. His major work from this time is the allegorical *Book of the Duchess* (1369). In the second period (to c.1387) he used Italian models, primarily DANTE and BOCCACCIO. His chief works in these years include the *House of Fame,* recounting the adventures of AENEAS after the fall of Troy; *The Parliament of Fowls,* on the mating of birds on St. Valentine's Day, thought to celebrate the betrothal of RICHARD II to Anne of Bohemia; a prose translation of BOETHIUS; the unfinished *Legend of Good Women,* on classical heroines, in which he introduced the rhymed heroic couplet; and *Troilus and Criseyde,* based on Boccaccio, one of the great love poems in English, in which he perfected the seven-line stanza later called rhyme royal. Chaucer's final period was devoted to work on his masterpiece, *The Canterbury Tales.* This unfinished work, about 17,000 lines, is one of the major poems of world literature. In it a group of pilgrims traveling to the shrine of St. Thomas à Becket decide to pass the time by telling stories. The tales include a variety of medieval genres, from the humorous fabliau to the serious homily, and vividly depict medieval attitudes toward love, marriage, and religion. Chaucer's brilliantly realized characters—the earthy Wife of Bath, the gentle Knight, the evil Summoner—are intensely alive. Chaucer's storytelling and poetic mastery were overlooked for centuries because of changes in the language after 1400, but in the 18th cent. he came to be regarded as one of the greatest English poets.

Chautauqua movement. A development in adult education similar to the LYCEUM movement, it was proposed in 1873 at the Methodist Episcopal camp meeting in Chautauqua, N.Y., by John Heyl Vincent and Lewis Miller. Eight-week summer programs offered members secular and religious instruction, and lectures by authors, explorers, musicians, and political leaders. Somewhere between revival meetings and country fairs in spirit, Chautauquas were attended by thousands each year. They were organized commercially in 1912 and persisted until c.1924.

Chavannes, Puvis de: see PUVIS DE CHAVANNES.

Chavez, Cesar Estrada, 1927–93, American agrarian labor leader; b. near Yuma, Ariz. A migrant worker, he began (1962) to organize wine-grape pickers in California. Using strikes, fasts, picketing, and marches, he won contracts from several major growers. He later launched nationwide boycotts against the table-grape and lettuce growers. In 1972 the United Farm Workers (UFW), with Chavez as president, became a member union of the AFL-CIO. A jurisdictional dispute with the TEAMSTERS was ended by a 1977 pact that defined the types of workers each union could organize.

Chavín de Huantar, archaeological site in NE Peru, probably the center of the Chavín culture (fl. c.700–c.200 B.C.), earliest civilization of the Andes. It is noted for advanced temples, painted sculptures, gold objects, and textiles.

Chavis, Benjamin Franklin, Jr. 1948–, African-American civil-rights leader; b. Oxford, N.C. A civil-rights activist from boyhood, he was wrongly jailed (1972–80) after leading a Wilmington, N.C., demonstration. Chavis was an official of the United Church of Christ before his appointment (1993) as director of the NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE.

checkerberry: see WINTERGREEN.

checkers, game for two players, known in England as draughts. It is played on a square board composed of 64 small squares, alternately dark and light in color, with all play conducted on the dark squares. On each turn, players on opposite sides of the board may move one of their 12 pieces diagonally in a forward direction. Kings (pieces "crowned" by reaching the last rank of the board) may move either backward or forward diagonally. The object is to eliminate an opponent's pieces by "jumping" them (jumping over the squares that they occupy). The game has been played in Europe since the 16th cent., and a similar game is known to have been played in ancient times.

cheese, food known from ancient times, consisting of the curd of MILK separated from the whey. Although milk from various animals has been used for making cheese, today milk from cows, sheep, and goats is most common. In making cheese, CASEIN, the chief milk protein, is coagulated by enzyme action, by lactic acid, or by both. The many kinds of cheeses depend for their distinctive qualities on the kind and condition of the milk, the processes used in their making, and the method and extent of curing. There are two main kinds of cheeses: hard cheeses, which improve with age, and soft cheeses, made for immediate consumption. Hard cheeses include Cheddar (originally from England), Edam and Gouda (Holland), Emmental and Gruyère (Switzerland), and Parmesan and Provolone (Italy). Among the semisoft cheeses are Roquefort (France), American brick, and Muenster. Soft cheeses may be fresh (unripened), e.g., cream and cottage cheeses, or may be softened by microorganisms in a ripening process that develops flavor, e.g., Camembert, Brie, and Limburger. Cheese is a valuable source of protein, fat, insoluble minerals, and, when made from whole milk, vitamin A.

cheetah, CAT (*Acinonyx jubatus*) found in Africa, SW Asia, and India. The swiftest four-footed animal, it runs down its prey at speeds of over 60 mi (95 km) per hr, the only cat to hunt this way. Cheetahs have tawny coats with many round, black spots; the average adult weighs 100 lb (45 kg). Cheetahs are unique among cats in having nonretractile claws. Hunting has greatly reduced their numbers.

Cheever, John, 1912–82, American author; b. Quincy, Mass. A moralist whose works are often comic or surreal, he wrote about America's affluent suburbs, e.g., *The Wapshot Chronicle* (1957) and *Oh What A Paradise It Seems* (1982). Many of his stories are in *The Stories of John Cheever* (1978; Pulitzer), and selections from his journals were published posthumously in *The Journals of John Cheever* (1991).

Cheka, Russian acronym for the Extraordinary Commission for Combating Counterrevolution, Speculation, Sabotage, and Misuse of Authority, the Soviet state security service (including the secret police) established (1917) by the Bolsheviks. The Cheka was headed by Felix DZERZHINSKY. Lenin presided (1922) over its reorganization, renaming it the GPU (State Political Directorate). It became the OGPU (United State Political Directorate) in 1923 and the NKVD (People's Commissariat for Internal Affairs) in 1934. See also KGB; SECRET POLICE.

Chekhov, Anton Pavlovich [chĕ'khəv], 1860–1904, Russian writer and physician. The son of a grocer and grandson of a serf, he helped support his family, while he studied medicine, by writing humorous sketches. His reputation as a master of the short story was assured when in 1888 "The Steppe," a story in his third collection, won the Pushkin Prize. *The Island of Sakhalin* (1893–94) was a report on his visit to a penal colony in 1890. Thereafter he lived in Melikhovo, near Moscow, where he ran a free clinic for peasants, took part in famine and epidemic relief, and was a vol-

unteer census-taker. His first play, *Ivanov* (1887), had little success, but *The Seagull* (1898), *Uncle Vanya* (1899), *The Three Sisters* (1901), and *The Cherry Orchard* (1904) were acclaimed when produced by the Moscow Art Theater. In 1901 Chekhov married the actress Olga Knipper, the interpreter of many of his characters. Three years later he died of tuberculosis. The style of his stories, novels, and plays, emphasizing internal drama, characterization, and mood rather than plot and focusing on the tragicomic aspects of banal events, had great influence.

chelicerate, member of a subphylum (Chelicerata) of ARTHROPODS comprising the HORSESHOE CRABS, ARACHNIDS, and SEA SPIDERS. Chelicerates are characterized by the absence of antennae and jaws and the presence of feeding structures (chelicera), which are modified pincerlike appendages used mainly for grasping and fragmenting food.

Chelyabinsk, city (1990 est. pop. 1,150,000), W Siberian Russia, in the southern foothills of the Urals and on the Mias R. A major industrial center, it processes ore and produces steel and farm machinery. Founded in 1736 as a Russian frontier outpost, it lies on the Trans-Siberian RR.

chemical pollutants: see POLLUTION; WASTE DISPOSAL.

chemical warfare, employment in warfare of toxic substances to damage or kill plants, animals, or human beings. POISON GAS was effectively used during WORLD WAR I, when chlorine gas and mustard gas inflicted heavy casualties on both sides. After the war the major powers continued to develop and stockpile chemical agents, but lethal types were not employed during World War II. Modern delivery systems—artillery shells, grenades, missiles, and aircraft spray systems—have increased the potential effectiveness of chemical weapons, and thousands of synthetic toxins and naturally occurring poisons have been tested for use in warfare since World War II. Besides potentially lethal chemicals that attack the skin, the blood, the nervous system, or the respiratory system, there are also nonlethal incapacitating agents that cause temporary physical disability or mental effects such as confusion, fright, or stupor. Such agents, e.g., tear gas, may be used in riot control as well as warfare. Various forms of HERBICIDES and defoliants were used during the VIETNAM WAR to destroy crops and clear away vegetation. In the early 1980s there were reports that a lethal agent, popularly called "yellow rain," was being used in Southeast Asia, but many of the reports were questioned or discredited. Iraq and Iran used chemical weapons during the IRAN-IRAQ WAR, and Iraq used them against its Kurdish minority and threatened to use them in the PERSIAN GULF WAR, but it is unclear whether their use was attempted or not. In 1993 more than 120 countries signed a treaty banning the production, stockpiling, and use of chemical weapons and establishing an independent organization to verify compliance with the treaty. See also BIOLOGICAL WARFARE.

chemistry, branch of science concerned with the properties, composition, and structure of substances and the changes they undergo when they combine or react under specified conditions. INORGANIC CHEMISTRY deals mainly with components of mineral origin. ORGANIC CHEMISTRY was first defined as the study of substances produced by living organisms; it is now defined as the study of the compounds of CARBON. PHYSICAL CHEMISTRY is concerned with the physical properties of materials; its subcategories are ELECTROCHEMISTRY; thermochemistry, the investigation of the changes in ENERGY and ENTROPY that occur during chemical reactions and phase transformations (see STATES OF MATTER); and chemical kinetics, which is concerned with the details of chemical reactions and of how equilibrium is reached between the products and reactants. Analytical chemistry is a collection of techniques that allows exact laboratory determination of the chemical composition of a given sample of material.

Chemnitz, city (1989 est. pop. 312,000), Saxony, SE Germany. Chartered in 1143, it has been a textile center since medieval times, and is now an industrial center with such manufactures as machine tools, chemicals, and vehicles. Notable buildings include a late-Gothic church. Heavily damaged in WORLD WAR II, the city has been rebuilt since 1945. It was named Karl-Marx-Stadt from 1953 to 1990.

chemosynthesis, process in which carbohydrates are manufactured from carbon dioxide and water using chemical nutrients as the energy source, rather than the sunlight used for energy in PHOTOSYNTHESIS. Most life on earth is fueled directly or indirectly by sunlight. There are, however, small ecosystems, such as those in the hot water found around hydrothermal vents on the ocean floor, that depend on bacteria whose life functions are fueled not by the sun but by simple inorganic chemicals, such as hydrogen sulfide, that seep up from the earth's crust.

chemotherapy, treatment of disease with chemicals or drugs; the term most often refers to treatment of CANCER. Traditional cancer chemotherapy poisons all body cells to some extent, but particularly targets rapidly dividing cells such as cancer cells. Its effect on other rapidly dividing cells (hair follicles, cells lining the stomach, and red blood cells) accounts for some of the common side effects. Current approaches use several drugs in combination, aimed at minimizing side effects while attacking the rapidly proliferating cells at vulnerable times. Chemotherapy is highly individualized, depending on the type of disease and its progression, the action of the agents used, and the side effects in the patient, and may be used alone or in combination with other cancer therapies, such as surgery. Knowledge from the field of molecular biology is being applied in experimental drugs that target cancer cells more specifically and inhibit their spread or "starve" them rather than poisoning them.

Cheney, Dick (Richard Bruce Cheney), 1941–, U.S. politician and government official; b. Lincoln, Nebr. A Republican, he held (1969–73, 1974–77) a series of White House posts in the Nixon and Ford administrations, eventually serving (1975–77) as Ford's de facto chief of staff. Elected to Congress from Wyoming in 1978, Cheney was a prominent conservative and became (1988) House Minority whip. He was (1989–93) secretary of defense under Pres. BUSH.

Chengchow: see ZHENGZHOU.

Chengdu or **Chengtu** [both: chŭng-dōō], city (1990 est. pop. 2,810,000), capital of Sichuan prov., SW China, at the confluence of the Nan and Fu rivers. It is an important regional center for metallurgy, chemicals, machinery, and electronics. An ancient walled city, it was the capital of the Shu kingdom (3d cent. A.D.). The cultural hub of SW China, it is the site of Sichuan Univ. and a center of Sichuan opera.

Chénier, André [shānyā'], 1762–94, French poet; b. Constantinople. His pamphlets denouncing the excesses of the REIGN OF TERROR led to his execution. His poems, perhaps the greatest in 18th-cent. France, range from the lyrical, e.g., *La Jeune Captive* (1795) and *Élégies* (1819), to the satirical.

Chennault, Claire Lee, 1890–1958, U.S. general; b. Commerce, Tex. In 1941 he organized in China the American Volunteer Group (called the Flying Tigers). He then headed (1942–45) the U.S. air task force in China.

Cheops: see KHUFU.

Chernenko, Konstantin Ustinovich, 1911–85, Soviet political leader. A protégé of Leonid BREZHNEV, he rose through Communist party ranks in the 1950s, becoming a full member of the Central Committee (1971) and the Politburo (1974). When Yuri ANDROPOV died (1984), he was elected general secretary of the Communist party and chairman of the Presidium. His health was poor and he soon died.

Chernobyl, Ukr. *Chornobyl,* city, N Ukraine near the Belarus border, on the Pripyat R. Ten miles (16 km) to the north, in the town of Pripyat, is the Chernobyl nuclear power plant, site of the world's worst nuclear reactor accident (1986). The cooling system of the plant's No. 4 reactor failed during a test and the core overheated, resulting in an explosion and fire. Fallout contaminated wide areas of E Europe and Scandinavia, most heavily in Belarus and Ukraine. The USSR was criticized for keeping the accident secret until radioactivity was discovered in Sweden and then failing to disclose its extent. Pripyat, Chernobyl, and nearby towns were permanently evacuated as a result of the accident. Ukraine has estimated that as many as 8,000 people died as a result of the accident and its cleanup.

Chernomyrdin, Viktor Stepanovich, 1938–, Soviet and Russian government official. He held positions in the Soviet oil and gas industry and served (1985–89) as minister of the gas industry. In 1992 YELTSIN chose him as Russian prime minister in a compromise. Chernomyrdin, who opposed privatization and other eco-

nomic reforms, gained increased power following the reformers' failure to win (1993) the Russian parliamentary elections.

Cherokee, once the outstanding Native American group in the SE U.S. (see NORTH AMERICA, INDIGENOUS PEOPLES OF). They spoke an Iroquoian language of the Hokan-Siouan stock (see NATIVE AMERICAN LANGUAGES). By the 16th cent. they had an advanced agricultural Eastern Woodlands culture. Soon after 1750 half the tribe died in a smallpox epidemic. In 1827 they established themselves as the Cherokee Nation, with a constitution providing for an elected, republican government. The syllabary devised by SEQUOYAH contributed to their progress. When gold was discovered on their lands, a fraudulent treaty obtained by whites bound the tribe to move West, and they were forcibly removed in 1838 to land in what is now Oklahoma. In the course of this "trail of tears," led by Chief John ROSS, thousands of Cherokees died. In Oklahoma they became the most important of the FIVE CIVILIZED TRIBES. With a 1990 population of 308,132, Cherokees constitute the largest U.S. tribe. Over 94,000 live in Oklahoma, and more than 5,000 live on a reservation in W North Carolina.

Cherokee, language belonging to the Iroquoian branch of the Hokan-Siouan linguistic family. See NATIVE AMERICAN LANGUAGES (table).

cherry, name for various trees and shrubs (genus *Prunus*) of the ROSE family, and for their fruits. Botanically, the small red-to-black fruits are drupes, or stone fruits, closely related to the PEACH, APRICOT, and PLUM. Hundreds of varieties of sweet (*P. avium*) and sour (*P. cerasus*) cherries, believed to be native to Asia Minor, are widely cultivated. Sour cherries are mostly self-fertile, and are hardier and more easily grown than sweet cherries, which must be cross-pollinated. The fruit is popular eaten raw, and in preserves, pies, ciders, and liqueurs. Species of **flowering cherry** are cultivated for their beautiful, usually double flowers; **cherry laurel** species are also cultivated as ornamentals, e.g., American cherry laurel, or mock orange (*P. caroliniana*). The wood of the wild black cherry (*P. serotina*), fine-grained and usually reddish in color, is prized for cabinetwork.

chert, cryptocrystalline variety of QUARTZ, commonly occurring in nodules. Flint—the dark variety of chert—was used by primitive peoples to make knives and spearheads, because, although it is very hard, it is easily shaped by flaking off the edges. It was long used with steel for lighting fires and later for setting off the powder in flintlock firearms.

Cherubini, Luigi [kārōōbē'nē], 1760–1842, Italian composer. He lived in Paris after 1788 and wrote operas of broad dramatic scope in the French tradition, e.g., *Médea* (1797) and *Les Deux Journées* (1800), and sacred music.

Chesapeake, city (1990 pop. 151,976), SE Va., created (1963) by merging the city of South Norfolk with all of Norfolk co. Its vast area includes residential suburbs of Norfolk, commercial farmland, and a portion of the Great Dismal Swamp. Industries include the manufacture of plywood and wood products, chemicals, fertilizers, and cement products.

Chesapeake, U.S. frigate. In June 1807, the *Chesapeake* sailed for the Mediterranean under James BARRON. H.M.S. *Leopard* stopped her and demanded the right to search for British deserters. When Barron refused, the *Leopard* opened fire; Barron had to submit, and four of his crew were impressed. The incident almost precipitated war. In the WAR OF 1812, the *Chesapeake* under James LAWRENCE fought (1813) H.M.S. *Shannon* and was taken; Lawrence's reported last command was "Don't give up the ship!"

Chesapeake Bay, major inlet on the Atlantic shoreline of the U.S. About 200 mi (320 km) long and up to 30 mi (48 km) wide, it is the drowned lower course of the Susquehannah R. and separates the DELMARVA Peninsula from mainland sections of E Maryland and E Virginia. The bay is crossed by the Chesapeake Bay Bridge-Tunnel. BALTIMORE, Md., is the chief port. Rivers feeding into the bay include the POTOMAC and the James, on which JAMESTOWN, the first permanent English settlement in the Americas, was founded in 1607. The bay was explored and charted (1608) by Capt. John SMITH.

chess, game for two players played on a square board composed of 64 small squares, alternately dark and light in color. Each player is provided with 16 pieces, or chessmen, either white or black. Various pieces are set down in a designated order on the two ranks closest to the player. Each piece is moved according to specific rules and is removed from the board when it is displaced by the move of one of the opposing pieces into its square. The objective in chess is to checkmate, or trap, the opponent's king, a piece whose mobility is limited. Chess probably originated in India. By the 13th cent. it was played throughout Europe. The first modern international chess tournament was held in London in 1851. There have been recognized world chess champions since that time, and since the 1970s championship matches, such as those in which Bobby FISCHER took the title from Boris Spassky, Anatoly KARPOV defeated Viktor Korchnoi, and Gary KASPAROV defeated Karpov and Nigel Short, have received worldwide media coverage.

Chesterfield, Philip Dormer Stanhope, 4th earl of, 1694–1773, English statesman and author. He was a noted wit and orator whose literary fame rests on letters to his illegitimate son Philip Stanhope (pub. 1774), aimed at educating a young man, and on letters to his godson (pub. 1890).

Chesterton, G(ilbert) K(eith), 1874–1936, English author, conservative, and Catholic apologist. A prolific writer, he produced studies of Browning (1903) and Dickens (1906); novels, including *The Napoleon of Notting Hill* (1904); detective fiction featuring Father Brown; poems; and essays, collected in *Tremendous Trifles* (1909) and elsewhere. With BELLOC he propounded the economic theory of Distributism.

chestnut, deciduous tree (genus *Castanea*) of the BEECH family, with thin-shelled, sweet, edible nuts borne in bristly burrs, widely distributed in the Northern Hemisphere. The common American chestnut (*C. dentata*), native to the E U.S., is nearly extinct from chestnut blight, a fungal disease, and edible chestnuts are now mostly imported from Italy. Several blight-resistant crosses of the American and Asian chestnuts have been developed. Some American species are called chinquapin.

Cheyenne, indigenous people of the Plains (see NORTH AMERICA, INDIGENOUS PEOPLES OF), with an Algonquian language of the Algonquian-Wakashan stock (see NATIVE AMERICAN LANGUAGES). In the 17th cent. they lived in earth-lodge villages along the Cheyenne R. After acquiring horses (c.1760) they became nomadic buffalo hunters. They were friendly to whites until prospectors swarmed into their lands when gold was found in Colorado. Cheyenne raids against intruders brought punitive actions by the U.S. army. Aroused by an unprovoked massacre at Sand Creek (1864), the Cheyenne waged bitter war that culminated in the Battle of the LITTLE BIGHORN (1876), where Cheyenne annihilated the cavalry of Gen. George CUSTER. In 1877, however, the sick and starving Cheyenne surrendered and were moved first to Oklahoma, then to Montana. In 1990 there were 11,456 Cheyenne in the U.S.

Cheyenne, city (1990 pop. 50,008), alt. 6,062 ft (1,848 m), state capital and seat of Laramie co., SE Wyo.; inc. 1868. A market and shipping center for a ranching area, it produces petroleum and plastics. It grew with the arrival (1867) of the Union Pacific RR and was made territorial capital in 1869. Its annual Frontier Days celebration (in July; first held 1897) is a famous tourist attraction.

Chiang Ch'ing: see JIANG QING.

Chiang Ching-kuo: see under CHIANG KAI-SHEK.

Chiang Kai-shek [jēäng kī-shĕk], 1887–1975, Chinese Nationalist leader. He is also called Chiang Chung-cheng. Chiang became prominent in the KUOMINTANG after the death (1925) of SUN YAT-SEN and in 1926 launched the Northern Expedition, in which the Nationalists captured Hankou, Shanghai, and Nanjing. He cooperated at first with Chinese Communists, but in 1927 reversed himself and began a long civil war with the Communists. He became head of the Nationalist government at Nanjing in 1928 and resisted the Japanese invasion of China in the Second SINO-JAPANESE WAR (1937–45). In 1949, however, the Communists drove Chiang and the Nationalists from the mainland to Taiwan. There he reorganized his military forces with U.S. aid, became (1950) president of Nationalist China (Taiwan), and instituted limited democratic political reforms. He continued to promise reconquest of the mainland, but his position was hurt when Taiwan was expelled (1972) from the UN in favor of Communist China. His son, **Chiang Ching-kuo** [jēäng jĭng-gwô], 1910–88, was also president of Taiwan

(1978–88). He was defense minister (1965–72) and premier (1972–78) before becoming president.

Chicago, Judy (Gerowitz), 1939–, American artist and founder of the Women's Art Education collective. She works in a variety of media, including such traditionally female-oriented crafts as needlework and china painting. She is best known for the multimedia installation, *The Dinner Party* (1974–78, in collaboration with various craftswomen).

Chicago, city (1990 pop. 2,783,726), seat of Cook co., NE Ill., third largest U.S. city, center of a vast metropolitan area (1990 pop. 8,065,633), on Lake Michigan; inc. 1837. A major GREAT LAKES port and the leading commercial, financial, industrial, and cultural center of the nation's interior, Chicago is a leader in steel production, printing, radio and television, and the manufacture of plastics, machinery, electronic equipment, and processed food. It has important stock, mercantile, and commodity exchanges. Downtown Chicago ("The Loop") has a dramatic skyline with some of the world's tallest skyscrapers, e.g., the Sears Tower and the John Hancock Tower. The North Side, mainly residential, stretches some 20 mi (32 km) along the lake. The West Side is a mix of European ethnic neighborhoods that developed in the 19th and early 20th cent. Most of the city's African Americans, nearly 40% of the population, live in the industrialized South Side. Leading cultural institutions include the Art Institute of Chicago, Natural History Museum, Chicago Symphony Orchestra, Univ. of Chicago, and Harold Washington Library. The city's modern development dates from the opening (1825) of the ERIE CANAL and the arrival (1852) of the railroads. A fire destroyed much of Chicago in 1871. Labor troubles, e.g., the 1886 HAYMARKET SQUARE RIOT and the 1894 Pullman strike (see DEBS, EUGENE V.; ALTGELD, JOHN P.), followed rapid industrialization. In the 1920s PROHIBITION brought a reputation for gang warfare. The SAINT LAWRENCE SEAWAY opened Chicago to ocean shipping after 1959.

Chicago, University of, at Chicago; coeducational; inc. 1890, opened 1892 primarily through the gifts of John D. ROCKEFELLER. Because of its progressive programs and distinguished faculty, it quickly achieved prominence. Significant among its facilities are the Pritzker School of Medicine; the Enrico Fermi Institute for Nuclear Studies; the McDonald Observatory, at Ford Davis, Texas; the Yerkes Observatory, at Williams Bay, Wis. The department of economics is renowned.

Chichén Itzá [chēchän' ētsä'], archaeological site in central YUCATÁN, Mexico. Probably founded c.514 by the Itzá, it was alternately abandoned and reoccupied until it was deserted for the last time in 1194. Spanning two great periods of MAYA civilization, it displays Classic and Post-Classic architectural styles and shows a strong TOLTEC influence.

chickadee, small North American BIRD of the TITMOUSE family. The lively black-capped chickadee (*Parus atricapillus*), with gray back and wings and light underparts, often swings upside down on branch tips, searching for insects.

Chickasaw, indigenous people of the Eastern Woodlands (see NORTH AMERICA, INDIGENOUS PEOPLES OF), who spoke a Muskogean language of the Hokan-Siouan stock (see NATIVE AMERICAN LANGUAGES). They lived in N Mississippi and warred with the nearby CHOCTAW, CREEK, CHEROKEE, and SHAWNEE. After 1834 they moved to Oklahoma, becoming one of the FIVE CIVILIZED TRIBES. In 1990 there were 20,631 Chickasaws in the U.S.

chicken, chief poultry BIRD, probably domesticated from a SW Asian jungle fowl. Chickens are raised commercially in highly mechanized indoor chambers and are classified by their uses. The Leghorn chicken is the main egg breed in the U.S., while a cross between the fast-growing Plymouth Rock chicken and deep-breasted Cornish hen is the most important meat breed. Some varieties are raised for their ornamental appearance, as pets, or for cockfighting.

chicken pox or **varicella,** acute infectious disease caused by the herpes zoster virus that also causes SHINGLES. Usually a disease of childhood, chicken pox is a highly contagious disorder characterized by an itchy rash of blisterlike lesions that appear two to three weeks after infection. When the lesions have crusted over, the disease is no longer communicable. Topical medication is often given to relieve the itching, and the drug acyclovir may be used to treat the disease, particularly in older patients.

chickpea, annual plant (*Cicer arietinum*) of the PULSE family, cultivated since antiquity for the edible, pealike seed. Chickpeas are used as food for humans and animals. They are boiled or roasted, and have been used as a coffee substitute. Other common names are *ceci,* garbanzo, and gram pea.

chicory or **succory,** herb (*Cichorium intybus*) of the COMPOSITE family, native to the Mediterranean and widely grown in North America and Europe. The roasted and powdered root is used as a coffee substitute and adulterant. Chicory is also used as a seasoning and in salads. French endive, or witloof, is the type that is blanched for salad. True endive, or escarole (*C. endivia*), a salad vegetable since antiquity, is cultivated in broad- and curly-leaved varieties.

chigger: see MITE.

Chihuahua, small TOY DOG; shoulder height, c.5 in. (12.7 cm); weight, 1–6 lb (0.5–2.7 kg). There are two varieties: the smooth, with a short, close-lying, glossy coat, and the long-coated, with soft-textured, flat, or slightly wavy hair. The coat is usually tan. Probably of Chinese origin, it was introduced into Mexico by Spanish settlers.

Chikamatsu Monzaemon [chē"kämä'tsōō], 1653–1724, Japanese dramatist. Writing primarily for the puppet stage, he profoundly influenced the development of modern Japanese theater (see JAPANESE LITERATURE). His work is divided into historical romances, e.g., *Battles of Coxinga,* and domestic tragedies of love and duty, e.g., *Love Suicides at Amijima.*

Child, Julia, 1912–, American cooking teacher and writer; b. Pasadena, Calif. She has hosted a series of public television programs, most notably *The French Chef* (1962–76), her first. Her comfortable, unintimidating manner is also evident in her many cookbooks.

child abuse, physical or emotional abuse of a child by a parent, guardian, or other person. Reports of child abuse, including sexual abuse, beating, and murder, have climbed in the U.S., and some authorities believe that the number of cases is grossly underreported. **Child neglect** is sometimes included in legal definitions of child abuse to cover instances of malnutrition, desertion, and inadequate care of a child's safety. When reported, child abuse cases are complicated by inadequate foster care services and a legal system that has trouble accommodating the suggestible nature of children, who are often developmentally unable to distinguish fact from make-believe.

Childe, Vere Gordon, 1892–1957, English archaeologist; b. Australia. His synthesis of European prehistory is embodied in *The Dawn of European Civilization* (1925, 6th ed. 1957) and *The Prehistory of European Society* (1958).

Chile [chĭl'ē], officially Republic of Chile, republic (1992 pop. 13,231,803), 292,256 sq mi (756,945 sq km), S South America, bordered by Peru (N), Bolivia (NE), Argentina (E), and the Pacific Ocean (W). Long and narrow, Chile stretches 2,880 mi (4,630 km) from north to south, but is only 265 mi (430 km) at its widest point. Major cities include SANTIAGO (the capital), VALPARAISO, and CONCEPCIÓN. The ANDES Mts. extend the entire length of eastern Chile; Ojos del Salado (22,539 ft/6,870 m), the second highest point in South America, is found here. Chile has three main natural regions: the arid north, which includes the ATACAMA DESERT; the cold and humid south, with dense forests, snow-covered peaks, glaciers, and islands; and the fertile central area, Mediterranean in climate, which is the population, economic, and cultural heart of the nation. Located along an active zone in the earth's crust, Chile is subject to devastating earthquakes. With an economy based on its mineral wealth, Chile is one of the world's leading exporters of copper; other minerals include nitrates, iron ore, manganese, lead, and zinc. Manufactures include processed foods (including wine), fishmeal, textiles, and iron and steel. Chief crops are wheat, potatoes, corn, and sugar beets. Although Chile is not self-sufficient in food, fruit accounts for nearly 10% of its exports. Sheep raising, fishing, and timber production are also important. The majority of Chile's population is mestizo, but a sizable number are of European descent. More than 85% of the people are Roman Catholic. Spanish is the official language.

History. Upon arrival in the area that is now Chile, the Spaniards met stout resistance from the ARAUCANIANS who lived there, but in

1541 Pedro de VALDIVIA succeeded in establishing the first Spanish settlement at Santiago. Despite the continued hostility of the native peoples, who were not fully conquered until the late 19th cent., the colonists established a pastoral society. In 1810 a struggle for independence from Spanish rule was initiated and finally, in 1818, following a decisive victory at Maipú by José de SAN MARTÍN, independence was proclaimed, and Bernardo O'HIGGINS, a revolutionary leader, was established as ruler. In 1879 long-standing border disputes with Bolivia and Peru led to the War of the Pacific; Chile, victorious, gained valuable mineral-rich territory. Exploitation of mineral resources, accompanied by industrialization, brought prosperity. Politically, Chile was one of the most stable and democratic nations in South America. In 1970 Salvador ALLENDE GOSSENS, a Marxist, was elected president. His attempt to transform Chile into a socialist state ended in 1973 with a U.S.-supported, bloody military coup, in which Allende lost his life. A repressive military junta, headed by Gen. Augusto PINOCHET, governed from 1973 to 1990. In a 1988 plebiscite, Chileans rejected Pinochet's bid to remain in office another eight years. Patricio Aylwin Azócar, a Christian Democrat heading a coalition of 17 center and left parties, won the presidency in 1989, but under the military-drafted constitution, Pinochet remained head of the army. In 1993 Eduardo Frei Ruiz-Tagle, the son of Allende's predecessor and a Christian Democrat, was elected president.

Chillicothe, city (1990 pop. 21,923), seat of Ross co., south-central Ohio, on the Scioto R.; founded 1796; inc. 1802. The trading center for a farm area, it also manufactures paper, shoes, and aluminum products. It became (1800) capital of the NORTHWEST TERRITORY, and (1803–10, 1812–16) capital of Ohio. Mound City National Monument (prehistoric Native American burial mounds) is nearby.

chimpanzee, black-haired APE (genus *Pan*) of the equatorial forests of central and W Africa, comprising the common chimpanzee (*P. troglodytes*) and the rarer bonobo, or pygmy chimpanzee (*P. paniscus*); considered the most intelligent of apes. The common chimpanzee is covered with long, black hair and may reach 5 ft. (1.5 m) in height and 150 lb (68 kg) in weight. Captive chimpanzees have been taught to communicate by using SIGN LANGUAGE or a computer console.

Chimu, ancient civilization on the desert coast of N Peru (see SOUTH AMERICA, INDIGENOUS PEOPLES OF) that flourished after c.1200. The Chimu were urban people with a powerful military, a complex social system, and well-planned cities such as Chan Chan, their capital. They influenced the Cuismancu empire of central Peru, but were absorbed c.1460 by the INCA.

Ch'in, dynasty: see CHINA.

China, Mandarin *Zhonghua Renmin Gongheguo,* officially People's Republic of China, republic (1992 est. pop. 1,169,620,000), 3,691,502 sq mi (9,561,000 sq km), E Asia; the most populous country in the world. It is bounded by Russia and North Korea (E), Russia and Mongolia (N), Kazakhstan, Kyrgyzstan, Tajikistan, Afghanistan, Pakistan, and India (W), and Nepal, India, Bhutan, Myanmar, Laos, and Vietnam (S). A coastline c.4,000 mi (6,440 km) long borders the Yellow and East China seas (E) and the South China Sea (S). The capital is BEIJING; other important cities include SHANGHAI, TIANJIN, and GUANGZHOU. China is the world's third largest country (after Russia and Canada). The terrain is generally rugged, with broad plains along the rivers and the southern coast. The Tibetan plateau occupies SW China and is separated from the Tarim basin of Xinjiang to the north by the massive Kunlun Mts. In N China is the vast Inner Mongolian tableland, as well as the eastern highlands and central plain of Manchuria. The two main rivers are the HUANG HE (Yellow R.), in the north, and the CHANG (Yangtze) R., in central China. The climate, harsh in the north and subtropical in the south, is mainly temperate.

Economy. The economic system was formerly centrally planned, but China is now attempting to create a "socialist market economy." The state sector has shrunk, and the economy has grown dramatically—it is now the third largest in the world. About 60% of the work force is agricultural, but their output is only about 25% of the gross domestic product. Only 15% of the land surface is suitable for farming. Principal crops are food grains, including rice, wheat, corn, millet, barley, and kaoliang (a form of sorghum); peanuts, sweet potatoes, soybeans, cotton, tobacco, and tea are also important. Hogs and poultry are widely raised, and both inland and marine fishing are important. China is one of the world's major mineral-producing countries. Reserves of coal, its most abundant mineral and principal energy source, rank among the world's largest. Once an importer of petroleum, China is now the world's fifth-ranked oil producer, and oil exports are an increasingly important source of foreign exchange. China also has extensive deposits of iron, tungsten, tin, mercury, magnesite, aluminum, salt, uranium, gold, and zinc. The country's enormous hydroelectric potential is being rapidly developed; the largest project, Gezhouba Dam, on the Chang (Yangtze) R., opened in 1981. China's manufactures include textiles, chemicals, agriculture-related products, such as farm machinery, as well as machine tools, processed foods, iron and steel, building materials, and electronic equipment. Since the 1980s light industrial and consumer items have increased greatly in importance. Rivers and canals are important arteries of transportation.

People. The population is heterogeneous. Although the Han (ethnic Chinese) constitute 92% of the total, 56 recognized minority groups exist, some occupying large and strategically important areas, including Tibet and Xinjiang. Mandarin dialects, the basis of the national language, are uniformly spoken in the north, but in the south, many dialects, including Cantonese, Wu, and Hakka, are spoken; the written language is common to all dialects. Non-

Chinese minorities include the Zhuangs, Huis, Uigurs, Tibetans, and Mongols. Under Mao religious practice was discouraged, but it has revived to some degree. Traditional Chinese religion is a mix of Confucianism, Buddhism, and Taoism. There is a Muslim minority and smaller groups of Catholics and Protestants. Population growth, long a concern, has been greatly diminished by drastic, often harsh government programs to control it.

History. A protohuman toolmaker known as Peking man (*Sinanthropus pekingensis*) lived in N China about 500,000 years ago. Modern humans first appeared in the region around 20,000 years ago, establishing primitive agricultural villages by 5000 B.C. The first documented Chinese civilization was the Shang dynasty (c.1523–c.1027 B.C.), which had cities, bronze metallurgy, and a system of writing. It was succeeded by the often turbulent Chou dynasty (c.1027–256 B.C.), which nevertheless gave rise to China's golden age of philosophy, highlighted by the works of CONFUCIUS, LAO-TZE, and Mencius. The Ch'in dynasty (221–207 B.C.) united China under a centralized imperial system; construction of the GREAT WALL was begun during this period. The Han dynasty (202 B.C.–A.D. 220), considered China's imperial age, was notable for its long, peaceable rule, territorial expansion, and technological and artistic achievement. There followed four centuries of warfare among petty states and invasions by the Huns; however, despite the chaos, the arts and sciences flourished, and BUDDHISM and TAOISM developed as important Chinese religions. Political reunification, begun under the Sui (581–618), paved the way for the glorious age of the T'ang dynasty (618–906), which at its height controlled an empire stretching from Korea to Turkistan. Prosperity continued under the Sung dynasty (960–1279), a time of scholarly studies and artistic progress, marked by the invention of movable type. In the 13th cent. N China fell to the MONGOLS led by JENGHIZ KHAN. His grandson KUBLAI KHAN founded the Yüan dynasty (1260–1368) and subdued (1279) the Sung. Kublai's vast realm was visited and described by Marco POLO. After a massive peasant rebellion (14th cent.) native rule was restored with the establishment of the Ming dynasty (1368–1644). However, in 1644 foreigners from the north—the Manchus—once again conquered China, establish-

CHINESE DYNASTIES

Dynasty	*Characteristics and History*
Hsia c.1994–c.1523 B.C.	Semilegendary Emperor Yu built irrigation channels, reclaimed land. Bronze weapons, chariots, domestic animals used. Wheat, millet cultivated. First use of written symbols.
Shang or Yin c.1523–c.1027 B.C.	First historic dynasty. Complex agricultural society with a bureaucracy and defined social classes. Well-developed writing, first Chinese calendar. Great age of bronze casting.
Chou c.1027–256 B.C.	Classical age (CONFUCIUS, LAO-TZE, Mencius) despite political disorder. Written laws, money economy. Iron implements and ox-drawn plow in use. Followed by Warring States period, 403-221 B.C.
Ch'in 221–206 B.C.	Unification of China under harsh rule of Shih Huang-ti. FEUDALISM replaced by pyramidal bureaucratic government. Written language standardized. Roads, canals, much of GREAT WALL built.
Han 202 B.C.–A.D. 220	Unification furthered, but harshness lessened and CONFUCIANISM made basis for bureaucratic state. BUDDHISM introduced. Encyclopedic history, dictionary compiled; porcelain produced.
Three Kingdoms A.D. 220–265	Division into three states: Wei, Shu, Wu. Wei gradually dominant. Confucianism eclipsed; increased importance of TAOISM and Buddhism. Many Indian scientific advances adopted.
Tsin or Chin 265–420	Founded by a Wei general; gradual expansion to the southeast. Series of barbarian dynasties ruled N China. Continued growth of Buddhism.
Sui 581–618	Reunification; centralized government reestablished. Buddhism, Taoism favored. Great Wall refortified; canal system established.
T'ang 618–907	Territorial expansion. Buddhism temporarily suppressed. CIVIL SERVICE examinations based on Confucianism. Age of great achievements in poetry (LI PO, PO CHÜ-I, TU FU), sculpture, painting.
Five Dynasties and Ten Kingdoms 907–960	Period of warfare, official corruption, general hardship. Widespread development of printing; paper money first printed.
Sung 960–1279	Period of great social and intellectual change. Neo-Confucianism attains supremacy over Taoism and Buddhism; central bureaucracy reestablished. Widespread cultivation of tea and cotton; gunpowder first used militarily.
Yüan 1271–1368	MONGOL dynasty founded by KUBLAI KHAN. Growing contact with West. Confucian ideals discouraged. Great age of Chinese playwriting. Revolts in Mongolia, S China end dynasty.
Ming 1368–1644	Mongols expelled. Confucianism, civil service examinations, reinstated. Contact with European traders, missionaries. Porcelain, architecture (see CHINESE ARCHITECTURE), the novel and drama flourish.
Ch'ing or Manchus 1644–1912	Established by the MANCHUS. Territorial expansion but gradual weakening of Chinese power; decline of central authority. Increasing European trade; foreign powers divide China into spheres of influence. OPIUM WAR; HONG KONG ceded; BOXER UPRISING. Last Chinese monarchy.

ing the Ch'ing (MANCHU) dynasty (1644–1912), the last in China's history.

Foreign Intervention. In a relaxation of China's traditional isolationist policy, Guangzhou was opened to limited overseas trade in 1834. Dissatisfied with this restricted arrangement, Great Britain provoked the OPIUM WAR (1839–42) and easily defeated China. The Treaty of Nanking ceded HONG KONG to Britain, forced China to open several ports to unrestricted trade, and established the principle of EXTRATERRITORIALITY, by which Britons in China were granted immunity from local law enforcement. France, Germany, and Russia soon won similar concessions. The Ch'ing regime was further weakened by a series of internal rebellions, particularly the TAIPING REBELLION (1850–64), a radical military-religious movement; by defeat in the First Sino-Japanese War (1894–95); and by the subsequent further partitioning of China into foreign spheres of influence. The BOXER UPRISING (1898–1900), a final desperate effort to resist foreign influence, was crushed by an international force.

Internal Struggles. These events added impetus to growing anti-Manchu sentiment, and despite belated domestic reforms, a revolution (1911) overthrew the Ch'ing, and a republic, briefly led by SUN YAT-SEN, was established in 1912. With the death (1916) of Sun's successor, YÜAN SHIH-KAI, Chinese warlords gained control of the government; they were finally ousted in 1927, after years of civil war, by the nationalist KUOMINTANG, led by CHIANG KAI-SHEK and aided by the Communists. In 1927 Chiang inaugurated the long Chinese civil war when he purged his Communist allies, eventually forcing them on the LONG MARCH (1934–35) to Shaanxi, where they established their base. In 1931 Japan had occupied Manchuria, and in 1937 it mounted a full-scale attack against China (see SINO-JAPANESE WAR, SECOND). An uneasy coalition of Nationalists and Communists fought the Japanese, but following victory in 1945, civil war once again erupted, with the U.S. supporting the Nationalists. Beijing, followed by the other major cities, fell to the Communists in 1949, and on Oct. 1 the People's Republic of China was proclaimed with MAO ZEDONG as chairman and ZHOU ENLAI as premier. Chiang Kai-shek fled to TAIWAN, where he established a new seat for the Republic of China government.

The People's Republic. Under the Communists, high inflation was brought under control, a land reform program introduced, industry nationalized and expanded with Soviet aid, and agriculture collectivized. The Chinese People's Volunteers entered the KOREAN WAR against UN forces in 1950, participating on a large scale until the armistice of 1953. A liberal "hundred flowers" period (1957) was followed by a crackdown on intellectuals and the Great Leap Forward (1958–60), a massive industrial and agricultural development program that was intended to transform China's economy overnight but that ended in the largest famine in world history, with an estimated 20–40 million deaths. At about the same time a growing ideological rift between China and the USSR led to withdrawal of Soviet aid and technical assistance. Evidence of internal tension began to surface in the 1960s, culminating in the CULTURAL REVOLUTION of 1966–69, a massive upheaval launched by Mao to purge the revolution of liberal elements. Tension increased in the early 1970s with the revelation that Lin Biao, China's defense minister and Mao's designated heir, had died (1971) in a plane crash after an attempt to assassinate Mao. In international affairs, China's progress toward recognition as a world power was aided by its explosion of an atomic bomb (1964) and the launching of its first satellite (1970). An easing of relations with the West led to the admission of China to the UN in 1971 and to a visit to China by U.S. Pres. NIXON in 1972. Zhou Enlai and Mao Zedong died in 1976. Following the assumption of power by HUA GUOFENG, the country

The key to pronunciation appears on page xiii.

was shaken by the arrest, trial, and conviction (1981) of Mao's widow, JIANG QING, and three colleagues (the GANG OF FOUR). DENG XIAOPING, who came to power in 1977, adopted a program of rapid economic modernization. Liberal economic and trade policies were instituted, and the U.S. and China normalized diplomatic relations in 1979. In 1981 the Communist party publicly criticized Mao's later policies, although his thought was reaffirmed as the nation's guideline in new party and national constitutions (1982). In early 1989 China was the scene of massive demonstrations calling for democratic reforms and an end to official corruption, but in June the army brutally suppressed the Beijing demonstrators, killing perhaps 1,000. A period of repression and reaction followed, but many of the economic reforms survived and new ones have since been instituted. In 1993 a revision of the constitution called for the development of a "socialist market economy."

China, Great Wall of: see GREAT WALL OF CHINA.

China, Republic of, official name of TAIWAN.

chinchilla, small, burrowing RODENT that lives in colonies up to 15,000 ft (4,270 m) high in the Andes of Bolivia, Chile, and Peru. Its soft gray pelt is one of the costliest of all furs, and the wild chinchilla was nearly exterminated before protective laws were passed.

chinchona: see CINCHONA.

Chinese, subfamily of the Sino-Tibetan family of languages. See LANGUAGE (table).

Chinese architecture. Few buildings exist in China predating the Ming dynasty (1368–1644) because of wars, invasions, and insubstantial construction (wood and rice-paper). An exception is the Great Wall of China. Mid-20th-cent. architectural finds have clarified some of the history of Chinese architecture. As early as the neolithic period, the basic principle of supporting a roof with spaced columns rather than walls was established. Walls served merely as enclosing screens. The typical Chinese roof probably dates from c.1500 B.C., but it is known only from the Han dynasty (202 B.C.–A.D. 220), when it appeared in the familiar form—graceful, overhanging, sometimes in tiers, with upturned eaves. It rested on brackets resting in turn on columns. Roof tiles were colorfully glazed and brackets elaborately carved and painted. A characteristic ground plan has remained constant in Chinese and Japanese palaces and temples. Inside an external wall, the building complex is arranged along a central axis and is approached through a series of gates. Next come a public hall and finally the private quarters. Each residential unit was built around a central court with a garden, which became an art form in itself. The coming of BUDDHISM did not affect the style. The only distinctly Buddhist building was the PAGODA, simple and square at first, later more elaborate. A distinctive pagoda style emerged in the 11th cent. Built in three stages, it had a base, shaft, and crown, surmounted by a spire, and was often octagonal. In the Ming period the complex of courtyards, parks, and palaces became labyrinthian. BEIJING's Forbidden City remains a spectacular achievement of intricacy and decoration. After the late 19th cent. the Chinese adopted European and, later, Soviet styles, with a trend toward the massive and clearly functional in public buildings.

Chinese art, the oldest in the world, has its origins in remote antiquity (see CHINA). Excavations in Gansu and Henan have revealed a Neolithic culture with pottery painted in dynamic swirling or lozenge-shaped patterns. Bronze vessels from the Shang dynasty (2d millennium) indicate an advanced culture as well as a long period of prior experimentation. Bronzes were decorated with severe abstract as well as naturalistic representations. The advent of BUDDHISM (1st cent. A.D.) brought works of sculpture, painting, and architecture of a distinctly religious nature. Representations of the BUDDHA and the bodhisattvas became great themes in sculpture. The forms of these figures came from India, but by the 6th cent. A.D. Chinese artists had developed their own sculpture style, which reached its greatest distinction in the T'ang dynasty (618–906). Buddhist sculpture continued to flourish until the Ming dynasty (1368–1644), at which time exquisite miniature sculpture in JADE, IVORY, and GLASS was produced in China and Japan. The origins of Chinese painting are largely lost until the 5th cent. A.D. The Caves of a Thousand Buddhas, near Dunhuang, contain frescoes and scrolls dating from the 5th to 8th cent. Chinese painting achieves its effects through mastery of the line and silhouette rather than through perspective or the rendering of light and shadow. The art of figure painting reached its peak in the T'ang dynasty, which also saw the rise of Chinese landscape painting. In the Sung dynasty (960–1279) landscape painting reached its peak, reflecting contemporary Taoist and Confucian views. The human figure was diminished so as not to intrude on the orderly magnitude of nature. The monumental detail also began to emerge—a single bamboo flower or bird became the subject for a painting. The Ch'an (Zen) sect of Buddhism used rapid brush strokes and ink splashes to create intuitive works of great vigor. With the Yüan dynasty (1260–1368) and Mongol rule, the human figure assumed greater importance, and STILL-LIFE painting gained prominence. In the Ming dynasty (1368–1644) a developing connoisseurship preserved many great works of art. During the Ch'ing (1644–1912) dynasty a level of technical competence was developed that lasted until the 19th cent., but there was little innovation in painting. By the 19th cent. reliance on calligraphic techniques had produced sterile formulas in painting. Since the Communist revolution (1949), art has been used largely for propaganda purposes, and Western influence forbidden. Some artists, working in China and abroad, have nonetheless produced art of considerable individuality. The development of Chinese pottery-making followed that of painting, reaching perfection in the Sung dynasty and extreme technical elaboration in the Ming. In the minor arts, e.g., enamelware, lacquerware, jade, ivory, and textiles, the world owes an incalculable debt to the influence of Chinese art.

Chinese exclusion, policy initiated in 1882 banning U.S. entry to Chinese laborers. After the U.S. acquisition (1848) of California, there arose a need for cheap labor, and Chinese flocked there to work on the railroads. By 1867 they numbered 50,000; their number increased after the Burlingame Treaty of 1868, which permitted Chinese immigration but not naturalization. Anti-Asian prejudice and the competition with American workers led to anti-Chinese riots (1877) in San Francisco, then to the Chinese Exclusion Act of 1882, which banned Chinese immigration for 10 years. In a new treaty of 1894, China accepted another 10-year exclusion, which Congress unilaterally continued until the 1924 immigration law that excluded all Asians. In 1943 a new law extended citizenship rights, and permitted an annual immigration of 105 Chinese. The quota was abolished in 1965.

Chinese literature. The oldest written records (c.1400 B.C.) in Chinese are from the Shang dynasty, but the elaborate system of notation in use then indicates an earlier origin. Most of the oldest extant works of literature were written in the late Chou dynasty (c.1207–256 B.C.), including much of the *Five Classics* of CONFUCIANISM. Traditionally attributed to CONFUCIUS, the *Five Classics* consist of the *Spring and Autumn Annals,* a chronology of Lu, Confucius's native state; the BOOK OF CHANGES, a system of divination; the *Book of Rites,* which describes ceremonials and the ideal state; the *Book of History,* historical records; and the *Book of Songs,* a collection of poems on war, love, and peasant life written in a simple style. Other important early books include the chief literature of TAOISM, *The Way and Its Power (Tao-te ching),* traditionally ascribed to LAO-TZE, and the work of Chuang-tze. These books probably achieved their present form in the 2d cent. B.C. In time the literary and spoken languages of China diverged sharply. In poetry the freedom of the Chou dynasty was followed by the development of prescribed forms, and by the T'ang dynasty (618–906) prosodic rules and pronunciation no longer reflected the spoken language. Classical Chinese poems are usually short, unemphatic lyrics, suggesting a mood or scene by a few touches instead of a detailed picture. Historical and literary allusions abound, while intellectual themes and narratives are rather rare. The T'ang dynasty was the great age of WANG WEI, LI PO, TU FU, and PO CHÜ-I, the masters of Chinese poetry. In the succeeding Sung dynasty (960–1279), SU TUNG-P'O was perhaps the foremost poet. Much learned prose has also been written in Chinese; particularly notable are the fairly accurate and objective histories produced since the Han dynasty (202 B.C.–A.D. 220). SSU-MA CH'IEN'S *Records of the Grand Historian of China* (c.100 B.C.) is the outstanding example and the model for later histories. During the T'ang and Sung dynasties popular prose and verse written in the vernacular appeared. Springing

from story cycles by professional storytellers, the vernacular literature first emerged as full-fledged art in the drama of the Yüan dynasty (1260–1368; see ASIAN DRAMA). The great novels of the Ming dynasty (1368–1644) that followed took shape gradually before being given their final form, perhaps anonymously by traditional scholars. An outstanding early novel is *Romance of the Three Kingdoms*, which recounts heroic deeds and chivalrous exploits. *Journey to the West*, or *Monkey*, is an allegorical tale of the supernatural adventures of a Buddhist monk on an Indian pilgrimage. The greatest Chinese novel is *Dream of the Red Chamber*, or *Story of the Stone*, an 18th-cent. work chiefly by Ts'ao Hsüeh-ch'in, which recounts the declining fortunes of an aristocratic family. After the republican revolution (1912) writers such as HU SHIH and LU HSUN rejected classical modes of composition and advocated writing in *paihua* everyday speech. It has proved particularly effective in prose. Among the most distinguished modern Chinese writers are Lu Hsun (Lu Xun), Mao Dun (Mao Tun), Lao She, Shen Congwen (Shen Ts'ung-wen), and Ba Jin (Pa Chin). Contemporary Chinese literature has suffered from government-sponsored SOCIALIST REALISM, but since the 1980s there has been some loosening of restrictions. After the 1989 massacre in Beijing's Tiananmen Square, many writers who had supported democratic reforms fled China; most continue to publish in exile.

Ch'ing or **Manchu,** dynasty: see CHINA.

Chios: see KHIOS.

chipmunk, RODENT of the SQUIRREL family. The common Eastern chipmunk (*Tamias striatus*), about 5 to 6 in. (13 to 15 cm) long, has reddish or grayish brown upper parts with a median black stripe and two black stripes separated by a whitish band along each side. Chipmunks eat nuts, berries, and insects; food is carried in expandable cheek pouches.

Chippendale, Thomas, 1718–79, English cabinetmaker. His designs were so widely followed that much 18th-cent. English furniture is grouped under his name, but only those pieces for which the original bills survive (e.g., for Harewood House) can be assigned unquestionably to his workshop. To the sober design and fine construction of the Queen Anne and Georgian styles he added Chinese, Gothic, and ROCOCO motifs. He made chairs of many types, from geometrical to sumptuously carved; desks; mirror frames; china cabinets and bookcases; and tables with fretted galleries and cluster-column Gothic legs.

Chippewa: see OJIBWA.

Chirac, Jacques, 1932–, French political leader. He was elected to the National Assembly (1967) and held several governmental posts (1967–74) before serving as prime minister (1974–76) under GISCARD D'ESTAING. Soon breaking with Giscard, Chirac became head of the Gaullists. Mayor of Paris since 1977, he was an unsuccessful presidential candidate (1981, 1988) and again prime minister (1986–88), under MITTERRAND.

chiral molecule: see ISOMER.

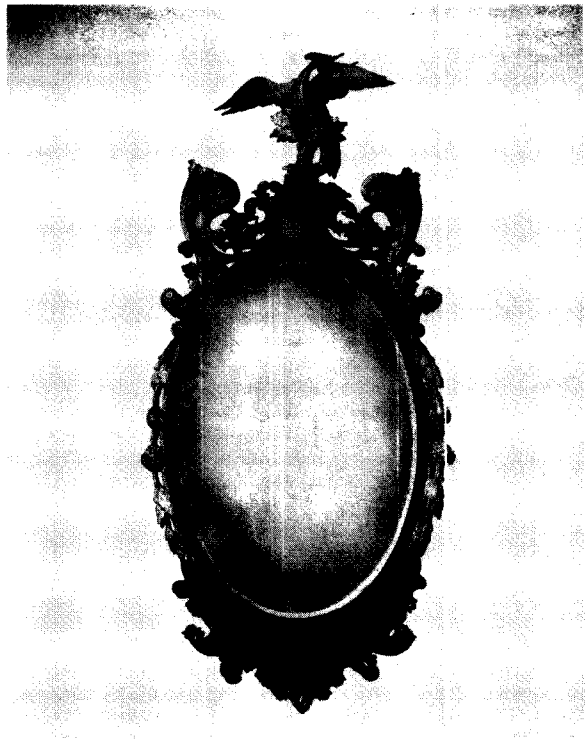
Chirico, Giorgio de [kē'rēkō], 1888–1978, Italian painter; b. Greece. His powerful, disturbing paintings employ steep perspective, mannequin figures, empty space, and forms out of context to create an atmosphere of mystery and loneliness. An influence on early SURREALISM, he termed his symbolism metaphysical painting.

Chiron [kī'rŏn], in Greek mythology, a centaur; son of CRONUS. He was a wise physician and prophet whose pupils included HERCULES, ACHILLES, JASON, and ASCLEPIUS. After receiving an incurable wound, he gave his immortality to PROMETHEUS and died. ZEUS turned him into the constellation Sagittarius.

chiropractic, medical practice based on the theory that disease results from a disruption of nerve function. This interference is thought to stem primarily from displaced vertebrae, which chiropractors massage and manipulate manually in order to relieve pressure on nerves.

Chisholm, Shirley Anita St. Hill, 1924–, African-American politician; b. Brooklyn, N.Y. A Democratic member (1964–68) of the New York state assembly, she was elected (1968) to the U.S. House of Representatives from New York, becoming the first African-American woman to serve there. She retired from Congress in 1983.

Chisholm Trail, route over which herds of cattle were driven to railheads in Kansas after the Civil War. In 1866, Jesse Chisholm, a trader, cut the trail by carting a heavy load of buffalo hides from Oklahoma to Kansas. Drovers followed the trail for 20 years with hundreds of thousands of Texas longhorns; it became celebrated in frontier stories and ballads. The trail fell into disuse as railroads and wire fencing developed, but traces of it survive.



Chippendale-style mirror in mahogany and gilt, 18th cent.

Chişinău, formerly **Kishinev,** city (1990 est. pop. 676,000), capital of Moldova, SE Europe, on the Byk R. Major industries include food and tobacco processing, the assembly of consumer goods, and the manufacture of building materials, machinery, and plastics. Founded in the early 15th cent., Chişinău came under Turkish rule in the 16th cent. Taken by Russia in 1812, it (and most of Moldova) was part of Romania between the world wars. During World War II the city's large Jewish minority was almost entirely exterminated.

chiton, marine invertebrate MOLLUSK (class Amphineura). The chiton has a low oval body covered dorsally by a slightly convex shell of eight overlapping plates. It clings tightly to hard surfaces with its broad flat ventral foot; it crawls by means of muscular undulations of the foot. The mouth, located in front of the foot, contains a toothed scraping organ, the radula. Chitons range from ½ in. to 12 in. (1.2–30 cm).

Chittagong, city (1991 pop. 2,080,195), capital of Chittagong division, SE Bangladesh, on the Karnafuli R. near the Bay of Bengal. An important rail terminus and administrative center, it is the chief port of Bangladesh, with modern facilities for oceangoing vessels. Oil (offshore installations and refineries), cotton- and jute-processing, and chemical and steel works are among its important industries. A port known since the early centuries A.D., it was controlled successively by the Hindus, Arakans, Moguls, and British. In 1991 a cyclone (hurricane) severely damaged the city and its harbor.

chivalry, system of ethical ideals that grew out of FEUDALISM and had its zenith in the 12th and 13th cent. Chivalric ethics originated chiefly in France and Spain and spread rapidly. They represented a fusion of Christian and military concepts of morality, and they still form the basis of gentlemanly conduct. The chief chivalric virtues were piety, honor, valor, courtesy, chastity, and loyalty. The knight's loyalty was due to God, to his suzerain, and to his sworn love. Love in the chivalrous sense was largely platonic. The ideal of militant knighthood was greatly enhanced by the CRUSADES, and the monastic orders of knights, the KNIGHTS TEMPLARS and KNIGHTS

HOSPITALERS, produced soldiers sworn to uphold the Christian ideal. Besides the battlefield, the tournament became an arena in which the virtues of chivalry could be proved. The code of COURTLY LOVE was developed in France and Flanders. In practice, chivalric conduct was never free from corruption, and the outward trappings of chivalry declined in the 15th cent. Medieval secular literature, such as the ARTHURIAN LEGEND and the CHANSONS DE GESTE, was concerned primarily with knighthood and chivalry. In the 19th cent. ROMANTICISM revived chivalrous ideals.

chive: see ONION.

chlamydia, genus of microorganisms that cause a variety of diseases in humans and other animals. Psittacosis, or parrot fever, caused by the species *Chlamydia psittaci,* is transmitted to people by birds, particularly parrots, parakeets, and lovebirds. In birds the disease takes the form of an intestinal infection, but in people it runs the course of a viral pneumonia. Different forms of *Chlamydia trachomatis* cause trachoma, an infection of the mucous membrane of the eyelids, and the sexually transmitted disease lymphogranuloma venereum. This same species also causes the sexually transmitted disease called chlamydia, the most common such disease in the U.S. In women, chlamydia is a common cause of pelvic inflammatory disease, which can result in infertility and an increased risk of tubal pregnancy. Men are the primary carriers, but painful urination and discharge often prompt them to get treatment before the testes can be infected and male infertility can result.

chlorine (Cl), gaseous element, discovered in 1774 by Karl SCHEELE, who thought it was an oxygen compound, and identified as an element by Sir Humphry DAVY in 1810. Chlorine is a greenish-yellow, poisonous gas with a disagreeable, suffocating odor. A HALOGEN, it occurs in nature in numerous and abundant compounds, e.g., sodium chloride (common salt). Chlorine is soluble in water; chlorine water has strong oxidizing properties. Chlorine is used in water purification, and as a disinfectant and antiseptic. Chlorinated hydrocarbons (e.g., DDT) are long-lasting pesticides and have become troublesome environmental pollutants. Many poison gases contain chlorine. Chlorine compounds used medically include chloroform and chloral hydrate. See ELEMENT (table); PERIODIC TABLE.

chlorofluorocarbon (CFC), any organic compound composed of CHLORINE, FLUORINE, and CARBON. Derived synthetically from HYDROCARBONS, many CFCs (such as some FREONS) are chemically stable, nonflammable, and relatively nontoxic. Because of such properties, these compounds have been widely used in industry and in consumer products, particularly in the production of foam for insulation and other uses, as AEROSOL propellants, as refrigerants and air conditioner coolants, and as cleansing agents in the production of electronic circuit boards. The resistance of CFCs to chemical breakdown, however, enables them to persist in the environment and migrate to the upper atmosphere. There, sunlight frees their chlorine atoms to form chlorine monoxide, which destroys the OZONE LAYER. In 1987 an international treaty called for reducing CFC use by 50% by 2000. A 1992 revision called for total elimination of CFCs in industrial countries by 1996, and by 1993 CFC emissions had dropped dramatically.

chlorophyll, green pigment in plants that gives most their color and enables them to carry on the process of PHOTOSYNTHESIS. Chlorophyll, found in the CHLOROPLASTS of the plant cell, is the only substance in nature able to trap and store the energy of sunlight. The light absorbed by chlorophyll molecules is mainly in the red and blue-violet parts of the visible spectrum; the green portion is not absorbed but reflected, and thus chlorophyll appears green.

chlorophyte, member of a division (Chlorophyta) of photosynthesizing PROTISTS that includes the green ALGAE and the stoneworts. They possess the same photosynthetic pigments (chlorophylls and carotenoids) as higher plants. Chlorophytes are typically marine or aquatic, have one to several cells and move via two whiplike flagella.

chloroplast, complex, discrete, lens-shaped structure, or organelle, contained in the cytoplasm of plant cells. Chloroplasts have submicroscopic, disklike bodies, called grana, that house CHLOROPHYLL and are the central site of the process of PHOTOSYNTHESIS.

chocolate, term for products of the seeds of the CACAO tree, used for making beverages or candy. Chocolate is prepared by a complex process of cleaning, blending, and roasting the beans, which are then ground and mixed with sugar, cocoa butter, and milk solids. A chocolate drink known to the Aztecs came to Europe through Spanish explorers c.1500, and was a fashionable beverage in 17th- and 18th-cent. England. In 1765 chocolate was first manufactured in the U.S., now the world's leading producer. The process for making milk chocolate was perfected in Switzerland c.1876.

Choctaw, indigenous people of the Eastern Woodlands (see NORTH AMERICA, INDIGENOUS PEOPLES OF), who lived mostly in central and S Mississippi and spoke a Muskogean branch of the Hokan-Siouan language stock (see NATIVE AMERICAN LANGUAGES). They had an agricultural economy and were excellent farmers. After being forced to cede their lands, they moved in 1832 to Indian Territory and became one of the FIVE CIVILIZED TRIBES. In 1990 there were 82,299 Choctaws in the U.S., with more than half living in Oklahoma.

cholera or **Asiatic cholera,** acute infectious disease caused by strains of the bacterium *Vibrio cholerae.* The bacteria, which are found in fecal-contaminated food and water and in raw or undercooked seafood, produce a TOXIN that affects the intestines, causing diarrhea, severe fluid and electrolyte loss, and, if untreated, death. Treatment consists of administration of glucose and electrolyte solutions; vaccines are of limited effectiveness. The disease remains prevalent in regions of the Third World where public sanitation is poor.

cholesterol, fat-related compound found in the tissues and blood plasma of vertebrates. A STEROID, cholesterol is found in large concentrations in the brain, spinal cord, and liver, and is a necessary component of cell membranes. It can be obtained from animal products in the diet or synthesized in the liver. Cholesterol is the major precursor of the synthesis of vitamin D and the various steroid HORMONES and can crystallize in the GALL BLADDER to form gallstones. In the blood, cholesterol travels with a protein in an organic compound called a LIPOPROTEIN. Low-density lipoproteins (LDLs) convey cholesterol from the liver to the body's tissues, and high-density lipoproteins (HDLs) convey cholesterol out of the blood stream for excretion. High levels of LDLs in the blood, or low levels of HDLs, are associated with an increased risk of heart disease; in atherosclerosis (see ARTERIOSCLEROSIS) deposits of cholesterol (mainly LDL cholesterol) accumulate inside blood vessels. Reducing consumption of foods containing cholesterol and saturated fat has been found to lower blood cholesterol levels; cholesterol levels can also be reduced with drugs (e.g., lovastatin).

Chomsky, Noam, 1928–, American linguist; b. Philadelphia. His theory of generative grammar, first proposed in *Syntactic Structures* (1957), revolutionized the study of language (see LINGUISTICS; TRANSFORMATIONAL-GENERATIVE GRAMMAR). He posits innate structures, not minimal sounds, as the basis for speech. He has written numerous linguistic works, e.g., *Reflections on Language* (1975), and books on current politics, e.g., *The Washington Connection and Third World Fascism* (1979), with Edward S. Herman.

Chongqing [chōōng-chĭng] or **Chungking** [chōōng-kĭng], city (1990 est. pop. 2,980,000), SE Sichuan prov., SW China, at the confluence of the Jialing and Chang (Yangtze) rivers. An industrial hub manufacturing steel and copper, refined oil, machinery, chemicals, and other products, Chongqing comprises a narrow, densely populated inner city rising on a mountain between its two rivers, and a planned industrial and residential district to the west. Long an important regional center, Chongqing became a treaty port in 1891 and was the capital of CHIANG KAI-SHEK's Nationalist government during World War II.

Chopin, Frédéric François [shôpăN'], 1810–49, Franco-Polish composer; b. Poland. He brought romantic piano music to unprecedented heights of expressiveness. In the 1830s he settled in Paris; although he remained a Polish nationalist, he never returned home. He associated with literary and artistic figures, notably George SAND, with whom he had a liaison from 1836 to 1847, when a long illness developed into tuberculosis. Chopin established the PIANO as a solo instrument free from choral or orchestral influence. In his piano CONCERTOS in E Minor (1833) and F Minor (1836), the piano dominates the orchestra. Other major works are 24 preludes (1838–39); SONATAS in B Flat Minor (1840) and B Minor (1845);

many études; and, expressing Polish nationalism, many polonaises and mazurkas.

Chopin, Kate O'Flaherty, 1851–1904, American author; b. St. Louis. Her novel *The Awakening* (1899) caused great controversy because of her treatment of female sexuality but is now highly regarded. She also wrote sketches of Creole life collected in *Bayou Folk* (1894) and *A Night in Acadie* (1897).

chordate, common name for an animal having three unique features at some stage of its development: a notochord (dorsal stiffening rod) as the chief internal support, a tubular nerve cord (spinal cord) above the notochord, and GILL slits leading into the pharynx (anterior part of the digestive tract). Grouped in the phylum Chordata, chordates are mainly vertebrates, animals of the subphylum Vertebrata (the FISHES, AMPHIBIANS, REPTILES, BIRDS, and MAMMALS), in which a backbone of bone or cartilage forms around the notochord; the rest are small aquatic invertebrates of the subphyla Urochordata (TUNICATES) and Cephalochordata (LANCELETS), in which there are no backbones.

chorea, disease causing involuntary jerky, arrhythmic movements of the face, limbs, or entire body. The childhood disease **Sydenham's chorea,** or **St. Vitus's dance,** is usually a complication of RHEUMATIC FEVER. The condition develops slowly, sometimes up to six months after the acute infection has occurred, but it resolves completely. For **Huntington's chorea,** see HUNTINGTON'S DISEASE.

chorionic villus sampling (CVS), diagnostic procedure in which a sample of chorionic villi from the developing placenta is removed from the uterus of a pregnant woman (see PREGNANCY AND BIRTH) using a fine needle inserted through the abdomen or a thin plastic catheter inserted through the cervix. Chorionic villi are fingerlike projections of a membrane surrounding the fetus and develop from the fertilized OVUM, or egg; cells in the sample are grown in the laboratory and studied to detect the presence in the fetus of such genetic BIRTH DEFECTS as TAY-SACHS DISEASE and DOWN'S SYNDROME. The sex of the child may also be ascertained. CVS is usually performed in the 10th or 11th week of pregnancy (several weeks earlier than AMNIOCENTESIS) if the parents are carriers of certain genetic diseases, if there is a family history of genetic disorders, or if the woman is over age 35.

chorus, in ancient Greek drama, the group that spoke to accent the action. It seems to have arisen from the singing of the DITHYRAMB and to have become a true dramatic chorus when THESPIS introduced the actor in the 6th cent. B.C. As TRAGEDY developed, the size and role of the chorus diminished while the importance of the actor increased. By the 2d cent. B.C. it had ceased to have anything to do with the action, and it eventually disappeared.

Chou, dynasty: see CHINA.

Chou En-lai: see ZHOU ENLAI.

Chouteau, family of American fur traders. **René Auguste Chouteau,** 1749–1829, b. New Orleans, established (1764) a trading post that became St. Louis. His half brother, **Jean Pierre Chouteau,** 1758–1849, b. New Orleans, founded (1809) the St. Louis Missouri Fur Company and settled Salina, Okla. Jean Pierre's son, **Auguste Pierre Chouteau,** 1786–1838, b. St. Louis, was a member of the company, and another son, **Pierre Chouteau,** 1789–1865, b. St. Louis, headed the reorganized company until its dissolution in 1864 and became one of the richest, most powerful people in the West.

chow chow, powerful NONSPORTING DOG; shoulder height, 18–20 in. (45.7–50.8 cm); weight, 50–60 lb (22.7–27.2 kg). Its coat has a soft, wooly underlayer and a dense, straight topcoat that stands out from the body. It may be any solid color and is the only breed with a black tongue. A hunting dog in China 2,000 years ago, it was brought to England in the 18th cent.

Chrétien, (Joseph Jacques) Jean, 1934–, Canadian politician, prime minister of Canada (1993–). A lawyer from Quebec and member of the LIBERAL PARTY, he was first elected to parliament in 1963 and served in various ministerial posts under Lester PEARSON and Pierre TRUDEAU. He lost a bid for the Liberal party leadership in 1984 but briefly served as deputy prime minister under John TURNER. Chrétien became party leader in 1990 and prime minister in 1993 after he led the Liberals to victory at the polls.

Chrétien de Troyes or **Chrestien de Troyes** [both: krātyăN' də trwä], fl. 1170, French poet, author of the first great literary treatments of the ARTHURIAN LEGEND. His narrative romances, imbued with the ideals of chivalry, include *Érec et Énide, Cligès,* and *Perceval.*

Christchurch, city (1991 pop. 292,858), E South Island, New Zealand. It is the commercial center of the productive Canterbury Plains and the third largest city in New Zealand. Lyttleton is its port. Perhaps the most English of New Zealand's cities, it has such landmarks as Hagley Park and Christchurch Cathedral. It was settled in 1850 and is the site of the Univ. of Canterbury (est. 1873).

Christian, Danish kings. **Christian I,** 1426–81, king of Denmark (1448–81), Norway (1450–81), and Sweden (1457–64), was the founder of the Oldenburg dynasty of Danish kings. In 1460 he also succeeded to Schleswig and Holstein. A weak monarch, he made concessions to the Danish nobles and lost his authority over Sweden. He was succeeded by his son John, whose son was **Christian II,** 1481–1559, king of Denmark and Norway (1513–23) and Sweden (1520–23). His massacre of Swedish nobles led to the accession of GUSTAVUS I of Sweden and the end of the Kalmar Union. Christian was deposed (1523) by the Danish nobles in favor of his uncle, Frederick I, and imprisoned (1532) until his death. **Christian III,** 1503–59, king of Denmark and Norway (1534–59), was the son of Frederick I. With Gustavus I of Sweden he defeated the German city of LÜBECK (1536), breaking the power of the HANSEATIC LEAGUE. He established (1536) Lutheranism in Denmark. Never elected king of Norway, he declared it a Danish dependency. He was succeeded by his son Frederick II. **Christian IV,** 1577–1648, king of Denmark and Norway (1588–1648), was the son of Frederick II. He made war (1611–13, 1643–45) on CHARLES IX of Sweden and had a major part in the THIRTY YEARS WAR. His son FREDERICK III succeeded him. Frederick's son was **Christian V,** 1646–99, king of Denmark and Norway (1670–99). His minister, GRIFFENFELD, dominated his reign. His son FREDERICK IV succeeded him. **Christian VI,** 1699–1746, king of Denmark and Norway (1730–46), was the son of Frederick IV. A Pietist, he carried out a peaceful foreign policy. In 1733 he established a form of serfdom. His son FREDERICK V succeeded him. **Christian VII,** 1749–1808, king of Denmark and Norway (1766–1808), was Frederick V's son. Because he was mentally ill, power was held first by his ministers and then by his son and successor, FREDERICK VI, as regent. Their reforms included the end of serfdom. **Christian VIII,** 1786–1848, king of Denmark (1839–48) and Norway (1814), was the cousin and successor of Frederick VI. He accepted a liberal Norwegian constitution. In 1836 Danish rule of SCHLESWIG-HOLSTEIN became an issue. His son FREDERICK VII succeeded him. **Christian IX,** 1818–1905, king of Denmark (1863–1906), succeeded Frederick VII, last of the Oldenburg line. In war (1864) with Prussia and Austria he lost Schleswig and Holstein. During his rule there was pressure for a more democratic constitution. His son FREDERICK VIII succeeded him. A younger son became GEORGE I of Greece. **Christian X,** 1870–1947, king of Denmark (1912–47) and Iceland (1912–44), was the son of Frederick VIII and the brother of HAAKON VII of Norway. He granted (1915) a new constitution enfranchising women. During the German occupation (1940–45) he was placed under house arrest (1943). His son FREDERICK IX succeeded him.

Christianity, all doctrines and religious groups based on the teachings of JESUS. Jesus is held by Christians to be the Son of God, the second person of the TRINITY, and the Savior of humanity. This teaching is embodied in the Bible, particularly in the New Testament. Rooted in JUDAISM, Christianity was founded in the 1st cent. in Palestine by disciples of Jesus. It was spread, despite sporadic persecution, through the Roman Empire by missionaries, notably St. PAUL, and was recognized (313) by CONSTANTINE I. The early church was plagued by heresies concerning the nature of Jesus (e.g., ARIANISM, NESTORIANISM, MONOPHYSITISM), which were condemned at councils such as the First Council of NICAEA (325). Monasticism arose in Egypt in the 3d and 4th cent. and was organized in the East by St. Basil the Great and in the West by St. BENEDICT. Christian writers, notably ORIGEN, St. ATHANASIUS, St. JEROME, and St. AUGUSTINE helped to determine and preserve the text of the Bible. In the East the church became centered in Constantinople and was largely subordinate to the emperor; in the West the PAPACY at Rome remained an independent force. From both centers Christianity grew to embrace all Europe, but in the 7th and 8th cent. lost Asia

Minor and N Africa to ISLAM. Gradually, a break developed between East and West (see ROMAN CATHOLIC CHURCH; ORTHODOX EASTERN CHURCH), and became more or less permanent after 1054. In the West the growing power and corruption of the church contributed to the Protestant REFORMATION, which splintered Christianity into numerous sects (see PROTESTANTISM). In the 20th cent. the ECUMENICAL MOVEMENT was begun to promote Christian unity.

Christian Science, religion founded upon principles of divine healing and laws expressed in the acts and sayings of JESUS, as discovered and formulated by Mary Baker EDDY and practiced by the Church of Christ, Scientist. The sect denies the reality of the material world, arguing that sin and illness are illusions to be overcome by the mind; thus, they refuse medical help in fighting sickness. Mrs. Eddy's *Science and Health with Key to the Scriptures* is the textbook of the doctrine. The church was founded in 1879 and is centered in Boston.

