Dos Passos, John Roderigo, 1896–1970, American novelist; b. Chicago. In works such as *Manhattan Transfer* (1925) and his major opus, the trilogy *U.S.A.* (1937)—*The 42nd Parallel* (1930), *1919* (1932), and *The Big Money* (1936)—he developed a kaleidoscopic technique to portray American life, combining narration, STREAM OF CONSCIOUSNESS, biographies, and quotations from newspapers and magazines. The left-wing views that colored his early works gave way to a conservatism that is evident in his less powerful later novels, e.g., his second trilogy, *District of Columbia* (1952).

Dostoyevsky or **Dostoevsky, Feodor Mikhailovich** [dəstəyĕf-'skē], 1821–81, Russian novelist, one of the towering figures of world literature. Shortly after completing an engineering education, he published his first novel, *Poor Folk* (1846), to wide acclaim. Though less successful, his next novels, *The Double* (1846) and *White Nights* (1848), nevertheless showed the profound insight into character that marks his greatest works. Arrested in 1849 for membership in a secret political group, he was exiled to Siberia, and there served four years at hard labor and five as a soldier. His harsh experiences (recorded in *The House of the Dead*, 1862) transformed his youthful liberalism into a fervent religious orthodoxy. The existentialist *Notes from the Underground* (1864), the first major work following his return to St. Petersburg in 1859, inaugurated his most fruitful literary period. It coincided with the death of his first wife and increasing financial burdens. *Crime and Punishment* (1866), a brilliant portrait of sin, remorse, and redemption through sacrifice, was followed by *The Idiot* (1868), the story of a failed Christ figure. It was written in Germany, where Dostoyevsky had gone with his new wife, Anna Grigoryevna Snitkina, whose love and practicality enriched his later years. In *The Possessed* (1871–72) he denounced the alienated radicalism that characterized contemporary Russia. *A Raw Youth* (1875) described decay within family relationships and the inability of science to answer man's deepest needs. These themes were central to his masterpiece, *The Brothers Karamazov* (1880), in which with rare psychological and philosophical insight Dostoyevsky plumbed the depths and complexities of the human soul. His last work, it ranks as one of the finest novels ever written and is a synthesis of the author's mature vision.

Douala, city (1986 pop. 636,980), United Republic of Cameroon, on the Wuori R. estuary. Cameroon's largest city and major port, it is a commercial and transportation center handling most of the country's exports (chiefly cocoa and coffee) as well as transit trade from Chad. Douala developed as a center of the slave trade after the Portuguese arrived in 1472. It later became part of a German protectorate (1884) and of the French CAMEROONS (1919).

double bass: see VIOL; VIOLIN.

Doubleday, Abner, 1819–93, alleged originator of BASEBALL and Union general in the U.S. Civil War; b. Saratoga co., N.Y. A friend, A.G. Mills, heading a commission (1907), reported that Doubleday invented (1839) the game at Cooperstown, N.Y. The report has been generally discredited and it is now known that a children's game similar to baseball had existed long before Doubleday's time.

double jeopardy, in law, prosecution twice for the same criminal offense. Jeopardy exists when a JURY is sworn in, or when EVIDENCE is introduced. The U.S. CONSTITUTION prohibits double jeopardy; a second trial is not precluded, however, if there were procedural errors in the first trial or if the jury could not reach a verdict.

double star: see BINARY STAR.

Douglas, Sir James, 1803–77, Canadian governor of BRITISH COLUMBIA (1858–64). He commanded (1846–58) the HUDSON'S BAY COMPANY territory W of the Rockies after he founded (1843) a fort

at the site of VICTORIA. Douglas served (1851–58) as governor of VANCOUVER ISLAND and was the first governor of the new crown colony of British Columbia.

Douglas, Sir James de, lord of Douglas, 1286?–1330, Scottish nobleman, called the Black Douglas and Douglas the Good. In the war of independence against England, he joined ROBERT I and made himself the terror of the border. He led a force at Bannockburn (1314) and in 1327 succeeded in ending the English campaign. After Robert died, Douglas started to Palestine to bury the king's heart but was killed fighting Moors in Spain.

Douglas, Stephen Arnold, 1813–61, American statesman; b. Brandon, Vt. A Democratic congressman (1843–47) and senator (1847–61) from Illinois, he thought disputes between North and South could be solved by SQUATTER SOVEREIGNTY and incorporated that concept into the COMPROMISE OF 1850 and the KANSAS-NEBRASKA ACT. Seeking Senate reelection in 1858, he engaged his opponent, Abraham LINCOLN, in the famous Lincoln-Douglas debates. At the Freeport (Ill.) debate, Douglas asserted that territories could exclude slavery—a doctrine that made him anathema to the South. The Democrats nominated him for president in 1860, but he ran second to Lincoln in the popular vote. A great orator, Douglas was long in the shadow of the Lincoln legend but is now held to have had a truly national vision.

Douglas, William Orville, 1898–1980, associate justice of the U.S. SUPREME COURT (1939–75), with the longest tenure in Court history; b. Maine, Minn.; LL.B., Columbia Univ. (1925). He was a member (1934–37) and chairman (1937–39) of the Securities and Exchange Commission, where he initiated a policy of reform. On the Court, he was known for his fervent support of civil rights, conservation, and free speech.

Douglas fir, tree (*Pseudotsuga menziesii*) of the PINE family, native to W North America. One of the tallest trees known (up to 385 ft/117 m), it is the leading timber-producing tree of the continent. Its usually hard, strong wood is of great commercial importance in construction.

Douglas-Home, Sir Alec (Alexander Frederick), 1903–, British politician. A Conservative, he entered Parliament in 1931 and served in government and cabinet posts, including that of foreign secretary (1960–63, 1970–74). He was prime minister from Oct. 1963 to Oct. 1964. In 1974 he was made a life peer.

Douglass, Frederick, c.1817–1895, American ABOLITIONIST; b. near Easton, Md. Escaping from slavery in 1838, he took the name Douglass from Sir Walter Scott's *Lady of the Lake.* In 1845 he published his *Narrative of the Life of Frederick Douglass,* and in 1847, after English friends had purchased his freedom, he established the *North Star* (Rochester, N.Y.), which he edited for 17 years, advocating abolition through political activism. During the CIVIL WAR he urged African Americans to join the Union ranks, and during and after RECONSTRUCTION he held several government posts.

Doukhobors: see DUKHOBORS.

Douw, Gerard or **Gerrit:** see DOU, GERARD.

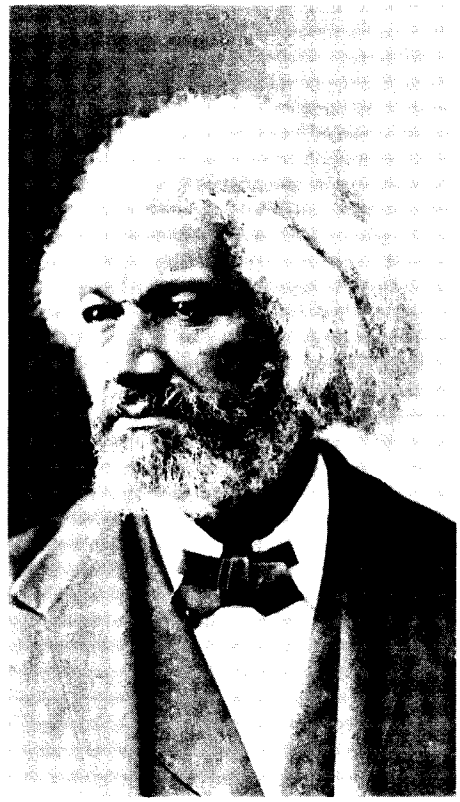
Dove, Arthur Garfield, 1880–1946, American painter; b. Canandaigua, N.Y. His abstract style flowered in the 1930s in fluid, poetic canvases based on natural forms. Dove is recognized as a precursor of ABSTRACT EXPRESSIONISM.

dove: see PIGEON.

Dover, city (1990 pop. 27,630), state capital and seat of Kent co., Del., on the St. Jones R.; founded 1683, inc. 1929. In a farming and fruit-growing area, it is a shipping and canning center with light industries. Dover Air Force Base, a huge cargo facility, is a major factor in the local economy. The old statehouse (begun 1722) is notable.

Dovzhenko, Aleksandr [dōvzhĕn'kō], 1894–1956, Ukrainian film director. Ranked with EISENSTEIN and PUDOVKIN, he used MONTAGE and surreal images in such films as *Zvenigora* (1928), *Arsenal* (1929), and *Earth* (1930).

Dow Jones Average, indicators used to measure and report value changes in representative stock groupings on the New York STOCK EXCHANGE. It consists of four different averages—industrial stocks, transportation stocks, utility stocks, and a composite average of all three. Although the industrial average is the most frequently cited, it has been criticized for consisting of only blue chip stocks and for its inability to accurately adjust, in spite of a sophisticated mathematical formula, for dividends and stock splits. The average is quoted in points, not in dollars. Other averages include the Dow Jones 20 Bond Average and the Dow Jones Municipal Bond Yield Average.



Frederick Douglass

Dowland, John, 1562–1626, English composer and lutanist. His books of *Songs or Ayres* (1597–1603) made him the foremost song composer of his time.

Down's syndrome, congenital disorder characterized by moderate to severe MENTAL RETARDATION, slow physical development, and flattish skull and facial features, giving a somewhat Asian appearance (hence the alternate name for the condition, mongolism). The syndrome is caused by genetic transmittance of an extra chromosome. It can occur at any time, but the risk increases significantly with parental age, particularly if the mother is over 35. AMNIOCENTESIS or CHORIONIC VILLUS SAMPLING can be used to detect the disorder in the fetus. Few people with Down's syndrome survive beyond age 35.

Dowson, Ernest Christopher, 1867–1900, English poet. One of the best known of the DECADENTS, he wrote delicate, musical poems, the most famous of which has the refrain "I have been faithful to thee, Cynara! in my fashion."

Doyle, Sir Arthur Conan, 1859–1930, English author and creator of Sherlock Holmes, best known of all fictional detectives. The brilliantly deductive Holmes and his stolid companion, Dr. Watson, appear in *A Study in Scarlet* (1887), *The Memoirs of Sherlock Holmes* (1894), *The Hound of the Baskervilles* (1902), and others. Doyle also wrote historical romances, e.g., *The White Company* (1891), and a *History of Spiritualism* (1926).

Drabble, Margaret, 1939–, English novelist. An old-fashioned novelist, she has been compared to Henry JAMES and George ELIOT for the subtle insight she brings to the dilemmas of modern women. Her novels include *Jerusalem the Golden* (1967), *The Needle's Eye* (1972), *The Realms of Gold* (1975), *The Middle Ground* (1980), and *The Gates of Ivory* (1991). She has also published scholarly studies, e.g., *Arnold Bennett* (1974).

Draco or **Dracon,** fl. 621 B.C., Athenian politician and law codifier.

Draco's code appears to have prescribed the death penalty for even trivial offenses, and Draconian has become a synonym for harshness in legislation.

Dracula: see STOKER, BRAM.

Drago, Luis María [drä'gō], 1859–1921, Argentine statesman and jurist. His protest against coercion of Venezuela by Great Britain, Italy, and Germany (1902) became known as the **Drago Doctrine;** it stated that no public debt could be collected from a sovereign American state by armed force or through occupation of American territory by a foreign power. It was adopted in modified form at the HAGUE CONFERENCE (1907).

dragon, mythical beast, usually represented as a huge, winged, fire-breathing reptile; prominent in the folklore of many peoples. The highest achievement of a hero in medieval legend, e.g., Saint GEORGE, was slaying a dragon. The beast is usually associated with evil; the dragon of the Book of REVELATIONS gave rise to its use as a symbol of SATAN. However, it can also be benevolent, as in ancient China.

dragonfly, large predatory INSECT of the order Odonata. They have chewing mouthparts and four membranous, net-veined wings. Dragonflies are found primarily in the tropics, but occur worldwide except in polar regions. They are strong fliers with elongated bodies that may reach 5 in. (12.7 cm) in length. They prey on mosquitoes and other insects. In the Permian period one species had a wingspan of 2½ ft (76 cm).

drainage basin: see CATCHMENT AREA.

Drake, Sir Francis, 1540–96, English navigator, the first Englishman to circumnavigate the globe (1577–80). He was a leader of the marauding campaign against Spanish vessels and settlements. On one such voyage in 1577, he navigated the Strait of MAGELLAN in his ship the *Golden Hind,* and pillaged the coasts of South and North America. He sailed across the Pacific and reached England in 1580, bearing treasure of great value. He was knighted by ELIZABETH I. Drake was an admiral in the fleet that defeated the Spanish ARMADA. He was defeated by the Spanish in the WEST INDIES (1595) and died off Portobello.

Dravidian languages, family of about 20 languages that appears to be unrelated to any other known language family. They are spoken by people living in S India and N Sri Lanka. See LANGUAGE (table).

drawing, art of the draftsman, commonly used to denote works in pen, pencil, crayon, charcoal, PASTEL, or similar media in which line and form, rather than color, are emphasized. Often vigorous and spontaneous, drawings are made as preparatory studies (see CARTOON) or as finished works. Among the many artists known for their drawings are LEONARDO DA VINCI, MICHELANGELO, DÜRER, RUBENS, HOGARTH, GOYA, DAUMIER, KLEE, PICASSO, and MATISSE.

Drayton, Michael, 1563–1631, English poet. Reflecting the poetic fashions of the day, he wrote pastorals, e.g., *The Shepherd's Garland* (1593); a sonnet sequence, *Idea's Mirror* (1594–1619); poems in the form of love letters (1597); topographical poetry, e.g., *Poly-Olbion* (1612–22); and many other types.

dream, mental activity associated with the rapid-eye-movement (REM) period of sleep. It generally consists of visual images and may reflect bodily disturbances (e.g., indigestion) or external stimuli (e.g., the ringing of an alarm clock). REM sleep accounts for about half of a newborn's total sleeping time, but the proportion decreases with age to about two hours for every eight-hour period of an adult's sleep. In primitive and ancient cultures, dreams played an extensive role in myth and religion. FREUD emphasized dreams as keys to the makeup of the individual. He distinguished between the experienced content of a dream and the actual meaning of the dream, which is largely concealed from the dreamer. JUNG held that dreams are not limited to the personal UNCONSCIOUS but may also be shaped by innate mental structures, called archetypes, that originate in the collective unconscious of the human species. Research suggests that REM sleep is a way for the brain to integrate information taken in during the day, consolidating new knowledge into memory. In this scenario, impulses from the brain stem stimulate the brain, resulting in dream images that may or may not have symbolic meaning.

Drebbel, Cornelis Jacobszoon, 1572–1634, Dutch inventor, physicist, and mechanician. Among his many inventions were the first navigable SUBMARINE, a scarlet dye, and a thermostat for a self-regulating oven.

Dred Scott Case, case argued before the U.S. SUPREME COURT in 1856–57 involving the status of SLAVERY in the federal territories. Scott, a slave, had been taken to Illinois and the Wisconsin territory, where slavery was prohibited by the MISSOURI COMPROMISE. Later, in Missouri, he sued for his freedom on the basis of his residence in a free state and territory. The Supreme Court's Southern majority declared that the Compromise was unconstitutional and that Congress had no power to limit slavery in the territories. Three justices also held that an African American descended from slaves had no rights as an American citizen and therefore no standing in court. The decision further inflamed the sectional controversy leading to the CIVIL WAR.

Dreiser, Theodore [drī'sər], 1871–1945, American novelist. A pioneer of NATURALISM in American literature, Dreiser wrote novels reflecting his mechanistic view of life, which held the individual as the victim of such ungovernable forces as economics, biology, society, and even chance. Among his novels are *Sister Carrie* (1900) and *Jennie Gerhardt* (1911), both about "fallen women"; *The Financier* (1912), *The Titan* (1914), and *The Stoic* (1947), a trilogy concerning a ruthless industrialist; and *The Genius* (1915) and *The Bulwark* (1946), both about an American artist. *An American Tragedy* (1925), considered his greatest work, tells of a poor young man's futile attempts to achieve social and financial success. Dreiser also wrote short stories, autobiographical works, and nonfiction commentaries on the USSR and the U.S

Dresden, city (1989 est. pop. 518,000), capital of SAXONY, E Germany, on the Elbe R. It is an industrial and cultural center and an inland port. Originally a Slavic settlement, it was settled (13th cent.) by Germans and later occupied by Prussia. From the 17th cent. until it was heavily bombed by the Allies in WORLD WAR II, Dresden was a showplace of art and of BAROQUE and ROCOCO architecture. It has been extensively rebuilt since 1945.

Drew, Charles Richard, 1904–50, African-American physician; b. Washington, D.C. A surgeon and a professor at Howard Univ. (1935–36; 1942–50), he developed a means of preserving blood plasma for transfusion. During World War II he headed (1940–41) the program that sent blood to Great Britain and was (1941–42) the director of the first American Red Cross Blood Bank.

Drew, John, 1827–62, American actor; b. Ireland. Having established a reputation as an Irish comedian, he maintained a stock company at the Arch Street Theatre, Philadelphia. After his death, his wife and co-star, **Louisa Lane Drew,** 1820–97, b. England, managed the theater until 1892. Her best role was as Mrs. Malaprop in *The Rivals.* Her eldest son, **John Drew,** 1853–1927, b. Philadelphia, joined Augustin Daly's company in 1875 and became one of the producer Charles Frohman's first stars. He distinguished himself in both Shakespearean and modern comedies. His sister Georgiana married Maurice Barrymore (see BARRYMORE, family).

Dreyer, Carl Theodor [drīər], 1889–1968, Danish film director. *The Passion of Joan of Arc* (1928) typifies his austere style. Among his other films are *Vampyr* (1932), *Day of Wrath* (1943), *Ordet* (1955), and *Gertrud* (1964).

Dreyfus Affair. In 1894 Capt. Alfred Dreyfus (1859–1935), a French officer, was convicted of treason by a court-martial, sentenced to life imprisonment, and sent to Devil's Island. The case had arisen with the discovery in the German embassy of a handwritten *bordereau* (schedule) that listed secret French documents and was addressed to Maj. Max von Schwartzkoppen, German military attaché in Paris. The French army was at the time permeated by anti-Semitism, and suspicion fell on Dreyfus, an Alsatian Jew. Although Dreyfus protested his innocence, interest in the case lapsed until 1896, when evidence was discovered pointing to Maj. Ferdinand Walsin Esterhazy as the real author of the *bordereau.* After the army's attempt to suppress this information failed, Esterhazy was tried (Jan. 1898) by court-martial, but was acquitted within minutes. Émile ZOLA, a leading supporter of Dreyfus, published an open letter accusing the judges of following orders from the military. Zola was sentenced to jail for libel, but fled to England. Meanwhile, the case had become a major political issue. Royalist, militarist, nationalist, and Roman Catholic elements joined the anti-Dreyfus group, while republican, socialist, and anticlerical

The key to pronunciation appears on page xiii.

forces allied to defend Dreyfus and to discredit the rightist government. In 1898 it was learned that much of the evidence against Dreyfus had been forged by Col. Henry of army intelligence. After Henry's suicide (Aug. 1898) and Esterhazy's flight to England, a revision of Dreyfus's sentence became imperative. A new court-martial was ordered, but the military court, unable to admit error, found Dreyfus guilty and sentenced him to 10 years in prison. However, a pardon was issued by Pres. Émile Loubet, and in 1906 the supreme court of appeals exonerated Dreyfus. In 1930 his innocence was reaffirmed by the publication of Schwartzkoppen's papers. The immediate result of the affair was to unite and bring to power the French left wing. Widespread antimilitarism and rabid anticlericalism ensued, leading in 1905 to the separation of church and state in France.

drift, deposit of clay, gravel, sand, and boulders, transported and laid down by glaciers. Some drift is stratified, or sorted by size, with coarser particles nearer the point of origin. Till, the greater part of drift, consists of unstratified heaps of rocks. Drifts can take many forms (e.g., DRUMLINS, ESKERS, MORAINES). Large sections of North America and continental Europe are covered by drift.

dromedary: see CAMEL.

drug, substance used to cure, alleviate, diagnose, or prevent disease. Before 1900 only a few drugs were used scientifically, among them alcohol, ether, MORPHINE, DIGITALIS, QUININE, IRON, IODINE, MERCURY, diphtheria antitoxin, and smallpox vaccine. Since then, and particularly since World War II, many new drugs and classes of drugs have been developed, making CHEMOTHERAPY an essential part of medical practice. Such drugs include ANTIBIOTICS; SULFA DRUGS; cardiovascular drugs, including propanolol and other BETA BLOCKERS; DIURETICS; ANTICOAGULANTS; whole blood, plasma, and blood derivatives; various smooth muscle relaxants and smooth muscle stimulants; IMMUNOSUPPRESSIVE DRUGS; HORMONES, such as thyroxine, INSULIN, and ESTROGEN; CORTISONE and other CORTICOSTEROIDS; ORAL CONTRACEPTIVES; VITAMINS; ANALGESICS; poison antidotes; and various stimulants and depressants, among them NARCOTICS, AMPHETAMINES, and BARBITURATES (see also ANESTHESIA; HALLUCINOGENIC DRUGS). Drugs are derived from many sources, organic and inorganic. Some drugs are or were originally extracted from plant or animal sources; other drugs are synthesized in the laboratory or extracted from inorganic compounds. There are two marketing classes of drugs; ethical drugs, for which prescriptions are needed, and PATENT MEDICINES, which are sold over the counter without prescription. The publication in the U.S. giving drug properties, actions, uses, dosages, and standards of strength and purity is the *United States Pharmacopoeia–National Formulary.* The *Physician's Desk Reference* compiles information supplied by drug companies about their products. The Food and Drug Administration regulates the testing and marketing of new drugs in the United States. The scientific study of drugs, their actions, and effects is PHARMACOLOGY.

drug addiction and drug abuse, chronic or habitual use of any chemical substance to alter states of body or mind for other than medically warranted purposes. Among the drugs with potential for abuse are NARCOTICS, including morphine, opium, heroin, and methadone; depressants such as ALCOHOL, BARBITURATES, and sedatives; stimulants such as COCAINE (see also CRACK) and AMPHETAMINES; HALLUCINOGENIC DRUGS; and MARIJUANA. Nicotine and CAFFEINE can also be abused, and ANABOLIC STEROIDS and HUMAN GROWTH HORMONE are often abused by athletes and bodybuilders seeking to increase muscle mass. An individual is said to be addicted if a physical dependence on a given drug develops and if withdrawal symptoms are experienced when the drug is discontinued or its dose decreased. True physical addiction is known to occur with the narcotics and depressants; psychological dependence, with or without physical symptoms, can develop with many other drugs, such as TRANQUILIZERS. The hallucinogens can also cause traumatic experiences and trigger psychotic reactions, including paranoia. Treatment for drug addiction includes METHADONE programs and participation in therapeutic communities (e.g., Synanon and Phoenix House) with other addicts who are giving up drugs (see also ALCOHOLISM). The question of what constitutes drug abuse depends on the cultural and social context. In some countries, narcotic use in the form of opium smoking is common and not considered a serious drug problem; in others, hashish or related compounds are widely used. In most industrialized nations, however, the use of many of these drugs is illegal and associated with criminal behavior.

druids, priests of ancient Celtic Britain, Ireland, and Gaul and probably of all ancient Celtic peoples. The druids constituted a priestly upper class in command of a highly ritualistic religion centering on the worship of a pantheon of nature deities. Religious ceremonies, held chiefly in oak groves and at river sources and lakes, included animal, and sometimes human, sacrifices and various forms of magic. Druids also educated the young and oversaw the community's intellectual life. They were an important cohesive force among the Celtic tribes; in Gaul they led rebellions against the Romans. Their power, although broken by the Romans, finally yielded only to Christianity.

drum, in music, PERCUSSION INSTRUMENT consisting of a frame over which one or more membranes or skins are stretched, and which acts as a resonator when the membrane is struck. The kettledrum, a metal bowl with a membrane stretched over the open side, can be tuned to a definite pitch by adjusting the tension of the head. In the snare drum, wire-covered gut strings are stretched across the head; these rattle when the drum is struck. The tom-tom is a high-pitched, tunable hand drum. The tambourine is a single-headed, small drum, usually with jingles attached to the frame, that is shaken or struck by hand.

drumlin, smooth, oval hill of glacial DRIFT, elongated in the direction of the movement of the ice that deposited it.

Drummond, William Henry, 1854–1907, Canadian poet; b. Ireland. His verse, collected in such volumes as *Poetical Works* (1912), portrays French Canadians in their own English dialect.

Drusus, Roman family of the gens Livius. An early distinguished member was **Marcus Livius Drusus,** d. 109? B.C., tribune of the people (122) with Caius Sempronius Gracchus (see GRACCHI). He successfully attacked Gracchus in the senate and became consul in 112. His son, **Marcus Livius Drusus,** d. 91 B.C., was also a leader of the senatorial party. By an increase in the franchise he won the support of the Romans and Italians, but the senate annulled Drusus' laws and brought on the Social War (90–88 B.C.) between Rome and the Italians. Drusus was assassinated. **Nero Claudius Drusus Germanicus,** 38–9 B.C., was the stepson of AUGUSTUS and father of CLAUDIUS I. He ravaged Germany E and N of the Rhine, but failed to subdue the Germans permanently. He died in Germany. His brother was the emperor TIBERIUS. Tiberius' son, **Drusus Caesar,** d. A.D. 23, earned the jealousy of Sejanus, Tiberius' minister, who tried to turn Tiberius against his son. Drusus died, perhaps of poisoning by Sejanus or by his wife under Sejanus' influence.

Druze or **Druse,** religious community primarily in Syria, Lebanon, Israel, and Jordan who believe that Hakim, the sixth Fatimite caliph (see FATIMID), is divine. Numbering about 1 million worldwide, they permit no religious conversion or intermarriage. Warring against the Ottoman Turks and the Christian Maronites, they helped prepare the way for French control of the E Mediterranean countries known as the Levant. Their defiance of the French mandate and occupation (1925–27) of Damascus led to protracted hostilities. After Syria became independent in 1944, the Druze surrendered their autonomy.

dryads: see NYMPH.

dry cell: see CELL, in electricity.

Dryden, John, 1631–1700, English poet, dramatist, and critic. He first came to notice with *Heroic Stanzas* (1659), commemorating the death of Oliver CROMWELL, but in 1660 he celebrated the restoration of CHARLES II with *Astraea Redux. Annus Mirabilis,* a long poem on the Dutch war, appeared in 1667, and in 1668 he became poet laureate. His plays include the heroic *Conquest of Granada* (1670–71); the comedy *Marriage à la Mode* (1672); and his blank-verse masterpiece, *All for Love* (1677). His great political SATIRE, *Absalom and Achitophel,* appeared in two parts (1681, 1682), and his attack on Thomas Shadwell, *MacFlecknoe,* in 1682. Five years after publishing *Religio Laici* (1682), a poetical exposition of the Protestant layman's creed, he announced his conversion to Roman Catholicism in *The Hind and the Panther.* Dryden lost his laureateship with the accession of WILLIAM III. Throughout his life, he

wrote brilliant critical prefaces and discourses, notably the *Essay of Dramatic Poesy* (1668). His last years were occupied chiefly with translating Juvenal, Vergil, and others.

dry ice: see CARBON DIOXIDE.

drypoint, INTAGLIO printing process in which lines are scratched directly into a metal plate with a needle; also, the print made from such a plate. The method is often used with ETCHING. In drypoint, the burr raised by the needle produces a rich, velvety effect and allows relatively few good prints to be made. Among the greatest masters of the technique are DÜRER, REMBRANDT, WHISTLER, and PICASSO.

dry rot, FUNGUS infestation of timber, typified by the destruction of CELLULOSE, with discoloration and eventual crumbling of the wood. Dry rot requires moisture for growth and occurs in improperly seasoned wood or where ventilation is poor or humidity high.

Dual Alliance: see TRIPLE ALLIANCE AND TRIPLE ENTENTE.

dualism, in philosophy and theology, system that explains all phenomena in terms of two distinct and irreducible principles, e.g., ideas and matter (as in PLATO, ARISTOTLE, and modern METAPHYSICS) or mind and matter (as in psychology). In theology the term refers to a concept of opposing principles, e.g., good and evil. See also MONISM.

Dual Monarchy: see AUSTRO-HUNGARIAN MONARCHY.

Duarte, José Napoleón, 1925–90, president of El Salvador (1980–82, 1984–88). A Christian Democrat, he was mayor of San Salvador (1964–70). In 1972 Duarte was elected president, but was exiled by the army. He was allowed to return (1979) and in 1980 was named to the ruling military junta, which later named him president. Duarte ruled, jointly with the junta, during a period of civil war when the government was seriously opposed by leftist rebels. He was forced from office (1982) by a coalition of right-wing parties (Alvaro Alfredo Magaña succeeded him), but became president again (1984) in a controversial election that was boycotted by the left.

Dubai: see UNITED ARAB EMIRATES.

Du Barry, Jeanne Bécu, comtesse, 1743–93, mistress of LOUIS XV of France. A courtesan of illegitimate birth, she was installed (1769) at court and retained her influence until the king's death (1774). During the FRENCH REVOLUTION she was arrested for treason and guillotined.

Dubček, Alexander [dōōb'chĕk], 1921–92, Czechoslovakian Communist leader. In 1968 he replaced NOVOTNÝ as party first secretary and instituted liberal policies that promised a gradual democratization. In Aug. 1968 Soviet forces invaded and a pro-Soviet government was installed. Dubček was removed from office in 1969. He returned (1989) to prominence during the demonstrations that ended Communist rule and served (1989–92) as parliament chairman (speaker).

Du Bellay, Joachim, 1522?–1560, French poet of the Pléiade (see under PLEIAD), author of their manifesto. Some of his finest poems, found in *Regrets* (1558) and *Antiquities of Rome* (1558) and written while he was in Rome, convey his impressions of that city and his nostalgia for France.

Dubinsky, David, 1892–1982, American labor leader; b. Russian Poland. Sent to a Siberian prison (1908) for union activity, he escaped and reached the U.S. in 1911. He worked as a cloak cutter and rose rapidly in the International Ladies' Garment Workers Union, becoming its president (1932–66). In 1936 he took the union out of the American Federation of Labor (AFL), of which he was a vice president, and into the Congress of Industrial Organizations (CIO), but he broke with the CIO in 1938 and rejoined the AFL in 1940. Dubinsky helped organize the Liberal party in 1944.

Dublin, city (1986 pop. 502,337), capital of the Republic of Ireland and county town of Co. Dublin, on Dublin Bay at the mouth of the Liffey R. It is Ireland's chief commercial, cultural, and administrative center. Its major industries include brewing, textile manufacturing, distilling, and shipbuilding. Dublin's turbulent early history was marked by the rule of the Danes, Irish, and English, who held the city from 1170 until 1800. It prospered in the late 18th cent., but declined after the Act of Union of 1800. In the 19th and early 20th cent. the city saw bloodshed in connection with nationalist efforts to free Ireland from British control. It also became the center of a Gaelic renaissance; the Gaelic League was founded (1893) there and the Abbey Theatre (see THEATER, table) began producing Irish plays. Dublin is the seat of the Irish legislature, he Dáil Éireann. Its institutions include the Univ. of Dublin (Trinity College), University College, and a national museum.

Du Bois, W(illiam) E(dward) B(urghardt), 1868–1963, African-American civil-rights leader and author; b. Great Barrington, Mass. Earning a Ph.D. from Harvard (1895), he taught economics and history at Atlanta Univ. (1897–1910; 1932–44) and was one of the first exponents of full and immediate racial equality. He cofounded (1909) the National Negro Committee, which became (1910) the NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE, and edited the NAACP magazine, *The Crisis,* until 1932. Late in life he promoted worldwide black liberation and pan-Africanism and, in 1961, joined the Communist party and moved to Ghana. His many writings include an autobiography (1968).

Dubos, René Jules [dübō'], 1901–82, American bacteriologist and author; b. France. Associated with Rockefeller Univ. from 1927, he isolated in crystalline form the agent gramicidin, an antibiotic that destroys gram-positive bacteria (see GRAM'S STAIN). This laid the basis for a new field of chemotherapy. His works include *So Human an Animal* (1969; Pulitzer).

Dubuffet, Jean [dübüfā'], 1901–85, French painter and sculptor. His primitive, childlike, humorous paintings are often done in thick impastos of asphalt, pebbles, and glass to enrich the surface texture. *Cow with the Subtile Nose* is in the Museum of Modern Art (N.Y.C.).

Duccio de Buoninsegna [dōōt'chō dē bwōnēnsā nyä], fl. 1278–1319, the first great Sienese painter. He enlivened the Byzantine traditional forms by the expressive use of outline in paintings both lyrical and majestic. His only authenticated work is a large altar called *Maestà* (1311) in the Siena cathedral. His influence on Sienese painting was enormous.

Duchamp, Marcel [düshäN'], 1887–1968, French painter; brother of Raymond DUCHAMP-VILLON, half-brother of Jacques VILLON. He is particularly noted for his cubist-futurist work *Nude Descending a Staircase,* depicting continuous action with a series of overlapping figures (see CUBISM; FUTURISM). A cofounder of the DADA group, he invented ready-mades (commonplace objects), e.g. the urinal entitled *Fountain,* which he exhibited as works of art. He also invented complex, nonfunctional machines.

Duchamp-Villon, Raymond [vēyôN'], 1876–1918, French sculptor; brother of Marcel DUCHAMP and Jacques VILLON. He turned from the tradition of RODIN to CUBISM, assembling such machinelike forms as *Horse* (Paris).

duck, wild and domestic waterfowl of the family Anatidae, which also includes the GOOSE and SWAN. It is hunted and bred for its meat, eggs, and feathers. Strictly speaking, *duck* refers to the female; the male is a *drake.* Ducks range from 16 to 22 in. (36 to 56 cm) in length and have waterproof feathers, with a thick layer of down underneath, and webbed feet. They are usually divided into three groups: surface-feeding—such as the mallard, wood duck, and teal, which frequent ponds and quiet waters; diving—such as the canvasback and eider, found on bays, rivers, and lakes; and fish-eating, or mergansers, which also prefer open water.

duckbill, marsupial: see PLATYPUS.

Dudley, Robert: see LEICESTER, ROBERT DUDLEY, EARL OF.

Dufay, Guillaume [düfā'], c.1400–74, founder and leading composer of the Burgundian school of music. A singer in the papal chapel in Rome and elsewhere, he wrote chansons, MASSES, and MOTETS in the northern French tradition, with English and Italian elements.

Dufy, Raoul [düfē'], 1877–1953, French painter, illustrator, and decorator. Turning to FAUVISM c.1905, he executed glittering landscapes, seascapes, and witty views of society, painted with swift, stenographic brush strokes, e.g., *The Palm* (Mus. Mod. Art, N.Y.C.).

dugong: see SIRENIAN.

Du Guesclin, Bertrand [dü gĕklăN'], c.1320–80, French soldier, constable of France (1370–80). In the service of CHARLES V of France, he defeated CHARLES II of Navarre, and in the HUNDRED YEARS WAR reconquered much of France from the English. He was the greatest French soldier of his time.

Duisburg [düs'bōōrk], city (1989 est. pop. 528,000), North Rhine–Westphalia, W Germany, at the confluence of the Rhine and Ruhr rivers. It is Europe's largest inland port and a steel-making center.

The key to pronunciation appears on page xiii.

Founded in Roman times, it passed to the duchy of Cleves (1290) and to Brandenburg (1614). During WORLD WAR II it was an armaments center and was heavily bombed.

Dukakis, Michael S(tanley), 1933–, U.S. politician; b. Brookline, Mass. He was a member of the House of Representatives (1962–70) and governor of Massachusetts (1975–79; 1983–91). His policies included the nation's first no-fault auto insurance bill and first major state tax amnesty. In 1988 he was the Democratic candidate for president but lost the election to George BUSH.

Dukas, Paul [dükä'], 1865–1935, French composer and critic. Influenced by Richard WAGNER and DEBUSSY, he is best known for his SYMPHONIC POEM *The Sorcerer's Apprentice* (1897).

Dukhobors or **Doukhobors** [Rus., = spirit wrestlers], religious sect, prominent in Russia from the 18th to the 19th cent., originally called Christians of the Universal Brotherhood. Doctrinally somewhat like the Quakers, they rejected outward symbols of Christianity, promoted a communal, absolutely democratic attitude, and preached equality. Persecuted in Russia, many eventually moved (1898–99) to W Canada. There they prospered, but had difficulties with the Canadian government on several occasions. In 1945 they formed two groups, the Union of the Dukhobors of Canada and the Sons of Freedom.

dulcimer: see STRINGED INSTRUMENT.

Du Lhut, Daniel Greysolon, sieur: see DULUTH, DANIEL GREYSOLON, SIEUR.

Dulles, John Foster, 1888–1959, U.S. secretary of state (1953–59); b. Washington, D.C. After serving (1945–49) as U.S. delegate to the UN, he negotiated (1951) the Japanese peace treaty formally ending World War II. As secretary of state under Pres. EISENHOWER, Dulles emphasized the collective security of the U.S. and its allies through foreign economic and military aid. He encouraged the development of nuclear weapons capable of "massive retaliation." His brother, **Allen Welsh Dulles,** 1893–1969, was director (1953–61) of the CIA.

Duluth or **Du Lhut, Daniel Greysolon, sieur** [dəlo͞oth'], 1636–1710, French explorer. His explorations won the Lake SUPERIOR and upper MISSISSIPPI R. regions for France. He is remembered for his just treatment of the native peoples.

Duluth, city (1990 pop. 85,493), seat of St. Louis co., NE Minn., at the W end of Lake SUPERIOR; settled c.1852, inc. 1870. It is the commercial, industrial, and cultural center of N Minnesota. The second largest port on the GREAT LAKES, Duluth ships grain, iron ore, and bulk cargo all over the world. The discovery of iron ore (1865) in the nearby Mesabi Range transformed the former timber-shipping port.

duma, Russian representative body established (1905) after the RUSSIAN REVOLUTION. The first (1906) and second (1907) dumas were dissolved by NICHOLAS II after a few months because of their political hostility. The third (1907–12) and fourth (1912–17) were the last before the 1917 Revolution. The **State Duma** (est. 1993) is the popularly elected lower house of Russia's legislature.

Dumas, Alexandre [dümä'], known as **Dumas père** [pĕr], 1802–70, French author. After several successful historical dramas, he produced his great triumphs, *The Three Musketeers* (1844) and *The Count of Monte Cristo* (1845). Although these highly romantic novels, written with the aid of collaborators, are sometimes scorned by critics, they have delighted generations of readers and have been translated into nearly every language. His illegitimate son, **Alexandre Dumas,** known as **Dumas fils** [fēs], 1824–95, is famous for his play *La Dame aux camélias* (1852), known in English as *Camille,* which became the vehicle for many famous actresses and was the basis of VERDI's opera *La Traviata.* Dumas fils was the chief creator of the 19th-cent. comedy of manners.

Du Maurier, George Louis Palmella Busson, 1834–96, English artist and novelist. A noted *Punch* illustrator, he also penned the novels *Peter Ibbetson* (1892) and *Trilby* (1894). His granddaughter **Daphne Du Maurier,** 1907–89, wrote *Rebecca* (1938), *The Scapegoat* (1957), and other novels, as well as a family history, *The Du Mauriers* (1937).

Dumouriez, Charles François [dü-mo͞o-rēā'], 1739–1823, French general in the FRENCH REVOLUTIONARY WARS. He won victories at Valmy and Jemappes in 1792. Defeated at Neerwinden (1793), he opened negotiations with the Austrians. After turning over to them the French commissioners sent to investigate his defeat, he deserted to the Austrian lines.

Dunant, Jean Henri [dünäN'], 1828–1910, Swiss philanthropist. His published description (1862) of the suffering of wartime wounded and his plea for organizations to care for them led to the establishment (1864) of the International RED CROSS. Dunant shared the first Nobel Peace Prize (1901) with Frédérick PASSY.

Dunbar, Paul Laurence, 1872–1906, African-American author; b. Dayton, Ohio. His poetry, e.g., *Lyrics of Lowly Life* (1896), uses African-American folk materials and dialects. Dunbar also wrote of African-American life in the South in novels and stories.

Dunbar, William, c.1460–c.1520, Scottish poet. Writing in the tradition of CHAUCER and the medieval Scottish poets, he is notable for his lively verse, metrical form, and caustic satire. "Lament for the Makers" is a well-known poem.

Duncan, Isadora, 1878–1927, American dancer; b. San Francisco. Her dances based on Greek classical art had great success in Budapest (1903), Berlin (1904), and New York City (1908). She danced barefoot in a revealing modified Greek tunic with flowing scarves, to complex music. Duncan's concerts, schools, and dynamic personality greatly influenced MODERN DANCE.

Duncan, Robert, 1919–88, American poet; b. Oakland, Calif. His lyric poems are contained in such volumes as *The Opening of the Field* (1960), *Bending the Bow* (1968), and *Derivations* (1970).

Dunham, Katherine, 1910?–, American dancer, choreographer, and anthropologist; b. Chicago. She taught anthropology and directed her own dance company from the late 1930s to the 60s. Her choreography combines Caribbean and African movements and rhythms with those of MODERN DANCE, which she influenced considerably.

Dunkers: see BRETHREN.

Dunkirk, Fr. *Dunkerque,* town (1990 pop. 70,331), N France, on the North Sea. It is a major port and an important center for iron, steel, and other industries. Fought over for centuries, ruled by many, it was bought (1662) from England by Louis XIV and restored to France. In 1940, during WORLD WAR II, over 300,000 Allied troops, cut off from land retreat by the Germans, were rescued there by British ships and boats.

Dunmore, John Murray, 4th **earl of,** 1732–1809, British colonial governor of Virginia. He led (1774) an expedition against Native Americans known as Lord Dunmore's War. He opposed the colonists, and they forced (1776) his return to England.

Duns Scotus, John, c.1266–1308, Scottish scholastic philosopher, known as the Subtle Doctor. A Franciscan, he adapted Aristotelian thought to Christian theology and founded the school of SCHOLASTICISM known as Scotism, which opposed the Thomism of the followers of THOMAS AQUINAS. Duns Scotus denied that individuality comes from matter. Modifying St. ANSELM's ontological proof of the existence of God, he argued that God's possible existence must be demonstrable from sense experience. His best-known works are *On the First Principle* and two commentaries on the *Sentences* of the Italian theologian Peter Lombard.

Du Pont, French-American family. **Pierre Samuel Du Pont de Nemours,** 1739–1817, a French economist, was one of the PHYSIOCRATS. He was active in politics and diplomacy, taking part in negotiations (1783) after the AMERICAN REVOLUTION and for the LOUISIANA PURCHASE. He emigrated to the U.S. in 1799. His son, **Eleuthère Irénée Du Pont,** 1771–1834, b. Paris, set up a powder works near Wilmington, Del., in 1802. Within a few years he developed an extensive business (now E.I. du Pont de Nemours & Co.) and was appointed (1822) a director of the Bank of the United States. **Samuel Francis Du Pont,** 1803–65, b. Bergen Point, N.J., American naval officer, was a grandson of Pierre Samuel. In the Civil War he directed (1861) the naval victory at Port Royal, S.C., and against his own wishes led (1863) the unsuccessful attack on Charleston. **Pierre Samuel Du Pont,** 1870–1954, b. Wilmington, Del., was a great-grandson of E.I. Du Pont and became (1915) president of the family business. Under him the company developed scores of chemical manufactures and acquired many other industries.

duralumin, ALLOY of ALUMINUM with COPPER, MAGNESIUM, and MANGANESE. A heat treatment causes a reaction between the aluminum and magnesium, increasing hardness and tensile strength. Be-

cause of its lightness and other properties, duralumin is widely used in the aircraft industry.

Durand, Asher Brown, 1796–1886, American painter; b. near Newark, N.J. An engraver early in his career, he became a leader of the HUDSON RIVER SCHOOL. His landscapes include *Franconia Notch* (N.Y. Public Lib., N.Y.C.) and *Mountain Forest* (Corcoran Gall., Wash., D.C.).

Duras, Marguerite [dürä'], 1914–, French novelist; b. Indochina (now Vietnam). Her experimental novels include *The Sea Wall* (1950), *Destroy, She Said* (1969), and *Love* (1972). More sensual novels include *The Lover* (1985) and *Emily L.* (1989). She has also written plays and screenplays, e.g., *Hiroshima Mon Amour* (1959), and has directed films.

Durban, city (1985 pop. 634,301), Natal prov., E South Africa, on Durban Bay, an arm of the Indian Ocean. It is an industrial center, a major seaport, and a year-round resort. Industries include shipbuilding, petroleum refining, and automobile assembly. About 40% of the population is of Anglo-Indian descent. The city was settled as Port Natal by the British in 1824 and was renamed in 1835. It is the site of several educational and cultural institutions.

Dürer, Albrecht [dür'ər], 1471–1528, German painter, engraver, and theoretician, the most influential artist of the German school; b. Nuremberg. The son of a goldsmith, he was apprenticed to his father and the painter Michael Wolgemut. After travel in Switzerland and Italy he settled in Nuremberg. He became the first German artist to achieve renown outside Germany. Dürer's foremost achievement was to adapt the principles of the Italian RENAISSANCE to Northern taste. A gifted draftsman, he produced a vast number of woodcuts (see WOODCUT AND WOOD ENGRAVING) and ENGRAVINGS, achieving an unsurpassed technical mastery and expressive power in graphic media. His highly rational system of perspective and proportion served equally well his penchant for both realistic detail and visionary fantasy. His series of woodcuts of the *Apocalypse* was issued in 1498, followed by two cycles of the *Passion of Christ* and *Life of the Virgin.* After 1500 he developed as an art theoretician and produced greatly detailed engravings. From 1510 on he concentrated on the translation of lighting and tonal effects into graphic works. His humanistic inclinations were revealed in such works as *St. Jerome in His Cell* and *Melencolia I* (both: 1514). Dürer usually signed his works, and his many self-portraits reveal a self-awareness rare for his time. He produced some important altarpieces, many sensitive watercolors of wildlife and landscapes, several decorative projects, and treatises on human proportions, applied geometry, and fortifications.

Durham, John George Lambton, 1st **earl of,** 1792–1840, British statesman. A Liberal member of Parliament (1813–32), he promoted the REFORM BILL of 1832. As governor general of Canada, he prepared the masterly *Report on the Affairs of British North America* (1839), supporting Canadian self-government and reforms but opposing French Canadian nationalism.

Durham, city (1990 pop. 136,611), seat of Durham co., N central N.C., in the Piedmont area; inc. 1867. Once largely dependent on tobacco and textiles, Durham is now part (with Raleigh and Chapel Hill) of a major research and educational complex. The tobacco industry, led by James B. Duke, developed after the Civil War. Duke Univ. is in Durham.

Durkheim, Émile, 1858–1917, French sociologist, considered a founder of modern SOCIOLOGY. Influenced by the POSITIVISM of COMTE, Durkheim applied the methods of natural science (particularly empirical evidence and statistics) to the study of society. He held that the collective social mind is the source of religion and morality, that common values are the bonds of social order, and that the loss of such values leads to social and individual instability and SUICIDE. His important works include *The Rules of Sociological Method* (1895), *Suicide* (1897), and *The Elementary Forms of Religious Life* (1912).

Durrell, Lawrence, 1912–90, English author; b. India. His travels lent exotic background to many of his novels. His masterpiece is the *Alexandria Quartet* (*Justine,* 1957; *Balthazar,* 1958; *Mountolive,* 1958; and *Clea,* 1960). The quartet's excellence lies in its rich, ornamental language and in its evocation of the city of Alexandria, Egypt.

Dürrenmatt, Friedrich, 1921–, Swiss playwright and novelist. One of the most famous German-language dramatists of his generation, he wrote of a comic, grotesque world in *The Visit* (1956) and *The Physicists* (1962). Irony also informs his novels, e.g., *The Quarry* (1953) and *The Pledge* (1958).

Dušan, Stephen: see STEPHEN DUŠAN.

Duse, Eleonora [dōō'zə], 1859–1924, Italian actress. From her Juliet at age 14 to her farewell appearance (1923) in IBSEN's *Lady from the Sea,* she projected tremendous emotional power; she was BERNHARDT's only rival. For years a romantic attachment existed between her and D'ANNUNZIO.

Dushanbe, city (1989 pop. 595,000), capital of Tajikistan, W Tajikistan. A major industrial center, the city produces textiles, textile machinery, clothing, leather goods, tractor parts, and foodstuffs. It was known as Dyushambe until 1929, when it was renamed Stalinabad and became the capital of the Tadzhik SSR. The name was changed to Dushanbe in 1961.

Düsseldorf, city (1989 est pop. 569,600), capital of North Rhine–Westphalia, W Germany, at the confluence of the Rhine and Düssel rivers. It is an inland port and an industrial center producing iron and steel, machinery, and other manufactures. Chartered in 1288, it was (14th–16th cent.) a ducal residence. HEINE was born in Düsseldorf.

Dust Bowl, collectively, those areas of the U.S. prairie states subject to dust storms or the removal of unprotected topsoil by strong winds. It covered 25,000 sq mi (64,750 sq km) at its greatest extent in the 1930s, when grasslands that had been plowed for wheat in the 1920s were abandoned or returned to grazing. Irrigation, regrassing, contour farming, and other conservation measures are now widely used.

Dutch East India Company: see EAST INDIA COMPANY, DUTCH.

Dutch language, member of the West Germanic group of the Germanic subfamily of the Indo-European family of languages. See LANGUAGE (table).

Dutch Reformed Church: see REFORMED CHURCH IN AMERICA.

Dutch Wars. 1 1652–54, war between the English and the Dutch. The long-standing rivalry between the two nations as competitors in world trade erupted into war after the British closed their possessions to Dutch traders. After a sea fight (Nov. 1652) the Dutch gained control of the English Channel, but in 1653 the English broke the control and blockaded the Dutch coast. The Dutch were defeated (July 31, 1653) and were forced to accept a humbling peace treaty. **2** 1664–67, another war between the English and the Dutch. Despite defeat, the Dutch continued to challenge English trade. The English took various Dutch colonies, including New Netherlands (later New York and New Jersey). Despite some English advances, domestic problems—the plague, the great fire, and Scottish disaffection—made them eager for peace. The resulting Treaty of Breda was a blow to English prestige. **3** 1672–78, the first of the great wars of LOUIS XIV of France. Louis was determined to crush Holland and end Dutch commercial rivalry; with secret support from CHARLES II of England, he invaded the Netherlands but was unable to take Amsterdam. After five years of fighting—with Spain, the Holy Roman emperor, and various other powers coming to Holland's aid—Louis was unable to crush Holland. France did gain some territory, including Franche-Comté, but ended up with a severely depleted treasury.

Dutch West India Company (1621–1791), trading and colonizing company chartered by the States-General of the Dutch republic in 1621 and organized in 1623. Given jurisdiction over a wide range of coast in Africa and the Western Hemisphere, it battled (1624–54) Portugal unsuccessfully for control of NE Brazil. The company founded (1626) Fort Amsterdam, which grew to be called New Amsterdam (now New York City).

Duvalier, François [düvälyā'], 1907–71, dictator of HAITI (1957–71). A physician, he served in the government and was elected president (1957) with army backing. After his reelection (1961), "Papa Doc," declared himself (1964) president for life. His long regime was a reign of terror. When he died, his son, **Jean-Claude Duvalier,** 1951–, became (1971) "president-for-life." Known as "Baby Doc," he pursued somewhat more enlightened policies but was forced (1986) to flee the country by increasing protests. France granted him asylum.

Dvořák, Antonín [dvôr'zhäk], 1841–1904, Czech composer. Much

of his music is nationalistic. He is best known for his Symphony in E Minor, *From the New World* (1893), written while he was in the U.S. It conveys with great exuberance Dvořák's impressions of American scenes and folk music and at the same time evokes nostalgia for his native land. He also wrote eight other symphonies, chamber works, a violin concerto, a cello concerto, and OVERTURES.

dwarfism, condition in which an animal or plant is smaller than normal size; in humans, it usually results from a combination of genetic factors and endocrine malfunction. Pituitary dwarfism is caused by a deficiency of HUMAN GROWTH HORMONE. Typically, the pituitary dwarf, or midget, has normal body proportions, mental capacity, and sexual development. The most famous dwarf of modern times was "General" TOM THUMB. **Cretinism,** a type of dwarfism accompanied by mental retardation and body distortion, results from an insufficiency of thyroid hormone.

Dwight, Timothy, 1752–1817, American clergyman, author, and educator, grandson of Jonathan EDWARDS; b. Northampton, Mass. He became (1783) a Congregational minister in Greenfield, Conn., and was a leader of the CONNECTICUT WITS, who tried to modernize the curriculum at Yale. Dwight was a believer in theocracy and Federalism, and strongly opposed Republicanism. He was a president of Yale (1795–1817).

Dy, chemical symbol of the element DYSPROSIUM.

Dyak or **Dayak,** indigenous people of BORNEO, numbering over 1 million. Modern civilization has made little change in their customs and mode of life, including intertribal warfare and HEADHUNTING. A whole village lives in a few enormous longhouses, and crops of rice, yams, and sugarcane are grown communally. The Dyak also fish and hunt, using blowguns and poison darts. Their religious cults are animistic and shamanistic.

Dyck, Sir Anthony van: see VAN DYCK, SIR ANTHONY.

dye, natural or synthetic substance used to color various materials, especially textiles, leather, and food. Natural dyes are obtained from plants (e.g., indigo), from animals (e.g., cochineal), and from minerals (e.g., ocher). Used since ancient times, natural dyes have been largely replaced by synthetic dyes, first made in the 19th cent. Most of these are made from coal tar (see TAR AND PITCH). Although some materials, e.g., silk and wool, can be colored simply by being dipped in the dye, others, including cotton, require a mordant. The process by which dyes become "attached" to the material they color is not well understood. It is thought either that a chemical reaction takes place between the dye and the fiber or that the dye is absorbed.

Dylan, Bob, 1941–, American singer and composer; b. Duluth, Minn., as Robert Zimmerman. In the 1960s he gained recognition through his lyrics, capturing the alienation of American youth, and his harsh, insistent delivery. Influenced by Woody GUTHRIE, among others, Dylan exercised a profound influence on folk and ROCK MUSIC, his style evolving from folk to folk-rock to country. Enigmatic and reclusive, he became something of a cult figure.

dynamics, branch of mechanics that deals with the MOTION of objects; it may be further divided into kinematics, the study of motion without regard to the forces producing it, and kinetics, the study of the FORCES that produce or change motion. The principles of dynamics are used to solve problems involving work and energy, and to explain the pressure and expansion of gases, the motion of planets, and the behavior of flowing fluids (gases and liquids). Special branches of dynamics treat the particular effects of forces and motions in fluids (see FLUID MECHANICS); these include AERODYNAMICS, the study of gases in motion, and hydrodynamics, the study of liquids in motion.

dynamite, EXPLOSIVE made from NITROGLYCERIN and various amounts of an inert, absorbent filler, e.g., sawdust. Often ammonium nitrate or sodium nitrate is added. Invented in 1866 by Alfred B. NOBEL, dynamite is usually pressed in cylindrical forms and wrapped in an appropriate material, e.g., paper or plastic. The charge is set off with a detonator.

dyne: see FORCE.

dysentery, inflammation of the intestines, characterized by frequent passage of feces, usually with blood and mucus. Amoebic dysentery is caused by infestation by the ameba *Entamoeba histolytica.* Bacillary dysentery is most often caused by the *Shigella* bacillus. Spread by fecal contamination of food and water, both forms are common where sanitation is poor. Treatment of bacillary dysentery is with a broad-spectrum ANTIBIOTIC; a combination of an antibiotic and an amoebicide is necessary for successful treatment of amoebic dysentery.

dyslexia, severe and persistent difficulty in learning to read despite average or above-average intelligence, normal vision, and appropriate reading instruction. The cause is unknown, but some studies have offered evidence that dyslexia is a neurological problem. Many dyslexics have trouble matching letters to their corresponding sounds. Some common disabilities associated with dyslexia are the reversal of letters, as *b* for *d,* also called mirror writing; word reversals, as *saw* for *was*; and defects in the visual and auditory perception and memory considered necessary for reading. Dyslexia, a type of LEARNING DISABILITY, was first described (1896) by English ophthalmologist W.P. Morgan, who called the condition *word blindness.*

Dzerzhinsky, Feliks Edmundovich, 1877–1926, Soviet political leader. As a follower of LENIN, he participated in the Bolshevik revolution (Oct. 1917). He served (1917–22) as first chief of the CHEKA, the SECRET POLICE, and its successors the GPU and OGPU (1922–26), and was head of the commissariat of internal affairs (NKVD). He oversaw repressions known as the "Red Terror." Later, he was chairman of the Supreme Economic Council (1924–26), a supporter of the New Economic Policy (NEP), and a member of the Politburo.

Dzungaria, also spelled Jungaria, Sungaria, or Zungaria, steppe and desert region, NW China, in Xinjiang Uygur Autonomous Region. Since 1953 large numbers of ethnic Chinese have moved there to work the deposits of coal, iron ore, and oil. The Dzungarian Gate, used for centuries by Central Asian conquerors as an invasion route to China, is a pass at the eastern end of the Ala-Tau, a mountain chain that marks part of the Kazakhstan-China border.

E

e, irrational NUMBER occurring widely in mathematics and science, approximately equal to the value 2.71828; it is the base of natural, or Naperian, LOGARITHMS. Like π (see PI), *e* is transcendental, i.e., not a root of any algebraic equation. It is defined as the limit of the expression $(1 + 1/n)^n$ as *n* becomes infinitely large. Expressions of the form e^x, known as the exponential function, occur in applications ranging from statistics to nuclear physics.

Ead-. For Anglo-Saxon names beginning thus, see ED-; e.g., for Eadgar, see EDGAR.

eagle, large, predatory BIRD of the HAWK family, found worldwide. Similar to but larger than the BUZZARDS, eagles are solitary and believed to mate for life. Their beaks are nearly as long as their heads, and their wingspan may reach 7½ ft (228 cm). The American bald eagle (*Haliaetus leucocephalus*), an endangered species, is brown with white head, neck, and tail plumage. The golden, or mountain, eagle (genus *Aquila*), is sooty brown with tawny head and neck feathers. Unlike the bald eagle, its legs are feathered to the toes.

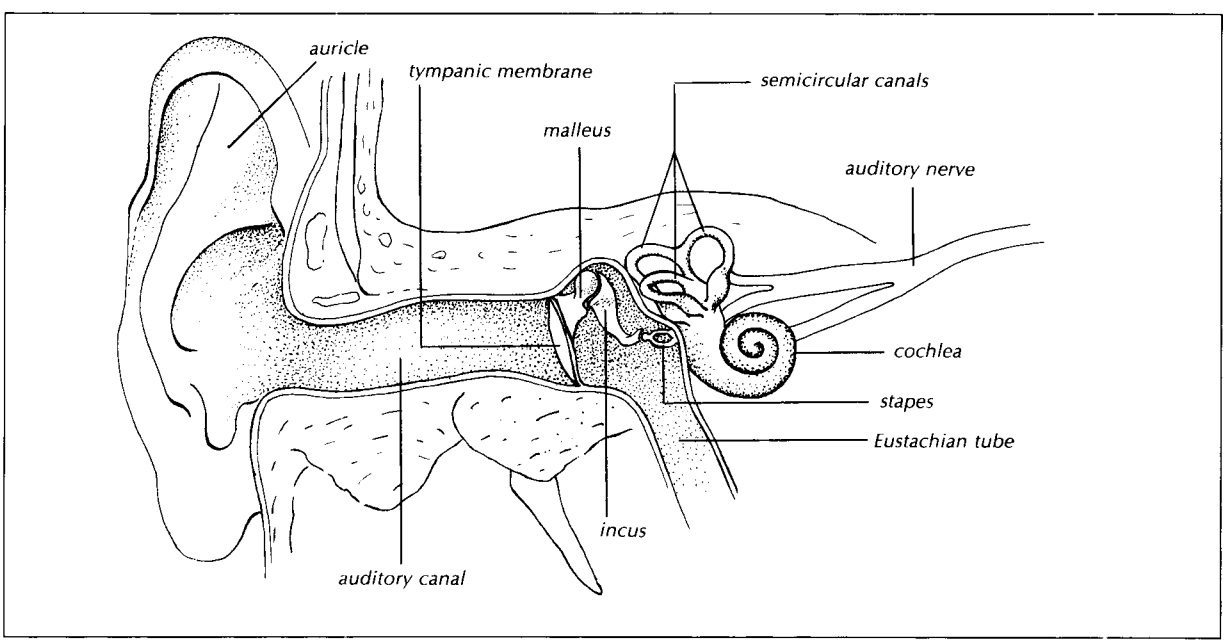
Eagleburger, Lawrence (Sidney), 1930–, U.S. government official; b. Milwaukee. A career diplomat, he joined the Foreign Service in 1957 and held a series of embassy, State Dept., national security, and Defense Dept. posts before serving as ambassador (1977–81) to Yugoslavia and a State Dept. assistant secretary (1981–82) and under secretary (1982–84). He was deputy secretary of state (1989–92) and secretary of state (1992–93) under Pres. Bush, becoming the first Foreign Service officer to hold those posts.

Eakins, Thomas [ā'kĭnz], 1844–1916, American painter, photographer, and sculptor; b. Philadelphia. Eakins is considered the foremost American portraitist and one of the greatest 19th-cent. artists. He sought to describe reality with absolute honesty, his study of anatomy and perspective providing a means of painting exterior reality. Eakins revived U.S. portraiture with his extraordinarily penetrating paintings and, as a teacher of artists such as HENRI, SLOAN, and GLACKENS, founded a school of native American art. Also a photographer, he used the medium as an art form, as an aid in painting, and to study motion. His paintings include *The Chess Players* (1876; Metropolitan Mus.), *The Clinic of Professor Agnew* (1889; Univ. Penn.), and portraits of Mrs. Frishmuth (1900; Philadelphia Mus.) and Miss Van Buren (1891; Phillips Coll., Wash., D.C.).

Eanes, António dos Santos Ramalho, 1935–, Portuguese army officer and president of Portugal (1976–86). In 1975 Eanes, then a colonel, headed the army group that crushed an attempted left-wing coup. A centrist, he was elected (1976) president with the support of all the major parties except the Communists. He carried out democratic and economic reforms and was reelected in 1980.

ear, organ of hearing and equilibrium. The human ear consists of outer, middle, and inner parts. The outer ear, the visible portion, includes the skin-covered flap of cartilage (auricle) and the auditory canal, which leads to the eardrum. The middle ear contains three small bones, or ossicles, known because of their shapes as the hammer, anvil, and stirrup. The Eustachian tube connects the middle ear to the throat. The inner ear contains the cochlea, which houses the sound-analyzing cells, and the vestibule, with the organs of balance. In the course of hearing, sound waves enter the auditory canal and strike the eardrum, causing it to vibrate. The waves are concentrated as they pass through the ossicles to a small opening leading to the inner ear. The vibration sets in motion fluid within the cochlea. This agitates a delicate membrane, stimulating thousands of sensory hair cells, which in turn stimulate the auditory nerve to send impulses to the brain. Three fluid-filled semicircular canals and two saclike organs, the utriculus and the sacculus, are the chief organs of balance and orientation; as with hearing, stimulation of sensory hair cells in these organs stimulates nerve impulses.

Earhart, Amelia [âr'härt], 1897–1937, American aviator; b. Atchison, Kans. She was the first woman to fly across the Atlantic (1928)



Ear

and to fly it alone (1932) and the first person to fly alone from Hawaii to California (1935). In 1937 she and Frederick J. Noonan set out to fly around the world, but they disappeared mysteriously between New Guinea and Howland Island. In 1992 a search party reported finding remnants of Earhart's plane on Nikumaroro (formerly Gardner Island), Kiribati, but their claims were disputed by people who worked on Earhart's plane.

Early, Jubal Anderson, 1816–94, Confederate general; b. Franklin co., Va.; grad. West Point, 1837. Prominent in the battle of CHANCELLORSVILLE and in the GETTYSBURG CAMPAIGN, he led (1864) a raid that reached the outskirts of Washington, D.C. Early was defeated (1864–65) by P.H. SHERIDAN in the Shenandoah Valley and was relieved of command.

Early Christian art and architecture. Among the earliest extant manifestations of Christian art are the early 3d-cent. paintings of biblical figures on CATACOMB walls in Rome. Among the main themes portrayed are the hope of resurrection and immortality, symbolized by fish and peacock motifs. After the Edict of Toleration (313) the scope of Christian art was radically enlarged. BASILICAS were covered with elaborate MOSAIC narrative cycles, e.g., Santa Maria Maggiore and Santa Pudenziana in Rome and Sant'Apollinare Nuovo in Ravenna. In Christian art the illumination of sacred texts assumed great importance. Fragments of silver and gold biblical text on purple vellum with sumptuous illuminations are still preserved, e.g., the Vienna Genesis from the first half of the 6th cent. The elaborate sculpture of the stone sarcophagus was extensively practiced, often depicting the life of Jesus. Ivory carvers decorated book covers and reliquaries and such large objects as the throne of Maximianus in Ravenna (6th cent.). After legal recognition of the faith, imposing cult edifices were erected throughout the Roman Empire. As with other art forms, Christian architecture adapted and modified existing structures from the pagan world. Church structure became centralized, emphasizing round, polygonal, or cruciform shapes. BAPTISTERIES and memorial shrines (martyria) followed the Roman style. A distinct type of Christian art and architecture was evolved in Egypt (see COPTIC ART). In the East the Byzantine emperors supported the developments of the Early Christian artistic tradition.

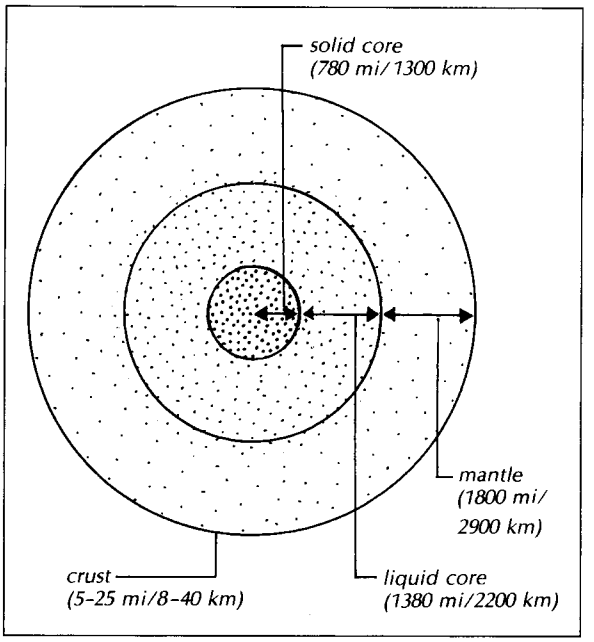
early man: see HUMAN EVOLUTION.

Earp, Wyatt Berry Stapp, 1848–1929, lawman and gunfighter of the American West; b. Monmouth, Ill. After serving as a policeman in Kansas, Earp was involved (1881) in the controversial gunfight at the O.K. Corral in Tombstone, Ariz.

earth, fifth largest PLANET of the SOLAR SYSTEM and the only one known to support life. Its mean distance from the SUN is c.93 million mi (150 million km). The change of seasons is caused by the tilt (23.5°) of the earth's axis to the plane of the orbit. The earth is surrounded by an envelope of gases, mostly oxygen and nitrogen, called the ATMOSPHERE. Gravitational forces have molded the earth into a spherical shape that bulges slightly at the equator (equatorial diameter: c.7,926 mi/12,760 km; polar diameter: 7,900 mi/12,720 km). Studies indicate that the earth consists of concentric layers that differ in size, chemistry, and density. The outer shell, or crust, consists of the CONTINENTS and the OCEAN basins. The crust is broken into vast plates that slide around on a plastic zone, or asthenosphere, within the middle shell, or mantle (see CONTINENTAL DRIFT; PLATE TECTONICS). At the center of the earth is an outer core, believed to be liquid, and an inner, solid core. The earth is estimated to be 4.5–5 billion years old, and its origin is a controversial subject. The earth has one natural satellite, the MOON.

Earth Day, April 22, a day set aside to promote ecology, encourage respect for life on earth, and highlight the problem of pollution. First observed in 1970, Earth Day is now publicly celebrated worldwide.

earthquake, trembling or shaking movement of the earth's surface. Great earthquakes usually begin with slight tremors, rapidly increase to one or more violent shocks, and diminish gradually. The immediate cause of most shallow earthquakes is the sudden release of stress along a FAULT, or fracture, in the earth's crust, resulting in the movement of opposing blocks of rock past one another. This causes vibrations to pass through and around the earth in wave form (see TSUNAMI). The subterranean origin of an earthquake is its focus; the point on the surface directly above the focus is the epicenter. Waves generated by earthquakes are of several types. Both P, or primary, waves, which are compressional and are the fastest, and S, or secondary, waves, which cause vibrations perpendicular to their motion, are body waves that pass through the earth. L, or long, waves travel along the surface and cause damage near the epicenter. Seismologists (see SEISMOLOGY) have deduced the internal structure of the earth by analyzing changes in P and S waves. The magnitude and intensity of earthquakes are determined by the use of scales, e.g., the Richter scale, which describes the amount of energy released at the focus of an earthquake.



Cross-section of the earth, showing its shells

earthworks, art form of the late 1960s and early 70s using elements of nature in situ. Often vast in scale, the works are subject to changes in temperature and light. Robert Smithson's *Spiral Jetty* (1970), a huge spiral of rock and salt crystal in the Great Salt Lake, Utah, is a classic example of the form.

earthworm, any cylindrical, segmented worm (see ANNELID WORM) of the class Oligochaeta. Ranging from 1 in. (2.5 cm) to 11 ft (330 cm) in length, earthworms burrow in the ground and swallow soil from which organic matter is extracted in the gizzard. They are important to agriculture in aerating and mixing the soil.

East Anglia, kingdom of Anglo-Saxon England, comprising the modern counties of Norfolk and Suffolk. Settled in the late 5th cent. by Angles, it became one of the most powerful English kingdoms of the late 6th cent. It became an under kingdom of MERCIA, against which it later rebelled (825), only to become a dependency of WESSEX. The Danish invading army, quartered in East Anglia (865–66), later (869) conquered the state entirely. The treaty of 886 confirmed the region as part of the DANELAW. After 917 East Anglia was an earldom of England.

East China Sea, arm of the Pacific Ocean, c.480,000 sq mi (1,243,200 sq km), bounded by China (W), Japan and the Senkaku and Ryukyu islands (E), and Taiwan (S). Vast oil deposits, first indicated in 1980, are believed to underlie much of the shallow sea floor.

Easter [from Old Eng. *Eastre,* name of a spring goddess], chief Christian feast, commemorating the resurrection of JESUS after his crucifixion. In the West it falls on a Sunday between Mar. 22 and Apr. 25 inclusive (see CALENDAR). Preceded by the penitential season of LENT, Easter is a day of rejoicing. The date of Easter is calculated differently in the Orthodox Eastern Church and usually falls several weeks after the Western date.

East Germany: see GERMANY.

Easter Island, 46 sq mi (119 sq km), in the South Pacific Ocean, W of Chile, which annexed it in 1888. The origin of the island's unusual hieroglyphs and gigantic carved heads, some weighing more than 50 tons, has been the subject of much speculation by the American psychologist Werner Wolff, the French ethnologist Alfred Métraux, and others. Thor HEYERDAHL theorized that the heads were carved by fair-skinned invaders from the East prior to the arrival (c.1680) of the island's present Polynesians; most anthropologists have rejected this idea.

Eastern Highlands, mountains and plateaus in E Australia that extend roughly parallel to the east and southeast coasts and into TASMANIA for c.2,400 mi (3,860 km). They form the continental divide and are sometimes referred to as the Great Dividing Range. Mt. KOSCIUSKO (7,316 ft/2,230 m), in the southeast is Australia's highest peak. Sections of the highlands are widely known by local names, including the Snowy Mountains, AUSTRALIAN ALPS, Blue Mts., and New England Range. Generally rugged, with few gaps and many gorges, the Eastern Highlands long hindered westward expansion across the continent.

Eastern Question, problem of the fate of the European territory, especially the Balkans, controlled by the decaying OTTOMAN EMPIRE (Turkey) in the 18th, 19th, and early 20th cent. For much of that time the Great Powers (Austria, Britain, Prussia, Russia, and France) were involved in either diplomatic intrigue or actual armed warfare to protect their national interests there. RUSSIA, in particular, was eager to expand into the area, looking for warm-water ports accessible to the Mediterranean. The other powers, especially Great Britain, were chiefly involved in thwarting Russia's ambitions. However, there were considerable shifts in alliances. The RUSSO-TURKISH WARS, in particular, resulted from the Eastern Question. In the 19th cent. the problem was exacerbated by the national aspirations of the individual Balkan peoples, who were aided or discouraged by the Great Powers, depending on what their own national interests were deemed to be. In the CRIMEAN WAR, Britain and France successfully aided Turkey in warding off Russian advances. Turkey's position, however, continued to decline. The BALKAN WARS (1912–13) set the stage for the final dissolution of the Ottoman Empire in WORLD WAR I.

Eastern Woodlands Indians: see NORTH AMERICA, INDIGENOUS PEOPLES OF.

East India Company, British, 1600–1858, company chartered by the Crown for trade with Asia. It acquired unequaled trade privileges from the Mogul emperors in India, and began to reap large profits by exporting textiles and tea. As Mogul power declined, the company intervened in Indian political affairs. Its agent, Robert CLIVE, defeated (1751–60) the rival French East India Company, and Warren HASTINGS, the first governor general of British India, assumed more control of the company. Britain took over India's administration after the INDIAN MUTINY of 1857, and the company was dissolved.

East India Company, Dutch, 1602–1798, company chartered by the States-General of the Netherlands. Granted a monopoly on Dutch trade E of the Cape of Good Hope and W of the Strait of Magellan, the company subdued local rulers; drove the British and Portuguese from Indonesia, Malaya, and Ceylon (now Sri Lanka); and dominated trade with the Spice Islands (Moluccas). When it was dissolved, its possessions became part of the Dutch empire in E Asia.

East India Company, French, 1664–1769, commercial enterprise chartered by LOUIS XIV to trade in the Eastern Hemisphere. It was merged (1719–23) into the Compagnie des Indes as part of John LAW's Mississippi Scheme. From 1741 the company was active in India, but it was dissolved after the French defeat by the British under Robert CLIVE.

East Indies, name, now seldom used, first applied to India, then to SE Asia, and finally to the islands of Indonesia.

Eastman, George, 1854–1932, American inventor and industrialist; b. Waterville, N.Y. He invented a dry-plate photographic process, roll film, and the Kodak camera (1888), as well as a process for color photography (1928). The Eastman Kodak Co. (founded 1892) was one of the first U.S. firms to mass-produce a standardized product, greatly stimulating the development of photography as a popular hobby. Eastman's philanthropies exceeded $100 million.

Eastman, Max, 1883–1969, American author; b. Canandaigua, N.Y. The editor of radical periodicals (*The Masses, Liberator*) until 1923, he later rejected Communism and wrote several books attacking it.

East Prussia, former province of Prussia, NE Germany. Königsberg (now KALININGRAD) was the capital. The area was conquered (13th cent.) by the TEUTONIC KNIGHTS from the Borussi, or Prussians. It passed (1618) to an elector of BRANDENBURG, whose son became (1701) king of PRUSSIA. From 1701 to 1945 East Prussia shared the history of Prussia. In 1945 East Prussia was divided between the USSR, becoming part of the Russian SFSR (now Russia), and Poland.

Eastwood, Clint (Clinton Eastwood, Jr.), 1930–, American actor and director; b. San Francisco. He is best known for roles in action films, where he portrays a strong, silent, often violent hero. He has starred in over thirty movies, including *Dirty Harry* (1972), *Magnum Force* (1973), and *In the Line of Fire* (1993). He directed and acted in *Play Misty for Me* (1971), *Heartbreak Ridge* (1986), and *Unforgiven* (1992; Academy Award).

eating disorders, any of several psychological disorders relating to the consumption of food, such as anorexia nervosa. Anorexia nervosa and bulimia are characterized by an abnormal fear of obesity, distorted body image, and subsequent abnormal eating patterns. Anorexia is marked by obsessive fasting; bulimia by eating binges followed by self-induced vomiting or the use of laxatives. The effects of these disorders range from mild weight loss to delayed sexual development, heart problems, depression, and even death. Both conditions have their roots in social pressures; most cases occur among middle- and upper-class adolescent girls. Some specialists distinguish a third eating disorder, binge eating disorder, which is characterized by frequent periods of uncontrolled, compulsive eating, resulting in obesity and distress; it is typically associated with anxiety or depression. Other eating disorders include rumination disorder, which generally occurs during infancy and involves repeated regurgitation; and pica, found primarily among young children and characterized by the eating of various nonnutritive substances, such as plaster, paint, or leaves.

Eaton, John Henry, 1790–1856, U.S. senator (1818–29) from Tennessee and secretary of war (1829–31); b. Halifax co., N.C. A close associate of Pres. JACKSON, he resigned as secretary after the social snubbing of his second wife, Margaret O'Neill.

Ebla, ancient city near Aleppo, Syria. The palace archive excavated (1975) there revealed that Ebla had been a major commercial center trading with much of the Middle East. The texts, written in a Canaanite language (Eblaite), date from c.2500 B.C.

ebony, common name for the Ebenaceae, a family of trees and shrubs widely distributed in warm climates. The genus *Diospyros* includes the ebony and persimmon trees. Ebony wood, valued since ancient times, is dark and hard; it is used extensively in cabinetmaking. Some species (e.g., *D. hirsuta*) have wood striped with black or shades of brown (called calamander wood or variegated ebony). The persimmons bear edible fruit that when unripe is astringent and when ripe is soft and pulpy, making it difficult to market. Persimmon wood has a limited use in the manufacture of objects (e.g., golf club heads) requiring hardwood.

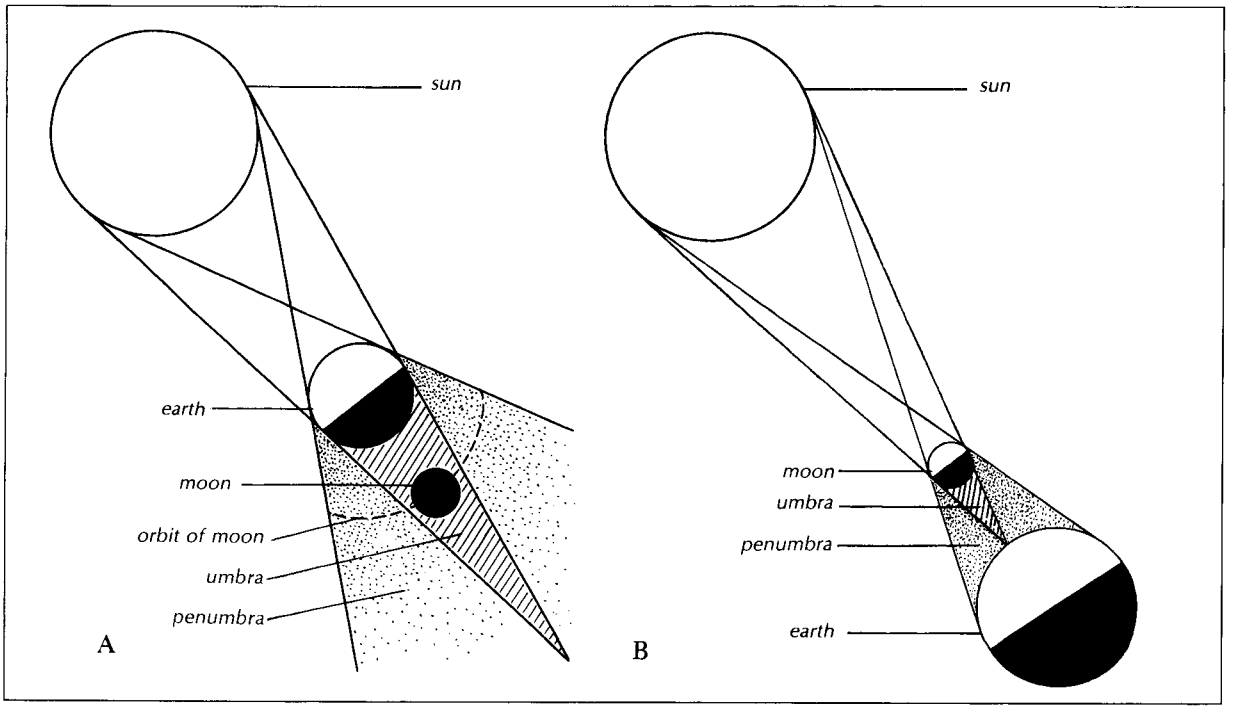
eccentricity, in astronomy: see ORBIT.

Ecclesiastes [ēklē"zēăs'tēz], book of the OLD TESTAMENT, 21st in the Authorized Version, traditionally ascribed to SOLOMON but clearly written much later (3d cent. B.C. or as late as 160 B.C.). A philosophical essay, it opens with the theme that since "all is vanity," life should be enjoyed. This is followed by praise of wisdom and mercy, an emphasis on the universality of death, and a brief epilogue on the fear of God's judgment.

Ecclesiasticus, book included in the OLD TESTAMENT of the Western canon and the Septuagint but not in the Hebrew Bible, and placed in the APOCRYPHA in the Authorized Version. It is also called the Wisdom of Jesus the Son of Sirach. The original Hebrew text dates from 200–180 B.C. and was translated perhaps in 132–131 B.C. Its theme is the excellence of wisdom, and it contains several eloquent passages.

Echegaray, José [āchāgärī'], 1832–1916, Spanish dramatist, mathematician, economist, and cabinet minister. His 63 plays range from romances to melodramatic problem plays like *The Great Ga-*

The key to pronunciation appears on page xiii.



Eclipses

leoto (1881). He shared the 1904 Nobel Prize in literature with Frédéric MISTRAL.

Echeverría Álvarez, Luis [āl'värās], 1922–, president of Mexico (1970–76). A member of the Institutional Revolutionary party, he held numerous government posts, including secretary of the interior (1964–69). As president he attempted reforms but was faced with inflation, unemployment, and political violence.

echidna or **spiny anteater,** primitive, egg-laying MAMMAL, or MONOTREME, of New Guinea, E Australia, and Tasmania. Covered with sharp quills, the grayish-brown echidna protects itself by rolling into a ball. It may reach 18 in. (46 cm) in length. A rapid burrower, the echidna probes for ants and termites with its sensitive muzzle and long, sticky tongue.

echinoderm, marine invertebrate animal of the phylum Echinodermata, having external skeletons of calcareous plates just under the skin, no head, and a unique water-vascular (ambulacral) system with tube-feet. Echinoderms are radially symmetrical, lack specialized excretory organs, and reproduce sexually. Echinoderms have extensive powers of regeneration of lost or injured parts. All members of the phylum live on the sea floor. The phylum includes the STARFISH, BRITTLE STARS, SEA URCHINS and SAND DOLLARS, SEA CUCUMBERS, and CRINOIDS.

Echo, in Greek mythology, mountain NYMPH. She incurred HERA's wrath with her chatter and, as punishment, could only repeat the last words said by others. In unrequited love for NARCISSUS, she pined away until her voice alone remained.

echo, reflection of a sound wave back to its source in sufficient strength and with a sufficient time lag (at least 0.1 sec) to be separately distinguished by the human ear.

Eck, Johann Maier von, 1486–1543, German Roman Catholic theologian. Although he held humanistic ideas, he is known as the theologian who forced LUTHER, whom he disputed publicly at Leipzig (1519), into a position of open opposition to the Roman Catholic Church.

Eckhart, Meister (Johannes Eckhart), c.1260–c.1328, German mystical theologian. A DOMINICAN, he communicated his burning sense of God's nearness to human beings and began a popular mystical movement in 14th-cent. Germany. Eckhart was wrongly accused of connection with the Beghards (a group with semiheretical beliefs), and 17 of his propositions were condemned (1329) as heretical by Pope John XXII. He was perhaps the first writer of speculative prose in German, which subsequently replaced Latin as the language used for popular tracts.

eclampsia: see TOXEMIA.

eclipse, partial or total obscuring of one celestial body by the shadow of another. A **lunar eclipse** occurs when the earth blocks the sun's light from the moon; a **solar eclipse** occurs when the moon blocks the sun's light from some area on the earth. Because the earth and moon shine only by the reflected light of the sun, each casts a shadow into space in the direction away from the sun. The shadow consists of a cone-shaped area of complete darkness, called the umbra, and a larger area of partial darkness that surrounds the umbra, called the penumbra. A lunar eclipse is said to be total or partial depending on whether the moon passes completely into the umbra of the earth's shadow or remains partly in the penumbra. A solar eclipse is said to be total or partial depending on whether the observer is in the umbra or the penumbra of the moon's shadow. Total solar eclipses have particular scientific importance, providing information about the motions of the moon and about the surface phenomena of the sun and permitting tests of Albert Einstein's general theory of RELATIVITY. An annular solar eclipse occurs when the moon is so distant from the earth that the umbra of its shadow is too short to reach the earth's surface; the sun is thus seen as a bright ring completely surrounding the moon's dark disk. Solar and lunar eclipses are possible only when the moon crosses the earth's orbital plane at a time when the sun, moon, and earth are in alignment (at new and full moon; see SYZYGY).

ecliptic, the great circle on the celestial sphere (see ASTRONOMICAL COORDINATE SYSTEMS) that lies in the plane of the earth's ORBIT. Because of the earth's yearly revolution around the sun, the sun appears to move in an annual journey along the ecliptic. The obliquity of the ecliptic is the inclination (about 23.5°) of the plane of the ecliptic to the plane of the celestial equator. The constellations of the ZODIAC are those through which the ecliptic passes.

Eco, Umberto [ĕcō], 1932–, Italian author and scholar. His enormously successful novel, *The Name of the Rose* (1981), is a medieval mystery that blends detective fiction, philosophy, history, and SEMIOTICS. Among his other works are *Foucault's Pendulum*

(1989), also a novel, *A Theory of Semiotics* (1976), and *The Limits of Interpretation* (1990).

E. coli: see ESCHERICHIA COLI.

ecology, study of the interrelationships of organisms and the physical environment. Within the BIOSPHERE, the basic unit of study is the ecosystem—a community of plants and animals in an environment supplying the raw materials for life, i.e., chemical elements (or food) and water. An ecosystem is delimited by climate, altitude, latitude, water and soil characteristics, and other physical conditions. The energy for fueling life activities reaches the earth in the form of sunlight. By PHOTOSYNTHESIS green plants capture that light energy and store it in the chemical bonds of carbohydrates, fats, and proteins. Some of the energy is acquired by plant-eating animals, and a fraction of it is passed on to predatory animals. Such sequences, called food chains, overlap at many points, forming food webs. Once spent, the energy for life cannot be replenished except by further exposure of green plants to sunlight. The chemicals of life are continually recycled by such processes as photosynthesis, RESPIRATION, and nitrogen fixation (see NITROGEN CYCLE). Disruption of these cycles by natural causes such as drought or by POLLUTION can disturb the balance of an entire ecosystem. An ecosystem that has reached a stable and self-perpetuating stage is known as a *climax community.* When extensive and well-defined, the climax community is called a *biome.* Examples are TUNDRA, SAVANNA (grassland), DESERT, and forests. Stability is attained through a process known as succession, whereby a relatively simple community, such as lichen- and algae-covered rocks, gives way over time to one more complex, such as a forest or tundra.

econometrics, a technique of economic analysis that combines economic theory with statistical and mathematical methods of analysis. It is an attempt to improve economic forecasting and to make possible successful policy planning. In econometrics, economic theories are expressed as mathematical relations and then tested empirically by statistical techniques. The system is used to create models of the national economy that endeavor to predict such basic factors as GROSS NATIONAL PRODUCT, levels of unemployment, inflation rate, and federal budget deficits. The use of econometrics has grown, even though its forecasts have not always attained a high degree of accuracy.

Economic and Social Council: see UNITED NATIONS (table 2).

economics, the study of how human beings allocate scarce resources to produce various commodities and how those goods are distributed for consumption among the people in society. The essence of economics lies in the fact that resources are scarce, or at least limited, and that not all human needs and desires can be met. How to distribute these resources in the most efficient and equitable way is a principal concern of economists. The field of economics has undergone a remarkable expansion in the 20th cent. as the world economy has grown increasingly large and complex. Today, economists are employed in large numbers in private industry, government, and higher education. The development of computer sciences has further enhanced the importance of economics in modern society. Economics is usually divided into two broad categories and a number of lesser ones. **Macroeconomics** involves the study of the whole economic picture, as opposed to the parts. It analyzes aggregate data in such areas as the GROSS NATIONAL PRODUCT (GNP) and national income, general price levels, and total employment. It also examines the interplay of these forces with each other and the results of any imbalances among them. **Microeconomics,** on the other hand, looks at economic activity in the individual case, whether it be a single corporation, commodity, or consuming unit, and attempts to determine, for example, how productive resources are allocated among competing producers and how incomes are distributed among the various sectors of an economy. It is especially concerned with the price levels of particular goods and services. Some economists list a third major category, that of economic growth and development. All of these fields today make use of ECONOMETRICS, a branch dealing with statistical analysis and forecasting. The history of economics has roots in the writings of the ancient Greeks. While it is closely identified with CAPITALISM, it plays a vital role in socialist and communist countries as well. Economics was established as a major field of study in the 18th cent. by Adam SMITH, who founded the so-called classical school, which included other British economists such as David RICARDO and John Stuart MILL. While they embraced, in varying degrees, the concept of LAISSEZ-FAIRE (allowing business to follow freely the "natural laws" of economics), J.M. KEYNES in the 20th cent. developed theories that have led to governmental attempts to control BUSINESS CYCLES. In addition to Keynesian and neo-Keynesian schools, modern economic schools include the monetarists, such as Milton FRIEDMAN, who believe that the money supply exerts a dominant influence on the economy; supply-siders (see SUPPLY-SIDE ECONOMICS); and Marxist and socialist economists (see MARXISM; SOCIALISM). See also BANKING; CREDIT; DEPRESSION; INFLATION; INTEREST; MONEY; SUPPLY AND DEMAND; TAXATION.

ecosystem: see ECOLOGY.

Ecuador [ĕk'wədôr], officially Republic of Ecuador, republic (1990 est. pop. 10,933,000), 109,483 sq mi (283,561 sq km), W South America, bordered by Colombia (N), Peru (S and E), and the Pacific Ocean (W). QUITO is the capital, and GUAYAQUIL is the largest city and chief port. The ANDES Mts. dominate the landscape, extending from north to south in two parallel ranges and reaching their highest point in the peak of Chimborazo (20,577 ft/6,272 m). There are numerous active volcanoes, and earthquakes are frequent, and often disastrous, in this area. Within the mountains are high, often fertile, valleys, which support the main bulk of the population and house the major urban centers. East of the Andes is a region of almost uninhabited tropical jungle, through which run the tributaries of the Amazon R., while to the west are the hot, humid lowlands of the Pacific coast. Since completion (1972) of a trans-Andean pipeline, Ecuador has become one of Latin America's largest oil producers and exporters; oil reserves are expected to be depleted, however, early in the next century. Other exports include bananas, coffee, cocoa, fish, and forest products. Tourism is also important to the economy. Although almost one third of the work force engages in agriculture (corn, barley, rice, wheat), many foodstuffs and other goods must be imported. Manufactures are few and small-scale; in the 1980s and 90s the government attempted to stimulate economic growth by imposing austerity budgets, currency devaluation, and increased taxation. The majority of the population is indigenous or mestizo, but there are people of African or mixed African and European origin along the coast. The few Ec-

The key to pronunciation appears on page xiii.

uadorans of entirely European-descent are mainly landholders. Spanish is the official language, although many indigenous people speak Quechua or Jarvo. Roman Catholicism is the predominant religion.

History. Entering the region that is now Ecuador in 1533, the Spanish CONQUISTADORES did not find the wealth they sought and moved on. The area became a colonial backwater, at various times subject to Peru and NEW GRANADA. It was liberated from Spanish control by Antonio José de SUCRE in the battle of Pichincha in 1822, made part of the newly formed state of Greater Colombia by Simón BOLÍVAR, and became a separate state (four times its present size) in 1830. Boundary disputes led to frequent invasions by Peru in the 19th and 20th cent., and some of them have still not been settled. Politically, Ecuador became divided between Conservatives, who supported entrenched privileges and a dominant Church, and Liberals, who sought social reforms; and its history in the 19th cent. was marked by bitter internecine struggles between the two factions. Political instability continued in the 20th cent., bringing a bewildering number of changes in government. In 1925 the army replaced the banking interests as the ultimate power. Military coups in support of various rival factions have been common. In 1979 a new constitution was promulgated, and popular presidential and legislative elections were held. Sixto Durán Ballén, a conservative, was elected president in 1992.

ecumenical council: see COUNCIL, ECUMENICAL.

ecumenical movement, a movement aimed at the unification of the Protestant churches of the world and ultimately of all Christians. In England the Evangelical Alliance (1846) was an attempt in this direction. In the U.S. the Federal Council of Churches of Christ was established in 1908. The WORLD COUNCIL OF CHURCHES (first assembly, 1948) is now the chief instrument of ecumenicity. Notable progress has been made in merging individual churches, e.g. the UNITED CHURCH OF CHRIST in the U.S. and the Church of SOUTH INDIA. Since the Second VATICAN COUNCIL (1962–65), the Roman Catholic Church has encouraged ecumenical dialogue with other churches.

Edda [ĕd'ə], title of two works in Old Icelandic. The *Poetic* (or *Elder*) *Edda,* the most valuable collection in Old Norse literature, is made up of 34 mythological and heroic lays (c.800–c.1200). The *Prose* (or *Younger*) *Edda,* probably written c.1222 by SNORRI STURLUSON, is a treatise on the art of Icelandic poetry and a compendium of Norse mythology and is the prime source on the subject.

Eddington, Sir Arthur Stanley, 1882–1944, English astronomer and physicist. He was Plumian professor of astronomy (from 1913) and director of the observatory (from 1914) at Cambridge Univ. Eddington made major contributions to the study of the evolution, motion, and internal constitution of stars and was one of the first physicists to grasp the theory of relativity, of which he became a leading exponent. A prolific writer on science, he wrote such works as *Mathematical Theory of Relativity* (1923) and *The Internal Constitution of the Stars* (1926).

Eddy, Mary Baker, 1821–1910, founder of the CHRISTIAN SCIENCE movement; b. Bow, near Concord, N.H. In frail health from childhood, she became interested in healing and faith, especially after meeting P.P. Quimby, a mental healer, in 1862. She later discarded his methods and began (1866) the Christian Science movement. *Science and Health,* the movement's textbook, appeared in 1875, and she planned the *Church Manual* and the upbuilding of the sect. As pastor emeritus of the Mother Church, Boston, and head of the whole church, she exercised great influence, even in retirement. In 1908 she founded the *Christian Science Monitor,* a daily newspaper.

Edel, (Joseph) Leon, 1907–, American literary scholar; b. Pittsburgh. For portions of his five-volume biography of Henry JAMES (1953–72) he received the Pulitzer Prize. His other works include *James Joyce: The Last Journey* (1947) and *Bloomsbury: A House of Lions* (1979).

edelweiss, perennial plant (genus *Leontopodium*) of the COMPOSITE family, found at high altitudes in the mountains of Europe, Asia, and South America. It has woolly-white floral leaves and small yellow disk flowers surrounded by silvery bracts. It is esteemed in Europe as a symbol of purity and in Switzerland is protected by law.

Eden, Sir Anthony, 1895–1977, British statesman. A Conservative, he was foreign minister from 1935 to 1938 but resigned in opposition to Neville CHAMBERLAIN's "appeasement" of the AXIS powers. Again foreign minister in Winston CHURCHILL's war cabinet (1940–45), he was instrumental in establishing the UN. After Labour's defeat in 1951, he once again became foreign minister. He succeeded Churchill as prime minister in 1955. His decision to use armed intervention in the SUEZ CANAL crisis in 1956 provoked much controversy. In poor health, he resigned in 1957. He was made a life peer in 1961.

Eden, Garden of, in the BIBLE, the first home of humans. God established the garden, with its trees of knowledge and of life, as a dwelling place for ADAM and EVE, until, having eaten of the forbidden fruit, they were banished. It has been located variously, particularly in Mesopotamia.

Edessa, ancient city of Mesopotamia (modern Urfa, Turkey). Around 137 B.C. it became the capital of the kingdom of Osroene and later came under Roman and Byzantine rule. In A.D. 639 it fell to the Arabs. Edessa was captured by the Crusaders in 1097 (see CRUSADES) but passed into Muslim hands again in 1144.

Edgar or **Eadgar,** 943–75, king of the English (957–75). His reign was one of orderly prosperity. He initiated widespread monastic reforms and granted practical autonomy to the Danes in England (see DANELAW) in return for their loyalty. His son was ÆTHELRED the Unready.

Edinburgh, Philip Mountbatten, duke of, 1921–, consort of ELIZABETH II of Great Britain; b. Greece. The son of Prince Andrew of Greece and Princess Alice, daughter of Prince Louis of Battenberg, he is a great-great-grandson of Queen VICTORIA. In 1947, the year he married Elizabeth, he took his mother's name, Mountbatten; became a British citizen; and was created duke of Edinburgh. In 1957 Elizabeth conferred upon him the title of Prince.

Edinburgh, capital city (1991 pop. 421,213) of Scotland and royal burgh. The city is divided into two sections: the Old Town, on the slope of Castle Rock, dates from the 11th cent.; the New Town spread to the north in the late 18th cent. Edinburgh is a government, finance, and tourist center. Most industry, which includes brewing and distilling, publishing, and paper milling, is situated near the city's port, Leith. Edinburgh grew up around its 11th-cent. castle and became Scotland's capital in 1437. It blossomed as a cultural center in the 18th and 19th cent., with such figures as David HUME, Robert BURNS, and Sir Walter SCOTT. It remains a cultural and educational hub and hosts an annual international arts festival.

Edison, Thomas Alva, 1847–1931, American inventor; b. Milan, Ohio. Edison was a genius in the practical application of scientific principles and one of the most productive inventors of his time—despite only three months of formal schooling and an increasing deafness throughout most of his life. Among his most important inventions were the carbon MICROPHONE (1877), the RECORD PLAYER (patented 1878), and the Kinetoscope (see MOTION PICTURES). His most significant contributions, however, were his development of the first commercially practical incandescent lamp (1879) and his design for a complete electrical distribution system for LIGHTING and power, culminating in the installation (1881–82) of the world's first central electric-light power plant in New York City. His New Jersey workshops (at Menlo Park and West Orange) were forerunners of the modern industrial research laboratory, in which teams of workers, rather than a lone inventor, systematically investigate a problem.

Edmonton, city (1991 pop. 616,741), capital of Alberta, W Canada, on the North Saskatchewan R. It is one of Canada's largest and fastest-growing cities and the chief center for Alberta's oil and petrochemical industries. Edmonton is an important agricultural processing and wholesaling center and serves as the gateway to the developing Peace R. and Athabasca frontier country. Edmonton has the world's largest mall, which has become a tourist attraction. Founded (1795) as Fort Edmonton, the city was a major western fur-trading post in the 19th cent.

Edmund, Saint (Edmund Rich), 1170?–1240, English churchman, archbishop of Canterbury. His zeal for reform antagonized HENRY

III, who secured from Rome a papal legate sympathetic to himself, with jurisdiction over Edmund. Feast: Nov. 16.

Edmund Crouchback: see under LANCASTER, HOUSE OF.

Edmund Ironside, d. 1016, king of the English (1016), son of ÆTHELRED the Unready. He was prominent in the fighting against CANUTE. On Æthelred's death, Edmund was proclaimed king although Canute received the support of over half of England. After the battle of Assandun (Oct. 18, 1016), he and Canute came to terms and partitioned England, but Edmund died the next month. His courage earned him the name Ironside.

Edom: see ESAU.

education: see AUDIOVISUAL INSTRUCTION; BILINGUAL EDUCATION; CHAUTAUQUA MOVEMENT; COLLEGES AND UNIVERSITIES; DYSLEXIA; KINDERGARTEN; LEARNING DISABILITIES; PROGRESSIVE EDUCATION; SIGN LANGUAGE; SOPHISTS; see also biographies of educators, e.g., BRAILLE, LOUIS; COMENIUS, JOHN AMOS; CONANT, JAMES BRYANT; FROEBEL, FRIEDRICH; GALLAUDET, THOMAS HOPKINS; GRAY, HANNA HOLBORN; HUTCHINS, ROBERT MAYNARD; MONTESSORI, MARIA; PESTALOZZI, JOHANN; WASHINGTON, BOOKER T.; WILLARD, EMMA.

Education, United States Department of, federal executive department established (1979) to administer and coordinate programs of federal assistance to education, previously a function of the former Dept. of Health, Education, and Welfare. It oversees and administers grants at elementary, secondary, and higher levels of education.

Edward, kings of England. **Edward I,** 1239–1307 (r.1272–1307), was the son and successor of HENRY III. He gained new claims to France through his marriage (1254) to Eleanor of Castile and was responsible for his father's victory in the BARONS' WAR. As king, his conquest of Wales (1277–82) was followed by a long, futile campaign against Scotland (1290–1307). Edward's legal reforms, notably the statutes of Westminster, earned him the title "English Justinian." He restricted private and church courts and controlled land grants to the church. His Model Parliament (1295) marked greater participation by the barons, merchants, and clergy whose resistance to war taxation had forced him to confirm previous charters (e.g., MAGNA CARTA). His son, **Edward II,** 1284–1327 (r.1307–27), was a weak king, dissipated and self-indulgent. His reign was noted for internal dissension and the loss of Scotland. His insistence on having his favorite, Piers Gaveston, at court caused rebellion among the barons, who eventually had Gaveston killed. Edward's later favorites, Hugh le Despenser and his son, virtually ruled England (1322–26). They made a truce with ROBERT I and recognized him as king of Scotland. Edward's wife, Queen ISABELLA, refused to return from France while the Despensers ruled. She entered into an adulterous alliance with Roger de MORTIMER and invaded England. The Despensers were executed and Edward forced to abdicate. He was imprisoned and almost certainly murdered by henchmen of Isabella and Mortimer. His son, **Edward III,** 1312–77 (r.1327–77), was dominated by Isabella and Mortimer until he seized power in a coup in 1330, putting Mortimer to death and forcing his mother into retirement. He supported Edward de BALIOL against the young Scottish king DAVID II, but despite his victory at Halidon Hill in 1333, the Scottish question remained unsettled. In 1337 the HUNDRED YEARS WAR began; it would dominate Edward's reign. He and his son EDWARD THE BLACK PRINCE took an active part in the war, the first phase of which ended with the treaty of London in 1359. The war was renewed after various treaties and truces, but, like the Scottish wars, was inconclusive in Edward's reign. There were many constitutional developments in Edward's long reign. The most important of these was the emergence of Commons as a distinct and powerful group in PARLIAMENT. The king's constant need for money for his wars enabled Commons to assert its power to consent to all lay taxation. The Black Death (see PLAGUE) decimated the population, producing a labor shortage that enabled the lower classes to demand higher wages and social advancement. Edward quarreled with the church, and the resulting religious unrest found a spokesman in John WYCLIF. There was rivalry between a court party headed by Edward's son JOHN OF GAUNT and the parliamentary party, headed by the Black Prince. Edward was succeeded by RICHARD II. **Edward IV,** 1442–83, son of Richard, duke of York, became king (1461–70, 1471–83) as leader of the York party (see ROSES, WARS OF THE) after his defeat of the Lancastrians and capture of HENRY VI. Edward's marriage to Elizabeth WOODVILLE (1464) and his favoritism to her family angered his cousin Richard Neville, earl of Warwick, who rebelled and fled to France, where he formed an alliance with MARGARET OF ANJOU, wife of the deposed Henry VI. They returned to England with troops and placed Henry on the throne. Their defeat by Edward (1471) led to Henry's death in the Tower (1471) and a peaceful end to Edward's reign. His son, **Edward V,** 1470–83?, was king in 1483. He was a pawn in the conflicting ambitions of his uncles, Earl Rivers and the duke of Gloucester. Gloucester had Rivers arrested, confined the king and his young brother in the Tower, had them declared illegitimate, and took the throne as RICHARD III. The boys disappeared and were presumed to have been murdered. One of the oldest and most prevalent theories—that they were smothered in their sleep by order of Richard III—is now considered anti-York propaganda of the TUDORS. **Edward VI,** 1537–53 (r.1547–53), succeeded his father HENRY VIII as king at the age of nine. He ruled under a council of regency controlled by his uncle and protector, Edward Seymour, duke of SOMERSET. During his reign Tudor absolutism was relaxed by a liberalization of the treason and heresy laws, and the government moved slowly toward Protestantism. Somerset's sympathy to the peasants led to his overthrow as regent by John Dudley, duke of Northumberland. Dudley gained ascendancy over the young king, now dying of tuberculosis, and persuaded him to settle the crown on Dudley's own daughter-in-law, Lady Jane GREY. The ensuing struggle ended with the victory of MARY I. **Edward VII,** 1841–1910, king of Great Britain and Ireland (r.1901–10), was the eldest son of Queen VICTORIA. Prince of Wales for 60 years, he was a leader of fashionable society. As king, he cooperated reluctantly in Herbert Asquith's attempt to limit the veto power of the House of Lords. He improved international understanding by traveling on the continent and by promoting an alliance with France. He and his wife, ALEXANDRA, were the parents of GEORGE V, whose eldest son, **Edward VIII** (1894–1972) was king in 1936. He was extremely popular until his announced intention of marrying Wallis Warfield Simpson (see WINDSOR, WALLIS WARFIELD, DUCHESS OF), an American suing her second husband for divorce, precipitated a crisis with the cabinet, then headed by Stanley BALDWIN. Edward insisted that he had the right to marry the woman of his choice, though her marital background made her unacceptable. The government saw in his challenge a threat to constitutional procedure and forced his abdication in 1936. As duke of Windsor, he married Wallis Warfield in 1937. He was governor of the Bahamas (1940–45).

Edwards, Jonathan, 1703–58, American theologian and metaphysician; b. Windsor, Conn. In 1729 he took sole charge of a congregation in Northampton, Mass., where he soon gained a wide following by his forceful preaching and powerful logic in support of Calvinist doctrine. A revival that he held (1734–35) effectively brought the GREAT AWAKENING to New England. His stern demands for strict orthodoxy and his inflexibility in a membership controversy resulted in his dismissal (1750) from Northampton. At Stockbridge, Mass., he completed his masterpiece, *The Freedom of the Will* (1754), which set forth metaphysical and ethical arguments for determinism. He is often regarded as the last great New England Calvinist, and his sermon *Sinners in the Hands of an Angry God* is still read today. Called (1757) to be president of the College of New Jersey (now Princeton Univ.), he died soon after.

Edward the Black Prince, 1330–76, eldest son of EDWARD III of England. He was created duke of Cornwall in 1337, the first duke ever to be created in England, and prince of Wales in 1343. Joining his father in the battles of the HUNDRED YEARS WAR, he fought at Crécy and Calais and in 1356 won the battle of Poitiers and captured JOHN II of France. It was apparently the French who first called him the Black Prince, perhaps because he wore black armor. Edward III made his French holdings a principality, and the Black Prince maintained a brilliant court at Bordeaux after 1363. He aided Peter I of Castile and León, but the taxes he was forced to levy in Aquitaine resulted in war with CHARLES V of France. Bad health forced him to resign his principalities in 1372. He opposed his brother JOHN OF GAUNT, who had become the virtual ruler of England with the aging of Edward III. The Black Prince died before his father, but his son succeeded to the throne as RICHARD II.

Edward the Confessor, d. 1066, king of the English (1042–66), son

of ÆTHELRED the Unready. He grew up in France and returned to succeed Harthacanute. He was an able but not very energetic ruler, and his strife with the powerful noble Earl Godwin was heightened by his support of the Normans in England. Godwin and his family were exiled (1051) but soon returned. During their absence, Edward received William, duke of Normandy (later WILLIAM I), and apparently made him his heir. Since both William and Harold III of Norway had claims to the English throne, Edward eventually recognized Godwin's warlike son HAROLD as his heir to avoid bloodshed. Edward's piety was responsible for his name the Confessor. He was canonized in the 12th cent. Feast: Oct. 13.

Edward the Elder, d. 924, king of WESSEX (899–924). The son and successor of ALFRED, he fought with his father against the Danes and was apparently joint king with him. He gradually became ruler of all England S of the Humber.

EEG: see ELECTROENCEPHALOGRAPHY.

eel, any of a large order (Anguilliformes) of FISH with a long, snakelike body, elongate dorsal and anal fins, no pelvic fins, and scales either lacking or embedded in the skin. The male American eel reaches 2 ft (61 cm) in length; the female, 4 ft (122 cm). Most, including the morays and conger eels, are marine; one family, Anguillidae, is freshwater. All eels spawn in the sea, the eggs hatching into transparent, ribbonlike larvae that drift about feeding until they metamorphose into small eels, or elvers; freshwater species typically undertake long migrations to spawn in the sea. Freshwater eels are an important food item in some parts of the world.

eel, electric: see ELECTRIC FISH.

Égalité, Philippe: see under ORLÉANS, family.

Egbert, d. 839, king of WESSEX (802–39). He secured the submission of KENT, EAST ANGLIA, MERCIA, and NORTHUMBRIA. Historians later called him the first king of England, but there was no conception of a kingdom of England in his day.

egg: see OVUM.

eggplant, garden vegetable (*Solanum melongena*) of the NIGHTSHADE family. Native to SE Asia, it is a perennial shrub, although it is often grown in warm climates as an annual herb. It is cultivated for its ovoid fruit, which varies in size and may be purple, white, or striped.

Eglevsky, André [ĕg'lĕvskē], 1917–77, Russian–American dancer; b. Moscow. He trained in France and made his debut (1931) in London. He danced (1939–42) with the Ballet Russe de Monte Carlo and was (1951–58) premier danseur with the NEW YORK CITY BALLET. After he retired, he formed (1958) the Eglevsky Ballet in Long Island, New York.

Egmont, Lamoral, count of, 1522–68, Flemish general and statesman. Although a Catholic, he opposed the persecution of Protestants in the Low Countries. His beheading by order of the duke of ALBA caused a revolt against Spanish rule. He is the hero of GOETHE's tragedy *Egmont,* with music by BEETHOVEN.

ego: see PSYCHOANALYSIS.

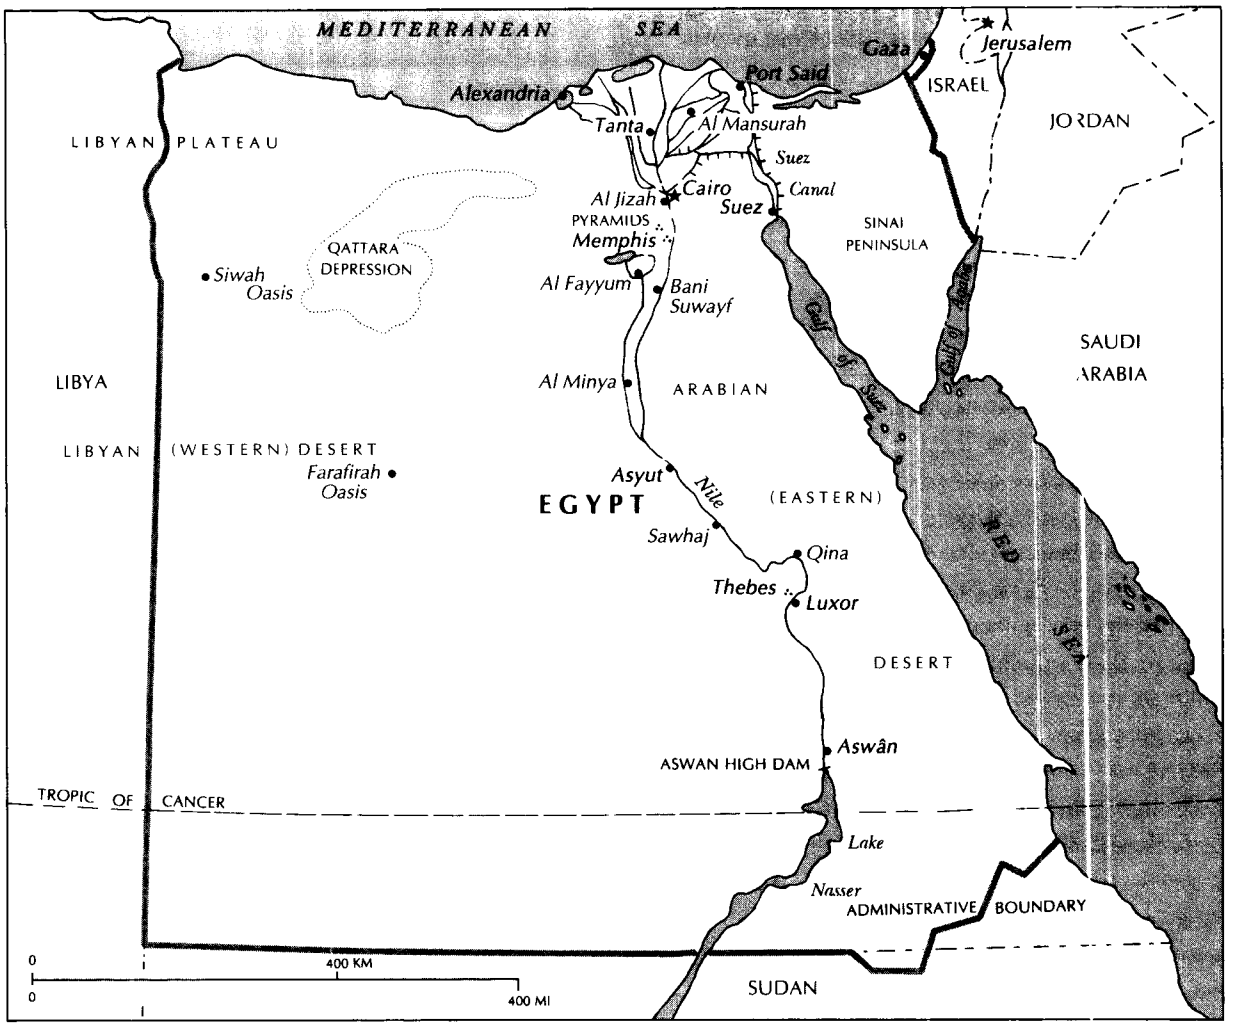
egret, name for several HERON species. Egrets were nearly exterminated by hunters seeking their white, silky plumage (which develops during the mating season) for millinery. The American egret has straight plumes, c.21 in. (52.5 cm) long, on its back. The snowy egret, or snowy heron (*Leucophoyx thula*), the most beautiful and most hunted, has curved plumes on the head, breast, and back.

Egypt, Arab. *Misr,* biblical *Mizraim,* officially Arab Republic of Egypt, republic (1992 est. pop. 56,369,000), 386,659 sq mi (1,001,449 sq km), NE Africa, bordered by the Mediterranean Sea (N), Israel and the Red Sea (E), Sudan (S), and Libya (W); the Sinai peninsula, the only part of Egypt located in Asia, is separated from the rest of the country by the SUEZ CANAL. Major cities include CAIRO (the capital) and ALEXANDRIA. The principal physiographic feature is the NILE R., which flows the length of the country from south to north and separates the Libyan (Western) and Arabian (Eastern) deserts that comprise 90% of the land area. Bordering the Nile between Aswan and Cairo are narrow strips of cultivated land, home of the vast majority of Egypt's inhabitants. Although the country's industrial base has been increased considerably in the 20th cent., the economy has been severely strained by the ARAB-ISRAELI WARS and Egypt's limited farmland. Agriculture, which employs about a third of its population, depends on the Nile for its fertility. Completion of the ASWAN HIGH DAM in 1970 greatly increased arable land, which still constitutes only 5% of Egypt's total land area. Cotton is the leading cash crop. Major manufactures include refined oil, chemicals, textiles, and processed foods. The Suez Canal and tourism are sources of foreign exchange. Egypt's population is growing very rapidly, increasing by nearly a million every seven months. Its inhabitants are mainly a complex racial mixture, descended from the ancient Egyptians, Berbers, sub-Saharan Africans, Arabs, Greeks, and Turks. The majority are SUNNI Muslims, but there is a substantial minority of Coptic Christians (see COPT). Arabic is the official language.

Ancient Egypt. Egyptian civilization, one of the world's oldest, developed in the valley of the Nile over 5,000 years ago. The rival kingdoms of Upper and Lower Egypt were united as a centralized state c.3200 B.C. by a king named Menes, who established his capital at MEMPHIS. A high culture developed early, and the use of writing was introduced. During the Old Kingdom (3110–2258 B.C.) Egyptian culture and commerce flourished, and the great pyramids were built. Its fall introduced a period of anarchy, which ended c.2000 B.C. with the establishment of the Middle Kingdom, with its capital at THEBES. Civilization again flourished until in 1786 B.C. weak rulers allowed the country to pass under the rule of foreign nomads, known as the HYKSOS. The Hyksos were expelled c.1570 B.C., and the New Kingdom was established. During the XVIII dynasty (1570–c.1342 B.C.) ancient Egyptian civilization reached its zenith; a vast empire was established and THEBES and MEMPHIS became the political, commercial, and cultural centers of the world. After the XX dynasty (1200–1085 B.C.) Egypt came increasingly under foreign domination, with periods of rule by Libya, Sudan, Assyria, Nubia, and Persia. Following a brief reestablishment of native power in 405 B.C., Egypt fell without a struggle to ALEXANDER THE GREAT in 332 B.C. After Alexander's death (323 B.C.) Egypt was inherited by his general, PTOLEMY, who founded the dynasty of Ptolemies and under whom the new city of ALEXANDRIA became the intellectual and religious center of the Hellenistic world. The Ptolemies maintained a formidable empire for more than two centuries until, weakened by internal dynastic disputes, Egypt fell to Rome in 30 B.C. Christianity was readily accepted in Egypt, which became part of the Byzantine Empire about A.D. 395. With the Arab conquest (639–42) Egypt became an integral part of the Muslim world.

Modern Egypt. After 500 years as part of the CALIPHATE, Egypt was seized by the MAMLUKS in 1250 and the Ottoman Turks in 1517. The first close contact with the West occurred in 1798, when French forces under NAPOLEON occupied the country; they were expelled in 1801 by combined Ottoman and British troops. In 1805 MUHAMMAD ALI, a common soldier, was appointed pasha of Egypt; under his rule the foundations of the modern state of Egypt were established. The construction of the SUEZ CANAL (1859–69) put Egypt deeply into debt, and, although nominally still part of the OTTOMAN EMPIRE, the country was forced to appoint a French-British commission to manage its financial affairs. The British consolidated their control between 1883 and 1907, and during WORLD WAR I, when Turkey joined the Central Powers, Great Britain declared Egypt a British protectorate, which lasted until 1937.

Independent Egypt. Egypt bitterly opposed the UN partition of Palestine in 1948 and played an important role in the ARAB-ISRAELI WARS that followed. In 1952 the Egyptian army deposed King FAROUK in a coup d'état; a republic was established in 1953, and Col. Gamal Abdel NASSER became president (1954). For a brief period Egypt and Syria merged (1958) in the United Arab Republic, then were joined by Yemen in the United Arab States; the union was dissolved in 1961. Inaugurating a program of economic and social reform, modernization of the army, and construction of the Aswan High Dam, Nasser, with the aid of the USSR, strove to make Egypt the undisputed leader of the Arab world. His rallying-cry was denunciation of Israel; in 1967 Egypt lost much territory in the Six-Day War, which also shattered its economy and armed forces. Nasser died in 1970 and was succeeded by Anwar al-SADAT, who regained some of Egypt's lost territory in the Yom Kippur War (1973) and reversed a 20-year trend by ending Soviet influence and seeking closer ties with the West. In 1977 Sadat angered his Arab allies by traveling to Jerusalem as a conciliatory gesture to Israel; the two nations signed a peace treaty in 1979 (see CAMP DAVID



ACCORDS). In 1981 Sadat was assassinated by Muslim fundamentalists, and Hosni MUBARAK, who pledged to continue Sadat's policies, became president. The Israeli withdrawal from the Sinai and its return to Egypt, which began in 1979, was completed in 1982. In the late 1980s and early 90s Muslim fundamentalists increasingly opposed the government. Egypt's greatest problem, however, is its growing population, which is crowded into a limited area and strains the economy.

Egyptian architecture was formulated prior to 3000 B.C. Abundant clay and scarce wood led to the early development of ceramic arts and brickwork. A massive, static, serene architecture emerged. Walls were immensely thick; columns were confined to halls and inner courts. Exterior walls had few openings and were covered with HIEROGLYPHICS and pictorial carvings in brilliant colors, with symbolic motifs like the scarab beetle. The capacity of sculptors to integrate decoration into structure was highly developed. Flat stone block roofs were supported by walls or by closely spaced internal columns. No dwellings, only tombs and temples, survive. Belief in the afterlife led to massive, impressive sepulchral architecture. Of the Old Kingdom (3110–2258 B.C.) remains the MASTABA is the oldest remaining form of sepulcher. The PYRAMID of a ruler was begun as soon as he ascended the throne. Middle Kingdom (2000–1786 B.C.) tombs were tunneled out of Nile cliffs. In temples of the New Kingdom (1570–1085 B.C.), the doorway was flanked by great pylons or towers, often with statues or obelisks in front. The temple was screened from the common people by a high wall. The hall had immense columns arranged in a nave and side aisles; behind were small, restricted sanctuaries. New Kingdom temples were also carved from rock, e.g., ABU SIMBEL. Egyptian architecture consistently resisted foreign influences.

Egyptian art. The art of predynastic EGYPT (c.4000–3200 B.C.), known from funerary offerings, was largely painted pottery and figurines, ivory carvings, slate cosmetic palettes, and flint weapons. Toward the end of the predynastic period, sculptors carved monolithic figures of the gods from limestone, e.g., the Min at Coptos. In the protodynastic and early dynastic periods (3200–2780 B.C.), Mesopotamian motifs appeared. The stone bowls and vases of these periods are remarkable for fine craftsmanship. During the height of the Old Kingdom, centered at Memphis (2630–2258 B.C.), the stylistic conventions that characterize Egyptian art were developed, notably the law of frontality, in which the human figure is represented with the eye and shoulders in front view, and the head, pelvis, legs, and feet in profile. There was little attempt at linear perspective or spatial illusionism. Relief was shallow, e.g., the palette of Namer (Cairo), a masterpiece of the I dynasty showing battle scenes. In sculpture the law of frontality was also strictly followed. Working with the most durable materials they had, artists decorated tombs with domestic, military, hunting, and ceremonial scenes to enable the dead to attain a happy continuation of their previous lives. Chief examples of Old Kingdom sculpture are the *Great Chephren,* in diorite; the *Prince Ra-hetep and Princess Nefert,* in painted limestone; and the *Sheik-el-Beled,* in painted wood (all: Cairo). Painting was generally employed as an accessory to sculpture. In the Middle Kingdom, based at Thebes (2000–1786 B.C.), the forms of the Old Kingdom were retained, but the unity of style was broken to admit a new formalism and delicacy. The

The key to pronunciation appears on page xiii.

tomb paintings at Bani Hasan are remarkable for freedom of draftsmanship. The sculptured portraits of Sesostris III and Amenemhet III (both: Cairo) are exceptional in their revelation of inner feelings. New Kingdom art (1570–1085 B.C.) was the final development of classic Egyptian style, with monumental forms, bold design, and a controlled vitality. During the Amarna period (1372–1350 B.C.) a naturalistic style developed in sculpture, e.g., the colossal statue of IKHNATON (Cairo) and the magnificent painted limestone bust of Queen NEFERTITI (Berlin Mus.). The rich sophistication of the period is exemplified by the furnishings from the tomb of TUTANKHAMEN. The Ramesside period (1314–1085 B.C.) saw an unsuccessful attempt to return to New Kingdom styles, but the vitality of that period was lost. The following period of decline (1085–730 B.C.) is characterized by mechanical repetition of earlier forms and by satirical drawings in the papyri. In the Saite period (730–663 B.C.) a coarse, brutal style predominated. After the Assyrian conquest of Egypt (663 B.C.), all the arts but metalworking declined. Egypt proved resistant to foreign influence in art through the Ptolemaic dynasty (332–30 B.C.). Architecture remained vital, e.g., at Idfu and Philae, and the minor arts continued to flourish. Fine collections of Egyptian art in the U.S. are at the Brooklyn and Metropolitan museums in New York City.

Sphinx and pyramid at Al Jizah, Egypt

Egyptian language, extinct language of ancient Egypt that is generally classified as a member of the Hamitic subfamily of the Hamito-Semitic family of languages. See AFRICAN LANGUAGES (table).

Egyptian religion. Ancient Egyptian worship is remarkable for its reconciliation and union of conflicting beliefs. The earliest predynastic tribes venerated many deities who were at first embodied in animals (such as the sacred cat of Bubastis), but who were later gradually humanized. The most widely accepted creation myth was that of the great sun god RA (Re), who appeared out of Chaos to create a race including OSIRIS and ISIS, and their son HORUS. When a national religion arose at the end of the predynastic period (c.3200 B.C.) various priesthoods attempted to systematize the gods and myths. The reign of IKHNATON established a monotheistic cult, but POLYTHEISM was restored after his death. The most important of the many forms of Egyptian worship were the cults of Osiris, king and judge of the dead, protector of all; the sun god Ra (symbolized by the PYRAMID), said to be the direct ancestor of the kings of Egypt; and AMON, Egypt's greatest god by the XIX dynasty. With no established book of teachings such as the Bible or Koran, Egyptian conduct was guided by human wisdom and the belief in *maat*, the principle of divine justice and order, held to be reflected in civil order as administered by the state under the pharaoh. While the priesthoods and state cult grew, the populace found its expression of religious feeling in the strict rites prescribed by funerary cults (see BOOK OF THE DEAD).

Ehrenburg or **Erenburg, Ilya Grigoryevich,** [ā'rənbŏork], 1891–1967, Russian writer. From 1909 to 1917 and 1921 to 1941 he lived in W Europe, where he wrote such novels as *The Love of Jeanne Ney* (1924) and *Out of Chaos* (1933). Returning to the Soviet Union in 1941, he became a war correspondent. His best-known novel, *The Fall of Paris* (1941–42), deals with the decay of French society, while *The Thaw* (1954) was the first work to discuss Stalinist repression.

Ehrlich, Paul, 1854–1915, German bacteriologist. For his work in immunology he shared with Élie Metchnikoff the 1908 Nobel Prize in physiology or medicine. He discovered salvarsan for the treatment of syphilis and made valuable contributions in hematology, cellular pathology, cancer study, and the use of dyes in microscopy and treatment of disease.

Eichmann, Adolf [īkh'män], 1906–62, German NAZI official. As head of the Gestapo's Jewish section, he oversaw the maltreatment, deportation to concentration camps, and murder (especially by the use of gas chambers) of millions of JEWS. After World War II, he escaped to Argentina, but he was located and abducted by Israeli agents in 1960. He was tried and hanged in Israel for crimes against the Jews.

Eiffel Tower, structure designed by the French engineer Alexandre Gustave Eiffel (1832–1923) for the Paris Exposition of 1889. The tower is 984 ft (300 m) high and consists of an open iron framework on four masonry piers; these piers support four columns that unite to form the shaft.

Eight, the, group of American artists in New York City, formed in 1908 to exhibit paintings. It comprised Arthur B. DAVIES, Maurice PRENDERGAST, Ernest Lawson, William GLACKENS, Everett SHINN, Robert HENRI, John SLOAN, and George LUKS. Men of widely different tendencies, they were bound by common opposition to academism and, because of their portrayal of everyday American life, were stigmatized as the "ashcan" school. They organized the ARMORY SHOW of 1913, which introduced modern European art to a reluctant but curious America.

Eijkman, Christiaan, 1858–1930, Dutch physician. For his work on the cause of BERIBERI, which led to the isolation of antineuritic vitamins, he shared with Sir Frederick Hopkins the 1929 Nobel Prize in physiology or medicine.

Eilat: see ELAT.

Eilshemius, Louis Michel [īlshē'mēəs], 1864–1941, American painter; b. near Newark, N.J. He is known for his imaginative, atmospheric American landscapes. *Approaching Storm* (Phillips Coll., Wash., D.C.) is an excellent example.

Einstein, Albert, 1879–1955, American theoretical physicist; b. Germany; recognized as one of the greatest physicists of all time. He became (1914) titular professor of physics and director of theoretical physics at the Kaiser Wilhelm Institute in Berlin. The Nazi government confiscated (1934) his property and revoked his German citizenship because he was Jewish, and in 1940 Einstein became an American citizen, holding a post at the Institute for Advanced Study in Princeton from 1933 until his death. Although an ardent pacifist, he urged Pres. F.D. ROOSEVELT to investigate the possible use of atomic energy in bombs. In one of three important 1905 papers, he explained BROWNIAN MOVEMENT on the basis of his study of the motion of atoms. His special theory of RELATIVITY (1905) dealt with systems or observers in uniform (unaccelerated) motion with respect to one another. He asserted (1911) the equality of GRAVITATION and INERTIA and formulated (c.1916) a general theory of relativity that included gravitation as a determiner of the curvature of a SPACE-TIME continuum. Einstein contributed to the development of QUANTUM MECHANICS, postulating (1905) light quanta (PHOTONS), on which he based his explanation of the PHOTOELECTRIC EFFECT, and developing the quantum theory of SPECIFIC HEAT. Working on a unified field theory, he attempted to explain gravitation and electromagnetism with one set of laws. For his work in theoretical physics, notably on the photoelectric effect, he received the 1921 Nobel Prize in physics.

einsteinium (Es), radioactive element, discovered in 1952 by A. Ghiorso and colleagues in residue from a thermonuclear explosion; a member of the ACTINIDE SERIES. Weighable amounts have since been prepared by neutron bombardment of plutonium. See ELEMENT (table); PERIODIC TABLE.

Einthoven, Willem, 1860–1927, Dutch physiologist; b. Java. He received the 1924 Nobel Prize in physiology or medicine for his in-

vention of a string galvanometer that he used to produce the electrocardiogram (EKG), a graphic record of the action of the heart (see ELECTROCARDIOGRAPHY).

Eisenhower, Dwight David, 1890–1969, American general and 34th president of the U.S. (1953–61); b. Denison, Tex.; his nickname was "Ike." A West Point graduate, he had a meteoric rise as a military commander during WORLD WAR II. In 1942 he became chief of army operations in Washington, D.C. Later that year he was named U.S. commander of the European theater of operations, and in 1943 he became supreme commander of the Allied Expeditionary Force. Eisenhower coordinated and directed the Allied invasion of Europe in June 1944. In Dec. 1944 he was made general of the army (five-star general) and upon his return to the U.S. became army chief of staff (1945–48). He was president of Columbia Univ. from 1948 to 1950 and in 1950 was named supreme commander of the Allied forces in Europe. After organizing the defense forces of the North Atlantic Treaty Organization (NATO), Eisenhower resigned (1952) from the army to campaign for the Republican presidential nomination. Popularity as a World War II hero brought him an easy election victory over his Democratic opponent, Adlai E. STEVENSON. One of Eisenhower's first moves as president (July 1953) was to fulfill a campaign promise to end the KOREAN WAR. He and his secretary of state, John Foster DULLES, continued the TRUMAN administration's policy of containing Communism, but attempts were also made to ease cold-war tensions. In domestic affairs, Eisenhower remained aloof from the legislative process and took few initiatives. Despite a heart attack (1955) he easily won reelection in 1956. His administration then took a more active role in the growing CIVIL-RIGHTS movement. In 1957 he sent federal troops to Little Rock, Ark., to enforce a court-ordered school desegregation decision, and later Congress enacted federal civil-rights legislation. Also in 1957, the president promulgated the so-called Eisenhower doctrine, which committed the U.S. to an active role in the Middle East to protect the region from Communist aggression. Tensions with the Soviet Union increased, however, and a summit meeting (1960) with Nikita KHRUSHCHEV ended abruptly because of conflict over U.S. espionage flights over the USSR. In 1959 the coming to power of the Communist Fidel CASTRO in Cuba posed other problems, and Eisenhower broke diplomatic relations with Cuba just before leaving office in Jan. 1961.

Eisenstein, Sergei Mikhailovich, 1898–1948, Russian film director. Ranked with D.W. GRIFFITH as a cinematic genius, he pioneered the use of MONTAGE in such works as *Potemkin* (1925), *October* (1928), and *Alexander Nevsky* (1938).

eisteddfod [āstēth'vōd], Welsh festival involving contests in ARTS AND CRAFTS with special emphasis on music and poetry. The National Eisteddfod is held for a week in August; local festivals are held throughout the year. It dates from the 12th cent.

Ekaterinburg: see YEKATERINBURG.

Ekelöf, Gunnar, 1907–68, Swedish poet, the most important Swedish poet of the 20th cent. His verse, philosophic and mystical, reflects his interest in the French SYMBOLISTS and Asian literature. Volumes in English translation include *Selected Poems* (tr. 1971) and *A Mölna Elegy* (tr. 1979).

EKG: see ELECTROCARDIOLOGY.

Elam, ancient Asian country, N of the Persian Gulf, now in W Iran. A civilization began there in the late 4th millennium B.C., and in the early 2d millennium B.C. Elam overthrew Babylonia. Its golden age came after 1300 B.C. Around 645 B.C. Elam fell to the Assyrian king ASSURBANIPAL. Its capital was Susa.

eland: see ANTELOPE.

elastic limit: see STRENGTH OF MATERIALS.

Elat or **Eilat,** city (1989 est. pop. 26,000), S Israel, a port on the Gulf of AQABA. It is strategically located near Egypt, Jordan, and Saudi Arabia and is Israel's gateway to Africa and E Asia. The city is a center for tourism and light industry. An ancient port (perhaps identical with the 10th-cent. Ezion-geber), Elat was resettled in 1949, and its deepwater harbor was opened in 1965.

Elba, island, 86 sq mi (223 sq km), in the Tyrrhenian Sea, 6 mi (9.7 km) W of the Italian peninsula. Controlled at times by Pisa, Spain, and Naples, it was an independent principality (1814–15) under the exiled NAPOLEON I prior to his escape and return to France. Following his final defeat, Elba passed to TUSCANY.

Elbe, river, central Europe, flowing c.725 mi (1,170 km) from the N Czech Republic through E Germany before entering the North Sea through a 60-mi (97-km), two-armed estuary at Cuxhaven. Navigable for c.525 mi (845 km), the river was internationalized in 1919. Traffic declined after Germany repudiated (1938) internationalization. The division of Germany (1945–90) made the river part of the boundary between East and West Germany.

Elbrus, Mount, highest mountain of the CAUCASUS, N Georgia, considered the highest point in Europe by those who consider the area part of that continent. Its twin peaks are extinct volcanic cones 18,481 ft (5,633 m) and 18,356 ft (5,595 m) high.

El Cordobés [ĕl kōrdōvās'], 1936?–, Spanish bullfighter; b. Manuel Benítez Pérez. The highest paid matador in history, he rose to national fame in the early 1960s because of his courage and personal magnetism. He retired in 1971.

elder: see HONEYSUCKLE.

El Dorado, legendary land of the Golden Man, a place of gold and plenty sought by Spanish CONQUISTADORS in the New World from the mid-16th cent. Its location shifted as new regions were explored. Similar legends appeared in the W United States.

Eleanor of Aquitaine [ăkwĭtān'], 1122–1204, queen consort first of LOUIS VII of France and then of HENRY II of England; daughter of William X, duke of Aquitaine. Her marriage to Louis was annulled in 1152 and shortly thereafter she married Henry, then duke of Normandy, uniting her vast possessions with his. Two of her sons—RICHARD I and JOHN—became kings of England. Henry's many infidelities caused her to establish her own court (1170) at Poitiers, which became the scene of much artistic activity. She supported her sons in their unsuccessful revolt (1173) against Henry and was confined by Henry until 1185. In 1189 she helped Richard secure the throne.

electoral college, in U.S. government, the body of electors that chooses the president and vice president. During national elections, voters in each state choose between slates of electors publicly pledged to one or another of the teams of national candidates. When the electoral college meets, each state's electors (equal in number to the total of its U.S. representatives and senators) usually cast all of their ballots for the team to which they are pledged. A majority of the electoral college is required to elect. If no candidate obtains a majority, the Constitution provides that the House of Representatives will select the president from among the top three candidates. Only two presidents have been elected in the House, Thomas JEFFERSON (1800) and John Quincy ADAMS (1824). The system is often criticized for leaving open the possibility that a candidate may obtain an electoral college majority without getting a majority (or even a plurality) of the national vote. Thus, in 1888, Benjamin HARRISON was elected even though Grover CLEVELAND received a greater popular vote.

electors, in the history of the HOLY ROMAN EMPIRE, the German princes who had the right to elect the German king, who was generally crowned emperor. The number of electors varied, but in 1356 Emperor CHARLES IV issued the Golden Bull, an edict that regularized election procedures and named the electors as the archbishops of Cologne, Mainz, and Trier, the king of Bohemia, the count palatine of the Rhine, the duke of Saxony, and the margrave of Brandenburg. Later, the duke of Bavaria and the ruler of Hanover were added. After 1438 only members of the house of HAPSBURG were elected. The electoral function disappeared with the end of the Holy Roman Empire in 1806.

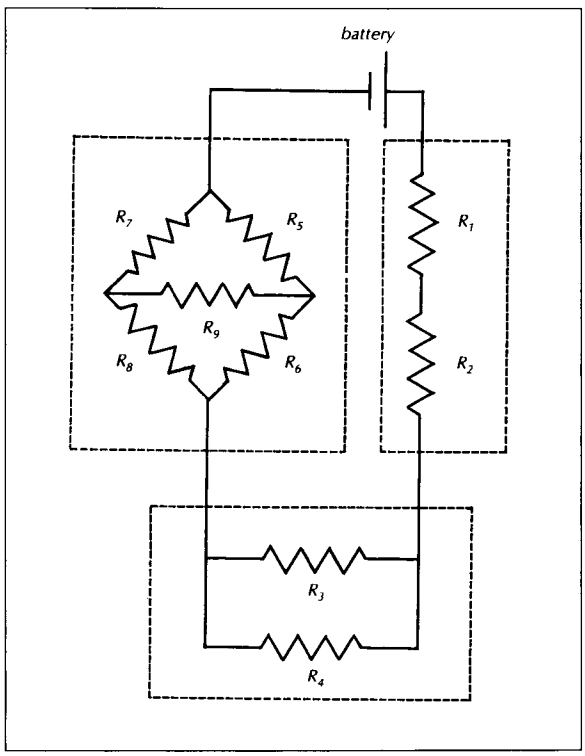
Electra, in Greek mythology, daughter of AGAMEMNON and CLYTEMNESTRA. She aided her brother ORESTES in avenging the murder of their father by their mother and AEGISTHUS. The tale was dramatized by AESCHYLUS, SOPHOCLES, and EURIPIDES.

electric and magnetic units, units used to express the magnitudes of various quantities in electricity and magnetism. Three systems of such units, all based on the METRIC SYSTEM, are commonly used. One of these, the mksa-practical system, is defined in terms of the units of the mks system and has the AMPERE of electric current as its basic unit. The units of this system—the VOLT, OHM, WATT, and farad—are those commonly used by scientists and engineers to make practical measurements. The two other systems, now being gradually abandoned, are both based on the cgs system. Electrostatic units (cgs-esu) are defined in a way that simplifies the de-

scription of interactions between static electric charges; there are no corresponding magnetic units in this system. Electromagnetic units (cgs-emu), on the other hand, are defined especially for the description of phenomena associated with moving electric charges, i.e., electric currents and magnetic poles.

electric arc process, method of producing STEEL from scrap metal. Electric current arcing through the scrap metal produces intense heat which quickly melts the metal and initiates the reactions that produce steel. Because little oxygen is involved, the electric arc process is ideal for producing high-grade steels that require alloying elements that would oxidize quickly in the OPEN-HEARTH PROCESS and BASIC OXYGEN PROCESS and be lost in the slag.

electric circuit, unbroken path along which an electric current may flow. A simple circuit consists of a voltage source, such as a battery (see CELL, in electricity) or a GENERATOR, whose terminals are connected to those of a circuit element, such as a RESISTOR, through which current can flow. More complex circuits include additional sources or elements and perhaps switches, so interconnected that, when appropriate switches are closed, each element is included in a closed path that also contains a source. Series, parallel, and non-series-parallel connections are illustrated in the figure. The effective RESISTANCE of two series-connected resistors is the sum of the individual resistances. The effective conductance (reciprocal of resistance) of two parallel-connected resistors is the sum of the individual conductances.



Electric Circuit: The resistances R_1 and R_2 are connected in series; the same current flows through both. The resistances R_3 and R_4 are connected in parallel; the same voltage appears across both. The resistances R_5, R_6, R_7, R_8, and R_9 are connected in a configuration that is neither series nor parallel. The three two-terminal subcircuits enclosed in broken lines are all connected in series with the battery.

electric eel: see ELECTRIC FISH.

electric fish, any of many unrelated species of FISH that have electric organs, usually made of modified muscle tissue, that are capable of producing from 450 to 600 volts of electricity. This electricity is used to detect and paralyze prey, repel enemies, navigate, and possibly communicate. Important electric fish include the electric EEL, the electric CATFISH, and the electric RAY, or torpedo.

electricity, class of phenomena arising from the existence of CHARGE. According to modern theory, most ELEMENTARY PARTICLES of matter possess charge, either positive or negative. Two particles of like charge, both positive or both negative, repel each other; two particles of unlike charge are attracted (see COULOMB'S LAW). The electric FORCE between two charged particles is much greater than the gravitational force between the particles. Many of the bulk properties of matter are ultimately due to the electric forces among the particles of which the substance is composed. Materials differ in their ability to allow charge to flow through them. Those that allow charge to pass easily are conductors (see CONDUCTION), whereas those that allow extremely little charge to pass through are called insulators (see INSULATION), or DIELECTRICS. A third class of materials, called SEMICONDUCTORS, is intermediate. Electrostatics is the study of charges, or charged bodies, at rest. When positive or negative charge builds up in fixed positions on objects, certain phenomena can be observed that are collectively referred to as static electricity. The charge can be built by rubbing certain objects together, such as silk and glass or rubber and fur; the friction between these objects causes ELECTRONS to transfer from one to another with the result that the object losing electrons acquires a positive charge and the object gaining electrons acquires a negative charge. Electrodynamics is the study of charges in motion. A flow of electric charge constitutes an electric current. In order for a current to exist in a conductor, there must be an ELECTROMOTIVE FORCE (emf), or POTENTIAL difference, between the conductor's ends. An electric CELL, a PHOTOVOLTAIC CELL, and a GENERATOR are all sources of emf. An emf source with an external conductor connected from one of the source's two terminals to the other constitutes an ELECTRIC CIRCUIT. Direct current (DC) is a flow of current in one direction at a constant rate. Alternating current (AC) is a current flow that increases in magnitude from zero to a maximum, decreases back to zero, increases to a maximum in the opposite direction, decreases to zero, and then repeats this process periodically. The number of repetitions of the cycle occurring each second is defined as the frequency, which is expressed in HERTZ (Hz). The frequency of ordinary household current in the U.S. is 60 cycles per sec (60 Hz), and electric devices must be designed to operate at this frequency. In a solid, the current consists not of a few electrons moving rapidly but of many electrons moving slowly; although this drift of electrons is slow, the impulse that causes it moves through the circuit, when the circuit is completed, at nearly the speed of light. The movement of electrons in a current is not steady; each electron moves in a series of stops and starts. In a direct current, the electrons are spread evenly through the conductor; in an alternating current, the electrons tend to congregate along the conductor surface. In liquids, gases, and semiconductors, current carriers may be positively or negatively charged.

electrocardiography, science of recording and interpreting the electrical activity of the HEART by means of a device called a cardiograph. Electrodes (leads) attached to the extremities and the left chest pick up electrical currents from heart muscle contractions. The currents are registered in wave patterns on a light-sensitive film recording known as an electrocardiogram, cardiogram, or simply EKG or ECG. Deviations in the normal height, form, or duration of the wave patterns indicate specific disorders; thus the EKG is an important aid in diagnosing many heart diseases. The first practical device for recording the activity of the heart was developed by W. EINTHOVEN in 1903, for which he won (1923) the Nobel Prize in physiology or medicine.

electrochemistry, science dealing with the relationship between electricity and chemical changes. Of principal interest are the reactions that take place between ELECTRODES and the ELECTROLYTES in electric and electrolytic cells (see ELECTROLYSIS) and that take place in an electrolyte as electricity passes through it.

electrode, terminal, usually in the form of a wire, rod, or plate, through which electric current passes between metallic and nonmetallic parts of an ELECTRIC CIRCUIT. The electrode through which current passes from the metallic to the nonmetallic conductor is called the anode; that through which current passes from the nonmetallic to the metallic conductor is called the cathode. An elec-

trode may be made of a metal, e.g., copper, lead, platinum, silver, or zinc, or of a nonmetal, commonly carbon.

electroencephalography, science of recording and analyzing the electrical activity of the BRAIN. Electrodes placed on the scalp are connected to an electroencephalograph which amplifies the nerve impulses in the brain and prints an image in the form of characteristic wave patterns called brain waves. The recording, known as an electroencephalogram, or EEG, is an important aid in diagnosing brain disorders and malfunctions, and has contributed to understanding normal brain function, SLEEP, and the effects of DRUGS and of such activities as BIOFEEDBACK. EEGs are also used to determine brain death (see DEATH). The electrical activity of the brain was first demonstrated by the German psychiatrist Hans Berger in 1929.

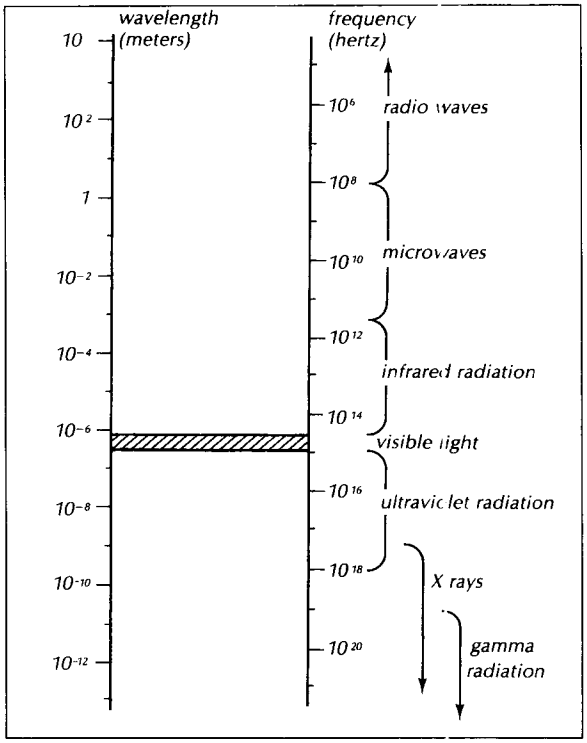
electrolysis, passage of an electric current through a conducting solution or molten salt (either is a type of ELECTROLYTE) that is decomposed in the process. When a cathode, or negative electrode, and an anode, or positive electrode, are dipped into a solution, and a direct-current source is connected to the electrodes, the positive ions migrate to the negative electrode and the negative ions migrate to the positive electrode. At the negative electrode each positive ion gains an electron and becomes neutral; at the positive electrode each negative ion gives up an electron and becomes neutral. The migration of ions through the electrolyte constitutes the electric current flowing from one electrode to the other. Electrolysis is used in the commercial preparation of various substances, e.g., chlorine by the electrolysis of a solution of common salt, and hydrogen by the electrolysis of water. The electrolysis of metal salts is used for plating. See also ELECTROCHEMISTRY.

electrolyte, electrical conductor in which current is carried by IONS rather than free electrons (as in a metal). Electrolytes include water solutions of acids, bases (see ACIDS AND BASES), or SALTS; certain pure liquids; and molten salts. See also ELECTROLYSIS.

electromagnet, device in which an electric current, passing through a wire coil wrapped around a soft iron core, produces a magnetic field. The magnetic-field strength produced depends on the number of turns of the coil of wire, the size of the current, and the magnetic permeability of the core. Electromagnets made with superconducting coils (see SUPERCONDUCTIVITY) offer no resistance to an electric current and can produce a strong magnetic field. Electromagnets lose their magnetism when the current is discontinued.

electromagnetic radiation, energy radiated in the form of a WAVE caused by an electric field interacting with a magnetic field. Electromagnetic radiation is the result of the acceleration of a charged particle. It does not require a material medium and can travel through a vacuum. The theory of electromagnetic radiation was developed by James Clerk MAXWELL and published in 1865, although his ideas were not accepted until Heinrich HERTZ proved the existence of radio waves in 1887. In order of decreasing wavelength and increasing frequency, the various types of electromagnetic radiation are RADIO waves, MICROWAVES, INFRARED RADIATION, visible LIGHT, ULTRAVIOLET RADIATION, X RAYS, and GAMMA RADIATION. The possible sources of electromagnetic radiation are directly related to wavelength; long radio waves are produced by large antennas such as those used by broadcasting stations; much shorter visible light waves are produced by the motions of charges within atoms; the shortest waves, those of gamma radiation, result from changes within the nucleus of the atom. The individual quantum of electromagnetic radiation is known as the PHOTON.

electromagnetism, electromagnetic interaction, or **electromagnetic force,** a long-range force involving the electric and magnetic properties of ELEMENTARY PARTICLES. It is responsible for the repulsion of like and attraction of unlike electric charges and explains atomic structure and the properties of LIGHT and other forms of ELECTROMAGNETIC RADIATION. The electromagnetic interaction is mediated, or carried, by PHOTONS. Because its effects can be easily observed, electromagnetism is the most thoroughly studied and best understood of the four fundamental forces of nature (see also GRAVITATION; STRONG INTERACTION; WEAK INTERACTION). The same laws that govern electromagnetism on the subatomic scale also apply on a large scale in motors, generators, and electronic equipment. A moving electric charge gives rise to a magnetic field,



Types of electromagnetic radiation

and if its motion changes the magnetic field varies and in turn produces an electric field; this is the origin of electromagnetic radiation. **Electromagnetic fields** are generated by electric motors and household appliances and by power transmission lines. It has been suggested that such fields, particularly those around transmission lines, may cause or promote childhood cancer. A number of studies have been conducted, but the results are contradictory and a generally accepted link has not been established.

electromotive force (emf), difference in electric POTENTIAL, or voltage, between the terminals of a source of electricity. It is usually measured in VOLTS.

electron, ELEMENTARY PARTICLE carrying a unit charge of negative electricity. An ATOM consists of a small, dense, positively charged nucleus surrounded by electrons that whirl about it in orbits, forming a cloud of charge. Ordinarily there are just enough negative electrons to balance the positive charge of the nucleus, and the atom is neutral. If electrons are added or removed, a net charge results, and the atom is said to be ionized (see ION). Atomic electrons are responsible for the chemical properties of matter (see VALENCE). The electron was discovered in 1897 by Joseph John THOMSON, who showed that cathode rays are composed of electrons. The electron is the lightest known particle having a non-zero rest mass. The positron, the electron's antiparticle (see ANTIMATTER), was discovered in 1932.

electronegativity, in chemistry, tendency for an atom to attract a pair of electrons that it shares with another atom. If the pair of electrons is not shared equally, i.e., if they spend more time with one atom than with the other atom, the favored atom is said to be more electronegative. Nonmetals have much higher electronegativities than metals; of the nonmetals, fluorine is the most electronegative, followed by oxygen, nitrogen, and chlorine.

electronic game, device or computer software that provides entertainment by challenging a person's eye-hand coordination or mental abilities. Made possible by the development of the MICROPROCESSOR, electronic games are marketed in various formats, such as hand-held one-player models, cartridges or COMPACT DISCS that are inserted in modules attached to television sets, computer software that is run on personal or network computers, and freestanding arcade versions. Most of their appeal comes from the COMPUTER

PROGRAM that synchronizes flashing lights and a variety of sounds with the action portrayed on a graphic display (see COMPUTER GRAPHICS). The games may be contested among several players, or an individual may engage in a test of skill against the computer. Game subjects include sports (e.g., baseball and football); action warfare, often space-oriented, and adventure; and such classics as contract bridge, chess, and poker.

electronic music, term applied to compositions whose sounds are either produced or modified electronically. The early examples of electronic compositions, called concrete music, were taped montages of electronically altered sound obtained by microphone from nonelectronic sources, such as voices and street noise. After the perfection of the tape recorder in the 1940s, music was composed with tones that were electronically produced as well as electronically manipulated. In 1955 the synthesizer was developed, a single unit with numerous generating and modifying capacities that enable composers to generate new sounds and to combine these sounds with great precision. Contemporary composers of electronic music include Karlheinz STOCKHAUSEN, Luciano BERIO, and Bruno Maderna. Since the 1950s, composers such as John CAGE, Milton BABBITT, and others have also experimented with COMPUTER music. Contemporary computer music may be produced using MIDI (Musical Instrument Digital Interface) or software synthesis. In MIDI a computer is used to control the output of synthesizers and signal-processing devices. In software synthesis a computer mathematically represents sounds, which are manipulated by various techniques, including filtering (which affects loudness), time delay (which affects reverberation), and frequency shifting (which affects pitch). Electronic techniques and instruments are widely employed in pop music and allow a solo artist to compose, produce, and perform music that employs a full complement of instrumental sounds.

electronics, a branch of electrical engineering; the science and technology based on and concerned with the controlled flow of electrons or other carriers of electric charge, especially in ELECTRON TUBES and SEMICONDUCTOR devices. The miniaturization (see MICROELECTRONICS) and savings in power brought about by the invention (1948) of the TRANSISTOR and the subsequent development of INTEGRATED CIRCUITS have allowed ELECTRIC CIRCUITS to be packaged more densely, making possible compact COMPUTERS, advanced RADAR and navigation systems, smaller, more reliable RADIO and TELEVISION receivers, advanced audio and video recording and reproduction systems, and CELLULAR TELEPHONES.

electron microscope, instrument that produces a highly magnified image of a small object, using an accelerated electron beam held within a vacuum to illuminate the object, and electromagnetic fields to magnify and focus the image. (By contrast, the optical MICROSCOPE uses visual light for illumination, and glass lenses for magnifying and focusing.) First developed in Gemany c.1932, the transmission electron microscope exploits the very short wavelengths of accelerated electrons, which are thousands of times shorter than those of light, to magnify an object up to one million times without losing definition. Images produced by the microscope are thrown onto a fluorescent screen or are photographed. The more recent scanning electron microscope constructs the image on a CATHODE-RAY TUBE as the surface of a specimen is gradually illuminated by a television scanning probe.

electron tube, device consisting of a sealed enclosure in which electrons flow between ELECTRODES separated either by vacuum (in a vacuum tube) or by an ionized gas at low pressure (in a gas tube). The two principal electrodes of an electron tube are called the anode and cathode. The simplest vacuum tube, the DIODE, contains only these two electrodes. When the cathode is heated, it emits a cloud of electrons, which are attracted to the positive polarity of the anode and constitute the current through the tube. Because the anode is not capable of emitting electrons, no current can flow in the reverse direction, and the diode acts as a RECTIFIER. In the vacuum triode, small signals applied to a third electrode, called a grid, placed between the cathode and anode, cause large fluctuations in the current between the cathode and anode. A triode can thus act as a signal AMPLIFIER. Although formerly the key elements of ELECTRIC CIRCUITS, electron tubes have been almost entirely displaced by SEMICONDUCTOR devices. See also CATHODE-RAY TUBE.

electron-volt (eV), unit of ENERGY used in atomic and nuclear physics; 1 eV is the energy transferred in moving a unit electric charge, positive or negative and equal in magnitude to the charge of the electron, through a potential difference of 1 volt. 1 eV = 1.60×10^{-19} joules = 1.60×10^{-12} ergs.

electroweak theory, a UNIFIED FIELD THEORY that describes two of the fundamental forces in nature, electromagnetism and the WEAK INTERACTION. The theory, for which Sheldon Glashow, Abdus Salam, and Steven Weinberg shared the 1979 Nobel Prize in physics, was confirmed in 1983 by the discovery of the W AND Z PARTICLES, two of a number of ELEMENTARY PARTICLES it predicted.

elegy, in Greek and Roman poetry, type of verse (in hexameter and pentameter couplets), written by THEOCRITUS, OVID, CATULLUS, and others; in English, a reflective poem of lamentation or regret, of no set metrical form, mourning one person, e.g., P.B. SHELLEY's "Adonais," or all humanity, e.g., Thomas GRAY's "Elegy in a Country Churchyard." The pastoral elegy, of which John MILTON's "Lycidas" is the best known, has a classical pastoral setting.

element, in chemistry, substance composed of ATOMS all having the same number of PROTONS in their nuclei. This number, called the ATOMIC NUMBER, defines the element and establishes its place in the PERIODIC TABLE. Each element is assigned a symbol of one to three letters (see table). The total number of protons and NEUTRONS in the nucleus of an atom is called the MASS NUMBER. Although all atoms of an element have the same number of protons in their nuclei, they may not all have the same number of neutrons. Atoms of an element with the same mass number make up an ISOTOPE of the element. All elements have isotopes; over 1,000 isotopes of the elements are known. Although 109 elements are known, only 94 elements occur naturally on earth; the others are produced artificially (see TRANSURANIUM ELEMENTS). The chemical properties of an element are due to the distribution of electrons around the nucleus, particularly the outer, or VALENCE, electrons (the ones involved in chemical reactions). Chemical reaction does not affect the nucleus and thus does not change the atomic number. For this reason an element is often defined as a substance that cannot be decomposed into simpler substances by chemical means. See also ATOMIC WEIGHT; COMPOUND; MOLECULE.

element 105: see HAHNIUM.

element 106: see UNNILHEXIUM.

element 107: see NIELSBOHRIUM.

element 108: see HASSIUM.

element 109: see MEITNERIUM.

elementary particles, the most basic physical constituents of the universe. ATOMS are the basic units of the chemical ELEMENTS but are themselves composed of smaller particles. The first subatomic particle to be discovered was the ELECTRON, identified in 1897 by Joseph John THOMSON. The nucleus of ordinary HYDROGEN was subsequently recognized as a single particle and was named the PROTON. The third basic particle in an atom, the NEUTRON, was discovered in 1932. Although models of the atom consisting of just these three particles are sufficient to account for all forms of chemical behavior of matter, QUANTUM MECHANICS predicted the existence of additional elementary particles. A search for the positron, or antiparticle (see ANTIMATTER) of the electron, led to its detection in 1932, but a search for a particle predicted by YUKAWA HIDEKI in 1935 led to the unexpected discovery of the muon the following year. Yukawa's particle, the pion, was finally discovered in 1947. Both the muon and pion were first observed in COSMIC RAYS. As the list of particles and antiparticles grew, through further study of cosmic rays and study of the results of particle collisions produced by PARTICLE ACCELERATORS, three basic categories of elementary particles were ultimately distinguished: leptons, quarks, and bosons. Leptons and quarks are FERMIONS, the basic constituents of nuclear and atomic structure, or MATTER; BOSONS are the particles that transmit the fundamental FORCES of nature between fermions. The smallest class of elementary particles is that of the massless bosons, which comprises the PHOTON, gluon, W AND Z PARTICLES, and the hypothetical graviton. The lepton class contains twelve particles: the electron, muon, tauon, and their antiparticles, and the neutrino or antineutrino associated with each. The QUARKS, the third class,

also number twelve: the whimsically named up, down, charm, strange, top (or truth), and bottom (or beauty) quarks and their antiparticles. Quarks are always found in pairs or triplets with other quarks or antiquarks to form particles called hadrons. More than 200 hadrons have been identified. Hadrons were earlier classified as either mesons, which include the muon and pion and consist of quark-antiquark pairs, or baryons, which consist of quark triplets. The lightest baryons are the proton and neutron; heavier baryons are known as hyperons. Elementary particles interact with one another through the four fundamental forces: GRAVITATION, electromagnetism, the WEAK INTERACTION, and the STRONG INTERACTION. Gravitation is experienced by all particles, but electromagnetism is experienced only by charged particles, such as the electron, proton, and muon. Hadrons and leptons, including the electron, muon, and the neutrinos, participate in the weak interaction associated with particle decay. The strong interaction is responsible

The key to pronunciation appears on page xiii.

for the structure of the atomic nucleus, and only hadrons participate in it.

elephant, largest living land MAMMAL, of Africa and Asia. It has a massive head, thick legs, and tough, gray skin. The upper lip extends into a long, flexible trunk used for drinking, spraying, conveying food to the mouth, and touching; the large ears provide an extensive cooling surface. African bull elephants may measure 13 ft (4 m) high at the shoulder and weigh 6 to 8 tons (5400 to 7200 kg). Hunted for their great, curved ivory tusks, they have become endangered. Highly intelligent, they are used in foresting and trained as circus and zoo performers. African elephants use infrasonic frequencies (those below the range of human hearing) for communication. See also MAMMOTH; MASTODON.

elephantiasis, abnormal enlargement of any part of the body due to obstruction of the lymphatic channels in the affected area. In tropical countries, the most common cause is a disease called filari-

asis, the result of an infestation of small roundworms (genus *Filaria*) in the LYMPHATIC SYSTEM. The condition can also result from the sexually transmitted disease lymphogranuloma venereum.

Eleusinian Mysteries, principal religious MYSTERIES of ancient Greece, held at ELEUSIS. The secret rites, which celebrated the abduction of PERSEPHONE and her return to her mother DEMETER, symbolized the annual cycle of death and rebirth in nature, as well as the immortality of the soul. DIONYSUS was also much honored at the festival.

Eleusis [ĭlo͞o'sĭs], ancient city of Attica, GREECE, NW of ATHENS. It was the seat of the ELEUSINIAN MYSTERIES, dedicated to DEMETER. The Eleusinian games were also held there.

elevator, mechanical lift device for transporting people or goods from one level to another. The American inventor Elisha G. Otis demonstrated (1853) a safety device designed to prevent the fall of an elevator if its supporting cable should break; in 1861 he patented a steam-powered elevator. Steam was gradually replaced, first in the early 1870s by hydraulic power (see HYDRAULIC MACHINERY) and then toward the end of the 19th cent. by electricity. Safety devices were improved and automatic controls introduced as elevator speeds increased.

Elgar, Sir Edward William, 1857–1934, English composer. Among his outstanding compositions are *Variations on an Original Theme* (or *Enigma Variations*, 1899) and the Violin Concerto in B Minor. He is best known for the *Pomp and Circumstance* marches (1901–30).

Elgin, Thomas Bruce, 7th **earl of,** 1766–1841, British diplomat. While on a diplomatic mission in Constantinople (1799–1803), he arranged for the ELGIN MARBLES to be brought to England. His son **James Bruce,** 8th **earl of Elgin,** 1811–63, was governor general of Canada (1847–54). He implemented the plan for responsible government outlined by his father-in-law, the earl of DURHAM, and personally negotiated the reciprocity treaty of 1854 with the U.S. His son, **Victor Alexander Bruce,** 9th **earl of Elgin,** 1849–1917, was viceroy of India (1894–99) and colonial secretary (1905–8).

Elgin Marbles, ancient sculpture taken from the Acropolis of Athens to England in 1806 by Thomas Bruce, 7th earl of Elgin. The PARTHENON frieze by PHIDIAS and sculpture from the ERECHTHEUM are on view at the British Museum.

El Greco: see GRECO, EL.

Eliade, Mircea, 1907–86, American religious scholar and writer; b. Bucharest. A student of myths and mystical experiences, he wrote over 50 books, including a history of religious ideas, completed in 1985, and novels such as *The Forbidden Forest* (1955) and *The Old Man and the Bureaucrats* (1979). He was editor of the multivolume *Encyclopedia of Religion and Religious Belief* (1988).

Elias, Greek form of ELIJAH.

Elijah or **Elias,** fl. c.875 B.C., Hebrew PROPHET in the reign of King AHAB and an outstanding figure in the OLD TESTAMENT. Elijah's mission was to destroy the worship of foreign gods and to restore justice, and his zeal brought about a temporary banishment of idolatry. His story in the Bible has many incidents, such as his raising the widow's son from the dead, his being fed by ravens, his experience of the still, small voice on Mt. Horeb, and his departure from earth in a chariot of fire enveloped in a whirlwind. His disciple was ELISHA. In Jewish tradition, Elijah is the herald of the MESSIAH. He is also prominent in the KORAN.

Elijah ben Solomon, 1720–97, Jewish scholar, called the Gaon Eminence of Vilna; b. Lithuania. Although a student of the CABALA, he fought the spread of HASIDISM among the Jews of Lithuania and Poland, fearing that it would weaken the Jewish community. His major writings were on the HALAKAH.

Eliot, Charles William, 1834–1926, American educator and president of Harvard Univ. (1869–1909); b. Boston. His 40-year administration at Harvard Univ. developed the college into a great modern university. He extended the elective system, added new courses, required written exams, enlarged the faculty, and increased entrance requirements while raising the standards for professional degrees. He supported Elizabeth Cary Agassiz's development of Radcliffe, and was also influential in securing greater uniformity in high school curricula and college entrance requirements. Eliot published widely.

Eliot, George, pseud. of **Mary Ann or** Marian Evans, 1819–80, English novelist, a major 19th-cent. writer. She defied convention to live with her mentor, G.H. LEWES. Writing about rural life, Eliot was primarily concerned with people's moral choices and their responsibility for their own lives. Her novels include *Adam Bede* (1859) and *Silas Marner* (1861). *Middlemarch* (1871–72) is considered her masterpiece.

Eliot, John, 1604–90, English missionary in colonial Massachusetts, called the Apostle to the Indians. A Puritan, he arrived in Boston in 1631, studied the area's Native American language, began preaching, and established villages for his native converts. His translation of the Bible into an Algonquian language (1661–63) and his *Indian Primer* (1669) are prime sources of our knowledge of the peoples of the area.

Eliot, T(homas) S(tearns), 1888–1965, English poet, one of the most influential literary figures of the 20th cent.; b. St. Louis. Living in London from 1914, he became a British subject in 1927, the same year he espoused Anglo-Catholicism. He was associated with the periodicals *The Egoist* (1917–30) and his own *Criterion* (1922–39), and he had an active career in publishing. Eliot's early poems—*Prufrock and Other Observations* (1917), *Poems* (1920), and *The Wasteland* (1922)—express the anguish and barrenness of modern life. Breaking completely with the 19th-cent. poetic tradition, they drew on the 17th-cent. METAPHYSICAL POETS, along with DANTE, Jacobean drama, and the French SYMBOLISTS. Eliot's later, more hopeful, poetry includes *Ash Wednesday* (1930) and *Four Quartets* (1935–42). He was also an important critic. His plays, attempts to revitalize the verse drama, include *Murder in the Cathedral* (1935) and *The Cocktail Party* (1950). He was awarded the 1948 Nobel Prize in literature.

Elisabeth: see ELIZABETH.

Elisha [ēlī'shə] or **Eliseus** [ēlĭsē'əs], Hebrew prophet. He continued the work of ELIJAH, but was more diplomatic and of a milder nature. Unlike Elijah, he had many disciples.

Elizabeth, 1837–98, empress of Austria and queen of Hungary, consort of FRANCIS JOSEPH. Her life was marred by tragedy, notably the death of her only son, Archduke RUDOLF. She was assassinated in Geneva by an Italian anarchist.

Elizabeth, 1709–62, czarina of Russia (1741–62); daughter of PETER I and CATHERINE I. She gained the throne by overthrowing IVAN VI. Elizabeth was hostile toward Prussia and sided against FREDERICK II of Prussia in the SEVEN YEARS WAR. She gave the nobles greater power over their serfs and in local government, while decreasing the service they owed the state.

Elizabeth, queens of England. **Elizabeth I,** 1533–1603, queen of England (1558–1603), the daughter of HENRY VIII and Anne BOLEYN, was declared illegitimate after her mother's execution; in 1544 Parliament reestablished her in the succession. Imprisoned as a rallying point for discontented Protestants, she regained some freedom by outward conformity to Catholicism. On her accession in 1558 England's low fortunes included religious strife, a huge government debt, and failure in wars with France. Her reign took England through one of its greatest eras—a period that produced such individuals as William SHAKESPEARE, Edmund SPENSER, Francis BACON, and Walter RALEIGH; a period that saw the country united to become a first-rate European power with a great navy; a period in which commerce and industry prospered and colonization began. Elizabeth's Tudor concept of strong rule and the need for popular support helped her select excellent counselors, such as Sir William Cecil (Lord BURGHLEY) and Sir Francis Walsingham. She reestablished Anglicanism, and measures against Catholics grew harsher. Important legislation enacted in her reign included stabilization of labor conditions, currency reforms, poor laws, and acts to encourage agriculture, commerce, and manufacturing. Elizabeth began a policy of peace, and her diplomatic maneuvers eventually defeated Spain and stalemated France. The Treaty of Edinburgh (1560) started a policy of supporting Protestant lords against Catholics. After the abdication of MARY QUEEN OF SCOTS from the Scottish throne, Elizabeth gave her refuge, kept her prisoner, and executed her only after numerous plots to seat Mary on the English throne. Although she had many favorites, notably the earl of LEICESTER, Elizabeth never married, but she used the possibility of marriage as a diplomatic tool. By marriage negotiations with FRANCIS, duke of Alençon and Anjou, she secured (1572) a defense alliance against

Spain and, later, French aid for the Dutch against Spain, which then emerged as England's main enemy. PHILIP II of Spain, whose marriage offer Elizabeth had refused in 1559, planned the Spanish ARMADA as a reprisal for English raids against Spanish shipping. The defeat of the Armada (1588) broke the power of Spain and strengthened England's national pride. Elizabeth's last years were darkened by the rash uprising of her favorite, Robert Devereux, 2d earl of ESSEX. She was succeeded by James VI of Scotland, son of Mary Queen of Scots, who became JAMES I of England. Vain, fickle in bestowing favors, prejudiced, vacillating, and parsimonious, she was nonetheless a great monarch, highly aware of the responsibility of rule and immensely courageous. **Elizabeth II,** 1926–, queen of Great Britain and Northern Ireland, succeeded her father, GEORGE VI, in 1952. In 1947 she married Philip Mountbatten, duke of EDINBURGH. They have four children: Prince CHARLES, Princess ANNE, Prince Andrew (b. 1960), and Prince Edward (b. 1964). In 1977 she celebrated her Silver Jubilee, the 25th anniversary of her accession to the throne. Her mother, **Elizabeth,** 1900–, queen consort to George VI, was the daughter of the 14th earl of Strathmore.

Elizabeth, 1843–1916, queen of ROMANIA, consort of CAROL I, also known as Elizabeth of Wied. Under the pseudonym Carmen Sylva she wrote extensively in several languages.

Elizabeth, city (1990 pop. 110,002), seat of Union co., NE N.J., on Newark Bay; settled 1609, inc. 1855. It is one of the largest container seaports in the world, and manufactures sewing machines, foundry products, textiles, office supplies, and chemicals. The area was purchased from the Delaware in 1664. It was the scene of several clashes during the AMERICAN REVOLUTION.

Elizabethan style, in architecture and decorative arts, transitional style of the English RENAISSANCE during which large manor houses were built. Plans tended toward symmetry, although such characteristics of TUDOR STYLE as the great hall remained. New features were added, notably broad staircases and long galleries. A famous example is Longleat, Wiltshire. Owners often designed houses themselves, and carpenters and masons amplified the plans. Renaissance, mannerist, and Flemish motifs were haphazardly adapted with no attempt at a unified classical style.

Elizabeth Woodville: see WOODVILLE, ELIZABETH.

elk, any of several members of the DEER family. It most properly designates the largest member of the family, *Alces alces,* found in N North America, where it is called MOOSE, and Eurasia. The name *elk* is used in North America to designate a different animal, the WAPITI.

Elkin, Stanley, 1930–, American novelist and short-story writer; b. N.Y.C. An offbeat comic writer with a gift for imagery and bizarre situations, Elkin demonstrates an underlying seriousness in such novels as *Boswell* (1964), *The Living End* (1979), *The Magic Kingdom* (1985), and *The MacGuffin* (1991) and the stories in *Criers and Kibitzers, Kibitzers and Criers* (1966).

Ellice Islands: see TUVALU.

Ellington, Duke (Edward Kennedy Ellington), 1899–1974, African-American jazz pianist and composer; b. Washington, D.C. He formed a band in 1918 and became nationally famous while appearing in Harlem (N.Y.C.) nightclubs. His orchestra, playing his own often complex compositions, made many innovations in the JAZZ idiom. Ellington's compositions include "Solitude" and "Mood Indigo" as well as such long concert works as *Black, Brown, and Beige* (1943).

ellipse: see CONIC SECTION.

elliptical geometry: see NON-EUCLIDEAN GEOMETRY.

Ellis Island, island, c.27 acres (10.9 hectares), N.Y.C., in Upper New York Bay, in New Jersey's waters but under New York's jurisdiction. Government property since 1808, it served (1892–1943) as the chief entry station for immigrants to the U.S. Now part of the Statue of Liberty National Monument, the island is open to tourists and has an immigration museum.

Ellison, Ralph, 1914–, African-American writer; b. Oklahoma City. His classic novel, *Invisible Man* (1952), details the struggles of a young, nameless African-American man in a hostile society. A collection of his essays, speeches, interviews, and reviews is *Going to the Territory* (1986).

Ellsworth, Lincoln, 1880–1951, American explorer; b. Chicago. He was the financial backer and colleague of Roald AMUNDSEN. With the aviator Umberto Nobile, they flew over the NORTH POLE in a dirigible in 1925. Ellsworth was the first person to fly over ANTARCTICA (1936). In 1939 he flew into interior Antarctica, viewing and claiming vast areas for the U.S.

Ellsworth, Oliver, 1745–1807, 3d chief justice of the U.S. SUPREME COURT (1796–99); b. Windsor, Conn. At the FEDERAL CONSTITUTIONAL CONVENTION (1787), he (with Roger Sherman) advanced the "Connecticut compromise," ending the struggle between large and small states over congressional representation. As U.S. senator (1789–96) he was the chief author of the bill establishing the federal court system.

elm, tree or shrub of the family Ulmaceae, found chiefly in the Northern Hemisphere. Elm trees (genus *Ulmus*) are tall and graceful, with fan-shaped crowns of finely subdividing branches and twigs. The American, or white, elm (*U. americana*) and the English, or Wych, elm (*U. campestris*) of Eurasia are widely planted as ornamental and shade trees. Both species are vulnerable to the fungus known as Dutch elm disease.

El Monte, city (1990 pop. 106,209), Los Angeles co., S Calif.; inc. 1912. Founded (1852) by pioneers on the SANTA FE TRAIL and known for its walnut groves, it is a growing residential, industrial, and commercial city in the San Gabriel Valley. Manufactures include aerospace products, electronic equipment, and plastic and metal products.

El Niño–Southern Oscillation (ENSO), large-scale climatic fluctuation of the tropical Pacific Ocean. The El Niño [Span., = the child] itself is a warm surface current that usually appears around Christmas in the Pacific off Ecuador and Peru and disappears by the end of March, but every 3–7 years it persists for as long as 18 months as part of an ENSO. Exactly what initiates an ENSO is unclear. In a typical ENSO, the strong easterly winds of the equatorial Pacific weaken, which allows warm eastward-flowing subsurface waters to rise, increasing surface temperatures 1–2°C, and sometimes as much as 4–6°C in the central and E Pacific. Along the W coast of South America, the El Niño's warm waters persist and deepen, and cold, upwelling, nutrient-rich waters fail to reach surface waters; the resulting warm, nutrient-poor waters devastate coastal fisheries. Heavy rain falls along the South American coast, and heavy rainfall also moves from the western to central Pacific, causing drier than normal conditions in Indonesia and nearby areas. An ENSO also affects the climate of the northern latitudes, particularly North America, which experiences warmer temperatures along the Pacific coast, increased rainfall in the Gulf states, and weaker Atlantic hurricanes. Severe ENSO events can be economically disruptive worldwide. In 1982–83, an ENSO caused droughts in India, Indonesia, Australia, and the Philippines, flooding in Peru and Ecuador, and devastating coastal storms in California. The ENSO that began in 1991 contributed to the record rain and flooding in the Midwest in 1993.

Elohim: see GOD.

elongation, the angular distance between two points in the sky as measured from a third point. As viewed from a third body, the elongation of two celestial bodies will be 0° when they are in conjunction and 180° when in opposition (see SYZYGY); quadrature occurs when the two bodies have an elongation of 90°. As viewed from the earth, the greatest elongations with respect to the sun of the inferior planets Mercury and Venus are 28° and 47°; the moon and the superior planets can range from 0° to 180°.

El Paso, city (1990 pop. 515,342), seat of El Paso co., extreme W Tex., on the RIO GRANDE, opposite JUÁREZ, Mex., and near the N.Mex. border; inc. 1873. Located in a region of cattle ranches and farms, the city is a port, and a commercial, industrial, and mining center. Manufactures include refined petroleum, copper, clothing, and machinery. The dry climate attracts tourists. The largest of the border cities, El Paso's history is bound up with that of MEXICO. Early settlement in the area was on the south (Juárez) bank of the river; the first house on the site of the present city was built in 1827. The arrival of railroad service in 1881 initiated the border town's growth into a modern city.

El Salvador, officially Republic of El Salvador, republic (1992 est. pop. 5,574,000), 8,260 sq mi (21,393 sq km), Central America; bordered by the Pacific Ocean (S), Guatemala (W), and Honduras (N

and E). The capital is SAN SALVADOR. Two volcanic ranges traverse the country from west to east. In between are the broad, fertile valleys that are the nation's heartland. The densely populated country is the smallest of the Latin American republics, with a weak economy overly dependent on coffee, the principal export. Cotton and sugar are also exported while oil and many manufactured goods are imported. Corn is the main subsistence crop. Light industry includes textile manufacture and food processing. The Spanish-speaking, Roman Catholic population is predominantly mestizo.

History. Spaniards conquered the area in 1524. El Salvador declared independence in 1821 and after a brief period was part of the Mexican Empire (1821–23) and then of the Central American Federation (1825–38). Becoming a separate republic in 1839 it was plagued by frequent interference from nearby states, notably GUATEMALA and NICARAGUA. The establishment of coffee cultivation in the late 19th cent. created an inequitable distribution of wealth that became the basis for future unrest and, consequently, of several repressive dictatorships. Overpopulation has been a major 20th-cent. problem. Failure of land reform in the 1970s brought increasing left-right polarization and guerrilla warfare, with U.S., Cuban, and Nicaraguan involvement. In 1982 a right-wing coalition came to power, but José Napoléon DUARTE, a Christian Democrat, was elected president in 1984. Attempts to negotiate an end to the guerrilla war were unsuccessful, and Duarte was succeeded (1989) by the right-wing ARENA party candidate, Alfredo Cristiani Burkard. Leftist parties, which had boycotted elections in the 1980s, participated in the 1991 parliamentary elections. In 1992 a peace treaty was signed with the rebels, ending the 12-year civil war, and new national elections were scheduled for 1994. Politically motivated violence remains a problem.

Elsheimer, Adam [ĕls'hīmər], 1578–1610?, German painter. Known for small paintings on copper of biblical subjects, he excelled at landscape and light effects and influenced Dutch painters. His *Good Samaritan* is in the Louvre.

Elsinore: see HELSINGØR.

Elysian fields or **Elysium,** in Greek mythology, happy otherworld in the west for heroes favored by the gods.

Elytis, Odysseus, pseud. of **Odysseus Alepoudelis,** 1911–, Greek poet; b. Crete. His poetry, joyful and sensuous, is replete with imagery of the Aegean Islands. *The Sovereign Sun* (1974) is a selection of his poems in English translation. He was awarded the 1979 Nobel Prize in literature.

Emancipation, Edict of, 1861, edict by which Czar ALEXANDER II freed all Russian SERFS (one third of the population). Serfdom was abolished, and peasants were to receive land from landlords and pay them for it. The system of payment and of land distribution, cumbersome and unjust, was reformed by STOLYPIN in 1906 in an effort to stem discontent.

Emancipation Proclamation, in U.S. history, the executive order abolishing SLAVERY in the CONFEDERACY. Pres. LINCOLN refrained at the start of the CIVIL WAR from freeing slaves lest it alienate the loyal border states. But after the successful ANTIETAM CAMPAIGN, Lincoln issued a preliminary edict and, on Jan. 1, 1863, the formal Emancipation Proclamation. It freed only those slaves residing in territory in rebellion "as a fit and necessary war measure for suppressing said rebellion." It was designed to deplete the Southern manpower reserve in slaves and to enhance the Union cause abroad, especially in Britain.

embalming, preservation of the body after death by artificial chemical means. It was highly developed in dynastic EGYPT, where immersion in a soda solution and filling of body cavities with resins and spices were common. Modern embalming grew from 17th-cent. attempts to preserve anatomical specimens. Formaldehyde, infused to replace the blood, is the most common embalming agent.

embargo, prohibition by a country of the departure of ships or certain types of goods from its ports. Instances of confining all domestic ships to port are rare, and the EMBARGO ACT OF 1807 is the sole example in U.S. history. The detention of foreign vessels, however, has often occurred as an act of reprisal or in anticipation of war. Embargoes on goods for economic and strategic purposes are also common. The U.S. has maintained an economic embargo against Cuba since 1960 in an attempt to undermine CASTRO. Both the LEAGUE OF NATIONS and the UNITED NATIONS have recognized the use of embargoes, e.g., the League's sanctions (1935) against Italy for its aggression in Ethiopia, the UN oil and arms embargoes against Rhodesia (see ZIMBABWE) and SOUTH AFRICA because of their racial policies, and the UN economic embargo against YUGOSLAVIA because of Serbian actions in CROATIA and BOSNIA.

Embargo Act of 1807, passed Dec. 22, 1807, by the U.S. Congress in answer to British and French restrictions on neutral shipping during the Napoleonic Wars (see NAPOLEON I). It forbade all international trade to and from American ports in an attempt to persuade Britain and France of the value and rights of neutral commerce. In Jan. 1808 the prohibition was extended to inland waters and land commerce to halt trade with Canada. Britain and France stood firm, however, and enforcement was difficult, especially in New England. The Nonintercourse Act (Mar. 1, 1809) and Macon's Bill No. 2 (1810) effectually dissolved the purpose of the embargo.

embezzlement: see LARCENY.

embroidery, ornamental needlework applied to all types of fabrics and worked with linen, cotton, wool, silk, gold, or silver thread. Beads, shells, feathers, or gems may be added. The art is mentioned in the Hindu Vedas and in the Old Testament; it probably antedates weaving. It was introduced into Europe from Byzantium, initiating a rich period of church embroidery (12th–14th cent.). Secular embroidery reached a height of sumptuousness in the 16th cent. By the 19th cent. embroidery had almost disappeared from male attire, and today it is used mainly on women's and children's clothing. Machine-made embroidery in no way approaches the quality of that formerly done by hand. Peasant embroidery, which has long flourished in Eastern Europe, the Balkans, Scandinavia, India, and the Americas, is still done in areas not yet penetrated by mechanization.

embryo, name for the developing young of an animal or plant. Embryology, the scientific study of embryonic development, deals with the period from fertilization until hatching or birth of an animal or, in plants, germination. In animals, early divisions produce a hollow ball of cells (a blastula), which later becomes a two-layered cuplike gastrula. In higher animals, a third (middle) layer of cells develops from one or both of the first two layers. The outer layer (ectoderm) gives rise to skin, scales, feathers, hair, nails, and the nervous system; the innermost layer (endoderm) forms the digestive glands and lining of the alimentary tract and lungs; the middle layer (mesoderm) develops into skeletal, muscular, and connective tissue and circulatory, excretory, and reproductive systems.

embryo biopsy, diagnostic procedure in which a single cell is removed from an embryo three days after it has been conceived through IN VITRO FERTILIZATION. The embryo continues to grow while the cell genes are replicated using POLYMERASE CHAIN REAC-

TION and then studied for genetic defects. The procedure allows an embryo to be tested before it is implanted into the womb when an inheritable disease is carried or exhibited one or both parents.

emerald, highly valued gem, green variety of the mineral BERYL. The finest emeralds are found in Colombia; other sources are Russia, Zimbabwe, and Australia. The Oriental emerald is the transparent green variety of CORUNDUM.

Emerson, Ralph Waldo, 1803–82, one of America's most influential authors and thinkers; b. Boston. A Unitarian minister, he left his only pastorate, Boston's Old North Church (1829–32), because of doctrinal disputes. On a trip to Europe Emerson met Thomas CARLYLE, S.T. COLERIDGE, and WORDSWORTH, whose ideas, along with those of PLATO, the Neoplatonists, Asian mystics, and SWEDENBORG, strongly influenced his philosophy. Returning home (1835), he settled in Concord, Mass., which he, Margaret FULLER, THOREAU, and others made a center of TRANSCENDENTALISM. He stated the movement's main principles in *Nature* (1836), stressing the mystical unity of nature. A noted lecturer, Emerson called for American intellectual independence from Europe in his Phi Beta Kappa address at Harvard ("The American Scholar," 1837). In an address at the Harvard divinity school (1838), he asserted that redemption could be found only in one's own soul and intuition. Emerson developed transcendentalist themes in his famous *Journal* (kept since his student days at Harvard), in the magazine *The Dial,* and in his series of *Essays* (1841, 1844). Among the best known of his essays are "The Over-Soul," "Compensation," and "Self-Reliance." He is also noted for his poems, e.g., "Threnody," "Brahma," and "The Problem." His later works include *Representative Men* (1850), *English Traits* (1856), and *The Conduct of Life* (1870).

emery: see CORUNDUM.

Emigrant Aid Company, formed (1854) to promote organized antislavery immigration to KANSAS from the Northeast. It hoped to use the concept of SQUATTER SOVEREIGNTY in the KANSAS-NEBRASKA ACT to ensure that Kansas became a free state. The name is associated exclusively with the New England Emigrant Aid Co., although Kansas aid societies in other northern states were also formed. Conceived by Eli Thayer, the company sent out 1,240 settlers. The National Kansas Committee, formed (1856) by various aid societies, became divided as to how to handle violence by proslavery forces. The movement virtually ended by 1857 and did little toward making Kansas a free state, but it captured public attention and engendered much bitterness that contributed to the CIVIL WAR.

Emmanuel Philibert, 1528–80, duke of Savoy (1553–80), called Ironhead. He succeeded his father, who had been dispossessed of his duchy by the French and the Swiss. Serving Spain, he defeated the French at Saint-Quentin (1557), and by the Treaty of Cateau-Cambrésis (1559) most of Savoy was restored to him. He made many reforms in Savoy and moved its capital to Turin, thus making it an Italian, rather than a French, state.

Empedocles, c.495–c.435 B.C., Greek philosopher. He held that everything in existence is composed of four underived and indestructible substances—fire, water, earth, and air—and that atmosphere is a corporeal substance, not a mere void. He believed that motion is the only sort of change possible and that apparent changes in quantity and quality are in fact changes of position of the basic particles underlying the observable object. Thus he first stated a principle central to modern physics.

emphysema, abnormal enlargement or distension of the air sacs of the lungs, causing difficulty in breathing. Usually chronic and progressive, the condition is associated with heredity, smoking, and long-standing respiratory ailments such as chronic bronchitis. Management is aimed at increasing lung capacity and preventing and treating infection, a common complication.

Empire State Building, in New York City, on Fifth Ave., between 33d St. and 34th St. It was designed by Shreve, Lamb, and Harmon, and built in 1930–31. With 102 stories, it was for years the tallest building in the world.

Empire style, in French interior decoration and costume, the manner prevailing in the reign of NAPOLEON I (1804–14), largely created for him by the architects FONTAINE and Percier and the artist J.-L. DAVID. Furniture was chiefly of mahogany. Walls were decorated with stucco, or with classical motifs and such imperial symbols as the emperor's monogram and representations of military trophies. The empress Josephine introduced the court dress with train, and men began to wear full-length trousers and polished top hats.

empiricism, philosophical doctrine holding that all knowledge is derived from experience, whether of the mind or of the senses. Thus it opposes the rationalist belief in the existence of innate ideas. A doctrine basic to the scientific method, empiricism is associated with the rise of experimental science after the 17th cent. It has been a dominant tradition in British philosophy, as in the works at LOCKE, HUME, and George BERKELEY. Most empiricists acknowledge certain a priori truths (e.g., principles of mathematics and logic), but John Stuart MILL and others have treated even these as generalizations deduced from experience.

empyema: see PLEURISY.

Ems dispatch, 1870 communication between King William of Prussia (later German Emperor WILLIAM I) and his premier, Otto von BISMARCK. In June 1870 the Spanish throne had been offered to Prince Hohenzollern-Sigmaringen. France having protested, the prince refused this offer, but the French ambassador, Comte Benedetti, meeting William at Ems, demanded further assurance. William rejected the request. Seeking to goad France into war, Bismarck made public the king's report of the conversation, edited in a provocative manner. France declared war on July 19, and the FRANCO-PRUSSIAN WAR began.

emu or **emeu,** large, flightless Australian BIRD (*Dromiceius novaehollandiae*) related to the CASSOWARY and OSTRICH. A swift runner, it is 5 to 6 ft (150 to 180 cm) tall. Its brownish plumage is coarse and hairlike.

emulsion: see COLLOID.

enamel, a siliceous substance that fuses with metal. Transparent or opaque, clear or colored, it adds a decorative surface. Enamel was used in making jewelry in ancient Egypt, Greece, and Rome, and was perfected in the Byzantine world, often in the CLOISONNÉ technique. Fine enamel-work was created in 12th-cent. France and Spain. The most famous enamelist was the 16th-cent. French artist Léonard LIMOUSIN. In England from the 17th cent. on, enamel was used for miniature portraits. Enamel-work declined in the 19th cent. but was revived in the 1960s.

enantiomer: see ISOMER.

encaustic, painting medium in which the binder for the pigment is wax, or wax and resin. Thought to have been widely used in ancient times, the technique is exemplified by remarkably preserved tomb paintings from Roman Egypt.

Enceladus, in astronomy, natural satellite of SATURN.

encephalitis, inflammation of the brain and spinal cord. Among the several forms of viral brain inflammation are RABIES, POLIOMYELITIS, and two types, transmitted by mosquitoes, that are known as sleeping sickness because of their characteristic prolonged COMA. Encephalitis can also follow such systemic diseases as influenza, scarlet fever, or infection with the AIDS virus. For many forms of encephalitis there is no treatment, although many types can be prevented by immunization.

Encina or **Enzina, Juan del** [ānthē'nä], 1469?–c.1530, Spanish poet and court musician. His *Églogas* (pastoral plays), which together with musical compositions and a treatise on poetry appear in *Cancionero* (1946), made him the father of Spanish RENAISSANCE drama.

enclosure of land: see INCLOSURE.

encomienda, system of tribute in Spanish America to supply adequate and cheap labor. Native peoples were required to pay tribute from their lands in return for Spanish protection. The hardships of the system soon decimated the indigenous population, however, and it died out gradually after 1542.

encyclical: see BULL.

Encyclopédie, influential 28-volume French encyclopedia, edited by Denis DIDEROT and Jean d'ALEMBERT, with the aid of QUESNAY, MONTESQUIEU, VOLTAIRE, J.J. ROUSSEAU, TURGOT, and others. It was published between 1751 and 1775. Its famous "preliminary discourse," signed by Alembert, indicated its aims and then presented definitions and histories of science and the arts. Despite attacks by the JESUITS and unofficial censorship by the printer, it was an immediate success. It championed the skepticism and rationalism of the ENLIGHTENMENT and played a major role in the intellectual preparation for the FRENCH REVOLUTION. In 1780 a five-volume supplement and two-volume index were added.

endangered species, any species of animal or plant whose ability to survive is seriously in question. Human activities can contribute to such endangerment: for example, by purposeful extermination to protect livestock; unrestricted hunting to obtain hides, feathers, or food; or the use of PESTICIDES to protect crops. Humans have contributed to the destruction of entire habitats through, e.g., STRIP MINING, oil spills, water POLLUTION, and the draining of swamps and leveling of forests for industrial and residential development. Such destruction can endanger the lives and breeding grounds of a large number of species simultaneously. Since the 1970s environmentalists have pressed for the establishment of new WILDLIFE REFUGES and for land-use planning. In the U.S. the Endangered Species Acts of 1966, 1969, and 1973 prohibit any trade in endangered species or their products and require that federal agencies assess the impact on wildlife of proposed projects.

endive: see CHICORY.

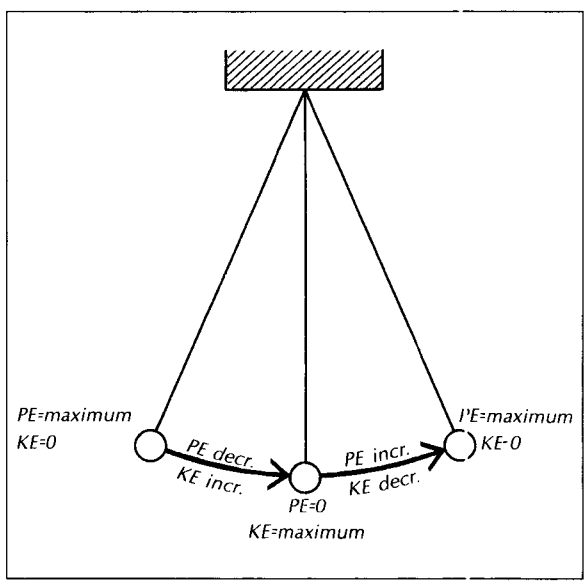
endocrine system, body control system composed of a group of glands that keeps the internal environment stable by producing chemical regulatory substances called HORMONES. In humans the major endocrine organs are the PITUITARY GLAND, THYROID GLAND, PARATHYROID GLANDS, ADRENAL GLANDS, THYMUS GLAND, PINEAL BODY, PANCREAS, ovaries, and testes (see REPRODUCTIVE SYSTEM); the KIDNEYS are also sometimes included. The endocrine, or ductless, glands secrete the hormones they produce directly into the internal environment; transmitted via the bloodstream or by diffusion, the endocrine hormones act at distant points in the body. Some, such as thyroxine from the thyroid gland, affect nearly all body cells; others, such as PROGESTERONE from the female ovary, which regulates the uterine lining, affect only a single organ. The pituitary, sometimes called the master gland, secretes hormones that regulate many of the other endocrine glands. The regulation of body function depends on the existence of specific receptor cells in target organs—cells that respond in specialized ways to minute hormonal stimuli. The hormones act by regulating cell metabolism: by accelerating, slowing, or maintaining enzyme activity in receptor cells, they control growth and development, metabolic rate, sexual rhythms, and reproduction. The quantities of hormones are maintained by feedback mechanisms that depend on interactions between the endocrine glands, blood levels of hormones, and activities of the target organs. See HYPOTHALAMUS.

endorphin, any of a group of NEUROTRANSMITTERS, affecting mood, perception of pain, memory retention, and learning. Chemically similar to opium-derived NARCOTICS, endorphins were searched for and found in the 1970s after the discovery that MORPHINE works by attaching itself to specific receptor sites in the brain. Endorphins also attach to these receptors and appear to be the brain's own natural painkillers. Besides behaving as pain regulators, endorphins are believed to contribute to euphoric feelings such as the "runner's high" experienced after prolonged exercise.

endoscope, any instrument used to look inside the body. Usually consisting of a tube attached to a viewing device, endoscopes are used to explore and biopsy such areas as the colon and the bronchi of the lungs. Endoscopes employing miniature television cameras and tiny surgical implements now allow exploration and **endoscopic surgery** through small incisions; such surgery is much less traumatic to the patient than traditional open surgery. Laparoscopic surgery, in which the endoscope is inserted through a small incision in the abdomen or chest, is used to correct abnormalities of the ovaries and as an alternative to traditional gall bladder and chest surgery. Arthroscopic surgery is endoscopic surgery performed on joints, such as the knee or shoulder.

energy, in physics, the ability or capacity to do WORK. Forms of energy include HEAT, chemical energy, and, according to the theory of RELATIVITY, MASS (see NUCLEAR ENERGY); other forms of energy are associated with the transmission of LIGHT, SOUND, and ELECTRICITY. Energy and work are measured in the same units: joules, ergs, electron-volts, calories, foot-pounds, or some other, depending on the system of measurement being used. When a force acts on a body, the work performed (and the energy expended) is the product of the force and the distance over which it is exerted. Potential energy is the capacity for doing work that a body possesses because of its position or condition. For example, a weight lifted to a certain height has potential energy because of its position in earth's gravitational field. Kinetic energy, the energy a body possesses because it is in motion, is equal to $\frac{1}{2}mv^2$, where m is its mass and v is its velocity. The average kinetic energy of the atoms or molecules of a body is measured by the TEMPERATURE of the body. Energy (or its equivalent in mass) can be neither created nor destroyed (see CONSERVATION LAWS), but it can be changed from one form into another.

energy, sources of. In contemporary usage, energy is whatever can be efficiently converted into heat or motion to provide power to run machines and vehicles and to supply heat and light. Energy sources are of two basic types, renewable and nonrenewable. Most of the industrial world is presently powered by nonrenewable fossil fuels—COAL, PETROLEUM, and NATURAL GAS—that, once used, cannot be replaced. Fission NUCLEAR REACTORS are fueled by uranium or plutonium, themselves finite energy sources. Spent uranium can be converted to fissile plutonium in a breeder reactor, however, a process that makes nuclear energy almost infinitely renewable. Nuclear technology, however, has not yet developed either failproof reactors or a safe method for disposing of nuclear wastes (see WASTE DISPOSAL). The development of nuclear fusion (whose end products are harmless) has so far been hindered by the difficulties of containing the fuels (plentiful light elements such as hydrogen) at the extremely high temperatures necessary to initiate and sustain fusion. Renewable energy sources include the energy from water and wind (see TURBINE; WATER WHEEL; WINDMILL); geothermal energy, the earth's internal heat that is released naturally in GEYSERS and VOLCANOES; tidal energy, the power released by the ebb and flow of the ocean's tides; biomass, the use of certain crops (including wood) or crop wastes either directly as fuel or as a fermentable source of fuels such as alcohol or methane; and SOLAR ENERGY, which can be stored and used directly as heat, or transformed into electricity through the use of PHOTOVOLTAIC CELLS. All these renewable energy sources are presently being tapped in some form, but none can replace fossil fuels without huge advances in the technologies needed to exploit them.



Relations between potential energy (PE) and kinetic energy (KE) for a swinging pendulum

Energy, United States Department of, federal executive department established (1977) to coordinate all national activities relating to the production, regulation, marketing, and conservation of energy. The department is also responsible for the federal nuclear weapons program and the long-term, high-risk research and development of energy technology.

Enewetak, Enewetok, or **Eniwetok,** circular atoll, central Pacific, in the MARSHALL ISLANDS. Consisting of c.40 islets surrounding a

large lagoon c.50 mi (80 km) in circumference, it was used (1948–54) by the U.S. for nuclear-bomb tests. Former residents, evacuated before the tests started, began returning in the early 1970s, and the island was declared to have been rendered safe in 1980.

Engels, Friedrich, 1820–95, German social philosopher and revolutionary; with Karl MARX, a founder of modern COMMUNISM and SOCIALISM. He was the son of a textile manufacturer, and after managing a factory in Manchester, England, he wrote his first major work, *The Condition of the Working Class in England in 1844* (1845). In 1844 he met Marx in Paris, beginning a lifelong collaboration. He and Marx wrote the *Communist Manifesto* (1848) and other works that predicted the inevitable triumph of the working class. When the REVOLUTIONS OF 1848 failed, Engels settled in England. With Marx he helped found (1864) the International Workingmen's Association. Engels's financial aid enabled Marx to devote himself to writing *Das Kapital* (3 vol., 1867–94); after his death Engels edited vol. 2 and 3 from Marx's drafts and notes. Engels had enormous influence on the theories of MARXISM and DIALECTICAL MATERIALISM. His major works include *Anti-Dühring* (1878) and *The Origin of the Family, Private Property, and the State* (1884).

Friedrich Engels

engine: see AUTOMOBILE; DIESEL ENGINE; INTERNAL-COMBUSTION ENGINE; STEAM ENGINE; TURBINE.

engineering, profession devoted to designing, constructing, and operating the structures, machines, and other devices of industry and everyday life. Before the INDUSTRIAL REVOLUTION, the field was confined to the military engineer, who built fortifications and weapons, and the civil engineer, who built bridges, harbors, aqueducts, buildings, and other structures. During the early 19th cent., mechanical engineering developed to design and build manufacturing machines and the engines to power them. Major modern engineering fields include the allied pursuits of mining, metallurgical, and petroleum engineering; electrical engineering, encompassing the generation and transmission of electric power and the design of all the devices that use it; electronics engineering, dealing mainly with computers and communications equipment; chemical engineering, dealing with the design, construction, and operation of plants and machinery for making such products as acids, dyes, drugs, plastics, and synthetic rubber; and aerospace engineering, comprising the design and production of aircraft, spacecraft, and missiles. Industrial, or management, engineering is concerned with efficient production and the design of methods and processes to achieve it.

England, largest (50,334 sq mi/130,365 sq km) and most populous (1991 pop. 46,382,050) political division of the United Kingdom of Great Britain and Northern Ireland. Separated from the continent of Europe by the ENGLISH CHANNEL, the Strait of Dover, and the NORTH SEA, it is bounded by Wales and the Irish Sea (W) and Scotland (N). The Isle of WIGHT and the Scilly Islands are part of England. Inland from the white chalk cliffs of the southern coast lie gently rolling downs and wide plains. The lowlands of the east coast extend north to the reclaimed marsh of the FENS. Northern England, above the Humber R., is mountainous; the chief highlands are the Cumbrian Mts. and the Pennines, and the famous LAKE DISTRICT, in the Cumbrians, is the site of England's highest points. Central England—the Midlands—is a large plain, interrupted and bordered by hills. In the west and southwest the terrain is high and hilly. The THAMES and the Severn are the longest rivers. Among the principal cities are LONDON, the capital of the United Kingdom; BIRMINGHAM and MANCHESTER, both industrial centers; and LIVERPOOL and BRISTOL, important ports. Despite its northerly latitudes, England has a mild climate. Most of the region is subject to wet weather and some of it to severe cold, but in general life in England is conducive to a wide variety of agricultural and industrial pursuits. (For government, economy, and history of England, see GREAT BRITAIN.)

England, Church of, the established church in England and the mother church of the ANGLICAN COMMUNION. Christianity, brought by the Romans, was established in Britain by the 4th cent., but it was nearly destroyed by invasions of pagan Anglo-Saxons beginning in the 5th cent. The mission of St. AUGUSTINE OF CANTERBURY began (597) the reconversion of England and the reestablishment of its ties to the papacy. Conflicts between church and state during the Middle Ages culminated with HENRY VIII's break with Rome. The pope's refusal to annul Henry's marriage to KATHERINE OF ARAGÓN led Henry to issue the Act of Supremacy (1534), which declared the king to be the head of the Church of England. Henry suppressed the monasteries and authorized the Great Bible (1539). Under Archbishop CRANMER the First BOOK OF COMMON PRAYER was produced and adopted (1549). MARY I returned the English church to communion with Rome, but with the accession of ELIZABETH I, an independent church was restored and steered along a middle ground between Roman Catholicism and Calvinism. During the ENGLISH CIVIL WAR the Long Parliament established (1646) PRESBYTERIANISM, but with the RESTORATION (1660), the episcopacy was restored and the Prayer Book was made the only legal service book by the Act of Uniformity (1662). Since that time, despite internal controversies, e.g., the OXFORD MOVEMENT, the church has held firm. The Archbishop of Canterbury is the chief leader (primate) of the church. In polity, the High Church party holds to ritual and apostolic succession and is contravened by the Low Church party, which emphasizes the Bible and preaching. Since 1981 women have been admitted to the diaconate, and in 1992 the General Synod voted to admit women to the priesthood.

English Channel, arm of the Atlantic Ocean between France and Great Britain. Up to c.150 mi (240 km) wide in the west, it narrows to 21 mi (34 km) in the east, where it is connected to the North Sea by the Strait of Dover. Train and motor transport ferries, along with Hovercraft, provide regular channel crossings. A 32.2-mi (52-km) long tunnel connecting Folkestone, England, with Calais, France, was begun in 1987, completed in 1993, and opened in 1994. Known as the "Chunnel," it is the second longest tunnel in the world. It consists of two railway tubes and a center service tube.

English civil war, 1642–48, the conflict between CHARLES I of England and a large body of his subjects, generally called the "parliamentarians," that culminated in the defeat and execution of the king and the establishment of a republican Commonwealth. The struggle has been called the Puritan Revolution because many of the king's opponents were Puritans, and the king's defeat was accompanied by the abolition of episcopacy. The more important constitutional issue in the war was between a king who claimed to

rule by divine right and a Parliament that claimed the right to govern the nation independent of the crown. Charles's father, JAMES I, temporized with Parliament due to his need for money. Sir Edward COKE upheld Parliament's rights and was dismissed by the king; Sir Francis BACON upheld the royal prerogative and was impeached by Parliament. James's last Parliament granted money with specific directions for its use. Charles I proved more intractable. Parliament tried hard to limit his power; it refused his subsidy until he signed the PETITION OF RIGHT. Charles still levied forced taxes, dissolved Parliament, and governed alone for 11 years, but his financial needs in the BISHOPS' WARS forced him to recall Parliament in 1640. Parliament recited the evils of Charles's reign in the Grand Remonstrance and tried to gather an army with a militia bill. The king organized an army himself and refused Parliament's final 19 demands. War became inevitable, and both sides bid for popular support. Charles was aided by the nobles, Anglicans, and Catholics, Parliament by the trading and artisan classes and the Scotch COVENANTERS. After initial indecisive campaigns, the victories of Oliver CROMWELL at Marston Moor and Naseby led to the king's surrender in 1645 and the end of the first civil war. His escape caused the second civil war (1647); it failed quickly. Pride's Purge (see under PRIDE, THOMAS) expelled from Parliament all those opposed to the army. The remainder, known as the Rump Parliament, sentenced and beheaded Charles for treason (1649). A quasi-democratic commonwealth was followed by Cromwell's domination in the Protectorate. The English civil war assured the emergence of the middle class, aided religious toleration, and settled the contest between king and Parliament. Its results were permanently confirmed by the GLORIOUS REVOLUTION of 1688.

English foxhound: see FOXHOUND.

English horn: see WIND INSTRUMENT.

English language, member of the West Germanic group of the Germanic subfamily of the Indo-European family of languages. See LANGUAGE (table).

English setter, large SPORTING DOG; shoulder height, c.25 in. (63.5 cm); weight, c.60 lb (27.2 kg). Its silky hair may be black, tan, and white; mixtures of lemon, liver, orange, blue, or black with white; or solid white. Developed in England as a hunting dog, it is commonly trained to point.

English sheepdog: see OLD ENGLISH SHEEPDOG.

English sparrow or **house sparrow,** small BIRD (*Passer domesticus*) of the weaver bird family, found worldwide. They are 4 to 7 in. (10 to 18 cm) long, with short, stout bills. The male is brown with black streaks above and grayish white below; the female is dull brown above and brownish white below. Chiefly seedeaters, they also eat harmful insects. Introduced (1850) in the U.S. to combat cankerworms, they have replaced many native birds in urban areas.

English springer spaniel, medium-sized SPORTING DOG; shoulder height, c.18 in. (46 cm); weight, c.45 lb (20 kg). Its medium-length, flat or wavy coat is liver and white, tan and white, or black and white. Developed in England as a field dog, it flushes game and will retrieve on land and water.

English units of measurement, principal system of a few nations, the only major industrial one being the United States. The English system actually consists of two related systems—the U.S. Customary System, used in the United States and dependencies, and the British Imperial System (see WEIGHTS AND MEASURES, table). Great Britain, the originator of the latter system, is now gradually converting to the METRIC SYSTEM. The names of the units and the relationships between them are generally the same in both systems, but the sizes of the units differ, sometimes considerably. The basic unit of length is the yard (yd); the basic unit of mass (weight) is the pound (lb). Within the English units of measurement there are three different systems of weights (avoirdupois, troy, and apothecaries'), of which the most widely used is the avoirdupois. The troy system (named for Troyes, France, where it is said to have originated) is used only for precious metals. Apothecaries' weights are based on troy weights; in addition to the pound, ounce, and grain—which are equal to the troy units of the same name—other units are the dram and the scruple. For liquid measure, or liquid capacity, the basic unit is the gallon. The U.S. gallon, or wine gallon, is 231 cubic inches (cu in.); the British imperial gallon is the volume of 10 lb of pure water at 62°F and is equal to 277.42 cu in. The British units of liquid capacity are thus about 20% larger than the corresponding American units. The U.S. bushel, or Winchester bushel, is 2,150.42 cu in. and is about 3% smaller than the British imperial bushel of 2,219.36 cu in.; a similar difference exists between U.S. and British subdivisions. The barrel is a unit for measuring the capacity of larger quantities and has various legal definitions depending on the substance being measured, the most common value being 105 dry quarts. Since the Mendenhall Order of 1893, the U.S. yard and pound and all units derived from them have been defined in terms of the metric units of length and mass, the meter (m) and the kilogram (kg); since 1959 these values are 1 yd = 0.9144 m and 1 lb = 0.45359237 kg. In the United States, the older definition of the yard as 3,600/3,937 m is still used for surveying, the corresponding foot (1,200/3,937 m) being known as the survey foot. The English units of measurement have many drawbacks: the complexity of converting from one unit to another, the differences between American and British units, the use of the same name for different units (e.g., *ounce* for both weight and liquid capacity, *quart* and *pint* for both liquid and dry capacity), and the existence of the three different systems of weights.

engraving, INTAGLIO printing process in which the lines to be printed are cut into a metal (usually copper) plate with a graver, or burin. The earliest known engravings printed on paper date from the mid-15th cent. Early master engravers include DÜRER, SCHONGAUER, and LUCAS VAN LEYDEN. During the 19th cent., steel engraving, which can produce many prints, was used to produce reproductions; it was superseded by photomechanical processes.

Eniwetok: see ENEWETAK.

enkephalin, one of several naturally occurring morphinelike substances (ENDORPHINS) in the brain.

Enlightenment, term for the rationalist, liberal, humanitarian, and scientific trend of 18th-cent. Western thought; the period is also sometimes known as the Age of Reason. The enormous scientific and intellectual advancements made in the 17th cent. by the EMPIRICISM of Francis BACON and LOCKE, as well as by DESCARTES, SPINOZA, and others, fostered the belief in NATURAL LAW and universal order, promoted a scientific approach to political and social issues, and gave rise to a sense of human progress and belief in the state as its rational instrument. Representative of the Enlightenment are such thinkers as VOLTAIRE, J.J. ROUSSEAU, MONTESQUIEU, Adam SMITH, SWIFT, HUME, KANT, G.E. LESSING, BECCARIA, and, in America, Thomas PAINE, Thomas JEFFERSON, and Benjamin FRANKLIN. The social and political ideals they presented were enforced by "enlightened despots" such as Holy Roman Emperor JOSEPH II, CATHERINE II of Russia, and FREDERICK II of Prussia. DIDEROT's *Encyclopédie* and the U.S. CONSTITUTION are representative documents of the Age of Reason.

Ennius, Quintus, 239–169? B.C., Calabrian poet, regarded by the Romans as the father of Latin poetry. He introduced quantitative hexameter and the elegiac couplet. Though he wrote in many forms, his masterpiece is the epic *Annales,* a literary history of Rome.

Enoch, in the BIBLE, father of METHUSELAH. It was said of him that he walked with God—a phrase also used of NOAH—and that, like ELIJAH, he was translated to heaven.

Ensor, James Ensor, Baron, 1860–1949, Belgian painter and etcher. Containing bizarre and powerful imagery, his early work, such as the nightmarish *Entry of Christ into Brussels* (1888), was rejected as scandalous. He produced his most inventive and original works, with weird, often gruesome compositions, until about 1900. Among his masterpieces is *The Temptation of St. Anthony* (Mus. Mod. Art, N.Y.C.). His sources included the grotesque fantasies of BOSCH and BRUEGEL. Ensor was one of the great innovators of the 19th cent.; his art opened the way for SURREALISM.

entablature, the entire unit of horizontal members above columns or pilasters in classical architecture. Its height in relation to that of the column varies with the three Greek orders: Doric, Ionic, and Corinthian. In Roman and Renaissance architecture it is about one fourth of the column height. Components are the architrave, which

rests directly on the column cap, the frieze, and the cornice, or topmost member.

Entebbe, town (1991 pop. 41,638), S Uganda, on Lake VICTORIA, near KAMPALA. Founded in 1893, it was the administrative capital (1894–1962) of the British Uganda Protectorate. It is the site of a major international airport, where in 1976 Israeli airborne commandos freed the passengers held hostage on a hijacked plane.

Entente: see TRIPLE ALLIANCE AND TRIPLE ENTENTE.

enterprise zone, designated geographical district in which resident businesses are legally entitled to receive special benefits from a government, established in economically depressed areas to encourage companies to locate there. Most states enacted enterprise zone programs during the 1980s, and changes in the federal tax code in 1993 instituted tax incentives for businesses in certain locations. Typical incentives offered to attract businesses to enterprise zones include tax credits, subsidized loans, and reduced regulations. Although usually associated with urban areas, enterprise zones have also been set up in rural areas. Most enterprise zones have only been marginally successful in reviving the areas in which they are located, in part because businesses located in such zones often employ workers who live outside the area.

entomology, study of insects, an arthropod class comprising about 675,000 known species, and representing about nine tenths of all classified animal species. Insects are studied for purely biological reasons, as well as for their role as crop pollinators; carriers of viral, bacterial, fungal, and protozoal diseases; parasites of humans and livestock; destroyers of economically important plants; and predators of other destructive insects.

entrapment, instigation of a crime by a law-enforcement official in order to obtain grounds for a criminal prosecution. A person who has been induced to commit a crime in such circumstances is not regarded as criminally liable. Government undercover operations often raise questions about entrapment because the dividing line between entrapment and rightful arrest for a crime that the perpetrator was predisposed to commit may be murky.

entropy, quantity specifying the amount of disorder or randomness in a system bearing energy or information. In THERMODYNAMICS, entropy indicates the degree to which a given quantity of thermal energy is available for doing useful work—the greater the entropy, the less available the energy. According to the second law of thermodynamics, during any process the change in entropy of a system and its surroundings is either zero or positive; thus the entropy of the universe as a whole tends towards a maximum. In INFORMATION THEORY entropy represents the "noise," or random errors, occurring in the transmission of signals or messages.

environmentalism, movement to preserve the quality and continuity of life through CONSERVATION OF NATURAL RESOURCES, prevention of POLLUTION, and control of land use. U.S. conservationists began working early in the 1900s to establish state and NATIONAL PARKS, forests, and WILDLIFE REFUGES. In the decades following World War II, growing public concern about pollution problems, dwindling energy resources, and the dangers of pesticides and radiation gave rise to environmentalism—a new kind of conservationism embracing the broader concept of conserving the earth itself by protecting its capacity for self-renewal (see BIOSPHERE; ECOLOGY). The movement generated extensive legislation, notably laws regulating air quality, water quality, noise, pesticides, toxic substances, and ocean dumping; laws to protect ENDANGERED SPECIES and wilderness lands; and the National Environmental Protection Act (1970), creating the Environmental Protection Agency to develop and enforce federal standards. At the heart of the new laws was the requirement that environmental impact statements (assessments of the probable environmental consequences) be filed for all federally funded projects, and the empowering of private citizens to sue government and industry for failure to comply with governmental standards. Numerous private organizations, such as the Sierra Club, National Audubon Society, Friends of the Earth, Natural Resources Defense Council, Nature Conservancy, and Greenpeace, are actively involved in various environmental causes, from preserving the habitat of endangered species to lobbying and litigating to preserve and extend legal environmental safeguards to protesting and obstructing activities regarded as environmentally destructive. In 1992 most of the world's nations (over 150) signed two treaties on the environment: the global warming convention promotes the curbing of emissions of gases that are believed to intensify the GREENHOUSE EFFECT, and the biodiversity convention calls for protecting endangered species and sharing research, technology, and profits with nations whose plants and animals provide the genetic resources for biotechnology. The U.S. did not sign the latter treaty until 1993.

Environmental Protection Agency (EPA), independent U.S. agency in the executive branch of the government. It was established in 1970 to reduce and control air and water POLLUTION, NOISE POLLUTION, and RADIATION and to ensure safe handling and disposal of toxic substances (see WASTE DISPOSAL). The EPA engages in research, monitoring, and the setting and enforcement of national standards. It also issues statements on the impact of operations of other federal agencies that are found detrimental to environmental quality, and it supports the antipollution activities of states, municipalities, and public and private groups.

Enzina, Juan del: see ENCINA, JUAN DEL.

enzyme, protein functioning as a biological CATALYST. Enzymes accelerate (often by several orders of magnitude) chemical reactions in the cell that would proceed imperceptibly or not at all in their absence. The enzyme is not permanently modified by its participation. Most enzymes demonstrate great specificity, reacting with only one or a small group of closely related chemical compounds; several enzymes are sometimes required for efficient catalytic function. Some enzymes depend on the presence of COENZYMES for their function. For the enzyme to continue to be effective, its three-dimensional molecular structure must be maintained. Over 1,500 different enzymes have been identified, and the exact arrangement of AMINO ACIDS (subunits of a protein) has been determined for many through the technique of X-RAY CRYSTALLOGRAPHY. The molecule (substrate) that the enzyme acts upon binds to a specific site on the enzyme, so that the interactions with nearby atoms sharply reduce the energy needed to cleave and re-form the appropriate chemical bonds.

Eocene epoch: see GEOLOGIC ERA (table).

Eos, in Greek mythology, goddess of dawn. Daughter of Hyperion and Theia, she was the sister of the sun god HELIOS, and the mother of the winds. The Romans called her Aurora.

ephedrine, mild, slow-acting drug used to relieve nasal congestion from hay fever or infection of the upper respiratory tract. Nonaddictive, ephedrine may cause insomnia and restlessness.

ephemeris, table listing the positions of one or more celestial bodies for each day of the year. Early national ephemerides include the French *Connaissance des temps* (begun 1679) and the British *Nautical Almanac and Astronomical Ephemeris* (begun 1767). After 1958 the U.S. and Great Britain jointly published solar, lunar, planetary, and satellite ephemerides in identical publications, which were combined (1981) as the *Astronomical Almanac.*

Ephesians, EPISTLE of the NEW TESTAMENT, 10th book in the usual order, traditionally by St. PAUL (A.D. c.60). Some scholars believe the letter was intended as an encyclical. The most profound of the Pauline epistles, it is pervaded with the doctrine of the mystical body of Christ, Paul's analogy of the perfect union of Christians. It contains a famous metaphor of the Christian as soldier (6.10–17).

Ephesus [ĕf'əsəs], ancient Ionian Greek city of ASIA MINOR, in modern TURKEY. A wealthy seaport, it was captured in turn by Lydia, Persia, and Macedonia. It passed to Rome in 133 B.C. and was the leading city of the province of Asia. Its temple of Artemis (Diana) was one of the SEVEN WONDERS OF THE WORLD. Ephesus later became a center of Christianity and was visited by St. PAUL.

Ephraim: see ISRAEL, TRIBES OF.

epic, long, narrative poem, usually on a serious, or exalted theme, centered on a heroic figure. Early epics, e.g., the Babylonian *Gilgamesh,* HOMER's *Iliad* and *Odyssey,* and the Anglo-Saxon BEOWULF, were shaped from the legends of expanding nations. Literary epics, e.g., VERGIL's *Aeneid* and John MILTON's *Paradise Lost,* consciously imitate the earlier form. Epic conventions include a hero embodying national ideals, the performance of great deeds, the depiction of an era, divine intervention, and concern with eternal human problems. A mock epic is a satire based on an incongruous treatment of the trivial in epic terms, e.g., Alexander POPE's *Rape of the Lock.*

Epictetus, A.D. c.50–c.138, Phrygian Stoic philosopher, once a slave. His STOICISM taught that the true good is within oneself and is not dependent on external things, and he emphasized the doctrine of brotherhood. His teachings, set down by his disciple Arrian in the *Encheiridion* and *Discourses,* influenced MARCUS AURELIUS.

epic theater: see BRECHT, BERTOLT; PISCATOR, ERWIN.

Epicurus, 341–270 B.C., Greek philosopher, founder and eponym of epicureanism. He defined philosophy as the art of making life happy and subordinated METAPHYSICS to ETHICS, naming pleasure the highest and only good. For Epicurus, however, pleasure was not the heedless indulgence advocated by the followers of HEDONISM, but rather the serenity (*ataraxia*) resulting from the absence of pain. He also prescribed a code of social conduct that advocated honesty, prudence, and justice in dealing with others (because such conduct would save the individual from society's retribution, or pain). Only fragments of his writings are extant; the finest exposition of his ideas is contained in *On the Nature of Things* by the Roman poet LUCRETIUS.

Epidaurus [ĕpĭdôr'əs], ancient city of GREECE, in the NE PELOPONNESUS. It was the site of the temple of ASCLEPIUS (4th cent. B.C.), renowned for its beautiful sculpture.

epidemic: see EPIDEMIOLOGY.

epidemiology, field of medicine concerned with the study of epidemics, outbreaks of disease that affect large numbers of people. Epidemiologists, using sophisticated statistical analyses, field investigations, and complex laboratory techniques, investigate the cause of a disease, its distribution (geographic, ecological, and ethnic), method of spread, and measures for control and prevention. Epidemiological investigations once concentrated on such communicable diseases as TUBERCULOSIS, INFLUENZA, and CHOLERA, but now also encompass CANCER, HEART DISEASE, and other diseases affecting large numbers of people.

Epigoni: see SEVEN AGAINST THEBES.

epigram, short, polished saying, usually in verse, often with a satirical or paradoxical twist. Established by MARTIAL, it is particularly associated with John DONNE, Alexander POPE, Lord BYRON, and S.T. COLERIDGE. Among the most brilliant epigrammatists was Oscar WILDE, whose works are studded with epigrams, e.g., "A cynic is a man who knows the price of everything, and the value of nothing."

epilepsy, disorder resulting from rapid, uncontrolled electrical activity in one or more areas in the brain and characterized by periodic convulsive seizures. Partial, or focal, seizures involve a small area of damaged brain cells. Generalized seizures, which involve many areas of damage, include absence seizures (formerly petit mal), in which the person may appear to be daydreaming, and grand mal seizures, which last a few minutes and result in a loss of consciousness and involuntary contraction of all the muscles of the body. No organic cause can be determined for the disorder in most cases, but seizures can result from birth injury or high fever, alcohol withdrawal, tumors, and head injuries. Drug therapy includes the use of such anticonvulsants as phenytoin, phenobarbital, carbamazepine, and felbamate. Brain surgery to remove the damaged cells is most successful in infants and young children.

epinephrine or **adrenaline,** hormone secreted by the medulla of the ADRENAL GLANDS. Strong emotions, such as fear and anger, cause epinephrine to be released into the bloodstream, producing an increase in heart rate, muscle strength, blood pressure, and sugar metabolism. This reaction, often called the "fight or flight" response, prepares the body for strenuous activity. In medicine, epinephrine is used chiefly as a stimulant in cardiac arrest, as a vasoconstrictor in shock, and as a bronchodilator and antispasmodic in bronchial asthma. See also CATECHOLAMINE.

Epiphany [Gr., = showing], a prime Christian feast, celebrated Jan. 6; also called Twelfth Day or Little Christmas. It commemorates the baptism of Jesus, the visit of the Wise Men to Bethlehem, and the miracle of Cana. Its eve is Twelfth Night.

epiphyte or **air plant,** plant that grows not in the soil but on another plant, depending on it only for physical support; an epiphyte makes its own food, thus differing from a PARASITE. Epiphytes obtain moisture from the air or moisture-laden pockets of the host plant. Well-known examples are many ORCHIDS and BROMELIADS.

Epirus [ĕpī'rəs], ancient country of W GREECE, on the Ionian Sea. It reached its height in the 3d cent. B.C., under PYRRHUS. It sided with MACEDON against Rome, was sacked (167 B.C.), and passed under Roman rule. In A.D. 1204 the independent despotate of Epirus emerged, but the Turks took it over in the 15th cent. In the late 18th cent. ALI PASHA established an independent state in Epirus and Albania.

Episcopal Church, Protestant, in the United States of America, a part of the ANGLICAN COMMUNION. Anglican (Church of England) services were first held in America at Jamestown, Va., in 1607, but after the American Revolution, it was necessary for American Anglicans to organize a national church. Samuel SEABURY was consecrated (1784) as the first bishop, and the first General Convention (1789) approved the name and constitution of the church and revised the BOOK OF COMMON PRAYER for use in America. The church follows the doctrinal lines of the Anglican Communion, although the Thirty-nine Articles have been modified to fit American conditions. Since 1976 its priesthood has been open to both men and women. In 1990 church membership was 2,446,050.

epistemology, branch of philosophy dealing with the origin and nature of knowledge, a fundamental theme since the 17th cent. The rationalist view, led by DESCARTES, SPINOZA, LEIBNIZ, and others, sought to integrate a belief in the existence of certain innate ideas with an acceptance of the value of data received by experience. EMPIRICISM, expounded by HUME, LOCKE, and John Stuart MILL, denied the existence of innate ideas altogether, maintaining that all knowledge comes from human experience. KANT attempted to combine the two views. In later theories the split was reflected in IDEALISM and MATERIALISM. The empirical view has been central to PRAGMATISM, as taught by C.S. PEIRCE, William JAMES, and John DEWEY, and to the development of the modern scientific approach.

epistle, in the BIBLE, a letter of the NEW TESTAMENT. The Pauline Epistles (ascribed to St. PAUL) are ROMANS, First and Second CORINTHIANS, GALATIANS, EPHESIANS, PHILIPPIANS, COLOSSIANS, First and Second THESSALONIANS, First and Second TIMOTHY, TITUS PHILEMON, and HEBREWS. JAMES, First and Second PETER, First, Second, and Third JOHN, and JUDE are traditionally called Catholic, or General, Epistles.

Epsom salts, a water-soluble, bitter-tasting compound ($MgSO_4 \cdot 7H_2O$) that occurs as white or colorless needle-shaped crystals. It is used as a medicinal purgative, in leather tanning, in mordant dyeing, and as a filler in cotton goods and paper. It is found in waters of mineral springs and as the mineral epsomite.

Epstein, Sir Jacob, 1880–1959, English sculptor; b. N.Y.C. After studying with RODIN in Paris, he revolted against the ornate and pretty in art, producing bold, often harsh and massive forms in stone and bronze. His best-known pieces include the Oscar Wilde Memorial (1911; Père-Lachaise, Paris), a marble *Venus* (1917; Yale Univ., New Haven, Conn.), and a *Madonna and Child* (Convent of the Holy Child Jesus, London).

Epstein-Barr virus (EBV), herpes virus that is the major cause of infectious MONONUCLEOSIS and is associated with a number of cancers, particularly lymphomas in immunosuppressed persons, including persons with AIDS. EBV affects certain salivary gland cells and white blood cells (lymphocytes) called B cells (see IMMUNITY).

Equal Employment Opportunity Commission (EEOC), U.S. agency created (1964) to end discrimination in hiring based on race, color, religion, sex, national origin, age, or disability, and to promote equal employment opportunities. If its attempts at persuasion fail to remedy unlawful practices, it is empowered to bring suit against offenders in federal court.

Equal Pay Act, U.S. law passed (1963) as an amendment to the WAGES AND HOURS ACT which prohibits discrimination based on sex that results in unequal pay for equal work.

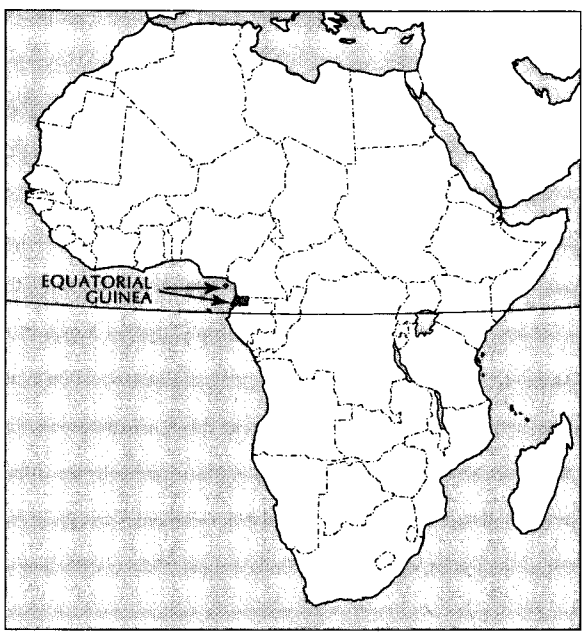
Equal Rights Amendment: see CIVIL RIGHTS; FEMINISM.

equation, a statement, usually in symbols, that two quantities or mathematical expressions are equal, e.g., $x + 3 = 6 - y$ or $\sin^2 = 1 - \cos^2$. A numerical equation contains only numbers, e.g., $2 + 3 = 6 - 1$; a literal equation contains some letters, representing unknowns or variables. An identity is an equation that is true no matter what value is substituted for the variables, such as $x^2 - 1 = (x - 1)(x + 1)$; a conditional equation is true for only certain substitutions, e.g., only the values $+1$ and -1 make true the equation $x^2 - 1 = 0$. See also ALGEBRA.

equation of time: see SOLAR TIME.

equator, imaginary great circle around the earth, equidistant from the two geographical poles and forming the base line from which LATITUDE is reckoned. Measuring c.24,000 mi (38,600 km), the equator intersects N South America, central Africa, and Indonesia. See also ASTRONOMICAL COORDINATE SYSTEMS.