Christian socialism, term used in Great Britain and the U.S. for a kind of socialism growing out of the clash between Christian ideals and the effects of competitive business. In Europe it usually refers to a party or trade union directed by religious leaders in contrast to socialist unions and parties. Begun (1848) in England and led by Frederick Denison MAURICE and Charles KINGSLEY, it sought to encourage the laboring masses and the church to cooperate against capitalism. It was influenced by the Fourierists (see FOURIER, CHARLES), rather than by MARX. In the U.S. the movement was organized (1889) with the formation of the Society of Christian Socialists and was concerned more with the application of the SOCIAL GOSPEL to immediate industrial and social problems than with political socialism.

Christie, Dame Agatha, 1891–1976, English detective-story writer. Of her over 80 books, most feature one of two detectives, Hercule Poirot or Jane Marple. Her novels include *The Murder of Roger Ackroyd* (1926) and *The Pale Horse* (1962). Among her plays is the long-running *Mousetrap* (1952).

Christina, 1626–89, queen of Sweden (1632–54), daughter of GUSTAVUS II. Until 1644 she was under a regency headed by OXENSTIERNA. Because of her zeal for learning, she attracted to her court musicians, poets, and such scholars as DESCARTES. She refused to marry, naming her cousin, later CHARLES X, as her successor. In 1654 she abdicated, becoming a Catholic and settling in Rome. On the death (1660) of Charles X she returned to Sweden but failed to regain the throne. She is buried at St. Peter's in Rome.

Christmas [Christ's Mass], in the Christian calendar, the feast of the nativity of JESUS (Dec. 25). It ranks after EASTER, PENTECOST, and EPIPHANY in liturgical importance and was not widespread until the 4th cent. The customs of the yule log, caroling, mistletoe, and gifts at Christmas are English. Elsewhere, gifts are given at other times, as at Epiphany in Spain. Christmas cards appeared c.1846. The concept of a jolly Santa Claus (see NICHOLAS, SAINT) was first made popular in 19th-cent. New York City. The Christmas tree was a medieval German tradition. Midnight Mass is a familiar religious observance among Roman Catholics and some Protestants.

Christmasberry or **toyon,** evergreen tree or shrub (*Photinia arbutifolia*) of the ROSE family, found on the North American Pacific coast. White flowers precede its bright red berries. Also called California holly, it is a Christmas green.

Christmas Island, tropical island (1992 est. pop. 930), 60 sq mi (155 sq km), external territory of Australia, in the Indian Ocean. Most of the inhabitants are Chinese and Malays who had come to work the island's phosphate mine, which closed in 1987. The island was annexed by Great Britain in 1888 and transferred to Australian rule in 1958.

Christo, 1935–, Bulgarian artist; b. Christo Javacheff. His art has typically involved wrapping objects, giving them a temporary, artificial skin that both conceals and reveals, thus transforming the everyday into the ambiguous. His work includes *Running Fence* (1976), a fabric curtain that ran 24 mi (38.6 km) through the California countryside, and *The Umbrellas* (1991), 1,340 20-ft (6.1-m) tall blue umbrellas in rice fields 70 mi (113 km) north of Tokyo and 1,760 yellow ones in Tejon Pass, NW of Los Angeles.

Christ of the Andes, statue of Jesus in Uspallata Pass, the ANDES. Dedicated on March 13, 1904, it commemorates a series of peace and boundary treaties between Argentina and Chile.

Christophe, Henri [krēstôf'], 1767–1820, Haitian revolutionary leader. A freed black slave, he helped TOUSSAINT L'OUVERTURE to liberate HAITI and plotted the assassination of DESSALINES. A tyrant, he ruled (1806–20) N Haiti as King Henri I. He committed suicide.

Christopher, Saint, 3d cent.?, martyr of Asia Minor. In legend he carried a child across a river and felt the child's weight almost too heavy to bear; the child was JESUS, who was holding the world in his hands. Christopher is the patron of travelers. His feast, July 25, was dropped from the Roman Catholic liturgical calendar in 1969.

Christopher, Warren M(inor), 1925–, U.S. government official; b. Scranton, N.D. A Democrat and a lawyer in private practice, he held a number of government posts before he served (1967–69) as deputy attorney general under Pres. Lyndon JOHNSON. From 1977 to 1981 he was deputy secretary of state under Pres. CARTER and was the chief U.S. negotiator in the talks (1981) that ended the Iranian hostage crisis (see IRAN). Christopher was appointed secretary of state by Pres. CLINTON in 1993.

Christus or **Cristus, Petrus** [both: krīs'təs], fl. 1444–c.1473, Flemish painter. A follower and probable pupil of the van EYCKS, he was noted for his introspective treatment of figures and rendering of geometric perspective. Many of his compositions are simplifications of Jan van Eyck's paintings. They include *Lamentation* (Brussels) and *Nativity* (National Gall., Wash., D.C.).

Christy, Edwin P., 1815–62, American showman; b. Philadelphia. In c.1846 he established Christy's Minstrels. The company crystallized the pattern for minstrel shows, with variety acts and white performers in blackface.

chromatography, resolution of a chemical mixture into its components by passing through a stationary system that retards each component to a varying degree. The retarding substance is usually a surface adsorbent, such as ALUMINA, CELLULOSE, or SILICA. In column chromatography the adsorbent is packed into a column, and a solution of the mixture is added at the top and washed, or eluted, down with an appropriate solvent; each component of the mixture passes through the column at a different speed. In paper chromatography the mixture to be separated is allowed to soak along the paper by capillary action, the cellulose in the paper acting as the adsorbent. In gas chromatography a liquid with a high boiling point is impregnated on an inert solid support packed into a thin metal column, and helium gas is allowed to flow through it. The solution to be analyzed is injected into the column, immediately volatized, and swept by the helium gas through the column; at this point the mixture is resolved into its components.

chromium (Cr), metallic element, discovered in 1797 by L.N. Vauquelin. A lustrous, silver-gray metal, it is comparatively rare and occurs only in compounds; the chief source is the mineral chromite. Hard and nontarnishing, chromium is used to plate other metals; in alloys (see, e.g., STEEL) with other metals it contributes hardness, strength, and heat resistance. Chromium compounds are used as paint pigments, in tanning, and in dyeing. See ELEMENT (table); PERIODIC TABLE.

chromosome, structural carrier of hereditary characteristics, found in the cell nucleus. The number of chromosomes is characteristic of each species; in sexually reproducing species, chromosomes generally occur in pairs. In MITOSIS, or ordinary cell division, each individual chromosome is duplicated and each daughter cell receives all chromosomes, a set exactly like its parent's. In MEIOSIS, the process by which germ cells (OVUM and SPERM) are formed, each daughter cell receives half the number of chromosomes, one of each pair. A fertilized egg contains two sets of chromosomes, one set from each parent. Chromosomes are made of DNA and associated proteins. They represent the linear arrangement of GENES, the units of inheritance.

chromosphere: see SUN.

chronic fatigue syndrome, syndrome that begins with flu-like symptoms followed by months or years of lethargy, weakness, and inability to concentrate. Misdiagnosed as "imaginary" for nearly a century, it has had various names, including the "yuppie flu" in the mid-1980s. Although many patients exhibit signs of brain inflammation, hormonal deficits, immune system abnormalities, and viral infections, the exact cause is unknown.

Chronicles or **Paralipomenon** [pâr"əlĭpŏm'ĭnŏn] [Gr., = things

left out], two books of the OLD TESTAMENT, 13th and 14th in the Authorized Version, originally a single work in the Hebrew canon. The books contain a history of the Jewish kingdom under DAVID (1 Chron. 10–29) and SOLOMON (2 Chron. 1–9), and, after the division of the kingdom, a history of the southern kingdom of JUDAH, including the BABYLONIAN CAPTIVITY (2 Chron. 10–36).

chronometer, instrument for keeping highly accurate time. The perfection of the chronometer in 1759 by the English clockmaker John Harrison allowed navigators at sea to determine longitude accurately for the first time. A mechanical marine chronometer is a spring-driven escapement timekeeper, like a watch, but its parts are more massively built and it has devices to compensate for changes in the tension of the spring caused by changes in temperature. Modern chronometers are electronic, using quartz crystal vibrations to regulate their timekeeping.

chrysanthemum, annual or perennial herb (genus *Chrysanthemum*) of the COMPOSITE family, long grown in E Asia. The chrysanthemum is a national flower of Japan and the floral emblem of the Japanese imperial family. The red, white, or yellow flowers range from single daisylike heads to large rounded or shaggy heads. They are commercially important. Innumerable horticultural types exist, most varieties of *C. morifolium.* The pyrethrum, feverfew, marguerite, and DAISY belong in the same genus.

Chrysler, Walter Percy, 1875–1940, American industrialist, founder of the Chrysler Corp.; b. Wamego, Kans. Initially a machinist's apprentice, he became (1916) a vice president of the General Motors Corp. and in 1924 brought out the first Chrysler car. The Chrysler Corp., founded in 1925, became one of the major U.S. automobile companies.

chrysophyte, member of a division (Chrysophyta) of photosynthesizing PROTISTS that consists of the yellow-green ALGAE, golden-brown algae, and DIATOMS. Traditionally classified as plants, they differ from them in their pigmentation, in that their cell walls contain large quantities of silica, and in the way that they store food.

Chrysostom: see JOHN CHRYSOSTOM, SAINT.

chrysotile: see ASBESTOS; SERPENTINE.

Chula Vista, city (1990 pop. 135,163), San Diego co., S Calif., on San Diego Bay; inc. 1911. A port of entry located in an area of citrus and truck farms, it grew with the expanding aircraft industry in nearby San Diego. Its population, which includes many Mexican-Americans, has mushroomed since 1980.

Chun Doo Hwan, 1931–, Korean military leader, president of South Korea (1980–88). An army officer, Chun rose to power after the assassination (1979) of South Korean Pres. PARK CHUNG HEE. As president, Chun banned many of his opponents from politics and secured (1980) a new, authoritarian constitution.

Chungking: see CHONGQING.

Chunnel: see ENGLISH CHANNEL.

Church, Frederick Edwin, 1826–1900, American painter; b. Hartford, Conn. A member of the HUDSON RIVER SCHOOL, he preferred exotic foreign landscapes to native views. His large canvases are noted for their crystalline portrayal of light.

Churches of Christ, conservative body of Protestant Christians, formerly united with the DISCIPLES OF CHRIST. Highly evangelistic, they are congregational in polity and biblical in doctrine, and form one of the larger American denominations. They have about 1.7 million members in the U.S.

Churchill, John: see MARLBOROUGH, JOHN CHURCHILL, 1ST DUKE OF.

Churchill, Sarah: see under MARLBOROUGH, JOHN CHURCHILL, 1ST DUKE OF.

Churchill, Sir Winston Leonard Spencer, 1874–1965, British statesman, soldier, and author. A graduate of Sandhurst, he fought in India, the Sudan, and South Africa. In 1900 he was elected to Parliament. He was the first lord of the admiralty (1911–15) in WORLD WAR I until discredited by the failure of the Dardanelles campaign, which he had championed. He later served in several cabinet positions in the Liberal government of LLOYD GEORGE. A Conservative after 1924, he was chancellor of the exchequer from 1924 to 1929; his revaluation of the pound was a factor leading to the general strike of 1926. Out of office from 1929 to 1939, Churchill issued unheeded warnings of the threat of Nazi Germany. In 1940, seven months after the outbreak of WORLD WAR II, he replaced Neville CHAMBERLAIN as prime minister. His stirring oratory, his energy, and his refusal to make peace with HITLER were crucial to maintaining British resistance from 1940 to 1942. Before the U.S. entry into the war, he met Pres. F.D. ROOSEVELT at sea. He twice addressed the U.S. Congress, twice went to Moscow, and attended a series of international conferences (e.g., YALTA CONFERENCE). After the postwar Labour victory in 1945, he became leader of the opposition. In 1951 he was again elected prime minister; he was knighted in 1953 and retired in 1955. Churchill was the author of many histories, biographies, and memoirs, and in 1953 he was awarded the Nobel Prize in literature for his writing and his oratory.

Churchill, river, NE Canada, called the Hamilton R. until renamed (1965) for Sir Winston Churchill. It flows c.600 m (970 km) from Ashuanipi Lake across Labrador (Newfoundland) to the Atlantic. One of the world's largest hydroelectric installations (5.2 Mw; completed 1971) is located at Churchill (formerly Grand) Falls.

Church of Christ, Scientist: see CHRISTIAN SCIENCE.

Church of England: see ENGLAND, CHURCH OF.

Church of Scotland: see SCOTLAND, CHURCH OF.

Church Slavonic, language belonging to the South Slavic group of the Slavic subfamily of the Indo-European family of languages. It is the first Slavic tongue known to be recorded in writing. From the 9th to 11th cent. A.D. the language is termed Old Church Slavonic, Old Church Slavic, or Old Bulgarian. The later Church Slavonic flourished as a literary language before the 18th cent. It is still the liturgical language of most branches of the ORTHODOX EASTERN CHURCH, but is extinct as a spoken tongue. See LANGUAGE (table).

Churriguera, José Benito [chōōrrēgā'rä], 1665–1725, Spanish architect and sculptor. He won fame for his design (1689) for the great catafalque for Queen Maria Luisa and for his ornate retables. Associated with his brothers, he was architect for the cathedral of Salamanca and built a private palace and the urban complex Nuevo Baztán in Madrid. The term **Churrigueresque** describes late-17th- and early-18th-cent. Spanish architecture marked by extravagance of design and capricious use of Renaissance motives. Its influence was important in the missions of Spanish colonial North America.

Chu Teh: see ZHU DE.

CIA: see CENTRAL INTELLIGENCE AGENCY.

Cibber, Colley, 1671–1757, English dramatist and actor-manager. After successes playing RESTORATION comedy, he wrote *Love's Last Shift* (1696), the first sentimental COMEDY. He wrote 30 more plays and was made poet laureate in 1730. An unpopular man, he was attacked by Alexander POPE in *The Dunciad.*

cicada, large, noise-producing INSECT (order Homoptera) with a stout body, a wide blunt head, protruding eyes, and two pairs of membranous wings. The males have platelike membranes on the thorax, which they vibrate, producing a loud, shrill sound; females are mute. The periodical cicadas (genus *Magicicada*) have the longest life cycles known of any insect, 13 years in one species and 17 in another, but winged adults only live for about one week.

Cicero or **Tully** (Marcus Tullius Cicero), 106 B.C.–43 B.C., greatest Roman orator, also a philosopher. As senatorial party leader he prosecuted CATILINE, but was later exiled himself by CLODIUS; recalled by POMPEY, he opposed Julius CAESAR. He answered Mark ANTONY in the senate with his first and second PHILIPPICS, defending the Republic. After Octavian (AUGUSTUS) took Rome, Cicero was executed. To the modern reader, his letters, to his brother and friends, are perhaps most interesting. His philosophical works are generally stoical (see STOICISM). He is best known for his *Orations against Catiline, Against Verres, On the Manilian Law,* and others. His mastery of Latin prose is unsurpassed.

Cid or **Cid Campeador** [sĭd], d. 1099, Spanish soldier whose exploits were romanticized in many literary works. He fought against the MOORS but ALFONSO VI distrusted and banished (1081) him. The Cid then served the Muslim ruler of ZARAGOZA, fighting against Moors and Christians alike. In 1094 he conquered VALENCIA and ruled there until his death.

Cilicia, ancient region of SE Asia Minor, between the Mediterranean and the Taurus range. Part of the Assyrian empire and then of the Persian empire, it was later hellenized. Roman and Byzantine rule followed. Cilicia was invaded (8th cent. A.D.) by the Arabs, and in 1080 an Armenian state (later called Little Armenia) was set up. This lasted until the area was conquered by the Turks in 1375.

ciliate or **ciliophore,** member of a subphylum (Ciliophora) comprising the most complex PROTOZOANS, including the slipper-shaped PARAMECIUM and the trumpet-shaped stentor. Ciliates are characterized by short hairlike structures (cilia) that cover the cell surface and aid in locomotion, a mouth, and a contractile vacuole for pumping waste and water from the cell.

Cimabue, Giovanni [chēmäbōō'ā], d. c.1302, Florentine painter; b. Cenni di Pepo or Peppi. His works constitute the transition from formal Byzantine painting to the freer expression of the 14th cent. Master of MOSAICS at the cathedral at Pisa, he kept many of the old forms while giving his figures greater naturalism. His attributed works include the *Madonna Enthroned* (Uffizi) and a *Crucifixion* (Santa Croce, Florence).

Cimarron, Territory of, now the Oklahoma panhandle. It was settled in the early 1800s by cattle ranchers, most of them squatters. After several unsuccessful attempts to create a separate territorial government for the area, Cimarron became part of Oklahoma Territory in 1890.

Cimbri: see GERMANS.

Cimmerians, ancient and little-known people who were driven (8th cent. B.C.) from the CRIMEA to the Lake Van region in present E Turkey. They swept across Asia Minor (late 7th cent.), plundering Lydia and weakening Phrygia.

cinchona or **chinchona,** evergreen tree (genus *Cinchona*) of the MADDER family, native to mountainous areas of South and Central America and widely cultivated elsewhere for its bark, the source of QUININE and other antimalarial alkaloids. The tree was named for the Countess of Chinchón, said to have been cured of a fever in 1638 by a preparation of the bark.

Cincinnati, city (1990 pop. 364,040; met. area 1,452,645), seat of Hamilton co., SW Ohio, on the Ohio R.; founded 1788, inc. as a city 1819. It is the industrial, commercial, and cultural center of a large area of Ohio and neighboring Kentucky, and a major river port and transportation center. Machine tools, processed food, electrical equipment, metal goods, and cosmetics are among its manufactures. The city was the first seat (1799) of the legislature of the NORTHWEST TERRITORY. Attractively situated in hilly terrain, it has undergone major renovation of its downtown area. Cultural institutions include its conservatory, opera, museums, and symphony orchestra. William Howard TAFT and Robert A. TAFT were born there, and it is the site of the Taft Museum.

Cincinnatus (Lucius or Titus Quinctius Cincinnatus), fl. 5th cent. B.C., Roman patriot. He was consul (460 B.C.) and dictator twice (458 and 439). According to tradition, he was called from his farm to defend Rome twice, first from foreign invaders, then from the plebeians.

cinematography: see MOTION-PICTURE PHOTOGRAPHY.

Cinna (Lucius Cornelius Cinna), d. 84 B.C., Roman politician. When SULLA left Italy, Cinna as consul (87–84 B.C.) opposed him, and slaughtered many of Sulla's followers. After Sulla set out for Rome, and before the civil war began, Cinna was murdered in a mutiny at Brundisium. His daughter Cornelia was the first wife of Julius CAESAR.

cinnabar, deep-red mercury sulfide mineral (HgS). Used as a pigment, it is principally a source of the metal MERCURY. Cinnabar is mined in Spain, Italy, and California.

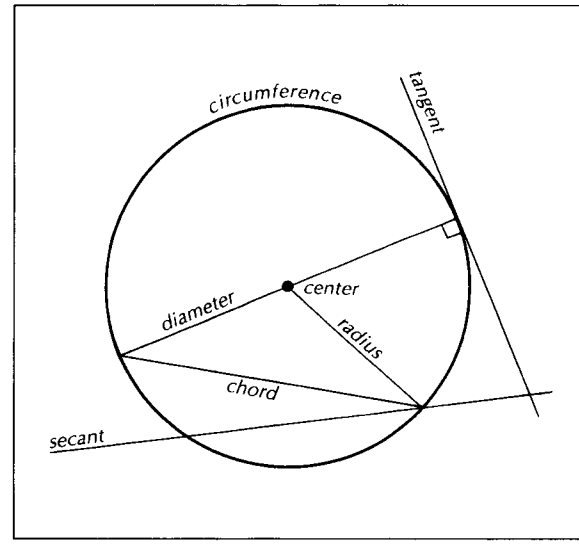
cinnamon, tree or shrub (genus *Cinnamomum*) of the LAUREL family. Cinnamon spice, obtained by drying the bark of the tropical Ceylon cinnamon (*C. zeylanicum*), has been used since biblical times. *C. camphora* is the source of CAMPHOR.

CIO: see AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS.

Cione, Andrea di: see ORCAGNA.

Circe [sûr'se], in Greek mythology, enchantress; daughter of HELIOS. In HOMER's *Odyssey* she turned ODYSSEUS' men into swine, but was forced to break the spell.

circle, closed plane CURVE consisting of all points at a given distance from a fixed point, called the center. A radius of a circle is any line segment connecting the center and the curve; the word *radius* is also used for the length r of that line segment. Both the circle itself and its length C are referred to by the term *circumference.* A line segment whose two ends lie on the circumference is a *chord;* a chord through the center is a *diameter.* The circumference of a circle is given by $C = 2\pi r$. The area A bounded by a circle is given by $A = \pi r^2$. In the religion and art of many cultures the circle frequently symbolizes heaven, eternity, or the universe. See also CONIC SECTION.



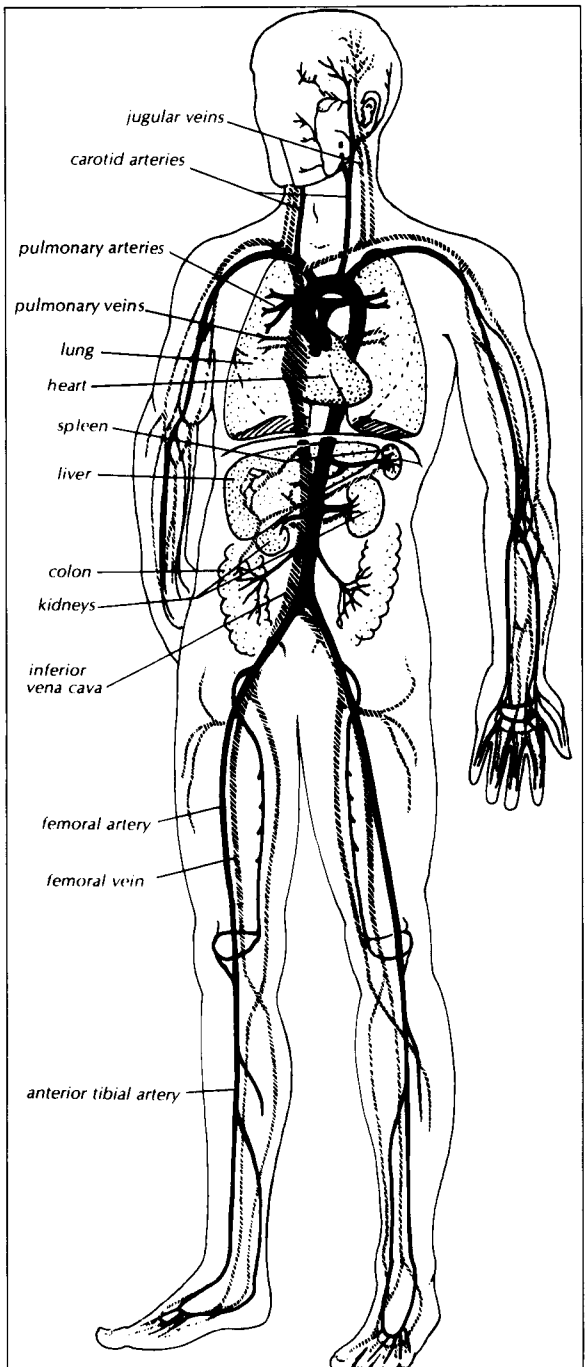
Circle

circuit breaker, electric device that, like a FUSE, interrupts a current in an ELECTRIC CIRCUIT when the current becomes too high. Unlike a fuse, which must be replaced after it has been used once, a circuit breaker can be reset after it has been tripped. When a high current passes through the circuit breaker, the heat it generates or the magnetic field it creates causes a trigger to rapidly separate the pair of contacts that normally conduct the current.

circuit rider, itinerant preacher of the Methodist denomination who served a "circuit" of 20 to 40 "appointments." The system was devised in the 18th cent. by John WESLEY for his English societies and was adapted in America by Francis ASBURY, where it aided greatly the spread of METHODISM.

circulatory system, a group of organs that transport blood and the substances it carries to and from all parts of the body. In humans the circulatory system consists of vessels (arteries and veins) that carry the blood and a muscular pump, the HEART, that drives the blood. Arteries carry the blood away from the heart; the main arterial vessel, the aorta, branches into smaller arteries, which in turn branch into still smaller vessels that reach all parts of the body. In the smallest blood vessels, the capillaries, which are located in body tissue, the gas and nutrient exchange occurs—the blood gives up nutrients and oxygen to the cells and accepts carbon dioxide, water, and wastes (see RESPIRATION). Blood leaving the tissue capillaries enters converging large vessels, the veins, to return to the heart. The human heart has four chambers and a dividing wall, or septum, that separates the heart into a right and a left heart. Oxygen-poor, carbon dioxide–rich blood from the veins returns to the right side of the heart. The heart contracts to pump the blood through pulmonary arteries to the LUNGS, where the blood receives oxygen and eliminates carbon dioxide. Pulmonary veins return the oxygen-rich blood to the left side of the heart. The left side then pumps the oxygenated blood through the branching aorta and arteries to all parts of the body. The organs most intimately related to the substances carried by the blood are the KIDNEYS, SPLEEN, and LIVER. An auxiliary system, the LYMPHATIC SYSTEM, collects lymph, or tissue fluid, from body tissues and returns it to the blood. See also ARTERIOSCLEROSIS; BLOOD PRESSURE; CORONARY ARTERY DISEASE; HEART DISEASE; SHOCK; STROKE.

circumcision, operation to remove the foreskin covering the glans of the penis. Dating from prehistoric times, it is performed by Jews as a sacramental operation eight days after the birth of a male child. It is also practiced among Muslims and other peoples and is often performed as a sanitary measure. Female circumcision, e.g.,



Schematic diagram of the circulatory system

excision of the labia minora and clitoris, or clitoridectomy, is found in Islam and in certain tribes of Africa, South America, and elsewhere.

circumpolar star, a star whose apparent daily path on the celestial sphere lies completely above or below an observer's horizon. A star whose declination (see ASTRONOMICAL COORDINATE SYSTEMS) is greater than 90° minus an observer's latitude will always remain above the horizon for that observer.

circus [Lat., = circle], associated historically with the horse and chariot races, gladiatorial combats, and brutal athletic contests known in ancient Rome as the Circensian games. The Roman circus was a round or oval structure, with tiers of spectators' seats enclosing the area where the action took place. The modern circus, which originated in performances of equestrian feats in a horse ring, dates from the late 18th cent. It is a tent show featuring wild and trained animals, acrobats, freaks, and clowns. The three-ring circus was originated by James A. Bailey. The most famous U.S. show was P.T. BARNUM's. Barnum and Bailey merged with Ringling Brothers in 1919. In its heyday from 1880–1920, the traveling circus declined in the 1950s and 60s. By the 1980s, however, the form had revived somewhat and more than 30 circuses were touring the U.S. and Canada.

cire perdue [Fr., = lost wax], process of hollow metal CASTING. A plaster or clay model is coated with wax and covered with a mold of perforated plaster or clay. Heat is applied, the wax melts and runs out of the holes, and molten metal (usually bronze) is poured into the space formerly occupied by the wax. When the metal is cool, the mold is broken and the core removed. Probably of Egyptian origin, the method was introduced into Greece in the 6th cent. B.C. and was used extensively from the 5th cent. The process, employed worldwide, was brought to China c.200 B.C. and was later used in casting the Benin bronzes of Africa. The great bronze masterpieces of the RENAISSANCE were produced by the cire perdue method.

cirrhosis, degeneration of LIVER tissue, resulting in fibrosis and nodule formation. Portal cirrhosis is the most prevalent form, occurring in patients with a history of ALCOHOLISM; other forms are caused by infections, such as HEPATITIS, and obstruction of BILE flow. Cirrhosis can result in gastrointestinal disturbances, emaciation, JAUNDICE, and edema. It is irreversible, but supportive treatment includes diet control, VITAMINS, diuretics (to remove accumulated fluid), and beta blockers (to control gastrointestinal bleeding). Cirrhosis is a common cause of death in the U.S.

Cisalpine Republic, 1797–1802, Italian state created by Napoleon Bonaparte, who united the two republics he had established (1796) N and S of the Po River. A French protectorate, it became the Italian Republic (1802) and, with the addition of Venetia, the Napoleonic kingdom of Italy (1805), which was broken up by the Congress of VIENNA (1815).

Ciskei [sĭskī'], black South African homeland, or BANTUSTAN (1990 est. pop. 1,000,000), 3,280 sq mi (8,500 sq km), declared independent (1981) by South Africa but not recognized as such by other nations. Bisho was the capital; the largest city was Mdantsane. Many of the Xhosa-speaking inhabitants were forcibly moved to Ciskei from Cape Province in the 1970s. South Africa took control of the homeland in 1994 after the Ciskei police mutinied, and it was reabsorbed.

Cisleithania: see AUSTRO-HUNGARIAN MONARCHY.

Citlaltépetl [sē"tlältā'petəl] or **Orizaba** [ōrēsä'bä], snow-capped, inactive volcano, highest peak (18,406 ft/5,610 m) in Mexico and third highest in North America. It last erupted in 1687.

citizens band radio: see RADIO.

citric acid cycle or **Krebs cycle,** series of chemical reactions occurring in the cells of higher plants, animals, and many microorganisms. It is essential for the oxidative metabolism of GLUCOSE and other simple sugars. The reactions take a molecule of citric acid (originating from glucose) through several intermediate products; additional organic molecules are incorporated, new molecules generated, and citric acid is regenerated. Each cycle releases hydrogen ions, which are necessary for the next stage of the metabolic process to generate chemical energy for the organism.

citron, small evergreen tree (*Citrus medica*) of the ORANGE family, and its fruit, the first of the CITRUS FRUITS introduced to Europe from E Asia. Citrons are grown in the Mediterranean, West Indies, Florida, and California. The large yellow-green, thin-rinded, and furrowed fruit contains a thick, white, and tender inner rind and a small acid pulp. The juice is used as a beverage and syrup, and the candied, preserved rind is used in confectionery and cookery.

citrus fruits, edible fruits of trees of the orange, or RUE, family; almost all native to Southeast Asia and the East Indies. The fruits are rich in vitamin C, citric acid, and sugars; the rind and blossoms yield ESSENTIAL OILS. Citrus fruits include the ORANGE, GRAPEFRUIT, LEMON, LIME, and KUMQUAT.

city-state, in ancient GREECE, autonomous political unit consisting

The key to pronunciation appears on page xiii.

of a city and the surrounding countryside. Greece was organized into several hundred city-states, with a variety of governments ranging from absolute monarchy to pure democracy. Only citizens participated in the government of the city-state, and citizenship was limited to those born of citizen parents. A large proportion of the population consisted of slaves. The organization of Greece into separate city-states left it open to foreign attack by large centralized states, to which it eventually became subject.

Civil Aeronautics Board: see under FEDERAL AVIATION ADMINISTRATION.

Civilian Conservation Corps (CCC), founded in 1933 by the U.S. Congress to provide work and job training for unemployed young men in conserving and developing the nation's natural resources. It was abolished in 1942.

civil law, legal system based on ROMAN LAW; also the body of law dealing with relationships between individuals, as opposed to CRIMINAL LAW, which deals with offenses against the state. After the collapse of the Roman Empire, the legal ideas and concepts of Rome were kept alive in the canon law of the medieval church and the *Corpus Juris Civilis* (6th cent.) of JUSTINIAN I. There are many later codifications of civil law principles. The most famous is the Code Napoléon (1804), the codification of the civil law of France, which has strongly influenced the law of continental Europe and Latin America, where civil law is prevalent. In contrast to COMMON LAW, prevalent in English-speaking countries (including the U.S., except Louisiana), civil law judgments are based on codified principles rather than on precedents, and civil law courts do not generally employ trial by jury or the law of evidence.

civil rights, rights protecting a person against arbitrary or discriminatory treatment. The U.S. CONSTITUTION guarantees freedom of religion, speech, and the PRESS, freedom of assembly, and rights to due process of law (e.g., HABEAS CORPUS) and equal protection under the law. After the CIVIL WAR, efforts to extend civil rights to African Americans were only in part realized by the 14th and 15th constitutional amendments. In the 20th cent. the African-American civil-rights movement, led by the NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE, the National Urban League, Martin Luther KING, Jr., and others, was instrumental in securing legislation, notably the civil-rights acts of 1964 and 1968 and the voting rights act of 1965, prohibiting discrimination in public accommodations, schools, employment, and voting for reasons of color, race, religion, or national origin (see INTEGRATION). WOMAN SUFFRAGE was achieved in the U.S. under the 19th amendment (1920). Congress passed the Equal Rights Amendment, prohibiting discrimination on grounds of sex, in 1972, but the amendment failed to win ratification (see FEMINISM). The federal AMERICANS WITH DISABILITIES ACT, enacted in 1990, forbids discrimination against disabled persons. See also GAY RIGHTS MOVEMENT.

civil service, entire body of those employed in civil administration as distinct from the military, excluding elected officials. While competitive examinations were used to select officials in ancient China, a civil service based on merit emerged in the West with the decline of feudalism and the growth of the nation-state. Prussia (mid-17th cent.) and, later, France (especially after NAPOLEON I) developed efficient civil administrations. The term, first used to designate British administration in India, was extended to Great Britain in 1854. Civil service reform in the U.S. was spurred by the scandals of GRANT's administration. The Pendleton Act (1883) reestablished the **Civil Service Commission** (first est. 1871), which sets up examinations for all positions classified as civil service; most federal jobs are so classified. As a result of reports (1949, 1955) by the Hoover Commission, the federal civil service was streamlined, and operations and activities of many agencies became part of the General Services Administration. The Hatch Act (1940), forbidding political campaigning by civil servants, was an attempt to separate civil service from politics. A 1993 revision of the act allows most civil servants to engage in political activity on their own time.

civil time: see SOLAR TIME.

Civil War, English: see ENGLISH CIVIL WAR.

Civil War, in U.S. history, conflict (1861–65) between Northern states (Union) and Southern seceded states (CONFEDERACY). It is known in the South as the War between the States, and by the official Union designation of War of the Rebellion. Many causes over a number of years contributed to what William H. SEWARD called "the irrepressible conflict": sectional rivalry, moral indignation aroused by the ABOLITIONISTS, the question of the extension of slavery into new territories, and a fundamental disagreement about the relative supremacy of federal control or STATES' RIGHTS. The MISSOURI COMPROMISE (1820) and the COMPROMISE OF 1850 were unsuccessful efforts toward a peaceful solution. The election of LINCOLN as president and the secession (Dec. 20, 1860) of SOUTH CAROLINA, soon followed by six other Southern states, precipitated war. Hostilities began when federal troops were moved to FORT SUMTER, S.C., and Confederate Gen. P.G.T. BEAUREGARD obeyed orders to fire on the fort (Apr. 12, 1861). Four more states seceded, making an 11-state Confederacy. Early battles were Confederate victories. Beauregard defeated Irvin McDowell (July 21) at the first battle of BULL RUN. In 1862, G.B. MCCLELLAN'S PENINSULAR CAMPAIGN was foiled by Confederate commander Robert E. LEE. In September, however, Lee's ANTIETAM CAMPAIGN was checked by McClellan, and Lincoln drafted the EMANCIPATION PROCLAMATION. The year ended with a Union defeat (Dec. 13) at FREDERICKSBURG, and spring brought a resounding Confederate victory (May 2–4, 1863) at CHANCELLORSVILLE, where Lee, however, lost his ablest general, "Stonewall" JACKSON. Confederate fortunes turned when Lee undertook the disastrous GETTYSBURG CAMPAIGN (June–July 1863). Meanwhile, the Union navy had blockaded the Southern coast, and D.G. FARRAGUT captured New Orleans (Apr. 1862). The introduction of the ironclad warship (see MONITOR AND MERRIMAC) had ended the era of the wooden battleship, but Confederate cruisers, built or bought in England, were causing great losses to Northern commercial shipping. In the West, GRANT's great victory (Feb. 1862) at Fort Donelson was followed by a drawn battle (April 6–7) at SHILOH. Union gunboats on the Mississippi opened the way for Grant's successful VICKSBURG CAMPAIGN. Confederate Gen. Braxton BRAGG was checked at the end of the CHATTANOOGA CAMPAIGN (Aug.–Nov. 1863) and was driven back to Georgia. In the WILDERNESS CAMPAIGN (May–June 1864), Grant forced Lee toward Richmond, and besieged PETERSBURG. Union Gen. W.T. SHERMAN won the ATLANTA CAMPAIGN (May–Sept. 1864) and led a destructive march through Georgia to the sea. The Confederates evacuated Richmond after P.H. SHERIDAN's victory at Five Forks (Apr. 1, 1865). With his retreat blocked, Lee was forced to surrender to Grant at APPOMATTOX (Apr. 9, 1865). The Union victory was saddened by the assassination of Pres. Lincoln (April 14), and by the deaths of more Americans than in any other war. But the Union was saved, and slavery was abolished. The seceded states were readmitted to the Union after RECONSTRUCTION.

Cl, chemical symbol of the element CHLORINE.

cladistics, an approach to the CLASSIFICATION of living things in which organisms are defined and grouped by the possession of one or more shared characteristics that are derived from a common ancestor and that were not present in any ancestral group (as envisioned by DARWIN's idea of "descent with modification"). It is a method of reconstructing EVOLUTION that emphasizes the importance of descent and common ancestry rather than simple overall similarity.

Claflin, Tennessee: see WOODHULL, VICTORIA (CLAFLIN).

Clair, René [klâr], 1898–1981, French film director. His films, noted for wit and fantastic satire, include *Sous le Toits de Paris* (1929), *The Ghost Goes West* (1936), and *Les Belles de nuit* (1952).

clam, name for some BIVALVE mollusks, especially marine species that live buried in mud or sand and have shells (valves) of equal size. Clams burrow by means of a muscular foot, which can be extruded through the valves. Clams are highly valued as food. Some freshwater bivalves are also called clams. See also MOLLUSK.

clan, social group based on assumed unilateral descent from a common ancestor. Such groups have existed all over the world, including some that claim the parentage or special protection of an animal, plant, or other object (see TOTEM) as well as such familiar groups as the Highland clans of Scotland. Most clans are exogamous and regard marriages among their members as incest. A clan is distinguished from a lineage in that a clan merely claims common ancestry and may have several lineages; a lineage can be

traced to a common progenitor. Several clans may combine into a larger social group called a phratry.

Clarendon, Edward Hyde, 1st **earl of,** 1607–74, English statesman and historian. A monarchist, he aided CHARLES I and went into exile with CHARLES II. After the RESTORATION, he was lord chancellor. Although he favored religious toleration, he was forced by Parliament to enforce the CLARENDON CODE. In 1667 Charles made him the scapegoat for various failures in the second DUTCH WAR and removed him from office. He fled England and died in exile. He wrote *History of the Rebellion.* His daughter Anne married JAMES II.

Clarendon, Constitutions of, 16 articles issued in 1164 by HENRY II of England at the Council of Clarendon. Important in the development of English law, the Constitutions extended the jurisdiction of civil over church courts. After the pope condemned them, THOMAS À BECKET, the archbishop of Canterbury, repudiated them, but for the most part they remained the law.

Clarendon Code, 1661–65, four English laws passed after the RESTORATION of CHARLES II to strengthen the position of the Church of ENGLAND. The laws resulted in a decrease in the followers of dissenting sects, especially Presbyterians. They were named for the earl of CLARENDON, who opposed but enforced them. Charles tried to court the dissenters by his unsuccessful declarations of indulgence (1662, 1672). The Code was largely superseded by the TEST ACT (1673).

Clarín: see ALAS, LEOPOLDO.

clarinet: see WIND INSTRUMENT.

Clark, George Rogers, 1752–1818, Revolutionary War general, conqueror of the Old Northwest; b. near Charlottesville, Va. He took Vincennes from the British (1779) and fought Native Americans in Ohio. His brother, **William Clark,** 1770–1838, b. Caroline co., Va., joined Meriwether Lewis (1803) as a leader of the LEWIS AND CLARK EXPEDITION. Later he was superintendent of Indian affairs, and governor of Missouri Territory.

Clark, Joe (Charles Joseph Clark), 1939–, prime minister of Canada (1979–80). He entered the Canadian House of Commons from Alberta in 1972 and became leader of the Progressive Conservative party in 1976. In the 1979 elections he led his party to victory and briefly replaced Pierre TRUDEAU as prime minister. His election represented the new political importance of W Canada, especially oil-rich Alberta. In 1983 Brian MULRONEY replaced him as party leader. Clark served as external affairs minister (1984–91) and constitutional affairs minister (1991–93) under Mulroney. In 1993 UN Secretary General Boutros-Ghali appointed him special UN representative for Cyprus.

Clark, Kenneth Bancroft, 1914–, African-American psychologist; b. Canal Zone. He is best known for his writings on the effects of school segregation on students. His 1950 report was cited in the U.S. Supreme Court decision, BROWN V. BOARD OF EDUCATION. He was the first African American to receive a permanent professorship at the City College of New York, where he taught (1942–75), and to be a member of the New York State Board of Regents (1966–86). His books include *Prejudice and Your Child* (1955), *Dark Ghetto* (1965), and *A Possible Reality* (1972).

Clark, Kenneth MacKenzie (Lord Clark of Saltwood), 1903–83, English art historian. His noted writings include *Leonardo da Vinci* (2d ed., 1952), *Landscape into Art* (1949), *Rembrandt and the Italian Renaissance* (1966), *The Romantic Rebellion* (1974), and a popular cultural survey, *Civilisation* (1970).

Clark, Mark Wayne, 1896–1984, U.S. general; b. Madison Barracks, N.Y. He was Allied commander in N Africa and Italy in WORLD WAR II, supreme commander (1952–53) of UN forces in Korea, and commander of U.S. forces in the Far East.

Clarke, Arthur C(harles), 1917–, British science fiction writer. His more than 70 popular, technologically realistic works often examine the universal search for meaning. They include *Childhood's End* (1953) and *The Songs of Distant Earth* (1983). His *2001: A Space Odyssey* (1968) was the basis of a now classic motion picture. He emigrated to Sri Lanka in 1956.

class action, lawsuit in which one or more persons represent a group (class) too large for individual suits to be practical. The decision binds all members of the group. Class action suits often involve major social issues, e.g., inmates attempting to improve prison conditions or women seeking equal pay for equal work.

classicism, term meaning clearness, elegance, symmetry, and repose produced by attention to traditional forms; absence of emotionalism, subjectivity, and excess enthusiasm; and, more precisely, admiration of Greek and Roman models. Renaissance writers, for example, looked to CICERO. In England, Francis BACON in prose and Ben JONSON in poetry strove for classical style. The movement reached its apex with Alexander POPE and the Augustans. In France neoclassicism found its highest expression in the dramas of Pierre CORNEILLE and Jean RACINE. The works of RENAISSANCE painters and of the composers F.J. HAYDN and W.A. MOZART particularly reveal the classical impulse. Classicism and ROMANTICISM are generally contrary tendencies.

classic revival, widely diffused phase of taste ("neoclassic") influencing architecture and the arts in Europe and in the U.S. in the last years of the 18th and first half of the 19th cent. Enthusiasm for antiquity and for archaeological knowledge was stimulated by the excavation of POMPEII and by expeditions in Greece. James Stuart and Nicholas Revett's *Antiquities of Athens* (1st vol., 1762) was extremely influential. In general, Roman influence predominated at first. In France, the Empire style sponsored by NAPOLEON I brought imitation of ancient Rome to a peak. In the U.S. the same spirit was seen in public buildings, e.g., Thomas JEFFERSON's Virginia capitol design (1785). American Greek revival appeared in B.H. LATROBE's Bank of Pennsylvania, Philadelphia (1799). Eventually a Greco-Roman form emerged. It was particularly dominant in the U.S., where classic colonnades were seen even on country farmhouses. Victorian romanticism after the Civil War extinguished the revival, but many major buildings, e.g., the dome and wings of the CAPITOL, remain.

classification, in biology, the systematic categorization of organisms. One aim of modern classification, or systematics, is to show the evolutionary relationships among organisms. The broadest division of organisms is into kingdoms, traditionally two—Animalia (animals) and Plantae (plants). Widely accepted today are three additional kingdoms: the Protista, comprising protozoans and some unicellular algae; the Monera, bacteria and blue-green algae; and the Fungi. From most to least inclusive, kingdoms are divided into the following categories: phylum (usually called *division* in botany), class, order, family, genus, and species. The species, the fundamental unit of classification, consists of populations of genetically similar, interbreeding or potentially interbreeding individuals that share the same gene pool (collection of inherited characteristics whose combination is unique to the species). See also LINNAEUS, CAROLUS; CLADISTICS.

Claudel, Paul [klōdĕl'], 1868–1955, French dramatist, poet, and diplomat. He was ambassador to Japan (1921–27), the U.S. (1927–33), and Belgium (1933–35). His writings reflect his profound and mystical Catholicism. His finest works include the play *Tidings Brought to Mary* (1912) and the rich lyric verse of *Five Great Odes* (1910).

Claude Lorrain [lôrăN'], whose original name was **Claude Gelée or** Gellée [zhəlá], 1600–82, French painter. The foremost landscape painter of his time, he recorded his poetic compositions in a notebook to protect them from forgeries; it was later published as *Liber Veritatis* (1777). In his later landscapes he opened up unlimited vistas, introducing lyrical variations of light to dissolve forms and draw the eye into vast panoramas. In *The Expulsion of Hagar* (1668; Munich) he defied conventional composition for strong effect. POUSSIN was indebted to him, as was J.M.W. TURNER.

Claudius I (Tiberius Claudius Drusus Nero Germanicus), 10 B.C.–A.D. 54, Roman emperor (A.D. 41–54), son of Nero Claudius Drusus Germanicus (see DRUSUS, family) and thus nephew of TIBERIUS. When CALIGULA was murdered (A.D. 41), Claudius was proclaimed emperor by the PRAETORIANS. Despite suffering from a type of paralysis, he consolidated and renewed the empire. Claudius caused MESSALINA, his third wife, to be executed. He was in turn supposedly poisoned by her successor, Agrippina II, after she had persuaded him to pass over his son Britannicus as heir in favor of NERO, her son by a former husband. Claudius was much reviled by his enemies; however, he seems to have had considerable administrative ability.

Claudius, ancient Roman gens. **Appius Claudius Sabinus Inregillenis** or **Regillensis** was a Sabine; he came (c.504 B.C.)

with his tribe to Rome. As consul (495 B.C.) he was known for his severity. **Appius Claudius Crassus** was decemvir (451–449 B.C.). Legend says that his attempt to rape VIRGINIA caused a revolt in which he was killed and which led to the fall of the decemvirs. **Appius Claudius Caecus,** censor (312–308 B.C.), constructed the first Roman aqueduct and began construction of the APPIAN WAY. **Publius Claudius Pulcher,** consul (249 B.C.), attacked the Carthaginian fleet at Drepanum and was defeated. **Appius Claudis Pulcher,** d. c.48 B.C., consul (54 B.C.), joined POMPEY in the civil war and died before the battle at Pharsala (48 B.C.).

Clausewitz, Karl von [klou'zəvĭts], 1780–1831, Prussian general and writer on military strategy. After serving in the wars against NAPOLEON I, he was appointed (1818) director of the Prussian war college. His masterpiece, *On War,* expounded the doctrines of "total war" and war as a political act (a continuation of diplomacy by other means). Published after his death, it had a major impact on military strategy and also greatly influenced political thinking.

Clausius, Rudolf Julius Emanuel [klou'zēōs], 1822–88, German mathematical physicist. He introduced the concept of ENTROPY and restated the second law of THERMODYNAMICS to say that heat cannot of itself pass from a colder to a hotter body. Through investigations of heat, electricity, and molecular physics, he developed the KINETIC-MOLECULAR THEORY OF GASES and formulated a theory of ELECTROLYSIS.

claustrophobia: see PHOBIA.

clavichord: see PIANO.

Clay, Cassius Marcellus, Jr.: see ALI, MUHAMMAD.

Clay, Henry, 1777–1852, American statesman; b. Hanover co., Va. He served Kentucky as U.S. senator (1806–7, 1810–11, 1831–42, 1849–52) and representative (1811–14, 1815–21, 1823–25). A leader of the "war hawks," Clay helped to bring on the WAR OF 1812. His "American system" was a national program for federal aid in internal improvements, a protective tariff, and a rechartering of the BANK OF THE UNITED STATES. Secretary of state (1825–29) under Pres. John Quincy ADAMS, he opposed the succeeding Jackson administration, especially on the bank issue. He was the presidential candidate of the National Republican party in 1832 and of the WHIG PARTY in 1844. Clay pushed the MISSOURI COMPROMISE (1820–21) through the House, and, denouncing extremists in both North and South, he was the chief shaper of the COMPROMISE OF 1850. He was called the Great Pacificator and the Great Compromiser.

clay, common name for a number of fine-grained, earthy materials that are plastic when wet. They are easily molded into a form they retain when dry, and become hard and hold their shape when subjected to heat. Chemically, clay minerals are hydrous aluminum silicates with various impurities. Clays are most commonly formed by surface weathering. In the form of BRICKS, clay has been indispensable to architecture since prehistoric times. Clays are of great industrial importance, e.g., in the manufacture of tile and pipe. Clay is one of the three principal types of soil; the others are SAND and LOAM.

Clayton Antitrust Act: see under ANTITRUST LAWS.

Clayton-Bulwer Treaty, concluded at Washington, D.C., on Apr. 19, 1850, between the U.S., represented by Secretary of State John M. Clayton, and Great Britain, represented by Sir Henry Bulwer. U.S.-British rivalries in CENTRAL AMERICA, particularly over a proposed isthmian canal, led to the treaty, which checked British expansion in Central America but prevented the U.S. from building and politically controlling a canal. The unpopular treaty remained effective until it was superseded by the HAY-PAUNCEFOTE TREATY of 1901.

Cleisthenes or **Clisthenes,** fl. 510 B.C., Athenian statesman; head of the family Alcmaeonidae. The undisputed ruler of ATHENS after 506 B.C., he instituted democratic reforms that ended civil strife there.

Cleland, John, 1709–87, English novelist. His *Memoirs of a Woman of Pleasure* (1750), commonly known as *Fanny Hill,* is traditionally considered the first great pornographic work in English and was repeatedly banned.

clematis, herb or vine (genus *Clematis*) of the BUTTERCUP family. The vines are usually profuse and varied bloomers. The Jackman clematis (*C. jackmanii*) is a large purple hybrid; the Japanese clematis (*C. paniculata*) has small white flowers. Other names for clematis are virgin's bower, traveler's joy, leatherflower, and old-man's-beard.

Clemenceau, Georges [klāmäNsō'], 1841–1929, French premier (1906–9, 1917–20), called "the Tiger." As a journalist, he passionately defended Dreyfus in the DREYFUS AFFAIR. His coalition cabinet in World War I, by reinvigorating French morale, facilitated the Allied victory. At the Paris Peace Conference, he opposed Woodrow WILSON, believing that the Treaty of VERSAILLES would not adequately protect France. Ironically, he lost the 1920 presidential election because of his perceived leniency towards Germany.

Clemens, Roger, 1962–, American baseball player; b. Dayton, Ohio. A pitcher for the Boston Red Sox since 1984, he is known for his hard fastballs, superb pitching control, and hair-trigger temper. Winner of the 1986, 1987, and 1991 Cy Young Awards, he holds the record for most batters (20) struck out in a single game (1986).

Clemens, Samuel Langhorne: see TWAIN, MARK.

Clement I, Saint, or **Clement of Rome,** d. A.D. 97?, pope (A.D. 88?–97?), martyr. Highly esteemed in his day, he may have known Saints PETER and PAUL. His letter to the Corinthians was considered canonical by some until the 4th cent. and is notable for the authority Clement assumes. He was the first Christian writer to use the phoenix as an allegory of the Resurrection. Feast: Nov. 23.

Clement V, 1264–1314, pope (1305–14), a Frenchman named Bertrand de Got. As archbishop of Bordeaux, he gained the favor of the French king PHILIP IV, who engineered his election as pope. He settled (1309) in Avignon, thus beginning the long "captivity" of the PAPACY. Dominated by Philip, he did resist attempts to condemn Pope BONIFACE VIII posthumously, but he supported Philip in suppressing the KNIGHTS TEMPLARS. He issued an important collection of canon law.

Clement VI, 1291–1352, pope (1342–52), a Frenchman named Pierre Roger. Completely pro-French, he kept an elegant court at Avignon. When the PLAGUE known as the Black Death struck (1348–50) Europe, he did much to help the sufferers and tried to stem the subsequent wave of anti-Semitism. In Roman affairs he at first favored but then opposed Cola di RIENZI.

Clement VII, c.1475–1534, pope (1523–34), a Florentine named Giulio de' Medici, a member of the MEDICI family. Weak and timorous, he seemed unaware of the threat that the REFORMATION posed to the church. Allied with FRANCIS I of France, Clement quarreled with Holy Roman Emperor CHARLES V and was captured (1527) when imperial troops sacked Rome. Peace was restored in 1529, and Clement crowned Charles emperor. Clement vacillated in the matter of granting an annulment for HENRY VIII of England and was unable to stop Henry's break with Rome.

Clement VIII, 1536–1605, pope (1592–1605), a Florentine named Ippolito Aldobrandini. Reversing a papal policy, he allied with France instead of Spain and was friendly with the French king HENRY IV. He was also known for piety.

Clement XI, 1649–1721, pope (1700–21), an Italian named Giovanni Francesco Albani. In the War of the SPANISH SUCCESSION, he supported first the claims of PHILIP V and then those of Charles of Hapsburg. Clement was known for his great learning and issued (1713) the bull *Unigenitus* to combat Jansenism (see under JANSEN, CORNELIS).

Clement XIV, 1705–74, pope (1769–74), an Italian named Lorenzo Ganganelli, a Conventual Franciscan. Bowing to the wishes of the Bourbon monarchs of France and Spain, Clement issued (1773) a brief suppressing the JESUITS.

Clemente, Roberto (Walker), 1934–72, Puerto Rican baseball player; b. Carolina, Puerto Rico. A right fielder, he played 18 years (1955–72) with the Pittsburgh Pirates. He had a lifetime batting average of .317, hit 240 home runs, and was the 11th player to reach 3,000 hits. He died in a plane crash while aiding earthquake victims in Nicaragua.

Clement of Alexandria (Titus Flavius Clemens), d. c.215, Greek theologian. A convert to Christianity, he was one of the first to attempt a synthesis of Platonic and Christian thought. He attacked GNOSTICISM, but he has himself been called a Christian gnostic for his efforts to state the faith in terms of contemporary thought. ORIGEN was his pupil.

Clement of Rome: see CLEMENT I, SAINT.

Cleon, d. 422 B.C., Athenian statesman. An antagonist of SPARTA, he

won a great victory at Sphacteria (425 B.C.) but was killed in the defeat at Amphipolis. His reputation as a vulgar demagogue is due to accounts by his enemies THUCYDIDES and ARISTOPHANES.

Cleopatra, 69 B.C.–30 B.C., queen of EGYPT, one of the great romantic heroines of history. The daughter of PTOLEMY XI, she was married (as was the custom) to her younger brother, PTOLEMY XII. By revolting against him, with the aid of Julius CAESAR, she won the kingdom, although it remained a vassal of Rome. After her husband died, she married another brother, Ptolemy XIII; but she was the mistress of Caesar, and in Rome she bore a son, Caesarion (later Ptolemy XIV), said to be his. Returning to Egypt after the murder of Caesar, she was visited by Marc ANTONY, who fell in love with her. She seems to have hoped to use him to reestablish her throne's power; they were married in 36 B.C. But the Romans were hostile, and Octavian (later AUGUSTUS) defeated Antony and Cleopatra off Actium in 31 B.C. Failing to defend themselves in Egypt, Antony and Cleopatra killed themselves. PLUTARCH, SHAKESPEARE, and G.B. SHAW are among the writers who have described Cleopatra's remarkable life.

Cleopatra's needles, popular name for two red granite OBELISKS from Egypt. Originally erected at Heliopolis (c.1475 B.C.) by THUTMOSE III, they were sent separately as gifts of ISMAIL PASHA to England (1878) and the U.S. (1880).

Clergy Reserves, lands in Upper and Lower Canada (now Ontario and Quebec) set apart under the Constitutional Act of 1791 "for the support and maintenance of a Protestant clergy." "Protestant clergy" was interpreted to mean clergy of the Church of England, a view which dissatisfied other Protestant denominations and became an issue in the Rebellion of 1837. In 1854 a law provided for secularization of the reserves, but Anglican and Presbyterian churches retained their endowments.

Clerk-Maxwell, James: see MAXWELL, JAMES CLERK.

Cleveland, (Stephen) Grover, 1837–1908, 22d (1885–89) and 24th (1893–97) president of the U.S.; b. Caldwell, N.J. He was mayor of Buffalo (1882–83) and governor of New York (1883–85). An enemy of machine politics, he was named the Democratic "clean government" candidate to oppose James G. BLAINE in 1884, and was elected after a bitter campaign. As president he pursued his conscientious, independent course, offending the zealots of his party by his moderate use of the SPOILS SYSTEM. In the 1888 election, Cleveland campaigned on a lower tariff, but in spite of a popular majority he lost the election to Benjamin HARRISON. The panic of 1893 struck a hard blow at his second administration, and he angered radical Democrats by securing repeal of the SHERMAN SILVER PURCHASE ACT. The party rift widened when he refused to sign his tariff measure as altered by the protectionist Sen. A.P. Gorman. In the Pullman strike (1894), he sent in troops and broke the strike on grounds that the movement of the U.S. mail was being halted. In foreign affairs he took a strong stand on the VENEZUELA BOUNDARY DISPUTE, and refused recognition to a Hawaiian government set up by Americans. Cleveland's independence marked him as a person of integrity.

Cleveland, city (1990 pop. 505,616; met. area 1,831,122), seat of Cuyahoga co., NE Ohio, on Lake Erie, at the mouth of the Cuyahoga R.; laid out 1796, chartered 1836. Ohio's second largest city, it is a major ore port and GREAT LAKES shipping point and a major producer of metal products. It has diverse light and heavy manufacturing and is a government, corporate, and medical research center. The arrival of the canal (1827) and railroad (1851) spurred the city's growth; its location between the Pennsylvania coal and oil fields and the Minnesota iron mines led to industrialization. John D. ROCKEFELLER began his oil dynasty there. Although the city declined in the 1970s and early 80s, as indicated by its 1978 loan default, the construction of new buildings highlighted economic progress. Case Western Reserve Univ. is among its many educational institutions. The Cleveland Orchestra, Cleveland Museum of Art, and Cleveland *Plain Dealer* newspaper are well known. The city is also the future site of the Rock-and-Roll Hall of Fame.

cliff dwellers, Native Americans of the Anasazi culture who built (11th–14th cent.) large communal homes on mesas and in canyon walls along rivers in the SW U.S. Ancient ancestors of the PUEBLO, the cliff dwellers were agriculturalists who planted and irrigated fields below their highly defensible houses. Their society was communal, and their KIVA attest to religious ceremonies like those of the Pueblos. Many of the dwellings (e.g., Mesa Verde) are now part of the NATIONAL PARK system.

Clifford, Clark McAdams, 1906–, U.S. government official; b. Fort Scott, Kans. As special adviser (1946–50) to Pres. Harry S TRUMAN, he was influential in the formulation (1947) of the Truman Doctrine and the creation of the Dept. of DEFENSE. He served (1961–63) as a foreign policy adviser to Pres. John F. KENNEDY, and became (1963) chairman of the Foreign Intelligence Advisory Board, supervising U.S. espionage operations and playing a crucial role in deciding U.S. military policy in the VIETNAM WAR. Clifford served (1968–69) as secretary of state under Pres. Lyndon JOHNSON. He was (1982–91) chairman of First American Bankshares, which was secretly owned by the Bank of Credit and Commerce International (BCCI), a foreign bank that had been forbidden to purchase a U.S. bank. In 1992 he was indicted on charges stemming from BCCI's secret ownership of First American.

Clinton, Bill (William Jefferson Clinton), 1946–, 42d president of the U.S. (1993–); b. Hope, Ark., as William Jefferson Blythe, 3d. A graduate of Georgetown Univ. and Yale Law School and a Rhodes scholar, he was a lawyer and (1974–76) law professor. In 1974 he was an unsuccessful Democratic candidate for the U.S. Congress from Arkansas. In 1976 he was elected Arkansas attorney general, and in 1978 he won the Arkansas governorship, becoming the nation's youngest governor, but he failed to win reelection in 1980. He ran again in 1982 and won and was reelected twice (1986, 1990). A moderate Democrat, he headed (1990–91) the centrist Democratic Leadership Council. In 1992 he won the Democratic presidential nomination, and he and running mate Al GORE defeated Pres. George BUSH and independent candidate Ross PEROT in the presidential election. He won (1993) passage of a national service program and of tax increases and spending cuts to reduce the federal deficit. He also proposed changes in the U.S. health care system that ultimately would provide health insurance coverage to most Americans. He is married to Hillary Rodham CLINTON.

Clinton, George, 1739–1812, American statesman, vice president of the U.S. (1805–12); b. Little Britain, N.Y. As New York's first governor (1777–95) under the new state constitution, he ably managed trade and public welfare. An advocate of state sovereignty, he opposed the federal Constitution. His nephew, **De Witt Clinton,** 1769–1828, b. New Windsor, N.Y., was mayor of New York City for 10 one-year terms (between 1803 and 1815), and was governor of New York (1817–21, 1825–28). He supported public education and city planning, and sponsored the ERIE CANAL and the Champlain-Hudson Canal.

Clinton, Sir Henry, 1738?–1795, British general in the AMERICAN REVOLUTION; b. Newfoundland. Knighted in 1777, he was (1778–81) supreme commander in America. He took Charleston (1780) but did not take part in the YORKTOWN CAMPAIGN.

Clinton, Hillary Rodham, 1947–, American lawyer and political figure, wife of U.S. Pres. Bill CLINTON; b. Chicago. She was in private practice from 1977 until 1992 and is an expert on children's rights. After her husband's election as president, she co-chaired the administration task force that examined, and proposed changes in, the U.S. health system.

Clio: see MUSES.

Clisthenes: see CLEISTHENES.

Clive, Robert, Baron Clive of Plassey, 1725–74, British soldier and statesman. In the military service of the British EAST INDIA COMPANY, he won a series of brilliant victories (culminating in Plassey, 1757) that broke French power in INDIA. He brought BENGAL under British control and was its first governor. In his second term as governor (1765–67), he reduced corruption and inefficiency and reached a settlement with the states of Bihar and Orissa. On his return to England in 1767, he was accused by Parliament of having unlawfully enriched himself while in India. He was acquitted in 1773, but, in poor health, committed suicide.

clock, mechanical, electrical, or atomic instrument for measuring and indicating time. Predecessors of the clock were the sundial, the hourglass, and the clepsydra. The operation of a clock depends on a stable mechanical oscillator, such as a swinging PENDULUM or a mass connected to a spring, by means of which the energy stored in a raised weight or coiled spring advances a pointer or other

indicator at a controlled rate. The heavy and bulky weight-driven clock may first have been built in the 9th cent. The introduction (c.1500) of the coiled spring made possible the construction of smaller, lighter-weight clocks. The Dutch scientist Christiaan HUYGENS invented (1656 or 1657) a pendulum clock, probably the first. Electric clocks, first made in the late 19th cent., are powered by an electric motor synchronized with the frequency of alternating current. The quartz clock, invented c.1929, uses the vibrations of a quartz crystal to drive a synchronous motor at a very precise rate. An atomic clock (invented 1948), even more precise, is indirectly controlled by atomic or molecular oscillations. Digital clocks and watches dispense with the hour-marked dial and display time as a numerical figure.

Clodius (Publius Clodius Pulcher), d. 52 B.C., Roman politician. In 62 B.C., disguised as a woman, he took part in the women's mysteries of Bona Dea in the house of Julius CAESAR, thus leading Caesar to divorce his wife Pompeia. In 58 B.C. he became tribune of the people and proved to be a demagogue. His gang of hired ruffians changed the complexion of Roman politics. He was killed by a rival gang hired by the tribune Milo.

cloisonné, method of decorating metal surfaces with enamel. Filaments of metal are attached to the surface of the object, outlining the design and forming compartments that are filled with colored paste enamels. When the piece is heated the enamels fuse with the metal, forming a glossy, colored surface. Probably invented in the Middle East, cloisonné was perfected by the Chinese, Japanese, and French.

Cloisters, the, museum of medieval art, in Fort Tryon Park, N.Y.C.; opened in 1938. A branch of the METROPOLITAN MUSEUM OF ART, it includes four French cloisters, a Romanesque chapel, and a chapter house. The core of the collection—several hundred examples of medieval French art (gathered by George Gray BARNARD)—was purchased (1925) by John D. Rockefeller, Jr. (see ROCKEFELLER, family), and presented to the museum. Later additions include the 15th-cent. *Unicorn* tapestries and CAMPIN's *Mérode Altarpiece*.

clone, group of organisms descended from a single individual through asexual REPRODUCTION. Except for changes in hereditary material due to MUTATION, all members of a clone are genetically identical. Laboratory experiments have resulted in the development of a frog from a cell of an existing animal, but it was the successful IN VITRO FERTILIZATION of human eggs that led in 1993 to the "cloning" of human embryos by dividing such fertilized eggs at a very early stage of development. This technique, which does not produce a clone but a twin, had already been used successfully with sheep and other animals. Abnormal embryos were used in the human experiment and were later discarded. The experiment provoked an outcry from ethicists, religious leaders, and others, most of whom called for banning such procedures or establishing guidelines for them.

Close, Chuck, (Charles Thomas Close), 1940–, American painter; b. Monroe, Wash. A leading figure in the PHOTOREALISM movement, he is known for huge, frontal, and photographically precise portraits.

closed-end investment company: see MUTUAL FUND.

closed shop: see UNION, LABOR.

clot-dissolving drug: THROMBOLYTIC DRUG.

Clotho: see FATES.

cloud, aggregation of minute particles of water or ice suspended in the air. Clouds form when air containing water vapor is cooled below a critical temperature called the DEW point. The resulting moisture condenses into droplets on microscopic dust particles (condensation nuclei) in the atmosphere. The air is normally cooled by expansion during its upward movement. Clouds are classified by appearance, altitude, or composition. Each cloud type is formed by specific atmospheric conditions and is, therefore, indicative of forthcoming weather. *Cirrus* clouds, generally white, and delicate and fibrous in appearance, are the highest clouds and are made of ice crystals. *Stratus* clouds, layered in appearance, are the lowest clouds and are associated with stormy weather. *Cumulus* clouds, which are vertically developed, usually with a horizontal base and a dome-shaped upper surface, are intermediate in height and are associated with fair weather. Combinations of these cloud names are common. *Cirrostratus* clouds, for example, are high-altitude layered clouds that often indicate rain or snow. Prefixes and suffixes are also used. For example, *nimbus* means rain, and *cumulonimbus* clouds, commonly called thunderheads, indicate rain showers.

cloud chamber: see PARTICLE DETECTOR.

Clouet, Jean [klo͞oā'], called **Janet** or **Jehannet,** c.1485–1540, court painter to FRANCIS I of France. He is thought to have been Flemish. None of the soft, geometrically simple drawings, portraits, and miniatures attributed to Jean Clouet can be proved to have been his. His son, **François Clouet,** c.1510–c.1572, inherited his father's position as court painter. His clear, precise draftmanship can be seen in his portraits of Francis I and Elizabeth of Austria (both: Louvre).

Clough, Arthur Hugh [klŭf], 1819–61, English poet. He is best remembered for his lyric "Say not the struggle naught availeth." Clough is the subject of "Thyrsis," an elegy written by his close friend Matthew ARNOLD.

clove, small tropical evergreen tree (*Syzygium aromaticum* or *Eugenia caryophyllata*) of the MYRTLE family and its unopened flower bud, an important spice. The buds, whose folded petals are enclosed in four toothlike lobes of the calyx, are dried and used whole or ground for cooking. Clove oil is used in flavorings, perfumes, and medicines.

clover, plant (genus *Trifolium*) of the PULSE family, mainly native to north temperate and subtropical areas. The American cultivated varieties were introduced from Europe. Clovers have been cultivated for hay and are excellent honey plants. The dried flowers and seed heads of the common white clover (*T. repens*) were used to make bread during famines in Ireland, and the leaves are used for salads in some parts of the U.S. Sweet clover is a related plant.

Clovis I, c.466–511, Frankish king (481–511), founder of the MEROVINGIAN monarchy. He rose from tribal chief to sole leader of the Salian FRANKS by dint of patience and murder. He won Gaul and SW Germany by fighting the Romans, Alemanni, Burgundians, and Visigoths. His wife, St. Clotilda, encouraged his conversion (496) to Christianity.

Clovis culture, early North American people (c.10,000–9000 B.C.) known through artifacts first unearthed in the early 1930s near Clovis, N.Mex. Their chipped flint points (Clovis points) and other stone tools were found with remains of large mammals, e.g., extinct mammoths. Clovis groups are the earliest definitively dated human populations in the Americas.

club moss, any of a family of primitive vascular plants that reached their zenith in the Carboniferous period and are now almost extinct. They resemble the more primitive nonvascular true mosses. Club mosses are usually creeping or epiphytic; many of them inhabit moist tropical or subtropical regions. Reproduction is by spores, which are clustered in small cones or borne in the axils of the scalelike leaves. Some species of *Lycopodium,* called ground pine or creeping cedar, resemble miniature hemlocks with flattened fan-shaped branches. Spores of *L. clavatum* are sold as lycopodium powder, or vegetable sulfur, a flammable yellow powder used in pharmaceuticals and fireworks. Species of *Selaginella* are grown as ornamentals, e.g., the resurrection plant.

Cluj-Napoca, Hung. *Kolozsvár,* Ger. *Klausenburg,* city (1989 est. pop. 318,000), W central Romania, in Transylvania, on the Someşul R. Romania's second largest city, it has metallurgical, consumer, and other industries. The city was founded (12th cent.) by German colonists, incorporated (1867) in the Austro-Hungarian empire, and transferred (1920) to Romania. It has noted botanical gardens and a 14th-cent. Gothic church.

Cluny Museum, Paris, 14th- and 15th-cent. Gothic and Renaissance structure built on the site of the Roman baths of Emperor Julian. Acquired and converted by the antiquarian Du Sommerard, it was left to the state at his death (1842). Its 24 galleries display medieval works of carved wood, metalwork, textiles, and stained glass, as well as superb 15th- and 16th-cent. tapestries.

cluster, star: see STAR CLUSTER.

Clytemnestra [klī"təmnĕs'trə], in Greek mythology, daughter of LEDA and Tyndareus. The wife of AGAMEMNON, she was the mother of ORESTES, ELECTRA, and IPHIGENIA. She and her lover, AEGISTHUS, murdered Agamemnon and, in revenge, were slain by Orestes. HOMER portrayed Clytemnestra as a noble woman, misled by her

lover, but the Greek tragedians, particularly AESCHYLUS, depicted her as remorseless and vengeful.

Cm, chemical symbol of the element CURIUM.

Cnossus: see KNOSSOS.

Co, chemical symbol of the element COBALT.

coal, fuel substance of plant origin, composed largely of CARBON with varying amounts of mineral matter. Coal belongs to a series of carbonaceous fuels that differ in the relative amounts of moisture, volatile matter, and fixed carbon they contain; the most useful contain the largest amounts of carbon and the smallest amounts of moisture and volatile matter. The highest grade of coal is anthracite, or hard coal, which is nearly pure carbon and is used as a domestic fuel. Bituminous coal, or soft coal, with a lower carbon content, is used as an industrial fuel and in making COKE. LIGNITE and PEAT are the lowest in carbon content. Large amounts of coal were formed in the Carboniferous period of geological time (345 to 280 million years ago). It is thought that great quantities of vegetable matter collected and underwent slow decomposition in SWAMPS similar to present-day peat bogs and in lagoons. The peat that formed was converted to lignite and coal by METAMORPHISM. The pressure of accumulated layers of overlying sediment and rock forced out much of the volatile matter, leaving beds or seams of compact coal interstratified with shales, clays, or sandstones. Higher grades of coal were produced where the stress was greatest. Major U.S. coal fields are found in Appalachia, the Midwest, the Rocky Mt. region, and along the Gulf Coast. The chief coal-producing countries of Europe are Russia, Ukraine, Poland, Germany, Britain, France, and Belgium. Valuable coal deposits also exist in China, India, South Africa, and Australia.

coal tar: see TAR AND PITCH.

coast guard, special naval force assigned to seaboard duties. In peacetime the U.S. coast guard is under the jurisdiction of the Dept. of Transportation; in wartime it is under the control of the U.S. navy. In addition to suppressing contraband trade and aiding vessels in distress, the service enforces navigation rules; administers regulations governing ship construction and licensing of merchant marine personnel; and operates weather ships, an ice patrol, and navigational aids, including lighthouses, lightships, buoys, and loran stations. The UNITED STATES COAST GUARD ACADEMY, New London, Conn., provides officer training.

Coast Mountains, western range of the North American cordillera, extending c.1000 mi (1,610 km) N from W British Columbia into SE Alaska. Geologically distinct from the COAST RANGES, the range reaches a high point at Mt. Waddington (13,260 ft/4,042 m).

Coast Ranges, series of geologically related ranges forming the western edge of the North American cordillera. The highest peaks are in the St. Elias Mts. (Alaska). Other ranges are the Olympic Mts. and the Coast Ranges (Oregon), the Klamath Mts. and Coast and Los Angeles ranges (California), and the mountains of BAJA CALIFORNIA.

coaxial cable: see CABLE.

cobalt (Co), metallic element, discovered in 1735 by Georg Brandt. It is silver-white, lustrous, and hard, and can be magnetized. It is combined with other metals in the ores cobaltite and smaltite. Cobalt alloys are used in very hard cutting tools, high-strength permanent magnets, and jet engines. Radioactive cobalt-60 is used in cancer therapy and to detect flaws in metal parts. See ELEMENT (table); PERIODIC TABLE.

Cobb, Ty(rus Raymond), 1886–1961, American baseball player; b. Narrows, Ga. Cobb was the first player elected (1936) to the National Baseball Hall of Fame. An outfielder, the "Georgia Peach" is considered by many to be the greatest player in the history of the game. In a 24-year career (Detroit Tigers, 1905–26; Philadelphia Athletics, 1927–28) he set numerous major-league records that still stand, such as his lifetime batting average of .367, and 12 batting championships. A daring base runner, he stole 892 bases. He was manager of the Tigers from 1921 to 1926.

Cobbett, William, 1763?–1835, British journalist and reformer. After resigning from the army, he went (1792) to the U.S., where he championed the Federalists (see FEDERALIST PARTY) against the pro-French Republicans. On his return to England (1799) he became a radical working-class leader and champion of agrarianism. His *Political Register* was an influential reform journal. After another flight

Ty Cobb

to the U.S. to avoid the Gagging Acts, he returned to become a central figure in the agitation for Parliamentary reform. He was elected to Parliament after the Reform Bill of 1832. His most famous book is *Rural Rides* (1830).

Cobden, Richard, 1804–65, British politician, a leading spokesman for the MANCHESTER SCHOOL. After making a fortune as a calico printer, he became a major influence in the repeal of the CORN LAWS. With John BRIGHT and Robert PEEL, he managed the ANTI-CORN-LAW LEAGUE. As a member of Parliament, Cobden negotiated the "Cobden Treaty" for reciprocal tariffs with France (1859–60), and favored the Union in the U.S. Civil War.

COBOL: see PROGRAMMING LANGUAGE.

cobra, venomous SNAKE of the family Elapidae equipped with an inflatable neck hood, found in Africa and Asia. The king cobra (*Ophiophagus hannah*), or hamadryad, the largest poisonous snake, is found in S Asia; it may reach a length of 18 ft (5.5 m). Other species include the Indian cobra (*Naja naja*) and the Egyptian cobra (*Naja haja*), also called the ASP. The family also includes CORAL SNAKES.

coca, plant (genus *Erythroxylon,* particularly *E. coca*) found mainly in upland regions and on mountain slopes of South America and in Australia, India, and Africa. Certain South American peoples chew the leaves mixed with lime, which acts with saliva to release COCAINE from the leaves. In this form and concentration, the DRUG acts as a stimulant. A cocaine-free extract of the leaves is used in some soft drinks. Coca is grown commercially in Sri Lanka, Java, and Taiwan.

cocaine, ALKALOID drug derived from COCA leaves, producing euphoria, hallucinations, and temporary increases in physical energy. Prolonged use can cause nervous-system aberrations (including delusions), general physical deterioration, weight loss, and addiction (see DRUG ADDICTION AND DRUG ABUSE). Withdrawal from the drug can produce severe depression. See also CRACK.

Cochabamba, city (1985 est. pop. 317,000), W central Bolivia, c.8,400 ft (2,560 m) high in the Andes. Center of a productive agricultural region, it was founded as Villa de Oropeza in 1574 and renamed in 1786.

Cochin China, historic region (c.26,500 sq mi/68,600 sq km), S Vietnam, bounded by Cambodia (NW, N), Annam (NE), the South China Sea (E, S), and the Gulf of Thailand (W). The capital and chief city was Saigon (now HO CHI MINH CITY). Cochin China included the MEKONG delta, one of the world's great rice-growing areas, and, in the northeast, plantations where rubber, coffee, tea, oil palms, and sugarcane were grown. Originally part of the KHMER EMPIRE, Cochin China fell to ANNAM in the 18th cent. and became (1862–67) a French colony. The Japanese occupied it during WORLD WAR II. In 1954, after an independence struggle against the French, Cochin China became part of South Vietnam. At the end of the VIETNAM WAR it was incorporated into united Vietnam.

Cochise, c.1815–74, chief of the Chiricahua APACHE in Arizona, noted for courage, integrity, and military skill. From 1861, when soldiers unjustly hanged some of his relatives, he warred relent-

lessly against the U.S. army. Peace talks in 1872 promised him a reservation on his native territory, but after he died his people were removed.