Equatorial Guinea [gĭn'ē], officially Republic of Equatorial Guinea, republic (1992 est. pop. 389,000), 10,830 sq mi (28,051 sq km), W central Africa, comprising a mainland section, Río Muni, bordered by Cameroon (N), Gabon (E and S), and the Gulf of Guinea (W); and several islands, the most important of which is Bioko (formerly Fernando Po), in the Gulf of Guinea. MALABO, on Bioko, is the capital. Río Muni, with 93% of the nation's land and 75% of the population, comprises a low-lying coastal area that rises in the interior to c.3,600 ft (1,100 m); forests of okoume, mahogany, and walnut grow along the coast. Bioko is made up of three extinct volcanoes, the loftiest of which rises to c.9,870 ft (3,010 m); the island has abundant fertile volcanic soil. The economy of Equatorial Guinea is almost exclusively agricultural. Cacao (from Bioko) and coffee and timber (from Río Muni) are the principal cash crops, but the harvest has steadily decreased since independence. Ethnically, the population is largely Fang in Río Muni, where 75% of the population lives, and Bubi on Bioko. Most of the people speak a Bantu language. Traditional religions and Roman Catholicism are both practiced.



History. The island now called Bioko was discovered by Fernão do Po, a Portuguese navigator, in 1472, but Portugal ceded it to Spain in 1778. Spain formally acquired Río Muni in 1885. The boundaries of the possession were defined in a 1900 treaty, and Bioko and Río Muni, as well as several other islands, were grouped together as Spanish Guinea. In 1968 nationalist demands led to limited autonomy and then full independence (1973). The first president, Francisco Macias Nguema, imposed a brutal and despotic rule over the new nation; by the late 1970s thousands of refugees had fled the country, and the economy was virtually ruined. In 1979 a military coup led by Lt. Col. Teodoro Obiang Nguema Mbasoga overthrew Macias, who was executed, and Obiang Nguema became president. A one-party state was established in 1987, and in 1989 Obiang Nguema was elected to the presidency. Under pressure he permitted multiparty parliamentary elections in 1993, but unfair electoral laws led the major opposition parties to boycott the poll.

equestrianism, art of riding and handling a horse. Riding as a skilled sport developed in medieval times and now includes diverse styles. Horse shows, which originated (1864) in Ireland, test skills in such events as hunting, jumping, and dressage. Equestrian competition is part of the Olympics.

equilibrium: see STATICS.

equinox, either of two points on the celestial sphere where the ECLIPTIC and the celestial equator intersect (see ASTRONOMICAL COORDINATE SYSTEMS). The vernal equinox is the point at which the sun appears to cross the celestial equator from south to north; the autumnal equinox, the point where it appears to cross from north to south. These crossings occur about March 21 and September 23 and mark the beginnings of Northern Hemisphere spring and autumn. On either date night and day are of equal length (12 hr each) in all parts of the world. The equinoxes are not fixed points, but move westward along the ecliptic (see PRECESSION OF THE EQUINOXES).

equisetophyte, member of a division (Equisetophyta or Sphenophyta) of the plant kingdom consisting of the HORSETAILS and scouring rushes. The surviving genus, *Equisetum,* is descended from tree-sized fossil plants.

equity, body of legal principles and rules developed in the English Court of Chancery from the 15th cent. to correct injustices caused by the rigidity and formalism of COMMON LAW. It implies application of the standard of what seems naturally just and right rather than the strict rules of law. However, equity law gradually built its own rigid body of precedent, and today the distinction between equity and common law is much diminished.

Er, chemical symbol of the element ERBIUM.

era of good feelings, period (1817–23) in U.S. history after the decline of the FEDERALIST PARTY when there was little open party feeling. The term was coined during Pres. MONROE's goodwill tour of the North. Under the surface, however, vast sectional issues and personal rivalries were developing and broke loose in the campaign of 1824.

Erasistratus, fl. 3d cent. B.C., Greek physician. Leader of a school of medicine in Alexandria, his works were influential until the 4th cent. A.D. He suggested that air carried from the lungs to the heart is converted into a vital spirit distributed by the arteries, and he also developed a reverse theory of circulation (veins to arteries). He studied brain convolutions, named the trachea, distinguished between motor and sensory nerves, and considered plethora (hyperemia) to be the primary cause of disease.

Erasmus or **Desiderius Erasmus,** 1466?–1536, Dutch humanist. One of the great figures of the RENAISSANCE, he taught throughout Europe, influencing European letters profoundly from 1500. An ordained priest of the Roman Catholic Church, he edited the Latin and Greek classics and the writings of the Fathers of the Church, and made a Latin translation of the New Testament based on the original Greek. Among his original, satirical works, written in Latin, are *In Praise of Folly* (1509) and *The Education of a Christian Prince* (1515). He was intimate with most of the scholars of Europe; his English friends included HENRY VIII and Thomas MORE. Erasmus combined vast learning with a fine style, keen humor, moderation, and tolerance. He championed church reform but opposed the Protestant Reformation and remained a loyal Catholic. As a result, he and Martin LUTHER became bitter opponents, and in *On the Freedom of the Will* he denounced Luther's position on predestination.

Erastus, Thomas, 1524–83, Swiss Protestant theologian, originally named Lüber, Lieber, or Liebler. He opposed Calvinist doctrine and the punitive power of the church. The term **Erastianism** has come to represent approval of the dominance of civil authority in punitive matters and, by extension, complete dominance of state over church.

Erato: see MUSES.

Eratosthenes, c.275–c.195 B.C., Greek scholar. The author of works on literature, mathematics, astronomy, geography, and philosophy, he devised a world map and a system of chronology and measured the earth's circumference and tilt and the size and distance from earth of the sun and moon.

erbium (Er), metallic element, discovered by Carl G. Mosander in 1843 in the mineral gadolinite. A silvery, malleable RARE-EARTH METAL, erbium is in the LANTHANIDE SERIES. The rose-colored oxide

erbia is used as a coloring agent in glazes and glass. See ELEMENT (table); PERIODIC TABLE.

Ercilla y Zúñiga, Alonso de [ārthē'lyä ē thōō'nyēgä], 1533–94, Spanish poet. His *La Araucana* (1569–89), about the conquest of the ARAUCANIANS of Chile (in which he took part), is the finest EPIC of the Spanish GOLDEN AGE.

Erechtheum, temple on the Acropolis, Athens, a masterpiece of Greek architecture. Built between c.421 B.C. and 405 B.C., it is sometimes ascribed to the architect MNESICLES. It contained sanctuaries to Athena, Poseidon, and the Athenian king Erechtheus. Of the Ionic order, the temple has three porticos; the southern one is the famous Porch of the CARYATIDS.

Erenburg, Ilya Grigoryevich: see EHRENBURG.

erg: see WORK.

ergonomics, engineering science concerned with the physical and psychological relationship between machines and people who use them. The ergonomicist assesses these interactions and attempts to improve efficiency and reduce strain and discomfort. Applications include the design of automobile interiors and the placement of machine switches and gauges.

ergot, disease of rye and other cereals caused by a fungus (*Claviceps purpurea*), which appears on heads of rye as dark purple structures called ergots. The ergots, which resemble rye seeds, contain certain active substances (ALKALOIDS) that are poisonous—ergot poisoning was epidemic in the Middle Ages, for example, because bread was often made from ergot-contaminated rye. The ergots also contain alkaloids used as drugs, e.g., ergotamine to treat migraine headaches and ergonovine to stop postpartum uterine bleeding.

Ericsson, Leif: see LEIF ERICSSON.

Eric the Red, fl. 10th cent., Norse chieftain; discoverer and colonizer of Greenland. He discovered Greenland c.982 and led (c.986) a group of 500 colonists there, founding Brattah-lid. The colony may have lasted four or five centuries.

Erie, city (1990 pop. 108,718), seat of Erie co., NW Pa., on Lake Erie; inc. as a city 1851. Pennsylvania's only GREAT LAKES port, it is a shipping point for coal, iron, and other products. Its manufactures include machinery and plastics. Laid out in 1795 on the site of a French fort, it was the launching point of the American fleet in the battle of Lake Erie (1813), during the WAR OF 1812. There are several colleges in the city.

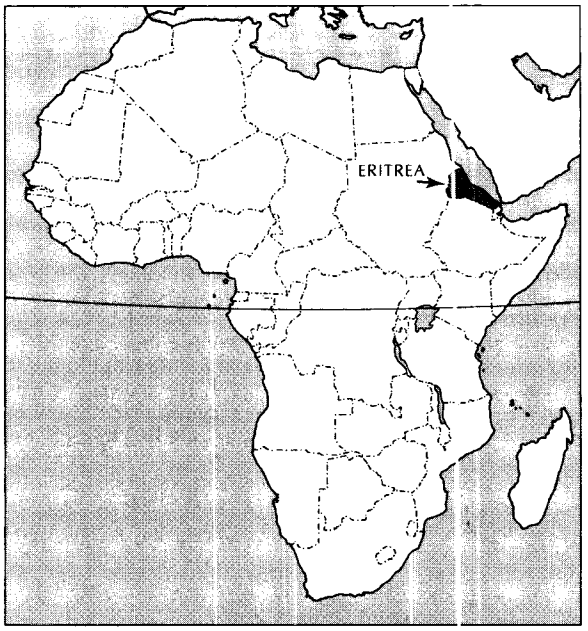
Erie, Lake, fourth largest (9,940 sq mi/25,745 sq km) of the GREAT LAKES, separating Canada (at Ontario) and the U.S. (at New York). It is 241 mi (388 km) long, 30–57 mi (48–92 km) wide, 572 ft (174 m) above sea level, and up to 210 ft (64 m) deep. Discharge of municipal and industrial wastes from lakeside cities polluted the lake and was banned in 1972; the lake has recovered somewhat. Lake Erie was discovered by JOLLIET in 1669. British and French and, later, British and Americans fought for its control in the 18th and 19th cent.

Erie Canal, historic artificial waterway (opened 1825) between Lake Erie and the Hudson R., providing a link between the Atlantic Ocean and the Great Lakes. Its use declined after 1850 as traffic was diverted to the railroads. It was replaced (1918) by the larger New York State Barge Canal, which follows part of its course.

Erikson, Erik, 1902–, Danish-American psychoanalyst; b. Germany. He became a MONTESSORI teacher in Vienna after 1927 and trained under Sigmund and Anna FREUD, specializing in child analysis. After emigrating to the U.S. (1933), he became engaged in varied clinical work, widening the scope of psychoanalytic theory to take greater account of social, cultural, and other environmental factors. In his most influential book, *Childhood and Society* (1950), he divided the human life cycle into eight psychosexual stages of development. His famous psychohistorical studies, *Young Man Luther* (1958) and *Gandhi's Truth* (1969), explore the convergence of personal and social history.

Erinyes: see FURIES.

Eritrea [ĕrĭtrē'ə], officially State of Eritrea, republic (1993 est. pop. 3,000,000), c.48,000 sq mi (124,320 sq km), NE Africa, bordered by the Red Sea (NE), Djibouti (SE), Ethiopia (S), and Sudan (NW). It gained its independence in 1993, having been federated (1952) with and then annexed (1962) by Ethiopia. ASMARA is the capital. Eritrea is an arid coastal strip (30 mi/50 km wide) in the southeast;



this narrows in the northwest, where it is bounded by the steep rise of the rugged central plateau. Most of Eritrea is sparsely populated by pastoral nomads, but there is settled agriculture in valleys of the central plateau to the north. The Red Sea ports of Assab (Aseb) and Massawa (Mesewa) are important to neighboring Ethiopia's economy. Products include citrus fruits, cereal grains and cotton. There is little industry beyond food processing. Eritrea has deposits of gold, copper, potash, and iron ore. Eritreans are ethnically related to the inhabitants of N Ethiopia and speak Tigrinya, Arabic, and several other languages. Coptic Christianity and Islam are the main religions.

History. Eritrea was part of the ancient Ethiopian kingdom of Aksum until the 7th cent. Thereafter Ethiopian emperors maintained an intermittent presence in the area until the mid-16th cent., when the Ottoman Empire won much of the coast. In the 1880s Italy occupied the coastal areas around Assab and Massawa. Eritrea became an Italian colony in 1890 and was the main base for Italy's invasion of Ethiopia (1935–36); it was captured by the British in 1941. It was federated to Ethiopia by the UN in 1952, and in 1962 it was annexed by Ethiopia. Secessionist movements sought to end the union, and through 1970s and 80s Eritrean guerrillas fought Ethiopian forces, eventually controlling most of the countryside. In 1991 they succeeded in capturing Asmara and the ports, giving them control of Eritrea. The long war devastated many parts of the country. In 1993 Eritreans overwhelmingly voted for independence, and former guerrilla leader Isaias Aferwerki became its first president.

ermine, northern WEASEL species (*Mustela erminea*), called short-tailed weasel in North America and stoat in the Old World. Its highly-prized white winter fur is used for coats, wraps, and trimmings.

Ernst, Max, 1891–1976, German painter. A member of the DADA movement and a founder of SURREALISM, he developed several devices to express his fantastic vision. Some of his landscapes are dreamlike and whimsical, while other works reveal a satanic, allegorical imagination. *Two Children Are Threatened by a Nightingale* is in the Museum of Modern Art (N.Y.C.).

Eros, in Greek mythology, god of love in all its manifestations. According to some legends, he was one of the oldest of the gods, born from CHAOS but personifying harmony. In most stories he was the son of APHRODITE and ARES and was represented as a winged youth armed with bow and arrows. In Roman myth, under the name Cupid or Amor, he was the naked infant son and companion of VENUS.

erosion, general term for the processes by which the surface of the

The key to pronunciation appears on page xiii.

earth is constantly worn away, principally by the abrasive action of running water, waves, GLACIERS, and wind. Streams and ocean waves, for example, erode bedrock by their own impact or by the abrasive action of the debris they carry. Rock surfaces are eroded by glaciers moving over them or by wind driving sand and other particles against them. In the U.S. the washing away of farmland topsoil is a problem. Erosion is also caused by strip mining and the removal of vast areas of plant cover, e.g., by careless land developers. Some methods of preventing soil erosion are reforestation, terracing, and special plowing techniques.

Erskine, Thomas, 1st **Baron Erskine,** 1750–1823, British jurist. Earlier a noted commercial lawyer, Erskine is best known as a defender of radicals at the time of the French Revolution. He defended Thomas PAINE's publication of *The Rights of Man* against a charge of sedition.

Ervin, Samuel James, 1896–1985, U.S. senator from North Carolina (1954–74); b. Morgantown, N.C. A distinguished jurist, he served (1948–54) on the North Carolina supreme court. As a Senate Democrat he favored a large defense establishment and opposed civil-rights legislation. He later became a constitutional expert and a civil libertarian. He gained national attention (1973–74) as chairman of the Senate hearings that probed the WATERGATE AFFAIR.

Erving, Julius, 1950–, African-American basketball player, nicknamed "Dr. J."; b. Roosevelt, N.Y. Playing for the ABA's Virginia Squires (1971–73) and New York Nets (1973–76), and the NBA's Philadelphia 76ers (1976–87), he excelled as a shooter, rebounder, and ball-handler. He led the ABA in scoring three times (1973–74, 1976) and was named most valuable player four times (ABA, 1974–76; NBA, 1981). With 30,026 career points (in the ABA and NBA combined), he ranks third on the all-time scoring list.

Es, chemical symbol of the element EINSTEINIUM.

Esaias, variant of ISAIAH.

Esau [ē'sô], in the BIBLE, son of ISAAC. He sold his birthright for pottage to his younger twin, JACOB, who also tricked him out of their father's blessing. Also known as Edom, Esau was the ancestor of the Edomites, a tribe consistently hostile to the Jews.

escape velocity, the velocity that a body must be given in order to escape the gravitational hold of some other larger body, e.g., the earth, moon, or sun. Escape velocity depends on the mass of the larger body and the distance of the smaller body from its center. The escape velocity from the earth's surface is about 7 mi/sec (11.3 km/sec).

escarole: see CHICORY.

Eschenbach, Wolfram von: see WOLFRAM VON ESCHENBACH.

M.C. Escher lithograph Convex and Concave, 1955

Escher, Maurits Corneille [ĕsh'ər], 1898–1970, Dutch artist. Primarily a graphic artist, he composed ironic works, often visual riddles that play with the pictorially logical and the visually impossible.

Escherichia coli or **E. coli,** common bacterium that normally inhabits the intestinal tracts of humans and animals but can cause infection in other parts of the body, especially the urinary tract. One strain, sometimes transmitted in hamburger meat, can cause serious infection resulting in diarrhea, anemia, kidney failure, and death. *E. coli* is widely used in laboratory research, especially in GENETIC ENGINEERING.

Escondido [ĕskəndē'dō], city (1990 pop. 108,635), San Diego co., S Calif.; inc. 1888. One of the fastest-growing U.S. cities, it is located in an agricultural valley. Fruit packing and avocado processing are important; manufactures include cereal products, textiles, and ink. A huge wild animal park is to the south.

Escorial or **Escurial,** monastery and palace in central Spain, near Madrid. It was built (1563–84) by PHILIP II to commemorate a victory over the French. A somber, massive granite pile, it includes a monastery, church, palace, mausoleum, college, and library. Designed by Juan Bautista de Toledo and Juan de Herrera, it has a famous art collection.

Esdraelon [ĕs"drəē'lən], plain, N Israel, c.200 sq mi (520 sq km), extending SE c.25 mi (40 km) between the coastal plain near Mt. Carmel and the Jordan R. valley. Once a swampy, malarial lowland, it has been drained and turned into one of Israel's most fertile and densely populated regions. Esdraelon is also called the plain of Jezreel or of Megiddo.

Esdras, two pseudepigraphic texts included in the Western canon and the Septuagint but placed in the APOCRYPHA in the Authorized Version, where they are called First and Second Esdras. The Western canon calls EZRA and Nehemiah First and Second Esdras, respectively, and the terms Third and Fourth Esdras are then used for the pseudepigraphic books. These are a series of apocalyptic visions and revelations to Ezra. Third Esdras antedates 100 B.C.; most critics date Fourth Esdras, as a whole, after A.D. 100.

Esfahan or **Isfahan,** city (1986 pop. 986,753), central Iran, on the Zayandeh R. Esfahan has long been known for its fine carpets, hand-printed textiles, and metalwork. Industrial products include steel and refined oil. Noteworthy from SASSANID times, it reached the height of its glory under Persian Shah ABBAS I, who made it his capital in 1598 and embellished it with many fine buildings, e.g., the beautiful imperial mosque, the Lutfullah mosque, and the royal palace. The city declined after its capture (1723) by the Afghans.

Eshkol, Levi, 1895–1969, Israeli statesman; b. Ukraine as Levi Shkolnik. A leader in the General Federation of Jewish Labor and the Mapai party, he served in David BEN-GURION's cabinet as minister of finance from 1952 to 1963, when he became prime minister. He led Israel in the Six-Day War (1967) and died in office. See also ARAB-ISRAELI WARS.

esker, long (up to many miles), narrow, winding ridge of stratified sand-and-gravel DRIFT, deposited in the beds of streams flowing through or beneath GLACIERS. Eskers occur in Scandinavia, Ireland, Scotland, and New England.

Eskimo, Algonquian and European name for the native inhabitants of the coast from the Bering Sea to Greenland and of the Chukchi Peninsula, in NE Siberia. Since the 1970s the Eskimo of Canada and Greenland have adopted the name **Inuit.** The Eskimo have remained largely of pure stock and, despite their wide dispersal, are extremely uniform in language (dialects of Eskimo-Aleut), physical type (Mongolic), and culture. Probably of Asian origin, Eskimos first appeared in Greenland in the 13th cent. Before the 20th cent. they lived in small bands, and almost all property was communal. Adapted to a severe environment, they got food, clothing, oil, tools, and weapons from sea mammals. Fish and CARIBOU were also important. Summer shelters were tents of caribou or seal skins, while cold-weather shelters were built of sod, wood, or stone; the igloo, or snow hut, was seldom used. Travel was by dogsled or kayak. Most Eskimos now live in modern settlements and use guns for hunting and snowmobiles for travel. The Eskimos' traditional animist religion has a rich mythology, and their art, which includes soapstone, ivory, and bone carvings, is skillfully rendered and well developed (see ESKIMO ART).

Eskimo-Aleut, language family consisting of Aleut (spoken on the Aleutian Islands) and Eskimo (spoken in Alaska, Canada, Greenland, and Siberia). See NATIVE AMERICAN LANGUAGES (table).

Eskimo art. The art of the Eskimo peoples arose some 2,000 years

ago in the Bering Sea area and in Canada. Traditional art consisted of small utilitarian objects, such as weapons and tools, as well as diminutive animals, carved and incised in walrus ivory, bone, and stone. The subjects of Eskimo art reflected their lives as hunters and fishermen, as well as their extensive mythology. Carved and painted wooden masks of the 19th cent. were used in various rituals. Modern Eskimo art dates from the late 1940s, when Canadians encouraged the development of art by native craftsmen working in traditional modes. Contemporary Eskimo art consists mainly of carved figures in smooth soapstone, ivory, and rough-surfaced whalebone, and lithographs printed with local stone that simplify and abstract the forms of the Eskimo hunters and their quarry.

ESP: see EXTRASENSORY PERCEPTION.

Esperanto: see INTERNATIONAL LANGUAGE.

Espinel, Vicente Martínez [āspēnĕl'], 1550–1624, Spanish novelist, poet, and musician of the GOLDEN AGE. He helped popularize the guitar and may have added its fifth string. His major work is the picaresque, semiautobiographical novel *History of the Life of the Squire Marcos of Obregón* (1618), the source of much of LE SAGE's *Gil Blas.*

espionage: see under INTELLIGENCE GATHERING.

essay, relatively short literary composition in prose in which the writer discusses a topic or tries to persuade the reader to accept a point of view. PLUTARCH and CICERO, among classical authors, wrote essays, but the term was first used by MONTAIGNE (1580) and Francis BACON (1597), two of the greatest essayists. The informal essay is personal, conversational, relaxed, and, frequently, humorous. Charles LAMB, William HAZLITT, and Mark TWAIN are among its masters. The formal essay, as written by Joseph ADDISON, Matthew ARNOLD, John Stuart MILL, Walter PATER, and others, is dogmatic, systematic, and expository. In the latter half of the 20th cent. the two styles of essays have tended to converge in a genre that has become more diversified in subject and conversational in tone. The magazine has been a chief vehicle for the dissemination of contemporary essays.

Essen, city (1987 pop. 620,594), North Rhine–Westphalia, W Germany, on the Ruhr R. An industrial center of the RUHR district, it was the site of the KRUPP steel works and is Germany's chief producer of electricity. The city grew up around a 9th-cent. Benedictine convent and was a small imperial state until it passed (1802) to Prussia. Badly damaged during WORLD WAR II, it was rebuilt after 1945. Landmarks include the cathedral (9th–14th cent.).

essential oils, volatile oils that occur in plants and in general give the plants their characteristic odors, flavors, or other such properties. Generally complex mixtures of organic compounds, they are used in perfumes, flavorings, and medicines. Among the plants notable for their essential oils are members of the following plant families: CARROT (e.g., ANISE, DILL, angelica), GINGER (cardamom), LAUREL (CINNAMON, CAMPHOR), MINT (peppermint, THYME), MYRTLE (CLOVE), and ORCHID (VANILLA). See also FATS AND OILS.

Essex, Robert Devereux, 2d earl of [dĕv'ərōō], 1567–1601, English courtier. After distinguishing himself as a cavalry officer in the Netherlands (1585–86), serving under his stepfather, the earl of LEICESTER, he became a favorite of ELIZABETH I and a rival of Sir Walter RALEIGH. In 1590 he angered the queen by his secret marriage to the young widow of Sir Philip SIDNEY. Advised by Francis BACON, he entered politics, hoping to seize power from the aging Lord BURGHLEY, but Elizabeth conferred power on Burghley's son, Robert Cecil, instead. On his own demand, Essex was sent to Ireland as lord lieutenant. There, he failed to quell the rebellion of the earl of Tyrone. On his return he was confined and later banned from court. He attempted a coup to establish his own party around the queen, but it failed and he was arrested. Elizabeth signed the warrant for his execution.

Essex, one of the kingdoms of Anglo-Saxon England. Probably settled by Saxons in the early 6th cent., Essex eventually approximated in size the modern counties of Essex, London, and Hertfordshire. King Sæbert of Essex accepted Christianity c.604, but the kingdom lapsed for a time into heathenism. Long dominated by MERCIA, Essex submitted (825) to WESSEX and became an earldom. It became part of the DANELAW in 886 but was retaken (917) by Edward the Elder of Wessex.

estate tax: see INHERITANCE TAX.

Estates-General: see STATES-GENERAL.

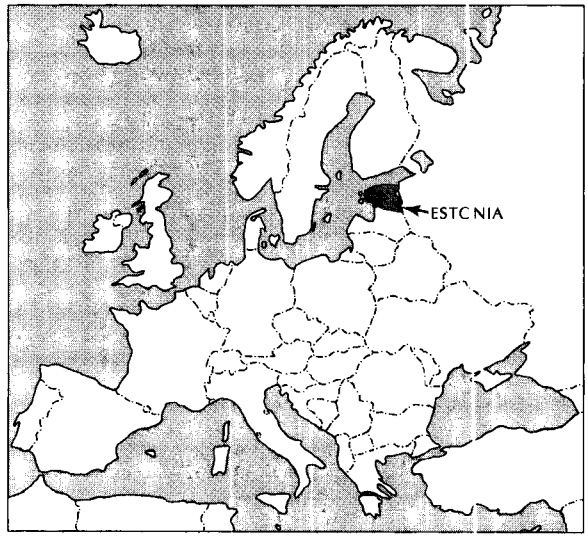
Este [ĕs'tā], Italian noble family, rulers of Ferrara (1240–1597) and of Modena (1288–1796), celebrated patrons of the arts. **Azzo d'Este II,** 996–1097, founded the family's greatness, and acquired Milan. His son, **Guelph d'Este IV,** d. 1101, founded the German line of GUELPHS. Among the Italian branch, **Azzo d'Este VII,** 1205–64, became (1240) chief magistrate of Ferrara. **Obizzo d'Este II,** d. 1293, was made perpetual lord of Ferrara (1264) and lord of Modena (1288). **Beatrice d'Este,** 1475–97, married Ludovico SFORZA; her sister **Isabella d'Este,** 1474–1539, was an important patron of Renaissance art. **Alfonso d'Este I,** 1476–1534, second husband of Lucrezia BORGIA (see BORGIA, family), fought for France in the Italian Wars (1494–1559). Pope JULIUS II declared (1510) his fiefs forfeited, but Alfonso aided Holy Roman Emperor CHARLES V against Pope CLEMENT VII, who was forced to recognize (1530) Alfonso's claims. His brother, **Ippolito I, Cardinal d'Este,** 1479–1520, was a patron of ARIOSTO. Alfonso's son, **Ippolito II, Cardinal d'Este,** 1509–72, built the Villa d'Este at Tivoli. In 1597 the direct male line died out and Pope CLEMENT VIII annexed (1598) Ferrara to the papal states. Another branch ruled Modena until deposed (1796) by the French.

Esterházy [ĕs'tĕrhä"zē], princely Hungarian family. **Paul, Fürst Esterházy von Galantha,** 1635–1713, took part in the defense of Vienna (1683) and the reconquest of Hungary from the Turks. His grandson, **Nikolaus Joseph, Fürst Esterházy von Galantha,** 1714–90, made (1766) F.J. HAYDN chief musical director at Eisenstadt and built the celebrated Esterházy palace there. His nephew, **Nikolaus, Fürst Esterházy von Galantha,** 1765–1833, was offered (1809) the crown of Hungary by NAPOLEON I but refused it.

Estes, Richard, 1936–, American painter; b. Evanston, Ill. One of the best-known American exponents of PHOTOREALISM, Estes is noted for his street scenes.

Esther, book of the OLD TESTAMENT, 17th in the Authorized Version. It is the story of the beautiful Jewish woman Esther (Hadassah), chosen as queen by the Persian king Ahasuerus after he has repudiated his previous wife, Vashti. Esther and her cousin Mordecai thwart the courtier Haman, who plots to massacre the Jews; Haman is hanged, and Mordecai becomes the king's chief minister. The feast of Purim (see JEWISH HOLIDAYS) celebrates this event. The historicity of the book is in question.

Estonia, Estonian *Eesti,* officially Republic of Estonia, republic (1992 est. pop. 1,607,000), 17,413 sq mi (45,100 sq km), N central Europe, from 1940 to 1991 a constituent republic of the USSR. It borders on the Baltic Sea (W); the gulfs of Riga and Finland (SW and N); Latvia (S); and Russia (E). The capital and largest city is TALLINN. Other important cities include Tartu and Narva. Industrial products include shale oil and gas, paper, and fertilizer. Fishing and farming are important. In addition to the Estonian majority, there are significant Russian and other minorities; Russians are the



The key to pronunciation appears on page xiii.

majority in NE Estonia. Estonian is the official language, and the dominant religion is evangelical Lutheranism. Since independence citizenship has generally been limited to ethnic Estonians, a practice widely criticized because it denies political and civil rights to the many Russian-speaking inhabitants.

History. The Estonians, ethnically and linguistically close to the Finns, settled the region before the 1st cent. A.D. Between the 13th and 18th cent. it was ruled in succession by Denmark, the Livonian Knights, Sweden, and Russia. Independent after 1920, it was forcibly annexed by the USSR in 1940 and was under German occupation from 1941 to 1944. Following World War II it was returned to Soviet control. In 1990 the Estonian parliament declared the Soviet annexation invalid and announced a transitional period leading to independence from the USSR. During the attempted hard-line coup against Soviet Pres. GORBACHEV, Estonia declared its immediate independence from the USSR, a status subsequently recognized by the Soviet government. In 1992 a new constitution was ratified and Lennart Meri was elected president. In 1993 Estonia signed a free-trade agreement with Latvia and Lithuania.

estrogen, any of a group of hormones produced chiefly in females by the reproductive organs and ADRENAL GLANDS. Estrogens are important in the regulation of the menstrual cycle (see MENSTRUATION) and in the development of secondary sex characteristics (pubic hair and breasts). In other animals, cyclical estrogen secretion induces estrus, or "heat." The ability of estrogens to suppress ovulation makes them major components in oral contraceptives. Estrogen replacement therapy is used to treat severe symptoms of menopause and retard OSTEOPOROSIS.

estuary, partly enclosed coastal body of water open to the ocean, so that fresh and salt water are mixed. Estuaries are extremely sensitive and ecologically important habitats, providing waterfowl sanctuaries and breeding and feeding grounds for many desirable life forms. They are often excellent harbors, and most large U.S. ports are located in them. The human impact on estuaries (e.g., landfill, sewage pollution, industrial effluents) can destroy the very properties of the estuary that facilitated development of the region.

etching, INTAGLIO process and the print produced from it. A metal plate, usually copper or zinc, is coated with a ground of acid-resistant resin or wax. The design is drawn on the ground with a needle, exposing the metal. Then the plate is submerged in acid, cutting into the exposed lines. The plate is removed frequently, and lines that are sufficiently deep are coated with varnish; others remain longer and produce darker, heavier lines when printed. In printing, the varnish is removed and the plate is warmed, coated with ink, wiped so that ink remains only in the grooves, covered with moist paper, and run through a press. Artists often alter etching plates, and several states of a work may exist. The plates have a finite life before their lines lose sharpness; many artists limit the number of prints and destroy the used plate. The art of etching evolved from ENGRAVING; both apparently originated in Germany. Among the foremost etchers are DÜRER, CALLOT, REMBRANDT, TIEPOLO, PIRANESI, GOYA, and WHISTLER.

Eteocles: see SEVEN AGAINST THEBES.

ethanol or **ethyl alcohol** (CH_3CH_2OH), a colorless liquid with characteristic odor and taste, commonly called grain alcohol or, simply, ALCOHOL. Ordinary ethanol is about 95% pure, the remaining 5% being water, which can only be removed with difficulty to give pure or absolute ethanol. Ethanol is the alcohol in beer, wine, and liquor and can be made by the FERMENTATION of sugar or starch. Denatured alcohol, for industrial use, is ethanol with toxic additives. Ethanol is used as a solvent in the manufacture of varnishes and perfumes; as a preservative; in medicines; as a disinfectant; and as a fuel and fuel additive. Ethanol is a soporific; if its presence in the blood exceeds about 5%, death usually occurs. Behavioral changes, impairment of vision, or unconsciousness occur at lower concentrations. See ALCOHOLISM.

Ethelfleda: see ÆTHELFLÆD.

ether or **aether,** in physics, a hypothetical medium for transmitting ELECTROMAGNETIC RADIATION, filling all unoccupied space. The theory of RELATIVITY eliminated the need for such a medium, and the term is used only in a historical context.

Etherege, Sir George, 1634?–1691, English dramatist. His witty *Comical Revenge; or, Love in a Tub* (1664) and *She Wou'd If She Cou'd* (1668) set the tone for the RESTORATION comedy of manners.

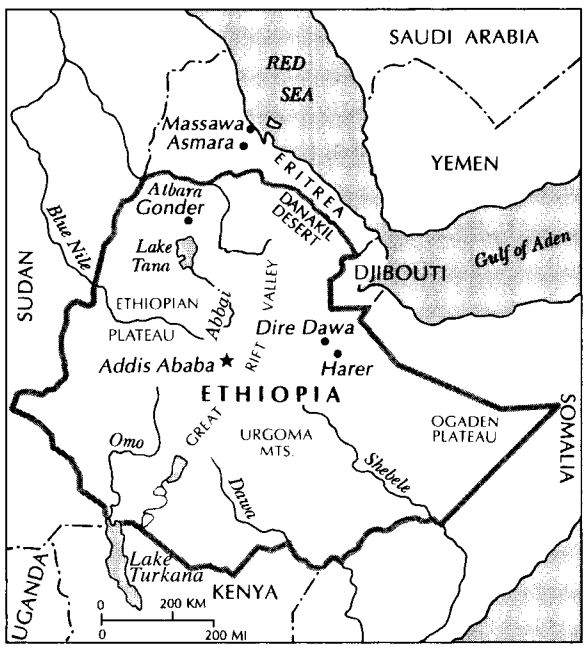
Ethical Culture movement, originating in the Society for Ethical Culture, founded (1876) in N.Y.C. by Felix ADLER. It stresses the ethical factor in all relations of life but insists on no definite ethical system. The society holds religious services, but members may also have other religious affiliations. The movement spread (1887) to England. In 1896 the International Union of Ethical Societies was formed.

ethics, in philosophy, the study and evaluation of human conduct in the light of moral principles, which may be viewed as the individual's standard of conduct or as a body of social obligations and duties. Theories of conscience have ascribed the moral awareness of right and wrong to divine will; to an innate sense (e.g., J.J. ROUSSEAU); or to the set of values derived from individual experience (e.g., LOCKE and MILL). Idealists such as PLATO have contended that there is an absolute good to which human activities aspire. Moral codes have frequently been based on religious absolutes, but KANT's categorical imperative attempted to set up an ethical criterion independent of theological consideration. The source of an ethical criterion has been variously equated with religion, the state (e.g., HEGEL and MARX), or the good of the individual or a group (as in the HEDONISM of EPICURUS; HOBBES; and the UTILITARIANISM of BENTHAM). Modern ethical theories include the instrumentalism of John DEWEY, for whom morality is relative to individual experience; and the intuitionism of G.E. MOORE, who postulated an immediate awareness of the morally good. More recently, Alasdair MacIntyre has cautioned against unbridled individualism and drawn on ARISTOTLE's notion of moral virtue as the mean between extremes, and Thomas Nagel has held that reason supersedes desire in moral decision making and that it is rational to choose altruism over narrow self-interest.

Ethiopia, republic (1993 est. pop. 51,000,000), 471,776 sq mi (1,221,900 sq km), NE Africa, formerly known as Abyssinia, bordered by Eritrea (N), Djibouti (NE), Somalia (E and SE), Kenya (S), and Sudan (W). ADDIS ABABA is the capital. Ethiopia may be divided into four geographic zones: from west to east they are the Ethiopian Plateau, a highland region including more than half the country and reaching a height of 15,158 ft (4,620 m) at Ras Dashan; the GREAT RIFT VALLEY, containing the Danakil Desert and several large lakes; the Somali Plateau, with heights of more than 14,000 ft (4,267 m) in the Urgoma Mts.; and the Ogaden Plateau, which is mostly desert. The Blue NILE (called the Abbai in Ethiopia) flows through the center of the Ethiopian Plateau from its source, Lake Tana, Ethiopia's largest lake. The economy is almost entirely agricultural, with most of the labor force engaged in subsistence farming. Coffee accounts for 60% of export earnings; other leading exports are oilseeds, hides and skins, and grain. Industry is limited to production of basic consumer needs. Some minerals are extracted on a small scale. Ethiopia's peoples are ethnically diverse and geographically separated. The Amhara and Tigréans (33% combined) of central and northern Ethiopia, who are Coptic Christians, are politically dominant. The largely Muslim OROMO, who live in the south and constitute about 40% of the population, are the largest ethnic group; there are also significant numbers of mainly Muslim Somalis in the east and southeast. Amharic is the official language, but English is widely spoken, and the various ethnic groups also speak their own languages.

History. According to tradition, the kingdom of Ethiopia was founded (10th cent. B.C.) by Menelik I, Solomon's first son, supposedly by the Queen of Sheba. The first recorded kingdom, however, is that of Aksum (Axum), probably founded (1st cent. A.D.) by traders from S Arabia and converted to Coptic Christianity in the 4th cent. With the rise of Islam in the 7th cent., Aksum lost control of the Red Sea routes, and a period of chaos followed. Order was restored in the 13th cent. with the founding of a new Solomonic dynasty. However, a war to expel the encroaching Somali, while successful (1543), exhausted the nation, which for the next two centuries was beset by ruinous civil wars. Finally, in 1889, MENELIK II, supported by Italy, instituted a strong rule. Claiming that Menelik had agreed to the establishment of a protectorate, Italy invaded Ethiopia in 1895 but was decisively defeated at Aduwa (1896). HAILE SELASSIE, who ascended the throne in 1930, faced a renewed

Italian threat, which culminated in a full-scale invasion in 1935. Ethiopia remained occupied until 1941, when it was liberated by the British. In 1952 the UN joined the former Italian colony of ERITREA in a federation with Ethiopia; Eritrea was annexed in 1962. In 1974 Haile Selassie was overthrown by army officers who proclaimed a socialist state and nationalized the economy. Colonel MENGISTU HAILE MARIAM brutally established (1977) himself as an authoritarian president. Under Mengistu, Ethiopia experienced serious political and economic problems, particularly a secessionist movement in Eritrea, a rebellion in Tigré prov. in the north, war with Somalia over the OGADEN, and a drought that caused widespread famine. In 1991 guerrilla successes drove Mengistu into exile. Tigréan guerrillas subsequently captured Addis Ababa, establishing an interim government with Meles Zenawi as president. The Eritreans triumphed as well, and in 1993 Eritrea became independent.



Ethiopic, extinct language of Ethiopia belonging to the Semitic subfamily of the Hamito-Semitic family of languages. See AFRICAN LANGUAGES (table).

ethnology, scientific study of the origin and functioning of humans and their cultures, usually considered a branch of cultural ANTHROPOLOGY. In the 19th cent. historical ethnology attempted to explain extant cultures by examining their early development. In the 20th cent. the comparative study of cultures has predominated.

ethology, study of animal behavior, especially its physiological, ecological, and evolutionary aspects. Originally, an organism's actions were classified as either instinctive behavior (actions not influenced by the animal's previous experiences, e.g., common reflexes) or learned behavior (actions dependent on earlier experiences, e.g., problem solving). Current emphasis is on the interaction between environmental and genetically determined responses, particularly during early development.

ethyl alcohol: see ETHANOL.

ethyne: see ACETYLENE.

Etna or **Aetna,** frequently active volcano, 10,958 ft (3,340 m), the highest in Europe, on the east coast of Sicily, S Italy. Snowcapped for much of the year, the volcano constantly threatens a densely populated agricultural area at its base. Its most recent eruption began in Dec. 1991.

Étoile, Place de l': see ARC DE TRIOMPHE DE L'ÉTOILE.

Eton, town, Berkshire, central England, on the Thames R. It is known chiefly for **Eton College** (est. 1440), the largest and most famous of the English public schools.

Etruria [itrŏŏr'eə], ancient country, W Italy, now Tuscany and W Umbria. It was the center of ETRUSCAN CIVILIZATION.

Etruscan art, the art of ETRURIA, which, by the 8th cent. B.C., spanned the area in Italy from Salerno to the Tiber R. The bronze and clay sculptures and carvings owe much to Greek sources but have a skillful, naturalistic character of their own. Sepulchral art was highly developed in centers such as Caere (Cerveteri) and Veii (Veio), as were portrait sculpture and FRESCO depictions of banquets and genre scenes. ROMAN ART absorbed the Etruscan by the 1st cent. B.C.

Etruscan civilization, highest civilization in Italy before the rise of Rome. Modern research tends to uphold the tradition of HERODOTUS that the Etruscans migrated to Italy from Lydia in Asia Minor in the 12th cent. B.C. A distinctive Etruscan culture evolved about the 8th cent. B.C., developed rapidly during the 7th cent. B.C., achieved its peak of power and wealth during the 6th cent. B.C., and declined during the 5th and 4th cent. B.C. Etruria comprised a loose confederation of city-states, including Clusium (now Chiusi), Tarquinii (Tarquinia), Veii (Veio), Volterra, and Perusia (Perugia). The Estruscans' wealth and power were in part based upon their knowledge of metalworking. They also made fine pottery. The Etruscan language cannot be classified into any known group of languages.

Eu, chemical symbol of the element EUROPIUM.

Euboea: see ÉVVOIA.

eucalyptus, evergreen shrubs or trees (genus *Eucalyptus*) of the MYRTLE family, a characteristic component of Australian flora. Also called ironbark, bloodwood, and gum tree, it is the sole food source of the KOALA and is valued for its timber and ESSENTIAL OILS. Several eucalyptus species are among the tallest trees known; *E. amygdalina regnans* reaches a height of over 300 ft (91 m).

Eucharist: see COMMUNION.

Euclid, fl. 300 B.C., Greek mathematician whose treatment of elementary plane GEOMETRY serves as the basis for most beginning courses on the subject. His great contribution was the use of a deductive system of proof in his *Elements,* a presentation of the mathematics of his day in 13 books. Studies of his work in the 19th cent. gave rise to several types of NON-EUCLIDEAN GEOMETRY.

Euclidean geometry, set of propositions in geometry that can be derived by rigorous logical steps from the five postulates stated by EUCLID in his *Elements.* The first three postulates state that it is possible (1) to draw a straight line from any point to any other point, (2) to produce a finite straight line continuously in a straight line, and (3) to describe a circle with any center and radius. The fourth postulate states that "All right angles are equal to one another," and the fifth posits that "If a straight line falling on two straight lines makes the interior angles on the same side less than two right angles, the two straight lines, if produced indefinitely, will meet on that side on which are the angles less than two right angles." A NON-EUCLIDEAN GEOMETRY replaces the fifth postulate with either of two alternative postulates.

Eudoxus of Cnidus [yōōdŏk'səs], 408?–355? B.C., Greek astronomer, mathematician, and physician. He was the first Greek astronomer to explain the movements of the planets scientifically, holding that a number of concentric spheres supported the planets in their paths. It is claimed that he calculated the length of the solar year, indicating a calendar reform similar to that made later by Julius CAESAR, and that he was the discoverer of parts of geometry included in EUCLID's work.

Eugene III, d. 1153, pope (1145–53), a Pisan named Bernard. He was driven (1146) from Rome by the agitation of Arnold of Brescia and the republicans. Eugene was a friend of BERNARD OF CLAIRVAUX and promoted the disastrous Second CRUSADE.

Eugene IV, 1383–1447, pope (1431–47), a Venetian named Gabriele Condulmer. Eugene at first opposed the Council of BASEL, but after being driven by rebellion from Rome to Florence (1434), he became conciliatory. He removed (1437) the council to Ferrara, where it proclaimed (1439) the reunion of the Eastern and Western churches (see COUNCIL, ECUMENICAL).

Eugene, city (1990 pop. 112,669), seat of Lane co., W Oreg., on the Willamette R.; inc. 1862. Located in a farming area, it has lumber, food-processing, and other industries. Tourism and convention business are important. The Univ. of Oregon is central to the city's cultural and recreational life.

Eugene of Savoy, 1663–1736, prince of the house of Savoy and general in the service of the Holy Roman Empire. He is regarded as one of the great military commanders of the modern age. He was a leading participant in the War of the SPANISH SUCCESSION, and he and the duke of MARLBOROUGH won the great battle of Blenheim (1704). He also fought the Turks and for Austria in the War of the POLISH SUCCESSION.

eugenics, study of methods to improve inherited human characteristics. It is directed chiefly at discouraging reproduction among those considered unfit (or those carrying genetic diseases) and encouraging it in the fit, although there are many difficulties in defining which traits are most desirable. The first half of the 20th cent. saw extreme coercive applications of such principles by governments ranging from miscegenation laws and enforced sterilization of the insane in the U.S. and other nations to the HOLOCAUST of Nazi Germany. In recent years, interest in eugenics has largely focused on GENETIC SCREENING.

Eugénie [yōōjē'nē], 1826–1920, empress of the French (1853–70), consort of NAPOLEON III. A Spanish noblewoman of great beauty, she married the emperor in 1853 and took an active part in government. After Napoleon III's deposition (1870) during the FRANCO-PRUSSIAN WAR, she fled to England.

euglenophyte, member of a small division (Euglenophyta) of photosynthetic aquatic organisms, variously classified in the protist, animal, or plant kingdoms. Most are unicellular; many have flagella and are motile. They resemble plants in that they have CHLOROPLASTS, but they also have gullets and lack cell walls, as animals do. The most characteristic genus is *Euglena,* common in ponds and pools.

Eulenspiegel, Till [oi'lən-shpē"gəl], a north German peasant clown of the 14th cent., immortalized in chapbooks describing his practical jokes. He is celebrated in Richard STRAUSS's tone poem and in stories and verse throughout Europe.

Euler, Leonhard [oi'lər], 1707–83, Swiss mathematician. The most prolific mathematician who ever lived, he worked at the St. Petersburg Academy of Sciences, Russia (1727–41, 1766–83), and at the Berlin Academy (1741–66). He contributed to areas of both pure and applied mathematics, including calculus, analysis, number theory, topology, algebra, geometry, trigonometry, analytical mechanics, hydrodynamics, and the theory of the moon's motion.

euphorbia: see SPURGE.

Euphrates, major river of arid SW Asia, formed by the confluence of the Kara and Murad rivers in E Turkey. It flows generally south, then southeast for c.1,700 mi (2,740 km) through deep canyons and narrow gorges in its upper course to a wide flood plain in Syria and Iraq. At BASRA the river joins with the TIGRIS R. to form the SHATT AL ARAB, which enters the PERSIAN GULF. An important source of irrigation for modern Syria and Iraq, the Euphrates contributed significantly to the development of many great civilizations in ancient MESOPOTAMIA. In the 1980s Turkey began constructing a series of dams on its upper course.

Eurasia, name of the great land mass that comprises the continents of EUROPE and ASIA.

Euric, d. c.484, king of the VISIGOTHS (466–c.484). He conquered the Iberian peninsula and S Gaul, made Toulouse his capital, and codified (475) Visigothic law.

Euripides, b. 480 or 485 B.C., d. 406 B.C., major Greek tragic poet. He wrote perhaps 92 plays, of which 19 are extant, including *Alcestis, Medea, Hippolytus, Andromache, The Trojan Women, Iphigenia in Tauris, The Phoenician Women, Orestes, Iphigenia in Aulis,* and *The Bacchae.* More realistic than AESCHYLUS or SOPHOCLES and rationalistic and iconoclastic toward the gods, he was interested in less-than-heroic characters. He resorted often to the device of the *deus ex machina* (god out of a machine) to resolve his plots. See also TRAGEDY.

Europa, in astronomy, natural satellite of JUPITER.

Europe, sixth largest continent, c.4,000,000 sq mi (10,360,000 sq km) including adjacent islands (1991 est. pop. 502,000,000). Actually a vast peninsula of the Eurasian landmass, it is conventionally separated from Asia by the URALS and Ural R. (E); the CASPIAN SEA and CAUCASUS (SE); and the BLACK SEA, BOSPORUS and DARDANELLES straits, and the Sea of Marmara (S). The MEDITERRANEAN SEA and Strait of GIBRALTAR separate it from Africa. The huge, young Alpine mountain chain, which includes the PYRENEES, ALPS, APENNINES, CARPATHIANS, and Caucasus, traverses the continent from west to east. MONT BLANC (15,771 ft/4,807 m) in the Alps and Mt. ELBRUS (18,481 ft/5,633 m) in the Caucasus are the highest points. The fertile European plain stretches from the Atlantic coast of France to the Urals. The climate is mild and generally humid in the west and northwest, dry in summer (Mediterranean type) in the south, and humid with cool summers in the east. Except for the north, Europe is densely populated. The countries of Europe are Albania, Andorra, Austria, Belarus, Belgium, Bosnia and Hercegovina, Bulgaria, Croatia, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, the Republic of Ireland, Italy, European Kazakhstan, Latvia, Liechtenstein, Lithuania, Luxembourg, Macedonia, Malta, Moldova, Monaco, the Netherlands, Norway, Poland, Portugal, Romania, European Russia, San Marino, Slovakia, Slovenia, Spain, Sweden, Switzerland, European Turkey, Ukraine, the United Kingdom (Great Britain and Northern Ireland), Vatican City, and Yugoslavia (see separate articles). LONDON, MOSCOW, and PARIS are the largest cities.

European Atomic Energy Community: see EUROPEAN UNION.

European Coal and Steel Community: see EUROPEAN UNION.

European Community: see EUROPEAN UNION.

European Economic Area: see EUROPEAN UNION; EUROPEAN FREE TRADE ASSOCIATION.

European Economic Community: see EUROPEAN UNION.

European Free Trade Association (EFTA), a customs union and trading bloc formed (1960) by Austria, Denmark, Britain, Norway, Portugal, Sweden, and Switzerland to promote free trade among members and seek broader economic integration of Europe. Iceland joined EFTA in 1971, and Finland in 1986. Liechtenstein, in a customs union with Switzerland, is also a member. Britain and Denmark left in 1973 to join the European Community (EC; see EUROPEAN UNION); Portugal did likewise in 1986. In 1991 the member countries of EFTA and the EC agreed to form a joint common market, the European Economic Area (EEA). Swiss voters rejected the pact in 1992, but the other EFTA nations ratified it and established the EEA in 1994; Liechtenstein must renegotiate its customs union before joining. Austria, Finland, Norway, and Sweden have applied for EC membership.

European Laboratory for Particle Physics: see CERN.

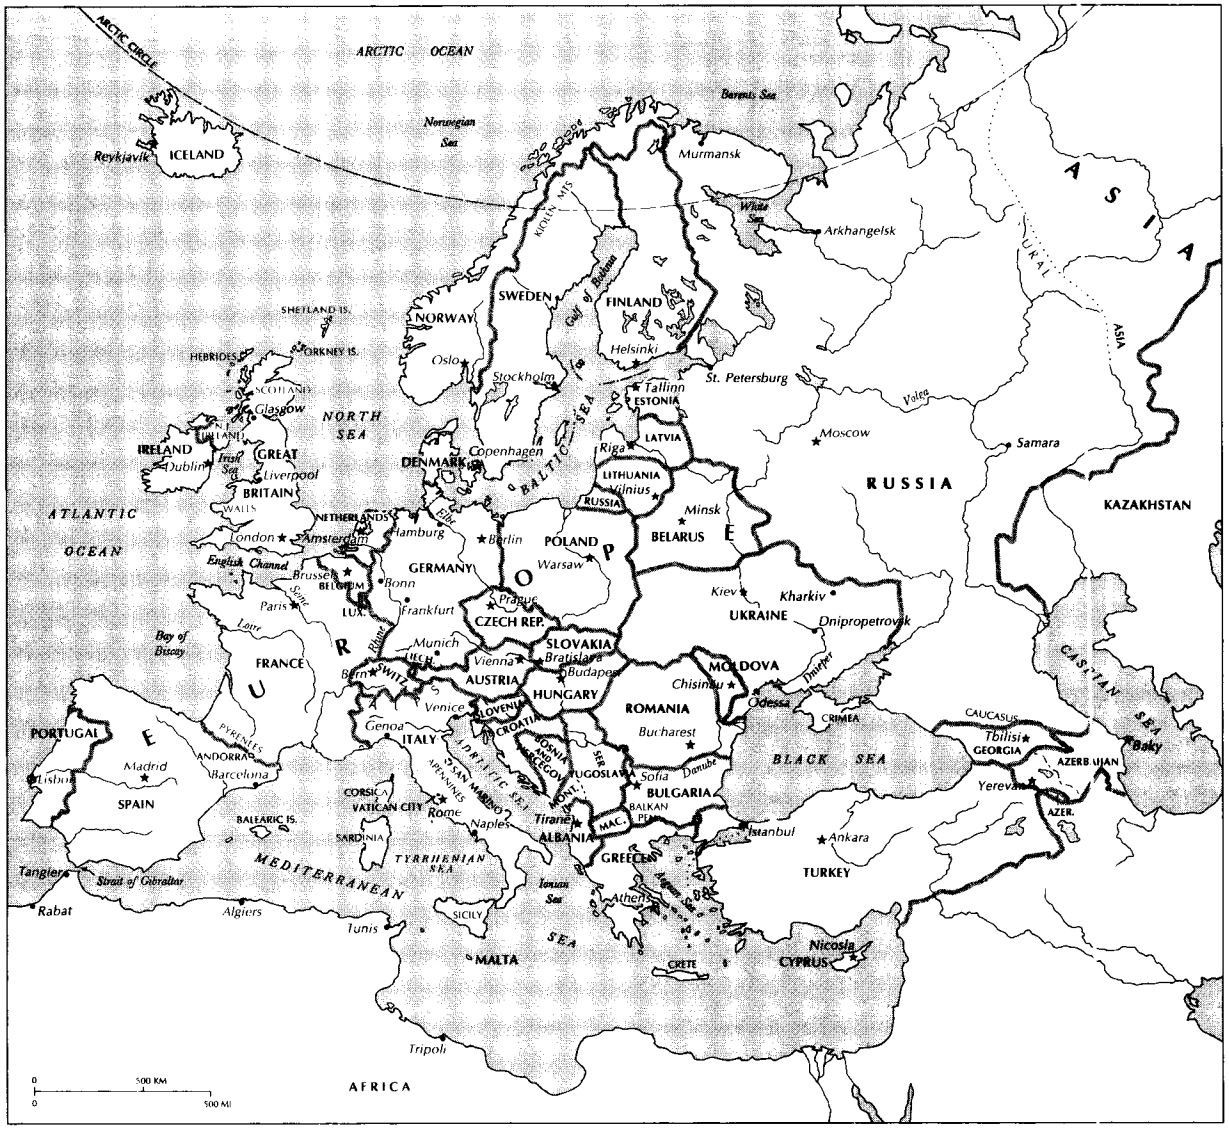
European Monetary System (EMS), arrangement by which most EUROPEAN UNION (EU) nations link their currencies to prevent large fluctuations relative to one another. It was organized in 1979 to stabilize foreign exchange and counter inflation among members. Periodic adjustments raise the values of strong currencies and lower those of weaker ones, but after 1986 changes in national interest rates were used to keep the currencies within a narrow range. The European Currency Unit (ECU) was also established. Regarded as a forerunner to a common EU currency, the ECU is a unit of accounting based on the currencies of EMS members and designed to facilitate international business within the European Community. In the early 1990s the system was strained by the differing economic policies and conditions of its members, most especially the newly reunified Germany. Britain and Italy withdrew (1992) from the exchange rate mechanism, and in 1993 the permitted range of fluctuation for the other currencies was increased (Greece has not participated in the exchange rate mechanism). In 1993 the **European Monetary Institute,** the first step in establishing an EU central bank (by 1999) and a common currency, was created.

European Organization for Nuclear Research: see CERN.

European Recovery Program: see MARSHALL PLAN.

European Space Agency (ESA), multinational agency formed in 1975 through the merger of the European Space Research Organization (ESRO) and the European Launcher Development Organization (ELDO). The financial contribution of each of the 13 member countries is determined by the projects it wishes to support. Major programs include the development of the Ariane rockets, the Spacelab scientific workshop (see SPACE EXPLORATION, table) carried into orbit by the space shuttle, and the SPACE PROBE *Giotto,* which flew by Halley's comet in 1985. **Arianespace,** a division of ESA, now conducts half of all commercial satellite launches.

European Union (EU), name given since the ratification of the



Maastricht treaty (Nov. 1993) to the **European Community** (EC) and other organizations responsible for a common EU foreign and security policy and for EU cooperation on justice and home affairs. Belgium, Britain, Denmark, France, Germany (originally West Germany), Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal, and Spain are full members. It includes the Council of the European Union (the former Council of Ministers), the European Commission, the European Parliament (directly elected by voters), and a Court of Justice. The EC, which is the core of the EU, resulted from the consolidation (1967) of three supranational groups: the European Coal and Steel Community (or Schuman Plan), established (1952) when six nations pooled their coal and steel resources to create unified products and labor markets; the Common Market, or European Economic Community (est. 1958), which sought the integration of the economies of Western Europe through the gradual elimination of internal tariff and customs barriers and the development of common price levels and a monetary union (see EUROPEAN MONETARY SYSTEM); and the European Atomic Energy Community, or Euratom (est. 1958), pledged to the common development of Europe's nuclear resources. The EC grew out of the efforts of such statesmen as Jean MONNET and Robert SCHUMAN of France and Paul Henri SPAAK of Belgium, who envisioned a unified Europe. In 1991 EC members signed the Treaty on European Union, or Maastricht treaty. It officially created the European Union, strengthened the parliament, called for the creation of an EU central bank (by 1999) and common currency, and took steps toward a common defense policy. The member countries also established a single market in 1993 and agreed to participate in a larger common market, the European Economic Area (est. 1994), with most of the EUROPEAN FREE TRADE ASSOCIATION nations.

europium (Eu), metallic element, purified by Eugène Demarcay in 1901. A silvery-white RARE-EARTH METAL, it has physical properties like those of other LANTHANIDE SERIES members, but its chemical properties resemble those of calcium. Europium is used in nuclear-reactor control rods. See ELEMENT (table); PERIODIC TABLE.

Eurydice: see ORPHEUS.

Euterpe: see MUSES.

euthanasia, either painlessly putting to death (positive, or active, euthanasia) or failing to postpone death from natural causes (negative, or passive, euthanasia), as in cases of terminal illness. The term *negative euthanasia* has come to mean the withdrawal of "extraordinary" means (e.g., intravenous feeding, respirators, and artificial kidney machines) of prolonging life. Positive euthanasia is illegal in the U.S., but physicians lawfully may refuse to prolong life when there is extreme suffering. In case of incapacitation a person's wishes concerning what life-support measures are or are not to be used to forestall death can be recorded in a LIVING WILL or preserved by a HEALTH-CARE PROXY. Whether measures used to keep

The key to pronunciation appears on page xiii.

the terminally ill alive are routine and justifiable or extraordinary remains a subject of debate. In the early 1990s in Michigan, Dr. Jack Kevorkian gained notoriety by assisting several people to commit suicide and became the object of a Michigan law (1992) forbidding such activity. In 1993 the Netherlands decriminalized, under a set of restricted conditions, voluntary positive euthanasia (essentially, physician-assisted suicide) for the terminally ill.

eutrophication, aging of a lake or slow-moving stream by biological enrichment of its water. In a young lake the water is cold and clear, supporting little life. With time, plant and animal life burgeon and organic remains begin to be deposited. As the lake grows shallower and warmer, marsh plants take root and begin to fill in the basin. Eventually the lake gives way to bog, finally becoming dry land. The natural aging of a lake may span thousands of years. However, wastes from human activities can accelerate the aging process, as with water POLLUTION. The prime pollutants are nitrates and phosphates, which greatly stimulate the growth of algae, producing a pungent surface scum. Decomposition of dead algae reduces the water's dissolved oxygen content, adversely affecting fish and other aquatic life forms typical of a mature lake.

Eutyches [yo͞o'tĭkēs], c.378–c.452, archimandrite in CONSTANTINOPLE, sponsor of Eutychianism (the first phase of MONOPHYSITISM) and leader of the opponents of NESTORIANISM. He taught that Jesus' humanity was absorbed in his one divine nature. Eutyches was deposed (448) but was reinstated (449) by the Robber Synod at Ephesus. The Council of CHALCEDON (1451) ended Eutychianism.

Evangelical Alliance, an association of individual Evangelical Christians of many denominations and countries, founded (1846) in London. In the U.S. the association was superseded (1950) by the NATIONAL COUNCIL OF CHURCHES OF CHRIST IN THE UNITED STATES OF AMERICA.

Evangelical United Brethren Church, Protestant denomination created (1946) by the union of the Evangelical Church and the United Brethren in Christ. Both bodies grew from evangelistic efforts, the former from the work of Jacob Albright (1807), the latter from the efforts of P.W. Otterbein and Martin Boehm (1800). The church had an episcopal government and stressed prayer, devotion to Jesus, and individual responsibility. In 1967 it became a part of the United Methodist Church.

evangelist [from Gr., = Gospel], title given to saints MATTHEW, MARK, LUKE, and JOHN. The title is now applied to Protestant preachers who preach personal conversion. Notable examples are John WESLEY, George WHITEFIELD, George FOX, Dwight Moody, and Billy GRAHAM.

Evans, Sir Arthur John, 1851–1941, English archaeologist. Keeper (1884–1908) of the Ashmolean Museum, Oxford, he excavated at KNOSSOS and uncovered remains of an ancient Cretan culture, which he called MINOAN. His writings include *The Mycenaean Tree and Pillar Cult* (1901) and *The Palace of Minos* (4 vol., 1921–35).

Evans, Mary Ann or **Marian:** see ELIOT, GEORGE.

Evans, Oliver, 1775–1819, American inventor; b. near Newport, Del. Evans developed and patented a number of grain-handling machines, including an elevator and a conveyor system, that later became standard equipment in U.S. mills. He pioneered the design of high-pressure steam engines. In 1804 he built the first land vehicle in the U.S. that moved under its own power, an engine-equipped dredge.

Evans, Walker, 1903–75, American photographer; b. St. Louis. He is noted for his studies of the rural South during the Great Depression. Many of his photographs of tenant farmers appeared in the book *Let Us Now Praise Famous Men* (1941), written by James AGEE.

Evans-Pritchard, Edward Evan, 1902–73, English social anthropologist. A specialist on Africa, he wrote *The Nuer* (1940), a classic of ethnography, and *Theories of Primitive Religion* (1965).

Evansville, city (1990 pop. 126,272), seat of Vanderburgh co., SW Ind., a port on the Ohio R.; inc. 1819. Commercial center for a coal, oil, and farm region, the city manufactures refrigeration and air-conditioning equipment, aluminum, plastics, drugs and machinery. The Univ. of Evansville and several other colleges are located there. Cultural institutions include a museum of arts and sciences and a philharmonic orchestra.

evaporation: see STATES OF MATTER.

Eve, in the BIBLE, the first woman, wife of ADAM, mother of CAIN, ABEL, and Seth. Led by the serpent to eat of the forbidden tree of knowledge, Eve tempted Adam to eat of the tree also. As punishment, they were banished from the Garden of EDEN.

Evelyn, John, 1620–1706, English diarist and author. A founder of the ROYAL SOCIETY (1660), he wrote on reforestation, natural science, art history, and numismatics. He is best known for his lifelong DIARY (pub. 1818), full of historical information on 17th-cent. England.

evening primrose, common name for a plant of the Onagraceae family, distributed worldwide. More specifically, it refers to a yellow, evening-flowering annual or biennial of the genus *Oenothera* grown in the temperate New World. The family also includes the FUCHSIA.

evening star, a common term for a bright planet, not a star, usually Venus, appearing in the western sky soon after sunset. In ancient times Venus was called Hesperus (Greek) or Vesper (Roman) when it was seen as the evening star.

Everest, Mount, 29,023 ft (8,846 m) high, highest mountain in the world, located in the central HIMALAYAS, on the Tibet-Nepal border. Named for Sir George Everest, the surveyor of the Himalayas, it was first climbed in 1953 by Sir Edmund HILLARY and Tenzing Norkay, after at least eight earlier attempts to scale it had failed.

Everett, Edward, 1794–1865, American orator and statesman; b. Dorchester, Mass. His long public career included service as congressman from Massachusetts (1825–35), governor of the state (1836–39), minister to England (1841–45), and U.S. senator (1853–54). During the CIVIL WAR he traveled throughout the North, speaking for the Union cause. He gave the principal speech at Gettysburg on the same occasion that produced Lincoln's famous GETTYSBURG ADDRESS.

Everglades, marshy, low-lying tropical area (maximum elevation 7 ft/2.1 m), S Florida, covering c.4,000 sq mi (10,000 sq km) south of Lake OKEECHOBEE and including Everglades National Park (see NATIONAL PARKS, table) and Big Cypress National Preserve. It is an area of solidly packed muck, saw grass, and marsh hummocks, and is rich in wildlife. Water from Okeechobee flows south through the Everglades to the Gulf of Mexico. The local SEMINOLE were driven out in the 1830s. From the late 19th cent., large tracts of land were drained to provide agricultural and grazing land. The Everglades have been adversely affected by agricultural development and urbanization (Miami and other cities), which have degraded and compete for the water on which its ecosystem depends. In 1988 the U.S. government sued to force Florida to restore the water quality. The state agreed to establish a cleanup program in 1992.

Evert, Chris (Christine Marie Evert), 1954–, American tennis player; b. Fort Lauderdale, Fla. Noted for her poise on the court and her strong, two-handed backhand, she captured the singles title at Wimbledon in 1974, 1976, and 1981 and won six U.S. Open singles titles between 1975 and 1982.

Everyman, late-15th-cent. English morality play. Summoned by Death, Everyman can persuade none of his friends—Beauty, Kindred, Worldly Goods—to go with him, except Good Deeds. This allegory is the basis of many later plays.

evidence, in law, material submitted to a court or other inquiring body to prove the facts in a legal dispute. The admissibility of evidence is governed by various rules. Particular evidence may be excluded on the grounds that it is irrelevant (having no bearing on the dispute), immaterial (having no impact on the substance of the dispute), or incompetent (outside the knowledge of the witness, e.g., hearsay). Rules of personal privilege excuse a witness from giving evidence relating to certain communications, e.g., between husband and wife; witnesses may also withhold self-incriminating evidence, and criminal defendants may refuse to testify. Evidence may be direct, such as that arising from personal observation, or it may be circumstantial, arising from facts that tend to prove other facts by inference. The kinds of evidence usually produced are physical objects (real evidence); written statements and documents (documentary evidence); oral testimony of the parties to the dispute (personal evidence); and technical or other specialized testimony (expert evidence). The burden of proof, i.e., the responsibility to establish a disputed fact, shifts according to the nature of the controversy: in a civil suit, each party must prove its affirm-

ative contentions by a preponderance of the evidence; in a criminal suit, the burden of proof rests on the prosecution, which must prove each element of its case beyond a reasonable doubt.

evolution, the process in which the genetic makeup of a population changes over a long period of time by such means as mutation, the result being the emergence of distinctive characteristics and new species. This process, also known as descent with modification, constitutes organic evolution. Inorganic evolution deals with the development of the physical universe from unorganized matter (see COSMOLOGY). Organic evolution conceives of life as having begun as a simple, primordial protoplasmic mass from which arose, through time, all subsequent living forms. The first clearly stated theory of evolution, that proposed by Jean LAMARCK in 1801, included the inheritance of ACQUIRED CHARACTERISTICS as the operative force in evolution. Subsequently (1858), Alfred Russel WALLACE and Charles DARWIN independently set forth a scientifically credible theory of evolution based on NATURAL SELECTION, focusing on the survival and reproduction of those species best adapted to the environment. This theory had a profound effect on scientific thought and experimentation. Although it has undergone modification in light of later scientific developments, the theory of evolution still rests on essentially the same grounds emphasized by Darwin, supported now by research in GENETICS as well as by comparative anatomy, embryology, geography, paleontology, and biochemistry. It has been challenged by those believing in the creation theory of the universe (see CREATIONISM). See also HUMAN EVOLUTION; MUTATION.

Evtushenko, Evgeny: see YEVTUSHENKO.

Évvoia or **Euboea,** island (1991 pop. 209,132), c.1,467 sq mi (3,800 sq. km), SE Greece, separated from the mainland by the Evripos strait. Its main industries are agriculture, magnesite and lignite mining, and marble quarrying. Settled by the ancient Greeks, it was divided among seven CITY-STATES, including Eretria, and later passed to Rome, Venice, and the Ottoman Turks before its incorporation (1830) into Greece.

Ewing, (William) Maurice, 1906–74, American geophysicist; b. Lockney, Tex. Ewing's oceanographic work was critical to the acceptance of the theory of PLATE TECTONICS. In the late 1930s he conducted the first seismic studies (1935) and the first photographing (1939) of the ocean floor. At Columbia Univ. he helped to found (1949) the Lamont-Doherty Geological Observatory and was (1949–72) its first director.

excess profits tax, levy on any profit above a standard level, usually imposed during wartime to prevent businesses from making unreasonable profits. Both the U.S. and Britain levied such taxes during the world wars. A "windfall profits" tax on oil revenues and royalties, enacted by the U.S. in 1980, was actually an EXCISE TAX on production, not profits.

excise tax, governmental levy on specific goods. Introduced by Holland in the 17th cent., excise taxes spread to England (1643) and the U.S. (1791). Both the federal government and state governments impose such taxes in the U.S., chiefly on gasoline, cigarettes, and liquor, and sometimes on furs, jewelry, and other goods classed as luxury items.

excommunication, formal expulsion of a person from a religious community, especially from the Roman Catholic Church. It involves a formal decree (or anathema) and public exclusion from the church, sacraments, and society. An excommunicate may return to the church on repentance.

excretion, process of eliminating from an organism the waste products of metabolism and other materials of no use. In one-celled organisms wastes are discharged through the cell's surface. Higher plants eliminate gases through the stomata, or pores, on the leaf surface, and multicellular animals have special excretory organs. In humans the main excretory organs are the KIDNEYS and other organs of the URINARY SYSTEM, through which URINE is eliminated, and the large intestine, from which solid wastes are expelled (see DIGESTIVE SYSTEM). Excretion also takes place in the SKIN, which eliminates water and salt in the form of sweat, and the LUNGS, which expel water vapor and carbon dioxide.

executive, in government, the chief administrative officer and the branch charged with carrying out the laws, as distinguished from the legislative (see CONGRESS) and judicial branches (see COURT SYSTEM; SUPREME COURT). A further distinction is sometimes made between the executives who decide policy and civil servants who implement it. Executive areas of concern include directing relations with foreign governments, commanding the armed forces, and approving or disapproving legislative acts. In the U.S., the president, the CABINET, and functionaries of the federal administrative agencies are considered part of the executive.

executive privilege, exemption of the president from the disclosure of information to congressional or judicial inquiries. It is usually invoked to protect confidential military or diplomatic operations or private presidential discussions. Efforts by presidents since Eisenhower to gain absolute privilege have been rejected by the courts.

exercise electrocardiography: see STRESS TEST.

Exeter, city (1991 pop. 98,125), capital of Devonshire, SW England, on the Exe R. It is the market and distribution center for SW England. Strategically located, it was besieged by the Danes (9th, 11th cent.), by William the Conquerer (1068), and by Yorkists (15th cent.). Its many historic sites include Roman ruins and the massive Norman Cathedral, whose library contains the famous Old English Exeter Book. The city's center was rebuilt after heavy bombings in WORLD WAR II.

existentialism, any of several philosophical systems of the 20th cent., all centered on the individual and the individual's relationship to the universe or to God. KIERKEGAARD developed a Christian existentialism that recognized the concrete ethical and religious demands confronting the individual, who is forced each time to make a subjective commitment. The necessity and seriousness of these decisions cause him dread and despair. Following Kierkegaard, HEIDEGGER and SARTRE, both students of HUSSERL, were the major thinkers of the movement. Heidegger rejected the label of existentialism, describing his philosophy as an investigation of the nature of being in which the analysis of human existence is only a first step. For Sartre, the only self-declared existentialist among the major thinkers, existence precedes essence: there is no God and no fixed human nature; thus, each person is totally free and entirely responsible for what he or she becomes and does. This responsibility accounts for human dread and anguish. Sartre influenced the writings of CAMUS and de BEAUVOIR. A Christian existentialism was developed in France by Gabriel Marcel, a Roman Catholic. The religious thinkers Karl BARTH, Paul TILLICH, Reinhold NIEBUHR, and Martin BUBER, and the philosopher Karl JASPERS are often included in the orbit of existentialism.

exobiology, search for extraterrestrial life throughout the universe. Philosophical speculation that there might be other worlds similar to ours dates back to the ancient Chinese and Greeks. Six basic parameters determine whether an environment is suitable for life as we know it: temperature, pressure, salinity, acidity, water availability, and oxygen content. Advanced life is restricted to a narrow range of these parameters, but primitive microorganisms can exist over a much wider range. Data already collected by SPACE PROBES essentially rule out advanced life on other planets of our solar system. Some scientists, however, have estimated that as many as 50,000 planets in our galaxy have earthlike conditions and that a substantial fraction of these are likely to have cultures as technologically advanced as our own; efforts to detect radio emissions from these civilizations have so far been unsuccessful. A continuing effort is being made to detect primitive life within our solar system, e.g., the surface landings (1976) of the Viking space probes.

Exodus, second book of the OLD TESTAMENT and of the PENTATEUCH, ascribed by tradition to MOSES. It is a religious history of the JEWS during their flight from Egypt, when they began to receive the Law. The events include the bondage in Egypt and God's preparations for liberation through the agency of Moses (1–11); the exodus proper, with the institution of the Passover (see JEWISH HOLIDAYS) and the crossing of the Red Sea (12–18); and the divine legislation at Mt. Sinai (19–40), including the giving of the TEN COMMANDMENTS.

exorcism, ritual driving out of evil spirits, as distinguished from rites of propitiation or evocation. It may be applied to a person, place, or thing by use of holy water, incense, incantation, or various rites. The New Testament records Jesus' ability to drive out

devils. The Roman Catholic Church regulates exorcism of demons from persons.

expert system or **knowledge-based system,** computer program that uses ARTIFICIAL INTELLIGENCE techniques to make decisions or recommendations or predict outcomes based on an analysis of data. An expert system typically has two parts: a very large database that contains specified knowledge in a given area and a set of rules (called the knowledge base) for reaching conclusions. Often the rules are an elaborate set of "if . . . then" statements. Expert systems have been applied to chemistry, geology, genetic engineering, medicine, and pharmacology.

explosive, a substance that undergoes rapid decomposition or combustion, evolving much heat and producing a large volume of gas. The heat evolved causes the gas to expand greatly, exerting the enormous pressure of explosions. Important explosives include TNT (trinitrotoluene), DYNAMITE, and NITROGLYCERIN. Chemical explosives are of two general kinds. Some, e.g., GUNPOWDER, are mixtures of readily combustible but not necessarily explosive substances, which, when set off (by ignition), undergo very rapid combustion. Others, called high explosives (e.g., TNT), are compounds whose molecules are unstable and can undergo explosive decomposition (detonation) without burning. The latter kind is used in warfare (e.g., in bombs, explosive shells, torpedoes, and missile warheads) and for blasting rock in mining and construction work. Nondetonating explosives, e.g., gunpowder and modern smokeless powders, are used as propellants for bullets and in fireworks. Nuclear explosives release energy by transformation of the atomic nucleus (see ATOMIC BOMB; HYDROGEN BOMB; NUCLEAR ENERGY).

exponent, in mathematics, a number or algebraic expression written above and to the right of another number or algebraic expression called the base. In the expressions x^2 and x^n, the number 2 and the algebraic letter n are the exponents, respectively, of the base x. A positive whole number as exponent indicates the power, or how many times the base is to be taken as a factor (e.g., $2^3 = 2 \times 2 \times 2 = 8$). Fractional and negative exponents indicate, respectively, roots and reciprocals (e.g., $8^{1/3} = \sqrt[3]{8}$ and $x^{-2} = 1x^2$). A zero exponent makes any quantity equal to 1.

exponential function: see article on *e*.

expressionism, term used to describe works of art and literature in which the representation of reality is distorted to communicate an inner vision, transforming nature rather than imitating it. **1** In painting and the graphic arts, certain movements such as the BRÜCKE (1905) and BLAUE REITER (1911) are described as expressionist. In addition, certain independent artists e.g., ROUAULT, SOUTINE, VLAMINCK, KOKOSCHKA, and SCHIELE, did personal visionary paintings. GAUGUIN, ENSOR, VAN GOGH, and MUNCH were the spiritual fathers of expressionism, as were such earlier artists as EL GRECO, GRÜNEWALD, and GOYA, whose works show striking parallels to modern expressionist sensibility. See also NEOEXPRESSIONISM. **2** In literature, expressionism is often considered a revolt against realism and naturalism, a seeking to achieve a psychological or spiritual reality rather than to record external events. In the novel, the term applies to KAFKA and JOYCE (see STREAM OF CONSCIOUSNESS). In drama, STRINDBERG is the forerunner of the group of early 20th-cent. dramatists to which the term is applied, e.g., Kaiser, TOLLER, and WEDEKIND. Their work was often characterized by a bizarre distortion of reality. The movement, though short-lived, gave impetus to a free form of writing and of theatrical production.

extinction, in biology, disappearance of a species of living organisms. Extinction occurs as a result of changed conditions to which the species is not suited. If no member of the affected species survives and reproduces, the entire line dies out, leaving no descendants. A species may also become extinct through its gradual evolution into a new species, as a result of natural selection for characteristics suited to new conditions. See also MASS EXTINCTION.

extortion, in law, the offense of obtaining from a person money or property not legally owed, through the use of fear, force, or authority of office. The demanding of ransom (a price for return of a captured person or property) or blackmail (money exacted by threat of exposure of criminal action or disreputable conduct) are forms of extortion.

extradition, delivery of a person, suspected or convicted of a crime, by the country of refuge to the country asserting jurisdiction. In the U.S. it also applies to the removal of a suspected criminal from one state to another. Its purpose is to prevent criminals from escaping punishment by fleeing to another jurisdiction. Extradition became common policy in the 19th cent., but since under international law it is not obligatory without a treaty, virtually all extradition occurs under the authority of specific bilateral treaties between nations. These may vary widely. Most European countries will surrender a criminal fugitive upon simple demand. The U.S. requires evidence that the accused has violated its law as well as the law of the demanding country. Like many nations, the U.S. will not surrender a fugitive wanted for a political crime (see ASYLUM).

extrasensory perception, commonly called ESP, any perception that occurs independently of the known sensory processes such as sight and smell. The main categories of ESP are telepathy, clairvoyance, and precognition. The existence of ESP is disputed, though systematic experimental research on the subject has been ongoing since 1930. See also PARAPSYCHOLOGY.

extraterritoriality, privilege of immunity from local law enforcement enjoyed by certain aliens while present in the territory of a foreign nation. It is extended to most diplomats and their families, who are considered by customary international law to be under the legal jurisdiction of their home countries and thus exempt from civil and criminal action, arrest, lawsuits, and, often, the payment of personal and property taxes. Certain transgressions, however, can result in an alien being declared persona non grata and expelled from the host country. Extraterritoriality also extends to public (i.e., state-owned) vessels in foreign territorial waterways and ports and to air space over national territory, although air space remains regulated by bilateral agreements because uniform standards of jurisdiction have not been established (see AIR, LAW OF THE).

extreme unction: see ANOINTING OF THE SICK.

extroversion and introversion, terms introduced into psychology by C.G. JUNG to identify two opposite psychological types: the extrovert, who is directed toward the external world and is most content when surrounded by people and activity, and the introvert, who is contemplative and enjoys solitude and the inner life. Jung believed that everyone has tendencies in both directions, although one direction generally predominates.

Eyck, Hubert van [vän īk], c.1370–1426, and **Jan van Eyck,** c.1390–1441, Flemish painters, brothers. Little is known of Hubert, who may have worked (1414–17) for Duke William of Bavaria and did settle in Ghent, Belgium. He is credited with an *Annunciation* and a stunningly detailed miniature diptych of the *Crucifixion and Last Judgment* (both: Metropolitan Mus.). Jan worked in the courts of Count John of Holland (1422–25) and Philip of Burgundy. His paintings are minutely descriptive, realistic depictions of portrait subjects and religious scenes with contemporary genre details. His oil technique reveals an unprecedented richness and intensity of color for the medium. The two brothers collaborated on their masterwork, the altarpiece of the Church of Saint Bavon in Ghent (completed by Jan in 1432). One or both brothers illuminated parts of the *Heures de Turin* manuscript. Jan's portrait oils include *Portrait of an Unknown Man* (1432) and *Man with the Red Turban,* perhaps a self-portrait (both: London), and the wedding picture *Giovanni Arnolfini and his Bride* (1434; National Gall., London). His splendid *Annunciation* is in Washington, D.C. (National Gall.). Jan van Eyck's influence on European painting is enormous.

eye, organ of vision. Like a camera, it has a diaphragm and variable focusing. The eyeball has three covering layers. The *sclera,* the outermost, is partially visible as the "white" of the eye. In the center of the sclera and projecting slightly is the cornea, a transparent membrane that acts as the window of the eye. The *choroid,* the layer beneath the sclera, is composed of dense pigment and blood vessels. Near the center of the visible part of the eye, the choroid forms the ciliary body, the muscles of which change the shape of the lens. The ciliary body merges with the iris, a muscular diaphragm that regulates the size of the pupil, the round opening through which light enters the eye. The iris, where it is not covered by the sclera, reveals the choroid's pigmentation, usually brown or blue (giving the eye its color). Behind the iris is the lens, a transparent, elastic, but solid ellipsoid body that bends light rays, fo-

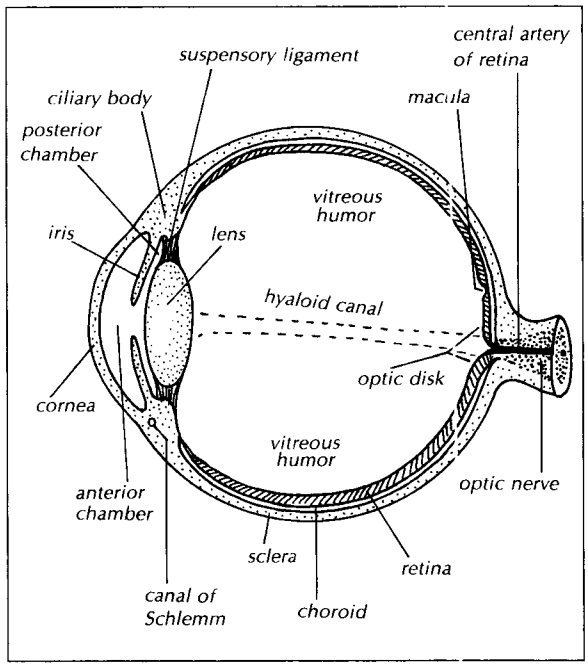
cusing them on the *retina,* the third tissue layer. The retina is a network of nerve cells, notably the rods and cones, that send impulses along the optic nerve to the brain. The rods provide vision in dim light, while the cones respond best to bright light and provide color vision. See also ASTIGMATISM; BLINDNESS; COLOR BLINDNESS; FARSIGHTEDNESS; GLAUCOMA; NEARSIGHTEDNESS.

Eyre, Lake, largest lake in Australia, located in the continent's arid interior, in central SOUTH AUSTRALIA state. It forms the continent's lowest point, 39 ft (12 m) below sea level, and frequently runs dry. Its waters are salty.

Ezekiel or **Ezechiel** [both: ēzē'kēēl], book of the OLD TESTAMENT, 26th in the Authorized Version, third of the Major PROPHETS, recounts the prophecies of Ezekiel, who preached (592–570 B.C.) to the Jews of the BABYLONIAN CAPTIVITY. It centers on the fall of JERUSALEM (586 B.C.): chapters 1–32 prophesy doom; 33–48, looking to restoration, end with a vision of the ideal Temple. Ezekiel stresses individual responsibility and is noted for its symbolic passages.

Ezra or **Esdras** [ĕz'drəs] and **Nehemiah** [nēəmī'ə], two books of the OLD TESTAMENT, 15th and 16th in the Authorized Version, tell the history of the JEWS from 538 B.C. to 432 B.C., from the decree of CYRUS THE GREAT permitting the return from the BABYLONIAN CAPTIVITY to the dedication of JERUSALEM's new walls. The book of Ezra concerns the return of one group, the rebuilding of the Temple, and the return of Ezra "the priest, the scribe" with orders to restore Jewish Law. Nehemiah tells of the return of Nehemiah, who was a cupbearer to ARTAXERXES I, the rebuilding of the walls, and the reading of the Law and signing of a covenant.

Ezzelino da Romano [ĕt"sālē'nō dä rōmä'nō], 1194–1259, Italian Ghibelline leader (see GUELPHS AND GHIBELLINES). He held Verona and other cities, and after 1237 he was the greatest power in N Italy. He was defeated (1258) at Milan. Placed by DANTE in the *Inferno,* he is remembered as a cruel tyrant.



Cross-section of human eye

F

F, chemical symbol of the element FLUORINE.

Fabergé, Peter Carl, 1846–1920, Russian goldsmith. As head of the studio established by his father, he was responsible for the design of elegant jewelry and objets d'art. Fabergé was particularly well known for the richly imaginative jeweled and enameled Easter eggs he created for the Russian royal family. He died in exile in Switzerland.

Fabian Society, British organization founded (1884) to promote evolutionary socialism. Its exponents included George Bernard SHAW, Beatrice Potter WEBB, and Sidney WEBB. The Fabians rejected Marxism and denied the need for violent class struggle. After publication of the *Fabian Essays* (1889), they gained widespread recognition. The Fabian Society played a leading role in the creation of the LABOUR PARTY, of which it remains an affiliated research and publicity agency.

Fabius, ancient Roman gens. **Quintus Fabius Maximus Rullianus** or **Rullus,** d. c.291 B.C., was a renowned general, especially after his victory over the Etruscans, the Samnites, and their allies at Sentinum (295). His descendant, **Quintus Fabius Maximus Verrucosus,** d. 203 B.C., the opponent of HANNIBAL, was called Cunctator [Lat., = delayer] because of his delaying tactics, from which the term *Fabian,* referring to a waiting policy, is derived. Tired of his inaction, the Romans replaced him (216 B.C.) and were defeated at Cannae.

Fabriano, Gentile da: see GENTILE DA FABRIANO.

facsimile machine or **fax machine,** device for transmitting copies of printed images over telephone lines. A facsimile machine scans a page to make an electronic representation of its text or graphics, compresses the data to save transmission time, and transmits it to another facsimile machine. The receiving machine decrypts the signal and uses a printer (usually built in) to make a facsimile of the original page. A computer equipped with a fax MODEM, printer, and appropriate software can duplicate many functions of a facsimile machine.

Faeroe Islands or **Faröe Islands** [fâr'ō], group of volcanic islands (1992 est. pop. 48,600), 540 sq mi (1,400 sq km), Denmark, located in the N Atlantic Ocean c.850 mi (1,370 km) from mainland Denmark. There are 17 inhabited and 5 uninhabited islands; Steymoy, with Tórshavn as the capital, and Østerø are the largest islands. Inhabitants speak Faeroese, a Germanic language related to Danish. Settled by Norsemen in the 8th cent., the islands became part of Norway in the 11th cent., when they were Christianized, and passed to the Danish crown in 1380. They became a British protectorate (1940–45) in World War II and gained self-government (1948) after an aborted independence movement.

Fahd ibn Abdul Aziz, 1922–, king of Saudi Arabia (1982–). A son of IBN SAUD, the founder of Saudi Arabia, Fahd served (1962–75) as interior minister and was named (1975) crown prince by his half-brother King KHALID. He was a powerful shaper of Saudi foreign and domestic policy under Khalid, on whose death (1982) he succeeded to the throne. Fahd has encouraged limited modernization of Saudi Arabia, but the new constitution (1992) that established

The key to pronunciation appears on page xiii.

an appointed consultative national council left unchanged the royal family's control of the government.

Fahrenheit temperature scale: see TEMPERATURE.

Fainzilberg, Ilya Arnoldovich: see ILF, ILYA ARNOLDOVICH.

Fairbanks, Douglas, 1883–1939, American film actor; b. Denver. He starred in such swashbucklers as *The Mark of Zorro* (1920), *The Thief of Bagdad* (1924), and *The Black Pirate* (1926). His son, **Douglas Fairbanks, Jr.,** 1909–, b. N.Y.C., is an actor whose films include *The Prisoner of Zenda* (1937) and *Gunga Din* (1939).

Fairbanks, city (1990 pop. 30,843), Fairbanks North Star Borough, central Alaska, on the Chena R.; inc. 1903. Oil, gas, lumbering, and mining, as well as the Univ. of Alaska, are important to the economy. The discovery of gold (1902) and the building of the Alaska railroad caused the city to develop.

Fair Labor Standards Act: see WAGES AND HOURS ACT.

fairy, in folklore, one of a variety of supernatural beings having magical powers. Belief in fairies has existed from earliest times, but the concept and description of the creatures varies widely, from the tiny old men, or leprechauns, of Irish legend, to beautiful enchantresses like the Germanic Lorelei, to human-eating giants, or ogres. Particular kinds of fairies include the Arabic JINNI, the Scandinavian troll, the Germanic elf, and the English pixie. Although usually represented as mischievous and capricious, they could also be loving and bountiful. Among the great adapters of popular fairy tales were Charles PERRAULT, the brothers GRIMM, and Hans Christian ANDERSEN.

Faisal or **Feisal,** kings of Iraq. **Faisal I,** 1885–1933 (r.1921–33), joined (1916) with T.E. LAWRENCE in the Arab revolt against the Turks. The British, largely through the efforts of Gertrude BELL, named him king. He was generally pro-British and was succeeded by his son, Ghazi. Ghazi's son, **Faisal II,** 1935–58 (r.1939–58), was generally pro-Western in his short majority reign. He was killed in a revolution that overthrew the Iraqi monarchy.

Faisalabad, formerly **Lyallpur,** city (1981 pop. 1,104,209), NE Pakistan. The commercial center of a region that grows cotton and wheat, it produces textiles, pharmaceuticals, and other manufactures. The city was founded c.1895 by Sir James Lyall, a British civil servant and Orientalist.

Faisal ibn al Saud, 1905–75, king of Saudi Arabia (1964–75). A son of IBN SAUD, he forced his brother King Saud to abdicate in 1964 and assumed the throne. He used his country's vast oil revenues to finance far-reaching economic and social reforms. A deranged nephew assassinated him.

Falange [Span., = phalanx], Spanish political party, founded 1933. Adhering to FASCISM, the Falange, through its militia, joined the Nationalist forces of Francisco FRANCO in the SPANISH CIVIL WAR (1936–39). The party's founder, José António Primo de Rivera, son of the dictator Miguel PRIMO DE RIVERA, was executed by the Loyalists in the civil war. In 1937 Franco took control of the Falange, making it the official party of his regime. By the 1970s its power had waned.

Falashas, group of approximately 45,000 Ethiopians who practice a form of JUDAISM; they call themselves Beta Israel [house of Israel]. Their scriptures include the Old Testament and certain apocryphal books, and they adhere to certain traditions that correspond to some of those found in the MIDRASH and TALMUD. In modern times there were POGROMS against the Falashas, and some, known as the Falash Mura, converted to Christianity. In 1984 and 1991 airlifts brought thousands of Falashas to Israel, and Ethiopia subsequently agreed (1991) to permit Israel to evacuate those still remaining.

falcon, long-winged BIRD of prey (genus *Falco*) related to the HAWK. Widely distributed, falcons are typified by notched beaks. They range in size from the 6½-in. (16.5-cm) falconet to the 24-in. (60-cm) gyrfalcon. The commonest and smallest American falcon is the sparrow hawk (*F. sparverius*). Falcons lay their eggs on the ground, on cliff ledges, or in deserted hawk or CROW nests. The peregrine falcon and gyrfalcon are used in falconry.

Faliscan [fəlis'kən], extinct language belonging to the Italic subfamily of the Indo-European family of languages. See LANGUAGE (table).

Falkland Islands, Span. *Islas Malvinas,* British crown colony (1991 pop. 2,121), 4,618 sq mi (11,961 sq km), S Atlantic. Consisting of two large islands and some 200 small ones, they are economically dependent on sheep-raising. The capital is Stanley. Long claimed by Britain, they have been under British rule since 1832, when Argentine colonists were expelled, but Argentina continued to claim them. In 1982 they were seized by Argentina and retaken by British troops. From 1908 to 1985 South Georgia and the South Sandwich Islands were dependencies of the Falklands.

Falkner, William: see FAULKNER, WILLIAM.

Falla, Manuel de [fä'lyä], 1876–1946, Spanish composer. He was influenced by the IMPRESSIONISM of DEBUSSY and RAVEL but retained Spanish characteristics, e.g., the flamenco tradition. His works include *Nights in the Gardens of Spain* (1916; for piano and orchestra) and the ballets *El Amor Brujo* (1915) and *The Three-Cornered Hat* (1917).

fall line, line where waterfalls occur in rivers passing from areas of relatively hard rocks (as in the Piedmont of the E U.S.) to areas of softer rock (as in the Atlantic Coastal Plain). It is usually the head of navigation. Fall-line cities in the U.S. include TRENTON, N.J.; WASHINGTON, D.C.; RICHMOND, Va.; RALEIGH, N.C.; and AUGUSTA, Ga.

fallout: see ATOMIC BOMB; HYDROGEN BOMB.

Fall River, industrial city (1990 pop. 92,703), SE Mass., a port on Mt. Hope Bay, at the mouth of the Taunton R.; settled 1656, inc. 1854. It was once the leading cotton textile center in the U.S., and textiles and clothing are still the chief manufactures, although industry has diversified. The trial (1892) of Lizzie BORDEN took place there.

falsetto: see VOICE.

Family Compact, popular name for a small clique of wealthy, powerful men who dominated Upper Canada (see ONTARIO) from the late-18th to mid-19th cent. They controlled the government, monopolized political offices, and strongly influenced banking, land grant issues, education, the courts, and Anglican church affairs. New settlers who were thus denied political opportunity formed an opposition that became the Reform party.

family leave, social policy permitting workers to take a specified amount of time off from the job to attend to pressing family needs. The U.S. Family and Medical Leave Act (1993), which covers companies with 50 or more workers, mandates up to 12 weeks of leave per year for various family medical emergencies and for the birth or adoption of a child. Many states also have family leave laws, and in many European countries and Japan, longer periods of paid leave are common.

family planning: see BIRTH CONTROL.

family therapy, form of PSYCHOTHERAPY dealing with the improvement of family relationships and the emotional environment, based on the assumption that identified psychological problems in one member of a family are not isolated, but are the result of unhealthful interactions within the entire family unit. Unlike GROUP PSYCHOTHERAPY, which concentrates on the individual within a group, family therapy focuses on the emotional life of the family as a whole. By defining the existing family structure and clarifying patterns, conflicts, and alliances, it enables family members to develop alternative patterns of relating to each other. Treatment may include both family and individual sessions with one or a team of therapists.

Fanfani, Amintore, 1908–, Italian political leader. A Christian Democrat, he served as foreign minister (1965, 1966–68), president of the Senate (1968–73, 1976–82), and as premier (1954, 1958–59, 1960–63, 1982–83).

Fantin-Latour, Ignace Henri Jean Théodore, 1836–1904, French painter and lithographer. Master of an almost photographic technique, he is best known for portrait groups of famous contemporaries, e.g., *The Studio at Batignolles* (Louvre).

Faraday, Michael, 1791–1867, English scientist. Despite little formal education he laid the foundations of classical FIELD theory, later developed by James Clerk MAXWELL. Faraday worked (1813–62) at the laboratory of the Royal Institution in London, becoming its director in 1825. He developed the first dynamo (in the form of a copper disk rotated between the poles of a permanent magnet), the precursor of modern dynamos and GENERATORS. From Faraday's and Joseph HENRY's independent discoveries (1831) of electromagnetic INDUCTION stemmed a vast development of electrical machinery for industry. In 1825 Faraday discovered the compound BENZENE. He formulated (1834) Faraday's law, which states that the number of MOLES of substance produced at an electrode during

ELECTROLYSIS is directly proportional to the number of moles of electrons transferred at that electrode.

farce, light theater piece with characters and events exaggerated to produce broad, simple humor. An element in the plays of ARISTOPHANES, PLAUTUS, and TERENCE, it appeared as a distinct genre in 15th-cent. France. Nicholas UDALL's *Ralph Roister Doister* (1566) is an early English example. Broad, ribald humor, absurdity, and buffoonery are also found in works not considered farces, e.g., the plays of MOLIÈRE. In the 20th cent. farce found expression in films by such artists as Charlie CHAPLIN and the MARX BROTHERS and in television by such figures as Lucille BALL and the cast of *Saturday Night Live.*

Far East, term commonly used today in a restricted sense for the region comprising E Asia (i.e., CHINA, JAPAN, KOREA, MONGOLIA) and the RUSSIAN FAR EAST. It is also sometimes extended to include SOUTHEAST ASIA. As used in the 19th cent., the term denoted those portions of the Asian continent farthest removed by sea from the W European maritime powers trading there.

Fargo, city (1990 pop. 74,111), seat of Cass co., E N.D., on the Red R., opposite Moorhead, Minn.; inc. 1875. The largest city in the state, Fargo developed with the coming (1871) of the railroad. It remains a railroad hub and river port, a regional finance center, and the trade center of a great spring wheat and livestock region. North Dakota State Univ. is located in the city.

Farid ad-Din Attar [ät-tär'], d. c.1229, Persian poet, one of the greatest Muslim mystic poets. Of his many and varied works, his masterpiece is *Conference of the Birds,* an allegory surveying the philosophy and practices of SUFISM.

Farley, James Aloysius, 1888–1976, American political leader; b. Rockland co., N.Y. As Democratic National Committee chairman, he managed (1932, 1936) F.D. ROOSEVELT's presidential campaigns. He served (1933–40) as U.S. postmaster general but resigned to protest Roosevelt's third term.

Farm Credit Administration (FCA), independent U.S. agency formed (1933) to supervise and coordinate the Farm Credit System, which provides credit to American farmers and their cooperatives. The system, which is borrower-owned, includes federal land-bank and land-credit associations, intermediate credit banks, banks for cooperatives, and production credit associations.

Farmer-Labor party, U.S. political organization founded (1919) to unite agrarian and organized labor interests. It promoted nationalization of various industries and resources but garnered little support and dissolved after 1924. The Minnesota Farmer-Labor party, unaffiliated with the national party, elected a governor and several U.S. senators and congressmen in the 1920s and 30s. It merged (1944) with the Minnesota Democratic party.

Farnese [färnā'zā], Italian noble family that ruled Parma and Piacenza from 1545 to 1731. In 1534 Alessandro Farnese became pope as PAUL III. He created (1545) the duchy of Parma and Piacenza for his illegitimate son, **Pier Luigi Farnese,** 1503–47, who was assassinated by nobles. His son and successor, **Ottavio Farnese,** 1520–86, married MARGARET OF PARMA. Their son, **Alessandro Farnese,** 1545–92, duke 1586–92, was a general in the service of PHILIP II of Spain. Appointed (1578) governor in the rebellious Netherlands, he took Tournai, Maastricht, Breda, Bruges, Ghent, and Antwerp from the rebels. In 1590 he entered France to aid the Catholic League against HENRY IV of France and relieved Paris (1590) and Rouen (1592). He is considered one of the age's greatest generals. The last duke of the line, Antonio, died in 1731. His niece, **Elizabeth Farnese,** 1692–1766, married (1714) PHILIP V of Spain and for a time virtually ruled Spain. She secured (1748) Parma and Piacenza for her son Philip, who founded the line of BOURBON-Parma.

Faröe Islands: see FAEROE ISLANDS.

Farouk, 1920–65, king of Egypt (1936–52), son and successor of Fuad I. He was regarded as a corrupt playboy and was deposed by the 1952 military coup led by Gamal Abdal NASSER. His infant son, Fuad II, succeeded him briefly.

Farquhar, George, 1678–1707, English dramatist; b. Ireland. The geniality of such plays as *The Constant Couple* (1699) and his masterpiece, *The Beaux' Stratagem* (1707), mark Farquhar as a transitional figure between RESTORATION and 18th-cent. drama.

Farragut, David Glasgow, 1801–70, American admiral; b. near Knoxville, Tenn. In the U.S. CIVIL WAR, he boldly sailed (1862) up the Mississippi R. and defeated an enemy flotilla enabling Union forces to take New Orleans. In 1864, uttering the famous cry "Damn the torpedoes [mines]," he forced the defenses of Mobile, Ala., and defeated a Confederate fleet. The outstanding naval commander of the war, Farragut was the first officer in the U.S. navy to receive the ranks of vice admiral (1864) and admiral (1866).

Farrell, James T(homas), 1904–79, American novelist; b. Chicago. In the tradition of NATURALISM, his fiction deals with life in Chicago's Irish Catholic slums. His work includes the novels of the Studs Lonigan trilogy (1932–35) and Danny O'Neill pentalogy (1936–53), short stories, and essays.

Farrell, Suzanne, 1945–, American ballet dancer; b. Cincinnati, Ohio. She was a favorite at the NEW YORK CITY BALLET (1961–69, 1974–89), where BALANCHINE created several roles for her. She also danced (1970–74) with BÉJART's Ballet of the 20th Century.

farsightedness or **hyperopia,** defect of vision in which near objects appear blurred but far objects can be seen clearly. Because the eyeball is too short or the eye's refractive power too weak, the image is focused behind the retina of the EYE, rather than upon it. Eyeglasses with convex lenses can compensate for the refractive error (see LENS).

fascism, philosophy of government that glorifies the nation-state at the expense of the individual. Major concepts of fascism include opposition to democratic and socialist movements; racist ideologies, such as ANTI-SEMITISM; aggressive military policy; and belief in an authoritarian leader who embodies the ideals of the nation. Fascism generally gains support by promising social justice to discontented elements of the working and middle classes, and social order to powerful financial interests. While retaining class divisions and usually protecting capitalist and landowning interests, the fascist state exercises control at all levels of individual and economic activity, employing special police forces to instill fear. The term was first used by the party started by MUSSOLINI, who ruled Italy from 1922 until the Italian defeat in WORLD WAR I, and has also been applied to other right-wing movements, such as NATIONAL SOCIALISM in Germany and the FRANCO regime in Spain.

fashion, the prevailing mode affecting modifications in costume. Since Asian and classical dress remained unchanged for centuries, fashion may be said to have originated in Europe around the 14th cent. Over subsequent centuries new styles, set by monarchs and prominent persons (e.g., Beau BRUMMELL), were spread by travelers, in letters, and by the exchange of the fashion DOLL. The first fashion magazine appeared c.1586 in Frankfurt, Germany; the popular American *Godey's Lady's Book* first came out in 1830. In Paris—the leading arbiter of fashion since the Renaissance—the fading influence of celebrities coincided with the rise of designer-dressmakers in the mid-19th cent. Other world fashion centers have been London, Rome, Milan, and New York. Designer fashions have traditionally been luxury goods whose possession has been largely limited to the wealthy. During the 1970s and 80s the availability of relatively inexpensive ready-to-wear collections made fashionable dressing possible for a wider range of the population. For a list of major contemporary designers, see the accompanying table.

Fassbinder, Rainer Werner, 1946–82, German film director. His more than 40 films, many of which portray post-World War II German life, include *Why Does Herr R. Run Amok?* (1969), *The Marriage of Maria Braun* (1979), *Lola* (1982), and *Veronika Voss* (1982).

Fatehpur Sikri or **Fathpur Sikri** [fətəpōōr' sĭk'rē], historic city, Uttar Pradesh state, N India. It was founded (1569) by AKBAR as his capital and is unique in India as a largely intact masterpiece of Mogul architecture.

Fates, in Greek mythology, three goddesses who controlled human life; also called the Moerae or Moirai. They were: Clotho, who spun the web of life; Lachesis, who measured its length; and Atropos, who cut it. The Roman Fates were the Parcae; the Germanic Fates were the NORNS.

Fathers of the Church, Christian writers of antiquity whose work is generally considered orthodox. A convenient definition includes all such writers up to and including St. GREGORY I in the West and St. JOHN OF DAMASCUS in the East. The Christian church also rec-

ognized **Doctors of the Church** who exhibited great holiness and learning. The eight ancient doctors are Saints Basil the Great, GREGORY NAZIANZEN, JOHN CHRYSOSTOM, and ATHANASIUS in the East and Saints AMBROSE, JEROME, AUGUSTINE, and GREGORY I in the West.

Fatimid or **Fatimite,** dynasty founded by Said ibn Husayn of NE Syria, which claimed the CALIPHATE on the basis of descent from Fatima, daughter of MUHAMMAD the Prophet. Doctrinally, the Fatimids were related to other Shiite sects, especially the DRUZE. Around 893 a follower of Said ibn Husayn, Al-Shii, went to NW Africa and, with the support of the BERBERS, won Tunisia, Sicily, NE Algeria, and NW Libya for the Fatimids. Said ibn Husayn was then hailed as the MAHDI. In the reign (953–75) of the fourth caliph, Moizz, the Fatimids conquered Egypt, Palestine, parts of Syria, and W Arabia. In 973 Moizz moved his capital to the new city of Cairo. Reliance on mercenaries, religious intolerance, and losses to the Normans and Crusaders in the 11th cent. led to the decline of the Fatimids, who were succeeded in their last stronghold, Egypt, by the rival ABBASIDS in 1171.

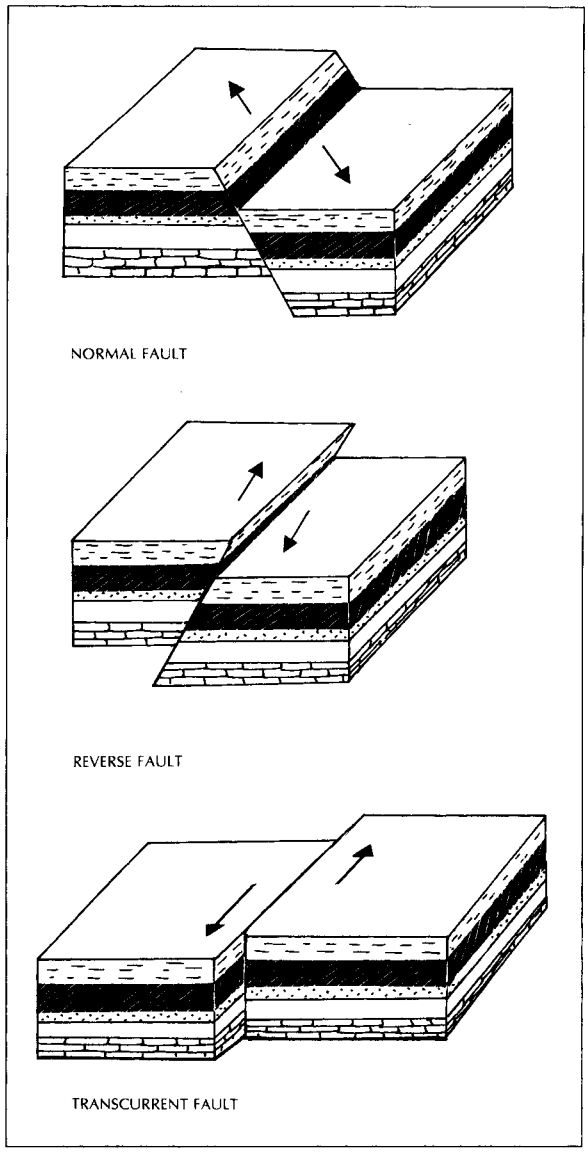
fats and oils, group of organic substances that are composed of carbon, hydrogen, and oxygen and are important in the diet and in industry. They are TRIGLYCERIDES, esters of one molecule of glycerol and three fatty acids. Generally, they are called fats if they are solid at room temperature and oils if liquid. **Saturated fats,** which are usually solid, are most common in animal foods such as lard, meat, dairy products, and eggs. They are called "saturated" because they have the highest possible number of hydrogen atoms attached to their carbon atoms. In **unsaturated fats,** which generally come from plant sources and are liquid, at least one hydrogen atom is missing and a carbon-carbon double bond occurs in its stead. If there is only one double bond, the fat is **monounsaturated;** fats with two or more double bonds are **polyunsaturated.** Unsaturated fats can be "hardened" by hydrogenation, i.e., by adding hydrogen atoms to reduce the number of double bonds and produce a saturated fat that is less likely to go rancid. Fats and oils are separated from their sources by pressing, rendering, or extraction with heat or solvents. Animal fats, such as lard, can be separated from animal tissues by rendering. Vegetable oils, e.g., those from OLIVES and linseed (see LINSEED OIL), are made by pressing fruits or seeds. The finest oils, used in food, are cold pressed. Subsequent warm pressing or extraction with solvents yields industrial-grade oil, used in making SOAP and other products. Fats and oils are essential to the body as energy sources and as a component of hormones and membranes, but excessive intake may contribute to ARTERIOSCLEROSIS, colon cancer, and gallstones. It is generally recommended that people limit the amount of fat and CHOLESTEROL in their diets and substitute unsaturated fats for saturated fats. See also ESSENTIAL OILS; FAT SUBSTITUTE; PETROLEUM.

fat substitute, substance used to replace dietary fat in the manufacture of foods. Fat substitutes are made in a variety of ways, mostly by manipulating natural food products such as egg whites, whey, and oats. Fat substitutes try to mimic the texture and flavor of fat while providing fewer calories and less metabolizable fat.

Faulkner, William, 1897–1962, American novelist; b. New Albany, Miss. One of the great American writers of the 20th cent., he explored the loss of traditional values and the decay and anguish of the post-Civil War South, using the imaginary Yoknapatawpha county as a microcosm of Southern life. A brilliant literary technician, Faulkner was master of a rhetorical, highly symbolic style. He was awarded the 1949 Nobel Prize in literature. His best-known novels include *The Sound and the Fury* (1929), *The Hamlet* (1940), *A Fable* (1954; Pulitzer), and *The Reivers* (1962; Pulitzer). He also published short stories, essays, and poems.

fault, in geology, a fracture in the earth's crust in which the rocks on each side move in relation to each other. This movement can be vertical, horizontal, or oblique. Horizontal faults showing lateral displacement of points originally directly opposite each other, such as the SAN ANDREAS FAULT in California, are called strike-slip. Another type of horizontal fault, the transform fault, occurs on the ocean floor between offset portions of the mid-ocean ridge (see PLATE TECTONICS). Altered positions of rocks due to faulting can mislead the geologist, because one rock layer can appear twice in the same cross section or disappear entirely. See also EARTHQUAKE.

Faunus, in Roman myth, woodland deity, protector of herds and crops; identified with the Greek PAN. He was attended by fauns—mischievous creatures, half man, half goat.



Types of vertical faults

Fauré, Gabriel Urbain [fōrā'], 1845–1924, French composer and teacher of RAVEL. His works include refined, intimate piano and chamber music, operas, a famous Requiem (1888), and songs, e.g., "Clair de Lune."

Faust, Faustus, or **Johann Faust** [foust], fl. 16th cent., learned German doctor who performed magic and died mysteriously. According to legend he sold his soul to the devil (Mephistopheles) in exchange for youth, knowledge, and magical power. Literary treatments of the story include the *Volksbuch* of Johannes Spies (1587), Christopher MARLOWE's *Dr. Faustus* (1593), GOETHE's masterpiece *Faust* (1808, 1833), and Thomas MANN's *Doctor Faustus* (1947). The legend inspired many composers of musical works, including BERLIOZ, GOUNOD, LISZT, SCHUMANN, and BOITO.

fauvism [fō'vĭzəm] Fr., *fauve* = wild beast, name derisively hurled at and cheerfully adopted by a group of French painters including MATISSE, ROUAULT, DERAIN, VLAMINCK, BRAQUE, and DUFY. Fauvism was essentially an expressionist style (see EXPRESSIONISM) characterized by distortion of forms and exuberant color. Although short-lived (1905–8), it was basic to the evolution of 20th-cent. art.

Fawkes, Guy: see GUNPOWDER PLOT.

fax machine: see FACSIMILE MACHINE.

FBI: see FEDERAL BUREAU OF INVESTIGATION.

Fe, chemical symbol of the element IRON.

feathers, outgrowths of the skin that constitute the protective and decorative plumage of birds and are thought to have evolved from reptilian scales in Mesozoic times. Feathers grow only along defined tracts; full grown, they lack a blood supply and have hollow shafts. Typically, barbs radiate from the distal part of the shaft (the rachis) and interlock via smaller cross-linking barbules to form a web, which gives the feather flexibility and durability. Down feathers of young birds and the protective undercoats of aquatic birds lack webs. Specializations (e.g., crests, ruffs, and topknots) and modifications (e.g., bristles) exist. Most feather colors (e.g., red, yellow, brown) are due to pigment in the feather; some (e.g., green and violet), as well as iridescent effects, are due to reflection and diffraction of light. The most important roles of feathers are in flight and heat retention.

feather star: see CRINOID.

February: see MONTH.

February Revolution, 1848, French revolution that overthrew the monarchy of LOUIS PHILIPPE and established the Second Republic. There was general dissatisfaction with the reactionary policies of the king and his minister François GUIZOT and with the poor conditions of the working class, which worsened in the economic crisis of 1846–47. After the government forbade a banquet to promote political opposition, street fighting began and government troops fired (Feb. 23, 1848) on the demonstrators, setting off the revolution. Louis Philippe abdicated on Feb. 24. A provisional government was formed and a republic was proclaimed, but the differing aims of the bourgeois revolutionaries and the radicals contributed to the revolution's eventual failure. To appease the workers and radicals, the right to work was guaranteed and national workshops were established, but deliberate mismanagement and the election of a more moderate government led to the dissolution of the workshops in May. The resulting workers' rebellion, known as the June Days, was crushed. After the completion of the republican constitution, Prince Louis Napoleon (later NAPOLEON III) was elected president. The revolution set off similar uprisings in Europe, but they failed virtually everywhere (see REVOLUTIONS OF 1848).

February Revolution, 1917, in Russian history: see RUSSIAN REVOLUTION.

Federal Art Project: see WORK PROJECTS ADMINISTRATION.

Federal Aviation Administration (FAA), U.S. government agency formed (1958) to regulate and promote air transportation. Its duties include the management of air traffic, the promulgation of safety regulations, and the setting of standards for airports and pilots. It assumed many of the functions of the **Civil Aeronautics Board,** or CAB (est. as the Civil Aeronautics Authority, 1938), and became (1967) part of the Dept. of Transportation. In 1981–82, it took over authority for the limited regulation of domestic routes and fares from the CAB, which was abolished by 1985.

Federal Bureau of Investigation (FBI), division of the U.S. Dept. of Justice charged with investigating all violations of federal law except those specifically assigned to other federal agencies. The FBI investigates espionage, sabotage, KIDNAPPING, bank robbery, CIVIL-RIGHTS violations, and fraud against the government, and conducts security clearances. Created in 1908, the bureau greatly increased its scope under the directorship (1924–72) of J. Edgar HOOVER, gaining wide popularity in the 1930s for its fight against criminal desperadoes such as John DILLINGER and against World War II saboteurs. During Hoover's controversial final years, the FBI came under attack for what many considered political bias and violation of the constitutional rights of citizens. See also INTELLIGENCE GATHERING.

Federal Communications Commission (FCC), independent U.S. agency created (1934) to regulate interstate and foreign communications, including various kinds of radio, television, wire, cable television, and satellite transmissions. The FCC is empowered to grant, revoke, renew, and modify broadcasting licenses and to assign broadcast frequencies.

Federal Constitutional Convention, in U.S. history, the meeting (May–Sept. 1787) in Philadelphia at which the CONSTITUTION OF THE UNITED STATES was drawn up. The Articles of CONFEDERATION, under which the U.S. had been governed, provided only a weak central government that had trouble conducting foreign policy, quelling internal disorders, and maintaining economic stability. Demand for a more centralized government grew steadily among the wealthy and conservative classes in many states. In 1786 a commercial conference, the ANNAPOLIS CONVENTION, disbanded with a call to convene a meeting in Philadelphia the next year for the purpose of revising the Articles. All states except Rhode Island sent delegates; George WASHINGTON presided. The major dispute at the convention was between large and small states over representation in the new Congress. A compromise proposal for a Congress with an upper house in which states were equally represented and a lower house elected by population was proposed by Oliver ELLSWORTH and Roger Sherman and finally approved. James MADISON was the chief drafter of the Constitution; Gouverneur MORRIS contributed to its style. Despite opposition, a sufficient number of states ratified the document to make it effective by the end of June 1788.

Federal Deposit Insurance Corporation (FDIC), independent U.S. agency established (1933) to promote public confidence in banks and to protect the money supply by providing a floor of insurance coverage for bank deposits in all national and state banks that are members of the FEDERAL RESERVE SYSTEM. It also examines insured state-chartered banks that are not members of the Federal Reserve. Since 1989 the FDIC has supervised the Savings Association Insurance Fund, the agency that was created to provide coverage for SAVINGS AND LOAN ASSOCIATIONS when the Federal Savings and Loan Insurance Corporation became insolvent. A sharp increase in bank failures in the late 1980s and early 1990s led to the insolvency (1991–92) of the FDIC as well, forcing it to seek government loans.

federal government or **federation,** government of a union of states in which sovereignty is divided between a central authority and component state authorities. The central government most often handles the concerns of the people as a whole, including foreign affairs, defense, coinage, and commerce; the local entities retain other jurisdictions. A successful federation usually requires a fairly uniform legal system and broad cultural affinities. The federal system is often accompanied by tensions between the central government (with its need for unity among the states) and state governments (with their desire for autonomy). Modern federations include Australia, Canada, India, Russia, Switzerland and the U.S.

Federalist party, U.S. political faction that supported a strong federal government. During Pres. WASHINGTON's administration (1789–97), political factions appeared within his cabinet, and the group that gathered around Alexander HAMILTON was called Federalists. They were conservatives who favored strong centralized government, encouragement of industry, attention to the needs of the great merchants and landowners, and a well-ordered society. They also were pro-British in foreign affairs. The party was concentrated in New England, with a strong element in the Middle Atlantic states. After the Democratic party's victory in 1800, the Federalists remained powerful locally, but leadership passed to reactionaries rather than moderates. Federalist opposition to the EMBARGO ACT OF 1807 and to the WAR OF 1812 resulted in the HARTFORD CONVENTION, but the successful issue of the war ruined the party, and by 1824 it was virtually dead.

Federal Reserve System, central banking system of the U.S., established by the Federal Reserve Act (1913). The act created 12 regional Federal Reserve banks, supervised by a Federal Reserve Board. All national banks must belong to the system, and state banks may if they meet certain requirements. Member banks hold the bulk of the deposits of all commercial banks in the country. The Board of Governors of the Federal Reserve System is composed of seven members appointed to staggered 14-year terms by the president, who also names one of the governors as chairman but has no power to remove any member. The Federal Open Market Committee directs purchases and sales by the reserve banks of U.S. government securities in the open market. The most important duties of the Federal Reserve authorities involve the maintenance of national monetary and credit conditions through lending to member banks, open-market operations, fixing reserve requirements, and establishing discount rates. In a sense, each Federal

The key to pronunciation appears on page xiii.

Reserve bank is a "banker's bank," with member banks using their reserve accounts much as bank depositors use their checking accounts. By controlling the credit market, the Federal Reserve System influences the nation's economic life. It can expand or contract the MONEY supply by buying or selling U.S. securities and by raising or lowering reserve requirements (the amount that member banks must set aside as reserves). Other important functions include the issuance of currency and coins and the setting of margin requirements (credit limits) in the stock exchanges. See also CENTRAL BANK.

Federal Trade Commission (FTC), independent U.S. agency established in 1914 and charged with keeping business competition free and fair. Its duties include enforcing ANTITRUST LAWS, preventing the dissemination of false and deceptive advertising, regulating the labeling and packaging of commodities, and gathering data concerning business conditions and making it available to Congress, the president, and the public. It may require corporations to submit information about their business practices if there is substantial evidence of wrongdoing. It is also empowered to issue cease-and-desist orders and to take violators to court.

Federal Writers' Project: see WORK PROJECTS ADMINISTRATION.

federation: see FEDERAL GOVERNMENT.

Feininger, Lyonel, 1871–1956, American painter; b. N.Y.C. Living in Europe, he was an illustrator and caricaturist before turning to easel painting in 1907. Feininger exhibited with the BLAUE REITER group and taught at the BAUHAUS in Germany (1919–32). He returned to the U.S. in 1937. Feininger developed a geometric style with interlocking translucent planes, often portraying sailboats or skyscrapers.

Feisal: see FAISAL.

feldspar or **felspar,** a group of potassium-, sodium-, and calcium-aluminum silicate minerals ($KAlSi_3O_8$, $NaAlSi_3O_8$, and $CaAl_2Si_2O_8$) and their isomorphic mixtures. The three pure members are called, respectively, orthoclase, albite, and anorthite. As constituents of crystalline rocks, the feldspars form much of the earth's crust. Pure feldspar is colorless and transparent, but impurities commonly make it opaque and colorful. Potassium feldspars are used in making porcelain and as a source of aluminum in making glass. The plagioclase feldspars (those ranging in composition from albite to anorthite) are commonly gray and occasionally red. MOONSTONE is a gem variety.

Felix V, antipope: see AMADEUS VIII.

Feller, Bob (Robert William Andrew Feller), 1918–, American baseball player; b. Van Meter, Iowa. A pitcher famous for his fastball, he won 266 games (1936–56) with the Cleveland Indians. He threw 3 no-hit and 12 one-hit games.

Fellini, Federico [fā-lē'nē], 1920–93, Italian film director. His films, noted for their extravagant visual fantasy, include *La Dolce Vita* (1960), *8½* (1963), *Juliet of the Spirits* (1965), *Fellini Satyricon* (1969), *Amarcord* (1973), *City of Women* (1980), and *Voices of the Moon* (1990).

felony, in CRIMINAL LAW, an offense more serious than a MISDEMEANOR, from which it is distinguished by the severity of the prescribed punishment. State laws vary, but in most U.S. jurisdictions (and in federal statutes), felonies are those crimes punishable by death or by imprisonment for more than one year. Felonies are usually tried by a JURY.

felspar: see FELDSPAR.

Femgericht: see VEHMGERICHT.

feminism, movement for women's political, social, and educational equality with men. Early leaders, including Mary WOLLSTONECRAFT in England and Elizabeth Cady STANTON and Susan B. ANTHONY in the U.S., demanded full legal and economic equality for women. Gradually, women in the U.S. won the right to own property and to enter the professions, and in 1920, after a prolonged struggle for WOMAN SUFFRAGE led by Carrie Chapman CATT and others, they obtained the right to vote through the passage of the 19th amendment to the U.S. CONSTITUTION. Women were fully enfranchised in Britain by 1928 and throughout most of the world by 1950. Betty FRIEDAN and the NATIONAL ORGANIZATION FOR WOMEN played prominent roles in the resurgence of feminism in the U.S. from the 1960s, stressing equal pay and employment opportunities, DAY-CARE CENTERS, the right to ABORTION, and the need to end SEXUAL HARASSMENT and sex stereotyping. The movement failed in one of its key goals, that of securing ratification of the federal Equal Rights Amendment, and legalized abortion also energized an anti-abortion, anti-feminist backlash in the U.S. that succeeded in restoring some restrictions on abortion. Nonetheless, much of what feminists sought in the 1960s was gained.

Federico Fellini

fencing, sport of dueling with foil, épée, and saber. The weapons and rules of modern fencing evolved from combat weapons and their usage. The foil, a light, flexible weapon with a blunted point, was originally used for practice. The épée, or dueling sword, is a straight, narrow, stiff weapon without cutting edges. The saber, a light version of the old cavalry broadsword, has a flexible, triangular blade with theoretical cutting edges. Fencing matches may be conducted among individuals or between teams, generally of nine players (three for each weapon). Points are made by touching the opponent. Protective clothing includes heavy canvas jackets, wire-mesh masks, and gloves. In women's fencing, only the foil is used. Fencing was first developed as a sport by the Germans in the 14th cent. It was included in the first modern Olympic games in 1896.

Fenian movement [fē'nēən], a secret revolutionary society organized c.1858 in Ireland and the U.S. to achieve Irish independence from England by force. The famine of the 1840s, which forced vast numbers of Irishmen to emigrate, brought to a crisis Irish discontent with English rule. In Ireland the Fenian movement was led by James Stephens. It appealed to the nonagrarian population and was opposed by the Roman Catholic Church. The various Fenian risings and acts of terrorism led at first to suppression by the British but eventually drew Parliament's attention to Irish problems. The movement in the U.S. was led by the émigré Irish revolutionary John O'Mahony. In 1865 a group of embittered Irish-American Fenians unsuccessfully attempted to invade Canada. The movement continued until 1914, but its influence was largely drawn into new organizations, notably the SINN FÉIN.

Fenians, a professional military corps that roamed over ancient Ireland (c.3d cent.) in the service of the high kings. They figure in the legends that developed around FINN MAC CUMHAIL and OSSIAN.

fennel, common name for several herbs, particularly those of the genus *Foeniculum* of the CARROT family. Their licorice-scented foliage and seeds are used for flavoring. Sweet fennel has a thickened leaf base and is eaten like CELERY.

Fens, the, also **Fenland,** fertile agricultural district, E England, reclaimed from The Wash, an arm of the North Sea. First Romans, then Saxons, attempted to drain the low-lying original swampland. Effective drainage began in the 17th cent. under Cornelius Vermuyden, a Dutch engineer, and continued into the 19th cent. A drainage-improvement program was completed in the 1960s to deal with continued land sinkage.

Ferber, Edna, 1887–1968, American author; b. Kalamazoo, Mich. Her colorful novels of American life include *So Big* (1924; Pulitzer).

Show Boat (1926), and *Giant* (1952). She also wrote plays with G.S. KAUFMAN, e.g., *Stage Door* (1936).

Ferdinand, rulers of the HOLY ROMAN EMPIRE. **Ferdinand I,** 1503–64, emperor (1558–64), king of BOHEMIA (1526–64) and of HUNGARY (1526–64), was the younger brother of Emperor CHARLES V; he increasingly acted as Charles's agent in the Hapsburg lands. In Hungary he fought against rival claimants who had the support of Ottoman Sultan SULAYMAN I, to whom he eventually was forced to pay tribute. In Bohemia, Ferdinand vigorously pushed Catholic reform and established HAPSBURG absolutism. In Germany he dealt with the Peasants' War and other rebellions and negotiated the Peace of Augsburg (1555). Charles abdicated in his favor in 1558. **Ferdinand II,** 1578–1637, emperor (1619–37), king of Bohemia (1617–37) and of Hungary (1618–37), was the grandson of Ferdinand I. In 1619 the Bohemian nobles rebelled and elected FREDERICK THE WINTER KING, thus beginning the THIRTY YEARS WAR. Ferdinand defeated Frederick in 1620, but the war continued. Ferdinand was almost certainly responsible for the murder (1634) of his leading general, WALLENSTEIN. **Ferdinand III,** 1608–57, emperor (1637–57), king of Hungary (1626–57) and of Bohemia (1627–57), was nominal head after 1634 of the imperialist forces in the Thirty Years War. After he succeeded his father, Ferdinand II, as emperor, the war took a disastrous turn. The Peace of WESTPHALIA, which he was forced to accept (1648), virtually ended the central power of the Holy Roman Empire. Ferdinand spent the last years of his reign healing the wounds of war and reforming the imperial bureaucracy.

Ferdinand, 1861–1948, czar of Bulgaria (1908–18), after being ruling prince (1887–1908). He declared Bulgarian independence from Turkey in 1908 and was a victor in the first of the BALKAN WARS (1912–13). His fortunes later declined, and in 1918 he was forced to abdicate in favor of his son, BORIS III.

Ferdinand, kings of Bohemia and Hungary: see FERDINAND, rulers of the Holy Roman Empire.

Ferdinand, kings of Portugal. **Ferdinand I,** 1345–83 (r.1367–83), the son of PETER I, had ambitions for the throne of CASTILE that led to three disastrous wars between 1369 and 1382. In 1372 he allied himself with JOHN OF GAUNT of England, but their two wars against Castile resulted in defeat. The final war ended with the marriage of Ferdinand's daughter, Beatrice, and John I of Castile. After Ferdinand's death and a national revolution, the throne of Portugal went to his half brother, JOHN I. **Ferdinand II,** 1816–85 (r.1837–53), was the king consort of Maria II of Portugal and was regent for their son, Peter V. He was more interested in his art collection than in governing the country.

Ferdinand, 1865–1927, king of ROMANIA (1914–27); nephew and successor of CAROL I. He took Romania (1916) into WORLD WAR I on the Allied side. In 1918 he acquired Bessarabia, and in 1919 he successfully intervened in Hungary against the Communist government of Bela KUN. During his reign agrarian reforms and universal male suffrage were instituted.

Ferdinand, Spanish kings. **Ferdinand I** (the Great), d. 1065, king of CASTILE (1035–65) and of LEÓN (1037–65), inherited the former kingdom and conquered the latter. He reduced the Moorish kings of Zaragoza, Badajoz, SEVILLE, and TOLEDO to vassalage and introduced church reforms. Prior to his death he divided his kingdom among three sons. **Ferdinand III,** 1199–1252, king of Castile (1217–52) and León (1230–52), permanently united the two kingdoms in 1230. He crusaded against the MOORS and completed the reconquest of Spain, except for the kingdom of GRANADA, by 1248. **Ferdinand IV,** 1285–1312, king of Castile and León (1295–1312), conquered GIBRALTAR (1309) from the Moors with the help of ARAGÓN, but he failed in his attempt to take Algeciras. **Ferdinand V** (the Catholic), king of Castile and León (1474–1504, jointly with his wife, ISABELLA I), king of Aragón (as Ferdinand II, 1479–1516), king of Sicily (1468–1516), and king of Naples (1504–16), with his wife completed the unification of Spain by conquering Granada in 1492. In that fateful year they also expelled the JEWS and sponsored COLUMBUS's discovery of the New World. Ferdinand fought France in the ITALIAN WARS and captured NAPLES. After Isabella's death (1504), he kept control of Castile by acting as regent for their daughter, JOANNA. He increased the powers of the throne by curbing the nobles and the CORTES. During his reign Spain became an Atlantic power and revolutionized European commerce. He left a vast empire to his grandson, Holy Roman Emperor CHARLES V. **Ferdinand VI,** c.1712–59, king of Spain (1746–59), kept the nation out of the SEVEN YEARS WAR during his lifetime. After the death (1758) of his beloved queen, Maria Barbara de Braganza, Ferdinand did not recover from his grief and soon followed her in death. **Ferdinand VII,** 1784–1833, king of Spain (1808–32), was forced by NAPOLEON I to renounce his throne and was imprisoned in France during the PENINSULAR WAR (1808–14). His name became the rallying cry of Spanish nationalists who resisted the French invaders and proclaimed (1812) a liberal constitution. But when he was restored to the throne (1814), Ferdinand proved to be a thorough reactionary; he abolished the new constitution but was forced to reinstate it by a revolution (1820). Backed by France's military intervention, he revoked the constitution again (1823) and ruthlessly repressed Spanish liberals. Ferdinand's death caused no less trouble than his reign: he had excluded his brother, Don Carlos, from the throne and thus brought on the CARLIST wars.

Ferdinand, kings of the TWO SICILIES. **Ferdinand I,** 1751–1825 (r.1816–1825), had previously been king of Naples as Ferdinand IV and king of Sicily as Ferdinand III. He had succeeded (1759) to the kingdoms when his father became king of Spain as CHARLES III. He opposed the French, who drove him from Naples to Sicily in 1799 and 1806. Restored (1815) in Naples, he abolished Sicilian autonomy and proclaimed himself king of the Two Sicilies. His rule was despotic. His grandson, **Ferdinand II,** 1810–59 (r.1830–59), initially tried to improve the kingdom's wretched state but soon drifted into absolutism. He bombarded Messina (1848) and Palermo (1849) to quell disorders, thus earning the nickname "King Bomba."

Ferdinand the Catholic: see Ferdinand V under FERDINAND, Spanish kings.

Fergana Valley or **Ferghana Valley** [fyĕrgänä'], region, c.8,500 sq mi (22,000 sq km), in Uzbekistan, Tajikistan, and Kyrgyzstan, central Asia. It is one of the most densely populated agricultural and industrial areas in central Asia, with important oil, coal, natural gas, and iron deposits. The valley belonged to a succession of central Asian empires and prospered until the 16th cent. from caravan trade along the traditional silk route between China and the Mediterranean. It was acquired by Russia in 1876 and became part of the USSR after the Russian Revolution. The region was divided when the Uzbek, Tadzhik, and Kirghiz SSRs were established in the 1920s.

Ferlinghetti, Lawrence, 1919–, American poet and publisher; b. Yonkers, N.Y. His City Lights Bookshop in San Francisco was a center for BEAT GENERATION writers. Among his volumes of verse is *A Coney Island of the Mind* (1958).

Fermat, Pierre de [fĕrmä'], 1601–65, French mathematician and magistrate. Although his work in mathematics was done for recreation, he was a founder of modern NUMBER THEORY and PROBABILITY theory. Many developments in number theory resulted from unsuccessful attempts to prove **Fermat's Last Theorem,** a conjecture that states that the equation $x^n + y^n = z^n$, where x, y, and z are nonzero integers, has no solutions for n when n is an integer greater than 2. In 1993 British mathematician Andrew Wiles described an apparent (but as yet unverified) proof of the conjecture.

fermentation, process by which a living cell can obtain energy through the anaerobic breakdown of glucose and other simple sugar molecules. Of the many different kinds of glucose fermentation, two kinds predominate: one, in microorganisms and animal cells, produces lactic acid as the sole end product; the other, in brewer's yeast and some bacteria, yields ethyl alcohol and carbon dioxide. Alcoholic fermentation to produce intoxicating beverages was practiced in antiquity. By 1500 B.C. production of beer from germinating cereals (malt) and of wine from crushed grapes was an established technical art in most of the Middle East. The modern science of BIOCHEMISTRY emerged directly from 19th-cent. studies of fermentation.

fermented milk, whole or skim milk curdled and thickened by lactic-acid-producing microorganisms. It was used in many forms by early nomadic herdsmen, especially in Asia, S and E Europe, Scandinavia, Africa, and South America. Yogurt, acidophilus milk, cultured buttermilk, and kumiss (koumiss) are forms of fermented milk.

The key to pronunciation appears on page xiii.

Fermi, Enrico, 1901–54, American physicist; b. Italy; came to U.S., 1938. He contributed to the early theory of beta decay and the NEUTRINO and to quantum statistics and discovered the element NEPTUNIUM. For his experiments with RADIOACTIVITY, he was awarded the 1938 Nobel Prize in physics. Fermi created (1942) the first self-sustaining chain reaction in uranium and worked on the atomic bomb at Los Alamos (see MANHATTAN PROJECT). He later helped develop the hydrogen bomb and served on the General Advisory Committee of the U.S. Atomic Energy Commission.

Fermi National Accelerator Laboratory (Fermilab), physical science research center (est. 1968) located near Batavia, Ill. Universities Research Association operates it under contract to the U.S. Dept. of Energy. Work at Fermilab is devoted to the study of elementary particles, principally through the use of a synchrotron particle accelerator capable of accelerating protons up to energies of 500 billion electron-volts.

fermion, any of a group of subatomic particles that have half-integral values of the quantum mechanical property called spin and are "antisocial," in that two of them cannot exist in the same quantum state. Fermions include the leptons and QUARKS, which are the basic components of matter. The proton, neutron, electron, and neutrinos are fermions. Fermi-Dirac statistics describe the behavior of systems of fermions. See BOSON; ELEMENTARY PARTICLES; STATISTICAL MECHANICS.

fermium (Fm), radioactive element, discovered in 1952 by Albert Ghiorso and colleagues in residue from a thermonuclear explosion. Its physical properties are largely unknown; its chemical properties are similar to those of other ACTINIDE SERIES members. See ELEMENT (table); PERIODIC TABLE.

fern, any plant of the division Polypodiophyta (sometimes called Filicophyta or Pterophyta), consisting of several thousand species found worldwide, usually in tropical rain forests. Most common living ferns belong to the polypody family (Polypodiaceae) and are characterized by triangular fronds subdivided into many leaflets (pinnae) and smaller pinnules. Except for ornamentals, the only commercially important ferns are tree ferns (families Dicksoniaceae and Cyatheaceae), whose trunks are used in construction; the starchy pith is used as stock feed. Ancestors of modern ferns were the dominant vegetation during the Carboniferous era. They, and such relatives as CLUB MOSSES and HORSETAILS, are the most primitive plants to have developed a true vascular system. Ferns reproduce by alternation of generations (see REPRODUCTION), and although no present-day ferns reproduce by seed, there is some fossil evidence that fernlike plants are the ancestors of seed plants (GYMNOSPERMS and ANGIOSPERMS).

Fernández de Lizardi, José Joaquín [fārnän'dās dā lēsar'dē], 1776–1827, Mexican writer. A dramatist and poet, he is best known for his picaresque satire *The Itching Parrot* (1816–30), considered the first Spanish-American novel.

Ferrara, city (1990 pop. 141,404), in Emilia-Romagna, N Italy, an industrial and agricultural center on a marshy plain. It was the site of an ESTE family principality (13th cent.). Its commerce and art flourished during the Renaissance. The 12th-cent. cathedral, 14th-cent. castle, and several palaces are notable.

Ferrara-Florence, Council of: see COUNCIL, ECUMENICAL.

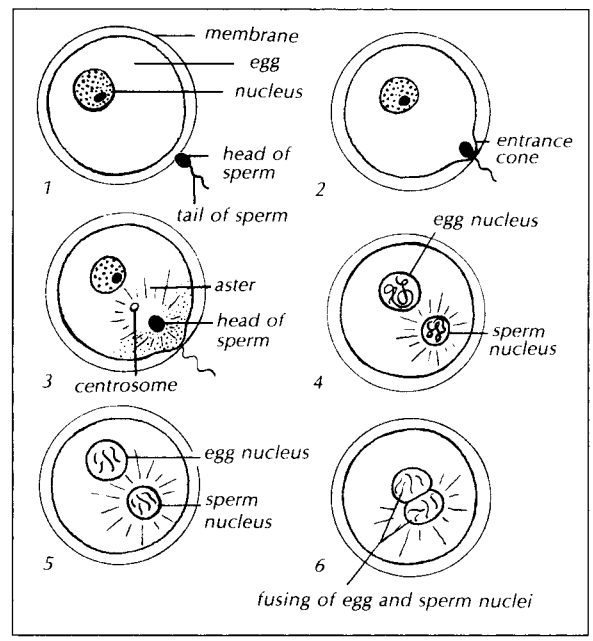
Ferraro, Geraldine A(nne), 1935–, U.S. politician; b. N.Y.C. A Democrat, she served three terms in the House of Representatives (1979–84). In 1984, as Walter MONDALE's running mate, she became the first woman nominated for the vice presidency by a major party in the U.S. In 1993 she was appointed U.S. representative on the UN Human Rights Commission.

ferret, domesticated polecat (*Mustela putorius*), a WEASEL common in the Old World. Used for centuries to hunt rats, mice, and rabbits, the ferret is related to the wild North American black-footed ferret (*M. nigripes*), which was nearly extinct by 1986, when the last wild black-footed ferrets were trapped. Since then they have been bred in captivity; the process of reestablishing them in the wild was begun in 1991.

Fertile Crescent, historic region of the Middle East, flanked by the Nile R. (W) and the Tigris and Euphrates rivers (E). A well-watered area, it includes parts of Israel, Lebanon, Jordan, and Iraq. It was the cradle of many ancient civilizations, e.g., EGYPT and MESOPOTAMIA.

fertility drug, any of a variety of substances used to increase the potential for conception and successful pregnancy by correcting various functional disorders. In the male, inadequate sperm production can often be remedied by administering thyroid hormones and, sometimes, pituitary hormones. In the female, failure to ovulate, a common cause of female sterility, can sometimes be treated with the administration of gonadotropic hormone and, in some cases, clomiphene citrate. Clomiphene often induces more than one ovum per month and can result in multiple births. In cases of repeated miscarriage or bleeding during pregnancy, PROGESTERONE has been found effective.

fertilization, in biology, sexual reproductive process involving the union of two unlike sex cells (gametes)—the ovum, or egg (female), and sperm (male)—followed by fusion of their nuclei. The principle of fertilization is the same in all organisms. The ovum absorbs the first sperm to make successful contact, and the two nuclei fuse, combining the hereditary material of both parents; the subsequent EMBRYO develops into a new individual. In lower plants and animals, the sperm swims to the egg through an external medium or through fluid in the female reproductive tract. In some higher plants, POLLINATION enables the sperm to contact the egg. In higher animals, sperm contact initiates cell division in the fertilized egg (zygote).



Fertilization of an egg cell

fertilizer, organic or inorganic material added to the soil to replace or increase plant nutrients. Organic fertilizers—including animal and green manure, fish and bone meal, guano (seabird excrement), and compost—are decomposed by soil microorganisms, and their elements are freed for plant use (see HUMUS). Most inorganic or chemical fertilizers contain the major nutrients (nitrogen, phosphorus, and potassium) in proportions required by the crop. Properly used, fertilizers increase crop yields and have helped make up for the world decrease in farmland. There are concerns, however, that inorganic nitrogenous fertilizers, in suppressing nitrogen-fixing bacteria, create a cycle in which more and more fertilizer is needed. In addition, nitrogen fertilizers that wash from farms into lakes and streams promote overgrowth of aquatic vegetation and cause EUTROPHICATION. See also NITROGEN CYCLE.

Festus (Sextus Pompeius Festus), fl. at some time between A.D. 100 and 400, Roman lexicographer. His surviving work, *On the Meaning of Words*, an abridgment of the lost glossary of Marcus Verrius Flaccus, is important as a primary source for Roman scholarship and antiquities.

fetal alcohol syndrome (FAS), pattern of physical, developmental, and psychological abnormalities seen in babies born to mothers who consumed alcohol during pregnancy. Abnormalities include low birth weight, facial deformities, and mental retardation, and there appears to be an association with impulsive behavior, anxiousness, and an inability on the part of the affected children to understand the consequences of their actions. FAS affects 1 to 2 babies per 1,000 born worldwide.

fetal tissue implant, implantation of tissue from a FETUS into a patient. In experimental procedures, fetal brain tissue has been implanted in the brains of patients with PARKINSON'S DISEASE so that the fetal tissue will supply chemicals lacking in the diseased brain. Because fetal cell therapy uses tissue from freshly aborted fetuses, the procedure is controversial. The successful transplantation of fetal ovaries in experiments with mice led to the suggestion in 1994 that human fetal ovaries could be implanted in infertile women, a possibility that troubled many ethicists and others.

fetish, inanimate natural or cultural object believed to have magical power, either from a will of its own or from a god that has transformed the object into an instrument of its desires. A fetish with great power is often declared TABOO.

fetus, term used to describe the unborn offspring in the uterus of vertebrate animals after the embryonic stage. In humans, the fetal stage begins seven to eight weeks after fertilization of the egg, when the EMBRYO assumes the basic shape of the newborn and all the organs are present, and continues until birth. Births before 36 weeks after conception are considered premature. See also PREGNANCY AND BIRTH.

Feuchtwanger, Lion [foikht'väng-ər], 1884–1958, German historical novelist. He achieved fame with *The Ugly Duchess* (1923), *Jud Süss* (1925), and the *Josephus* trilogy (1923–42). Feuchtwanger left Germany in 1933 and lived in the U.S. after 1940. His novels are noted for imaginative historical reconstruction and character portrayal.

feudalism, a political and social system in Western Europe from the end of CHARLEMAGNE's empire (late 9th cent. A.D.) to the rise of absolute monarchies. It had a local agricultural economy with the manor as its unit. In the MANORIAL SYSTEM, the VILLEIN and SERF held land from the lord of the manor, the seigneur or suzerain, in return for services, dues, and an oath of fealty. The king owned all land. Under him came a hierarchy of nobles, the highest holding land from the king, and those of lesser rank from the nobles above them. Landholding was by fief and was ceremonially acquired by INVESTITURE. The unsettled conditions of the time necessitated warriors for the lord and protection for the vassal. Gradations of vassalage were based on landholding and military service, from the single serf to private armies of hundreds. The KNIGHT was the typical warrior, with the squire below him and counts, dukes, and other nobles above him. The system, rooted in the decay of Roman institutions, spread from France to Spain, to Italy, and later to Germany and E Europe. WILLIAM I (the Conqueror) brought (1066) the Frankish form of feudalism to England. Feudalism waned as powerful monarchies broke down local systems, but it lingered in France until the French Revolution, in Germany and Japan until the 19th cent., and in Russia until 1917 (although serfdom was abolished officially in 1861).

Feuerbach, Ludwig Andreas, 1804–72, German philosopher. At first a follower of HEGEL, he abandoned IDEALISM for materialism, a progression that influenced Karl MARX in the development of DIALECTICAL MATERIALISM. Feuerbach rejected the "illusionistic" nature of religion and established a naturalistic-humanistic ethic that held humanity and nature to be the proper study of philosophy. His best-known work, *The Essence of Christianity* (1841), was translated into English by George ELIOT.

Feuerbach, Paul Johann Anselm von, 1775–1833, German jurist. A criminal-law theorist, he argued in *Critique of Natural Law* (1796) that law was the positive mandate of the state, and not to be confused with natural morality. Feuerbach saw a dual role for criminal law as protector both of society (through its deterrent function) and of the individual (through its exact definition of crimes). In 1813 he drafted an influential liberal criminal code in Bavaria.

Feuillants, political club of the FRENCH REVOLUTION. Emerging in July 1791, the group advocated a constitutional monarchy. After the fall (Sept. 1792) of the monarchy, it was suppressed by the JACOBINS.

Feynman, Richard Phillips, 1918–88, American physicist; b. N.Y.C. He shared (1965) the Nobel Prize in physics for his work on quantum electrodynamics. Feynman also explained, with Murray GELL-MANN, the WEAK INTERACTION. He worked on the early development of the atomic bomb and developed the Feynman diagram, a system of notation used to describe and calculate subatomic reactions.

Fez, city (1990 est. pop. 1,012,000), N central Morocco. It is located in a rich agricultural region. The city is noted for its Muslim art and its handicraft industries. It has given its name to the brimless felt caps that were formerly characteristic items of Muslim dress in the Middle East. Fez reached its zenith under the Marinid sultans in the mid-14th cent. It consists of the old city (founded A.D. 808) and the new city (founded 1276), connected by walls; there is also a European suburb. The city has more than 100 mosques.

Fianna Fáil, Irish political party, organized in 1926 by opponents of the Anglo-Irish treaty (1921) that established the Irish Free State. Led by Eamon DE VALERA, the party gained control of the government in 1932 and advocated separation from Great Britain. Except for 1948–51 and 1954–57, it held power until 1973. It returned to power under John LYNCH (1977–79), Charles HAUGHEY (1979–81, Mar.–Dec. 1982, 1987–92), and Albert REYNOLDS (1992–). Since 1989 the party has shared power in coalition governments with the Progressive Democrats (1989–92) and with Labor (1993–).

fiber, threadlike strand, usually pliable and capable of being spun into a yarn. Fibers are classified as either natural (including animal, vegetable, and inorganic) or artificial (see SYNTHETIC TEXTILE FIBERS). Animal fibers, e.g., SILK, WOOL, and goat hair (mohair), consist mainly of proteins. Vegetable fibers, e.g., COTTON, consist mainly of cellulose. ASBESTOS is the chief natural inorganic fiber; FIBERGLASS also is of inorganic origin. Artificial fibers are made either by synthesizing POLYMERS, as in nylon, or by altering natural fibers, as in RAYON. Fibers are used for textiles, e.g., cotton, silk, wool; cordage, e.g., hemp; brushes, e.g., animal hairs; filling, e.g., horsehair; and plaiting, e.g., sisal. The invention of SPINNING and weaving machinery during the INDUSTRIAL REVOLUTION greatly increased the demand for fibers.

fiber, dietary, or **roughage,** bulky part of food that cannot be broken down by enzymes in the small intestine, consisting of cellulose, pectin, and other materials. Although it has little nutritional value, fiber's bulk prevents constipation and minimizes intestinal disorders. People with a high-fiber diet statistically have lower colon cancer rates and lower levels of CHOLESTEROL and triglycerides in the blood. Almost all dietary fiber comes from plants, particularly legumes, green leafy vegetables, whole fruits, and bran and whole grains.

fiberglass, thread made from glass. Molten glass is forced through a kind of sieve, thus spinning it into threads. Strong, durable, and impervious to many caustics and to extreme temperatures, fiberglass fabrics are widely used in industry. Some, resembling silk and cotton, are used for drapery. Boat hulls and auto bodies molded of fiberglass combined with plastic are rust proof.

fiber optics, transmission of messages or information by light pulses along hair-thin glass fibers. Cables of optical fibers can be made smaller and lighter than conventional cables of copper wires or coaxial tubes, yet they can carry much more information, making them useful for transmitting large amounts of data between computers and for carrying data-intensive television pictures or many simultaneous telephone conversations. Optical fibers are immune to electromagnetic interference (from lightning, nearby electric motors, and similar sources) and to crosstalk from adjoining wires, and tapping into them is more easily detected. They also require fewer repeaters over a given distance than copper wire does to keep a signal from deteriorating. In addition to communications, optical fibers are used to transmit light in automobiles and aircraft, in medical equipment, and in other products.

Fibonacci, Leonardo [fēbōnät'chē]; b. c.1170, d. after 1240; Italian mathematician, known also as Leonardo da Pisa. The Fibonacci SEQUENCE 0, 1, 1, 2, 3, 5, 8, 13, 21, . . . , in which each term is the sum of the two preceding terms, occurs in higher mathematics in various connections.

Fichte, Johann Gottlieb, 1762–1814, German philosopher. He re-

ceived early recognition for *A Critique of All Revelation* (1788), erroneously attributed to KANT. His later works, including *The Vocation of Man* (1800), developed a transcendental IDEALISM that considered the individual ego as the source of experience and postulated an absolute ego or moral will of the universe, from which everything derives. An important influence on Friedrich SCHELLING and G.W. HEGEL, Fichte is best remembered for his political theories. His *Addresses to the German People* (1808) established him as a leader of liberal nationalism, and he became a hero to the revolutionaries of 1848.

fiction: see NOVEL; SHORT STORY.

Fiedler, Arthur, 1894–1979, American conductor; b. Boston. A versatile German-trained instrumentalist, he formed (1924) the Boston Sinfonietta, a group dedicated to performing little-heard compositions. In 1929 he inaugurated annual concerts at Boston's Esplanade bandshell. Fiedler became director of the Boston Pops Orchestra in 1930; for almost 50 years he led it to enormous international popularity with an astute blend of classical and popular music concerts featuring a wide variety of guest artists.

Fiedler, Leslie, 1917–, American critic; b. Newark, N.J. He is probably best known for *Love and Death in the American Novel* (1960), a Freudian literary analysis. His other works include *An End to Innocence* (1955), essays; *Nude Croquet* (1969), stories; and *Freaks* (1978), a historical study.

fief: see FEUDALISM.

Field, Cyrus West, 1819–92, American merchant, promoter of the first Atlantic CABLE; b. Stockbridge, Mass. In 1853 he retired with a modest fortune from the paper business. The next year he conceived the idea of the cable and organized English and American companies to lay it. The first message was transmitted on Aug. 16, 1858; the cable failed three weeks later, but he raised new funds and succeeded in laying a new cable in 1866. He later promoted other oceanic cables, notably one via Hawaii to Asia and Australia.

Field, Eugene, 1850–95, American writer; b. St. Louis. He was known for his wittily urbane newspaper column "Sharps and Flats." Among his books are *A Little Book of Western Verse* (1889) and *With Trumpets and Drums* (1892). Field's children's poems include "Little Boy Blue" and "Wynken, Blynken, and Nod."

Field, Marshall, 1834–1906, American merchant; b. Conway, Mass. As a partner in the firm of Field, Leiter, and Co. (founded 1881), he amassed one of the largest private fortunes in the U.S. and pioneered in many modern retailing practices. His large philanthropies included the Art Institute of Chicago, Univ. of Chicago, and the Chicago Museum of Natural History. His grandson, **Marshall Field III,** 1893–1956, was owner (1940–48) of the New York city liberal newspaper *PM* and later of the Chicago *Sun* and *Times*.

field, in physics, region throughout which a force may be exerted; examples are the gravitational, electric, and magnetic fields that surround, respectively, masses, electric charges, and magnets (see GRAVITATION; ELECTRICITY; MAGNETISM). Fields are used to describe all cases in which two bodies separated in space exert a force on each other.

field hockey: see HOCKEY, FIELD.

Fielding, Henry, 1707–54, English novelist and dramatist. *Tom Thumb* (1730) was the most notable of his early comedies, farces, and burlesques. Two satires, *Pasquin* (1736) and *The Historical Register for 1736* (1737), in which he attacked the government of Robert WALPOLE, ended his dramatic career by provoking the Licensing Act of 1737, which censored the stage. Turning to the NOVEL, he achieved success with *Joseph Andrews* (1742), a parody of Samuel RICHARDSON'S *Pamela;* and *Jonathan Wild* (1743), the ironic history of a highwayman. His masterpiece, *Tom Jones* (1749), presents in the foundling Tom and his guardian, Squire Allworthy, Fielding's ideal person, in whom goodness and charity are combined with common sense. Memorable characters, brilliant plotting, and moral vision make it one of the greatest English novels. Fielding's last works were *Amelia* (1751) and the *Journal of a Voyage to Lisbon* (1755).

field mouse: see VOLE.

Field Museum of Natural History, at Chicago, est. 1893 with gifts of Marshall Field and others. It is noted for its exhibits of animals in their natural settings, displays of plant life, and anthropological and geological collections. The museum sponsors expeditions and conducts research.

Field of the Cloth of Gold, meeting place of HENRY VIII of England and FRANCIS I of France, near Calais, France (1520). Both kings brought large retinues, and the name given the site indicates the splendor of the pageantry. The political results were negligible, because Henry had decided to ally himself with Holy Roman Emperor CHARLES V rather than with Francis.

Fields, W.C., 1880–1946, American film actor; b. Philadelphia as William Claude Dukenfield. He played a series of drunken, misanthropic, yet wistful rascals in such comedies as *It's a Gift* (1934), *My Little Chickadee* (1940), and *The Bank Dick* (1940).

fifth force, postulated fifth basic FORCE of nature (the four known forces of nature are gravity, electromagnetism, and the strong and weak interactions). Proposed in 1986 to account for gravitational discrepancies observed during some experiments, it was said to result in a repulsive effect about 1,000 times less powerful than gravity, and its strength was said to fall off quickly with distance, having a range of about 700 ft (200 m). The results of some initial experiments supported the possibility that the fifth force might exist, but later investigations, including a large-scale, highly accurate oceanic experiment, provided no evidence of such a force.

Fifty-four forty or fight, in U.S. history, phrase commonly used by American extremists in the controversy with Great Britain over the OREGON region. They held that U.S. rights extended to lat. 54°40'N, the recognized southern boundary of Russian America. The phrase was used by Democrat James POLK in his successful 1844 presidential campaign. In 1846 the boundary was set at 49°N.

fig, plant (genus *Ficus*) of the MULBERRY family, comprising over 600 species of vines, shrubs, and trees. Fig plants bear hundreds of tiny female flowers inside a fleshy receptacle, which ripens into a soft, pear-shaped fruit containing masses of tiny seeds. The common fig (*F. carica*), native to the Mediterranean region and cultivated from early times for its commercially valuable fruit, has been naturalized elsewhere in mild, semiarid climates. Some edible varieties can be pollinated only by the fig wasp.

Figueiredo, João Baptista de Oliveira [fēgārā'dō], 1918–, Brazilian general and politician, president of Brazil (1979–85). He was named (1974) to head the national intelligence service and in 1979 was chosen to succeed Ernesto Geisel as president. Figueiredo liberalized Brazil's military regime and moved the nation cautiously toward democracy.

Figueres Ferrer, José [fēgā'rās fār-rār'], 1906–90, president of COSTA RICA (1948–49, 1953–58, 1970–74). In 1948 he led a revolt to ensure the presidency of newly elected Otilio Ulate and served as provisional president. His administrations enacted social legislation and economic reforms.

figured bass, in music, a system of shorthand notation in which figures are written below the notes of the bass part to indicate the chords to be played; also called thorough bass and basso continuo. It arose in the 17th cent. and was widespread until after the time of J.S. BACH as a means of notating an accompaniment on the harpsichord or ORGAN.

Fiji or **Viti,** officially Republic of Fiji, republic (1990 pop. 759,567), c.7,000 sq mi (18,130 sq km), comprising c.320 islands (c.105 inhabited) in the SW Pacific Ocean (see PACIFIC OCEAN map). The two largest islands are Viti Levu, the site of Suva, the capital; and Vanua Levu. The climate is tropical. Sugarcane, copra, ginger, tropical fruits, taro, and cotton are the chief crops. Gold and fish are also significant exports. Tourism is important. The original Fijians, of Melanesian origin in the west and Polynesian origin in the east, are now almost equaled in number by Indians, who first came (1870–1916) to the islands as indentured workers for the British. The native Fijians are largely Christian; those of Indian origin are about three quarters Hindu and one quarter Muslim. The official language is English; Fijian and Hindi are also spoken.

History. The islands were visited by the Dutch navigator Abel TASMAN (1643) and by Capt. James COOK (1774). The first European settlement was established in 1804, and the islands were annexed by Britain in 1874. Fiji gained independence as a Commonwealth member in 1970. Following two coups (1987) by native army officers opposed to a government dominated by Indians, Fiji declared itself a republic and left the Commonwealth. In 1990 a new

constitution granted non-urban Melanesians a disproportionate say in the government. In 1992 Sitiveni Rabuka, who had led the 1987 coups, became prime minister.

filbert: see HAZEL.

Filipepi, Alessandro di Mariano: see BOTTICELLI, SANDRO.

Fillmore, Millard, 1800–1874, 13th president of the U.S. (1850–53); b. Summerhill, N.Y. A U.S. representative from New York (1833–35, 1837–43), Fillmore was elected (1848) vice president on the WHIG PARTY ticket with Zachary TAYLOR. Succeeding to the presidency on Taylor's death, Fillmore signed the COMPROMISE OF 1850 and tried to enforce the FUGITIVE SLAVE ACT. He emphasized nonintervention in foreign disputes and signed a treaty opening Japan to Western commerce. Fillmore unsuccessfully strove to make the Whigs a national party, in order to conciliate the sectional struggle. In 1856 he was the presidential candidate of the KNOW-NOTHING MOVEMENT, which tried vainly to unite the North and South.

finch, BIRD of the family Fringillidae, found worldwide except Australia, considered the most highly developed of birds. Finches are typified by stout, conical bills, used to open the seeds that comprise their main diet; many also eat insects. Highly diversified, finches are classified in three groups: those with triangular bills, e.g., CANARY, SPARROW, and the birds called finch, e.g., bullfinch and goldfinch; those with thick, rounded bills, e.g., CARDINAL; and those whose mandibles cross at the tips, e.g., crossbill. Because their seed diet does not depend on weather, many finches are year-round residents in colder areas.

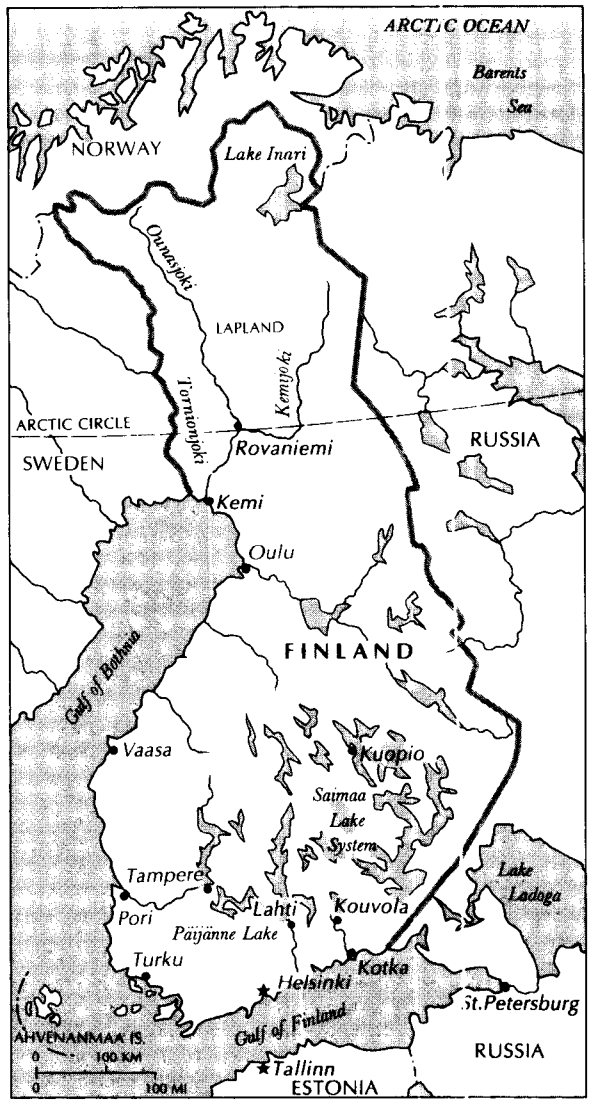
Fingal: see FINN MAC CUMHAIL.

fingerprint, an impression or image of the underside of the end of a finger or thumb, which has ridges that form a pattern unique to each person. Traditionally, impressions have been taken using ink and paper, but in live-scan fingerprinting electronic images produced by a video scanner are converted by computer into binary codes, which can be more readily compared. Fingerprinting as an identification device dates from antiquity, but sophisticated modern methods are based on work by the English scientist Sir Francis GALTON and others during the late 19th cent. Fingerprint identification is used extensively in criminal investigation, the armed services, government employment, and banking. In the U.S. a national fingerprint file and database is maintained by the FEDERAL BUREAU OF INVESTIGATION.

fingerprinting, DNA: see DNA FINGERPRINTING.

Finland, Finnish *Suomi,* officially Republic of Finland, republic (1992 est. pop. 5,004,000), 130,119 sq mi (337,009 sq km), N Europe; bordered by the Gulf of Bothnia and Sweden (W), Norway (N), Russia (E), and the Gulf of Finland and the Baltic Sea (S). HELSINKI is the capital. There are three main geographical zones: a low-lying coastal strip in the south and west that includes most of the major cities; a vast forested interior plateau, dotted with some 60,000 lakes; and a thinly wooded or barren region north of the ARCTIC CIRCLE, part of LAPLAND. Since World War II, manufacturing has replaced agriculture as the principal sector of the economy. Chief manufactures are forest products (about 70% of Finland is forested), iron, steel, petroleum products, machinery, chemicals, and processed food. Finland is also known for its design of glass, ceramics, and stainless-steel cutlery. Financial and other services are also important. Finnish and Swedish are both official languages, and most of the population belongs to the established Evangelical Lutheran Church. Finland is governed by an elected president and a 200-member unicameral parliament (*Eduskunta*).

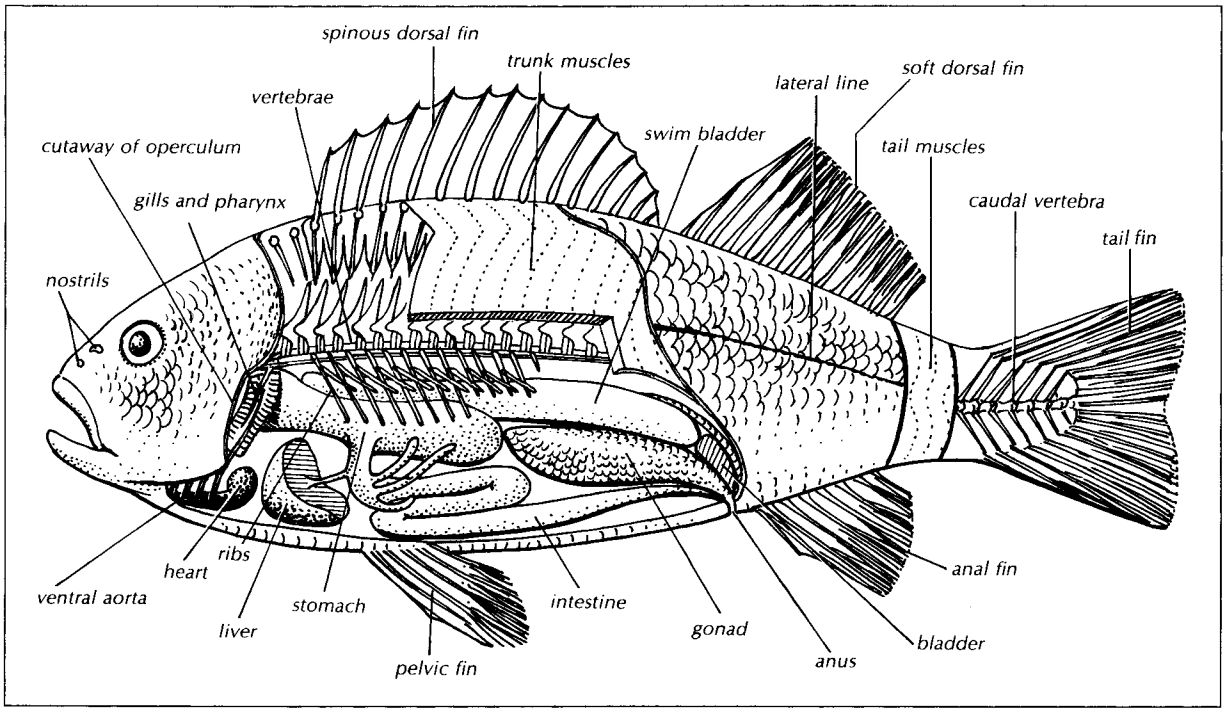
History. Beginning in the 1st cent. A.D., Finland was settled by nomadic hunters and fishers, who forced the small number of Lapps living in the central and southern regions to move to the far north, where they live today. Sweden conquered the area in the 13th cent. but allowed the Finns considerable independence, raising Finland to the rank of grand duchy in 1581. During the Napoleonic Wars, Finland was invaded by Russia, which annexed it in 1809. As a Russian grand duchy, Finland was again allowed wide-ranging autonomy. Finnish nationalism became a strong force early in the 19th cent.; an elected parliament was established in 1906, and Finnish independence was proclaimed in 1917. In the civil war that followed (1918), the nationalist White Guard, led by C.G.E. MANNERHEIM and aided by German troops, defeated the leftist Red Guard, supported by the Soviets. A republic was established in



1919. After the start of WORLD WAR II, Soviet troops invaded Finland (1939), which, despite heroic resistance, was defeated (1940). Hoping to recover territories lost in the conflict, Finland joined the German attack (1941) on the USSR but was forced to capitulate (1944). The armistice required Finland to expel the Germans, and in the ensuing Finnish-German warfare, N Finland was devastated. The peace treaty signed in 1947 ceded additional Finnish territory to the USSR, and a treaty signed in 1948 pledged Finland to defend the USSR from attack along their common border. In the postwar years Finland, led by Pres. U.K. KEKKONEN from 1956, sought to remain neutral and maintain good relations with the USSR while preserving its independence. In 1981 Mauno K. Koivisto succeeded Kekkonen as president. The country began developing closer relations with Western Europe in the late 1980s. The economic collapse of the USSR caused economic difficulties in Finland, which had traded extensively with the Soviets, but Soviet political disintegration led to the scrapping of the 1948 defense treaty and to a pledge by Russia to treat Finland as an equal. Since 1991 Esko Aho, a centrist, has been prime minister, heading the first nonsocialist government since the 1960s. Martti Ahtisaari, a diplomat, became Finland's first popularly elected president in 1994.

Finlay, Carlos Juan, 1833–1915, Cuban physician. He suggested (1881) the mosquito as the carrier of YELLOW FEVER and specified (1882) the correct species, now known as *Aëdes aegypti.* A commission headed by Walter REED inaugurated (1900) experiments that proved his theory.

The key to pronunciation appears on page xiii.



Anatomy of a ray-finned fish

Finney, Albert, 1936–, English film actor. He has starred in such varied films as *Tom Jones* (1963), *Murder on the Orient Express* (1974), and *Shoot the Moon* (1982).

Finnish language, also called Suomi, member of the Finnic group of the Finno-Ugric languages. These languages form a subdivision of the Uralic subfamily of the URALIC AND ALTAIC family of languages. See LANGUAGE (table).

Finn mac Cumhail, Fionn mac Cumhail, or **Finn MacCool** [all: fĭn məkōōl′], semimythical Irish hero, celebrated in OSSIAN's narrative poems and in the Fenian ballads, so called after the professional fighters Finn is said to have led in the 3d cent.

Finno-Ugric languages [fĭn′ō-ōōgrĭk], group of languages forming a subdivision of the Uralic subfamily of the URALIC AND ALTAIC family of languages. See LANGUAGE (table).

fiord: see FJORD.

fir, tree (genus *Abies*) of the PINE family, found chiefly in the alpine regions of the Northern Hemisphere. Tall, pyramidal evergreens, firs have short, flat, stemless needles and erect, cylindrical cones. They are valued for their fragrance and beauty. The balsam fir is a popular Christmas tree.

Firbank, (Arthur Annesley) Ronald, 1886–1926, English author. An eccentric aesthete, he wrote unconventional satiric novels, e.g., *Vainglory* (1915), *Valmouth* (1919), and *Prancing Nigger* (1924), that influenced WAUGH, COMPTON-BURNETT, and Aldous HUXLEY.

Firdausi [fərdou'sē], c.940–1020, Persian poet, author of the *Book of Kings,* the first great work of Persian literature; b. Abdul Kasim Mansur. The *Book of Kings* is an epic poem recounting the history of Persia from the arrival of the Persians to that of the Arabs. It is noted for its even rhyme, stately cadences, and continuous flow.

firearm: see ARTILLERY; GUN; SMALL ARMS.

firefly or **lightning bug,** small, luminescent, nocturnal, carnivorous BEETLE of the family Lampyridae. They emit heatless flashes of green-yellow to red-orange light (see BIOLUMINESCENCE); these are sexual signals produced by special organs on the abdomen. Firefly larvae prey on snails and earthworms, and some are beneficial to agriculture. Larvae and wingless females are called glowworms.

Firestone, Harvey Samuel, 1868–1938, American industrialist; b. Columbiana co., Ohio. He began to manufacture rubber tires in 1896. The Firestone Fire & Rubber Co., which he organized in 1900, became a leader of the rubber industry and one of the largest tire manufacturers in the U.S.

Firth, Raymond William, 1901–, English social anthropologist; b. New Zealand. A professor at the Univ. of London (1944–68), he conducted research in the Pacific and in West Africa, focusing on social organization and economic systems. His works include *We the Tikopia* (1936, rev. ed. 1957) and *Symbols: Public and Private* (1973).

Fischer, Bobby (Robert James Fischer), 1943–, American chess player; b. Chicago. In 1972 at Reykjavik, Iceland, he won the world chess championship from Boris Spassky of the USSR. Fischer subsequently disputed match rules with the International Federation of Chess, and in 1975 Anatoly KARPOV of the USSR was declared champion by default. In 1992 Fischer again beat Spassky in an exhibition match in YUGOSLAVIA and was charged with violating U.S. economic sanctions against that nation.

Fischer-Dieskau, Dietrich, 1925–, German baritone. He is one of the foremost singers of German LIEDER, noted for his interpretations of Brahms, Schubert, Schumann, and Wolf.

Fischer-Tropsch process, method, discovered (1923) by the German coal researchers Franz Fischer and Hans Tropsch, for the synthesis of hydrocarbons and other aliphatic compounds. A mixture of hydrogen and carbon monoxide is reacted in the presence of an iron or cobalt catalyst. Much heat is evolved, and such products as methane, synthetic gasoline and waxes, and alcohols are made, with water or carbon dioxide as by-products.

Fish, Hamilton, 1808–93, American statesman; b. N.Y.C. A Whig congressman (1843–45) and senator (1851–57) from New York, Fish served as Pres. GRANT's secretary of state (1869–77) and was one of the ablest persons ever to hold that office. He arranged the Treaty of WASHINGTON (1871), which settled long-standing disputes with Britain, and he kept U.S.-based filibustering expeditions against Cuba from escalating into war with Spain.

fish, limbless, aquatic, VERTEBRATE animal with fins, internal gills, and skin with a glandular secretion that decreases friction. Most fish have scales and are cold-blooded. A typical fish is torpedo-shaped, with a head containing a brain and sensory organs, a muscular-walled trunk with a cavity containing internal organs, and a muscular tail. Most fish propel themselves through water with weaving movements and control direction with fins. Although some fish, such as sharks, bear live young, most fish eggs are fertilized and hatch in water. There are over 20,000 species in three classes: Agnatha, the most primitive fishes, jawless and without

paired pelvic and pectoral fins (e.g., LAMPREY); Chondrichthyes, cartilaginous fishes, with skeletons of cartilage but no swim bladder or lungs (e.g., SHARK, RAY); and Osteichthyes, bony fishes, the most highly developed. Bony fishes have a bony skeleton and a swim bladder or lungs, and are divided into fleshy-finned (e.g., LOBEFIN, LUNGFISH) and ray-finned fishes (e.g., BASS, TUNA). The largest fish is the whale shark (*Rhincodon typus*), reaching 50 ft (15 m) in length and found worldwide in tropical seas; the smallest is the ½-in. (1.3-cm) goby (family Gobiidae) of the Philippines.

Fisher, Irving, 1867–1947, American economist; b. Saugerties, N.Y. A professor at Yale Univ. (1890–1935), he is known for his pioneering work in monetary economic theory; his theory of the "compensated dollar" to stabilize purchasing power; and his development of the INDEX NUMBER, a measurement of price levels.

Fisher, Saint John, c.1469–1535, English prelate, cardinal, bishop of Rochester (1504–34). For opposing the divorce of HENRY VIII and KATHARINE OF ARAGÓN and other acts of the English REFORMATION, Fisher was imprisoned in 1534. To show his support Pope PAUL III created (1535) Fisher a cardinal, but an enraged Henry quickly had Fisher beheaded. He was canonized in 1935. Feast: June 22.

Fisher, M(ary) F(rances) K(ennedy), 1908–92, American culinary writer. In her youth, she lived in France, where she was inspired by the literary gastronome Brillat-Savarin. Her writings, including *Serve It Forth* (1937) and *With Bold Knife and Fork* (1979), are culinary essays offering recipes, philosophical reflections, reminiscences, and anecdotes.

fish farming: see AQUACULTURE.

Fisk, James, 1834–72, American financial speculator; b. Pownal, Vt. He became wealthy during the Civil War by dealing in cotton and established (1866) a brokerage house in New York City. After taking part in the struggle against Cornelius VANDERBILT for control of the Erie RR, he and Jay GOULD made millions by manipulating Erie stock. They also engineered an attempt to corner the gold market in 1869, causing the BLACK FRIDAY scandal. At the age of 37, Fisk was killed by a rival for the attentions of an actress.

fission: see ATOMIC BOMB; NUCLEAR ENERGY.

Fitch, John, 1743–98, American inventor; b. Windsor, Conn. An early experimenter with steam engines and steamboats (see STEAMSHIP), he is believed to have designed (1786) the first practical steamboat. Nevertheless, he failed to receive either the opportunity to commercialize his invention or the recognition he justly deserved.

FitzGerald, Edward, 1809–83, English author. His masterpiece is his translation of *The Rubaiyat of Omar Khayyam* (1859; rev. 1868, 1872, 1879). Other works are *Euphranor* (1851), a Platonic dialogue; and *Polonius* (1852), aphorisms.

Fitzgerald, Ella, 1918–, African-American singer; b. Newport News, Va. She was a popular big band and solo artist. Principally a JAZZ singer with a sweet and effortless style, she is a noted interpreter of the songs of George GERSHWIN and Cole PORTER, among others.

Fitzgerald, F(rancis) Scott (Key), 1896–1940, American author, one of the great American writers of the 20th cent.; b. St. Paul, Minn. The literary spokesman of the "jazz age," he wrote about people whose lives resembled his own. He and his wife, Zelda, lived a celebrated life, glittering and dissipated, in New York City and the French Riviera, but his later years were plagued by financial worries and his wife's insanity. Fitzgerald's novels are *This Side of Paradise* (1920); *The Beautiful and Damned* (1922); *The Great Gatsby* (1922), his masterpiece about the corruption of the American dream; *Tender Is the Night* (1934); and *The Last Tycoon* (1941), an unfinished work reflecting his last years in Hollywood. He also published four short-story collections.

Fitzgerald, Garrett, 1926–, Irish politician. An economist, he was elected (1969) to parliament as a Fine Gael member. He was foreign affairs minister (1973–77), then party leader (1977–87), and later prime minister (1981–82; 1983–87). A moderate nationalist, he was a driving force behind the 1985 Anglo-Irish agreement on Northern Ireland.

Five, The, group of five 19th-cent. Russian composers: BALAKIREV, CUI, MOUSSORGSKY, BORODIN, and RIMSKY-KORSAKOV. They drew on Russian history, literature, and folklore to write music of a distinctly national character.

Five Civilized Tribes, name used since the mid-19th cent. for the CHEROKEE, CHICKASAW, CHOCTAW, CREEK, and SEMINOLE settled in INDIAN TERRITORY under the Removal Act of 1830. Living on communally held land, each tribe had a written constitution, a tripartite government, and a public school system. A later federal policy of detribalization resulted in the loss of their governmental functions, except advisory, and the division of tribal land into individual holdings.

Five Nations: see IROQUOIS CONFEDERACY.

Five-Power Treaty: see NAVAL CONFERENCES.

fjord or **fiord,** coastal inlet characterized by sheer parallel walls, often extending far below the water surface, and by many branches. They are probably glaciated valleys subsequently drowned by the sea. Norway's fjords are noted for their grandeur; Sognafjord is 4,000 ft (1,220 m) deep and over 100 mi (160 km) long.

flag, piece of cloth, usually bunting or similar light material, plain, colored, or bearing a device, varying in size and shape but often oblong or square, used as an ensign, standard, or signal or for display or decorative purposes, and generally attached at one end (the hoist) to a staff or a halyard by which it may be hoisted. The portion from the hoist to the free end is the fly; the top quarter of the flag next to the staff is the canton. Flags have been used since ancient times. Early flags had a religious significance that persisted historically. For example, the ensign of Great Britain, the Union Jack, is formed by the crosses of St. GEORGE, St. ANDREW, and St. PATRICK, the national saints, respectively, of England, Scotland, and Ireland. Armies and navies use flags for signaling: the white flag is used universally for truce; the black, in early times was a symbol for piracy; the red symbolizes mutiny or revolution; the yellow is a sign of infectious diseases. Shipping lines have their own flags. Striking a flag signifies surrender, and the flag of the victor is hoisted above that of the vanquished. A flag flown at half-mast is a symbol of mourning. The inverted national ensign is a signal of distress. The first flag of the U.S. was raised at Cambridge, Mass., by George WASHINGTON on Jan. 2, 1776. Today, the U.S. flag has 13 stripes, denoting the 13 original colonies, and 50 stars, for the 50 states. The U.S. states and territories also have their own flags.

Flag Day (June 14), anniversary of the adoption of the American flag in 1777. It is not a legal holiday.

Flagstad, Kirsten, 1895–1962, Norwegian soprano. In 1935 she appeared at the METROPOLITAN OPERA in Richard WAGNER's *Die Walküre* and thereafter was regarded as the greatest living Wagnerian soprano.

Flaherty, Robert Joseph, 1884–1951, American film director; b. Iron Mountain, Mich. His pioneering documentaries include *Nanook of the North* (1922) and *Man of Aran* (1934).

flamingo, large pink or red tropical wading BIRD (order Ciconiiformes), similar to the related HERON and STORK but with webbed feet and a unique, down-bent bill. Ranging in height from 3 to 5 ft (90 to 150 cm), the flamingo has a long neck and legs and a broad wingspan.

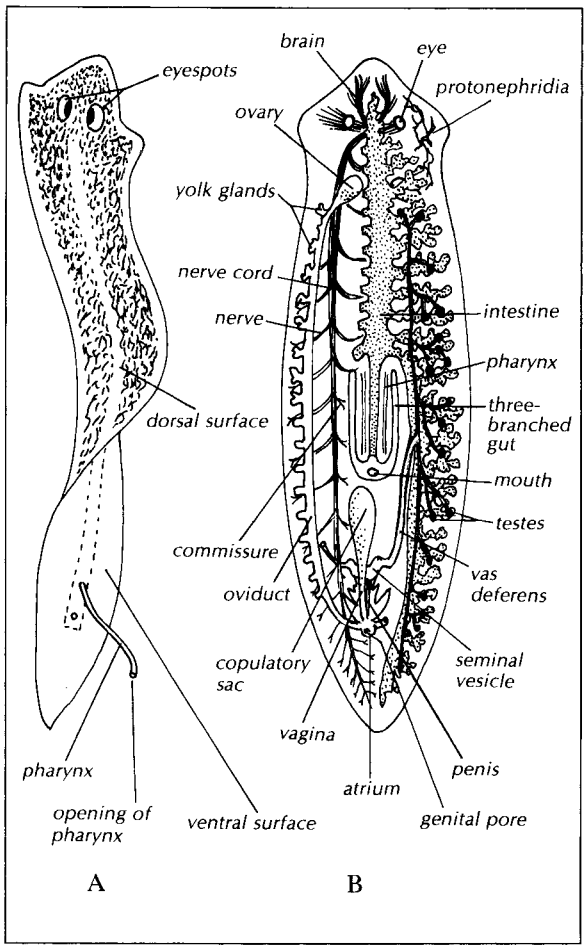
Flanders, former county in the Low Countries extending along the North Sea and W of the Scheldt R.; the name is also used for all Flemish (Dutch) areas of Belgium. Flanders became a French fief in the 9th cent. Virtually independent, it was the hub of medieval Europe's cloth industry but was weakened by civil strife and by rebellion against France. By the 15th cent., although Flemish art and commerce flourished under the Burgundians, it was little more than a French province. It passed in turn to the Spanish Hapsburgs and Austria before being partitioned among France (1797), the Netherlands (1815), and Belgium (1830); parts of W Flanders had earlier been annexed (1668–78) to France. Its strategic location has made Flanders a key battleground; occupation by the Germans in WORLD WAR II led to the dramatic British evacuation at DUNKIRK (1940).

flatfish, member of the order Pleuronectiformes, bottom-living FISH of the Atlantic and Pacific. Adult flatfish have an unusual, flattened body with both eyes on one side of the head. They lie with the blind, generally whitish, side on the ocean bottom; the eyed, colored side faces up. Soles are generally small, warm-water flatfishes with small eyes and mouths and few or no teeth. Flounders, generally larger, are known for the ability to change their color to match the background. The European sole (*Solea solea*) and many

flounders, including the flukes (genus *Paralichthys*) and the large, voracious, cool-water halibuts (genus *Hippoglossus*), are important food fish.

Flathead: see SALISH.

flatworm, soft-bodied, bilaterally symmetrical invertebrate of the phylum Platyhelminthes. Among the most primitive organisms, flatworms are divided into the free-living, primarily aquatic class of turbellarians (including PLANARIANS) and the exclusively parasitic classes of FLUKES and TAPEWORMS.



Flatworm: External (left) and internal (right) anatomy of a planaria, a representative flatworm

Flaubert, Gustave [flōbĕr'], 1821–80, French novelist, a master of the realistic novel. A scrupulous writer, intent on finding the exact word (*le mot juste*) and achieving complete objectivity, he published his masterpiece, *Madame Bovary,* in 1857, after five years of work. Portraying the frustrations of a romantic young woman married to a dull provincial doctor, it resulted in his prosecution on moral grounds. His other works include the novels *Salammbô* (1862), *A Sentimental Education* (1869), and the satirical *Bouvard and Pécuchet* (1881) and *Three Tales* (1877), one of which is the great novella "A Simple Heart."

flax, common name for an annual herb of the Linaceae family, especially members of the genus *Linum,* and for the fiber obtained from such plants. Native to Eurasia, flax was the major source of cloth fiber until the growth of the COTTON industry (c.1800). The flax of commerce is obtained from several varieties of *L. usitatissimum.* Exposure to water or dew and sun loosens the fiber from the woody tissue in a process known as retting. After washing, drying, beating, and combing, fibers are obtained for use in making fabric (see LINEN), threads, and cordage. Flax seeds are crushed to make LINSEED OIL, and the remaining linseed cake is used for fodder. Dried seed is also used in medicines.

Flaxman, John, 1755–1826, English sculptor and draftsman. After designing Wedgwood pottery, he produced figure drawings from Greek vases to illustrate works by Homer and Dante; these were engraved by William BLAKE. He is known for his memorial sculptures, e.g., Sir Joshua REYNOLDS.

flea, small, blood-sucking wingless INSECT of the order Siphonaptera. Adult fleas eat only blood and are external PARASITES of mammals and birds. They have hard bodies flattened from side to side, piercing and sucking mouthparts, and strong legs for jumping. Certain rat fleas carry TYPHUS and bubonic PLAGUE; other fleas transmit TAPEWORMS to humans.

Flémalle, Master of: see CAMPIN, ROBERT.

Fleming, Sir Alexander, 1881–1955, Scottish bacteriologist. He discovered PENICILLIN (1928) and lysozyme (1922), an antibacterial substance found in body secretions. Professor of bacteriology at the Univ. of London, he shared the 1945 Nobel Prize in physiology or medicine with Ernst CHAIN and Sir Howard FLOREY for work on penicillin. Fleming was knighted in 1944.

Flemish language, member of the West Germanic group of the Germanic subfamily of the INDO-EUROPEAN family of languages. It is one of the official languages of Belgium. See LANGUAGE (table).

Fletcher, John, 1579–1625, English dramatist, thought to have worked with SHAKESPEARE on *Two Noble Kinsmen* and *Henry VIII.* His most important collaboration was with Francis BEAUMONT. Their chief works—*Philaster, A Maid's Tragedy, A King and No King,* and *The Scornful Lady* (1607–13)—developed the romantic tragicomedy, which was popular through the 18th cent.

Fleury, André Hercule de [flörē'], 1653–1743, French Roman Catholic cardinal, chief minister of LOUIS XV. As virtual ruler of France (1726–43), he restored financial order. He strove for peace abroad but was drawn into the wars of the POLISH SUCCESSION and the AUSTRIAN SUCCESSION.

flight simulator, device providing a controlled environment in which a flight trainee can experience conditions approximating those of actual flight. The simulator, complete with a replica of an aircraft's cockpit, simulates an aircraft's rolling, pitching, and yawing motions. A computer coordinates the instrument readings, the student's control inputs, the position of the simulator, information about the aircraft's characteristics, and information about the terrain over which it is supposed to be flying. Video displays simulate conditions outside the cockpit. Simulators are also now used to increase the competence of experienced pilots with new aircraft and to expose them to potential adverse weather and equipment failure conditions.

Flinders Petrie, Sir William Matthew: see PETRIE.

Flinders Ranges, mountain chain, SOUTH AUSTRALIA state, Australia. They extend 260 mi (418 km) between Lake Torrens and Lake Frome and reach a high point of 3,900 ft (1,189 m) at St. Mary's Peak. Uranium and copper are mined there.

Flint, city (1990 pop. 140,761), seat of Genesee co., SE Mich.; inc. 1855. Established (1819) as a fur-trading post, it later became a site of cart and carriage making. Since 1902 it has been an international automobile manufacturing center; many major auto makers, e.g., General Motors, began there.

flint: see CHERT.

Flood, in the Bible: see NOAH.

Florence, Ital. *Firenze,* city (1990 pop. 413,069), capital of TUSCANY, central Italy, on the Arno R. It is a commercial, industrial, and tourist center known for fine handicrafts. Of Roman origin, it became prominent after gaining autonomy in the 12th cent. It was a center of GUELPH AND GHIBELLINE strife (13th cent.) but nonetheless grew in size and power through war with other cities. Meanwhile, trade in silks, tapestries, and jewelry brought great wealth. The MEDICI family dominated Florence from the 15th to 18th cent., their rule interrupted by two revolutions (1494–1512, led by SAVONAROLA; and 1527–30). The artistic and intellectual life of the city flowered from the 14th to 16th cent., with DANTE, BOCCACCIO, DONATELLO, LEONARDO DA VINCI, RAPHAEL, and MICHELANGELO among the many born or active there. Florence passed (1737) to the house of Hapsburg-Lorraine, was annexed (1860) to Sardinia, and was the capital of Italy (1865–71). Among its many glorious works of ar-

chitecture are the cathedral of Santa Maria del Fiore; the nearby baptistry; the churches of Santa Croce, Santa Maria Novella, and San Lorenzo; and the Pitti Palace, the Palazzo Vecchio, and the UFFIZI, all of which house masterpieces of RENAISSANCE art.

Florey, Howard Walter (Baron Florey of Adelaide), 1898–1968, British pathologist; b. Australia. For their work in purifying PENICILLIN and demonstrating its effectiveness against harmful bacteria, he and Ernst CHAIN shared with Alexander FLEMING the 1945 Nobel Prize in physiology or medicine. He was professor of pathology at Oxford Univ. from 1935 to 1962 and was knighted in 1944.

Florida, state in the extreme SE U.S. A long peninsula between the Atlantic Ocean (E) and the Gulf of Mexico (W), Florida is bordered by Georgia and Alabama (N).

Area, 58,560 sq mi (151,670 sq km). *Pop.* (1990) 12,937,926, a 32.8% increase over 1980 pop. *Capital,* Tallahassee. *Statehood,* Mar. 3, 1845 (27th state). *Highest pt.,* 345 ft (105 m), Walton co.; *lowest pt.,* sea level. *Nickname,* Sunshine State. *Motto,* In God We Trust. *State bird,* mockingbird. *State flower,* orange blossom. *State tree,* Sabal palmetto palm. *Abbr.,* Fla.; FL.

Land and People. The highest elevations are found in the northwest, the Florida Panhandle. Central Florida has rolling hills and abounds in lakes, of which Lake OKEECHOBEE is the largest. The EVERGLADES, which includes Big Cypress Swamp, is a unique wilderness area extending over much of S Florida. The small islands of the FLORIDA KEYS extend southwest from the end of the mainland. The state is noted for its mild climate and abundant sunshine. The extreme south of Florida and the state of Hawaii are the only places in the U.S. with tropical climates. Florida has one of the highest rates of population increase in the country, partly because many retired persons have settled in the state. It also has one of the larger Hispanic populations in the country (more than 12% of the total population). In 1990, 83% of the population was white and 14% African American. Almost 85% of the population lives in urban areas. MIAMI is a leading international trade and financial center and the state's second largest city; JACKSONVILLE is the largest city. Other important cities are TAMPA, SAINT PETERSBURG, ORLANDO, and FORT LAUDERDALE.

Economy. Because of Florida's warm climate, extremely long coastline, and many beaches, as well as such attractions as Walt Disney World and other resorts near Orlando, tourism is the main source of income. Florida is one of the country's leading agricultural states, producing citrus fruits, winter vegetables, and cattle. Industry is dominated by agricultural processing and the manufacturing of electrical, electronic, and transportation equipment and chemicals. By the early 1990s, foreign trade had also become an important factor in Florida's economy. The state leads the U.S. in phosphate production; petroleum, natural gas, and sand and gravel are also extracted. The large fishing industry catches mostly shellfish.

Government. The constitution (adopted 1968) provides for a governor elected to a four-year term. The legislature is composed of a house of 120 members elected for two years and a senate of 40 members elected for four years. Florida sends 23 representatives and 2 senators to the U.S. Congress and has 25 electoral votes.

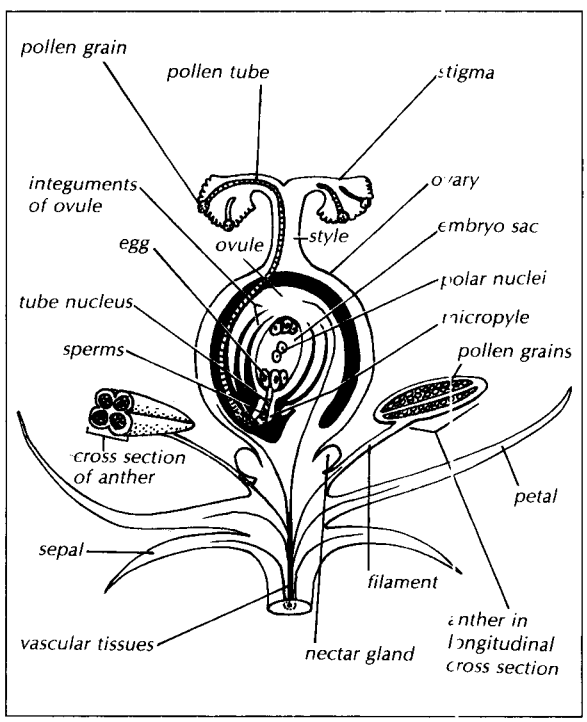
History. Seeking the fabled Fountain of Youth, the Spanish explorer PONCE DE LEÓN became the first European to land (1513) in Florida. The first permanent settlement, SAINT AUGUSTINE, was founded by the Spanish in 1565 and is the oldest city in the U.S. Subsequently, Spain and England fought for control of the strategic peninsula. In 1819 Spain reluctantly ceded Florida to the U.S. As settlers arrived, the increasingly displaced SEMINOLE rebelled, but they were defeated in the Second Seminole War (1835–42), and most were forcibly removed to Oklahoma. However, small bands fled to the Everglades and Lake Okeechobee area, where they still live on reservations. With the arrival (1880s) of railroads, Florida experienced its first real-estate boom, followed by a second during the 1920s. After the Cuban Revolution (1958–59), a huge influx of Cubans fled to Miami; another wave followed in 1980. The establishment (1947) of a rocket-launching site at CAPE CANAVERAL brought the aerospace industry to Florida, making it one of the fastest-growing states in the SUN BELT. In 1992 parts of S Florida were devastated by Hurricane Andrew.

Florida Keys, chain of small islands and reefs extending into Florida Bay c.150 mi (240 km) southwest from the southern shore of Florida. A motor causeway traverses the keys, linking the mainland and the city of KEY WEST on the outermost island (Key West), which is c.90 mi (150 km) N of Cuba, separated by the Straits of Florida. The largest of the Florida Keys is Key Largo. Commercial fishing and tourism are the principal industries.

flotation process, process for concentrating the metal-bearing mineral in an ORE. Crude ore is ground to a fine powder and mixed with water and reagents. When air is blown through the mixture, mineral particles cling to the bubbles, which rise to form a froth on the surface. The froth is skimmed off and the water and chemicals removed, leaving a clean concentrate. Among the minerals effectively concentrated by this method are sulfide and phosphate ores.

flounder: see FLATFISH.

flower, specialized part of seed plants that contains reproductive organs. The basic floral parts (sepal, petal, stamen, and pistil) are modified leaves, typically arranged concentrically and attached at their bases to the tip of the stem. The outermost, green sepals (the calyx) encircle a whorl of usually showy, colored petals (the corolla), within which POLLEN-bearing stamens surround a central ovary-bearing pistil. After fertilization, each ovule (the part that contains the egg) in the ovary becomes a SEED, and the ovary becomes the FRUIT. The number and arrangement of floral parts varies greatly among groups of plants and are important bases for classification. In general, the higher a plant is on the evolutionary scale, the greater the flower's complexity and efficiency for reproduction.



Flower: Longitudinal cross-section of a flower at the time of fertilization, showing a pollen grain and pollen tube

Floyd, Carlisle, 1926–, American composer; b. Latta, S.C. He is known for his folk opera *Susannah.* Other operas, written in a conservative style, include *Wuthering Heights* (1958), *Of Mice and Men* (1970), and *Bilby's Doll* (1976). *The Passion of Jonathan Wade* (1962; revised version, 1991) is less conservative and more musically eclectic in its revised version.

fluid mechanics, branch of MECHANICS dealing with the properties and behavior of fluids, or substances that flow, i.e., liquids and gases. The larger part of the field is fluid dynamics (study of fluids in motion), which itself is divided into hydrodynamics (study of liquids in motion) and AERODYNAMICS (study of gases in motion).

fluke, FLATWORM of the class Trematoda. Flukes, which are related to the TAPEWORM, are internal and external parasites that cause many diseases. Adults cling to their hosts with sucking disks and bear an external cuticle resistant to digestion by the host. Some species of FLATFISH are also called flukes.

fluorescence, LUMINESCENCE in which light of a visible color is emitted from certain substances, called phosphors, when irradiated by electromagnetic radiation, especially ultraviolet light. Unlike PHOSPHORESCENCE, the light is emitted only while the stimulation continues.

fluoridation, process of adding a fluoride to a community water supply to preserve the TEETH of the inhabitants. Tooth enamel ordinarily contains small amounts of fluorides, which, when augmented with fluoridated water, can greatly reduce tooth decay in children. While studies have proved fluoridation safe at levels of one part per million, opponents assert that such action constitutes compulsory medication and that those wanting fluoride can use it individually.

fluorine (F), gaseous element, first prepared in 1886 by Henri Moissan. Fluorine is a yellowish, poisonous, highly corrosive HALOGEN gas. It is the most chemically active nonmetallic element and the most electronegative of all the elements. FLUORITE is its chief commercial source. The addition of one part per million of soluble fluorides (salts of hydrofluoric acid) to public water supplies reduces tooth decay. Fluorine compounds are used in ceramic and glass manufacturing, in refrigeration and air-conditioning systems, and as lubricants. TEFLON is an inert, heat-resistant FLUOROCARBON. See ELEMENT (table); PERIODIC TABLE.

fluorite or **fluorspar,** calcium fluoride mineral (CaF_2), occurring in various colors in crystal, granular, and massive forms. Its crystals sometimes exhibit fluorescence. Found mainly in England, Germany, Mexico, Kentucky, and Illinois, fluorite is used as a flux in metallurgy, in preparing hydrofluoric acid, and in making opal glass and enamel. Some colorless crystals are used to make lenses and prisms.

fluorocarbon, any organic compound composed of FLUORINE and CARBON. Derived synthetically from HYDROCARBONS, many fluorocarbons, such as TEFLON, and the chemically related CHLOROFLUOROCARBONS, such as FREON-12, are chemically stable, nonflammable, and relatively nontoxic. Fluorocarbons have been widely used as lubricants, in materials used in bearings, and in low-adhesion surfaces.

flute: see WIND INSTRUMENT.

fluxional molecule, molecule that exhibits rapid intramolecular rearrangements of its component atoms. As with structural ISOMERS, fluxional compounds maintain the same number of component atoms. At equilibrium, fluxional molecules may manifest many different isomers and fluctuate rapidly among them.

fly, name for a variety of winged INSECTS, but properly restricted to members of the order Diptera. True flies have sucking and piercing mouthparts and, in most species, one pair of wings. All flies undergo complete METAMORPHOSIS. Most are harmful as disease carriers or crop destroyers. The order includes the FRUIT FLY, GNAT, MOSQUITO, and TSETSE FLY.

flying buttress: see BUTTRESS.

flying fish, torpedo-shaped FISH (family Exocoetidae) of warm seas that has well-developed pectoral fins that can be held rigid and used to glide short distances over the water. Specially adapted tail fins, vibrated in taxiing along the water surface to gain momentum, and (in some species) enlarged pelvic fins also help in "flight." The largest species is the 18-in. (45-cm) California flying fish.

flying saucer: see UNIDENTIFIED FLYING OBJECT.

flying squirrel, nocturnal SQUIRREL adapted for gliding. Flying squirrels do not actually fly. Most are found in Asia, but there are two North American species (genus *Glaucomys*), which together are found in forests over much of the continent. The gliding mechanism is a fold of skin extending along each side of the body. When the animal extends its limbs in leaping, the flaps stretch out taut like a parachute.

Fm, chemical symbol of the element FERMIUM.

FM: see MODULATION.

Fo, Dario, 1926–, Italian playwright, actor, director, and songwriter. Fo developed a form of satirical farce influenced by Berthold BRECHT and Antonio GRAMSCI that is less formal than traditional COMMEDIA DELL'ARTE. In 1968 Fo and his wife, actress Franca Rame, began presenting plays on contemporary issues; the most famous is *Accidental Death of an Anarchist* (1970).

foam: see COLLOID.

Foch, Ferdinand [fôsh], 1851–1929, marshal of France. In WORLD WAR I he halted the German advance at the Marne (1914) and fought at Ypres (1915) and the Somme (1916). In 1917 he became chief of the French general staff, and in Apr. 1918 he assumed the unified command of the British, French, and U.S. armies.

fog, aggregation of water droplets just above the earth's surface, i.e., a cloud near the ground. A light or thin fog is usually called a mist. Fog may occur either when the moisture content of the air is increased beyond the saturation point or when the air is cooled below the DEW point. In either case, excess moisture condenses on microscopic dust particles (condensation nuclei) in the atmosphere.

Fokine, Michel [fôkēn', Rus. fô'kyĭn], 1880–1942, Russian–American choreographer and ballet dancer; b. St. Petersburg. He choreographed for NIJINSKY and PAVLOVA in Russia and for DIAGHILEV in Paris. He is considered the founder of modern ballet. His works include *Les Sylphides* (1909), *The Firebird* (1910), and *Petrouchka* (1911).

Fokker, Anton Herman Gerard [fôk'ər], 1890–1939, German-American aircraft manufacturer; b. Java. His factories in Germany produced triplanes and biplanes used in World War I; he also invented an apparatus allowing machine-gun bullets to be fired through a rotating propeller without intercepting the blades. He later turned to developing commercial aircraft and came to the U.S. in 1922.

fold, in geology, bent or deformed arrangement of stratified rocks. Arches, or upfolds, are known as anticlines; depressions, or downfolds, are called synclines. An imaginary line drawn along the crest of an anticline or the trough of a syncline is its axis; the two sides curving away from the axis are the limbs. The complex causes of folding include large-scale crustal movements (see PLATE TECTONICS).

Foley, Thomas S(tephen), 1929–, U.S. politician, Speaker of the U.S. House of Representatives (1989–); b. Spokane, Wash. Elected to the House as a Democrat from Washington state in 1964, he served as chairman of the House Democratic caucus (1976–80) and of the agriculture committee (1975–80). Foley held the House leadership positions of majority whip (1981–86) and majority leader (1987–89) before he became Speaker of the House in 1989.

Folger, Henry Clay, 1857–1930, American industrialist and collector of Shakespeareana. With the help of his wife, **Emily Jordan Folger,** 1858–1936, he acquired one of the largest and most valuable collections of its sort in the world. They endowed the Folger Shakespeare Library.

folk art, artwork of a culturally homogeneous people made by artists without formal training. Often nationalistic in character, it generally involves craft processes, e.g., in America, QUILTING and sculpture of figureheads, weather vanes, and cigar-store figures. Paintings in the tradition of PRIMITIVISM are also in the folk idiom. Much folk art has a rough-hewn, idiosyncratic, or awkward quality often admired and imitated by sophisticated artists.

folk dance, primitive, tribal, or ethnic form of the dance, sometimes the survival of an ancient ceremony or festival. The term includes characteristic national dances, country dances, and figure dances in costume. Examples include children's games such as "The Farmer in the Dell," as well as the Spanish fandango, the Bohemian polka, the Irish jig, and the American Virginia reel. The English musician Cecil James Sharp made a notable collection of English folk songs and dances, and the American Folk Dance Society has preserved American country dances.

folklore, body of customs, legends, beliefs, and superstitions passed on by oral tradition, including folk tales, dances, songs, and medicine. The study of folklore became significant in the 19th cent. as a result of the rise of European ROMANTICISM and nationalism. Today most anthropologists see the many manifestations of folklore as imaginative expressions by a people of its desires, attitudes, and cultural values and regard folk heroes (e.g., Paul BU-

NYAN in the U.S. and ROBIN HOOD in England) as reflections of the civilizations from which they sprang.

folk song, music of anonymous composition, transmitted orally. The germ of a folk song is assumed to be produced by an individual and altered in transmission as a group expression. National and ethnic individuality is seen in folk music, but little is wholly indigenous. That of the U.S. reveals transplanted European and African sources. Interest in folk music grew in the 19th cent., although earlier scholars had worked in the field. Béla BARTÓK made great contributions in notating the folk music of central Europe. The phonograph and tape recorder facilitated transcription and collection of folk song. The music often shows the influence of formal composition, and songs of traceable authorship, e.g., "Dixie," are often considered folk songs. Since the 1950s folk music has been a significant influence and source for much popular vocal and instrumental music. Singers like Woody GUTHRIE and Joan BAEZ have performed folk songs and their own compositions in the idiom. Types of folk song include the work songs found in all cultures, e.g., sea CHANTEYS and SPIRITUALS.

Fonda, Henry, 1905–82, American actor; b. Grand Island, Nebr. Among his films are *Young Mr. Lincoln* (1939), *The Grapes of Wrath* (1940), *Mr. Roberts* (1955), and *On Golden Pond* (1981; Academy Award).

Fonda, Jane, 1937–, American actress; b. N.Y.C. The daughter of Henry FONDA, she has starred in such films as *Klute* (1971; Academy Award), *Julia* (1977), *The China Syndrome* (1979), and *On Golden Pond* (1981). She is also known for her liberal politics and for her exercise and weight-loss books and videos. Previously married to Roger Vadim and Tom Hayden, she married Ted TURNER in 1991.

Fongafale, town (1973 est. pop. 870), capital of TUVALU.

Fontaine, Pierre François Léonard [fôNtĕn'], 1762–1853, French architect. Working from 1794 with Charles Percier, he was a developer of the Empire style in France.

Fontainebleau, school of, group of 16th-cent. artists who decorated the royal palace at Fontainebleau, in France. Chief in importance were Il ROSSO, Francesco PRIMATICCIO, and Sabastiano Serlio. An Italian development of MANNERISM, the style of the Fountainebleau school was refined to the point of artificiality. Its subjects were allegorical and symbolic, in keeping with the tastes of FRANCIS I's court.

Fontana, Domenico, 1543–1607, Italian architect. In Rome he designed (1588) the LATERAN palace and the Vatican library. His other work included the fountain Acqua Felice (1587), the erection of an Egyptian obelisk before St. Peter's (1586), and the royal palace, Naples (1600).

Fontanne, Lynn: see LUNT, ALFRED, AND LYNN FONTANNE.

Fonteyn, Dame Margot [fôntān'], 1919–91, English ballerina, b. Margaret Hookham. She studied in London and was *prima ballerina assoluta* of the ROYAL BALLET. Her performances in *Sleeping Beauty* and *The Firebird* were renowned, and her partnership (after 1962) with Russian dancer Rudolf NUREYEV brought her new recognition.

Foochow: see FUZHOU.

food additives, substances added to foods during processing to prevent spoilage or to enhance appearance, taste, texture, or nutritive value. By quantity the most common food additives are flavorings (e.g., spices and synthetic flavors) and sweeteners (e.g., sucrose, corn syrup, fructose, and dextrose). Other additives include colorings, preservatives, emulsifiers (which keep processed foods from separating), and stabilizers (which prevent the formation of ice crystals). In the U.S. the FOOD AND DRUG ADMINISTRATION is responsible for testing and regulating food additives.

Food and Agricultural Organization: see UNITED NATIONS (table 3).

Food and Drug Administration (FDA), agency in the Public Health Service division of the U.S. Dept. of HEALTH AND HUMAN SERVICES. Established in 1928, it is charged with protecting public health by ensuring that foods are safe and pure, cosmetics and other chemical substances harmless, and products safe, effective, and honestly labeled. All new medicinal drugs must be licensed for use by the FDA.

food chain: see ECOLOGY.

food preservation. Because most foods remain edible for only a limited time, food preservation has been practiced since the remotest times. Early products of conservation were cheese, butter, wine, bacon, pemmican, raisins, and parched grains. Advances in the methods used came with scientific investigations of the microorganisms that cause food spoilage, especially in the work of Louis PASTEUR. Basic methods of modern food preservation include dehydration, freeze-drying, heating (e.g., CANNING and PASTEURIZATION), refrigeration (both freezing and chilling), hermetic sealing to remove air, and GAMMA RADIATION to destroy microorganisms and retard spoilage. Such preserving agents as salt vinegar, sugar, smoke, and alcohol are also used, often in combination. Other common preservatives are chemical agents.

food pyramid or **Food Guide Pyramid,** diagram used in nutrition education that fits food groups into a triangle and notes that, for a healthful diet, those at the base should be eaten more frequently than those at the top. At the base of the pyramid are breads, cereals, rice, and pasta. Above these are the vegetable and fruit groups. Next are the dairy group and a group including meats, eggs, nuts, and dry beans. Oils and sweets are at the apex, with a recommendation that they be used sparingly.

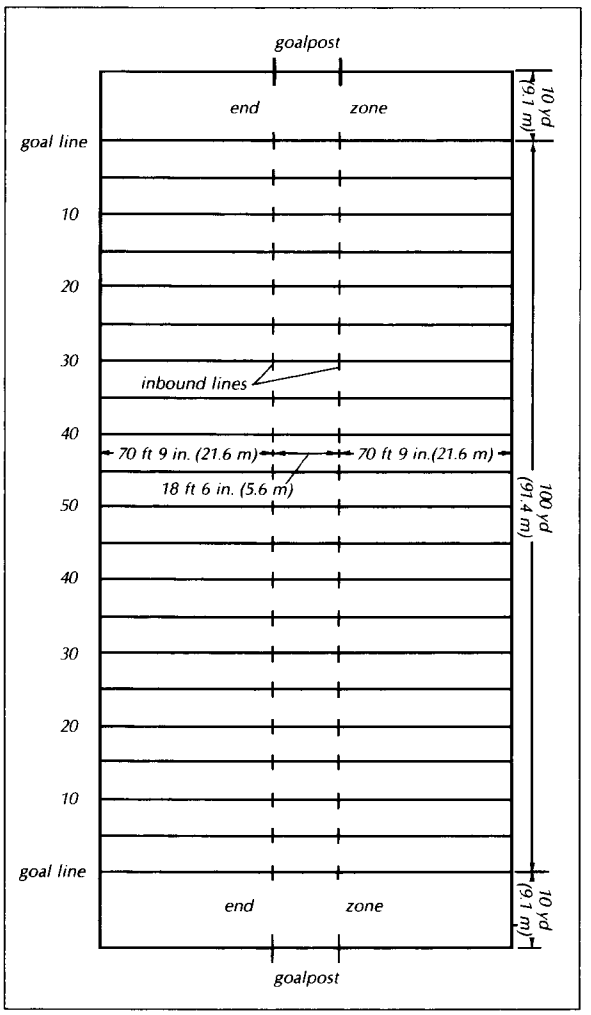
fool's gold: see PYRITE.

Foot, Michael, 1913–, British politician. He entered Parliament in 1945 and became a spokesman for the Labour party's radical left wing. Editor of the party organ, the *Tribune,* he served as secretary of state for employment (1974–75) and Speaker of the House of Commons (1976–79). He succeeded James CALLAGHAN as Labour party leader (1980–83) and tried to maintain the party's traditional policies in the face of the opposition of more conservative members, who broke away and formed the SOCIAL DEMOCRATIC PARTY.

foot-and-mouth disease: see HOOF-AND-MOUTH DISEASE.

football, any of several games in which two opposing teams attempt to score points by moving an inflated ball past a goal line or into a goal area. The games, differing greatly in their rules, include SOCCER (association football) and RUGBY, English games from which **American football** developed. The American game is played by two teams of 11 players each on a field that measures 100 by 53⅓ yd (91.4 by 48.8 m). At each end of the field is an end zone 10 yd (9.14 m) deep, in which stand H-shaped goal posts. Play is directed toward gaining possession of the football and moving it (by running or passing) across the opponent's goal line, thereby scoring a touchdown, worth six points. Points are also scored by kicking the ball over the crossbar between the goal posts (a field goal, worth three points); downing a player with the ball behind the player's own goal line (a safety, worth two points); and a conversion following a touchdown. In professional ball the conversion is made by kicking the ball over the goal posts (one point); in college and high school ball, the conversion is by a kick (one point) or by a pass or run (two points). The offensive team, led by the quarterback, must gain 10 yd in four tries (downs) or yield possession of the ball. The defending team tries to stop the ball carrier from advancing by tackling. Blocking and tackling make football one of the most rugged of sports, and players must wear heavy protective gear. The first intercollegiate football match in America (more like a 50-person soccer game) was played (1869) between Princeton and Rutgers at New Brunswick, N.J. Harvard began to play a rugby-type game in the 1870s, and within the next decade the distinctive American version evolved. A professional football association was formed in 1920 and renamed the National Football League (NFL) in 1922. Buoyed by the tremendous popularity of professional football after World War II, the NFL absorbed two rival leagues (1949 and 1966) and grew to 28 teams in two conferences by the early 1980s. The league will expand to 30 teams in 1995. The annual Super Bowl game for the league championship has been a major sports spectacle since its introduction in 1967. The World League of American Football was a short-lived NFL affiliate that played (1991–92) during the NFL's off-season. It had ten teams, including three in Europe and one in Canada. It is scheduled to be replaced with a six-team all-European league in 1995. **Canadian football** is similar to the U.S. game except that the field and the end zone are larger, measuring 110 by 65 yd (100 by 59 m) and 25 yd (23 m) deep, respectively; a team consists of 12 players; and only three downs are allowed. The Canadian Football League

(CFL), formed in 1959, is the major professional circuit. **Gaelic football,** played primarily in Ireland, is perhaps the roughest of the football-type games. The object is to punch, dribble (bounce), or kick the ball into (3 points) or directly over (1 point) the rectangular goal-net. A team is made up of 15 players. **Australian football** is played on a large oval field. Each team of 18 players attempts to kick the egg-shaped ball past a set of goal posts. The ball may be advanced by punches, kicks, or dribbles.



A professional football field. College teams use a similar field except that the inbound lines are 53 ft 4 in. (16.3 m) from the sidelines

foot-pound: see TORQUE; WORK.

Forbidden City: see CHINESE ARCHITECTURE; BEIJING.

force, in physics, a quantity that produces a change in the size or shape (see STRENGTH OF MATERIALS) or the MOTION of a body. Commonly experienced as a "push" or "pull," force is a vector quantity, having both magnitude and direction. The study of forces in equilibrium is STATICS; that of forces and motion is DYNAMICS. Four basic types of force are known in nature. The gravitational force (see GRAVITATION) and the electromagnetic force (see ELECTROMAGNETISM) both have an infinite range. The STRONG INTERACTION is a short-range force holding the atomic nucleus together, and the WEAK INTERACTION is a short-range force associated with radioactivity and particle decay. In the METRIC SYSTEM forces are measured in such units as the dyne (cgs system) and the newton (mks system), which cause accelerations of, respectively, 1 cm/sec^2 on a 1-gram mass and 1 m/sec^2 on a 1-kg mass. In ENGLISH UNITS OF MEASUREMENT, the pound (lb) is used. A 1-lb force equals 444,823 dynes; 1 dyne equals 10^{-5} newtons.

force bill, name of several laws in U.S. history, notably the federal act of Mar. 2, 1833, and the Reconstruction acts of 1870–71. The first force bill was passed in response to South Carolina's ordinance of NULLIFICATION. It empowered Pres. JACKSON to use the military, if necessary, to enforce the laws of Congress, specifically the tariff measures at issue. The second set of force bills strengthened the RECONSTRUCTION program of the radical Republicans by imposing strict penalties on those who tried to obstruct it. The act of May 31, 1870, penalized anyone who tried to prevent qualified citizens (in this case African Americans) from voting and placed congressional elections under exclusive federal control. The act of Apr. 20, 1871, in response to KU KLUX KLAN activities, declared acts by armed combinations tantamount to rebellion and empowered the president to suspend habeas corpus in lawless areas.

Ford, Edsel Bryant: see under FORD, HENRY.

Ford, Ford Madox, 1873–1939, English author; b. Ford Madox Hueffer. He wrote over 60 works, including novels, poems, criticism, travel essays, and reminiscences, and edited the *English Review* (1908–11) and *Transatlantic Review* (1924). His most important novels are *The Good Soldier* (1915) and a tetralogy published together as *Parade's End* (1950).

Ford, Gerald Rudolph, 1913–, 38th president of the U.S. (1974–77); b. Omaha, Nebr., as Leslie Lynch King, Jr. (he later took the name of his stepfather). A Republican congressman from Michigan (1949–73), he served (1965–73) as Republican minority leader in the House and was (1968, 1972) permanent chairman of the Republican National Convention. In 1973 Ford became the first appointed vice president of the U.S. (see CONSTITUTION) when he succeeded Spiro T. AGNEW. When Nixon resigned (Aug. 9, 1974) amidst the WATERGATE AFFAIR, Ford became president; one month later he issued a pardon to Nixon. As president, Ford continued Nixon's foreign policy and advocated anti-inflationary measures and limited social spending at home. A presidential candidate in 1976, he lost the election to Democrat Jimmy CARTER. His defeat was attributed to an economic recession and high inflation and to his pardon of Nixon.

Ford, Henry, 1863–1947, American industrialist, pioneer automobile manufacturer; b. Dearborn, Mich. While working as a machinist and engineer with the Edison Co., in his spare time he built (1892) his first automobile. In 1903 he organized the Ford Motor Co. By cutting production costs, controlling raw materials and distribution, adapting the assembly line to automobiles, and featuring an inexpensive, standardized car, Ford became the largest automobile producer in the world. In 1908 he designed the Model T; over 15 million cars were sold before the model was discontinued (1928), and a new design, the Model A, was created to meet growing competition. In 1914 Ford created a sensation by paying his workers five dollars for an eight-hour day, considerably above the average, and by beginning a profit-sharing plan that would distribute up to $30 million annually among his employees. He stubbornly resisted union organization until 1941. He retired in 1945. His numerous philanthropies included the FORD FOUNDATION. His son, **Edsel Bryant Ford,** 1893–1943, was president of the company from 1919 until his death. Henry's grandson, **Henry Ford II,** 1917–1987, who became president in 1945 and chairman in 1960, modernized the firm, and, for the first time in company history, recruited outsiders for high positions. He retired in 1980.

Ford, John, 1586–c.1640, English dramatist. The most important playwright during the reign of Charles I, he wrote (1627–33) three major tragedies: *'Tis Pity She's a Whore, The Broken Heart,* and *Love's Sacrifice.*

Ford, John, 1895–1973, American film director; b. Cape Elizabeth, Me. He won Academy Awards for *The Informer* (1935), *The Grapes of Wrath* (1940), *How Green Was My Valley* (1941), and *The Quiet Man* (1952). His many Westerns include *Rio Grande* (1950) and *The Searchers* (1956).

Ford Foundation: see FOUNDATION.

foreign exchange, methods and instruments used to adjust the payment of debts between two nations that employ different currency systems. A nation's BALANCE OF PAYMENTS has an important effect on the exchange rate of its currency. The rate of exchange is

the price in local currency of one unit of foreign currency and is determined by the relative supply and demand of the currencies in the foreign exchange market. The chief demand for foreign exchange comes from importers and exporters, purchasers of foreign securities, government agencies, and international corporations. Exchange rates were traditionally fixed under the gold standard and later by international agreements, but in 1973 the major industrial nations of the West adopted a system of "floating" rates that allows for fluctuation within a limited range. See also EUROPEAN MONETARY SYSTEM; INTERNATIONAL MONETARY SYSTEM.

Foreign Legion, French volunteer armed force composed chiefly, in its enlisted ranks, of foreigners. Its international composition and practice of not inquiring into enlistees' backgrounds surrounded it with an aura of romance. Created by King LOUIS PHILIPPE (1831) to pacify Algeria, it was used throughout the French colonial empire and during both world wars. Today its headquarters are in S France.

Forester, C(ecil) S(cott), 1899–1966, English novelist. He is best known for stories of the royal navy in the days of sail, especially for those centering on Capt. Horatio Hornblower. Forester also wrote *The African Queen* (1935).

forestry, the management of forests for WOOD, water, wildlife, forage, and recreation. Due to wood's economic importance, forestry has been chiefly concerned with timber management, especially reforestation, maintenance of extant forests, and fire control. The U.S. Forest Service manages the National Forest System (federally owned forest reserves), emphasizing sustained yield (achieved by balancing reforestation and logging) and multiple use.

forgery, in law, fabrication or alteration of a written document with intent to deceive or defraud. Most instances of forgery occur in connection with instruments for payment of money, such as checks, but the crime may also involve documents of title (e.g., deeds) or public documents (e.g., birth and marriage certificates). Counterfeiting (the manufacture of false money with intent to deceive) may be regarded as a special variety of forgery.

forging: see WELDING.

formaldehyde or **methanal** (HCHO), a colorless, flammable, poisonous gas with a suffocating odor. Pure gaseous formaldehyde is uncommon, because it readily polymerizes into solid paraformaldehyde. Formalin, a 40%-by-volume solution of formaldehyde in water, is used as an antiseptic, disinfectant, and preservative for biological specimens. Formaldehyde is also used to make DYES, PLASTICS (e.g., BAKELITE), and synthetic RESINS.

Forrest, Edwin, 1806–72, American actor, the nation's first theatrical idol; b. Philadelphia. His New York City debut as Othello (1826) established him as a great tragedian, noted for bold and forceful acting. His rivalry with the English actor W.C. MACREADY resulted in a riot (1849) in New York by Forrest partisans in which many were killed.

Forrestal, James Vincent, 1892–1949, U.S. secretary of the navy (1944–47) and secretary of defense (1947–49); b. Beacon, N.Y. After the reorganization (1947) of the war and navy departments, Forrestal became the first secretary of defense. Illness forced his resignation, and he later committed suicide.

Forster, E(dward) M(organ), 1879–1970, English novelist. With sensitivity, subtlety, and an impeccable style, he brought new depths to the English novel of manners. *Where Angels Fear to Tread* (1905) was followed by *The Longest Journey* (1907), *A Room with a View* (1908), *Howards End* (1910), and *Maurice* (1913–14, published 1971). His last novel, *A Passage to India* (1924), is his best-known work. He also published short stories and nonfiction, including *Aspects of the Novel* (1927).

forsythia, shrub (genus *Forsythia*) of the OLIVE family, native to Europe and Asia. Producing abundant bell-shaped yellow or white flowers, which appear before the leaves, forsythia bushes are often cultivated as ornamentals in hedges and along borders.

Fortaleza, city (1990 pop. 1,824,991), NE Brazil, capital of Ceará state. An Atlantic port at the mouth of the Paejú R., which bisects the city, it ships coffee and other products of Brazil's interior and has processing and textile industries. It is also known for traditional handicrafts, e.g., lacemaking. The city first achieved importance in the 17th cent. as a center of the great colonial sugar plantations.

Fort Collins, city (1990 pop. 87,758), seat of Larimer co., N Colo., on the Cache la Poudre R., at the foot of the ROCKY MOUNTAINS.; inc. as a city 1883. The area was settled (1864) around a fortification built to protect a trading post. The city, trade center for a rich farming area, has diversified industries and is the seat of Colorado State Univ.

fortification, system of defense structures for protection from enemy attacks. The art developed in earliest times with the building of simple earthworks, which soon evolved into walls, palisades, and elaborate stockades. City walls appeared very early in the Middle East, notably in Mesopotamia and Phoenicia. Major advances in permanent fortification were made by the Romans, who built walls along the Danube and Rhine rivers and in England, e.g., HADRIAN'S WALL. The GREAT WALL OF CHINA was an even more ambitious undertaking. The advent of siegecraft, using such devices as battering rams and catapults, reduced the effectiveness of large-scale fortification, but in the Middle Ages CASTLES and citadels remained defensible against all but a lengthy siege. In the 15th cent. the development of ARTILLERY further diminished the value of fixed fortifications, and military engineers had to devise new methods of defense based on detached forts that created an entrenched camp over a wide area. This ring system of fortification failed in Belgium in World War I, however, as did the French MAGINOT LINE in World War II. The development of air power, heavy artillery, and mechanized warfare eventually brought an end to such defense systems. In both the Korean and Vietnam wars, the theory of fortification largely returned to the idea of temporary, even improvised, shelter, intended mainly to delay the enemy's advance.

Fort Knox [for Henry KNOX], U.S. military reservation, 110,000 acres (44,515 hectares), Hardin and Meade cos., N Ky.; est. 1917 as a training camp and became a permanent post in 1932. The U.S. Depository (built 1936) holds the bulk of the nation's gold bullion in steel and concrete vaults.

Fort Lauderdale, city (1990 pop. 148,377), seat of Broward co., SE Fla., on the Atlantic coast; settled around a fort built (c.1837) in the Seminole War, inc. 1911. The city has more than 270 mi (435 km) of natural and artificial waterways and one of the largest marinas in the world. A major beach resort, it has a performing arts center and art and science museums. Products include electronic devices, boats and yachts, and various light manufactures.

Fort McHenry, U.S. military post, Baltimore harbor, Md. Its defense against British bombardment in the WAR OF 1812 inspired Francis Scott KEY to write "The STAR-SPANGLED BANNER." It is now a national monument and historic site.

FORTRAN: see PROGRAMMING LANGUAGE.

Fort Sill, U.S. military reservation, Comanche co., SW Okla., 4 mi N of Lawton; est. 1869 by Gen. Philip SHERIDAN. Now a 95,000-acre (38,445-hectare) field artillery and missile base, it was once (1870s) a base of operations for campaigns against Native American peoples and for maintaining law and order in the region. Various tribes were resettled on the reservation, and GERONIMO is buried there.

Fort Smith, city (1990 pop. 72,798), seat of Sebastian co., NW Ark., at the Okla. line, where the Arkansas and Poteau rivers join; inc. 1842. A military post (est. 1817) and gold rush supply point (1848), it was a lawless area cleansed by "Hanging Judge" Isaac Parker. The modern city is a rail and trade center and has diverse manufactures, including refrigerators and heating and electrical equipment. The city has a 22-block historic district. Fort Smith National Historic Site is there.

Fort Sumter, fortification in Charleston harbor, S.C., site of the first clash (Apr. 12, 1861) of the CIVIL WAR. The Confederates were victorious, but the fort was retaken by Union forces in 1865. It is now a national monument.

Fort Wayne, city (1990 pop. 173,072), seat of Allen co., NE Ind., where the St. Joseph and St. Marys rivers join to form the Maumee R.; inc. 1840. It is a railroad, wholesale, and distribution hub with electronics and automotive industries. The MIAMI had their chief town on the strategic site. A French fort (built before 1680) was replaced by one built (1794) by Anthony WAYNE.

Fort Worth, city (1990 pop. 447,619), seat of Tarrant co., N Tex., 30 mi (48 km) W of DALLAS, with which it forms Texas's largest metropolitan area (1990 pop. 3,885,415); settled 1843, inc. 1873. Es-

tablished as an army post in 1847, it became a cattle town after the Civil War. Completion (1876) of the railroad made it a meatpacking and shipping point. Wheat (late 19th cent.) and oil (discovered 1919 W of the city) furthered its development. Today it is a major N Texas industrial city, with large oil and gas facilities and aerospace and electronics industries. The Dallas–Fort Worth airport (opened 1974 between the cities) is one of the world's largest. Texas Christian Univ., the Kimball Art Museum, and the Amon Carter Museum of Western Art are among the city's well-known institutions.

Foscolo, Ugo, 1778–1827, Italian writer. A novel recounting his political disillusionment with Napoleon Bonaparte (see NAPOLEON I), *The Last Letters of Jacopo Ortis* (1798–1802), together with his criticism and lyrics (e.g., *Sepulchres*, 1807), strongly influenced Italian letters.

Foss, Lukas, 1922–, American composer, pianist, and conductor; b. Germany as Lukas Fuchs. As conductor of the Buffalo Philharmonic Orchestra (1963–71), he was noted for performing avant-garde compositions. His own early works were traditional; his later interest in modern techniques is seen in *Elytres* (1964) and *Fanfare* (1973). He was music director of the Brooklyn Philharmonic from 1971 to 1991 and of the Milwaukee Symphony Orchestra from 1981 to 1986.

fossil, remains or imprint of a plant or animal preserved from prehistoric times by natural methods and found mainly in sedimentary rock, asphalt, coal, and amber. Fossilization of skeletal structures or other hard parts is most common. Conditions for fossilization include quick burial in an originally moist sediment or other material that prevents both weathering and decay. Shells and bones embedded in hardened sediment can be dissolved by water, leaving a natural mold. Sometimes these molds are filled with mineral deposits, forming natural casts. Fossil footprints and trails and coprolites, or fossil excrement, can reveal much about the lives and feeding habits of ancient animals. Many insects and other ARTHROPODS have been preserved whole in amber; in 1993 DNA was extracted from an amber-encased weevil from the Cretaceous period. Entire large animals of the late Pleistocene have been found frozen, notably in Siberia. In California the LA BREA tar pits have yielded many skeletons. The study of fossils is called paleontology.

fossil fuel: see ENERGY, SOURCES OF.

Foster, Stephen Collins, 1826–64, American songwriter and composer; b. Lawrenceville, Pa. He had little training. Writing songs for the E.P. CHRISTY minstrel troupe, he acquired a knowledge of African American life, but sensing prejudice against "Ethiopian songs" he was reluctant even to put his name to them. Because of their utter simplicity, his African-American dialect songs are often thought of as folk music. His songs include "Oh! Susannah," "Camptown Races," "My Old Kentucky Home," and "Old Black Joe."

foster care, generally, care of children on a full-time, temporary basis by persons other than their own parents. Also known as boarding-home care, foster care is intended to offer a supportive family environment to children whose natural parents cannot raise them because of the parents' physical or mental illness, the child's behavioral difficulties, or problems within the family environment, e.g., abuse, alcoholism, or crime. Children may be placed by an agency in group homes or with families, who receive some payment toward care. The child's parents may retain their parental rights, and the child may ultimately return home. Under permanent foster care the agency has guardianship; the child may then be available for adoption by the foster parents or others. Foster care has been extended in recent years to include care for elderly persons, on a fee basis, in the homes of people who are not family members.