Cockcroft, Sir John Douglas, 1897–1967, English physicist. After serving as fellow and professor of natural philosophy at Cambridge, he directed (1946–59) the British Atomic Energy Research Establishment at Harwell. He shared with Ernest Walton the 1951 Nobel Prize in physics for their pioneer work in transmuting atomic nuclei by bombarding elements with artificially accelerated atomic particles.

cocker spaniel, smallest SPORTING DOG; shoulder height, 14–15 in. (35.6–38.1 cm); weight, c.25 lb (11.3 kg). Its silky, flat, or wavy coat is moderately long and may be any solid color or combination of colors. The breed was developed from English cocker spaniels brought to the U.S. in the 1880s.

cockle, heart-shaped marine BIVALVE mollusk having ribbed, brittle shells and moving with a jumping motion produced by means of a large, muscular foot. Most species do not exceed 3 in. (7.5 cm) in length. Cockles burrow in sand or mud in shallow water. Several species are edible.

cockroach or **roach,** nocturnal, flat-bodied oval INSECT of the family Blattidae (order Orthoptera). Cockroaches have long antennae, long legs adapted for running, and a flat extension of the upper body that covers the head; some species fly. In length they range from ¼ in. to 3 in. (.6–7.6 cm). Cockroaches are not known to be disease carriers. They were extremely abundant during the Carboniferous period (about 350 million years ago) and probably were the first flying animals.

cocoa: see CACAO.

coconut, edible fruit of the coco palm tree (*Cocos nucifera*) of the PALM family, widely distributed throughout the tropics. The coco palm, which grows to a height of 60 to 100 ft (18 to 30 m) and has a crown of frondlike leaves, is one of the most useful trees in existence. It is a source of timber, and its leaves are used in baskets and for thatch. The coconut itself is a single-seeded nut with a hard, woody shell encased in a thick, fibrous husk. The hollow nut contains coconut milk, a nutritious drink, and its white kernel, a staple food in the tropics, is eaten raw and cooked. Commercially valuable coconut oil is extracted from the dried kernels, called copra, and the residue is used for fodder. Husk fibers are used in cordage and mats, and nutshells are made into containers.

Cocos (Keeling) Islands, external territory of Australia (1992 est. pop. 600), 5.5 sq mi (14.2 sq km), consisting of two separate atolls with 27 coral islets, in the Indian Ocean. The population is largely Muslim Malays. The islands were settled (1827) and developed by the Clunies-Ross family for copra production. Under British rule from late 1800s, they were a dependency of Britain's SINGAPORE colony after 1903; they were transferred to Australia in 1955. Australia purchased the Clunies-Ross interests in 1978 and leased the copra plantation to a Cocos Malay-run cooperative. The islands' residents voted to become part of Australia in 1984.

Cocteau, Jean [kôktō'], 1889–1963, French author and filmmaker. Unrivaled in the 20th cent. for versatility in the arts, he experimented in almost every artistic medium, producing poetry, fiction, drama, films, ballets, drawings, and operatic librettos. Surrealistic fantasy suffuses his work. He is best known for the novel *Les Enfants Terribles* (1929; film 1950); the plays *Orphée* (1926; film 1949) and *The Infernal Machine* (1934); and the films *The Blood of a Poet* (1932) and *Beauty and the Beast* (1945).

cod, marine, bottom-feeding FISH (family Gadidae), among the most important and abundant food fishes. The Atlantic cod (*Gadus morrhua*) averages 10 to 25 lb (4.5 to 11 kg), but specimens up to 200 lb (90 kg) have been reported. The haddock (*Melanogrammus aeglefinus*), the most important food fish in the Atlantic, is smaller, reaching a weight of 30 lb (13.6 kg). Finnan haddie is lightly smoked haddock. Commercially exploitable stocks of cod and haddock have been depleted in recent years.

codeine, ALKALOID drug derived from OPIUM. A NARCOTIC with effects like those of MORPHINE, codeine is prescribed as an ANALGESIC and cough suppressant. It is addictive (see DRUG ADDICTION AND DRUG ABUSE).

Code Napoléon: see CIVIL LAW.

Cody, William Frederick: see BUFFALO BILL.

coelacanth: see LOBEFIN.

coelenterate, radially symmetrical, predominantly marine invertebrate animal of the phylum Cnidaria (also called Coelenterata), having a three-layered body wall, tentacles, and specialized stinging cells (nematocysts). Members of the phylum have a primitive nervous system and no specialized organs for excretion or respiration. The phylum includes the SEA ANEMONES, CORALS, JELLYFISH, and hydroids (see HYDRA). See also POLYP and MEDUSA.

coenzyme, any of a group of relatively small organic molecules that make up the non-protein portion of an ENZYME and without which the enzyme is inactive. Coenzymes participate in chemical reactions catalyzed by enzymes; although often structurally altered in the course of the reaction, coenzymes are always restored to their original form. Notable coenzymes include ADENOSINE TRIPHOSPHATE, important in the transfer of chemical energy, and VITAMINS, vital to a variety of biochemical reactions in the body, including the Krebs cycle (see CITRIC ACID CYCLE).

Coetzee, J(ohn) M(ichael), 1940–, South African writer. A white South African computer scientist, linguist, and teacher, his novels are about the human suffering that results from imperialism and APARTHEID, e.g., *In the Heart of the Country* (1976), *Waiting for the Barbarians* (1982), and *Age of Iron* (1990).

Cœur, Jacques [kör], c.1395–1456, French merchant and chief adviser to CHARLES VII of France. He amassed a fabulous fortune with which he financed the last campaigns of the HUNDRED YEARS WAR. Arrested (1451) on the concocted charge of having poisoned Agnès SOREL, the king's mistress, he escaped (1454–55) to Rome and died fighting the Turks.

coffee, name for an evergreen shrub or tree (genus *Coffea*) of the MADDER family, its seeds, and the beverage made from them. The mature, red fruit (a drupe) typically contains two seeds, or coffee beans. Varieties of Arabian coffee (*C. arabica*) supply the bulk of the world's supply; Liberian coffee (*C. liberica*) and Congo coffee (*C. robusta*) are of some commercial importance. Coffee plants require a hot, moist climate and rich soil. The harvested seeds are cleaned and roasted; heat acts on the essential oils to produce the aroma and flavor. Roasts range from light brown to the very dark Italian roast. Coffee contains CAFFEINE, a stimulant that can cause irritability, depression, and indigestion if taken in excess. The coffee plant was known before A.D. 1000 in Ethiopia, where its fruit was used for food and wine. A beverage made from ground, roasted coffee beans was used in Arabia by the 15th cent., and by the mid-17th cent. it had reached most of Europe and had been introduced into North America.

Coffin, Henry Sloane, 1877–1954, American Presbyterian clergyman; b. N.Y.C. He was pastor (1905–26) of the Madison Avenue Presbyterian Church, and president (1926–45) of Union Theological Seminary (both: N.Y.C.). His nephew **William Sloane Coffin, Jr.,** 1924–, b. N.Y.C., was chaplain (1958–75) at Yale Univ., where he was an antiwar activist, and was (1977–89) senior minister at Riverside Church (N.Y.C.).

cognac: see BRANDY.

cognitive psychology, school of psychology that examines internal mental processes, such as creativity, perception, thinking, problem solving, memory, and language. Cognitive psychologists are interested in how a person understands, diagnoses, and solves a problem, concerning themselves with the mental processes that mediate between stimulus and response. In recent years cognitive psychology has become associated with computer information processing and ARTIFICIAL INTELLIGENCE, studying parallels in the ways that both brain and computer receive, process, store, and retrieve information.

Cohan, George M(ichael), 1878–1942, American showman; b. Providence, R.I. He wrote, directed, produced, and starred in many MUSICALS, most exemplifying his favorite themes—Broadway and a flag-waving patriotism. His first successes were *Little Johnny Jones* (1904) and *Forty-five Minutes from Broadway* (1906). Best remembered for such songs as "The Yankee Doodle Boy," "Give My Regards to Broadway," and "Over There," he was also a skillful adapter of others' material, e.g., *Seven Keys to Baldpate* (1913).

coherence, a constant correlation between the phases of two or more WAVES, or parts of a single wave. Two waves are coherent and in phase if their crests and troughs are synchronized, and coherent

but out of phase if the crests of one are synchronized with the troughs (or any other part of the wave except the crest) of the other. Waves are incoherent if the crests and troughs meet randomly, i.e., the correlation between the phases is not constant. Coherence underlies a variety of phenomena, such as INTERFERENCE and DIFFRACTION, and is also the basis of many of the remarkable properties of LASER radiation.

cohesion: see ADHESION AND COHESION.

Cohn, Ferdinand, 1828–98, German botanist. Considered a founder of bacteriology, he developed theories of the bacterial causes of infectious disease and recognized bacteria as plants. His writings cover such subjects as fungi, algae, insect epidemics, and plant diseases.

coin, piece of metal, usually a disk of gold, silver, nickel, bronze, copper, or a combination of such metals, issued by a government for use as MONEY. State coinage, said to have originated in Lydia in the 7th cent. B.C., enabled governments to make coins whose nominal value exceeded their value as metals. The first U.S. MINT was established in 1792. Beginning in 1965, the U.S. Treasury stopped putting silver in newly minted dimes and quarters, and reduced the amount of silver in the half-dollar. A 1970 act eliminated all silver from the half-dollar and dollar coins. U.S. law provides, however, that special mintings of both coins, containing 60% copper and 40% silver, be made for collectors.

Coke, Sir Edward [kōōk], 1552–1634, English jurist and political leader. After a rapid rise in Parliament he became (1593) attorney general, gained a reputation as a severe prosecutor, and was favored at the court of JAMES I. As chief justice of common pleas (from 1606) and of the king's bench (from 1613) he championed the common law against the royal prerogative. Collisions with the king and political enmities led to his dismissal in 1616. By 1620 he had returned to Parliament, where he led popular opposition to the Crown. He helped draft the PETITION OF RIGHT (1628). Coke's writings include his *Reports* (on common law) and the *Institutes*.

coke, hard, gray, porous fuel with a high CARBON content. It is the residue left when bituminous COAL is heated in the absence of air. Coke is used in extracting metals from ores in the BLAST FURNACE.

cola or **kola,** tropical tree (genus *Cola*) of the sterculia family, native to Africa but grown in other tropical areas. The fruit is a pod containing CAFFEINE-yielding seeds. Cola nuts are chewed for this stimulant. They are also exported for use in soft drinks and medicine.

Colbert, Jean Baptiste [kôlbĕr'], 1619–83, French statesman. Appointed (1665) controller general of finances by LOUIS XIV, he aimed to make France economically self-sufficient through the practice of MERCANTILISM. He encouraged industry by subsidies and tariffs, regulated prices, built roads, canals, and harbors, and expanded the navy and France's commercial potential. His power declined with the onset of Louis XIV's wars.

cold or **common cold,** viral infection of the mucous membranes of the upper respiratory tract, especially the nose and throat. There are numerous viral organisms that may cause the common cold, although there is no known cure or preventive. Treatment of symptoms includes fluids to prevent dehydration, ANALGESICS (e.g., ASPIRIN) to lessen fever, and decongestants to shrink swollen mucous membranes. Some believe that VITAMINS in large doses, especially vitamin C, may be helpful in prevention.

cold fusion or **low-temperature fusion,** nuclear fusion of deuterium, an isotope of HYDROGEN, at or relatively near room temperature. Fusion, the reaction involved in the release of the destructive energy in a HYDROGEN BOMB, requires extremely high temperatures, and investigations of fusion as a possible energy source have focused on the problems involved in designing an apparatus to contain and sustain such a reaction (see NUCLEAR ENERGY; NUCLEAR REACTOR). In 1989 B. Stanley Pons and Martin Fleischmann, chemists at the Univ. of Utah, announced that an experiment conducted at room temperature using platinum and palladium electrodes immersed in heavy water (deuterium oxide) had produced excess heat and other by-products that they ascribed to a fusion reaction. Attempts to replicate their experiment produced initially conflicting results, but several early announcements of experimental confirmation were later retracted. Pons and Fleischmann were also later criticized for having skewed data to show the emission of gamma rays at an energy level typical of fusion. Research into the possibility of cold fusion, by Fleischmann and others, nonetheless continued, because of intriguing but inconclusive experimental results and because of the desirability of producing relatively nonpolluting fusion energy in quantity at any temperature.

cold sore: see HERPES SIMPLEX.

cold war, term used to describe the political and economic struggle between the capitalist, democratic Western powers and the Soviet Union (and later other Communist nations) after the Allied victory in WORLD WAR II. The cold war period was marked by massive military buildups (including nuclear weaponry) by both sides and by intensive economic competition and strained hostile diplomatic relations. The "hot wars" of the period included the KOREAN WAR and VIETNAM WAR. The first important post-World War II disagreement between East and West was about the reunification of GERMANY, which proved at the time to be impossible. Communications between the two sides virtually ceased, and an "iron curtain" descended between them. The U.S. rallied the other Western powers by sponsoring a series of strategic actions, including the MARSHALL PLAN, the NORTH ATLANTIC TREATY ORGANIZATION (NATO), and other regional pacts. Within the Communist bloc the Soviet Union maintained tight political, economic, and military control over its satellites, for example, by suppressing the Hungarian Revolution of 1956; by instituting (1955) the WARSAW TREATY ORGANIZATION; and by supporting Communist revolutions in CHINA, parts of Southeast Asia, and CUBA. A period of eased tensions, known as DÉTENTE, occurred in the late 1960s and the 70s, but the Soviet invasion of Afghanistan (1979), the banning of the SOLIDARITY union and other events in Poland, and Pres. REAGAN's strong anti-Communist stance worsened relations between East and West. In the late 1980s and early 90s Mikhail GORBACHEV's policies opened Soviet society to increasingly radical change and diminished the power of hard-line Communists, and the USSR permitted the collapse of Communist regimes in Eastern Europe (1989–90) and the reunification of Germany (1990). Cordial relations between the USSR and U.S., which began to act in unison internationally, led both nations' leaders to hail the end of the cold war, and the breakup of the Soviet Union in late 1991 ended Communist rule there and dramatically altered the international political landscape.

Cole, Nat "King" (Nathaniel Adams Cole), 1919–65, African-American singer and pianist; b. Montgomery, Ala. He became one of the most popular of all American singers with such hits as "The Christmas Song" and "Unforgettable." Cole appeared in films and was the first African American to have (1956) his own television series. His daughter **Natalie Maria Cole,** 1950–, b Los Angeles, is also a popular singer.

Cole, Thomas, 1801–48, American painter; b. England. He specialized in painting the spectacular scenery of New York state, becoming a leader of the HUDSON RIVER SCHOOL. A characteristic painting is *Catskill Mountains* (Mus. Art, Cleveland). Other works are neoclassical in style.

Coleman, Ornette, 1930–, African-American musician and composer; b. Fort Worth, Tex. After playing saxophone in rhythm-and-blues bands, he became one of the most controversial figures in the JAZZ avant-garde. His impassioned, atonal music was extremely influential in the development of free jazz.

Coleridge, Samuel Taylor, 1772–1834, English poet and man of letters. After an erratic university career, he planned with Robert SOUTHEY to found a utopian community in the U.S., but the project did not materialize. In 1798 he and William WORDSWORTH published *Lyrical Ballads,* a volume whose experiments in language and subject matter (and the prefaces to later editions) make it a seminal work of English ROMANTICISM. Coleridge contributed "The Rime of the Ancient Mariner," his best-known work, as well as "Christabel" and "Kubla Khan," all poems on exotic or supernatural themes. "Dejection: An Ode" (1802) was his last great poem. A brilliant conversationalist, Coleridge lectured (notably on SHAKESPEARE), traveled, and wrote on philosophy, religion, and literature. From 1816 he lived in London at the home of Dr. James Gilman, who helped the poet control his long-standing opium addiction. *Biographia Literaria,* which includes accounts of his literary life and also critical essays, appeared in 1817; its borrowings from German idealist philosophers borders, at times, on plagiarism. This, and

Ornette Coleman

his inability to finish projects, make Coleridge a controversial figure, but he was unquestionably a major literary influence in his day and, at his best, a great poet.

Colette [kōlĕt'], 1873–1954, French novelist; b. Sidonie Gabrielle Colette. Her numerous novels, e.g., *Chéri* (1920), *The Cat* (1933), and *Gigi* (1945), are famed for their sensitive observations of women, nature, and eroticism. Colette's early *Claudine* books were published under the name of her first husband, Willy (pseud. of Henry Gauthier-Villars).

coleus, tropical plant (genus *Coleus*) of the MINT family, native to Asia and Africa. Some, with large, colorful leaves, are cultivated as houseplants.

Coligny, Gaspard de Châtillon, comte de [kōlēnyē'], 1519–72, French Protestant leader, admiral of France. With Louis I de CONDÉ, he commanded the HUGUENOTS in the Wars of Religion (see RELIGION, WARS OF) and negotiated a peace in 1570. He became a favorite adviser of CHARLES IX, thus arousing the enmity of CATHERINE DE' MEDICI. Coligny was the first victim in the massacre of SAINT BARTHOLOMEW'S DAY.

Coliseum: see COLOSSEUM.

collage [Fr., = pasting], technique in art consisting of cutting natural or manufactured materials and pasting them to a painted or unpainted surface—hence, a work of art in this medium. It was initiated in 1912 when PICASSO pasted a piece of commercially printed oilcloth to his cubist *Still Life with Chair Caning* (Mus. Mod. Art, N.Y.C.). Collage elements appear in works by GRIS and BRAQUE, and were basic to DADA and SURREALISM. Collage is related to the newer art of assemblage, in which the traditional painted canvas is abandoned in favor of the assembling of bits of material.

collateral: see CREDIT.

collective bargaining, in labor relations, procedure whereby an employer agrees to discuss working conditions by bargaining with employee representatives, usually a labor union. First developed in Britain in the 19th cent., it received an impetus in the U.S. during the 1930s through such legislation as that which created the NATIONAL LABOR RELATIONS BOARD. The process is now accepted in most Western industrialized countries as the basic method of settling disputes about wages, hours, job security, and other matters. It may be assisted by labor **mediation,** the mediator being a neutral third party who endeavors to bring the two sides together. Industrial **arbitration** is a last resort, implying the need for a third party to resolve the dispute and impose a decision on both sides. Sometimes called binding arbitration, it may be compelled by the government, as in Canada, Italy, or Britain, or it may be called for by voluntary agreement, as is often the case in the U.S.

collective farm, an agricultural producers' cooperative. In the USSR, collectivization of agriculture was initiated by STALIN in 1929, and the system initially survived the USSR's disintegration. A collective farm's land and equipment is owned by the state, which decides what will be produced. Farm workers share in state-guaranteed profits and have small private plots where they can grow goods for free-market sale. In China, the commune (first established 1958) paralleled the Soviet collective farm. Land and equipment were owned by the commune, which oversaw fulfillment of government quotas by production teams (small groups of workers). Reforms under DENG XIAOPING have led to the dismantling of most communes. China has, and the former USSR also had, state farms, whose workers are paid wages. Since the USSR's breakup the republics have slowly moved toward private ownership of land and the end of collective farming. Many barriers in Russia to private ownership of land were removed by decree in 1993. The best-known type of Israeli collective farm is the KIBBUTZ.

college of arms: see HERALDS' COLLEGE.

colleges and universities, institutions of higher education. Universities, which usually consist of several faculties or colleges, are larger than colleges, have wider curricula, are involved in research, and grant graduate and professional as well as undergraduate degrees.

Universities. Universities arose in the Middle Ages to train young men in law, theology, and medicine. Although they were usually established by royal or ecclesiastical initiative, some were founded by students. The medieval university often had thousands of students and played an important role in contemporary affairs. The most famous European universities include those at Oxford, Cambridge, and Paris (all founded in the 12th cent.), Salamanca (c.1230), Prague (1348), Vienna (1365), Uppsala (1477), Leiden (1575), and Moscow (1755). The oldest universities in the New World are the Univ. of Santo Domingo (1538), in the Dominican Republic; the Univ. of Mexico (1551), in Mexico City; and San Marcos Univ. (1551), in Lima, Peru. In the U.S., the first state university, the Univ. of North Carolina, opened in 1795. Most modern universities developed in the late 19th cent., as small private colleges expanded and tax-supported land-grant colleges and universities were founded. Institutions devoted to graduate study and research, such as Johns Hopkins Univ., were also established at that time. Women were not admitted to universities until c.1870 (see COEDUCATION); by 1900 most universities were secularized. During the 20th cent. many universities, especially in the U.S., have received large grants from government agencies for scientific and technical research.

Colleges. The earliest colleges were founded in 15th-cent. Paris as endowed residence halls for university students. It was only later, at Oxford and Cambridge, in England, that the college became the principal center of learning. Degrees, however, continued to be conferred by the university with which the college was associated. In America, however, the liberal arts college arose as a separate institution, with numerous colleges founded in the 17th and 18th cent. to train young men for the ministry, e.g., Harvard (1636), William and Mary (1693), Yale (1701), Princeton (1746), and Columbia (1754). These were joined in the next century by a number of women's colleges: Mount Holyoke (1837), Elmira (1853), Vassar (1861), Wellesley (1871), Smith (1871), Bryn Mawr (1881), and Barnard (1889). Teachers' colleges, or normal schools, also developed in the 19th cent. By the 20th cent., many American colleges had grown into universities; today, the distinction between the two has blurred, with many colleges granting graduate

degrees. COMMUNITY COLLEGES have greatly expanded opportunities for higher education in the U.S. since World War II.

collie, large, agile WORKING DOG; shoulder height, 22–26 in. (55.9–66 cm); weight, 50–75 lb (22.7–34 kg). There are two types: the rough-coated (long-haired) and the smooth-coated. Both may be sable and white, blue, tricolored, or white. It was developed (17th–18th cent.) in Scotland as a sheepdog.

colligative properties, properties of a SOLUTION that depend on the number of solute particles present, but not on the chemical properties of the solute. Colligative properties of a solution include its freezing and boiling points (see STATES OF MATTER) and osmotic pressure (see OSMOSIS).

Collins, Michael, 1890–1922, Irish revolutionary leader. A member of the SINN FÉIN, he organized the guerrilla warfare that forced the British to sue for peace. With Arthur GRIFFITH he set up the Irish Free State. He was assassinated.

Collins, (William) Wilkie, 1824–89, English novelist. The author of some 30 novels, he is best known for *The Woman in White* (1860) and *The Moonstone* (1868), considered the first full-length detective novels in English.

Collodi, Carlo, pseud. of **Carlo Lorenzini,** 1826–90, Italian author. A journalist, he also wrote didactic tales for children, the most famous of which is *Pinocchio* (1883).

colloid, a mixture in which one substance is divided into minute particles (called colloidal particles) and dispersed throughout a second substance. Colloidal particles are larger than molecules but too small to be observed with a microscope; however, their shape and size (usually between 10^{-7} and 10^{-5} cm) can be determined by electron microscopy. In a true SOLUTION the particles of dissolved substance are of molecular size and thus smaller than colloidal particles. In a coarse mixture (e.g., a SUSPENSION) the particles are much larger than colloidal particles. Colloids can be classified according to the phase (solid, liquid, or gas) of the dispersed substance and of the medium of dispersion. A gas may be dispersed in a liquid to form a foam (e.g., shaving lather) or in a solid to form a solid foam (e.g., Styrofoam). A liquid may be dispersed in a gas to form an AEROSOL (e.g., FOG), in another liquid to form an emulsion (e.g., homogenized milk), or in a solid to form a gel (e.g., jellies). A solid may be dispersed in a gas to form a solid aerosol (e.g., dust or smoke in air), in a liquid to form a sol (e.g., ink), or in a solid to form a solid sol (e.g., certain ALLOYS). Colloids are distinguished from true solutions by their inability to diffuse through a semipermeable membrane (e.g., cellophane) and by their ability to scatter light (the TYNDALL effect).

Cologne, Ger. *Köln,* city (1989 est. pop. 937,000), North Rhine–Westphalia, W Germany, on the Rhine R. It is a river port and an industrial center producing electronic equipment, chemicals, and other manufactures. Founded (1st cent. B.C.) by the Romans, it flourished (4th–13th cent.) under powerful archbishops. It became a free imperial city (1475) and a member (15th cent.) of the HANSEATIC LEAGUE. The city was badly damaged in WORLD WAR II. However, such buildings as its Gothic cathedral (begun 1248) and Romanesque Church of St. Andreas still stand.

Colombia [kəlŭm'bēə], officially Republic of Colombia, republic (1992 est. pop. 34,297,000), 439,735 sq mi (1,138,914 sq km), NW South America. The only South American country with both Pacific and Caribbean coastlines, Colombia is bordered by Panama (NW), Venezuela (NE), Ecuador and Peru (S), and Brazil (SE). Major cities include BOGOTÁ (the capital), MEDELLÍN, and CALI. By far the most prominent physical features are the three great Andean (see ANDES) mountain chains (CORDILLERAS) that fan north from Ecuador, reaching their highest point in Pico Cristóbal (18,947 ft/5,775 m). The Andean interior is the heart of the country, containing the largest concentration of population as well as the major coffee-growing areas. In pre-Columbian days this was the site of the advanced civilization of the Chibcha. To the east of the Andes lies more than half of Colombia's territory—a vast, largely undeveloped lowland, including the tropical rain forests of the AMAZON basin and the savannas (LLANOS) of the ORINOCO basin. Agriculture is a major source of income: besides coffee, long Colombia's leading export, the chief cash crops are bananas, cotton, sugarcane, and tobacco. Coca and cannabis are grown for the illegal drug trade, which is a major source of foreign exchange, but trafficking has disrupted the

fabric of Colombian society. Rich in minerals, Colombia produces petroleum (since 1991 its most valuable export) and natural gas, iron, coal, gold, nickel, and emeralds. The growing manufacturing sector is led by processed foods, textiles, metal products, and chemicals. About two thirds of the population are mestizos; less than one fifth are of pure European descent. Spanish is the official language, and most of the people are Roman Catholic.

History. Conquered by the Spanish in 1530s, the region that is now Colombia became the core of the Spanish colony of NEW GRANADA, which included Panama and most of Venezuela. The struggle for independence from Spain began in 1810, lasted nine years, and ended with the victory of Simón BOLÍVAR at Boyacá in 1819. Bolívar set up the new state of Greater Colombia, which included all of New Granada and (after 1822) Ecuador. Political differences soon emerged, however, and the union fell apart. Venezuela and Ecuador became separate nations; the remaining territory eventually became the Republic of Colombia (1886), from which Panama seceded in 1903. Through the 19th and into the 20th cent., political unrest and civil strife racked Colombia. Strong parties developed along conservative (centrist) and liberal (federalist) lines, and civil war frequently erupted between the factions. As many as 100,000 people were killed before the conservatives emerged victorious in a civil war of unprecedented violence that raged from 1899 to 1902. And again, after a four-decade hiatus of political peace, in 1948 bloody strife rent the nation, costing hundreds of thousands of lives. Orderly government was finally restored as the result of a compromise between liberals and conservatives in 1958. A guerrilla insurgency arose in the 1970s and continued into the 1990s, although some groups signed peace agreements with the government. In the 1980s and early 90s the cocaine "cartels" threatened to undermine civil government through bribery, bombings, kidnappings, and the murder of government officials. In the 1990 presidential election, an outspoken enemy of the drug lords, César Gaviria Trujillo, was elected president. Although the power of the notorious Medellín drug cartel was broken in 1993, the Cali cartel remains strong. Colombia es-

The key to pronunciation appears on page xiii.

tablished a customs union with Venezuela in 1991 and has signed free-trade agreements with other Andean nations.

Colombo, largest city (1986 est. pop. 684,000) and capital of Sri Lanka, on the Indian Ocean near the mouth of the Kelani R. It has one of the world's largest artificial harbors, with facilities for containerized cargo. Noted for its gem-cutting and ivory-carving, Colombo also has chemical, processed food, oil refining, and other industries. A port since Greco-Roman times, it was settled by Muslims in the 8th cent. The Portuguese built (16th cent.) a fort to protect their spice trade. The city passed (17th cent.) to the Dutch and then to the British, who made it (1802) the capital of their colony of Ceylon. The city has several colleges and universities and many churches, mosques, and temples.

colonialism: see COLONIZATION; IMPERIALISM.

colonization, extension of political and economic control over an area by an occupying state that usually has organizational or technological superiority. The colonizer's nationals may migrate to the colony because of overpopulation or economic or social distress at home, but IMPERIALISM has been a major colonizing force. The colony's population must be subdued or assimilated to the colonizer's way of life, or a modus vivendi otherwise imposed. Colonization dates back at least to the Phoenicians, but it is most important historically as the vehicle of European expansion from the 15th cent. into Africa, the Americas, and Asia. The Spanish, Portuguese, English, French, and Dutch established colonies worldwide that have, for the most part, obtained independence from imperial systems only in the 20th cent. Today classic colonialism is widely considered immoral. See also MANDATES; TRUSTEESHIP, TERRITORIAL.

Colonna, a leading noble Roman family from the 12th to the 16th cent. **Sciarra Colonna,** d. 1329, was a bitter enemy of Pope BONIFACE VIII and led, with Chancellor Nogaret, the French expedition that captured (1303) Boniface. The family also produced Pope MARTIN V. **Fabrizio Colonna,** d. 1520, was a general of the HOLY LEAGUE against LOUIS XII of France in the Italian Wars. His cousin **Prospero Colonna,** 1452–1523, defeated the French at La Biocca (1522). **Marcantonio Colonna,** 1535–84, duke of Paliano, led the papal forces at LEPANTO.

colony: see COLONIZATION.

color, visual effect resulting from the eye's ability to distinguish the different wavelengths or frequencies of light. The apparent color of an object depends on the wavelength of the light that it reflects. In white, or normal, light, an opaque object that reflects all wavelengths appears white and one that absorbs all wavelengths appears black. Any three primary, or spectral, colors can be combined in various proportions to produce any other color sensation. Beams of light are combined "additively," and red, blue, and green are typically chosen as primaries. Pigments, however, combine by a "subtractive" process, i.e., by absorbing wavelengths, and artists generally choose red, blue, and yellow as their primaries. Two colors are called complementary if their light together produces white.

Colorado, one of the mountain states of the W U.S.; bordered by Wyoming (N), Nebraska (N, E), Kansas (E), Oklahoma and New Mexico (S), and Utah (W).

Area, 104,247 sq mi (270,000 sq km). *Pop.* (1990) 3,294,394, a 14% increase over 1980 pop. *Capital,* Denver. *Statehood,* Aug. 1, 1876 (38th state). *Highest pt.,* Mt. Elbert, 14,433 ft (4,402 m); *lowest pt.,* Arkansas R., 3,350 ft (1,022 m). *Nickname,* Centennial State. *Motto, Nil Sine Numine* [Nothing without Providence]. *State bird,* lark bunting. *State flower,* Rocky Mountain columbine. *State tree,* Colorado blue spruce. *Abbr.,* Colo., CO.

Land and People. Colorado has the highest mean elevation among the states (c.6,800 ft/2,100 m). The high plains of the east, an extension of the GREAT PLAINS, give way to the foothills of the ROCKY MOUNTAINS and the high Front Range. The Rockies, which run north-south across the state and are traversed by the CONTINENTAL DIVIDE, include 51 of the 80 peaks in North America over 14,000 ft (4,267 m) high. Mt. Elbert (14,433 ft/4,402 m) is the loftiest mountain in the U.S. portion of the range. The COLORADO PLATEAU in the west is an arid region with many canyons carved by the COLORADO, Gunnison, and other rivers. Most of the population (about 82%) lives in cities among the foothills, principally in and around DENVER—the leading city of the mountain states—but also in COLORADO SPRINGS, PUEBLO, and FORT COLLINS. In 1990 the state was 88% white, 12% African American and others.

Economy. Since the 1950s, manufacturing has contributed the largest share of Colorado's income. Leading industries include the manufacture of computer, transportation, and electrical equipment and aerospace products; food processing; and printing and publishing. Agriculture is dominated by the raising of cattle and sheep. Grown mostly on irrigated land, corn, wheat, hay, and sugar beets are the leading crops. Leading minerals include oil, coal, molybdenum, sand and gravel, and uranium. Gold mining has been revived recently. The state is popular year-round with tourists, especially skiers and visitors to its spectacular Rocky Mt. National Park.

Government. The constitution of 1876 provides for a governor elected to a four-year term. The legislature consists of a senate of 35 members serving four-year terms and a house with 65 members serving two-year terms. Colorado is represented in the U.S. Congress by two senators and six representatives and has eight electoral votes.

History. The cliff dwellings of Colorado's early inhabitants are preserved at Mesa Verde National Park in the southwest. Spain claimed the region comprising present-day Colorado in 1706. The U.S. acquired much of it through the LOUISIANA PURCHASE (1803) and the rest from Mexico in 1848. The discovery (1858) of gold brought many settlers, but the gold was soon extracted, and the mining settlements became ghost towns. Silver and lead were subsequently discovered, but the collapse (1893) of the U.S. silver market brought a statewide depression. Rapid urban growth occurred during and after World War II. The national energy crisis in the 1970s resulted in a dramatic expansion of Colorado's coal and oil industries, but when oil prices collapsed in the early 1980s, the economy suffered a significant downturn. In the late 1980s and early 90s Colorado grew rapidly despite the national recession. See also NATIONAL PARKS (table).

Colorado, chief river of the arid SW U.S. It flows 1,450 mi (2,334 km) from the Rocky Mts. of N Colorado to the Gulf of California, c.1000 mi (1,610 km) of its course cutting through deep canyons, including the spectacular GRAND CANYON. Use of the river, whose flow is controlled by HOOVER, Davis, Imperial, Parker, GLEN CANYON, and other dams, is allocated by treaties with Mexico and by compacts between states.

Colorado Plateau, physiographic region of the SW U.S., covering c.150,000 sq mi (388,500 sq km) in Arizona, Utah, Colorado, and New Mexico. The broad, sparsely vegetated, and semiarid plateau surfaces—one third located within Native American reservations—are cut by great canyons, including the GRAND CANYON and CANYON DE CHELLY.

Colorado Springs, city (1990 pop. 281,140), seat of El Paso co., central Colo., on Monument and Fountain creeks, at the foot of PIKES PEAK; founded 1859, inc. 1886. A year-round vacation and health resort, it manufactures electronic, mining, and aerospace equipment. Colorado College is in the city; the U.S. Air Force Academy is nearby.

color blindness, inability to distinguish colors, an inherited trait occurring almost exclusively in males. Individuals with partially defective color vision (the most common form) have difficulty distinguishing red from green. Those who are completely red-green color-blind see both colors as yellow. Totally color-blind persons see only black, white, and shades of gray.

color field painting, abstract art movement begun in the 1960s. Working toward a more intellectual aesthetic than that of ABSTRACT EXPRESSIONISM, color field painters explored their conception of the fundamental formal elements of abstract painting: pure areas of untempered color; flat, two-dimensional space; monumental scale; and the varying shape of the canvas. Painters associated with the movement include Ellsworth KELLY, Morris LOUIS, Kenneth NOLAND, and Frank STELLA.

Colosseum or **Coliseum,** common name for the Flavian Amphitheater in Rome, built A.D. c.75–80 under VESPASIAN and TITUS. Much of the four-storied oval, 617 ft (188 m) by 512 ft (156 m), still stands. Tiers of marble seats accommodated about 45,000 people. In the arena gladiatorial combats were held until A.D. 404, and according to tradition, Christians were thrown to beasts.

Colossians, EPISTLE of the NEW TESTAMENT, 12th book in the usual

order, written to Christians of Colossae and Laodicea (Asia Minor) by St. PAUL (A.D. c.60), apparently in connection with a gnostic doctrine current in the churches addressed. Like EPHESIANS, it emphasizes the doctrine of the mystical body of Christ.

colossus, name given in antiquity to a statue of very great size. Examples include the Athena Parthenos on the ACROPOLIS at Athens and the **Colossus of Rhodes,** one of the SEVEN WONDERS OF THE WORLD. Among colossuses of later times, the Great Buddha at Kamakura, Japan, and the Statue of LIBERTY in New York harbor are notable. Two colossal figures of Jesus are in South America, one at Rio de Janeiro and the other, CHRIST OF THE ANDES, on the boundary of Argentina and Chile.

Colt, Samuel, 1814–62, American inventor; b. Hartford. His revolving breech pistol (patented 1835–36) was one of the standard SMALL ARMS of the world in the last half of the 19th cent. Colt also invented a submarine battery used in harbor defense and a submarine telegraph cable.

Coltrane, John, 1926–67, African-American musician; b. Hamlet, N.C. Rising to prominence with the Miles DAVIS quintet in the mid-1950s, he was until his death the dominant tenor and soprano saxophonist of the JAZZ avant-garde.

Columba, Saint, or **Saint Columcille,** 521–97, Irish missionary to Scotland, called the Apostle of Caledonia. He established a monastic center at IONA in 563 and eventually Christianized all of N Scotland. Feast: June 9.

Columbia, city (1990 pop. 98,052), state capital and seat of Richland co., central S.C., on the Congaree R.; inc. 1805. The largest city in the state, it is the trade center for a farming region, and manufactures such products as textiles, plastics, and electronic equipment. Most of the city was burned by Gen. SHERMAN's troops in 1865. The Univ. of South Carolina and several other colleges are located there.

Columbia, chief river of the NW U.S., c.1,210 mi (1,950 km) long, including 465 mi (748 km) in SW Canada. It flows generally south in British Columbia and Washington and then west, forming the Washington-Oregon boundary and entering the Pacific Ocean W of Portland, Ore. Numerous dams, including the GRAND COULEE DAM, provide hydroelectricity and irrigation. The Columbia, whose volume is greatly increased by the SNAKE and other major tributaries, was the early focus of American settlement in the Oregon country.

Columbia Plateau, physiographic region of the NW U.S., covering c.100,000 sq mi (259,000 sq km) in Washington, Oregon, and Idaho. Most of it is underlaid by thick, nearly horizontal beds of lava (mainly basalt) and partly covered with fertile loess. Arid areas south of the GRAND COULEE DAM are irrigated as part of the Columbia Basin project.

Columbia University, mainly in New York City; founded 1754 as King's College by grant of King George II. It was closed during the American Revolution but reopened as Columbia College in 1784. To reflect the addition of graduate and professional schools, the name Columbia University was adopted in 1896; Columbia College and Barnard College (for women; est. 1889 and affiliated) remained the undergraduate schools. The university also includes the College of Physicians and Surgeons, Teachers College (affiliated), and schools of journalism, law, social work, and international affairs, as well as research institutes, botanical and biological field stations, and a geological laboratory.

columbine, perennial plant (genus *Aquilegia*) of the BUTTERCUP family. Columbines have delicate foliage and red, white, yellow, blue, or purple flowers with long, nectar-secreting spurs on the petals. Wild columbine, or rockbell (*A. canadensis*), is a favorite of hummingbirds. The blue-and-white-flowered *A. coerulea* of the Rockies is Colorado's state flower.

columbium: see NIOBIUM.

Columbus, Christopher, 1451–1506, European discoverer of America; b. Genoa, Italy. In Portugal, he became a master mariner and was determined to reach India by sailing west. After eight years of supplication, he received the backing of the Spanish monarchs FERDINAND V and ISABELLA I. On Oct. 12, 1492, his ships, the *Niña, Pinta,* and *Santa María,* reached Watling Island, in the Bahama group; later they touched CUBA and HISPANIOLA. He was made an admiral and governor general of all new lands. In 1493 he set sail with 17 ships, exploring PUERTO RICO and the Leeward Islands, and founding a colony in Hispaniola. In 1498 he explored VENEZUELA, realizing that he had found a continent. Because of disreputable conditions in Hispaniola, he was replaced as governor in 1500 and returned to Spain in chains. On his last voyage (1502) he reached Central America. Although he is considered a master navigator today, he died in neglect, almost forgotten.

Columbus. **1** City (1990 pop. 178,681), seat of Muscogee co., W Ga., on the Chattahoochee R.; settled and inc. 1828. A port city situated on the FALL LINE, it has many textile mills, and manufactures iron and food products. Hydroelectric and canal development have revitalized industry in the 20th cent. Many of the city's antebellum homes have been preserved and restored. **2** City (1990 pop. 632,910; met. area 1,377,419), state capital and seat of Franklin co., central Ohio, on the Scioto R.; founded 1797, inc. as a city 1834. The largest city in Ohio, it is a major industrial and trade center in a rich farm region. Columbus took over state government from CHILLICOTHE in 1816. Transportation has been key to its development: canals, the NATIONAL ROAD (reaching Columbus in 1833), and the railroad (1850) all brought growth. The city's manufactures include appliances, machinery, and auto parts. The convention center (1993), with its vigorously disordered exterior, is notable, and Ohio State Univ. and the Columbus Gallery of Fine Arts are located in the city.

Columbus Day, holiday (traditionally Oct. 12) commemorating Christopher COLUMBUS's discovery of America. Since 1971 it has been celebrated in most of the U.S. on the Monday nearest Oct. 12.

Columcille, Saint: see COLUMBA, SAINT.

column, vertical architectural support, circular or polygonal in plan. It is generally at least four times as high as its diameter or width; stubbier masses are usually called piers or pillars. Shape, proportions, and materials of columns vary widely. Columns arranged in a row form a colonnade. The Egyptians used massive columns, closely spaced, for inner courtyards and halls. Early Greek columns had a cushionlike cap and tapering shaft. By the 7th cent. B.C., the Greek Doric had been established. In Greek, Roman, and Renaissance architecture, the various column types, with their entablatures, form the classical ORDERS OF ARCHITECTURE. The classical column has three fundamental elements: base, shaft, and capital. The capital provides a structural and decorative transition between the circular column and the rectangular entablature. In Greek buildings columns were usually indispensable, but Roman and Renaissance architects used them also as a decorative feature, mostly following fixed rules of proportions. Romanesque, Gothic, and Byzantine columns were usually structural elements, and were without canons of proportioning. Chinese and Japanese columns had, instead of capitals, ornamented brackets.

coma, deep state of unconsciousness from which a person cannot be aroused even with the most painful stimuli. It may be caused by severe brain injury, DIABETES, MORPHINE or BARBITURATE poisoning, SHOCK, or hemorrhage. Treatment is directed at the cause of the condition.

Comanche, indigenous people of a nomadic Plains culture (see NORTH AMERICA, INDIGENOUS PEOPLES OF), who ranged the Southwest from the 18th cent. They spoke a Shoshonean language of the Aztec-Tanoan stock (see NATIVE AMERICAN LANGUAGES). Excellent horsemen and warriors, they killed more whites in proportion to their numbers than any other tribe and kept their territory unsafe for whites for more than a century. They probably introduced PEYOTE to the Plains tribes (see NATIVE AMERICAN CHURCH). In 1990 there were 11,322 Comanches in the U.S.

Comaneci, Nadia [kōmänēch], 1961–, Romanian gymnast. Known for her bold routines and implacable composure, she won six medals in the 1976 Olympics, twice scoring an unprecedented perfect 10, and four medals in the 1980 Olympics. She defected to the U.S. in 1989.

combinations, in mathematics: see PERMUTATIONS AND COMBINATIONS.

comb jelly or **sea gooseberry,** solitary marine invertebrate (phylum Ctenophora) having eight radially arranged rows (combs) of ciliated plates (ctenes) on the spherical body surface and specialized adhesive cells (colloblasts) used for capturing PLANKTON. Comb jellies are carnivorous, bioluminescent, and hermaphroditic. They are weak swimmers but possess a unique sense organ con-

trolling equilibrium (statocyst). Usually transparent, comb jellies vary from ¼ in. (0.6 cm) to more than 1 ft (30.5 cm) in length and look very much like JELLYFISH.

COMECON: see COUNCIL FOR MUTUAL ECONOMIC ASSISTANCE.

comedy, literary work, usually dramatic, aiming chiefly to amuse. Whereas TRAGEDY seeks to engage the emotions, comedy strives to entertain through ridicule of characters, customs, and institutions or through a resolution of contretemps thrown up by the plot. Dramatic comedy had its origins in Greek fertility rites. Old Comedy, culminating in ARISTOPHANES, was a series of scenes using FARCE, fantasy, parody, and SATIRE, with a final lyric celebration of unity. New Comedy (from c.4th cent. B.C.) was more realistic and romantic, less satirical and critical. MENANDER in Athens, PLAUTUS and TERENCE in Rome were its leading practitioners. In the Middle Ages comedy survived in folk plays and in the Italian COMMEDIA DELL'ARTE. In the RENAISSANCE, Elizabethan comedy drew in part on Latin comedy to produce the caustic satires of Ben JONSON and the romantic comedy of SHAKESPEARE. Classical and commedia dell'arte elements blended in France in MOLIÈRE's brilliant work. After the Puritan suppression of the theater, witty, artificial comedy reappeared during the English RESTORATION in the work of William CONGREVE and William WYCHERLEY. It descended into sentiment by the end of the 17th cent. but revived late in the 18th cent. with Oliver GOLDSMITH and R.B. SHERIDAN. Oscar WILDE typified the late-19th-cent. comedy of manners, G.B. SHAW the comedy of ideas. Trends in the 20th-cent. include the romantic comic fantasies of J.M. BARRIE and Jean GIRAUDOUX; the native Irish comedy of J.M. SYNGE and others; the absurdist works of Samuel BECKETT and Eugène IONESCO; and the so-called black comedy (the darkly humorous treatment of serious themes) of Sam SHEPARD, David MAMET, and others. The century also saw the development of such popular comedic forms as VAUDEVILLE, comic MOTION PICTURES, "stand-up comedy" (routines, often satiric, usually performed by a single individual), and of a uniquely television-related form, the situation comedy ("sit-com"), generally a kind of debased comedy of manners. Masters of nondramatic comedy include, among many, BOCCACCIO, RABELAIS, CERVANTES, VOLTAIRE, and Henry FIELDING.

Comenius, John Amos, Czech *Jan Amos Komenský,* 1592–1670, Moravian churchman and educator. Relating education to everyday life, he advocated systematizing all knowledge, teaching in the vernacular rather than Latin, and establishing a universal system of education with opportunities for women. One of his major works, *Didactica Magna* (1628–32; tr. M.W. Keatinge, 1896), expounds these principles.

comet, mostly gaseous body of small mass and enormous volume that can be seen from earth for periods ranging from a few days to several months. A comet head, on the average about 80,000 mi (130,000 km) in diameter, contains a small, bright nucleus (ice and frozen gases interspersed with particles of heavier substances) surrounded by a coma, or nebulous envelope of luminous gases. As the comet nears the sun, the particles and gases are driven off, forming a tail as long as 100 million mi (160 million km). Pushed by the SOLAR WIND, the tail streams out away from the sun. J.H. OORT hypothesized (1950) a shell of more than 100 billion comets surrounding the solar system and moving very slowly at a distance of as much as 150,000 times the sun-earth distance; a passing star, however, may gravitationally perturb a few closer to the sun. In 1951 G.P. KUIPER proposed a region of minor planets just outside Neptune's orbit as a source of comets with short orbital periods. See also HALLEY'S COMET.

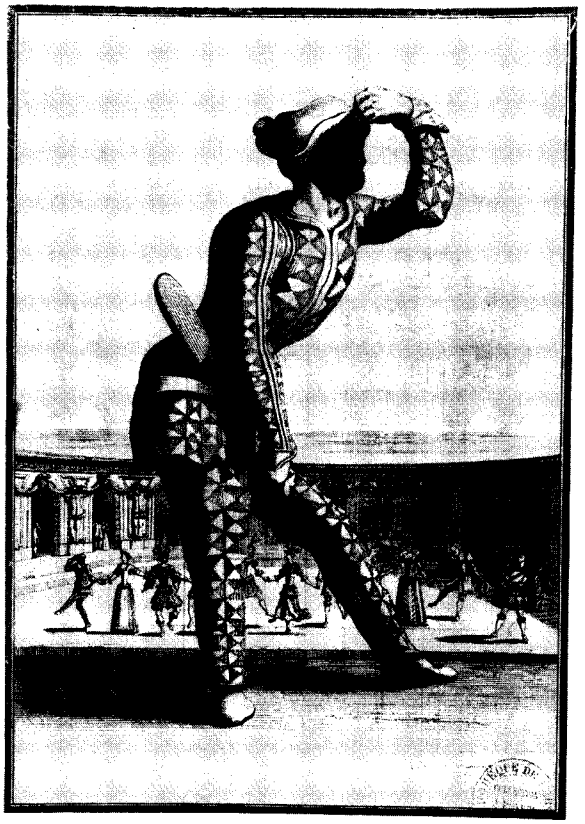
comic strip, a narrative applied to a sequence of cartoons in which human and/or animal characters usually communicate by means of speech and/or thought "balloons." It is a predominantly commercial art form, which became established at the turn of the 20th cent. as a syndicated newspaper feature that boosted circulation. The first modern comic strip is acknowledged to be Richard Felton Outcault's *The Yellow Kid* (1896). While comic strips initially used humorous story lines, giving rise to their nickname, "the funnies," they later ventured into such realms as sophisticated whimsy, adventure, science fiction, and political satire, e.g., Walt Kelly's *Pogo* (1949), Charles SCHULZ's *Peanuts* (1950), and Garry TRUDEAU's *Doonesbury* (1970). The mass appeal of the comic strip was a major source of inspiration for POP ART. See also CARTOON.

Cominform: see under COMINTERN.

Comintern, acronym for Communist International, founded (1919), by V.I. LENIN to claim Communist leadership of the world socialist movement. It excluded non-Communist socialists. Its efforts to foment revolution failed, and in 1935 it began to form coalitions, or popular fronts, with bourgeois parties. The Comintern dissolved (1943) as a gesture of support for the Allied war effort. The **Cominform** (Communist Information Bureau) was organized (1947) by the USSR to coordinate the exchange of information between E European and some W European Communist parties, formerly a function of the Comintern. It was disbanded in 1956.

Commagene [kŏməjē'nē], ancient district of N Syria, on the Euphrates R. and S of the Taurus range, now in SE Asian Turkey. Once part of the Assyrian empire and later of the Persian Empire, it became independent in 162 B.C. The Roman Emperor Vespasian permanently annexed Commagene in A.D. 72.

commedia dell'arte [kōmmā'dēä dĕllär'tā], popular form of comedy in Italy (16th-18th cent.). Using improvised dialogue and masked actors in satiric song, dance, and farce, it gave rise to such traditional PANTOMIME characters as Harlequin and Columbine. Its influence on European theater, particularly French pantomine and English harlequinade, was great.



Commedia del'arte harlequin

commensalism, relationship between members of two different species of organisms in which one individual is usually only slightly benefited while the other is not affected at all. In many cases, commensalism cannot be distinguished from parasitism (see PARASITE). See also SYMBIOSIS.

Commerce, United States Department of, federal executive department charged with promoting economic and technological development. Established (1903) as the Dept. of Commerce and Labor, it became a separate department in 1913. Its divisions include the Economic Development Administration, the Bureau of the Census, the National Oceanic and Atmospheric Administration, the

National Institute of Standards and Technology, the Minority Business Development Agency, the Patent and Trademark Office, and the National Telecommunications and Information Administration.

commercial bank: see BANKING.

commercial paper, type of short-term NEGOTIABLE INSTRUMENT, usually an unsecured promissory note, that calls for the payment of money at a specified date. Because it is not backed by collateral, commercial paper is usually issued by major firms with strong credit ratings. An important source of cash for the issuing firm, it is usually payable at a lower rate of interest than the prime discount rate. The commercial paper market expanded greatly after the mid-1970s, reaching $140 billion by 1981, double the amount of four years earlier. The trend was accompanied by the rise of MONEY-MARKET FUNDS, a major buyer of commercial paper, and a resulting loss of corporate loan business by banks (see BANKING).

commodity market, organized traders' exchange in which contracts for delivery of certain products are bought and sold. Most trading is done in futures contracts, which require the holder to sell or buy goods at a future date for a specified price, and options, which are similar but give the holder the right to buy or sell. Such trading allows both hedging against serious losses in a declining market and speculation for gain in a rising market. Spot contracts, a less widely used form of trading, call for immediate delivery. In the U.S., commodity markets deal in a wide range of products, notably grains and oilseeds, livestock and meat, food and fiber, metals, petroleum, and lumber, and in financial futures, such as Treasury bonds, stocks, and currencies.

common law, system of law based on custom and precedent established by court decisions. Developed in medieval England and so called because it represented common, rather than local, custom, the common law prevails in most English-speaking nations, including the U.S. (except Louisiana, which adheres to CIVIL LAW). The formality and inflexibility of early common law often led to injustice, and in 15th-cent. England the chancellor issued the first of many decrees to restore "equity" (fairness); this was the beginning of the modern body of EQUITY law, later merged with the common law in many jurisdictions. The slowness of common-law procedure has led to adoption of numerous statutes that supersede the common law, notably in the fields of commercial, administrative, and criminal law.

Common Market: see EUROPEAN UNION.

Commons, House of: see PARLIAMENT.

Commonwealth of Independent States (CIS), association formed by most of the former republics of the UNION OF SOVIET SOCIALIST REPUBLICS to coordinate interrepublican affairs; ceremonial headquarters are in Minsk, Belarus. A council of heads of state and a council of heads of government are the chief coordinating bodies of the CIS. On Dec. 8, 1991, four months after the attempted coup against Soviet Pres. GORBACHEV, Ukraine, seeking to assure its independence and avoid renewed Russian domination, joined with the other Slavic republics (Belarus and Russia) to found the CIS. On Dec. 21, 11 of the 12 surviving Soviet republics (Georgia did not join until 1993) signed a new agreement establishing the CIS, and four days later Gorbachev resigned as president of the USSR. The agreement recognized current borders and each republic's independence, sovereignty, and equality, and established a free-market ruble zone embracing the republics' interdependent economies and a joint defense force for participating republics. Strategic nuclear weapons, in Belarus, Kazakhstan, Russia, and Ukraine, are under the joint control of those republics, with day-to-day authority in the hands of the Russian president and defense minister. Eventually all such weapons outside Russia are to be destroyed. The commonwealth proved unable to prevent conflicts between the republics, and most republics, including Russia, moved to establish independent armed forces. By the end of 1993 nearly all members had established their own currencies. Attempts to form a joint defense force were abandoned, and Ukraine proved reluctant to relinquish its nuclear arms. A pact calling for increased economic integration was signed by most CIS nations in 1993.

Commonwealth of Nations, voluntary association of Great Britain, its dependencies and associated states, and certain sovereign states that were former dependencies. The purpose of the Commonwealth (founded 1931) is consultation and cooperation. No collective decisions are binding on the 50 member states, and they may withdraw at any time. They recognize the British monarch as the symbolic head of the Commonwealth. Members are linked economically, but the system of preferential tariffs was abandoned after Britain joined (1973) the European Community. The headquarters of the Commonwealth is in London.

Commune of Paris, insurrectionary governments in Paris formed during (1792) the FRENCH REVOLUTION and at the end (1871) of the FRANCO-PRUSSIAN WAR. In the French Revolution, the commune was a major radical force in France until moderates gained control (1794–95) of the National Convention. After the Franco-Prussian War, the commune opposed the national government led by Adolphe THIERS at VERSAILLES as too conservative and ready to accept humiliating peace terms. Versailles troops laid siege to Paris, against which the *communards* (whose aims included economic reforms and whose members comprised radical republicans, socialists, anarchists, and Marxists) put up a desperate defense. Before their defeat (May 28) they shot hostages and burned the TUILERIES and the palace of justice. Severe reprisals followed, with more than 17,000 people executed, a repression that lastingly embittered French political life.

communicable diseases, illnesses caused by microorganisms (bacteria, viruses) and transmitted either directly or indirectly from one infected person or animal to another. Many diseases are spread by airborne microorganisms through contact or proximity (e.g., INFLUENZA, MEASLES, WHOOPING COUGH). Some are spread through contaminated food or water (e.g., CHOLERA, TYPHOID), while others are transmitted by an animal or insect carrier (MALARIA, RABIES). Still others are transmitted under special circumstances, such as sexual contact (e.g., SYPHILIS) or infected instruments or blood transfusion (e.g., serum HEPATITIS). Control of communicable disease includes isolation of infected persons, immunization, personal hygiene, and stringent public health and sanitation measures.

communications satellite, artificial SATELLITE that provides a worldwide linkup of RADIO and TELEVISION transmissions and TELEPHONE service; such a satellite avoids the curvature-of-the-earth limitation formerly placed on communications between ground-based facilities. The first communications satellite was NASA's *Echo 1*, an uninstrumented inflatable sphere that passively reflected radio signals back to earth. Later satellites, starting with NASA's Relay satellites and the American Telephone and Telegraph (AT&T) Company's Telstar satellites, carried with them electronic devices for receiving, amplifying, and rebroadcasting signals to earth. The U.S. launching (1963) of the first synchronous-orbit satellite (*Syncom 1*) paved the way for the formation of the International Telecommunications Satellite Organization, whose successive series of Intelsat geostationary satellites have steadily lowered the cost of transoceanic communications. Domestic communications satellites, also geostationary, have been launched by many nations, including Canada, the USSR (now Russia), and Indonesia, and by several private U.S. companies. Military satellite systems have been developed by the U.S. and NATO.

communion, a SACRAMENT in most of CHRISTIANITY, a partaking of bread and wine that repeats the actions of JESUS at the LAST SUPPER. Roman Catholics and some others believe that the substances actually and miraculously become the body and blood of Jesus (transubstantiation). Others believe that the sacrament is symbolic, but all who practice communion believe that the recipient is united mystically with Jesus. The sacrament is called the Eucharist by some (including Roman Catholics) and the Lord's Supper or Holy Communion by many Protestants.

communism, a system of social organization in which property, particularly real property and the means of production, is held in common. With an uppercase *C*, the term refers to the movement that has sought to overthrow CAPITALISM through revolution. Forms of communism existed among various tribes of Native Americans, and it was espoused by early Christian sects. During the Middle Ages the MANORIAL SYSTEM provided communal use of the village commons and cultivation of certain fields, rights the peasants fought to retain in England (14th cent.) and Germany (16th cent.). By the early 19th cent. the rise of capitalism, reinforced by the INDUSTRIAL REVOLUTION, had created a new industrial class living

and working under appalling conditions. Utopian socialists such as Robert OWEN and Charles FOURIER, anarchists such as P.J. PROUDHON, and revolutionaries such as Auguste Blanqui all favored some kind of communal solution to this poverty. In Germany Karl MARX and Friedrich ENGELS published the *Communist Manifesto* (1848), the primary exposition of the doctrine that came to be known as MARXISM. It postulated the inevitability of communism arising from class war, the overthrow of capitalism, and the creation of a classless society. Marxism greatly influenced 19th-cent. SOCIALISM. The modern Communist political movement began when the Russian Social Democratic Labor party split (1903) into two factions (see BOLSHEVISM AND MENSHEVISM). The Bolsheviks, led by V.I. LENIN, called for armed revolution. After their triumph in the 1917 RUSSIAN REVOLUTION, the Bolsheviks formed the Communist party (1918), established a party dictatorship, and founded the COMINTERN (1919), which claimed leadership of the world socialist movement. In the 1930s, Joseph STALIN's policy of "socialism in one country" prevailed in the USSR, but after WORLD WAR II Stalin created "satellite" Communist states in Eastern Europe. The Chinese Communists (see CHINA), who triumphed in 1949, aided movements in Southeast Asia. U.S. opposition to these and other actions by Soviet, Chinese, and other Commmunists led to the COLD WAR, KOREAN WAR, VIETNAM WAR, and "proxy wars" elsewhere, particularly in Latin America and Africa. Economic difficulties, particularly shortages of food and other consumer goods, and the resurgence of NATIONALISM led to demands for reform and internal problems in Hungary (1956), Czechoslovakia (1968), and Poland (1956, 1981), and other Communist countries, and to the often violent suppression of protest. In the 1960s Sino-Soviet relations deteriorated, and the Communist parties of Western and THIRD WORLD countries began to assert their independence of those two powers. Popular uprisings, economic collapse, and free elections ousted Communist governments in much of Eastern Europe in 1989 and 1990, and the failed hard-line coup against Soviet Pres. GORBACHEV led to the suspension of the Communist party in the USSR and the country's subsequent disintegration in 1991. By the early 1990s traditional Communist party dictatorships held power only in China, Cuba, Laos, North Korea, and Vietnam. China, Laos, Vietnam, and, to a lesser degree, Cuba have reduced state control of the economy in order to stimulate growth. Communist parties, or their descendent parties, remain politically important in many Eastern European nations and in Russia and many other nations of the former USSR.

Communist party: see COMMUNISM.

Communism Peak or **Mount Communism,** 24,590 ft (7,495 m), highest point in Tajikistan, in the Pamir Mts. It was the highest mountain in the former USSR. Originally called Garmo Peak, it was renamed Stalin Peak (1933) and Communism Peak (1962).

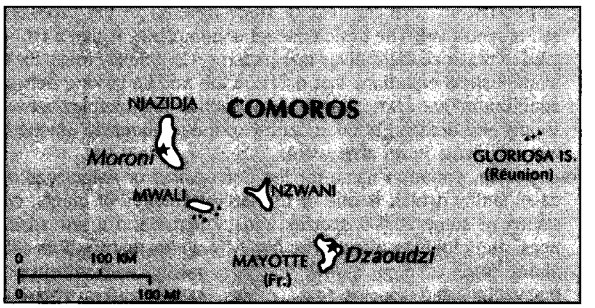
community college or **junior college,** U.S. public institution of higher education characterized by a two-year curriculum leading to an associate in arts degree or to transfer to a four-year college. It prepares students for direct entry into an occupation and, because of the low tuition, local setting, and relatively easy entry requirements, has been a major force in the expansion of educational opportunities since World War II.

commutative law, in mathematics, law holding that for a given operation combining two quantities, the order of the quantities is arbitrary. Addition and multiplication are commutative, thus, $a + b = b + a$ and $a \times b = b \times a$ for any two numbers a and b. Subtraction and division, however, are not commutative.

commutator: see GENERATOR; MOTOR, ELECTRIC.

Comnenus [kŏmnē'nəs], dynasty of Byzantine emperors: ISAAC I, ALEXIUS I, JOHN II, MANUEL I, ALEXIUS II, and Andronicus I.

Comoros, the, officially Federal Islamic Republic of the Comoros, republic (1992 est. pop. 494,000), 718 sq mi (1,862 sq km), occupying most of the Comoro Islands, an archipelago in the Indian Ocean, between the African coast and Madagascar. The capital is Moroni. It consists of three volcanic main islands—Njazidja, Nzwani, and Mwali (formerly Grande-Comore, Anjouan, and Mohéli, respectively), as well as numerous coral reefs and islets. A fourth island, the largely Roman Catholic MAYOTTE, is administered by France but claimed by the Comoros. Because of poor soil, lack of natural resources, and overpopulation, the islands have severe economic problems. Most of the population is engaged in agriculture, involving subsistence crops and the production of vanilla, copra, and essential oils for export. The people are of mixed African, Arab, Malay, and Indian descent. French and Arabic are the official languages, but most people speak a local blend of Swahili and Arabic. The state religion is Islam.



History. Originally populated by immigrants from Africa, Indonesia, and Arabia, the islands were ceded to the French between 1841 and 1909. After occupation by the British in WORLD WAR II, they were granted administrative autonomy within the French Union (1946) and internal self-government (1968). In 1975, as France was negotiating to end its rule in the islands, the Comoros unilaterally declared their independence; the island of Mayotte, however, voted to remain under French control. In 1978 the Comoros was proclaimed a federal Islamic republic; shortly thereafter, a one-party state was formed under Pres. Ahmed Abdallah Abderrahman. After his assassination in 1989, Saïd Mohamed Djohar became interim president and subsequently won election in a multiparty contest. He survived an impeachment attempt in 1991 and a coup attempt in 1992.

compact disc (CD), small plastic disk used to store information digitally; one type of OPTICAL DISK. Originally developed for audio systems as an alternative to phonograph records and audiotapes, CDs are now used for computer data storage and in video home entertainment systems. In audio CDs, the sound to be recorded is sampled thousands of times a second. Each sample is converted to a number that represents the sample's amplitude and encoded in binary form as a series of microscopic pits on the reflective surface of an aluminum disk. The disk is covered with a transparent plastic coating and is played on machine that uses an infrared LASER to read the pattern of pitted and unpitted areas on the disk's surface. Other CD formats include CD-ROM [*C*ompact *D*isk-*R*ead *O*nly *M*emory], a form of CD that is read by a computer using a CD-ROM drive and that can contain computer programs and digitized text, sound, photographs, and video; interactive CDs (CD-I, CDTV, and other formats), CD-ROM disks that require special players with built-in microcomputers; and Photo CD, a CD-ROM format for storing photographs.

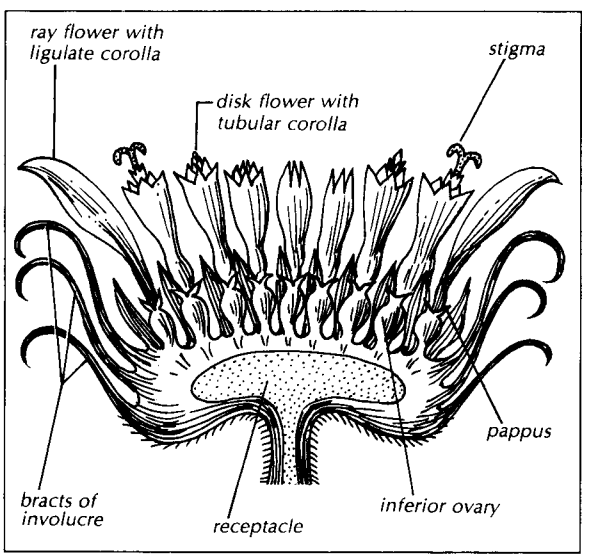
comparative linguistics: see LINGUISTICS.

compass, in navigation, an instrument for determining direction. The mariner's compass, probably first used by European seamen in the 12th cent., consists of a magnetic needle freely suspended so that it turns to align itself with the magnetic north and south poles. The **gyrocompass** is a more accurate form of navigational compass, unaffected by magnetic influences, that came into wide use during World War II. It consists essentially of a rapidly spinning, electrically driven rotor suspended in such a way that its axis automatically points along the geographical meridian.

complex, in psychoanalysis, term introduced by C.G. JUNG to indicate a group of unconscious feelings and memories that result from early, highly emotional experiences and that conflict with other, conscious, ideas to influence mental activity and behavior. Two frequently cited complexes are the inferiority complex—real or imaginary handicaps, often colored by feelings of discouragement, that produce a striving to compensate; and the Oedipus complex—named by Sigmund FREUD after the myth of OEDIPUS and designating childhood hostility toward the parent of the same sex and attraction toward the parent of the opposite sex. The Oedipus complex is believed to arise as part of the psychosocial development of the personality around ages four to six.

complexity, in science, field of study devoted to the process of self-organization. The basic concept of complexity is that all things tend to organize themselves into patterns. Complexity looks for the mathematical equations that describe the middle ground between equilibrium (see STATICS) and CHAOS, such as the interplay between supply and demand in an economy or the relationship among living organisms in an ecosystem.

composite, common name for the Compositae or Asteraceae, the daisy family, which is one of the largest families of plants, consisting of some 20,000 species, mostly herbs and a few shrubs, trees, and climbing plants. The family includes many edible salad plants (e.g., LETTUCE, endive, CHICORY, salsify, and ARTICHOKES), many cultivated species (e.g., ASTERS, DAISIES, CHRYSANTHEMUMS, MARIGOLDS, and ZINNIAS), and many common weeds and wildflowers. It is often broken down into THISTLE, chicory, and RAGWEED tribes. The typical composite flower, e.g., a SUNFLOWER, is composed of a multiflowered head. The outer ring consists of the conspicuous, but sterile, often petallike ray flowers, which serve to attract insects for pollination. The central part of the head is composed of minute tubular disk flowers, usually with both stamens and pistils. A series of modified leaves (bracts) arising from the base of the flower stalk supports the head. Many composite FRUITS are highly adapted to dispersal by animals (e.g., the burr plants such as burdock and cocklebur) or by wind (e.g., the DANDELION and GOLDENROD).



A composite flower is composed of many small flowers, often of two types (ray and disk). As in the sunflower (above), these flowers are joined by a common receptacle and surrounded by bracts (modified leaves).

composite material or **composite,** any material made from at least two discrete substances, such as concrete. Many materials are produced as composites, such as the fiberglass-reinforced plastics used for automobile bodies and boat hulls, but the term usually is used to describe any of various modern industrially manufactured composites, such as carbon fiber–reinforced plastics. Composite materials allow a blending of properties of the separate components. Carbon fiber–reinforced plastics combine the high strength and stiffness of the fiber with the low weight and resistance to fracture of the polymeric matrix. Glass, wood, and other kinds of fibers are also used, and the fibers may be layered or woven. Other modern composites include wood fiber or chunks in a concrete matrix and silicon carbide, a ceramic, in a titanium matrix.

compound, in chemistry, a substance composed of ATOMS of two or more ELEMENTS in chemical combination, occurring in fixed, definite proportion and arranged in fixed, definite structures. A compound has unique properties that are distinct from the properties of its elemental constituents and of all other compounds. A compound differs from a mixture in that the components of a mixture retain their own properties and may be present in many different proportions. The components of a mixture are not chemically combined; they can be separated by physical means. A molecular compound, e.g., WATER, is made up of electrically neutral MOLECULES, each containing a fixed number of atoms. An ionic compound, e.g., SODIUM CHLORIDE, is made up of electrically charged IONS that are present in fixed proportions and are arranged in a regular, geometric pattern called crystalline structure (see CRYSTAL) but are not grouped into molecules.

compressor, machine that decreases the volume of air or gas by the application of pressure. Compressor types range from the simple hand PUMP and the piston-equipped compressor used in gas stations to inflate tires to machines that use a rotating, bladed element to achieve compression. Compressed air exerts an expansive force that can be used as a source of power to operate pneumatic tools or to control such devices as air BRAKES. Air under compression can be stored in closed cylinders.

Compromise of 1850, an attempt at solving North-South tensions over the extension of slavery, specifically into newly annexed Texas and territory gained by the U.S. in the MEXICAN WAR. The WILMOT PROVISO of 1846, prohibiting slavery in land acquired from Mexico, caused contention. Compromise measures, largely originating with Stephen A. DOUGLAS, were sponsored in the Senate by Henry CLAY. The compromise proposed was to admit California as a free state, use popular sovereignty to decide free or slave status for New Mexico and Utah, prohibit the slave trade in the District of Columbia, pass a more stringent fugitive slave law, and settle Texas boundary claims. Chances for acceptance of these proposals were enhanced by a famous speech by Daniel WEBSTER (Mar. 17, 1850), and even more by the succession of Millard FILLMORE, a supporter of the compromise, after the death of Pres. Zachary TAYLOR. The proposals were passed as separate bills in Sept. 1850. The Compromise of 1850 was not, as had been hoped, a final solution of the question of slavery in new territories; that issue arose again in 1854 (see KANSAS-NEBRASKA ACT).

Compton, Arthur Holly, 1892–1962, American physicist; b. Wooster, Ohio. He was professor of physics at the Univ. of Chicago, where he helped to develop the atomic bomb, and was later professor and chancellor at Washington Univ., St. Louis. For his discovery of the **Compton effect** (the increase in the wavelengths of X rays and gamma rays when they collide with and are scattered from loosely bound electrons in matter), he shared the 1927 Nobel Prize in physics with Charles WILSON. Compton also made valuable studies of cosmic rays.

Compton-Burnett, Dame Ivy, 1892–1969, English novelist. Relying almost completely on highly stylized conversation, her witty novels, including *Brother and Sister* (1929) and *Mother and Son* (1955), picture a hypocritical Edwardian world.

computer, a device capable of performing a series of arithmetic or logical operations. A computer is distinguished from a calculating machine, such as an abacus or electronic CALCULATOR, by being able to store a computer program (so that it can repeat its operations and make logical decisions) and to store and retrieve data without human intervention. Computers are classed as analog or digital. An analog computer operates on continuously varying data; a digital computer performs operations on discrete data. An analog computer represents data as physical quantities and operates on the data by manipulating the quantities. In a complex analog computer, continuously varying data are converted into varying electrical quantities and the relationship of the data is determined by establishing an equivalent relationship, or analog, among the electrical quantities. Although analog computers are commonly found in such forms as speedometers and watt-hour meters they largely have become obsolete for general-purpose mathematical computations and data storage by digital computers. Within a digital computer, data are expressed in binary notation (see NUMERATION), i.e., by a series of "on-off" conditions that represent the digits "1" and "0." A series of eight consecutive binary digits, or bits, is called a byte and allows 256 "on-off" combinations. Each byte can thus represent one of up to 256 alphanumeric characters. Arithmetic

The key to pronunciation appears on page xiii.

and comparative operations can be performed on data represented in this way and the result stored for later use. Digital computers are used for reservation systems, scientific investigation, data-processing applications, DESKTOP PUBLISHING, and ELECTRONIC GAMES.

Hardware. The four major physical components, or hardware, of a computer are the central processing unit (CPU), main storage, auxiliary storage, and input/output devices. Computer operations are performed in the CPU, which contains the LOGIC CIRCUITS for arithmetic and logical operations and for control of the other units that make up a computing system. The CPU also contains the registers, a relatively small number of storage locations that can be accessed faster than main storage and are used to hold the intermediate results of calculations. The main storage is contained in the storage unit, or memory, of the computer. Main storage—once made up of vacuum tubes and later of magnetic cores, each tube or core representing one bit—is now made up of tiny INTEGRATED CIRCUITS, each of which contains thousands of SEMICONDUCTORS. Each semiconductor represents one bit. Random access memory (RAM), which both can be read from and written to, is erased each time the computer is turned off. Read only memory (ROM), which cannot be written to, maintains its content at all times and is used to store the computer's control information. Programs and data that are not currently being used in main storage can be saved on auxiliary storage, or external storage. Although punched paper tape and punched cards once served this purpose, the major materials used today are magnetic tape and magnetic disks, which can be read from and written to, and the compact disc (or CD-ROM), which uses optical storage techniques and can only be read. Data are entered into the computer and the processed data made available via input/output devices. All auxiliary storage devices are used as input/output devices. For many years, the most popular input/output medium was the punched card. Although this is still used, the most popular input device is now the COMPUTER TERMINAL and the most popular output device is the high-speed PRINTER. The CPU, main storage, auxiliary storage, and input/output devices collectively make up a system. Computers are categorized by both size and the number of people who can use them concurrently. *Supercomputers* are sophisticated machines designed to perform complex calculations at the maximum speed; they are used to model very large dynamic systems, such as weather patterns. *Mainframes,* the largest and most powerful general-purpose systems, are designed to meet the computing needs of a large organization by serving hundreds of computer terminals at the same time. *Minicomputers,* though somewhat smaller, also are multiuser computers, intended to meet the needs of a small company by serving up to a hundred terminals. *Microcomputers,* computers powered by a MICROPROCESSOR, are subdivided into PERSONAL COMPUTERS and workstations, the latter typically incorporating RISC PROCESSORS. Although microcomputers were originally single user computers, the distinction between them and minicomputers has blurred as microprocessors have become more powerful. Linking multiple microcomputers together through a LOCAL AREA NETWORK or by joining multiple microprocessors together in a PARALLEL-PROCESSING system has enabled smaller systems to perform tasks once reserved for mainframes.

Software. The computer program, or software, controls the functioning of the hardware and directs its operation. See COMPUTER PROGRAM.