Foucault, Jean Bernard Leon [fōōkō'], 1819–68, French physicist. Investigating the speed of light, he determined its velocity in air and found that its speed in water and other media decreased in proportion to the index of refraction. He originated the Foucault PENDULUM, with which he demonstrated the earth's rotation, invented (1852) the GYROSCOPE, and with the physicist Armand Fizeau took the first clear photograph of the sun.

Foucault, Michel, 1926–84, French philosopher and historian. Highly influential, he is known for historical studies, e.g., *Madness and Civilization* (1961), that reveal the sometimes disturbing power relations in social practices. Works such as *The Order of Things* (1966) and *Archaeology of Knowledge* (1969) analyze systems of knowledge, uncovering their unconscious rules and relations to one another. His last writings, e.g., *History of Sexuality*, vol. 2 (1984), examine the self's relationship to itself.

Fouché, Joseph [fōōshā'], b. 1759 or 1763, d. 1820, French police minister (1799–1802, 1804–10). An opportunist, he sided with every party in power from the FRENCH REVOLUTION through the BOURBON restoration. He was indispensable to NAPOLEON I, who created him duke of Otranto in 1809. Sometimes considered the father of the modern police state, he created a ruthlessly efficient system of criminal and political police. After the second Bourbon restoration, he was exiled and died in obscurity.

Foucquet: see FOUQUET.

foundation, institution through which private wealth is contributed and distributed for public purposes. Foundations have existed since Greek and Roman times, when they honored deities. The medieval European church had many foundations, and the Arab *waqf* (pious endowment) developed with the growth of Islam. Modern European foundations are generally smaller than those in the U.S. and are closely regulated by the state. There were a few early American foundations, e.g., those endowed by Benjamin FRANKLIN (1791) and by James Smithson (1846; to form the SMITHSONIAN INSTITUTION), but foundations in the U.S. developed rapidly after the Civil War. From 1896 to 1918 many wealthy Americans created private foundations for the public benefit, e.g., Andrew CARNEGIE and John D. ROCKEFELLER, Sr. The larger of the modern U.S. foundations have devoted themselves to broad areas, e.g., the Carnegie Corporation of New York (est. 1911) concentrates on American education and underprivileged groups; the Rockefeller Foundation (est. 1913) works in the areas of hunger, overpopulation, education, equal opportunity, cultural improvement, and ecology; and the Ford Foundation (est. 1936) concentrates on world peace, democratic government, economic well-being, education, and the scientific study of humanity. More recent foundations include the John D. and Catherine T. MacArthur Foundation (est. 1979), best known for its annual awards to creative individuals (often called "genius" prizes).

founding: see CASTING.

Fouquet or **Foucquet, Jean** or **Jehan** [fōōkā'], c.1420–c.1480, French painter and illuminator. Court painter to CHARLES VII and LOUIS XI, he produced delicate religious paintings, court portraits, and an illuminated BOOK OF HOURS for Étienne Chevalier (Chantilly) that is regarded as his masterpiece.

Four Freedoms. On Jan. 6, 1941, Pres. F.D. ROOSEVELT, in a message to Congress proposing LEND-LEASE legislation, stated that Four Freedoms should prevail throughout the world—freedom of speech and expression, freedom of worship, freedom from want, and freedom from fear. These were substantially incorporated (Aug. 1941) in the ATLANTIC CHARTER.

Four Horsemen of the Apocalypse, allegorical figures in REVELATION in the BIBLE. One interpretation of the rider on the white horse is that he represents Jesus. The rider on the red horse is war; on the black horse, famine; and on the pale horse, death.

Fourier, Charles [fōōryā'], 1772–1837, French social philosopher. He held that social harmony could be achieved in a society based on the "phalanx," an economic unit of 1,620 people sharing a communal dwelling and dividing work according to their natural inclinations. The many Fourierist communities included BROOK FARM. After Fourier's death Fourierism was led by V.P. CONSIDÉRANT.

Fourier, Jean Baptiste Joseph, Baron, 1768–1830, French mathematician and physicist, noted for his researches on heat diffusion and numerical equations. He originated the Fourier series, which allowed discontinuous functions to be represented by a trigonometric series.

Four-Power Treaty: see NAVAL CONFERENCES.

Fourteen Points, formulation of a peace program, presented (Jan. 1918) by Pres. WILSON near the end of WORLD WAR I. The program called for a just, unselfish peace that would offer self-government to the European national groups and pave the way for general disarmament and open agreements between nations. The program had two purposes: to reach the people and liberal leaders of the

Central Powers, in the hope that their influence would help shorten the war, and to provide an actual framework for the peace discussions. The first aim was successful, but despite the enormous moral authority the Fourteen Points conferred on Wilson, the program's important points were lost in the compromises that came out of the peace treaty (see VERSAILLES, TREATY OF).

Fourth of July, Independence Day, or **July Fourth,** U.S. patriotic holiday commemorating the adoption of the DECLARATION OF INDEPENDENCE. Celebration of it began during the AMERICAN REVOLUTION.

Fowler, Henry Watson, 1858–1933, English lexicographer. He and his brother, Francis G. Fowler (1870–1918), collaborated on *The King's English* (1906), *The Concise Oxford Dictionary of Current English* (1911), and *The Pocket Oxford Dictionary* (1924). After the death of his brother, H.W. Fowler completed alone the invaluable reference work *A Dictionary of Modern Usage* (1926).

Fowles, John, 1926–, English novelist. A cerebral writer, he is interested in manipulating the novel form. His books include *The Collector* (1963), *The French Lieutenant's Woman* (1969), *Mantissa* (1982), and *A Maggot* (1985).

Fox: see SAC AND FOX.

Fox, Charles James, 1749–1806, British statesman and orator, for many years the outstanding parliamentary proponent of liberal reform. A WHIG, he entered Parliament in 1768. He was a close friend of the prince of Wales (later GEORGE IV) and an enemy of GEORGE III and William PITT. Three times foreign secretary (1782, 1783, 1806), Fox opposed British intervention in the FRENCH REVOLUTION. He advocated legislative independence for Ireland, enlargement of the franchise, and parliamentary reform. Abolition of the slave trade, which he proposed and urged, was passed in 1807.

Fox, George, 1624–91, English religious leader, founder of the Society of FRIENDS. In 1646 he underwent a mystical experience that convinced him that Christianity was an inner light by which Jesus directly illumines the believing soul. Beginning to preach in 1647, he was often persecuted and imprisoned but won many followers. He organized his sect in 1668; the first London Yearly Meeting was held in 1671. His journal (1694, with a preface by William Penn) has appeared in various editions.

Fox, Margaret: see SPIRITISM.

fox, carnivorous MAMMAL of the DOG family, found in much of the Northern Hemisphere. It has a pointed face, thick fur, and bushy tail. Most fox species belong to the red fox group (genus *Vulpes*). The common red fox (*V. vulpes*) of North America inhabits areas of forest mixed with open country from the Arctic to the S U.S.

fox terrier, long-legged TERRIER; shoulder height, c.15 in. (38.1 cm); weight, 15–19 lb (6.8–8.6 kg). There are two types: the smooth, with a dense, short, flat coat, and the wirehaired, with a longer, harsh, wiry coat. Both are white, with black or black-and-tan markings. The breed was perfected in 19th-cent. England to hunt foxes.

Foxe, John, 1516–87, English clergyman, author of the noted *Book of Martyrs.* A Protestant, he fled to the Continent in the reign of MARY I. There, a Latin edition of his history was published in 1559. An expanded English edition (1563) appeared in the reign of ELIZABETH I. The book praised the Protestant martyrs of Mary's reign.

foxhound, sturdy, medium-sized HOUND. The **English foxhound,** shoulder height, 21–25 in. (53.3–63.5 cm), weight, 60–70 lb (27.2–31.8 kg), with a short, glossy coat that is usually black, tan, and white. Probably developed from 14th-cent. French hounds, it was first used in packs to hunt foxes in the 17th cent. The slightly smaller **American foxhound** was developed over 300 years ago.

Foyt, A.J. (Anthony Joseph Foyt, Jr.), 1935–, American auto racing driver; b. Houston. Foyt was the first person to win the Indianapolis 500 race four times (1961, 1964, 1967, 1977). He has also won the Daytona 500 and, with Dan Gurney, the 24 Hours of Le Mans. He has been U.S. Auto Club driving champion seven times.

Fr, chemical symbol of the element FRANCIUM.

Fra: see ANGELICO, FRA; LIPPI, FRA FILIPPO.

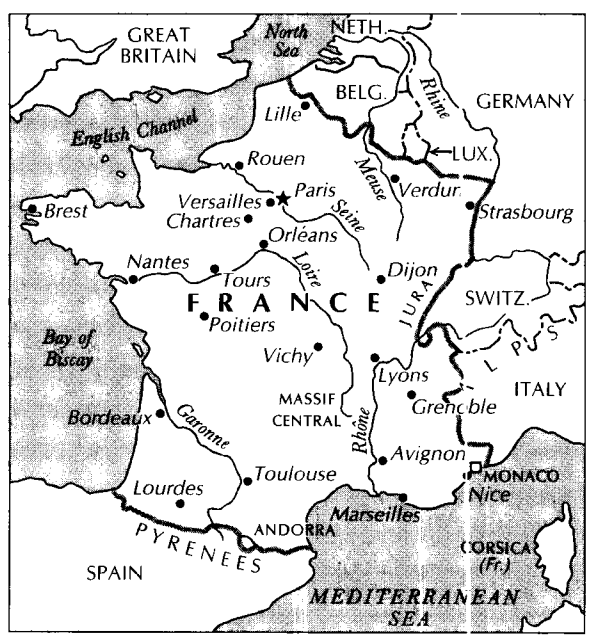
fractal geometry, branch of MATHEMATICS concerned with irregular patterns made of parts that are in some way similar to the whole, e.g., twigs and tree branches, a property called self-similarity or self-symmetry. Unlike conventional GEOMETRY, which is concerned with regular shapes and whole-number dimensions, such as lines (one-dimensional) and cones (three-dimensional), fractal geometry deals with shapes found in nature that have non-integer, or fractal, dimensions—linelike rivers with a fractal dimension of about 1.2 and conelike mountains with a fractal dimension between 2 and 3. The theory of fractals developed from Benoit MANDELBROT's study of COMPLEXITY and CHAOS. Fractal geometry has been applied to such diverse fields as the stock market, chemical industry, meteorology, and COMPUTER GRAPHICS.

fraction, in arithmetic, an expression representing a part, or several equal parts, of a unit. In writing a fraction, e.g., $\frac{2}{3}$ or $\frac{2}{3}$, the number after or below the bar, called the denominator, indicates the total number of equal parts into which the unit has been divided; the number before or above the bar, called the numerator, indicates how many of these parts are being considered. The present notation for fractions is of Hindu origin, but Egyptians used some types of fractions before 1600 B.C. The DECIMAL SYSTEM uses another way to represent fractions, e.g., 0.75 for $\frac{3}{4}$, often simplifying arithmetical computation.

Fragonard, Jean-Honoré [frägônär'], 1732–1806, French painter. Influenced by BOUCHER, he was admitted to the Académie royale in 1765 for *Coresus and Callirrhoë* (Louvre). Thereafter he painted polished, delicately erotic scenes of love for the court of LOUIS XV. Representative works are *Love's Vow* and *The Swing* (both: Wallace Coll., London) and the *Music Lesson* (Louvre). He is esteemed for the freedom of his brushstroke, the vitality of his portraiture and landscapes, and his virtuosity in depicting the gaiety and charm of the age of Louis XV.

Frame, Janet, 1924–, New Zealand author of such complex, disturbing novels as *Owls Do Cry* (1957), *Faces in the Water* (1961), *Living in the Maniototo* (1979), and *The Envoy from Mirror City* (1985), of poems, e.g., *The Pocket Mirror* (1967), and of short stories.

France, Anatole [fräNs'], pseud. of **Jacques Anatole Thibault,** 1844–1924, French author, the most prominent French man of letters of his day. His early fiction displayed allusive charm and subtle irony, as in *The Crime of Sylvestre Bonnard* (1881), *Thaïs* (1890), and *At the Sign of the Reine Pédauque* (1893). After the DREYFUS AFFAIR (in which he supported ZOLA), he concentrated more on political satire, notably in the novel *Penguin Island* (1908), an allegory of French history. He was elected to the French Academy in 1896 and received the Nobel Prize in literature in 1921.



France, officially French Republic, republic (1992 est. pop. 57,287,000), 211,207 sq mi (547,026 sq km), W Europe; bordered by the English Channel (N), the Atlantic Ocean and Bay of Biscay (W), Spain (SW), the Mediterranean Sea (S), Switzerland and Italy

The key to pronunciation appears on page xiii.

RULERS OF FRANCE SINCE 987 *(including dates of reign)*

The Capetians
Hugh Capet, 987–96
Robert II (the Pious), son of Hugh Capet, 996–1031
Henry I, son of Robert II, 1031–60
Philip I, son of Henry I, 1060–1108
Louis VI (the Fat), son of Philip I, 1108–37
Louis VII (the Young), son of Louis VI, 1137–80
Philip II (Augustus), son of Louis VII, 1180–1223
Louis VIII, son of Philip II, 1223–26
Louis IX (Saint Louis), son of Louis VIII, 1226–70
Philip III (the Bold), son of Louis IX, 1270–85
Philip IV (the Fair), son of Philip III, 1285–1314
Louis X (the Quarrelsome), son of Philip IV, 1314–16
John I (the Posthumous), son of Louis X, 1316
Philip V (the Tall), son of Philip IV, 1317–22
Charles IV (the Fair), son of Philip IV, 1322–28

House of Valois
Philip VI, grandson of Philip III, 1328–50
John II (the Good), son of Philip VI, 1350–64
Charles V (the Wise), son of John II, 1364–80
Charles VI (the Mad or the Well Beloved), son of Charles V, 1380–1422
Charles VII (the Victorious or the Well Served), son of Charles VI, 1422–61
Louis XI, son of Charles VII, 1461–83
Charles VIII, son of Louis XI, 1483–98
Louis XII, descendant of Charles V, 1498–1515
Francis I, cousin and son-in-law of Louis XII, 1515–47
Henry II, son of Francis I, 1547–59
Francis II, son of Henry II, 1559–60
Charles IX, son of Henry II, 1560–74
Henry III, son of Henry II, 1574–89

House of Bourbon
Henry IV (of Navarre), descendant of Louis IX, 1589–1610
Louis XIII, son of Henry IV, 1610–43
Louis XIV, son of Louis XIII, 1643–1715
Louis XV, great-grandson of Louis XIV, 1715–74
Louis XVI, grandson of Louis XV, 1774–92

The First Republic
The National Convention, 1792–95
The Directory, 1795–99
The Consulate (Napoleon Bonaparte, First Consul, 1802–4), 1799–1804

The First Empire
Napoleon I (Napoleon Bonaparte), 1804–15

Bourbon Restoration
Louis XVIII, grandson of Louis XV, 1814–24
Charles X, grandson of Louis XV, 1824–30

House of Bourbon-Orléans
Louis Philippe, descendant of Louis XIII, 1830–48

The Second Republic
Louis Napoleon Bonaparte, nephew of Napoleon I, president, 1848–52

The Second Empire
Napoleon III (Louis Napoleon Bonaparte), 1852–70

The Third Republic *(presidents)*
Louis Jules Trochu (provisional), 1870–71
Adolphe Thiers, 1871–73
Marie Edmé Patrice de MacMahon, 1873–79
Jules Grévy, 1879–87
Sadi Carnot, 1887–94
Jean Paul Pierre Casimir-Périer, 1894–95
Félix Faure, 1895–99
Émile François Loubet, 1899–1906
Armand Fallières, 1906–13
Raymond Poincaré, 1913–20
Paul Eugène Louis Deschanel, 1920
Alexandre Millerand, 1920–24
Gaston Doumergue, 1924–31
Paul Doumer, 1931–32
Albert Lebrun, 1932–40

The Vichy Government
Henri Philippe Pétain, chief of state, 1940–44

The Provisional Government
Charles De Gaulle, president, 1944–46

The Fourth Republic *(presidents)*
Georges Bidault (provisional), 1946
Vincent Auriol, 1947–54
René Coty, 1954–58

The Fifth Republic *(presidents)*
Charles De Gaulle, 1958–69
Georges Pompidou, 1969–74
Valery Giscard d'Estaing, 1974–81
François Mitterrand, 1981–

(E, SE), and Germany, Luxembourg, and Belgium (NE). PARIS is the capital; other major cities include MARSEILLES, LYONS, TOULOUSE and NICE. One of the country's major natural features is the Massif Central, a rugged mountain area occupying south-central France. North of this and of the LOIRE R. is the Paris basin, a fertile depression drained by the SEINE and Marne rivers. To the southeast is the RHÔNE valley, which widens into a plain near its delta on the MEDITERRANEAN. To the southwest is the great Aquitanian plain, drained by the Garonne and Dordogne rivers. The main mountain ranges are the French ALPS, with France's highest peak, MONT BLANC (15,771 ft/4,807 m), the Vosges and the Jura mountains in the east, and the PYRENEES in the southwest.

Economy. France is one of the world's major economic powers. Agriculture is important, and about 60% of the land is used for farming. Over half of the value of agricultural output derives from livestock; leading crops are sugar beets, wheat, corn, barley, and potatoes. Only Italy produces more wine. Iron ore and bauxite are the leading minerals. Major industrial products include chemicals, textiles, steel, foods (particularly cheese), motor vehicles, aircraft. Tourism is important, as is the production of luxury goods such as perfume. The railroads, utilities, many banks, and some key industries are nationally owned, but there has been some recent movement toward PRIVATIZATION. France has the world's second largest number of operating nuclear power plants, which produce over 75% of its electricity.

People. France has great ethnic diversity. French is the universal language, but Alsatian (a German dialect), Flemish, Breton, Basque, and Catalan are still spoken in various sections. Roman Catholicism is the dominant religion.

Government. Metropolitan (European) France is composed of 96 departments (including the island-department of CORSICA), grouped into 22 regions and subdivided into districts, municipalities, and cantons. Together with the overseas departments and territories, they constitute the French Republic. The Fifth French Republic is governed under a constitution adopted in 1958 and amended in

1962. It provides for a strong president, directly elected to a seven-year term, and a bicameral parliament.

Early History. The area known as GAUL was conquered (58–51 B.C.) by the Romans under Julius CAESAR. Beginning in the 3d cent. A.D., the Gallo-Roman civilization that had developed was overrun by Germanic invaders, including the FRANKS under CLOVIS I, who defeated (486) the last Roman governor. Under the MEROVINGIAN and CAROLINGIAN dynasties, the Franks ruled Gaul until 987, when powerful feudal lords established HUGH CAPET as king. Under the Capetian kings, who reigned until 1328, France experienced a rebirth that reached its height in the 13th cent. Its leading role in the CRUSADES established its cultural supremacy in most of Europe, and the HUNDRED YEARS WAR (1337–1453) evicted the English from French soil. The 16th cent. brought religious conflict and civil wars, but in the 17th cent. two great statesmen, Cardinal RICHELIEU and Cardinal MAZARIN, reestablished French power, and under LOUIS XIV (r.1643–1715) France became the greatest power in Europe.

The Ancien Régime and the New France. Burdened by remnants of FEUDALISM and a system of outworn privileges, France under LOUIS XV (r.1715–74) hovered on the verge of bankruptcy. The SEVEN YEARS WAR (1756–63) drained the treasury and cost France its empire in India and North America. French support of the AMERICAN REVOLUTION proved a financial disaster. The result was the upheaval that shook Europe from 1789 to 1815 (see FRENCH REVOLUTION; FRENCH REVOLUTIONARY WARS; NAPOLEON I). During this time a constitutional monarchy was created (1791); war with much of Europe began, accompanied by the growth of radical factions in France (1792); ROBESPIERRE presided over the REIGN OF TERROR (1793–95); and a reaction ushered in the DIRECTORY (1795–99), which was terminated by Napoleon's coup d'etat. Making himself emperor (1804), Napoleon led his armies as far as Moscow before his final defeat in the WATERLOO CAMPAIGN (1815).

Modern France. France emerged as a uniform, bureaucratic state dominated by the bourgeoisie. The Bourbon Restoration (1814–30) was short-lived. The JULY REVOLUTION of 1830 enthroned LOUIS PHILIPPE, who was overthrown in turn by the FEBRUARY REVOLUTION of 1848. Louis Napoleon headed the Second Republic and later (1852) made himself emperor as NAPOLEON III. Defeat in the FRANCO-PRUSSIAN WAR (1870–71) led to his downfall and the establishment of the Third Republic. In WORLD WAR I France, led by CLEMENCEAU, bore the brunt of the fighting in the West. In WORLD WAR II defeat by Germany (1940) was followed by occupation; Marshal PÉTAIN headed the collaborationist VICHY government in unoccupied France, while Gen. Charles DE GAULLE led the "Free French" resistance. In 1944 the Allies expelled the Germans from France. The Fourth Republic, proclaimed in 1946, was weakened by the defeat (1954) of French troops in INDOCHINA and a war for independence in ALGERIA. De Gaulle was returned to power as first president (1958–69) of the Fifth Republic. Seeking to restore French prestige in world affairs, De Gaulle stressed independence from the U.S. and NATO in military affairs. His conservative policies were continued by his successors, Georges POMPIDOU and Válery GISCARD D'ESTAING. In 1981, after 23 years of Gaullist dominance, Socialist François MITTERRAND was elected president and embarked on a program that included administrative decentralization and nationalization of banks and industry. In 1986 the Socialists lost their parliamentary majority, and Mitterrand was forced to appoint Jacques CHIRAC, a Gaullist, as premier. Chirac reversed the Socialist program with a policy of reprivatization and opposed Mitterrand in the 1988 presidential election. Mitterrand won, and the Socialists regained control of the national assembly. Mitterrand turned increasingly to foreign affairs and pursued a more moderate economic program. Rising unemployment and other economic difficulties, as well as several corruption scandals, led to a resounding Socialist defeat in 1993. Conservatives captured nearly 85% of the seats in the national assembly, and Édouard BALLADUR, a Gaullist, became premier.

Franceschi, Piero de': see PIERO DELLA FRANCESCA.

Francis, Saint, or **Saint Francis of Assisi,** 1182?–1226, founder of the FRANCISCANS; b. Assisi, Italy. The son of a wealthy merchant, he underwent a conversion at age 22 and became markedly devout and ascetic. In 1209 he began to preach and was given permission by Pope INNOCENT III to form an order of friars. The friars traveled about Italy and soon began preaching in foreign countries, including (1219–20) the Holy Land. In 1221 Francis gave up command of the order, and in 1224 he became the first known person to receive the stigmata (wounds corresponding to those of the crucified Jesus). Francis exemplified humility, love of poverty, and joyous religious fervor; he is also associated with a simple love of nature and humanity and is often depicted preaching to birds. Stories about him were collected in *The Little Flowers of St. Francis.* Feast: Oct. 4.

Francis, rulers of the HOLY ROMAN EMPIRE. **Francis I,** 1708–65, emperor (1745–65), duke of Lorraine (1729–37), and duke of Tuscany (1737–65), exchanged Lorraine for Tuscany in 1735 as part of the settlement of the War of the POLISH SUCCESSION. In 1736 he married MARIA THERESA, heiress to the HAPSBURG lands. He became emperor at the end of the War of the AUSTRIAN SUCCESSION, but the real rulers were Maria Theresa and Chancellor Kaunitz. **Francis II,** 1768–1835, was the last Holy Roman emperor (1792–1806) and, as Francis I, the first emperor of Austria (1804–35) and king of Bohemia and Hungary (1792–1835). When NAPOLEON I forced the dissolution of the Holy Roman Empire, Francis took the title emperor of Austria. Later he helped defeat Napoleon and, guided by METTERNICH, presided over the Congress of VIENNA. His reign was exceedingly reactionary and repressive.

Francis I, emperor of Austria: see FRANCIS II, Holy Roman emperor.

Francis, kings of France. **Francis I,** 1494–1547 (r.1515–47), was the cousin, son-in-law, and successor of LOUIS XII. He resumed the ITALIAN WARS and recovered Milan by a brilliant victory at Marignano (1515). A candidate for Holy Roman emperor (1519), Francis lost to CHARLES V, who became his lifelong rival. A planned alliance with HENRY VIII of England failed to occur at the FIELD OF THE CLOTH OF GOLD (1520), and Francis was captured in his first war (1521–25) against Charles V. To gain his freedom Francis renounced many territorial claims. He then created the League of Cognac, consisting of Francis, Henry VIII, Venice, Florence, and the papacy; they were all allied against Charles V, but a second war (1527–29) gained little, and a third war (1536–38) proved inconclusive. In 1542 Francis, allied with the Turkish sultan SULAYMAN I, again attacked Charles, who was supported by Henry VIII. The resulting peace treaties only confirmed earlier French losses. Francis was a typical Renaissance monarch, unscrupulous, spendthrift, and dissolute, but is also known for his support of the arts. He was a patron of François RABELAIS, and LEONARDO DA VINCI worked at his court. Francis was succeeded by his son HENRY II. His grandson, **Francis II,** 1544–60 (r.1559–60), married (1558) MARY QUEEN OF SCOTS, and during his reign the government was run by her relatives, the GUISE family. Their ruthless persecution of the Protestants caused the HUGUENOTS to launch the ill-fated Amboise Conspiracy (1560) in an effort to displace them.

Francis, 1554–84, French prince, duke of Alençon and Anjou, youngest son of HENRY II of France. Although ill-shapen and pockmarked, he was considered as a husband for ELIZABETH I of England. Offered (1580) the rule of the Low Countries by WILLIAM THE SILENT, leader of the Netherlands' revolt against Spain, he invaded the Netherlands but withdrew in 1583.

Francis, Dick, 1920–, English novelist. Formerly a professional champion steeplechase jockey, he parlayed his knowledge of horse racing into successful mysteries, including *Twice Shy* (1982), *Break In* (1986), and *The Edge* (1988).

Franciscans, members of several Roman Catholic religious orders following the rule (approved 1223) of St. FRANCIS. There are now three orders of Franciscan friars. The Friars Minor (O.F.M.), formerly called Observants, and the Friars Minor Conventual (O.M.C.) split (1517) as a result of a reform. Further reform (1525) created the Capuchins (O.M.Cap.). The Franciscans include an order of nuns, the Poor Clares, and a third order including both laity and religious members. Franciscans are educators and missionaries.

Francis de Sales, Saint, 1567–1622, French Roman Catholic preacher, Doctor of the Church, key figure in the Catholic Reformation in France (see REFORMATION, CATHOLIC). He became (1602) bishop of Geneva and is credited with many conversions of Protestants by his eloquent preaching. With St. Jane Frances de Chantal, he founded the Order of the Visitation for women. His *Intro-*

The key to pronunciation appears on page xiii.

duction to the Devout Life is a religious classic, and he is the patron saint of Roman Catholic writers. Feast: Jan. 24.

Francis Ferdinand or **Franz Ferdinand,** 1863–1914, Austrian archduke, heir apparent to his great-uncle, Emperor FRANCIS JOSEPH. He and his wife, Sophie, were assassinated (1914) in SARAJEVO by Gavrilo Princip, a Serbian nationalist. The consequent Austrian ultimatum to Serbia led directly to WORLD WAR I.

Francis Joseph or **Franz Josef,** 1830–1916, emperor of Austria (1848–1916) and king of Hungary (1867–1916). He subdued Hungary (1849) but lost (1859) Lombardy to Sardinia, and later he lost Venetia to Italy in the AUSTRO-PRUSSIAN WAR of 1866. After reorganization (1867), his empire became the AUSTRO-HUNGARIAN MONARCHY. Francis Joseph joined (1879) in an alliance with Germany (see TRIPLE ALLIANCE AND TRIPLE ENTENTE). His reign was disturbed by the tragic deaths of his son, RUDOLF; his brother, MAXIMILIAN, emperor of Mexico; and his wife, ELIZABETH. He died during World War I and was succeeded by CHARLES I.

Francis Xavier, Saint, 1506–52, Basque JESUIT missionary, called the Apostle to the Indies. A friend of St. IGNATIUS OF LOYOLA, with whom he and five others formed the Society of Jesus, he spent the last 11 years of his life as a missionary in India, Southeast Asia, and Japan. He is considered one of the greatest Christian missionaries, possessing both profound mysticism and common sense. Feast: Dec. 3.

francium (Fr), radioactive element, discovered in 1939 by Marguerite Perey as a disintegration product of actinium. Some of the 21 known isotopes of this rare ALKALI METAL are prepared by bombarding thorium with protons, deuterons, or alpha particles. See ELEMENT (table); PERIODIC TABLE.

Franck, César Auguste [fräNk], 1822–90, Belgian-French composer and organist. As a teacher in Paris, he influenced an entire generation of composers. His distinctive music, drawing on the techniques of BACH, includes his famous Symphony in D minor (1886–88).

Franco, Francisco [fräng'kō], 1892–1975, Spanish general, *caudillo* [leader] of Spain (1939–75). An army chief of staff (1934–36) and a political conservative, he joined (1936) the Nationalist rebellion against the republic and invaded Spain from Morocco. He became head of the rebel government (1936) and of the fascist FALANGE party (1937). With German and Italian help, he won the SPANISH CIVIL WAR in 1939, dealt ruthlessly with Loyalist opponents, and established a corporate state. He kept Spain a nonbelligerent in World War II, and in 1947 he declared Spain a kingdom and himself regent. He named (1969) Prince JUAN CARLOS as his successor and, despite social unrest, retained power until his death.

Franco-German War: see FRANCO-PRUSSIAN WAR.

Franconia, one of the five basic or stem duchies of medieval Germany, S Germany. It became (9th cent.) a duchy that included the cities of Mainz, Würzburg, Frankfurt, and Worms. Partitioned in 939, it remained politically fragmented. Most of Eastern Franconia passed (1803–15) to Bavaria.

Franco-Prussian War or **Franco-German War,** 1870–71, war provoked by BISMARCK as part of his plan to create a unified German empire. Bismarck surmised that his publication of the EMS DISPATCH would goad the French government into declaring war (on July 19, 1870) on Prussia and that the other German states would fall into line behind Prussia. A brilliant campaign led by von MOLTKE brought a string of German victories, culminating in the French rout at Sedan, where the emperor, NAPOLEON III, was captured (Sept. 1). In Paris, Napoleon was deposed and a provisional government was formed, but French resistance was made useless after the surrender of the French commander, Marshal Bazaine, at Metz (Oct. 27). Paris, however, held out until Jan. 1871, when the Prussian siege finally succeeded. France was forced to pay a huge indemnity and to give up most of Alsace and Lorraine. Again Paris resisted, until the COMMUNE OF PARIS was crushed militarily by the new French government. The war had far-reaching consequences. The German Empire was proclaimed (at Versailles on Jan. 18, 1871), and Prussian militarism and imperialism had triumphed.

Frank, Anne, 1929–45, Jewish diarist; b. Germany. Her family fled Nazi rule for Amsterdam in 1933. After Germany occupied the Netherlands, they hid (1942–44) in a secret room in a warehouse until betrayed to the Nazis. The moving diary she kept while in hiding was discovered (1947) and became an international bestseller. She died at the Bergen-Belsen CONCENTRATION CAMP.

Frank, Jacob, c.1726–1791, Polish Jewish sectarian and adventurer; b. Ukraine as Jacob ben Judah Leib. He founded the Frankists, a heretical Jewish sect that was an anti-Talmudic outgrowth of the mysticism of SABBATAI ZEVI.

Frankenthaler, Helen, 1928–, American painter; b. N.Y.C. A one-time student of Jackson POLLOCK, she is known for her lyrical and sensuous stained canvases.

Frankfort, city (1990 pop. 25,968), state capital and seat of Franklin co., N central Ky., cut by the Kentucky R.; est. 1786, became capital 1792. In the bluegrass country, it is the trade center for a tobacco and livestock area and produces whiskey, electronic and automotive parts, and other manufactures. Many fine old homes and the graves of Daniel BOONE and his wife are in the city.

Frankfurt or **Frankfurt am Main,** city (1989 est pop. 625,300), Hesse, central Germany, on the Main R. A port and an industrial center producing chemicals, pharmaceuticals, and other manufactures, it is also a world financial center—the German central bank and European Monetary Institute are here—and the site of major international trade fairs. Founded (1st cent. A.D.) by the Romans, it became a royal residence (8th cent.) under CHARLEMAGNE and the coronation place (1562–1792) of the Holy Roman emperors. In the 19th cent. it was the seat of the diet of the GERMAN CONFEDERATION. The city was the original home of the ROTHSCHILD family and the birthplace of GOETHE.

Frankfurt an der Oder, city (1989 est. pop. 87,900), Brandenburg, E Germany, a port on the Oder R. It is an industrial center, agricultural market, and rail hub. Manufactures include textiles, machinery, and foodstuffs. Chartered in 1253, the city was sacked (1631) by the Swedes in the THIRTY YEARS WAR and was severely damaged in WORLD WAR II.

Frankfurter, Felix, 1882–1965, associate justice of the U.S. SUPREME COURT (1939–62); b. Austria; LL.B., Harvard Univ. (1906). A professor (1914–39) at Harvard Law School, he espoused liberal causes, helping to found the AMERICAN CIVIL LIBERTIES UNION and supporting the NEW DEAL. Appointed to the Court by Pres. F.D. ROOSEVELT, Frankfurter tempered liberalism with judicial restraint, holding that government could limit civil liberties to protect itself and that the Court should not interfere in political issues.

Frankfurt Parliament, 1848–49, national assembly convened as a result of the liberal revolution that swept Germany. Its members were popularly elected, and its aim was the unification of Germany. It offered the imperial crown to FREDERICK WILLIAM IV of Prussia, but he refused the offer because it came from a popularly elected parliament. Thereafter, the movement foundered and most members withdrew.

Frankfurt School, the researchers associated with the Institute of Social Research at the Univ. of Frankfurt, Germany, founded (1923) as a Marxist-oriented center for research in philosophy and the social sciences. Influenced by PSYCHOANALYSIS and EXISTENTIALISM, such members as Theodor ADORNO, Walter BENJAMIN, and Herbert MARCUSE developed a version of Marxism known as "critical theory," formulated aesthetics, and critiqued capitalist culture.

frankincense: see INCENSE-TREE.

Franklin, Aretha, 1942–, American singer; b. Memphis, Tenn. She began singing in the choir of her father's church. Known as "Queen of Soul," she recorded such hits as "Respect," "Chain of Fools," and "Who's Zoomin' Who."

Franklin, Benjamin, 1706–90, American statesman, printer, scientist, and writer; b. Boston. He went (1723) to Philadelphia as a printer and won attention for his wit and commonsense philosophy, especially as expressed in *Poor Richard's Almanack* (pub. 1732–57). He helped establish (1751) an academy that became the present Univ. of Pennsylvania, and he served as deputy postmaster general of the colonies (1753–74). His famous experiment with a kite in a thunderstorm proved the presence of electricity in lightning. Franklin proposed a plan of union for the colonies at the ALBANY CONGRESS (1754) and was agent for several colonies in England. Returning (1775) to America, he helped draft the DECLARATION OF INDEPENDENCE, which he signed. During the AMERICAN REVOLUTION he was a successful American agent in France and was appointed (1781) a commissioner to negotiate the peace with Brit-

Aretha Franklin

ain. Franklin's last great public service was his attendance at the FEDERAL CONSTITUTIONAL CONVENTION (1787). His autobiography is well known. Benjamin's illegitimate son, **William Franklin,** c.1730–1813, was the last royal governor of New Jersey and a Loyalist in the American Revolution.

Franklin, Sir John, 1786–1847, British explorer in N Canada. He explored the arctic coast of CANADA on expeditions in 1819–22 and 1825–27, during which he founded Fort Franklin. After serving as governor of Van Diemen's Land (now TASMANIA) (1836–43), he set out to look for the NORTHWEST PASSAGE in 1845. His entire expedition of 129 men was lost, their ships apparently frozen in the ice. The tragedy inspired over 40 searches, from which much geographical information was gained.

Franklin, John Hope, 1915–, African-American historian; b. Rentiesville, Okla. Educated at Fiske University and Harvard, he was president of Phi Beta Kappa (1973–76) and the American Historical Association (1978–79). His works include *From Slavery to Freedom* (1947) and *Racial Equality in America* (1976).

Franklin, State of, government (1784–88) formed by the inhabitants of what is now E TENNESSEE after NORTH CAROLINA ceded (1784) its western lands to the U.S. Unable to secure congressional recognition, the government under John SEVIER passed out of existence when the terms of its officers expired. The area reverted temporarily to North Carolina.

Franklin Institute, in Philadelphia, chartered in 1824 "for the promotion of the mechanic arts" and noted for its lecture series, trade exhibitions, and work on governmental, industrial, and scientific problems. Its renowned science museum opened in 1934.

Franks, group of Germanic tribes that settled by the 3d cent. along the Rhine. The Salian Franks, under CLOVIS I, moved into GAUL and overthrew (486) the Romans. Clovis united them with the Ripuarian Franks, and they accepted Christianity and founded the MEROVINGIAN dynasty. Their conquests eventually encompassed most of western and central Europe, including the kingdoms of Neustria, Austrasia, and Burgundy. In the 8th cent. the rule of the CAROLINGIAN dynasty was culminated by the reign of CHARLEMAGNE. In 870 the kingdom of the West Franks became France and that of the East Franks became Germany.

Franz Josef or **Franz Joseph:** see FRANCIS JOSEPH.

Fraser, Douglas Andrew, 1916–, American labor leader; b. Scotland. He began working in a Detroit auto plant at 18. After becoming active in the United Auto Workers, he rose through the ranks as a union executive and earned wide respect as chief negotiator with the Chrysler Corp. While president of the UAW (1977–83), Fraser led the union in granting wage concessions in exchange for greater job security during the severe auto-industry slump of 1981–82. He became (1980) the first union leader to be elected to the board of directors of an American company (Chrysler).

Fraser, John Malcolm, 1930–, Australian political leader and prime minister (1975–83). In 1955 he was elected to Parliament. In 1975 he became the leader of the opposition Liberal-Country party and prime minister after the Labor government of Gough WHITLAM was dismissed. Fraser's conservative policies included cuts in government spending. He resigned from Parliament in 1983.

Fraser, major river of British Columbia, Canada, flowing in a zigzag course c.850 mi (1,370 km) from a source in the Rocky Mts. near Yellowhead Pass, Alta., to a fertile delta on the Strait of Georgia at Vancouver, B.C. The Fraser contains the chief spawning grounds in North America for the Pacific salmon. Early explorers were Sir Alexander MACKENZIE (1793) and the fur trader Simon Fraser (1808).

fraternity and sorority, in American colleges, student societies formed for social, literary, or religious purposes, with initiation by invitation and occasionally by a period of trial called hazing. Sororities are for women. Usually named with two or three Greek letters, fraternities and sororities are also known as Greek-letter societies. **Phi Beta Kappa,** the oldest of these societies, was founded (1776) at the College of William and Mary (Williamsburg, Va.) and became a scholarship honor society. Because of their entrance policies, which can be discriminatory, fraternities and sororities are forbidden on some campuses.

fraud, in law, willful misrepresentation intended to deprive another of some right. Fraud may be actual (involving actual deceit) or constructive (involving abuse of a relationship of trust). The remedy granted the plaintiff in most cases of fraud is either damages for the loss incurred or cancellation of the fraudulent CONTRACT (or sometimes both).

Frazer, Sir James George, 1854–1941, Scottish anthropologist. He is best known for *The Golden Bough* (1890), a comparative study in folklore, magic, and religion that showed parallel beliefs in primitive and Christian cultures. The monumental work had a great impact on early 20th-cent. thought.

Frederick, rulers of the HOLY ROMAN EMPIRE. **Frederick I** or **Frederick Barbarossa,** c.1125–90, emperor (1155–90) and German king (1152–90), was of the HOHENSTAUFEN dynasty, but his mother was a GUELPH, and Frederick was chosen emperor in the hope that he could end the discord between the GUELPHS AND GHIBELLINES. His coronation was delayed by unrest in Germany and by the revolutionary commune of Rome (1143–55). He restored peace, placated his Guelph cousin, HENRY THE LION, by restoring Bavaria to him, and was crowned in 1155. He failed in his efforts to restore imperial power in Italy; he was forced to recognize the LOMBARD LEAGUE, and Pope Alexander III, whom he had opposed, excommunicated him. In Germany, however, he succeeded in breaking the power of Henry the Lion in 1180–81. In 1189 he joined the Third CRUSADE and was drowned in Cilicia, in Turkey. **Frederick II,** 1194–1250, emperor (1220–50) and German king (1212–20), king of Sicily (1197–1250), and king of Jerusalem (1229–50), was one of the most arresting figures of the Middle Ages. He was a patron of art and science and greatly expanded commerce. His intense struggle with the papacy led to the ruin of the house of Hohenstaufen. With his rule the great days of the German empire ended and the rise of states in Italy began. He was the son of Emperor Henry VI and Constance, heiress of Sicily. Both died while he was an infant, and the imperial crown passed him by, but he was made king of Sicily. After OTTO IV became emperor in 1209, he alienated Pope INNOCENT III by asserting imperial authority in Italy and Innocent retaliated by crowning Frederick as German king (1212). Otto was deposed (1215) and, after long negotiations, Frederick was crowned emperor in 1220. His long-delayed crusade, when it finally took place (1228–29), turned out to be a state visit that culminated in Frederick's being crowned king of Jerusalem. The sporadic fighting between emperor and pope turned into a serious

The key to pronunciation appears on page xiii.

breach in 1239, and INNOCENT IV excommunicated (1245) Frederick and declared him deposed. Just as the war had turned in his favor, Frederick died of dysentery. **Frederick III,** 1415–93, emperor (1452–93) and German king (1440–93), was generally a weak ruler but made considerable progress toward reuniting the HAPSBURG family lands within his own branch. His greatest success was the acquisition of Burgundy through the marriage of his son, later Emperor MAXIMILIAN I, to MARY OF BURGUNDY, daughter of Charles the Bold. After 1490 Frederick relinquished most of his duties to Maximilian. He was the last emperor crowned at Rome.

Frederick, Danish kings. **Frederick III,** 1609–70, king of Denmark and Norway (1648–70), was the son of CHRISTIAN IV. After disastrous wars (1657–60) with CHARLES X of Sweden, the monarchy was made hereditary and the burghers strengthened at the expense of the nobles. Frederick's son, CHRISTIAN V, succeeded him. **Frederick IV,** 1671–1730, king of Denmark and Norway (1699–1730), was the son of Christian V. In the NORTHERN WAR he failed to recover S Sweden but obtained Schleswig and Lauenburg. His son, CHRISTIAN VI, succeeded him. **Frederick V,** 1723–66, king of Denmark and Norway (1746–66), was Christian VI's son. He encouraged commerce and industry, but the peasants' condition remained poor. His son, CHRISTIAN VII, succeeded him and was the father of **Frederick VI,** 1768–1839, king of Denmark (1808–39) and Norway (1808–14). In the FRENCH REVOLUTIONARY WARS England's attack on Denmark led him to ally himself with NAPOLEON I. At the Congress of Vienna (1814–15) he lost Norway to Sweden. His cousin CHRISTIAN VIII succeeded him. The son of Christian VIII, **Frederick VII,** 1808–63, was king of Denmark and duke of Schleswig, Holstein, and Lauenberg (1848–63). He accepted a constitution ending absolute monarchy. The SCHLESWIG-HOLSTEIN issue continued, leading to war with Prussia under his successor, CHRISTIAN IX. **Frederick VIII,** 1843–1912, king of Denmark (1906–12), was the son of Christian IX. He fought in the 1864 war with Prussia. His son CHRISTIAN X succeeded him. Another son became HAAKON VII of Norway. **Frederick IX,** 1899–1972, king of Denmark (1947–72), was the son of Christian X. Because he had no son, the Danish constitution was amended in 1953 to permit the succession of his daughter, who became Queen Margaret II.

Frederick, German kings: see FREDERICK, rulers of the Holy Roman Empire.

Frederick II or **Frederick the Great,** 1712–86, king of Prussia (1740–86), son and successor of FREDERICK WILLIAM I. He spent a miserable youth, ill-treated and despised by his father, and at one time was imprisoned for desertion. Once king, however, he displayed unexpected qualities of leadership and decision, becoming one of the great military generals of all time. His exploits in the War of the AUSTRIAN SUCCESSION (1740–48) and the SEVEN YEARS WAR (1756–63) made Prussia the greatest military power in Europe. He was the prime mover in the first Partition of POLAND (1772), which vastly increased his kingdom. He was less successful in the War of the BAVARIAN SUCCESSION (1778–79), in which he was thwarted by Emperor Joseph II. A "benevolent despot," Frederick promoted important legal and social reforms. He was a great patron of the arts and surrounded himself with intellectuals. His taste for French culture and his stormy friendship with VOLTAIRE are well known. He was a champion of religious liberty, and his philosophy was materialistic and skeptical. He wrote mediocre poetry and excellent prose (in French), and he composed passable music, especially for the flute, which he played well. He was childless and was succeeded by his nephew, FREDERICK WILLIAM II.

Frederick Augustus, electors of Saxony: see Augustus II (for Frederick Augustus I) and Augustus III (for Frederick Augustus II) under AUGUSTUS, kings of Poland.

Frederick Barbarossa: see Frederick I under FREDERICK, rulers of the Holy Roman Empire.

Frederick Henry, 1584–1647, prince of Orange, son of WILLIAM THE SILENT. He succeeded (1625) his brother MAURICE OF NASSAU as stadtholder of the United Provinces. In 1635 he signed a pact with France and Sweden against the Hapsburgs in the THIRTY YEARS WAR. During his rule commerce, science, and art (see HALS; REMBRANDT) flourished, and his title was made hereditary in his family. He was succeeded by his son, William II.

Fredericksburg, battle of, in the U.S. CIVIL WAR, fought Dec. 13, 1862, at Fredericksburg, Va., Union troops under Gen. Ambrose Burnside were repulsed in their efforts to reach Richmond by the forces of R.E. LEE, Stonewall JACKSON, and James LONGSTREET. It was a major Union defeat, with more than 12,000 Union casualities.

Frederick the Great: see FREDERICK II, king of Prussia.

Frederick the Winter King, 1596–1632, king of Bohemia (1619–20, or during one winter; hence his sobriquet) and elector palatine (1610–20) as Frederick V. The Protestant diet of Bohemia deposed the Catholic King Ferdinand (Holy Roman Emperor FERDINAND II) and named Frederick king, thus precipitating the THIRTY YEARS WAR. When he did not receive the expected Protestant support, he was defeated (1620) at White Mountain and forced to give up all his lands. He was the father of Prince RUPERT and of the Electress SOPHIA, the forebear of the British ruling family the Hanovers.

Frederick William, kings of Prussia. **Frederick William I,** 1688–1740 (r.1713–40), created a strong, absolutist state, instituting administrative reforms and rigid economy. He also built up the Prussian army, but except for a brief intervention in the Northern War (1700–21), he observed peace. He was a coarse man who had contempt for his gifted son, who succeeded him as FREDERICK II (Frederick the Great). **Frederick William II,** 1744–97 (r.1786–97), was the nephew and successor of Frederick II. He was defeated in the FRENCH REVOLUTIONARY WARS and signed a separate peace (1795) with the French. He participated in the second and third partition of POLAND (1793, 1795) and was a patron of MOZART. His son, **Frederick William III,** 1770–1840 (r.1797–1840), suffered crushing defeat by the French, and the Treaty of Tilsit (1807) made Prussia virtually a French vassal. Though he was weak and vacillating, he surrounded himself with able administrators who made valuable reforms. He grew increasingly reactionary in his old age. **Frederick William IV,** 1795–1861 (r.1840–61), was the son and successor of Frederick William III. A romanticist, mystic, and half-hearted liberal, he nonetheless crushed the REVOLUTION OF 1848 and refused the imperial crown because it was offered by a popularly elected body, the FRANKFURT PARLIAMENT. In 1857 his mental imbalance necessitated the regency of his brother and successor, William I.

Frederick William, 1620–88, elector of Brandenburg (1640–88), known as the Great Elector. He rebuilt his devastated state after the THIRTY YEARS WAR and added greatly to his domains. He secured East Pomerania and other territories in 1648 and secured full sovereignty over Prussia in 1660. He was succeeded by his son Frederick, who in 1701 crowned himself "king in Prussia" and styled himself Frederick I.

Fredericton, city (1991 pop. 46,466), capital of New Brunswick, E Canada, on the St. John R. Wood products are a major manufacture. It was founded (1783) by UNITED EMPIRE LOYALISTS at the site of Ste. Anne, an abandoned village of French ACADIA. It became provincial capital in 1785.

Freedom of Information Act (1966), law requiring that U.S. government agencies release their records to the public on request, unless the information sought falls into a category specifically exempted, such as national security, an individual's right to PRIVACY, or internal agency management. The act provides for court review of agency refusals to furnish identifiable records. The states also have similar laws. The U.S. and some states have also adopted so-called sunshine laws that require governmental bodies, as a matter of general policy, to hold open meetings, announced in advance.

freedom of the press: see PRESS, FREEDOM OF THE.

free fall, in physics, the state of a body moving solely under the influence of gravitational forces (see GRAVITATION). A body falling freely toward the surface of the earth undergoes an acceleration (see MOTION) equal to 32 ft/sec^2 (9.8 m/sec^2).

Freeman, Douglas Southall, 1886–1953, American historian; b. Lynchburg, Va. A retired newspaper editor, he wrote superb works on the CIVIL WAR, including *R.E. Lee* (4 vol., 1934–35; Pulitzer) and *Lee's Lieutenants* (3 vol., 1942–44). He also wrote a biography of George Washington (7 vol., 1949–57; Pulitzer).

Freeman's Farm, battle of: see SARATOGA CAMPAIGN.

Freemasonry, teachings and practices of the secret fraternal order known as the Free and Accepted Masons. There are 4.75 million members worldwide, mostly in the U.S. and other English-speaking

countries, and no central authority. Its ideals include fellowship, religious toleration, and political compromise. Drawing on guild practices of medieval stonemasons, the order's first Grand Lodge was organized in London (1717). In America, Masons were active in the Revolution and continued as a force in later politics. In Europe, they included VOLTAIRE, GOETHE, HAYDN, MAZZINI, and GARIBALDI. Freemasonry's identification with 19th-cent. bourgeois liberalism led to reaction, e.g., in the U.S., the ANTI-MASONIC PARTY; its anticlericalism brought the hostility of the Roman Catholic Church. Totalitarian states have always suppressed Freemasonry. Masons have a complex systems of rites and degrees, subsidiary organizations for women and children, and lodges noted for their parades and fraternal gatherings.

freesia: see IRIS.

free silver, in U.S. history, a political movement for the unlimited coinage of silver. Supported by silver-mining interests, by indebted agrarian classes of the South and West, and later by Populists (see POPULIST PARTY) and Democrats, free silver was a hotly contested issue in the late 19th cent. Debtors believed that more money in circulation would permit them to pay their debts with inflated dollars. The BLAND-ALLISON ACT (1878) and the SHERMAN SILVER PURCHASE ACT (1890) were compromises that failed to satisfy the silverites. The defeat of free-silver champion W.J. BRYAN in the presidential elections of 1896 and 1900, coupled with increasing gold supplies and returning prosperity, minimized the issue thereafter.

Free-Soil party, U.S. political party born in 1847–48 to oppose the extension of SLAVERY into territories newly gained from Mexico. In 1848 the Free-Soil party ran Martin VAN BUREN and C.F. Adams (see ADAMS, family) for president and vice president; by polling 300,000 votes it gave New York state to the Whigs and thus made Zachary TAYLOR president. After the COMPROMISE OF 1850 seemed to settle the slavery-extension issue, the group known as the Barnburners left the Free-Soilers to return to the Democratic party, but radicals kept the Free-Soil party alive until 1854, when the new REPUBLICAN PARTY absorbed it.

Freetown, city (1985 pop. 469,776), capital of Sierra Leone, W Sierra Leone, on the Atlantic Ocean. It is the nation's largest city and chief port. Industries include food processing and oil refining. A highway link to MONROVIA, Liberia, was under construction in the early 1980s. Freetown was founded in 1792 by former slaves from Nova Scotia; descendants of liberated slaves (called Creoles), though a minority, play a leading role in the modern city.

free verse, loose term for verse free of conventional limitations and metrical restrictions. Cadence, particularly of common speech, is often substituted. The term comes from the *vers libre* of Jules Laforgue, Arthur RIMBAUD, and others who rejected the classical alexandrine. The term has been applied to the King James translation of the Bible and is associated with Walt WHITMAN, Ezra POUND, T.S. ELIOT, and other modern poets.

free will, in philosophy, the doctrine that the will of an individual can and does determine some of his acts. PLATO held that actions are determined by the extent of a person's understanding. Christian ethics have long disputed the extent of human dependence on the power of God: St. AUGUSTINE, LUTHER, and John CALVIN followed the doctrine of predestination or divine grace, while St. THOMAS AQUINAS held that God's omnipotence does not include the predetermination of human will. Later advocates of free will have referred to common practice: Individuals believe they determine their actions and hold one another accountable for doing so. Modern psychology has introduced the concept of the UNCONSCIOUS as a motivating force.

freezing: see STATES OF MATTER.

Frege, Gottlob [frā'gə], 1848–1925, German philosopher and mathematician. Frege was one of the founders of symbolic logic (see LOGIC) and a major influence on Bertrand RUSSELL and Russell's student Ludwig WITTGENSTEIN. He demonstrated that mathematics is derived solely from deductive logic and is not synthetic, as Kant had posited. He also believed that verbal conceptualizations can be translated into logical form. After Russell and others had pointed out some serious contradictions in vol. 2 of his major work, *The Basic Laws of Arithmetic* (1893–1903), Frege virtually ceased to produce original work. Nevertheless, his contributions to the development of modern mathematical theory and the theory of meaning are of prime importance.

Frémont, John Charles, 1813–90, American explorer, soldier, and political leader; b. Savannah, Ga. His enthusiastic reports of his Western explorations (1841–44) created wide interest in that region. He was a leader (1846) in the revolt of California against Mexico until he quarreled with S.W. KEARNY in Kearny's contest for command with Robert Stockton. Frémont was U.S. senator from California (1850–51) and Republican candidate for president in 1856. He commanded the Western Dept. in the CIVIL WAR but was removed because of his radical policy toward slaveholders. He lost his fortune (1870) in a railroad venture. Later, he was governor (1878–83) of Arizona Territory. He was called the Pathfinder.

Fremont, city (1990 pop. 173,339), W Calif., on San Francisco Bay; inc. 1956. Long an agricultural center with vineyards, it still has breweries and canneries, but the 1963 opening of an automobile-assembly plant transformed it into a fast-growing industrial city.

French, Daniel Chester, 1850–1931, American sculptor; b. Exeter, N.H. After executing his first large work, *The Minute Man* (1875; Concord, Mass.), he received many commissions for public statues. His most famous is the heroic figure of Abraham Lincoln in the LINCOLN MEMORIAL (Wash., D.C.).

French and Indian Wars, 1689–1763, a series of colonial campaigns in North America between England and France, corresponding to wars between European alliances in the worldwide struggle for empire. In America, seaboard strongholds and western forts were seized, and the settlers engaged in guerrilla warfare with Native Americans. *King William's War* (1688–97), linked to the War of the GRAND ALLIANCE, consisted chiefly of frontier attacks on the British colonies. *Queen Anne's War* (1702–13) corresponded to the War of the SPANISH SUCCESSION, and *King George's War* (1744–48) to the War of the AUSTRIAN SUCCESSION. The last and most important conflict, called simply the *French and Indian War* (1754–63), was linked to the SEVEN YEARS WAR. Jeffrey AMHERST took Louisbourg (1758), and Quebec and Montreal also fell (1759–60) to the British. The war ended French control in Canada and the West (see PARIS, TREATY OF). After the wars the American colonies felt less dependent militarily on the British; they began to concentrate on their own problems and institutions and to think of themselves as American rather than British.

French Community, established in 1958 to replace the FRENCH UNION. Its purpose was to create a political federation for France and all its overseas departments and territories. However, since all of France's African colonies chose total independence, the French Community never achieved its aims. After 1962 it operated primarily as a vehicle for fostering military, economic, technical, and cultural cooperation among its members and is now largely inactive.

French East India Company: see EAST INDIA COMPANY, FRENCH.

French Equatorial Africa, former French federation of territories in W central Africa (1910–58), comprising what are now GABON, CHAD, the CENTRAL AFRICAN REPUBLIC, and CONGO. It was dissolved (1958) when the members became republics within the FRENCH COMMUNITY.

French Guiana [gēăn'ə, -ăn'-], Fr. *La Guyane française,* French overseas department (1992 est. pop. 128,000), 35,135 sq mi (91,000 sq km), NE South America, bordered by the Atlantic Ocean (N), Suriname (E), and Brazil (S and E). CAYENNE is the capital. The population, largely Creole, is concentrated along the coast. French is the official language, but Creole, Taki-Taki, and other languages and dialects are also spoken. The economy rests on the export of shrimp, timber, and rum; there are deposits of gold and bauxite. A rocket-launching base for communications satellites is located at Kourou, on the coast. French settlement dates from 1604; following periods of Dutch and British rule, French authority was restored in 1815. Guiana was made an overseas department in 1947. French Guiana was used as a penal colony during the French Revolution, and permanent penal camps were established under Napoleon III; DEVILS ISLAND, off the coast, was especially notorious. Since the early 1970s there have been increasing local demands for autonomy, fueled in part by high unemployment and divisions between the white European elite and Creole majority.

French horn: see WIND INSTRUMENT.

The key to pronunciation appears on page xiii.

French language, member of the Romance group of the Italic subfamily of the Indo-European family of languages. See LANGUAGE (table).

French Polynesia, overseas territory of France (1992 est. pop. 206,000), 105 islands in the South Pacific. The capital is Papeete, on TAHITI. It comprises the Society Islands, Marquesas Islands, Austral Islands, Tuamotu Islands, and Gambier Islands. Tropical fruits are grown, vanilla and copra exported. Tourism is important. The inhabitants are mainly indigenous Polynesians, known as Demis. French is the official language, but native languages are commonly spoken. The population is about 60% Protestant and 30% Roman Catholic. There is a governor, council, and elected assembly.

French Revolution, political upheaval that began in France in 1789 and eventually affected the whole world. Historians differ widely as to its causes. Some see it as an intellectual movement born from the liberal ENLIGHTENMENT of the 18th cent.; some, as a rebellion of the underprivileged classes against feudal oppression; others, as the assertion of the new capitalist bourgeoisie against an outdated and restricted social and economic system—in the fixed order of the ancien régime, France was still ruled by two privileged classes, the nobility and the clergy, who refused to give up any of their privileges and supplemented their dwindling funds by exacting dues from the more productive bourgeoisie. The immediate cause of the revolution was without doubt the bankrupt state of the public treasury. The wars of the 17th and 18th cent., an iniquitous and inefficient system of taxation, intervention in the AMERICAN REVOLUTION, and waste had resulted in a gigantic public debt, which neither NECKER, nor Calonne, nor Loménie de Brienne was able to reduce. As a last resort LOUIS XVI called the STATES-GENERAL, which, it was hoped, would pass the necessary fiscal reforms. It convened at VERSAILLES on May 5, 1789, for the first time since 1614. From the start the deputies of the third estate—the commons—joined by many members of the lower clergy and by a few nobles, pressed for sweeping political and social reforms that far exceeded the assembly's powers. Defying the king, they proclaimed themselves the National Assembly (June 17), and, on an indoor tennis court, took an oath not to separate until a constitution had been drawn up. The king yielded and legalized the Assembly, but his dismissal of Necker led to the storming of the BASTILLE by an excited Paris mob (July 14). Louis XVI, ever anxious to avoid bloodshed, gave in once more; Necker was recalled; the Commune was established as the city government of Paris; and the National Guard was organized. On Aug. 4, 1789, the Assembly abolished all feudal privileges. Meanwhile, rumors of counterrevolutionary court intrigues were exploited by extremist demagogues, and on Oct. 5 a mob marched to Versailles and forcibly moved the royal family and the Assembly to Paris. There the Assembly drafted a constitution (1791) that created a limited monarchy with a unicameral legislature (the Legislative Assembly) elected by voters who had the requisite property qualifications; the preamble was the famous DECLARATION OF THE RIGHTS OF MAN AND CITIZEN. Earlier, anticlerical legislation had been capped when the clergy was required to take oaths to civil authority (1790), a measure that alienated many pious rural districts from the Revolution. The king decided to join those nobles who had already fled abroad (émigrés), but his flight (June 20–21, 1791) was arrested at Varennes. Brought back in humiliation to Paris, Louis accepted the new constitution. In the Legislative Assembly, the republican GIRONDISTS and the extreme JACOBINS and CORDELIERS gained the upper hand. "Liberty, Equality, Fraternity" became a catch phrase. Elsewhere, the émigrés were inciting other European courts to intervene. The Declaration of Pillnitz played into the hands of the Girondists, who hoped that a foreign war would rally the nation to the republican cause. With the declaration of war on Austria (April 20, 1792), the FRENCH REVOLUTIONARY WARS began. Early reverses and rumors of treason by the king and Queen MARIE ANTOINETTE brought the lower classes, especially those in Paris, into action. In Aug. 1792 a mob stormed the TUILERIES palace and an insurrectionary commune replaced the legally elected one (see COMMUNE OF PARIS); all police power was seized by the Paris commune (dominated by DANTON and MARAT); the Assembly suspended the king and ordered elections for a National Convention to draw up yet another constitution; and hundreds of royal prisoners were killed by "spontaneous" mobs in the September massacres (Sept. 2–7, 1792). On Sept. 21 the Convention abolished the monarchy, set up the First Republic, and proceeded to try the king for treason. Louis's conviction and execution (Jan. 1793) led to royalist uprisings, notably in the Vendée, and was followed by the REIGN OF TERROR, in which ROBESPIERRE and his associates triumphed in turn over the more moderate Girondists and over his rivals Danton and J.R. HÉBERT. The republican constitution never became active; the Committee of Public Safety and the Revolutionary Tribunal reigned supreme. Robespierre's final excesses frightened the Convention into the coup d'etat of 9 Thermidor (July 27, 1794), which resulted in his execution and a period of relative reaction. Under the new constitution of 1795, the DIRECTORY came into existence. Its rule was marked by corruption, intrigues, runaway inflation, bankruptcy, and a fatal dependence on the army; it was ended by Napoleon Bonaparte's coup d'etat of 18 Brumaire (see NAPOLEON I). With the establishment of the Consulate (followed in 1804 by Napoleon's empire), the victory of the bourgeoisie became final. With the French Revolutionary Wars and the Napoleonic Wars, the French Revolution tore down the medieval structures of Europe, opened the paths of 19th-cent. liberalism, and hastened the advent of nationalism.

French Revolutionary Wars, 1792–1802, general European war precipitated by the FRENCH REVOLUTION, which had aroused in foreign lands the hostility of monarchs, nobles, and clergy, all of whom feared the spread of republican ideas to the lower classes. They looked upon war as the only way to restore LOUIS XVI (still nominally king of France) to his full powers. For their part, the revolutionaries in France looked upon war as a way of ensuring permanence to their revolution by spreading it abroad. Thus, with both sides wanting it, war seemed inevitable. In August 1791 Austria and Prussia called for the restoration of Louis, an act that angered French public opinion. The radical GIRONDISTS assumed power in March 1792, and on Apr. 20, 1792, France declared war on Austria. Meeting little resistance at first, allied Austrian and Prussian armies invaded France, but the cannonade at Valmy (Sept. 20) revealed the superiority of French artillery and proved a turning point. The French overran the Austrian Netherlands, invaded Germany, and seized Savoy and Nice from Sardinia. Louis XVI was executed (Jan. 21, 1793), an act that led to the formation of the First Coalition (Austria, Prussia, Great Britain, Holland, Spain). The French, led by Lazare CARNOT, raised new armies and by the end of 1793 had driven the allies from France. Holland,

Prussia, and Spain all made peace in 1795. Napoleon Bonaparte contributed stunning French victories in Italy, and by 1797 only Britain remained in the war. Bonaparte's strike against Britain in Egypt was disastrous, and the English destroyed (1798) the French fleet at Aboukir. In 1798 a Second Coalition was formed, consisting of Britain, Russia, Austria, Turkey, Portugal, and Naples. The French victory over the Russians at Zürich took Russia out of the war. Napoleon Bonaparte, back in France, declared himself First Consul (November 1799). In 1800 Bonaparte inflicted a heavy defeat on the Austrians at Marengo, and the Second Coalition collapsed (1801) when Austria consented to the Peace of Luneville. Once more, only the British persevered. They expelled the French from Egypt and destroyed the Danish fleet. (The Danes had refused to abide by British rules of neutrality.) But the British public was weary of fighting, and in 1802 the Treaty of Amiens concluded the war. The French Revolutionary Wars had transformed the political landscape of Europe. With their victories the French had created a whole series of new political entities: the Batavian Republic (Holland), the Helvetic Republic (Switzerland), the Parthenopian Republic (Naples), the Cisalpine Republic (various Italian states), and the Roman Republic (the Papal States). Peace was short-lived, however; in 1803 the Napoleonic Wars began (see NAPOLEON I).

French Southern and Antarctic Lands, overseas territory of France, including Adélie Land, which covers c.200,000 sq mi (520,000 sq km) in ANTARCTICA, and a number of islands in the S Indian Ocean. The largest of these is Kerguelen (1,318 sq mi/3,414 sq km). One of 300 islands in the Kerguelen Archipelago, it is a base for research, seal hunting, and whaling. The Crozet Islands, to the west, and Saint Paul and Amsterdam islands, to the northeast, are also part of the territory.

French Union, former political entity (1946–58) that comprised metropolitan France (France proper and Corsica) and its overseas territories. It replaced the colonial system and was superseded by the FRENCH COMMUNITY.

French West Africa, former federation of French territories in W Africa (1895–1959) that consisted of present-day BENIN, BURKINA FASO, GUINEA, CÔTE D'IVOIRE, MALI, MAURITANIA, NIGER, and SENEGAL. It was dissolved in 1959 as the territories moved toward independence.

Freneau, Philip, 1752–1832, American writer; b. N.Y.C. America's first professional journalist, he was a propagandist for the AMERICAN REVOLUTION and Jeffersonian democracy. His fame rests on such lyrical poems as "The Wild Honeysuckle," "The Indian Burial Ground," and "Eutaw Springs." His poem *The British Prison Ship* (1781) recorded his captivity on a British brig.

Freon, trade name for any of a special class of chemical compounds used as refrigerants, air conditioner coolants, and solvents. Freons are HYDROCARBON derivatives that contain fluorine, and often chlorine and bromine as well. They are generally colorless, odorless, nontoxic, noncorrosive, and nonflammable. Though usually unreactive, freons can undergo reactions in the upper atmosphere that damage the earth's OZONE LAYER. The most commonly used is Freon-12, or dichlorodifluoromethane (CCl_2F_2).

frequency: see HARMONIC MOTION; WAVE.

frequency modulation: see MODULATION.

fresco, the art of painting on plaster. Pure fresco is painted on damp, fresh lime plaster. The binder is in the lime, which, in drying, forms a calcium carbonate that incorporates the pigment with the material of the wall. Fresco does not permit a large palette or delicate transitional tones, as does oil, but its clear, luminous color and permanence make it ideal for monumental murals. An ancient technique, fresco was employed in the Minoan palace at KNOSSOS and used by the Romans for decoration, notably at POMPEII. It was perfected by the masters of the Italian RENAISSANCE, who customarily prepared a CARTOON and transferred the design to wet plaster. For large frescoes the plaster was applied to small sections daily, each painted in a day. Fresco was revived in 20th-cent. Mexico with the work of José Clemente OROZCO, Diego RIVERA, and other artists.

Frescobaldi, Girolamo, 1583–1643, Italian composer. He became organist at St. Peter's Church, Rome, in 1608, and at the Medici court, Florence (1628–34). His style traveled to Germany and influenced organists through J.S. BACH. He wrote many ORGAN works and some instrumental and vocal music.

Fresnel, Augustin Jean [frānĕl'], 1788–1827, French physicist and engineer. His investigations of light, especially interference phenomena in POLARIZED LIGHT and double refraction, supported the wave theory of light and the concept of transverse vibrations in light waves. He also devised a way of producing circularly polarized light.

Fresno, city (1990 pop. 354,202), seat of Fresno co., S central Calif.; founded 1872, inc. 1885. It is the financial hub of the SAN JOAQUIN Valley. Grapes, figs, cotton, and vegetables are grown in the area, and Fresno co. leads all U.S. counties in the value of agricultural products sold. The city is also a railroad, marketing, and processing center with light industries.

Freud, Sigmund, 1856–1939, Austrian psychiatrist founder of PSYCHOANALYSIS; b. Vienna. M.D., 1881, Univ. of Vienna. Early in his career Freud collaborated with Josef BREUER on the use of HYPNOSIS in the treatment of HYSTERIA. The therapy was based on the hypothesis that the symptoms of hysterical patients—directly traceable to apparently forgotten psychic traumas in early life—represented undischarged emotional energy. The two men separated over Freud's growing conviction that this energy was sexual in nature. Rejecting hypnosis, Freud devised the technique of free association, which allowed material repressed in the UNCONSCIOUS to emerge to conscious recognition. Although his early work was poorly received, after 1906 he was joined by other psychiatrists, including C.G. JUNG and Alfred ADLER. Both, however, resigned from the International Psychoanalytic Association (founded 1910) between 1911 and 1913 in protest against Freud's emphasis on infantile sexuality and the Oedipus complex (see COMPLEX). Although they and others who broke away later objected to aspects of Freudian theory, the basic structure of their analysis remained Freudian. With the Nazi occupation of Austria, Freud fled (1938) to England, where he died. His theory has had enormous impact, influencing anthropology, education, art, and literature. His writings include *The Interpretation of Dreams* (1900), *Beyond the Pleasure Principle* (1920), and *Moses and Monotheism* (1939).

Freud, Anna, 1895–1982, Austrian-British psychoanalyst. She continued the work of her father, Sigmund FREUD, and was a pioneer in the psychoanalysis of children. She received her training in Vienna before emigrating (1938) with her father to England, where she founded and directed a clinic for child therapy. Her writings include *The Psychoanalytical Treatment of Children* (1946), *Normality and Pathology in Childhood* (1965), and *The Writings of Anna Freud* (7 vol., 1973).

Freyja [frā'yä] or **Freya** [frā'ä], Norse goddess of love, marriage, and fertility. She was also a deity of the dead and was the sister of the god Frey.

Frick, Henry Clay, 1849–1919, American industrialist; b. Westmoreland co., Pa. In 1871 he organized Frick & Co. to operate coke ovens and soon held a key place in the coal industry. Andrew CARNEGIE acquired heavy interests in Frick's company, and Frick in turn played a key role in organizing (1892) the Carnegie Steel Co.; he expanded that company and acquired railroads and iron-ore lands. His strong anti-union policies resulted in the Homestead strike. After a struggle with Carnegie for control, Frick resigned and became a director of U.S. Steel Corp. He willed his mansion in New York City, housing his art collection, to the public as a museum.

friction, resistance offered to the movement of one body past another body with which it is in contact. The amount of friction depends on the nature of the contact surfaces and on the magnitude of the force pressing the two bodies together, but not on the surface area of the contact surfaces. The coefficient of friction is the ratio of the force necessary to move one body horizontally over another at a constant speed to the weight of the body. Fluid friction, observed in the flow of liquids and gases, is minimized in airplanes by a modern, streamlined design (see AERODYNAMICS).

Friday: see WEEK.

Friedan, Betty Naomi, 1921–, American feminist; b. Peoria, Ill. In 1963 she galvanized the women's movement by publishing *The Feminine Mystique*, an attack on the notion that women find fulfillment only through childbearing and homemaking. Founder of

the NATIONAL ORGANIZATION FOR WOMEN (1966), she also helped organize the National Women's Political Caucus (1970). In *The Second Stage* (1981) she evaluated the progress of FEMINISM, remaining a moderate and criticizing its radical elements. *The Fountain of Age* (1993) is an affirmation of the vitality of old age.

Betty Friedan

Friedman, Milton, 1912–, American economist and a leading spokesman for the monetarist school of economics; b. Brooklyn, N.Y. A staunch conservative and opponent of the beliefs of J.M. KEYNES, Friedman developed the theory that changes in monetary supply precede, rather than follow, changes in overall economic activity. A professor at the Univ. of Chicago (1946–77), he received the 1976 Nobel Prize in economics. His writings include *Capitalism and Freedom* (1962). See ECONOMICS.

Friedrich, Caspar David, 1774–1840, German romantic landscape painter. His mystical, pantheistic attitude toward nature is best seen in *Capuchin Friar by the Sea* and *Man and Woman Gazing at the Moon* (both: Berlin).

Friends, Religious Society of, religious body originating in England in the 17th cent. under George FOX. He believed that a person needed no spiritual intermediary but could find understanding and guidance through "inward light" supplied by the Holy Spirit. Commonly called Quakers, members refused to participate in Church of ENGLAND services, take oaths, or bear arms, and were often subject to persecution. They spread to Asia, Africa, and America, where they found refuge in Rhode Island and a colony established (1682) in Pennsylvania by William PENN. In the 19th cent. American Friends split into Orthodox, Hicksite, and Conservative groups, but the old lines of division have since grown considerably less. Their meetings are periods of silent meditation in which those urged by the spirit can offer prayer or exhortation. Friends are active in education and social welfare and believe in complete equality.

Frigg or **Frigga,** Norse mother goddess and the wife of WODEN. Of great importance in GERMANIC RELIGION, she was queen of the heavens, a deity of love and the household.

Friml, (Charles) Rudolf, 1879–1972, American composer; b. Prague. He lived in the U.S. after 1906. Best known of his 33 light operas are *The Firefly* (1912), *Rose Marie* (1924), and *The Vagabond King* (1925).

Frisch, Karl von, 1886–1982, Austrian zoologist. For his pioneering work in comparative behavioral psychology, particularly his studies of the complex communication between insects, he shared the 1973 Nobel Prize in physiology or medicine with Konrad LORENZ and Nikolaas TINBERGEN. An important implication of his work is that behavioral continuity exists between animal communication and human language.

Frisch, Max, 1911–91, Swiss writer. His novels *I'm Not Stiller* (1954), *Homo faber* (1957), *A Wilderness of Mirrors* (1964), and *Man in the Holocene* (tr. 1980) deal with the individual's search for personal identity. *The Firebugs* (1953) and *Andorra* (1961) are his best-known plays. His *Journal 1966–1971* was published in English in 1974.

Frisch, Ragnar, 1895–1973, Norwegian economist who, with Jan TINBERGEN, won the first Nobel Prize in economics (1969) for pioneering work in the development of ECONOMETRICS.

Frisian language, member of the West Germanic group of the Germanic subfamily of the Indo-European family of languages. See LANGUAGE (table).

Frobisher, Sir Martin, 1535?–1594, English mariner. He was licensed by ELIZABETH I for three expeditions to search for the NORTHWEST PASSAGE (1576, 1577, 1578). He reached Frobisher Bay and S BAFFIN ISLAND but erroneously believed that he had found Cathay. He commanded a ship in Sir Francis DRAKE'S WEST INDIES expedition (1585) and was knighted for his services in the defeat of the Spanish ARMADA (1588).

Froebel, Friedrich Wilhelm August [frā'bəl, frō–], 1782–1852, German educator and founder of the KINDERGARTEN system. Having little formal schooling himself, he stressed pleasant surroundings, self-directed activity, and physical training for children. Influenced by SCHELLING, he also insisted upon spiritual training as a fundamental principle. He founded (1816) the Universal German Educational Institute to train teachers and opened the first kindergarten in 1837. The most important of his several books on education is *The Education of Man* (1826).

frog, tailless, freshwater AMPHIBIAN (order Anura) found worldwide. Some frogs require moisture and are highly aquatic; others, such as TOADS, are more terrestrial. Frogs have bulging eyes, short, neckless bodies, long, muscular hind legs for jumping, webbed feet for swimming, and smooth skin, usually green or brown. They capture insects and other food with a sticky, forked tongue. Most frogs lay eggs in early spring, and by the end of summer METAMORPHOSIS to a four-legged adult is complete. True frogs belong to the Ranidae family, which includes the bullfrog (*Rana catesbeiana*) and other North American frogs.

Froissart, Jean [frəwäsär'], c.1337–1410?, French chronicler, poet, and courtier. He traveled widely and knew many important people. His famous chronicle covers the history of Western Europe from the early 1300s to 1400, roughly the first half of the HUNDRED YEARS WAR. In it he describes events with brilliance and gusto. His disregard for accuracy and highly partisan spirit limit the chronicle as pure history, but it brings an era to life.

Fromm, Erich, 1900–1980, American psychoanalyst and author; b. Germany. He emigrated (1934) to the U.S., where he practiced psychoanalysis and lectured at various institutions, including Bennington College and New York University. Fromm held that the individual is a product of society and that in industrial society human beings have become estranged from themselves. His many works include *Escape from Freedom* (1941), *The Sane Society* (1955), and *Beyond the Chains of Illusion* (1962).

Fronde [frôNd], 1648–53, series of outbreaks in France during the minority of LOUIS XIV. They were caused by the efforts of the PARLEMENT of Paris (the chief judicial body) to limit royal authority (as championed by Cardinal MAZARIN), by the ambitions of discontented nobles, and by the excessive fiscal burden on the people. The **Fronde of the Parlement,** 1648–49, began with Parlement's refusal to register a fiscal edict that would have required the magistrates of high courts to give up four years' salary. Parlement then drew up a reform document limiting royal authority. The royal court secretly fled Paris, and government forces under Louis II, prince de CONDÉ, blockaded the city until a compromise peace between Parlement and the monarchy was arranged. The arrest of the overbearing Condé by the order of Mazarin, his former ally, precipitated the much more serious **Fronde of the Princes,** 1650–53. Although Condé was released and Mazarin fled into exile (1651), Condé, with the support of several powerful nobles and the provincial parlements of S France, waged open warfare on the government and even concluded an alliance with Spain, then at war with France. Defeated at Faubourg Saint-Antoine (1652), Condé was given shelter in Paris. His arrogance soon alienated the Parisians, and the Fronde disintegrated. In 1652 the king returned to Paris, followed by Mazarin in 1653. The last attempt of the nobility

to resist the king by arms, the Fronde resulted in the strengthening of the monarchy and the further disruption of the French economy.

Frondizi, Arturo, 1908–, president of Argentina (1958–62). A liberal and anti-Peronist, he supported a policy of economic austerity. Because he allowed Peronists to participate in the elections of 1962, outraged anti-Peronist elements in the army arrested him and annulled the elections.

front, in meteorology, the boundary between adjacent air masses. If a cold air mass pushes a warm air mass ahead of it, a cold front exists; a warm front is the reverse situation. A stationary front is one in which neither air mass pushes against the other. An occluded front exists when a cold front catches up to a warm front; the warm air mass lying between the two cold air masses is thus forced to rise.

Frontenac, Louis de Buade, comte de Palluau et de [frŏn-'tānăk], 1620–98, French governor of New France (1672–82, 1696–98). Although his independent policy displeased King LOUIS XIV and his powers as governor were reduced, he advanced French exploration in Canada, established new forts and posts, subdued (1696) the IROQUOIS CONFEDERACY, and held QUEBEC against the British in the first FRENCH AND INDIAN WAR.

Frost, Robert, 1874–1963, one of the most popular American poets of the 20th cent.; b. San Francisco; moved to Lawrence, Mass., 1885. He went to England in 1912 and won his first acclaim there. After publishing *A Boy's Will* (1913) and *North of Boston* (1914), he returned to the U.S. and settled in New Hampshire. While Frost wrote movingly of the people and landscape of New England, his lyrical, dramatic, and often deeply symbolic verse goes far beyond regional poetry. His volumes of poetry include *New Hampshire* (1923), *A Witness Tree* (1942), *Steeple Bush* (1947), and *In the Clearing* (1962). Frost was awarded the Pulitzer Prize for poetry in 1924, 1931, 1937, and 1943, and in 1961 he read his poem "The Gift Outright" at Pres. Kennedy's inauguration. His complete poems were published in 1967.

frost or **hoarfrost,** ice formed by the condensation of atmospheric water vapor on a surface whose temperature is below 32°F (0°C). In the formation of frost, water vapor is changed directly to a solid (see DEW). Frost appears as a light, feathery deposit of ice, often in a delicate pattern.

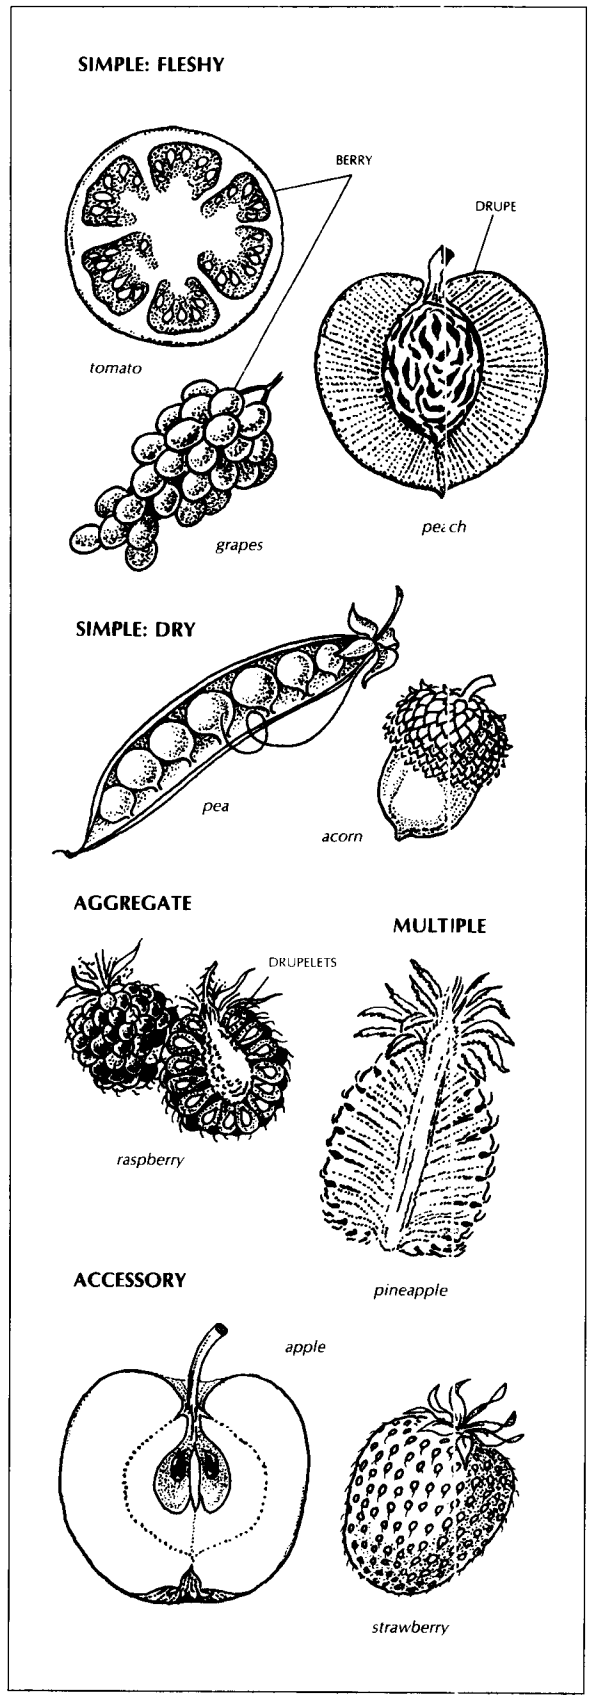
frostbite or **chilblains,** tissue injury caused by exposure to cold, usually affecting the hands, feet, ears, or nose. Extreme cold causes the small blood vessels in the extremities to constrict, resulting in slowed blood circulation and stagnation, which deprive tissues of nutrients. The condition is aggravated by inactivity and dampness. Severe, untreated frostbite may result in GANGRENE.

frozen foods: see FOOD PRESERVATION.

fructose, levulose, or **fruit sugar,** simple SUGAR found in honey and fruit. Sweeter than SUCROSE, fructose is a carbohydrate with the same formula as GLUCOSE, but with a different structure (see ISOMER). An equimolar mixture of fructose and glucose, called invert sugar, is obtained by the breakdown of sucrose and is the major component of honey.

fruit, matured ovary of a FLOWER, containing the seed. After FERTILIZATION takes place and the embryo plantlet has begun to develop, the surrounding ovule becomes a seed and the ovary wall around the ovule (pericarp) becomes the fruit. Fruits are classified into four types: simple, aggregate, multiple, and accessory. Simple fruits are either fleshy or dry. Fleshy fruits are either berries (the entire pericarp is fleshy, e.g., the blueberry, tomato, and banana) or drupes (the inner layer of the pericarp becomes a pit or stone around the seed, e.g., the peach and walnut). Dry fruits are divided into those whose hard, papery shells either split to release the mature seeds (dehiscent), e.g., the PEA, or do not split (indehiscent), e.g., the NUT or GRAIN. Aggregate fruits (e.g., the raspberry) are masses of small drupes (drupelets), each developed from separate ovaries of a single flower. Multiple fruits (e.g., the pineapple) develop from ovaries of many flowers in a cluster. Accessory fruits contain tissue derived from parts other than the ovary, e.g., the apple, the edible portion of which is actually a swollen stem.

fruit fly, very small, winged INSECT (families Tephritidae and Drosophilidae) in the order Diptera (see FLY). Fruit flies lay their eggs in plant tissue. In some species the larvae feed directly on the fruit pulp; in others they feed on yeasts growing in the fruit. Some spe-



Types of fruit

cies cause damage to important crops, e.g., the Mediterranean fruit fly (*Ceratitis capitata*), a serious pest of citrus fruits. The vinegar fly (*Drosophila melanogaster*) is often used in the laboratory study of GENETICS because of its ten-day life cycle and large chromosomes.

Frunze: see BISHKEK.

Fry, Christopher, 1907–, English dramatist and film writer, one of the few 20th-cent. playwrights to employ verse successfully. His plays include *The Lady's Not for Burning* (1949) and *A Sleep of Prisoners* (1951). His screenplays include *Ben Hur* (1959; Academy Award) and *The Bible* (1966).

Fry, Elizabeth (Gurney), 1780–1845, English prison reformer and philanthropist. A Quaker, she worked from 1813 to improve the conditions of women in Newgate prison. Such innovations as segregation of the sexes and education and employment programs in British prisons were largely due to her efforts. She also founded soup kitchens in London.

Fry, Roger Eliot, 1866–1934, English art critic and painter. A champion of the modern French schools of art (see POSTIMPRESSIONISM), he emphasized analysis of the formal qualities in a work of art. His writings include *Vision and Design* (1920) and *Cézanne* (1927).

Fuchs, Klaus Emil, 1911–88, British physicist and Communist spy; b. Germany. An acknowledged Communist, he passed information to the USSR while working on the atomic bomb in the U.S. (1944–45) and in the atomic research center at Harwell, England, as head of the physics division. He was arrested in 1950 and imprisoned until 1959, when he went to East Germany. He was director of the Institute for Nuclear Physics from 1959 to 1979.

fuchsia, shrub or herb (genus *Fuchsia*) of the EVENING PRIMROSE family, a tropical American plant cultivated for its pendulous, brilliant, red-to-purple and white flowers. Most garden fuchsias are hybrids.

fuel cell, electric CELL in which the chemical energy from the oxidation of a gas fuel is converted directly to electrical energy in a continuous process. The fuel cell differs from a battery in that its reactants are supplied from an external source. In the hydrogen and oxygen fuel cell, hydrogen and oxygen gas are bubbled into separate compartments connected by a porous disk through which an ELECTROLYTE, such as aqueous potassium hydroxide (KOH), can pass. Inert graphite electrodes, mixed with a catalyst such as platinum, are dipped into each compartment. When the two electrodes are electrically connected, an OXIDATION AND REDUCTION reaction takes place in the cell: hydrogen gas is oxidized to form water at the anode; electrons are liberated in this process and flow through the external circuit to the cathode, where the electrons combine with the oxygen gas and reduce it. Fuel cells are characterized by high efficiency, cleanliness, and lack of noise. They have been used to generate electricity in spacecraft, prototype electric power plants, and experimental motor vehicles.

fuel injection, system in an INTERNAL-COMBUSTION ENGINE that delivers fuel or a fuel-air mixture to the cylinders by means of pressure from a pump. It was originally used in DIESEL ENGINES because of diesel fuel's greater viscosity and the need to overcome the high pressure of the compressed air in the cylinders. A diesel fuel injector sprays an intermittent, timed, metered quantity of fuel into a cylinder, distributing the fuel throughout the air within. Fuel injection is also now used in gasoline engines in place of a CARBURETOR. In gasoline engines the fuel is first mixed with air, and the resulting mixture is delivered to the cylinder. Modern fuel injection systems use computers to regulate the process. Fuel injection results in more efficient fuel combustion, improving fuel economy and engine performance and reducing polluting exhaust emissions.

Fuentes, Carlos [fwān'tās], 1928–, Mexican novelist and short-story writer. He synthesizes reality and fantasy in such experimental novels as *Where the Air is Clear* (1958), *A Change of Skin* (1967), *Terra Nostra* (1975), *The Old Gringo* (1984), and *The Campaign* (1991).

Fuessli, Johann Heinrich: see FUSELI, HENRY.

Fugard, Athol (Harold Lanigan), 1932–, South African playwright, actor, and director. An Afrikaner opposed to APARTHEID, Fugard has written of the suffering and common humanity of blacks, Coloureds, and poor whites in his country in such powerful plays as *The Blood Knot* (1961), *Boesman and Lena* (1969), *A Lesson from Aloes* (1978), *Master Harold . . . and the Boys* (1982), and *Playland* (1993).

fugitive slave laws, in U.S. history, the federal acts of 1793 and 1850 providing for the return between states of escaped slaves. Northern states relaxed enforcement of the 1793 law as they abolished SLAVERY, greatly angering the South, and the law was circumvented by the UNDERGROUND RAILROAD. Many Northern states also passed personal-liberty laws allowing fugitives jury trial; others forbade state officials to aid in capturing or jailing fugitives. As a concession to the South, the COMPROMISE OF 1850 strengthened the fugitive slave law. "All good citizens" were required to obey it on pain of heavy penalty; jury trial and the right to testify were prohibited to fugitives. The ABOLITIONISTS and new personal-liberty laws defied these provisions. Notable fugitive slave trials stirred up public opinion in both the North and South. Northern NULLIFICATION of the fugitive slave laws was cited in 1860 by South Carolina as a cause of secession. Congress repealed both laws in 1864, during the CIVIL WAR.

fugue [from Ital., = flight], in music, a form of composition, originally choral, in which the basic principle is imitative COUNTERPOINT of several voices. Its main elements are: a theme or subject, stated first in one and then in all voices; continuation of a voice after the subject, accompanying the subject statements in other voices; and passages built on a *motif*, a short phrase derived from the subject or countersubject. First established by Flemish composers in the 15th cent., the fugue was highly developed by J.S. BACH. The CANON is a short form of fugue.

Fuji, Mount, or **Fujiyama,** volcano 12,389 ft (3,776 m) high, highest point on HONSHU, Japan. The mountain, which last erupted in 1707, is sacred to many Japanese and is a traditional goal of pilgrimage. In 1982 a wall was erected to halt erosion of the perfectly formed, snow-capped cone, long a source of inspiration to Japanese artists.

Fujimori, Alberto, 1938–, president of Peru (1990–). An economist and the son of Japanese immigrants, he won the presidency in a upset victory. As president he slashed inflation by cutting subsidies and raising prices. In 1992 he suspended congress and declared emergency rule to combat corruption and SHINING PATH guerrillas.

Fukuoka [fo͝okō'ôkä], city (1990 pop. 1,237,107), capital of Fukuoka prefecture, N Kyushu, Japan. Having grown from Hakata, one of Japan's most important medieval ports, the modern city is also a vital commercial and steel and textile producing center as well as the seat of several universities. The city has three noted shrines, including a 16th-cent. Shinto shrine.

Fulani, people of W Africa, numbering approximately 14 million. They are of mixed African and Berber origin. First recorded as living in the Senegambia region, they are now scattered throughout the area of the Sudan from Senegal to Cameroon. The Fulani became zealous Muslims (11th cent.) and from 1750 to 1900 engaged in many holy wars in the name of Islam. In the first part of the 19th cent., the Fulani carved out two important empires. One, based on Massina, for a time controlled TIMBUKTU; the other, centered at Sokoto, included the HAUSA States and parts of Bornu and W Cameroon. The Fulani emir of Sokoto continued to rule over part of N Nigeria until the British conquest in 1903.

Fulbright, J(ames) William, 1905–, U.S. senator from Arkansas (1945–75); b. Sumner, Mo. A Democrat, he was elected to the House of Representatives (1942) and then to the Senate (1944). He became known internationally for the Fulbright Act (1946), which provided for the exchange of students and teachers between the U.S. and other countries. As chairman (1959–74) of the Senate Foreign Relations Committee, he opposed the VIETNAM WAR.

Fuller, Margaret, 1810–50, American writer and lecturer; b. Cambridge, Mass. One of the most influential literary figures of her day, she was a leading exponent of TRANSCENDENTALISM and edited (1840–42) its journal, *The Dial. Woman in the Nineteenth Century* (1845) expresses her feminist views. Her essays as first literary critic of the New York *Tribune* are collected in *Papers on Literature and Art* (1846). In 1847 she went to Rome, where she married the Marchese Ossoli, a follower of MAZZINI, and with him took part in the REVOLUTION OF 1848–49, writing about it for the *Tribune*. Returning to the U.S. (1850), she, her husband, and their baby were drowned in a shipwreck.

Fuller, Melville Weston, 1833–1910, 8th chief justice of the U.S. SUPREME COURT (1888–1910); b. Augusta, Me. He was the first chief justice with academic legal training, having attended (1854–55),

but received no degree from, Harvard Law School. On the Court he tended toward a strict construction of the Constitution.

Fuller, R(ichard) Buckminster, 1895–83, American architect and engineer; b. Milton, Mass. He is noted for his revolutionary technological designs aimed at deriving maximum output from minimum material and energy—the *Dymaxion* principle. Examples are his self-contained "4-D" house (1928), Dymaxion automobile (1933), and designs for geodesic domes.

fullerene, any of a class of carbon molecules in which the carbon atoms are arranged in the form of a closed, hollow sphere, cylinder, or the like. A fullerene molecule may have as few as 32 atoms of carbon, but the most common and most stable is **buckminsterfullerene** (C_{60}), a soccerball-shaped molecule consisting of 60 carbon atoms and named after R. Buckminster FULLER because of the resemblance of its molecular structure to his geodesic domes. Fullerenes were first identified in 1985 as products of experiments in which graphite was vaporized using a laser, and they have since been discovered in nature, where they resulted from lightning strikes. Fullerenes have been used experimentally as superconductors and to produce tiny diamonds and thin diamond films.

Fullerton, city (1990 pop. 114,144), S Calif., SE of Los Angeles; inc. 1904. Oil was discovered nearby in 1892, but the city's main growth followed the building of the Santa Ana Freeway in the 1950s. Its diversified manufactures include aerospace, electrical, and electronic components.

Fulton, Robert, 1765–1815, American inventor, engineer, and painter; b. near Lancaster, Pa. A person of many talents and a mechanical genius, he was successively an expert gunsmith, a landscape and portrait painter, and a maker of torpedoes and submarines. In 1807 his *Clermont,* launched on the Hudson R. was the first commercially successful steamboat (see STEAMSHIP) in America; although Fulton had predecessors, e.g., John FITCH, he is popularly considered the steamboat's inventor.

function, in mathematics, a relation that assigns to each member x of some set X (the domain) a unique member y of some set Y (the range); y is said to be a function of x, usually denoted $f(x)$ (read "f of x"). In the equation $y = f(x)$, x is called the independent variable and y the dependent variable. Although a function f assigns a unique y to each x, several x's may yield the same y; e.g., if $y = f(x) = x^2$ (where x is a number), then $f(2) = f(-2) = 4$. If this never occurs, then f is called a one-to-one, or injective, function.

functional group, in organic chemistry, group of atoms within a molecule that is responsible for certain properties of the molecule and reactions in which it takes part.

functionalism, in anthropology and sociology, theory stressing the interdependence of all of a society's behavior patterns and institutions. Implicit in the work of late 19th-cent. French sociologist Émile DURKHEIM, it was developed in England by anthropologists B. MALINOWSKI and A.R. RADCLIFFE-BROWN and applied more broadly by U.S. sociologist Talcott PARSONS. Although functionalism has the virtue of stressing the interrelatedness of a society with its institutions, beliefs, and customs, it has been criticized for celebrating the status quo and not paying enough attention to conflict and change as features of social life.

fundamentalism. 1 In Protestantism, conservative religious movement that arose among members of various denominations early in the 20th cent. Its aim is to maintain traditional interpretations of the Bible and what its adherents believe to be the fundamental doctrines of the Christian faith. The movement developed (1909) in reaction to the emergence of liberal theology, which attempted to recast Christian teachings in light of the scientific and historic thought of the time. **2** In Islam, term encompassing various modern Muslim leaders, groups, and movements opposed to secularization in Islam and Islamic countries and seeking to reassert traditional beliefs and practices. There are both SHIITE and SUNNI fundamentalist leaders and groups, such as the Ayatollah KHOMEINI and the MUSLIM BROTHERHOOD.

Fundamental Orders, in U.S. history, the basic law of the Connecticut colony, 1639–62. A preamble and 11 orders presented a binding and compact frame of government that put the welfare of the community above that of individuals.

Fundy, Bay of, large inlet of the Atlantic Ocean, c. 70 mi (270 km) long and 30–50 mi (50–80 km) wide, NE Canada, between New Brunswick and Nova Scotia. It is famous for its tidal bore and for high tides that reach 40–50 ft (12–15 m), creating the reversing falls of the St. John R.

fungal infection, infection caused by a fungus. Some, such as SMUT and MILDEW, affect plants. Others, such as lumpy jaw, affect animals. In humans, fungi cause the skin infections RINGWORM and athlete's foot and the vaginal yeast infection candidiasis. Other fungi take advantage of the body when it has been weakened by diseases such as AIDS or DIABETES and cause infections such as candidiasis of the throat (thrush) or aspergillosis. Some fungal infections are regional. The lung disease histoplasmosis occurs in the central and SE U.S., and VALLEY FEVER occurs in the SW U.S.

fungicide, substance used to prevent or destroy a FUNGUS. Made from sulfur or copper compounds, organic salts of iron, zinc, and mercury, or other chemicals, fungicides are used on seeds, soil, wood (to prevent dry rot), and fabrics (to prevent mildew). Human FUNGAL INFECTIONS are treated with fungicides, called antifungals or antimycotics in medicine, such as nystatin and clotrimazole.

fungus, member of a kingdom (Fungi) of non-photosynthesizing organisms that live as PARASITES, symbionts, or SAPROPHYTES. Fungi are multicellular (with the exception of YEASTS); the body of most consists of slender cottony filaments, or hyphae. All fungi are capable of asexual REPRODUCTION by cell division, budding, fragmentation, or SPORES. Those that reproduce sexually alternate a sexual generation (GAMETOPHYTE) with a spore-producing one. The three divisions of fungi are the zygomycetes (e.g., black bread MOLD), the ascomycetes (e.g., yeasts, powdery mildews, TRUFFLES, and blue-green molds such as *Penicillium*) and deuteromycetes (the imperfect fungi, e.g., species that cause RINGWORM), and the basidiomycetes (e.g., MUSHROOMS, smuts, and puffballs). Fungi help decompose organic matter (important in soil renewal) and are valuable as a source of ANTIBIOTICS, vitamins, and various industrial chemicals and for their role in FERMENTATION.

fungus infection: see FUNGAL INFECTION.

Funk, Casimir [fōōngk], 1884–1967, American biochemist; b. Warsaw, Poland; came to U.S., 1915. Credited with discovering VITAMINS, he stirred public interest with his 1912 paper on vitamin-deficiency diseases. He coined the term *vitamine* and later posited the existence of four such materials (B_1, B_2, C, and D). He contributed to knowledge of the hormones of the pituitary and sex glands and stressed the importance of balance between hormones and vitamins.

fur, hairy covering of an animal, especially that with thick, soft, close-growing underfur next to the skin and a coarser protective layer of guard hair above it. The term includes sheepskins with their hair, and curled pelts, e.g., Persian lamb. Used for clothing since prehistoric times, furs were traditionally luxury goods in the more populous, temperate regions of the world, where wild animals are scarce. The most prized furs include sable, mink, and chinchilla, but many others, e.g., beaver, fox, rabbit, and ocelot, are also valued, and breeding and hunting industries are important in North America and Asia. Following the exploitation (17th–19th cent.) of N American and Asian wilderness areas, depleting the sea otter and threatening the fur seal, conservationists and humane groups have protested trapping for fur. In 1969 the U.S. government passed the ENDANGERED SPECIES Act, banning importation or sale of pelts of such animals as the polar bear, jaguar, and tiger. Since World War II synthetic furs have become increasingly popular because of their realistic appearance, their relatively low cost, and public awareness of endangered species.

Furies or **Erinyes** [ērīn'ē-ēz], in Greek mythology, goddesses of vengeance. Born from the blood of URANUS, they punished wrongs committed against blood relatives regardless of the motivation, as in the case of ORESTES. Named Megaera, Tisiphone, and Alecto, they were usually represented as crones with bats' wings, dogs' heads, and snakes for hair.

Furtwängler, Wilhelm, 1886–1954, German conductor, in Lübeck, Mannheim, Berlin, and with the New York Philharmonic (see ORCHESTRA, table). He was renowned for his interpretations of BRAHMS and Richard WAGNER.

fuse, electric, safety device used to protect an ELECTRIC CIRCUIT

The key to pronunciation appears on page xiii.

against an excessive current. A fuse consists of a low-melting-point alloy strip enclosed in a suitable housing and connected in series with the circuit that it protects. Because of its electrical RESISTANCE, the alloy strip is heated by electric current; if the current exceeds the safe value for which the fuse was designed, the strip melts, opening the circuit and stopping the current. See also CIRCUIT BREAKER.

Fuseli, Henry [fyo͞o'zĭlē], 1741–1825, Anglo-Swiss painter and draftsman, also known as Johann Heinrich Fuessli or Füssli. His paintings were grotesque and visionary, e.g., *Nightmare* (1782). His drawings reveal his romantic fascination with the terrifying and the weird.

fusel oil, oily, colorless liquid with a disagreeable odor and taste. A mixture of ALCOHOLS and fatty acids formed during the alcoholic FERMENTATION of STARCH, fusel oil may occur as an unwholesome impurity in imperfectly distilled liquor. It is used as a solvent in making lacquers and enamels.

Fushun [fo͞o-sho͞on], city (1990 est. pop. 1,350,000), NE Liaoning prov., NE China, in a highly industrialized area 36 mi (60 km) from SHENYANG. It is the coal-mining center of China and has one of the largest opencut coal mines in the world. Oil production and refining are also major industries. The city was developed by Russia until 1905 and by Japan until 1945.

fusion: see COLD FUSION; HYDROGEN BOMB; NUCLEAR ENERGY.

Füssli, Johann Heinrich: see FUSELI, HENRY.

futures market, a commodity exchange (see COMMODITY MARKET) where contracts for the future delivery of grain, livestock, and precious metals are bought and sold. Speculation in futures serves to protect both the developers and the users of the commodities from unfavorable and unpredictable price fluctuations. The U.S. futures market now includes Treasury bills and government guaranteed mortgages, or Ginnie Maes, thereby allowing speculation on changes in future interest rates.

futurism, Italian school of painting, sculpture, and literature that flourished from 1909, when Filippo Marinetti's first manifesto of futurism appeared, until the end of World War I. It portrayed the dynamic character of 20th-cent. life, glorified war and the machine age, and favored the growth of FASCISM. The futurists' representation of forms in motion influenced many painters, including Marcel DUCHAMP and Robert DELAUNEY, and such movements as CUBISM and Russian CONSTRUCTIVISM.

Fuzhou or **Foochow** [both: fo͞o-jō], city (1990 est. pop. 1,290,000), capital of Fujian prov., E China, a port on the Min R. delta c.25 mi (40 km) from the coast. It consists of an old walled city dating from the T'ang dynasty and a modern riverside town. Its industries include food processing (tea, sugar, and fruit), chemicals, and textiles. The city's lacquerware and handicrafts are famous throughout China. Long a center for China's foreign commerce and a treaty port following the OPIUM WAR (1839–42), it was designated a "special economic zone" in 1979 to spur foreign investment.

fuzzy logic, a multivalued (as opposed to binary) LOGIC. Classical logic holds that everything can be expressed in binary terms: 0 or 1, black or white, yes or no; in terms of BOOLEAN ALGEBRA, everything is in one set or another but not in both. Fuzzy logic allows for values between 0 and 1, shades of gray, and maybe; it allows partial membership in a set. When the approximate reasoning of fuzzy logic is used with an EXPERT SYSTEM, logical inferences can be drawn from imprecise relationships. It is used, for example, to optimize automatically the wash cycle of a washing machine by sensing the load size, fabric mix, and quantity of detergent. Fuzzy logic is used to control passenger elevators, household appliances, cameras, automobile subsystems, and SMART WEAPONS.

G

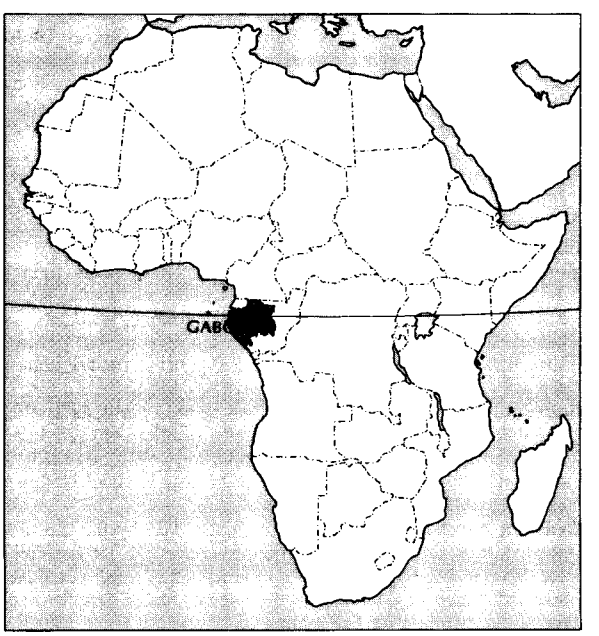
Ga, chemical symbol of the element GALLIUM.

Gable, Clark, 1901–60, American film actor; b. Cadiz, Ohio. For years a box-office attraction, he made such films as *It Happened One Night* (1934), *Gone with the Wind* (1939), and *The Misfits* (1960).

Gabo, Naum [gä'bō], 1890–1977, Russian sculptor, architect, and theorist; brother of Antoine PEVSNER. He wrote the *Realist Manifesto* (1920), proposing that new concepts of time and space be incorporated into art. His sculptural experiments with CONSTRUCTIVISM were often transparent, geometric abstracts.

Gabon [gäbôN'], officially Gabonese Republic, republic (1991 pop. 1,079,980), 103,346 sq mi (267,667 sq km), W central Africa, bordered by the Atlantic Ocean (W), Equatorial Guinea and Cameroon (N), and Congo (E and S). LIBREVILLE (the capital) and Port-Gentil are the only large cities. Lambaréné, on the Ogooué, is the site of the famous hospital established by Albert SCHWEITZER in 1913. Gabon is situated astride the equator. The coastline is a narrow, low-lying strip; the interior is made up of mountain ranges and high plateaus. Much of the country is drained by the Ogooué R., which flows into the Atlantic. The economy is based on oil production, which provides the highest per capita income in sub-Saharan Africa and accounts for two thirds of export earnings. Other minerals extracted include manganese, uranium, and gold. Forest products are also important. Agricultural output is low, and much food needs to be imported. The peoples of Gabon include the Fang (the most numerous group), Omiéné, Batoka, and Eshira. French is the official language and a number of Bantu dialects are also spoken. Most of the people follow traditional beliefs, but there are many Christians in the cities.

History. The region that is now Gabon was inhabited in Paleo-



lithic times. The Omiéné were living there by the 16th cent., the Fang by the 18th, and from the 16th to 18th cent. Gabon was part of the Loango empire, which stretched from the Ogooué to the Congo (Zaïre) rivers. Portuguese navigators arrived in the Ogooué estuary in the 1470s, and Gabon soon became an important center of a slave trade that flourished until the 1880s. By the late 18th cent., the French had gained a dominant position in the area, and, despite resistance from the Fang, Gabon became part of the French Congo in 1889 and of FRENCH EQUATORIAL AFRICA in 1910. Held by the Free French in WORLD WAR II, Gabon became an overseas territory in 1946 and self-governing in 1958. It achieved full independence in 1960 but retained close ties with France. In 1967 the country adopted a one-party political system with Omar Bongo as president. Independent legislative candidates were permitted in 1980, but not until 1990, when unrest forced Bongo to agree, did multiparty legislative elections occur. Amid charges of fraud, Bongo's party won a majority of the seats. Bongo won (1993) reelection in disorganized polling that also prompted fraud charges.

Gaborone, city (1992 est. pop. 140,000), capital of Botswana. Primarily an administrative center with mining-related industries, it is located on the country's main rail line and has a small international airport. The city was founded c.1890 by Gaborone Matlapin, an African chief. It became the capital of newly independent BOTSWANA in 1966.

Gabriel, archangel, the divine herald. In the BIBLE he appears to DANIEL; to Zacharias, father of JOHN THE BAPTIST; and to the Virgin MARY in the Annunciation. Christian tradition makes him the trumpeter of the Last Judgment. In Islam, Gabriel reveals the KORAN to MUHAMMAD, becoming the angel of truth.

Gabriel, Jacques Ange [gäbrēĕl'], 1689–1782, French architect of the ROCOCO. His work is characterized by classical repose, purity of form, and restraint. He worked for 30 years for LOUIS XV at VERSAILLES, Compiègne, and other royal residences. He also designed Place Louis XV (now Place de la Concorde), Paris (1753), and worked on the LOUVRE.

Gabrieli, Andrea, c.1510–86, Italian organist and composer. He wrote MADRIGALS, MOTETS, MASSES, *ricercari,* and canzones for organ and was important in developing multiple-choir technique, which was further refined by his nephew **Giovanni Gabrieli,** c.1555–1612. Giovanni was most important in the development of the CONCERTO style, and he published (1597) the first printed music with dynamic indications.

Gadda, Carlo Emilio, 1893–1973, Italian novelist. His complex style combined literary language, slang, dialects, deliberate misspellings, foreign words, and imitations of various prose styles. *That Awful Mess on Via Merulana* (1957) is considered his masterpiece.

Gaddi, celebrated family of Florentine artists. **Gaddo Gaddi,** c.1260–c.1333, a painter and mosaicist, is thought to have produced the MOSAICS in the portico of Santa Maria Maggiore, Rome. His son, **Taddeo Gaddi,** c.1300–c.1366, was a pupil and assistant to GIOTTO and chief Florentine painter after Giotto's death. His works include painting in Santa Croce and Santa Felicità, Florence. Taddeo's son, **Agnolo Gaddi,** c.1350–1396, possessed a somewhat rigid, Giottesque style. His frescoes include *Life of the Virgin* (cathedral, Prato).

Gadhafi, Moammar: see QADDAFI, MUAMMAR AL-.

gadolinium (Gd), metallic element, extracted in oxide form by J.C.G. de Marignac in 1880. This silver-white, malleable, ductile, lustrous RARE-EARTH METAL is found in gadolinite, MONAZITE, and bastnasite. It is paramagnetic at room temperature but becomes strongly ferromagnetic when cooled. See ELEMENT (table); PERIODIC TABLE.

Gadsden, James, 1788–1858, American railroad promoter and diplomat; b. Charleston, S.C. He advocated a southern rail system and a railroad to the Pacific. Appointed minister to Mexico (1853), he negotiated the GADSDEN PURCHASE, but he was recalled (1856) for exceeding his instructions.

Gadsden Purchase, strip of land bought (1853) by the U.S. from Mexico. Pres. Franklin PIERCE wished to ensure U.S. possession of the Mesilla Valley near the Rio Grande—the most practicable southern route for a railroad to the Pacific. James GADSDEN negotiated the purchase for $10 million of the area of about 30,000 sq mi (77,700 sq km) that now forms extreme S New Mexico and Arizona S of the Gila R.

Gaea, in Greek mythology, the earth; daughter of CHAOS, mother and wife of both URANUS (the sky) and Pontus (the sea). She was mother, by Uranus, of the CYCLOPES, the TITANS, and others, and, by Pontus, of five sea deities. She helped cause the overthrow of Uranus by the Titans and was worshiped as the primal goddess, the mother of all things.

Gaelic [gā'lĭk], or Goidelic, group of languages belonging to the Celtic subfamily of the Indo-European family of languages. Gaelic is spoken in highland Scotland, in Ireland, and on the Isle of Man. See LANGUAGE (table).

Gaelic football: see under FOOTBALL.

Gagarin, Yuri Alekseyevich, 1934–68, Soviet cosmonaut. He became the first person to achieve orbital spaceflight when, on Apr. 12, 1961, he circled the earth once in *Vostok I.* He died (Mar. 27, 1968) in the crash of a jet trainer.

Gage, Thomas, 1721–87, British general, commander of the British forces in North America (1763–75). As governor of Massachusetts (1774–75) he tried to enforce the INTOLERABLE ACTS. His measures brought on the battles of LEXINGTON AND CONCORD, which began the AMERICAN REVOLUTION.

Gaines's Mill: see SEVEN DAYS BATTLES.

Gainsborough, Thomas, 1727–88, English portrait and landscape painter. Greatly influenced by VAN DYCK, he was celebrated for the elegance, vivacity, and refinement of his portraits. His favorite subject was landscape, and he produced some of the first great landscape paintings in England. Gainsborough had few English rivals as a colorist. In his last years he excelled in fancy pictures, a pastoral genre with idealized subjects, e.g., *The Mall* (1783; Frick Coll., N.Y.C.). Among his well-known works are *Perdita* (Wallace Coll., London), *The Blue Boy* (Huntington Art Gall., San Marino, Calif.), and *Lady Innes* (Frick Coll., N.Y.C.).

Gaiseric or **Genseric,** c.390–477, king of the Vandals and Alani (428–77). He left Spain for Africa (429), subdued a large territory, and took CARTHAGE (439). Recognized as independent of Rome, he persecuted Roman landowners and clergy. In 455 he sacked Rome, and he frustrated Roman expeditions against him. By the time he made peace with ZENO (476), he held N Africa, Sicily, Sardinia, Corsica, and the Balearic Islands.

Gaitskell, Hugh Todd Naylor, 1906–63, British statesman. During WORLD WAR II he served in the ministry of economic warfare (1940–42) and on the Board of Trade (1942–45). He entered Parliament as a Labour member in 1945 and later was chancellor of the exchequer (1950–51). In 1955 he succeeded ATTLEE as party leader. He favored moderation of party policies.

Gaius [gā'əs, gī'–], fl. 2d cent., Roman jurist. His textbook *Institutes* is a major source of our knowledge of early ROMAN LAW.

galactic cluster: see STAR CLUSTER.

Galápagos Islands or **Archipiélago de Colón,** archipelago of 13 large and several smaller islands belonging to Ecuador, c.650 mi (1,045 km) W of the country in the Pacific Ocean. The islands were claimed by Ecuador in 1832. They are largely desolate lava piles with little vegetation, except on the upper slopes, but are of special interest to naturalists for their large tortoises, land and marine iguanas, flightless cormorants, and other unusual wildlife. Charles DARWIN, who visited the islands in 1835, gathered evidence there that supported his theory of natural selection.

Galatians, epistle of the NEW TESTAMENT, possibly the earliest written (A.D. c.48), 9th book in the usual order, by St. PAUL to Christians of central Asia Minor. Some scholars date it after A.D. 52. In answer to the belief that circumcision and the Law of MOSES are essential, Paul argues, in a passage central to Christianity, that salvation can be achieved through faith alone.

galaxy, large aggregation of gas, dust, and typically billions of stars. It is held together by the gravitational attraction between its parts, and its rotational motion prevents it from collapsing on itself. A typical spiral galaxy is shaped like a flat disk, about 100,000 light-years in diameter, with a central bulge, or nucleus, containing old stars; winding through the disk are the characteristic spiral arms of dust, gas, and young stars. An elliptical galaxy, lacking spiral arms entirely and containing little or no gas and dust, resembles the

nucleus of a spiral galaxy. A small minority of galaxies are classified as irregular, i.e., showing no definite symmetry or nucleus. One theory suggests that irregulars evolve into spirals or ellipticals, depending on the initial amount of rotational motion. Some galaxies radiate a large fraction of their energy in forms other than visible light, such as radio waves, X rays, and infrared and ultraviolet radiation; their optical counterparts may be faint or undetectable. Gravitation also holds clusters of galaxies together; the Local Group cluster includes the MILKY WAY (containing the sun and solar system) and the ANDROMEDA GALAXY, both spirals, and the irregular MAGELLANIC CLOUDS. See also HUBBLE'S LAW.

Galbraith, John Kenneth, 1908–, American economist and public official; b. Ontario, Canada. He taught economics at Harvard (1934–39, 1949–75, except for time in government service). An adviser to Pres. J.F. KENNEDY, he was (1961–63) U.S. ambassador to India. A Keynesian economist (see KEYNES), he advocated government spending to fight unemployment and using more of the nation's wealth for public services and less for private consumption. His widely read books include *The Affluent Society* (1958; rev. ed., 1985), *The New Industrial State* (1967; 3d rev. ed., 1978), and *The Anatomy of Power* (1983).

Galdós, Benito Pérez: see PÉREZ GALDÓS, BENITO.

Galen, c.130–c.200, physician and writer; b. Pergamum, of Greek parents. He resided chiefly in Rome and was personal physician to several emperors. Credited with some 500 treatises (at least 83 extant), Galen correlated earlier medical knowledge with his own discoveries (based on experiments and animal dissections). He showed that arteries carry blood, not air, and added greatly to knowledge of the brain, nerves, spinal cord, and pulse. His virtually undisputed authority discouraged original investigation and hampered medical progress until the 16th cent.

galena or **lead glance,** lustrous, blue-gray lead sulfide mineral (PbS). It is the chief ore and principal source of LEAD. Distributed worldwide, it frequently contains silver and other accessory metals.

Galicia [gəlĭsh'ēə], historic region (32,332 sq mi/83,740 sq km), SE Poland and W Ukraine. The Polish section covers Rzeszów and the greater part of Krakow provinces; the Ukranian section includes Lviv (Lvov), Ivano-Frankovsk, and Tarnopol oblasts. Mainly agricultural, Galicia also has minerals, notably oil. Originally the duchy of Galich and Vladimir, the region was annexed to Poland in the 14th cent., passed to Austria in 1772, and won limited autonomy in 1861. A battleground in WORLD WAR I, after the war Galicia was contested (1918–20) by newly independent Poland and the new Ukrainian republic with Polish title to the region confirmed by the Polish-Soviet Treaty of Riga (1921). In 1939 most of E Galicia was annexed to Ukraine.

Galicia, Galician *Galiza,* autonomous region (1987 est. pop. 2,858,000), NW Spain, on the Atlantic Ocean, S of the Bay of Biscay and N of Portugal. It includes the provinces of La Coruña, Lugo, Orense, and Pontevedra. In this largely mountainous area, fishing, stock-raising, and food processing are the major occupations. Galicia passed from Rome to the German Suevi (5th–6th cent.), the MOORS, and ASTURIAS (8th–9th cent.).

Galilee, region, N Israel, roughly the portion north of the plain of Esdraelon. Galilee was the chief scene of the ministry of Jesus. After the destruction of Jerusalem (A.D. 70), it became the main center of Judaism in PALESTINE. Zionist colonization of the area began at the end of the 19th cent. and accelerated after World War II. The chief city is NAZARETH. The **Sea of Galilee,** also called **Lake Tiberias** or **Lake Kinneret,** is a lake (64 sq mi/166 sq km) in NE Israel. About 700 ft (210 m) below sea level, it has a saline character and is fed and drained by the JORDAN R. Some fishing is carried on, and some of its water is pumped to S Israel for irrigation. In the Old Testament the lake was called the Sea of Chinnereth or Chinneroth; in the New Testament, Galilee, Gennesaret, or Tiberias.

Galileo (Galileo Galilei), 1564–1642, Italian astronomer, mathematician, and physicist. At the age of 19 he discovered the principle of isochronism—that each oscillation of a pendulum takes the same time despite changes in amplitude. Soon thereafter he became known for his invention of a hydrostatic balance and his treatise on the center of gravity of falling bodies. He found experimentally that bodies do not fall with velocities proportional to their weights, a conclusion received with hostility because it contradicted the accepted teaching of ARISTOTLE. Galileo discovered that the path of a projectile is a parabola, and he is credited with anticipating Isaac NEWTON's laws of motion. In 1609 he constructed the first astronomical telescope, which he used to discover the four largest satellites of Jupiter and the stellar composition of the Milky Way, and in 1632 he published his *Dialogue Concerning the Two Chief World Systems,* a work that upheld the COPERNICAN SYSTEM rather than the PTOLEMAIC SYSTEM and marked a turning point in scientific and philosophical thought. Brought (1633) before the INQUISITION in Rome, he was made to renounce all his beliefs and writings supporting the Copernican theory. His last book, *Dialogues Concerning Two New Sciences* (1638), contains most of his contributions to physics.

Galileo, in space exploration: see SPACE PROBE, table.

Gall, c.1840–94, SIOUX war chief; b. South Dakota. Chief lieutenant of SITTING BULL in the defeat of George CUSTER at LITTLE BIGHORN (1876), Gall later surrendered and worked for better relations between Native Americans and whites.

Galla: see OROMO.

Gallant, Mavis, 1922–, Canadian writer. An expatriate writer living in France, she has contributed to *The New Yorker* since the 1950s. Her publications include short stories, two novels, *Green Water, Green Sky* (1959) and *A Fairly Good Time* (1970), and one play, *What Is to Be Done?* (1983).

Gallatin, Albert, 1761–1849, U.S. public official and financier; b. Switzerland. An innovative secretary of the treasury (1801–14), he reshaped U.S. financial policy to Jeffersonian principles. Under Pres. MADISON he urged the use of federal money to expand the internal economy. A key figure in negotiating the Treaty of GHENT, he was also minister to France (1816–23) and to Great Britain (1826–27). In 1842 he founded the American Ethnological Society.

Gallaudet [gă'lôdĕt'], American family of educators of the deaf. **Thomas Hopkins Gallaudet,** 1787–1851, b. Philadelphia, founded (1817) the first free school for the deaf in the U.S. His oldest son, **Thomas Gallaudet,** 1822–1902, an Episcopal priest, founded St. Ann's Church for Deaf-Mutes, N.Y.C., and the Gallaudet Home for aged deaf-mutes, Poughkeepsie, N.Y. The youngest son, **Edward Miner Gallaudet,** 1837–1917, opened a school for deaf-mutes (now Gallaudet College) in Washington, D.C.

gall bladder, small, pear-shaped sac attached to the LIVER by the cystic duct. The gall bladder stores and concentrates BILE, which is produced by the liver and functions in fat digestion. Fatty foods stimulate intestinal cells to produce a hormone that causes the gall bladder to contract, forcing the bile into the common bile duct and the intestine, where fats are absorbed. Components of bile sometimes crystallize in the gall bladder, forming gallstones.

Gallic Wars, campaigns in Gaul led by Julius CAESAR as proconsul of Gaul (58–51 B.C.). Caesar's first campaign was to prevent the Helvetii from entering SW GAUL. Next, the Aedui asked Caesar's help against the German Ariovistus, whom Caesar routed. In 57 B.C. Caesar pacified Belgica (roughly Belgium). In 56 B.C. he attacked the Veneti, and in the following year he went to the Low Countries and repelled a German invasion. He invaded (54 B.C.) Britain and the next winter put down a revolt of Belgian tribes led by Ambiorix. In 53 B.C. all central Gaul raised a revolt, organized by VERCINGETORIX. With incredible speed and brilliant tactics, Caesar crossed the Alps and suppressed the Gauls. The prime source of the Gallic Wars is Caesar's own commentaries, *De bello Gallico.*

Gallipoli campaign, April 1915–January 1916, Allied expedition in Turkey in WORLD WAR I. Planned by Winston CHURCHILL, British first lord of the admiralty, its purpose was to gain the Dardanelles, capture Constantinople, and make contact with Russia. Poor Allied cooperation and strong Turkish resistance forced the Allies into an evacuation that was the only successful operation in a disastrous campaign.

Gallitzin [gəlĭt'sĭn], Russian princely family. **Vasily Vasilyevich Gallitzin,** d. 1619, sent to offer the Russian throne to Prince Ladislaus of Poland, was imprisoned by King SIGISMUND III for refusing to help him gain the throne; he died in prison. **Vasily Vasilyevich Gallitzin,** 1643–1714, was the lover and chief adviser of Sophia Alekseyevna, regent for PETER I. He was exiled to Siberia after her downfall (1689). **Boris Alekseyevich Gallitzin,** 1654–1714, tutor

to PETER I, headed the government during Peter's first foreign tour. **Dmitri Mikhailovich Gallitzin,** 1665–1737, helped ANNA, daughter of IVAN IV, gain the throne providing she agreed to limit her power; she began to rule absolutely and sentenced him to death, then exiled him instead. **Dmitri Alekseyevich Gallitzin,** 1735–1803, Russian ambassador at Paris (1765–73), was a friend of DIDEROT and VOLTAIRE. **Aleksandr Nikolayevich Gallitzin,** 1773?–1844, a statesman of liberal tendencies, was a counselor to ALEXANDER I. **Nikolai Dmitryevich Gallitzin,** 1856–1925, headed the council of ministers of NICHOLAS II from 1916 until the RUSSIAN REVOLUTION of 1917.

gallium (Ga), metallic element, discovered spectroscopically by P.E. Lecoq de Boisbaudran in 1875. Solid gallium is blue-gray; the liquid form is silver. It is chemically similar to ALUMINUM. Gallium compounds are used in transistors, lasers, and diodes. See ELEMENT (table); PERIODIC TABLE.

gallotanic acid: see TANNIN.

Gallup, George Horace, 1901–84, American public-opinion statistician; b. Jefferson, Iowa. He founded the American Institute of Public Opinion (1935) at Princeton, N.J., and originated the Gallup POLL to measure voter sentiment and gauge the national mood on various issues.

Galsworthy, John, 1867–1933, English novelist and dramatist. He is best remembered for his novels of the Forsyte family, grouped in three trilogies, *The Forsyte Saga* (1922), *A Modern Comedy* (1928), and *End of the Chapter* (1934). Dealing with three generations of a complacent upper-middle-class family from the 1880s to the 1920s, the novels focus on Soames Forsyte, the "man of property." Galsworthy also wrote highly successful dramas on social problems, including *The Silver Box* (1906), *Strife* (1909), and *Justice* (1910). He was awarded the 1932 Nobel Prize in literature.

Galt, John, 1779–1839, Scottish novelist. Known chiefly for his novels of Scottish country life, e.g., *The Ayrshire Legatees* (1821) and *The Entail* (1823), he also wrote a biography of BYRON (1830) and founded (1827) the town of Guelph in Canada.

Galton, Sir Francis, 1822–1911, English scientist and cousin of Charles DARWIN. In his *Hereditary Genius* (1869) he presented evidence that talent is an inherited characteristic; this led him to found the EUGENICS movement. His system of classifying fingerprints is basically that still in use.

Galvani, Luigi, 1737–98, Italian physician. A noted surgeon and researcher in comparative anatomy, he concluded, from his observation that a frog's leg contracted when touched by two different metals in a moist environment, that animal tissues generate ELECTRICITY. Although he was eventually proved wrong by Alessandro VOLTA, the controversy stimulated research in electrotherapy and on electric currents. Many electrical terms derive from his name.

galvanizing, process of coating a metal, usually iron or steel, with a protective coating of ZINC. Galvanized iron is usually prepared by dipping or electroplating. Pure iron, copper iron, and various steels are often galvanized, because the zinc coating resists oxidation and moisture.

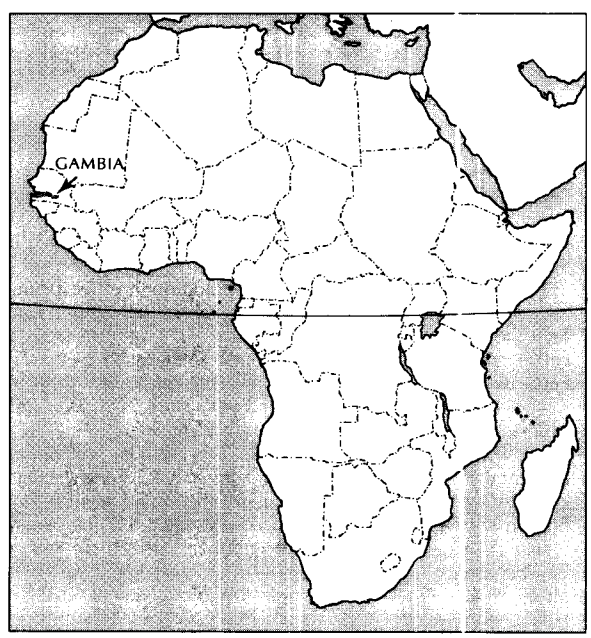
galvanometer, instrument used to determine the presence, direction, and strength of electric current in a conductor. Galvanometers are based on the discovery (1819) by Hans OERSTED that a magnetic needle is deflected by the presence of an electric current in a nearby conductor. When an electric current is passing through the conductor, the magnetic needle tends to turn at right angles to the conductor, so that its direction is parallel to the lines of induction around the conductor and its north pole points in the direction in which these lines of induction flow. In general, the extent to which the needle turns is dependent upon the current strength. In the modern d'Arsonval galvanometer, the magnet is fixed and the coil is movable. If a pointer is attached to the moving coil so that it passes over a suitably calibrated scale, the galvanometer can be used to quantitatively measure the current passing through it. A direct current (DC) AMMETER measures direct current by allowing a known percentage of the current to pass through a galvanometer. A DC VOLTMETER measures direct voltage (see POTENTIAL, ELECTRIC) between two points by allowing current to flow through a galvanometer connected in series with a high resistance. The current through the galvanometer is then proportional to the voltage (see OHM'S LAW).

Galveston, city (1990 pop. 59,070), seat of Galveston co., on Galveston Island, SE Tex.; inc. 1839. It has a fine natural harbor at the entrance to Galveston Bay; causeways connect it with the mainland and Texas City. Oil refining and shipbuilding lead its industries. From its deepwater port goods are exported all over the world. Settled from the 1830s but known to Europeans centuries earlier, it also is a noted resort center with fine beaches and many tourist attractions, including Moody Gardens. The city was devastated by a 1900 hurricane. A massive seawall has helped to protect it, but hurricanes since have still caused much damage.

Gama, Vasco da, c.1469–1524, Portuguese navigator, the first European to travel by sea to INDIA (1497–99). At the order of MANUEL I, he commanded four vessels, reached Calicut, and opened up a lucrative spice trade, thus beginning the Portuguese empire. He returned with 20 ships in 1502 and established Portuguese power in India and Africa. His methods were harsh, and he was not a good administrator. He was sent back to India as viceroy in 1524 but soon died.

Gambetta, Léon [gäNbĕtä'], 1838–82, French republican leader. He opposed the Second Empire of NAPOLEON III and was prominent in the provisional government following the empire's fall (1870) in the FRANCO-PRUSSIAN WAR. He bitterly fought French capitulation and after 1871 helped to create the Third Republic. He pursued a moderate policy between the radicals and the monarchists and was premier (1881–82).

Gambia, The [găm'bēə], officially Republic of The Gambia, republic (1993 pop. 1,025,867), 4,361 sq mi (11,295 sq km), W Africa, the continent's smallest independent state. It is a narrow strip of land on both banks of the Gambia R., bordered by the Atlantic Ocean on the west and surrounded on the remaining three sides by Senegal. The capital is BANJUL, on St. Mary's Island, near the mouth of the Gambia R. A low-lying country, it ranges from sandy beaches along the coast to a swampy river valley in the interior. The economy is overwhelmingly dependent on the export of peanuts, which provide 90% of its earnings. Rice and other grains are produced for local consumption. Tourism also is important. The population is primarily Muslim, including the Malinke (Mandingo; the most numerous group), Fulani (Fula), and Wolof. English is the official language, but the Malinke language is common and Wolof also is spoken.



History. Prior to the arrival of Portuguese explorers in the mid-15th cent., the area that is now Gambia was part of the MALI empire. English merchants won trading rights from the Portuguese in

1588, and in the early 17th cent. British companies founded settlements along the Gambia R. In 1816 the British purchased St. Mary's Island, where they established Bathurst (now Banjul), and in 1843 the territory became a crown colony. The French, who controlled the neighboring interior (now Senegal), failed in negotiations to acquire the Gambia R. settlements, which, in 1894, became a British protectorate. Gambia achieved self-government in 1963 and independence in 1965, under Dawda Kairaba Jawara; it became a republic in the Commonwealth of Nations in 1970. Independent Gambia has largely been a successful parliamentary democracy, but in 1981 there was an attempted coup against Jawara that was suppressed only with the help of Senegalese troops. The country joined (1981) with SENEGAL in a confederation known as Senegambia, which, while maintaining individual sovereignty, aimed at cooperation in foreign policy, security, communications, and monetary and economic affairs, but Gambia's reluctance to move toward union led Senegal to dissolve (1989) the confederation.

games, theory of, group of mathematical theories applying statistical logic to the choice of strategies in a game. A game consists of a set of rules governing a competitive situation in which two or more individuals or groups attempt to maximize their own winnings or minimize those of their opponents. Game theory, first developed by John VON NEUMANN, is applied to many fields, e.g., military problems and economics.

gametophyte, phase of a plant life cycle in which the egg (see OVUM) and SPERM (gametes) are produced. In many lower plants the gametophyte phase is the dominant life form; for example, the familiar MOSSES are the gametophyte form of the plant. The union of egg and sperm gives rise to the sporophyte phase, in which spores are formed; spores, in turn, give rise to the gametophyte. In mosses the sporophyte is a capsule atop a slender stalk that grows out of the top of the gametophyte. The alternation between the gametophyte and sporophyte phase is known as alternation of generations.

gamma globulin: see GLOBULIN.

gamma radiation, radiation emitted in one of the three types of natural RADIOACTIVITY. It is the most energetic form of ELECTROMAGNETIC RADIATION, with a very short wavelength of less than 10^{-10} m. Gamma rays are essentially very energetic X RAYS emitted by excited nuclei. They often accompany alpha or beta particles, because a nucleus emitting those particles may be left in an excited (higher-energy) state. Gamma-ray sources are used in medicine to treat cancer, for diagnostic purposes, and to sterilize equipment and supplies, in industry in the inspection of castings and welds, and in food processing to kill microorganisms and retard spoilage.

gamma-ray astronomy, study of celestial objects by analysis of the most energetic ELECTROMAGNETIC RADIATION they emit. Gamma rays are difficult to observe from ground-based telescopes due to atmospheric interference, and high-altitude balloons, sounding ROCKETS, and orbiting OBSERVATORIES are therefore used. Gamma-ray astronomy is particularly useful in the study of black holes (see GRAVITATIONAL COLLAPSE), COSMIC RAYS, PULSARS, QUASARS, NEUTRON STARS, and SUPERNOVAS. Gamma-ray astronomy can be considered an extension of X-RAY ASTRONOMY to the extreme shortwave end of the spectrum.

Gamow, George [găm'ŏf], 1904–68, Russian-American theoretical physicist and author; b. Odessa; came to U.S., 1933. He is best known as an author who popularized abstract physical theories. Gamow devised (1928) a theory of radioactive decay and applied nuclear physics to problems of stellar evolution. He also proposed an important theory on the organization of genetic information in the living cell.

Gandhi, Indira, 1917–1984, prime minister of India (1966–77, 1980–84); daughter of Jawaharlal NEHRU. After serving as her father's aide and rising through the ranks of the Congress party, she became prime minister on the death of SHASTRI. India's defeat of Pakistan in 1971 assured Indian dominance of the subcontinent. Gandhi's administration, increasingly authoritarian, was marked by stress on social programs and government planning. Faced with opposition, she declared an "emergency" in 1975, jailing opponents and suspending civil liberties. Forced from office in 1977, she made a triumphant return in 1980, stressing agricultural development and stronger international relations. She was assassinated (1984) by SIKH members of her bodyguard unit following an attack on the Golden Temple in Amritsar, the Sikhs' holiest shrine. Her son, Rajiv GANDHI, succeeded her as prime minister.

Gandhi, Mohandas Karamchand, 1869–1948, Indian political and spiritual leader, called the Mahatma [great-souled] and regarded as the father of independent INDIA. After practicing law in South Africa, where he fought for the rights of the Indian population there, he returned (1915) to India. Already regarded as a leader in the nationalist movement, he began working for Indian independence from Great Britain. He gave up Western ways to lead a life of abstinence and spirituality. He asserted the unity of all people under one God and preached Christian and Muslim ethics along with the Hindu. He became a proponent of satyagraha [passive resistance] as a way to end British rule. His efforts led the British to jail him several times, but so great was his following that his threats to fast until death usually forced his release. In the INDIAN NATIONAL CONGRESS, India's chief political party, he led the fight to rid the country of the CASTE system; he especially defended the rights of the untouchables. In 1942 the British jailed him after he refused to cooperate during World War II. In 1944 he was released and became a major figure in the postwar negotiations that resulted in Indian independence in 1947. He was deeply distressed by the religious partition of the country into India and Pakistan. When violence broke out between Hindus and Muslims, he resorted to fasts and visits to the troubled areas in efforts to end the violence. He was on one such prayer vigil in New Delhi when he was fatally shot by a Hindu extremist who objected to Gandhi's tolerance for the Muslims.

Gandhi, Rajiv, 1944–91, Indian political leader. He succeeded his mother, Indira GANDHI, as prime minister after her assassination (1984) and led the Congress party (see INDIAN NATIONAL CONGRESS) to a sweeping election victory. A proponent of free enterprise, he presided over the government during a period of robust economic growth. He also unsuccessfully attempted to mediate an end to Tamil-Sinhalese violence in SRI LANKA, sending Indian peacekeeping forces there in 1987. Allegations of corruption and arrogance diminished his popularity, however; in 1989 the Congress party lost its parliamentary majority and he resigned as prime minister. Gandhi was assassinated by Tamil separatists in 1991.

Ganges [găn'jēz] or **Ganga,** chief river in India, c.1,560 mi (2,510 km) long, considered sacred by Hindus. It rises in the Himalayas and flows generally east-southeast through a wide and densely populated plain to join the BRAHMAPUTRA R. in Bangladesh. The combined river then continues through a vast and fertile delta on the Bay of BENGAL, which it enters as the Padma and other distributaries. Hardwar, Allahabad, and Varanasi (Benares) are especially holy bathing sites along its banks. The Ganges is a major source of water for irrigation in both India and Bangladesh.

Gang of Four, term of opprobrium given by the Chinese Communist authorities to four persons held responsible for the excesses of the CULTURAL REVOLUTION (1966–69). They were also accused of trying to seize power after the deaths (1976) of MAO ZEDONG and ZHOU ENLAI. The most notable of the Gang of Four was JIANG QING, Mao's widow. The others were Wang Hongwen, Yao Wenyuan, and Zhang Chunqiao. They were imprisoned in 1976, tried in 1980, and sentenced in 1981. Sentences ranged from death (later commuted to life in prison) to 20 years in prison.

gangrene, local death of body tissue. Dry gangrene, the most common form, follows a disturbance of blood supply to the tissues, e.g., in DIABETES or destruction of tissue from injury. Moist gangrene results from an invasion of toxin-producing bacteria that destroy tissue. Treatment includes rest and ANTIBIOTICS; excision of the diseased area or, in advanced cases, amputation of the affected part may be necessary.

gannet: see BOOBY.

Ganymede, in astronomy, natural satellite of JUPITER.

Ganymede [găn'ēmēd], in Greek mythology, a beautiful youth carried off by ZEUS to be cupbearer to the gods.

Gaon of Vilna: see ELIJAH BEN SOLOMON.

gar, cylindrical, mostly freshwater FISH (family Lepisosteidae) with hard, diamond-shaped scales, a long jaw, and long, sharp teeth, found in the U.S. and Central America. The largest species is the

9-ft (2.7-m) alligator gar (*Lepisosteus spatula*) of the Mississippi valley.

garbanzo: see CHICKPEA.

Garbo, Greta, 1905–90, Swedish-American film actress; b. Sweden as Greta Gustafson. She was noted for her beauty and her dramatic intensity. Her films include *Queen Christina* (1933), *Anna Karenina* (1935), and *Camille* (1936).

García Lorca, Federico [gärthē'ä lôr'kä], 1898–1936, Spanish lyric poet and dramatist. His work reflects the spirit of his native Andalusia and his own passionate response to life. *Gypsy Ballads* (1928) made him the most popular Spanish poet of his generation, while *Lament for the Death of a Bullfighter* (1935) and *The Poet in New York* (1940) evidenced his growing maturity of thought. His plays, notably the tragedies *Blood Wedding* (1933) and *The House of Bernarda Alba* (1936), ensure his continuing international reputation. García Lorca was shot by FRANCO's soldiers at the outbreak of the SPANISH CIVIL WAR.

García Márquez, Gabriel [gärsē'ä mär'käs], 1928–, Colombian writer. His works, generally chronicling the physical and moral collapse of Macondo, an imaginary town, include *Leaf Storm and Other Stories* (1955) and the novels *One Hundred Years of Solitude* (1967), *The Autumn of the Patriarch* (1975), and *Chronicle of a Death Foretold* (tr. 1982). *The General in His Labyrinth* (1989) is a novelized treatment of the last years of Simón Bolívar. García Márquez was awarded the 1982 Nobel Prize in literature.

García Moreno, Gabriel [gärsē'ä mōrā'nō], 1821–75, president of ECUADOR (1861–65, 1869–75). A fervent Roman Catholic, he guaranteed (1862) the Church's independence and granted it control over education. His despotism in crushing liberal opposition led to his assassination.

Garcilaso de la Vega [gärthēlä'sō dā lä vā'gä], 1503?–1536, Spanish lyric poet. He typified the courtly poet-soldier of Spain's GOLDEN AGE. His sonnets, elegies, odes, and eclogues, published after his death in battle, introduced Italian RENAISSANCE poetic forms into Spain.

Garden Grove, city (1990 pop. 143,050), S Calif., a residential suburb of LONG BEACH and LOS ANGELES, on the Santa Ana R.; founded 1877, inc. 1956. The city is in a citrus fruit area. Nearby defense installations provide much employment. The "Crystal Cathedral," an enormous glass church, is there.

gardenia, evergreen shrub or tree (genus *Gardenia*) of the MADDER family, native to the Old World tropics. Gardenias' heavily fragrant and showy blossoms make them popular corsage and greenhouse plants. Most of the cultivated types are varieties of *G. jasminoides*, also called Cape jasmine but unrelated to true JASMINE.

Gardner, Erle Stanley, 1889–1970, American writer; b. Malden, Mass. His many detective novels are noted for their fast action and clever legal devices. His most famous character, Perry Mason, is, like Gardner himself, a lawyer.

Gardner, Isabella Stewart, 1840–1924, American art collector, b. N.Y.C. The wealthy leader of a cultural salon, she sponsored artists and the connoisseur Bernard BERENSON, who advised her in collection. She willed her collection and the building that houses it to Boston as a museum.

Gardner, John Champlin, Jr., 1933–82, American novelist; b. Batavia, N.Y. A scholar of medieval literature, he drew on his academic knowledge and religious concerns to create fiction that is both popular and philosophically interesting. His works include *Grendel* (1971), *The Sunlight Dialogues* (1972), *October Light* (1976), and *Mickelsson's Ghosts* (1982), novels, and *On Moral Fiction* (1978), criticism.

Garfield, James Abram, 1831–81, 20th president of the U.S. (March–Sept., 1881); b. Cuyahoga co., Ohio. He served in the Union army until 1863, when he became a Republican member of the U.S. House of Representatives, and followed his party's radical RECONSTRUCTION program. Elected president in 1880, he declared war on the leading faction of his party by appointing James G. BLAINE secretary of state (passing over the "Stalwarts" of the influential Roscoe CONKLING); won a victory with his appointment for port collector of New York; and began prosecution of frauds in the U.S. postal service. But on July 2, 1881, he was shot by a disappointed office seeker, Charles J. Guiteau. Garfield died Sept. 19 and was succeeded by Vice President Chester A. ARTHUR.

Garibaldi, Giuseppe, 1807–82, Italian patriot and soldier, a leading figure in the RISORGIMENTO; b. France. He fled to South America (1835) after a republican plot failed and fought (1842–46) in the Uruguayan civil war. Returning to Italy, he fought for Sardinia against Austria (1848) and for MAZZINI's Roman republic (1849), then found asylum in the U.S. Returning (1851) to Italy, he renounced his republican views and supported a united Italy under VICTOR EMMANUEL II of Sardinia. In 1860, with Victor Emmanuel's connivance, Garibaldi led 1,000 volunteer "red shirts" in a spectacular conquest of Sicily and Naples. He then relinquished his conquests to Sardinia, and Victor Emmanuel was proclaimed (1861) king of Italy. In 1862 and 1867 he tried unsuccessfully to take Rome, which had remained outside the new kingdom. He was elected (1874) to the Italian parliament.

Garland, Hamlin, 1860–1940, American author; b. near West Salem, Wis. Raised in the Midwest, he wrote of the difficulties of prairie life in tales, e.g., *Main-Travelled Roads* (1891); novels, e.g., *A Little Norsk* (1892); and autobiographical works, e.g., *A Daughter of the Middle Border* (1921; Pulitzer).

Garland, Judy, 1922–69, American singer and film actress; b. Grand Rapids, Mich., as Frances Gumm. Her films include *The Wizard of Oz* (1939), *Meet Me in St. Louis* (1944), and *A Star Is Born* (1954).

Garland, city (1990 pop. 180,650), N Tex., a suburb of DALLAS; inc. 1891. Since World War II it has grown from an agricultural community into a center for electronics research and the production of aerospace equipment.

garlic: see ONION.

Garmo Peak: see COMMUNISM PEAK.

Garneau, François Xavier, 1809–66, French-Canadian historian. His *History of Canada* (3 vol., 1845–48) is a well-written, scholarly work covering the period from the exploration and settling of Canada by the French to the union of the two Canadas in 1841. Garneau may have written the history to disprove Lord Durham's claim that French Canadians were "without history and without a literature."

Garner, Erroll Louis, 1921–77, American jazz pianist and composer; b. Pittsburgh. He wrote about 200 songs, including "Misty," "Dreamy," and "Solitaire." He developed a unique style of piano playing and toured throughout the world from the 1940s through the 1960s.

Garner, John Nance, 1868–1967, vice president of the U.S. (1933–41); b. Red River co., Tex. In Congress from 1902, he became Speaker of the House (1931) and was vice president for Franklin D. ROOSEVELT's first two terms.

garnet, name applied to a group of silicate minerals $(Fe,Mg,Ca,Mn)_3(Al,Fe,Cr)_2(SiO_4)_3$ used chiefly as gems and abrasives. The most common gem varieties are red, but garnets are also yellow, brown, and green. They are found in many types of rock throughout the world.

Garnett, Richard, 1835–1906, English author and distinguished librarian at the British Museum (1851–99). He wrote essays, novels, and poems, and biographies of MILTON, CARLYLE, EMERSON, and COLERIDGE, and discovered previously unknown poems by P.B. SHELLEY. His son, **Edward Garnett,** 1868–1937, was a critic who corresponded with and encouraged many writers. Edward's wife, **Constance (Black) Garnett,** 1862–1946, made important translations from Russian of TOLSTOY, DOSTOYEVSKY, and others. Their son, **David Garnett,** 1892–1981, wrote the imaginative *Lady into Fox* (1923) and other novels.

Garrick, David, 1717–79, English actor, manager, and dramatist, the greatest actor of 18th-cent. England. A pupil of Samuel JOHNSON, he accompanied Johnson to London in 1737. His formal debut (1741) as Richard III made him the idol of London, where his straightforward manner and diction revolutionized acting styles. Noted for his versatility, he played contemporary drama as well as Shakespearean roles; his King Lear was especially praised. As manager (1747–76) of the Drury Lane Theatre, he initiated many reforms in stagecraft.

Garrison, William Lloyd, 1805–79, American abolitionist; b. Newburyport, Mass. He founded the *Liberator* in 1831 and for 35 years campaigned for immediate and complete abolition of slavery. Favoring moral persuasion over violence or political involvement, he helped organize (1833) the American Anti-Slavery Society and was

its president (1843–65). He advocated Northern secession from the Union because the Constitution permitted slavery, and he opposed the Civil War until Lincoln issued the EMANCIPATION PROCLAMATION in 1862. Although he was considered the foremost antislavery leader during the 19th cent., evidence indicates that less famous ABOLITIONISTS were more effective.

Garvey, Marcus, 1887–1940, African-American proponent of black nationalism; b. Jamaica. In 1914 he founded the Universal Negro Improvement Association to foster worldwide unity among blacks and establish the greatness of their African heritage. Rejecting any notion of integration in countries where blacks were a minority, he urged a "back to Africa" movement. Garvey's brilliant oratory and his newspaper, *Negro World,* made him the most influential African-American leader of the early 1920s, but his influence declined after his misuse of funds intended to establish an African-American steamship company resulted in a mail fraud conviction. He was jailed (1925) and deported to Jamaica (1927), dying in relative obscurity.

Gary, city (1990 pop. 116,646), NW Ind., on Lake Michigan, near Chicago. Once one of the world's great steel centers, Gary was founded by the U.S. Steel Corp., which bought the land in 1905. Its location midway between western iron ore sources and eastern and southeastern coal areas made it ideal for industry. During the nationwide steel strike of 1919, federal troops occupied the city for several months. In recent years the city has looked for new industries to revitalize its economy.

gas, in physics: see KINETIC-MOLECULAR THEORY OF GASES; STATES OF MATTER.

Gasca, Pedro de la [gäs'kä], c.1485–1567?, Spanish colonial administrator in PERU (1547–50). Sent by Holy Roman Emperor CHARLES V to restore order, he repealed the New Laws of LAS CASAS, which were meant to protect indigenous peoples, and pardoned their violators. He put down (1548) a revolt by Gonzalo PIZARRO and restored the semblance of order in Peru.

Gascony, region, SW France. The sandy, swampy Landes along the ocean, the Pyrenees, and the hilly Armagnac region are the main geographic areas. Fishing, stock raising, wine making, and tourism are the chief industries. Auch is the historic capital. The Vascones, or BASQUES, invaded the area and set up a duchy in 601. In 1154 Gascony, along with AQUITAINE, came under English rule; and France did not recover it completely until the end (1453) of the HUNDRED YEARS WAR. It later passed to Henry of Navarre (later HENRY IV of France) and was united with the royal domain in 1607.

Gaskell, Elizabeth Cleghorn (Stevenson), 1810–65, English author. In addition to her excellent but controversial *Life of Charlotte Brontë* (1857), she is known for her novels about social conditions, e.g., *Mary Barton* (1848), and village life, e.g., *Cranford* (1853) and *Wives and Daughters* (1866).

gas laws, physical laws describing the behavior of a gas (see STATES OF MATTER) under various conditions of volume (V), pressure (P), and absolute, or Kelvin, TEMPERATURE (T). Boyle's, or Mariotte's, gas law states that under constant temperature $PV = k_1$. Charles's, or Gay-Lussac's, law states that under constant pressure $V = k_2T$. A third law states that under constant volume $P = k_3T$. The constants k_1, k_2, and k_3 are dependent on the amount of gas present and, respectively, on the temperature, pressure, and volume of the gas. These three laws can be combined into a single law, or equation of state: $PV = kT$ or $Pv = RT$, in which v is the specific volume equal to V/n, n is the number of moles of the gas, k is a proportionality constant, and R is the universal gas constant, equal to 8.3149×10^3 joules/kg-mole-degree in mks units. These laws are formulated for so-called ideal or perfect gases. Real gases are described more accurately by the van der Waals equation: $(P + a/v^2)(v - b) = RT$, in which a and b are specific constants for each gas.

gasoline, light, volatile fuel oil; called petrol in Britain. A mixture of HYDROCARBONS obtained in the fractional DISTILLATION and "cracking" of PETROLEUM, it is used as a fuel for INTERNAL-COMBUSTION ENGINES, for cooking, and as a solvent. The quality of gasoline used in engines is rated by OCTANE NUMBER. To increase octane rating, additives containing lead were once widely used. Because of the health hazard of lead as an environmental pollutant and the harmful effect it has on pollution-control devices, however, AUTOMOBILE design and gasoline composition were changed. Lead additives are now banned in the U.S. Compounds such as methyl tertiary butyl ether (MTBE), which raises octane ratings and promotes more thorough combustion, and ethanol, used in gasohol, are now added to reduce pollution. Detergents are added to clean fuel injectors and improve engine performance. Alternatives to gasoline as a vehicular fuel, such as NATURAL GAS and electricity from storage batteries, have also been used on a small scale, particularly in urban areas, where distances are shorter and air pollution greater.

gasoline engine: see INTERNAL-COMBUSTION ENGINE.

Gaspar: see WISE MEN OF THE EAST.

Gaspee, British revenue cutter, burned June 10, 1772, at Gaspee Point, Narragansett Bay, R.I. Colonists burned the *Gaspee* in defiance of the enforcement of revenue laws.

Gaspé Peninsula or **Gaspésie,** tongue of land, E Quebec, Canada, 60–90 mi (97–145 km) wide, projecting c.150 mi (240 km) E into the Gulf of St. Lawrence. The coast is famous for its bold headlands and picturesque coastal settlements. The interior is a mountainous wilderness, completely forested, that reaches a high point of 4,160 ft (1,268 m) in the Shickshock Mts.

gastropod, MOLLUSK of the class Gastropoda. It usually has a coiled or spiraled one-piece shell (univalve), although it may be reduced or absent. The head has sensory tentacles and a mouth with a rasplike tongue (radula). The ventral surface of the animal is modified into a large, flattened foot, which, along with other soft body parts, can be withdrawn into the shell; in most cases, the opening is covered by a plate (operculum). Most gastropods are marine, but there are forms that live in fresh water and on land. The class includes the ABALONE, CONCH, SNAIL, SLUG, WHELK, LIMPET, PERIWINKLE, and SEA SLUG.

Gates, Bill (William Henry Gates, 3d), 1955–, American businessman; b. Seattle. At 19 Gates founded (1974) the Microsoft Corp. with Paul Allen. Since 1980, when Microsoft purchased the rights to an existing computer operating system and adapted it for the International Business Machines Corp.'s new PERSONAL COMPUTER, Gates has built the company into one of the world's largest producers of microcomputer software.

William Gates

Gates, Horatio, 1727–1806, American Revolutionary general; b. England. A colonial hero after his successful SARATOGA CAMPAIGN (1777), he commanded Patriot forces in the Carolinas until the disgraceful defeat (1780) at Camden, S.C.

Gates of the Arctic National Park: see NATIONAL PARKS (table).

Gatling, Richard Jordan, 1818–1903, American inventor; b. Winton, N.C. He invented and manufactured agricultural implements but is remembered as the creator of a rapid-firing gun, the precursor of the modern machine gun (see SMALL ARMS). He offered it to the Union army, but it was not accepted for use until 1866, after the Civil War had ended.

GATT, General Agreement on Tariffs and Trade: see UNITED NATIONS (table 3).

Gaudier-Brzeska, Henri [gōdyā'-bərzĕskä'], 1891–1915, French sculptor. The chief exponent of VORTICISM in sculpture, he is known for his draftsmanship, animal figures, and abstracts.

Gaudí i Cornet, Antonio [gaudē' ē kōr'nĕt], 1852–1926, Spanish architect, working mainly in Barcelona. He created startling architectural forms paralleling the development of ART NOUVEAU or MODERNISMO. Many of his buildings resemble sculptural configurations. His use of color and mixed materials is seen in his masterpiece, the Expiatory Church of the Holy Family (1882–1930). He also made many technological innovations.

Gauguin, Paul [gōgăN'], 1848–1903, French painter and woodcut artist; an influential founder of modern art. At 35 he left his career as a stockbroker and devoted himself to painting. Allied with the impressionists (see IMPRESSIONISM), in 1888 he and Émile Bernard proposed a synthetist theory emphasizing flat planes and bright, non-naturalistic color with symbolic or primitive subjects. *The Yellow Christ* (Albright-Knox Gall., Buffalo) is characteristic of this period. In 1891 he went to Tahiti, where he painted some of his finest works and wrote *Noa Noa* (tr. 1947), an autobiographical novel. He returned to France briefly but died in poverty and despair in the South Seas. Gauguin rejected the tradition of Western naturalism, using nature as a starting point from which to abstract figures and symbols. His color harmonies and profound sense of mystery can be seen in such paintings as *The Day of the God* (Art Inst., Chicago), *La Orana Maria* (1891; Metropolitan Mus.), and *By the Sea* (1892; Nat. Gall., Wash., D.C.). He also revived the art of woodcutting and did some fine lithographs and pottery pieces.

Gaul, Lat. *Gallia,* ancient name for the land S and W of the Rhine, W of the Alps, and N of the Pyrenees. The name was extended by the Romans to include N Italy and is derived from its settlers of the 4th and 3d cent. B.C.—invading CELTS, called Gauls by the Romans. Julius CAESAR conquered Gaul in the GALLIC WARS (58–51 B.C.). He is the best ancient source on Gaul, and he has immortalized its three ethnic divisions: Aquitania in the S, Gaul proper (central France), and Belgica in the N. Gaul was rapidly Romanized.

Gaunt, John of: see JOHN OF GAUNT.

Gauss, Carl Friedrich [gous], 1777–1855, German mathematician, physicist, and astronomer; b. Johann Friederich Carl Gauss. Considered the greatest mathematician of his time and the equal of ARCHIMEDES and Isaac NEWTON, Gauss made many discoveries before age twenty. His greatest work was in NUMBER THEORY; his *Disquisitiones Arithmeticae* (completed 1798; pub. 1801) is a masterpiece. Extremely rigorous in his work, Gauss refused to publish any result without a complete proof. Thus, many discoveries were not credited to him and were remade by others later, e.g., the work of János Bolyai and Nikolai LOBACHEVSKY in NON-EUCLIDEAN GEOMETRY, Augustin CAUCHY in complex variable analysis, Carl Jacobi in elliptic functions, and Sir William Rowan HAMILTON in quaternions. Gauss early discovered, independently of Adrien LEGENDRE, the method of least squares. In 1801, when the asteroid Ceres was discovered by the Italian astronomer Giuseppe Piazzi, Gauss calculated its orbit on the basis of only a few accurate observations, and it was found the next year precisely where he had predicted. His *Theoria motus corporum celestium* (1809) treats the calculation of the orbits of planets and comets from observational data. From 1807 until his death, Gauss was director of the astronomical observatory at Göttingen. Geodetic survey work done for the governments of Hanover and Denmark from 1821 led him to an interest in space curves and surfaces, as well as to the invention of the heliotrope, a device to measure distances by means of reflected sunlight. Gauss's collaboration with the German physicist Wilhelm Weber in research on electric and magnetic phenomena led to his invention, in 1833, of the electric telegraph.

Gautier, Théophile, 1811–72, French poet, novelist, and critic and exponent of art for art's sake. His finely crafted poems, notably *Enamels and Cameos* (1852), foreshadowed the revolt against ROMANTICISM by the PARNASSIANS and SYMBOLISTS.

gavotte, originally a peasant DANCE of the Gavots, in upper Dauphiné, France. A circle dance with lively, skipping steps, it was used by LULLY in court ballets and by COUPERIN and J.S. BACH in their keyboard suites.

Gay, John, 1685–1732, English playwright and poet, best known for *The Beggar's Opera* (1728), about thieves and prostitutes, and satirizing society and then-fashionable Italian opera. Its sequel, *Polly* (1729), was suppressed by the government. Gay's verse appeared in *Fables* (1727, 1738).

Gay-Lussac, Joseph Louis, 1778–1850, French chemist and physicist. He and the French chemist Louis Jacques Thénard were the first to isolate BORON. Gay-Lussac discovered (1802) independently that at constant pressure the volume of an enclosed gas is directly proportional to its temperature, a law known as Charles's law or as Gay-Lussac's law (see GAS LAWS). He was the first to formulate (c.1808) the law of combining volumes, which states that gases combine by volume in simple multiple proportion.

Gay-Lussac's law: see GAS LAWS.

gay rights movement, organized efforts to end the criminalization of homosexuality and protect the CIVIL RIGHTS of homosexuals. The modern gay rights movement in the U.S. grew out of the Stonewall riot (June 1969) in New York City, which resulted from a police raid on a gay bar. A number of groups formed to work for the repeal of laws prohibiting consensual homosexual conduct; for legislation barring discrimination against gays in housing and employment; and for greater acceptance of homosexuals among the rest of the population. By the early 1990s 26 states had repealed their antisodomy laws. Laws protecting homosexuals from discrimination also had been enacted, but largely at the local level; by 1993 only eight states had such laws. Opposition to such laws, particularly from conservative religious groups, has often been strong, and opponents have often gained repeal of gay rights measures. In 1993 the Defense Dept., at Pres. Clinton's order, changed the ban on homosexuals in the military to a ban on homosexual activity. See also HOMOSEXUALITY.

Gaza Strip, coastal region of the Middle East (1992 est. pop. 681,000), c.140 sq mi (370 sq km), on the Mediterranean Sea, adjoining Egypt and Israel. Densely populated and impoverished, it is mainly inhabited by Palestinian refugees; there is also a small minority of Israeli settlers. The strip was part of the British mandate for PALESTINE from 1917 to 1948, passed to Egyptian control in 1949, and has been occupied by Israel since the 1967 ARAB-ISRAELI WAR. Autonomy for the region, promised by the CAMP DAVID ACCORDS (1978), has yet to be granted. The Palestinian uprising (*intifada*) began in Gaza in 1987. A 1993 accord between Israel and the PALESTINE LIBERATION ORGANIZATION called for limited self-rule in the area by mid-1994.

gazelle, delicate, graceful ANTELOPE (genus *Gazella*) inhabiting arid, open country, usually in Africa. Standing 2 to 3 ft (60 to 90 cm) high at the shoulder, the fawn-colored gazelle often has heavily ringed horns that curve back and inward. Gazelles are powerful jumpers and very swift. Closely related is the reddish-brown **impala** (*Aepyceros melampus*), the most powerful jumper of all antelopes, able to leap 10 ft (3 m) into the air and travel 30 ft (9 m) in a single bound.

Gd, chemical symbol of the element GADOLINIUM.

Gdańsk or **Danzig,** city (1989 est. pop. 461,000), N Poland, on a branch of the Vistula R. and on the Gulf of Gdańsk. It is a major port on the BALTIC SEA, with some of the world's largest shipyards. Its other industries include mechanical engineering, machine building, chemicals and metallurgy. An old Slavic settlement, it was the capital of Pomerelia (see POMERANIA) from the 10th cent. and a member of the HANSEATIC LEAGUE from the 13th cent. The city was later ruled by Poland and Prussia and in 1919 was made a free city. HITLER's demand (1939) for Danzig's return to Germany and his subsequent invasion of Poland began WORLD WAR II. The city was restored to Poland in 1945. In both 1970 and 1980 workers' strikes in Gdańsk spread to other cities, causing major political changes in Poland.

GDP, gross domestic product. See under GROSS NATIONAL PRODUCT.

Ge, chemical symbol of the element GERMANIUM.

gear, toothed wheel, cylinder, or cone, usually mounted on a shaft, that transmits motion from one part of a machine to another. When the teeth of two gears are meshed, the turning of one shaft will cause the other shaft to rotate. By meshing two gears of different diameters, a variation in both speed and torque is obtained.

Geddes, Norman Bel, 1893–1958, American designer; b. Adrian, Mich., as Norman Melancton Geddes. He was known for imaginative designs for the New York City stage, notably *The Miracle* (1924), and for numerous industrial products. His daughter, **Barbara Bel Geddes,** 1922–, b. N.Y.C., is an actress. She appeared in the play *Cat on a Hot Tin Roof* (1955), the film *Vertigo* (1959), and was a regular (1978–84, 1985–90) on the television series *Dallas.*

Geelong, city (1991 pop. 152,800), Victoria, SE Australia, on an inlet of Port Phillip Bay, near Melbourne. One of Australia's chief ports and industrial centers, its manufactures include refined oil, automobiles, fertilizer, and processed meat.

Gehrig, Lou(is), 1903–41, American baseball player; b. N.Y.C. As first baseman (1925–39) for the New York Yankees, he had a lifetime batting average of .340, hit 493 home runs, and batted .361 in seven World Series. Known as the "Iron Horse," he set a record by playing in 2,130 consecutive league games. His career was ended by a rare disease, AMYOTROPHIC LATERAL SCLEROSIS, which took his life at 37.

Geiger counter: see PARTICLE DETECTOR.

Geisel, Theodor Seuss: see SEUSS, DR.

gelatin or **animal jelly,** foodstuff obtained from connective tissue (found in hoofs, bones, tendons, ligaments, and cartilage) of vertebrate animals by the action of boiling water or dilute acid. It is largely composed of the protein collagen. Pure gelatin is brittle, transparent, colorless, tasteless, and odorless. It dissolves in hot water and congeals when cooled. Gelatin is widely used to give food a proper consistency, in photographic emulsions, and as a coating for pills. Vegetable gelatin, or AGAR, is made from seaweed.

Gelée, Claude: see CLAUDE LORRAIN.

Gell-Mann, Murray, 1929–, American theoretical physicist; b. N.Y.C. In 1953 he and, independently, the Japanese team of T. Nakano and Kazuhiko Nishijima proposed the concept of "strangeness" to account for certain particle-decay patterns. In 1961 Gell-Mann and Yuval Ne'eman independently introduced the "eightfold way," or SU(3) symmetry, a tablelike ordering of all subatomic particles. The 1964 discovery of the omega-minus particle, which filled a gap in this ordering, brought the theory wide acceptance and led to Gell-Mann's being awarded the 1969 Nobel Prize for physics. In 1963 Gell-Mann and George Zweig independently postulated the existence of the QUARK, an even more fundamental particle with a fractional electric charge.

Gemara: see TALMUD.

Gemayel, Amin, 1942–, president of LEBANON (1982–88). A lawyer and a member of the Christian Phalange party, he served in the Lebanese parliament from 1970. In 1982, after the assassination of his brother, President-elect Bashir Gemayel, he was elected president. He had no real authority and accomplished little. With parliament deadlocked (1988) over his successor, Gemayel appointed Gen. Michel Aoun interim president, an act that led to two years of warfare and political instability.

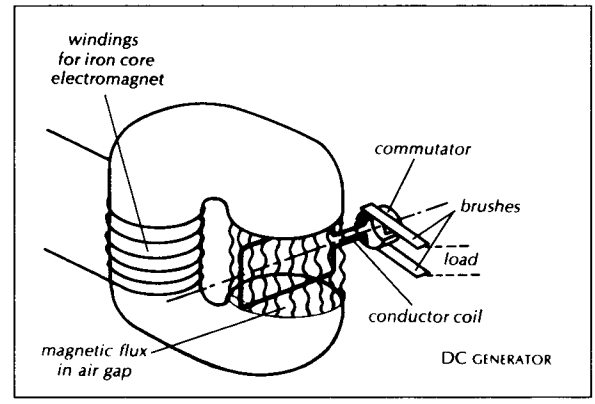
Gemini, Project: see SPACE EXPLORATION, table.

gene, the unit by which inheritable characteristics are transmitted to succeeding generations in all living organisms. Genes are contained by, and arranged along the length of, the CHROMOSOME. The gene is composed of deoxyribonucleic acid (see DNA) arranged in a definite sequence and interspersed with sequences of "nonsense" DNA, called introns, that have no known function. Each chromosome of each species has a definite number and arrangement of genes, which govern both the structure and metabolic functions of the cells, and thus of the entire organism. A genome is the sum total of the genes contained in an organism's full set of chromosomes. They provide a blueprint for the synthesis of enzymes and other proteins and specify when these substances are to be made. Alteration of the number or arrangement of the genes can result in MUTATION, a change in the inheritable traits. See also GENETIC ENGINEERING; GENETICS; HUMAN GENOME PROJECT.

General Agreement on Tariffs and Trade (GATT): see UNITED NATIONS (table 3).

General Assembly: see UNITED NATIONS (table 2).

generator, electrical device used to convert mechanical energy to electrical energy. It operates on the principle of electromagnetic INDUCTION. The generator moves a conductor through a magnetic field and directs the current produced by the induced voltage to an external circuit. In the simplest generator the conductor is an open coil of wire rotating between the poles of a permanent magnet. During a single rotation, one side of the coil passes through the magnetic field, first in one direction and then in the other, so that the induced current is alternating current (AC), moving first in one direction, then in the other. Each end of the coil is attached to a separate metal slip ring that rotates with the coil. Brushes resting on the slip ring pass the current to the external circuit. To obtain direct current (DC), i.e., current that flows in only one direction, a commutator is used in place of slip rings. The commutator is a single slip ring split into left and right halves that are insulated from each other and attracted to opposite ends of the coil. Current leaves the generator through the brushes in only one direction and pulsates from no flow to maximum flow and back again. In practice, generators have many coils and several magnets. The whole assembly carrying the coils is called the armature, or rotor; the stationary parts constitute the stator. Except for magnetos, which use permanent magnets, AC and DC generators use electromagnets. AC generators are often called alternators.



Generator: The rotation of the conducting coil of wire in a magnetic field causes a current to be induced in the coil. In the DC generator, a split-ring commutator changes the direction of the current with each half rotation, resulting in a pulsing direct current.

Genesis, first book of the OLD TESTAMENT and of the PENTATEUCH, ascribed by tradition to MOSES. It tells of the origin of the world and of humans (1–11), including the stories of humanity's disobedience and fall, CAIN and ABEL, and NOAH; the career of God's special servant ABRAHAM (12–24), including the story of Hagar and ISHMAEL, the sacrifice of ISAAC, and Abraham's journey to CANAAN and God's promises to him; the career of Isaac (25–26); and the life of JACOB, called Israel (27–50), with the story of his son JOSEPH and the migration of the family to Egypt. Sources of Genesis include Babylonian and Egyptian folklore. Controversy over its interpretation and literary history has been extensive.

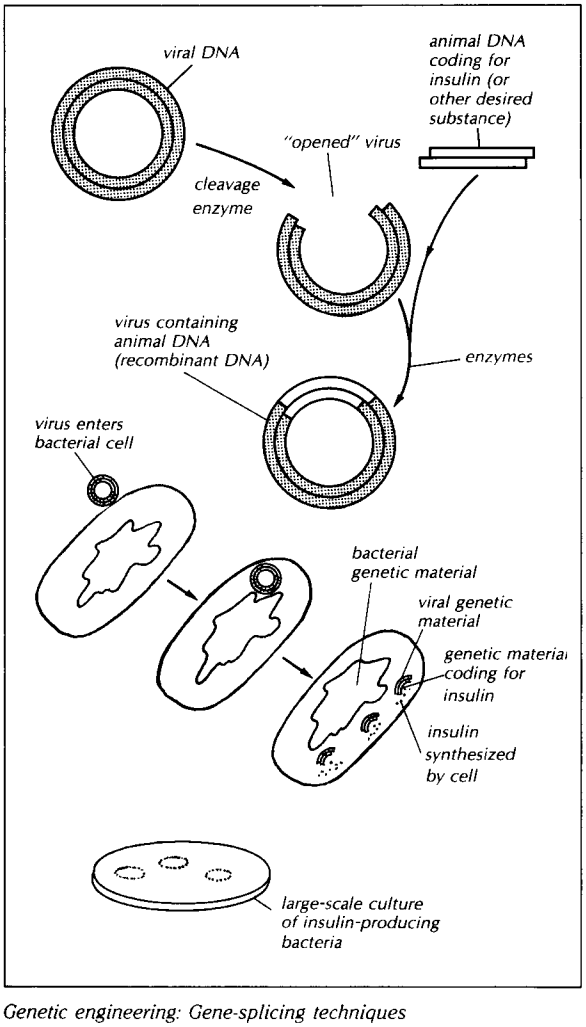
gene splicing: see GENETIC ENGINEERING.

Genet, Edmond Charles Édouard [zhənā'], 1763–1834, French Revolutionary minister to the U.S. (1793–94), known as Citizen Genet. His plans to raise troops against Spanish FLORIDA and to commission privateers against Britain were not approved by Pres. WASHINGTON, and the U.S. demanded (1793) his recall. Genet remained in the U.S. rather than face a changed political situation in France.

Genet, Jean, 1910–86, French dramatist. While in prison, he attracted attention with his autobiographical narratives about homosexuality and crime, e.g., *Our Lady of the Flowers* (1943). He was

pardoned (1948) from a sentence of life imprisonment through the intervention of French literary figures. His plays *The Balcony* (1956), *The Blacks* (1958), and *The Screens* (1961) are classic examples of the theater of the absurd.

gene therapy, the use of GENES and the techniques of GENETIC ENGINEERING in the treatment of a genetic disorder or chronic disease. There are many techniques of gene therapy, most of them still in experimental stages. One technique for treating hereditary problems involves removing cells from a patient, fortifying them with healthy copies of the defective gene, and reinjecting the fortified cells into the patient. Another involves inserting a gene into an inactivated or nonvirulent virus and using the virus's infective capabilities to carry the desired gene into the patient's cells. A LIPOSOME, a tiny fat-encased pouch that can traverse cell membranes, is also sometimes used to transport a gene into a cell. Once inserted into body cells, the gene may produce an essential chemical that the patient's body cannot, remove or render harmless a substance or gene that is causing or contributing to disease (see ANTISENSE), or expose certain cells, especially cancerous cells, to attack by conventional drugs. Like drugs, gene therapy techniques must be approved by the federal government in the U.S.



Genetic engineering: Gene-splicing techniques

genetic engineering, group of research techniques that manipulate the DNA (genetic material) of cells in order to change hereditary traits or produce biological products. The techniques include the use of hybridomas (hybrids of rapidly multiplying cancer cells and cells that make small amounts of a desired antibody) to make MONOCLONAL ANTIBODIES, gene splicing or recombinant DNA technique (in which the DNA of a desired gene is inserted into the DNA of a bacterium, which then reproduces itself, yielding more of the desired gene), and POLYMERASE CHAIN REACTION (which makes perfect copies of DNA fragments). Genetically engineered products include bacteria designed to efficiently break down oil slicks and industrial waste products, drugs (growth hormone, human insulin, interferon), plants that are resistant to diseases and insects, and, in forensics, DNA FINGERPRINTING techniques. Because genetic engineering involves techniques used to obtain patents on human genes and to create patentable living organisms, it has raised many legal and ethical issues. Questions have also been raised about the safety of releasing into the environment genetically altered organisms that might disrupt ecosystems.

genetics, scientific study of heredity. The science arose in 1900, with rediscovery of MENDEL's work on traits that are inherited as if each were a separate, independent unit. Geneticists probing the physical basis of the transmission of inherited characteristics study the unit of inheritance, the GENE; the various forms of a gene that governs a trait (alleles); the array of genes along a CHROMOSOME; and the set of genes characteristic of each species (the genome). Since the discovery (1953) of the structure of DNA, work on NUCLEIC ACIDS has begun to explain how genes determine life processes by directing the synthesis of proteins. It has also explained MUTATION as alterations in gene or chromosome structure. See also GENETIC ENGINEERING; HUMAN GENOME PROJECT.

genetic screening, testing for genetic disorders. Most commonly, prospective parents or a fetus are tested when a specific genetic disorder is suspected (e.g., TAY-SACHS DISEASE or SICKLE-CELL ANEMIA). Genetic screening begins with a complete medical history of both parents. If the parents decide to conceive or have already conceived, diagnostic tests, such as CHORIONIC VILLUS SAMPLING and AMNIOCENTESIS, can be performed on the fetus to detect various genetic disorders. In the case of a positive finding, the parents can elect to abort the fetus. As researchers identify more genetic markers for diseases and develop blood tests for them, concern has arisen over the use of such tests to deny people health and life insurance, employment, and the like. A 1993 National Academy of Sciences report called for the establishment of ethical guidelines on the use of genetic screening.

Geneva, city (1990 pop. 165,404), capital of Geneva canton, SW Switzerland, on the Lake of Geneva, divided by the Rhône R. A cultural, financial, and administrative center, it manufactures watches, jewelry, and precision instruments. The city was settled by the Celts and later held by the Romans. In the 16th cent. it was the focal point of the Reformation under John CALVIN; by the 18th cent. it had become an intellectual center, the residence of J.J. ROUSSEAU and others. Geneva joined (1815) the Swiss Confederation. The LEAGUE OF NATIONS and the GENEVA CONFERENCES met there. It is the seat of such bodies as the World Health Organization and the International Red Cross.

Geneva Conference. **1** International conference held Apr.–July 1954 to bring peace to KOREA and INDOCHINA. The chief participants were the U.S., the USSR, Great Britain, France, China, the two Koreas, and various factions from Indochina. No permanent agreement on Korea resulted, but three agreements were reached on Indochina (see VIETNAM; VIETNAM WAR). **2** So-called summit conference, held in July 1955, attended by the leaders of the U.S., the USSR, Britain, and France. A wide agenda of issues was discussed (e.g., disarmament, unification of Germany, increased cultural and economic ties). Although no substantive agreements resulted, the conference ended on a note of optimism and is regarded as a major step in the ending of the COLD WAR. **3** Conference, beginning Oct. 1958, attended by the U.S., the USSR, and Britain; its purpose was to reach an accord on the banning of nuclear testing. Since then, most international meetings at Geneva have been concerned with the general problem of nuclear arms. See DISARMAMENT, NUCLEAR.

Geneva Conventions, series of treaties signed (1864–1949) in Geneva, Switzerland, providing for humane treatment of combatants and civilians in wartime. The first convention, signed by 16 nations, covered the protection of sick and wounded soldiers and medical personnel and facilities. Later conventions extended

(1906) the first to naval warfare and covered (1929) the treatment of prisoners of war. As a result of World War II, particularly of the conduct of Germany and Japan, four conventions were adopted in 1949 to strengthen and codify earlier treaties and safeguard civilians.

Genghis Khan: see JENGHIZ KHAN.

genie: see JINNI.

Gennesaret: see Galilee, Sea of, under GALILEE.

Genoa, city (1990 pop. 706,754), capital of Liguria, NW Italy, on the Italian RIVIERA. Italy's chief port, it handles heavy passenger and freight traffic. Iron and steel, chemicals, oil refineries, and shipyards long led the economy, but the service sector is increasingly important. It became (10th cent.) a free commune and its maritime power grew; rivalry with Pisa ended (1284) in naval victory. In decline, it fell to many, including Napoleon (1805–14). The medieval Cathedral of San Lorenzo and the doges' palace are notable.

Gentile da Fabriano [dä fäbrēä'nō], c.1370–1427, Italian painter, a foremost exponent of the international Gothic style. His elegant, lavishly gilt Strozzi altarpiece (Uffizi) exhibits his jewellike colors and courtly style. He worked throughout Italy. His later paintings reflect Florentine realism, e.g., *John the Baptist* (Lateran Basilica, Rome).

Gentileschi, Orazio [jāntēlē'skē], c.1562–1647, Tuscan painter. Influenced by CARAVAGGIO, he developed a cooler, more lyrical style. In 1626 he settled in England, at the invitation of CHARLES I. His principal works include *The Annunciation* (San Siro, Genoa) and *Flight into Egypt* (Louvre). His daughter, **Artemisia Gentileschi,** c.1597–c.1651, was known for her spirited execution, e.g., *Judith and Holofernes* (Uffizi) and *Mary Magdalen* (Pitti Gall., Florence).

gentlemen's agreement, in U.S. history, an agreement between the U.S. and Japan in 1907 that Japan should stop the emigration of its laborers to the U.S. and that the U.S. should stop discrimination against the Japanese. This agreement was ended in 1924 by the act of Congress excluding immigration from Japan, just as immigration from China had been previously excluded.

geocentric system: see PTOLEMAIC SYSTEM.

geochemistry, study of the chemistry of the earth, especially the study of the absolute and relative abundances of the elements and their distribution and movement. Such studies have provided insights into the evolution of the oceans and atmosphere, the ages of rocks, the chemical evolution of life, and, more recently, the effects of the massive introduction of pollutants into the environment.

geodesy or **geodetic surveying,** subdivision of GEOPHYSICS that determines the earth's size and shape, the position of points on the earth's surface, and the dimensions of areas so large that the curvature of the earth must be taken into account. In a process called triangulation, a base line between two points, many miles apart, is measured, and a third point is determined by the angle it makes with each end of the base line. Triangulation is now increasingly done using signals from geodetic satellites in space.

Geoffrey IV, known as **Geoffrey Plantagenet,** 1113–51, count of Anjou (1129–51). He married (1128) MATILDA, daughter of HENRY I of England. On Henry's death (1135) he claimed and conquered (1144) Normandy in his wife's name. After 1139 Matilda tried to conquer England from her cousin King STEPHEN. Her son by Geoffrey became HENRY II of England. In 1147 Geoffrey went on a crusade with LOUIS VII of France.

Geoffrey of Monmouth, c.1100–1154, English author. His *Historia Regum Britanniae* (c.1135), a supposed chronicle of the kings of Britain, is a major source of ARTHURIAN LEGEND, giving the first coherent account of Arthur.

Geoffroy Saint-Hilaire, Étienne [zhôfrwä' sănTēler'], 1772–1844, French zoologist. He was professor (1793–1840) at the Museum of Natural History in Paris and a member of Napoleon's scientific staff in Egypt. His theory that all animals conform to a single plan of structure was strongly opposed by the naturalist Georges CUVIER, and they held a widely publicized debate in 1830.

geologic era, major unit of geologic time. For the purpose of dating rock formations and the fossils contained within them, the earth's history has been divided into eras, which are further subdivided into periods and, in some cases, epochs (see table).

geology, science of the EARTH's history, composition, and structure. Branches include mineralogy (see MINERAL), PETROLOGY, geomorphology (the origin of landforms and their modification by dynamic processes), GEOCHEMISTRY, GEOPHYSICS, sedimentation, structural geology, economic geology, and engineering geology. Historical geology includes stratigraphy (the interrelationships of layered ROCKS) and paleontology (the study of FOSSILS). Geological observations have been made since ancient times, but modern geology began in the 18th cent., notably with James HUTTON's doctrine of UNIFORMITARIANISM, which, in its opposition to CATASTROPHISM, laid the groundwork for much of modern geological science. The systematic survey in the mid-20th cent. of the OCEAN floors brought radical changes in concepts of crustal evolution (see PLATE TECTONICS).

geometric progression: see PROGRESSION.

geometry, branch of MATHEMATICS concerned with the properties of and relationships between points, lines, planes, figures, solids, and surfaces. Elementary EUCLIDEAN GEOMETRY of two and three dimensions (plane and solid geometry) is based largely on EUCLID's *Elements* (c.300 B.C.), a systematic presentation of the geometry of its time. Although Euclid's basic assumptions have been judged insufficiently rigorous by David HILBERT and others, his axiomatic method of proof has been adopted throughout mathematics and in other fields as well. In the 17th cent., René DESCARTES invented CARTESIAN COORDINATES to express geometric relations in algebraic form; he thus founded ANALYTIC GEOMETRY, from which developed algebraic geometry, concerned with geometrical objects defined by algebraic relations between their coordinates. Other branches of geometry include descriptive geometry, which is concerned with the two-dimensional representation of three-dimensional objects; differential geometry, in which the concepts of the CALCULUS are applied to curves, surfaces, and other geometrical entities; projective geometry, which is concerned with those properties of geometrical figures that remain unchanged under projection, e.g., from one plane to another; and NON-EUCLIDEAN GEOMETRY. TOPOLOGY, perhaps the most general type of geometry, is often considered a separate branch of mathematics.

geomorphology: see GEOLOGY.

geophysics, study of the structure, composition, and dynamic changes of the EARTH and its ATMOSPHERE, based on the principles of physics. Applied geophysics uses seismic, electrical, gravimetric, magnetic, and radiometric techniques for geological exploration and prospecting.

geopolitics, method of political analysis stressing the importance of geographical factors (e.g., natural boundaries and access to waterways) in determining national interests and international relations. The term received wide attention through the works of the German geographer Karl Haushofer, who popularized H.J. Mackinder's theory of a Eurasian "heartland" central to world dominance. The NAZIS used Haushofer's ideas to justify their expansion in central Europe. Geopolitical considerations have been used to justify other expansionist policies, such as MANIFEST DESTINY.

George, Saint, 4th cent.?, patron of England. Possibly a soldier in the Roman army who died a martyr in Asia Minor, he was adopted by England in the Middle Ages. In legend he is the slayer of a dragon. Feast: Apr. 23.

George, kings of Great Britain and Ireland. **George I** (George Louis), 1660–1727 (r.1714–27), was the great-grandson of JAMES I. He was the first British sovereign of the house of HANOVER under the Act of SETTLEMENT. His dual role as elector of Hanover and king of England, his German manners, and his inability to speak English made him unpopular. His indifference to government led to the first real cabinet and the rise of the WHIGS to power. In 1718 the QUADRUPLE ALLIANCE guaranteed the Hanoverian succession. His son, **George II** (George Augustus), 1683–1760 (r.1727–60), was more active in government than his father. In the War of the AUSTRIAN SUCCESSION, he personally led his troops in battle, the last British monarch to do so. His wife, Caroline of Ansbach, furthered the dominancy of Robert WALPOLE. During his reign the Whigs united behind the policy of William PITT (the Elder) in the SEVEN YEARS WAR. His grandson, **George III,** 1738–1820 (r.1760–1820), ended the long Whig control of government by securing Pitt's resignation in 1761. George wanted to rule personally, and he found an amenable minister (1770–82) in Lord NORTH, whose policy of

GEOLOGIC ERAS

Time	*Geologic Developments*	*Life Forms*
Azoic Time. From the formation of the earth.		
4,550-3,800 million years ago	Crust and oceans forming. Lack of ATMOSPHERE allows bombardment.	No life forms.
Precambrian Time. Traditionally divided into two eras, Archeozoic and Proterozoic.		
3,800-700 million years ago	Permanent crust formed, with vast deposits of metallic minerals. Metamorphic rocks in massive formations, e.g., CANADIAN SHIELD. Erosion, sedimentation begin.	Earliest life marine (blue-green ALGAE). PHOTOSYNTHESIS begins to develop oxygen-rich atmosphere. Wormlike forms possible. First recognizable fossils.
Paleozoic Era. Age of INVERTEBRATES and marine forms. Six periods.		
Cambrian: 700-500 million years ago	Sedimentary rock (sandstone, shale, limestone, conglomerate) forms in shallow seas over continents. Climate generally mild, but North America tropical.	First FOSSILS of animals with hard parts, e.g., shells, skeletons, All fauna marine; every invertebrate phylum represented. Animal ability to secrete CALCIUM leads to shell, skeleton formation. TRILOBITE dominant.
Ordovician: 500-435 million years ago	North America, Europe, Africa moving together (see PLATE TECTONICS; CONTINENTAL DRIFT). Seas at greatest extent over North America. Rocks chiefly sedimentary.	Marine ecosystems develop; fossil evidence of deepwater life forms. MOLLUSKS, some CORALS. Fishlike VERTEBRATES appear.
Silurian: 435-395 million years ago	Shallow flooding deposits sediments. Later withdrawal of water leaves oxidized "red beds," salt deposits.	Earliest land plants. In seas, coral reefs, ARTHROPODS, CRINOIDS. Fish develop first vertebrate jaw. SHARKS appear.
Devonian: 395-345 million years ago	Continents drier at beginning. Europe, North America collide, causing mountain building (orogeny). South pole in central Africa.	Fish dominant: armored fish, lungfish Toward end of period first land animals, AMPHIBIANS. Plant life, including lowland forests of giant PSILOPHYTA plants, highly developed, uniform over planet.
Carboniferous: 345-280 million years ago	Climate warm, moist; COAL-forming sediments laid down in vast swamps. Severe continental collisions cause orogeny, e.g., in URALS.	FERNS, fernlike trees, primitive CONIFERS among flora in swamps, INSECTS, e.g., cockroaches, flourish. First REPTILES appear toward end.
Permian: 280-230 million years ago	Land, e.g., E North America, rising. Atmosphere, oceans cooler. Glaciation in southern hemisphere. General aridity. Appalachians thrust up at end.	Insects evolve toward modern types. Reptiles flourish. Ferns, conifers persist in cool air.
Mesozoic Era. Age of reptiles. Three periods.		
Triassic: 230-195 million years ago	Climate warming; semiarid to arid. Continental plates, joined c.200 million years ago in supercontinent Pangaea, begin to break into continents; FAULTS, tilting widespread.	Fewer species, higher populations. Ammonites, clams, snails present. First DINOSAURS. First MAMMALS may have evolved.
Jurassic: 195-140 million years ago	North America, Africa separate; ocean basins open. Erosion reduces Appalachians. Plate subduction (Pacific under North American) causes folding, orogeny in W North America.	Climate warmer than present. CYCADS appear. GINKGOES, HORSETAILS among flora. Reptiles dominant on land, in sea and air. Archaeopteryx, first BIRD, appears. First mammal fossils.
Cretaceous: 140-65 million years ago	Extensive submergence of continents leaves overlapping marine rocks. Chalk deposits. South America, Africa separate; North Atlantic widening. Cycles of orogeny.	Dinosaurs, large reptiles climax, then disappear. Snakes, lizards appear. Revolution in plants: flowering plants (ANGIOSPERMS); modern trees. Flora uniformity that lasts into Eocene.

coercion led to the AMERICAN REVOLUTION. The notable TORY ministry of the younger William PITT (1783–1801) saw the end of royal attempts to control the ministry. George III's reign witnessed a great expansion of empire and trade, the beginning of the INDUSTRIAL REVOLUTION, and a flowering of arts and letters. The king's insanity led to the regency (1811) of his son **George IV,** 1762–1830 (r.1820–30). Ruling through Tory ministers, he was hated for his extravagance and dissolute habits. He aroused particular hostility when he attempted (1820) to divorce his long-estranged wife, CAROLINE OF BRUNSWICK. He was succeeded by his brother, WILLIAM IV. **George V** (George Frederick Ernest Albert), 1865–1936 (r.1910–36), was the second son of EDWARD VII. He was always interested in the affairs of the British empire and in 1911 traveled to India. During WORLD WAR I (1917) he gave up all his German titles and changed the name of the royal house from Saxe-Coburg-Gotha to WINDSOR. His second son, **George VI** (Albert Frederick Arthur George), 1895–1952, king of Great Britain and Northern Ireland (r.1936–52), became king on the abdication of his brother, EDWARD VIII. During WORLD WAR II he worked to keep up British morale by visiting bombed areas, war plants, and theaters of war. He and his wife, ELIZABETH, had two daughters: ELIZABETH II and Princess MARGARET. Like his father, he was held in deep affection by his people.

George, kings of the Hellenes (Greece). **George I,** 1845–1913 (r.1863–1913), was the second son of Christian IX of Denmark and was elected king of Greece after the deposition (1862) of OTTO I. He introduced (1864) a democratic constitution and expanded the Greek domain. He was assassinated. **George II,** 1890–1947 (r.1922–23, 1935–47), did not succeed his father, CONSTANTINE I, but was passed over (1917) because of his pro-German sympathies. The crown fell to his younger brother ALEXANDER. In 1922

The key to pronunciation appears on page xiii.

GEOLOGIC ERAS (*Continued*)

Time	*Geologic Developments*	*Life Forms*
Cenozoic Era. Age of mammals, modern seed plants. Traditionally divided into two periods, Tertiary (Paleocene/Eocene, Oligocene, Miocene, and Pliocene epochs) and Quaternary (Pleistocene and Holocene epochs).		
Paleocene/Eocene: 65-37 million years ago	Seas withdraw; Europe emergent. Volcanism forms Rockies, other ranges. Erosion fills basins, laying BAUXITE deposits in W North America. Greenland, North America split.	Most common modern plants present. Modern birds. Early horses, pigs, rodents, whales. Number of PRIMATE types greatly increases. Hardwoods, redwoods in W North America. Climate warm, humid.
Oligocene: 37-23 million years ago	North America largely dry; red bed sedimentation; erosion in Rockies. African, European plates collide, causing Alpine orogeny. Arabia, Africa split at Red Sea rift. California collides with mid-Pacific ridge.	Archaic mammals disappearing. Modern horses, pigs, true CARNIVORES, rhinoceroses, elephants begin to appear. Cats, dogs evolving. Modern grasses.
Miocene: 23-5 million years ago	Coastal submergence; volcanism raises CASCADES, western North American plateaus. Himalayas, Alps, Andes, built up. South America, Antarctica separate; cold transantarctic current isolates southern continent.	Climate cooler; forests reduced, grassy plains increase. Mammals include hyena, bear, seal, raccoon. Giant ape widespread. Giant hog develops, then disappears.
Pliocene: 5-1.8 million years ago	Volcanism creates isthmus between North and South America. Outlines of North America roughly modern. Polar, Alpine ice caps sizable. Uplifting, tilting in W North America continues.	Cooler, drier climate. Life forms begin to take on modern appearance. Climax, maybe initial decline, of mammals. Manlike apes. Earliest human artifacts, OLDUVAI GORGE skeletal finds from this epoch.
Pleistocene: 1.8 million-10,000 years ago	Great age of GLACIERS. Polar, Alpine ice advances in 4 or 5 separate glacial periods. Glacial DRIFT widespread. Land forms altered; lakes created by ice retreats.	Extinction of mammals, including mastodon, mammoth, sabertooth carnivores. Rise of man (*Homo sapiens*) c.100,000 years ago; Cromagnon c.35,000 years ago. Horse, camel disappear from Americas. See also STONE AGE.
Holocene or Recent: 10,000 years ago to present	Glaciers retreat. Climate warmer; DESERTS form in some areas. Many scientists argue that Holocene is only another interglacial episode of the Pleistocene epoch.	Human civilization; mankind begins to affect climate, geology. Extinction of other species continues.

George did become king, but hostility towards the dynasty forced him into exile in 1923 and Greece was declared a republic. He was restored in 1935 and instituted a dictatorship under John Metaxas. George was in exile during World War II, and his return to Greece in 1946 failed to halt the civil war then raging. He was succeeded by his brother PAUL.

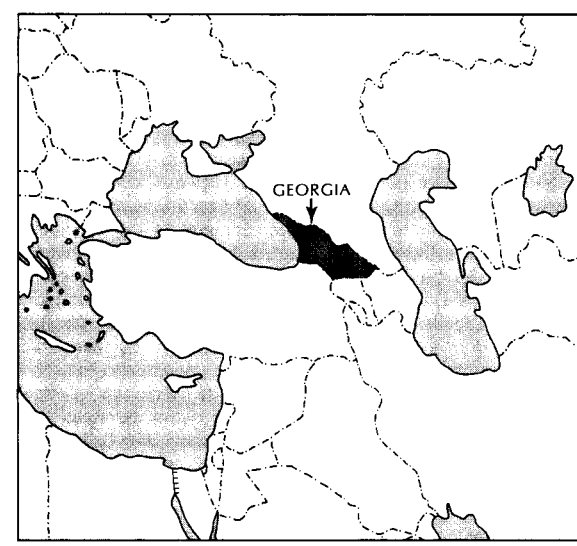
George, David Lloyd: see LLOYD GEORGE, DAVID.

George, Henry, 1839–97, American economist, founder of the single-tax movement; b. Philadelphia. His own poverty and his observation of avarice as a newspaperman bolstered his reformist ideas. Believing that the great contrast between poverty and wealth lay in the fact that the rental of land and the unearned increase in land values profited only a few individuals, not the community, George proposed a single tax on land to meet all costs of government. His theories, published in *Progress and Poverty* (1879), have influenced tax legislation in many countries.

George, Stefan [gāôrg'ə], 1868–1933, German poet. He was influenced poetically by Greek classical forms and the French SYMBOLISTS and intellectually by NIETZSCHE. His esoteric, pure verse appeared in such volumes as *Algabal* (1892), *Book of the Shepherds* (1895), *The Soul's Year* (1897), and *The Seventh Ring* (1907). George's aesthetic ideal called for a controlled humanism. He devoted himself to the purifying of German language and culture and had great influence on younger poets through his verse and through *Blätter für die Kunst* (founded 1892), the literary organ of his circle.

Georgetown, city (1985 est. pop. 75,000), N Guyana, capital of Guyana, on the Atlantic Ocean at the mouth of the Demerara R. Guyana's largest city, it exports bauxite and other products of the interior. Settled in the 1600s by the Dutch, who called it Stabroek, it was taken and renamed by the British in 1812. It still has canals and other Dutch features.

Georgia, Georgian *Sakartvelo,* officially Republic of Georgia, republic (1992 est. pop. 5,571,000), c.26,900 sq mi (69,700 sq km), SW Asia, in W Transcaucasia; formerly a constituent republic of the USSR. It borders the Black Sea (W); Azerbaijan (E); Turkey and Armenia (S); and Russia (N). The capital is TBILISI. A mountainous country rich in minerals and coal, Georgia produces many manufactures, particularly iron and steel, machinery, and chemicals. Agricultural products include tea, citrus fruits, and tobacco. The BLACK SEA coast is a popular resort area. In addition to the Georgian majority, which comprises about 70% of the population, there are



Armenian, Russian, Ossetian, and other minorities. Georgian, a Caucasian language, and Russian are spoken. Most Georgians are members of the Eastern Orthodox church.

History. The kingdom of Georgia, dating from the 4th cent. B.C., reached its height in the 12th and 13th cent. A.D. In 1555 W Georgia fell to Turkey and E Georgia to Persia. Under Russian sway after 1783, Georgia was briefly independent (1918–21). In 1991 a nationalist-dominated parliament declared Georgia independent from the USSR. Pres. Zviad Gamsakhurdia was subsequently accused of dictatorial rule, and fighting between the opposition and his supporters led to his ouster (1992). Eduard SHEVARDNADZE agreed to head an interim government and was later elected head of state, but unrest and fighting continued into 1993 in Gamsakhurdia's home region of Mingrelia, in W Georgia. There have also been conflicts with separatists in South Ossetia, in central Georgia, and in Abkhazia, in NW Georgia. In 1993 Abkhazian separatists ousted Georgian forces from Abkhazia. Georgia did not join the COMMONWEALTH OF INDEPENDENT STATES until 1993.

Georgia, state in the SE U.S.; bordered by Florida (S), Alabama (W), Tennessee and North Carolina (N), and South Carolina and the Atlantic Ocean (E).

Area, 58,876 sq mi (152,489 sq km). *Pop.* (1990) 6,478,216, an 18.6% increase over 1980 pop. *Capital,* Atlanta. *Statehood,* Jan. 2, 1788 (fourth of original 13 states to ratify the Constitution). *Highest pt.,* Brasstown Bald, 4,784 ft (1,459 m); *lowest pt.,* sea level. *Nickname,* Empire State of the South. *Motto,* Wisdom, Justice, and Moderation. *State bird,* brown thrasher. *State flower,* Cherokee rose. *State tree,* live oak. *Abbr.,* Ga.; GA.

Land and People. The mountains of the north, part of the APPALACHIAN MOUNTAINS system, give way to the transitional Piedmont Plateau and its fertile, gently rolling hills. The southern half of the state is covered by the low-lying coastal plain; just offshore are the popular resorts of the Georgia SEA ISLANDS. Along the border with Florida is the OKEFENOKEE SWAMP, a huge wilderness area with unique flora and fauna. The climate is temperate but variable throughout the state. About 63% of the population lives in urban areas; ATLANTA, the largest city, is the major commercial and financial center of the southeast. Other major cities are COLUMBUS, SAVANNAH, and MACON. In 1990, 71% of the population was white and the rest predominately African American (27%).

Economy. Service industries and manufacturing are of prime economic importance. Major manufactures include cotton textiles, apparel, carpets, transportation equipment, processed foods, and paper. The heavily wooded state is a leading producer of lumber, pulpwood, and resins and turpentine. Georgia also provides 60% of the world's kaolin and is known for its fine marble. Principal crops are peanuts (Georgia is the largest U.S. producer), tobacco, corn, and cotton.

Government. The constitution (adopted 1945) provides for a governor serving a four-year term. The general assembly consists of a 56-seat senate and a 180-seat house, both of whose members serve two-year terms. Georgia sends 11 representatives and 2 senators to the U.S. Congress and has 13 electoral votes.

History. The region was inhabited by the CREEK and CHEROKEE when it was visited (c.1540) by Hernando DE SOTO. Subsequently, both England and Spain claimed control of the area, and British settlers led by James E. OGLETHORPE arrived in 1733. The British captured much of Georgia during the AMERICAN REVOLUTION. Following the war, cotton cultivation, based on the plantation system and slavery, began to dominate the economy. In 1861 Georgia seceded from the Union and joined the CONFEDERACY. The state suffered considerable damage during the CIVIL WAR, with the burning of Atlanta (1864) and Gen. W.T. SHERMAN's destructive march to the sea. By the 1880s the textile industry was transforming the state's economy from agriculture to manufacturing. In the early 1960s Georgia was the first state of the deep South to proceed with integration without a major curtailment of its public-school system. In 1976 Jimmy CARTER became the first native Georgian to be elected U.S. president. From the 1970s to early 90s, Georgia's cities, especially Atlanta, experienced significant growth, further heightening the disparity between the urban centers and rural areas of the state.

Georgian style, several trends in English architecture during the reigns (1714–1820) of George I, George II, and George III. The first half of the period (c.1710–c.1760) was dominated by Neo-Palladianism (see PALLADIO). Colin Campbell's *Vitruvius Brittanicus* (1715) inspired a return to CLASSICISM, based on the works of Inigo JONES and Palladio. His Mereworth Castle, Kent, epitomizes the style. A second generation of architects carried the Palladian tradition through the Georgian period. In the first half of the 18th cent., a BAROQUE countercurrent, stemming from Christopher WREN's designs, was carried on by Sir John VANBRUGH, Nicholas HAWKSMOOR, and James GIBBS. In the second half, the CLASSIC REVIVAL was led by Sir William CHAMBERS, Robert ADAM, and Sir John Soane. A standard type of house construction, red brick with white stone courses and cornices and white painted trim, came to be known as Georgian. Notable buildings of the period include Soane's Bank of England and Gibbs's St. Martin's-in-the-Fields. American builders of the period followed British models closely.

geothermal energy: see ENERGY, SOURCES OF.

Gephardt, Richard A(ndrew), 1941–, U.S. congressman; b. St. Louis. A lawyer, he was elected to the U.S. House of Representatives as a Democrat from Missouri in 1976. Influential on foreign trade issues, he has championed restrictions on imports as a means of protecting American jobs. Gephardt ran unsuccessfully for the 1988 Democratic presidential nomination. He became House majority leader in 1989.

geranium, herb or shrub of the family Geraniaceae. More specifically, the name refers to the popular garden and greenhouse geranium (genus *Pelargonium*), grown for its colorful flowers and ornamental, sometimes scented foliage. Its long, beak-shaped fruits give it the name stork's-bill. The family also includes the true geraniums (genus *Geranium*) and the heron's-bills (genus *Erodium*). Geraniums also are cultivated for the aromatic oils extracted from their foliage and flowers.

gerbil, desert RODENT (subfamily Gerbillinae) found in the hot, arid regions of Africa and Asia. Gerbils have large eyes and powerful, elongated limbs upon which they can spring. Sandy, gray, or red-brown, gerbils are 3 to 5 in. (7.6 to 12.7 cm) long, excluding the long tail, and are popular pets.

geriatrics, study of the medical problems of the aged. Aging cells are more susceptible to the accumulation of CALCIUM, CHOLESTEROL, and other substances that may cause tissue deterioration, and thus the elderly are more prone to disease and decreased physiological functioning. Many disabilities of aging are related to CIRCULATORY SYSTEM deterioration, but studies have shown that proper nutrition and exercise contribute to prolonging good health and circulation. The study of old age is known as GERONTOLOGY.

Géricault, Jean Louis André Théodore [zhārēkō'], 1791–1824, French painter. After studying in Rome he exhibited in Paris his famous *Raft of the Medusa* (Louvre), a turbulent painting of shipwrecked men at sea that ushered in French ROMANTICISM. He later went to England, where he did such fine horse paintings as *The Village Forge* (Louvre). He also modeled small figures and made excellent lithographs.

German Confederation, 1815–66, union of 39 German states created by the Congress of VIENNA to replace the old HOLY ROMAN EMPIRE. It comprised 35 monarchies and 4 free cities. It was little more than a loose union for the purpose of mutual defense, with its main organ a central diet under the presidency of Austria. The confederation was dominated by the strong influence of Austria and Prussia. The Austro-Prussian War (1866) destroyed the confederation, and the North German Confederation that replaced it was under the sole leadership of Prussia.

Germanic languages, subfamily of the Indo-European family of languages, of which English, Dutch, and German, are members. See LANGUAGE (table).

Germanic law, customary laws of the ancient Germans, codified (5th–9th cent.) after the Germanic tribes invaded the Roman Empire. Enacted cooperatively by ruler and people, they deal chiefly with penal law and legal procedure, although there are many laws pertaining to landholding. The Germans regarded law as personal, not territorial, and therefore continued to govern the Romans under their rule by ROMAN LAW.

Germanic religion, pre-Christian religious practices among the

tribes of W Europe, Germany, and Scandinavia. There was no one religion common to all the Scandinavian and Teutonic peoples, but descriptions from TACITUS and the EDDAS point to certain basic polytheistic features. In early times two groups of gods were worshiped, the Aesir and the Vanir; later they coalesced to form a single pantheon of 12 principal deities, headed by WODEN (Odin) and including Tiw (Tyr), Thor (Donar), Balder, Frey, FREYJA, and FRIGG. Their home was Asgard. There, in the palace Valhalla, Woden and his warrior maidens (the Valkyries) gave banquets to dead heroes. Unlike the gods of most religions, the ancient Nordic deities were subject to Fate (the Norns), and tradition held that they were doomed to eventual destruction by the forces of evil in the form of giants and demons, led by Loki. After a ferocious battle at Ragnarok, the universe would end in a blaze of fire; but a new cosmos was to rise from the ashes of the old, and a new generation of gods and humans would dwell in harmony. The Germanic temples were attended by priests, who oversaw magic rites (e.g., divination) and prayer. Conversion of the Germans to Christianity began as early as the 4th cent. A.D., but it took many centuries for the new religion to spread throughout N Europe.

germanium (Ge), semimetallic element, isolated from argyrodite by Clemens Winkler in 1886. Gray-white, lustrous, and brittle, it is chemically and physically similar to SILICON. It is used as a SEMICONDUCTOR in TRANSISTORS and integrated circuits. The oxide, transparent to infrared radiation, is used in optical instruments. See ELEMENT (table); PERIODIC TABLE.

German language, member of the West Germanic group of the Germanic subfamily of the Indo-European family of languages. See LANGUAGE (table).

German measles: see RUBELLA.

Germans, a large ethnic complex of ancient Europe, a basic stock in the composition of the modern peoples of Scandinavia, Germany, Austria, Switzerland, the Low Countries, and England. They lived in N Germany and along the Baltic Sea, expanding south, southeast, and west in the early Christian era. CAESAR and TACITUS wrote of their warlike attributes, culture, and distribution. The Teutons and Cimbri, whom the Roman general Marius defeated (102–101 B.C.), may have been Germans. German tribes increasingly troubled the Roman Empire, with Vandal attacks in the west and OSTROGOTH attacks in the east. Among the tribes were the Alemanni, the FRANKS, the Angles, the Burgundii, the LOMBARDS, the SAXONS, and the VISIGOTHS. The Scandinavians included the Icelanders, who produced the first Germanic literature.

German shepherd, large, muscular WORKING DOG; shoulder height, c.25 in. (64 cm); weight, 60–85 lb (27.2–38.5 kg). It has a dense undercoat and a harsh outercoat that is usually black, gray, or black and tan. Developed as a sheepherder and perfected in Germany c.1900, it has been used in war, in police work, and as a guide dog for the blind.

German wirehaired pointer, large SPORTING DOG; shoulder height, c.24 in. (61 cm); weight, c.60 lb (27 kg). It has a woolly undercoat and a harsh, wiry, flat-lying outercoat of liver and white. An all-purpose retrieving pointer, it was developed in Germany in the mid-19th cent.

Germany, officially Federal Republic of Germany (1992 est. pop. 80,387,000), 137,900 sq. mi. (357,161 sq km), central Europe; bordered by the Netherlands, Belgium, and France (W), Switzerland and Austria (S), the Czech Republic and Poland (E), and Denmark and the North and Baltic seas (N). BERLIN is the de jure capital and largest city. The de facto capital is BONN, but in 1991 the German parliament voted to move the federal government to Berlin. N Germany is a plain drained by the Ems, Weser, ELBE, and ODER rivers. Its chief cities are BREMEN, HAMBURG, and Berlin. South of the N German plain, the country rises to highlands, including the mineral-rich Harz mountains and Thuringian uplands. The chief rivers are the Weser and the Main; major cities are FRANKFURT, LEIPZIG, and CHEMNITZ. Germany is mountainous, with the BLACK FOREST on the west and the Bavarian Alps on the south. The Main, Neckar, and DANUBE are the principal rivers; major cities are MUNICH, STUTTGART, and NUREMBERG. A fourth geographical region is the heavily industrialized valley of the RHINE R., which rises in the Swiss Alps and flows north through W Germany. Its chief cities are MAINZ, Bonn, and COLOGNE. Manufacturing, which includes transportation equipment, electrical machinery, metal and chemical products, and automobiles, and service industries dominate the economy. The main religions are Protestant (45%, predominant in the N and E) and Roman Catholicism (37%, chiefly in the W and S).

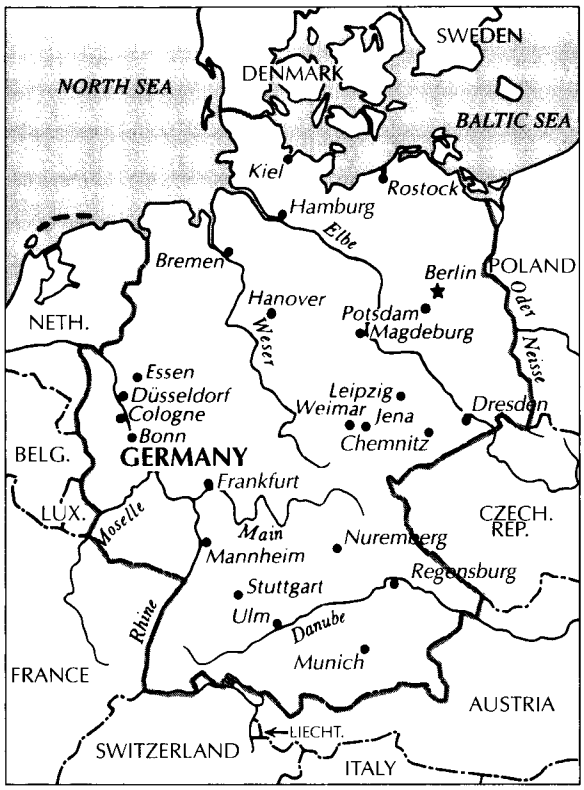
Government. Germany is a federal republic comprising 16 states, each with its own parliament. The federal government includes a president, a cabinet headed by a chancellor (who is the head of government), and a bicameral legislature with 662 members. Germany is a member of the EUROPEAN UNION and the NORTH ATLANTIC TREATY ORGANIZATION.

Economy. After World War II, West Germany became one of the world's primary industrial powers, with an export-oriented economy. Principal manufactures were machinery, chemicals, motor vehicles, and electric and electronic equipment. East Germany, which rapidly industrialized in the postwar years, was considered a prosperous Eastern European nation, but by 1990 its infrastructure was obselete and its industries uncompetitive by Western standards. At reunification it was estimated that Germany would have to invest $500 billion in the East German economy, and the costs of restructuring the East strained German resources in the early 1990s.

History to 1949. In antiquity, Rome conquered (1st cent. B.C.–1st cent. A.D.) SW Germany but was stopped from further conquest by Germanic tribes who lived to the northeast. Germanic tribes later (4th–5th cent.) overran most of the Roman Empire, and by the 6th cent. one of these tribes, the FRANKS, had created a vast empire in Germany and Gaul (see MEROVINGIANS; CAROLINGIANS; CHARLEMAGNE). In the 8th cent. Christianity was spread among the Germans by St. BONIFACE. A successor state, the HOLY ROMAN EMPIRE, was founded in the 10th cent., but Germany remained a loose federation of small principalities and cities. The Holy Roman Empire, weakened by the Protestant REFORMATION (16th cent.) and the THIRTY YEARS WAR (1618–48), was finally swept aside (1806) by NAPOLEON I. The Congress of VIENNA (1814–15) created the GERMAN CONFEDERATION, another loose federation of German states, in which PRUSSIA and Austria emerged as rivals. Prussia, under Otto von BISMARCK, finally achieved the unification of Germany after victories in the AUSTRO-PRUSSIAN WAR (1866) and the FRANCO-PRUSSIAN WAR (1870–71). In 1871 King WILLIAM I of Prussia was proclaimed emperor of Germany, and the new German empire rapidly became the chief economic and military power on the Continent. Its industrial, colonial, and naval expansion threatened British and French interests and helped bring about WORLD WAR I. Badly defeated, Germany accepted (1919) the harsh Treaty of VERSAILLES and established the Weimar Republic. This was beset from the beginning by extremist agitation, mass unemployment, and severe inflation. In 1933 Adolf HITLER was appointed chancellor, and within a year he had established an absolute dictatorship. WORLD WAR II began with Germany's invasion of Poland (1939) and ended, in Europe, with the German surrender in 1945. The defeated country was divided into four Allied occupation zones, but dissension between the USSR and the West led to the formation (1949) of the Federal Republic of Germany (West Germany) in the U.S., French, and British zones and of the German Democratic Republic (East Germany) in the Soviet zone.

West Germany. The Federal Republic of Germany was established in 1949, with Konrad ADENAUER as its first chancellor. The country gained most of the attributes of national sovereignty in 1952 and full independence in 1955. Aided by the MARSHALL PLAN, West Germany recovered quickly from World War II. Politics in the early years were dominated by insistence on reunification, to be achieved through democratic elections, and nonrecognition of East Germany. The government (1969–74) of Willy BRANDT, while upholding the goal of a united Germany, made significant steps toward improving relations with Eastern Europe, including the signing of a nonaggression pact with the USSR (1970) and a treaty with East Germany (1973). Brandt was succeeded (1974) by Helmut SCHMIDT (reelected 1976 and 1980). Over a decade of political dominance by the Social Democrats ended when the Christian Democrat Helmut KOHL became chancellor in 1982.

East Germany. The German Democratic Republic was established in 1949, with Otto Grotewohl as its first prime minister.



Economic hardships led (1953) to a workers' uprising that was suppressed by Soviet forces. Under Walter ULBRICHT, who emerged as leader in the 1950s, the Berlin Wall was erected (1961) to halt the flow of millions of East Germans to the West. Ulbricht's successor, Erich HONECKER, ruled one of the most politically repressive police states in the Soviet bloc. In 1989, East Germans fled west by way of Hungary and Czechoslovakia, and antigovernment demonstrations spread throughout the country. Honecker was ousted, and his successors opened (1989) the West German border, dissolved the secret police, and promised multiparty elections.

Reunification. A strong drive for reunification developed in East and West Germany in 1990. In East Germany, conservative parties supporting reunification won the elections, and the new government and the force of events proceeded to dismantle the state. Economic union with the West occurred in July, and on Oct. 3, 1990, political reunification took place under what had been the West German constitution. In new national elections (Dec. 1990), the conservative coalition headed by Kohl retained power. The economy of the East largely collapsed, and the costs of reunification pushed Germany into recession and led to increased social tensions.

germination, process by which the plant embryo within the SEED resumes growth after a period of dormancy and the seedling emerges. Food stored in the endosperm or in the cotyledons (see ANGIOSPERM) provides energy in the early stages of growth until the seedling can make its own.

germ warfare: see BIOLOGICAL WARFARE.

Geronimo, c.1829–1909, leader of the Chiricahua APACHE; b. Arizona. After the Chiricahua Reservation was abolished (1876), he repeatedly led raids, was captured, and escaped. Finally surrendering in 1886, he and his followers were deported as prisoners of war to Florida. Geronimo was removed to Fort Sill, Okla., became a Christian and a prosperous farmer, and appeared in Pres. Theodore Roosevelt's inaugural procession.

gerontology, study of old age and the aging process, concerned with the physical aspects of aging as well as with the special economic and social problems of the elderly. Gerontology emerged as a major field of study in the 20th cent. as the steady increase in average life expectancy swelled the numbers of older people in the population, especially in developed countries. The medical specialty that focuses on the health and diseases of the elderly is called GERIATRICS.

Gerry, Elbridge [gĕr'ē], 1744–1814, vice president of the U.S. (1813–14); b. Marblehead, Mass. He supported patriotic activities before and during the AMERICAN REVOLUTION, and sat in the CONTINENTAL CONGRESS (1766–85) and the FEDERAL CONSTITUTIONAL CONVENTION (1787), where he opposed a strong central government. Elected governor of Massachusetts in 1810, he won again in 1811. His second term was marked by the grotesque rearrangement of election districts, called a GERRYMANDER after him. He was elected vice president on the ticket with James MADISON. His grandson **Elbridge Thomas Gerry,** 1837–1927, b. N.Y.C., was a reformer. A position as legal advisor to the American Society for the Prevention of Cruelty to Animals led to his founding (1875), with the help of Henry Bergh, the New York Society for the Prevention of Cruelty to Children (sometimes called the Gerry Society). He devoted most of his life to this cause, which became national in scope.

gerrymander, in U.S. politics, rearrangement of lines and boundaries of voting districts to favor the party in power. The term, which described this political art as practiced by Massachusetts Jeffersonians, originated while Elbridge GERRY was governor. Gerrymandering was limited somewhat by the Supreme Court in 1964. The term has also been used to describe the similar creation of voting districts to favor the election of a candidate from a specific racial or ethnic group.

Gershwin, George, 1898–1937, American composer; b. Brooklyn, N.Y. His scores to MUSICALS, including *Lady, Be Good!* (1924) and *Of Thee I Sing* (1931; Pulitzer), made him famous. In his extended compositions, e.g., *Rhapsody in Blue* (1923) and *An American in Paris* (1928), he blended traditional with folk and JAZZ elements. Gershwin wrote the music for the folk opera *Porgy and Bess* (1935). His brother, **Ira Gershwin,** 1896–1983, wrote lyrics to many of his compositions. After George's death, he collaborated with Harold Arlen on the film *A Star is Born* (1954)

Gesner, Konrad von, 1516–65, Swiss scientist and bibliographer. He was an important reviver of the classical school of zoological description that culminated in the work of Carolus LINNAEUS. His illustrated *Historia animalium* (5 vol., 1551–58, 158?), influenced biology and the arts and is considered the foundation of zoology as a science.

gesneria, herb or shrub, chiefly tropical and subtropical, of the family Gesneriaceae, cultivated for its showy, often tubular blossoms. The family includes the AFRICAN VIOLETS, the African Cape primrose (genus *Streptocarpus*), and the gloxinia (*Sinningia speciosa*) of Brazil, not to be confused with the genus *Gloxinia,* which is not cultivated.

Gestalt, school of psychology that interprets phenomena as organized wholes, rather than as aggregates of distinct parts. It maintains that the significance of a structured whole (e.g., in visual perception) does not depend on its specific constituent elements; thus a drawn figure still has meaning when there are gaps in the drawing. Gestalt, which has made substantial contributions to the study of learning, memory, thinking, and human personality and motivation, was brought to the U.S. in the 1930s by refugee psychologists from Germany. There the movement had received impetus from psychologists Max Wertheimer, Wolfgang Köhler, and Kurt Koffka, in protest against the prevailing scientific approach to analysis, with its detachment from human values. *Gestalt therapy,* developed after World War II by Frederick Perls, believes that a person's inability to successfully integrate the parts of his or her personality into a healthy whole may lie at the root of psychological disturbance. In therapy the analyst encourages clients to release their emotions and to recognize these emotions for what they are.

Gesta Romanorum, medieval collection of Latin stories, each with a moral, probably older than the extant 14th-cent. manuscript. CHAUCER and others used it as a source.

Gethsemane [gĕthsĕm'ənē], olive grove or garden, E of Jerusalem, near the foot of the Mount of OLIVES. It was the scene of the agony and betrayal of JESUS.

Getty, J(ean) Paul, 1892–1976, American business executive, one

of the richest people in the world; b. Minneapolis, Minn. After inheriting his father's oil business, he became (1956) director and principal owner. His personal worth was estimated at $3 billion. An ardent art collector, he founded (1954) the J. Paul Getty Museum in Malibu, Calif., and bequeathed it an endowment of $750 million, making it the world's richest museum (see GETTY CENTER). Getty lived in Britain from the early 1950s until his death.

Getty Center, art complex in Brentwood, Calif. Consisting of six buildings on 124 acres (50 hectares) outside Los Angeles, it was designed by Richard MEIER and is scheduled for completion in 1996. It will combine a new J. Paul Getty Museum with a library and archives, conservation and art historical institutes, and educational and computer centers.

Gettysburg Address, Nov. 19, 1863, famous speech by Abraham LINCOLN at the dedication of the CIVIL WAR cemetery at Gettysburg, Pa. Lincoln eloquently stated his grief for the fallen soldiers and the principles for which they had given their lives. The brief address is perhaps the most quoted speech of all time, including among many memorable phrases: "and that government of the people, by the people, for the people, shall not perish from the earth."

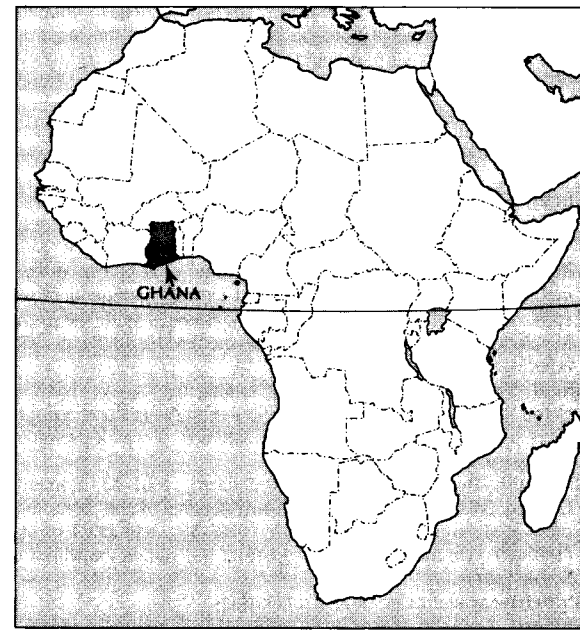
Gettysburg campaign, June–July 1863, a series of battles that marked the turning point of the U.S. CIVIL WAR. After his victory at CHANCELLORSVILLE, Confederate Gen. Robert E. LEE undertook a second invasion of the North, crossing the Potomac into Pennsylvania and fighting at Harrisburg and Chambersburg. Union forces under George G. MEADE were massing N of the Potomac. The two forces met just W of Gettysburg in the greatest battle of the war (July 1–3, 1863). On July 1 the Union was driven to Cemetery Hill, south of the town. On July 2 the Confederates took the Peach Orchard but were repulsed in assaults on Cemetery Ridge and Cemetery Hill; they briefly held Culp's Hill. On July 3 Lee ordered George E. PICKETT's division forward in its famous but disastrous charge against the Union center. Tremendous losses resulted, and on July 4 Lee withdrew. Union losses totaled 23,000 killed or wounded; Confederate, 25,000.

geyser, HOT SPRING from which water and steam are ejected periodically to heights ranging from a few to several hundred feet. The generally accepted explanation is that rainwater, collected under pressure in hot rocks below ground, turns partly to steam and causes the water above it to overflow, thereby reducing the pressure and forcing an eruption. Notable geysers are found in Iceland; North Island, New Zealand; and Yellowstone National Park, U.S. (see NATIONAL PARKS, table). Geothermal generating plants use geysers to produce electricity. Geyserlike features have been observed on Neptune's moon Triton, some of them ejecting material to a height of 5 mi (8 km).

Ghana, ancient empire, W Africa, in the savanna region now occupied by E Senegal, SW Mali, and S Mauritania. The empire was founded c.6th cent. by Soninke peoples and lay astride the trans-Saharan caravan routes. Its capital was Kumbi Salih. It prospered from trade, mostly in salt and gold, and from tribute. Invaded by the Almoravids in 1076, it disintegrated by the 13th cent. Modern GHANA takes its name from the ancient empire.

Ghana, officially Republic of Ghana, republic (1992 est. pop. 16,185,000), 92,099 sq mi (238,536 sq km), W Africa, bordered by the Gulf of Guinea (S), Côte d'Ivoire (W), Burkina Faso (N), and Togo (E). Major cities include ACCRA (the capital) and KUMASI. The coastal region and the far north are savanna areas; in between is a forest zone. Lake Volta, in central Ghana, is one of the world's largest dammed lakes. Cacao is the principal crop in Ghana's predominantly agricultural economy; other exports include minerals (gold, diamonds, and bauxite) and timber. Aluminum smelting, food processing, and lumber production are the principal industries, and coffee and tobacco are widely grown. The population includes various linguistic groups, chiefly the Akan (Ashanti and Fanti), Mole-Dagbani, Ewe, and Ga-Adangme. Numerous indigenous tongues are spoken, but English is the official language. About 40% of the people are Christians, 10% are Muslims (mainly in the north), and the rest follow traditional religions.

History. In precolonial times the region comprised a number of independent kingdoms, including the ASHANTI confederation in the interior and the Fanti states along the coast. The first European fort



was established by the Portuguese at Elmina in 1482, and for more than three centuries European nations engaged in a brisk but highly competitive trade in gold and slaves. The expanding Ashanti kingdom forced the withdrawal of the Danes (1850) and the Dutch (1872), but the British allied themselves with the Fanti, defeated the Ashanti in 1874, and organized the coastal region as the Gold Coast colony. After renewed fighting between the British and the Ashanti, Britain made the kingdom a colony in 1901, at the same time declaring a protectorate over the Northern Territories, a region north of Ashanti. After World War I part of the German colony of TOGOLAND, mandated to Britain, was administered with the Gold Coast. In 1951, in the face of rising nationalist activity, Britain granted a new constitution and held general elections, from which Kwame NKRUMAH, the colony's leading nationalist figure, emerged as premier. The state of Ghana, named after a medieval African empire (see separate article) and including British Togoland, which had voted to join it, became an independent country within the Commonwealth of Nations in 1956. In 1969 Nkrumah transformed Ghana into a republic and named himself president for life. Increasingly repressive and beset by a deteriorating economy, Nkrumah was overthrown by a coup in 1966. The ensuing years saw a succession of coups. By the late 1970s the economy had slid into chaos, and corruption was rife. In 1979 Jerry RAWLINGS led a military coup, and after conducting a harsh anti-corruption campaign, he stepped aside and permitted a return to elected civilian government. Continuing corruption and economic decline led Rawlings to seize power again in 1981. Economic reforms (1983) helped revive the economy, and in 1992 Rawlings became president after a free election under a new constitution.

Ghats, two mountain ranges, S India, forming the eastern and western edges of the DECCAN plateau. Anai Mudi (8,841 ft/2,695 m) is the highest point. The **Western Ghats,** c.1,000 mi (1,600 km) long, extend southeast from near Bombay to the southern tip of India. Their densely forested western slopes receive abundant rainfall from onshore monsoon winds and are the source of many easterly-flowing rivers, including the Godavari, Kistna, and Caudery. The **Eastern Ghats,** facing the Bay of Bengal, form a series of hills extending c.900 mi (1,450 km) southwest from the Mahanadi valley.

Ghazali, al-, 1058–1111, Islamic philosopher, considered the greatest theologian in ISLAM, well known in medieval Europe as Algazel. Of Persian origin, he abandoned teaching to wander for 10 years as a Sufi mystic (see SUFISM), attempting to reconcile MYSTICISM with orthodox Islam. His great compendium of Muslim thought, *Restoration of the Sciences of Religion,* outlines an orthodox system for the attainment of unity with God.

Ghelderode, Michel de [gĕldərōd'], 1898–1962, Belgian dramatist. A satirist and exquisite poet, he is considered one the most original French-language playwrights of modern times. A wide variety of influences—MAETERLINCK, medieval morality plays, Flemish painting, puppet theater, COMMEDIA DELL'ARTE, the Elizabethans, and Edgar Allan POE—reveal themselves in such masterpieces as *Chronicles of Hell* (1929), *Pantagleize* (1929), and *Hop Signore!* (1935).

Ghent, city (1991 est. pop. 231,000), W Belgium, at the confluence of the Scheldt and Leie rivers. It is a major port and a banking and textile-manufacturing center. One of Belgium's oldest cities, founded in the 7th cent., it was the capital of FLANDERS. It was a medieval wool-producing city and was virtually independent until 1584. Thereafter it was ruled by the HAPSBURGS, until the French Revolution. It is noted for its many medieval and Renaissance buildings.

Ghent, Treaty of, 1814, agreement ending the WAR OF 1812 between the U.S. and Great Britain. Stipulating the restoration of territory taken by either party during hostilities, it was a diplomatic victory for the U.S.

Gheorghiu-Dej, Gheorghe [gâô'gyōōdāzh], 1901–65, Romanian Communist leader. He was secretary general of the Communist party (1945–54, 1955–65), premier (1952–55), and chief of state (1961–65). He maintained a measure of independence within the Soviet sphere.

Ghibellines: see GUELPHS AND GHIBELLINES.