History. Although the development of digital computers is rooted in the ABACUS and early mechanical calculating devices, Charles BABBAGE is credited with the design of the first modern computer, the "analytical engine," during the 1830s. John Atanassoff constructed the first semielectronic digital computing device in 1939. The first fully automatic calculator was the Mark I, or Automatic Sequence Controlled Calculator, begun in 1939 at Harvard by Howard Aiken, while the first all-purpose electronic digital computer, ENIAC (Electronic Numerical Integrator And Calculator), which used thousands of vacuum tubes, was completed in 1946 at the Univ. of Pennsylvania. UNIVAC (UNIVersal Automatic Computer) became (1951) the first computer to handle both numeric and alphabetic data with equal facility; this was the first commercially available computer. First-generation computers were supplanted by the transistorized computers (see TRANSISTOR) of the late 1950s and early 1960s, second-generation machines that could perform a million operations per second. They, in turn, were replaced by the third-generation integrated-circuit machines of the mid-1960s and 1970s. The 1980s and early 90s were characterized by the development of the microprocessor and the evolution of increasingly smaller but powerful computers, such as the personal computer and PERSONAL DIGITAL ASSISTANT. See also ANALOG-TO-DIGITAL CONVERSION; ARTIFICIAL INTELLIGENCE; BAUD; BOOLEAN ALGEBRA; DIGITAL-TO-ANALOG CONVERSION; PROGRAMMING LANGUAGE; VIDEOTEX.

computer-aided design (CAD) or **computer-aided design and drafting** (CADD), the production of drawings, specifications, parts lists, and other design-related elements using special graphics- and calculations-intensive computer programs. Used in such fields as architecture, electronics, and aerospace, naval, and automotive engineering, CAD systems originally merely automated drafting but now often include three-dimensional modeling and computer-simulated operation of the model. More expensive CAD programs are often integrated with COMPUTER-AIDED MANUFACTURING systems, and less expensive ones are available for do-it-yourself home remodeling and other uses.

computer-aided manufacturing (CAM), form of AUTOMATION in which computers control the machinery on an assembly line, such as ROBOTIC milling and welding machines, and move the product from machine to machine as each step is completed. Advanced systems are integrated with COMPUTER-AIDED DESIGN systems and can manage such tasks as parts ordering, scheduling, and tool replacement.

computer graphics, the transfer of pictorial data into and out of a COMPUTER. Using ANALOG-TO-DIGITAL CONVERSION techniques, a variety of devices—such as curve tracers, digitizers, and light pens—connected to graphic COMPUTER TERMINALS can be used to store pictorial data in a digital computer. By reversing the process through DIGITAL-TO-ANALOG CONVERSION techniques, the stored data can be output on a mechanical plotting board, or plotter, or on a televisionlike graphic display terminal. Raster graphics stores and displays images as a bit map, a series of closely spaced dots (or pixels) arranged in rows and columns. Vector, or object-oriented, graphics stores the images as mathematical formulas. Images are displayed by calculating the coordinates of the end points and then drawing lines between them. Computer graphics capabilities range from the simple display of digital tabulations as line graphs and pie charts to complex animation and elaborate special effects for television and motion pictures. Computer graphics are used in architecture, art, COMPUTER-AIDED DESIGN, ELECTRONIC GAMES, FLIGHT SIMULATORS for pilot training, and MOLECULAR MODELING.

computer music: see ELECTRONIC MUSIC.

computer program, a series of instructions that a COMPUTER can interpret and execute; programs are also called software to distinguish them from hardware, the physical equipment used in DATA PROCESSING. These programming instructions cause the computer to perform arithmetic and logical operations or comparisons (and then take some additional action based on the comparison) or to input or output data in a desired sequence. In conventional computing the operations are executed sequentially; in PARALLEL PROCESSING the operations are allocated among multiple processors, which execute them concurrently and share the results. Programs are often written as a series of subroutines, which can be used in more than one program or at more than one point in the same program. Systems programs are those that control the operation of the computer. Chief among these is the operating system—also called the control program, executive, or supervisor—which schedules the execution of other programs, allocates system resources, and controls input and output operations. Processing programs are those whose execution is controlled by the operating system. Language translators decode source programs, written in a PROGRAMMING LANGUAGE, and produce object programs, which are in machine language and can be understood by the computer. These include assemblers, which translate symbolic languages that have a one-to-one relationship with machine language; compilers, which translate an algorithmic- or procedural-language program into a machine-language program to be executed at a later

time; and interpreters, which translate source-language statements into object-language statements for immediate execution. Other processing programs are service or utility programs, such as those that "dump" computer memory to external storage for safekeeping and those that enable the programmer to "trace" program execution, and application programs, which perform business and scientific functions such as payroll processing, accounts payable and receivable posting, and simulation of environmental conditions.

computer terminal, a device that enables a COMPUTER to receive or deliver data. Computer terminals vary greatly depending on the format of the data they handle. For example, a simple early terminal comprises a typewriter keyboard for input and a typewriter printing element for alphanumeric output. A similar device includes the keyboard for input and a televisionlike screen to display the output. The screen can be a CATHODE-RAY TUBE or a gas plasma panel, the latter involving an ionized gas (sandwiched between glass layers) that glows to form dots which, in turn, connect to form lines. Such displays can present a variety of output, ranging from simple alphanumerics to complex graphic images used as design tools by architects and engineers. Portable terminals frequently use LIQUID CRYSTAL displays because of their low power requirements. The terminals of PEN-BASED COMPUTERS use a stylus to input handwriting on the screen. Touch-sensitive terminals accept input made by touching a pressure sensitive panel in front of a menu displayed on the screen. Other familiar terminals include store checkout systems that deliver detailed printed receipts and use laser scanners to read the BAR CODES on packages, and automatic teller machines in banks.

computer virus, rogue COMPUTER PROGRAM, typically a short program designed to disperse copies of itself to other computers and disrupt those computers' normal operations. A computer virus usually attaches or inserts itself to or in a file or the boot sector of a disk and is spread via floppy disks, networks, or on-line services. Although some viruses are harmless, others can destroy or corrupt data or cause an operating system or applications program to malfunction. Antivirus programs and hardware have been developed to combat viruses by searching for evidence of a virus program, isolating infected files, and removing viruses from a computer's software.

Comstock, Anthony, 1844–1915, American morals crusader; b. New Canaan, Conn. He secured strict New York and federal antiobscenity legislation. As an organizer and then the secretary (1873–1915) of the New York Society for the Suppression of Vice, he was responsible for the destruction of 160 tons of literature and pictures.

Comstock Lode, on Mt. Davidson, W Nev.; the richest known U.S. silver deposit, discovered in 1857 by Ethan Allen Grosh and Hosea Ballou Grosh. They died before recording claims, and in 1859 Henry Tomkins Paige Comstock laid claim to the lode. When he disposed of his holdings, the lode became a scene of furious activity, centering on VIRGINIA CITY. Wasteful mining methods and the demonetization of silver led to the lode's decline, and by 1898 it was virtually abandoned.

Comte, Auguste, 1798–1857, French philosopher and sociologist, founder of the school of philosophy known as POSITIVISM. Comte was primarily a social reformer; his goal, as set forth in *The Course of Positive Philosophy* (1830–42), was a society in which both individuals and nations could live in harmony and comfort. He regarded sociology (a term he originated) as the method by which this harmony and well-being could be achieved. Comte formulated a theory of three stages of social development: theological (belief in the supernatural), metaphysical (belief in ideas as reality), and positive (phenomena are explained by observation, hypothesis, and experimentation).

Conakry, city (1986 est. pop. 800,000), capital of Guinea, on the Atlantic Ocean. It is Guinea's largest city and its administrative, economic, and communications center. Situated on Tombo island, it is connected with the mainland by a causeway. Conakry's economy is based on its modern port; manufactures include food products and automobiles. The city was occupied by the French in 1887. Since World War II it has grown into a modern city with wide boulevards.

Conant, James Bryant, 1893–1978, American educator; b. Dorchester, Mass. President of Harvard Univ. from 1933 to 1953, he became U.S. high commissioner for Germany (1953) and ambassador to West Germany (1955–57). He published widely on American education, including *The American High School Today* (1959) and *The Education of American Teachers* (1963).

concentration, in chemistry, measure of the relative proportions of two or more quantities in a mixture (see COMPOUND). Concentrations may be expressed in a number of ways. The simplest is in terms of a component's percentage by weight or volume. Mixtures of solids or liquids are frequently specified by weight-percentage concentrations, whereas mixtures of gases are usually specified by volume percentages. Very low concentrations, such as those of various substances in the atmosphere, are expressed in parts per million (ppm). The *molarity* of a SOLUTION is the number of MOLES of solute per liter of solution. The *molality* of a solution is the number of moles of solute per 1,000 grams of solvent. The *mole fraction* of a solution is the ratio of moles of solute to the total number of moles in the solution.

concentration camp, prison or forced-labor camp outside the normal criminal system, for political prisoners, minorities, or others declared undesirable; first used by the British during the SOUTH AFRICAN WAR to confine Afrikaners. In Germany under the Nazis (see NATIONAL SOCIALISM), concentration camps were set up after 1933 to detain (without legal procedure) Jews, Communists, Gypsies, homosexuals, and others. During WORLD WAR II, extermination, or death, camps were established for the sole purpose of killing men, women, and children. In the most notorious camps—Auschwitz, Treblinka, and Majdanek in Poland, Buchenwald and Dachau in Germany—more than 6 million people, mostly Jews and Poles, were killed in gas chambers. Millions of others were also interned during the war, and a large proportion died of gross mistreatment, malnutrition, and disease. The term *concentration camp* has also been applied to similar camps operated by the Japanese during World War II, to the forced-labor camps of the USSR, and to the U.S. internment camps for Japanese-Americans during World War II.

Concentration camp survivors, Auschwitz, 1945

Concepción, city (1992 est. pop. 315,000), capital of Concepción prov., S central Chile, near the mouth of the Bío-Bío R. It is a major industrial center. Founded in 1550, it was leveled or severely damaged by at least six major earthquakes in the period from 1570 to 1960. The frequent rebuilding of the city has given it a modern aspect.

concerto, musical composition usually for orchestra and soloist (most often piano or violin) or a group of soloists. The *concerto grosso,* for a small group of soloists with full orchestra, was developed by Giuseppe Torelli, VIVALDI, and CORELLI. The BAROQUE concerto was most fully developed by J.S. BACH and G.F. HANDEL. Toward the end of the 18th cent. the solo concerto displaced the *concerto grosso,* and was fixed by W.A. MOZART in its classical form of three movements. In the 19th cent. BEETHOVEN gave greater importance to the orchestra, and LISZT unified the concerto form through the use of repeated themes.

The key to pronunciation appears on page xiii.

conch, name for some tropical, marine GASTROPODS having heavy, spiral shells, the whorls of which overlap each other. The typical gastropod foot is reduced in size and the horny plate (operculum) located at the end of the foot has the appearance and function of a claw. Their shells range in color from white to red. Conchs are a valuable food source.

Concord. **1** Residential city (1990 pop. 111,348), Contra Costa co., W Calif.; settled c.1852, inc. 1906. Concord is in an oil and farm region; electronic equipment is the leading manufacture. The city is part of the growing San Francisco Bay area. **2** Town (1990 pop. 17,076), E Mass., on the Concord R.; inc. 1635. Electronic and wood products are made. The site of the 1775 battle (see LEXINGTON AND CONCORD, battles of) is marked by Daniel Chester FRENCH's bronze *Minuteman.* Concord's fine old houses were the homes of EMERSON, the ALCOTTS, HAWTHORNE, and THOREAU, among others. **3** City (1990 pop. 36,006), state capital and seat of Merrimack co., S central N.H., on the Merrimack R.; settled 1725–27, inc. 1733 as Rumford, Mass., inc. 1765 as Concord, N.H.; became state capital in 1808. Its granite quarries are famous. The city also produces electrical and leather goods and has a printing industry.

concordat, formal agreement between the pope in his spiritual capacity and the temporal authority of a state. The earliest was the Concordat of Worms (1122) which ended the INVESTITURE controversy. The most famous was the **Concordat of 1801,** reached between Napoleon and Pope PIUS VII. It reestablished the Roman Catholic Church in France and provided for the nomination of bishops by the state and the conferral of office by the pope.

concrete, structural masonry material made by mixing broken stone or gravel with sand, CEMENT, and water, and allowing the mixture to harden into a solid mass. Concrete has great strength under compression, but its tensile strength must be increased by embedding steel rods (reinforced concrete) or CABLES under tension (prestressed concrete) within the concrete structural member.

concrete music: see ELECTRONIC MUSIC.

Condé [kôNdā'], French princely family, cadet branch of the house of BOURBON. It originated with **Louis I de Bourbon, prince de Condé,** 1530–69, Protestant leader and general. He tried to topple the GUISE family from power in the conspiracy of Amboise (1560) and commanded the HUGUENOTS in the Wars of Religion (see RELIGION, WARS OF). He was slain at the battle of Jarnac. His great-grandson **Louis II de Bourbon, prince de Condé,** 1621–86, called the Great Condé, won major victories in the THIRTY YEARS WAR at Rocroi (1643), Freiburg (1644), Nördlingen (1645), and Lens (1648). In the FRONDE he turned against the government by taking command of the rebellious army of the princes in 1651 and of the Spanish army in 1653. Defeated in the battle of the Dunes (1658), he was pardoned (1659) by LOUIS XIV, for whom he fought successfully (1672–78) in the DUTCH WARS. His great-grandson **Louis Joseph de Bourbon, prince de Condé,** 1736–1818, formed the emigré "army of Condé" (dissolved 1801), which fought in alliance with France's enemies against French Revolutionary forces.

condensation: see STATES OF MATTER.

condenser: see CAPACITOR.

condominium, individually owned unit in a building or development with multiple residential or commercial occupants. Each unit (often an apartment or duplex) may be financed or sold separately by the owner, as in private housing, but the care and expense of maintaining common areas are shared, as in COOPERATIVES. Condominium sales sometimes include time-sharing, in which a number of people buy into the same condominium for use at a specified time of year (e.g., a particular month) over a period of years (e.g., 25 years). The demand for condominium housing surged in the U.S. in the 1970s and remained strong during the housing slump of the early 1980s.

condor, VULTURE found in the high peaks of the Coast Range of S California and the ANDES. Condors are the largest living birds, nearly 50 in. (125 cm) long with wingspans of from 9 to 10 ft (274 to 300 cm). Voracious eaters, they prefer carrion but will attack living animals as large as deer. California condors are extremely rare and from 1987, when the last wild bird was captured, to 1992 were only found in zoos. In 1992 zoo-raised birds were returned to the wild.

Condorcet, Marie Jean Antoine Nicolas Caritat, marquis de [kôNdôrsā'], 1743–94, French mathematician, philosopher, and political leader. He did notable work (1785) on the theory of PROBABILITY. His best-known work is *Sketch for a Historical Picture of the Progress of the Human Mind* (1795), in which he traced human development through nine epochs to the French Revolution and predicted in the tenth epoch the ultimate perfection of the human race.

conduction, transfer of HEAT or ELECTRICITY through a substance, resulting from a difference in temperature between different parts of the substance or from a difference in electric POTENTIAL. Heat may be conducted when the motions of energetic (hotter) molecules are passed on to nearby, less energetic (cooler) molecules, but a more effective method is the migration of energetic free electrons. Conduction of electricity consists of the flow of CHARGES. Metals are thus good conductors of both heat and electricity because they have a high free-electron density.

Confederacy, name commonly given to the **Confederate States of America** (1861–65), the government established by the southern states of the U.S. after their secession from the Union. When Pres. LINCOLN was elected (Nov. 1860), seven states—South Carolina, Georgia, Louisiana, Mississippi, Florida, Alabama, and Texas—seceded. A provisional government was set up at Montgomery, Ala., and a constitution was drafted; it resembled the U.S. CONSTITUTION but had provisions for STATES' RIGHTS and SLAVERY. After the firing on FORT SUMTER and Lincoln's call for troops, four more states—Arkansas, North Carolina, Virginia, and Tennessee—joined. Richmond, Va., became the capital, and Jefferson DAVIS and A.H. STEPHENS were elected president and vice president. The story of the Confederacy is the story of the loss of the CIVIL WAR. Its loyal citizens bore privations and invasion with courage. It was refused recognition by England and France. Volunteers for its army were insufficient; conscription was used but opposed. Financial troubles were heavy, and its paper money became worthless. Mounting Union victories made defeat inevitable. The Confederacy fell after R.E. LEE's surrender in Apr. 1865.

Confederation, Articles of, in U.S. history, early form of constitution ratified in 1781 and superseded (1789) by the U.S. CONSTITUTION. Its chief faults were a subordinate role for the central government and the dependence of Congress on the states both for funds and for execution of its decrees. Because of these inherent weaknesses the government commanded little respect domestically or abroad. Its most significant achievement was the ORDINANCE OF 1787.

Confessing Church, German Protestant movement. Founded (1933) by Martin NIEMOELLER in opposition to the Nazi-sponsored German Christian Church, it was later driven underground. It continues as a separate group within the German Evangelicals.

confirmation, Christian rite confirming an individual's prior initiation into the church by BAPTISM. In the Roman Catholic and Orthodox Eastern Churches, it is a SACRAMENT. In the West it is ordinarily conferred by a bishop and consists of the laying on of hands and anointing with chrism, a mixture of oil and balm. Priests confer it in the East. Lutherans and Anglicans also use confirmation.

Confucianism, moral and religious system of China. Its origins lie in the collection of sayings known as the *Analects* (see CHINESE LITERATURE), attributed to CONFUCIUS, and in ancient commentaries such as that of Mencius. Before the 3d cent. B.C., Confucianism was a system of ethical precepts for the management of society, based on the practice of *jen*—sympathy or "human-heartedness"—as shown in one's relations with others and demonstrated through adherence to *li,* a combination of etiquette and ritual. A person who wishes to be properly treated when in a subordinate role must, according to the Confucian Golden Rule, treat his own inferiors with propriety. Confucianism, with its practical social precepts, was often challenged by the supernatural religious systems of TAOISM and BUDDHISM and was eclipsed by them from the 3d to the 7th cent. A.D., but it revived under the T'ang dynasty (618–906). The Sung dynasty (960–1279) saw the development of neo-Confucianism, a metaphysical system that drew on the beliefs of Taoism and especially of ZEN BUDDHISM; during the Ming period (1368–1644) it stressed meditation and intuitive knowledge. Thereafter the system gradually weakened, and with the overthrow of the

monarchy (1911–12) Confucianism declined, a process accelerated by the Communist revolution (1949). Traditional Chinese ethics and culture still stem from Confucian teachings, however.

Confucius [kənfyo͞o'shəs], Chinese *K'ung Fu-tse,* c.551–479? B.C., Chinese sage. Legend surrounds his life, but modern scholars base their accounts mainly on the *Analects,* a collection of sayings and dialogues apparently recorded by Confucius' disciples. He was born in the feudal state of Lu, in modern Shandong province. Probably because of his reformist teachings, he held only minor governmental posts. In the midst of the warfare and tyranny, he urged a system of morality and statecraft to bring about peace, stability, and just government. His supposed doctrines are embodied in CONFUCIANISM.

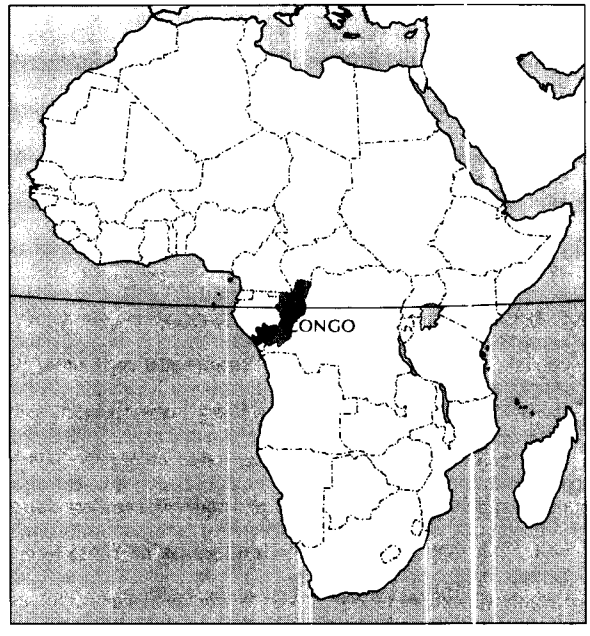
congestive heart failure: see HEART DISEASE.

conglomerate, a large corporation that grows mainly through acquisition of, or merger with, firms in unrelated fields. Although corporate mergers and acquisitions were common earlier, the modern conglomerate did not emerge until the 1960s, when it became popular among investors. By diversifying, the conglomerate seeks to protect itself against changing markets and economic conditions.

Congo, officially Republic of the Congo, republic (1992 est. pop. 2,377,000), 132,046 sq mi (342,000 sq km), W central Africa, bordered by Gabon (W), Cameroon and the Central African Republic (N), Zaïre (E and SE), and Cabinda (an exclave of Angola) and the Atlantic Ocean (SW). Major cities include BRAZZAVILLE (the capital) and POINTE-NOIRE. The country is largely covered by tropical rain forests and stretches of wooded savanna, and is drained by tributaries of the CONGO and Ubangi rivers. Congo serves as the commercial and transport hub of central Africa, with important road, river, and rail systems connecting inland areas with the Atlantic. Forestry and agriculture are the chief economic activities, providing sugarcane, palm oil, coffee, cocoa, and timber for export, and serving as the basis of most of the country's industry. Mining is also important, with petroleum and potash the principal exports, although reserves are being depleted. The Bakongo, the major ethnic group, are Bantu-speaking, as are the other principal groups, the Sanga, Mbochi, and Bateke. About half of the people adhere to traditional religions, and some 30% are Roman Catholic. French is the official language.

History. The region probably was first inhabited by PYGMIES, followed (15th cent.) by the Bakongo, Bateke, and Sanga. After the Portuguese navigator Diego Cão explored the coast in 1482, a slave trade developed between Europeans and the coastal African states. Portuguese traders predominated throughout the 17th cent., although French, English, and Dutch merchants competed for commercial opportunities. From 1889 the area (called French Congo and later Middle Congo) was administered by French concessionaires, who exploited its rubber and ivory, until it became a colony in FRENCH EQUATORIAL AFRICA in 1910. In 1946, after serving as a bastion for Free French forces in WORLD WAR II, Congo was granted a territorial assembly. It gained autonomy within the FRENCH COMMUNITY in 1958 and full independence in 1960. Its first president, Fulbert Youlou, was ousted in 1963, and a government with a Marxist-Leninist ideology was established. This was, in turn, overthrown in 1968, but the new military regime continued the previous government's socialist policies. Following a presidential assassination in 1977, a military council governed until 1979, when Col. Denis SASSOU-NGUESSO became president. Widespread unrest in 1990 led to a national political conference (1991) that reduced presidential power and ended the state's adherence to Marxism-Leninism. In 1992 Pascal Lissouba won the nation's first democratic presidential election, but fighting between pro-government forces and Lissouba's opponents (both largely ethnically based groups) slowed progress toward full democracy.

Congo or **Zaïre,** great river of Africa, flowing c.2,720 mi (4,380 km) generally north and west through Zaïre to the Atlantic Ocean in NW Angola. It drains much of central equatorial Africa. Its upper course, above Boyoma (Stanley) Falls, is known as the Lualaba R. Its lower course widens near Kinshasa to form lakelike Pool Malebo (Stanley Pool), from which the river descends 876 ft (267 m) through a series of rapids (Livingstone Falls) to the port of Matadi. Called the Congo for the historic KONGO kingdom near its mouth, the river was explored in the 19th cent. by David LIVINGSTONE and Henry STANLEY.



Congregationalism, a type of Protestant church organization in which each congregation, or local church, has free control of its own affairs, with Jesus alone as its head. The movement arose (16th–17th cent.) in England in a SEPARATIST revolt against formalized worship. Pilgrims brought Congregationalism to America in 1620, where it later took a leading part in the GREAT AWAKENING. There have been several mergers involving Congregational bodies, the latest (1957) forming the UNITED CHURCH OF CHRIST. There are no bishops or presbyteries.

Congress of Industrial Organizations: see AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS

Congress of Racial Equality (CORE), civil-rights organization founded (1942) in Chicago by James Farmer. It seeks, through nonviolent direct action, to end discrimination in public accommodations, housing, and other areas. CORE first gained national recognition with the 1961 Freedom Rides, in which interracial groups traveled south by bus. It later moved toward a more separatist policy, calling for African-American economic independence within the U.S., and since the late 1970s has taken more politically conservative positions.

Congress of the United States, legislative branch of the federal government, instituted (1789) by Article 1 of the CONSTITUTION OF THE UNITED STATES. It comprises two houses, the Senate and the House of Representatives. The Senate consists of two senators from each state, who serve six-year terms. Senators were elected by state legislatures until 1913, when the 17th amendment to the Constitution required that they be chosen by popular election. Every two years one third of the Senate is elected. The House of Representatives consists of 435 members apportioned among the states according to their population in the federal census. Representatives are elected from congressional districts drawn up by the state legislatures and serve two-year terms. The House traditionally elects its presiding officer, the Speaker, by consensus of the majority party. The vice president of the U.S. is the presiding officer of the Senate, but the agenda is set by the majority leader. Most of the work in both houses is transacted by standing committees in which both majority and minority members are represented. Each chamber has an equal voice in legislation, although revenue bills must originate in the House. The Senate must ratify all treaties by a two-thirds vote; it also confirms important presidential appointees. A presidential VETO of congressional legislation can be overridden by a two-thirds vote in each house. Whenever an item of legislation is approved in varying forms by the two houses, the

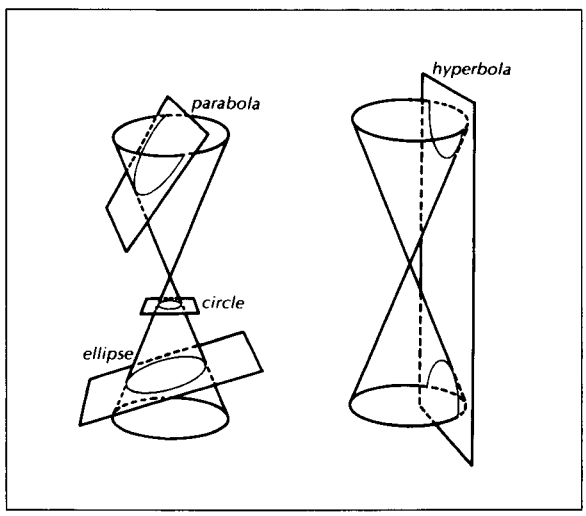
The key to pronunciation appears on page xiii.

differences are reconciled by a joint (or conference) committee that includes members of both chambers. See also EXECUTIVE; CABINET; COURT SYSTEM IN THE UNITED STATES; SUPREME COURT, UNITED STATES.

Congress party: see INDIAN NATIONAL CONGRESS.

Congreve, William, 1670–1729, English dramatist. After publishing a novel, *Incognita* (1692), and translations, he turned to the stage. His first comedy, *The Old Bachelor* (1693), was a great success and was followed by *The Double Dealer* (1693), *Love for Love* (1695), and a tragedy, *The Mourning Bride* (1697). His masterpiece, *The Way of the World,* appeared in 1700. Congreve's plays are considered the apex of RESTORATION comedy. With brilliant language and complex plots they present amused, cynical portraits of people more concerned with manners than morals.

conic section or **conic,** curve formed by the intersection of a plane and a right circular cone, or conical surface. The ordinary conic sections are the CIRCLE, the ellipse, the parabola, and the hyperbola. When the plane passes through the vertex of the cone, the result is a point, a straight line, or a pair of intersecting straight lines; these are called degenerate conic sections. In ANALYTIC GEOMETRY every conic section is the graph of an equation of the form $ax^2 + bxy + cy^2 + dx + ey + f = 0$, where a, b, c, d, e, and f are constants and a, b, and c are not all zero.



Conic sections

conifer, tree or shrub of a large division (Coniferophyta or Pinophyta) of mostly cone-bearing evergreens distributed worldwide. A few, e.g., the LARCH, are deciduous. Conifers, being GYMNOSPERMS, do not have true flowers, but some, e.g., the YEW, have globular fruits. The PINE, MONKEY-PUZZLE TREE, CYPRESS, and SEQUOIA are conifers.

conjunction, in astronomy: see SYZYGY.

conjunctivitis, disorder of the mucosal membrane that covers the eyeball and lines the eyelid, usually caused by bacteria, virus, or allergy; also called "pinkeye." Producing redness, discharge, and itching of the eyes, conjunctivitis is frequently treated with ANTIBIOTICS and sometimes CORTISONE. Before the use of silver nitrate drops in eyes of newborns, conjunctivitis was a major cause of blindness in infants.

Conkling, Roscoe, 1829–88, American politician; b. Albany, N.Y. He served New York in the U.S. House of Representatives (1859–63, 1865–67) and the U.S. Senate (1867–81). The Republican state "boss" and "Old Guard" leader, He resigned from the Senate when Pres. James A. GARFIELD ignored him in appointing a collector of the port of New York.

Connecticut, one of the New England states of the NE U.S.; bordered by Massachusetts (N), Rhode Island (E), Long Island Sound (S), and New York (W).

Area, 5,009 sq mi (12,973 sq km). *Pop.* (1990), 3,287,116, a 5.8% increase over 1980 pop. *Capital,* Hartford. *Statehood,* Jan. 9, 1788 (fifth of the original 13 states to ratify the Constitution). *Highest pt.,* Mt. Frissell, 2,380 ft (726 m); *lowest pt.,* sea level. *Nickname,* Constitution State. *Motto, Qui Transtulit Sustinet* [He Who Transplanted Still Sustains]. *State bird,* American robin. *State flower,* mountain laurel. *State tree,* white oak. *Abbr.,* Conn.; CT.

Land and People. Except for the coastal plain along Long Island Sound, Connecticut is covered with rolling hills. The western highlands, including part of the Taconic Mts., are separated from the eastern highlands by the fertile Connecticut R. valley. Almost 80% of the population lives in metropolitan areas. The principal cities are BRIDGEPORT, HARTFORD, NEW HAVEN, WATERBURY, and STAMFORD. The state's densely settled southwestern corner is part of the New York City metropolitan area. In 1990 the population was 87% white and 8.3% African American.

Economy. Although there has been significant economic decline in recent years, Connecticut continues to be a heavily industrialized state. Among its chief products are transportation equipment, including submarines manufactured at GROTON, jet engines, and helicopters; electronic and electrical equipment; munitions; medical instruments; and pharmaceuticals. Hartford has long been one of the country's leading insurance centers. The small agricultural sector is dominated by dairying and the cultivation of shade-grown tobacco.

Government. The constitution of 1965 provides for a governor elected to a four-year term. The legislature is composed of a 36-member senate and 151-seat house, with members of both serving two-year terms. Connecticut is represented in the U.S. Congress by six representatives and two senators and has eight electoral votes.

History. The Dutch discovered the Connecticut R. in 1614, but European settlement of the region was largely the work of English Puritans from Massachusetts. In the 1630s they flocked to the Connecticut valley, and in 1638–39 the towns of Hartford, Windsor, and Wethersfield adopted the FUNDAMENTAL ORDERS, which set up a government for the colony. It soon expanded to include other towns and in 1662 acquired the colony of New Haven, which had been founded in 1638. Connecticut joined the other colonies in the AMERICAN REVOLUTION and was one of the first states to ratify the Constitution. Its important shipping trade suffered from the EMBARGO ACT (1807) and the WAR OF 1812, and the state gradually turned to manufacturing. Connecticut abolished slavery in 1848 and supported the Union in the CIVIL WAR with nearly 60,000 troops. The state has prospered for most of the 20th cent., save for the Great Depression. During the early to mid-1980s, largely due to defense-related industries, Connecticut was one of the nation's wealthiest states. Prosperity gave way to economic downturn later in the decade and in the early 1990s as federal military spending declined markedly.

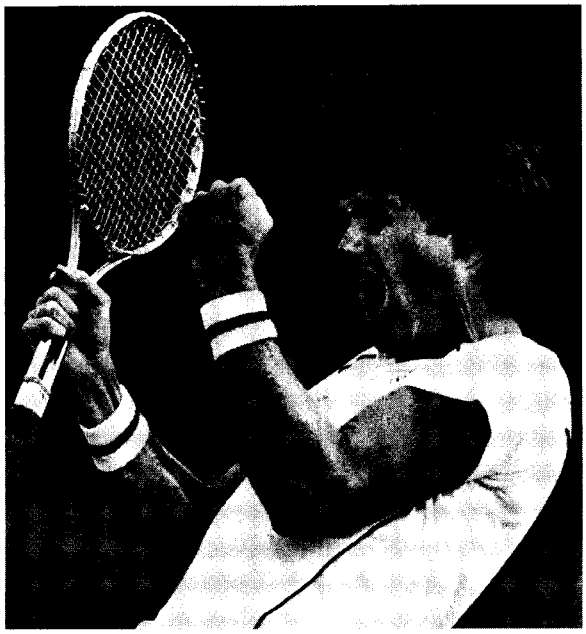
Connecticut Wits or **Hartford Wits,** informal association of Yale students and rectors formed in the late 18th cent. Conservative Federalists, they attacked their liberal opponents in satirical verses, e.g., *The Anarchiad* (1786–87). Members of the group included Timothy DWIGHT and John TRUMBULL.

connective tissue, supportive tissue widely distributed in the body. Consisting mainly of substances certain cells secrete, it contains relatively few cells. The connective tissue that forms TENDONS and LIGAMENTS is mainly collagen—white, inelastic protein fibers. Cartilage, vital to the skeletal system of vertebrates, is fibrous collagen in a gel; it is firm but flexible. Connective tissue found under the skin and supporting most organs contains collagen and other fibers as well. BONE connective tissue is made up largely of collagen fibers and calcium salt crystals; its structure is strong and rigid. BLOOD and lymph have a fluid connective tissue matrix.

Connelly, Marc, 1890–1980, American dramatist; b. McKeesport, Pa. His best-known play is *The Green Pastures* (1930; Pulitzer), a biblical fantasy based on African-American life in the South. He also wrote several plays in collaboration with George S. KAUFMAN.

Connolly, Maureen, 1934–69, American tennis player; b. San Diego. At 16, "Little Mo" became the youngest player to win the U.S. national singles. She twice defended (1952–53) the title successfully, won (1952–54) at Wimbledon three times, and completed (1953) the grand slam by adding the French and Australian titles.

Connors, Jimmy (James Connors, Jr.), 1952–, American tennis



Jimmy Connors

player; b. East St. Louis, Ill. In 1974, at 22, he won the Australian Open, the U.S. Open (which he also won in 1976, 1978, 1982, and 1983), and Wimbledon (which he also won in 1982). Connors has won more professional tennis tournaments than any other man.

conquistador, military leader of the Spanish conquest of the New World in the 16th cent. Francisco PIZARRO and Hernán CORTÉS were the greatest conquistadors. The word can mean any daring, ruthless adventurer.

Conrad, rulers of the HOLY ROMAN EMPIRE and its predecessor state. **Conrad I,** d. 918, German king (911–18), succeeded Louis the Child, but was plagued by feuds and rebellions in Lorraine, Swabia, and Bavaria. His failure to halt the continuing Hungarian invasions and the alienation of his nobles almost dissolved the kingdom. **Conrad II,** c.990–1039, emperor and German king (1024–39), was the first of the Frankish Salian dynasty. His election as German king was contested by Swabia, Lotharingia, and Italy; but he was crowned after three years of conflict. His reign was marked by constant revolts, but he added Burgundy to his dominions and greatly increased commerce. **Conrad III,** c.1093–1152, emperor and German king (1138–52), founder of the HOHENSTAUFEN dynasty, was set up as antiking to Emperor LOTHAIR II in 1127 but submitted to Lothair in 1135. He was elected king at Lothair's death by those opposing Henry the Proud of Bavaria and his brother Guelph, thereby setting in force the struggle between the GUELPHS AND GHIBELLINES. Conrad was never crowned. **Conrad IV,** 1228–54, emperor and German king (1237–54), king of Sicily and of Jerusalem (1250–54), was made king by his father Emperor FREDERICK II, but the struggle between Frederick and Pope INNOCENT IV kept him from being crowned. He was excommunicated in 1254 and died shortly thereafter of fever.

Conrad, d. 1192, Latin king of JERUSALEM (1192), marquis of Montferrat, a leader in the Third CRUSADE. He defended TYRE against the Saracens and became (1187) its lord. To gain the throne of Jerusalem he married the daughter of AMALRIC I, but he was immediately murdered, probably by Muslims. The title passed eventually to AMALRIC II.

Conrad, Joseph, 1857–1924, English novelist; b. Poland, as Józef Teodor Konrad Walecz Korzeniowski. After a period at sea (during which he became a British subject), he began (1894) writing novels in English, an acquired language, and eventually became one of the greatest prose stylists in English literature. Notable early works include *The Nigger of the "Narcissus"* (1897), *Lord Jim* (1900), and the novellas *Youth* (1902), *Heart of Darkness* (1902), and *Typhoon* (1903). A master at creating character and atmosphere, Conrad acutely portrayed individuals suffering from isolation and moral disintegration, and the clash between colonized cultures and European colonizers. His best works include *Nostromo* (1904), *The Secret Agent* (1907), *Under Western Eyes* (1911), *Chance* (1913), and *Victory* (1915).

consanguinity: see KINSHIP.

conscientious objector, person who, on grounds of conscience, refuses military service. Resistance based on religious or humanitarian convictions, as among Quakers (see FRIENDS), is usually distinguished from political opposition. In World Wars I and II, the U.S. and Britain allowed objectors who were members of recognized pacifist religious denominations to substitute nonmilitary service, but imprisoned other pacifists. In the 1970s the U.S. Supreme Court allowed conscientious objection based on deeply held ethical as well as religious beliefs, but refused to accept opposition to the VIETNAM WAR as a basis for exemption.

conscription, compulsory enrollment, in war or peace, in the armed forces. The idea of compulsory military service by all of a nation's able-bodied men was introduced in the late 18th cent. during the French Revolution and enabled Napoleon to raise huge armies. Other European countries adopted such a system during the 19th cent. In the U.S. wartime conscription was used in the Civil War and both world wars, and a peacetime draft was maintained from 1945 to 1973.

conservation laws, in physics, basic laws that maintain that the total value of certain quantities remains unchanged during a physical process. Conserved quantities include MASS (or matter), ENERGY, linear MOMENTUM, angular momentum, and electric CHARGE; the theory of RELATIVITY, however, combines the laws of conservation of mass and of energy into a single law. Additional conservation laws have meaning only on the subatomic level.

conservation of natural resources, informed restraint in the human use of the earth's resources. The term *conservation,* which came into use in the late 19th cent., referred to the management, mainly for economic reasons, of such valuable natural resources as timber, fish, game, topsoil, pastureland, and minerals. It referred also to the preservation of forests, wildlife (see WILDLIFE REFUGE), park land, wilderness, and WATERSHED areas. Conservation as part of a total approach to the use of natural resources was introduced by Pres. Theodore ROOSEVELT and his chief forester, Gifford PINCHOT. They popularized the philosophy, inspired a widespread movement, and gave impetus to much legislation. A Roosevelt-appointed commission published the first inventory of the country's natural resources. POLLUTION problems and dwindling ENERGY resources gave rise in the 1960s and 70s to a related movement—ENVIRONMENTALISM—and numerous laws were passed to protect the environment and its resources. Conservation measures were originally designed to protect economic resources or the habitats of large mammal populations, such as elephants or tigers. Current thinking, however, favors the protection of entire ecological regions by the creation of "biosphere reserves" and also emphasizes the importance of reconciling human use and conservation beyond parks.

conservatism, in politics, the desire to maintain or conserve the existing order. Modern political conservatism emerged in the 19th cent., in reaction to the political and social changes of the FRENCH REVOLUTION and the INDUSTRIAL REVOLUTION. European conservatism, as formulated by Edmund BURKE and others, emphasized preserving the power of the king and landowners, limiting suffrage, and continuing the ties between church and state. Benjamin DISRAELI exemplified the conservative tendency to resort to moderate reform in order to preserve the foundations of the old order. By the 20th cent. conservatism was being redirected by erstwhile liberal manufacturing and professional groups who had achieved their political aims and had become concerned with preserving them. The new conservatism advocated economic LAISSEZ FAIRE and opposed the extension of the welfare state.

Conservative Judaism: see JUDAISM.

Conservative party, major British political party, the other being the LABOUR PARTY. The successor of the TORY party, it came into being after the REFORM BILL of 1832 and advocated the Tory policies of defense of the Church of England and protection of agricultural

interests. Later, it strongly supported imperialism. The repeal of the protectionist CORN LAWS (1846) by the Conservative leader Sir Robert PEEL caused a split in the party and its exclusion from power for most of the period 1846–73. Under Benjamin DISRAELI's "Tory democracy" (1874–80), the party wooed the broadening electorate with social legislation. The dominant party during the 1920s and 30s under Stanley BALDWIN, it lost prestige with the failure of Neville CHAMBERLAIN's appeasement of Nazi Germany (1937–40), but the country rallied to his successor, Sir Winston CHURCHILL, during WORLD WAR II. In the postwar years the Conservatives led Britain into the European Community (see EUROPEAN UNION and generally continued the social programs initiated by the Labour party. In 1979 Margaret THATCHER, a Conservative, became Britain's first woman prime minister. She cut social programs and privatized many government-owned companies. Thatcher was succeeded by Conservative John MAJOR in 1990.

Considérant, Victor Prosper [kôNsēdäräN'], 1808–93, French socialist. Leader of Fourierism after the death (1837) of Charles FOURIER, he took part in the June Days uprising (1848), was forced to flee to Belgium, and later tried unsuccessfully to establish (1855–57) a Fourierist colony in Texas. His books include *Principles of Socialism* (1847).

consideration: see CONTRACT.

Constable, John, 1776–1837, leading English landscape painter. The influence of RUISDAEL and CLAUDE LORRAIN is evident in his direct observation of nature and use of broken color, both extraordinary for his day. Such works as *View on the Stour* (1819) and *The Hay Wain* (1821; National Gall., London) influenced French romantics (including DELACROIX and Bonington) and later the BARBIZON SCHOOL, as well as the general course of 19th-cent. French landscape painting. His preparatory sketches, e.g., *Weymouth Bay* (National Gall., London), are spontaneous and vigorous.

Constance, Council of: see SCHISM, GREAT.

Constant, Benjamin [kôNstäN'], 1767–1830, French-Swiss political writer and novelist; b. Switzerland. Through Germaine de STAËL he became interested in politics, and his affair with her took him to Paris (1795). He served (1799–1801) as a tribune under NAPOLEON I but lived in exile (1802–14) with de Staël after she was expelled from France. During the Bourbon restoration he served (1819–22, 1824–30) in the chamber of deputies, earning a reputation as a liberal. His most important work is the semiautobiographical novel *Adolphe* (1816).

Constanţa [kônstän'tsä], city (1989 est. pop. 316,000), SE Romania, on the Black Sea. It is Romania's main seaport, with such exports as petroleum and grain; its chief naval and air base; an industrial city; and a resort. Founded (7th cent. B.C.) by the Greeks, it was ruled by the Romans, Byzantines, and Turks before passing to Romania in 1878.

Constantine, Roman emperors. **Constantine I** or **Constantine the Great,** 288?–337 (r.310–337), was born at Naissus (now Niš, Yugoslavia), the son of Constantius I and St. HELENA. When Constantius died at York in 306, his soldiers proclaimed Constantine emperor, but much rivalry for the vacated office ensued. Before the battle at the Milvian or Mulvian Bridge near Rome in 312, Constantine, who was already sympathetic toward Christianity, is said to have seen in the sky a flaming cross as the sign by which he would conquer. He adopted the cross and was victorious. The battle is regarded as a turning point for Christianity. Constantine ruled in the West and LICINIUS in the East as coemperors until they fell out in 324. Licinius lost his life in the struggle, leaving Constantine sole emperor. In a reign of peace, Constantine rebuilt the empire on a basis of absolutism. In 325 he convened the epoch-making Council of NICAEA. In 330 he moved the capital to Constantinople, a city dedicated to the Virgin. As the founder of the Christian empire, Constantine began a new era. He was baptized on his deathbed. **Constantine II,** 316–40 (r.337–40), was the son of Constantine. When the empire was divided at his father's death (337), he received Britain, Gaul, and Spain. Feeling cheated, he warred with his brother Constans I; he was killed while invading Italy.

Constantine, Byzantine emperors. **Constantine I:** see under CONSTANTINE, Roman emperors. **Constantine IV** (Pogonatus), c.652–685 (r.668–85), repelled the Muslims but had to cede land to the Bulgars. He called the Third Council of Constantinople (680), which condemned MONOTHELETISM. **Constantine V** (Copronymus), 718–75 (r.741–75), was a capable general and administrator. His support of ICONOCLASM and opposition to MONASTICISM lost him Rome. **Constantine VI,** b. c.770 (r.780–97), reigned first with his mother, IRENE, as regent and then as co-ruler (792). In 797 she had her cruel and unpopular son deposed and blinded. **Constantine VII** (Porphyrogenitus), 905–59 (r.913–59), had his reign interrupted by the usurpation of ROMANUS I (919–44). He fostered learning, law reform, and the fair distribution of land. **Constantine XI** (Palaeologus), d. 1453, was the last Byzantine emperor (r.1449–53). He proclaimed the union of the Eastern and Western churches. After a long siege Constantinople fell (1453) to Ottoman sultan MUHAMMAD II. Constantine died in the battle.

Constantine, kings of the Hellenes (Greece). **Constantine I,** 1868–1923 (r.1913–17, 1920–22), opposed the Allies in World War I and was forced to abdicate in favor of his second son, ALEXANDER. He was restored after Alexander's death, but in 1922 a military rebellion forced him to abdicate again, this time in favor of his eldest son, GEORGE II. **Constantine II,** 1940– (r.1964–73), succeeded his father, PAUL, but in 1967 was forced into exile by a military junta. He was formally deposed in 1973.

Constantine the Great: see CONSTANTINE I.

Constantinople, former capital of the BYZANTINE EMPIRE and of the OTTOMAN EMPIRE, called ISTANBUL since 1930. It was founded (A.D. 330) at BYZANTIUM as the new capital of the Roman Empire by CONSTANTINE I and became the largest, most splendid medieval European city. Built on seven hills above the BOSPORUS, it had such magnificent buildings as the church of HAGIA SOPHIA and the emperors' palace (a city in itself), and many artistic and literary treasures. It was conquered in 1204 by Crusaders (see CRUSADES), in 1261 by MICHAEL VIII, and in 1453 by MUHAMMAD II. Almost depopulated when it fell to the Turks, the city recovered quickly, and was embellished by the Ottoman sultans who built palaces and mosques. After WORLD WAR I Constantinople was occupied (1918–23) by the Allies. In 1923 Kemal ATATÜRK made ANKARA Turkey's capital.

Constantinople, Councils of, four ecumenical councils of the Roman Catholic Church. The First Council of Constantinople (381), called to confirm the victory over ARIANISM, established the orthodox teaching of the Trinity and condemned the heresy of Apollinarianism. The second council (553) was called and dominated by Byzantine Emperor JUSTINIAN I; it condemned Nestorian writings (see NESTORIANISM) and encouraged MONOPHYSITISM. The third council (680) condemned MONOTHELETISM and a former pope, HONORIUS I. The fourth council (869–70) confirmed the condemnation of PHOTIUS. The third and fourth councils are not accepted as ecumenical by the Orthodox Church.

Constantinople, Latin Empire of, 1204–61, feudal empire in the S Balkans and Greek archipelago, founded by the leaders of the Fourth CRUSADE. Its government was divided between the Crusaders and their Venetian creditors. The rulers were BALDWIN I, HENRY OF FLANDERS, ROBERT OF COURTENAY, and BALDWIN II. The empire at once began to decline from internal strife and attacks by the Bulgars, Turks, and Greek states of NICAEA and EPIRUS. It was taken (1261) by MICHAEL VIII of Nicaea, who restored the Byzantine Empire. However, Venice retained most of the Greek Isles, the Villehardouin family of France kept Achaia, and Athens came under Catalan rule.

constellation, in common usage, group of stars (e.g., URSA MAJOR) that are imagined to form a configuration in the sky; properly speaking, a constellation is a definite region of the sky in which the configuration of stars is contained. The entire celestial sphere is divided into 88 such regions, with boundaries fixed by international agreement along lines of right ascension and declination. The 12 constellations located along or near the ecliptic, or apparent path of the sun through the heavens, are known as the constellations of the ZODIAC.

constitution, fundamental principles of government of a nation, either implied in its laws, institutions, and customs, or embodied in one or more documents. The British constitution, an unwritten, flexible type, comprises the whole body of common and statutory law, practices, and customs that have evolved there; it can be

THE CONSTITUTION OF THE UNITED STATES (*Summary*)

The Preamble states the general purpose of the Constitution:

We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

Article I Places legislative power in a Congress composed of a Senate and House of Representatives, prescribes method of electing Congress, and empowers each house to establish its own procedural rules. Process of legislation from Congress to President is generally described. Section VIII grants Congress specific powers, e.g., to declare war. Section IX limits Congress's powers, forbidding, e.g., ex post facto laws. Section X limits powers of states and makes some state actions dependent on Congressional consent.

Article II Creates EXECUTIVE branch of government, headed by President and Vice President. Establishes ELECTORAL COLLEGE, prescribes election process, qualifications, and manner of succession when a president is incapacitated. Section II enumerates President's powers as military commander-in-chief and in foreign affairs. Section III governs President's working relations with Congress and grants President administrative power. Section IV governs impeachment of a President.

Article III Vests all judicial power in a SUPREME COURT. Congress may establish inferior courts. Section II defines the extent of federal jurisdiction and distinguishes cases in which federal jurisdiction is original, e.g., cases between states, from those in which federal courts can hear only appeals. Section III defines, and limits prosecution for, TREASON.

Article IV Governs relations between states, prescribing full faith and credit for one another's laws, equal treatment of citizens of all states, and extradition procedures. Section III governs admission of states to the Union and administration of federal territories and property. Section IV guarantees a republican (see REPUBLIC) form of government to every state.

Article V Governs the process of amending the Constitution.

Article VI Establishes the Constitution as the supreme law of the land. Federal and state officeholders shall be bound to support the Constitution; no religious test may be required for office.

Article VII States that the Constitution shall take effect when nine (of the thirteen) states have ratified it.

AMENDMENTS (*with date of ratification*)

Amendment I (1791) First of the Bill of Rights amendments (I-IX); prohibits government-established religion; guarantees freedom of worship, of speech, of the press, of assembly and to petition the government.

Amendment II (1791) For the purpose of maintaining a well-regulated militia, preserves the right to keep and bear arms.

Amendment III (1791) Prohibits peacetime quartering of troops in private dwellings without owners' consent.

Amendment IV (1791) Guarantees against unreasonable search and seizure.

Amendment V (1791) Guarantees against violations of due process in criminal proceedings. No person may be compelled to testify against himself. Grand jury process is required for criminal INDICTMENT. DOUBLE JEOPARDY is prohibited. Public taking of private PROPERTY without just compensation is prohibited.

Amendment VI (1791) Guarantees speedy, fair trial, impartial jury, right to counsel in all criminal cases. See CRIMINAL LAW.

Amendment VII (1791) Guarantees jury trial in all major civil (noncriminal) cases, and prohibits retrial of adjudicated matters.

Amendment VIII (1791) Prohibits excessive bail or fines and cruel and unusual punishment.

Amendment IX (1791) Declares that the enumeration of certain rights in the Constitution does not imply that the people do not retain all other rights.

Amendment X (1791) Reserves to the states powers that the Constitution does not give to the federal government or prohibit to the states.

Amendment XI (1798) Declares that the federal courts may not try any case brought against a state by a citizen of another state or country.

Amendment XII (1804) Revises presidential and vice presidential election rules.

Amendment XIII (1865) First of three 'Civil War' amendments; prohibits slavery.

Amendment XIV (1868) Defines U.S. citizenship. Prohibits states from violating due process (see Amendment V) or equal protection of the law.

Amendment XV (1870) Guarantees rights of citizens against U.S. or state infringement based on race, color, or previous servitude.

Amendment XVI (1913) Authorizes a federal INCOME TAX.

Amendment XVII (1913) Provides for direct popular election of Senators.

Amendment XVIII (1919) Makes PROHIBITION federal law.

Amendment XIX (1920) Guarantees women the vote in state and U.S. elections.

Amendment XX (1933) Changes Congressional terms of office and the inauguration date of the President and Vice President; clarifies succession to the presidency.

Amendment XXI (1933) Repeals Amendment XVIII, ends prohibition.

Amendment XXII (1951) Limits presidential tenure to two terms.

Amendment XXIII (1961) Permits District of Columbia residents to vote for President and Vice President.

Amendment XXIV (1964) Outlaws the POLL TAX in all federal elections and primaries.

Amendment XXV (1967) Provides for procedures to fill vacancies in the Vice Presidency; further clarifies presidential succession rules.

Amendment XXVI (1971) Lowers voting age in federal and state election to 18.

Amendment XXVII (1992) Postpones until after the next Congressional election the effect of any law that alters the compensation of members of Congress.

modified simply by an act of PARLIAMENT. The U.S. CONSTITUTION, a written, rigid type, has superior sanction to ordinary laws and can be changed only through an elaborate process of amendment. It remains abreast of the times, however, through statutes passed by

The key to pronunciation appears on page xiii.

CONGRESS and interpretations and rulings of the SUPREME COURT. In modern times, countries have tended to operate under written constitutions.

Constitution Act, 1982, British law that established procedures for Canadian amendment of Canada's constitution (the previous act had required the formal approval of Britain's Parliament). It also contains a bill of rights, the Charter of Rights and Freedoms. It provisions were combined with BRITISH NORTH AMERICA ACT (1867) and previous Canadian constitutional changes in the CANADA ACT.

Constitutional Convention: see FEDERAL CONSTITUTIONAL CONVENTION.

Constitutional Union party, in U.S. history, formed when the conflict between North and South broke down older parties. Organized just before the election of 1860, it recognized "no political principle but the Constitution of the country, the union of the states, and the enforcement of laws." Party candidates John Bell and Edward EVERETT carried Kentucky, Tennessee, and Virginia in the presidential election won by Abraham Lincoln.

Constitution of the United States, document embodying the principles on which the American nation is governed. It establishes a federal REPUBLIC with sovereignty balanced between the national government and the states. Within the national government, power is separated among three branches, the EXECUTIVE, legislative (see CONGRESS), and judicial (see SUPREME COURT, UNITED STATES; COURT SYSTEM OF THE UNITED STATES). The U.S. Constitution is the supreme law of the land; no other law, state constitution or statute, federal legislation, or executive order can operate in conflict with it. Drawn up at the FEDERAL CONSTITUTIONAL CONVENTION of 1787 in Philadelphia and ratified by the required nine states by June 21, 1788, the Constitution began to function in 1789, superseding the ARTICLES OF CONFEDERATION (1781). It is relatively brief and concise, consisting of a preamble, 7 articles, and 27 amendments (see accompanying table). The **Bill of Rights,** comprising the first 10 (or in some counts, 9) amendments to the constitution, was added in 1791 to provide adequate guarantees of individual liberties. Amendments 1 through 8 prohibit certain federal actions, many of them analogous to British actions complained of in the DECLARATION OF INDEPENDENCE. The 9th amendment states that the people retain any rights not specified in the Constitution. The 10th amendment reserves to the states powers not given to the federal government and is the foundation of STATES' RIGHTS doctrine. The 27th amendment, which postpones the effect of any law that alters Congressional pay until after the next election, was originally submitted to the states with the first 10 amendments but was not ratified until 1992. After 1791, amendments to the Constitution were few. The 14th amendment—assuring that the rights of citizens cannot be abridged by the states—has been the basis for limitation of many state actions. The brevity and generality of the language of the Constitution have made it adaptable to changing times, and the mechanics of amendment are difficult. Since Chief Justice John MARSHALL's time, the U.S. Supreme Court has changed the Constitution more than the amendment process has. Arguments on the meaning of the document generally proceed from two bases: the question of the signers' intent and the need to relate the Constitution to modern conditions. Over time the Constitution has been held to mean radically different things. Thus in PLESSY V. FERGUSON (1896), the Court held racial segregation constitutional, while in BROWN V. BOARD OF EDUCATION (1954), it found the opposite. Among the concepts long subject to reexamination and reinterpretation are states' rights, due process of law, and equal protection under the law.

constructivism, Russian art movement founded c.1913 by Vladimir Tatlin (1885–1956), related to the movement known as SUPREMATISM. Naum (Pevsner) Gabo and Antoine Pevsner gave it new impetus with works derived from CUBISM and FUTURISM but related to technological society. In 1921, when all modern art movements were officially disparaged in the Soviet Union, Gabo and Pevsner went into exile. Vsevolod Meyerhold spread constructivism abroad through stage design.

Consumer Affairs, United States Office of: see CONSUMER PROTECTION.

Consumer Price Index: see INDEX NUMBER.

consumer protection, actions by government, business and private groups to safeguard the interests of the buying public. Since the 1960s consumers' rights have been extended to such broad areas as product information and safety, satisfaction of grievances, advertising claims, and a voice in governmental decisions affecting the consumer. Early legislative action by the U.S. government included the Sherman Antitrust Act (1890; see ANTITRUST LAWS); the Pure Food and Drug Act (1906); and the creation of the FEDERAL TRADE COMMISSION (1914) and the FOOD AND DRUG ADMINISTRATION (1931). The consumer movement gained significant impetus during the 1960s and 70s when consumer activists such as Ralph NADER succeeded in promoting laws that set safety standards for automobiles, children's clothing and toys, and a wide range of household products. The federal Truth in Lending Act was passed (1968) to provide consumers with full information on the cost of credit. The U.S. Office of Consumer Affairs (est. 1971) coordinates federal activities in this field, conducting investigations and surveys, acting on individual consumer complaints, and disseminating product information. The Consumer Product Safety Commission (est. 1973), another federal agency, sets national safety standards and bans hazardous products. State and local governments also have become involved in consumer protection. The Consumer Federation of America, comprising about 220 organizations, is the largest consumer advocacy group in the U.S. Consumer protection on an international scale is coordinated by the International Organization of Consumers Unions, based in The Hague, Netherlands.

contact lens, thin lens of plastic (originally glass), worn on the eyeball and used instead of eyeglasses to improve vision or, in certain cases, to correct or treat disorders. The widely used corneal lenses cover just the cornea of the eye and float on a film of tears. Those made of soft plastic can be worn for longer periods of time than the hard-plastic models. Scleral lenses, covering the entire eye, are occasionally used to treat eye injuries or infections.

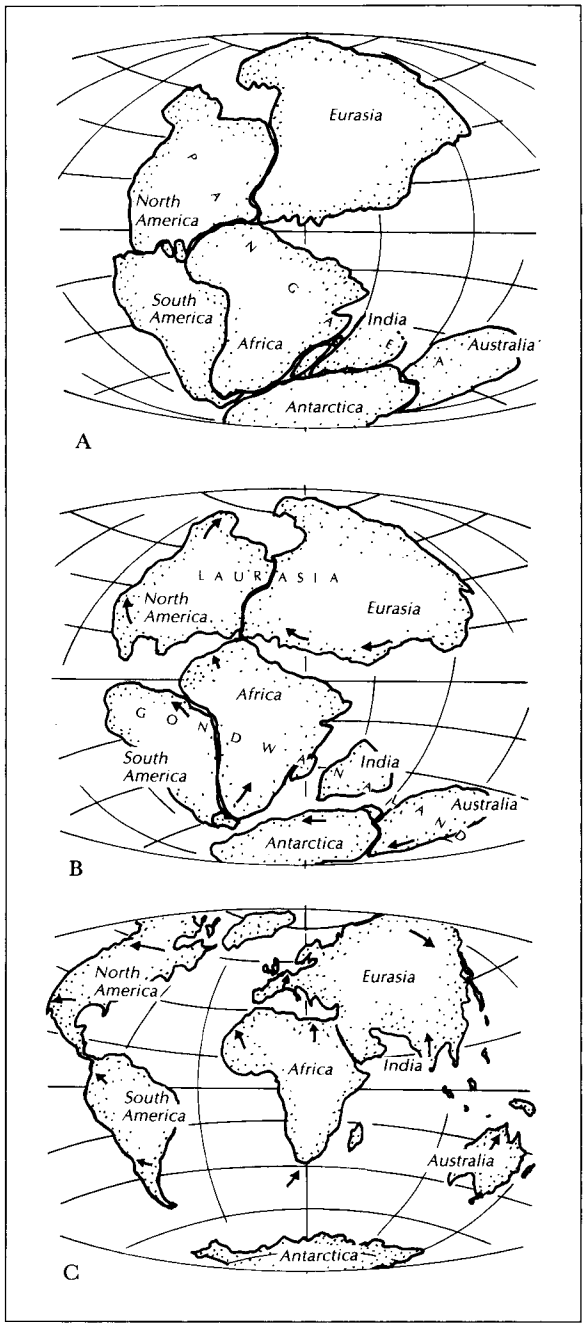
contagious diseases: see COMMUNICABLE DISEASES.

continent, largest unit of land on the earth. The continents are EURASIA (EUROPE and ASIA), AFRICA, NORTH AMERICA, SOUTH AMERICA, AUSTRALIA, and ANTARCTICA. More than two thirds of the continental regions are in the Northern Hemisphere. Continental areas bounded by the sea-level contour comprise about 29% of the earth's surface. All continents contain interior plains, or PLATEAUS, underlain by the oldest rocks; where exposed to the surface, these rocks are called continental shields, or cratons. The oldest of these rocks dated by radioactivity are 3.8 billion years old, indicating that the cratons formed with the solidification of the earth's crust. The continents have grown by accretion on their edges, where huge plates of crust converge, creating MOUNTAIN belts (see CONTINENTAL DRIFT; PLATE TECTONICS).

Continental Congress, 1774–89, federal legislature of the THIRTEEN COLONIES and later of the U.S. under the Articles of CONFEDERATION. After England passed the INTOLERABLE ACTS, the First Continental Congress met (Sept. 5–Oct. 26, 1774) in Philadelphia and petitioned the king. When the Second Continental Congress met there on May 10, 1775, armed conflict had begun (see LEXINGTON AND CONCORD, BATTLES OF), but the Congress moved gradually toward independence. It finally created the Continental Army, named George WASHINGTON commander in chief, and adopted (July 4, 1776) the DECLARATION OF INDEPENDENCE.

Continental Divide, the drainage divide separating rivers flowing to different sides of a continent. In the U.S., where it is also called the Great Divide, it follows the crest of the Rocky Mts. and separates rivers draining to the Arctic, Atlantic, and Pacific oceans.

continental drift, the theory that the positions of the earth's continents have changed considerably through geologic time. The first comprehensive theory of continental drift was proposed by the German meteorologist Alfred WEGENER in 1912. On the basis of the jigsaw fit of the opposing Atlantic coasts and geologic and paleontologic correlations on both sides of the Atlantic, he advanced the theory that c.200 million years ago there was one supercontinent, Pangaea, which split into two vast land masses, Laurasia and Gondwanaland. The present continents separated in the next geologic era (the Mesozoic). A plastic layer in the interior of the earth accommodated this process, in which the earth's rotation caused horizontal alterations in the granitic continents floating on the



Continental drift (arrows indicate the directions of motion of the landmasses): The major present landmasses are shown in the positions they are believed to have occupied when they formed an original, single supercontinent called Pangaea (A) and, later, two separate supercontinents known as Laurasia and Gondwanaland (B). The present positions of the landmasses are shown in (C).

"sea" of the basaltic ocean floors. The frictional drag along the leading edges of the drifting continents created MOUNTAINS. Wegener's theory met controversy until 1954, when it was revived by British geophysicists seeking to explain the phenomenon of polar wandering (see MAGNETIC POLE). Since then, the modern theory of PLATE TECTONICS has evolved from and replaced Wegener's original thesis.

contrabassoon: see WIND INSTRUMENT.

contraception: see BIRTH CONTROL.

contract, in law, enforceable agreement between two or more persons to perform, or refrain from performing, a specified act. A contract is made when one party submits an offer that is accepted by the other. Generally, the parties must be mentally sound, of legal age, and acting with free will. A contract must not have an immoral or criminal purpose, or be against public policy. Certain types of contracts must be in writing. A contract must involve consideration—something of value (e.g., money or a promise) given by each party to the other. A contract is terminated when its terms have been fulfilled or when special circumstances, e.g., the death of one party, make fulfillment impossible or unlawful. The law provides several remedies for breach (failure to carry out the terms) of a contract, most often the award of money damages for losses incurred.

contralto: see VOICE.

convection, transfer of heat by the flow of a liquid or gas. A fluid expands when heated and thus undergoes a decrease in density. The warmer, less dense regions of a fluid tend to rise, in accordance with ARCHIMEDES' PRINCIPLE, through the surrounding cooler fluid. If the heat continues to be supplied, the cooler fluid that flows in to replace the rising fluid will also become heated and will rise, setting up a convection current.

Cook, George Cram: see GLASPELL, SUSAN.

Cook, James, 1728–79, English explorer. An officer in the royal navy, he set off in 1768 in the *Endeavor* to chart the transit of Venus. The trip took him around the world, and he explored the coasts of AUSTRALIA and NEW ZEALAND. In 1776 he rediscovered the Sandwich Islands and searched the West Coast of NORTH AMERICA for a passage to the Atlantic. He is credited with preventing scurvy among his crew through proper diet. Cook was killed by natives on the Hawaiian Islands.

Cook Islands, self-governing dependency of New Zealand (1992 est. pop. 18,000), 90 sq mi (234 sq km), consisting of two groups of coral islands in the South Pacific Ocean. The islanders are MAORIS and hold New Zealand citizenship. Tourism and food processing are the main economic activities; major products include citrus fruits, clothing, copra, and handicrafts. The islands were proclaimed a British protectorate in 1888, passed to New Zealand in 1901, and achieved self-government in 1965.

Coolidge, Calvin, 1872–1933, 30th president of the U.S. (1923–29); b. Plymouth, Vt. In his first year as governor of Massachusetts (1919–20) he became nationally known for using the militia to end a Boston police strike. He was U.S. vice president (1921–23) before becoming president upon the death of Warren G. HARDING. Coolidge's New England simplicity and personal honesty were appealing. His faith in laissez-faire business, economy in government, and tax cuts, and his opposition to agricultural price fixing all reflected the national mood. Through his public statements he encouraged the stock market speculation of the late 1920s and left the nation unprepared for the economic collapse that followed. He chose not to run again in 1928.

Cooper, Gary, 1901–61, American film actor; b. Helena, Mont., as Frank James Cooper. His films include *Mr. Deeds Goes to Town* (1936), *For Whom the Bell Tolls* (1943), and *High Noon* (1952; Academy Award).

Cooper, James Fenimore, 1789–1851, first major American novelist; b. Burlington, N.J., later associated with Cooperstown, N.Y. His literary career began in 1820 and covered a period of 30 years, during which he published more than 50 works. He first achieved success with the American Revolutionary novel *The Spy* (1821). Cooper's most important novels comprise *The Leatherstocking Tales,* named for their chief character, the frontiersman Natty Bumppo, nicknamed Leatherstocking. Notable for their descriptive power, mastery of native background, and idealization of the Native American, they are (in narrative order): *The Deerslayer* (1841), *The Last of the Mohicans* (1826), *The Pathfinder* (1840), *The Pioneers* (1823), and *The Prairie* (1827). Cooper is also known for his romances of American life on land and sea, e.g., *The Pilot* (1823), *The Red Rover* (1827), and *The Water-Witch* (1830). An apologist for the U.S. during his years abroad (1826–33) in works such as *Notions of the Americans* (1828), he was repelled by the abuses of democracy on his return and wrote several critical novels, e.g.,

Homeward Bound, Home as Found (both: 1838), which earned him violent criticism and many enemies. Cooper's late novels include the Littlepage trilogy (1845–46), a study of conflict between the landed and landless in New York state.

Cooper, Peter, 1791–1883, American inventor and industrialist; b. N.Y.C. He built the *Tom Thumb,* one of the earliest locomotives in the U.S., and invented practical devices and processes in the iron industry (e.g., rolling the first iron for fireproof buildings). He invested heavily in the Atlantic CABLE and headed the North American Telegraph Co., which controlled more than half the telegraph lines in the U.S. Interested in providing education for the working classes, he promoted a public school system in N.Y.C. and founded Cooper Union (1859), a free institution of higher learning and a pioneer evening engineering and art school. In 1876 he was the presidential candidate of the GREENBACK PARTY.

cooperative, nonprofit economic enterprise for the benefit of those using its services. Cooperatives are common today in such areas as insurance, food, banking and credit (see CREDIT UNION), and housing. The cooperative movement grew out of the philosophy of Robert OWEN, Charles FOURIER, and others. The first permanent consumer cooperative was founded (1844) in Britain, and workers and farmers in the U.S. formed producer cooperatives soon thereafter (see GRANGER MOVEMENT). Cooperatives of various kinds are important in Scandinavia, Israel, China, Russia, and France. See also COLLECTIVE FARM.

Coornhert, Dirck Volckerszoon [kôrn'hârt], 1522–90, Dutch humanist. His translation of the first 12 books of HOMER'S *Odyssey* (1561) is the first major poetic work of the Dutch RENAISSANCE. A supporter of religious tolerance, he also wrote comedies, morality plays, and a philosophical treatise (1586).

Cope, Edward Drinker, 1840–97, American paleontologist; b. Philadelphia. He was the first to provide comprehensive descriptions of Eocene vertebrates. He and rival paleontologist Othniel Marsh, with whom he quarreled on scientific matters for 20 years, discovered the first complete dinosaur remains. Cope believed that evolution was caused by an organism's inner urge to attain a higher state of being.

Copenhagen, city (1988 pop. 468,744), capital of Denmark, E Denmark. It is a major commercial, fishing, and naval port, and Denmark's chief commercial and cultural center, with such products as ships, machinery, drugs, processed food, and the pottery known as Copenhagen Ware. Founded by the 11th cent., it survived attacks by the HANSEATIC LEAGUE and Sweden, became Denmark's capital in 1443, and expanded as a prosperous trade hub in the 16th and 17th cent. During WORLD WAR II the city was occupied (1940–45) by the Germans. Its landmarks include the 17th-cent. Charlottenborg Palace, the 19th-cent. palaces on Amalienborg Square, the round tower used by Tycho BRAHE as an observatory, and the statue of Hans Christian ANDERSEN'S Little Mermaid.

Copernican system, the first modern European heliocentric theory of planetary motion; it placed the sun motionless at the center of the solar system with all the planets, including the earth, revolving around it. COPERNICUS developed his theory (which replaced the PTOLEMAIC SYSTEM) in the early 16th cent. from a study of ancient astronomical records. His system explained RETROGRADE MOTION in a natural way.

Copernicus, Nicholas, 1473–1543, Polish astronomer. After studying law and medicine at the Univ. of Cracow and at Bologna, Padua, and Ferrara, he took up (1512) his duties as canon of a cathedral in Frauenberg, East Prussia. Copernicus laid the foundation for modern astronomy with his heliocentric theory of planetary motion (see COPERNICAN SYSTEM). This theory, first presented (1512 or earlier) in a short form in his unpublished manuscript "Commentariolus," was probably completed by 1530 and was published in his classic work *De revolutionibus orbium coelestium* (1543).

Copland, Aaron, 1900–90, American composer; b. Brooklyn, N.Y. The American character of his music is apparent in his use of JAZZ and folk elements, as in the short piece for chamber orchestra, *John Henry* (1940). He wrote ballets, e.g., *Billy the Kid* (1938), *Rodeo* (1942), and *Appalachian Spring* (1944), and music for films, e.g., *Of Mice and Men* (1939). His major orchestral works are *El Salón México* (1936) and the Third Symphony (1946). Other works include *12 Poems of Emily Dickinson* (1950) and a tone poem (see SYMPHONIC POEM), *Inscape* (1967).

Copley, John Singleton, 1738–1815, American painter, considered the greatest early American portraitist; b. Boston. He painted in Boston, New York City, and Philadelphia. In 1774 he settled in London, where his style gained in subtlety and polish but lost most of the vigor and individuality of his early work. His modern reputation rests on his early American portraits, which are treasured for their pictorial qualities and as powerful records of their time and place. Among his outstanding portraits are those of Paul Revere, Samuel Adams (both: Mus. Fine Arts, Boston), and Daniel Hubbard (Art. Inst., Chicago).

copper (Cu), metallic element, known to humans since the BRONZE AGE. The reddish, malleable, ductile metal is a good conductor of heat and electricity. It has low chemical reactivity. In moist air it forms a patina, a protective, greenish surface film. The chief commercial uses are in electrical apparatus and wire, roofing, utensils, coins, metalwork, plumbing, and refrigerator and air-conditioner coils. Copper alloys include BRASS and BRONZE. Copper compounds are used as insecticides, fungicides, and paint pigments, and in electroplating. CHALCOPYRITE is the principal ore. Copper is essential for normal metabolism and hemoglobin synthesis in humans. See ELEMENT (table); PERIODIC TABLE.

Copper Age: see BRONZE AGE.

copperhead, poisonous SNAKE (*Ancistrodon contortrix*) of the E U.S. The copperhead, a PIT VIPER, detects its warm-blooded prey by means of a heat-sensitive organ behind the nostril. The head is a pale copper color; the banded, brown body may reach a length of 4 ft (120 cm).

Copperheads, in the U.S. CIVIL WAR, reproachful term for Southern sympathizers in the North. Led by C.L. VALLANDIGHAM, they were especially strong in Illinois, Indiana, and Ohio. The term was often used by Republicans to label all Democratic opponents of the Lincoln administration.

Coppola, Francis Ford, 1939–, American film director, writer, and producer; b. Detroit. Among his films are *The Godfather,* in three parts (1972, 1974, 1990), a study of an Italian-American crime family; *The Conversation* (1974); *Apocalypse Now* (1979); and *Bram Stoker's Dracula* (1992).

copra: see COCONUT.

Copt, member of the native Christian minority (5%–10%) of Egypt. Most Copts belong to the Coptic Church, an autonomous sect that adheres to MONOPHYSITISM. The Coptic language, now extinct, was the Egyptian language spoken in early Christian times.

Coptic art, Christian art in the upper Nile Valley of EGYPT. Reaching its mature phase in the late 5th and 6th cent., Coptic art was influenced by Islamic art after the Arab conquest of Egypt between 640 and 642. It shows a high degree of stylization verging on abstraction. The themes represent both Roman and Christian sources with flattened-out forms and decorative motifs. Remains of wall paintings reveal Old and New Testament scenes and images of the Mother and Child. Representative examples of Coptic art are found in sculpture, ivory, textiles, and illumination.

copyright, statutory right of the creator to exclusive control of an original literary or artistic production. The copyright holder may reproduce the work or license others to do so, and receives payments (royalties) for each performance or copy. The U.S. law (rewritten in 1978) extends protection for the creator's life plus 50 years. Books, plays, musical compositions, sound recordings, photographs, works of art, and other original creations may be copyrighted. Copyright laws first appeared in the 15th cent., when PRINTING began in Europe. The earliest American statute was passed in 1790. The U.S., with most other nations, subscribes to the 1952 Universal Copyright Convention.

coral, small, sedentary marine animal of the COELENTERATE class Anthozoa, having a horny or calcareous skeleton (also called coral). Most corals form colonies by budding, but solitary corals also exist. In both, the individual animal (polyp) secretes a cup-shaped skeleton around itself; in colonial corals, the skeleton and a thin sheet of living tissue are attached to other individuals. As a colonial coral produces more polyps, the lower members die, and new layers are built up on the old skeletons, forming CORAL REEFS. Precious red and white corals are used for jewelry.

coral reef, limestone formation produced by living animals, found in shallow, tropical marine waters. In most, the predominant animals are CORALS, which secrete skeletons of calcium carbonate (limestone) that build up over thousands of years into a massive formation that supports the living corals and a great variety of other plant and animal life. Coral reefs are formed only in the tropics where the water is warmer than 72°F (22°C). They are classified as fringing reefs (platforms continuous with the shore), barrier reefs (separated from the shore by a wide, deep lagoon), or atolls (surrounding a lagoon). Coral reefs are under many environmental pressures, including damage from coastal development, water pollution, tourism, and overharvesting of fish and crustaceans. Reefs formed by other organisms are also called coral reefs.

Coral Sea, southwest arm of the Pacific Ocean, between NE Australia, New Guinea, and Vanuatu (formerly the New Hebrides). It was the scene of a U.S. victory (1942) that checked the southward expansion of the Japanese forces in WORLD WAR II.

Coral Sea Islands, external territory of Australia, comprising scattered small islands and reefs spread over c.400,000 sq mi (1,035,995 sq km) of the South Pacific Ocean, E of the GREAT BARRIER REEF, off NE Australia. The islands, uninhabited except for a meteorological station on Willis Island, became a territory in 1969.

coral snake, New World poisonous SNAKE of the same family as the COBRAS. The venom of coral snakes, like that of cobras, is especially potent, and the mortality rate among bitten humans is high. Coral snakes are marked by alternating bands of black, red, and yellow.

Corday, Charlotte, 1768–93, French assassin of Jean Paul MARAT. A sympathizer of the GIRONDISTS, she gained access to Marat, a critic of the Girondists, under false pretenses and stabbed him (1793) in his bath. She was arrested and guillotined.

Cordeliers [kôrdəlyā'], French revolutionary club. Instrumental in the fall (1793) of the GIRONDISTS, it originally included such people as Georges DANTON. Later it drifted to the extreme left under J.R. HÉBERT. It dissolved (1794) after the extremists were executed in the REIGN OF TERROR.

Cordero, Angel Tomás, Jr., 1942–, American jockey; b. Santurce, Puerto Rico. One of the most successful jockeys, he won 7,057 races over 22 years before he retired in 1992. From 1977 to 1990 his mounts won over $5 million each year, a record. Cordero also won six Triple Crown races, including three Kentucky Derbies.

Cordilleras [Span., originally = little strings], general name for the chain of mountains in W North America, from N Alaska to Nicaragua, including the ROCKY MTS., the COAST RANGES, and the SIERRA MADRE. Some geographers use the term for any extensive group of mountain systems.

Córdoba, city (1991 pop. 1,124,700), central Argentina, on the Río Primero. It is a commercial metropolis near a major dam that has transformed the surrounding area from a ranching center to a land of grain fields, orchards, and vineyards. Settled in 1573, Córdoba was an early Argentine cultural center with a university (est. 1613). Many colonial buildings, e.g., the former city hall, remain.

Córdoba or **Cordova,** city (1988 est. pop. 302,000), capital of Córdoba prov., S Spain, in Andalusia, on the Guadalquivir R. Its industries produce beverages, textiles, and metals. Of Iberian origin, it flourished under Rome. As the seat (756–1031) of an emirate comprising most of Moorish Spain, it was a center of Muslim and Jewish culture and was renowned for its wealth, crafts, and architecture, e.g., the great mosque (begun 8th cent. and now a cathedral). Córdoba passed to Seville in 1078 and to Castile in 1236.

Corelli, Arcangelo, 1653–1713, Italian composer and violinist. He was a noted virtuoso whose technique was perpetuated by his students and in his SONATAS. He also helped to establish the typical form of the CONCERTO grosso.

Corfu: see KÉRKIRA.

coriander, annual herb (*Coriandrum sativum*) of the CARROT family, cultivated for its fruits. The dried seed is used as a spice, and contains an aromatic oil used as a flavoring, as a medicine, and in liqueurs.

Corinna, fl. c.500 B.C., Greek poet. Her verse, fragments of which remain, deals with mythological themes and is written in the dialect of BOEOTIA.

Corinth or **Kórinthos,** city (1981 pop. 22,658), S Greece, in the NE Peloponnesus, on the Gulf of Corinth. Founded after the destruction of Old Corinth by an earthquake (1858) and rebuilt after another earthquake in 1928, the modern city is a port and trading center for olives, tobacco, raisins, and wine. Ancient Corinth was one of the oldest and most powerful of the Greek CITY-STATES, dating from Homeric times. Athenian assistance to its rebellious colonies was a direct cause of the PELOPONNESIAN WAR (431–404 B.C.). Destroyed by the Romans in 146 B.C., it was restored by Julius CAESAR in 46 B.C. Later it passed to the Byzantine Crusaders, the Venetians, and the Ottoman Turks before being captured (1822) by Greek insurgents. Ruins at Old Corinth include the Temple of Apollo.

Corinthian order: see ORDERS OF ARCHITECTURE.

Corinthians, two EPISTLES of the NEW TESTAMENT, 7th and 8th books in the usual order, written to the church at CORINTH by St. PAUL. First Corinthians (A.D. 55?) is one of the longest, most important epistles. It begins with an attack on factionalism and condemns various practices, e.g., litigation among Christians. The epistle closes with five famous passages: the institution of the Eucharist (11); the doctrine of the mystical body of Christ (12); a panegyric on Christian love (13); the functions of prophecy among Christians (14); and a chapter on Jesus' resurrection (15). The shorter Second Corinthians focuses on Paul's apostleship, authority, and motives, closing with a defense of his mission. See also SACRAMENT.

Coriolanus (Gnaeus Marcius Coriolanus), Roman patrician, fl. 5th cent. B.C. According to legend he was expelled from Rome because he demanded the abolition of the people's tribunate in return for distributing state grain to the starving plebeians. He led (491? B.C.) the Volscians against Rome. Only the tears of his wife and his mother caused him to spare the city. The angry Volscians killed him.

Coriolis effect [for Gaspard Coriolis], tendency for any moving body on or above the earth's surface to drift sideways from its course because of the earth's rotational direction (west to east) and speed, which is greater for a surface point near the equator than toward the poles. In the Northern Hemisphere the drift is to the right of the motion; in the Southern Hemisphere, to the left. In most human-operated vehicles, continuous course adjustments mask the Coriolis effect. The Coriolis effect must be considered, however, when plotting ocean currents and wind patterns (see CYCLONE) as well as trajectories of free-moving projectiles through air or water.

Cork, city (1986 pop. 133,271), county town of Co. Cork, S Republic of Ireland, on the Lee R. at Cork Harbour. The second largest city in the nation, it produces tractors, rubber, leather and textile goods, and whiskey. Its exports are largely agricultural. Probably founded in the 7th cent., Cork was occupied by the Danes (9th cent.) and passed to English control in 1172. It was prominent in the nationalist disturbances of 1920. University College is located there.

cork, protective, waterproof outer covering of the stems and roots of all woody plants, produced by the cork CAMBIUM. Cork cells have regularly arranged walls impregnated with a waxy material, called suberin, that is resistant to water and gas. Cork is buoyant, resilient, light, and chemically inert; it is used for bottle stoppers and insulating materials, and in many household and industrial items. The cork OAK (*Quercus suber*), which has a thick cork layer, is the source of commercial cork.

cormorant, large aquatic BIRD related to the PELICAN found chiefly in temperate and tropical regions. Cormorants are 2 to 3 ft (61 to 92 cm) long, with thick, dark plumage, webbed feet, and a large bill with the upper mandible hooked at the end. Expert swimmers, they pursue fish under water; in E Asia they are used to fish.

corn, in botany, name given to the leading cereal crop of any major region. In England, corn means wheat; in Scotland and Ireland, oats. In America, corn is the grain called maize, or Indian corn (*Zea mays*), a GRASS that was domesticated and cultivated long before Europeans reached the New World. Native Americans raised many varieties (e.g., sweet corn, popcorn, colored corn, and corn for cornmeal). Corn is eaten fresh or ground for meal. It is mainly used as animal fodder. The corn plant consists of the tassel (male flowers) at the top of the plant; the kernels (female flowers) on the cob, enclosed by a leafy husk, beyond which extends the silk (the

threadlike stigmas and styles that catch the pollen); and the supporting pithy, noded stalk with its prop roots.

Corneille, Pierre [kôrnā'yə], 1606–84, French dramatist, a master of classical TRAGEDY. His masterpiece, *Le Cid* (1637), based on a Spanish play (see CID), took Paris by storm. Among the finest of his other tragedies are *Horace* (1640), *Cinna* (1640), and *Polyeucte* (1643). The comedy *The Liar* (1643) also had great success. A master of the grand style, Corneille exalted the will, celebrating the subordination of human passion to duty.

cornel: see DOGWOOD.

Cornell, Ezra, 1807–74, American financier, founder of Cornell Univ.; b. Westchester Landing, N.Y. He devised a method for stringing telegraph wires on poles and became founder, director, and largest stockholder of Western Union Telegraph Co. (1855). His interest in agricultural education led him to secure, with A.D. WHITE, legislation founding Cornell Univ. (1865). Its charter embraced many of his ideas, and he was responsible for the financial success of its federal land grant.

Cornell, Joseph, 1903–73, American artist; b. Nyack, N.Y. He is best known for his shadow boxes made of found objects, maps, photographs, engravings, and other materials. Influenced by SURREALISM, these constructions are personally symbolic and evocative.

cornet: see WIND INSTRUMENT.

cornflower, common herb (*Centaurea cyanus*) of the COMPOSITE family, a garden flower in the U.S. The long-stemmed, blue flower heads have radiating vase-shaped florets that yield a juice used as a dye when mixed with alum. Other names for cornflower include bluebottle, bluebonnet, ragged robin, and bachelor's button.

Cornish, dead language belonging to the Brythonic group of the Celtic subfamily of the Indo-European family of languages. See LANGUAGE (table).

corn laws, regulations dating from 1361 restricting the export and import of grain, notably in England. The corn law of 1815 was designed to maintain high prices and prevent an agricultural depression after the Napoleonic Wars. Consumer resentment led to the ANTI-CORN-LAW LEAGUE'S campaign, and to their repeal by Robert PEEL in 1846.

Cornplanter, c.1740–1836, half-white chief of the Senecas who aided the British in the AMERICAN REVOLUTION. Friendly to whites, he signed (1784) the Treaty of Fort Stanwix and was given a grant of land on the Allegheny R.

Cornwallis, Charles Cornwallis, 1st Marquess, 1735–1805, English general. He led British forces in the AMERICAN REVOLUTION, and his defeat in the disastrous YORKTOWN CAMPAIGN ended the fighting. Later he was governor general of India (1786–94, 1805) and viceroy of Ireland (1798–1801).

Coronado, Francisco Vásquez de [kōrōnä'thō], c.1510–54, Spanish explorer. In search of the Seven Cities of Cibola, he was the first European to explore ARIZONA and NEW MEXICO. Though he found no gold, he acquainted the Spanish with the PUEBLO peoples and opened the Southwest to colonization.

coronary artery disease, condition that results when the arteries that supply the muscles of the heart (coronary arteries) are narrowed or occluded, usually by fibrous and fatty tissue deposits. When insufficient oxygen reaches the heart (especially during time of increased need, as during exercise or stress) the radiating chest pain of **angina pectoris** results. When total blockage of an artery occurs, usually due to clots or pieces of plaque blocking an already narrow artery, portions of heart muscle can die (a condition known as a myocardial infarction, or heart attack) and disrupt the electrical impulses that make the heart beat. Predisposing factors include a family history of heart disease, HYPERTENSION, high total and low-density lipoprotein (LDL) CHOLESTEROL levels, and cigarette smoking. Treatment ranges from preventive measures (lowering fat intake and giving up cigarettes) and medication to surgical procedures (coronary artery bypass and BALLOON ANGIOPLASTY).

Corot, Jean-Baptiste Camille [kôrō'], 1796–1875, French landscape painter. One of the most influential 19th-cent. painters, he celebrated the countryside without romanticizing farm labor or peasants. His Roman works have simplicity of form and clarity of lighting, as in the *Coliseum* and *Forum* (both: Louvre). Using sketches made directly from nature, he painted his later landscapes in shades of gray and green. His delicate lighting is seen in *Femme à la perle* (Louvre) and *Interrupted Reading* (Art Inst., Chicago).

Jean-Baptiste Corot landscape Paysage avec personnages et cavaliere

Corpus Christi, city (1990 pop. 257,453), seat of Nueces co., S Tex.; inc. 1852. It is a petroleum and natural-gas center, with heavy industries, e.g., refineries, smelting plants, and chemical works. Shrimp and fish processing is important, as is tourism. The first settlers arrived in the 1760s; a trading post (est. 1839) boomed in the MEXICAN WAR. The fast-growing area has a busy port and military facilities.

Corpus Juris Civilis: see ROMAN LAW.

Correggio [kərĕj'ō], c.1494–1534, Italian BAROQUE painter; b. Antonio Allegri, called Correggio after his birthplace. His early works, e.g., the *Marriage of St. Catherine* (National Gall., Wash., D.C.), were greatly influenced by the styles of MANTEGNA and LEONARDO DA VINCI. Among his many mythological scenes are the sensual *Io* (Vienna) and *Antiope* (Louvre). His most famous project, *Assumption of the Virgin* (Parma cathedral), used daring foreshortening. His illusionistic ceiling decorations, with their sense of grace and tenderness and soft play of light and color, were widely imitated in the 17th cent.

Corregidor, historic fortified island (c.2 sq mi/5 sq km) at the entrance to Manila Bay, just off BATAAN, the Philippines. It was a fortress from Spanish times; its defenses were greatly elaborated by the U.S. after the SPANISH-AMERICAN WAR (1898). During WORLD WAR II the Japanese bombarded Corregidor for five months, finally forcing the surrender (May 1942) of 10,000 U.S. and Filipino troops. The island was retaken by U.S. forces in 1945.

Corsica, island (1990 pop. 249,700), 3,367 sq mi (8,721 sq km), a department of metropolitan France, in the Mediterranean Sea SE of France. The capital is Ajaccio. Much of the island is wild, mountainous, and covered with *maquis*, whose flowers have earned Corsica the name "the scented isle." Fruit, cork, cigarettes, wine, and cheese are exported, and tourism is economically important. Native Corsican speech is a dialect of Italian. The island was granted by the Franks to the papacy in the late 8th cent., and Pope GREGORY VII ceded (1077) it to Pisa; it was taken over by Genoa in the 15th cent. Genoese rule was harsh and unpopular, and following a rebellion led (1755) by Pasquale PAOLI the island was ceded (1768) to France. With British support Paoli expelled the French and from 1794 to its recapture in 1796 it was controlled by the British. French possession was confirmed by the Congress of VIENNA in 1815. Blood feuds between clans and banditry persisted into modern times. The island has been the site of separatist movements, most recently in the 1970s and 80s.

Cortázar, Julio [kôrtä'zär], 1914–84, Argentine writer; b. Belgium. An exponent of SURREALISM who often depicted life as a maze, he is known for the novels *The Winners* (1960) and *Sixty-Two: A Model Kit* (1968), and short-story collections, e.g. *A Change of Light and Other Stories* (tr. 1980).

Cortés, Hernán, or **Hernando Cortez** [kôrtĕz'], 1485–1547, Spanish CONQUISTADOR, conqueror of MEXICO. Under a commission of

the Cuban governor, Diego de VELÁZQUEZ, Cortés sailed from Cuba in 1519 to conquer the AZTEC empire of MONTEZUMA. He founded the city of Vera Cruz, burned his ships to prevent his forces from turning back, and enlisted the help of the defeated Tlaxcalans. Believing the Spanish to be descendants of the god QUETZALCOATL, Montezuma received them. Cortés took him hostage and ruled through him. Velázquez tried to recall Cortés, who defeated a force sent to retrieve him. When he returned to the capital, Tenochtitlán, he found the Aztecs in rebellion. In the famous battle known as *noche triste* [sad night], he retreated from the city with heavy losses. He returned the next year; after a three-month siege, the city fell, and with it the empire. As captain, Cortés extended his conquest to most of Mexico and N Central America. Though CHARLES V of Spain made Cortés a marqués, he refused to make him governor of Mexico. Cortés returned to Spain in 1540, where, frustrated and neglected by the court, he died.

Cortés, Sea of: see CALIFORNIA, GULF OF.

Cortes, representative assembly of SPAIN. From the 12th to the 19th cent. each region, e.g., LEÓN and CASTILE, had its own cortes. The first national Cortes met (1810) during the PENINSULAR WAR against Napoleonic rule and voted (1812) a liberal constitution revoked (1814) by the king. The Cortes was Spain's parliament (1931–39) after the fall of the monarchy but was stripped of power under Francisco FRANCO. After his death (1975) it emerged as an important element in Spanish democracy.

corticosteroid drug, any synthetic or naturally derived substance with the general chemical structure of a STEROID, used therapeutically to mimic or augment the effects of the hormones produced naturally in the cortex of the ADRENAL GLAND. Corticosteroids suppress the immune response, decrease inflammation, and stimulate the bone marrow. They are used to treat such conditions as ARTHRITIS, ASTHMA, systemic lupus erythematosus (see AUTOIMMUNE DISEASE), and HODGKIN'S DISEASE and some other forms of cancer. They are also useful in relieving the itching and inflammation of eczema, psoriasis, and insect bites. See also CORTISONE; HYDROCORTISONE.

cortisone, steroid HORMONE whose main physiological effect is on carbohydrate metabolism. It is synthesized from cholesterol in the outer layer, or cortex, of the ADRENAL GLAND and is necessary for life. Failure of the adrenal gland to synthesize cortisone (ADDISON'S DISEASE) is fatal unless cortisone is administered. The anti-inflammatory effect of the hormone makes it useful in treating asthma and other allergic reactions, arthritis, and various skin diseases.

Cortona, Pietro Berrettini da [kôrtô'nä], 1596–1669, Italian BAROQUE painter and architect. His FRESCOES and ceilings, e.g., *Allegories of the Virtues and Planets* (Pitti Palace, Florence), were influential examples of Illusionism.

corundum, aluminum oxide mineral (Al_2O_3) occurring in both gem and common varieties. The transparent gems, chief of which are RUBY and SAPPHIRE, are colorless, pink, red, blue (Oriental AQUAMARINE), green (Oriental EMERALD), yellow, and violet. Common varieties, used as ABRASIVES (e.g., emery), are blue-gray to brown. Corundum is found in North Carolina, Georgia, Montana, Myanmar, Sri Lanka, India, Thailand, South Africa, and Tanzania.

Corvinus, Matthias: see MATTHIAS CORVINUS.

Cosby, Bill, 1937–, African-American comedian and actor; b. Philadelphia. He was the first African-American actor to star in a dramatic series on television (*I Spy,* 1965–68). He has also starred in several situation comedies, including the popular *Cosby Show* (1984–92). He has won numerous Emmy awards and written several books, including *Fatherhood* (1986).

Cosgrave, William Thomas, 1880–1965, Irish statesman. A member of the SINN FÉIN, he fought in the Easter Rebellion (1916) and won election (1918) to the British Parliament. He served as president of Ireland from 1922 to 1932. **Liam Cosgrave,** 1920–, his son, was also active in Irish politics. He entered (1943) the Irish parliament as a Fine Gael member and served (1948–57) in various ministerial posts. Leader of the party from 1965 to 1977, he was prime minister from 1973 to 1977.

Cosimo de' Medici: see under MEDICI, family.

cosmetic surgery, PLASTIC SURGERY for cosmetic purposes, such as the improvement of the appearance of the face by removing wrinkles or reshaping the nose.

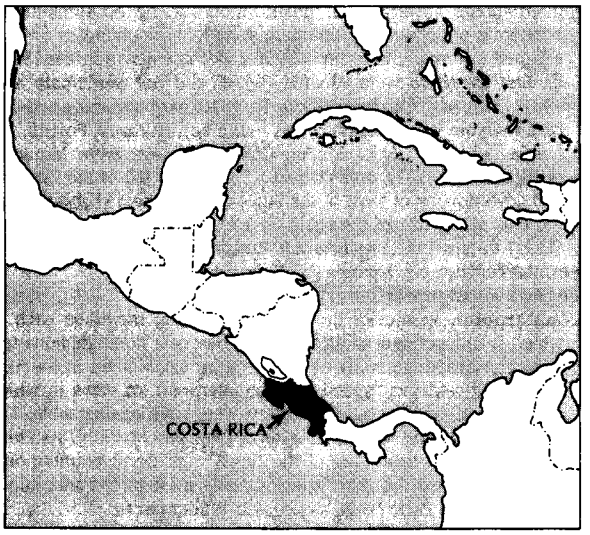
cosmic rays, high-energy particles bombarding the earth from outer space. The extraterrestrial origin of cosmic rays was determined (c.1911) by Victor Hess; they were so named by Robert MILLIKAN in 1925. Primary cosmic rays consist mainly of PROTONS; ALPHA PARTICLES; and lesser amounts of nuclei of carbon, nitrogen, oxygen, and heavier atoms. These nuclei cause showers of secondary cosmic rays by colliding with other nuclei in the earth's atmosphere. Some cosmic rays have energies a billion times greater than those that can be achieved in particle accelerators; cosmic rays of lower energy, however, predominate. The origin of cosmic rays is still unknown, as are the processes by which they are accelerated.

cosmology, science that aims at a comprehensive theory of the creation, evolution, and present structure of the entire universe. The PTOLEMAIC SYSTEM and the COPERNICAN SYSTEM are theories that describe the position of the earth in the universe. William HERSCHEL showed that the MILKY WAY is composed of a vast number of STARS separated by enormous distances. By studying the distribution of STAR CLUSTERS, Harlow SHAPLEY gave the first reliable estimate of the size of our galaxy (c.100,000 LIGHT-YEARS) and of the position of the sun within it (c.30,000 light-years from the center). By 1924 astronomers had recognized that some of the NEBULAE are not within our galaxy, but are separate GALAXIES at great distances from the Milky Way. After studying the RED SHIFTS in the spectral lines of the distant galaxies, Edwin HUBBLE and Milton Humason concluded that the universe is expanding (see HUBBLE'S LAW), with the galaxies flying away from one another at great speeds. The big bang theory states that all of the matter and energy in the universe was concentrated in a very small volume that exploded between 10 and 20 billion years ago, and that the resulting expansion continues today. The strongest evidence for the big bang theory is the feeble radio background radiation, discovered in the 1930s, that is received from every part of the sky. This radiation has a BLACKBODY temperature of 2.7° above absolute zero and is interpreted as the electromagnetic remnants of the primordial fireball, stretched to long wavelengths by the expansion of the universe. Data from NASA's Cosmic Microwave Background Explorer (see OBSERVATORY, ORBITING) revealed small temperature fluctuations in the radiation that are thought to be related to the "seeds" of stars and galaxies. How the homogeneous early universe implied by the uniform background radiation evolved into the present universe of clusters and superclusters of galaxies separated by enormous voids remains unanswered, as does the question of whether the universe's expansion will continue or eventually halt and reverse, with the universe collapsing in the so-called "big crunch." According to another hypothesis, the steady-state theory, the universe expands, but new matter is continuously created at all points in space left by the receding galaxies; this theory now has few adherents.

Cossa, Baldassare, c.1370–1419, Neapolitan churchman, antipope (1410–15) as John XXIII. A cardinal, he deserted Pope GREGORY XII and supported the Council of Pisa, which was intended to end the schism (see SCHISM, GREAT) between Rome and Avignon. When the antipope Alexander V died, Cossa was elected (1410). He sought the aid of SIGISMUND and helped to elect him Holy Roman emperor, then allied himself with Louis II of Anjou against Lancelot of Naples. Pressured by Sigismund, he convened the council of Constance (1414–18) and promised to abdicate if the rival popes would do so. Then, secretly, he fled, hoping to keep his position; but he was forced to return and was deposed (1415).

Cossacks, peasant-soldiers in the Russian empire who held certain privileges in return for military service. They were descended from Russians and Poles, including many runaway serfs, who settled along the Dnieper and Don rivers in the 15th and 16th cent. For taking part in 17th- and 18th-cent. peasant revolts they lost much of their early autonomy and were integrated into the Russian military. Most Cossacks fought against the Red Army in the 1918–20 civil war. Their communities were collectivized (1928–33), but many of their traditions survive.

Costa Rica, officially Republic of Costa Rica, republic (1992 est. pop. 3,187,000), 19,575 sq mi (50,700 sq km), Central America; bordered by Nicaragua (N), the Caribbean Sea (E), Panama (S), and the Pacific Ocean (W). The capital is SAN JOSÉ. The coastal



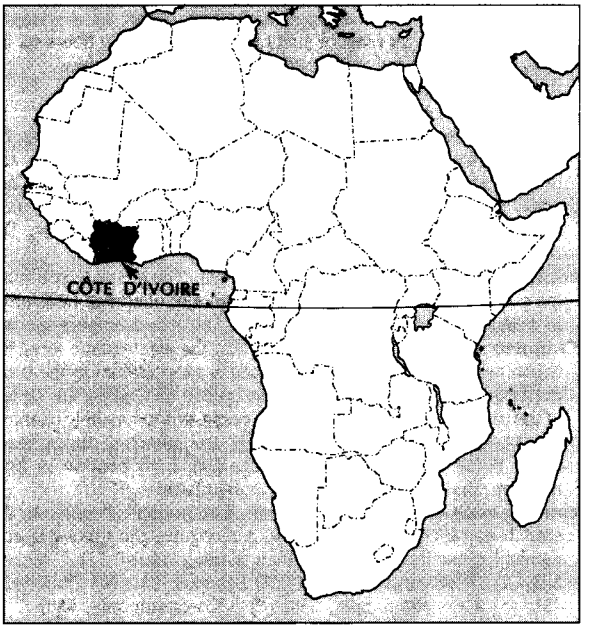
areas are hot, humid, heavily forested, and sparsely populated. A massive chain of volcanic mountains, rising to over 12,000 ft (3,658 m), traverses the country from NW to SE; nestled within it lies the *meseta central*, a broad plateau with a springlike climate, where most Costa Ricans live. Costa Rica is a largely agricultural nation, exporting coffee, bananas, sugar, and beef. Industry is being developed and manufactured goods such as textiles are increasingly exported. The people are mainly of Spanish descent and are Roman Catholic. The official language is Spanish. Costa Rica is among the most politically stable Latin American countries, with a long democratic tradition, a literacy rate over 90%, and no army as such.

History. Conquest of the area by Spain began in 1563, with the founding of Cartago. The early colonists were mainly small landowners. Gaining independence in 1821, Costa Rica was successively part of the Mexican Empire and of the Central American Federation (which also included GUATEMALA, HONDURAS, NICARAGUA, and EL SALVADOR), before becoming a sovereign republic in 1838. Coffee growing was initiated on the plateau in the early 1800s, and banana cultivation was introduced on the coast (by U.S. interests) in 1874. Costa Rica's history of orderly, democratic government began in 1889, and has been interrupted only by brief periods of junta rule, in 1917–19 and in 1948–49, after a disputed election sparked a six-week civil war. Economically, the nation has had balance-of-payments problems, e.g., in the early 1980s the cost of importing manufactured goods and oil far exceeded income received for agricultural exports. Oscar ARIAS SANCHEZ, president from 1986 to 1990, worked to preserve his nation's neutrality and to bring peace to Central America. In 1994 José María Figueres Olsen was elected president.

cost of living, amount of money needed to buy the goods and services necessary to maintain a specified STANDARD OF LIVING. The figure is based on the cost of such items as food, clothing, rent, fuel, recreation, transportation, and medical services. High inflation in the 1970s led many employers and unions to use cost-of-living increases, as measured by the Consumer Price Index (see INDEX NUMBER), as a basis for wage rates and subsequent adjustments. SOCIAL SECURITY payments and some PENSION plans are also pegged to changes in the Consumer Price Index.

Côte d'Ivoire or **Ivory Coast,** officially Republic of Côte d'Ivoire, republic (1992 est. pop. 13,497,000), 124,503 sq mi (322,463 sq km), W Africa, bordered by the Gulf of Guinea (S), Liberia and Guinea (W), Mali and Burkina Faso (N), and Ghana (E). The official capital is YAMOUSSOUKRO; the largest city, former capital, and chief port is ABIDJAN. The country consists of a coastal lowland in the south, a densely forested plateau in the interior, and high savannas in the north. Rainfall is heavy, especially along the coast. One of the most prosperous W African countries, Côte d'Ivoire enjoyed a high economic growth rate from independence until the 1980s, when falling commodities prices devalued its exports. Predominantly agricultural, the country is one of the world's largest coffee and cocoa producers. Timber from mahogany and other forests is a valuable export; rubber is also harvested. Industrialization has been steady since the 1960s; flour, palm oil, petroleum, textiles, and cigarettes are produced. The major ethnic groups are the Beti, Anyi, Malinke, Dan, and Senufo. There are also immigrants from Burkina Faso, Mali, and Guinea and people of French and Arab descent. Traditional religious beliefs predominate; about 20% of the people are Muslim and 20% Christian. French is the official language.

History. The precolonial Côte d'Ivoire was dominated by native kingdoms. Beginning in the 16th cent., the Portuguese and other Europeans engaged in a flourishing trade in slaves and ivory along the coast. The French began systematic conquest in 1870, proclaiming a protectorate in 1893. However, strong tribal resistance delayed occupation of the interior, and although Côte d'Ivoire was nominally incorporated into FRENCH WEST AFRICA in 1904, effective French control was not established until after World War I. In 1946 a mounting desire for independence led Félix HOUPHOUËT-BOIGNY to form an all-African political party. Côte d'Ivoire voted for autonomy within the FRENCH COMMUNITY in 1958 but in 1960 withdrew and declared itself independent. A one-party state until 1990, Côte d'Ivoire was headed after independence by Houphouët-Boigny. He died in office in 1993 and was succeeded as president by Henri Konan-Bédié, the national assembly speaker.



Cotonou, city (1989 est. pop. 350,000), S Benin, a seaport on the Gulf of Guinea. Although PORTONOVO is the capital, Cotonou, Benin's largest city, is the unofficial seat of government and commercial center. Its air, road, and rail connections also make it the country's communications hub. The seaport has been expanded to handle increased transit trade for Niger and Nigeria. Offshore oil-drilling is carried on nearby. Cotonou was a small state controlled by the Dahomey kingdom (see BENIN, republic) before coming under French rule (1883–1960).

Cotton, John, 1584–1652, Puritan clergyman in England and Massachusetts; b. England. When vicar of St. Botolph's Church, Boston, Lincolnshire, he was summoned (1632) to court for his Puritanism. Fleeing (1633) to Massachusetts Bay, he became a leading figure. He was chiefly responsible for expelling Anne HUTCHINSON and Roger WILLIAMS and has been viewed as an upholder of theocracy.

cotton, name for a shrubby plant (genus *Gossypium*) of the MALLOW

family, for the fibers surrounding the seeds, and for the cloth woven from the spun fibers. Each of the seeds, which are contained in capsules, or bolls, is surrounded by white or cream-colored downy fibers that flatten and twist naturally as they dry. Cotton is tropical in origin but is now cultivated worldwide. It has been spun, woven, and dyed since prehistoric times. Most commercial cotton in the U.S. is from *G. hirsutum,* but some is obtained from sea-island and American-Egyptian *G. barbadense*. The chief cultivated species in Asia are *G. arboreum* and *G. herbaceum.* Cotton is planted annually by seed. Diseases and insect pests are numerous, e.g., the boll weevil, responsible for enormous losses, particularly of the highly susceptible, silky-fibered sea-island cotton, which was the leading type of cotton before the advent of this pest. Cotton is separated from its seeds by a COTTON GIN. Manufacture of cotton into cloth, textiles, and yard goods involves carding, combing, and SPINNING. Cotton is a source of CELLULOSE products, fertilizer, fuel, plastic reinforcing, automobile tire cord, pressed paper, cardboard, and cottonseed oil (used, e.g., in cooking, cosmetics, soaps, candles, detergents, paints, oilcloth, and artificial leather), which is pressed from the seeds. Used in Egypt, China, and India in ancient times, cotton has long played a significant role in world industry. Britain's need for imported cotton dictated much of its sea-domination policy as an imperial nation, and in the U.S., cotton was a principal economic cause of the CIVIL WAR.

cotton gin, machine for separating COTTON fibers from the seeds. American inventor Eli WHITNEY invented (1793) the saw gin, which was especially suited to short- and medium-staple cotton. In a modern gin, which still uses Whitney's basic design, seeds are removed as the fibers are pulled through a grid by a series of circular saws; an air blast or suction carries the clean fibers off the saws to a condenser and, finally, to the baling apparatus.

cottonmouth: see WATER MOCCASIN.

cottonwood: see WILLOW.

Coulomb, Charles Augustin de, 1736–1806, French physicist. He is known for his work on electricity, magnetism, and friction, and he invented a magnetoscope, a magnetometer, and a torsion balance that he employed in determining torsional elasticity (see STRENGTH OF MATERIALS) and in establishing COULOMB'S LAW. The unit of electric charge, the coulomb, is named for him.

coulomb (coul or C), unit of electric CHARGE. The absolute coulomb, the current U.S. legal standard, is the amount of charge transferred in 1 second by a current of 1 AMPERE; i.e., it is 1 ampere-second.

Coulomb's law, physical law stating that the electrostatic force between two point charges in free space is proportional to the product of the amount of CHARGE on the bodies divided by the square of the distance between them. If the bodies are oppositely charged, one positive and one negative, they are attracted toward each other; if the bodies are similarly charged, both positive or both negative, the force between them is repulsive.

council, ecumenical, council of church authorities accepted by the church as official. Roman Catholics recognize the following ecumenical councils (listed with their starting dates): (1) 1 Nicaea, 325, (2) 1 Constantinople, 381; (3) Ephesus, 431; (4) Chalcedon, 451; (5) 2 Constantinople, 553; (6) 3 Constantinople, 680; (7) 2 Nicaea, 787; (8) 4 Constantinople, 869; (9) 1 Lateran, 1123; (10) 2 Lateran, 1139; (11) 3 Lateran, 1179; (12) 4 Lateran, 1215; (13) 1 Lyons, 1245; (14) 2 Lyons, 1274; (15) Vienne, 1311; (16) Constance, 1414; (17) Basel and Ferrara-Florence, 1431, 1438; (18) 5 Lateran, 1512; (19) Trent, 1545; (20) 1 Vatican, 1869; (21) 2 Vatican, 1962. The Orthodox Church recognizes only the first seven councils and the continuation of 3 Constantinople (the Trullan Synod). The purpose of the first eight councils was to determine whether specific theological concepts were orthodox or heretical. The remaining councils, all held in Western Europe, have dealt chiefly with church discipline. Two of them, 2 Lyons and Ferrara-Florence, attempted to reconcile the Eastern and Western churches. In the Great SCHISM the conciliar theory developed, which held that an ecumenical council was superior to the pope; this theory was in its heyday at the Council of Constance. The 21st ecumenical council, called by Pope JOHN XXIII, advocated the reunion of all Christians with the Church of Rome (see VATICAN COUNCILS).

Council for Mutual Economic Assistance (COMECON), former international governmental organization for the coordination of economic policy among Communist nations. Founded in 1949, it adopted a formal charter in 1959 and became active in the 1960s. Its first members were Albania (which did not participate after 1961), Bulgaria, Czechoslovakia, East Germany (which ceased to be a member when Germany was reunified), Hungary, Poland, Romania, and the USSR. Joining COMECON later were Mongolia (1962), Cuba (1972), and Vietnam (1978). The fall of the Communist governments of most of the European members (1989–90) and the end of the use of the ruble as a basis for inter-member trade (1991) doomed the organization, and in 1991 it was dissolved.

counterfeiting: see FORGERY.

counterintelligence: see INTELLIGENCE GATHERING.

counterpoint, in music, the art of combining melodies each of which is independent though forming part of a homogeneous texture. The academic study of counterpoint established in the 18th cent. examined five "species" of counterpoint, or ways in which two lines of music could be interwoven: note against note; two notes against one; four notes against one; syncopation (a shifting of metrical accent in one of the lines); and florid counterpoint, which combined the other species. Early masters of contrapuntal music include PALESTRINA, LASSO, and William BYRD.

countertenor: see VOICE.

country and western music, American popular form originating in the Southeast (country) and in the West and Southwest (western), coalescing in the 1920s when recorded material became widely available. It is directly descended from the FOLK MUSIC of the English, Scottish, and Irish settlers of the SE U.S. Country music tends toward simpler forms, western toward a band style verging on swing. The music, depicting the life experience of poor rural (and now also urban) whites, has gained a national audience, largely through the "Grand Old Opry" radio broadcasts from Nashville. Although African-American GOSPEL MUSIC and blues have been influential, performers and audiences are almost all white. In the 1960s and 70s country and western influenced ROCK MUSIC's development, and since then a country and western revival has brought the form national popularity. Noted performers include Hank WILLIAMS, Patsy Cline, Merle Haggard, Johnny CASH, Willie Nelson, Loretta LYNN, Dolly Parton, Ricky Scaggs, and Garth Brooks.

Couperin, François [kōōpərăN'], 1668–1733, French harpsichordist and composer. His graceful, delicate music represents the apex of French rococo, the reaction against BAROQUE style. He published four books of harpsichord SUITES (1713–30) and also composed much ORGAN music.

Gustave Courbet's Stonebreakers

Courbet, Gustave [kōōrbā'], 1819–77, French painter. Always at odds with aesthetic and political authority, he audaciously chose subjects from ordinary life, as in *Wounded Man* (Louvre), which caused his work to be rejected and considered offensive. He defended his realistic works, e.g., *Funeral at Ornans* and *Stonebreakers* (both: Louvre), and went on to paint the self-congratulary *Painter's Studio* (Louvre). Although his aesthetic theories were not destined to prevail, his influence became enormous. Today his work is admired for its frankness, vigor, and solid construction.

Courrèges, André: see FASHION (table).

courtly love, aristocratic philosophy of love that flourished in France and England during the Middle Ages, probably derived from OVID's works, various Eastern ideas, and TROUBADOUR songs. The code required a man to fall in love with a married woman of equal or higher rank, and, before consummating this love, to commit daring exploits proving his devotion; the lovers then pledged themselves to secrecy and fidelity. In reality, the code was little more than rules governing adultery. More important as a literary convention, it appears in the works of CHRÉTIEN DE TROYES and CHAUCER. See also CHIVALRY.

court system in the United States, the judicial branch of government, which applies and interprets the law. It is divided into separate federal and state systems, a division resulting from the fact that each of the 13 original colonies already had its own court system (based on the English model) when the U.S. Constitution mandated (1789) creation of a federal judiciary. The federal court system consists of three levels. At the lowest level there are district courts, which have original jurisdiction in most cases involving federal law. There are 92 districts, with at least one in each state, the District of Columbia, and Puerto Rico. The court of appeals system (est. 1891), on the second level, consists of 11 judicial circuits, which hear appeals from district courts and also deal with cases involving federal regulatory agencies. The U.S. SUPREME COURT is the ultimate arbiter of the law of the land. There are also special federal courts, such as the court of claims and court of tax appeals. While individual state court systems vary, they are also built on a hierarchical principle. At the lowest level are the inferior courts, which may include magistrate, municipal, traffic, and other courts that deal with petty civil and criminal cases. Superior courts, in which jury trials are common, handle more serious cases. The highest state court, variously called the appellate court, court of appeals, or supreme court, hears appeals from the lower courts. There are also special state courts, e.g., juvenile, divorce, probate, and small claims courts.

Cousteau, Jacques Yves, 1910–, French oceanographer and inventor. In 1943, with Emil Gagnan, he invented the self-contained underwater breathing apparatus (scuba). He founded (1945) the French navy's undersea research group, and since 1951 he has gone on annual oceanographic expeditions and produced many books and documentary films.

Cousy, Bob (Robert Joseph Cousy), 1928–, American basketball player; b. N.Y.C. In 13 seasons (1950–63) with the Boston Celtics of the National Basketball Association, he was the game's finest playmaker and a leading scorer (18.4-point average). He coached college and professional basketball from 1963 to 1973.

couvade, custom observed in some societies in which a father acts out the labor and childbirth that are actually being experienced by his wife. This may include retiring to bed, observing TABOOS, and/or appearing to feel pain. Couvade has been known since antiquity and practiced, in such places as Europe and South America, into the 20th cent. It may have begun as a way of asserting paternity or as an attempt, through magic, to draw the attention of evil spirits away from the mother and child.

covenant, in the Bible and theology, a voluntary agreement of God with humans; in law, a contract under seal or an agreement by deed; in Scottish history, a pact by opponents of episcopacy (see COVENANTERS). The Old Testament tells of several covenants between God and Israel, e.g., that culminating in the delivery of the Law of Moses. In English common law, covenants follow the same rules as other contracts; variously classified, all contain an explicit promise by the covenanter to the covenantee.

Covenanters, in Scottish history, groups of Presbyterians bound by oath to sustain one another in the defense of their religion. The first formal Covenant was signed in 1557, by Protestants trying to seize control of Scotland, and was later renewed at times of crisis, especially in the 17th cent. The Covenanters particularly opposed the imposition of the episcopate in Scotland and the use of the English Book of Common Prayer. The troubles ended with the GLORIOUS REVOLUTION (1688), which restored the Presbyterian Church in Scotland.

Covent Garden, area in London containing the city's principal produce market and the Royal Opera. The market was established (1671) on the site of a convent garden. In 1974 it was removed to Nine Elms, on the River Thames. The Royal Opera was erected on the site of the Theatre Royal built (1732) by John Rich; it was rebuilt after fires in 1808 and 1856. The Royal Ballet began performances there in 1946.

Coventry, city (1991 pop. 294,387), West Midlands, central England. It is an industrial center noted for automobile and airplane production. The city grew around a Benedictine abbey founded by Lady GODIVA and her husband in 1043. During WORLD WAR II a massive air raid (1940) destroyed the city's center and its 14th-cent. cathedral. A new cathedral was built alongside the ruins in 1962.

cow: see CATTLE; DAIRYING.

Coward, Sir Noel, 1899–1973, English playwright, actor, composer, director, and producer, known for his wit and sophistication. His works include comedies, e.g., *Private Lives* (1930) and *Blithe Spirit* (1941); musicals, e.g., *Bitter Sweet* (1929); films, e.g., *In Which We Serve* (1942) and *Brief Encounter* (1946); and many popular songs.

cowbird, New World BIRD of the BLACKBIRD and ORIOLE family. Most lay eggs in the nests of smaller birds, especially vireos, SPARROWS, and flycatchers; the host bird usually incubates the eggs and feeds the cowbird hatchlings. Cowbirds feed chiefly on insects, following cattle to capture the insects they stir up in grazing.

Cowell, Henry Dixon, 1897–1965, American composer and pianist; b. Menlo Park, Calif. Largely self-educated, he experimented with new musical resources, introducing the tone cluster on the piano, played with fist or elbow, and the technique of playing directly on the strings. His works include five *Hymns and Fuguing Tunes* (1941–45).

Cowley, Abraham, 1618–67, English METAPHYSICAL POET. In the scriptural epic *Davideis* (1656) he developed the use of the couplet as a vehicle for narrative verse. Among his principal works are the DONNE-influenced love cycle *The Mistress* (1647) and *Poems* (1656), including Pindaric odes.

cowpea, black-eyed pea, or **black-eyed bean,** annual leguminous plant (*Vigna sinensis*) of the PULSE family, native to the Old World but now cultivated in the S U.S., where it is used in cooking and, especially, as a catch crop and major forage plant. It is also grown commercially in India and China.

Cowper, William [kōō'pər, kou'–], 1731–1800, English poet. He led a quiet country life, interrupted by bouts of insanity. The poems contributed to John Newton's *Olney Hymns* (1779) often give way to religious despair and self-distrust. Cowper wrote on homely subjects, producing in 1785 his famous long poem *The Task,* which foreshadowed 19th-cent. ROMANTICISM in its descriptions of country life. Playfulness finds its way into many poems, including "The Diverting History of John Gilpin." His letters are considered among the most brilliant in English literature.

Cowper, William Cowper, 1st Earl [kōō'pər], 1664?–1723, English jurist. He was a leading negotiator in the union (1707) of England and Scotland. As first lord chancellor of Great Britain (1707–10, 1714–18) he contributed much to the modern system of EQUITY.

Coxey, Jacob Sechler, 1854–1951, American social reformer; b. Selinsgrove, Pa. After the panic of 1893 he gained fame by leading **Coxey's Army,** a band of jobless men who marched across the country from Ohio to Washington, D.C., to demonstrate for measures to relieve unemployment. On its arrival (May 1894), the "army" numbered only 500 instead of the threatened 100,000, and it disbanded anticlimactically when its leaders were arrested for walking on the Capitol lawn. Coxey later became an advocate of public works financed by fiat money as a remedy for unemployment and ran for president as the Farmer-Labor party candidate in 1932 and 1936.

coyote or **prairie wolf,** small, swift WOLF (*Canis latrans*) found in deserts, prairies, open woodlands, and brush country. Resembling a medium-sized dog with a pointed face, thick fur, and a black-tipped, bushy tail, the coyote is common in the central and W U.S. and ranges from Alaska to Central America and the Great Lakes; it is occasionally seen in New England. Considered dangerous to livestock, coyotes are killed each year by the thousands.

Cozens, Alexander, c.1717–1786, English draftsman; b. Russia. Probably the first English master to work entirely with landscape, he explained his system of making accidental "blot" drawings to suggest subjects in *A New Method of Assisting the Invention in*

Drawing Original Compositions of Landscape (c.1785). His son, **John Robert Cozens,** 1752–97, is known for poetic watercolor landscapes.

Cozzens, James Gould, 1903–78, American novelist; b. Chicago. His meticulously crafted novels, often concerning idealism and compromise, include *Guard of Honor* (1948; Pulitzer), and *By Love Possessed* (1957).

CPU: see COMPUTER.

Cr, chemical symbol of the element CHROMIUM.

crab, chiefly marine animal of the CRUSTACEAN order Decapoda, with an enlarged cephalothorax covered by a broad, flat shell (carapace). Extending from the cephalothorax are five pairs of legs, the first pair bearing claws (pincers). Crabs have a pair of eyes on short, movable stalks and many mouthparts. They tend to move sideways but can move in all directions. The blue crab of the Atlantic coast of the U.S. is a source of food, marketed after molting as the soft-shell crab. The giant Japanese spider crab, with a 1-ft-wide (30-cm) carapace and legs about 4 ft (122 cm) long, is the largest arthropod.

Crab Nebula, diffuse gaseous NEBULA surrounding an optical PULSAR in the constellation Taurus. It is the remnant of a SUPERNOVA explosion in 1054 and is a strong emitter of radio waves and X rays.

crack, a form of COCAINE. A less expensive, more potent, smokable form of the drug, it is the most addictive of abused substances. The drug's availability has greatly increased the number of addicts, resulting in major law enforcement problems in Western countries. See also DRUG ADDICTION AND DRUG ABUSE.

Cracow: see KRAKÓW.

crafts: see ARTS AND CRAFTS.

Craig, Sir James Henry, 1748–1812, British governor of CANADA (1807–11). His lack of sympathy with French Canadians resulted in his dissolution (1809) of Lower Canada's assembly, but his arbitrary methods served only to consolidate their position.

Craigie, Sir William A., 1867–1957, British lexicographer; b. Scotland. Generally considered the foremost lexicographer of his time, Craigie worked on the *New English Dictionary* (commonly called the *Oxford English Dictionary*) from 1897 and was joint editor from 1901 to 1933. In the U.S. he was chief editor of *A Dictionary of American English on Historical Principles* (4 vol., 1938–43).

Cram, Ralph Adams, 1863–1942, American architect; b. Hampton Falls, N.H. An ardent exponent of the Gothic, he produced collegiate and ecclesiastical works in a neo-Gothic style, e.g., part of the Cathedral of SAINT JOHN THE DIVINE, N.Y.C., and the graduate school and chapel at Princeton.

Cranach or **Kranach, Lucas** [both: krä'näkh], the Elder, 1472–1553, German painter and engraver. Called the painter of the REFORMATION, he was court painter to three electors of Saxony. Although his work is often naïve and awkward in draftmanship, it also has freshness, originality, and a warm, rich color. His paintings include *Adam and Eve* (Courtauld Inst., London) and such famous portraits as that of Elector John Frederick and *Self-Portrait* (Uffizi). His son **Lucas Cranach,** the Younger, 1515–86, inherited his shop, signature, and popularity. Their work is often indistinguishable.

cranberry, low, creeping, evergreen bog plant (genus *Oxycoccus*) of the HEATH family. The tart red berries are used for sauces, jellies, pies, and beverages. The native American, or large, cranberry (*O.* or *V. macrocarpus*) is commercially cultivated. The unrelated highbush cranberry, or cranberry tree, is in the HONEYSUCKLE family. Cranberries are often classified in the blueberry genus *Vaccinium*.

Crane, (Harold) Hart, 1899–1932, American poet; b. Garrettsville, Ohio. Although he published only two volumes, he is considered one of the most original poets of his time. His first collection, *White Buildings* (1926), was inspired by New York City. His most ambitious work, *The Bridge* (1930), is a series of long poems on the U.S., in which the Brooklyn Bridge serves as a mystical unifying symbol. An alcoholic and a homosexual, plagued by personal problems, Crane jumped overboard while returning from Mexico to the U.S. and was drowned.

Crane, Stephen, 1871–1900, often considered the first modern American writer; b. Newark, N.J. He introduced REALISM into American fiction with his grim and unpopular first novel, *Maggie: A Girl of the Streets* (1893). Crane achieved fame with his next novel, *The Red Badge of Courage* (1895), a remarkable account of a young CIVIL WAR soldier. Later a war correspondent in Cuba and Greece, he also wrote superb short stories, e.g., "The Open Boat" (1898) and "The Monster" (1899), and poetry. Vilified because of his domestic life, Crane spent his last years in Europe.

crane, large, wading marsh BIRD of the Northern Hemisphere and Africa, related to the RAILS. Cranes are known for their loud, trumpeting call and rhythmic mating dances. The North American whooping crane, a white bird almost 5 ft (152 cm) tall, was nearly extinct in 1941 and is still endangered; the gray sandhill crane, which winters W of the Mississippi, is also becoming rare.

Cranmer, Thomas, 1489–1556, English churchman. He came to the attention of HENRY VIII in 1529 by suggesting that the king might further his efforts to divorce KATHARINE OF ARAGÓN by collecting favorable opinions from the universities. He was made archbishop of Canterbury in 1533 and was completely subservient to Henry's will. While serving EDWARD VI, he shaped the doctrinal and liturgical transformation of the Church of England. He placed the English Bible in churches, and in 1552 he revised the BOOK OF COMMON PRAYER. Under the Roman Catholic MARY I, he was tried for treason, convicted of heresy, and burned at the stake.

Crashaw, Richard, 1612?–1649, English METAPHYSICAL POET. The son of an ardent Puritan minister, he converted to Catholicism and lived on the Continent. His fame rests on his intense religious verse, which combines sensuality with mysticism in a manner suggestive of baroque art. *Steps to the Temple* (1646), his major volume of poems, was enlarged to include *Delights of the Muses* (1648).

Crassus, ancient Roman family, of the plebeian Licinian gens. **Lucius Licinius Crassus,** d. 91 B.C., a noted orator and lawyer (much admired by Cicero), was consul in 95 B.C. He proposed the Licinian Law to banish from Rome all who had gained Roman citizenship by illegal means. This helped bring on the Social War (90–88 B.C.). **Marcus Licinius Crassus,** d. 53 B.C., was the best-known member of the family. Charming, avaricious, and ambitious, he became the principal landowner in Rome by organizing his private fire brigade, buying burning houses cheaply, and then putting out the fires. He gained immense prestige—along with POMPEY—for suppressing the uprising of SPARTACUS. He and Julius CAESAR drew closer together and, with Pompey, formed the First TRIUMVIRATE (60 B.C.), but Crassus and Pompey did not get along. Avid for military glory, Crassus undertook a campaign against the Parthians. His army was routed at Carrhae (modern Haran) in 53 B.C., and he was treacherously murdered.

crater: see METEORITE.

Crater Lake National Park: see NATIONAL PARKS (table).

Crawford, Joan, 1908–77, American film actress; b. San Antonio, Tex., as Lucille Le Sueur. A major Hollywood star, she made such films as *Grand Hotel* (1932), *Mildred Pierce* (1945; Academy Award), and *Humoresque* (1946).

Crawford, Thomas, 1813–57, American sculptor; b. N.Y.C. An exponent of the CLASSIC REVIVAL, he won recognition with *Armed Freedom,* a statue above the CAPITOL dome, and with the design of the WASHINGTON MONUMENT, for which he executed several figures.

Craxi, Bettino [krä'ksē], 1934–, Italian political leader. Socialist party leader from 1976, he was Italy's first socialist prime minister (1983–87). In 1993 he was charged with corruption and resigned as party leader.

crayfish or **crawfish,** edible freshwater CRUSTACEAN smaller than, but structurally similar to, the LOBSTER. Crayfish are found in ponds and streams in most parts of the world except Africa. They are scavengers and grow to 3 to 4 in. (7.6–10.2 cm) in length. Crayfish are usually brownish green; some cave-dwelling forms are colorless.

Crazy Horse, d. 1877, revered chief of the Oglala SIOUX. Resisting encroachment of whites in the mineral-rich Black Hills of South Dakota, he repeatedly defeated U.S. troops. He joined SITTING BULL and GALL to defeat George Armstrong CUSTER at LITTLE BIGHORN (1876), but finally he and 1,000 starving followers had to surrender. He was stabbed to death trying to escape from prison.

Crazy Horse Memorial, memorial to CRAZY HORSE and Native Americans, in progress at Thunderhead Mt., near Custer, S.D., in the BLACK HILLS. When finished it will consist of an equestrian statue of Crazy Horse, 563 ft (172 m) high and 641 ft (196 m) long, carved

in the round out of the mountainside. Work on the memorial was begun in 1948 by American sculptor Korczak Ziolkowski (1908–82) at the invitation of Lakota Chief Henry Standing Bear.

creationism, belief in the biblical account of the creation of the world; also known as creation science. Advocates of creationism have campaigned to have it taught in U.S. public schools along with the theory of EVOLUTION, which they dispute. In 1981 a federal judge ruled unconstitutional an Arkansas law requiring the teaching of creationism, holding it to be religious in nature; a similar Louisiana law was overturned in 1982.

credit, granting of goods, services, or money in return for a promise of future payment, usually accompanied by an INTEREST charge. The two basic forms of credit are business and consumer. The chief function of business credit is the transfer of capital from those who own it to those who can use it, in the expectation that the profit from its use will exceed the interest payable on the loan. Consumer credit permits the purchase of retail goods and services with little or no down payment in cash. In installment buying and selling, the consumer agrees to make payments at specific intervals in set amounts. CREDIT CARDS are issued by local and national retailers and by banks. Cardholders usually pay an annual fee and a monthly interest charge on the unpaid balance. The major bank cards also provide short-term personal loans. See DEBT.

credit card, card or document used to obtain consumer credit when purchasing an article or service. Credit cards may be issued by a local retailer, a national retailer, or a third party, e.g., a bank or financial services company. Typically, cards issued by a retailer may be used only in its stores; third-party cards, such as those issued by a bank in association with Visa or MasterCard, are general-purpose cards and may be used at a variety of establishments. Through the revolving charge plan, cardholders can postpone payment by accepting a monthly interest charge. Consumers may also use the general-purpose cards to obtain short-term personal loans, often called cash advances. Credit-card issuers get revenue from fees paid by stores that accept their cards, from yearly fees paid by cardholders, and from interest charged on unpaid credit balances. The late 1980s and early 90s saw a dramatic increase in the number of credit cards issued by nonbanks, including the financial arms of telephone companies, automobile manufacturers, and national retailers. **Charge cards,** such as American Express, require the consumer to pay for all purchases at the end of the billing period. See also DEBIT CARD.

Crédit Mobilier of America, ephemeral construction company, involved in a major U.S. financial scandal. Oakes Ames, T.C. Durant, and other stockholders of the Union Pacific RR set up (1867) the Crédit Mobilier and awarded themselves contracts for construction on the Union Pacific that netted profits estimated at from $7 million to $23 million. To forestall investigations or interference by Congress, Ames sold or assigned shares of stock to members of Congress at par, though the shares were worth twice as much. The scandal broke during the 1872 presidential campaign and resulted in a Congressional investigation that issued censures, but there were no prosecutions.

credit union, cooperative financial institution that makes low-interest personal loans to members. It is usually composed of persons from the same occupational group or local community, such as company employees or members of labor unions and churches. Funds for lending come from members' savings deposits through the sale of shares. In the U.S. the more than 12,500 credit unions are chartered and regulated by the federal government or the states.

Cree, indigenous people of Manitoba, one branch of whom moved southwest to adopt a buffalo culture as the Plains Cree, while the other retained their deer culture as the Woodland Cree (see NORTH AMERICA, INDIGENOUS PEOPLES OF). They spoke an Algonquian language of the Algonquian-Wakashan stock (see NATIVE AMERICAN LANGUAGES). Although warlike, the Cree were friendly to fur traders, and their history closely follows that of the Hudson's Bay and North West fur companies. Today they are one of the larger Canadian tribes; another group lives in Montana. In 1990 there were 8,290 Crees in the U.S.

creed, summary of basic doctrines of faith. The following are some of the historically important Christian creeds. **1** The **Nicene Creed,** usually said to be a revision by the First Council of CONSTANTINOPLE (381) of a creed adopted by the First Council of NICAEA (325). **2** The **Athanasian Creed,** a 6th-cent. statement, no longer ascribed to St. ATHANASIUS, on the Trinity and the Incarnation. **3** The **Apostles' Creed,** similar to the Nicene Creed and dating in its present form to c.650.

Creek, confederacy of 50 Native American towns or peoples mainly in Georgia and Alabama, who spoke a Muskogean tongue of the Hokan-Siouan linguistic stock (see NATIVE AMERICAN LANGUAGES). Named for their villages on creeks or rivers, they lived a settled agricultural life, governing themselves democratically. Although they were friendly to the British in colonial times, white encroachment later aroused their hostility. In the Creek War (1813–14), they were subdued by Andrew JACKSON and lost two thirds of their territory. Eventually they were moved to Indian Territory and became one of the FIVE CIVILIZED TRIBES. Today they live largely in Oklahoma. In 1990 there were 43,550 Creeks in the U.S.

Crémazie, (Joseph) Octave [krāmāzē'], 1822–79, French Canadian poet, "the father of French Canadian poetry." His poem "Le Vieux Soldat canadien" (1855) made him famous. His poetry is patriotic and was influenced by French ROMANTICISM.

Cresson, Edith, 1934–, French politician. A Socialist, she was elected to the European parliament in 1979 and held a series of ministerial appointments (1981–86). From 1986 to 1990, she was a member of the French National Assembly and then served as French premier (1991–92), the first woman to do so.

Cretaceous period: see GEOLOGIC ERA (table).

Crete, island (1991 pop. 536,980), c.3,235 sq mi (8,380 sq km), SE Greece, in the E Mediterranean Sea and marking the southern limit of the Aegean Sea. It is now a popular tourist region composed mainly of small farms growing grains, olives, and oranges, and raising livestock; food processing is the main industry. Crete was the site of the MINOAN CIVILIZATION, which reached its peak c.1600 B.C. Invaluable archaeological finds have been made at the ruins of the palace at the ancient city of KNOSSOS. Although the island later flourished as a trading center, it played no important political role in ancient Greece. It was conquered by the Romans (68–67 B.C.) and by the Ottoman Turks (1669), but a series of revolts finally forced (1898) the Turks to evacuate. The island officially joined modern Greece in 1913, as a result of the BALKAN WARS. A British military base in WORLD WAR II, it was attacked by Germany in the first and only successful all-air invasion of the war.

cretinism: see under DWARFISM.

Crèvecoeur, J. Hector St. John [krĕvkör'], 1735–1813, American author and agriculturist; b. France. After settling in Orange co., N.Y., he wrote *Letters from an American Farmer* (1782) and other agricultural articles that described U.S. rural life of the time. He introduced the culture of the American potato into Normandy and of European crops, notably alfalfa, into the U.S. He returned to France in 1790.

Crick, Francis Harry Compton, 1916–, English scientist. He shared with Maurice Wilkins and James WATSON the 1962 Nobel Prize in physiology or medicine for establishing the function and double-helix structure of DNA, the key substance in the transmission of hereditary characteristics.

cricket, slender, chirping, hopping INSECT of the family Gryllidae. Most have long antennae, muscular hindlegs, and two pairs of fully developed wings. The males produce the characteristic song by rubbing specialized structures of their front wings together; both sexes have auditory organs on their forelegs. Common field crickets of the U.S. are brown to black and about 1 in. (2.5 cm) long.

cricket, ball and bat game played chiefly in Great Britain and the Commonwealth countries. It is played by two opposing teams of 11 contestants on a level turf, measuring about 525 ft (160 m) by about 550 ft (170 m). Two wickets are placed 66 ft (20.12 m) apart near the middle of the field, each consisting of two wooden crosspieces (bails) resting on three stumps. Batsmen of the same team defend each wicket with a paddle-shaped bat against opposing bowlers, who try to knock down the bails of the wicket. If a batsman hits the ball far enough so that he and his partner can run to exchange places, a run is scored. Batsmen are retired if the ball is caught on the fly or if the bails are knocked down. A game may require several days to complete. Cricket probably was developed

in medieval England before 1400. Australia and Britain compete in a famous series.

crime, the recorded violation of major rules of social behavior codified in CRIMINAL LAW. Such law varies from one culture to the next, reflecting differences in social norms. Crime, its causes, and its prevention are the subject of criminology, a subdivision of sociology that also draws on psychology, economics, and other disciplines. One of its branches is penology, which deals with PRISON management and the rehabilitation of convicted offenders. The causes of crime may include psychological predisposition, emotional disorders, environment, or other factors. Crime tends to rise during periods of economic DEPRESSION and social upheaval and is most common in poverty areas, often as juvenile delinquency; so-called white-collar crime is committed by those of higher economic status. In the U.S. ORGANIZED CRIME developed during PROHIBITION. Crimes of violence traditionally draw the heaviest penalties, whereas "victimless crimes" (such as PROSTITUTION) are often virtually decriminalized through the failure of the authorities to prosecute.

Crimea, Ukr. and Rus. *Krym,* peninsula and autonomous republic (1991 est. pop. 2,363,000), c.10,000 sq mi (25,900 sq km), Ukraine, linked with the mainland by the Perekop Isthmus and bounded by the Black Sea (S, W) and the Sea of Azov (NE). Major cities include Simferopol (the capital), SEVASTOPOL, Kerch, and Yalta. The north is a semiarid steppe that supports wheat, corn, and cotton crops; in the south rises the Crimean, or Yaila, range. The subtropical shore along the Black Sea is famed for its resorts. Heavy industry in the Crimea includes plants producing machinery, chemicals, and building materials. The population is largely Russian.

History. In ancient times Crimea was inhabited by a CIMMERIAN people called Tauri, who were expelled (8th cent. B.C.) by the Scythians. In the 5th cent. B.C. the kingdom of the Cimmerian Bosporus emerged, later coming under Greek, then Roman, influence. The area, overrun between the 3d and 13th cent. by the Goths, Huns, Khazars, Cumans, and Mongols, became an independent TATAR khanate in the 15th cent. It was annexed by Russia in 1783. The peninsula was a battleground in the CRIMEAN WAR (1853–56), the RUSSIAN REVOLUTION, and both world wars. The Crimean Tatars were expelled from region in 1945 and were not permitted to return until the late 1980s. In 1954 the area was transferred from the Russian SFSR to Ukraine. Crimea was made (1991) an autonomous republic within Ukraine, and in 1992 there was an abortive attempt by the Russian-dominated Crimean government to declare independence.

Crimean War, 1853–56, between Russia and the allied powers of Turkey, England, France, and Sardinia. Its cause was inherent in the EASTERN QUESTION; its pretext was a quarrel between Russia and France over guardianship of Palestinian holy places. Turkey declared war on Russia after the latter occupied Moldavia and Walachia; England, France, and Sardinia joined later. The fighting centered on SEVASTOPOL, the heavily fortified base of the Russian fleet. After a long, bloody siege, the city fell and the war ended, thus checking Russian influence in the area. The war is particularly remembered for the futile battle of Balaklava and for the heroic nursing reforms of Florence NIGHTINGALE.

criminal law, body of law that defines offenses against the state and regulates their prosecution and punishment. It is distinguished from CIVIL LAW, which is concerned with relations between private parties. In the U.S., power to define crime rests with the states and with the federal government. U.S. criminal law is based on English COMMON LAW, but a number of states have enacted penal or criminal codes, and since World War II the trend is increasingly toward codification. The procedure in criminal cases is essentially the same throughout the U.S. A grand jury usually examines the evidence against a suspect and either dismisses the case or draws up an INDICTMENT. Trial is by JURY or before a judge alone. The public prosecutor (usually called the district attorney) presents the government's case, and counsel represents the accused. There is a legal presumption of innocence, and the burden of proving guilt beyond a reasonable doubt is on the prosecution. If the accused is found innocent, he or she is discharged; if guilty, the judge pronounces sentence. If convicted, the defendant may appeal; the prosecution, however, under the prohibition against DOUBLE JEOPARDY, generally cannot appeal an acquittal.

criminology: see CRIME.

crinoid, member of the class (Crinoidea) of marine invertebrate animals (ECHINODERMS) that includes the sea lilies and feather stars. Most sea lilies remain stalked and sessile for their entire lives, while feather stars break off the stalk and become mobile as adults. All crinoids live with their oral side upward. Most have a ring of 10 arms encircling the mouth, but some sea lilies have up to 40 arms and some feather stars up to 200.

Cripple Creek, town (1990 pop. 584), alt. 9,375 ft (2,858 m), seat of Teller co., central Colo.; inc. 1892. Once a great gold boom town (1901 est. pop. 50,000), it is now a summer resort and one of three Colorado towns with casino gambling. There were violent mine strikes in 1893 and 1904.

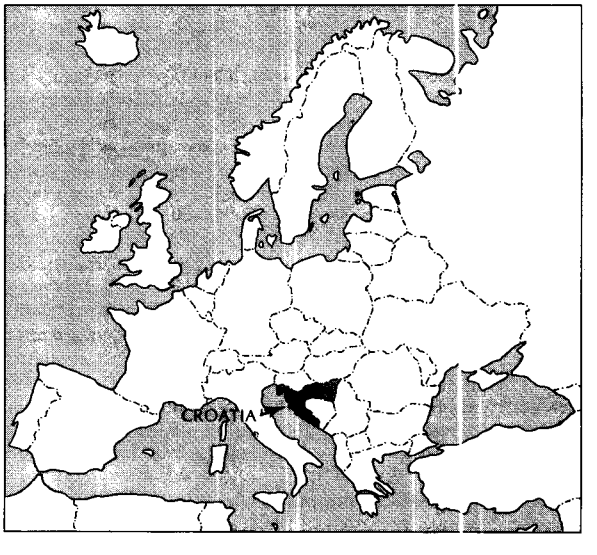
Cristus, Petrus: see CHRISTUS, PETRUS.

Crittenden Compromise, unsuccessful last-minute effort to avert the U.S. CIVIL WAR. It was proposed in Dec. 1860 by Sen. John J. Crittenden of Kentucky as a constitutional amendment mandating the use of the MISSOURI COMPROMISE line, extended to California, to divide free and slave states. It was defeated (Jan. and Mar. 1861) in Congress.

croaker, carnivorous, elongate, spiny-finned FISH of the family Sciaenidae, including the drum and weakfish (sea trout), so called because of their croaking or grunting noises. Croakers are found in the sandy shallows of temperate and warm seas. The drums are the largest and noisiest croakers—up to 150 lb (68 kg) in the common drum—and include the commercially important red drum, or channel bass. The weakfish, named for their easily torn flesh, include the common weakfish, or squeteague, of the Atlantic coast and the spotted weakfish.

Croatia [krōā'shə], Croatian *Hrvatska,* officially Republic of Croatia, republic (1991 est. pop. 4,784,000), 21,824 sq mi (56,524 sq km), S Europe, in the NW corner of the Balkan Peninsula; formerly a constituent republic of Yugoslavia. It is bordered by the Adriatic Sea (W), Slovenia (NW), Hungary (NE), Yugoslavia (E), Bosnia and Hercegovina (S and E), and Yugoslavia (S). Roughly shaped like an inverted U, Croatia is mountainous in the coastal regions of DALMATIA and Istria but flat and fertile inland in Slavonia, in the northeast. ZAGREB is the capital and largest city; other important cities include Osijek, Rijeka, and Split. Resources include petroleum, bauxite, copper, and iron, as well as timber. Tourism has been important, especially on the Adriatic coast, but was hurt by fighting in the early 1990s. The majority of population are Croats; Serbs were the largest minority but their numbers have been reduced through forced evictions. Both Croats and Serbs speak Serbo-Croatian. Most Croats are Roman Catholic; the Serbs belong largely to the Orthodox church.

History. Once part of the Roman province of Pannonia, the area



The key to pronunciation appears on page xiii.

was settled by Croats in the 7th cent. Croatia was a kingdom from the 10th cent. and united with Hungary in 1102, but it retained its own diet. The Turks held most of Croatia from the 16th to 18th cent.; they were replaced by the HAPSBURGS, who ruled the area until 1918. After World War I it became part of Yugoslavia, but Serb domination led to Croatian restiveness. In World War II the Germans dismantled Yugoslavia and set up a fascist puppet state in Croatia. Thousands of Serbs were massacred under fascist rule. In 1945 the area again became part of Yugoslavia; however, Croatian nationalism persisted. In 1991, after Serbia opposed a looser Yugoslav federation, Croatia declared itself independent, with Franjo Tudjman, a former general, as president. Militias of Serbs native to the area fought for control of parts of Croatia, especially in Krajina in the west, and Yugoslav forces entered the fighting on the Serbian side. By the end of 1991 Serbs controlled about 30% of Croatia, and a truce called in early 1992 has largely held. In 1992 Croatia supported and directed Bosnian Croatians when fighting erupted in Bosnia, gaining effective control of large areas of Bosnia.

Croce, Benedetto, 1866–1952, Italian philosopher, historian, and literary critic. His *Aesthetic as Science of Expression and General Linguistic* (1902), the first part of his major work *Philosophy of the Spirit* (1902–17), was a landmark of modern IDEALISM. Croce was renowned for his works of literary criticism and AESTHETICS, cultural history, and historical methodology. A staunch anti-Fascist, he became a Liberal party leader in 1943.

crochet, construction of fabric by interlocking loops of thread or yarn using a hook. The chain stitch is used to cast on a foundation chain of the desired length, into which successive rows of stitches are worked. All stitches and patterns derive from single and double crochet. Like knitting, crochet produces a fabric that stretches. When a fine hook and thread are used, crochet can be used to produce a form of lace.

Crockett, Davy (David Crockett), 1786–1836, American frontiersman; b. near Greeneville, Tenn. He was a U.S. representative from Tennessee (1827–31, 1833–35) and died defending the ALAMO. Known for his backwoods humor, he is the supposed author of several autobiographical works, although their idiom does not match that of his own letters.

crocodile, carnivorous REPTILE (order Crocodilia) found in tropical and subtropical regions, distinguished from the ALLIGATOR by greater aggressiveness, a narrower snout, and a long, lower fourth tooth, which protrudes when the mouth is closed. Crocodiles have flattened bodies, short legs, and powerful jaws. The saltwater crocodile is often 14 ft (4.3 m) long, while the Nile, American, and Orinoco crocodiles are commonly 12 ft (3.7 m) long. Native to the Everglades and Florida Keys, the American crocodile (*Crocodylus acutus*) is an endangered species

crocus, perennial herb (genus *Crocus*) of the IRIS family, native to the Mediterranean and SW Asia. Crocuses usually bear a single yellow, purple, or white flower and have small, grasslike leaves. One species, SAFFRON, is cultivated commercially as a yellow dye. The unrelated meadow saffron, or autumn crocus, is in the LILY family, and the wild crocus, or pasqueflower, is in the BUTTERCUP family.

Croesus [krē'səs], d. c.547 B.C., last king of Lydia (560–c.546 B.C.), noted for his great wealth. He allied himself with Egypt and Babylonia against CYRUS THE GREAT of Persia, but he was defeated and captured.

Cro-Magnon man, biologically modern human being (species *Homo sapiens*), existing 40,000–35,000 years ago (see HUMAN EVOLUTION). Skeletal remains were first found (1868) in France and then in other parts of Europe. Cro-Magnon man was anatomically identical to modern humans, but differed from NEANDERTHAL MAN, who disappeared in the fossil record shortly after Cro-Magnon's appearance. Cro-Magnon's upper Paleolithic culture (see STONE AGE) produced flint and bone tools, shell and ivory jewelry, and elegant polychrome cave paintings of great vitality (see PALEOLITHIC ART).

Crompton, Samuel, 1753–1827, English inventor (1779) of a SPINNING machine that for the first time allowed the production of fine strong cotton yarns. Crompton's mule spinner, or muslin wheel, combined the best features of Richard ARKWRIGHT's water frame and James HARGREAVES's spinning jenny.

Cromwell, Oliver, 1599–1658, lord protector of England. A Puritan, he entered Parliament in 1628, standing firmly with the opposition to CHARLES I. During the first civil war (see ENGLISH CIVIL WAR), he rose rapidly to leadership because of his military ability and genius for organization. His own regiment, the Ironsides, distinguished itself at Marston Moor (1644). In 1645 he became second in command to Sir Thomas Fairfax in the New Model Army, which defeated the king at Naseby (1645). After Charles's flight to Carisbrooke (1647), Cromwell lost hope of dealing moderately with him. In the second civil war, he repelled the Scottish royalist invasion at Preston (1648). His was the leading voice demanding execution at the king's trial in 1649. After the republican Commonwealth was proclaimed, Cromwell led a cruelly punitive expedition into Ireland, where he initiated a policy of dispossessing the Irish. He defeated the Scottish royalists at Dunbar (1650) and CHARLES II at Worcester (1651). In 1653 Cromwell dissolved the Rump Parliament and replaced it with the feeble Nominated (Barebone's) Parliament, which he himself appointed. That same year the Protectorate was established and Cromwell was named lord protector. In 1657 he declined the crown. Cromwell's foreign policy was governed by the need to expand English trade and prevent the restoration of the Stuarts. He approved the Navigation Act of 1651, which led to the first (1652–54) of the DUTCH WARS; his war with Spain (1655–58) was over trade rights. Opinions of Cromwell have always varied. Although he favored religious toleration, he tolerated only Jews and non-Anglican Protestants. His military genius and force of character are recognized, but the necessities of government forced him into cruelty and intolerance. His son **Richard Cromwell,** 1626–1712, succeeded him. The army and Parliament struggled for power until the Protectorate collapsed and the Commonwealth was reestablished in 1659. He lived abroad (1660–80) and later in England under an assumed name. A man of virtue and dignity, he was forced into a situation beyond his talents.

Cronaca, Il: see POLLAIUOLO, family.

Cronkite, Walter, 1916–, American journalist; b. St. Joseph, Mo. From 1962 to 1981 he was anchorman of the Columbia Broadcasting System's evening television news program.

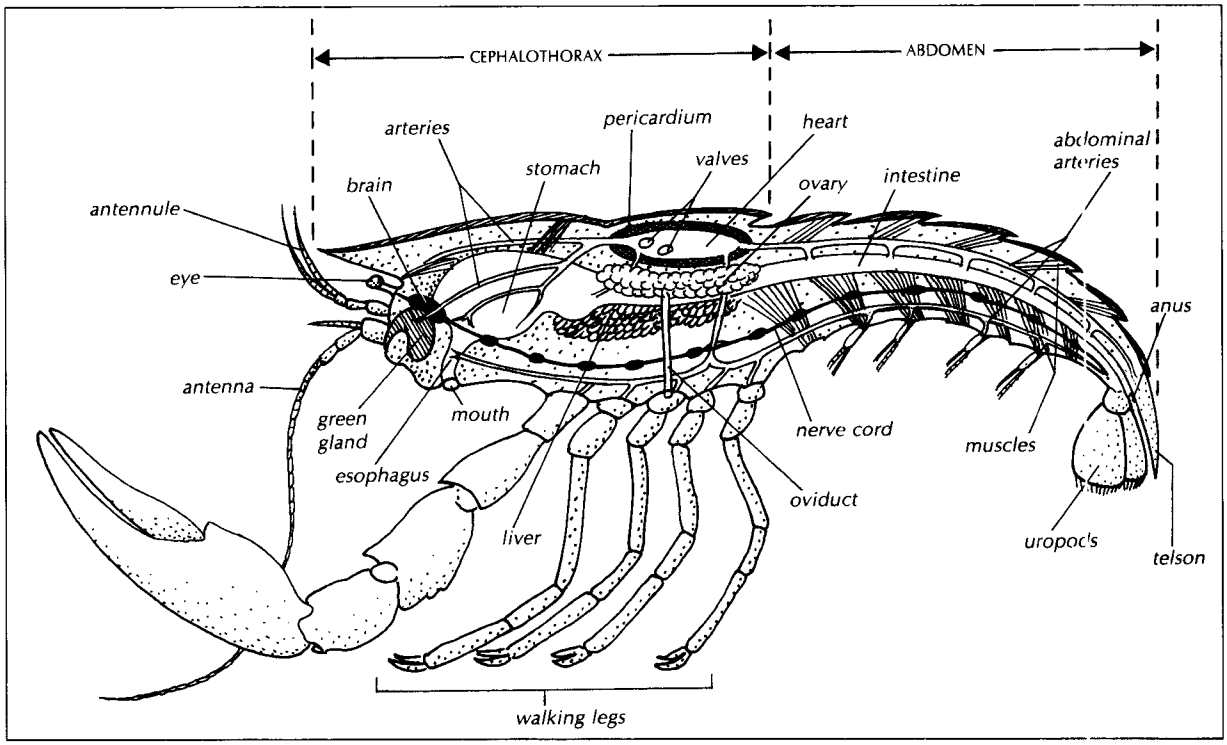
Cronus or **Kronos,** in Greek myth, the youngest TITAN; son of URANUS and GAEA. He led the Titans in a revolt against Uranus and ruled the world. By his sister RHEA, he fathered the great gods—ZEUS, POSEIDON, DEMETER, HERA, HADES, and HESTIA. Fated to be overthrown by one of his children, he tried unsuccessfully to destroy them. Zeus later led the OLYMPIAN gods in defeating him in a battle, described by HESIOD, called the Titanomachy. Cronus is equated with the Roman god SATURN.

Crookes, Sir William, 1832–1919, English chemist and physicist. Noted for his work on radioactivity, he invented the spinthariscope (used to make visible the flashes produced by bombarding a screen with the alpha rays of a particle of radium), the radiometer (used to measure the intensity of radiant energy), and the Crookes tube (a highly evacuated tube through which is passed an electrical discharge). He founded (1859) *Chemical News* and discovered the element THALLIUM.

croquet, lawn game in which players hit wooden balls with wooden mallets through a series of 9 or 10 wire arches (wickets). The first player to hit the posts at both ends of the field wins. Developed in France in the 17th cent., the game is popular, with varying rules, in Britain and the U.S.

Crosby, Bing, 1904–77, American singer and film actor; b. Tacoma, Wash., as Harry Lillis Crosby. His crooning voice was heard on radio and records. His many films include *Going My Way* (1944; Academy Award).

cross, widely used symbol found in such diverse cultures as those of ancient India, Egypt, and the Native Americans. Its most widespread use is among Christians, to whom it recalls the crucifixion of JESUS and humanity's redemption thereby. The oldest Christian remains contain drawings of crosses. Their use was attacked by Byzantine ICONOCLASM, but was vindicated at the Second Council of NICAEA (787). There are many types of crosses. The Latin cross, the commonest, has its upright longer than its transom. With two transoms it is called a patriarchal or archiepiscopal cross; with three, it is a papal cross. The Greek cross has equal arms. A crucifix is a cross with the figure of Jesus upon it.



Crustacean: Internal anatomy of a female crayfish, a representative crustacean

croup, acute obstructive inflammation of the larynx in young children, usually ages three to six. Symptoms include difficulty in breathing and a high-pitched, barking cough due to swelling or spasm. The cause may be an infection, ALLERGY, or obstruction by a swallowed object. Treatment is directed at the cause.

Crow, indigenous people of the Plains (see NORTH AMERICA, INDIGENOUS PEOPLES OF), who ranged the Yellowstone R. region and spoke a Siouan language of the Hokan-Siouan stock (see NATIVE AMERICAN LANGUAGES). A hunting tribe, they cultivated only tobacco. Their highly complex social system stressed care of children. They helped the whites in the SIOUX wars. Today most Crows live in Montana, near the LITTLE BIGHORN, where tourism, ranching, and mineral leases provide tribal income. In 1990 there were 8,588 Crows in the U.S.

crow, black BIRD (family Corvidae) related to the RAVEN, MAGPIE, and JAY and among the most intelligent of birds. Known for its throaty "caw," the American, or common, crow, about 19 in. (49 cm) long with a wingspan of over 3 ft (92 cm), destroys harmful insects and rodents.

crown, circular head ornament worn by sovereigns. (The coronet is worn by nobles.) In ancient Greece and Rome crowns were merely wreaths, sometimes made of leaves, awarded in athletic or poetic contests, or in recognition of public service. The use of the crown as a symbol of royal rank is of ancient tradition in Egypt and E Asia. The medieval and modern crown, an elaboration of the DIADEM, is usually made of metal, often gold, inlaid with gems. Famous historic crowns include the Lombard iron crown (Monza, Italy), the crown of Charlemagne (Vienna, Austria), and the crown of St. Stephen of Hungary. The triple crown of the pope, known as a tiara, dates from the 14th cent.