Ghiberti, Lorenzo [gēbĕr'tē], c.1378–1455, Florentine sculptor. In 1401 he won the competition to produce a bronze portal for the baptistery in Florence, defeating BRUNELLESCHI. He designed the north portal to match Andrea PISANO's earlier Gothic portal and was constrained by its rigid quatrefoil framework. The reliefs, executed between 1403 and 1424, depict the life of Jesus, the Evangelists, and the Church Fathers. Ghiberti also produced sculptural figures for the Church of Or San Michele before he began work on the baptistery's east portal, a task that took him 23 years. These later reliefs were more modern in form and structure. His *Comentarii* is the earliest known autobiography of an artist.

Ghirlandaio or **Ghirlandajo, Domenico** [both: gērländä'yō], 1449–94, Florentine painter whose family name was Bigordi. His religious narrative paintings, e.g., *Madonna with the Vespucci Family* (Church of the Ognissanti, Florence), reveal superlative technique and a keen eye for contemporary detail. With BOTTICELLI in Rome he decorated parts of the SISTINE CHAPEL. Among his pupils was MICHELANGELO, who probably assisted with Ghirlandaio's great FRESCO cycle of the life of Mary and St. John the Baptist in Santa Maria Novella, Florence. His famous realistic portrait *Grandfather and Grandson* is in the Louvre.

Ghose, Aurobindo [gōsh], 1872–1950, Indian mystic philosopher, known as Sri Aurobind. He spent his early years as an agitator for Indian independence. He experienced mystic visions, retired from political activism, and formulated what became Purna, or Integral, Yoga. In 1926 he retired into seclusion in his ashram at Pondicherry.

ghost dance, ritual central to the messianic religion instituted c.1870 among the PAIUTE by their prophet WOVOKA. The religion, which prophesied the end of white expansion westward and the return of land to Native Americans, spread to most of the western tribes. The ritual was danced for five successive days and was accompanied by hypnotic trances. The SIOUX performed the ritual prior to their massacre at WOUNDED KNEE in 1890—wearing "ghost shirts" that they thought would protect them from bullets.

Giacometti, Alberto [jäkōmĕt'tē], 1901–66, Swiss sculptor and painter. Associated with SURREALISM, he is known for his bronze sculptures of elongated human figures, e.g., *Man Walking* (Albright-Knox Gall., Buffalo).

Giambologna: see BOLOGNA, GIOVANNI.

giant, in mythology, manlike being of great size and strength; a brutish power of nature, lacking the stature of gods and the civilization of humanity. In many cultures, e.g., Greek, Scandinavian, and Native American, giants were believed to be the first race of people that inhabited the earth.

giant schnauzer: see SCHNAUZER.

giant sequoia: see SEQUOIA.

Gibbon, Edward, 1734–94, English historian. He is the author of *The History of the Decline and Fall of the Roman Empire* (6 vol., 1776–88), one of the most influential historical works of modern times. Gibbon also wrote a subtle and interesting autobiography, *Memoirs of His Life and Writings* (1796). He served in Parliament from 1774 to 1783.

gibbon, small APE (genus *Hyloblates*) found in the forests of SE Asia. Gibbons are highly adapted to arboreal life. Their arms are extremely long, and they swing through the trees with great speed and agility. Gibbons live in permanent families consisting of a male, a female, and their young; they are very territorial.

Gibbs, James, 1682–1754, English architect. An exponent of the GEORGIAN STYLE, he is noted for London churches, e.g., St. Mary-le-Strand (1714–17) and St. Martin's-in-the-Fields (1721–26); the latter inspired steepled churches in the American colonies. He also designed the circular Radcliffe Camera, Oxford.

Gibbs, Josiah Willard, 1839–1903, American mathematical physicist; b. New Haven, Conn. A professor of mathematical physics at Yale, his studies in physical chemistry and thermodynamics have profoundly affected industry, notably in the production of ammonia. He formulated the concept of chemical potential, was influential in developing vector analysis, and did work in statistical mechanics.

Gibraltar, British dependency (1992 est. pop. 29,700), 2.25 sq mi (5.8 sq km), on a narrow, rocky peninsula extending into the Mediterranean Sea from SW Spain. The town of Gibraltar lies at the northwest end of the Rock of Gibraltar. Although Gibraltar is a free port with some transit trade, its major importance is strategic, and its status has long been a subject of dispute between Great Britain (which has maintained possession since 1704) and Spain.

Gibran, Kahlil [jəbrän'], 1883–1931, Lebanese poet and novelist. He wrote in both English and Arabic. Fusing elements of Eastern and Western mysticism, he achieved lasting fame with such aphoristic, poetic works as *The Prophet* (1923) and *The Garden of the Prophet* (1934).

Gibson, Althea, 1927–, American tennis player; b. Silver, S.C. In 1948 she won the first of 10 straight national Negro women's singles titles. The first African American to play in the U.S. nationals (1950) and at Wimbledon (1951), she captured both of those championships in 1957 and 1958.

Gibson, Charles Dana, 1867–1944, American illustrator; b. Roxbury, Mass. As an illustrator of various contemporary magazines, he delineated aristocratic social ideals and created an ideal woman, the famous "Gibson Girl."

Gide, André [zhēd], 1869–1951, French author. A leader of French liberal thought, he was one of the founders (1909) of the influential *Nouvelle revue française.* He was controversial for his frank defense of homosexuality and for his espousal (and later disavowal) of communism. In his major novels—*The Immoralist* (1902), *Lafcadio's Adventures* (1914), and *The Counterfeiters* (1926)—he shows individuals seeking out their own natures, which may be at odds with prevailing ethical concepts. He was also known for his journals (1889–1949). Gide received the Nobel Prize in literature in 1947.

Gideon, Gedeon, Jerubbaal, or **Jerubbesheth,** in the BIBLE, one of the greater judges of Israel, a strong opponent of the BAAL cult. He refused the kingship because of his belief that God was the king of Israel. He also defeated the Midianite (see MIDIAN) oppressors and appeased the rival Emphramites (see ISRAEL, TRIBES OF).

Gideon v. Wainwright, case decided in 1963 by the U.S. SUPREME COURT. Florida had denied Clarence Gideon free counsel in a criminal trial, and he had defended himself. The Court held that the right to counsel, guaranteed in federal trials by the 6th amendment to the U.S. CONSTITUTION, is fundamental to a fair trial, and that the state's failure to provide counsel for a FELONY defendant violated due process under the 14th amendment.

Gielgud, Sir John, 1904–, English actor. He excelled in plays by SHAKESPEARE (notably *Hamlet*), WILDE, and PINTER, and won praise for film and television roles, e.g., *Arthur* (1981; Academy Award), *Brideshead Revisited* (1981), and *Prospero's Books* (1991).

Gierek, Edward, 1913–, Polish Communist leader. He replaced Władysław GOMULKA as first secretary of the party in 1970 after food riots had broken out. A failing economy and labor unrest led to his

The key to pronunciation appears on page xiii.

ouster in 1980 (see SOLIDARITY). In 1981 he was expelled from the Communist party and interned after martial law was declared.

gift tax: see under INHERITANCE TAX.

gila monster, venomous LIZARD (*Heloderma suspectum*) found in the deserts of the SW U.S. and NW Mexico. It averages 18 in. (45 cm) in length, with a large head, stout body, and thick tail that acts as a food reservoir; its skin is covered with beadlike scales. It and the beaded lizard (*H. horridum*) are the only known venomous lizards.

Gilbert, Cass, 1859–1934, American architect; b. Zanesville, Ohio. His 60-story Woolworth Building (1913) in New York City exerted great influence on the growth of the SKYSCRAPER. Among his other conspicuous works are the Federal Courts Building (N.Y.C.) and the Supreme Court Building (Wash., D.C.).

Gilbert, Sir Humphrey, 1537?–1583, English soldier, navigator, and explorer; half brother of Sir Walter RALEIGH. He was knighted (1570) for services in Ireland. His *Discourse* (1576), arguing the existence of the NORTHWEST PASSAGE, long motivated English exploration. In 1583 he reached NEWFOUNDLAND and claimed it for England. He disappeared at sea near the AZORES.

Gilbert, William, 1544–1603, English scientist and physician. Noted for his studies of ELECTRICITY and MAGNETISM, he coined the word *electricity* and was the first to distinguish between electric and magnetic phenomena. In his *De Magnete* (1600) he described methods for strengthening natural magnets (lodestones) and for using them to magnetize steel rods by stroking, and he concluded that the earth acts like a giant magnet with its poles near the geographic poles. From 1600 he was president of the College of Physicians and court physician to Elizabeth I and James I.

Gilbert, Sir William Schwenck, 1836–1911, English playwright and poet. With the composer Sir Arthur SULLIVAN he wrote a series of popular, satiric operettas, including *Trial by Jury* (1875), *H.M.S. Pinafore* (1878), *The Pirates of Penzance* (1879), *Patience* (1881), *Iolanthe* (1882), *Princess Ida* (1884), *The Mikado* (1885), *Ruddigore* (1887), *The Yeomen of the Guard* (1888), and *The Gondoliers* (1889). Gilbert was a metrical craftsman, and his lyrics are often scintillatingly funny.

gilds: see GUILDS.

gill, external respiratory organ of most aquatic animals, the basic function of which is oxygen–carbon-dioxide exchange. Gill structure and location vary among animals of different groups. In fishes, gills are located at the rear of the mouth and contain capillaries; in higher aquatic invertebrates, they protrude from the body surface and contain extensions of the vascular system; in mollusks, they are inside the mantle cavity; in aquatic insects, they occur as projections from the walls of the air tubes. In amphibians, gills are usually present only in the larval stage; in higher vertebrates, they occur merely as rudimentary, nonfunctional gill slits, which disappear during embryonic development.

Gillespie, Dizzy (John Birks Gillespie), 1917–93, African-American jazz musician; b. Cheraw, S.C. With Charlie PARKER he led the bop movement in JAZZ in the 1940s. His trumpet style blended spectacular facility with taste and intelligence.

Gilson, Étienne, 1894–1978, French philosopher and historian. After teaching in Paris, Gilson founded (1929) the Institute of Medieval Studies at the Univ. of Toronto and was long a member of its faculty. He was also one of the leaders of the neo-Thomist movement in Catholic philosophy. His works include *The Philosophy of St. Thomas Aquinas* (1919) and *The Spirit of Medieval Philosophy* (2 vol., 1932).

ginger, common name for perennial herbs of the tropical and subtropical family Zingiberaceae. Many are important for their aromatic oils. Ginger (*Zingiber officinale*) is cultivated for its root, which is candied or dried for medicines and spice. Turmeric (*Curcuma longa*) and the seeds of cardamom (*Elettaria cardamomum*) are similarly used, and often combined with ginger to make a curry.

gingivitis, inflammation of the gums, characterized by red, swollen, spongy gums that bleed easily. It may be acute, chronic, or recurrent. Chronic gingivitis usually results from bacteria, although other factors, such as poor dentition, prolonged use of the drug phenytoin, vitamin C deficiency, or DIABETES, may also contribute to it. If left untreated, gingivitis can lead to PERIODONTITIS.

Dizzy Gillespie

Gingrich, Newt(on Leroy), 1943–, U.S. politician; b. Harrisburg, Pa. A history professor, he was elected as a U.S. representative from Georgia in 1978. He became a leader of conservative House Republicans who supported the use of confrontational tactics against House Democrats and helped force Speaker Jim WRIGHT's resignation (1989) by questioning his financial dealings. Gingrich became House minority whip in 1989.

ginkgo or **maidenhair tree,** deciduous tree (*Ginkgo biloba*) with fan-shaped leaves. A sacred plant in its native China and Japan, ginkgo is a "living fossil," the only remaining species of a large group of GYMNOSPERMS (division Ginkophyta) that existed in the Triassic period. Today the ginkgo is valued in the U.S. and Europe as an urban tree because of its exceptional tolerance for smoke, low temperatures, and minimal water supply (although the female plant, with its malodorous fruit, is not as desirable an ornamental as the male). Ginkgo seeds are esteemed as a food in E Asia.

Ginsberg, Allen, 1926–, American poet of the beat generation; b. Paterson, N.J. He is best known for *Howl* (1956), a long poem attacking American values. Other volumes include *Kaddish and Other Poems* (1961), *Collected Poems, 1947–1980* (1984), and *White Shroud: Poems 1980–1985* (1986).

Ginsburg, Ruth (Joan) Bader: see SUPREME COURT, UNITED STATES (table 1).

ginseng, plant (genus *Panax*) of the family Araliaceae. True ginseng (*P. schinseng*) is prized by the Chinese for its curative properties. It and a North American ginseng (*P. quinquefolius*), used as a substitute for true ginseng, have been nearly exterminated by commercial exploitation.

Giono, Jean [jônō], 1895–1970, French novelist. His works—particularly the pastoral trilogy *Hill of Destiny* (1920), *Lovers Are Never Losers* (1929), and *Harvest* (1930)—describe Provençal life, emphasizing closeness to nature.

Giorgione [jôrjô'nā], c.1478–1510, Venetian painter. With TITIAN he was a student of Giovanni Bellini (see BELLINI, family). Few details remain of his life. He undertook important commissions in oil and FRESCO and died of the plague in his 30s. He was a major innovator, greatly influencing the principal painters of his time. His frescoes are virtually destroyed, and only a few oils are ascribed to him with certainty. Luminous colors, a liberated, self-expressive style, and the poetic rendition of a bucolic fantasy world are the chief hallmarks of his works, which include *The Three Philosophers* (Vienna), *Tempesta* (Acad., Venice), and *Concert Champêtre* (Louvre).

Giotto (Giotto di Bondone) [jôt'tō], c.1266–c.1337, Florentine painter and architect. More than any other artist, he may be said to have determined the course of painting in Europe. Giotto turned from the formulas of Byzantine painting to the study of nature, achieving lifelike, expressive faces and the illusion of movement. He designed a great number of works, many of which have disappeared. In Rome in 1300 he executed the MOSAIC of the *Navicella* (now in St. Peter's, Rome), and in 1304 began the 38 FRESCOES in the Scrovegni (Arena) Chapel (Padua). Among the greatest works

in Italian art. these scenes from the *Life of the Virgin*, the *Life of Christ*, the *Last Judgment*, and *Virtues and Vices* illustrate Giotto's dramatic sense and power of narration. Returning to Florence, he did the frescoes of *St. John the Baptist* and *St. John the Evangelist* (Peruzzi Chapel, Church of Santa Croce) and the *Life of St. Francis* (Bardi Chapel). He achieved a remarkable representation of space, allying figures and background harmoniously without using a system of perspective, e.g., in *Madonna in Glory* (Uffizi) and *Death of the Virgin* and *Crucifixion* (both: Berlin). Chief architect of the cathedral in Florence, in his last years he designed the campanile called "Giotto's Tower." His reforms in painting were carried throughout Italy by his many pupils and followers, and his popularity is attested to in literature by DANTE, PETRARCH, BOCCACCIO, and others. His well-known *Wedding of St. Catherine* (Uffizi) was badly damaged in the flood of 1966.

Giotto, in space exploration: see SPACE PROBE, table.

Giovanni Bologna: see BOLOGNA, GIOVANNI.

Giovanni da Fiesole: see ANGELICO, FRA.

Giovanni di Paolo [dē pä'ōlō], c.1403–1483, major Italian painter of the Sienese school. Like other Sienese painters of his era, he paid scant attention to the artistic innovations made in Florence. He had an inclination toward fantasy and a disregard for perspective. *Paradise* and *Creation of the World* (both: Metropolitan Mus.) and six expressive scenes from the life of St. John the Baptist (Art Inst., Chicago) are typical of his work.

Giovanni Gondola: see GUNDULIĆ, IVAN.

giraffe, African ruminant MAMMAL (*Giraffa camelopardalis*) living in open SAVANNA S of the SAHARA. The tallest animal (up to 18 ft/5.5 m), the giraffe browses in the tops of ACACIA and MIMOSA trees. The legs and neck are elongated; the skin is patterned in large, sandy-to-chestnut spots on a lighter background. Giraffes travel in small herds.

Giraudoux, Jean [zhērōdōō'], 1882–1944, French dramatist and novelist. Mostly imaginative interpretations of Greek myths, his plays include *Tiger at the Gates* (1935) and *Electra* (1937). *The Madwoman of Chaillot* (1945) is a bitter satire on 20th-cent. materialism. Among his novels are *Les Provinciales* (1909) and *My Friend from Limousin* (1922).

Girl Scouts, recreational and service organization est. 1912 in Savannah, Ga., by Juliette Gordon Low, originally modeled on the BOY SCOUTS and Girl Guides of Sir Robert BADEN-POWELL. The membership is divided into four age groups between 6 and 17. Activities stress good citizenship, service to others, health, international friendship, and the arts. There are some 3.3 million members.

Girondists [jĭrŏn'dĭsts] or **Girondins,** group of moderate republicans in the FRENCH REVOLUTION, so called because their early leaders were mostly from the Gironde dept. Notable members were Jacques Brissot de Warville, Charles DUMOURIEZ, and Jean Marie Roland de la Platière. Representing the educated, provincial middle class, they favored a constitutional government and a continental war, splitting with the JACOBINS on the second issue. They were unable to prevent the execution of the king, and their position was weakened after the treason of Dumouriez. In June 1793 many Girondists were arrested and executed; the leftist MOUNTAIN was thus assured of complete control.

Giscard d'Estaing, Valéry [zhēskär' dĕstăN'], 1926–, president of France (1974–81). A member of the national assembly from 1955, he was finance minister (1962–66, 1969–74) under DE GAULLE and POMPIDOU. As president he was unsuccessful in dealing with inflation and rising unemployment. He lost the 1981 election to MITTERRAND but later held a seat (1984–89) in the national assembly.

Gish, Lillian, 1896–93, American actress; b. Springfield, Ohio. She is best known for such silent films as *The Birth of a Nation* (1915), *Broken Blossoms* (1919), and, with her sister, Dorothy Gish (1898–1968), *Orphans of the Storm* (1921).

Gissing, George, 1857–1903, English novelist. Influenced by Charles DICKENS, he wrote grim treatments of social issues that reflect his own unhappy life, as in *The Private Papers of Henry Ryecroft* (1903). His best-known work is *New Grub Street* (1891), depicting the plight of the poor, alienated artist.

Giuliani, Rudolph William, 1944–, American politician; b. Brooklyn, N.Y. A crime-busting Republican prosecutor in the Justice Dept. in the 1970s, he was U.S. attorney for New York's Southern District from 1983 to 1989. Giuliani narrowly won the New York City mayoral election in 1993, defeating the incumbent, David DINKINS, who had bested him by a slim margin in 1989.

Giulini, Carlo Maria, 1914–, Italian conductor. A disciple of TOSCANINI, he was first known as a conductor of opera, chiefly in Milan and Rome. In 1968 he made his orchestral debut, with the New York Philharmonic. After holding posts with the Chicago Symphony and Vienna Symphony, he was (1978–84) musical director of the Los Angeles Philharmonic (see ORCHESTRA, table).

Giulio Romano, c.1492–1546, Italian painter, architect, and decorator, a founder of MANNERISM; b. Giulio Pippi. A favorite pupil of RAPHAEL, Giulio painted many FRESCOES from Raphael's designs. In the service of the duke of Mantua, he designed the Church of San Benedetto and rebuilt the Palazzo del Te, decorating it with illusionistic and somewhat melodramatic frescoes. His well-known oils include *The Stoning of St. Stephen* (Church of Santo Stefano, Genoa).

Giza [gē'zə] or **Al Jizah** [äl jē'zö], city (1990 est. pop. 2,680,000), N Egypt, a suburb of CAIRO. It is a manufacturing and agricultural trade center, the seat of Egypt's motion-picture industry, and a resort. Nearby are the Great SPHINX and the PYRAMID of KHUFU (Cheops).

Gjellerup, Karl Adolf [yĕl'ərōōp], 1857–1919, Danish novelist. His novels range from the naturalistic, idealistic *Minna* (1889) to the Buddhist-influenced *Pilgrim Kamanita* (1906). He shared the 1917 Nobel Prize in literature with Henrik PONTOPPIDAN.

glacier, mass of ice formed in high mountains and polar regions by the compacting of snow and kept in constant movement by the pressure of the accumulated mass. The four main types are *valley*, or *mountain, glaciers*, tongues of ice moving from mountain snowfields into stream valleys; *piedmont glaciers*, formed by the spread of one or the convergence of several valley glaciers; *ice caps*, flattened, somewhat dome-shaped glaciers covering mountains and valleys alike; and *continental glaciers*, huge ice sheets that give rise to ICEBERGS. Glaciers alter topography greatly by their erosive action, by their transport of various debris, and by the various forms of DRIFT they leave behind.

Glacier Bay National Park: see NATIONAL PARKS (table).

Glacier National Park: see NATIONAL PARKS (table).

Glackens, William James, 1870–1938, American painter; b. Philadelphia. An illustrator for various periodicals, Glackens first showed his paintings with the EIGHT and is known for his portrayals of the contemporary scene. His dark early style yielded to a brighter palette influenced by French IMPRESSIONISM, e.g., *Parade, Washington Square* (Whitney Mus., N.Y.C.).

gladiators [Lat., = swordsmen], in ancient Rome, class of professional fighters who performed for exhibition. There were various types of gladiators, armed and armored differently. Gladiators fought each other and also wild beasts. They were slaves or prisoners, including Christians, or impoverished freedmen. Forbidden by CONSTANTINE I, gladiatorial games continued nonetheless until A.D. 405.

gladiolus: see IRIS.

Gladstone, William Ewart, 1809–98, British statesman, the dominant personality of the LIBERAL PARTY from 1868 to 1894. As chancellor of the exchequer (1852–55, 1859–66), he secured measures for economic retrenchment and free trade. He was prime minister four times (1868–74, 1880–85, 1886, 1892–94) and achieved notable reforms: passage of the Irish land act; establishment of competitive examinations for the civil service, and of vote by secret ballot; abolition of the sale of army commissions; parliamentary reform; and educational expansion. His advocacy of HOME RULE for Ireland wrecked his third ministry. A great orator and master of finance, he was deeply religious and brought a high moral tone to politics; nonetheless, he was passionately disliked by Queen VICTORIA.

gland, organ that manufactures chemical substances. A gland may vary from a single cell to a complex system. The glands of the ENDOCRINE SYSTEM, e.g., the thyroid, adrenals, and pituitary, secrete hormones directly into the bloodstream. Sweat, salivary, and other so-called exocrine glands secrete substances onto external or internal body surfaces, usually through ducts. Mixed glands such as

the LIVER and PANCREAS have both endocrine and exocrine functions.

glanders, highly contagious, fatal bacterial disease of horses, mules, and donkeys that can be transmitted to humans. The bacterium, *Actinobacillus mallei,* primarily infects the skin, lungs, and nasal membranes, causing lumps, or nodules, to form in the infected area. These nodules enlarge, form ulcers, and release bacteria-laden pus to other parts of the body. Infected animals must be destroyed to prevent the spread of the disease.

Glaser, Milton, 1929–, American graphic designer; b. N.Y.C. His constantly changing style, which draws widely on art history, has had enormous international influence. Glaser's work includes the design of posters, e.g., Bob Dylan (1966); book and record covers; periodicals; type; and interiors.

Glasgow, city (1991 pop. 654,542), Strathclyde, S central Scotland, on the River Clyde. It is Scotland's leading seaport and largest city and the center of the Clydeside industrial belt. Manufactures include electronic equipment, chemicals, textiles, carpets, and machine tools. Economically depressed in the early 1980s, by the late 1980s it had become a lively cultural center. Founded in the late 6th cent. by St. Mungo (St. Kentigern), Glasgow began its modern commercial growth with the tobacco trade in the 18th cent. Nearby coal fields and its location on the Clyde contributed to its industrial growth in the early 19th cent.

glasnost: see GORBACHEV, MIKHAIL SERGEYEVICH; UNION OF SOVIET SOCIALIST REPUBLICS.

Glaspell, Susan, 1882–1948, American author; b. Davenport, Iowa. She and her husband, George Cram Cook, organized (1915) the Provincetown Players. Glaspell wrote novels, short stories, and plays, e.g., *Alison's House* (1930; Pulitzer).

Glass, Philip, 1937–, American composer; b. Baltimore. He was influenced by Eastern music, and in 1968 he formed the Philip Glass Ensemble. His music, blending standard notation and tonality with electronics, is repetitive and of great duration. His best-known works are his operas, including *Einstein on the Beach* (1976; with Robert Wilson), *Satyagraha* (1980), and *The Voyage* (1992).

glass, hard substance, usually brittle and transparent, composed chiefly of silicates and an alkali fused at high temperatures. Metallic oxides impart color. In prehistoric times objects were fashioned from natural glass such as obsidian (a volcanic substance) and rock crystal (a transparent quartz). The oldest extant manufactured glass is from Egypt, c.2000 B.C. Many types were made in Roman times, but little is known of European glassmaking from the fall of Rome until the 10th cent., when STAINED GLASS appeared. Methods have changed little since ancient times. The materials are fused at high temperatures in seasoned fireclay containers, boiled down, skimmed, and cooled several degrees; then the molten glass is ladled or poured into molds and pressed, or it is blown or drawn. The shaped glass is annealed to relieve stresses caused by manipulation, then slowly cooled. Until the 17th cent. the finest glass was made in Venice; later France and England became centers of glassmaking. In the 20th cent. many new types have been developed, including fiberglass and safety glass, but in some uses glass has been superseded by PLASTIC. Despite mass production, glassmaking by hand remains a valued art.

glaucoma, disease of the EYE characterized by an excess of fluid within the eyeball, causing increased pressure on the retina and impairment of vision ranging from slight abnormalities to BLINDNESS. It most commonly develops gradually after the age of 40 but can sometimes occur abruptly. It is treated with drugs (such as pilocarpine) that decrease intraocular pressure.

Glazunov, Aleksandr Konstantinovich, 1865–1936, Russian composer. With RIMSKY-KORSAKOV he completed BORODIN's *Prince Igor.* His own early works reflected nationalism, but Western influences became more prominent later.

Gleizes, Albert Léon [glĕz], 1881–1953, French cubist painter, illustrator, and writer. A leading cubist, he used a rich palette and wrote the first tract on the principles of CUBISM, *Du Cubisme* (1912), with Jean METZINGER.

Glen Canyon Dam, 710 ft (216 m) high, 1,560 ft (475 m) long, N Arizona, on the COLORADO R. Completed in 1964, it is one of the world's largest concrete dams and impounds Lake Powell.

Glendale. 1 City (1990 pop. 148,134), Maricopa co., S central Ariz., adjacent to Phoenix; inc. 1910. One of the fastest-growing U.S. cities, it is located in a rich agricultural region and is a fruit and vegetable shipping and processing center. Luke Air Force Base is in Glendale. **2** City (1990 pop. 180,038), Los Angeles co., S Calif., a suburb of Los Angeles; inc. 1906. It has an aerospace industry and other defense-oriented manufactures, as well as a film industry. Forest Lawn Memorial Park, a large cemetery containing numerous art reproductions, is located in Glendale.

Glendower: see OWEN GLENDOWER.

Glenn, John Herschel, Jr., 1921–, U.S. astronaut and politician; b. Cambridge, Ohio. He was the first American and the third person to be put into orbital spaceflight when, on Feb. 20, 1962, he circled the earth three times in *Friendship 7* (*Mercury-Atlas 6*). After retiring (1964) from NASA and the U.S. marine corps, he was elected (1974, 1980, 1986, 1992) to the U.S. Senate as a Democrat from Ohio. He made unsuccessful bids for the Democratic presidential nomination in 1984 and 1988.

glider, type of aircraft resembling an airplane but having at most a small auxiliary propulsion plant and often no means of propulsion at all. Modern gliders typically have very slender wings and streamlined bodies. An unpowered glider is usually launched by an elastic shock cord, a rope, or a cable attached to its front and pulled by a launching crew, a tow car, or a tow plane; its relative low weight and large wing area permit it to keep flying for long periods and updrafts of air are used to gain altitude. The type of craft built especially for soaring and sustained flight is called a sailplane. See also HANG GLIDING; LILIENTHAL, OTTO.

Glière, Reinhold Moritzovich [glĕĕr'], 1875–1956, Russian composer and teacher of PROKOFIEV and KHACHATURIAN. His romantic, impressionistic compositions show folk influences. The ballet *The Red Poppy* (1927) is well known.

Glinka, Mikhail Ivanovich [glēn'kä], 1804–57, first of the nationalistic school of Russian composers. His operas *A Life for the Czar* (1836) and *Russlan and Ludmilla* (1842) introduced a characteristically Russian style.

global warming, gradual increase of the temperature of earth's lower atmosphere as a result of human activity. A layer of atmospheric gases (carbon dioxide, methane, nitrous oxide, and ozone; called greenhouse gases) allows radiation from the sun to reach the earth unimpeded and traps INFRARED RADIATION from the earth's surface. This process, called the GREENHOUSE EFFECT, keeps the earth's temperature at a level suitable for life. Growth in industry, agriculture, and transportation since the Industrial Revolution, however, has produced gases that have augmented the earth's thermal blanket. Some researchers believe that continued production of greenhouse gases will lead to global temperature increases, which could melt the polar ice sheets, resulting in a rise in sea level and damage to coastal development and estuaries; dry soils, producing profound changes in agriculture; endanger many species; and spawn more frequent tropical storms. Despite controversy over this scenario, many nations have acted to decrease greenhouse-gas production and control deforestation, which also contributes to higher levels of carbon dioxide.

Globe Theatre, London playhouse, built 1598, where most of SHAKESPEARE's plays were presented. It burned down in 1613, was rebuilt, and was destroyed by the Puritans in 1644.

globular cluster: see STAR CLUSTER.

globulin, any of a very large family of PROTEINS widely distributed in animals and plants. The gamma globulins, isolated from mammalian blood serum, are the antibodies of the immune system (see IMMUNITY). Gamma globulin injections are given to people exposed to a disease (e.g., infectious hepatitis) to create a temporary immunity to the disease or reduce its severity and to people whose bodies cannot produce antibodies.

glockenspiel: see PERCUSSION INSTRUMENT.

Glorious Revolution, in English history, the events of 1688–89 leading to the deposition of JAMES II and the accession of WILLIAM III and MARY II. James's overt Catholicism and the birth of a Catholic heir united Whigs and Tories against him. Seven Whig and Tory leaders sent an invitation to the Dutch prince, William of Orange, and his consort, Mary, the Protestant daughter of James, to come to England. When William and Mary landed, James's army deserted

him and he fled to France (Dec. 1688). William and Mary accepted the BILL OF RIGHTS (1689), which assured the ascendancy of parliamentary power over royal power.

Gloucester, city (1990 pop. 28,716), NE Mass., on Cape Ann; settled 1623, inc. as a city 1873. Its fine harbor has been used by fishing ships for over three centuries, and it is still a great fishing port with many related industries. The picturesque city is a resort center and artists' colony. Points of interest include the bronze *Fisherman,* a memorial to Gloucester sailors lost at sea, and Hammond Castle Museum.

gloxinia: see GESNERIA.

glucagon, polypeptide HORMONE secreted by the islets of Langerhans in the PANCREAS. It tends to counteract the action of INSULIN, i.e., it raises the concentration of glucose in the blood, by promoting GLYCOLYSIS. The actions of glucagon are mediated by cyclic adenosine monophosphate, which is synthesized from adenosine triphosphate.

Gluck, Christoph Willibald von [glŏŏk], 1714–87, German-born operatic composer. With *Orfeo ed Euridice* (1762) he revolutionized OPERA, establishing lyrical tragedy as a vital form that unified dramatic, emotional, and musical elements. *Alceste* (1767) followed. In Paris he produced (1774) *Iphigénie en Aulide,* his first serious opera with a French libretto. His last important work, *Iphigénie en Tauride* (1779), is often considered his masterpiece. Gluck's emphasis on dramatic impact and musical simplicity became incorporated into French operatic tradition.

glucose, dextrose, or **grape sugar** (empirical formula: $C_6H_{12}O_6$), white crystalline SUGAR; somewhat less sweet-tasting than SUCROSE (table sugar), it is found in fruits and honey. Glucose is the major source of energy in animal metabolism. It requires no digestion prior to absorption into the bloodstream. A monosaccharide (see CARBOHYDRATE), glucose can be obtained by HYDROLYSIS of a variety of more complex carbohydrates, e.g., MALTOSE, CELLULOSE, or GLYCOGEN. It is commercially made from cornstarch (see STARCH) and is used in sweetening candy, chewing gum, jellies, and various foods. Glucose present in urine may be a symptom of DIABETES.

glutton: see WOLVERINE.

glycogen, highly branched POLYMER of GLUCOSE that is made and stored in the LIVER and MUSCLE cells of humans and the higher animals and in the cells of lower animals. During short periods of strenuous activity, energy is released in the muscles by direct conversion of glycogen to lactic acid. See also CARBOHYDRATE.

glycolysis, process in all higher animals and most microorganisms in which glucose is broken down. Beginning with a single molecule of glucose, glycolysis is a series of chemical reactions requiring eleven different ENZYMES and eventually yielding two molecules of lactic acid, which then enter the CITRIC ACID CYCLE. The reactions of glycolysis also generate the high-energy substance ADENOSINE TRIPHOSPHATE. Glycolysis is the primary means by which many anaerobic organisms obtain energy.

gnat, small, two-winged INSECT of the order Diptera (see FLY). Gnats include black flies, crane flies, midges, MOSQUITOES, and others. Gnats often assemble in large mating swarms. Some gnats are suspected carriers of pinkeye and yaws.

gnathustomulid, member of a phylum (Gnathustomulida) of microscopic worms that have elongated bodies and cilia and are hermaphroditic. They live largely in sandy marine sediments. They resemble flatworms, but their feeding mechanism differs, and their epithelial cells each have only one cilium.

gneiss, coarse-grained, imperfectly layered metamorphic ROCK characterized by alternating dark and light bands that differ in mineral content. Gneisses result from the metamorphism of many igneous or sedimentary rocks and are the most common types of rocks found in Precambrian regions.

Gnosticism, dualistic religious and philosophical movement of the late Hellenistic and early Christian eras. The term designates a variety of sects, all promising salvation through an occult knowledge [Gr. *gnōsis*] that they claimed was revealed to them alone. Christian ideas were quickly incorporated into these syncretistic systems, and by the 2d cent. A.D. several posed a serious threat to Christianity; much of early Christian doctrine was formulated in reaction to this danger. Gnosticism taught that the spirit was held captive by evil archons but that through the use of secret formulas it could be freed at death and restored to the heavenly abode. Gnosticism eventually merged with MANICHAEISM, which adopted many of its ideas. The Mandaeans, in modern Iran and Iraq, are the only Gnostic sect extant.

GNP: see GROSS NATIONAL PRODUCT.

gnu or **wildebeest,** large ANTELOPE (genus *Connochaetes*) living in herds on African grasslands. A swift runner, it has hindquarters like those of a horse and a head and humped shoulders like those of a buffalo. A beard, mane, long tail, and large curving horns are characteristic of both sexes. The brindled gnu, or blue wildebeest (*C. taurinus*), weighs c.500 lb (225 kg) and stands 4½ ft (135 cm) at the shoulder.

goat, ruminant MAMMAL (genus *Capra*) of the CATTLE family, with hollow horns, coarse hair, and a characteristic "beard," closely related to the SHEEP. Found in mountainous terrain and arid climates worldwide, goats live in herds and feed on grass and shrubs. They have been bred for centuries for their highly nutritious milk and valuable hair and wool, the source of mohair and cashmere. Wild goats include the IBEX.

goatsucker, medium-sized, primarily nocturnal BIRD (order Caprimulgiformes) found in temperate and tropical regions. Goatsuckers have long, pointed wings, weak feet, and small, gaping bills fringed with bristles. Most are brown, gray, or black and have monotonous songs. They feed mainly on insects. All fly at night except the nighthawk, which is active at dawn and dusk. One species, the whippoorwill, common in the E U.S., hibernates during the winter instead of migrating.

Gobi, one of the world's great deserts, c.500,000 sq mi (1,295,000 sq km), extending c.1,000 mi (1,610 km) east to west across Central Asia, in SE Mongolia and N China. It is from 3,000 to 5,000 ft (910 to 1,520 m) high, with cold winters, short hot summers, and fierce sand and wind storms. Grassy fringe areas support a small population of nomadic Mongol herders, and there are important deposits of oil at Yumen (China) and Saynshand (Mongolia) and coal at Tawan-Tolgoi (Mongolia). The Kerulen R. is the largest permanent stream.

God, divinity of the three great monotheistic religions, JUDAISM, CHRISTIANITY, and ISLAM, as well as many other world religions. In the Old Testament various names for God are used, *Elohim* most commonly. The four-letter form YHWH is the most celebrated; the Hebrews considered it ineffable and in reading substituted the name *Adonai* [my Lord]. The reconstruction *Jehovah* was based on a mistake, and the form *Yahweh* is not now regarded as reliable. The general conception of God is that of an infinite being (often a personality but not necessarily anthropomorphic) who is supremely good, who created the world, who knows all and can do all, who is transcendent over and immanent in the world, and who loves all human beings. (The Old Testament concept of God is less unified and consistent.) The majority of Christians believe God lived on earth in the flesh as Jesus Christ (see JESUS; TRINITY). Muslims call God *Allah,* the name of God in Arabic, the language of the Koran, but it is also used by Arabic-speaking Christians. The several famous arguments for the existence of God are based on causality, design and purpose in the universe, and the nature of divine being; many have held, however, that God's existence must be accepted on faith. Some philosophers have extended the name God to such concepts as world soul, cosmic energy, and mind.

Godard, Jean-Luc [gôdär'], 1930–, French film director. His highly personal films are marked by a free-wheeling approach to content and style. *Breathless* (1959), noted for its elliptical editing, was followed by films like *My Life to Live* (1962), *Weekend* (1967), and *Every Man for Himself* (1980).

Goddard, Robert Hutchings, 1882–1945, American physicist and rocket expert; b. Worcester, Mass. In 1926 he completed and successfully fired the world's first liquid-fuel rocket. Goddard designed and built early high-altitude rockets, the first practical automatic steering device for rockets, and many other rocket devices. He was one of the first persons to develop a general theory of rocket action and to prove experimentally the efficiency of rocket propulsion in a vacuum.

Godden, Rumer, 1907–, English novelist. Subtle characterization marks her novels, which include *Black Narcissus* (1939), *The River* (1946), *In This House of Brede* (1969), and *The Dark Horse* (1982).

Her sister **Jon Godden,** 1908–, is a novelist whose works include *In the Sun* (1965).

Gödel, Kurt [gö'dəl], 1906–78, Czech-American mathematician and logician. He came to the U.S. in 1940. Gödel is best known for his work in mathematical logic, particularly his proof (1931) of a theorem stating that the various branches of mathematics are based in part on propositions that are not provable within mathematics itself, although they may be proved by means of logical systems external to mathematics.

Godfrey of Bouillon [bo͝oyôN'], c.1058–1100, crusader, duke of Lower Lorraine. He was prominent in the First CRUSADE at the siege of Jerusalem (1099) and was elected ruler of the city after its capture. Known for piety and simplicity, he was the subject of many legends and CHANSONS DE GESTE. He was succeeded by his brother BALDWIN I.

Godfrey of Strasbourg: see GOTTFRIED VON STRASSBURG.

Godiva, Lady [gōdī'və], fl. c.1040–c.1080, wife of Leofric, earl of Mercia. According to legend, she rode naked through the town of Coventry to persuade her husband to lower the heavy taxes. The only person who looked at her as she rode became known as Peeping Tom.

Godolphin, Sidney Godolphin, 1st earl of, 1645–1712, English statesman. Possessed of considerable financial knowledge, he early established a friendship with the duke of MARLBOROUGH, and their political fortunes were closely linked. He was first lord of the treasury under CHARLES II, JAMES II, WILLIAM III (1689–96, 1700–1701), and Queen ANNE (1702–10).

Godoy, Manuel de [gōthoi'], 1767–1851, Spanish statesman. As chief minister (1792–97, 1801–8) of CHARLES IV, he made peace with France (1795) and led the Spanish army to victory over Portugal (1801). His alliance with NAPOLEON I against England resulted in the Franco-Spanish naval defeat at TRAFALGAR (1805). An unscrupulous, corrupt politician, he was overthrown (1808) when France invaded Spain in the PENINSULAR WAR, and he went into exile in France.

Godunov, Boris [gədo͞onôf'], c.1551–1605, czar of Russia (1598–1605). A favorite of IVAN IV, Boris was regent for Feodor I, Ivan's son, and probably had Ivan's younger son, DMITRI, murdered. On Feodor's death an assembly of the ruling class made Boris czar. He ruled capably, but popular distrust and famine (1602–4) undermined his reign. In 1604 a pretender claiming to be Dmitri invaded Russia; Boris died, and his son, Feodor II, could not defend the throne.

Godwin, William, 1756–1836, English author and political philosopher. Rationalism, materialism, and anarchism mark his *Enquiry Concerning Political Justice* (1793) and his novels, including *The Adventures of Caleb Williams* (1794) and *Fleetwood* (1805). In 1797 he married the feminist Mary WOLLSTONECRAFT. Their daughter, Mary SHELLEY, married the poet P.B. SHELLEY, who was influenced by Godwin's works.

Godwin-Austen, Mount: see K2.

Goebbels, Paul Joseph [göb'əls], 1897–1945, German NAZI propagandist. One of HITLER's original followers, he became propaganda minister in 1933, which gave him complete control over the German radio, press, cinema, and theater; later he also regimented all German culture. A master of the "big lie," he directed his most virulent propaganda against the JEWS. He killed himself and his family after Germany's defeat in World War II.

Goering or **Göring, Hermann Wilhelm** [gö'riNG], 1893–1946, German NAZI leader. One of HITLER's earliest followers, Goering founded and headed (1933–36) the Gestapo (secret police) after Hitler came to power. He was air minister after 1937, and he directed the German economy as a virtual dictator. Hitler designated him as his successor in 1939. In WORLD WAR II he was responsible for the total air war. He was severely criticized for not being able to counter the Allies' bombing raids, and in 1943 Hitler relieved him of all duties and offices. He was sentenced to death for his WAR CRIMES at the Nuremberg trials, but he killed himself two hours before he was to be hanged.

Goes, Hugo van der [go͞os], d. 1482, Flemish painter. His *Monforte Altarpiece* (c.1472; Berlin) reveals a classic sonority in color and serenity. Later works, e.g., the great *Portinari Altarpiece* (c.1476; Uffizi), show tension and dissonance in color and spatial arrangement. His *Death of the Virgin* (c.1480; Bruges) is remarkable for its staring, melancholy apostles.

Goethals, George Washington [gō'thəlz], 1858–1928, American army engineer; b. Brooklyn, N.Y. After serving on inland water projects, he became (1907) chief engineer of the PANAMA CANAL. After overcoming geological, climatic, and labor problems, he completed (1919) the canal ahead of schedule. For the next two years he was governor of the Canal Zone.

Goethe, Johann Wolfgang von [gö'tə], 1749–1832, German poet, dramatist, novelist, and scientist whose genius embraced most fields of human endeavor. His autobiography, *Poetry and Truth* (1811–13), describes his happy childhood. He studied law at Leipzig (1765) and at Strasbourg (1770–71), where he met HERDER and began his lifelong study of plants and animals. Lasting influences from this period were J.J. ROUSSEAU and SPINOZA, who appealed to his mystic feeling for nature. Goethe first won attention with the drama *Götz von Berlichingen,* a product of STURM UND DRANG, and *The Sorrows of Young Werther* (1774), an epistolary novel of morbid sensibility written after his unrequited love for Charlotte Buff. In 1775 Goethe was invited to visit Charles Augustus, duke of Saxe-Weimar, at whose court he was to spend the rest of his life. For 10 years Goethe was chief minister of state at Weimar. A trip to Italy (1786–88) fired his enthusiasm for the classical ideal. Written under this impact were *Egmont* (1788), *Roman Elegies* (1788), *Torquato Tasso* (1789), *Hermann and Dorothea* (1797), and the final version of the drama *Iphigenia in Tauris* (1787). A major work, *The Apprenticeship of Wilhelm Meister* (1796), became the prototype of the German novel of character development; also acclaimed is Goethe's psychological novel *Elective Affinities* (1809). The first part of his dramatic poem *Faust,* one of the great works of world literature, was published in 1808; the second, after his death. The friendship of SCHILLER made a deep impression on Goethe. His many relationships with women inspired some of his finest lyrics. The collection *West-Eastern Divan* (1819) also reflects his readings of the Persian poet HAFIZ. Increasingly aloof in his later years from national or literary partisanship, Goethe became more and more the Olympian divinity to whose shrine at Weimar all Europe flocked. His approach to science combined sensuous experience with poetic intuition; well known is his stubborn attack on Newton's theory of light (1810). Most of his works have been translated into English, notably by Thomas CARLYLE.

Goffman, Erving, 1922–88, American sociologist; b. Manville, Alta. He developed a performance-oriented theory of behavior in *The Presentation of Self in Everyday Life* (1959). *Asylums* (1961), which dealt with personality changes among inmates of a mental asylum, led to his study of other institutions. He taught at the universities of California and Pennsylvania.

Gogh, Vincent Van: see VAN GOGH, VINCENT.

Gogol, Nikolai Vasilyevich [gô'gəl], 1809–52, Russian writer. His first success was *Evenings on a Farm Near Dikanka* (1831–32), a collection of fanciful tales set in his native Ukraine. *Mirgorod* (1835) included "Taras Bulba," a novella of 17th cent. COSSACK life. He next wrote several tales of St. Petersburg; the most famous is "The Overcoat." His fame as a dramatist rests on *The Inspector-General* (1836), a satire on provincial folly. The culmination of his inventive gift was *Dead Souls* (1842), a picaresque novel about a rogue who buys the names of dead serfs in order to mortgage them.

Goidelic: see GAELIC.

Golan Heights, strategic upland region in SW Syria, c.500 sq mi (1,250 sq km), bordering S Lebanon, NE Israel, and NW Jordan, formally annexed by Israel in 1981. Elevations range from c.6,500 ft (2,000 m) in the north to below sea level along the Sea of Galilee (Lake Tiberias) and the Yarmuk R. in the south. The Golan Heights were fortified and used for artillery attacks on Israel after 1948. The region was captured by Israel during the Six-Day War in 1967 (see ARAB-ISRAELI WARS).

gold (Au), metallic element, known since prehistoric times. Chemically inactive, this very ductile and most malleable METAL can be beaten into thin sheets of gold leaf. Only silver and copper conduct electricity better. Gold is usually hardened by alloying with other metals; it also often occurs in nature as an alloy. The gold content

of an alloy is stated in carats; by definition, pure gold is 24 carats, and thus a 75% gold alloy is 18 carats. Gold is found widely distributed, mostly in metallic form as dust, grains, flakes, or nuggets. It occurs in quartz veins or lodes, usually in association with silver or other metals, and in alluvial placer deposits. Chief producers are South Africa, Russia, Canada, and the U.S. Possibly the first metal used by humans, gold was valued for ornaments, and magical powers were attributed to it. Alchemists of the Middle Ages tried to transmute baser metals into gold (see ALCHEMY). The search for gold stimulated European exploration of the Western Hemisphere. For discussion of its monetary function, see BIMETALLISM; COIN; MONEY. See also ELEMENT (table); PERIODIC TABLE.

Goldberg, Rube (Reuben Lucius Goldberg), 1883–1970, American cartoonist; b. San Francisco. A humorous and political cartoonist, he is known for drawings of wildly intricate machines that perform simple tasks. He was also a sculptor.

Golden Age, [Span. *Siglo de Oro*], in Spanish literature, the period between c.1500 and c.1680, when many of the masterpieces of Spanish literature were produced. During the 16th cent. Spain became a dominant European power, and the spirit of the RENAISSANCE invaded its life and letters. Spanish writers assimilated the foreign influences to produce a distinctive literature characterized by patriotism, realism, and, occasionally, mysticism. The greatest single work of the period was *Don Quixote de la Mancha* (1605, 1615), by CERVANTES. Other important writers of the Golden Age were ALARCÓN Y MENDOZA, CALDERÓN, ERCILLA, ESPINEL, GARCILASO DE LA VEGA, GÓNGORA, GRACIÁN, St. JOHN OF THE CROSS, LOPE DE VEGA, MORETO, QUEVEDO, ROJAS ZORILLA, ST. THERESA of Ávila, and TIRSO DE MOLINA.

Golden Ass, The: see APULEIUS, LUCIUS.

golden calf, in the BIBLE, an idol erected by the Israelites on several occasions. AARON made one while MOSES was on Mt. Sinai. JEROBOAM I made two, and HOSEA denounced a calf in Samaria. A bull cult was widespread in CANAAN at the time of the Israelite invasion.

Golden Fleece, in Greek mythology, magic fleece of the ram that carried Phrixus and Helle from Boeotia. Helle fell into the sea (which became the Hellespont), but Phrixus arrived safely in Colchis. He then sacrificed the ram, which became the constellation Aries. Its fleece, hung in a wood guarded by a dragon, was later sought by JASON and the Argonauts.

Golden Gate Bridge, one of the world's longest suspension bridges, built (1933–37) across the entrance (Golden Gate) of San Francisco Bay, Calif. It has a main span of 4,200 ft (1,280 m) and a total length of 9,266 ft (2,824 m).

Golden Horde, Empire of the, Mongol state comprising most of Russia, founded in the mid-13th cent. by the Mongol leader Batu Khan (see TATARS). The name derives from the magnificence of the Mongol camp on the Volga, where the empire had its capital. The Russian principalities were tributaries of the khan, who confirmed princely succession and exacted taxes. In the early 14th cent., Islam became the official religion of the empire. Warfare among its leaders and attempts by the Russian princes to end tributary payments weakened the empire. TIMUR conquered it in the late 14th cent.

golden retriever, large SPORTING DOG; shoulder height, c.23 in. (58 cm); weight, 60–75 lb (27.2–34.1 kg). Its water-repellent double coat is golden-brown. Developed in Scotland in the 19th cent. mainly to hunt waterfowl, this hardy breed is also used as a guide dog.

goldenrod, any species of the genus *Solidago* of the COMPOSITE family, chiefly North American weedy herbs with small, mostly yellow flowers growing along a slender stem. Once incorrectly thought to cause hay fever, it grows wild in many parts of the U.S. and is the state flower of Kentucky and Nebraska. Goldenrod has been used in dyes and teas.

Golden Rule, saying of JESUS, "As ye would that men should do to you, do ye also to them likewise."

goldfish, freshwater FISH (genus *Carassius*) popular in home aquariums. Native to China, it was domesticated centuries ago from its wild form, an olive-colored carplike fish up to 16 in. (40 cm) long. Marketed goldfish are 1 to 4 in. (2.5 to 10 cm) long and most commonly orange in color; breeders have developed bizarre varieties with unusual tails, double or triple fins, bulging eyes, and a range of colors.

Golding, Sir William (Gerald), 1911–93, English novelist. His novels, concerned especially with the dark side of human nature, include the nightmarish *Lord of the Flies* (1954), *The Spire* (1964), and *Rites of Passage* (1980). He was awarded the 1983 Nobel Prize for literature and was knighted in 1988.

Goldman, Emma, 1869–1940, American anarchist; b. Russia; emigrated to the U.S. in 1886. With the anarchist Alexander BERKMAN, she published the paper *Mother Earth.* Between 1893 and 1917 she was imprisoned several times on such charges as inciting to riot, publicly advocating birth control, and obstructing the draft. She and Berkman were deported (1919) to Russia; disagreeing with the Soviet government, she left in 1921.

Goldmark, Peter Carl, 1906–77, Hungarian-American engineer. Emigrating to the U.S. (1933), he joined (1936) the Columbia Broadcasting System, where he perfected the first commercial color television system. He also developed the 33⅓ (LP) phonograph and the scanning system used (1966) by the Lunar Orbiter space probe to radio photographs back to the earth.

Goldoni, Carlo, 1707–93, Italian dramatist, author of over 260 works, including opera. He created a new Italian COMEDY of character, an advance on the COMMEDIA DELL'ARTE. Among his most notable plays are *The Mistress of the Inn* (1753), *The Accomplished Maid* (1756), and *The Fan* (1763).

Goldsmith, Oliver, 1730?–74, Anglo-Irish author. One of Samuel JOHNSON's circle, he made his name with *Citizen of the World* (1762), a series of whimsical essays; the philosophical poem *The Traveler* (1764); and the nostalgic pastorale *The Deserted Village* (1770). His reputation, however, rests on two comedies, *The Good-natur'd Man* (1768) and *She Stoops to Conquer* (1773), and on his novel *The Vicar of Wakefield* (1766). The comedies injected realism into the dull, sentimental theater of the day and, like the novel, are imbued with humor and warm humanity.

Goldwater, Barry Morris, 1909–, U.S. senator (1953–65, 1969–87); b. Phoenix, Ariz. He was the leader of the extreme conservative wing of the Republican party during the 1950s and 1960s. He ran for president in 1964 but was decisively defeated by Lyndon B. JOHNSON. His son **Barry Morris Goldwater, Jr.,** 1938–, b. Los Angeles, was a U.S. congressman from California (1968–83).

Goldwyn, Samuel, 1882–1974, American film producer; b. Poland as Samuel Goldfish. In 1916 he formed Goldwyn Pictures, which merged with L.B. MAYER's company to become Metro-Goldwyn-Mayer in 1924. Goldwyn also produced films independently, e.g., *The Best Years of Our Lives* (1946).

golem [Heb., = something shapeless], in medieval Jewish legend, a robotlike servant made of clay and given life by means of a charm, particularly the name of God.

golf, game in which players hit a small, hard ball with specially designed clubs over an outdoor course (links). The object is to deposit the ball in a cup, or hole, using as few strokes as possible. The standard course, usually more than 6,000 yd (about 5,500 m) in length, is divided into 18 holes, each consisting of a tee, from which the ball is initially driven; the fairway, bounded by tall grass (the rough) and containing natural or artificial obstacles (hazards) such as water and sand traps; and the green, a smooth surface on which the cup (4.5 in/11.43 cm in diameter) is located. A set of 14 golf clubs typically includes 3 or 4 woods, 8 to 10 irons, 1 or 2 wedges, and a putter for use on the green. Although its origin is unknown, golf is identified with Scotland, where it was played as early as 1457. The British Open Tournament was established in 1860. The game may have been played in America in the 17th cent., but the first permanent club, at Yonkers, N.Y., was not organized until 1888. In the 20th cent. golf experienced a tremendous increase in popularity. The professional tour, led by such stars as Arnold PALMER and Jack NICKLAUS, emerged as a major attraction after World War II, and the women's professional tour grew in popularity in the 1980s and early 90s.

Golgi, Camillo [gôl'jē], 1844–1926, Italian physician. For his work on the structure of the nervous system, he shared with Santiago Ramón y Cajal the 1906 Nobel Prize in physiology or medicine. Golgi stained nerve tissue with silver nitrate to delineate (1883) certain nerve cells (Golgi cells) in the central nervous system; ob-

served (1909) the Golgi apparatus, a part of the cytoplasm distinguishable by staining; and recognized that the three types of malaria are caused by different protozoan organisms.

Golgotha: see CALVARY.

Goliad, city (1990 pop. 1,946), seat of Goliad co., S Tex., on the San Antonio R., a market town in a farm area. During the Texas Revolution (1836) it was the scene of the infamous "Goliad massacre" of Texan prisoners by Mexican troops. A Spanish mission (est. 1749) and presidio are tourist attractions.

Goliath, in the BIBLE, gigantic Philistine who challenged the Israelites. The young DAVID accepted the challenge and killed him with a stone from a sling.

Gomorrah: see SODOM AND GOMORRAH.

Gompers, Samuel, 1850–1924, American labor leader; b. England. After emigrating to the U.S. in 1863, he worked as a cigar maker and joined the local union. In 1881 he helped found the labor organization that became the American Federation of Labor in 1886. From 1886 until his death (except during 1895), he was president of the AFL. He directed the successful battle with the KNIGHTS OF LABOR and kept the AFL free of radical and socialistic elements; he also won higher wages, shorter hours, and more freedom for workers. A man of great personal integrity and the leading spokesman of the labor movement, he did much to make organized labor respected. See AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS.

Gomułka, Władysław, 1905–82, Polish Communist leader. As first secretary of the Communist party (1956–70), he liberalized Poland while retaining close ties to the USSR. He resigned as the result of food riots.

Goncharov, Ivan Aleksandrovich [gənchərôf'], 1812–91, Russian novelist. A government official, he wrote the satirical novel *Oblomov* (1859), a classic study of indolence. Other novels are *A Common Story* (1847) and *The Precipice* (1869).

Goncourt, Edmond Louis Antoine Huot de [gôNkōōr'], 1822–96, and **Jules Alfred Huot de Goncourt,** 1830–70, French authors, brothers. Together they wrote social history, art criticism, and influential naturalistic novels, e.g., *Renée Mauperin* (1864) and *Mme Gervaisais* (1869). From 1851 they published the highly successful *Journal des Goncourt,* for 40 years providing an intimate account of Parisian society. Their work paved the way for both NATURALISM and IMPRESSIONISM. In his will, Edmond provided for the founding of the Goncourt Academy and its annual prize for fiction.

Gondwanaland: see CONTINENTAL DRIFT.

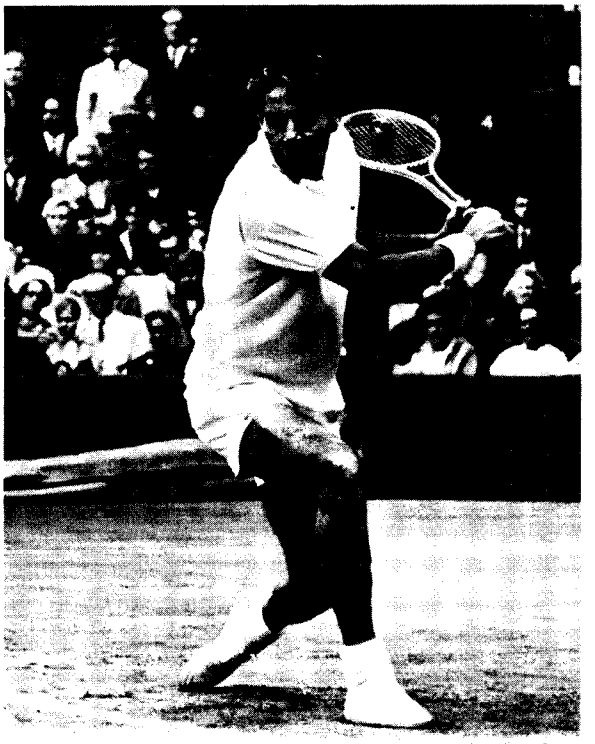
gong: see PERCUSSION INSTRUMENT.

Góngora y Argote, Luis de [gōn'gōrä ē ärgō'tā], 1561–1627, Spanish poet. A major figure of Spain's GOLDEN AGE, he wrote sonnets, ballads, and the long pastoral *Solitudes* (1613), his masterpiece. His complex, artificial style, characterized by innovative use of metaphor, latinate vocabulary, and classical and mythological allusions, exemplifies the baroque tendencies that came to be known as *Gongorism.*

gonorrhea, infectious disease involving chiefly the mucous membranes of the genitourinary tract, caused by the bacterium *Neisseria gonorrheae.* A SEXUALLY TRANSMITTED DISEASE, gonorrhea causes inflammation of the genital organs and urethra and, if untreated, sterility. The disease is treated with ANTIBIOTICS, but the bacterium has developed strains that are resistant to antibiotic treatment.

Gonzaga [gōntsä'gä], Italian princely house that ruled Mantua (1328–1708), Montferrat (1536–1708), and Guastalla (1539–1746). **Francesco Gonzaga,** 1466–1519, marquis of Mantua, married Isabella d'ESTE and made numerous alliances in the ITALIAN WARS. His son, **Federico Gonzaga,** 1500–40, was made (1530) duke of Mantua and acquired Montferrat. In 1627 this senior branch became extinct, and the succession was disputed by a cadet line that had acquired the French duchies of Nivernais and Rethel, and by another junior branch that ruled Guastalla. War broke out between France and Spain over the issue, and the Nivernais branch won (1631). It in turn became extinct in 1708.

Gonzales, Pancho (Richard Alonzo Gonzales), 1928–, American tennis player; b. Los Angeles. Known for his powerful service, he won (1948–49) two U.S. national singles titles. His early professional career was unsuccessful, but he rose to prominence in



Pancho Gonzalez

1954, remaining the professional champion (except for 1960) until 1961.

González Márquez, Felipe, 1942–, prime minister of Spain (1982–). A lawyer and first secretary (1974–79, 1979–) of the Spanish Socialist party, González led the Socialists to a landslide victory in the 1982 parliamentary elections to become head of Spain's first leftist government since the SPANISH CIVIL WAR. The Socialists were returned to power in 1986, 1989, and, as a minority government, 1993. In 1986 he led Spain into the European Community.

Goodall, Jane, 1934–, British ethologist. An authority on chimpanzees, she has studied their behavior and social patterns since establishing (1960) a research camp in Tanzania. Her books include *My Friends the Wild Chimpanzees* (1967) and *The Chimpanzees of Gombe* (1986).

Good Friday, anniversary of JESUS' death on the cross, the Friday before Easter. Among Christians it is a day of mourning and penitence. In the Orthodox, Roman Catholic, and Anglican churches, the saying of Mass is suspended.

Goodman, Benny (Benjamin David Goodman), 1909–86, American clarinetist and bandleader; b. Chicago. He formed (1934) a big band and went on to become the "King of Swing," performing for radio, motion pictures, and records. He also led small ensembles, e.g., with Teddy Wilson (piano), Gene Krupa (drums), and Lionel Hampton (vibraphone), and was successful as a classical clarinetist. See also JAZZ.

Goodyear, Charles, 1800–60, American inventor and originator of vulcanized RUBBER; b. New Haven, Conn. He experimented for years to find a way to keep rubber from sticking and melting in hot weather; in 1839 he discovered vulcanization, patenting it in 1844. Goodyear worked and died in poverty.

goose, large, wild or domesticated swimming BIRD related to the DUCK and SWAN. Strictly speaking, the term *goose* applies to the female and *gander* to the male. In North America the wild, or Canada, goose (*Branta canadensis*) is known by its honking call and V-shaped, migrating flocks in spring and fall. Geese have been domesticated since ancient times; the popular Toulouse, or gray, goose is descended from the European graylag (*Anser anser*).

gooseberry: see CURRANT.

gopher or **pocket gopher,** burrowing RODENT (family Geomyidae)

found in North and Central America. The gopher is gray, buff, or dark brown; its combined head and body length is 5 to 12 in. (13 to 30 cm). It has extremely long teeth and large claws. The name *pocket gopher* refers to the fur-lined pouches that open on the outsides of its cheeks, used to carry food and nesting material.

Gorbachev, Mikhail Sergeyevich, 1931–, Soviet political leader, last president of the USSR (1988–91). A specialist in agriculture, he was elected to the Communist party's central committee in 1971 and became a full member of the POLITBURO in 1980. Succeeding CHERNENKO as general secretary of the Communist party in 1985, he was elected president of the USSR in 1988 and to a new, more powerful presidency in 1989. Confronted with deteriorating economic conditions, Gorbachev introduced policies whose guiding principles *glasnost* [openness] and *perestroika* [restructuring] were intended to liberalize and revitalize Soviet socialism and society. The changes succeeded in democratizing Soviet politics but produced few economic benefits and unleashed long-suppressed ethnic conflicts and separatist movements. In foreign affairs he vastly improved relations with the U.S. and ended Soviet interference in Eastern European nations, most of which subsequently elected non-Communist governments. In 1990 he was awarded the Nobel Peace Prize. The imminent signing of a treaty transferring many powers to the republics led hard-liners in Gorbachev's government to attempt (Aug. 1991) to overthrow him. In the aftermath Gorbachev aligned himself with Boris YELTSIN and other reformers and resigned from the Communist party. He agreed to even greater power-sharing with the republics and tried to prevent the USSR's disintegration but met with little success. The agreement (Dec. 8, 1991) by Belarus, Russia, and Ukraine to form the COMMONWEALTH OF INDEPENDENT STATES, the decision of all but one of the remaining republics to join, and Russia's expropriation of union ministries and property left Gorbachev without function or authority, and he resigned Dec. 25, 1991. In 1993 he became head of the International Green Cross, a newly established environmental organization.

Gorboduc, legendary early British king mentioned by GEOFFREY OF MONMOUTH. He divided his kingdom between his sons Ferrex and Porrex, causing great strife. *Gorboduc, or Ferrex and Porrex* (1561), was the first English blank-verse tragedy.

Gordian, name of three Roman emperors. **Gordian I** (Marcus Antonius Gordianus Africanus), d. 238, was made coemperor (238) with his son. After a reign of only 22 days, he committed suicide after learning that his son and colleague, **Gordian II,** 192–238, had been killed in battle. The latter's son, **Gordian III,** c.223–244, then became emperor. Philip the Arabian had him murdered in 244.

Gordian knot: see GORDIUS.

Gordimer, Nadine, 1923–, South African writer. Her novels, often bleak studies of South African life, include *The Voice of the Serpent* (1953), *A Guest of Honour* (1970), *Burger's Daughter* (1979), *July's People* (1981), and *My Son's Story* (1990). She has also written short stories. In 1991 Gordimer was awarded the Nobel Prize for literature.

Gordius, in Greek mythology, king of Phrygia. The pole of his wagon was fastened to the yoke with a knot that defied efforts to untie it. An oracle stated that he who untied this Gordian knot would rule Asia. According to legend, ALEXANDER THE GREAT simply cut the knot with his sword.

Gordon, Charles George, 1833–85, British soldier and administrator. After serving in the CRIMEAN WAR, he commanded the Chinese army that suppressed the TAIPING REBELLION; afterwards he was popularly known as "Chinese Gordon." He was governor of the Egyptian Sudan (1877–80). Later (1885), while trying to crush the power of the MAHDI, he was killed in the siege of KHARTOUM.

Gordon setter, large SPORTING DOG; shoulder height, 23–27 in. (58.4–68.6 cm); weight, 45–75 lb (20.4–34.1 kg). Its long, shiny coat is black, with tan markings. Developed in Scotland and popularized there by the fourth duke of Gordon in the early 1800s, it was brought to the U.S. in 1842.

Gore, Al(bert, Jr.), 1948–, vice president of the U.S. (1993–); b. Washington, D.C. A moderate Democrat, he served (1977–85) as a U.S. representative from Tennessee before he was elected (1984) U.S. senator from Tennessee. He ran unsuccessfully for the Democratic presidential nomination in 1988. Gore was reelected to the Senate in 1990. In 1992 Bill CLINTON chose Gore as his vice-presidential running mate. He has sought to draw attention to environmental concerns and to promote the development of nationwide information systems and the streamlining of the federal government.

Goren, Charles Henry, 1901–91, American expert on contract BRIDGE; b. Philadelphia. His first book on the game, *Winning Bridge Made Easy* (1936), outlined his point-count system for determining the strength of a hand; it became the standard. He later gave up his law practice to concentrate on bridge and wrote a daily newspaper column, as well as many books and magazine articles. A master player, he won, on average, a major tournament a year from 1937 to 1965, placing second many times when he didn't win.

Gorgon, in Greek myth, one of three hideous sisters, Stheno, Euryale, and Medusa (the only mortal one, killed by PERSEUS). Winged and snake-haired, they turned all who looked at them to stone. They were much represented in Greek art.

gorilla, largest APE (*Gorilla gorilla*), native to the forests of equatorial W Africa. Males range from 5 to 6 ft (150 to 190 cm) in height and weigh c.450 lb (200 kg) in the wild; they have prominent sagittal crests and brow ridges and enormous canine teeth. Females are about half the size of males, and their features are less developed. Their shaggy coats are brown or black. Though extremely muscular and powerful, gorillas are quiet and retiring; they are chiefly vegetarian.

Göring, Hermann Wilhelm: see GOERING, HERMANN WILHELM.

Gorky, Arshile [gôr'kē], 1904–48, American painter; b. Armenia. His early work is figurative and refined. Later he was influenced by SURREALISM and began (c.1940) to create abstractions of mysterious organic forms. His work was influential in the development of ABSTRACT EXPRESSIONISM.

Gorky, Maxim or **Maksim** [gôr'kē] [Rus., = bitter], pseud. of **Alekseyev Maximovich Pyeshkov,** 1868–1936, Russian writer. Born in poverty, he wandered the Volga region, educating and supporting himself, from the age of eight. *My Childhood* (1913), *In the World* (1916), and *My Universities* (1923) describe his early years. His first story appeared in 1892. In *Sketches and Stories* (1898) he wrote of the vigor and nobility of peasants, workers, and vagabonds. In 1902 *The Lower Depths,* the first and greatest of his 15 plays, was performed by the Moscow Art Theater. Gorky's friendships with the writers ANDREYEV, CHEKHOV, and TOLSTOY date from this time; he later published memoirs of all three. When the 1905 Revolution failed he was forced into exile. *Mother* (1906), which became the prototype of the revolutionary novel, was written in the U.S. After living in Capri (1907–13) Gorky returned to Russia in 1914. In the period of turmoil after the RUSSIAN REVOLUTION (1917), he used his friendship with LENIN and his post as head of the state publishing house to aid writers and artists. In 1921 he went abroad again, returning in 1928. *The Life of Klim Samgin* (1927–36), a four-part novel often considered his masterpiece, was unfinished at his death. Gorky's work, vital and optimistic, combines realism with a strong poetic strain. He is considered the father of Soviet literature and the founder of the doctrine of SOCIALIST REALISM.

Gorky: see NIZHNY NOVGOROD.

Gospel [M.E., = good news; cf. *evangel* from Gr., = good news], one of the four biographies of JESUS in the NEW TESTAMENT: MATTHEW, MARK, LUKE, and JOHN. The first three are called Synoptic Gospels because they present a comprehensive view, agreeing in subject matter and order. Many church liturgies include a solemn reading of the Gospel for the day. The honor paid to the Gospels resulted in some of the glories of book illumination, e.g., the Book of Kells.

gospel music, American musical form that developed in Protestant churches of the South. It is performed today by Americans of all backgrounds, but African-American gospel music is more important. Rooted in field and work songs, and owing less to the Protestant hymns than do African-American SPIRITUALS, gospel is an intense, joyful music. Its form derives from the call-and-response singing of preacher and congregation in African-American churches; the message is conveyed with tight control, at other times with abandon. Gospel and JAZZ were considered antithetical in African-American society until both forms gained general ac-

The key to pronunciation appears on page xiii.

ceptance by the mid-20th cent.; together they influence "soul" and ROCK MUSIC. Major gospel performers include Mahalia JACKSON, Sister Rosetta Tharpe, the Clouds of Joy, and the Dixie Hummingbirds. Popular artists influenced by gospel music include Ray CHARLES and Aretha FRANKLIN.

Gossaert or **Gossart, Jan:** see MABUSE, JAN DE.

Göteborg [yötəbôr'yə], city (1988 pop. 432,021), capital of Göteborg och Bohus co., SW Sweden, on the Kattegat. Sweden's most important seaport, it has shipyards and fisheries as well as such manufactures as wood and paper products, iron and steel, and ball bearings. Founded in 1604 by CHARLES IX, it was a major commercial center from the 17th cent. Early in the 20th cent., it became the terminus of an important transatlantic shipping service.

Gothic architecture and art. The character of the Gothic visual aesthetic was one of immense vitality; it was spikily linear and restlessly active. Informed by the scholasticism and mysticism of the Middle Ages, it reflected the exalted religious hysteria, the pathos, and the self-intoxication with logical formalism that were the essence of the medieval. The Gothic style was the dominant structural and aesthetic mode in Europe for 400 years. Making its appearance (c.1140) in the Île-de-France, the style owes much to prior experimentation in Normandy (see NORMAN ARCHITECTURE). Ribbed vaulting (see VAULT) and pointed ARCHES had been used in Romanesque construction but without such purposeful and constant application. The important Gothic rib delineated the vaults and clarified the entire structure. Unlike the Romanesque, Gothic construction emphasized light and soaring spaces. The introduction (c.1180) of flying BUTTRESSES reduced wall surfaces by relieving them of part of their structural function, making possible the huge stained-glass windows that gave High Gothic church walls the appearance of curtains. The High Gothic cathedral was based on the traditional basilican plan, but single units were integrated into a unified spatial scheme. The exterior view was dominated by twin towers crowning a facade decorated with sculptures. Additional towers, a profusion of flying buttresses, and pinnacles rose around the upper part of the edifice. The first landmark Gothic structure is the ambulatory of the abbey of Saint-Denis (1140–44). The influence of its large areas of glass and use of space was imitated in such cathedrals as those of Sens, Noyon, Laon, and Paris. The High Gothic phase is marked by the Cathedral of Chartres (begun after 1194). In the mid-13th cent., the Rayonnant style further reduced opaque wall surfaces for windows and stone tracery, e.g., Sainte-Chapelle, Paris. Interesting variations on Gothic style appeared in Western Europe. The early English style (late 12th–early 13th cent.) retained much of the ponderous mural style of Norman architecture, e.g., Salisbury Cathedral. Romanesque proportions were dominant in Italy, but the French style inspired German churches, e.g., in Cologne, as well as Spanish Gothic architecture. The latter was also influenced by Moorish tradition, e.g., in Toledo. In the 14th and 15th cent. these trends culminated in the flamboyant style, e.g., The Church of Saint-Maclou, Rouen; the decorated style in England, e.g., Ely Cathedral; and the even more flamboyant perpendicular style, e.g., the choir of the cathedral at Gloucester. After the 14th-cent. economic crises and the Black Death, building slowed, but the Gothic tradition never completely died. It was revived in the 19th cent. (see GOTHIC REVIVAL). All the other arts of the Gothic period were dominated by architecture. Sculpture and stained glass were integrated into the churches. By the 13th cent., sculpture became more important, more humanized, and less united with architecture. The tendency toward mannerisms in gesture and greater realism reached monumental form in the *Well of Moses* (1395–1403; Dijon), by Claus Sluter. Monumental fresco painting was rare in the Gothic period, though STAINED GLASS and tapestry assumed great importance and showed a stylistic development parallel to that of sculpture. The Paris school was the center of Gothic painting and manuscript illumination. The *Pietà* of the Avignon school (Louvre; c.1460) is noted for its originality of expression. The elegant International Style was developed at this time, and panel painting dominated all other forms of painting. The culmination of Gothic art in the 15th cent. was marked by SCHONGAUER, Lochner, FOUQUET, and the van EYCKS.

Gothic language, dead language belonging to the Germanic subfamily of the Indo-European family of languages. One of the earliest literary remains in any Germanic tongue is the Gothic Bible of Ulfilas. See LANGUAGE (table).

Gothic revival, term designating a return to building styles of the Middle Ages, most important in the U.S. and England. Early works were in the late ROCOCO manner of Horace WALPOLE's "gothick" house, Strawberry Hill (1770). By 1830, architects were copying the originals more literally. A.W.N. Pugin's *Contrasts* (1836) and *True Principles of Pointed or Christian Architecture* (1841) were basic texts. Pugin advocated adherence to the methods of medieval builders to achieve structural clarity. John RUSKIN elaborated on these ideas. The movement came into conflict with the CLASSIC REVIVAL. The Church of England, supporting the Gothic style, provided for the restoration of many medieval religious buildings. In 1840 Pugin and Sir Charles Barry won a competition with Gothic designs for the houses of parliament. VIOLLET-LE-DUC led the exponents of Gothic design in France. In the U.S. the picturesque aspect of the style dominated. Gothic works include James Renwick's ST. PATRICK'S CATHEDRAL (N.Y.C.). The revival foundered because of the impossibility of reproducing Gothic buildings without a medieval economy or technology.

Goths: see OSTROGOTHS; VISIGOTHS.

Gottfried von Strassburg (Godfrey of Strasbourg) [gôt'frēt fən shträs'bo͝orkh], fl. 13th cent., German poet. His unfinished Middle High German epic *Tristan* (c.1210) ranks him among the great medieval poets. See TRISTRAM AND ISOLDE.

Gottschalk, Louis Moreau, 1829–69, American pianist and composer; b. New Orleans. He achieved extraordinary international success as a performer. His compositions often use African-American and Creole rhythms and Spanish subjects. They include the piano pieces *The Last Hope* and *The Dying Poet.*

gouache: see WATERCOLOR PAINTING.

Gould, George Jay: see under GOULD, JAY.

Gould, Glenn, 1932–82, Canadian pianist and composer. A prodigy, he was noted for his interpretations of J.S. BACH and the romantic composers. After 1964 he concentrated on recording rather than performing.

Gould, Jay, 1836–92, American speculator; b. Delaware co., N.Y. From country-store clerk he rose to control half the railroad mileage in the Southwest, New York City's elevated lines, and the Western Union Telegraph Co. Aided by James FISK, he defeated Cornelius VANDERBILT for control of the Erie RR, but public protest over Gould's stock manipulations resulted in his expulsion in 1872. He then bought into the Union Pacific and other western railroads, and by sharp practice gained control of four lines, creating the Gould system. His scheming with Fisk to corner the gold market in 1869 caused the BLACK FRIDAY panic, and Gould's name became synonymous with autocratic business practice. His son, **George Jay Gould,** 1864–1923, b. N.Y.C., inherited his holdings. To compete with E.H. HARRIMAN, he bought or built railroads from coast to coast, but his unsound financing collapsed in the panic of 1907.

Gould, Stephen Jay, 1941–, American paleontologist and science writer; b. N.Y.C. With Niles Eldredge, Gould proposed (1972) the evolutionary theory of "punctuated equilibrium," which states that in geologic time and strata, the appearance of a new species occurs suddenly and without the continuous slow accretion of tiny variations, due to the nature of the evolutionary process and the relationship between the evolutionary and geologic time scales (see EVOLUTION; NATURAL SELECTION); and that the new species then persists virtually unchanged in the fossil record for perhaps millions of years. The "missing links" in evolutionary development sought since the time of Charles DARWIN are thus unlikely to be found. Elaboration of these concepts has led to extensive scientific debate. Gould has taught at Harvard Univ. since 1967 and has written many books and essays, including *The Mismeasure of Man* (1981) and *Wonderful Life* (1989).

Gounod, Charles François [gō͞o'nō], 1818–93, French composer of the romantic operas *Faust* (1859) and *Romeo and Juliet* (1867). He also wrote ORATORIOS and CANTATAS.

gourd, common name for some members of the Cucurbitaceae family, of tropical, subtropical, and temperate regions. The family is known for its many edible and otherwise useful plants, almost all annual herbs that grow as vines. Among these are *Cucurbita* spe-

cies, including the PUMPKIN and summer squashes (varieties of *C. pepo*) and the winter squashes (*C. maxima*); and *Cucumis* species, including the CUCUMBERS, gherkins (*C. anguria*), and all MELONS except the WATERMELON. The edible fruit of the loofah, or California okra (*Luffa cylindrica*), is dried for the inner fibrous network, which is used as a scrubbing sponge. The term *gourd* is applied to those members of the family whose fruits have hard, durable shells used for ornament and as utensils, e.g., cups, dippers, and bowls. The Old World genus *Lagenaria* includes the calabash, dipper, and bottle gourds.

Gourlay, Robert Fleming [gōōr'lē], 1778–1863, Scottish writer and agitator in Canada. After emigrating to ONTARIO in 1817, he opposed the control of land grants by the FAMILY COMPACT clique and was imprisoned and banished (1819) by it. His conviction was nullified (1842), and he returned briefly (1856–60) to Canada.

gout, condition that manifests itself as recurrent attacks of acute ARTHRITIS, distinguished from other forms of arthritis by the presence of increased uric acid in the body. It may become chronic and deforming. Gout usually begins with an acute attack of pain, inflammation, extreme tenderness, and redness in the affected joint. Treatment includes anti-inflammatory drugs, high liquid intake, and medication that increases uric acid excretion by the kidneys.

Gower, John, 1330?–1408, English poet, a friend of CHAUCER. His three major works are *Speculum meditantis* or *Miroir de l'omme*, an allegorical manual in French; *Vox clamantis*, in Latin; and *Confessio amantis* (c.1390), in English, a collection of stories illustrating the Seven Deadly Sins.

Gowon, Yakubu, 1934–, Nigerian head of state (1966–75). In 1966 he was appointed commander in chief of the armed forces and head of the military government. He led (1967–70) the fight against secessionist BIAFRA, and after the Nigerian victory he attempted a policy of reconciliation. He was deposed while abroad in 1975 and went in exile into England.

Goya y Lucientes, Francisco José de, 1746–1828, Spanish painter and graphic artist, the greatest painter of his age. After studying in Zaragoza, Madrid, and Rome, Goya designed a series of ROCOCO tapestries full of gaiety and charm, enhanced by earthy realism. The candor of observation revealed in these early works was later to make him the most graphic and savage of satirists. He became court painter to CHARLES III and CHARLES IV, and his royal portraits, painted with extraordinary realism, show his contempt for his subjects. In 1793 a severe illness left him deaf, and thereafter his works were cheerless. Two of his most celebrated paintings, *Maja Nude* and *Maja Clothed* (both: Prado) are from this period, as was his chief religious work, FRESCOES for the Church of San Antonio de la Florida, Madrid. It is in his ETCHINGS and AQUATINTS that his disillusionment is clearly seen. His *Caprichos* are a grotesque social satire; his *Disasters of War,* a series of etchings suggested by the Napoleonic invasions of Spain, are an indictment of human evil and corruption. Also inspired by the Napoleonic invasions is his compelling painting, *The Third of May 1808* (1814–15; Prado). At 70 Goya retired to his villa, decorating it with "Black Paintings" of macabre subjects, e.g., *Satan Devouring His Children, Witches' Sabbath,* and *The Three Fates* (all: Prado).

Goyen, Jan Josephszoon van, 1596–1656, Dutch landscape painter. His grayish-green landscapes of harbors, canals, riverbanks, and winter scenes sacrifice minute detail for atmospheric effects, e.g., *Banks of a Canal* (Louvre).

Goytisolo, Juan [goitēsō'lō], 1931–, Spanish writer. His novels, often realistic portrayals of post–civil war Spanish society, include *The Young Assassins* (1954), *The Party's Over* (1962), and *Makbara* (1980).

Gozzoli, Benozzo [gôt'tsōlē], 1420–97, Florentine painter; b. Benozzo di Lese. He was apprenticed to Fra ANGELICO. His famous *Journey of the Magi* (Medici Palace) depicts a magnificent cavalcade, with Lorenzo de' Medici as one of the Magi.

Gracchi [grăk'ī], two Roman statesmen and social reformers, brothers. **Tiberius Sempronius Gracchus,** d. 133 B.C., the elder brother, became alarmed at the growth of wealth of the few. He stood for the tribunate of the people in 133 B.C. as an avowed reformer and was the author of the Sempronian Law to redistribute the public lands. At the next election Tiberius renominated himself, but the senate had the election postponed. In a great riot on the following day Tiberius was killed. His brother, **Caius Sempronius Gracchus,** d. 121 B.C., became the organizer of the reform movement begun by Tiberius. Elected (123) tribune of the people, he initiated a series of remarkable social reforms. Caius was reelected (122) tribune, but the following year was defeated for reelection. Repeal of his measures was proposed, and in the ensuing riots Caius was killed.

Grace, 1929–82, princess consort of Monaco; b. Philadelphia as Grace Patricia Kelly. She was a major film star until 1956, when she married RAINIER III, the ruling prince of Monaco. She won the 1954 Academy Award for her performance in *The Country Girl.*

grace, in Christian theology, the free favor of God toward people, necessary for their salvation. Differing conceptions of grace led to challenges by the 5th-cent. heresy Pelagianism and by 16th-cent. CALVINISM. There is also cleavage in Christianity about the role of sacraments. Roman Catholics and Orthodox Christians hold that sacraments confer grace; Protestants, that they are merely signs, not sources, of grace.

Graces, in Greek mythology, personifications of beauty and charm; daughters of ZEUS and the oceanid NYMPH Eurynome. Also known as the Charites, they were named Aglaia, Thalia, and Euphrosyne. The Romans called them the Gratiae.

Gracián, Baltasar [gräthyän'], 1601–56, Spanish JESUIT writer of the GOLDEN AGE. His masterpiece is the allegorical, pessimistic novel *El criticón* (3 parts, 1651–57), which contrasts an idyllic primitive life with the evils of civilization. It brought him exile and disgrace.

grackle, New World BIRD of the family Icteridae, which includes the BLACKBIRD and BOBOLINK. The common grackle of the Atlantic coast is black with metallic hues. It eats grains and insects but is also a cannibalistic nest robber.

Graf, Steffi, 1969–, German tennis player. Graf won her first major title, the French Open, in 1987. In 1988 she captured the Grand Slam (Australian, French, and U.S. opens and Wimbledon) and the women's singles gold medal in the Olympics. Graf has subsequently won the Australian Open three times (1989–90, 1994), U.S. Open twice (1989, 1993), French Open once (1993), Wimbledon four times (1989, 1991–93) and a silver medal in the 1992 Olympics.

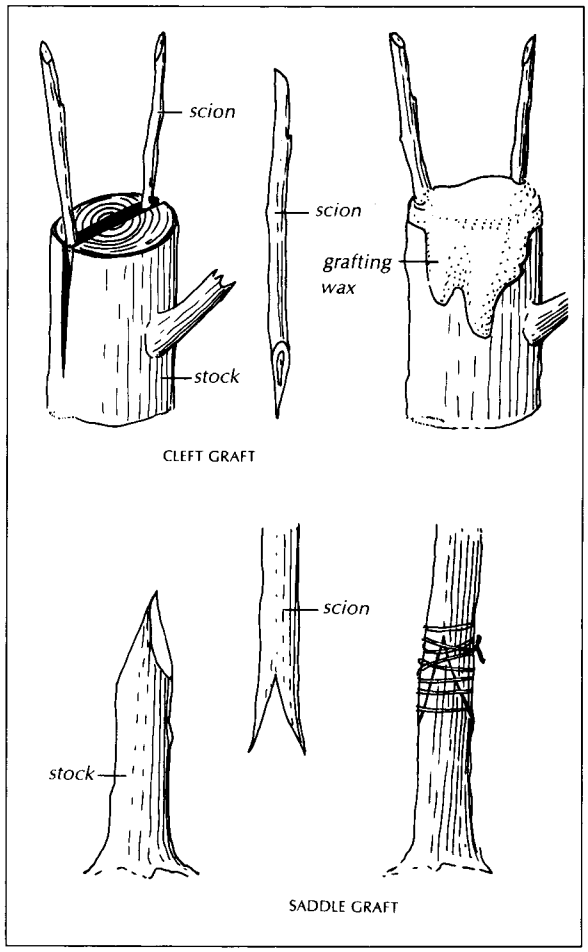
graffito, or **sgraffito,** decorative medium in which a plaster surface is scratched to uncover a darker, contrasting color. The technique was known to the ancient Egyptians and Greeks. During the Renaissance, Italian architects used graffito to decorate the surfaces of buildings. A graffito (pl. graffiti) also refers to an irreverent inscription on a wall in a public space. Archaeologists used the term to designate informal writings on ancient monuments. In the second half of the 20th cent., the term has been applied to many acts of property defacement involving paint and other graphic media.

grafting, horticultural practice of uniting the cambial layers, or CAMBIUM, of two closely related plants so that they grow as one. The scion (the piece grafted onto the stock or rooted part) may be a single bud or a cutting with several buds; the stock may be a whole plant or a root. The primary reason for grafting is to propagate HYBRIDS that do not bear seed or do not grow true from seed. It is also used to increase fruit tree productivity by adding to the numbers of buds, to grow a plant in an unfamiliar environment by using a stock adapted to that environment, and to combat diseases and pests by using resistant stock.

Graham, Billy (William Franklin Graham), 1918–, American evangelist; b. Charlotte, N.C. Ordained (1939) a minister in the Southern Baptist Church, he began his career as an evangelist in 1944. A fiery and persuasive preacher, he has had highly successful evangelistic campaigns that have brought him international attention. The Billy Graham Evangelical Association publishes *Decision* magazine and produces material for radio, television, and films.

Graham, Martha, 1894–1991, American dancer, teacher, and choreographer; b. Pittsburgh, Pa. She studied and made her debut (1920) with the Denishawn companies, and then formed (1929) her own troupe. She was a leading figure in MODERN DANCE; her works include *Appalachian Spring* (1944) and *The Archaic Hours* (1969).

Graham, Thomas, 1805–69, Scottish chemist. His research in diffusion in both gases and liquids led to his formulation of Graham's law. The first to work in colloidal chemistry, he observed that some



Two methods of grafting

substances pass through a membrane more slowly than others, thus discovering DIALYSIS. His studies of phosphoric acid led to the present chemical concept of polybasic acids.

Grahame, Kenneth, 1859–1931, English author. His humorous works include *The Golden Age* (1895) and, his children's classic *The Wind in the Willows* (1908).

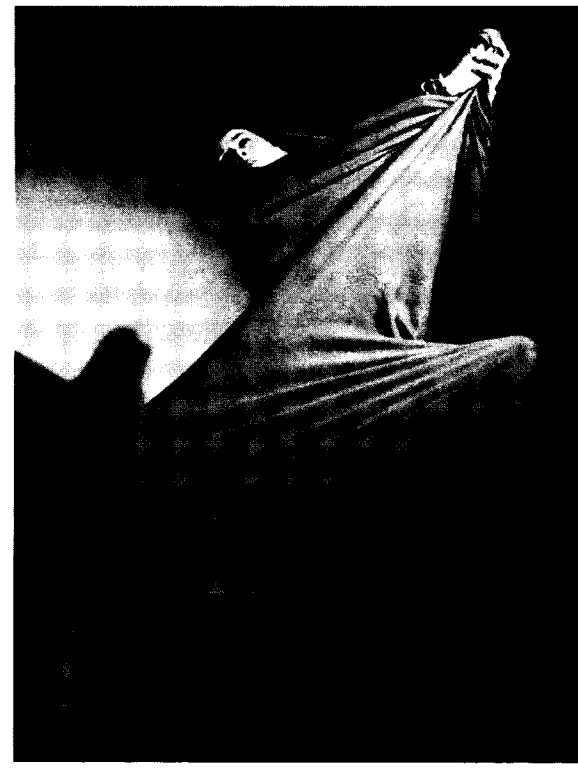
grain, in agriculture, the caryopsis, or dry FRUIT, of a cereal GRASS, the seedlike fruits of BUCKWHEAT and other plants, and the plants bearing such fruits. Grains, whole or ground into meal or flour, are the main food of humans and domestic animals. The food content is mostly carbohydrate, but some protein, oil, and vitamins are present. Low in water content, grains can be stored for long periods. The primary grain crops—including WHEAT, RICE, and CORN—together occupy about half of total world cropland.

Grainger, Percy Aldridge, 1882–1961, Australian-American pianist and composer. He settled in the U.S. in 1914. A friend of GRIEG, he is noted for settings of folk melodies.

gram: see METRIC SYSTEM; WEIGHTS AND MEASURES, table.

Gramme, Zénobe-Théophile, 1826–1901, Belgian electrical engineer. Model-maker for a Parisian manufacturer of electrical devices, he developed (1869), with little knowledge of electrical theory, an improved, practical direct-current dynamo. By reversing its principle, he invented the electric engine. In 1872, working with others, he transmitted direct-current electricity over a long distance.

Gramm-Rudman-Hollings Act, U.S. budget deficit reduction measure of 1985. The law provided for automatic spending cuts to take effect if Congress failed to reach established targets. Because the automatic cuts were declared unconstitutional, a revised version of the act was passed in 1987; it failed to result in reduced deficits.



Martha Graham, "Lamentation," 1935

A 1990 revision of the act changed its focus from deficit reduction to spending control.

Gramsci, Antonio, 1891–1937, Italian political theorist. After rejecting Socialism, Gramsci helped found (1921) the Italian Communist party. As party chief (1924) he was elected to the chamber of deputies (1924–26). When MUSSOLINI outlawed the party, Gramsci was arrested (1926) and spent his remaining years in prison (1926–37), where his writings, *Letters from Prison* (1947), *The Modern Prince* (1949), and *Prison Notebooks* (1971) proved him to be one of the leading Marxist thinkers of the century.

Gram's stain, laboratory staining technique that distinguishes between two groups of bacteria, gram-negative and gram-positive, by identifying differences in their cell-wall structure. Pinpointing the type of bacterial pathogens involved in disease (see BACTERIA) can be valuable in determining treatment.

Granada, city (1988 est. pop. 263,000), capital of Granada prov., S Spain, in Andalusia, at the confluence of the Darro and Genil rivers and at the foot of the Sierra Nevada. Now the center of a mineral-rich agricultural region, Granada flourished as the seat (1238–1492) o the kingdom of Granada, the last refuge of the MOORS, driven south by the Christian reconquest of Spain. The city is dominated by the Alhambra, a Moorish citadel and palace, and also contains a cathedral and the palace of Holy Roman Emperor CHARLES V.

Granados, Enrique [gränä'thōs], 1867–1916, Spanish composer and pianist; b. Cuba. He created the Spanish piano manner later used by FALLA. *Goyescas* (1912–14), a set of piano pieces, is his outstanding work.

Gran Chaco, lowland plain, c.250,000 sq mi (647,500 sq km), in Paraguay and adjacent parts of Bolivia and Argentina. It is sparsely populated and one of the hottest places in South America, with alternating flood and drought seasons. Resources include oil (in the east) and quebracho, a source of tannin.

Grand Alliance, War of the, 1688–97, war between France and members of the League of Augsburg (known as the Grand Alliance after 1689). League members included the Holy Roman emperor, the German states, Spain, Sweden, the Dutch Netherlands, Savoy, and England (after WILLIAM III ascended the throne). They at-

tempted to thwart the territorial incursions of LOUIS XIV. Despite some English victories, France was generally successful. But as the war dragged on, both sides wearied of it. The Treaty of Ryswick, which ended the war, forced France to give up most of its conquests. See FRENCH AND INDIAN WARS.

Grand Army of the Republic (GAR), organization established by Union veterans of the U.S. CIVIL WAR in 1866. At its peak in 1890, it had more than 400,000 members. Its principal goals were to aid fellow veterans and their families, obtain pension increases, and preserve the memory of fallen comrades (they secured the adoption of MEMORIAL DAY in 1868). They exerted a strong influence on the REPUBLICAN PARTY until 1900. The last member died in 1956.

Grand Banks, submarine plateau off SE Newfoundland, Canada. Shallow and frequently fog-bound, the waters in the area are rich in cod, halibut, haddock, and other marine life, making it one of the most important fishing grounds in the world. There are also oil deposits.

Grand Canal, world's longest and oldest constructed waterway, extending c.1,000 mi (1,600 km) from Tianjin (the port for Beijing) in N China to Hangzhou and the CHANG (Yangtze) R. valley in the south. The canal, which was started in the 6th cent. B.C., was lengthened A.D. c.610 and again extended in the 13th cent. Long in decline, it was dredged, widened, and renovated after 1958.

Grand Canary: see CANARY ISLANDS.

Grand Canyon, world-famous gorge cut by the COLORADO R., NW Arizona. It is up to 1 mi (1.6 km) deep, 4–18 mi (6–29 km) wide, and more than 200 mi (320 km) long. Multicolored layers of rock in the canyon wall record more than 2 million years of geologic time. Trails wind from the rim of the gorge to its floor. The most spectacular section of the canyon is part of Grand Canyon National Park (see NATIONAL PARKS, table) and is one of the principal tourist attractions in the U.S., visited each year by nearly 4 million people.

Grand Canyon National Park: see NATIONAL PARKS (table).

Grand Coulee Dam, concrete dam, 550 ft (168 m) high and 4,173 ft (1,272 m) long, on the COLUMBIA R., Washington. Built 1933–42, it impounds **Franklin D. Roosevelt Lake** (130 sq mi/337 sq km), one of the largest reservoirs in the U.S., and supports a hydroelectric installation that was expanded during the early 1980s into one of the largest in the world (more than 9.7 Mw capacity).

grandfather clause, provision in constitutions of seven Southern states (adopted 1895–1910) exempting from rigid economic and literacy requirements those persons eligible to vote on Jan. 1, 1867, and their descendants. Since African Americans had not yet been enfranchised on that date, the provision effectively barred them from the polls while granting voting rights to poor and illiterate whites. The clause was ruled unconstitutional by the Supreme Court in 1915. The term *grandfather clause* is now applied to any kind of legal exemption based on prior status.

grand jury: see under JURY.

Grand Prairie, city (1990 pop. 99,616), Dallas and Tarrant cos., N Texas; inc. 1909. A rapidly growing city between Dallas and Fort Worth, it is a distribution hub with a large aerospace industry. Other manufactures include mobile homes, metal goods, plastics, and automobiles. A wildlife park and the Six Flags over Texas amusement park are there.

Grand Rapids, city (1990 pop. 189,126), seat of Kent co., W central Mich., on the Grand R.; inc. 1850. The commercial center for a farm and orchard area, the city is famous for furniture manufacturing (begun 1859), which is still one of its leading industries. Gravel, gypsum, and appliances are among its other products. Grand Rapids is the gateway to a large recreational area of Michigan.

Grand Teton National Park: see NATIONAL PARKS (table).

Grange, Red (Harold Edward Grange), 1903–91, American football player; b. Forksville, Pa. As an All-American halfback (1923–25) at the Univ. of Illinois, he scored 31 touchdowns and gained 3,367 yards. In his professional career with the Chicago Bears (1925–35), he scored 1,058 points. Later he became a radio and television sportscaster.

Granger movement, American agrarian movement named for the National Grange of the Patrons of Husbandry, founded in 1867. Its local units were called granges and its members grangers. Originally established for social and educational purposes, the granges became political forums seeking to correct economic abuses through cooperative enterprise. The "Granger laws," regulating railroads and grain storage facilities, established the constitutional principle of public regulation of private utilities. After 1876 other groups adopted the agrarian protest and the granges reverted to their social role.

granite, coarse-grained ROCK composed chiefly of QUARTZ and FELDSPARS, of varying color. It is commonly believed to be igneous (having solidified from a molten state), but some granites show evidence of being metamorphic in origin (see METAMORPHISM). Formed at depth, granite masses are exposed at the earth's surface by crustal movements or erosion of overlying rocks. Very coarse-grained granite, called pegmatite, may contain minerals and gems of economic value.

Grant, Cary, 1904–86, American film actor; b. England as Archibald Leach. Debonair and charming, he appeared in such films as *Bringing Up Baby* (1938), *The Philadelphia Story* (1940), and *North by Northwest* (1959). In 1970 he received the Academy Award for general excellence.

Grant, Ulysses Simpson, 1822–85, commander in chief of the Union army in the U.S. Civil War, 18th president of the U.S. (1869–77); b. Point Pleasant, Ohio, as Hiram Ulysses Grant. He graduated from West Point in 1843. Upon the outbreak of the CIVIL WAR, he was commissioned colonel, then brigadier general of a regiment of volunteers and fought his first battle at Belmont, Mo., on Nov. 9, 1861. In Feb. 1862 he captured Fort Henry and Fort Donelson in Tennessee, providing the first major Union victory, and he was at once promoted to major general. In Apr. 1862 he barely escaped defeat at the Battle of SHILOH. The VICKSBURG CAMPAIGN (1862–63), which ended Confederate control of the Mississippi, was one of his greatest successes. Called to the supreme command in the West (Oct. 1863), he thoroughly defeated the Confederate forces under Braxton BRAGG at CHATTANOOGA. Pres. LINCOLN made him commander in chief, with the rank of lieutenant general, in Mar. 1864. He directed the Union army in the WILDERNESS CAMPAIGN (May–June 1864), wearing out the Confederates by sheer attrition; he received Robert E. LEE's surrender at APPOMATTOX on Apr. 9, 1865. He was made full general in 1866, the first U.S. citizen after Washington to hold that rank. Grant was elected president in 1868, defeating Horatio Seymour, and reelected in 1872, defeating Horace GREELEY. His administration was characterized by corruption, special-interest legislation, and vigorous pursuit of a punitive RECONSTRUCTION program; in foreign affairs, however, much was accomplished by his able secretary of state, Hamilton FISH. Grant's *Personal Memoirs* (2 vol., 1885–86) rank among the great military narratives of history.

Granville-Barker, Harley Granville, 1877–1946, English dramatist and critic. A major avant-garde producer of plays in the early 1900s, he also wrote realistic plays, e.g., *Waste* (1907) and *The Madras House* (1910), and the monumental *Prefaces to Shakespeare* (6 vol., 1927–74).

grape, common name for the family Vitaceae, mostly climbing shrubs of tropical, subtropical, and temperate zones. The WINE grape (*Vitis vinifera*), known since ancient times, probably originated around the Mediterranean and in W Asia; it is now grown also in temperate regions of the Americas. Grapes grown east of the Rockies are usually hybrids of this species and disease-resistant American grapes, or are varieties of native species. Raisins are dried grapes. The genus *Parthenocissus*, native to the U.S., includes the VIRGINIA CREEPER (*P. quinquefolia*) and Boston IVY (*P. tricuspidata*).

grapefruit, evergreen tree (*Citrus paradisi*) of the RUE family and its globular CITRUS FRUIT, which grows in grapelike bunches and weighs from one to five pounds (0.45 to 2.27 kg). It is believed that the pomelo (*C. maxima*), long a popular fruit in parts of Asia, was introduced into the West Indies, where a mutation produced the grapefruit.

graphics: see COMPUTER GRAPHICS; ENGRAVING; ETCHING; PRINTING; WOODCUT AND WOOD ENGRAVING.

graphite, plumbago, or **black lead,** mineral, one of two crystalline forms of the element CARBON, occurring in various parts of the world. Dark gray or black, greasy, and soft, with a metallic luster, it is a good conductor of electricity. It is used to make crucibles and electrodes; mixed with clay, it is the so-called lead of pencils.

Grass, Günter [gräs], 1927–, German writer and artist; b. Danzig (Gdańsk, Poland). Antimilitarism and social criticism are expressed in his novels *The Tin Drum* (1959) and *Dog Years* (1963). His early works are symbolic; later writings, such as *From the Diary of a Snail* (1973), reflect his political activism. *The Flounder* (1977) is a highly acclaimed novel treating politics, feminism, and the art of cooking.

grass, any plant of the family Gramineae, a widely distributed group of mostly annual and perennial herbs. The grass family is of far greater economic importance than any other. It includes the cereal grasses, e.g., WHEAT, RICE, CORN, OATS, BARLEY, and RYE, which provide the GRAIN that is the staple food in most countries and the major type of feed; most hay and pasture plants, e.g., SORGHUM and bluegrass; SUGARCANE; and species of REED and BAMBOO used for thatching and construction. In addition, plants of the grass family provide raw material for the production of many liquors and PAPER items, form climax vegetation (see ECOLOGY) in areas of low rainfall (see PAMPAS; PRAIRIE; SAVANNA; STEPPE; VELDT), and help to prevent EROSION.

Grasse, François Joseph Paul, comte de [gräs], 1722–88, French admiral. His blockade of the York and James rivers during the AMERICAN REVOLUTION effectively bottled up Gen. CORNWALLIS at Yorktown and led to the great American victory of the YORKTOWN CAMPAIGN.

grasshopper, slender, winged, singing INSECT of two families in the order Orthoptera, having powerful hind legs adapted for jumping and initiating flight and chewing mouthparts. Usually only males produce a song, but both sexes possess auditory organs. They range from ½ to 4 in. (1–10 cm) in length. The long-horned grasshopper family includes the KATYDID; the smaller, short-horned family includes the LOCUST.

Grasso, Ella Tambussi, 1919–81, American politician, governor of Connecticut (1975–81); b. Windsor Locks, Conn. She served Connecticut in the legislature (1952–56) and as secretary of state (1958–70). She was elected to the U.S. House of Representatives in 1970. Elected governor in 1974, she was the first American woman to achieve the office of governor in her own right.

Gratiae: see GRACES.

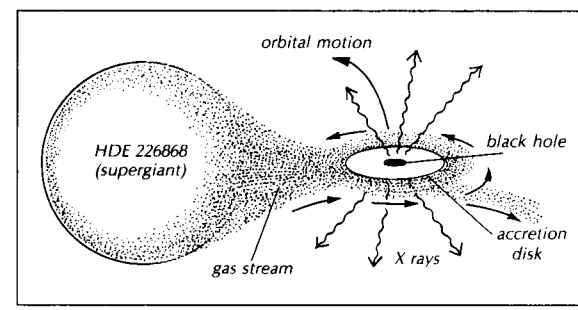
Grattan, Henry, 1746–1820, Irish statesman. Entering the Irish Parliament in 1775, he became known as a brilliant orator. He helped achieve nominal legislative independence for the Irish Parliament, and he helped gain Catholics the right to vote in Ireland. When hopes that Catholics could sit in Parliament were dashed, he retired (1797). He sat in the British Parliament from 1805 but took little part.

Graves, Michael, 1934–, American architect; b. Indianapolis. A member of the New York "Five" group in the 1960s, he emerged in the 1970s as a leading proponent of architectural POSTMODERNISM. His projects include the Portland Building, Portland, Oreg.; the Walt Disney Co. Corporate Headquarters, Burbank, Calif.; and the Newark Museum, Newark, N.J. He is also known for his furniture and furnishings designs.

Graves, Robert, 1895–1985, English poet, novelist, and critic. He was first successful with his war memoir *Good-bye to All That* (1929). Best known for his poetry and for novels on Roman history, *I, Claudius* (1934) and *Claudius the God* (1934), he also wrote studies of myth, e.g., *Greek Myths* (2 vol., 1955), criticism, and translations of APULEIUS and HOMER.

gravitation, the attractive FORCE existing between any two particles of matter. Because this force acts throughout the universe, it is often called universal gravitation. Isaac NEWTON was the first to recognize that the force holding any object to the earth is the same as the force holding the moon and planets in their orbits. According to Newton's law of universal gravitation, the force between any two bodies is directly proportional to the product of their MASSES and inversely proportional to the square of the distance between them. The constant of proportionality is known as the gravitational constant (symbol G) and equals 6.670×10^{-11} newton-M^2/kg^2 in the mks system of units. The measure of the force of gravitation on a given body on earth is the WEIGHT of that body. In the general theory of RELATIVITY, gravitation is explained geometrically: matter in its immediate neighborhood causes the curvature of the four-dimensional SPACE-TIME continuum. See also CELESTIAL MECHANICS.

gravitational collapse, in astronomy, theoretically predicted final stage in the life history of a star (see STELLAR EVOLUTION). Gravitational collapse may begin when a star has depleted its steady sources of nuclear energy and can no longer produce the expansive force, which is a result of normal gas pressure, that supports the star against the compressive force of its own GRAVITATION. As the star shrinks in size (and increases in density), it may assume one of several forms, depending upon its mass. A low-mass star may become a WHITE DWARF; a more massive star may explode as a SUPERNOVA and become a NEUTRON STAR. If the core remaining after a supernova is more than three times the sun's mass, however, the star can collapse without limit to an indefinitely small size. According to the general theory of RELATIVITY, space becomes curved in the vicinity of matter; the greater the concentration of matter, the greater the curvature. When the radius of a star decreases below a certain limit (the Schwarzschild radius, or event horizon) determined by its mass, the extreme curvature of space seals off contact with the outside world. The former star is now a **black hole.** Because light and other forms of energy and matter are permanently trapped inside a black hole by the enormous pull of gravitation, a black hole can be observed only indirectly. For example, in some BINARY-STAR systems, such as the X-ray source Cygnus X-1, the smaller and invisible companions are strong emitters of X-rays and are suspected of being black holes. Gas flows from the larger component of the binary and forms an accretion disk around the black hole. As the gas from this disk spirals into the black hole, it is accelerated by the collapsed star's enormous gravitational pull; as this happens, the matter becomes compressed and heated to the extreme temperatures at which X rays are emitted.



Gravitational collapse: The X-ray source Cygnus X-1 is believed to be a black hole (a massive star that has undergone gravitational collapse and cannot now be seen directly) orbiting around an optically observed supergiant star (HDE 226868).

Gray, Asa, 1810–88, leading American botanist and taxonomist; b. Oneida, N.Y. Professor of natural history at Harvard and a prolific author, he (with the botanist John Torrey) helped to revise LINNAEUS's taxonomy, basing his version mainly on fruit anatomy rather than gross morphology. His writings include the *Manual of Botany* (8th centennial ed. 1950), the standard reference for E U.S. flora; *Structural Botany* (6th ed. 1879); and *The Elements of Botany* (1887).

Gray, Elisha, 1835–1901, American inventor; b. Barnesville, Ohio. He patented many electrical devices, most having to do with the telegraph. In 1875, experimenting with transmitting musical notes, he hit on the idea of transmitting the human voice. In early 1876 he filed for a patent caveat, just hours after the registration of Alexander Graham BELL's final telephone patent.

Gray, Hanna Holborn, 1930–, American historian, president of the Univ. of Chicago (1978–93); b. Germany. Her father, the eminent historian Hajo Holborn, fled the Nazis in 1934 and settled in the U.S. A Renaissance and Reformation scholar, Gray became provost of Yale in 1974 and acting president in 1977. Her appointment to Chicago made her the first woman to head a major American university.

Gray, Thomas, 1716–71, English poet. A scholar of Greek and history, he spent a secluded life at Cambridge. His first important

poems, written in 1742, include "Ode on a Distant Prospect of Eton College." The meditative "Elegy Written in a Country Churchyard" (1751) is probably the most quoted poem in English. Horace WALPOLE published Gray's Pindaric odes in 1757. Gray's verse illustrates the evolution of 18th-cent. English poetry from CLASSICISM to early ROMANTICISM.

Graz [gräts], city (1991 pop. 232,155), capital of Styria prov., SE Austria, on the Mur R. Probably founded in the 12th cent., it was built around the Schlossberg, a mountain peak, on which stand the famous Uhrturm clock tower and the ruins of a 15th-cent. fortress. The second largest city in Austria, Graz produces iron and steel, precision and optical instruments, and machinery. Noteworthy are its Gothic structures and the Johanneum museum. The astronomer Johannes KEPLER taught at the university.

Great Awakening, series of religious revivals that swept over the American colonies about the middle of the 18th cent. Beginning in the 1720s, Theodorus Frelinghuysen and Gilbert Tennent made local stirrings in New Jersey. In New England the movement was started (1734) by Jonathan EDWARDS. It was spread by a tour (1739–41) of George WHITEFIELD and reached the South with the preaching (1748–59) of Samuel Davies. The Great Awakening led to bitter doctrinal disputes, but it also resulted in missionary work among Native Americans and in the founding of new educational institutions. It encouraged a democratic spirit in religion.

Great Barrier Reef, largest coral reef in the world, in the CORAL SEA, off the coast of Queensland, NE Australia. It is c.1,250 mi (2,000 km) long and is separated from the mainland by a shallow lagoon up to 100 mi (161 km) wide. The reef is composed of hundreds of individual reefs and has many islets, coral gardens, and unusual marine life. In some places it is more than 400 ft (122 m) thick.

Great Basin, desert region, in Nevada, Utah, and parts of adjoining states, forming the northern half of the **Basin and Range** physiographic province. It was explored (1843–45) and named by J.C. FRÉMONT, who recognized it as a basin of interior drainage (i.e., without outlet to the sea). GREAT SALT LAKE, Sevier, and Utah are the chief lakes. The basin is sparsely populated. Industries include defense-related manufacturing, tourism, mining, and ranching.

Great Basin National Park: see NATIONAL PARKS (table).

Great Bear Lake, largest lake of Canada and fourth largest of North America, c.12,275 sq mi (31,800 sq km), on the Arctic Circle in the Mackenzie district of the Northwest Territories. The lake, which is ice-bound for eight months of the year, is 190 mi (310 km) long, 25–110 mi (40–177 km) wide, and drains west through the Great Bear R. to the MACKENZIE R. Port Radium, in the east, was a radium-mining boom town in the 1930s.

Great Britain, officially United Kingdom of Great Britain and Northern Ireland, constitutional monarchy (1991 pop. 54,156,067), 94,226 sq mi (244,044 sq km), on the British Isles, off W Europe. It comprises England, Wales, and Scotland on the island of Great Britain, and Northern Ireland on the island of Ireland. The capital is LONDON. Great Britain is one of the world's leading industrial nations. It lacks most of the raw materials needed for industry, however, and must also import about 40% of its food supplies. Thus, its prosperity is heavily dependent on the export of manufactured goods in exchange for raw materials and foodstuffs, and it has long been an extremely active trading nation. Manufacturing and service industries employ more than one third of the total work force. Major industries include mechanical and electrical engineering, food processing, iron and steel, paper and printing, motor vehicles, chemicals, textiles, and aircraft. Production of oil from NORTH SEA wells began in 1975, and by 1979 the country was self-sufficient in petroleum. Coal is also mined in large quantities. Almost 30% of the land is arable, and almost half is suitable for meadows and pastures. Chief commodities are dairy products and beef cattle and other livestock, including many sheep, which are raised for meat and wool. The coal, gas, electricity, railroad, shipbuilding, nuclear energy, and aerospace industries, which were mainly publicly owned until the late 1970s, have undergone increasing PRIVATIZATION. Great Britain is the fourth most populous nation in Europe; the greatest population concentration is in England. English is the universal language, but Welsh is widely spoken in Wales and some Gaelic in Scotland. The Church of England is the established church in England; the Presbyterian Church is legally established in Scotland. There are also large numbers of Roman Catholics and Methodists and smaller minorities of Muslims, Jews, Hindus, Sikhs, and Buddhists. Immigration has made Great Britain a multiracial society; Indian, Pakistani, West Indian, African, Chinese, and other minorities total 2.7 million. The hereditary monarch plays a largely ceremonial role in the government. Sovereignty rests in PARLIAMENT, which consists of an elected House of Commons and a nonelected House of Lords. Effective power resides in the Commons, where the leading party usually provides the executive—the cabinet, headed by the prime minister. For physical geography, see ENGLAND; IRELAND, NORTHERN; SCOTLAND; WALES; for the early history of Scotland (to 1707) and Wales (to 1536), prior to incorporation in Great Britain, see separate articles.