Crozet Islands: see FRENCH SOUTHERN AND ANTARCTIC LANDS.

crucifix: see CROSS.

crucifixion, hanging on a cross, an ancient method of execution. It was used in the Middle East, but not by the Greeks. The Romans may have borrowed it from Carthage and reserved it for slaves and despised criminals. A prisoner was either nailed or tied to the cross, and, to induce more rapid death, his legs were often broken. JESUS died by crucifixion.

crude oil: see PETROLEUM.

Cruikshank, George, 1792–1878, English caricaturist, illustrator, and etcher. The most popular caricaturist of his day, he illustrated more than 850 books and contributed to the *Meteor*, the *Scourge*, and the *Satirist*. Among his best works are illustrations for *Life in London*, etchings for Grimm's *German Popular Stories*, and his drawings *The Drunkard's Children* and *The Gin Trap*.

cruise missile: see: MISSILE, GUIDED.

Crumb, George (Henry), 1929–, American composer; b. Charleston, W.Va. Crumb often incorporates mysterious voices and the sounds of such unconventional instruments as thumb pianos into his works, which include *Echoes of Time and the River* (1967; Pulitzer); *Ancient Voices of Children* (1970), one of several settings of GARCÍA LORCA's poems; and *Cosmic Dances for Amplified Piano* (1979).

Crusades, wars undertaken by European Christians between the 11th and 13th cent. to conquer the Holy Land from the Muslims. At the Council of Clermont (1095) Pope URBAN II exhorted Christendom to war, and the Crusaders took their name from the crosses distributed there. Religious motives dominated the Crusades at first, but worldly aims were never absent: The nobles hoped to capture land and loot; the Italian cities looked to expand trade with the Middle East. The **First Crusade,** 1095–99, was led by Raymond IV, count of Toulouse, GODFREY OF BOUILLON, BOHEMOND I, and TANCRED. Their victorious campaign was crowned by the conquest of Jerusalem (1099). The establishment of the Latin Kingdom of JERUSALEM and the orders of the KNIGHTS HOSPITALERS and the KNIGHTS TEMPLARS followed. The **Second Crusade,** 1147–49, preached by St. BERNARD OF CLAIRVAUX after the Christians lost EDESSA (1144) to the TURKS, ended in dismal failure. After SALADIN captured (1187) Jerusalem for Islam, the **Third Crusade,** 1189–92, led by Holy Roman Emperor FREDERICK I, PHILIP II of France, and RICHARD I of England, failed to recapture the city. A three-year truce, however, gave Christians access to Jerusalem. The **Fourth Crusade,** 1202–4, was diverted for the benefit of Venice, and the Crusaders seized Constantinople (see CONSTANTINOPLE, LATIN EMPIRE OF). In the pathetic **Children's Crusade** (1212), thousands of children set out for the Holy Land, only to be sold as slaves or to die of hunger or disease. The **Fifth Crusade,** 1217–21, was aimed at Egypt, but failed. The truce arranged with the Muslims by Holy

Roman Emperor FREDERICK II in the Sixth Crusade, 1228–29, was short-lived. Three later crusades in the 13th cent. failed to reverse the Muslim gains. In 1291 the last Christian stronghold of Akko (Acre) fell.

crustacean, invertebrate animal (class Crustacea), an ARTHROPOD. Primarily aquatic, they have bilaterally symmetrical segmented bodies covered by a chitinous exoskeleton that is periodically shed. In most, the head and thorax are fused as a cephalothorax and protected by a shield-like carapace. The head typically has two pairs of antennae, three pairs of biting mouthparts, and usually one medial and two lateral eyes. Thoracic appendages are often modified into claws and pincers with gills at their bases. Crustaceans include SHRIMP, CRAYFISH, LOBSTERS, CRABS, and BARNACLES.

Cruz, Juana Inés de la: see JUANA INÉS DE LA CRUZ.

Cruz, Ramón de la [krōoth], 1731–94, Spanish dramatist. His *sainetes,* 450 one-act comedies of middle- and lower-class life, freed Spanish drama from foreign influence.

cryogenics: see LOW-TEMPERATURE PHYSICS.

cryolite or **kryolite,** sodium and aluminum fluoride mineral (Na_3AlF_6), usually pure white or colorless but sometimes tinted pink, brown, or even black and having a waxy luster. Cryolite is used principally as a flux in the smelting of ALUMINUM, but it is also a source of soda, aluminum salts, fluorides, and hydrofluoric acid. Discovered (1794) in Greenland, it occurs almost nowhere else.

cryptography, science of translating messages into ciphers or codes. The science of breaking codes and ciphers without the key is called cryptanalysis. Cryptology is the science embracing both cryptography and cryptanalysis. The beginnings of cryptography can be traced to the HIEROGLYPHICS of early Egyptian civilization (c.1900 B.C.). Ciphering has always been considered vital for diplomatic and military secrecy. The widespread use of computers and data transmission in commerce and finance is making cryptography very important in these fields as well. Recent successes in applying certain aspects of computer science to cryptography seem to be leading to more versatile and more secure systems in which encryption is implemented with sophisticated digital electronics. Industry and the U.S. government, however, have argued over who will have ultimate control over data encryption and, as a result, over government access to encrypted private transmissions.

crystal, solid body bounded by natural plane faces that are the external expression of a regular internal arrangement of constituent atoms, molecules, or ions. The particles in a crystal occupy positions with definite geometrical relationships to each other, forming a kind of scaffolding called a crystalline lattice. On the basis of its chemistry and the arrangement of its atoms, a crystal falls into one of 32 classes; these in turn are grouped into seven systems according to the relationships of their axes. Differences in the physical properties of crystals sometimes determine the use to which they can be put in industry. See also QUASICRYSTAL.

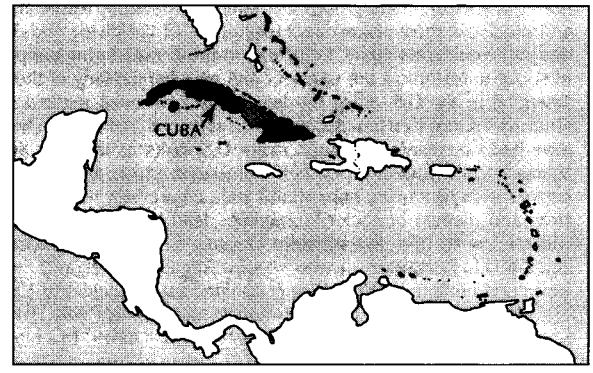
Crystal Palace, building designed by Sir Joseph Paxton, erected at Hyde Park, London, for the Great Exhibition in 1851. It was removed to Sydenham and used as a museum until damaged by fire in 1936. The iron, glass, and wood structure greatly influenced late 19th-cent. architecture.

Cs, chemical symbol of the element CESIUM.

Cu, chemical symbol of the element COPPER.

Cuba, officially Republic of Cuba, republic (1992 est. pop. 10,847,000), 44,218 sq mi (114,524 sq km), in the Caribbean Sea, 90 mi (145 km) S of Florida. It consists of Cuba, the largest island in the WEST INDIES, and many small adjacent islands. Principal cities are HAVANA (the capital), CAMAGÜEY, SANTIAGO DE CUBA, and GUANTÁNAMO. The main island has three mountain regions, including the rugged Sierra Maestra in the east, but is predominantly level or gently rolling. The climate is subtropical. Coffee, rice, corn, citrus fruits, and an excellent tobacco are grown; nickel is mined; and there is a fishing industry. Some consumer goods, as well as chemicals and steel, are manufactured. However, despite all efforts to diversify the base, Cuba's economy remains overwhelmingly dependent on the growing of sugarcane and refining of sugar. The people are of Spanish, African, and mixed Spanish-African descent, and their language is Spanish. Roman Catholicism, the major religion, is tolerated by the regime, a one-party Marxist government dominated by its founder, Fidel CASTRO.

History. Christopher COLUMBUS discovered the island of Cuba in 1492, and Spain colonized it from 1511, using it as a base for New World exploration and as an assembly-point for its treasure fleets. Called the "Pearl of the Antilles," Cuba prospered in the 1600s and 1700s, its population swelled by immigrants from Spain and African slave laborers. When most of Spain's American possessions became independent republics in the early 1800s, Cuba remained a colony. Slavery, a major prop of the sugar-based economy, was not abolished until 1886. A TEN YEARS WAR for independence (1868–78) was inconclusive. In 1895 a new struggle, led by JOSÉ MARTÍ, culminated in the SPANISH-AMERICAN WAR and establishment of a Cuban republic in 1898. The new nation suffered recurrent periods of dictatorship during which reformist zeal gave way to corruption and repression, notably under Gerardo MACHADO (1925–33) and his successor, Fulgencio BATISTA Y ZALDÍVAR. After a long guerrilla campaign, Batista was supplanted by Fidel Castro on Jan. 1, 1959. Castro promised agrarian reform, and under his leadership the nation soon became the only Communist state in Latin America and a firm ally of the USSR. An unsuccessful U.S.-supported attempt by anti-Castro exiles to invade Cuba at the BAY OF PIGS in 1961 was followed in 1962 by a U.S.–Soviet confrontation sparked by Soviet introduction of offensive weapons onto the island (see CUBAN MISSILE CRISIS). The U.S. maintained a trade embargo against Cuba into the 1990s, provoked by Cuban support of revolutionary movements in Latin America and, later, in Africa. Domestically, Castro virtually wiped out illiteracy, but the economy required massive Soviet aid. The changes in Eastern Europe and collapse of the USSR have left Cuba isolated politically, while continued economic dependence on sugar and the U.S. embargo have hurt the economy. In 1993 the government authorized cooperatives on state farms and individual private enterprise on a limited basis.



Cuban Missile Crisis, 1962, major COLD WAR confrontation between the U.S. and the Soviet Union. Following the BAY OF PIGS INVASION, the USSR secretly began building missile launching sites in Cuba. After the construction was detected by U.S. reconnaissance flights, U.S. Pres. KENNEDY demanded (Oct. 22) the withdrawal of the missiles, and imposed a naval blockade on Cuba. The Soviets agreed (Oct. 28) to dismantle the missile sites, and the crisis ended as suddenly as it had begun.

cubism, art movement, primarily in painting, that originated in Paris c.1907. In intellectual revolt against the sensual, emotional art of previous eras, the cubists used an analytical system in which three-dimensional subjects were fragmented and redefined from several different points of view simultaneously. Work from this analytic phase (1907–12), as by Pablo PICASSO and Georges BRAQUE, appealed to the intellect and has been termed conceptual realism because it shows objects as the mind, not the eye, perceives them. During the synthetic phase (1913 through the 1920s) works were composed of fewer and simpler forms, in brighter colors, and many artists introduced the *trompe l'oeil* effect of COLLAGE, as in the works of Juan GRIS. Other major exponents of cubism included Jean METZINGER, Marcel DUCHAMP, and Fernand LÉGER. Influenced also by African masks, Picasso's *Demoiselles d'Avignon* (1907; Mus. Mod. Art, N.Y.C.) contains much of the basic material of cubism.

cuckoo, BIRD of the family Cuculidae, widely distributed in temperate and tropical regions. Cuckoos are slender-bodied, long-tailed birds with down-curved bills, pointed wings, and dull plumage. Typical American cuckoos are the black-billed and yellow-billed cuckoos (*Coccyzus americanus*), known for their low, chuckling call notes. The roadrunner (*Geococcyx californianus*), a ground cuckoo of the southwest deserts, speeds over the ground at up to 15 mi (24.1 km) per hr.

cucumber, herbaceous vine (*Cucumis sativus*) of the GOURD family. Its greenish, generally cylindrical fruit is eaten fresh and pickled.

Cueva, Juan de la [kwā'vä], 1550?–1610?, Spanish dramatist. Of his 14 plays, the most famous is the comedy *The Scoundrel* (1581). By introducing national themes he laid the foundation for the drama of Spain's GOLDEN AGE.

Cui, César Antonovich [küē'], 1835–1918, Russian composer and critic. He was the nationalistic champion of The FIVE. Cui's best works were songs and short salon pieces.

Culbertson, Ely, 1893–1955, American authority on contract BRIDGE; b. Romania. A champion bridge player himself, he introduced the first successful system of bidding, wrote many books and a syndicated newspaper column on the game, and edited *Bridge World* magazine. After World War II, he wrote and lectured widely on world peace.

Cullen, Countee, 1903–46, African-American poet; b. N.Y.C. A major figure of the HARLEM RENAISSANCE of the 1920s, he applied traditional verse forms to African-American themes. His books of poetry include *Color* (1925) and *Copper Sun* (1927).

cult, ritual worship of the supernatural or its symbolic representations. It is often associated with a particular deity; for example, a cult of the ancient Middle East was that of the GREAT MOTHER OF THE GODS. The term is now often used to refer to contemporary religious groups whose beliefs and practices depart from the conventional norms of society. These groups vary widely in doctrine, leadership, and ritual, but most stress direct experience of the divine and duties to the cult community. Cults tend to proliferate during periods of social unrest; most are transient and peripheral. Many of those emerging in the U.S. since the late 1960s have been marked by renewed interest in MYSTICISM and Asian religions, but many others have had Christian roots. Such major U.S. cults as the Rev. Sun Myung MOON's Unification Church and HARE KRISHNA, a movement derived from Hinduism, have stirred wide controversy. Cults' insularity and distrust of society sometimes lead to violent conflicts with the law. In 1978, in Jonestown, Guyana, followers of Jim Jones killed a U.S. Congressman who was investigating Jones and then Jones and more than 900 others committed mass suicide. In 1993 a gunfight near Waco, Tex., between federal officers and David Koresh and his followers led to a 51-day siege that ended in a blaze that left Koresh and 82 people dead.

Cultural Revolution (1966–69), mass campaign in CHINA begun by MAO ZEDONG to revitalize the nation's revolutionary fervor and renew its basic institutions. Allied with the army, revolutionary Red Guards recruited from the youth attacked so-called bourgeois elements in cultural circles and in the bureaucracy. Lin Biao and JIANG QING were other leaders of the movement, which resulted in widespread disorder and violence. The revolution led to the fall of LIU SHAOQI and many other Communist party officials.

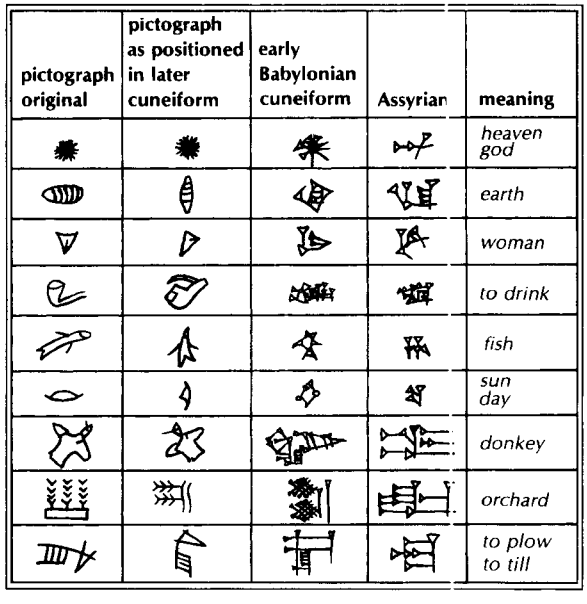
Cumans or **Kumans,** nomadic East Turkic people. Coming from NW Russia, they conquered S Russia and Walachia in the 11th cent. From their state along the Black Sea they traded with E Asia and Venice. After their defeat by the MONGOLS (13th cent.) many Cumans fled to Bulgaria and Hungary, and others joined the Empire of the GOLDEN HORDE.

Cumberland Gap, mountain pass through the Cumberland Mts. of the Appalachians, near Middlesboro, Ky., discovered in 1750 by Dr. Thomas Walker. Daniel BOONE'S WILDERNESS ROAD to the "Old West" ran through the gap, and it was an important military objective of both sides in the CIVIL WAR. The pass was designated a national historical park in 1940.

cumin or **cummin,** low annual herb (*Cuminum cyminum*) of the CARROT family, long cultivated in the Old World for the aromatic, seedlike fruits. Cumin is an ingredient of curry powder. It yields an oil used in liqueurs and veterinary medicines. Related to the CARAWAY, cumin has similar uses in cooking.

cummings, e e (Edward Estlin Cummings), 1894–1962; b. Cambridge, Mass. His lyrical verse, eccentric in typography and language, is included in such volumes as *Tulips and Chimneys* (1923), *Is 5* (1926), and *95 Poems* (1958). *The Enormous Room* (1922) is an exceptional prose account of his World War I internment in France.

cuneiform [Lat., = wedge-shaped], system of writing developed before the last centuries of the 4th millennium B.C. in the lower Tigris and Euphrates valley, probably by the Sumerians. The characters consist of arrangements of wedge-like strokes, generally on clay tablets. The history of the script is strikingly like that of the Egyptian HIEROGLYPHIC (see also ALPHABET). Normal Babylonian and Assyrian writing used from 300 to 600 arbitrary cuneiform symbols for words and syllables, some originally pictographic. There was also an alphabetic system that made it possible to spell out a word, but because of the adaptation from Sumerian, a different language, there were many ambiguities. Cuneiform writing was used outside Mesopotamia, notably in ELAM and by the HITTITES, but was not common after the Persian conquest of Babylonia (539 B.C.). A late use was that of the ACHAEMENIDS of Persia (mid-6th–4th cent. B.C.). H.C. RAWLINSON and G.F. GROTEFEND were noted cuneiform scholars.



Examples of the development of cuneiform

Cunningham, Merce, 1919–, American dancer and choreographer; b. Centralia, Wash. He studied and performed (1940–55) with Martha GRAHAM before forming (1953) his own company. He creates dances to the music of such avant-garde composers as John CAGE, e.g., *Sixteen Dances for Soloist and Company of Three* (1951) and *Squaregame* (1976).

Cunobelinus: see CYMBELINE.

Cuomo, Mario M(atthew), 1932–, U.S. politician; b. N.Y.C. Admitted (1956) to the New York bar, he attracted attention after he successfully mediated (1972) a local housing dispute. A Democrat, he was New York's secretary of state (1975–79), lieutenant governor (1979–83), and governor (1983–). He has supported social service program innovations and improvements in the state's infrastructure and environment and been an opponent of capital punishment. He is an often impressive orator.

Cupid: see EROS.

Curaçao [kyŏŏ'rəsō], island (1989 est. pop. 146,000), 178 sq mi (461 sq km), in the NETHERLANDS ANTILLES. Willemstad is the capital of the island group. Its refineries, among the world's largest, process oil from nearby Venezuela. Visited by Europeans in 1499, it was colonized (1527) by the Spanish and captured (1634) by the Dutch. Many Africans were imported as slaves.

curare, any of several ALKALOID plant extracts originally used as arrow poisons by indigenous South American peoples. Curare produces paralysis by interfering with the transmission of nerve impulses in skeletal muscle. Curare is also now used medically as an adjunct to general anesthesia and in diagnosing myasthenia gravis.

Curia Regis: see PARLIAMENT.

Curie, family of French scientists. **Pierre Curie,** 1859–1906, scientist, and his wife, **Marie Sklodowska Curie,** 1867–1934, chemist and physicist, b. Poland, married 1895, are known for their work on radioactivity and on radium. Pierre discovered (1883) and, with his brother Jacques, investigated piezoelectricity (a form of electric polarity) in crystals. Following Antoine BECQUEREL's discovery of RADIOACTIVITY, Marie began to study URANIUM, a radioactive element found in pitchblende. Together, the Curies discovered POLONIUM and RADIUM and determined their atomic weights and properties. For their work on radioactivity, they shared with Becquerel the 1903 Nobel Prize in physics. Marie Curie became the first person to be awarded a second Nobel Prize when she received the 1911 chemistry prize for the discovery of polonium and radium. The French scientists **Frédéric Joliot-Curie,** 1900–1958, formerly Frédéric Joliot, and **Irène Joliot-Curie,** 1897–1956, daughter of Pierre and Marie Curie, were married in 1926. They received the 1935 Nobel Prize in chemistry for artificially producing radioactive substances by bombarding elements with alpha particles. The Joliot-Curies investigated (1940) the chain reaction in nuclear fission. In 1946 they helped to organize the French atomic energy commission, of which Frédéric was the first chairman (1946–50).

Curitiba, city (1990 est. pop. 1,399,000), SE Brazil, capital of Paraná state. It handles the products of an expanding agricultural and ranching area through the Atlantic port of Paranaguá, c.70 mi (110 km) away. Founded in 1654, the city became important when immigrants developed the Paraná hinterland from the late 19th cent. The city has grown rapidly since 1950.

curium (Cm), synthetic element, first produced by alpha-particle bombardment of plutonium-239 by Glenn SEABORG and colleagues in 1944. It is a silvery metal and a very radioactive element in the ACTINIDE SERIES. Curium accumulates in bones and disrupts red blood cells. See ELEMENT (table); PERIODIC TABLE.

curlew, large shore BIRD (genus *Numenius*) of both hemispheres, usually brown and buff in color with a downcurved bill. The long-billed curlew (*N. americanus*) is found in the West.

currant, northern shrub (genus *Ribes*) of the SAXIFRAGE family. The gooseberry bush belongs to the same genus. The tart black, white, or red currant berries and the purple gooseberries are both eaten fresh or used in preserves, sauces, and pies. Dried currants were used by Native Americans in making pemmican, a travel food. Today's commercial "dried currant" is a raisin. Because gooseberries and currants are a host to blister RUST, their cultivation is discouraged.

currency: see MONEY.

Currier & Ives, American lithographers and publishers who produced highly popular hand-colored prints of 19th-cent. scenes and events in American life. **Nathaniel Currier,** 1813–88, b. Roxbury, Mass., founded the business (1835) in New York City and formed (1857) a partnership with the artist and businessman **James Merritt Ives,** 1824–95, b. N.Y.C. The business closed in 1907.

Curtis, Charles, 1860–1936, vice president of the U.S. (1929–33); b. near North Topeka, Kans. Of part Native American ancestry, Curtis was a U.S. congressman from Kansas (1892–1906). A Republican, he championed Native American rights and supported farm and veterans' benefits. He was a U.S. senator (1907–13, 1915–29) before serving as Herbert HOOVER's vice president.

Curtis, Cyrus Hermann Kotzschmar, 1850–1933, American publisher; b. Portland, Me. After starting the *Ladies' Home Journal* (1883), he founded (1890) the Curtis Publishing Company and built up a national reputation with the *Saturday Evening Post* and *Country Gentleman.* He also owned several newspapers and was a great philanthropist.

Curtiss, Glenn Hammond, 1878–1930, American inventor and aviation pioneer; b. Hammondsport, N.Y. He made (1908) the first public flights in the U.S., established (1909) the first U.S. flying school, and made (1910) a spectacular flight from Albany to New York City. He invented (1911) ailerons (see AIRFOIL) and after World War I made radical improvements in the design of planes and motors.

curve, in mathematics, the path of a point moving in space. In ANALYTIC GEOMETRY a plane curve, i.e., a curve that lies in one plane, is usually considered as the graph of an equation or function (for some examples, see CONIC SECTION). A skew, twisted, or space curve is one that does not lie all in one plane, e.g., the helix, a curve having the shape of a wire spring.

Cush, ancient kingdom of NUBIA, in what is now SUDAN. It flourished from the 11th cent. B.C. to the 4th cent. A.D. and in the 8th cent. B.C. included Egypt in its domain. Meroë, its capital, was overrun by the Ethiopians in the 4th cent., and the kingdom came to an end.

Cushing, Harvey Williams, 1869–1939, American neurosurgeon; b. Cleveland. A noted brain surgeon and a teacher at Johns Hopkins, Harvard, and Yale, he won a 1925 Pulitzer Prize for his biography of Sir William Osler. **Cushing's disease,** first described by him, is caused by hyperactivity of the cortex of the adrenal glands and affects more women than men. Symptoms include obesity, hypertension, hirsutism, and easy bruisability. Treatment is by removal of one or both adrenal glands, or, if the pituitary body is involved, by X-ray therapy or surgery.

Cushitic [kəshĭt'ĭk], group of languages belonging to the Hamitic subfamily of the HAMITO-SEMITIC family of languages. See LANGUAGE (table).

Custer, George Armstrong, 1839–76, U.S. Army officer; b. New Rumley, Ohio. He compiled an extraordinary record in the CIVIL WAR and became (1863) the youngest general in the Union army. Later he commanded the 7th Cavalry. During a campaign against the SIOUX in 1876, Custer and an entire detachment of over 200 were killed by Native Americans on the LITTLE BIGHORN R. His spectacular death made him a popular but controversial hero.

customs duty: see TARIFF.

cuttlefish, CEPHALOPOD mollusk that has 10 tentacles, 8 bearing muscular suction cups on their inner surface and 2 longer ones for grasping prey. The cuttlefish has a reduced internal shell embedded in the mantle; in some there is a degenerate internal shell of lime called cuttlebone. The body is short, broad, and flattened with lateral fins, similar to the SQUID. When disturbed, cuttlefish eject a dark ink, which hides them from predators.

Cuvier, Georges Léopold Chrétien Frédéric Dagobert, Baron [küvyā'], 1769–1832, French naturalist. A pioneer in comparative anatomy, he originated a system of zoological classification based on structural differences of the skeleton and organs. His reconstruction of the soft parts of fossils deduced from their skeletal remains greatly advanced paleontology, and he identified and named the flying reptile pterodactyl. He rejected evolutionary theory in favor of CATASTROPHISM.

Cuvilliès, François de [küvēyĕs'], 1695–1768, French architect, decorator, and engraver. He introduced French ROCOCO decoration into Germany. His Residenz-Theater (1751–53) and Amalienburg pavilion, in the park of Nymphenburg, both at Munich, represent the apex of German rococo decoration.

Cuyp or **Kuyp** [both: koip], family of Dutch painters. **Jacob Gerritszoon Cuyp,** 1594–c.1651, was a portrait and landscape painter. His stepbrother, **Benjamin Cuyp,** 1616–52, painted figures and peasant scenes in the style of REMBRANDT. Jacob's son, **Aelbert Cuyp,** 1620–91, was one of the foremost Dutch landscapists. He is famous for his simple but richly colored pastoral scenes; among the best are *Piper with Cows* and *Promenade* (both: Louvre), and *Horseman and Cows in a Meadow* (National Gall., London).

Cuza, Alexander John, or **Alexander John I,** 1820–73, first prince of ROMANIA (1859–66). He integrated Moldavia and Walachia, thereby creating Romania. He emancipated the serfs (1864) and instituted other important reforms. He was forced to abdicate in 1866.

Cuzco or **Cusco,** city (1993 pop. 257,751), S Peru, capital of Cuzco dept. It is an agricultural trading center and has woolen mills. Said to have been founded by MANCO CAPAC, it was the capital of the INCA empire, with massive, gold-decorated palaces and temples. After it was plundered by Francisco PIZARRO in 1533, the Spaniards raised a colonial city within the old walls, many of which remain visible. The city was devastated by an earthquake in 1950, but most of the

historic buildings have been restored. The ruins of an Inca fortress are nearby.

cyanide, salt or ester of hydrogen cyanide (HCN) formed by replacing the hydrogen with a metal or a radical. The most common and widely used (those of sodium and potassium) are employed as insecticides, in making pigments, in metallurgy, and in gold and silver refining. Most cyanides are deadly poisons that cause respiratory failure. Symptoms include a breath odor of bitter almonds, dizziness, convulsions, collapse, and, often, froth on the mouth.

cyanobacteria: see BLUE-GREEN ALGAE.

Cyaxares [sīăk'sərēz], d. 585 B.C., king of MEDIA (c.625–585 B.C.). He made the kingdom of the Medes a major power in the Middle East. In 612 B.C. Cyaxares took NINEVEH and completely defeated the Assyrians by 605 B.C.

Cybele, in ancient Asiatic religion, GREAT MOTHER OF THE GODS. The chief centers of her early worship were Phrygia and Lydia. In the 5th cent. B.C. her cult spread to Greece and later to Rome. She was primarily a nature goddess, responsible for maintaining and reproducing the wild things of the earth. Her annual spring festival celebrated the death and resurrection of her beloved Attis, a vegetation god.

cybernetics, term coined by Norbert WIENER to refer to the general analysis of control systems and communication systems in living organisms and machines. Analogies are drawn between the functioning of the brain and nervous system and that of the COMPUTER and other electronic systems (see NEURAL NETWORK). Cybernetics overlaps the fields of AUTOMATION, computing machinery, INFORMATION THEORY, and neurophysiology.

cycad, palmlike plant of a division (Cycadophyta) of mostly tropical and subtropical cone-bearing evergreens. Cycads, known from the Permian period, are the most primitive of the living SEED-bearing plants. Some have tuberous, underground stems and crowns of leathery, glossy, fernlike leaves arising from ground level; others have high, columnar stems. Some cycads, e.g., the fern palm of the Old World tropics and the Australian nut palm, bear edible, nutlike fruits. Florida ARROWROOT, or sago, is a starch from the pith of the coontie, or sago palm (*Zamia floridens*).

Cyclades, island group (1991 pop. 95,083), c.1,000 sq mi (2,590 sq km), SE Greece, in the Aegean Sea. It includes about 220 islands, the most important of which are Tínos, Ándros, Mílos, Náxos, Kéa, and Páros. Largely mountainous, the islands are agricultural areas and tourist centers; there is some mining and quarrying. In 1829 they passed from the OTTOMAN EMPIRE to Greece.

Cycladic art [sīklăd'ĭk], BRONZE AGE art of the central Aegean Cycladic islands. Early tomb remains include jugs, pots, and bowls decorated in geometric designs, as well as marble female fertility figures. These are frontal and geometric in style. Figures of musicians have also been found. Considerable Minoan (see MINOAN CIVILIZATION) influence is seen in the pottery of the 17th cent. B.C. found at Phylakopi in Melos.

cyclamate: see SWEETENERS, ARTIFICIAL.

cyclamen: see PRIMROSE.

cyclone, region, often called a "low," of low central atmospheric pressure relative to the surrounding pressure. The resulting pressure gradient, combined with the CORIOLIS EFFECT, causes air to circulate about the center, or core, in a counterclockwise direction north of the equator and a clockwise direction south of it. The frictional drag on near-surface air moving over land or water causes it to spiral inward toward lower pressures; this movement is compensated for near the center by rising currents, which are cooled by expansion when they reach the lower pressures of higher altitudes. The cooling, in turn, characteristically increases the relative HUMIDITY greatly and produces cloudiness. Tropical cyclones, which form over warm tropical waters, can reach a severe intensity, becoming HURRICANES. An **anticyclone** has the opposite characteristics: a "high," or region of high central pressure relative to the surrounding pressure; clockwise circulation north of the equator and counterclockwise circulation south of it; descending and diverging air that is warmed by compression as it encounters higher pressure at lower altitudes; and characteristic low humidity and little cloudiness. Both cyclones and anticyclones move across the land at speeds of 500 to 1,000 mi/day (800 to 1,600 km/day). The term *cyclone* is also sometimes used for a TORNADO.

Cyclops, plural **Cyclopes** [sīklō'pēz], in Greek mythology, immense one-eyed beings. According to HESIOD, they were smiths, sons of URANUS and GAEA, who gave ZEUS the lightning bolts that helped him defeat CRONUS. In HOMER, they were a barbarous people, one of whom (POLYPHEMUS) was encountered by ODYSSEUS in his wanderings.

cyclotron: see PARTICLE ACCELERATOR.

cymbals: see PERCUSSION INSTRUMENT.

Cymbeline or **Cunobelinus,** d. A.D. c.40, British king. His conquest of the Trinovantes (of Essex) made him the wealthiest and most powerful ruler in SE England. Cymbeline gives his name, and little else, to SHAKESPEARE's play.

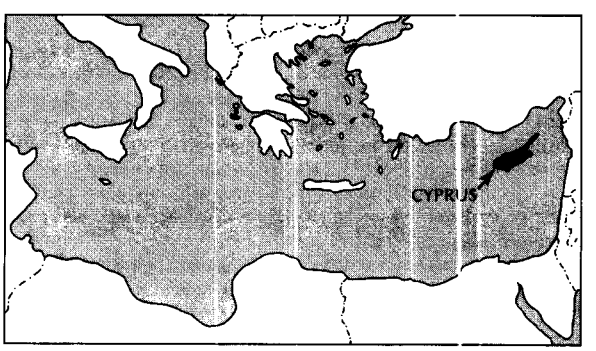
Cynewulf [kĭn'əwo͝olf], fl. early 9th cent. Anglo-Saxon religious poet to whom are ascribed four didactic poems: *Juliana, The Ascension, Elene,* and *The Fates of the Apostles.*

cypress, common name for the Cupressaceae, a widely distributed family of coniferous shrubs and trees, some yielding valuable timber. Chief among them are the JUNIPER, the ARBORVITAE, and the true cypresses. The latter, found in S Europe, E Asia, and W North America, are resinous evergreens with a fragrant, durable wood and scalelike leaves and include the Monterey cypress (*Cupressus macrocarpa*), native to the region around Monterey Bay, Calif., but widely cultivated. American trees of the genus *Chamaecyparis,* also called cypresses, comprise some important timber trees, e.g., the Lawson cypress, or Port Oxford cedar (*C. lawsoniana*). The lumber called cypress in the S U.S. is mainly from BALD CYPRESS trees.

Cyprian, Saint, 200?–258, Father of the Church, bishop of CARTHAGE (c.248). He supported the papal view that Christians who had apostasized under persecution should be readmitted to the church. He was martyred in the persecution of the Roman emperor Valerian. Feast: Sept. 16.

Cyprus, Gr. *Kypros,* officially Republic of Cyprus, republic (1992 est. pop. 716,000), 3,578 sq mi (9,267 sq km), an island in the E Mediterranean Sea, c.40 mi (60 km) S of Turkey. The capital is NICOSIA. Since 1974 the nation has been divided into Turkish (in the north) and Greek (in the south) sectors. Two mountain ranges traverse the island from east to west; the highest peak is Mt. Olympus (6,406 ft/1,953 m), in the southwest. Between the ranges lies a wide plain, where grapes (used for wine), cereals, olives, tobacco, and cotton are grown. Fishing, tourism, and the raising of livestock are also important. Copper, pyrites, asbestos, and gypsum are the chief mineral resource. Manufactures include paper, chemicals, textiles, and refined petroleum. Nearly 80% of the population is Greek and Orthodox Christian, and about 18% is Turkish and Muslim. Greek, Turkish, and English are spoken.

History. Excavations have revealed the existence of a Neolithic culture on Cyprus from 4000 to 3000 B.C. Influenced by the Middle East and, after 1500 B.C., by Greece, Cyprus fell to a succession of rulers, including Assyria, Egypt, Persia, and Rome. After eight centuries (from A.D. 395) of Byzantine control, it was conquered (1191) by RICHARD I of England, who bestowed it on the French Lusignan dynasty. Annexed (1489) by VENICE and conquered (1571) by the Turks (see OTTOMAN EMPIRE), it came under British administration in 1878 and was annexed outright by Britain in 1914. The movements among Greek Cypriots for self-rule and union *(enosis)* with GREECE were a source of constant tension, erupting in 1955



The key to pronunciation appears on page xiii.

into violence that was tantamount to civil war. The conflict was aggravated by Turkish support of Turkish Cypriot demands for partition of the island. In 1959, a settlement, precluding both *enosis* and partition, provided for independence in 1960, and MAKARIOS III, leader of the Greek Cypriot nationalists, was elected president. The British retained two sovereign military enclaves, Akrotiri and Dhekelia. Large-scale fighting continued, however, and a UN peacekeeping force was sent to Cyprus in 1965. In 1974 the national guard, dominated by Greek army officers, overthrew the Makarios regime. Citing its responsibility to protect the Turkish Cypriot community, Turkey invaded Cyprus and established a Turkish state in the northern two fifths of the island. Since that time Cyprus has been a divided nation, with a self-governing Turkish community in the north and a Greek community in the south. In 1983 the Turkish state, headed by Rauf Denktash, declared itself independent as the Turkish Republic of Northern Cyprus, but it has only been recognized by Turkey. In 1993 Glafcos Clerides, a conservative, was elected president of Cyprus. Negotiations to end the division of the country have been unsuccessful.

Cyrene [sīrē′nē], ancient city near the northern coast of Africa, in Cyrenaica (now E Libya). A Greek colony (7th cent. B.C.), it was a city-state with much commerce with Greece and some development of art. Cyrene became powerful over other cities and held nominal independence until the marriage of Berenice (d. 221? B.C.) to PTOLEMY III of Egypt. It was later the center of a Roman province. The Roman emperor TRAJAN's punishment of Cyrene because of Jewish uprisings led to its decline.

Cyril and Methodius, Saints, d. 869 and 884 respectively, Greek missionaries, brothers, called Apostles to the Slavs and fathers of Slavonic literature. Sent (863) to MORAVIA, they won papal approval for the use of Slavonic in church liturgy. The **Cyrillic alphabet,** used in Russia and elsewhere, is named for St. Cyril but was probably the work of his followers. Feast: Feb. 14.

Cyrus the Great, d. 529 B.C., king of Persia, founder of ACHAEMENID power and the Persian empire. He conquered MEDIA between 559 and 549 B.C., Lydia (see CROESUS) in 546, and BABYLONIA in 538. In EGYPT he laid the basis for future Persian victories. Because he placed Jews in power in PALESTINE, creating a buffer state between Persia and Egypt, he is spoken of approvingly in the Old Testament, e.g., Dan. 6.28. He respected the religion and customs of each part of his empire.

Cyrus the Younger, d. 401 B.C., Persian prince, younger son of DARIUS II and Parysatis. His mother obtained several satrapies for him in Asia Minor when he was very young. In the PELOPONNESIAN WAR he helped LYSANDER to build a victorious fleet. When Darius died (404 B.C.) Cyrus was accused of a plot to kill his elder brother, the heir, ARTAXERXES II. Saved by his mother, he raised an army to overthrow Artaxerxes but died in battle. XENOPHON's *Anabasis* describes the revolt.

cystic fibrosis, inherited disorder of the exocrine GLANDS, affecting infants and children. It is caused by an abnormal gene that disrupts chloride transfer in and out of cells. Normally, chloride movement pulls water from the tissues. Without the water, mucus in the exocrine glands becomes thick and sticky and eventually blocks the ducts of these glands (especially the pancreas, lungs, and liver). Symptoms include a distended abdomen, diarrhea, malnutrition, and repeated incidence of respiratory infections. Treatment consists of a low-fat, high-protein diet, VITAMINS, pancreatin, and ANTIBIOTICS to ward off infection; dornase alfa (Pulmozyme) can help break up the mucus.

cytochrome, any of a class of heme-containing proteins, present in the mitochondria of plant and animal cells, that play a vital role in cellular RESPIRATION, by alternately accepting and donating electrons (as hydride ions) in oxidation reactions.

cytology, in biology, the study of the structure of all normal and abnormal components of cells and the changes, movements, and transformations of such components, using light, phase, interference, confocal, and electron microscopes.

Czech language [chĕk], in the past sometimes also called Bohemian, member of the West Slavic group of the Slavic subfamily of the Indo-European family of languages. See LANGUAGE (table).

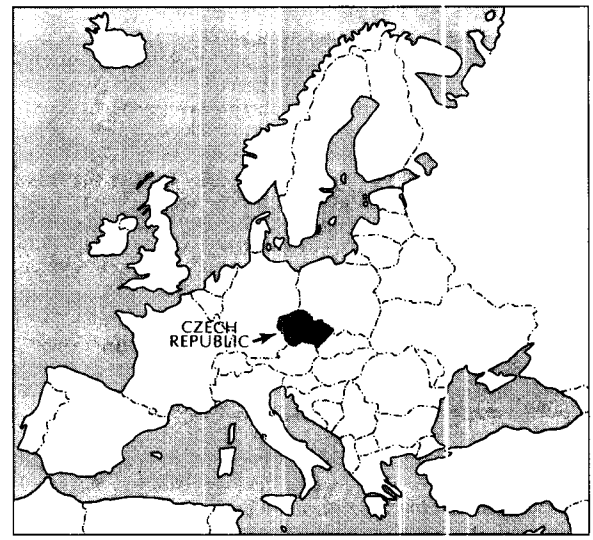
Czech Legion, in WORLD WAR I, a military force of c.40,000 to 50,000, mostly Czechs and Slovak Russians, who fought for Russia. After Russia left the war, the legion was evacuated via the Trans-Siberian RR. They did some fighting for the anti-Bolsheviks in the Russian civil war.

Czechoslovakia, former nation (1918–39, 1945–92), central Europe, divided since 1993 into the CZECH REPUBLIC and SLOVAKIA. Czechoslovakia emerged in 1918 from the ruins of the AUSTRO-HUNGARIAN MONARCHY as an independent republic comprising the Czech lands of BOHEMIA and MORAVIA, part of SILESIA, Slovakia, and, before World War II, RUTHENIA. It was largely the creation of its first and second presidents, Thomas Garrigue MASARYK and Eduard BENEŠ. Economically the most favored of the Hapsburg successor states, it also benefited from a liberal, democratic constitution (1920) and able leadership. Its weakness lay in the disaffection of the German and Magyar (Hungarian) minorities and agitation for autonomy in Slovakia. Vehemently backed by HITLER, the German nationalist minority demanded union with Germany. Faced with the threat of war, the West pursued a policy of appeasement and signed (1938) the MUNICH PACT, by which Germany obtained the Bohemian borderlands (Sudetenland). The truncated state was dissolved in 1939, when Germany made Bohemia and Moravia a "protectorate," Slovakia gained nominal independence, and Ruthenia was awarded to HUNGARY. After liberation by U.S. and Soviet forces at the end of WORLD WAR II, Czechoslovakia was restored to its pre-Munich status (except for Ruthenia, which was ceded to the USSR and became part of Ukraine) and the German population was expelled. A Communist-dominated coalition government ruled until 1949, when the Communists gained control and established a Soviet-style state. A trend toward liberalization, begun in 1963, reached its climax in 1968 with the installation of reformers Alexander DUBČEK as party leader and Ludvik Svoboda as president. In August the USSR with its Warsaw Pact allies invaded Czechoslovakia, forcing the repeal of most of the reforms and replacing Dubček with the staunchly pro-Soviet Gustav HUSÁK, who reestablished a repressive Communist dictatorship. With the Mikhail GORBACHEV's liberalization of Soviet society, and as other Eastern European Communist governments collapsed, Czechoslovakia became (1989) the scene of antigovernment demonstrations. Dissident groups formed Civic Forum which, in Dec. 1989, successfully negotiated the establishment of a multiparty government. Pres. Husák resigned, and the parliament elected the playwright Václav HAVEL, chief spokesman of Civic Forum, president. In free elections in 1990 Civic Forum won a parliamentary majority. Subsequent economic reforms were especially disruptive in Slovakia, which had a disproportionate share of subsidized state-owned heavy industry. In the 1992 parliamentary elections ethnically based parties with conflicting positions on economic and political reform triumphed in the Czech lands and Slovakia, leading to an impasse at the federal level and breakup into two separate nations, the Czech Republic and Slovakia, on Jan. 1, 1993.

Czech Republic, Czech *Česká Republika,* republic (1993 est. pop. 10,300,000), 30,443 sq mi (78,847 sq km), central Europe; bordered by Poland (N), Germany (N and W), Austria (S), and Slovakia (E). Major cities include PRAGUE (the capital), BRNO, Ostrava, Plzeň (Pilsen), and Olomouc. The republic comprises the traditional Czech lands of Bohemia and Moravia and Czech Silesia. The two main geographic regions are the Bohemian plateau (W) and the Moravian lowland (E). The Sudetes Mts. in the north separate Moravia from Czech Silesia. The country is landlocked, and the chief rivers—the ELBE, Vltava (Moldau), and Oder—are economically important. The Czech Republic is highly industrialized; major manufactures include machinery and machine tools, automobiles, metalworking, iron and steel, chemicals, electronic equipment, textiles, and footwear. Coal, lignite, and pitchblende are the main minerals. Major crops include sugar beets, potatoes, and grains. The population is largely Slavic, consisting chiefly of Czechs (81%) and Moravians (13%). Roman Catholicism is the largest religion, but there are sizable Protestant (notably HUSSITE) groups. Czech is the official language.

History. For the earlier history of the area see BOHEMIA and MORAVIA. In 1918 CZECHOSLOVAKIA emerged from the ruins of the AUSTRO-HUNGARIAN MONARCHY as an independent republic, created by uniting the Czech lands with Slovakia, inhabited by the closely related Slovaks. From the beginning, however, the minority Slovaks, who

had different cultural, religious, and social traditions, sought autonomy in the highly centralized state. In 1939 the Czech lands fell under Hitler's control, and Slovakia became a German puppet state. After World War II, Czechoslovakia was reestablished, but Slovak resentment of Czech dominance persisted under Communist rule. In 1969 Czechoslovakia became, at least officially, a federal state when the Czech and Slovak socialist republics were established. With the end of Communist rule in 1990, economic reforms were begun that were especially disruptive in Slovakia, which had a disproportionate share of subsidized state-owned heavy industry. In the 1992 parliamentary elections ethnically based parties with conflicting positions on economic and political reform triumphed in the Czech lands and Slovakia, leading to an impasse at the federal level and movement toward breakup into two separate nations. Václav Klaus, prime minister of the Czech Republic, insisted on independence, rather than autonomy, for poorer Slovakia, in part to assure institution of his free-market economic program. On Jan. 1, 1993, Czechoslovakia was dissolved and the Czech Republic established. Václav HAVEL was elected (1993) its first president. The new republic quickly moved to privatize state industries.



Czerny, Karl [chĕr'nē], 1791–1857, Austrian pianist. The teacher of LISZT, he is known for his technical studies for the piano.

D

Dacca: see DHAKA.

Dachau, Germany: see CONCENTRATION CAMP.

dachshund, small, short-legged HOUND; shoulder height, 5–9 in. (13–25 cm); weight, 5–20 lb (2–9 kg). It is black or chocolate with tan, or solid red. There are six varieties: smooth-haired, long-haired, wirehaired, and miniatures of each. The breed was developed in Germany over hundreds of years to hunt badgers.

Dacia, ancient region roughly corresponding to Romania, whose people were called Getae by the Greeks, Daci by the Romans. They had an advanced material culture. DOMITIAN tried to subdue them but ended by paying them tribute (A.D. 90). Under TRAJAN, Dacia became (A.D. 105) a Roman province, but AURELIAN lost it to the invading Goths (A.D. 250–70). The Roman legacy to Dacia was the Romance tongue Romanian.

Dacko, David, 1930–, president of the CENTRAL AFRICAN REPUBLIC (1960–66, 1979–81). A leader in the independence movement in French Equatorial Africa, he became the first president of the newly independent Central African Republic. He was toppled from power in 1966 by J.-B. BOKASSA but reinstated in a 1979 coup. Reelected president, he was overthrown by a military junta in 1981.

Dacron: see SYNTHETIC TEXTILE FIBERS.

Dada or **Dadaism,** international nihilistic movement among European artists and writers, 1916–22. It originated in Zürich with the French poet Tristan Tzara and stressed absurdity and the role of the unpredictable in artistic creation. Carried to New York by Jean ARP, Max ERNST, and Marcel DUCHAMP, these principles were eventually modified to become the basis of SURREALISM. Duchamp's celebrated *Mona Lisa* adorned with mustache and goatee and George GROSZ's caricatures are characteristic Dadaist works. The literary manifestations of Dada were mostly nonsense poems—meaningless and random word combinations.

daddy longlegs or **harvestman,** an ARACHNID with long slender legs, related to the SPIDERS. It has eight legs extending from a rounded or oval body. The daddy longlegs is omnivorous, feeding on plant fluids, animal tissue, and other daddy longlegs. The unrelated long-legged crane fly (an INSECT) is also called daddy longlegs.

Daedalus [dĕd'ələs], in Greek mythology, craftsman and inventor. He built the MINOTAUR's labyrinth in Crete. When King MINOS refused to let him leave, Daedalus built wax and feather wings for himself and his son Icarus. They flew away, but when Icarus came too close to the sun, his wings melted and he fell to his death. Daedalus escaped to Sicily.

daffodil: see NARCISSUS.

Daguerre, Louis Jacques Mandé [dägâr'], 1789–1851, French scene painter and physicist, inventor of the daguerreotype. Known first for his illusionistic stage sets, he was also the inventor, with C.M. Bouton, of the diorama (pictorial views seen with changing lighting). The daguerreotype, a photograph produced on a silver-coated copperplate treated with iodine vapor, was developed with J. Nicéphore NIÉPCE and ceded to the Academy of Sciences in 1839.

dahlia, tuberous-rooted, perennial plant (genus *Dahlia*) of the COMPOSITE family, native to Guatemala and Mexico, and widely cultivated. Most of the thousands of horticultural varieties are developed from one species (*D. pinnata*), the garden dahlia. Dahlias are stout, woody plants with colorful, late-blooming flowers. The tubers of the garden dahlia are a source of fructose used by diabetics.

Dahomey: see BENIN.

Daimler, Gottlieb [dām'lər], 1834–1900, German engineer, inventor, and pioneer AUTOMOBILE manufacturer. His construction (1885) of the first high-speed INTERNAL-COMBUSTION ENGINE led to the development of the automobile industry.

dairying, industry concerned with producing, processing, and distributing MILK and milk products. Ninety percent of the world's milk comes from CATTLE; the rest comes from GOATS, BUFFALO, SHEEP, REINDEER, YAKS, and other ruminants. About one third of the milk is used for BUTTER, an almost equal amount for market milk, and the rest for farm uses and the making of CHEESE, concentrated milks, ice cream, and such by-products as dried milk solids (e.g., LACTOSE and CASEIN). The rise of modern, large-scale dairying paralleled the

growth of urban populations and was stimulated by the invention of the cream separator and other specialized machines, the discovery of PASTEURIZATION, and the study of cattle breeding.

daisy, name for several common wild flowers of the COMPOSITE family. The true, or English, daisy (*Bellis perennis*) is cultivated in the U.S.; its white, pink, or red flowers close at night. Other species include the purple Western daisy (*Astranthum* or *B. integrifolium*); and the common, white, or oxeye daisy of the U.S. (*Chrysanthemum leucanthemum*). Other plants called daisy include the yellow daisy, or BLACK-EYED SUSAN; the Michaelmas daisy, an ASTER; the Paris daisy, one of the plants also called marguerite; and the seaside daisy and daisy fleabane, which are fleabane species (genus *Erigeron*).

Dakar, largest city (1988 pop. 1,447,642) and capital of Senegal, on Cape Verde Peninsula, on the Atlantic Ocean. It is an economic center for a market-gardening region, and its expanding industries produce food products, fertilizers, cement, and textiles. The city is the busiest port in W Africa, also serving Mali and Mauritania, and is linked by rail and air with other Senegalese cities. Dakar became the capital of FRENCH WEST AFRICA in 1902 and was occupied by U.S. forces in World War II. The modern city is an educational and cultural center.

Dakota: see SIOUX.

Daladier, Édouard [dälädyā'], 1884–1970, French premier (1934, 1938–40). A leading radical Socialist in the 1930s, Daladier signed the MUNICH PACT with HITLER in 1938 and presided over France in the early months of WORLD WAR II, until overthrown by his failure to aid Finland. After France's fall (1940) he was arrested by the VICHY government and was tried (1942) in the war-guilt trials at Riom. In the Fourth Republic he served (1946–58) in the national assembly.

Dalai Lama, "oceanic teacher," title of the leader of TIBETAN BUDDHISM. Believed like his predecessors to be the incarnation of the Bodhisattva Avalokiteshvara, the fourteenth Dalai Lama, Tenzin Gyatso, 1935–, gave up cooperation with the Chinese and fled into exile (1959). He has traveled widely, pleading the Tibetan cause. Recipient of the 1989 Nobel Peace Prize, the Dalai Lama wrote an autobiography, *Freedom in Exile* (1990).

Dale, Sir Henry Hallett, 1875–1968, English scientist. For his study of ACETYLCHOLINE as agent in the chemical transmission of nerve impulses, he shared with Otto LOEWI the 1936 Nobel Prize in physiology or medicine. Dale also investigated the pharmacology of ergot and histamine shock. He was knighted in 1932.

d'Alembert, Jean le Rond: see ALEMBERT.

Daley, Richard Joseph, 1902–76, U.S. political leader; b. Chicago. A former (1939–46) Illinois state senator, he was elected Cook co. Democratic chairman in 1953. As mayor (1955–76) of CHICAGO, he was one of the last big city bosses; his support was often sought by state and national leaders. Daley gained national notoriety in 1968 when Chicago police brutally subdued demonstrators at the Democratic National Convention. His son, **Richard M. Daley,** 1942–, served (1980–89) as state's attorney for Cook Co., Ill., before he became mayor of Chicago in 1989.

Dali, Salvador, 1904–89, Spanish painter. Influenced by FUTURISM and CHIRICO, he became a leader of SURREALISM. His precise style enhances the dreamlike effect of his works, e.g., *Persistence of Memory* (1931; Mus. Mod. Art, N.Y.C.).

Dalian or **Dairen,** city (1990 est. pop. 2,400,000), S Liaoning prov., NE China, on the Liaodong peninsula. The city, centered on the harbor that employs 13% of its population, is China's third largest foreign-trade port. Dalian produces ships, diesel engines, machine tools, chemicals, and textiles and is a major fishing center. The municipality of **Lüda** comprises Dalian, Lüshun (the former Port Arthur, an important naval center), and surrounding areas.

Dallapiccola, Luigi, 1904–75, Italian composer. The first Italian to use ATONALITY, he is noted for his operas *The Prisoner* (1944–48) and *Odysseus* (1968); the ORATORIO *Job* (1950); and the Christmas CONCERTO (1956).

Dallas, city (1990 pop. 1,006,877), seat of Dallas co., N Tex., on the Trinity R.; inc. 1871. It is the second largest city in Texas and the eighth largest in the U.S.; with nearby FORT WORTH, it forms Texas's largest metropolitan area (1990 pop. 3,885,415). A French settlement c.1841 and a cotton market in the 1870s, it later developed into the financial center of the Southwest. Oil refineries; diverse manufactures, particularly aerospace and electronic products; meat-packing plants; corporate headquarters for oil, gas, insurance, and banking companies; and governmental offices are of major importance in its economy. The city is also a tourist and convention center. Dallas is noted as a hub of fashion and of cultural and educational institutions.

Dalmatia [dălmā'shə], historic region and province of CROATIA, extending along the ADRIATIC SEA from Rijeka to the Gulf of Kotor. Split is the capital. Dalmatia is mountainous, except for a coastal lowland whose scenic beauty attracts many tourists. Other economic activities include agriculture and fishing. A Roman province, Dalmatia was divided by the 10th cent. between the kingdoms of Croatia and Serbia. By 1420 Venice held most of the region. Various parts of Dalmatia passed (16th–20th cent.) to Hungary, the Turks, France, and Austria. After 1918 the region became part of YUGOSLAVIA. Most of Dalmatia was occupied by Italy during World War II. After Croatia declared (1991) its independence from Yugoslavia, the southern Dalmatian town of Dubrovnik was the scene of heavy fighting between Croatian and Yugoslav forces.

Dalmatian, hardy NONSPORTING DOG, known for speed and endurance; shoulder height, 19–23 in. (48.3–58.4 cm); weight, 35–50 lb (15.9–22.7 kg). It has a short, glossy coat, white with black or dark-brown spots. Probably developed in DALMATIA several hundred years ago, it was associated with horses and with horse-drawn coaches and fire engines; it remains a firemen's mascot.

Dalton, John, 1766–1844, English scientist. He taught mathematics and physical sciences at New College, Manchester. Dalton revived the atomic theory of matter (see ATOM), which he applied to a table of atomic weights and used in developing his law of partial pressures (Dalton's law). He was color-blind and studied that affliction, also known as Daltonism.

dam, barrier, commonly across a watercourse, to hold back water, often forming a reservoir or lake. Modern dams may be built for multiple purposes: to provide water for irrigation, aid flood control, furnish hydroelectric power, and improve the navigability of waterways. Rock-fill and earth dams are built with a central core—usually clay or cement, respectively—that is impervious to water. Gravity dams, usually made of concrete, use their own weight to provide resistance to the pressure of water. Single-arch concrete dams are curved upstream and are usually constructed in narrow canyons where the rocky side walls are strong enough to withstand the tremendous thrust of the dam, caused by the pressure of the water. Multiple-arch dams consist of a number of single arches supported by buttresses. Roller-compacted concrete dams, in which thin concrete layers are compacted as if they were earth, do not need full forms. See also ASWAN HIGH DAM; GRAND COULEE DAM; HOOVER DAM; TENNESSEE VALLEY AUTHORITY.

Damascene, John: see JOHN OF DAMASCUS, SAINT.

Damascus, city (1988 est. pop. 1,300,000), capital of Syria, SW Syria. The largest city in Syria, it stands in an oasis between mountains and desert and is bisected by the Barada R. Manufactures include textiles, metalware, sugar, and glass. Inhabited before 2000 B.C., it may be the oldest continuously occupied city in the world. From the 2d millennium B.C. to A.D. 395 it was ruled by the Egyptians, the Israelites, the Assyrians, the Persians, Alexander the Great, the Seleucids, and the Romans. A thriving commercial city, it early adopted Christianity. St. PAUL was converted on the road to Damascus. A provincial Byzantine capital, it fell to the Arabs in 635 and became Islamic. After 750 it was held by many conquerors, including the Saracens (12th–13th cent.) and the Ottoman Turks (1516–1918). Arab troops working with T.E. LAWRENCE helped the British take it in 1918. The French then ruled it as part of a League of Nations mandate until Syria became independent (1941). Landmarks include the Great Mosque, one of the world's largest.

d'Amboise, Jacques, 1934–, American dancer and choreographer; b. Dedham, Mass. He became (1953) a soloist with the NEW YORK CITY BALLET. He is known for American-theme works, e.g., *Filling Station, Western Symphony,* films, e.g., *Carousel* (1956), and his own ballets, e.g., *Irish Fantasy* (1964). D'Amboise founded the National Dance Institute in 1976 to bring the teaching of dance into city public schools.

Damocles [dăm'əklēz], in classical literature, courtier of DIONYSIUS

THE ELDER at SYRACUSE. To show the precariousness of power and rank, Dionysius gave a banquet at which a sword was suspended over Damocles' head by a hair.

Damon and Pythias, two youths whose loyalty to each other symbolizes true friendship. When Pythias, condemned to death by the Syracusan tyrant DIONYSIUS THE ELDER, was released to arrange his affairs, Damon stayed on as pledge. On Pythias' return, Dionysius freed them both.

Dan: see ISRAEL, TRIBES OF.

Dana, Richard Henry, 1787–1879, American author; b. Cambridge, Mass. A lawyer, poet, critic, and essayist, he was a founder of the *North American Review* and is best known for his poem *The Buccaneer* (1827). His son, **Richard Henry Dana,** 1815–82, was a writer and lawyer who wrote a classic of the days of sailing ships in *Two Years before the Mast* (1840), based on his experiences as a common sailor. *The Seaman's Friend* (1841), a manual of maritime law, grew out of his legal practice.

Da Nang, formerly Tourane, city (1990 est. pop. 371,000), central Vietnam, a port on the SOUTH CHINA SEA. It has an excellent deep-water harbor. Its manufactures include textiles and machinery. The scene (1535) of the first European landing in Vietnam, it was ceded to France by ANNAM in 1787. During the VIETNAM WAR it was the site of a huge U.S. military base.

dance, art of precise, expressive, and graceful human movement, usually performed in accord with musical accompaniment. Many primitive dances have survived in the FOLK DANCE of modern times. Native American dances, usually of a ritualistic and ceremonial nature, illustrate many of the purposes of primitive dancing. The dance of religious ecstasy, in which hypnotic and trancelike states are induced (characteristic of Africa and Asia), was represented in America by the remarkable GHOST DANCE. Native American dancing is always performed on the feet, but in islands of the Pacific and in Asia, some dances are performed in a sitting posture, with only the hands, arms, and upper parts of the body being used. In Japan, the early dances became institutionalized with a national school of dancing in the 14th cent. Soon dance became associated with the famous Nō drama (see ASIAN DRAMA). In medieval Europe, the repeated outbreaks of dance mania, associated with epidemics of bubonic plague, are reflected in the allegory of the Dance of Death. Dancing as a social activity and a form of entertainment is of relatively recent origin. In the Middle Ages, social dancing was a feature of the more enlightened courts. The BALLET first appeared at the French court in the 16th cent. Among formal social dances of the 17th cent. were the MINUET and the GAVOTTE. MODERN DANCE became part of the world of serious theatrical dance in the 20th cent. Popular national dances include the mazurka and polonaise, from Poland; the fandango and bolero, from Spain; and the WALTZ, from Germany. The U.S. initiated such dances as the cake walk, the Virginia reel, the fox trot, and the Charleston. Since the 1920s the U.S. has seen a number of dance crazes, e.g., the Lindy Hop of the 1930s, the jitterbug of the 1940s, the rock 'n' roll forms of the 1950s, the go-go dances of the 1960s, the disco dances of the 1970s, and the hip-hop styles of the 1980s and 90s. See articles on major dance companies and individual dancers.

Dance Theater of Harlem, established (1968) as an open-door school. It was founded by Arthur Mitchell of the NEW YORK CITY BALLET and is the first African-American classical dance company. Its repertoire includes mainly classics choreographed by Mitchell, Jerome ROBBINS, Antony TUDOR and others. The company tours extensively and offers community dance courses at home.

dandelion, perennial herb (genus *Taraxacum*) of the COMPOSITE family, widely distributed in temperate regions. It has a rosette of deep-toothed leaves and a bright yellow head followed in fruit by a round head of white down for wind distribution. The common dandelion (*T. officinale*) is generally considered a lawn pest in the U.S. but is also cultivated for food and medicine in the U.S. and elsewhere. The leaves are used in salads and as a seasoning; the roots are used as a coffee substitute, as a bitter tonic, and as a laxative; the flower heads are used for making dandelion wine and as forage for bees. The dandelion plant contains a white latex—a hydrocarbon—that can be converted into a combustible fuel. One species is grown commercially for latex in some nations.

Danegeld [dān'gĕld"], medieval land tax originally raised to buy off raiding Danes and later used for military expenditures. In England the tribute was first levied in 868 and then in 871 by ALFRED. Under ÆTHELRED (978–1016) it became a regular tax, and was collected by later rulers until the 12th cent.

Danelaw [dān'lô"], originally the body of law that prevailed in the part of England occupied by the Danes after the treaty of King ALFRED with Guthrum in 886. It soon came to mean also the area in which Danish law obtained. The Danelaw had four main regions: NORTHUMBRIA; the areas around and including Lincoln, Nottingham, Derby, Leicester, and Stamford; EAST ANGLIA; and the SE Midlands.

Daniel, book of the OLD TESTAMENT, 27th in the Authorized Version. It relates events and visions from the life of Daniel, a Jew of the 6th cent. B.C. Daniel and his friends, taken to BABYLON, remain faithful to the TORAH (1); Daniel interprets a dream of NEBUCHADNEZZAR (2); Nebuchadnezzar tries to punish three recalcitrant Jews (the Three Holy Children) in the fiery furnace (3); Daniel interprets a second dream of Nebuchadnezzar to foretell the latter's madness (4); Daniel interprets the handwriting on the wall at BELSHAZZAR'S feast (5); he escapes from the lion's den (6); he has four apocalyptic visions (7–12). The story of Susanna and the elders, and also the stories of Daniel's revelation of the fraud connected with the Babylonian idol Bel and of his killing a dragon and subsequent miraculous escape after being thrown to lions, are in the version of Daniel in the APOCRYPHA. The book as a whole presents many critical problems.

Danilova, Alexandra [dänē'luvä], 1904–, Russian-American ballerina; b. St. Petersburg. She trained (1924–29) in St. Petersburg with DIAGHILEV, and was (1938–52) prima ballerina of the Ballet Russe de Monte Carlo. After her retirement, she taught.

Danish language, member of the North Germanic, or Scandinavian, group of the Germanic subfamily of the Indo-European family of languages. See LANGUAGE (table).

D'Annunzio, Gabriele, 1863–1938, Italian poet, novelist, dramatist, and soldier. The sensuous imagery of his early poetry, from *Canto nuovo* (1882) to *Alcione* (1904), displayed unrivaled craftsmanship. His novels, e.g., *The Child of Pleasure* (1889) and *The Triumph of Death (1894),* show the same control of language but are shallow and theatrical. Two of his plays, *La Gioconda* (1899) and *Francesca* (1902), were written for Eleonora DUSE; their affair he described in the novel *The Flame of Life* (1900). In World War I, D'Annunzio's oratory had much to do with Italy's entrance on the Allied side. In Sept. 1919 he led a march on Fiume, where he established an illegal government. He was an early exponent of fascism. See also IRREDENTISM.

Dante Alighieri [älēgyĕ'rē], 1265–1321, Italian poet, author of the *Divine Comedy.* A Florentine patrician, he fought on the side of the GUELPHS but later supported the imperial party. In 1290, after the death of his exalted Beatrice (see BEATRICE PORTINARI), he plunged into the study of philosophy and Provençal poetry. Politically active in Florence from 1295, he was banished in 1302 and became a citizen of all Italy, dying in Ravenna. The *Divine Comedy,* a vernacular poem in 100 cantos (more than 14,000 lines), was composed in exile. It is the tale of the poet's journey through Hell and Purgatory (guided by VERGIL) and through Heaven (guided by Beatrice, to whom the poem is a memorial.) Written in a complex PENTAMETER form, *terza rima,* it is a magnificent synthesis of the medieval outlook, picturing a changeless universe ordered by God. Through it Dante established Tuscan as the literary language of Italy and gave rise to a vast literature. His works also include *La vita nuova* (c.1292), a collection of prose and lyrics celebrating Beatrice and ideal love; treatises on language and politics; eclogues; and epistles.

Danton, Georges Jacques [däNtôN'], 1759–94, French Revolutionary leader. A lawyer who won immense popularity through his powerful oratory, he exercised power as a member of the Legislative Assembly (1791–92), the COMMUNE OF PARIS, and the CORDELIERS, and through his participation in the overthrow (1792) of the monarchy. In the new republic he was virtual head of the Provisional Executive Council and came to dominate the first Committee of Public Safety (1793) created by the Convention. Although initially Danton had sought foreign wars in order to spread French institutions, with France's military reverses he advocated a concil-

iatory foreign policy and the relaxation of the REIGN OF TERROR at home. Eclipsed by ROBESPIERRE and the extremists, he was arrested on a charge of conspiracy in 1794, subjected to a mock trial, and guillotined.

Danube, chief river of central and SE Europe, c.1,770 mi (2,850 km) long, second-longest European river after the Volga. It rises in the Brege and Brigach rivers in the BLACK FOREST of SW Germany and crosses or forms part of the borders of Austria, Slovakia, Hungary, Croatia, Yugoslavia, Romania, Bulgaria, and Ukraine before entering the BLACK SEA through a large (c.1,000 sq mi/2,590 sq km), swampy delta. The river is navigable by barges to Ulm (Germany) and connected to the Rhine and N Europe by the Rhine-Main-Danube Canal. The Sip Canal bypasses the rapids at Iron Gate gorge in the Romanian-Yugoslavian section.

Danzig: see GDAŃSK.

Daphne, in Greek mythology, a nymph loved by APOLLO. When she was pursued by him, she prayed for rescue and was transformed by GAEA into a laurel tree.

Daphnis and Chloë: see LONGUS.

Da Ponte, Lorenzo, 1749–1838, Italian poet, librettist, and teacher. He wrote the librettos to MOZART's *Marriage of Figaro* (1786), *Don Giovanni* (1787), and *Così fan tutte* (1790). In America after 1805, he taught Italian language and culture. In 1833 he helped establish the Italian Opera House, N.Y.C.

DAR: see DAUGHTERS OF THE AMERICAN REVOLUTION.

D'Arblay, Madame: see BURNEY, FANNY.

Dardanelles, narrow strait, known as the Hellespont in ancient times, c.40 mi (60 km) long and 1–4 mi (1.6–6.4 km) wide, linking the Sea of Marmara and the Mediterranean Sea, and separating European and Asian Turkey. It forms, with the Sea of Marmara and the BOSPORUS, the only outlet of the BLACK SEA, controlling access of ships from the sea to the MEDITERRANEAN SEA–SUEZ CANAL–INDIAN OCEAN sea lane. International access by all merchant ships and by warships in peacetime is guaranteed by the Montreux Convention (1936), which also recognized Turkey's right to fortify the strait.

Dardic languages, group of languages belonging to the Indo-Iranian subfamily of the Indo-European family of languages. See LANGUAGE (table).

Dare, Virginia, b. 1587, first child born of English parents in America. She was a member of the "lost colony" of ROANOKE ISLAND that disappeared c.1591.

Dar-es-Salaam, largest city (1988 pop. 1,360,850) and capital of Tanzania, on an arm of the Indian Ocean. It is the country's chief port and economic center, connected by rail to Kigoma, in the west, and (since 1975) to LUSAKA, Zambia. The city has a variety of industries and a major oil refinery. Founded in 1866 by the sultan of ZANZIBAR, it became the capital of German East Africa in 1891 and grew rapidly after World War II. Today it has a university and several colleges.

Darío, Rubén [därē'ō], 1867–1916, Nicaraguan poet and diplomat; b. Félix Rubén García Sarmiento. His first book, *Blue* (1888), heralded the founding of MODERNISMO. Other works include *Prosas profanas* (1896) and *Autumn Poem* (1910), perhaps his masterpiece. His influence on all Spanish-language writers was enormous. He served as a diplomat in many European and Latin American countries.

Darius, several kings of ancient PERSIA. **Darius I** (the Great), d. 486 B.C. (r.521–486 B.C.), was one of the most able of the ACHAEMENIDS. He perfected a highly efficient system of administration. Around 500 B.C., when the Ionian cities rebelled against Persian rule, Darius put down the rebels and set out to punish the Greek city-states that had aided the insurrection. He met defeat in the memorable battle of MARATHON (490 B.C.); however, he consolidated Persian power in the East. He also continued Cyrus the Great's policy of restoring the Jewish state. **Darius II,** d. 404 B.C. (r.423?–404 B.C.), was not popular or successful, and he spent much time in quelling revolts. He lost Egypt (410) but secured influence in Greece. **Darius III,** d. 330 B.C. (r.336–330 B.C.), seriously underestimated ALEXANDER THE GREAT's strength when the Macedonians invaded Persia. He was defeated by Alexander in several major battles and was forced to flee to Bactria, where the satrap had him murdered. These events ended the Persian empire and marked the beginning of the Hellenistic period in the E Mediterranean.

Dark Ages: see MIDDLE AGES.

dark matter, material that is believed to make up more than 90% of the mass of the universe but is invisible because it neither emits nor reflects ELECTROMAGNETIC RADIATION, such as light or radio signals. Its existence would explain gravitational anomalies seen in the motion and distribution of galaxies. Dark matter can only be detected indirectly, e.g., through the bending of light rays from distant stars by its gravity. It may consist of dust, planets, intergalactic gas formed of ordinary matter, or of MACHOs [*M*assive *A*strophysical *C*ompact *H*alo *O*bjects], nonluminous bodies such as burned-out stars, black holes, and brown dwarfs. Other theories hold that it is made of ELEMENTARY PARTICLES that played a key role in the formation of the universe, possibly the low-mass NEUTRINO or theoretical particles called axions and WIMPs [*W*eakly *I*nteracting *M*assive *P*articles]. See also INTERSTELLAR MATTER.

Darlan, Jean François [därläN'], 1881–1942, French admiral and politician. The leading member of Marshal PÉTAIN'S VICHY government in WORLD WAR II, he strengthened France's collaborationist ties with Germany. Later, as commander of all French forces, he was in N Africa during the Nov. 1942 Allied landings and brought French N and W Africa over to the Allied side. He was assassinated on Dec. 28.

Darling, longest river in Australia, flowing 1,702 mi (2,739 km) generally southwest across the semiarid plains of NEW SOUTH WALES to join the MURRAY R. at Wentworth. An important source of irrigation water, it rises in the rainy EASTERN HIGHLANDS and receives many tributaries; occasionally it runs dry.

Darnley, Henry Stuart or **Stewart, Lord,** 1545–67, second husband of MARY QUEEN OF SCOTS and father of JAMES I. Son of the powerful earl of Lennox, he claimed succession to the English throne through his grandmother Margaret TUDOR. His Catholic sympathies, his claim on the throne, and perhaps his handsome appearance induced Mary to marry him in 1565. He proved to be vicious and dissipated, and she did not make him royal consort. Jealous of David RIZZIO, Darnley and others murdered him. Soon Darnley was without friends. A plot was formed to murder him, probably under the earl of BOTHWELL. On Feb. 9, 1567, the house near Edinburgh where he was staying was blown up; he was found strangled in an adjoining garden the next day.

DARPA: see ADVANCED RESEARCH PROJECTS AGENCY.

Darrow, Clarence Seward, 1857–1938, American lawyer; b. Kinsman, Ohio. He had an early lucrative career in private and corporate law, but with his defense of Eugene V. DEBS and others in connection with the 1894 Pullman strike he turned to representing the underdog. He became famous as an opponent of capital punishment; none of his more than 100 clients was sentenced to death. In the SCOPES TRIAL (1925) on the teaching of evolution in public schools, he opposed fundamentalist religious tenets, arguing against William Jennings BRYAN. Darrow's writings include *Crime: Its Cause and Treatment* (1922).

Darwin, Charles Robert, 1809–82, English naturalist, grandson of Erasmus DARWIN. He firmly established the theory of organic EVOLUTION. His position as official naturalist aboard the H.M.S. *Beagle* during its world voyage (1831–36) started Darwin on a career of accumulating and assimilating data that resulted in the formulation of his concept of evolution. In 1858 he and Alfred Russel WALLACE simultaneously published summaries of their independently conceived notions of NATURAL SELECTION; a year later Darwin set forth the structure of his theory and massive support for it in his *Origin of Species.* This was supplemented by later works, notably *The Descent of Man* (1871). Darwin also formulated a theory of the origin of coral reefs.

Darwin, Erasmus, 1731–1802, English physician and poet; grandfather of Charles DARWIN. His long poem *Botanic Garden* (1789–91) expounded the Linnaean system. *Zoonomia* (1794–96) explained organic life in evolutionary terms, anticipating later theories.

Darwin, city (1990 est. pop. 73,300), capital of the Northern Territory, N Australia, on an inlet of the Timor Sea. It is the chief port and administrative center for the sparsely settled tropical north coast. Called Palmerston until 1911, it was renamed for Charles DARWIN, who discovered its site in 1839. It has been largely rebuilt

since a devastating typhoon in 1974. Kakadu National Park is nearby.

Darwinism: see NATURAL SELECTION.

database: see INFORMATION STORAGE AND RETRIEVAL.

data communications, transmission of digitally encoded data from a source to a destination, particularly as applied to computers. Although telephone circuits are often used, their relatively limited frequency range makes them rather slow paths for data, a limitation offset by their availability and relatively low cost. Generally MODEMS are used to coordinate the computer and the telephone circuit. Where cost can be justified, high speed data links are constructed; these are often FIBER-OPTIC or coaxial cables designed for wide frequency range, or microwave, radio systems. Because local-area and wide-area networks link many computers together so that they can transfer and share data, a variety of techniques are used to allocate the communications resource: in time-division multiplexing, each computer is assigned a short time slot during which it can use the whole bandwidth of the network; in packet switching, multiple concurrent transmissions can take place because each data packet is tagged with the address for which it is intended; and in asynchronous transfer mode (ATM)—an advanced form of packet switching—video, data, and voice transmissions can be transmitted making it ideal for multimedia computer communications.

data processing or **information processing,** operations (e.g., handling, merging, sorting, and computing) performed upon data in accordance with strictly defined procedures, such as recording and summarizing the financial transactions of a business. In automatic or electronic data processing the operations are performed by a COMPUTER. In distributed data processing some or all of the operations are performed in different locations at computer facilities connected by telecommunications links.

date, name for a PALM (*Phoenix dactylifera*) and for its edible fruit, probably native to Arabia and North Africa and long a major food source in desert and tropical regions. The sweet, nutritious fruits grow in heavy clusters; a tree may produce up to 200 lb (90 kg) annually. Sugar and a fermented drink are made from the sap of the tree, and the seeds are sometimes used as a coffee substitute. The wood of the trunk is used in construction, and mats and baskets are woven from the leaves.

dating, in geology, archaeology, paleontology, and physics, the determination of the actual or relative age of an object, of a natural phenomenon, or of a series of events. The most common and accepted method of absolute geologic dating (establishment of actual age) is based on the natural RADIOACTIVITY of certain minerals found in rocks; because the rate of radioactive decay of any particular ISOTOPE is known, the age of a specimen can be computed from the ratio of the remaining isotope and its decay product. Relative geological dating (determination of the sequence of geological events) is accomplished by marking out the succession in which rocks were deposited, using various surface criteria. The identification of FOSSILS in a geological sample is very useful because certain assemblages of species are characteristic of specific geologic time periods. Pollen analysis, or palynology, can also establish the succession of deposits as well as the climate prevalent at the time of deposition. In archaeology and recent geology, the carbon-14 method, which measures the remaining amount of this radioactive isotope in organic matter, can date specimens as old as 35,000 years. The death of an organism ends the incorporation of this isotope (created by COSMIC-RAY bombardment) and levels of the isotope equal at a rate equal to the isotope's known decay rate. This method's accuracy has been improved by cross-checking with dendrochronology, in which the age of a piece of ancient wood can be determined by examining the ring pattern in its cross section. The pattern of individual ring widths in a sample reflects local climatic conditions occurring at the time when the piece of wood was a growing tree. By the use of overlapping patterns found in different wood samples, dating by this method has been carried back over 8,000 years.

Daubigny, Charles-François [dōbēnyē'], 1817–78, French landscape painter. Best known for his paintings of the banks of the Seine and the Oise, he was particularly successful in his atmospheric depiction of dawn, twilight, and moonlight, e.g., *Moonlight.* His son, **Karl Pierre Daubigny,** 1846–86, painted in his father's manner.

Daudet, Alphonse [dōdā'], 1840–97, French author. He is noted for his gently naturalistic portrayals of French life, as in the Provence-inspired collection of short stories, *Letters from My Mill* (1869). His semiautobiographical novel, *Le Petit Chose* (1868), touchingly describes his life at boarding school. His son, **Léon Daudet,** 1867–1942, editor of the right-wing Catholic paper *Action française,* was the author of an extensive and valuable series of memoirs.

Daughters of the American Revolution (DAR), patriotic society founded 1890 in Washington, D.C., and open to women with ancestors who aided the AMERICAN REVOLUTION. It has over 204,000 members and has done much to preserve and mark historic places. The DAR has been criticized for its conservative political policies.

Daumier, Honoré [dōmyā'], 1808–79, French caricaturist, painter, and sculptor. Daumier was the greatest social satirist of his day. His bitterly ironic approach mercilessly ridiculed bourgeois society in realistic graphic style. He produced almost 4,000 lithographs now considered masterpieces. His stylistically similar small canvases, e.g., *Third-Class Carriage* (Metropolitan Mus.), have the same dramatic intensity. His sculpture includes over 30 small, painted busts.

dauphin [dô'fĭn] [Fr., = dolphin], French title. It was borne first by the counts of Vienne and after 1350 by the eldest son of the king of France. If the dauphin died before the king, the title went to the dauphin's eldest son.

Davenport, city (1990 pop. 95,333), seat of Scott co., E central Iowa, on the Mississippi R.; inc. 1836. With the Illinois cities of Rock Island, Moline, and East Moline, it forms the Quad Cities. It prospered with the arrival (1856) of the first railroad to bridge the river. Today it produces processed food, agricultural equipment, and clothing and is a rail and commercial center. The Mississippi flooded large areas of the city in 1993.

David, Saint, d. 588?, patron saint of WALES, first abbot of Menevia (now Saint David's) in Wales. His shrine was an important place of pilgrimage in the Middle Ages, and the national Welsh festival is still celebrated on his feast, Mar. 1.

David, d. c.972 B.C., king of the ancient Hebrews (c.1012–c.972 B.C.), successor of SAUL and one of the greatest of Hebrew national heroes. To him were ascribed many of the PSALMS. Many of the interesting and beautiful narratives in the BIBLE deal with the story of David, e.g., the fight of David and GOLIATH; the friendship of David and Saul's son, Jonathan; David's love for BATH-SHEBA; and the revolt of ABSALOM.

David, kings of Scotland. **David I,** 1084–1153 (r.1124–53), fought without success for MATILDA, his niece, in the struggle for the English crown between STEPHEN and Matilda. He did realize his main aim, securing Northumberland. His rule of Scotland was felicitous. **David II** (David Bruce), 1324–71 (r.1329–71), went to France after EDWARD III and Edward de BALIOL invaded Scotland in 1332. He invaded England in 1346, was captured, and held until ransomed in 1357.

David, Jacques-Louis [dävēd'], 1748–1825, French painter. The virtual art dictator of France for a generation, he made a break with tradition that marks the beginning of "modern art." He borrowed classical forms and motifs, primarily from sculpture, to illustrate his sense of virtue. Inspired by the ideals of the FRENCH REVOLUTION, he eschewed sentiment. His *Death of Socrates* (1787; Metropolitan Mus.) and *The Oath of the Horatii* (Louvre) are major works. David's iron control was softened in his portraits, e.g., *Marat* (1793; Brussels). As First Painter to NAPOLEON I he produced paintings that are static and deadened in feeling, e.g., *The Distribution of the Eagles* (1810).

Davidson, Jo, 1883–1952, American sculptor; b. N.Y.C. He is best known for his insightful, vigorously modeled portrait busts of such leading figures as Woodrow Wilson, Mahatma Gandhi, Franklin Delano Roosevelt, and Albert Einstein.

Davies, Arthur Bowen, 1862–1928, American painter; b. Utica, N.Y. A member of the EIGHT, he favored symbolic, romantic pictures of the female nude in idyllic landscapes. Davies was the chief organizer of the 1913 ARMORY SHOW.

Davies, Robertson, 1913–, Canadian novelist. He came to interna-

tional attention with the Deptford trilogy of novels (1970–75), a richly plotted study of three people's journey to self-discovery, replete with humor, mystery, magic, Jungian ideas, and grotesque characters. His other novels include *The Rebel Angels* (1982) and *The Lyre of Opheus* (1988).

Da Vinci, Leonardo: see LEONARDO DA VINCI.

Davis, Angela Yvonne, 1944–, African-American activist; b. Birmingham, Ala. She taught (1969–70) at UCLA despite state efforts to oust her for being a Communist. In 1970 she went into hiding after being accused of aiding an attempted courtroom escape that killed four persons. Apprehended, tried (1972), and acquitted, she became the vice-presidential candidate of the Communist party in 1980.

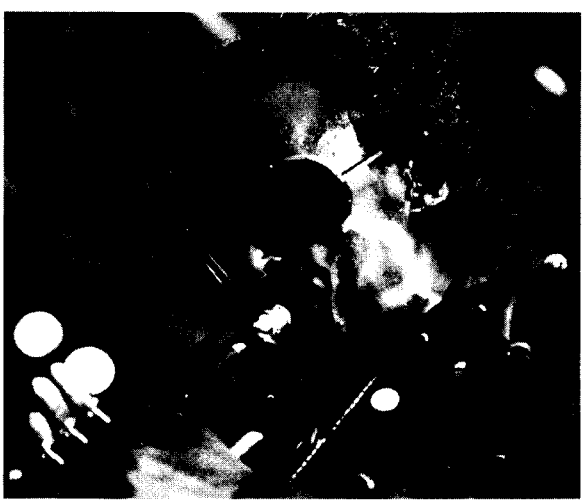
Davis, Benjamin Oliver, 1877–1970, U.S. general; b. Washington, D.C. Davis was (1940–48) the first African-American general in the U.S. Army, having risen from the rank of private. His son, **Benjamin Oliver Davis, Jr.,** 1912–, was (1954–65) the first African-American air force general and (1965–70) lieutenant general. He served (1971–75) as an assistant secretary in the Dept. of Transportation.

Davis, Bette, 1908–89, American film actress; b. Lowell, Mass., as Ruth Elizabeth Davis. An enduring Hollywood star, she made such films as *Jezebel* (1938; Academy Award), *Dark Victory* (1939), and *All About Eve* (1950).

Davis, Sir Colin (Rex), 1927–, English conductor. A clarinetist, he is self-taught as a conductor. He led the BBC Symphony (1967–71), the Royal Opera, Covent Garden (1971–86), and the Bavarian Radio Symphony Orchestra (1983–92). He was knighted in 1980.

Davis, Jefferson, 1808–89, American statesman, president of the CONFEDERACY (1861–65); b. near Elkton, Ky. A U.S. senator from Mississippi (1847–51, 1857–61) and U.S. secretary of war (1853–57), Davis left Washington after the secession (Jan. 1861) of Mississippi. As president of the Confederacy, he assumed strong centralized power, weakening the STATES' RIGHTS policy for which the South had seceded. He had many disputes with Confederate generals, and R.E. LEE surrendered without his approval. Captured (1865) by Union forces, he was imprisoned for two years but was released (1867) without prosecution.

Davis, Miles, 1926–91, African-American musician; b. Alton, Ill. He worked with Charlie PARKER in the 1940s, was a catalyst of "cool" JAZZ around 1950, led influential small bands through the 1960s, and produced jazz-rock and jazz-funk blends in the late 1960s and the 1970s. He was famous for his warm, often muted trumpet style.



Miles Davis

Davis, Richard Harding, 1864–1916, American writer; b. Philadelphia. A leading journalist and foreign correspondent, he specialized in books about his wartime experiences. His also wrote novels, e.g., *Soldiers of Fortune* (1897) and *The Bar Sinister* (1903); short stories; and plays.

Davis, Stuart, 1894–1964, American painter; b. Philadelphia. A jazz enthusiast, he often incorporated jazz tempos into the vibrant patterns of his paintings. In the 1920s Davis came under the influence of CUBISM and created, in such works as *Colonial Cubism* (Walker Art Center, Minneapolis), a brightly colored, distinctly American interpretation of the movement.

Davy, Sir Humphry, 1778–1829, English chemist and physicist. He was professor (1802–13) at the Royal Inst., London, where his electrochemical researches led to his isolation of SODIUM and POTASSIUM (1807) and BARIUM, BORON, CALCIUM, and MAGNESIUM (1808). He showed chlorine to be an element, theorized that acids characteristically contain hydrogen, and classed chemical affinity as an electric phenomenon.

Dawes, Charles Gates, 1865–1951, vice president of the U.S. (1925–29); b. Marietta, Ohio. He shared the 1925 Nobel Peace Prize for proposing the Dawes Plan that reduced defeated Germany's reparations. He was vice president under Pres. COOLIDGE.

Dawson or **Dawson City,** city (1991 pop. 972), W Yukon, N Canada, at the confluence of the Yukon and Klondike rivers. A famous gold rush town whose population reached c.20,000 in 1898, it was the territorial capital until replaced by WHITEHORSE in 1952.

Day, Clarence Shepard, 1874–1935, American essayist; b. N.Y.C. He is best known for sketches of his parents, e.g., *Life with Father* (1935) and *Life with Mother* (1937).

day: see SIDEREAL TIME; SOLAR TIME.

Dayan, Moshe [dīän'], 1915–81, Israeli military leader; b. Palestine. He directed the 1956 Sinai campaign as chief of staff and the 1967 Six-Day War as defense minister. Blamed for Israeli unpreparedness in the 1973 October War, he resigned (1974) with Golda MEIR. Later (1977–79) he was Israeli foreign minister. See also ARAB-ISRAELI WARS.

day-care center, institution for the care of children of working parents; also called day nursery, but not to be confused with NURSERY SCHOOL. Originating in Europe in the late 18th cent., day-care facilities were first established in the U.S. by private charities in the 1850s. The women's movement and other social developments during the 20th cent. have spurred the growth of day-care centers and encouraged businesses to establish them.

Day Lewis, C(ecil), 1904–72, English author. His verse was at first didactic and social, reflecting his leftist leanings, later more personal and metaphysical. His works include *Collected Poems* (1954); a translation of Vergil's *Aeneid* (1952); and detective stories written under the pseudonym Nicholas Blake. He was POET LAUREATE (1967–72).

daylight saving time (DST), time observed when clocks and other timepieces are set ahead, usually by 1 hr, so that the sun will rise and set later in the day as measured by civil time (see SOLAR TIME). DST conserves lighting power and provides more usable daylight hours for afternoon and evening activities. First adopted during World War I by the U.S. and other countries, DST in the U.S. currently extends from the first Sunday in April to the last Sunday in October.

day nursery: see DAY-CARE CENTER.

Dayton, city (1990 pop. 182,044), seat of Montgomery co., SW Ohio, on the Great Miami R.; inc. 1805. It is a port and trading hub for a fertile farm area, and an aviation center. Chief manufactures are computers, air conditioners, appliances, tools, and paper and rubber goods. The city grew with the extension of canals (1830s–40s) and railroads, and with the industrial demands of the CIVIL WAR. The WRIGHT brothers, Dayton natives, returned there after their historic first flight and established a research aircraft plant.

Dazai Osamu [dä'zī], pseudonym of **Shuji Tsushima** [shōō'jī], 1909–48, Japanese novelist. He was noted for his obsession with suicide, his ironic and gloomy wit, and his brilliant fantasy. His masterpiece, *Setting Sun* (1947), depicts the decline of Japan's nobility after World War II.

DC: see ELECTRICITY; GENERATOR; MOTOR, ELECTRIC.

D Day: see WORLD WAR II.

ddI and **ddC:** see AZT.

DDT: see INSECTICIDES.

deadly nightshade: see BELLADONNA; NIGHTSHADE.

Dead Sea, salt lake, c.390 sq mi (1,010 sq km), in the arid Jordan trough of the GREAT RIFT VALLEY, on the Israel-Jordan border. At

1,292 ft (394 m) below sea level, it is the lowest point on earth. The lake, which has no life and owes its high salinity to rapid evaporation, derives most of its inflow (now diminished because of irrigation) from the JORDAN R. Potash and bromine are commercially extracted.

Dead Sea Scrolls, documents of great historical and scholarly value, found in 1947 and later in caves above the NW Dead Sea. Archaeologists have shown that the scrolls stored in jars in the first cave at QUMRAN were written or copied between the 1st cent. B.C. and the first half of the 1st cent. A.D. Chief among the scrolls are two copies of the Book of Isaiah, almost 1,000 years older than any Hebrew biblical manuscript previously known. Another important scroll was the so-called *Manual of Discipline* for an ascetic community, which has been identified with both the ruins at nearby QUMRAN and the Essenes, a Jewish religious sect living an ascetic communal agricultural life in that region between the 2d cent. B.C. and 2d cent. A.D. Parallels between the "Qumran" scrolls and the New Testament have led some scholars to suggest a tie between the Essenes and the early Christians, including the much-disputed suggestion that Jesus and John the Baptist may have been Essenes. More recent work by other archaeologists and biblical scholars has questioned the association of the scrolls with the Qumran ruins and the Essenes.

deafness, partial or total loss of hearing. It may be present at birth (congenital) or acquired any time thereafter. Conductive deafness, one of the two major types of deafness, involves a disturbance in the transmission of sound to the nerve receptors of the inner ear. This type of deafness may be caused by infection, impacted wax, perforation of the eardrum, or otosclerosis, a chronic condition, especially in older people, that restricts the vibration of the bone leading to the inner ear. These conditions can usually be treated with ANTIBIOTICS, surgery, hearing aids, and other techniques. The other major type of deafness—perceptive, or nerve, deafness—involves damage to neural receptors in the inner ear, to nerve pathways to the brain, or to the area of the brain concerned with hearing. Usually permanent, it can be caused by infection, senility, tumors, or excessive noise, or it may be congenital. A cochlear implant, in which a tiny receiver is connected by a wire to the inner ear, can sometimes alleviate perceptive deafness. Those who cannot be helped to hear may communicate through SIGN LANGUAGE and lip reading. The first U.S. public school for the deaf was founded in 1817 by T.H. GALLAUDET. See also EAR.

Dean, James, 1931–55, American film actor, b. Fairmount, Ind. Dean was identified with restless, inarticulate youth in *East of Eden* (1953) and *Rebel without a Cause* (1954). He was killed when his racing car crashed, and his death set off a worldwide wave of cultist mourning.

Dearborn, city (1990 pop. 89,286), SE Mich., on the Rouge R., adjoining DETROIT; settled 1795, inc. as a city 1929. It is the home of the Ford Motor Co., and has automotive research and manufacturing facilties. Largely residential despite its industry, it is famous for the Edison Inst. of Technology, which includes Greenfield Village, birthplace of Henry FORD, and the Henry Ford Museum.

death, cessation of all life (metabolic) processes. Death may involve the organism as a whole (somatic death) or may be confined to cells and tissues within the organism. Somatic death has traditionally been defined as the end of cardiac activity and RESPIRATION. With advances in organ TRANSPLANTATION techniques, however, the need has arisen for a more precise definition of medical death, since the death of a donor must be established before transfer of an organ can be undertaken. The current definition is that of a 1981 U.S. presidential commission which recommended that death be defined as "irreversible cessation of all functions of the entire brain, including the brain stem," the brain stem being that part of the brain that controls breathing and other basic body functions. Some feel, however, that people in persistent vegetative states, i.e. people who have brain stem function but have lost higher brain functions (vision, abstract thought, personality) should be considered dead and allowed, through LIVING WILLS or relatives, to donate organs.

death angel: see MUSHROOM.

Death Valley National Monument, protected desert region, 2,067,628 acres (836,757 hectares), S California and S Nevada, location of the lowest point (282 ft/86 m below sea level) in the Americas. It receives less than 2 in. (5 cm) of rain a year and has recorded some of the world's highest air temperatures (134°F/57°C) and ground temperatures (165°F/74°C). The unusual plants and animals found there are of considerable scientific interest. Death Valley was a major source of borax in the late 19th cent.

debenture: see BOND.

debit card, card that allows the cost of goods or services that are purchased to be deducted directly from the purchaser's checking account. Increasingly common in the 1990s as alternatives to CREDIT CARDS, debit cards have been promoted as safer than cash and more convenient than personal checks. They are typically issued by large credit card companies through their participating banks.

de Broglie, Louis Victor, prince: see BROGLIE.

Debs, Eugene Victor, 1855–1926, American Socialist leader; b. Terre Haute, Ind. An advocate of industrial unions and a pacifist, Debs was imprisoned in 1895 for breaking an injunction during the Pullman railroad strike. Later, he was jailed (1918–21) for violating the Espionage Act. He helped to form the Socialist party and was its presidential candidate five times after 1900. Debs was widely revered as a martyr to his principles.

debt, obligation in services, money, or goods owed by one party (the debtor) to another (the creditor). A debt usually involves the payment of INTEREST. If a debtor fails to pay, a court may assign payment out of the debtor's property. In ancient times debt was associated with slavery, because the insolvent debtor and his household were often turned over to the creditor to perform compulsory services. Imprisonment for debt, which once filled prisons, was ended as such in England and the U.S. by laws enacted in the 19th cent., although imprisonment on related charges, such as concealment of assets, may still occur. The laws of BANKRUPTCY govern the distribution a debtor's assets to the creditors.

debt, public, indebtedness of a government expressed in money terms; also known as the national debt. The public debt increases whenever public spending exceeds public revenues, producing budget deficits. To finance such deficits, the government borrows from private or institutional investors or from other governments. Public loans may be in the form of short-term instruments, such as treasury certificates, long-term government bonds, or various other notes. Governments may incur debts for several reasons, most importantly for the financing of wars and the combating of the effects of recessions, but also because of an unwillingness to limit spending or increase taxes for fear of the political consequences. Heavy government borrowings exert upward pressures on INTEREST rates and may be harmful to the general economy. The rate of increase in the U.S. public debt accelerated in the 1970s, reaching $533 billion in 1975 and $908 billion in 1980. During that period, however, the debt as a percentage of the GROSS DOMESTIC PRODUCT (GDP) remained steady, at less than 30%. In the 1980s, as a result of tax cuts under Pres. REAGAN, unprecedented peacetime budget deficits led to enormous increases in the national debt, which reached $4 trillion (67% of the GDP) by the end of 1992.

Debussy, Claude Achille [dəbüsē'], 1862–1918, French composer, exponent of musical IMPRESSIONISM. He employed the whole-tone SCALE to create nuances of mood and expression, exploring unusual harmonies and dissonances. He is best known for the tone poem (see SYMPHONIC POEM) *Prelude to the Afternoon of a Faun* (1894), inspired by a poem of MALLARMÉ. Other orchestral works include *Nocturnes* (1899) and *La Mer* (1905). His piano works include *Suite Bergamasque* (1905), including *Clair de lune; Estampes* (1903); preludes; and études.

decadents, name loosely applied to the late-19th-cent. artists and writers who strove to express the morbid and macabre elements of human emotion. They claimed art should exist for its own sake. Often confused with the French SYMBOLISTS, who influenced them, they were most evident in England, where they included WILDE, DOWSON, and BEARDSLEY.

Decameron: see BOCCACCIO, GIOVANNI.

decathlon, a contest comprising 10 track-and-field events: broad jump; high jump; discus; shot put; javelin; 100-meter, 400-meter, and 1,500-meter races; 110-meter hurdles; and pole vault. An Olympic event since 1912, it has been dominated by Americans. The

winner gains the traditional title "world's greatest athlete." See PENTATHLON.

Decatur, Stephen, 1779–1820, American naval officer; b. near Berlin, Md. During the TRIPOLITAN WAR, he led (1804) a daring raid into Tripoli harbor to burn the captured U.S. frigate *Philadelphia.* In the WAR OF 1812, Decatur commanded the *United States* and captured (1812) the British frigate *Macedonian.* Known for his reckless bravery and stubborn patriotism, he was mortally wounded in a duel with James BARRON.

Decatur, city (1990 pop. 83,885), seat of Macon co., central Ill., on the Sangamon R., inc. 1839. A railroad and industrial center in a rich farm area, Decatur processes soybeans and corn, repairs railway cars, and manufactures tires, tractors, machinery, and automobile equipment. Historic sites associated with Abraham LINCOLN are in and around the city.

Deccan, region of India. It is sometimes used in a wide sense for all of India S of the Narbada R. and sometimes, more specifically, for the area of rich volcanic soils and lava-covered plateaus in the northern part of the peninsula between the Narbada and Krishna rivers.

December: see MONTH.

Decembrists, Russian officers who rose against Czar NICHOLAS I in Dec. 1825. Influenced by liberal ideals while serving in W Europe during the Napoleonic Wars (see NAPOLEON I), they advocated representative democracy but disagreed on its form. Their poorly organized rebellion was crushed, but it led to increased revolutionary activity among the educated classes and an accompanying rise in police terrorism.

De Chirico: see CHIRICO, GIORGIO DE.

decibel (dB), unit of sound intensity. The faintest audible sound is arbitrarily assigned a value of 0 dB, and the loudest sounds that the human ear can tolerate are about 120 dB. The difference in decibels between any two sounds is equal to 10 $\log_{10} (P_1/P_2)$, where P_1 and P_2 are the two power levels.

decimal system [Lat., = of tenths], NUMERATION system based on powers of 10 and using the digits 0, 1, 2, 3, 4, 5, 6, 7, 8, and 9. A numeral in the decimal system is written as a row of digits, with each position in the row corresponding to a specific power of 10 (see EXPONENT). A decimal point in the row divides it into increasing positive powers of 10 for positions to the left, and increasing negative powers of 10 for positions to the right. For example, 103 represents $(1 \times 10^2) + (0 \times 10^1) + (3 \times 10^0)$, or $100 + 0 + 3$; and 1.03 corresponds to $(1 \times 10^0) + (0 \times 10^{-1}) + (3 \times 10^{-2})$, or $1 + 0 + \frac{3}{100}$. The decimal system was introduced into Europe c.1300. Its positional system made it an improvement over Roman numerals and simplified arithmetic computation. The METRIC SYSTEM of weights and measures is based on the decimal system, as are most systems of national currency.

Declaration of Independence, adopted July 4, 1776, by delegates of the THIRTEEN COLONIES, announcing their separation from Great Britain and the creation of the U.S. It was written almost totally by Thomas JEFFERSON. The opening paragraphs state the American ideal of government, based on the theory of natural rights. Its combination of general principles and an abstract theory of government with a detailed enumeration of specific grievances and injustices makes it one of the great political documents of history.

Declaration of London: see LONDON, DECLARATION OF.

Declaration of Rights: see BILL OF RIGHTS.

Declaration of the Rights of Man and Citizen, historic French document. It was drafted (1789) by Emmanuel SIEYÈS and embodied as the preamble in the French constitution of 1791. Influenced by the U.S. DECLARATION OF INDEPENDENCE and the ENLIGHTENMENT, it asserted the equality of all men, the sovereignty of the people, and the inalienable rights of the individual to liberty, property, and security.

declination: see ASTRONOMICAL COORDINATE SYSTEMS.

decompression sickness, physiological disorder caused by rapid decrease in atmospheric pressure that results in the release of nitrogen bubbles into body tissues. The bubbles cut off the oxygen supply, causing nausea, pain in the joints and abdomen, and, in severe cases, shock, paralysis, and even death. Also known as the bends, or altitude sickness, it affects divers, airplane pilots, and others working under compressed air. Use of a **decompression chamber** allows for a gradual reduction of pressure, preventing the accumulation of nitrogen in body tissues.

deconstruction, the exposure and undermining of the metaphysical assumptions involved in systematic attempts to ground knowledge, as in STRUCTURALISM. Deconstructionists tend to focus on close readings of texts and how the texts refer to other texts, to uncover what is left out, ignored, or silenced by the text, and reveal the illogical and paradoxical in what appears logical and stable. They also seek to disrupt hierarchical oppositions (speech and writing, truth and lie, being and nonbeing) in which one term is valued and the other denigrated and upon which texts depend. Because deconstruction is an attack on the very existence of theories and conceptual systems, deconstructionists shun logical definitions and explanations for such approaches as nonlinear presentations based on word play and puns. The term *deconstruction* was coined in the 1960s by Jacques DERRIDA, who extended the philosophical excursions of NIETZSCHE and HEIDEGGER to criticize the entire tradition of Western philosophy. In the U.S. deconstruction has been particularly influential in literary theory.

Dedekind, Julius Wilhelm Richard, 1831–1916, German mathematician, perhaps best known for the "Dedekind cut," whereby real numbers can be defined in terms of rational numbers. A student of Carl GAUSS, he led the effort to formulate rigorous definitions of basic mathematical concepts.

deduction. **1** In traditional LOGIC, the process of drawing, by reasoning, particular conclusions from more general principles assumed to be true. The Aristotelian SYLLOGISM is the classic example of deductive logic in the tradition. **2** In contemporary logic, any statement derived by a transformed rule upon an axiom; more generally, the term now refers to a process of deriving theorems from axioms, or conclusions from premises, by formal rules (transformation rules). See also INDUCTION.

Dee, John, 1527–1608, English mathematician, astrologer, and occultist. Acquitted of a charge of sorcery against Queen Mary I, he became a favorite of Queen Elizabeth I for whom he drew up valuable scientific studies about newly discovered lands. His occult studies led to his claim of having discovered the secret of ALCHEMY, which he practiced abroad.

Deep Sea Drilling Project, U.S. program (1964–83) to investigate the evolution of ocean basins by drilling and studying cores of ocean sediments and underlying oceanic crust. It used the *Glomar Challenger,* an elaborately equipped ship capable of drilling through great water depths. The OCEAN DRILLING PROGRAM, begun in 1984, succeeded it.

deer, ruminant MAMMAL of the family Cervidae, found worldwide except for Australia. Deer range in size from the MOOSE, which may be c.7 ft (2.1 m) high at the shoulder, to the pudu of South America, which is c.12 in. (30 cm) high. Antlers, bony outgrowths of the skull used as weapons during the breeding season, develop in males of most species and are shed and renewed annually. In deer lacking antlers, long, upper canine teeth are used for fighting. The white-tailed deer, a source of food and buckskin for Native Americans and white settlers, was nearly exterminated by overhunting; it is now restored in the E U.S. Other North American deer include the mule deer of the W U.S. and the closely related black-tailed deer of the Pacific Coast. Old World deer include the red deer and fallow deer.

Defense, United States Department of, federal executive department charged with coordinating and supervising all activities relating to the national security. It was organized (1949) to replace the National Military Establishment (1947), which in turn had replaced the WAR DEPARTMENT. It is the largest federal department. The secretary of defense, a civilian, oversees all policies having to do with U.S. military affairs. He is assisted by the secretaries of the army, navy, and air force, who are also civilians appointed by the president. His principal military advisers are the **Joint Chiefs of Staff,** a statutory agency within the department whose members include a chairman, the chiefs of staff of the army and air force, the chief of naval operations, and the commandant of the Marine Corps. Defense Dept. agencies include the ADVANCED PROJECTS RESEARCH AGENCY, Ballistic Missile Defense Organization, Defense Intelligence Agency, Defense Mapping Agency, and NATIONAL SECURITY AGENCY.

Defense Advanced Research Projects Agency: see ADVANCED RESEARCH PROJECTS AGENCY.

defense mechanism, any of a variety of unconscious reactions used by individuals to protect themselves from feelings of ANXIETY or enable them to modify reality to make it more tolerable. Common defense mechanisms accepted in PSYCHOANALYSIS, are denial, in which the person simply denies that the anxiety or anxiety-causing circumstance exists; repression, the prevention of unacceptable ideas from entering the conscious mind; and displacement, the release of dangerous impulses in a substitute situation or through disguised activity.

deflation: see under INFLATION.

Defoe or **De Foe, Daniel,** 1660?–1731, English writer. His poem *The True-born Englishman* (1701), a defense of William III, brought fame, but an ironic satire, *The Shortest Way with Dissenters* (1702), brought a prison term. Called the father of modern journalism, he was associated with 26 periodicals, and he wrote and published (1704–13) *The Review,* a journal, single-handedly. His three great novels—*The Life and Strange Surprising Adventures of Robinson Crusoe* (1719), based in part on the experience of Alexander SELKIRK, and often considered the first true NOVEL in English; the picaresque *Moll Flanders* (1722); and *A Journal of the Plague Year* (1722)—all appeared as memoirs, intended to be taken as true. Defoe's writing is straightforward and vivid, with a remarkable concern for detail.

defoliant: see HERBICIDE.

De Forest, Lee, 1873–1961, American inventor; b. Council Bluffs, Iowa. A pioneer in the development of wireless telegraphy, sound pictures, and television, he invented the triode (1906), which made transcontinental telephony practicable and led to the foundation of the radio industry.

Degas, Edgar (Hilaire Germain Edgar Degas) [dəgä'], 1834–1917, French painter and sculptor. Degas united the discipline of classical art with the immediacy of IMPRESSIONISM. His favorite subjects were ballet dancers, women at their toilette, café life, and the racetrack. He combined his portrayal of contemporary life with such daring compositional innovations as accidental cutoff views, off-center subjects, and unusual angles. His innovative achievement of balance is seen in *Woman with Chrysanthemums* (1865; Metropolitan Mus.) and *Foyer of the Dance* (1872; Louvre). Degas turned from oils to pastels and charcoal, perhaps because of failing eyesight. His works in sculpture include dancers and horses. He profoundly influenced such later artists as TOULOUSE-LAUTREC and PICASSO. Many of his most celebrated works, e.g., *The Bellelli Family* (1859), *The Rehearsal* (1882), and *Two Laundresses* (1882), are in the Louvre.

De Gaulle, Charles, 1890–1970, French general and statesman, first president (1959–69) of the Fifth Republic. Opposing the Franco-German armistice in WORLD WAR II, he fled (1940) to London and there organized the Free French forces and rallied several French colonies to his movement. In 1943 he became co-president (with Henri Honoré Giraud) of the French Committee of National Liberation at Algiers, and in 1945 he was elected provisional president of France. He resigned (1946) when it became apparent that the Fourth Republic's constitution would not provide for a strong executive. He become (1947) head of a new party, Rally for the French People (RFP), but dissolved it in 1953 and retired. In 1958, during the political crisis created by the civil war in ALGERIA, De Gaulle became premier with the power to rule by decree for six months. A new constitution that strengthened the presidency was drawn up, and in 1959 De Gaulle became president of the new republic. As president, he reached (1962) a settlement for Algerian independence, developed France's atomic potential, and withdrew (1966) from NATO. He supported French participation in the Common Market, but opposed British participation. Nearly toppled (1968) by worker-student demonstrations, he resigned in 1969 after a defeat on constitutional reform.

De Grasse, François Joseph Paul, comte: see GRASSE, FRANÇOIS JOSEPH PAUL, COMTE DE.

De Hooch or **De Hoogh, Pieter:** see HOOCH, PIETER DE.

dehydrated food: see FOOD PRESERVATION.

Deimos, in astronomy, natural satellite of MARS.

Deirdre [dâr'drə, dēr'-], heroine of Irish legend. Intended as the wife of Conchobar, king of Ulster, she fell in love with Naoise and fled to Scotland with him and his brothers. On their return home Conchobar killed Naoise, and Deirdre died on his grave. The story was popular with writers of the Irish literary renaissance, e.g., W.B. YEATS and J.M. SYNGE.

deists, rationalist thinkers of the 17th and 18th cen., who held that the course of nature demonstrates the existence of God, while they rejected formal religion and claims of supernatural revelation. VOLTAIRE, J.J. ROUSSEAU, Benjamin FRANKLIN, and Thomas JEFFERSON were deists. See also ENLIGHTENMENT.

Dekker, Thomas, 1572?–1632?, English dramatist and pamphleteer. His most famous play, *The Shoemaker's Holiday* (1600), is notable for its realistic depiction of London life. He collaborated with John WEBSTER, Thomas MIDDLETON (*Honest Whore,* Pt. I, 1604), Philip MASSINGER, and others. Most of his works have been lost.

de Klerk, Frederick Willem, 1936–, South African political leader. Succeeding P.W. BOTHA as National party leader and then as president in 1989, de Klerk, despite his conservative reputation, began the process of ending APARTHEID, lifting the ban on antiapartheid parties and releasing Nelson MANDELA from prison in 1990. In 1991 he obtained the repeal of all remaining apartheid laws and called for the drafting of a new constitution, a process that led to the approval of a multiracial transitional government in 1993. De Klerk and Mandela jointly were awarded the Nobel Prize for peace in 1993. Mandela succeeded de Klerk as South African president in 1994 following multiracial elections, and de Klerk became one of two vice presidents in a government of national unity.

de Kooning, Willem, 1904–, American painter and leader of ABSTRACT EXPRESSIONISM; b. Netherlands. He painted huge canvases slashed with color and charged with great energy. He is particularly known for his monumental 1950s series entitled *Woman,* e.g., the ferocious *Woman I* (Mus. Mod. Art, N.Y.C.).

Delacroix, Eugène (Ferdinand-Victor-Eugène Delacroix) [dəläkwä'], 1798–1863, French painter. He was the foremost painter of the romantic movement in France (see ROMANTICISM) and was particularly influential as a colorist. His first major work, *The Bark of Dante* (Louvre), brought him recognition as the leader of the opposition to the neoclassical school of DAVID. His dramatic interpretation of scenes from mythology, literature, political, religious, and literary history was lavish and exuberant. He was influenced by English painting and a trip to Morocco that provided him with much exotic material, e.g., *Women of Algiers* (1834; Louvre). He did many portraits of notable contemporaries, e.g., George SAND (Copenhagen), and his animals in motion, e.g., *Tiger Attacking a Horse* (Louvre), are compelling.

de la Madrid Hurtado, Miguel, 1934–, Mexican public official, president of Mexico (1982–88). As minister of planning and budget in the cabinet of José LÓPEZ PORTILLO, he was influential in planning the utilization of Mexico's oil wealth to promote economic growth. Known as a conservative technocrat, he was chosen (1981) as the candidate of the ruling Institutional Revolutionary party and served from 1982 to 1988.

de la Mare, Walter, 1873–1956, English poet and novelist. His writing often delights in the shadowy world between the real and unreal. His poetry includes *The Listeners* (1912); among his novels are *Henry Brocken* (1904) and *The Return* (1910).

De la Ramée, Louise: see OUIDA.

Delaunay, Robert [dəlōnā'], 1885–1941, French painter. He was a major figure in the movement that APOLLINAIRE termed ORPHISM. His amalgam of fauve color (see FAUVISM), futurist dynamism (see FUTURISM), and analytical CUBISM is best seen in his series of paintings of the EIFFEL TOWER.

Delaware, English name for a group of North American peoples with an Algonquian language of the Algonquian-Wakashan stock (see NATIVE AMERICAN LANGUAGES). Calling themselves the Lenni-Lenape, they claimed ancient occupation of the Delaware R. region, where most Algonquian tribes had originated. In 1682 they made a treaty of friendship with William PENN, but in 1720 the Iroquois forced them into Ohio. The Delaware sided with the British in the American Revolution; afterward they moved successively to Kansas, Texas, and the INDIAN TERRITORY. A few still live on reservations, mainly in Oklahoma. In 1990 there were 9,321 Delaware in the U.S.

Delaware, one of the mid-Atlantic states of the U.S., the country's

The key to pronunciation appears on page xiii.

second-smallest state (after Rhode Island). It is bordered by Maryland (W, S), and there is a short border with Pennsylvania (N); New Jersey (E) is across the Delaware Bay and Delaware R.

Area, 2,057 sq mi (5,328 sq km). *Pop.* (1990) 666,168, an 11.9% increase over 1980 pop. *Capital,* Dover. *Statehood,* Dec. 7, 1787 (first of the original 13 states to ratify the Constitution). *Highest pt.,* 442 ft (135 m), New Castle co.; *lowest pt.,* sea level. *Nickname,* First State. *Motto,* Liberty and Independence. *State bird,* blue hen chicken. *State flower,* peach blossom. *State tree,* American holly. *Abbr.,* Del.; DE.

Land and People. Delaware occupies the low-lying northeastern portion of the peninsula (DELMARVA) it shares with Maryland and Virginia. Along its entire eastern edge the state is bounded by Delaware Bay and the mouth of the DELAWARE R. The climate is equable. WILMINGTON, in the north, is the only large city and dominates the state; 73% of the population lives in urban areas. In 1990 80% of the population was white and 17% was African American.

Economy Delaware has an industrialized economy dominated by the Du Pont chemical company, in the Wilmington area. Other major industries are food processing; automobile assembly; the manufacture of nylon, clothing, metals, and rubber and plastic products; and finance. Much of the agricultural income is earned from broiler chickens, soybeans, potatoes, corn, and dairy products. Although fishing is declining, crabs, oysters, clams, and finfish are caught offshore.

Government. The constitution of 1897 provides for a governor elected to a four-year term. The general assembly consists of a senate whose 21 members serve four-year terms, and a house whose 41 members are elected to two-year terms. Delaware is represented in the U.S. Congress by two senators and one representative and has three electoral votes.

History. The area was the home of the DELAWARE when Henry HUDSON sailed up the Delaware R. in 1609. He was followed by a British explorer the following year, and control of Delaware was subsequently contested by the Dutch and the English—and later by the Swedes—until 1674, when British authority was solidified. The residents were later linked to William PENN's colony of Pennsylvania. In 1776 Delaware was one of the 13 colonies to sign the Declaration of Independence. When Eleuthère Irénée DU PONT started a gunpowder mill in 1802, the state's industrial base was established. Delaware remained loyal to the Union during the CIVIL WAR, but strong pro-Southern sentiment reflected the split between the rural south and urban north, a division that still persists. Industry expanded during both world wars and immediately after World War II. In the 1970s Delaware experienced a movement of population and industry from the cities to the suburbs. During the 1980s the state's usury laws were liberalized, and Delaware (especially the Wilmington area) became a banking center.

Delaware, a major river of the E U.S., flowing c.280 mi (450 km) from sources in the Catskill Mts., SE New York, past Trenton, N.J. (the head of navigation), Philadelphia, Pa., and Wilmington, Del., into Delaware Bay and the Atlantic Ocean. The Delaware River Basin Compact (1961) regulates water use by the heavily industrialized states through which the river flows.

De la Warr, Thomas West, 12th **Baron,** 1577–1618, 1st governor of the English colony of VIRGINIA. He arrived in the colony in 1610 and dissuaded the colonists, who were in dire need, from returning to England. Delaware is named for him.

Delhi [dĕl′ē], state (1991 pop. 9,370,475) and city (1991 pop. 7,175,000), N central India. It is located on a hot, arid plain, but irrigation supports agriculture. From ancient times the region, a crossroads, was the key to empire, and the remains of many dynasties survive. It was the chief center of the Delhi Sultanate (1192–1526). In 1638, the Mogul emperor SHAH JAHAN built a new capital there, known as Shahjahanabad (the city of Delhi, also known as "Old Delhi"). The Mahrattas held the city from 1771 to 1803, when the British took it. Points of interest include Shah Jahan's Red Fort. It was the interim capital of British India (1912–31) while the modern administrative city of New Delhi was being built.

Delian League, confederation of Greek states under the leadership of ATHENS. The first Delian League (478–404 B.C.) was formed by Athens and a number of Ionian states to oppose Persia, an object accomplished in the PERSIAN WARS. Dissent arose within the league, but by a mixture of force and persuasion Athens established supremacy, and the league in effect became an Athenian empire. The alliance was unstable, however, and with Athens' defeat (404 B.C.) in the PELOPONNESIAN WAR it came to an end. After Conan reestablished Athenian mastery of the sea, the second Delian League was formed (378 B.C.). It lasted, despite Athenian-Theban quarrels, until utterly destroyed by the victory of PHILIP II of Macedon at Chaerona (338 B.C.).

Delibes, Léo [dəlēb′], 1836–91, French composer. He wrote melodic, vividly orchestrated works, e.g., the ballets *Coppélia* (1870) and *Sylvia* (1876) and the opera *Lakmé* (1883).

Delilah: see SAMSON.

delirium tremens: see ALCOHOLISM.

Delius, Frederick, 1862–1934, English composer, of German parentage. Influenced by GRIEG, he combined ROMANTICISM and IMPRESSIONISM in music characterized by free structure and rich chromatic HARMONY. His best-known works include *Brigg Fair* (1907), *On Hearing the First Cuckoo in Spring* (1912), and *North Country Sketches* (1914). His operas include *A Village Romeo and Juliet* (1907).

Della Robbia [dĕl″ə rŏb′ēə], Florentine family of sculptors and ceramists famous for their enameled terra cotta or faïence. **Luca della Robbia,** 1400?–1482, founder of the workshop, perfected a method of making clay reliefs and sculptures permanent by coating them with a glaze made of tin, antimony, and other substances. His *Madonna and Child* (Metropolitan Mus.) is typical of his blue-and-white panels with touches of gold. The family tradition was continued by his nephew **Andrea della Robbia,** 1435–1525?, and Andrea's sons **Luca II della Robbia,** c.1480–c.1550, **Giovanni della Robbia,** 1469–c.1529, and **Girolamo della Robbia,** c.1488–1566. Andrea did the famous medallions on the Foundling Hospital, Florence, showing simple baby forms (*bambini*) on a blue background.

Delmarva, peninsula, E U.S., c.180 mi (290 km) long, between Chesapeake Bay (W) and Delaware Bay and Atlantic Ocean (E). A fertile farming area, it is divided among (and named for) three states—Delaware, Maryland, and Virginia.

Delorme or **de l'Orme, Philibert** [dəlôrm′], c.1510–70, French architect, one of the greatest Renaissance architects. Most of his work has been destroyed. After Italian travels he introduced into France a classical style that endured to the mid-18th cent. Among his works were the tomb of FRANCIS I at Saint-Denis, the TUILERIES, and the gallery at Chenonceaux.

Delors, Jacques (Lucien Jean), 1925–, French economist and politician, president (1985–) of the European Commission. Beginning in the 1940s, he held a series of posts in French banking and state planning, eventually becoming (1969) an adviser to Gaullist Prime Min. Jacques Chaban-Delmas. In 1974 he joined the Socialist party. Under Socialist Pres. François MITTERAND, Delors served as economics and finance minister (1981–83) and economics, finance, and budget minister (1983–84) and helped revive the French economy. In 1985 he was appointed president of the European Commission, the executive body of the European Community (EC), and began playing a leading role in EC affairs. Working with British commissioner Lord Cockfield, he crafted and won approval of the Single European Act (1986), which ended the need for unanimous consent by EC nations on most issues and laid the groundwork for the establishment of a single EC market by 1993. Delors has also reformed EC finances and moved the EC nations toward a single currency and greater cooperation on defense.

Delphi [del′fī], town in Phocis, GREECE, near the foot of Mt. Parnassus. It was the seat of the Delphic ORACLE, the most famous and powerful oracle of ancient Greece. The oracle, which originated in the worship of an earth-goddess, possibly GAEA, was the principal shrine of APOLLO. It was housed in a temple built in the 6th cent. B.C. The oracular messages were spoken by a priestess in a frenzied trance and interpreted by a priest, who usually spoke in verse. The oracle's influence prevailed throughout Greece until Hellenistic times. Delphi was the meeting place of the Amphictyonic League and the site of the PYTHIAN GAMES. It was later pillaged by the Romans, and the sanctuary fell into decay.

delphinium: see LARKSPUR.

delta, the alluvial plain formed at the mouth of a river where the

stream loses velocity and drops part of its sediment load. No delta is formed if the coast is sinking or if ocean or tidal currents prevent sediment deposition. A deltaic plain is usually very fertile but subject to floods. The three main varieties of delta are the arcuate (e.g., that of the Nile), the bird's-foot (e.g., that of the Mississippi), and the cuspate (e.g., that of the Tiber).

Deluge: see NOAH.

De Mabuse, Jan: see MABUSE, JAN DE.

Demeter [dĭmē'tər], in Greek mythology, goddess of harvest and fertility; daughter of CRONUS and RHEA; mother of PERSEPHONE by ZEUS. She and her daughter were the chief figures in the ELEUSINIAN MYSTERIES, and her primary festival was the Athenian Thesmophoria. The Romans identified her with CERES.

Demetrius I (Demetrius Poliorcetes), c.337–283 B.C., king of MACEDON. He aided his father, Antigonus I, in the wars of the DIADOCHI until their defeat (and Antigonus's death) at Ipsus (301 B.C.). He recovered ATHENS (295) and, after murdering his competitors, seized the throne of Macedon (294). Driven out by PYRRHUS, he took refuge (285) with King Seleucis I of Syria. His son, Antigonus II, made good his claim to the throne of Macedon.

Demetrius, in Russian history: see DMITRI.

de Mille, Agnes (George), 1908?–93, American choreographer and dancer; b. N.Y.C.; niece of Cecil B. DEMILLE. She created the first major American BALLET, *Rodeo* (1942), and brought ballet techniques to MUSICALS such as *Oklahoma!* (1943). She created *Fall River Legend* (1948) for the American Ballet Theatre. De Mille wrote books on dance, including one on Martha GRAHAM (1991), and autobiographical works.

DeMille, Cecil B(lount), 1881–1959, American film director; b. Ashfield, Mass. His many "spectacle" films include *The Ten Commandments* (1923; 1956), *The Crusades* (1935), *Union Pacific* (1939), and *The Greatest Show on Earth* (1952).

Deming, W(illiam) Edwards, 1900–93, American statistician and quality-control expert; b. Sioux City, Iowa. Deming used statistics to examine industrial production processes for flaws and believed that improving product quality depended on increased management-labor cooperation as well as improved design and production processes. He greatly influenced Japanese industry as it rebuilt in the postwar years and was often critical of U.S. corporate management.

Demirel, Süleyman, 1924–, Turkish political leader. A successful engineer, he became leader of the center-right Justice party in 1964, deputy prime minister in 1965, and prime minister later the same year. Growing civil anarchy brought down his government in 1971, but he again served as prime minister during most of the late 1970s. In Sept. 1980 civil turmoil led to an army coup; Demirel was ousted, detained (1980, 1983), and banned from politics until 1987. He returned to politics as leader of the conservative True Path party and served (1991–93) as prime minister in a coalition government. In 1993 he was elected president of Turkey.

democracy, system of government in which the people—not one class, an autocrat, or a select group—share in directing the state's activities. It flourished in such Greek CITY-STATES as Athens before giving way to IMPERIALISM. The philosophy and practice of modern democracy emerged slowly in the West. Basic to it is the concept of representation of the people by elected agents. The idea that natural rights could not be taken from the people is also fundamental (see NATURAL LAW). John LOCKE, J.J. ROUSSEAU, and others developed the concept of a social contract in which sovereignty rests with the people, who undertake reciprocal obligations with a ruler; rulers violating this contract may be removed. These ideas greatly influenced British government, the AMERICAN REVOLUTION, and the FRENCH REVOLUTION. Since the 19th cent., when political democracy was established in most Western countries, emphasis has been placed on increasing the portion of the population participating in political decisions. Theorists of SOCIALISM and other doctrines have criticized this emphasis, maintaining that true democracy is not merely political but rests on economic equality and, according to some, on public ownership of wealth. Since the mid-20th cent. most political systems have described themselves as democracies, but many of them have not encouraged competing political parties and have not stressed individual rights and other elements typical of classic Western democracy. With the collapse of Communism in Eastern Europe, the fall of authoritarian dictatorships in Latin America, and the end of some one-party states in sub-Saharan Africa, however, the number of true multiparty democracies has increased.

Democratic party, American political party. Founded around Thomas JEFFERSON and opposed to Alexander HAMILTON and the Federalists, the party emphasized personal liberty and the limitation of federal government. Originally called Democratic Republicans, they were called Democrats by 1828. Backed by a coalition of Southern agrarians and Northern city dwellers, Jefferson was elected president in 1800, and the Democrats retained the presidency until 1825. A radical group of Democrats led by Andrew JACKSON won the elections of 1828 and 1832, but arguments over slavery created or deepened splits within the party, and the CIVIL WAR all but destroyed it. The party revived after the disputed election of 1876, and the end of RECONSTRUCTION brought the "solid South" into the Democratic fold. With the nomination (1896) of W.J. BRYAN on a FREE SILVER platform, the radicals again gained control, but Bryan's defeat pointed out the difficulty of reconciling the party's diverse elements. The Democrats regained (1913–21) the presidency under the liberal Woodrow WILSON, and during the Depression they swept into office with Franklin D. ROOSEVELT and initiated the NEW DEAL. When Roosevelt died in his fourth term, he was succeeded (1945) by Harry S TRUMAN, who was elected (1948) in his own right. Following the presidential victories (1952, 1956) of Republican Dwight D. Eisenhower, Democrat John F. KENNEDY narrowly won the 1960 election. After his assassination (1963) he was succeeded by Lyndon JOHNSON, whose administration was marked by civil-rights legislation and the VIETNAM WAR. The modern Democratic party had by then become an uneasy alliance of labor, minorities, middle-class reformers, and Southern Democrats. Hubert H. HUMPHREY and George MCGOVERN were the Democratic presidential nominees in 1968 and 1972 respectively, but serious Southern disaffection contributed to their defeats by Republican Richard M. Nixon. Following the WATERGATE AFFAIR, the Democrats elected (1976) the hitherto unknown Jimmy CARTER as president. Carter's inability to cope with economic problems and to free (1979–81) U.S. hostages in Iran led to his defeat (1980) by Republican Ronald REAGAN. Although the party did not win the presidency again until the election (1992) of Bill CLINTON, it remained a power in Congress and at the state level throughout the 1980s.

Democritus, c.460–c.370 B.C., Greek philosopher. His atomic theory of the nature of the physical world, known to us through ARISTOTLE's writings, was the most scientific theory proposed up to his time. He held that all living things are composed of tiny indivisible particles, called atoms, and that their constant motion explains the creation of the universe: the heavier atoms clustered together to form the earth, while the lighter ones formed the heavenly bodies.

demography, science of human population, especially of human numbers and their changes over time. By studying birth and death rates, marital and migration patterns, and population distribution, demography ascertains trends and predicts probabilities.

Demosthenes, 384–322 B.C., Greek orator. His reputation as the greatest of the Greek orators rests mainly on his orations arousing ATHENS against PHILIP II of Macedon—three *Philippics* (351–341 B.C.) and three *Olynthiacs* (349). Philip triumphed (338), and Demosthenes' cause was lost. His other orations include *On the Peace* (346), *On the False Legation* (343), and *On the Crown* (330). In 324 B.C. Demosthenes was exiled for his involvement in an obscure affair involving money taken by a lieutenant of ALEXANDER THE GREAT. Recalled after Alexander's death (323), he failed in his attempt to free Greece from Macedon, fled, and took poison to avoid capture by ANTIPATER.

demotic: see HIEROGLYPHIC.

Dempsey, Jack (William Harrison Dempsey), 1895–1983, American boxer; b. Manassa, Colo. The "Manassa Mauler" won the heavyweight title by knocking out Jess Willard in 1919 and lost it to Gene TUNNEY in 1926. In a controversial rematch (1927) Dempsey knocked Tunney down in the seventh round, but the count (now known as the "long count") was delayed by Dempsey's failure to go to his corner and Tunney won a 10-round decision

Demuth, Charles, 1883–1935, American painter; b. Lancaster, Pa.

Known for his translucent WATERCOLORS of fruits and flowers, Demuth was one of the first painters to draw inspiration from the geometric shapes of technology.

Denali National Park: see NATIONAL PARKS (table).

dendrochronology: see DATING.

dengue fever, acute infectious disease caused by a virus and transmitted by the *Aedes* mosquito. It occurs in warm climates. Symptoms include headache, fever, and intense joint pain, followed by a generalized rash. There is no specific treatment, but the disease can be controlled by eradicating the mosquitoes and their breeding grounds.

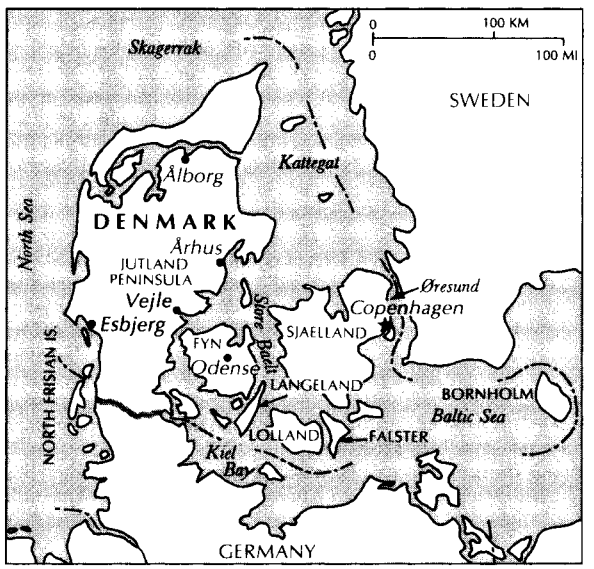
Deng Xiaoping or **Teng Hsiao-p'ing,** [dŭng shēou-pĭng], 1904–, Chinese Communist leader. Twice purged from power (1967, 1976) and twice rehabilitated (1973, 1977), Deng was deputy premier under HUA GUOFENG. He soon became (1977) powerful as Communist party deputy chairman, and in 1979 visited the U.S. to seek closer U.S.-Chinese ties. In 1981 Deng strengthened his position in China by replacing Hua as Communist party chairman with his own protégé, HU YAOBANG. For most of the 1980s he served as head of the party and government military commissions and the newly created party Central Advisory Commission. Although not holding any of the highest ranking official posts, Deng became the most powerful Chinese leader since Mao. When Hu was forced from power, ZHAO ZIYANG, another Deng protégé, became party leader, and later when Zhao was ousted, a third Deng associate, JIANG ZEMIN, replaced Zhao. Deng has sought to loosen government control of the economy in order to promote development while insisting on tight party control of the government and politics.

De Niro, Robert, 1943–, American film actor; b. N.Y.C. After studying for the stage, he acted in films directed by Brian De Palma. In 1973, he made his first major movies, *Bang the Drum Slowly* and *Mean Streets*. Other films include *The Godfather Part II* (1974; Academy Award), *The Deer Hunter* (1979), *Raging Bull* (1981; Academy Award), *Good Fellas* (1989), and *Cape Fear* (1990).

Denis, Maurice [dənē'], 1870–1943, French painter and writer. His paintings, often on religious themes, were not as influential as his art theories. His writings include *Theories* (2 vol., 1920, 1922) and *History of Religious Art* (1939).

Denmark, Dan. *Danmark,* officially Kingdom of Denmark, kingdom (1992 est. pop. 5,164,000), 16,629 sq mi (43,069 sq km), N Europe; bordered by Germany (S), the North Sea (W), the Skagerrak (N), and the Kattegat and the Øresund (E). The southernmost of the Scandinavian countries, Denmark includes most of the Jutland peninsula as well as more than 450 islands. The FAEROE ISLANDS and GREENLAND, which are semiautonomous, lie to the northwest. COPENHAGEN is the capital and chief industrial center; other important cities are RHUS, Odense, and Ålborg. Denmark, which is almost entirely low-lying, has traditionally been an agricultural country; after 1945, however, it greatly expanded its industrial base. The main commodities raised are livestock and poultry, root crops, and cereals. The leading manufactures include food products, chemicals, machinery, metals, and electrical and electronic equipment. Fishing, shipping, and tourism are also important. Nearly all the inhabitants speak Danish, and most belong to the established Lutheran Church. Denmark is a constitutional monarchy, governed under the 1953 constitution. Legislative power is vested in the unicameral Folketing (parliament); executive authority rests with the monarch and the appointed prime minister and cabinet. The reigning monarch is Queen MARGARET II.

History. The Danes probably settled Jutland by c.10,000 B.C., but little is known of Danish history before the 9th to 11th cent. A.D., when the Danes had an important role in the VIKING raids on W Europe. Harold Bluetooth (d. c.985) was the first Christian king of Denmark, and his son, Sweyn, conquered England. Danish hegemony over N Europe was first established (12th–13th cent.) by WALDEMAR I and WALDEMAR II. Queen MARGARET I achieved (1397) the Kalmar Union of Denmark, Sweden, and Norway; the union with Sweden was largely ineffective and ended in 1523, but that with Norway lasted until 1814. The house of Oldenburg, from which the present dynasty is descended, acceded in 1448 with CHRISTIAN I, who also united Schleswig and Holstein with the Danish crown. Participation in the THIRTY YEARS WAR (1618–48) and the wars (1657–60) of FREDERICK III with Sweden caused Denmark to lose prestige. Under the Treaty of Kiel (1814) Denmark lost Norway to Sweden, and following its defeat (1864) by Prussia and Austria it was deprived of SCHLESWIG-HOLSTEIN. Of more lasting importance was the internal reform of the 19th cent. that transformed Denmark's poor peasantry into the most prosperous small farmers in Europe. Denmark was occupied (1940–45) by German forces in WORLD WAR II. In 1949 it broke a long tradition of neutrality and joined NATO, and in 1973 it joined the European Community (see EUROPEAN UNION). The Social Democratic party was dominant in the postwar era, although at times ruling in a coalition or as a minority government. From 1982 to 1993, however, a center-right coalition headed by Conservative Poul Schlüter was in power. In 1993 Poul N. Rasmussen, a Social Democrat, became prime minister of a center-left government.



density, ratio of the MASS of a substance to its volume. Because many substances, especially gases, can be compressed into a smaller volume by increasing the pressure on them, the temperature and pressure at which the density is measured are usually specified. See SPECIFIC GRAVITY.

dentistry, treatment and care of the TEETH and associated oral structures. Dentists are concerned with tooth decay, diseases of the supporting structures (such as the gums), faulty positioning of the teeth, and tooth replacements, as well as prevention of these problems. Specialized fields of dentistry include orthodontics (corrective dentistry) and periodontics (treatment of gum diseases; see GINGIVITIS and PERIODONTITIS).

Denver, city (1990 pop. 467,610; met. area 1,622,980), state capital, coextensive with Denver co., N central Colo., on the South Platte R.; inc. 1861. Colorado's largest city, Denver is a processing, shipping, and distributing point for a large agricultural area. It is the financial and administrative center of the ROCKY MOUNTAIN region, and a hub for energy resource development. Numerous federal agencies have offices there, and it is the site of a U.S. mint. The Denver area has major stockyards and many diversified industries, including electronics and aeronautics. Tourism is also important. In the 1870s and 80s it was the center of a gold and silver boom. Its development into a major modern city began in the 1890s. Points of interest include a large park system, the state capitol, and the Denver Art Museum and other museums.

Depardieu, Gérard [dəpär"dyö'], 1948–, French actor. A versatile, highly acclaimed performer, he has made dozens of films, including *Le Dernier Métro* (1980), *The Return of Martin Guerre* (1982), and *Green Card* (1990).

De Patinir, De Patenier, or **De Patiner, Joachim:** see PATINIR, JOACHIM DE.

depreciation, in ACCOUNTING, reduction in the value of fixed assets

as a result of use, damage, or obsolescence. It can be estimated in several ways. In the straight-line method, annual depreciation is simply the cost of the asset (minus its value, if any, as scrap) divided equally over its estimated lifetime. Decreasing-charge methods assign higher depreciation costs to the early years. Depreciation allows companies to cut costs of capital investment through tax savings.

depressant: see DRUG.

depression, in economics, a period of economic crisis in commerce, finance, and industry, characterized by falling prices, restriction of credit, reduced production, numerous bankruptcies, and high unemployment. A less severe crisis is usually known as a downturn, or **recession;** in the U.S. a recession is technically defined as two consecutive quarterly declines in the GROSS NATIONAL PRODUCT. A short period in which fear takes hold of the minds of businessmen is more properly called a PANIC. Depressions now tend to become worldwide in scope because of the international nature of trade and credit. Such was the case in the most severe economic reversal of the 20th cent., the GREAT DEPRESSION of the 1930s, which began in the U.S. and spread abroad. Since that time, governments have acted to stabilize economic conditions in an effort to prevent depressions, using tax and fiscal measures as well as tighter controls over BANKING and the STOCK EXCHANGES. Job-training programs and increased public welfare are other steps taken to alleviate economic slumps.

depression, a psychological disorder that can be marked by sleep and eating disturbances, lack of concentration, problems at work, intense feelings of emptiness, guilt, and worthlessness, and suicidal thoughts. A depressive illness is distinguished from a temporary "blue" mood or grief after a disappointment or loss and may have both psychological and biochemical components. The illness may have a manic phase (see MANIC-DEPRESSION). Many people improve significantly with psychological treatment and ANTIDEPRESSANT medication, often used in combination. ELECTROCONVULSIVE THERAPY may help severe cases.

depth charge, explosive device used against submarines and other underwater targets. Delivered from surface ships, it is either rolled into the water or propelled by special throwers. The charge is detonated by water pressure at a predetermined depth and, if it explodes near enough, can destroy the target by concussion.

De Quincey, Thomas, 1785–1859, English essayist. The autobiographical *Confessions of an English Opium-Eater* (1822) brought him literary eminence. A prolific contributor to various journals, he is remembered for "On the Knocking at the Gate in Macbeth" and *Autobiographic Sketches* (1853).

Derain, André [dərăN′], 1880–1954, French painter. He was an exponent of FAUVISM, as in his portrait of MATISSE (1905; Philadelphia Mus. Art). Gradually his art grew more conservative.

derivative: see CALCULUS.

Derrida, Jacques, 1930–, French philosopher. He has sought to "deconstruct" Western rationalist thought and metaphysics to reveal the incoherence of its foundations (see DECONSTRUCTION). In *Writing and Difference* (1967) and *On Grammatology* (1967) he set forth his theories, based on a broad reading of the Western tradition. In opposition to the theory of SAUSSURE (see SEMIOTICS), Derrida challenged the primacy of spoken language, emphasizing the written language's ability to alter speech and thought, creating rather than merely transmitting meaning. His writings have analyzed the work of HUSSERL, HEGEL, and other major philosophers.

dervish [Pers., = beggar], the friar or monk of ISLAM. There are numerous societies of dervishes, many quite similar to the religious orders of Western Christendom; however, dervishes do not take final vows and are never cloistered. Certain groups are characterized by the form of their mystical practice, e.g., the howling dervishes and whirling dervishes. Some form of SUFISM is the theological basis of most of the dervish sects.

Derzhavin, Gavril Romanovich [dyĭrzhä′vĭn], 1743–1816, Russian poet. An innovator in the age of classicism, he dedicated *Felitsa* (1783) to Catherine II, leading to his appointments as poet laureate and then minister of justice. His most famous lyric is the *Ode to God* (1784).

DES or **diethylstilbestrol,** synthetic nonsteroid female sex hormone having the same physiological effects as ESTROGEN. In the 1940s and 50s, DES was given in large doses to pregnant women to prevent miscarriage, but such use was banned in 1973. During the 1970s the drug was linked to vaginal cancer in some women whose mothers had taken DES during pregnancy, and it has since been implicated in various reproductive disorders and other conditions in female and male children of such mothers. The use of DES as a growth accelerator in beef cattle was banned in 1979. DES is currently used in treatment of certain breast and prostate cancers.

Desai, Morarji Ranchhodji [dēsī′], 1896–, prime minister (1977–79) of INDIA. As leader of the Janata people's party, he became prime minister after Indira GANDHI's fall from power. He was unable to maintain a working majority, however, and resigned in 1979, thereby clearing the way for Mrs. Gandhi's return to power.

desalination, process of removing soluble salts from water to render it suitable for drinking, irrigation, or industrial uses. In *distillation,* salt water is heated in one container to make the water evaporate, leaving the salt behind. The desalinated vapor is then condensed to form water in a separate container. The high fuel costs involved in vaporizing salt water can be reduced by using a vacuum to lower the boiling point or by exposing a water spray or film to high heat, a process known as flash distillation. In Hawaii the vacuum method also produces electricity in a process that vaporizes warmer, near-surface water, uses the steam to run a turbine, and condenses the steam with cold water from the ocean depths. Other desalination techniques include *electrodialysis,* the use of porous membranes to filter out negatively and positively charged salt ions; *freezing,* based on the principle that water excludes salt when it crystallizes to ice; *ion-exchange,* in which water passes through a bed of specially treated synthetic resins that are capable of extracting ions of the salt from the solution and replacing them with ions that form water; and *reverse osmosis,* in which pressure, generated by the presence of salt in the water, forces water through a membrane permeable only by pure water.

Descartes, René, 1596–1650, French philosopher, mathematician, and scientist. His philosophy is called Cartesianism (from *Cartesius,* the Latin form of his name). Often called the father of modern philosophy, he is regarded as the bridge between SCHOLASTICISM and all philosophy that followed him. Primarily interested in mathematics, he founded ANALYTIC GEOMETRY and originated the CARTESIAN COORDINATES and Cartesian curves. To algebra he contributed the treatment of negative roots and the convention of exponent notation. Descartes also contributed to optics, physiology, and psychology. His *Discourse on Method* (1637) and *Meditations* (1641) contain his important philosophical theories. Intending to extend mathematical method to all areas of human knowledge, Descartes discarded the authoritarian systems of the scholastic philosophers and began with universal doubt. Only one thing cannot be doubted: doubt itself. Therefore, the doubter must exist. This is the kernel of his famous assertion *Cogito, ergo sum* [I think, therefore I am]. From this certainty Descartes expanded knowledge, step by step, to admit the existence of God (as the first cause) and the reality of the physical world, which he held to be mechanistic and entirely divorced from the mind; the only connection between the two is the intervention of God. This is almost complete DUALISM.

descent: see KINSHIP.

desegregation: see INTEGRATION.

desert, arid region, usually partly covered by sand, supporting a limited and specially adapted plant and animal population. So-called cold deserts, caused by extreme cold and often covered perpetually by snow or ice, form about one sixth of the earth's surface. Warm deserts form about one fifth of it. The world's largest desert areas lie between 20° and 30° north and south of the equator in regions where mountains intercept the paths of the trade winds or where atmospheric conditions limit precipitation. An area with an annual rainfall of 10 in. (25 cm) or less is considered a desert, although some deserts and semideserts exist in areas of higher precipitation where moisture is lost by runoff or evaporation. The two largest deserts are the SAHARA in Africa and the great desert of central and W Australia.

De Sica, Vittorio, 1901–74, Italian film director and actor. His *Shoeshine* (1946), *The Bicycle Thief* (1948), and *Umberto D.* (1952) are classics of postwar Italian neo-realism. Among his later works is

The Garden of the Finzi-Contini (1971). He starred in ROSSELLINI's *General Della Rovere* (1959) and many other films.

desktop publishing, system for producing printed materials that consists of a PERSONAL COMPUTER or COMPUTER workstation, high-resolution printer (usually a laser PRINTER), and COMPUTER PROGRAM that allows the user to select from a variety of type fonts and sizes, column justifications, page layouts, and graphics libraries and often includes support for document creation and editing. It enables a small business or an individual to produce professional quality materials on the premises inexpensively and quickly without need of external typesetting or printing facilities.

Des Moines, city (1990 pop. 193,187), state capital and seat of Polk co., S central Iowa, on the Des Moines and Raccoon rivers; chartered 1857. Iowa's largest city, it is a major Corn Belt industrial and transportation center. Publishing and printing, food processing, insurance, and diverse manufactures are important. Drake Univ. and various state buildings are notable.

De Soto, Hernando, c.1500–42, Spanish explorer. After serving with Francisco PIZARRO in PERU, he was named governor of CUBA. In 1539 he set out to conquer Florida. In search of treasure, his group explored much of present-day GEORGIA, the Carolinas, TENNESSEE, ALABAMA, and OKLAHOMA. They were probably the first Europeans to see (1541) the MISSISSIPPI R. De Soto died on the adventurous journey and was buried in the Mississippi.

Des Prés, Josquin: see JOSQUIN DESPREZ.

Dessalines, Jean Jacques [dĕsälēn'], c.1758–1806, emperor of HAITI (1804–6). Of African descent and born a slave, he became a shrewd general. He defeated (1803) French forces and, upon Haiti's independence (1804), ruled as a despot until he was assassinated.

detective story, type of popular fiction in which a crime, usually a murder, is solved by a detective—professional or amateur—who logically interprets the evidence. The modern detective story, complete with its conventions, is considered to have emerged in E.A. POE's "Murders in the Rue Morgue" (1841). Wilkie COLLINS's *The Moonstone* (1868) is probably the first full-length detective novel. In 1887 Arthur Conan DOYLE, in "A Study in Scarlet," introduced Sherlock Holmes, the most famous of all sleuths. Subsequent writers, too, have often used one detective in a series of works. Especially famous are G.K. CHESTERTON's Father Brown, Earl Derr Biggers's Charlie Chan, Rex Stout's Nero Wolfe, Dorothy SAYERS's Lord Peter Wimsey, Agatha CHRISTIE's Hercule Poirot and Jane Marple, and P.D. James's Adam Dalgliesh. Many writers incorporate the conventions of the detective story into the NOVEL, producing works that are witty, erudite, and filled with interesting characters. Such writers include Ngaio MARSH, C. DAY LEWIS, Josephine Tey, Arthur W. Upfield, Peter Dickinson, and Ruth Rendell. More specialized types of detective fiction include the "police procedural," by such writers as Freeman Wills Crofts, Ed McBain, and Maj Sjöwall and Per Wahlöö, which focus on the technical aspects of crime-solving; the "hard-boiled" story, such as those of Dashiell HAMMETT, Raymond CHANDLER, and Ross MACDONALD, featuring tough but honorable "private eyes"; and the psychological story, such as the novels of Georges SIMENON, in which motivation and ambience are more important than the solution to the crime. Espionage novels involving international intrigue share many conventions of detective fiction. Masters of this genre include Eric AMBLER, Graham GREENE, Ian Fleming, and John LE CARRÉ.

detector: see PARTICLE DETECTOR.

détente, relaxation of tensions between nations, applied particularly to a period of improved relations between the U.S. and USSR in the 1960s and 70s that resulted as the hostilities of the COLD WAR diminished. Détente reached its height in such agreements as the Nuclear Nonproliferation Treaty (1968), Strategic Arms Limitation Treaty (SALT I; 1972), and the Helsinki accords (1975). After the Soviet invasion of Afghanistan (1979), relations between the two superpowers worsened. The crisis in Poland, an escalation of the arms race, and Pres. REAGAN's anti-Soviet stance brought an end to détente in the early 1980s.

Detroit, city (1990 pop. 1,027,974; met. area 4,382,299), seat of Wayne co., SE Mich., on the Detroit R., between Lakes St. Clair and Erie; inc. as a city 1815. It is Michigan's largest city, the nation's seventh largest, and a major GREAT LAKES shipping and rail center. Its early carriage industry helped Henry FORD and others to make it the "automobile capital of the world." It continues to be the headquarters of major auto manufacturers, but declines in the field have caused severe unemployment in the city and its environs. Other industries include steel, pharmaceuticals, and food processing. A producer of foundry products and machine tools, tires, paint, and chemicals, it also has extensive salt mines. Detroit is the oldest city in the Midwest. A French fort and fur-trading settlement founded in 1701 by CADILLAC, it was captured (1760) by the British. U.S. control, resulting from JAY'S TREATY (1794), dates from 1796. After a devastating 1805 fire, the city was rebuilt to a plan by L'ENFANT and grew to great commercial importance in the mid-1800s. In July 1967 race riots caused several deaths and many injuries, as well as some $150 million in property damages. The city is the site of many ambitious modern building projects, e.g., the Renaissance Center. The city's educational and cultural institutions include Wayne State Univ., the Univ. of Detroit, the Detroit Inst. of the Arts, and the Detroit Symphony Orchestra. An international bridge and a vehicular tunnel link Detroit with WINDSOR, Ontario.

Deucalion [dyōōkā'lēən], in Greek mythology, son of PROMETHEUS; father of HELLEN. Only he and his wife Pyrrha survived the flood that ZEUS caused in anger at humankind's irreverence. Later an oracle told them to cast behind them the stones of the earth. These stones became human and repopulated the world.

deuterium: see HYDROGEN.

Deuteronomy, book of the OLD TESTAMENT, fifth and last of the PENTATEUCH, ascribed by tradition to MOSES. According to the text it gives the final words of Moses to his people, and includes a review of the history of Israel since the exodus from Egypt and a number of general and particular moral principles. The book concludes with a blessing by, and the death of, Moses. Its main theme is absolute monotheism.

De Valera, Eamon [dĕ vəlâr'ə], 1882–1975, Irish statesman; b. N.Y.C. He took part in the Easter Rebellion of 1916; sentenced to life imprisonment, he was released under an amnesty in 1917 and elected president of SINN FÉIN. Again imprisoned in 1918, he escaped to the U.S., where he raised funds for Irish independence. While away, he was elected president of the revolutionary assembly, Dáil Eireann; he returned in 1920. In 1922, De Valera repudiated the treaty between Britain and Ireland that established the Irish Free State because it did not give Ireland absolute freedom, and he left the Dáil. In 1927 he reentered the Dáil with his party, FIANNA FÁIL. As prime minister (1932–48, 1951–54, 1957–58), he made Ireland a sovereign state and maintained neutrality in WORLD WAR II. He was also president of Ireland (1959–73).

devaluation, decreasing the value of one nation's currency relative to gold or the currencies of other nations. It is usually undertaken as a means of correcting a deficit in the BALANCE OF PAYMENTS. Although devaluation occurs in terms of all currencies, it is best illustrated in relation to one other currency. For example, if the U.S. is losing money in its trade with France, it may decide to devalue the dollar by 10%. If one dollar had been worth about 5.5 francs, a 10% devaluation causes it to be worth only 5 francs. Such a move causes French products to become more expensive for Americans (in theory, reducing U.S. imports) and American products to become cheaper for the French (increasing U.S. exports).

Devereux, Robert: see ESSEX, ROBERT DEVEREUX, 2D EARL OF.

Devils Island, most southerly of the Îles du Salut, in the Caribbean Sea, off FRENCH GUIANA. It was the site of a penal colony (1852–1951) used mostly for political prisoners, such as Capt. Alfred Dreyfus (see DREYFUS AFFAIR). Its name was synonymous with the system's horrors.

Devolution, War of, 1667–68, between France and Spain over the Spanish Netherlands. On the basis of a complicated legal claim, LOUIS XIV of France overran the Spanish Netherlands and Franche-Comté. The United Provinces, in alarm, formed the Triple Alliance with England and Sweden, and France was forced to make peace.

Devonian period: see GEOLOGIC ERA (table).

de Vries, Hugo, 1848–1935, Dutch botanist. He rediscovered (1900) Gregor MENDEL's laws of heredity and developed the theory of MUTATION, expounded in *The Mutation Theory* (1901–3) and in *Plant-Breeding* (1907). De Vries introduced the experimental method to the study of evolution, and maintained that new species develop

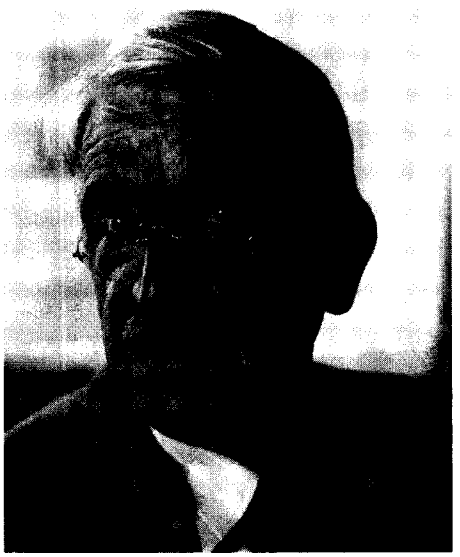
via mutations and that each quality subject to change is represented by a single physical unit (which he called a pangen). His work on osmosis is also important; he coined the term *isotonic*.

dew, thin film of water that has condensed on the surface of objects near the ground. Dew forms when objects cool during the night, causing the layer of air in contact with them to cool, and then causing the condensation of the water vapor in that layer of air. Condensation occurs because the capacity of air to hold water vapor decreases as the air is cooled. FROST forms if the dew point, or temperature at which condensation begins, is below 32°F (0°C).

Dewar, Sir James, 1842–1923, British chemist and physicist; b. Scotland. Professor at the Royal Inst., London, and later director of the Davy-Faraday Research Laboratory there, he was knighted in 1904. Best known for his work on the properties of matter at very low temperatures and the liquefaction of gases, he liquefied and solidified hydrogen and invented the DEWAR FLASK.

Dewar flask [for Sir James Dewar], container for storing hot or cold substances, e.g., liquid nitrogen. It consists of two flasks, one inside the other, separated by a vacuum. The vacuum greatly reduces the transfer of heat. The common thermos bottle is an adaptation of the Dewar flask.

Dewey, George, 1837–1917, American admiral; b. Montpelier, Vt.; grad. Annapolis, 1858. During the SPANISH-AMERICAN WAR, he directed (1898) the spectacular victory over the Spanish fleet in Manila Bay in the Philippines.



John Dewey

Dewey, John, 1859–1952, American philosopher and educator; b. Burlington, Vt. He rejected authoritarian teaching methods, regarding education in a democracy as a tool to enable the citizen to integrate his or her culture and vocation usefully. To accomplish those aims, both pedagogical methods and curricula needed radical reform. Dewey's philosophy, called instrumentalism and related to PRAGMATISM, holds that truth is an instrument used by human beings to solve their problems, and that it must change as their problems change. Thus it partakes of no transcendental or eternal reality. Dewey's view of democracy as a primary ethical value permeated his educational theories. He had a profound impact on PROGRESSIVE EDUCATION and was regarded as the foremost educator of his day. He lectured all over the world and prepared educational surveys for Turkey, Mexico, and the Soviet Union. Among his works are *Democracy and Education* (1916) and *Logic* (1938).

Dewey, Melvil, 1851–1931, American library pioneer, originator of the Dewey decimal system; b. Adams Center, N.Y. As acting librarian of Amherst College (1874) he evolved his system of book classification, using the numbers 000 to 999 to cover the general fields of knowledge and narrowing the system to fit special subjects by the use of decimals. While at Columbia Univ. he established the first library school. Dewey was also librarian of the New York State Library at Albany, where he founded another important library school. He was a founder of the American Library Association.

Dewey, Thomas Edmund, 1902–71, U.S. politician, governor (1943–55) of New York; b. Owosso, Mich. Twice a Republican presidential candidate, Dewey lost in 1944 to F.D. ROOSEVELT, and in 1948, quite unexpectedly, to Harry S TRUMAN.

De Witt, Jan: see WITT, JAN DE.

dextrose: see GLUCOSE.

Dhahran, city (1980 est. pop. 15,000), NE Saudi Arabia, near the Persian Gulf. Since the discovery (1938) of oil nearby, it has grown rapidly into a modern city. In Dhahran are the headquarters of the Arabian American Oil Co. (ARAMCO), the office of the Saudi petroleum ministry, and the Univ. of Petroleum and Minerals. During the PERSIAN GULF WAR the city was the site of a coalition air base and was subjected to Iraqi missile attacks.

Dhaka or **Dacca,** city (1991 pop. 6,959,920), capital of Bangladesh, on the Burhi Ganga R. It is the nation's industrial, commercial, and administrative center, with an active trade in jute, rice, and tea. Among its manufactures are textiles, jute products, and rope, and in cottage industries, confectioneries, jewelry, and other handicrafts. It was the capital (1660–1704) of the Mogul province of Bengal. It passed under British rule in 1765, and became capital of the newly formed Bangladesh in 1971. Historic buildings include the Bara Katra palace (1644) and Lal Bagh fort (1678).

dharma. **1** In Hinduism, the religious and ethical duties of the individual; virtue, right conduct. **2** In Buddhism, religious truth, namely, Buddhist teaching. The plural, *dharmas,* refers to the constituent qualities and phenomena of the empirical world.

diabetes or **diabetes mellitus,** chronic disorder of carbohydrate metabolism involving INSULIN. Insulin-dependent diabetes (Type 1), which affects children, is usually caused by a deficient secretion of insulin and is treated by insulin injections. Noninsulin diabetes (Type 2), which affects adults, results from the inability of the cells in the body to respond to insulin and can usually be controlled with diet regulation and oral hypoglycemic (sugar-lowering) drugs. Symptoms of diabetes are elevated sugar in the urine and the blood, excessive urination, thirst, hunger, weakness, weight loss, and itching. Diabetes can lead to vascular disease, kidney disease, HYPERTENSION, and BLINDNESS. Uncontrolled diabetes leads to diabetic acidosis: ketones in the blood, confusion, unconsciousness, and possible death.

Diadochi [dīăd'əkī] [Gr., = successors], subordinates of ALEXANDER THE GREAT who, after his death (323 B.C.), struggled for control of his empire. Chief among them were Antipater, Perdiccas, Eumenes, Craterus, Antigonus, Ptolemy, Seleucus, and Lysimachus. The major events of the wars of the Diadochi were the victory of Antipater over Perdiccas for the regency (321 B.C.); the defeat of Antigonus by Lysimachus, Ptolemy, and Seleucus at Ipsus (301 B.C.); and the victory of Seleucus over Lysimachus at Corupedion (281 B.C.). At the end of the period Alexander's empire was irrevocably split, with power divided among the descendants of Ptolemy, Seleucus, and Antigonus.

Diaghilev, Sergei Pavlovich, 1872–1929, Russian Ballet impresario and art critic. With Michel FOKINE and others, he founded (1909) the Ballets Russes in Paris. His lavish productions, incorporating asymmetry and perpetual motion, revolutionized BALLET, and attracted dancers, choreographers, designers, and composers of the first rank.

dialect, variety of a LANGUAGE used by a group of speakers within a particular speech community. Every individual speaks a variety of his or her language called an idiolect. Dialects are groups of idiolects with a common core of similarities in pronunciation, grammar, and vocabulary. Adjacent dialects are mutually intelligible, yet with increasing distance differences may accumulate to the point of mutual unintelligibility. For example, in the Dutch-German speech community, there is a continuum of intelligibility from Flanders to Schleswig and from there to Styria, but Flemish and Styrian dialects are mutually unintelligible. The methods of comparative linguistics, using written texts, and of modern linguistic

geography, using informants, have been used to study dialects. In recent years many linguists have focused on social dialects that reflect societal groups, occupations, or life-styles. In the U.S. much work has been done in the area of BLACK ENGLISH.

dialectical materialism, official philosophy of Communism, based on the works of Karl MARX and his followers. A reversal of HEGEL's dialectical IDEALISM, it holds that everything is material and that human beings create social life solely in response to economic needs. Thus all aspects of society are considered to reflect the economic structure, and classes in society are determined by their relationship to the means of production. Growth, change, and development take place through a naturally occurring "struggle of opposites," a process that individuals cannot influence. Application of these principles to the study of history and sociology is called historical materialism, an approach having many non-Communist advocates.

dialysis, in chemistry, transfer of dissolved solids (solute) across a semipermeable membrane, which permits or hinders diffusion of molecules according to their size. Dialysis is frequently used to separate different components of a solution. For example, in artificial kidney machines hemodialysis is used to purify the blood of persons whose KIDNEYS have ceased to function. In the machine, blood is circulated on one side of a semipermeable membrane, while dialysis fluid—containing substances necessary to the body and closely matching the chemical composition of the blood—is circulated on the other side. Metabolic waste products, such as urea, diffuse through the membrane into the dialysis fluid and are discarded, while the diffusion of substances necessary to the body is prevented. In peritoneal dialysis, the dialysis fluid is introduced into the abdominal cavity. Waste products leach from the blood vessels into the fluid, which is later drained from the patient. See also OSMOSIS.

diamond, mineral, one of two crystalline forms of the element CARBON. It is the hardest naturally occurring substance known, and inferior stones are used as ABRASIVES, in certain types of cutting tools, and as phonograph needles. Gem diamonds were first found in streambeds in India and Borneo; many now come from volcanic pipes in South Africa. Russia and Angola are also important producers. Famous diamonds include the Koh-i-noor, now among the English crown jewels; the Cullinan, from which 105 stones were cut; and the blue Hope diamond. Synthetic diamonds, produced since 1955, are now widely used industrially. A hard carbon nitride (C_3N_4) described in 1989 and synthesized in the early 1990s may be harder than diamond but has not been produced in large enough amounts for a proper test.

Diamond Head, peak, 761 ft (232 m) high, SE Oahu, Hawaii, prominent landmark of the Honolulu waterfront. It is located on the rim of an extinct volcanic crater near Waikiki Beach and is protected from commercial development.

Diana, 1961–, princess of Wales, wife of CHARLES, prince of Wales, heir to the British throne. Daughter of the 8th Earl Spencer, she worked as a kindergarten teacher in London before her marriage in 1981. She and Prince Charles separated in 1992; they have two sons, William and Henry.

Diana, in Roman mythology, goddess of the moon, forests, animals, and women in childbirth. Both a virgin goddess and an earth goddess, she was identified with the Greek ARTEMIS.

Diane de Poitiers [pwätyā'], 1499–1566, mistress of HENRY II of France. She maintained friendly relations with the queen, CATHERINE DE' MEDICI, while completely eclipsing her. She supported the king's anti-Protestant policy.

diaphragm: see RESPIRATION.

diary [Lat., = day], a daily record of events and observations. It derives its impact from its immediacy, unlike the retrospective memoir. Diaries interest historians because they depict everyday lives in a given time and place. Three of the most famous are those by Samuel PEPYS, who bore witness to the plague (1665) and great fire (1666) then sweeping London; Mary Chesnut, who chronicled in personal terms the fate of the CONFEDERACY in the American CIVIL WAR; and Anne Frank, a young German-Jewish girl who, before she died in a World War II CONCENTRATION CAMP, recorded her experiences while hiding in Holland. Important literary diaries include those of John EVELYN, André GIDE, Franz KAFKA, and Virginia WOOLF.

Diana, Princess of Wales

diatom, single-celled, microscopic plant that secretes and is enclosed by an often intricate, round-to-elongated silica shell. Golden-brown ALGAE, diatoms are found in fresh and salt water, in moist soil, and on the moist surfaces of other plants; they are the principal constituent of PLANKTON, an important food source for aquatic animals. Most exist singly, but some form colonies. When the aquatic forms die, their shells collect in the ooze on the bottom, eventually forming the material called diatomaceous earth (kieselguhr) or the more compact, chalky, light-weight rock called diatomite, used in sound and heat insulation, in making explosives, and for filters and abrasives. Most LIMESTONE and much PETROLEUM is of diatom origin.

Díaz, Porfirio, 1830–1915, Mexican dictator. In 1876 he lost the presidential election, revolted, and seized power. He ruled MEXICO ruthlessly for 35 years in the interest of the few and at the expense of the peons. He promoted prosperity by encouraging foreign investments. Growing popular discontent culminated in the 1910 revolution led by MADERO. Díaz fled and died in exile.

Dickens, Charles, 1812–70, English novelist, one of the great fiction writers in English. After a childhood of poverty, during which he had to work for a time in a blacking warehouse (a humiliation he never forgot), Dickens became a court stenographer and parliamentary reporter. His early sketches of London life were collected in *Sketches by Boz* (1836). *The Posthumous Papers of the Pickwick Club* (1836–37), a series of connected humorous sketches, promptly made Dickens famous, and the major novels that followed established him as the most popular writer of his time. They include *Oliver Twist* (1838), *Nicholas Nickleby* (1839), *The Old Curiosity Shop* (1841), *Barnaby Rudge* (1841), *Dombey and Son* (1848), *David Copperfield* (1850), *Bleak House* (1853), *Hard Times* (1854), *Little Dorrit* (1857), *A Tale of Two Cities* (1859), *Great Expectations* (1861), *Our Mutual Friend* (1865), and *The Mystery of Edwin Drood* (1870; unfinished). After an American tour in 1842, he wrote sharply about the U.S. in *American Notes* (1842) and in the novel *Martin Chuzzlewit* (1843). Working ceaselessly, Dickens gave highly successful readings from his works, edited two magazines, wrote Christmas stories, e.g., *A Christmas Carol* (1843), and managed amateur theatricals. He married Catherine Hogarth in 1836, but despite their 10 children, it was not a happy union, and they separated in 1858. Although sometimes marred by sentimentality, Dickens's novels are remarkable for their rich portraits of all aspects of society, their crusades against

abuses (imprisonment for debt, legal delays, bad education), and their sharply drawn, eccentric characters, whose names—Mr. Micawber, Uriah Heep, Ebenezer Scrooge—have become household words for generations of readers.

Dickey, James, 1923–, American poet; b. Atlanta. He makes use of the ordinary in his poems, joining the natural and mechanical on such topics as war and nature. His poetry volumes include *Buckdancer's Choice* (1965) and *The Zodiac* (1976). He is probably best known for his novel *Deliverance* (1969).

Dickinson, Emily, 1830–86, one of the greatest poets in American literature; b. Amherst, Mass. The daughter of a prominent lawyer, she spent almost all of her life in her birthplace, gradually withdrawing from local activities, and spending her later years as a virtual recluse in her father's house. She composed over 1,000 unique lyrics dealing with religion, love, nature, death, and immortality, only seven of which were published during her lifetime. Her verse, noted for its aphoristic style, its wit, its delicate metrical variation, and its bold and startling imagery, has had great influence on 20th-cent. poetry. Her posthumous fame began with the first editions of her poems (1890, 1891) and her correspondence (2 vol., 1894). While her work has gone through many editions, a definitive edition of Dickinson did not appear until the 1950s, when T.H. Johnson published her poems (3 vol., 1955) and her letters (3 vol., 1958).

Dickinson, John, 1732–1808, American Revolutionary statesman; b. Talbot co., Md. He wrote *Letters from a Farmer in Pennsylvania* (1767–68) to protest the TOWNSHEND ACTS. A conservative member of the CONTINENTAL CONGRESS, he championed the rights of the small states at the FEDERAL CONSTITUTIONAL CONVENTION.

dicotyledon: see ANGIOSPERM.

Diderot, Denis [dēdərō'], 1713–84, French encyclopedist and materialist philosopher. He was enormously influential in shaping the rationalist thought of the 18th cent. His lifework, the ENCYCLOPÉDIE, for which he enlisted the leading French talents of the time, epitomized the spirit of the ENLIGHTENMENT. Also a novelist, satirist, and playwright, he produced *The Father of the Family* (1758) the first "bourgeois drama." He authored many philosophical works and in his *Salons* pioneered in modern art criticism. In his later years, he enjoyed the patronage of CATHERINE II of Russia.

Didion, Joan, 1934–, American writer; b. Sacramento, Calif. Exploring the emptiness of contemporary American life, her work includes novels, e.g., *Play It As It Lays* (1970) and *A Book of Common Prayer* (1977), and essay collections, e.g., *The White Album* (1979) and *After Henry* (1992).

Dido [dī'dō], in Roman mythology, founder and queen of CARTHAGE. Of the several versions of her story the most famous is in VERGIL's *Aeneid,* in which she loves AENEAS. When he leaves her to continue his journey to Italy, she destroys herself on a burning pyre.

Didrikson, Babe (Mildred Didrikson), 1913–56, American athlete, perhaps the greatest woman athlete of modern times; b. Port Arthur, Tex. She excelled in basketball, baseball, and track, and she won (1932) two Olympic events, the javelin and the 80-meter hurdles. As a golfer she won the U.S. (1946) and British (1947) amateur titles and the U.S. Open (1948, 1950, 1954). She married George Zaharias, a wrestler, in 1938.

Didymus: see THOMAS, SAINT.

Diefenbaker, John George, 1895–1979, prime minister of CANADA (1957–63). He was leader of the Progressive Conservatives and led them to their greatest election victory in 1958. He instituted agricultural reforms, but a recession contributed to his party's losses to the Liberals in 1962; his government fell the following year.

Diego Garcia, coral island, Indian Ocean, largest island of the Chagos Archipelago, SW of Sri Lanka. Part of the British Indian Ocean Territory, it is also claimed by Mauritius. The 11-sq-mi (28-sq-km) island, leased (1970) to the U.S., was later developed as a major U.S. naval base to guard the PERSIAN GULF oil routes and to counter increased Soviet military activities in S Asia and Africa.

dielectric, material that does not readily conduct electricity, i.e., an insulator (see INSULATION). A good dielectric resists breakdown under high voltages, does not draw appreciable power from the circuit, and has reasonable physical stability. Dielectrics are used to separate the plates of a CAPACITOR. The dielectric strength is a measure of the maximum voltage (see POTENTIAL, ELECTRIC) that a dielectric can sustain without significant CONDUCTION.

Diem, Ngo Dinh [dyĕm], 1901–63, president (1955–63) of South VIETNAM. Named (1954) premier, he ousted (1955) Bao Dai as head of state and emerged as president. His rule grew authoritarian, and he was murdered in a military coup that was apparently backed by the U.S.

Dienbienphu [dyĕn'byĕn'fōō'], former French military base, NW Vietnam, near the Laos border. It was the scene (May 1954) of the last great battle between the French and the VIET MINH, whose victory after a 56-day siege marked the end of French power in INDOCHINA.

diesel engine, type of INTERNAL-COMBUSTION ENGINE patented (1892) by the German engineer Rudolph Diesel. It is heavier and more powerful than the gasoline engine and burns fuel oil instead of gasoline. It differs from the gasoline engine in that the ignition of fuel is caused by compression of air in its cylinders instead of by a spark. The speed and power of the diesel are controlled by varying the amount of fuel injected into the cylinder. Diesels are widely used to power industrial and municipal electric generators, continuously operating pumps such as those used in oil pipelines, and ships, trucks, locomotives, and some automobiles

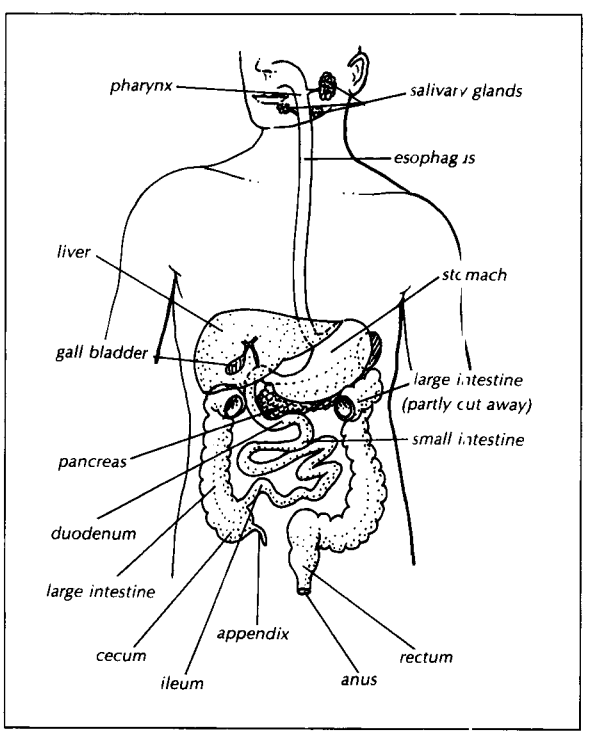
dietary fiber: see FIBER, DIETARY.

diethylstilbestrol: see DES.

Dietrich, Marlene [dē'trĭkh], 1901–92, German-American film actress. She played the sultry, ageless femme fatale. Her films included *The Blue Angel* (1930), *The Scarlet Empress* (1934), *A Foreign Affair* (1948), and *Witness for the Prosecution* (1957).

diffraction, bending of radiation (such as light) around the edge of an obstacle or by a narrow aperture. Diffraction results from the INTERFERENCE of light waves that pass an opaque body, producing a fuzzy region between the shadow area and the lighted area that, upon close examination, is actually a series of light and dark lines. A **diffraction grating** contains many fine, parallel slits or scratches (about 12,000 per cm or 30,000 per in.) and disperses light into its colors. These gratings are used in diffracting SPECTROSCOPES. The atomic and molecular structure of crystals is examined by X-ray diffraction.

digestive system, in animals, a group of organs that digest food



Digestive system

and eliminate wastes. Digestion converts food into a form that can be absorbed into the CIRCULATORY SYSTEM and distributed to tissues throughout the body. Digestion begins at the mouth, where chewing reduces the food to a fine texture, saliva moistens it, and an enzyme (amylase) in saliva begins the conversion of starch into simple sugars. The swallowed food passes through the PHARYNX and through a long tube, the esophagus, into the STOMACH. The food is pushed through the digestive system by peristalsis (contractions of the muscles forming the outer walls of the digestive tract). In the stomach, where digestive ENZYMES and gastric juices are secreted, sugars and alcohol are absorbed directly through the stomach wall into the bloodstream, and the remainder, in the form of a thick liquid (chyme), passes into the first section of the small INTESTINE (the duodenum). There digestive enzymes from the PANCREAS break down fats into glycerol and fatty acids, starches into sugars, and proteins into amino acids. The LIVER supplies bile, which makes fat globules smaller and more easily digested. Small glands in the intestinal wall (crypts of Lieberkühn) also secrete enzymes that continue digestion. Digested food is absorbed through small projections of the intestinal wall (villi) into the blood and lymph. Undigested material passes into the large intestine and is excreted through the anus (see EXCRETION). See also GALL BLADDER.

Digger Indians: see PAIUTE.

digital circuit, ELECTRIC CIRCUIT in which the output currents or voltages are interpreted as having one of several (often two) values, depending on which of a corresponding number of ranges they fall into. Such circuits implement logical operations or operations on representations of discrete numbers, often in binary form. See also ANALOG CIRCUIT.

digital computer: see COMPUTER.

digitalis, any of several chemically similar drugs used to treat heart failure and cardiac arrhythmias. Digitalis slows the pulse and the conduction of nerve impulses in the heart and increases the force of heart contractions and the amount of blood pumped per heartbeat. Common preparations include digitalis, digitoxin, and digoxin (from the foxglove plant *Digitalis purpurea*, the chief source of the drug), and ouabain (from the ouabaio tree).

digital-to-analog conversion, the process of changing discrete data into a continuously varying signal. The most common use is to present the output of a digital COMPUTER as a graphic display (see COMPUTER GRAPHICS) or as audio output, as in computer-generated music. See also ANALOG-TO-DIGITAL CONVERSION.

dill, annual or biennial plant (*Anethum graveolens*) of the CARROT family, native to Europe. Its pungent, aromatic leaves and seeds are used for pickling and for flavoring sauces, salads, and soups.

Dillinger, John, 1902?–34, American bank robber and murderer; b. Indianapolis (?). After his second jailbreak, he and his gang terrorized the Midwest with hit-and-run bank robberies in 1933. He was held responsible for 16 killings and was declared "public enemy number one" by the FBI, whose agents gunned him down on a Chicago street (July 1934).

Dilthey, Wilhelm, 1833–1911, German philosopher. A strict proponent of EMPIRICISM, Dilthey based what he called his "philosophy of life" on a foundation of descriptive and analytical psychology. He rejected transcendental considerations in his study of all aspects of human activity. His influence on early sociological theory is especially evident in the works of Max WEBER. Dilthey's major work is *Einleitung in die Geisteswissenschaften* [Introduction to the human sciences] (1883).

DiMaggio, Joe (Joseph Paul DiMaggio), 1914–, American baseball player; b. Martinez, Calif. A center fielder, he played his entire career (1936–51) with the New York Yankees. In 1941 "Joltin' Joe" set a major-league record by hitting safely in 56 straight games. He compiled a lifetime average of .325, hit 361 home runs, and was a superb fielder.

dime novels, swift-moving thrillers, mainly about the AMERICAN REVOLUTION, the frontier period, and the CIVIL WAR. First sold in 1860 for 10 cents, the books featured such real life adventurers as BUFFALO BILL, Ned BUNTLINE, and Deadwood Dick and such fictional characters as Nick CARTER. The quality of the novels dropped in the 1880s, and they were eclipsed by other series, pulp magazines, and comic strips in the 1890s.

dimension, in mathematics, number of parameters or coordinates required to describe points in a mathematical object (usually geometric). The space we inhabit, having height, width, and depth, is three-dimensional; a plane or surface is two-dimensional; a line or curve is one-dimensional; and a point is zero-dimensional. By means of a coordinate system, e.g., CARTESIAN COORDINATES, one can specify any point with respect to a chosen origin (and coordinate axes through the origin, in the case of two or three dimensions). By analogy, an ordered set of four, five, or more numbers is defined as representing a point in a space of four, five, or more dimensions.

Dimitrov, Georgi [dĭmē'trŏf], 1882–1949, Bulgarian Communist leader and premier (1946–49). In 1933 the NAZIS charged him with setting the REICHSTAG fire. He was acquitted and moved to the USSR, where he became a citizen. He returned to Bulgaria toward the end of World War II.

Dinesen, Isak [dē'nəsən], pseud. of **Baroness Karen Blixen,** 1885–1962, Danish author who wrote primarily in English. She is best known for her imaginative tales, which contain romantic and supernatural elements. Collections include *Winter's Tales* (1942) and *Last Tales* (1957). *Out of Africa* (1937) is an autobiographical account of her years on a coffee plantation in Kenya.

dingo, wild DOG of Australia; shoulder height, c.24 in. (61 cm). Probably introduced by aboriginal settlers thousands of years ago, it was the only large carnivorous mammal found in Australia by the first European colonists. It has large, erect ears, a wolflike head, and long legs, and is usually yellowish red, with white markings. A nocturnal hunter, it preys on small animals and often kills livestock.

Diniz, Port. *Dinis* [both: dēnēsh'], 1261–1325, king of Portugal (1279–1325). He stimulated farming and commerce and restricted the Roman Catholic Church's acquisition of land. A poet and patron of literature, he founded (1290) a university at Lisbon during his relatively peaceful reign.

Dinkins, David N., 1927–, African-American political leader; b. Trenton, N.J. After graduating (1956) from Brooklyn Law School, he went into private practice. Active in Democratic politics, he was (1986–89) Manhattan borough president and the first African-American mayor (1990–93) of New York City.

dinoflagellate: see PYRROPHYTE.

dinosaur, any of a large group of extinct REPTILES (subclass Archosauria) that dominated the earth for over 150 million years in the Mesozoic era. Dinosaurs ranged in length from the 2-ft (60-cm) *Compsognathus* to the 100 to 120-ft (30 to 37-m) *Seismosaurus*, which may have weighed as much as 100 tons (90 metric tons). They have been traditionally classified as cold-blooded reptiles, but evidence suggests that they used a range of metabolic temperature-regulating techniques. They are all thought to have been egg-layers. Saurischian (order Saurischia), or lizard-hipped, dinosaurs included meat-eating bipeds, e.g., *Allosaurus* and *Tyrannosaurus*, and plant-eating quadrupeds, e.g., *Apatosaurus* (Brontosaurus) and *Diplodocus*. Ornithischian (order Ornithischia), or bird-hipped, dinosaurs included plant-eating bipeds, e.g., *Iguanodon* and the duckbills, and armored dinosaurs, e.g., the plated *Stegosaurus* and horned *Triceratops*. Ironically, birds are related not to bird-hipped dinosaurs but to saurischian carnivores. It is not known why dinosaurs died out. Most theories postulate that drastic changes in geography, climate, and sea level, possibly resulting from catastrophic volcanic eruptions or an asteroid or comet impact, were to blame (see MASS EXTINCTION).

Diocletian (Caius Aurelius Valerius Diocletianus), 245–313, Roman emperor (284–305); b. Salona (now Split, Croatia). An army commander of humble birth, he was chosen to succeed Numerian as emperor and became sole ruler after his coemperor, Carinus, was killed (285). Diocletian appointed Maximian as his coemperor and Constantius I and Galerius as caesars (subemperors). Each of the four was given a district of the empire to rule. Under this reorganization the empire throve; Britain was restored (296), and the Persians were subjugated (298). Diocletian's unsuccessful economic policies and his persecution of Christians were the only black marks on his splendid reign. In 305 he retired to his castle at Salona.

diode, two-terminal device having a low RESISTANCE to electric cur-

rent in one direction and a high resistance in the reverse direction. Diodes are thus useful as RECTIFIERS, converting alternating current (AC) into direct current (DC). Although ELECTRON-TUBE diodes were once common, almost all diodes today are SEMICONDUCTOR devices. In general, current flowing through a diode is not proportional to the voltage between its terminals. When the voltage applied in the reverse direction exceeds a certain value, a semiconductor diode breaks down and conducts heavily in the direction of normally high resistance; this effect can be exploited to regulate voltage. In another type of diode, the tunnel diode (see TUNNELING), the current through the device decreases as the voltage is increased within a certain range; this property, known as negative resistance, makes it useful as an AMPLIFIER. Some diodes are sensitive to light (see PHOTOELECTRIC CELL; PHOTOVOLTAIC CELL). A light-emitting diode (LED) produces light as current passes through it; some LEDs can act as lasers. A thermistor is a special semiconductor diode whose conductivity increases with the diode temperature.

Diogenes, c.412–323 B.C., Greek philosopher. He taught that the virtuous life is the simple life, a maxim he dramatized by living in a tub. Condemning the corruption of his contemporaries, he went about the streets looking for "an honest man." None of his writings survives.

Dione, in astronomy, natural satellite of SATURN.

Dion of Syracuse [di'ən], 409?–354? B.C., Greek political leader in Syracuse, brother-in-law of DIONYSIUS THE ELDER. A friend of PLATO, he opposed tyranny. Leading a force from Athens, he overthrew (357 B.C.) DIONYSIUS THE YOUNGER and ruled Syracuse until he was assassinated.

Dionysius the Elder, c.430–367 B.C., tyrant of SYRACUSE. Gaining influence by supporting the poorer classes, he became (405 B.C.) TYRANT. He maintained power by exploiting Syracusan fear of the Carthaginians, leading expeditions against them in Sicily, and against Italian cities. He was succeeded by his son, **Dionysius the Younger,** fl. 368–344 B.C. Unsuited for the position by both training and temperament, he was overthrown by DION OF SYRACUSE (357). The murder of Dion permitted his return, but he was finally expelled in 344.

Dionysus [dīənī'səs], in Greek mythology, god of fertility and wine, later considered a patron of the arts. Probably of Thracian origin, Dionysus was one of the most important Greek gods and the subject of profuse and contradictory legends. He was thought to be the son of either ZEUS and PERSEPHONE or of Zeus and Semele. Dionysus was attended by a carousing band of SATYRS, MAENADS, and NYMPHS. He taught humans viticulture but was capable of dreadful revenge upon those (e.g., ORPHEUS and Pentheus) who denied his divinity. His worship was characteristically drunken and orgiastic. The chief figure in the ORPHIC MYSTERIES and other cults, Dionysus had many festivals in his honor. From the music, singing, and dancing of the Greater Dionysia in Athens developed the dithyramb and, ultimately, Greek drama. The Romans identified him with Liber and BACCHUS, who was more properly the wine god.

Diophantus, fl. c.250, Greek mathematician known as the "father of algebra." He developed the use of symbols instead of words in algebraic reasoning as well as methods for solving determinate and indeterminate equations. His chief work is the *Arithmetica.*

Dioscuri: see CASTOR AND POLLUX.

diphtheria, acute, contagious disease caused by the *Corynebacterium diphtheriae.* It is spread through respiratory droplets of infected individuals. The bacteria, lodging in the mucous membranes of the throat, secrete a potent toxin, which causes tissue destruction and the formation of a gray membrane in the upper respiratory tract that can loosen and cause asphyxiation. The toxin may also spread via the blood and damage tissues elsewhere in the body. Diphtheria can be prevented by vaccination.

Dirac, Paul Adrien Maurice, 1902–84, English physicist. He formulated (1928) a version of QUANTUM MECHANICS that took into account the theory of RELATIVITY. This theory implied the existence of an antiparticle (see ANTIMATTER) to the electron; it was discovered later and named the positron. His equation of a particle's motion is a relativistic modification of Erwin SCHRÖDINGER's basic equation of quantum mechanics. Dirac and Schrödinger shared the 1933 Nobel Prize in physics. Dirac also helped to formulate the Fermi-Dirac statistics and contributed to the quantum theory of electromagnetic radiation.

direct current: see ELECTRICITY; GENERATOR; MOTOR, ELECTRIC.

Directoire style, in French interior decoration and costume, the manner prevailing at the time of the DIRECTORY (1795–99). Influenced by Greco-Roman design, it departed from the sumptuous LOUIS PERIOD STYLES and forecast the EMPIRE STYLE. Furniture became more angular and severe; painted and waxed wood replaced marquetry. Women adopted the chemise gown, with low neckline and high waistline, and men wore tight breeches and coats with wide lapels.

Directory, five men who held (1795–99) executive power in France during the FRENCH REVOLUTION. They were chosen by the legislature and each year one director was replaced. The Directory was riddled by corruption and torn by internal squabbles. After the military reverses of 1799, the Abbé SIEYÈS, who became a director that year, helped NAPOLEON I stage the coup of 18 Brumaire (Nov. 9, 1799), which replaced the Directory with the Consulate.

dirigible: see AIRSHIP.

disarmament, nuclear. The first ATOMIC BOMBS dropped (1945) on Japan by the U.S. in WORLD WAR II demonstrated the threat to humanity posed by the possibility of nuclear war. Therefore the first resolution (1946) of the General Assembly of the UNITED NATIONS set up the UN Atomic Energy Commission to make proposals for control of atomic energy. The U.S.-sponsored Baruch Plan proposed an international agency to control all destructive uses of atomic power. Intensification of the COLD WAR made agreement impossible, and the Soviet Union became the second nuclear power (1949). After both the U.S. (1952) and the USSR (1953) exploded HYDROGEN BOMBS, UN disarmament talks were revived, and a subcommittee of the commission was established. Its Western members—the U.S., Canada, Great Britain, and France—advocated an international control system with on-site inspection. The USSR called for an immediate ban on nuclear weapons with possible later controls. The U.S., Great Britain, and the USSR began discussions on the formulation of a nuclear test-ban treaty in 1958 and agreed to suspend nuclear testing for one year. These talks, continued under U.S. Pres. John F. KENNEDY and Soviet Premier Nikita KHRUSHCHEV, led to the first test-ban treaty (1963), the Moscow Agreement, which banned testing in the atmosphere, in outer space, and under water. The two countries proposed a nonproliferation agreement that was approved (1968) by the UN General Assembly and eventually signed by over 150 nations, but North Korea threatened to withdraw (1993) from the treaty and has sought to avoid international inspections. Nonsignatory nations that have or develop nuclear weapons are not bound by the treaty. The U.S. and USSR began holding Strategic Arms Limitation Talks (SALT), which resulted in the signing (1972) of the SALT I treaty; the two powers agreed to limit antiballistic missiles and reached an interim accord on limiting offensive nuclear weapons. The SALT II talks led to an agreement tentatively approved by U.S. Pres. Jimmy CARTER and Soviet Premier Leonid BREZHNEV. Ratification by the U.S. Senate, however, was shelved (1980) after the Soviet invasion of Afghanistan. In 1982 the U.S. and USSR began a new set of talks, called START (STrategic Arms Reduction Talks). In 1987 Pres. REAGAN and Soviet leader Mikhail GORBACHEV signed the INF treaty to eliminate intermediate-range nuclear forces, and a START treaty, signed by Pres. BUSH and Gorbachev in 1991, called for additional reductions in U.S. and Soviet nuclear arsenals. In response to increasing Soviet political instability, Bush announced (1991) the elimination of most U.S. tactical nuclear arms, took strategic bombers off alert status, and called for further reductions in ballistic missiles. With the USSR's disintegration, its nuclear arms passed to Belarus, Kazakhstan, Russia, and Ukraine. The republics pledged to abide by existing treaties and remove outlying weapons to Russia. In 1993 Bush and Russian Pres. YELTSIN signed a START II treaty that called for cutting nuclear warheads by two thirds by 2003 and eliminating those weapons most likely to be used in a first strike. Ukraine, fearing Russian domination, has refused to ratify START unconditionally and relinquish all its nuclear weapons.

Disarmament Conference, 1923–37, series of international meetings for the discussion of general disarmament. Participants were

the members of the LEAGUE OF NATIONS, the U.S., and the USSR. The first meeting (Feb. 1932–June 1933), at Geneva, was marked by disagreement over definitions of the categories of war materials, the reluctance of France to agree to any arms limitations, and Germany's insistence on a military parity with the other powers. The session ended in deadlock. The second session (Oct. 1933) met in Germany, but when Adolf HITLER withdrew Germany from the League of Nations, the Conference again adjourned. Thereafter, it met only sporadically until it went out of existence in 1937. By then a general military buildup preparatory to WORLD WAR II was already underway, and all hopes of disarmament had vanished.

Disciples of Christ or **The Christian Church,** a Protestant religious body founded early in the 19th cent. in the U.S. It held that the Bible alone should form the basis for faith and conduct and that individuals should interpret the Bible for themselves. The church was begun by Thomas Campbell (see under CAMPBELL, ALEXANDER), who gathered together several dissident groups. In the late 1800s the group split into the CHURCHES OF CHRIST and the more liberal Disciples of Christ, which is formally known as The Christian Church (Disciples of Christ). The latter had a U.S. membership of 1,039,692 in 1990.

Disney, Walt(er Elias), 1901–66, American film producer, a pioneer in animated cartoons; b. Chicago. He began his career as a cartoonist in 1920. In 1928 he created the character of Mickey Mouse in the cartoon short *Steamboat Willie.* His *Snow White and the Seven Dwarfs* (1938) was the first full-length animated cartoon. Others include *Fantasia* (1940) and *Alice in Wonderland* (1951). After 1950 he also produced adventure and semidocumentary nature films and began his company's development of amusement parks featuring his cartoon characters. **Disneyland,** a gargantuan amusement park in Anaheim, Calif., opened in 1955. Walt Disney World opened near Orlando, Fla., in 1971 as an amusement park and resort, and Epcot Center and Disney-MGM Studios have since been added. In 1983 a Disneyland park was opened outside Tokyo, and Euro Disneyland was opened east of Paris in 1992.

Disraeli, Benjamin, 1st **earl of Beaconsfield** [dĭzrā'lē], 1804–81, British statesman and author. Of Jewish descent, he was baptized a Christian in 1817. His political essays and novels earned him a permanent place in English literature. Elected to Parliament in 1837, he developed into an outstanding, realistic, and caustically witty politician. In 1848 he became leader of the Tory protectionists. Disraeli favored a political partnership with the working classes, and as chancellor of the exchequer (1852, 1858–59, 1866–68), he "educated his party" (now the Conservative party) to pass the fairly radical REFORM BILL of 1867, which enfranchised some 2 million men, largely of the working class, and greatly benefited his party. He became prime minister in 1868 but lost the office to GLADSTONE that same year. His second ministry (1874–80) produced many domestic reforms but is noted for its aggressive foreign policy. The annexation of the Fiji islands (1874) and the Transvaal (1877), and the wars against the Afghans (1878–79) and the ZULUS (1879), proclaimed England an imperial world power. Disraeli's purchase of controlling shares of the Suez Canal strengthened British interests in the Mediterranean. After the Russo-Turkish War, he induced Turkey to cede Cyprus to Great Britain, and through the Congress of Berlin he reduced Russian power in the Balkans. A favorite of Queen VICTORIA, he had her crowned empress of India in 1876. His policy of democracy and imperialism revitalized his party. His father, **Isaac D'Israeli,** 1766–1848, was an author, best known for *Curiosities of Literature* (6 vol., 1791–1834).

dissenters: see NONCONFORMISTS.

distaff: see SPINNING.

distillation, process used to separate the substances composing a mixture; it involves a change of state, e.g., liquid to gas, and subsequent condensation (see STATES OF MATTER). A simple distillation apparatus consists of three parts: a flask in which the mixture is heated, a condenser in which the vapor is cooled, and a vessel in which the condensed vapor, called distillate, is collected. Upon heating, the substances with a higher boiling point remain in the flask and constitute the residue. When the substance with the lowest boiling point has been removed, the temperature can be raised and the process repeated with the substance having the next lowest boiling point. The process of obtaining portions (or fractions) in this way is called fractional distillation. In destructive distillation various solid substances, such as wood, coal, and oil shale, are heated out of free contact with air, and the portions driven off are collected separately. Distillation is used in refining PETROLEUM and in preparing alcoholic beverages.

distributive law, in mathematics, a law governing the interaction of certain pairs of operations. The distributive law of multiplication over addition states that the equation $a \times (b + c) = (a \times b) + (a \times c)$ holds for all numbers a, b, c.

District of Columbia, federal district (1990 pop. 606,900), c.70 sq mi (180 sq km), on the E bank of the Potomac R., coextensive with WASHINGTON, D.C., established by congressional acts of 1790 and 1791. A 10-mi (16.1-km) square carved from Maryland and Virginia, it was reduced in 1847 when the Virginia grant was retroceded (see ALEXANDRIA; ARLINGTON). District residents were disenfranchised until the 23d amendment to the U.S. Constitution (1961) was passed, allowing them to vote in presidential elections. In 1970 the District was allowed a nonvoting delegate to Congress. A constitutional amendment giving full congressional representation passed Congress in 1978, but not enough states ratified it. Since then District officials have worked, without success, to obtain statehood. District government, under a 1974 act, is by mayor and city council, but all District legislation is reviewed by Congress.

dithyramb, in ancient Greece, hymn to the god DIONYSUS, an antiphonal choral LYRIC out of which TRAGEDY grew. It developed into the form used by poets such as Bacchylides. Later it became freer in meter and more musical.

Dittersdorf, Karl Ditters von, 1739–99, Austrian composer and violinist. An important precursor of MOZART in operatic and symphonic forms, he also wrote the comic opera *Doktor und Apotheker* (1786), his best-remembered work.

diuretic, drug that increases the rate of urine formation by the kidney, thus eliminating excess sodium and water from the body. Diuretics are given to alleviate edema (swelling from water retention) in heart, kidney, and lung disorders and to lessen the pressure in the eyeball in glaucoma.

diurnal circle, apparent path followed by a star due to the earth's rotation on its axis. The stars appear to move from east to west on the celestial sphere in concentric circular paths centered at the celestial poles (see ASTRONOMICAL COORDINATE SYSTEMS).

dividend, the part of the net earnings, or profits, of a corporation that is distributed to its stockholders. Dividends are declared by the board of directors, usually at regular intervals. In the U.S., they may be paid in bonds or stocks of a company, in notes, or in cash. Holders of preferred stock must be paid their dividends before anything is paid on common stock. Businesses being terminated may issue liquidation dividends.

divination, foreseeing future events or obtaining secret knowledge through divine sources, omens, or oracles. It is based on the belief that revelations are offered to humans in extrarational forms of knowledge: ancient Chaldeans studied birds' flight and patterns in water or entrails; the Greeks put their trust in the ORACLE. Present-day forms of divination include crystal gazing, palmistry, and astrology.

Divine, Father, c.1882–1965, African-American religious leader, founder of the Peace Mission movement; b. Georgia as George Baker. He moved (c.1915) to the North and later called himself Father Divine. Many accepted him as the personification of God. Although he was black, his movement was interracial and nonsectarian. It spread from Harlem (N.Y.C.), but faltered after his death.

Divine Comedy: see DANTE ALIGHIERI.

divine right: see under MONARCHY.

diving, deep-sea, descent into deep water for extended periods, used in a variety of commercial, scientific, and military activities. Helmeted diving suits were first devised in England in the 17th cent., and improved versions are still in use today. The scuba (acronym for Self-Contained Underwater Breathing Apparatus), invented by J.Y. COUSTEAU, which enables divers to carry their own air supply, allows much greater mobility. The bathyscaphe, developed by Auguste PICCARD, was the first self-contained diving craft; it has been replaced by the SUBMERSIBLE. Skin diving, a popular sport, is

done with a face mask and snorkel (plastic tube) just below the surface, or with a scuba at greater depths.

diving, springboard and platform, sport of entering the water from a raised position, often while executing tumbles and other acrobatic maneuvers. Springboard diving is done from a flexible plank either 1 or 3 m (about 3 ft 3 in. or 9 ft 10 in.) above the water. Platform diving (or high diving) is usually done from a rigid platform projecting from a tower 10 m (32 ft 10 in.) high. Both types are scored on the basis of form, execution, and difficulty of the dive. Competitive diving, a part of most aquatic sports meets, is an Olympic event for men (since 1904) and women (since 1912).

divisionism: see POSTIMPRESSIONISM.

division of labor, in economics, the specialization of the functions and roles involved in making the separate parts of a product. It is closely tied to the standardization of production, the introduction and perfection of machinery, and the development of large-scale industry. As a result of mass-production techniques, total production is many times what it would be had each worker made the complete product. Problems created by the division of labor include job monotony, technological unemployment, and eventually chronic unemployment if the economy does not expand quickly enough to reabsorb the displaced labor.

divorce, in law, dissolution of a marriage by court judgment. Partial dissolution, leaving the parties married but allowing noncohabitation, is judicial separation. In the U.S., divorce is regulated by the states, and laws vary widely. However, generally accepted grounds are adultery, desertion, and cruelty. The trend is toward fewer and broader grounds, such as irreconcilable differences and irretrievable breakdown of the marriage. The issues of child custody, the award of alimony to one of the parties (usually the wife), and PROPERTY distribution are determined by the court. After the decree is final, both parties are free to remarry.

Dix, Dorothea Lynde, 1802–87, American social reformer; b. Hampden, Me. A pioneer in the movement for specialized treatment of the insane, she influenced the founding of state hospitals for the insane in the U.S., Canada, and Europe. Dix also did notable work in penology.

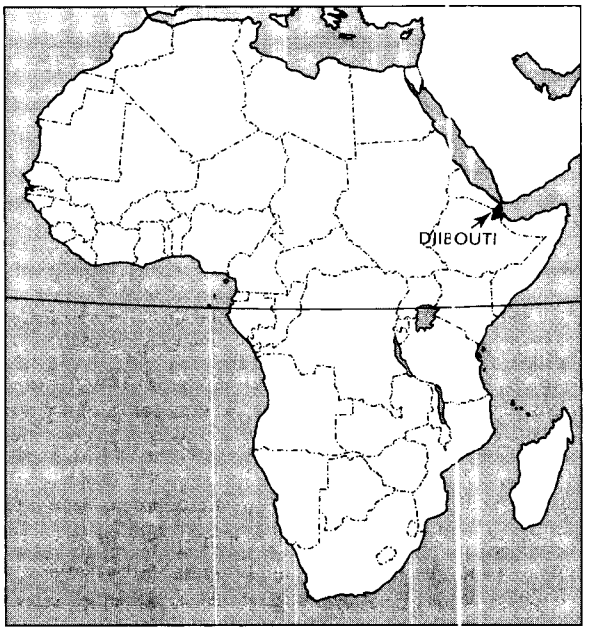
Dix, Otto, 1891–1969, German painter and draftsman. Associated with German EXPRESSIONISM, he depicted the sordid world of prostitutes and swindlers. *War* (1924) is a series of 50 etchings, fantastic visions executed with great clarity.

Djakarta: see JAKARTA.

Djibouti [jēbo͞otē'], officially Republic of Djibouti, republic (1992 est. pop. 391,000), c.8,500 sq mi (22,020 sq km), E Africa, bordered by Eritrea (N), Ethiopia (W and S), Somalia (SE), and the Gulf of Aden (E). DJIBOUTI is the capital. Largely a stony desert, the country is economically underdeveloped. Nomadic animal-herding is the chief occupation, but the government is attempting to develop agriculture and fisheries. Hides, cattle, and coffee (transshipped from Ethiopia) are the major exports, and revenue is derived from the port of Djibouti and transit fees and taxes and French military bases. Industries include the building and repairing of ships, production of compressed or liquid gas, and food processing. The population is about 40% Issa (of Somali origin) and 35% Afar (of Ethiopian origin), with the rest largely other Somali tribes, Arabs, and Ethiopian refugees. Both Issas and Afars are Muslim and speak Cushitic languages. French and Arabic are the official languages.

History. Djibouti is important for its strategic situation on the strait between the Gulf of ADEN and the RED SEA. France obtained a foothold in the area in 1862 and organized it as a colony, French Somaliland, in 1896. The colony gained territorial status in 1946 and was renamed the French Territory of the Afars and the Issas in 1967. In a 1967 referendum the Afars voted to continue ties with France, while the Issas voted for independence and eventual reunion with SOMALIA. Djibouti became independent in 1977 under Pres. Hassan Gouled Aptidon, who established a single-party state in 1981. The country has been adversely affected by warfare in and between neighboring Ethiopia and Somalia, and tensions between Afars and the Issa-dominated government led to an Afar rebellion, beginning in 1991. Limited multi-party elections were restored in 1992.

Djibouti, town, (1989 est. pop. 300,000), capital of the Republic of Djibouti. A strategically located port on the Gulf of ADEN, it is the



country's only large town and the mainstay of the economy. The port, linked by railroad to ADDIS ABABA, derives most of its revenue from the Ethiopian transit trade. Founded (c.1888) by the French, it was the capital of French Somaliland (1892–1945) and later of the French territory of the Afars and Issas (1945–77).

Djilas, Milovan [jē'läs], 1911–, Yugoslav political leader and writer. A leading adviser to TITO in the resistance movement during WORLD WAR II, he held high government and Communist party posts after the war but was dismissed in 1954 for criticizing the regime. He was jailed in 1956 for supporting the Hungarian revolution, and his term was extended in 1957, when *The New Class,* his critique of the Communist oligarchy, was published in the West. Released in 1961, he was arrested again in 1962 and freed in 1966. His other works include *Conversations with Stalin* (1962), *Memoir of a Revolutionary* (1973), and *Tito* (1980).

Dmitri or **Demetrius,** 1582–91, czarevich, son of IVAN IV of Russia (Ivan the Terrible). Dmitri's brother, Feodor I, succeeded Ivan, but Boris GODUNOV ruled in actuality. Dmitri was killed in 1591, possibly by Boris's order. Boris became czar when Feodor died in 1598. Four pretenders later assumed Dmitri's name. The first invaded Russia with Polish help in 1604, was crowned when Boris died suddenly, but was killed in 1606. The second invaded in 1607 and was killed in 1610. Two men claiming to be Dmitri's son were executed in 1612 and 1613. The coronation of Michael ROMANOV in 1613 ended the chaotic period, known as the Time of Troubles.

DNA or **deoxyribonucleic acid,** NUCLEIC ACID found in the nuclei of CELLS. It is the principal constituent of GENES (linear segments of DNA) and CHROMOSOMES, the structures that transmit hereditary characteristics. The amount of DNA is constant for all typical cells of any given species of plant or animal, regardless of the size or function of that cell. Each DNA molecule is a long, two-stranded chain made up of subunits, called nucleotides, containing a sugar (deoxyribose), a phosphate group, and one of four nitrogenous bases: adenine (A), guanine (G), thymine (T), and cytosine (C). In 1953 J.D. WATSON and F.H. CRICK proposed that the strands, connected by hydrogen bonds between the bases, were coiled in a double helix. Adenine bonds only with thymine (A–T or T–A) and guanine only with cytosine (G–C or C–G). The complementarity of this bonding insures that DNA can be replicated, i.e., that identical copies can be made in order to transmit genetic information to the next generation. See also HUMAN GENOME PROJECT.

DNA fingerprinting, any of several similar techniques for analyzing and comparing DNA from separate sources, used especially in law enforcement to identify suspects from hair, blood, semen, or tissue found at the scene of a violent crime. In DNA fingerprinting, DNA

is extracted from a sample and cut into segments using enzymes. The segments are sorted by length by means of gel electrophoresis. Segments that contain sequences of repeated DNA bases, which have been shown to be highly variable from one individual to another, are radioactively tagged, causing them to form a visual pattern, known as a "DNA fingerprint," on X-ray film. In one version of the process, POLYMERASE CHAIN REACTION is used to produce multiple copies of segments from a limited amount of DNA, enabling a DNA fingerprint to be made from a single hair. In criminal investigations, the DNA fingerprint of a suspect's blood is compared to that of the evidence from the crime scene to see how closely they match. First developed in the mid-1980s, DNA fingerprinting has been accepted in most courts, and a number of states have established DNA fingerprint databases. It is generally regarded as a reliable forensic tool when properly done, but some scientists have called for wider sampling of human DNA to insure that the segments analyzed in the tests are indeed highly variable for all ethnic and racial groups. The techniques used in DNA fingerprinting also have applications in paleontology, archaeology, various fields of biology, and medical diagnostics.

Dnieper, Dnipro, or **Dnepr,** river in W Russia, E Belarus, and Ukraine, flowing generally S c.1,430 mi (2,300 km) into the BLACK SEA. The river, which rises W of Moscow and is the chief river of UKRAINE, was made navigable for virtually its entire length by construction (1932) of the Dniprohes dam near Zaporizhzhya (Zaporozhye). Known to the ancients as Borysthenes, the river was (9th–11th cent.) an important commercial link between the Slavs and Byzantines.

Dniester, Dnister or **Dnestr,** river, c.850 (1,370 km) long, W Ukraine and E Moldova. It rises in the CARPATHIANS and flows generally southeast through Ukraine and Moldova to an estuary on the BLACK SEA SW of Odessa. The Dniester formed the Romanian-Soviet border from 1918 to 1940, when the USSR recovered Bessarabia from Romania (see MOLDOVA).

Dnipropetrovsk, formerly **Dnepropetrovsk,** city (1990 est. pop. 1,186,000), E central UKRAINE, on the Dnieper R. A hub of rail and water transport, it is a leading producer of iron, steel, heavy machinery, chemicals, and rolling stock. Founded as Ekaterinoslav in 1787, the city was occupied (1941–43) by German forces.

Doberman pinscher, large WORKING DOG; shoulder height, 24–28 in. (61–71 cm); weight, 60–75 lb (27–34 kg). Its short, smooth coat is black, brown, or blue, with rust markings. Named for Louis Dobermann, who developed the breed in Germany c.1890, it has been used as a guard, police, and war dog.

Dobzhansky, Theodosius [dôbzhän'skē], 1900–75, American geneticist; b. Russia. After his emigration to the United States in 1927, he taught at Columbia (1940–62) and at Rockefeller Univ. (1962–71). He was known for his research in genetics and for his work with the fruit fly *Drosophila.* His most important writings were *Genetics and the Origin of Species* (1937) and *Mankind Evolving: The Evolution of the Human Species* (1962).

Doctorow, E(dgar) L(aurence), 1931–, American novelist; b. N.Y.C. Blending fiction and fact into reconstructions of eras in American history, he has been acclaimed for *The Book of Daniel* (1971), based on the ROSENBERG CASE; *Ragtime* (1975), recreating pre-World War I America; *Loon Lake* (1980), portraying American life during the Great Depression; and *Billy Bathgate* (1989).

Dodecanese, island group (1991 pop. 162,439), SE Greece, in the Aegean Sea between Asia Minor and Crete, c.1,035 sq mi (2,580 sq km). Despite its name ("twelve islands"), the Dodecanese group consists of some 20 islands, notably RHODES (site of the administrative center), Kós, Kárpathos, Kálimnos, and Pátmos. Part of ancient Greece, the islands were occupied by the Ottoman Turks (1522–1912) and by Italy before being captured by the Allies in WORLD WAR II. In 1947 they were ceded to Greece.

Dodge, Mary Mapes, 1831–1905, American writer; b. N.Y.C. She edited *St. Nicholas* magazine for children from 1873 and wrote the classic children's tale *Hans Brinker; or, The Silver Skates* (1865).

Dodge City, city (1990 pop. 21,129), seat of Ford co., SW Kans., on the Arkansas R.; inc. 1875. It is the distributing center for a wheat and livestock area. Laid out (1872) near Fort Dodge on the SANTA FE TRAIL, it was a railhead and became a rowdy cow town noted for its Boot Hill cemetery.

Dodgson, Charles Lutwidge: see CARROLL, LEWIS.

Dodoma, city (1988 pop. 203,833), central Tanzania. A centrally situated transportation hub, it was designated (1975) the administrative capital to replace DAR-ES-SALAAM, and development of the new capital is slowly proceeding. The trade center for an agricultural region, Dodoma produces processed food and furniture.

Doenitz, Karl [dön'ĭts], 1891?–1980, German admiral. He was chief naval commander during WORLD WAR II. After HITLER's death (1945) he headed the German government that negotiated the unconditional surrender to the Allies. He was imprisoned (1946–56) as a war criminal.

dog, carnivorous, domesticated MAMMAL (*Canis familiaris*) of the family Canidae. It is distinguished from other canines, e.g., WOLVES, FOXES, by its worldwide distribution in close association with humans and by the enormous genetic variability within the species. It is probable that the dog was the first animal to be domesticated over 10,000 years ago and that the earliest dogs resembled the wild Australian DINGO. For centuries dogs have been selectively bred for special purposes, notably to pursue and retrieve game, as draft animals, as guides, and as companions. There are systems for classifying and breeding dogs throughout the world, many using a variation of the British system. In the U.S. the American Kennel Club recognizes 125 of the more than 200 known breeds. The breeds are grouped into six classes: SPORTING DOG, HOUND, TERRIER, WORKING DOG, TOY DOG, and NONSPORTING DOG. A purebred dog is one that conforms to the standards of a certain breed and whose pedigree has been recorded for a certain period of time. Dogs of mixed origin are called mongrels. Dogs mate about every six months; their gestation period is about nine weeks, and litters vary from 2 to 10 puppies.

dogtooth violet, originally a name for the Old World plant *Erythronium denscansis,* now used also for several North American species of the same genus of the LILY family. The most common American species is the lilylike, yellow-flowered *E. americanum,* also called adder's tongue. Dogtooth violets are unrelated to the true VIOLETS.

dogwood or **cornel,** common name for some members of the family Cornaceae, trees or shrubs (genus *Cornus*) chiefly of north temperate and tropical mountain regions. Dogwoods have inconspicuous flowers surrounded by large, showy bracts, often mistaken for petals. The flowering dogwood (*C. florida*) and the Pacific dogwood (*C. nutallii*) are cultivated as ornamentals. Their bark, rich in tannin, is used as a QUININE substitute. The bunchberry, or dwarf cornel (*C. canadensis*), is a low, herbaceous wild flower of North America. The BLACK GUM is sometimes included in the dogwood family.

Doha, city (1986 pop. 217,294), capital of Qatar, SE Arabia, on the Persian Gulf. A fishing village before oil production began (1949) in Qatar, it has become a modern city containing almost three quarters of Qatar's population.

Dohnányi, Ernst von [dō'nänyĭ], 1877–1960, Hungarian composer, pianist, and conductor. He led the Budapest Philharmonic Orchestra (1919–44). His compositions, influenced by BRAHMS, include the suite *Ruralia Hungarica* (1924), operas, and piano music. He came to the U.S. in 1949.

doldrums or **equatorial belt of calms,** area around the earth, centered slightly north of the equator between the two belts of trade winds. The large amount of solar radiation at these latitudes results in various forms of severe weather, e.g., HURRICANES, as well as calms (periods of no wind) that can strand sailing vessels for weeks.

Dole, Robert Joseph (Bob), 1923–, U.S. politician; b. Russell, Kans. A lawyer and Republican, he was elected as U.S. representative from Kansas in 1960 and served four terms. In 1968 he was elected to the U.S. Senate. Dole was Gerald FORD's running mate in Ford's unsuccessful presidential campaign (1976) and campaigned unsuccessfully for the Republican presidential nomination in 1980 and 1988. In 1985 he became Senate majority leader; since 1987 he has been the minority leader. His wife, **Elizabeth Hanford Dole,** 1936–, b. Salisbury, N.C., is a lawyer and U.S. government official. A Republican, she was secretary of transportation (1983–89) in the Reagan administration and secretary of labor (1989–91) under

Pres. Bush. She became president of the American Red Cross in 1991.

Dole, Sanford Ballard, 1844–1921, Hawaiian statesman; b. Honolulu. He became (1894) the first president of the republic of HAWAII; after Hawaii's annexation (1898) by the U.S., he served (1900–03) as its first territorial governor.

Dolin, Anton [du'lĭn], 1904–83, English ballet dancer and choreographer. He studied (1921) with DIAGHILEV and became (1924) principal danseur. He formed (1925) his own company with Vera Nemtchimova. He joined the Vic-Wells Ballet, often dancing with Alicia MARKOVA, with whom he formed (1935, 1949) two dance companies. He danced principal roles at the Ballet Theater (N.Y.C.) and wrote several books on dance.

doll, small figure of a human being, usually a child's toy. In ancient Egypt, Greece, and Rome, dolls were used symbolically and probably also as children's playthings. In Europe, from the 15th cent., fashion dolls given as gifts by monarchs and courtiers helped spread costume styles. By the 17th cent. both boys and girls played with dolls. Sonneberg, Germany, was noted for the manufacture of wooden dolls (17th cent.) and of dolls' china heads (19th cent.). In Paris, dolls were made that could speak and close their eyes. In the 19th cent. dolls were made of papier-mâché, china, wax, hard rubber, or bisque; by the 20th cent. doll manufacturing was an important U.S. industry.

Dollfuss, Engelbert [dôl'fo͝os], 1892–1934, Austrian chancellor (1932–34). He opposed the National Socialists and the Social Democrats, and sought support from Austrian Fascists and from Italy. In Apr. 1934 Austria became a corporative state with a one-party, authoritarian system. He was assassinated (July 25) by Austrian Nazis.

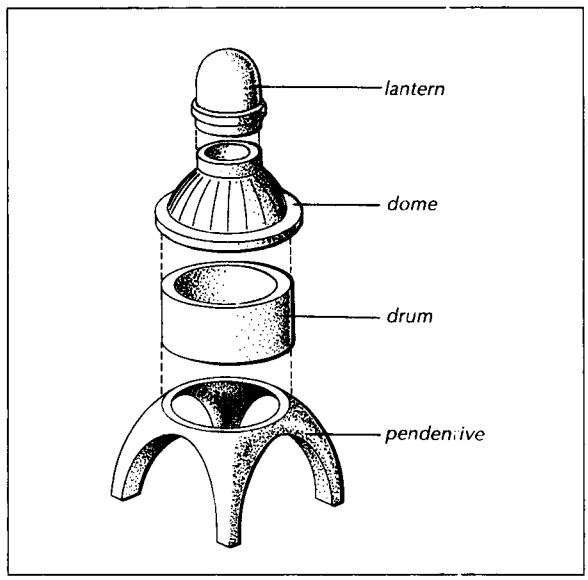
Döllinger, Johann Joseph Ignaz von [döl'ĭngər], 1799–1890, German theologian, historian, leader of the OLD CATHOLICS. Ordained (1822) a Roman Catholic priest, he was long associated with the Univ. of Munich and was a leading member of the Catholic party in the Frankfurt Parliament (1848–49). He spurned the dogma of papal infallibility pronounced by the First VATICAN COUNCIL (1870) and was excommunicated (1871). While sympathetic with the Old Catholics, he never intended a separate sect to grow from the movement and never became a member of the Old Catholic Church.

dolomite. **1** White, gray, brown, or reddish calcium magnesium carbonate mineral $CaMg(CO_3)_2$, commonly crystalline. **2** Carbonate rock composed chiefly of the mineral dolomite, similar to LIMESTONE but harder and heavier. Dolomite formations are widespread and are notable in the region of the Alps called the Dolomites, where the rock was first studied. Dolomite is used chiefly as a building stone, for the manufacture of refractory furnace linings, and as magnesium carbonate for pipe coverings.

dolphin, aquatic MAMMAL, any of the small, toothed, gregarious WHALES of the family Delphinidae. They include the beaked dolphin, the killer whale, the pilot whale, and 12 freshwater species in South America and S Asia. Fishlike in form, dolphins breathe through a dorsal blowhole. They propel themselves by means of powerful flukes, steering with a dorsal fin and navigating with the aid of echolocation. Dolphins are exceptionally friendly toward humans, and their high order of intelligence and their complex language have long been the subject of study.

Domagk, Gerhard [dō'mäk], 1895–1964, German chemist and pathologist. Because of a Nazi decree, he had to decline the 1939 Nobel Prize in physiology or medicine, awarded for his discovery of the efficacy of prontosil, the forerunner of the SULFA DRUGS, in treating streptococcal infections. He received the Nobel Prize medal (but not the prize money) in 1947.

dome, a roof circular or (rarely) elliptical in plan, usually hemispherical in form, placed over a square, circular, or other space. Ancient examples are found at Mycenae and in Sicily, but the Romans were the first developers of the form. Their constructions culminated in the PANTHEON (2d cent. A.D.). The use of the pendentive, however—essential to placing a dome over a square—was discovered by the Byzantine builders of HAGIA SOPHIA at Constantinople (A.D. 532–37). Islamic architects, under Byzantine influence, built many domes. The Persian or onion dome is best seen at the TAJ MAHAL. Roman and Byzantine influences converged in the designers of the Italian RENAISSANCE. A circular drum was usually interposed between pendentive and dome, to give greater elevation; the dome was then topped with a lantern. Noted domes include BRUNELLESCHI's for the cathedral at Florence (1420–36) and MICHELANGELO's for St. Peter's, Rome (completed 1590). In the U.S. C. BULFINCH's dome for the Massachusetts state capitol, Boston, established the style. Modern domes employ a wide variety of materials and designs.



Parts of a dome

Domenichino [dōmānēkē'nō] or **Domenico Zampieri,** 1581–1641, Italian painter. An adherent of classical doctrine and a landscape painter, he produced many FRESCOES, e.g., the *Martyrdom of St. Andrew* (San Gregorio Magno, Rome).

Domenico Veneziano [vānātsyä'nō], c.1400–1461, Italian painter. His work, with rich coloring and detailed landscape settings, and his name suggest that he came from Venice. His masterpiece, the *St. Lucy Altarpiece* (central panel, Uffizi), reveals an innovative use of space; in it, he disposed of the Gothic hierarchical order and introduced figures (deity and saints) in a harmonious group.

Dome of the Rock: see MOSQUE.

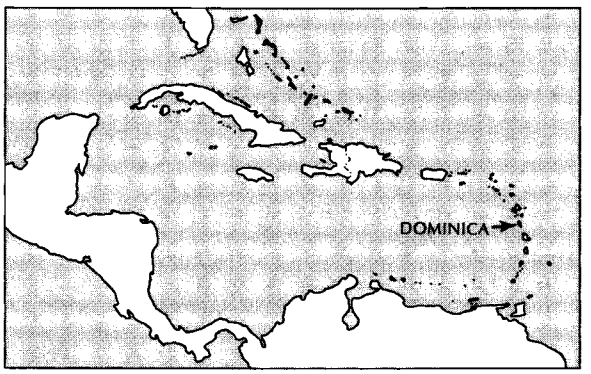
Domesday Book or **Doomsday Book,** the surviving record of a census of England made (1085–86) by order of WILLIAM I. It contains extensive information on English land division and its use and inhabitants and also on economic resources in the country. It is a major source for study of the Middle Ages.

Domingo, Placido, 1941–, Spanish operatic tenor. He is best noted for his warm voice and his interpretation of lyric roles in Italian opera, although he has also sung in Wagnerian operas. Among his most famous roles are Don José in *Carmen*, Canio in *Pagliacci*, and Pinkerton in *Madama Butterfly*.

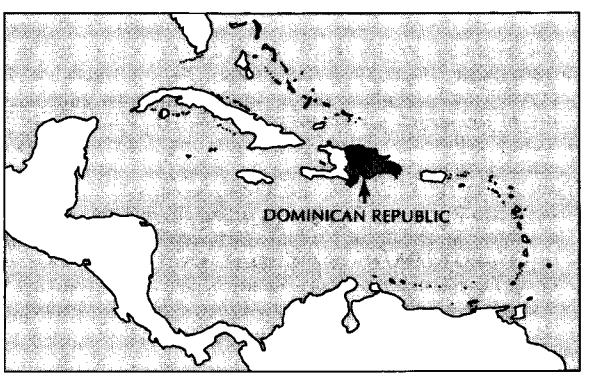
Dominic, Saint, 1170?–1221, Castilian churchman, founder of the DOMINICANS. Dominic successfully preached to the ALBIGENSES in S France. In 1216 he was given a house at Toulouse for his growing band of preachers and won the consent of Pope Honorius III to form a new order. Tradition says that the rosary was given to him by the Virgin Mary in a vision. Feast: Aug. 8.

Dominica, officially Commonwealth of Dominica, island nation (1992 est. pop. 87,000), c.290 sq mi (750 sq km), West Indies, between Guadeloupe and Martinique, largest of the Windward Islands. Dominica is mountainous and forested; of volcanic origin, it has fertile soil, a mild climate, and plentiful rainfall. The capital and chief port is Roseau. The nation exports bananas, citrus fruits, and coconut oil and is a tourist resort. Most of the people are of African descent; there is a remnant group of Caribs. Roman Catholicism is the predominant religion. English is the official lan-

guage, but a French patois is widely spoken. The Caribs, who had earlier (14th cent.) wrested Dominica from the Arawaks, long fought French and British colonization. In the 18th cent. Africans were brought in as slaves to work plantations. After a long struggle for control between Britain and France, the island became a British colony in the early 1800s. It has been a fully independent member of the Commonwealth since 1978. Dominica is subject to frequent hurricanes, one of the worst of which, in 1979, left some 60,000 people homeless.



Dominican Republic, Span. *República Dominicana,* republic (1992 est. pop. 7,516,000), 18,816 sq mi (48,734 sq km), West Indies, on the eastern two thirds of the island of HISPANIOLA, which it shares with HAITI. The land ranges from mountainous to gently rolling, with fertile river valleys; the climate is subtropical. The capital and chief port is Santo Domingo. The economy has long been dominated by sugar, which still earns much of the country's foreign exchange, despite establishment of varied light industries and the development of nickel mining and tourism. Coffee, cocoa, bananas, and tobacco are also exported. About two thirds of the population is of mixed Afro-European descent, with the rest mainly of African descent. Spanish is the national language, and Roman Catholicism is the predominant religion.



History. Part of the Spanish colony of SANTO DOMINGO during the 16th and 17th cent., and then under Haitian rule after 1821, the Dominican Republic was proclaimed in 1844. Its history has been unusually turbulent, with recurrent dictatorships and rebellions. Bankrupted by civil strife after the murder of the dictator Ulises Heureaux in 1899, the republic came under U.S. domination; U.S. marines occupied the country in 1916–24 and the U.S. exerted fiscal control until 1941. In 1930 Rafael TRUJILLO MOLINA began 30 years of corrupt dictatorship, which ended with his assassination in 1961. Democratic elections in 1962 brought to power a reform president, Juan Bosch, but right-wing opposition led to his ouster a year later. In 1965 civil war between pro- and anti-Bosch forces broke out, and U.S. troops intervened again. In 1966, elections supervised by the Organization of American States restored a degree of normality; Joaquín BALAGUER defeated Bosch, and under his regime (1966–78) considerable progress was made toward stabilizing the economy. Economic stability was also pursued by his successors, Antonio Guzmán Fernández and Jorge Blanco. Balaguer became president again in 1986. Overpopulation has been a problem for the Dominican Republic, and many people have emigrated to the U.S.

Dominicans, Roman Catholic religious order, officially named the Order of Preachers (O.P.). Founded (1216) by St. DOMINIC, the order preached against the heresy of the ALBIGENSES and produced many eminent theologians, notably St. THOMAS AQUINAS. Members are accepted not into a specific house, but into the whole order, and wear a white habit with a black mantle (worn when preaching). There is a contemplative order of nuns and a widespread third order, including many teachers.

Dominion Day: see CANADA DAY.

domino theory, notion that if one country becomes Communist, other states in the region will probably follow, like falling dominoes in a line. The analogy, first applied (1954) to Southeast Asia by Pres. EISENHOWER, was adopted in the 1960s by supporters of the U.S. role in the VIETNAM WAR. The theory was revived in the 1980s to characterize the threat perceived from leftist unrest in Central America.

Domitian (Titus Flavius Domitianus), A.D. 51–96, Roman emperor (A.D. 81–96). On the death of his brother TITUS, he succeeded to the throne. His rule became increasingly despotic and plots were formed against him. Finally his wife Domitia had him murdered.

Don, river, c.1,200 mi (1,930 km) long, SW Russia. It rises near Tula and flows southeast to within 65 mi (105 km) of the VOLGA R., to which it is connected by canal, then southwest into the Sea of Azov. It is an important artery for grain, lumber, and coal shipments and is the outlet for the industrial Donets Basin. The Don is navigable for c.850 mi (1,370 km) from Rostov-na-Donu, its chief city and port.

Donatello [dŏnətĕl'ō], c.1386–1466, Italian sculptor, a major innovator in RENAISSANCE art; b. Florence as Donato di Niccolò di Betto Bardi. He assisted GHIBERTI in Florence and worked on its cathedral. His sculptures developed from Gothic forms, e.g., the marble *David* (Bargello, Florence) to strong, humanistic expression, e.g., *St. Mark* (Orsanmichele, Florence). He developed a shallow relief technique *(schiacciato)* with which he achieved effects of spatial depth. In Rome he studied ancient monuments that influenced his sculpture. Donatello headed a vast workshop in Padua (1443–53). His late Florentine masterworks include the *Magdalen* (baptistery) and the pulpits of San Lorenzo.

Donetsk [dənyĕtsk'], city (1990 est. pop. 1,120,000), E UKRAINE, on the Kalmiius R. The hub of the Donets Basin industrial region, it has coal mines, iron and steel mills, machinery works, and chemical plants. It was founded (1870) as Yuzovka and called Stalino from 1924 to 1961.

Dong, Pham Van, 1906–, premier (1976–81) of the Socialist Republic of VIETNAM. A close associate of HO CHI MINH, he was premier of North Vietnam (1954–76) during the VIETNAM WAR and afterward helped unify the country, serving as premier (1976–81) and chairman of the council of ministers (1981–86).

Don Giovanni: see DON JUAN.

Donizetti, Gaetano, 1797–1848, Italian composer. Influenced early by ROSSINI, he later developed his own melodic, often sentimental style. His best-known operas include *Lucrezia Borgia* (1833) and *Lucia di Lammermoor* (1835). *The Daughter of the Regiment* (1840) is a comic opera.

Don Juan, legendary profligate. There are many versions of his story, but the Spanish is the most widespread. In it, Don Juan seduces the daughter of the commander of Seville and kills her father in a duel. When he jeeringly invites a statue of his victim to a feast, it comes to life and drags Don Juan to hell. The earliest-known dramatization of the story is by TIRSO DE MOLINA. Other famous treatments are by MOLIÈRE, MOZART (in his opera *Don Giovanni*), BYRON, and G.B. SHAW.

donkey: see ASS.

Donne, John, 1572–1631, English divine and greatest of the METAPHYSICAL POETS. A courtier, Donne in his first period (before 1601)

wrote cynical, realistic, and sensuous lyrics, essays, and satires, including some of his *Songs and Sonnets* and the prose work *Problems and Paradoxes*. With his marriage and the end of his court career in 1601, his writing became more serious. The two *Anniversaries* (1611, 1612) reveal that his faith in the medieval order was shaken by growing scientific and philosophic doubt. In 1615 Donne took holy orders in the Anglican church. Two years later his wife died. Thereafter the tone of his poetry, e.g., *Holy Sonnets*, deepened. He wrote religious poetry, e.g., *Devotions* (1624), and became one of the great preachers of his day. From 1621 to his death he was dean of St. Paul's, London. All of Donne's poetry—love sonnets, and religious and philosophical verse—is marked by a striking blend of passion and reason. His love poetry treats the breadth, physical and spiritual, of the experience. The devotional poems are deeply concerned with death and the possibility of the soul's union with God. Original, witty, and erudite, his style is characterized by a brilliant use of paradox, hyperbole, and image. Neglected for 200 years, Donne was rediscovered in the 20th cent. and greatly influenced such poets as W.B. YEATS, T.S. ELIOT, and W.H. AUDEN.

Donner Party, group of emigrants to California who in 1846–47 met with tragedy. The party, named for its two Donner families, was trapped by snow in Oct. 1846 in the Sierra Nevada near what is today called the Donner Pass. The survivors resorted to cannibalism before their rescue, and only about half of the original party of 87 reached California.

Donoso, José, 1925–, Chilean novelist and short-story writer. His work ranges from ironically realistic studies of decadent Chilean life, e.g., the novel *Coronation* (1957), to surrealistic portrayals of bizarre subjects, written in a dense and powerful style, e.g., the novel *The Obscene Bird of Night* (1970), considered his masterpiece.

Don Quixote de la Mancha: see CERVANTES SAAVEDRA, MIGUEL DE.

Doolittle, Hilda, pseud. **H.D.,** 1886–1961, American poet; b. Bethlehem, Pa. She lived abroad after 1911 and was married to Richard ALDINGTON. One of the most original of the IMAGISTS, she wrote such volumes of verse as *Sea Garden* (1916) and *Bid Me to Live* (1960).

Doomsday Book: see DOMESDAY BOOK.

Doppler effect, change in the wavelength (and frequency) of a wave as a result of the motion of either the source or receiver of the waves. If the source and the receiver are approaching each other, the frequency of the wave will increase and the wavelength will be shortened—sounds will be higher in pitch and light will be bluer. If the source and receiver are moving apart, sounds will become lower-pitched, and light will appear redder (see RED SHIFT). Astronomers analyze Doppler shifts of light and radio waves to measure the velocities and (indirectly) distances of remote objects.

Dorchester, Guy Carleton, 1st Baron: see CARLETON, GUY.

Doré, Gustave, 1832–83, French illustrator, engraver, painter, and sculptor. He is best known for his fantastic, imaginative, engraved illustrations for some 120 books, including *Don Quixote* (1862) and MILTON's *Paradise Lost*.

Doria, Andrea, b. 1466 or 1468, d. 1560, Italian admiral and statesman. He fought for France in the ITALIAN WARS until 1528, when he went over to Holy Roman Emperor CHARLES V. Doria became (1528) virtual dictator of Genoa but retained many republican institutions. He aided Charles in taking Tunis (1535), and with French aid, he recovered Corsica for Genoa (1559).

Dorians, people of ancient GREECE. They arrived in the PELOPONNESUS between 1100 and 950 B.C., drove out the ACHAEANS (see ACHAEA), and rapidly extended their influence. SPARTA and CRETE were Dorian centers. The Dorians' arrival inaugurated a period of Greek decline, but they did contribute to Greek culture, particularly in the Doric style of architecture.

Doric order: see ORDERS OF ARCHITECTURE.

dormouse, Old World nocturnal RODENT of the family Gliridae. European species hibernate for nearly six months. The common dormouse (*Muscardinus avellanarius*) of Europe and W Asia is up to 4 in. (10 cm) long with rounded ears, large eyes, and thick, reddish brown fur; it eats insects, nuts, and berries.

Dorsey, Thomas A(ndrew), 1899–1993, American gospel musician, b. Villa Rica, Georgia. He began as a blues pianist and songwriter and was later a church choir director. Widely known as the father of GOSPEL MUSIC, Dorsey combined elements of the blues with African-American religious music in his hundreds of songs, including "Take My Hand, Precious Lord."

Dortmund, city (1989 est. pop. 588,000), North Rhine–Westphalia, W Germany, a port on the Dortmund-Ems Canal. An industrial center with such manufactures as steel and machinery, it is located in the RUHR industrial district. It flourished (13th–17th cent.) as a member of the HANSEATIC LEAGUE. The city was badly damaged during WORLD WAR II, but such buildings as the Reinold church (begun in the 13th cent.) remain.