Early English History. Little is known of the earliest inhabitants of Britain, but the great structure at STONEHENGE is evidence of their advanced BRONZE AGE culture. The first Celtic invaders arrived in Britain in the early 5th cent. B.C. In A.D. 43 the emperor CLAUDIUS I began the Roman conquest of Britain, which prospered and grew under four centuries of Roman rule. With the disintegration of the empire by the early 5th cent., Germanic peoples—the ANGLO-SAXONS and the Jutes—initiated waves of invasion and settlement that gradually coalesced into a group of small kingdoms. Raids by VIKINGS (Danes), begun in the late 8th cent., turned into full-scale invasion in 865, and by 1016 the Dane CANUTE ruled all of England. The conquest of England in 1066 by the Norman WILLIAM I (see NORMAN CONQUEST) ushered in a new era in English history with the introduction of FEUDALISM. Conflict between the kings and the nobles over abuse of royal power came to a head under King JOHN, whose unprecedented financial demands and unpopular church and foreign policies resulted in the MAGNA CARTA (1215), a landmark in English constitutional history. The HUNDRED YEARS WAR with France, which began in 1337, and the Black Death (see PLAGUE), which first arrived in Britain in 1348, hastened the breakdown of the feudal system. Dynastic wars (see ROSES, WARS OF THE) weakened both the nobility and the monarchy and ended with the accession (1485) of the TUDOR family. Under the Tudors, England flourished and was introduced to RENAISSANCE learning. HENRY VIII (r.1509–47) began the English Reformation by breaking with the papacy and establishing the Church of England. He also brought about the union (1536) of England and Wales. The English Renaissance reached its peak during the reign of ELIZABETH I, a time of great artistic achievement and overseas expansion. At her death (1603) the crowns of England and Scotland were united by the accession to the English throne of the Stuart JAMES I (James VI of Scotland). Under the STUARTS a bitter power struggle between the monarchy and Parliament culminated in the ENGLISH CIVIL WAR (1642–48). The victory of the parliamentarians led to the execution (1649) of CHARLES I, abolition of the monarchy, and establishment of the Commonwealth and the Protectorate under Oliver CROMWELL. Following Cromwell's death, CHARLES II was invited (1660) to become king (see RESTORATION). The old issues of religion, money, and royal prerogative were not laid to rest, however, until the GLORIOUS REVOLUTION (1688) ousted JAMES II and placed (1689) WILLIAM III and MARY II on the throne. The BILL OF RIGHTS confirmed that sovereignty resided in Parliament. In 1707 the Act of Union legally united the kingdoms of Scotland and England.

The Empire. In the 18th cent. Britain began to play a more active role in world affairs, emerging from the SEVEN YEARS WAR (1756–63) as possessor of the world's greatest empire (see BRITISH EMPIRE). It suffered a serious loss in the AMERICAN REVOLUTION (1775–83), but it was preeminent in INDIA, settled AUSTRALIA, and acquired still more territories in the wars against NAPOLEON I. A vain attempt to solve the longstanding Irish problem (see IRELAND) brought about the union (1801) of Great Britain and Ireland. The INDUSTRIAL REVOLUTION, in the late 18th and early 19th cent., transformed social and economic life. Under Queen VICTORIA (r.1837–1901) Britain reached the height of its commercial, political, and economic leadership. The country's aggressive diplomacy in Europe culminated in the CRIMEAN WAR, and social and political reforms were also begun. The dominant figures on the political scene were the prime ministers Benjamin DISRAELI and William GLADSTONE.

The 20th Century. In the early 20th cent., growing military and

economic rivalry with Germany led Britain to ally itself with France and Russia (see TRIPLE ALLIANCE AND TRIPLE ENTENTE), and in 1914 Britain entered WORLD WAR I. Despite British victory, the war drained the nation of wealth and manpower, and in the postwar years Britain faced severe economic problems. In an effort to settle the thorny Irish problem, Northern Ireland was created in 1920 and the Irish Free State in 1921–22. Prime Min. Neville CHAMBERLAIN pursued a policy of appeasement toward the rising tide of German and Italian aggression, but this failed. In 1939 the Germans invaded Poland, and Britain entered WORLD WAR II by declaring war on Germany. The nation sustained intensive bombardment in the Battle of Britain, but the British people, inspired by Prime Min. Winston CHURCHILL, rose to a supreme war effort. Following the defeat (1945) of Germany, the Labour party, led by Clement ATTLEE, gained power and launched a program, including nationalization of industry, to revive the war-damaged economy. The postwar years brought independence to many former colonies, and Britain's status as a world military and economic power gradually declined. In the early 1970s the country underwent its worst economic crisis since World War II, and although the situation eased somewhat with the discovery of oil in the North Sea, the early 1980s saw a continuation of the problems of inflation and unemployment accompanied by a weakening currency. Conservative Margaret THATCHER became (1979) Britain's first woman prime minister. Opposed to the Labour welfare state, she cut social programs, privatized many state-owned businesses, and sought to break the power of organized labor. In 1982 she led the nation in a successful undeclared war with Argentina over the disputed FALKLAND ISLANDS. In the mid and late 1980s, the economy grew and unemployment decreased, but economic conditions again worsened in the 1990s, with unemployment rising to 9.4% by early 1992. Thatcher was succeeded as prime minister by Conservative John MAJOR in 1990.

Great Dane, very large, powerful WORKING DOG; shoulder height, up to 36 in. (91.4 cm); weight, up to 150 lb (68.1 kg). Its short coat may be brindle, fawn, black, or white with black patches. Developed in Germany over 400 years ago, it was used as a boarhound.

Great Depression, the severe U.S. economic crisis of the 1930s, supposedly precipitated by the 1929 stock market crash. Certain

RULERS OF ENGLAND AND GREAT BRITAIN *(including dates of reign)*

Saxons and Danes
Egbert, 802–39
Æthelwulf, son of Egbert, 839–58
Æthelbald, son of Æthelwulf, 858–60
Æthelbert, 2d son of Æthelwulf, 860–65
Æthelred, 3d son of Æthelwulf, 865–71
Alfred, 4th son of Æthelwulf, 871–99
Edward (the Elder), son of Alfred, 899–924
Athelstan, son of Edward, 924–39
Edmund, 3d son of Edward, 939–46
Edred, 4th son of Edward, 946–55
Edwy, son of Edmund, 955–59
Edgar, younger son of Edmund, 959–75
Edward (the Martyr), son of Edgar, 975–78
Æthelred (the Unready), younger son of Edgar, 978–1016
Edmund (Ironside), son of Æthelred, 1016
Canute, by conquest, 1016–35
Harold I (Harefoot), illegitimate son of Canute, 1037–40
Harthacanute, son of Canute, 1040–42
Edward (the Confessor), younger son of Æthelred, 1042–66
Harold II, brother-in-law of Edward the Confessor, 1066

House of Normandy
William I (the Conqueror), by conquest, 1066–87
William II (Rufus), 3d son of William I, 1087–1100
Henry I, youngest son of William I, 1100–1135

House of Blois
Stephen, grandson of William I, 1135–54

House of Plantagenet
Henry II, grandson of Henry I, 1154–89
Richard I (Coeur de Lion), 3d son of Henry II, 1189–99
John, youngest son of Henry II, 1199–1216
Henry III, son of John, 1216–72
Edward I, son of Henry III, 1272–1307
Edward II, son of Edward I, 1307–27
Edward III, son of Edward II, 1327–77
Richard II, grandson of Edward III, 1377–99

House of Lancaster
Henry IV, grandson of Edward III, 1399–1413
Henry V, son of Henry IV, 1413–22
Henry VI, son of Henry V, 1422–61, 1470–71

House of York
Edward IV, great grandson of Edward III, 1461–70, 1471–83
Edward V, son of Edward IV, 1483
Richard III, brother of Edward IV, 1483–85

House of Tudor
Henry VII, descendant of Edward III, 1485–1509
Henry VIII, son of Henry VII, 1509–47
Edward VI, son of Henry VIII, 1547–53
Mary I, daughter of Henry VIII, 1553–58
Elizabeth I, younger daughter of Henry VIII, 1558–1603

House of Stuart
James I (James VI of Scotland), descendant of Henry VII, 1603–25
Charles I, son of James I, 1625–49

Commonwealth and Protectorate
Council of State, 1649–53
Cromwell, Oliver, lord protector, 1653–58
Cromwell, Richard, lord protector, 1658–59

House of Stuart (restored)
Charles II, son of Charles I, 1660–85
James II, younger son of Charles I, 1685–88
William III, grandson of Charles I; ruled jointly with Mary II, 1689–94; ruled alone, 1694–1702
Mary II, daughter of James II; ruled jointly with William III, 1689–94
Anne, younger daughter of James II, 1702–14

House of Hanover
George I, great-grandson of James I, 1714–27
George II, son of George I, 1727–60
George III, grandson of George II, 1760–1820
George IV, son of George III, 1820–30
William IV, 3d son of George III, 1830–37
Victoria, granddaughter of George III, 1837–1901

House of Saxe Coburg
Edward VII, son of Victoria, 1901–10

House of Windsor *(family name changed during World War I)*
George V, son of Edward VII, 1910–36
Edward VIII, son of George V, 1936
George VI, 2d son of George V, 1936–52
Elizabeth II, daughter of George VI, 1952–

causative factors are generally accepted: overproduction of goods; a tariff and war-debt policy that curtailed foreign markets for American goods; and easy money policies that led to overexpansion of credit and fantastic speculation on the stock market. At the depth (1933) of the Depression, 16 million people—one third of the labor force—were unemployed. The effects were felt in Europe and contributed to Adolph HITLER's rise in Germany. The policies of the NEW DEAL relieved the situation, but complete recovery came only with the heavy defense spending of the 1940s. See also DEPRESSION.

Great Dividing Range, crest line of the Eastern Highlands of Australia, forming most of that continent's drainage or continental divide. It is also widely used as an alternate name for the EASTERN HIGHLANDS.

Great Elector, the: see FREDERICK WILLIAM.

Greater Antilles: see WEST INDIES.

Great Falls, city (1990 pop. 55,097), seat of Cascade co., N central Mont., at the confluence of the Missouri and Sun rivers, near the falls that gave the city its name; inc. 1888. A hydroelectric power center and farm market, it refines oil, copper, and zinc and mills flour. Malmstrom Air Force Base is nearby.

Great Lakes, group of five connected freshwater lakes, E central North America, together covering c.95,000 sq mi (245,000 sq km). The lakes—SUPERIOR, MICHIGAN, HURON, ERIE, and ONTARIO—and their connecting waterways extend 1,160 mi (1,876 km) along the U.S.-Canadian border. With the SAINT LAWRENCE SEAWAY they form the **St. Lawrence & Great Lakes Waterway,** a major shipping artery that is navigable (except from December to April, when blocked by ice) for 2,342 mi (3,770 km) by ocean-going vessels of 27-ft (8.2-m) draft. The lakes range in elevation from 602 ft (183 m) in the west to 246 ft (75 m) in the east, the greatest drop (167 ft/51 m) occurring between lakes Erie and Ontario at NIAGARA FALLS.

Great Mother of the Gods, in ancient Middle Eastern religion (and later in Greece, Rome, and W Asia), mother goddess, the great symbol of the earth's fertility. As the creative force in nature, she was worshiped under many names, including ASTARTE (Syria), CERES (Rome), CYBELE (Phrygia), DEMETER (Greece), ISHTAR (Baby-

lon), and ISIS (Egypt). The later forms of her cult involved the worship of a male deity (her son or lover, e.g., ADONIS, OSIRIS), whose death and resurrection symbolized the regenerative power of the earth.

Great Plains, semiarid region of level and rolling terrain, located E of the Rocky Mts. and extending more than 1,500 mi (2,415 km) from Texas N into Canada. Elevations range from c.6,000 ft (1,829 m) in the west to c.1,500 ft (457 m) at the eastern boundary, which coincides roughly with the 100th meridian of longitude (running from E Oklahoma through the central Dakotas). Ranching and wheat farming, begun in the late 1800s, ended centuries of habitation by Native Americans and huge bison herds. Coal, oil, and natural gas deposits underlie the Plains.

Great Rift Valley, huge depression, currently thought to be the product of PLATE TECTONICS, extending c.3,000 mi (4,830 km) across most of E Africa and into SW Asia. In Africa it consists of an eastern arm, occupied in part by Lakes Turkana (Rudolf) and MALAWI (Nyasa), and a western arm, occupied in part by Lakes TANGANYIKA, Kivu, Edward, and Albert. In SW Asia it forms the RED SEA, the Gulf of AQABA, the DEAD SEA, and the JORDAN and Al Biqa valleys. Flanked in places by high cliffs and volcanoes (Mts. KENYA and KILIMANJARO), the floor of the rift ranges in elevation from c.1,300 ft (395 m) below sea level, in the Dead Sea, to c.6,000 ft (1,830 m) above sea level, in S Kenya.

Great Salt Lake, largest salt lake in North America, in NW Utah. The shallow lake (c.13–24 ft/4–7.3 m deep) has ranged in size from 1,000 sq mi (2,600 sq km), during 1955–75, to 2,500 sq mi (6,500 sq km) in the mid-1980s. The Weber, Jordan, and Bear rivers, which feed it, are diverted for use farther east. The lake's waters have a salt content (10%) that is greater than sea water and support no life except brine shrimp and colonial algae.

Great Slave Lake, second largest lake of Canada, c.10,980 sq mi (28,400 sq km), in the Mackenzie district of the Northwest Territories. The deepest lake (2,015 ft/614 m) in North America, it is c.300 mi (480 km) long, 12–68 mi (19–109 km) wide, and drains W through the MACKENZIE R. Gold is mined at YELLOWKNIFE, in the north, and some lead and zinc on the southern shore.

Great Smoky Mountains or **Great Smokies,** range of the APPALACHIAN MTS., on the North Carolina–Tennessee border, named for a smokelike haze that frequently envelops them. They rise to a high point of 6,642 ft (2,024 m) at Clingmans Dome and are partly within Great Smoky Mountains National Park (see NATIONAL PARKS, table).

Great Smoky Mountains National Park: see NATIONAL PARKS (table).

Great Society: see JOHNSON, LYNDON BAINES.

Great Wall of China, fortifications winding c.1,500 mi (2,400 km) across N China from Gansu prov. to the Yellow Sea. It is an amalgamation of many walls, first united (3d cent. B.C.) by the Ch'in dynasty. The present form dates substantially from the Ming dynasty (1368–1644) and averages 25 ft (7.6 m) in height. Successive invasions of China by northern nomads proved the wall to be of little military utility.

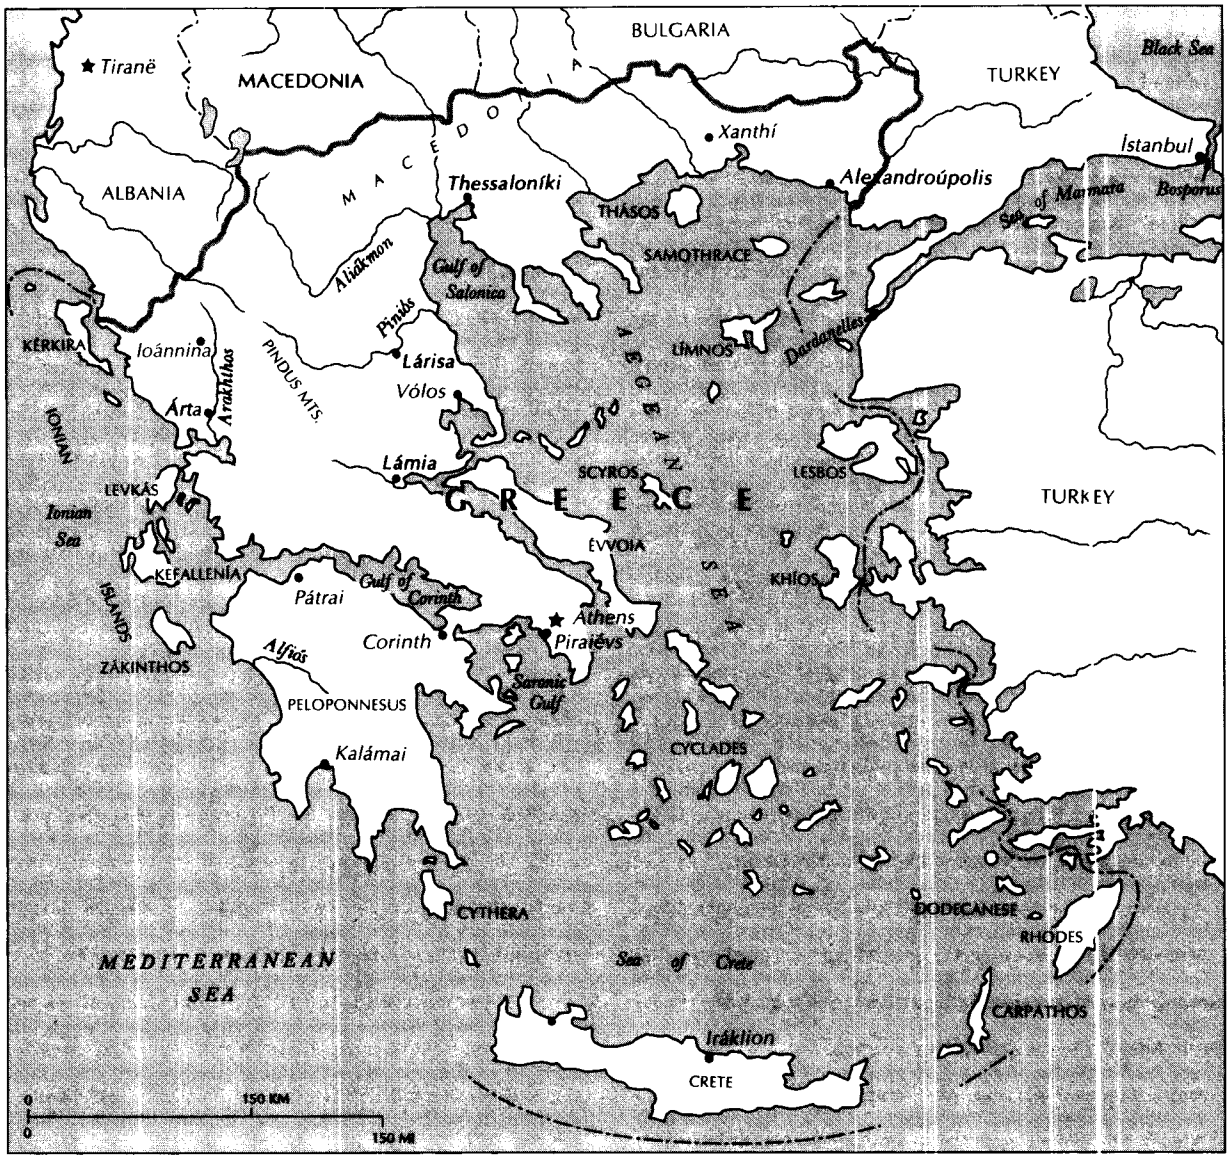
grebe, swimming BIRD found on or near quiet waters in much of the world. Resembling both the related LOON and unrelated DUCK, it has short wings, a vestigial tail, and long, individually webbed toes on feet that are set far back on a short, stubby body. Grebes are poor fliers and clumsy on land. They have complex courtship rituals, including dancing in pairs on the water.

Greco, El [ĕl grĕk'ō], c.1541–1614, Greek painter in Spain; b. Candia, Crete, as Domenicos Theotocopoulos. By 1577 he was established in Toledo after having painted in Rome and studied in Venice under TITIAN. He left portraits of Toledo's proud nobility; their ascetic faces are seen in the foreground of the *Burial of the Count Orgaz* (Church of San Tomé, Toledo). El Greco's flamelike lines, accentuated by vivid highlights, elongated and distorted figures, and full, vibrant color produced dynamic representations of religious ecstasy. Among his great works are *Baptism, Crucifixion,* and *Resurrection* (all: Prado) and a long series of paintings of St. FRANCIS. To his last period belong such works as the *Adoration* and *View of Toledo* (both: Metropolitan Mus.). El Greco undoubtedly influenced VELÁZQUEZ and is ranked among the great inspired, visionary artists.

Greece, Gr. *Hellas* or *Ellas,* officially Hellenic Republic, republic (1992 est. pop. 10,064,000), 50,944 sq. mi (131,945 sq km), SE Europe. Occupying the S Balkan Peninsula, it is bordered by the Ionian Sea (W), the Mediterranean Sea (S), the Aegean Sea (E), Turkey and Bulgaria (NE), Macedonia (N), and Albania (NW). ATHENS is the capital and largest city; other major cities include THESSALONÍKI and PIRAIÉVS. About 75% of the country is mountainous, the major range being the Pindus Mts., in the north. Central Greece includes the low-lying plains of Thessaly, Attica, and Boeotia, as well as Greece's highest point, Mt. OLYMPUS (9,570 ft/2,917 m). The southern portion of the country is the PELOPONNESUS. Of the total land area, almost 20% is in islands, notably CRETE, the DODECANESE (including RHODES), and the CYCLADES. Industry has replaced agriculture as the leading source of income. Principal manufactures include building materials, textiles, food products, chemicals, paper and printed material, refined petroleum, and ships. The chief farm products are corn, wheat, citrus fruits, olives and olive oil, grapes, tobacco, sugar beets, and tomatoes; large numbers of sheep and goats are raised. Tourism is also important. Modern Greek is the official language, and the established religion is the Greek Orthodox Church. Ethnic Greeks constitute over 98% of the population. Government is by a unicameral parliament of 300 members, who elect a president for a 5-year term. Greece became a full member of the European Community (see EUROPEAN UNION) in 1981. The country left the military wing of NATO in 1974 but rejoined it in 1980.

Ancient Greece. The region had seen the rise and fall of splendid cultures, e.g., the MINOAN CIVILIZATION and the MYCENEAN CIVILIZATION, before the arrival of Greek-speaking peoples. By 1000 B.C. Achaeans, Aeolians, Ionians, and Dorians had settled in the region that is modern Greece, where they developed many independent, often warring, CITY-STATES. Taking to the sea, by the 8th cent. B.C. they had created a network of colonies from Asia Minor to Spain (see MAGNA GRAECIA). The 5th cent. B.C. began with attempted invasions of Greece by the Persians. Greek success in the PERSIAN WARS (500–449 B.C.) ushered in the golden age of Greek history. Athens, in particular, grew dramatically and, in the age of PERICLES (c.495–429 B.C.), experienced a surge of cultural development rarely equaled in world history. Although Athens succumbed to SPARTA in the PELOPONNESIAN WAR (431–404 B.C.), Athenian thought prevailed, and the culture that was to be the fountainhead of Western civilization lived on. When PHILIP II of Macedon conquered Greece (338 B.C.) at Chaeronea, he paved the way for his son, ALEXANDER THE GREAT, who spread Greek civilization across the known world. By 146 B.C. the remnants of the Greek states had fallen to Rome, but when the Roman Empire was split (A.D. 395), the BYZANTINE EMPIRE, formed from the eastern portion, was thoroughly Greek in tradition. HELLENISTIC CIVILIZATION, centered at ALEXANDRIA, Egypt, and other cities, also preserved the Greek heritage.

Modern Greece. Turkish incursions and Norman attacks began in the 11th cent., and Greece was absorbed into the OTTOMAN EMPIRE in 1456. Under Ottoman rule Greece languished in obscurity and poverty until the successful Greek War of Independence (1821–32) and the establishment of a constitutional monarchy. Greece acquired the Ionian Islands (1864), Thessaly and part of Epirus (1881), and Crete (1913); in the BALKAN WARS (1912–13) it obtained SE MACEDONIA and W THRACE. Pressured by the Allies, Greece entered WORLD WAR I in 1917 and after the war was awarded most of European Turkey and the Bulgarian coast. The period between the world wars was marked by political turmoil: monarchs were enthroned and dethroned; a republic proclaimed in 1924 collapsed in 1935; and in 1936 a right-wing dictatorship was established under George METAXAS. During WORLD WAR II Greece was occupied (1941–44) by the German army. Civil war erupted in 1946, but massive U.S. military and economic aid ensured the victory of royalist forces over Communist rebels. A coup d'etat by rightist army officers in 1967 resulted in the rise to power of George PAPADOPOULOS, who abolished (1973) the monarchy and was, in turn, overthrown by another military coup. Civilian government was restored in 1974, and a new constitution adopted in 1975. In 1981 the electoral victory of Andreas Papandreou (see under PAPANDREOU, GEORGE) and the Pan-Hellenic Socialist Movement (Pasok) ended 35 years of pro-Western, conservative rule and gave Greece its first



socialist government. In 1989 Pasok lost its parliamentary majority amid charges of corruption, but three elections were needed before the conservative New Democratic party secured a parliamentary majority of one vote in 1990. Constantine Mitsotakis became premier, and Constantine KARAMANLIS was elected president. Facing a record deficit and high inflation, Mitsotakis instituted an austerity program and moved to sell or liquidate state-owned companies. The economic hardships that resulted led Greek voters to return Papandreou and Pasok to power in 1993.

Greek Anthology, collection of epigrammatic poems representing Greek literature from the 7th cent. B.C. to the 10th cent. A.D. It began with Meleager's *Garland* (c.90–80 B.C.) and was added to by others. A 10th-cent. version, the *Palatine Anthology,* is the chief modern source.

Greek architecture arose on the shores of the Aegean Sea. When the Dorians migrated into Greece (c.1000 B.C.), true Hellenic culture began; by the 6th cent. B.C., a definite Dorian system of construction existed. All the great works were produced between 700 B.C. and the Roman occupation (146 B.C.). The major masterpieces were erected between 480 B.C. and 323 B.C., including the reign of PERICLES, when CALLICRATES, MNESICLES, and ICTINUS flourished. Of the three great styles or ORDERS OF ARCHITECTURE, the Doric was earliest and the one in which most of the monuments were erected. Early examples (6th cent. B.C.) are found in Sicily and Paestum in Italy; after 500 B.C. the Doric was perfected at Athens in the Hephaesteum (465 B.C.), the PARTHENON (c.447–432 B.C.), and the Propylaea (437–432 B.C.). The Greek colonies of Asia Minor evolved the second great order, the Ionic order, stamped with Middle Eastern influences. After 500 B.C. it appeared in Greece proper, challenging with its slender columns and carved enrichments the sturdy, simple Doric. The most important Ionic buildings were at Miletus. In Greece, the ERECHTHEUM was the one major Ionic structure. The third, or Corinthian, order, appeared in this period. Even more ornate, it was little used. Examples are the Choragic monument (c.335 B.C.) and the Tower of the Winds (100 B.C.–35 B.C.), both at Athens. The Greeks used finely cut stone joints rather than mortar. Marble was used after the 5th cent. B.C. Earlier, rough stone was covered with a marble dust and lime coating. Although Greek buildings were long thought to have been left white, traces of decorative coloring have been found. Cities often had an acropolis, a citadel and temple site built on a steep hill. The standard Greek temple had a simple rectangular chamber with an entrance porch flanked by columns. The sides and ends would then be surrounded with a colonnade, sometimes doubled. A body of traditional mathematical formulas was developed to ensure harmony of proportions. The Greeks built temples, monumental

The key to pronunciation appears on page xiii.

tombs, agoras [public meeting places], stoas [colonnaded shelters], stadiums, palaestrae [gymnasiums], propylaeas [city gates], and amphitheaters. After Athens and Sparta declined, the more opulent and florid Hellenistic architecture arose (4th–3d cent. B.C.); from this style the Romans doubtless acquired their concepts of monumental architecture.

Greek art. The Aegean basin was a center of artistic activity from early times (see AEGEAN CIVILIZATION). Two great cultures—the MINOAN CIVILIZATION and the MYCENEAN CIVILIZATION—developed complex and delicate art forms. After the invasion of the Dorians and other barbarians (before 1000 B.C.), the curvilinear designs and naturalistic representations of the Mycenean age were replaced by geometric schemes with linear patterns. The transformation is seen in late geometric (c.900–700 B.C.) pottery. Between 700 and 600 B.C., Asian influence led to the use of floral and arabesque patterns and monster and animal themes. Then, during the archaic period (c.660–480 B.C.), sculpture became the principal form of artistic expression. The statues of nude walking youths, *kouroi,* suggesting Egyptian prototypes but distinct in stylization and tension of movement, e.g., *Kouros* (Metropolitan Mus.), date from this period. Draped female figures show Asian influence, e.g., *Hera of Samos* (Louvre). The outstanding Athenian school of black-figure vase painting led by Execias depicted mythological and contemporary scenes. A greater concern with three-dimensional space and naturalistic detail emerged with red-figure vase painting (c.525). Euthymides and Euphronius were early masters. The early classical period revealed new insight into the structure of the human form (c.480–450 B.C.). e.g., the sculptures from the temple of Zeus at Olympia, the bronze *Charioteer* (museum; Delphi), and the *Zeus* or *Poseidon* (Athens, National Mus.). During the Golden Age, the height of the classical period (450–400 B.C.), Polykleitos arrived at a rational norm for the ideal figure. The magnificent sculptures from the ACROPOLIS and its PARTHENON, thought to have been designed by PHIDIAS, exemplify this ideal. In the late classical period (400–300 B.C.), there was more emphasis on emotion in art. The works attributed to PRAXITELES are elegant and graceful; to SCOPAS, strongly emotional; and to LYSIPPOS, individualized, though their sculptures largely survive as fragments or Roman copies. The works of the painters of the period, e.g., Apollodorus and APELLES, are known only through description. The Hellenistic period began with the conquests of Alexander the Great. Masterpieces of the period include the *Nike (Victory) of Samothrace* and *Aphrodite of Melos* (both: Louvre); the *Pergamum Frieze* (Berlin Mus.); the Roman copies of the *Odyssey Landscape* (Vatican), a painting with great spatial illusionism; and the *Laocoön and his Sons* (Vatican). Despite its decline, Greek culture and art inspired Western art throughout history.

Greek language, member of the Indo-European family of languages. Modern Greek is derived from the standard Greek or koinē of the Hellenistic world. See LANGUAGE (table).

Greek religion. Although its exact origins are lost in time, Greek religion is thought to date from about the 2d millennium B.C., when the culture of Aryan invaders fused with those of the Aegean and Minoan peoples who had inhabited the region of Greece from Neolithic times. As portrayed in Homer's *Iliad,* the classical Greek pantheon, also called Homeric or Olympian (for Mt. Olympus, home of the gods), was a blend of Minoan, Egyptian, Asian, and other elements. The Greek deities had supernatural powers, particularly over human life, but were severely limited by the relentless force of fate (Moira). The gods were most important in their role as guardians of the city-states and as those who could provide information, through divination rites, about one's future on earth. Often the favorable response or reward expected did not materialize, and the civil strife that followed the classical period (from c.500 B.C.) placed the old gods on trial. The popular religion of the Greek countryside rose, emphasizing the promise of afterlife and elaborate rites offered by such cults as the Eleusinian and ORPHIC MYSTERIES. The Dionysian excesses of these mystery rites were offset by the virtues of moderation ascribed to Apollo. Later Greek philosophical inquiry sought a more logical connection between nature and humanity, leading to the rationalization of the early myths and the final destruction of the Homeric pantheon. The vacuum was eventually filled by Christianity.

Greeley, Horace, 1811–72, American newspaper editor; b. Amherst, N.H. He founded the New York *Tribune* in 1841. As editor for over 30 years, he advocated a protective tariff, the organization of labor, temperance, a homestead law, and women's rights, and opposed monopoly, land grants to railroads, and SLAVERY. His editorials were widely quoted, and thousands acted on his advice, "Go West, young man, go West." He was one of the first members of the new REPUBLICAN PARTY, although he denounced Pres. LINCOLN's border-state policy and embarrassed the administration by his antiwar sentiments. Following the Civil War he favored African-American suffrage and amnesty for all Southerners; he defied public opinion by signing the bail bond to release Jefferson DAVIS from prison. He ran for president in 1872 as the candidate of the LIBERAL REPUBLICAN PARTY but was soundly defeated by the incumbent, U.S. GRANT.

Greely, Adolphus Washington, 1844–1935, American army officer and explorer; b. Newburyport, Mass. Between 1881 and 1884 he commanded the Lady Franklin Bay Expedition to establish one of a chain of arctic meteorological stations. He and his party mapped a stretch of Greenland's coast, crossed Ellesmere Island, and achieved a northern record of 83°24′. After two relief efforts failed, a ship found only Greely and six others alive. Later, as the army's chief signal officer, he built telegraph communications in U.S. possessions. He directed relief operations after the San Francisco earthquake in 1906.

Green, Henry, 1905–74, English novelist; b. Henry Vincent Yorke. His enigmatic, comic novels include *Living* (1929), *Caught* (1943), *Loving* (1945), and *Concluding* (1948).

Green, Julian, 1900–, French novelist, of American parentage. Such novels as *The Closed Garden* (1927) and *The Dark Journey* (1929) concern vice and madness. Others are *Moïra* (1950) and *Each in His Darkness* (1960). In 1971, he was elected to the Académie Française.

Green, William, 1872–1952, American labor leader; b. Coshocton, Ohio. He rose through the ranks of the United Mine Workers of America (UMW), serving (1912–24) as secretary-treasurer. In 1924 he was elected president of the AFL (see AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS), a post he held until his death. He organized skilled labor into craft unions and led the AFL in the struggle with the CIO after the groups split in 1935. Green wrote *Labor and Democracy* (1939).

Greenaway, Kate, 1846–1901, English illustrator. Her fanciful colored drawings of child life influenced children's clothing and illustrated books. She provided text and pictures for many books, e.g., *Under the Window* (1879).

Greenback party, a U.S. political organization founded (1874–76) to promote currency expansion. Its principal members were Southern and Western farmers stricken by the Panic of 1873. They nominated Peter COOPER for president in 1876, but he received only 81,737 votes. Uniting with labor in the Greenback-Labor party (1878), they polled over 1 million votes and elected 14 representatives to Congress. Thus encouraged, and with a broadened program that included woman suffrage, federal regulation of interstate commerce, and a graduated income tax, they nominated James B. WEAVER for president (1880). But the return of prosperity had allayed discontent, and their vote declined to a little over 300,000. Following the 1884 election the party dissolved. Many members later joined the Populists.

Green Bay, city (1990 pop. 96,466), seat of Brown co., NE Wis., at the mouth of the Fox R., on Green Bay; inc. 1854. A major GREAT LAKES port and rail center, it is on the site of a French trading post and mission (1634); permanent settlement, the state's oldest, dates from 1701. It was a fur-trading center and gateway to the upper Midwest occupied by the French (1717), British (1761), and Americans (1816). Today it produces paper, food products, and automobile parts. It is home to the Packers professional football team.

Greene, Charles Sumner, 1868–1957, and **Henry Mather Greene,** 1870–1954, American architects; b. Brighton, Ohio. The Greene brothers modified aspects of the ARTS AND CRAFTS movement, the shingle style, and Asian architecture to fit the relaxed climate and lifestyle of California. They were pioneers in the development of the bungalow-style residence in southern California, e.g., the Gamble House (1908) in Pasadena.

Greene, (Henry) Graham, 1904–91, English novelist. A Catholic

convert with intense moral concerns, he wrote novels that are essentially parables of the damned. Those that are thrillers, e.g., *Orient Express* (1932), he called "entertainments." His major works are *Brighton Rock* (1938) and *The Heart of the Matter* (1948). A superb journalist, he set novels in sites of topical interest, e.g., *The Quiet American* (1955) in Indochina. He is also known for his short stories, plays, film criticism, and film scripts, including *The Third Man* (1950).

greenhouse effect, process whereby heat is trapped at the surface of the earth by the atmosphere. Energy from the sun passes through the atmosphere, warming the earth and providing the wavelengths used in PHOTOSYNTHESIS. Much of the incoming energy is reradiated in the form of heat, some directly and some as a result of either the METABOLISM of living things or human industrial activities. This heat (infrared radiation) is prevented from leaving the earth by atmospheric carbon dioxide, water vapor, and ozone (acting like the glass in a greenhouse), and much of it goes back into the ground. An increase in atmospheric carbon dioxide of 10% over the past century has led some authorities to predict a long-term warming of the earth's climate. Over 150 nations have signed a 1992 treaty designed to reduce the emission of gases that are believed to intensify the greenhouse effect and result in global warming.

Greenland, officially Kalaallit Nunaat (1992 est. pop. 57,400), largest island in the world, c.840,000 sq mi (2,175,600 sq km), self-governing overseas division of Denmark, lying largely within the Arctic Circle off NE Canada. The capital is Nuuk (formerly Godthb). An ice sheet c.14,000 ft (4,300 m) deep in places covers more than four fifths of the land area. Fishing, shrimping, and sealing are the principal economic activities. Extensive oil deposits have been detected beneath its southwestern offshore waters, but the fragile arctic environment, great depths, and icebergs make drilling difficult. Most people live along the coast in the SW, where the climate is warmed by the North Atlantic Drift. Almost 20% of the people were born outside Greenland; the others are of mixed Inuit and Danish ancestry. A majority of the population are Lutherans. Greenland is internally self-governing; Denmark is responsible for foreign affairs, defense, and the judicial system. Greenlandic (Inuit) and Danish are the official languages.

History. Greenland was named and settled (c.982) as a self-governing colony by ERIC THE RED, a Norseman. The colony was neglected by Norway in the 14th and 15th cent., and the colonists had either died out or had been assimilated with the Eskimos when Greenland was rediscovered, with no trace of the Norsemen, in the 16th cent. by the British explorers Martin FROBISHER and John Davis. It was recolonized, beginning in 1721, by Norway and became a Danish colony in 1815. Greenland became an integral part of Denmark in 1953 with representatives in the *Folketing* (Parliament), and was granted home rule in 1979. Since then the local parliament has been controlled by left-wing parties favoring greater autonomy and internal economic development. In 1985 the island withdrew from the European Community.

Green Mountain Boys, popular name of armed bands led by Ethan ALLEN that used threats, intimidation, and violence to prevent the New Hampshire Grants (land that is now Vermont) from becoming part of New York state. In the AMERICAN REVOLUTION, under Allen, they captured Fort TICONDEROGA (1775) and won an important victory at Bennington (1777).

Greenough, Horatio [grē'nō], 1805–52, American sculptor and writer; b. Boston. As a writer, he heralded modern concepts of functionalism in architecture. As a sculptor, he is famous for a colossal statue of George Washington (Smithsonian Inst.).

Green party, any of the political parties established in various countries to oppose the destructive environmental effects of many modern technologies and the economic systems and institutions that drive them. Many Green parties also advocate PACIFISM and support HUMAN RIGHTS. The German Green party, founded in West Germany in 1979, had some political successes in the 1980s and merged with a group from the former East Germany in 1993. There are 26 Green parties in Europe; a U.S. group has existed since 1973.

Greenpeace, international environmental organization, founded 1971. It seeks to promote environmental awareness and end environmental abuse through nonviolent confrontations with governments and companies. It often uses media exposure to draw attention to its causes.

Green Revolution, popular term referring mainly to the large increases achieved in GRAIN production in certain developing countries—especially Mexico, India, Pakistan, and the Philippines—from the late 1960s into the 1980s. The increases were achieved by using high-yielding and high-protein HYBRIDS, chemical FERTILIZERS, and new crop strategies and harvesting methods. The dependence on costly fertilizers, pesticides, and irrigation, which poor farmers cannot afford and that may be ecologically harmful, has been criticized.

Greensboro, city (1990 pop. 183,521), seat of Guilford co., N central N.C.; settled 1749, inc. 1808. The state's third largest city, it has an important textile industry, produces tobacco and machinery, and is a regional financial, insurance, and distribution center. The Revolutionary War battle of Guilford Courthouse was fought nearby. The city has several colleges. It is the birthplace of Dolley MADISON and O. HENRY.

Greenspan, Alan, 1926–, U.S. economist, chairman of the Federal Reserve Board (1987–); b. N.Y.C. A private economic consultant (1954–74, 1977–87), Greenspan served (1974–77) as chairman of the president's Council of Economic Advisers during the Ford administration. From 1981 to 1983 he chaired the bipartisan National Commission on Social Security Reform, which reformed the financing of the U.S. social security system to assure its solvency. In 1987 Pres. Reagan appointed him chairman of the Federal Reserve Board; he was reappointed by Pres. Bush in 1991. Influenced by the philosophy of Ayn RAND, Greenspan is a strong free-market supporter and opponent of government intervention in the economy. As Federal Reserve chairman, he has emphasized fighting inflation.

Greenville, city (1990 pop. 58,282), seat of Greenville co., NW S.C., on the Reedy R., in the Piedmont; laid out 1797, inc. as a city 1907. A major industrial and commercial center of the SE U.S., in the heart of a region of mill towns, it has huge textile mills and diverse manufactures, and processes farm products. Textile Hall is the scene of the biennial Southern Textile Exposition. Furman Univ. and Bob Jones Univ. are in the city.

Greenwich, borough (1991 est. pop. 212,000) of Greater London, SE England, on the Thames R. The system of geographic longitude and time-keeping worked out at its old Royal Observatory (1675–1958) have become standard in most of the world; the prime meridian (0° longitude) passes through the observatory. Other points of interest are the Royal Naval College (begun 17th cent.) and the National Maritime Museum.

Greenwich Mean Time (GMT): see SOLAR TIME.

Greenwich meridian: see PRIME MERIDIAN.

Greenwich Village, district of lower Manhattan, N.Y.C. An influx of artists and freethinkers in the early 1900s established the area's reputation for bohemianism.

Greer, Germaine, 1939–, Australian feminist and writer. She moved to England (1964), earned a Ph.D. from Cambridge, and taught at the Univ. of Warwick (1967–73). Her book *The Female Eunuch* (1970), an analysis of attitudes toward women and a call for an end to sexual repression, made her a leading spokeswoman for FEMINISM. She has also written *The Change: Women, Aging, and the Menopause* (1992).

Gregorian chant: see PLAINSONG.

Gregory I, Saint (Saint Gregory the Great), c.540–604, pope (590–604), Doctor of the Church. A Roman prefect, he became a monk and, although he resisted promotion, eventually pope. His rule was notable for the enforcement of papal supremacy and the establishment of the temporal position of the pope. He attacked Donatism in Africa, refused to recognize the title *ecumenical* of the patriarch of Constantinople (an act that helped split East and West), and treated (592) with the invading LOMBARDS after the Byzantine exarch failed to defend Rome. Gregory encouraged monasticism, made laws for the lives of the clergy, and sent missionaries to England. His writings include letters, commentaries on the Book of Job, saints' lives, and *Pastoral Care.* He also contributed to the development of Gregorian chant or PLAINSONG. Feast: Sept. 3.

Gregory VII, Saint, d. 1085, pope (1073–85), an Italian named Hildebrand. A Benedictine, he became notable under Pope Gre-

The key to pronunciation appears on page xiii.

gory VI and under LEO IX launched his reform program, aimed at correcting corruption and laxity in the church. As chief figure in the curia under Leo's successors, he transferred the papal election from the Romans to the college of cardinals and formed an alliance with the Normans of S Italy. As pope he pressed his reforms by condemning clerical marriage, simony, and lay INVESTITURE, and he sent papal legates throughout Europe to enforce his actions. Opposition was widespread, and a powerful antireform party grew among laymen who feared church domination. In Germany, HENRY IV joined the antireform party and was excommunicated (1076) by Gregory. Losing support, Henry humbled himself before Gregory at Canossa, but in 1080 the two again fell out. Henry, again excommunicated, set up Guibert of Ravenna (Clement III) as antipope, and Gregory's appeal to the Christian world failed. When the German civil war ended, Henry marched into Italy and took Rome (1083). Gregory retired into the Castel Sant' Angelo until the Normans under ROBERT GUISCARD rescued him, then followed the Norman withdrawal and died in Salerno after a year of exile. His reform was a turning point in church history. It elevated the moral level of the church and began the successful struggle against lay investiture. Feast: May 25.

Gregory IX, 1143?–1241, pope (1227–41), an Italian named Ugolino di Segni. Elected at age 84, he excommunicated (1227) Holy Roman Emperor FREDERICK II for not undertaking a crusade. Imperialists in Rome revolted and forced Gregory into exile until 1230. In a dispute over Italian liberties, he again excommunicated (1239) Frederick and ordered him dethroned. Frederick blocked Gregory's call for a general council and was preparing to attack Rome when Gregory died at age 98.

Gregory XI, 1330–78, pope (1370–78), a Frenchman named Pierre Roger de Beaufort. After receiving prophetic admonitions from St. Bridget of Sweden and St. CATHERINE OF SIENA, he determined to move the papacy from Avignon back to Rome. But the Avignon court was opposed, and the papal states were in chaos. After sanctioning a foray into Italy by Robert of Geneva, Gregory returned to Rome (Jan. 1377), thus ending the Babylonian Captivity of the popes. The elections after his death began the Great SCHISM.

Gregory XII, c.1327–1417, pope (1406–15), a Venetian named Angelo Correr. Gregory negotiated with the Avignon antipope, Benedict XIII (see LUNA, PEDRO DE), to end the Great SCHISM, but failed, whereupon the Council of Pisa elected a second antipope. The Council of Constance accepted Gregory's resignation (1415), deposed the two antipopes, and elected MARTIN V pope (1417).

Gregory XIII, 1502–85, pope (1572–85), an Italian named Ugo Buoncompagni, best known for the reformed, or Gregorian, CALENDAR. He was prominent at the Council of TRENT (1545, 1559–63). As pope he proposed the deposition of Queen Elizabeth I of England and took an interest in the education of the clergy and the conversion of Protestants. He issued a new edition of the canon law and patronized the Jesuits.

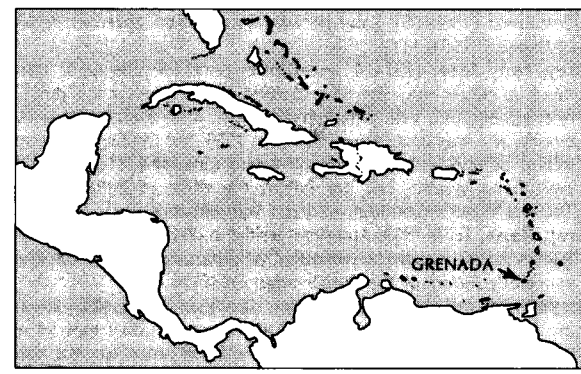
Gregory, Lady Augusta (Persse), 1859–1932, Irish dramatist, a founder and director of the Abbey Theatre, Dublin. Her plays include *Spreading the News* (1904), *The Gaol Gate* (1906), *The Rising of the Moon* (1907), and *The Workhouse Ward* (1908). Her *Our Irish Theater* (1913) is a key document of the Irish Literary Renaissance.

Gregory Nazianzen, Saint [nāzēăn'zĭn], c.330–390, Cappadocian theologian, Doctor of the Church, one of the Four Fathers of the Greek Church. Active in the struggle against ARIANISM, he was chosen bishop of Constantinople (379), but he retired after the First Council of CONSTANTINOPLE. Feast: Jan. 2.

Gregory of Nyssa, Saint, c.330–95, Christian theologian. Influenced by his brother Saint Basel and friend Saint Gregory Nazianzen, he entered monastic life and became Bishop of Cappadocia in E central Turkey. Against Arian opponents (see ARIANISM), he championed the Nicene doctrine of the single substance (ousia) of the members of the Trinity at the First Council of CONSTANTINOPLE (381). His writings include many anti-Arian tracts and apologias for rigorous Christian asceticism.

Gregory of Tours, Saint, 538–94, French historian, bishop of Tours (from 573). His masterpiece, *History of the Franks,* is a universal history with an important account of contemporary events. Feast: Nov. 17.

Grenada [grĭnā'də], island nation (1992 est. pop. 83,600), in the West Indies, consisting of the main island of Grenada (120 sq mi/311 sq km), the southernmost of the Windward Islands; and the southern group of the sparsely settled archipelago known as the Grenadines. The capital and main port, Saint George's, is on Grenada, a volcanic, mountainous island. The economy is primarily agricultural; cocoa, bananas, nutmeg, mace, sugar, coconuts, cotton, and limes are exported. The people, mainly of African or mixed descent, speak English (the official language) or a French patois. Almost 65% of the inhabitants are Roman Catholics, with Anglicans making up more than 20% of the population. Settlement of Grenada, delayed by hostile Caribs, was begun by the French in 1650, but the island was taken over in 1783 by the British, who established sugar plantations and imported African slaves. Grenada became self-governing in 1967 and an independent state within the Commonwealth in 1974. A coup in 1979 installed a Marxist government headed by Maurice Bishop, who allied the nation with Cuba. In 1983 the overthrow and execution of Bishop led to an invasion by the U.S., with token forces from other Caribbean nations, that restored democratic rule. Nicholas Brathwaite, of the National Democratic Congress, has been prime minister since 1990.



grenade, small bomb designed to be thrown by hand or shot from a modified rifle or a grenade launcher. It may be filled with gas or chemicals but more often holds an explosive charge that fractures the casing into lethal fragments. First used in the 15th cent. (by "grenadiers"), the grenade later fell into disuse until the 20th cent., when it became a standard infantry weapon.

Grenoble, city (1990 pop. 150,758), capital of Isère dept., SE France. A leading resort at the foot of the Alps and site of the 1968 winter Olympics, it is important for its nuclear-research center, hydroelectric power, and science-based industries and research institutes, linked to the noted University of Grenoble (est. 1339). It passed from the dauphins of Viennois to the crown in 1349.

Grenville, George, 1712–70, British statesman. While prime minister (1763–65), he provoked reformers by persecuting John WILKES and aroused opposition by attempting to tax the American colonies through the STAMP ACT. His son **George Nugent Temple Grenville, 1st marquess of Buckingham,** 1753–1813, was lord lieutenant of Ireland (1782–83, 1787–89). His brother **William Wyndham Grenville, Baron Grenville,** 1759–1834, was foreign secretary to William PITT (1791–1801). In 1806 he formed the "ministry of all talents," which abolished the slave trade (1807).

Grenville, Sir Richard, 1542?–1591, English naval hero. In 1585 he commanded the fleet carrying the first colonists to ROANOKE ISLAND. On an expedition to capture Spanish treasure ships off the Azores in 1591, his ship, the *Revenge,* became separated from the rest of the fleet. He tried to break through the Spanish line, but he was mortally wounded and died in Spanish captivity.

Gresham, Sir Thomas, 1519?–1579, English merchant and financier. Founder of the Royal Exchange, he accumulated a private fortune while serving as an adviser to ELIZABETH I. His name was given to **Gresham's law,** the economic principle (formulated long before his time) that "bad money drives out good." When depre-

ciated, mutilated, or debased coinage (or currency) circulates concurrently with money of high value in terms of precious metals, the good money automatically disappears because of hoarding.

Gretzky, Wayne, 1961–, Canadian ice hockey player. He has played on the Edmonton (Alta.) Oilers (1978–88) and Los Angeles Kings (1988–). In 1981–82 he set single-season National Hockey League (NHL) marks for goals scored (92), assists (120), and points (212), becoming the first player to achieve more than 200 points, and in 1984–85 he set a new single-season assists record (135). He also holds the lifetime goals, assists, and points records and has been NHL scoring champion and most valuable player nine times.

Greuze, Jean-Baptiste [gröz], 1725–1805, French genre and portrait painter. He is best known for his moralizing pictures, e.g., *The Broken Pitcher* (Louvre). His portraits, e.g., that of his wife (*The Milkmaid*) and of Napoleon I (both: Versailles), are more interesting.

Grey, Charles Grey, 2d Earl, 1764–1835, British statesman. In 1796 he became foreign secretary in the "ministry of all talents" and WHIG leader of the House of Commons, putting through the measure to abolish the slave trade (1807). As prime minister (1830–34), he secured passage of the REFORM BILL of 1832 by threatening to force WILLIAM IV to create enough Whig peers to carry it in the House of Lords. His grandson, **Albert Henry George Grey,** 4th **Earl Grey,** 1851–1917, was a Liberal member of the House of Commons (1880–86). Later he was a successful governor general of Canada (1904–11).

Grey, Lady Jane, 1537–54, queen of England for nine days; grandniece of HENRY VIII. She was married to the son of the duke of Northumberland, who persuaded EDWARD VII to make her his successor. She was proclaimed queen in 1553, but the English people rallied behind MARY I, and Jane was imprisoned. Her life might have been spared, but her father, the duke of Suffolk, joined Thomas Wyatt's rebellion, and she was beheaded.

Grey, Zane, 1875–1939, American writer; b. Zanesville, Ohio. He is known for his enormously popular melodramatic tales of the West, especially *Riders of the Purple Sage* (1912).

greyhound, tall, swift sight HOUND; shoulder height, c.26 in. (66 cm); weight, c.65 lb (29.5 kg). Its short, smooth coat may be any of various colors. Developed in Egypt c.5,000 years ago, the breed was known before the 9th cent. in England, where it was bred by aristocrats to hunt such small game as hares. Today it is widely used in racing.

Grieg, Edvard Hagerup [grēg], 1843–1907, Norwegian composer who developed a strongly nationalistic style. He founded (1867) the Norwegian Academy of Music. His best-known works are the Concerto in A Minor for piano and orchestra (1869); the CANTATA *Olav Trygvason* (1873); the SUITE of incidental dramatic music, *Peer Gynt* (1876); and settings of Norwegian FOLK SONGS.

Griffes, Charles Tomlinson, 1884–1920, American composer; b. Elmira, N.Y. His impressionistic compositions include *The Pleasure-Dome of Kubla Khan* (1920) and *Roman Sketches* (1915–16), including *The White Peacock.*

griffin, in ancient and medieval legend, creature with an eagle's head and wings and a lion's body. Originating in Middle Eastern legend, it is often found in Persian art. It is thought to have symbolized strength and vigilance.

Griffith, Arthur, 1872–1922, Irish statesman, founder of SINN FÉIN. Through his newspaper, the *United Irishmen,* he advocated the creation of an Irish assembly. He was the first president (1922) of the Irish Free State.

Griffith, D(avid) W(ark), 1875–1948, American film director. A cinematic genius, he innovated cross-cutting, close-ups, long shots, moving-camera shots, and flashbacks in such films as *The Birth of a Nation* (1915) and *Intolerance* (1916).

Grimké, Angelina Emily, 1805–79, and **Sarah Moore Grimké,** 1792–1873, American abolitionists and feminists; b. Charleston, S.C. Sisters from an aristocratic slaveholding family, they were converted to the Quaker faith, moved north, and became the first women to speak publicly on the issues of slavery and women's rights. Angelina became a persuasive orator, and Sarah published influential works on abolition (1836) and the equality of the sexes (1838).

Grimm, Jakob, 1785–1863, German philologist and folklorist, a founder of comparative philology. Aside from his study of Germanic languages (see GRIMM'S LAW) and his writings on German grammar and mythology, he is best known for the collection of folk tales known as *Grimm's Fairy Tales* (1812–15), compiled with his brother, **Wilhelm Grimm,** 1786–1859.

Grimmelshausen, Hans Jakob Christoffel von [gĭm'əlshou"zən], 1625–76, German novelist. His satirical *Adventurer ome Simplicius Simplicissimus* (1669) is a picaresque romance, noted for its vigor, humor, and realism.

Grimm's law, principle of relationships in Indo-European languages, first formulated by Jakob GRIMM in 1822. It demonstrates that the regular shifting of consonants in groups took place once in the development of English and the other Low German languages and twice in German and the other High German languages. Thus, the unaspirated voiceless stops *(k, t, p)* of the ancient, or classical, Indo-European languages (Sanskrit, Greek, Latin) became voiceless aspirates *(h, th, f)* in English and mediae *(h, d, f)* in German; unaspirated voiced stops *(g d, b)* became voiceless stops *(k, t, p)* in English and voiceless aspirates *(kh, ts, f)* in German; and aspirated voiced stops *(gh, dh, bh)* became unaspirated voiced stops *(g, d, b)* in English and voiceless stops *(k, t, p)* in German.

Gris, Juan [grēs], 1887–1927, Spanish cubist painter; b. José Victoriáno Gonzalez. A developer of synthetic CUBISM, he painted simple forms that reflect an architectonic design. His later works were more sumptuous and decorative. Most of his works are still life oils and COLLAGES.

Griswold v. Connecticut, case decided in 1965 by the U.S. SUPREME COURT, establishing a right to privacy in striking down a Connecticut ban on the sale of contraceptives. The Court, through Justice DOUGLAS, found a "zone of privacy" created by several amendments to the U.S. CONSTITUTION guaranteeing against governmental intrusion into the homes and lives of citizens. The *Griswold* decision was important in later cases, such as ROE V. WADE.

Gromyko, Andrei Andreyevich [grōmē'kō], 1909–89, Soviet diplomat and government official. After holding such posts as ambassador to the U.S. (1943–46) he became foreign minister (1957–85). In the 1970s he helped arrange U.S.–Soviet summit talks. He became (1973) a member of the ruling politburo, taking the position of first deputy premier (1983–85) and president (1985–88).

Gronchi, Giovanni [grôn' kē], 1887–1978, Italian politician. He broke (1922) with MUSSOLINI. A founder of the Christian Democratic party, he was minister for commerce, industry, and labor (1944–46), speaker of the chamber of deputies (1948–55) and president of Italy (1955–62).

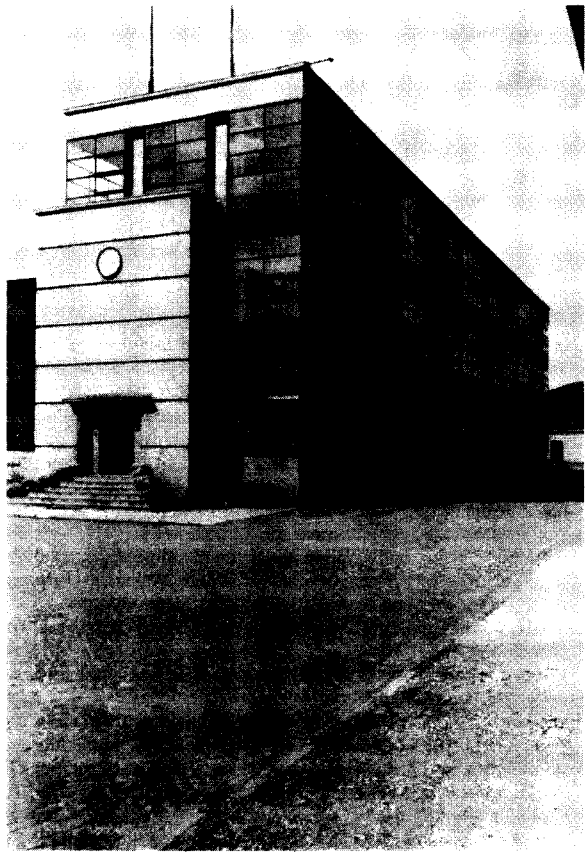
Grooms, Red, 1937–, American artist; b. Nashville. A painter and filmmaker, he pioneered in the theatrical art form known as the "happening." He is best known for his witty environmental constructions, e.g., *Ruckus Manhattan* (1975).

Gropius, Walter [grō'pēōōs], 1883–1969, German-American architect, a leader of modern functional architecture. In Germany his glass-wall Fagus factory buildings (1910–11) at Alfeld were among the most advanced works in Europe. In 1918 he became director of the Weimar School of Art and reorganized it as the BAUHAUS. He designed (1926) a complete new set of buildings for it in Dessau, as well as the Staattheater in Jena (1923), residences, and industrial buildings. In the U.S. after 1937, he taught at Harvard until 1952.

gross domestic product: see under GROSS NATIONAL PRODUCT.

Grosseteste, Robert [grōs'tĕst], c.1175–1253, English prelate. A founder of the Oxford Franciscan school, he made Oxford a center of learning. As bishop (1235) of Lincoln, he resisted the efforts of HENRY III to control church appointments and supported the reforms of Simon de MONTFORT. He also censured Pope INNOCENT IV for excessive exactions and for appointing foreigners to English sees. His writings include treatises on the sciences, pastoral works, and poems. His studies of ARISTOTLE were the basis for the SCHOLASTICISM of THOMAS AQUINAS and ALBERTUS MAGNUS.

gross national product (GNP), a nation's total output of goods and services in a given period, usually one year. In estimating the GNP, only the final value of a product is counted (e.g., automobiles, but not the steel that they contain). The three major components of GNP are consumer purchases, private investment (including over-



Fagus factory buildings, designed by Gropius

seas investment but excluding foreign investment in a nation's economy), and government spending. The GNP is reported quarterly in the U.S. and was used as a barometer of the nation's economic health, but in 1991 the government switched to emphasizing the **gross domestic product** (GDP), which is similar but covers only goods and services produced inside a nation's borders. The GDP, which also is reported quarterly, is regarded as a better indicator of the performance of a country's economy and is used as such by most industrialized nations. The government continues to report the GNP, but about a month after the GDP.

Gros Ventre, name used by the French for two distinct bands of Native Americans of the Plains (see NORTH AMERICA, INDIGENOUS PEOPLES OF). The nomadic Atsina band of ARAPAHO spoke an Algonquian language of the Algonquian-Wakashan stock; the settled Hidatsa, speaking a Siouan branch of Hokan-Siouan, were closely allied with the MANDAN, an agricultural people with whom they live on a reservation in North Dakota.

Grosz, George [grōs], 1893–1959, German-American painter; b. Germany. Early associated with DADA, he was famous for savage post–World War I caricatures of bourgeois society. He became a U.S. citizen in 1938 and painted traditional landscapes and figures. Deeply affected by the horrors of World War II, he created a symbolic series of ravaged figures, e.g., *Street Scene* (Philadelphia Mus. Art).

Grotefend, Georg Friedrich [grō'təfĕnt], 1775–1853, German archaeologist and philologist. His greatest achievement was deciphering inscriptions of Persian CUNEIFORM.

Grotius, Hugo [grō'shəs], 1583–1645, Dutch jurist and humanist. His *Concerning the Law of War and Peace* (1625) is considered the first definitive text on INTERNATIONAL LAW. Drawing on the Bible and classical history, he argued that natural law prescribes rules of conduct for nations, as for individuals. While not condemning all war, he maintained that only certain causes justified it, and he devoted much attention to the concept of more humane warfare.

Groton, city (1990 pop. 45,144), SE Conn., on the Thames R., opposite New London; settled c.1650, inc. 1705. Shipbuilding and pharmaceuticals are its major industries; it is famous for the construction of submarines. The *Nautilus,* the first nuclear submarine, was launched there in 1954.

ground-effect machine: see AIR-CUSHION VEHICLE.

groundhog: see WOODCHUCK.

ground laurel: see TRAILING ARBUTUS.

Group of Seven (G7), international organization (est. 1985) of the world's major industrial powers: the U.S., Canada, France, Germany, Great Britain, Italy, and Japan. It discusses and coordinates economic and commercial matters and works to aid the economies of other nations. The leaders of the G7 nations meet annually in member countries.

grouper, large, carnivorous FISH of the sea BASS family, abundant in tropical and subtropical seas and highly valued as food. Most have bright markings that change in color and pattern to match the background. The largest is the spotted jewfish (up to 600 lb/270 kg). The red grouper and black grouper form the bulk of the commercial catch.

group psychotherapy, a means of altering behavior and emotions that is based on the use of group interactions. The technique was developed in the 1930s and received further impetus during World War II, when there was a great need for a prompt method of treating many patients simultaneously. The therapy can take many forms, depending upon the predisposition and training of the therapist, but is generally carried out in formal groups of 5 to 12 people; the members may be heterogeneous or homogeneous. The group becomes a "sample" social setting, reproducing conditions of interpersonal relationships in general; its members jointly participate in observing personal motivation and styles of interaction. Members can also try new behaviors and learn to deal with the consequences of these within the group. Group therapy may be combined with individual treatment.

grouse, henlike terrestrial BIRD of the family Tetraonidae, found in the colder parts of the Northern Hemisphere. It is protectively plumaged in reds, browns, and grays. The American ruffed grouse (*Bonasa umbellus*), often miscalled PARTRIDGE or PHEASANT, is a forest bird noted for the drumming sound made by the courting male. The ptarmigan (*Lagopus lagopus*) is an arctic species that migrates to the NW U.S. in winter, when its rusty brown plumage changes to white.

Grove, Lefty (Robert Moses Grove), 1900–1975, American baseball player; b. Lonaconing, Md. He won 300 games and struck out over 2,200 batters as a left-handed pitcher for the Philadelphia Athletics (1925–33) and Boston Red Sox (1934–41). In 1931 he won 31 games and lost 4, for a winning percentage of .866, a record that stood for many years.

Grundtvig, Nikolai Frederik Severin [grōōnt'vĭg], 1783–1872, Danish writer, churchman, and educator. He founded the folk high school, a form of adult education designed to foster patriotism and religious conviction in young adults. His many literary works include the epoch-making *Northern Mythology* (1808), a loose retelling of the Old Norse myths. In his poems, songs, and hymns, he treated historical, mythological, and religious subjects.

Grünewald, Mathias [grün'əvält], c.1475–1528, German religious painter; b. Mathis Gothart Neithart. Possessed of unique expressive power, he used stylistic components such as silhouette and unusual color, the striking contrast of light and shadow, and the exaggeration of the human form to convey anguish and terror. His most frequent subject was the crucifixion of Jesus, and his masterpiece is the *Isenheim Altarpiece* (1515; Colmar, France).

grunion: see SILVERSIDES.

Guadalajara, city (1990 pop. 1,628,617), SW Mexico, capital of Jalisco state. A spacious, beautiful city (called the "Pearl of the West"), it is Mexico's second largest city. Although it is a modern metropolis with varied manufactures, it retains many old colonial structures, notably a cathedral and a governor's palace. Its location on a plain more than 5,000 ft (1,524 m) high and its mild, dry climate have made it a popular health resort. Founded c.1530, Guadalajara was a center of the movement for independence from Spain. It has suffered several earthquakes.

Guadalcanal, island c.2,510 sq mi (6,500 sq km), in the SW Pacific

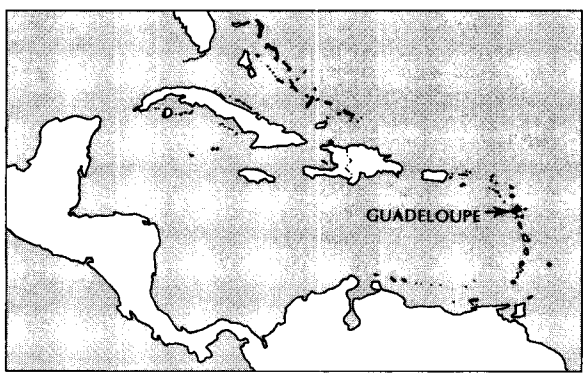
Ocean, largest of the SOLOMON ISLANDS and site of the national capital, Honiara. The largely mountainous and forested island is of volcanic origin. Coconuts are grown, and some gold has been mined. In bitter fighting during WORLD WAR II, U.S. forces seized (1942–43) the island and its airstrip, Henderson Field, from Japanese troops.

Guadalupe Hidalgo, Treaty of, 1848, peace treaty between the U.S. and Mexico that ended the MEXICAN WAR. It confirmed U.S. claims to TEXAS. Mexico ceded most of the present SW U.S. for $15 million and the assumption by the U.S. government of claims against Mexico by U.S. citizens.

Guadalupe Mountains National Park: see NATIONAL PARKS (table).

Guadalupe Victoria, 1786?–1843, first president of MEXICO (1824–29); b. Manuel Félix Fernández. A general, he fought against Spanish rule, and after Mexican independence (1821) he and SANTA ANNA overthrew the ITURBIDE regime. His administration was marred by factional strife.

Guadeloupe, overseas department of France (1992 est. pop. 409,000), 687 sq mi (1,779 sq km), in the Leeward Islands; comprising Basse-Terre, Grande-Terre, and smaller islands. Visited (1493) by Columbus, it was settled (17th cent.) by the French, who eliminated the native Caribs, imported African slaves, and made it a major sugar producer. Sugar remains important, as are tourism, bananas, livestock raising, and fishing. The population is mainly of African or mixed descent. French is the official language, but a French patois is widely spoken.



Guam [gwäm], island (1990 pop. 141,039), 209 sq mi (541 sq km), W Pacific, southernmost of the Marianas island group; an unincorporated U.S. territory. AGANA is the seat of government. Guam is tropical and partly mountainous. The island is a major military base, and providing goods and services to the installations is a major industry. There is tourism (largely from Japan) and some light industry. Subsistence agriculture also is practiced. Guamanians, who are chiefly of Chamorros (mixed Spanish, Filipino, and Micronesian) stock, are U.S. citizens but cannot vote in U.S. elections. About one fourth of the population are military personnel and their dependents. Administered by the U.S. Dept. of the Interior, Guam has an elected governor and legislature. Discovered (1521) by MAGELLAN, it belonged to Spain until it was surrendered to the U.S. in 1898. Guam was occupied by the Japanese from 1941 to 1944. Typhoons devastated Guam in 1976 and 1992, and the island suffered a severe earthquake in 1993. In 1987 Guamanians voted to seek commonwealth status with the U.S.

Guangzhou or **Canton,** city (1990 est. pop. 3,580,000), capital of Guangdong prov., S China, a major deepwater port on the Pearl R. delta. Among the largest cities in the country, Guangzhou is the transportation, industrial, and trade center of S China. It has shipyards, a steel complex, and factories producing many heavy and light industrial products. Its exports include textiles, paper, cement, sugar, and traditional handicrafts. Guangzhou has a large international airport and is linked with HONG KONG by rail and hovercraft. It became a part of China in the 3d cent. B.C. and was later the first Chinese port regularly visited by European traders. The seat (1913) of SUN YAT-SEN'S revolutionary movement, Guangzhou was a Nationalist center in the 1920s, and its fall (1950) to Communist armies signalled the Communist victory in all of China. Foreign trade expositions have been held there since 1957. Guangzhou remains a major marketplace for China's foreign trade and for foreign investment in S China.

Guantánamo, city (1986 est. pop. 175,000), SE Cuba, in Oriente prov. Founded in the 19th cent. by French refugees from Haiti, it is now a sugar- and coffee-processing center. It is c.20 mi (32 km) inland from its port, Caimanera, on well-protected **Guantánamo Bay,** which is also the site of a large U.S. naval station established in 1903. Since the revolution of 1959, Cuba has refused to accept the token annual U.S. rent for the naval base and has pressed for its surrender.

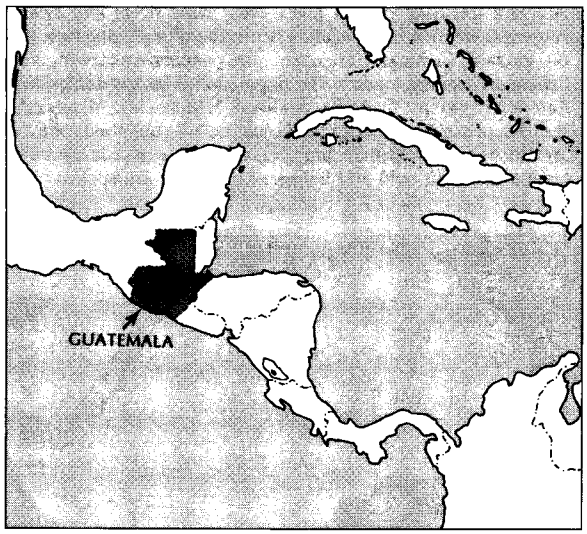
Guaraní, people in N and E South America (see SOUTH AMERICA, INDIGENOUS PEOPLES OF) of the Tupi-Guaraní linguistic stock (see NATIVE AMERICAN LANGUAGES). Those who live in S Brazil and Paraguay are called Guaraní; those in the Amazon region are called Tupí or Tupinambá. At the time of the Spanish conquest (16th cent.), communities of both groups had a chief and a powerful SHAMAN. The Guaraní grew corn and manioc. In ancient times they practiced ritual CANNIBALISM. Although their material culture was not advanced, they had a rich body of folklore. Early Jesuit missionaries founded among them the agricultural settlements called reductions, using native labor under the absolute, but usually benevolent, rule of priests. Guaraní is widely spoken in Paraguay; most Tupí have been assimilated into European culture.

Guardi, Francesco [gwär'dē], 1712–93, Venetian painter of landscapes and architectural scenes. A follower of CANALETTO, he developed a freer style. His work ranges from architectural scenes to delightful, spontaneous *capricci*.

Guatemala, officially Republic of Guatemala, republic (1992 est. pop. 9,784,000), 42,042 sq mi (108,889 sq km), Central America; bordered by Mexico (N and W), Belize and the Caribbean Sea (E), Honduras and El Salvador (SE), and the Pacific Ocean (SW). The capital is GUATEMALA CITY. A highland region occupies the southern half of the country and is the most densely populated area. Much of northern Guatemala is covered by a vast tropical forest, the Petén. Coffee exports accounts for more than half of the nation's revenue. Sugar, cotton, tobacco, vegetables, fruit, and beef also are exported. Industry, particularly the assembly of clothing for the U.S. market, is being expanded. The mainly Roman Catholic population is about evenly divided between Maya and mestizos. The official language is Spanish, although many indigenous people speak only their own dialects. The literacy rate and per capita income are extremely low.

History. After defeat of the Quiché (MAYA) in 1523–24, Spain established a prosperous colony in the area, with its capital (from 1542) at ANTIGUA. After independence (1821) Guatemala became the nucleus of the Central American Federation and, after dissolution of the federation in 1839, a separate republic. Ruled through the 19th cent. by a series of usually repressive dictators, Guatemala has alternated in the 20th cent. between economic reform and reaction. A conservative coup in 1954 owed its success to U.S. military intervention. From 1970 into the early 1980s, the country was dominated by conservative military elements. A leftist insurgency, begun in the 1960s, persisted into the 1990s, despite army efforts to crush it, but the rebels have had limited success at best. Peace talks, begun in 1991, have proved unsuccessful. In 1985 a civilian, Vinicio Cerezo Arévalo, was elected president, but the military retained considerable influence. He was succeeded (1991) by Jorge Serrano Elías, a right-wing businessman with military ties. Serrano adopted economic reforms, but they resulted in a decline in living standards and led to antigovernment protests. In 1993 he attempted to institute rule by decree, but the army withdrew its support and forced him to resign. Ramiro de León Carpio, the attorney general for human rights, was elected by the congress to succeed Serrano and won passage of constitutional reforms.

Guatemala, city (1990 est. pop. 2,250,000), S central Guatemala, capital of Guatemala. The largest city in Central America, it is the nation's commercial and industrial center, with a cosmopolitan atmosphere and many modern public buildings, as well as Spanish colonial structures and large native markets. It was constructed in a highland valley in 1779, after the former capital, ANTIGUA, was



destroyed by earthquakes. Guatemala City itself suffered that fate in 1917–18 and has since been completely rebuilt.

guava, small evergreen tree or shrub (genus *Psidium*) of the MYRTLE family, native to tropical America and grown for its ornamental flowers and edible fruit. Species include the common tropical guava (*P. guajava*) and the strawberry guava (*P. cattleyanum*). The guava is grown commercially in Florida and California and is made into jellies and beverages.

Guayaquil, city (1990 pop. 1,531,229), capital of Guayas prov., W Ecuador, on the Guayas R. near its mouth on the Gulf of Guayaquil, an inlet of the Pacific Ocean. It is Ecuador's largest city and its chief port and manufacturing center. Founded by Sebastián de Benalcázar in 1535, it was liberated from Spain by Antonio José de SUCRE in 1821, and in 1822 was the site of a meeting between Simón BOLÍVAR and José de SAN MARTÍN that determined the course of South American independence. The climate is hot and humid, and yellow fever was a problem until the early 20th cent.

Guðmundsson, Kristmann [gvü'thmünsôn], 1902–83, Icelandic novelist who wrote in both Norwegian and Icelandic. His psychologically insightful works include *The Bridal Gown* (1927) and *The Square* (1965).

Gudrun [gōō'drōōn] or **Kudrun** [kōō–], in Germanic literature. **1** Heroine of the VOLSUNGASAGA. **2** Heroine of a Middle High German epic influenced by the *Nibelungenlied* (see NIBELUNGEN). **3** Principle character of the Icelandic *Laxdaelasaga.*

Guelphs [gwĕlfs], German dynasty of the Middle Ages. It traced its descent from the Swabian count Guelph, or Welf, in the 9th cent. Eventually the Guelphs became the dukes of Bavaria and Saxony, and were the rivals of the house of HOHENSTAUFEN. In Italy the dynasty was represented by the ESTE family. The Guelphs came to represent the papal faction in the longtime struggle between the GUELPHS AND GHIBELLINES.

Guelphs and Ghibellines [gĭb'əlēnz], opposing political factions in Germany and Italy in the later Middle Ages. The names designated the papal (Guelph) party and the imperial (Ghibelline) party during the long struggle between the papacy and the Holy Roman emperors; they also designated two rival German families, the Welfs or GUELPHS, and the HOHENSTAUFEN. In Germany the rivalry began under Emperor HENRY IV and last flared at the election of Emperor OTTO IV. In Italy the terms were used from the 13th to the 15th cent., and the rival factions plunged the country into internal warfare. Among the Ghibellines were EZZELINO DA ROMANO and the VISCONTI family of Milan. Milan itself was Guelph, as were, generally, Florence and Genoa. Cremona, Pisa, and Arezzo were usually Ghibelline. Venice remained neutral.

Guernica [gärnē'kä], town (1981 pop. 17,836), in the Basque prov. of Vizcaya, N Spain. The Guernica oak, under which the diet of Vizcaya met, symbolizes the Basques' lost liberty. One of PICASSO's greatest paintings commemorates the 1937 destruction of Guernica by German bombers aiding FRANCO during the SPANISH CIVIL WAR.

Guernsey: see CHANNEL ISLANDS.

Guerrero, Vicente [gär-rā'rō], 1782–1831, Mexican revolutionary leader. He won guerrilla victories over Spanish forces but accepted ITURBIDE's conservative leadership of the Mexican independence movement. He and SANTA ANNA led (1828) a successful revolt against Iturbide, and Guerrero served briefly (1829) as president, but he was forced to retreat and was finally captured and shot.

Gueux [gö] [Fr., = beggars], 16th-cent. Dutch revolutionary party. In 1566 over 2,000 nobles and burghers vowed to resist Spanish repression in the NETHERLANDS. Called "these beggars" at the court of the Spanish regent, MARGARET OF PARMA, they adopted the sobriquet. The "Beggars of the Sea," crews of Dutch privateers chartered in 1569 by WILLIAM THE SILENT to harass Spanish shipping, raised the siege of LEIDEN in 1574.

Guevara, Ernesto, 1928–67, Cuban revolutionary leader; b. Argentina. A physician and political activist, "Che" Guevara became (1956) Fidel CASTRO's chief lieutenant and a guerrilla leader in the Cuban revolution (1959). He served as minister of industry (1961–65), then left Cuba to foster revolutions in other countries. Captured in Bolivia (1967), he was executed.

Guggenheim, family of American industrialists and philanthropists. **Meyer Guggenheim,** 1828–1905; b. Aargau canton, Switzerland, emigrated (1847) to the U.S. and prospered as a merchant in Philadelphia. His real fortune came from metal smelting and refining, beginning when he was nearly 60. Seven sons—Isaac, Daniel, Murry, Solomon, Benjamin, Simon, and William—contributed to the expansion of the family enterprises. **Daniel Guggenheim,** 1856–1930, b. Philadelphia, combined (1901) the Guggenheim interests with the American Smelting and Refining Co. The Daniel and Florence Guggenheim Foundation for aeronautical research represented his main philanthropy. **Simon Guggenheim,** 1867–1941, established (1925), with his wife, the John Simon Guggenheim Memorial Foundation to assist scholars, writers, and artists. **Solomon Robert Guggenheim,** 1861–1949, created a foundation that established (1937) the SOLOMON R. GUGGENHEIM MUSEUM.

Guggenheim Museum: see SOLOMON R. GUGGENHEIM MUSEUM.

Guicciardini, Francesco [gwēchärdē'nē], 1483–1540, Italian historian and statesman. He served in the Florentine government and under Pope LEO X before taking up writing. Breaking with medieval tradition, he removed history from the realm of literature and related it to the development of states. His history of Italy (1492–1534) is the masterwork of Italian historical literature of the RENAISSANCE.

Guidi, Tommaso: see MASACCIO.

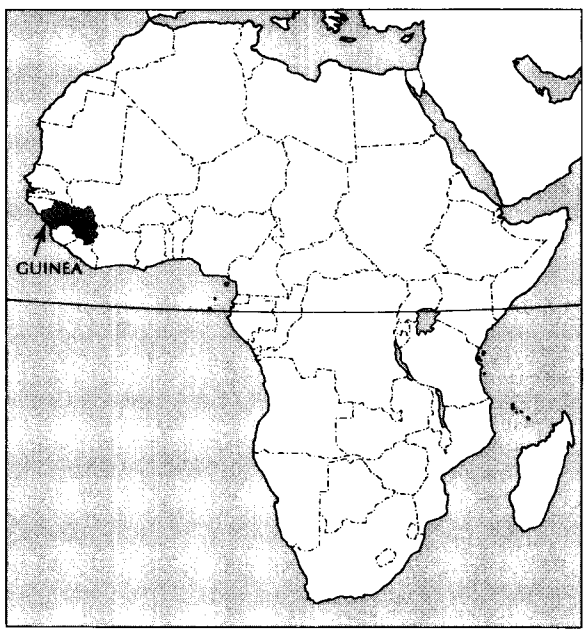
guilds or **gilds,** economic and social associations of persons engaged in the same business or craft, typical of Western Europe in the Middle Ages. Membership was never by class, but by profession or trade. The primary function of guilds was to establish local control over a profession or craft by setting standards of workmanship and price, by protecting the business from competition, and by gaining status in society for guild members. Merchant guilds in some cases developed into intercity leagues for the promotion of trade, such as the medieval HANSEATIC LEAGUE. By the 17th cent. the power of the guilds had withered in England. They were abolished in France in 1791 and elsewhere in Western Europe during the 19th cent.

guild socialism, form of socialism in Great Britain that advocated industrial self-government through national worker-controlled guilds. The theory began (1906) with Arthur J. Penty, who sought to revive the spirit of medieval craft guilds and argued that workers should strive for control of industry rather than for political reform. Several guilds were started, but the movement ended after the collapse (1922) of the National Building Guild, its most powerful component.

Guillén, Jorge [gēlyān'], 1893–1984, Spanish poet. He settled in the U.S. in 1939. His difficult, classic verse appears in *Cántico* (1928), *Clamor* (1957), and *Affirmation: A Bilingual Anthology* (1968). He also wrote the essays in *Language and Poetry* (1961).

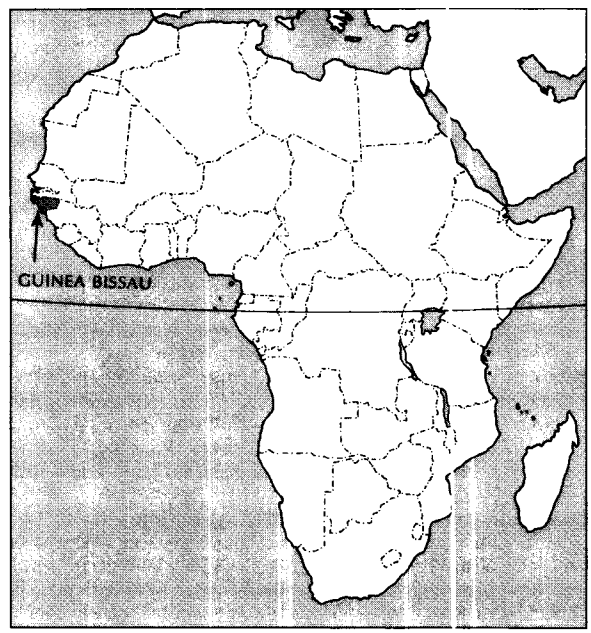
Guinea [gĭn'ē], Fr. *Guinée,* officially Republic of Guinea, republic (1992 est. pop. 7,784,000), 94,925 sq mi (245,856 sq km), W Africa, bordered by Guinea-Bissau, Senegal, and Mali (N), Côte d'Ivoire (E), Sierra Leone and Liberia (S), and the Atlantic Ocean (W). CONAKRY is the capital. A humid and tropical country, Guinea com-

prises an alluvial coastal plain; the mountainous Fouta Jallon region; a savanna interior; and the forested Guinea Highlands, which rise to c.5,800 ft (1,770 m) in the Nimba Mts. Guinea is predominantly agricultural. Coffee, bananas, palm kernels, and pineapples are the leading cash crops; the main subsistence crop is rice. Some of the world's largest bauxite deposits lie in Guinea, the world's third largest producer; iron ore, gold, and diamonds also are mined. Poor administration and transportation have hampered industrialization, and Guinea, despite its mineral wealth, remains one of the world's poorest nations. Most sectors of the economy were placed under state control after independence (1958), but large-scale PRIVATIZATION was initiated in 1991. The main ethnic groups are the pastoral Fulani and the agrarian Malinké and Susu. Islam is the chief religion, but there are animist and Roman Catholic minorities. French is the principal language, but indigenous tongues also are spoken.



History. Part of present-day Guinea belonged to medieval GHANA, and later to the MALI empire. As in other W African states, Portuguese exploration of the Guinea coast in the mid-15th cent. led to the development of a slave trade involving also the French and British. France proclaimed a protectorate over the Boké area of Guinea in 1849 and, after extending its control over much of the rest of Guinea, annexed it under the name Rivières du Sud (rivers of the south). In 1895, as French Guinea, it became part of French West Africa. Exploitation of Guinea's rich bauxite deposits began just before World War II, accompanied by the growth of a radical labor movement led by Ahmed Sékou TOURÉ. Under his leadership Guinea was the only French colony to reject (1958) self-government within the FRENCH COMMUNITY and to vote instead for full independence. Touré created a one-party socialist state in which he, as head of the government and the ruling party, had ultimate authority. Over time his rule became increasingly repressive. When Touré died (1984) a military clique seized power, and Col. (now Major Gen.) Lansana Conté became president. Conté has reduced state control of the economy and, under foreign and domestic pressure, liberalized the political system. Conté won (1993) a multiparty presidential election that was boycotted by some opposition groups and was marred by fraud.

Guinea-Bissau [–bĭs″sou′], officially Republic of Guinea-Bissau, republic (1992 est. pop. 1,047,000), 13,948 sq mi (36,125 sq km), W Africa, bordered by the Atlantic Ocean (W), Senegal (N), and Guinea (E and S), and including the Bijagós Archipelago and several islands in the Atlantic. The capital is BISSAU. Guinea-Bissau is largely a low-lying coastal plain, with many rivers and swampy estuaries. Farming is the leading occupation, producing rice, palm oil, cassava, sugarcane, coconuts, and peanuts. Cashew nuts and fishing are leading exports. The population is largely comprised of four ethnic groups: the Balante, Fulani, Malinke, and Mandyako. A majority of the people hold traditional beliefs, but about one third are Muslim, and about 5% are Christian. Portuguese is the official language, but Criould and indigenous tongues are spoken.



History. First visited by the Portuguese in 1446–47, the area that is now Guinea-Bissau developed in the 16th cent. as a slave-trading center. It was administered as part of the CAPE VERDE islands until 1879, when it became the separate colony of Portuguese Guinea. In 1951 it was constituted an overseas province. A nationalist movement was organized in 1956, and a war for independence began in the early 1960s. After more than 10 years of fighting, independence was proclaimed in 1973 and recognized by Portugal in 1974. The following year some 100,000 refugees of the war returned. Ties with Cape Verde had been close, with eventual union a goal. However, a coup in 1980, which brought João Bernardo Vieira to power, led to a breakdown of those relations. Since then the country's economy has slowly moved away from socialism. Popular pressure led the ruling party to agree (1991) to the introduction of multiparty democracy; free elections are expected to be held in 1994.

guinea pig, domesticated form of the cavy (*Cavia porcellus*), a South American RODENT unrelated to the pig. Guinea pigs have rounded bodies and large heads, are 6 to 10 in. (15 to 25 cm) long, and weigh 1 to 2 lb (450 to 900 grams). There are short- and long-haired varieties and many color combinations.

Guinevere: see ARTHURIAN LEGEND.

Guinness, Sir Alec, 1914–, English actor. Noted for his versatility, he has appeared in such films as *Kind Hearts and Coronets* (1949; he performed eight parts); *The Bridge on the River Kwai* (1957; Academy Award); and, for television, *Tinker, Tailor, Soldier, Spy* (1980) and *Smiley's People* (1982), dramatizations of novels by John LECARRÉ.

Guise, French ducal family, founded as a cadet branch of the house of Lorraine by **Claude de Lorraine,** 1st **duc de Guise,** 1496–1550. His daughter, MARY OF GUISE, married JAMES V of Scotland and was the mother of MARY QUEEN OF SCOTS. His sons **François de Lorraine,** 2d **duc de Guise,** 1519–63, and **Charles de Guise, Cardinal de Lorraine,** c.1525–74, controlled French politics in the reign of FRANCIS II, the first husband of Mary Queen of Scots.

They championed the Roman Catholic cause against the Protestant HUGUENOTS and harshly suppressed the Huguenot conspiracy of Amboise (1560). After Francis's death they opposed the tolerant policies of the regent, CATHERINE DE' MEDICI, and provoked the Wars of Religion (see RELIGION, WARS OF). François's son **Henri de Lorraine,** 3d **duc de Guise,** 1550–88, helped Catherine de' Medici plan the massacre of Huguenots on SAINT BARTHOLOMEW'S DAY (1572). He formed the Catholic League to oppose Protestantism and revived the League in 1585 to block the accession of the Protestant Henry of Navarre (later HENRY IV). Because of Guise's designs on the throne, King HENRY III brought about the assassinations of Guise and his brother **Louis de Lorraine, Cardinal de Guise,** 1555–88. Henri was succeeded by his son, **Charles de Lorraine,** 4th **duc de Guise,** 1571–1640. Charles's son **Henri de Lorraine,** 5th **duc de Guise,** 1614–64, was the archbishop of Rheims. He conspired against Cardinal RICHELIEU (1641) and fought in Naples against Spain (1647–48; 1654). He was grand chamberlain at the court of LOUIS XIV.

guitar: see STRINGED INSTRUMENT.

Guitry, Lucien Germain [gētrē'], 1860–1925, the most versatile French actor of his day. His son, **Sacha Guitry,** 1885–1957, was an actor; popular playwright, e.g., *Nono* (1905); and film director.

Guiyang or **Kweiyang** [both: gwā-yäng], city (1990 est. pop. 1,530,000), capital of Guizhou prov., SW China. A major transport and industrial center, it produces textiles, fertilizers, machine tools, and petroleum products. The city's population includes numerous minority nationalities.

Guizot, François [gēzō'], 1787–1874, French statesman and historian. A university professor, he served LOUIS PHILIPPE as minister of public instruction (1832–37). Becoming the chief power in the ministry (1840), he was named premier in 1847, but his acceptance of the established order led to his overthrow in the FEBRUARY REVOLUTION of 1848. He devoted the rest of his life to writing. His *History of the Revolution in England* (6 vol., 1826–56) illustrates his critical approach and his admiration for the British experience.

GULAG, system of forced-labor prison camps in the USSR, from the Russian acronym for Chief Administration of Corrective Labor Camps, a department of the KGB (Soviet SECRET POLICE). Established in 1918, the vast penal network reached its peak under STALIN, when deaths of political prisoners from starvation and other forms of maltreatment were estimated in the millions. The system was publicized in the writings of SOLZHENITSYN.

Gulf Stream, warm ocean current of the N Atlantic Ocean off E North America, originating in the Gulf of Mexico, passing through the Straits of Florida, and moving northeastward until it merges with the NORTH ATLANTIC DRIFT at lat. 40°N and long. 60°W. The Gulf Stream has an average speed of 4 mi (6.4 km) per hour. At its beginning the water temperature is 80°F (27°C), but it decreases as it moves north.

Gulf War: see PERSIAN GULF WAR; IRAN-IRAQ WAR.

gull, aquatic BIRD of the family Laridae (which also includes the TERN), found near all oceans and many inland waters. White with gray or black plumage, gulls are larger and bulkier than terns, and their tails are squared rather than forked. They have long, narrow wings adapted for soaring, webbed feet for swimming, and hooked bills.

Gullah, a creole language spoken by the Gullahs, African Americans of the Carolina Sea Islands and the Middle Atlantic coast of the U.S. It is a mixture of 17th- and 18th-cent. English and a number of West African languages.

gum tree, name for the EUCALYPTUS and for other trees, e.g., sweet gum (WITCH-HAZEL family) and BLACK GUM.

gun, a device that discharges shot, shells, or bullets from a straight tube. A gun using the explosion of GUNPOWDER or some other explosive substance to propel the projectile is called a firearm; types include ARTILLERY (large firearms), MORTAR, and SMALL ARMS. Certain other guns use compressed air produced by a spring-operated plunger (e.g., BB gun) or a lever-and-pump system (e.g., air rifle) to propel the projectile.

gun control, government limitation of the purchase and ownership of firearms. The availability of guns is controlled by nations and localities throughout the world. In the U.S. the "right of the people to keep and bear arms" is guaranteed by the Constitution, but has been variously interpreted. Some states and localities have enacted strict licensing and other control measures, and federal legislation (1968) prohibited the sale of rifles by mail. Gun control has continued to be widely debated, however, and often opposed, notably by the NATIONAL RIFLE ASSOCIATION. The growing number of gun-related crimes propelled congressional passage (1993) of the "Brady bill" (named for James Brady, the press secretary wounded in the 1981 assassination attempt on Pres. Reagan) after years of controversy. It requires a five-day waiting period and background check before a handgun purchase.

Gundulić, Ivan [gōōndōō'lĭch], or **Giovanni Gondola** [gōndə'lä], 1588–1638, Croatian poet. His finest work, *Osman* (1626), an epic of the Polish wars against the Turks, shows early Slavic nationalism and the influence of ancient song.

gunmetal, a BRONZE, an ALLOY of COPPER, TIN, and a small amount of ZINC. Originally used to make guns, it is now employed in casting machine parts. The percentages of the three elements are varied, depending on the intended use.

gunpowder, explosive mixture of saltpeter (75%), sulfur (10%), and charcoal (15%). It is believed to have originated as early as the 9th cent. in China, where it was used for making fireworks, and to have been introduced into Europe in the 14th cent. Its use revolutionized warfare. Gunpowder was the only explosive in wide use until the mid-19th cent., when it was superseded by NITROGLYCERIN-based EXPLOSIVES.

Gunpowder Plot, conspiracy to blow up the English Parliament and JAMES I on Nov. 5, 1605, the opening day of Parliament. An uprising of English Catholics was to follow. In preparation, gunpowder was stored in the cellar of the House of Lords. The plot was exposed when a conspirator warned a relative not to attend Parliament that day. One of the plotters, Guy Fawkes, was arrested as he entered the cellar. The others were either seized and killed outright or imprisoned and executed. The plot only worsened the plight of English Catholics. Guy Fawkes Day is celebrated today in England on Nov. 5.

Gupta [gōōp'tə], Indian dynasty (c.320–c.550) founded by CHANDRAGUPTA I (r.c.320–c.330). At its height, the dynasty ruled much of what is modern India.

Gurkha, ethnic group of NEPAL. Predominantly Tibeto-Mongolians, they speak Khas, a Rajasthani dialect of Sanskritic origin; practice Hinduism; and claim descent from the RAJPUTS of N India. By the 18th cent. they had expanded east from their small state of Gurkha throughout Nepal. Many Gurkha soldiers have served in Indian and British armies.

Gustavus, kings of Sweden. **Gustavus I,** 1496–1560 (r.1523–60), was the founder of the modern Swedish state and the VASA dynasty. After his father, a Swedish senator, was killed (1520) in a massacre ordered by the Danish king, CHRISTIAN II, Gustavus escaped from prison and defeated the Danes. His election as king by the Riksdag (1523) ended the Kalmar Union of Denmark, Sweden, and Norway. In 1527 he founded a national Protestant church. With a newly strengthened navy, he defeated LÜBECK (1537), freeing Swedish commerce from the power of the HANSEATIC LEAGUE. In 1544 he made the throne hereditary in the Vasa family, ending the election of Swedish kings. His son Eric XIV succeeded him. **Gustavus II** (Gustavus Adolphus), 1594–1632 (r.1611–32), was the son of CHARLES IX. Aided by his chancellor, OXENSTIERNA, he ended the Kalmar War with Denmark (1613) and forced Russia to cede Ingermanland (1617). In the THIRTY YEARS WAR he obtained much of Polish Livonia and several Baltic ports (1629), then invaded German Pomerania, defeating TILLY near Leipzig (1631). At Lützen (1632) the Swedes defeated WALLENSTEIN, but Gustavus was killed. His daughter, CHRISTINA, succeeded him. **Gustavus III,** 1746–92 (r.1771–92), was the son of Adolphus Frederick. To quell civil strife he imposed (1772) a new constitution restoring the royal prerogatives lost by his successors. In a war with Russia and Denmark (1788–90), he was victorious. He planned a coalition to aid the French royalists but was assassinated by an agent of the nobles. His son, **Gustavus IV,** 1778–1837 (r.1792–1809), succeeded him under the regency of his uncle, later CHARLES XIII. After he joined (1805) the Third Coalition against NAPOLEON I he lost Swedish Pomerania to France and Finland to Russia (1808). His despotism, mental imbalance, and disastrous policies led to his forced abdi-

cation when the Russians threatened Stockholm (1809). Charles XIII became king and made peace with Russia. Gustavus was exiled, and his descendants barred from succession. **Gustavus V,** 1858–1950 (r.1907–50), was the son of Oscar II. During his reign Sweden prospered and avoided involvement in two world wars. He was succeeded by his son, **Gustavus VI** (Gustaf Adolf), 1882–1973 (r.1950–73). He participated in archaeological expeditions in Sweden, Greece, and China, and his work as a botanist earned him admission (1958) to the British Royal Academy. His grandson, Carl Gustaf, succeeded him as CHARLES XVI GUSTAVUS.

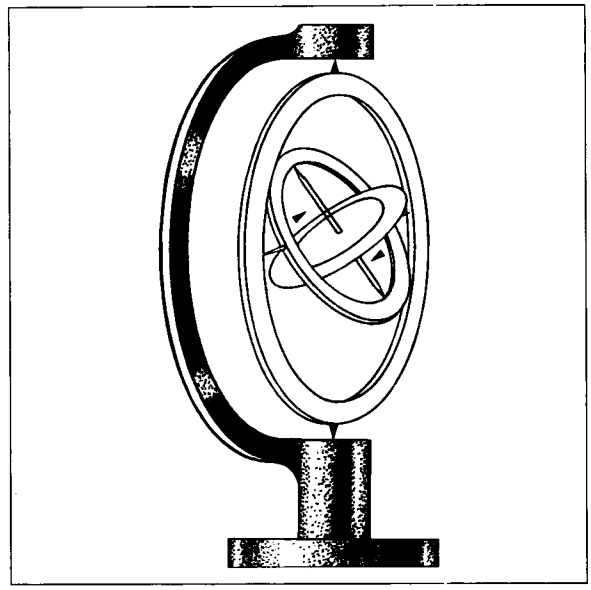
Gustavus Adolphus: see Gustavus II under GUSTAVUS, kings of Sweden.

Gutenberg, Johann, c.1397–1468, German printer, believed to have been the first European to print with movable type. Laurens Janszoon Koster of Holland and Pamfilo Castaldi of Italy are thought by some to have preceded him. Gutenberg's name did not appear on any of his work, and details of his life are scant. He is thought to have trained as a goldsmith. He may have invented PRINTING in Strasbourg in 1436 or 1437, but the work attributed to him, including the MAZARIN BIBLE (1455), was done in Mainz. He had to give up his press and types to Johann Fust for debt.

Guthrie, Sir Tyrone, 1900–1971, English director and producer. Noted for his experimental Shakespearean productions, he headed the Old Vic and Canada's Shakespeare Festival before founding (1963) the Guthrie Theater in Minneapolis.

Guthrie, Woody (Woodrow Wilson Guthrie), 1912–67, American folk singer, guitarist, and composer; b. Okemah, Okla. He wrote over 1,000 songs, chiefly on social and political themes, and strongly influenced younger performers like Bob DYLAN. His son, **Arlo Guthrie,** 1947–, b. N.Y.C., also is a folk singer and composer.

Guyana [gīăn'ə, -ăn-], officially Cooperative Republic of Guyana, republic (1992 est. pop. 739,000), 83,000 sq mi (214,969 sq km), NE South America, bordered by the Atlantic Ocean (N), Suriname (E), Brazil (S and W), and Venezuela (W). GEORGETOWN is the capital. The climate is hot and humid, and rainfall is heavy. There is a cultivated coastal plain and a forested, hilly interior. Agriculture and mining are the principal economic activities, with the processing of bauxite (nationalized in the 1970s) and sugarcane the largest industries. The population, primarily of Indian (51%) and African and mixed (43%) descent, with about 4% native peoples, is concentrated along the coast. English is the official language, and indigenous American languages also are spoken. Christianity, Hinduism, and Islam are the main religions.



Three-frame gyroscope

History. Originally settled by the Dutch in the 17th cent., the region was awarded to the British in 1815 and united as British Guiana in 1831. Full independence was gained in 1966 under the leadership of Prime Min. (later Pres.) Forbes Burnham. Guyana became a republic in 1970 and embarked on a socialist path that ultimately led to economic ruin. In 1978 the Guyana jungle was the site of a mass suicide involving over 900 American exiles who were members of Rev. Jim Jones's People's Temple. Burnham was succeeded at his death (1985) by Desmond Hoyte, who gradually reversed the government's socialist policies. Both Burnham and Hoyte were accused of using electoral fraud to stay in power. In 1992 Hoyte lost the presidency to Cheddi Jagan, a former prime minister (1957–64) and ex-Marxist.

Guzmán Blanco, Antonio [gōōsmän' blän'kō], 1829–99, Venezuelan dictator (1870–88). Instrumental in deposing (1863) PAEZ as dictator, he served (1863–68) as Liberal vice president and led a counterrevolution (1870) that made him president. A benevolent despot, he reformed government administration and brought about material progress. His regime was overthrown in 1888.

Gwyn or **Gwynn, Nell** (Eleanor Gwyn), 1650–87, English actress, notable for her charm in comic roles. From 1669 she was the mistress of CHARLES II and bore him two sons.

gymnastics, exercises for the balanced development of the body, usually practiced in a gymnasium, so named for the training place for the OLYMPIC GAMES of ancient Greece. Modern gymnastics dates from the early 19th cent., when several *Turnplätze* were established in Berlin, then spread throughout the Continent, to England, and to the U.S. Now a popular modern Olympic sport, gymnastics includes floor exercises, the horse, the vault, parallel and uneven bars, horizontal bar, balance beam, and rings.

gymnosperm, plant in which the SEEDS are exposed to the air during all stages of development, in contrast to ANGIOSPERMS. Gymnosperms, which include the PINES, are woody plants with STEMS, ROOTS, LEAVES, and vascular, or conducting, tissue (xylem and phloem). Gymnosperms are always pollinated by wind, and many have their seed-bearing structures organized into cones. Traditionally constituting the plant division Pinophyta, the group includes the CYCADS, CONIFERS, and GINKGOS.

gynecology, branch of medicine specializing in disorders of the female REPRODUCTIVE SYSTEM. Modern gynecology deals with disorders of MENSTRUATION, menopause, disease and maldevelopment of reproductive organs, hormonal and fertility problems, and BIRTH CONTROL devices. A related branch of medicine is **obstetrics,**

which specializes in the care of women during PREGNANCY and childbirth.

gypsies or **gipsies,** nomadic people found on every continent but most prominent in Spain and the Balkans. Despite much wandering they still cling to their identity and customs. Some still travel in small caravans, although many now live in settled communities. They often earn a living as metalworkers, musicians, horse or car dealers, auto mechanics, and fortune-tellers. Most are Roman Catholic or Eastern Orthodox Christian. Their Indo-Iranian language, Romany, and their blood groupings are related to those found in NW India and adjoining areas, where they probably originated. They went to Persia in the 1st millennium A.D. and have since divided into the Gitanos, Kalderash, Manush, Rom, and other groups. They had spread throughout Europe by the 16th cent. and appeared in North America in the late 1800s. Estimates of the number of gypsies range widely, but there are perhaps 10 million worldwide; half a million died in Nazi CONCENTRATION CAMPS during World War II. Since the end of Communist rule in E Europe, they have faced increased discrimination and persecution there, particularly in Romania.

gypsum ($CaSO_4 \cdot 2H_2O$), the most common sulfate mineral, occurring in many places and forms. It is very soft; the massive variety ALABASTER and the lustrous variety satin spar are easily worked into decorative objects. Plaster of Paris, used to make casts, molds, and wallboard, is made from gypsum.

Gypsy language: see ROMANY.

gyroscope, symmetrical mass, usually a wheel, mounted so that it can spin about an axis in any direction. A spinning gyroscope will resist changes in the orientation of its spin axis. Gyroscopes are used in ship stabilizers to counteract rolling, and a gyroscope is the nucleus of most automatic steering systems, such as those used in airplanes, missiles, and torpedoes. See also COMPASS.

H

H, chemical symbol of the element HYDROGEN.

Ha, chemical symbol of the element HAHNIUM.

Haakon [hä'kən, Nor. hô'kōōn], kings of Norway. **Haakon I** (the Good), c.915–61 (r. c.935–61), was the son of HAROLD I. Raised as a Christian in England, he tried unsuccessfully to introduce Christianity into Norway after seizing power from his brother Eric Bloodyaxe. Eric's sons succeeded him. **Haakon IV** (Haakon Haakonsson), 1204–63 (r.1217–63), was the illegitimate son of Haakon III. Under him medieval Norway reached its zenith. Iceland and Greenland were acquired, legal reforms were carried out, and Old Norse literature flowered (see SNORRI STURLUSON). His son, MAGNUS VI, succeeded him. **Haakon VII,** 1872–1957 (r.1905–57), was born Prince Charles, second son of FREDERICK VIII of Denmark. He was chosen king when Norway separated from Sweden. During the German occupation of Norway (1940–45), he headed a government in exile in London. He was succeeded by his son OLAF V.

Haarlem, city (1991 est. pop. 150,000), capital of N Holland prov., W Netherlands. It has heavy industry but is best known as a flower-growing center and exporter of bulbs, chiefly tulips. Leading masters, e.g., HALS, van OSTADE, and van RUISDAEL, painted there. Among its many historic buildings are the 15th-cent. Groote Kerk (church) and the city hall (begun 1250).

Habakkuk, Habacuc, or **Habbacuc** [all: həbäk'ək], book of the OLD TESTAMENT, 35th in the Authorized Version, 8th of the Minor PROPHETS. It is a set of poems on the punishment of the wicked by God, using the Chaldaeans (Babylonians) as His instrument, and on the triumph of divine justice and mercy.

habeas corpus [Lat., = you should have the body], in law, a writ issued by a court commanding that a person held in custody be brought before a court so that it may determine whether the detention is lawful. Meant to ensure that a prisoner is accorded due process of law, it does not determine guilt or innocence. Habeas corpus originated in medieval England and was regarded highly by the British colonists in America as a safeguard against illegal imprisonment. It is guaranteed by the U.S. CONSTITUTION and may be suspended only in time of rebellion or invasion.

Haber, Fritz, 1868–1934, German chemist. During World War I he directed Germany's chemical warfare activities, which included the introduction of poison gas. After the Nazi rise to power (1933), he went into exile in England. He won the 1918 Nobel Prize in chemistry for his discovery of the Haber process for synthesizing ammonia from its elements.

Habsburg, family: see HAPSBURG.

haddock: see COD.

Hades [hā'dēz], in Greek mythology. **1** The ruler of the underworld, commonly called PLUTO. **2** The world of the dead, ruled by Pluto and PERSEPHONE. Guarded by CERBERUS, it was either underground or in the far west and was separated from the land of the living by five rivers. One of these was the STYX, across which the dead were ferried. Three judges decided the fate of souls; heroes went to the ELYSIAN FIELDS, evildoers to TARTARUS.

Hadewijch [hä'dəvīkh], fl. early 13th cent., Dutch mystical poet, a nun. Her works are a monument both to early Dutch literature and to Roman Catholic mysticism.

Hadrian. For popes of this name, see ADRIAN.

Hadrian or **Adrian,** A.D. 76–138, Roman emperor (117–138); b. Spain. His name in full was Publius Aelius Hadrianus. A ward of TRAJAN, Hadrian distinguished himself as a commander and as an administrator. He was chosen as Trajan's successor. Hadrian's reign was vigorous and judicious. Abandoning the aggressive policy of Trajan in Asia, he withdrew to the boundary of the Euphrates in Palestine. In 132 he put down the insurrection of the Hebrew leader BAR KOKBA with great severity. Hadrian traveled extensively in the empire, stabilizing government and adorning the cities. In Germany he built great protective walls, and in Britain he had HADRIAN'S WALL built. He also patronized the arts; his regard for the youth Antinoüs was recorded by sculptors and architects. As his successor he chose Antoninus Pius.

Hadrian's Wall, ancient Roman wall, 73.5 mi (118.3 km) long, across Great Britain from Wallsend to Bowness. Built (A.D. c.122–26) by Emperor HADRIAN and extended by Emperor SEVERUS a century later, the wall demarcated the northern boundary and defense line of Roman Britain. Fragments of it remain.

Haeckel, Ernst von [hĕ'kəl], 1834–1919, German biologist and philosopher. He was an early exponent in Germany of Charles DARWIN's theory of EVOLUTION. Based on his interpretations of Darwin's theory, he evolved a mechanistic form of MONISM. His theory of recapitulation postulated a hypothetical ancestral form represented by the gastrula stage of embryonic development. Although many were later proved incorrect, his theories attracted a following and stimulated research.

haemo-. For words beginning thus, see HEMO-.

Hafiz [häfēz'], d. 1389?, Persian poet; b. Shams ad-Din Muhammad. Traditionally interpreted allegorically by Muslims, his poems are passionate lyrics, usually *ghazals* (groups of rhyming couplets), on such themes as love and drink.

hafnium (Hf), metallic element, discovered by X-ray spectroscopy

in 1923 by Dirk Coster and Georg von Hevesy. Lustrous, silvery, and ductile, it is chemically similar to ZIRCONIUM; the two elements are among the most difficult to separate. Hafnium is used for nuclear-reactor control rods. See ELEMENT (table); PERIODIC TABLE.

Hagar: see ISHMAEL.

Hagen, Walter, 1892–1969, American golfer; b. Rochester, N.Y. He won 11 major championships: the U.S. Open twice (1914, 1919) and, during the 1920s, the British Open four times and the Professional Golfers' Association five times. He played on five Ryder Cup teams.

Haggai [hăg'āī] or **Aggeus** [ăgē'əs], book of the OLD TESTAMENT, 37th in the Authorized Version, 10th of the Minor Prophets. Dated 520–519 B.C., it calls on the JEWS, newly returned from the Babylonian exile, to renew work on restoring the Temple.

Haggard, Sir Henry Rider, 1856–1925, English novelist. He is known for his highly popular romantic adventure stories, particularly *King Solomon's Mines* (1885) and *She* (1887).

Hagia Sophia [Gr., = Holy Wisdom] or **Santa Sophia,** Turkish *Aya Sofia,* originally a Christian church at Constantinople (now İstanbul), later a MOSQUE, now a museum of Byzantine art. The supreme masterpiece of Byzantine architecture, the present structure was built (A.D. 532–37) by Anthemius of Tralles and Isidorus of Miletus for the emperor JUSTINIAN I. After the Turkish conquest of Constantinople (1453), it became a mosque. The interior mosaics were obscured under layers of plaster and painted ornament, and Christian symbols were obliterated. Four MINARETS were added at the outer corners. The nave is covered by a lofty DOME carried on pendentives; its weight thus rests on four huge arches and their piers. The east and west arches are extended by half-domes and domed exedrae. A vast oblong interior is thus created. The dome is 102 ft (31 m) in diameter and 184 ft (56 m) high, with a corona of 40 arched windows flooding the interior with light. The original decorations and gold mosaics have been largely restored.

Hague, The, city (1991 est. pop. 445,000), capital of S Holland; seat of the Dutch government, the Dutch supreme court, and the International Court of Justice (see UNITED NATIONS, table 2). It grew around a palace begun c.1250 by William, count of Holland. Seat (from 1586) of the States General of the United Provinces of the Netherlands and residence (17th–18th cent.) of their stadtholders, it became a major diplomatic and intellectual center. It was the Dutch royal residence from 1815 to 1948. Site of the HAGUE CONFERENCES, the city is known as a center for the promotion of peace. Landmarks include the 14th-cent. Gevangenenpoort prison, the 17th-cent. Mauritshuis, and the Peace Palace (1913).

Hague Conferences, two international conferences (1899, 1907) held at The Hague, the Netherlands, on the problems of armaments and the rules of modern warfare. They adopted various conventions that were later ratified by many nations. Although they failed to prevent WORLD WAR I, they were an example for both the LEAGUE OF NATIONS and the UNITED NATIONS. The first conference created the HAGUE TRIBUNAL.

Hague Tribunal, popular name for the Permanent Court of Arbitration, established by the first HAGUE CONFERENCE (1899). Headquartered in The HAGUE, it consists of a permanent group of jurists from which a panel is selected whenever contending nations agree to submit a dispute to arbitration. It has ruled in more than 20 international disputes, including the Venezuela Claims (1904). After World War I it was largely eclipsed in importance by the WORLD COURT.

Hahn, Otto, 1879–1968, German chemist and physicist. Noted for important work on radioactivity, he received the 1944 Nobel Prize in chemistry for splitting (1939) the uranium atom and discovering the possibility of chain reactions. The development of the atomic bomb was based on this work.

hahnium (Ha), artificial radioactive TRANSURANIUM ELEMENT. Claims for its production have been made by a Soviet group at Dubna who in 1967 bombarded americium with neon to obtain, apparently, the Ha^{260} and Ha^{261} isotopes, and by an American group at the Univ. of California, Berkeley, who in 1970 bombarded californium with nitrogen nuclei to obtain the Ha^{260} isotope. It is also called unnilpentium (Unp). See ELEMENT (table); PERIODIC TABLE.

Haida, indigenous people of the Northwest Coast (see NORTH AMERICA, INDIGENOUS PEOPLES OF) who live on islands off British Columbia and speak a language of the Nadene stock (see NATIVE AMERICAN LANGUAGES). Before the arrival (early 19th cent.) of white fur traders, their clan society practiced the POTLATCH. The Haida are noted for their artwork and dugout canoes. By 1880 disease had reduced 8,000 Haida to 2,000. Today many have left their islands for mainland life. In 1990 there were 1,805 Haidas in the U.S.

Haidar Ali or **Hyder Ali,** 1722–82, Indian Muslim ruler. A peasant by birth, he rose through army ranks and by 1761 was the virtual ruler of the state of Mysore. His efforts to expand his domain met with British opposition. He defeated the British in 1769, but in 1781 he was defeated near Madras.

Haifa [hī'fä], city (1988 est. pop. 225,000), NW Israel, on the Mediterranean Sea. It is a major industrial center, a railroad hub, and one of the main ports of Israel. Haifa is known to have existed by the 3d cent. A.D. and was destroyed (1191) by SALADIN. The city's revival began in the late 18th cent.; development of its port in the 20th cent. led to its main growth. It is the world center of BAHA'ISM.

Haig, Alexander Meigs, Jr., 1924–, U.S. general and public official, U.S. secretary of state (1981–82); b. Philadelphia. A career military officer, he served as Pres. NIXON's civiliar chief of staff during the WATERGATE AFFAIR. Later he was (1974–79) NATO commander, and in 1981, became Pres. REAGAN's secretary of state. His sudden resignation (1982) was attributed to disagreements over foreign policy. In 1988, he ran unsuccessfully for the Republican party's nomination for president of the U.S.

Haig, Douglas Haig, 1st **earl,** 1861–1928, British field marshal. In WORLD WAR I he became (1915) commander in chief of the British expeditionary force in France, but he received little support from LLOYD GEORGE. He was much criticized for the staggering losses suffered in the battle of the Somme and the Passchendaele campaign (see YPRES, BATTLES OF).

haiku, unrhymed Japanese poem recording the essence of a keenly perceived moment linking nature and human nature. Usually consisting of 17 symbol-sounds, it was adapted by the IMAGISTS and other Western writers as a three-line poem of five, seven, and five syllables.

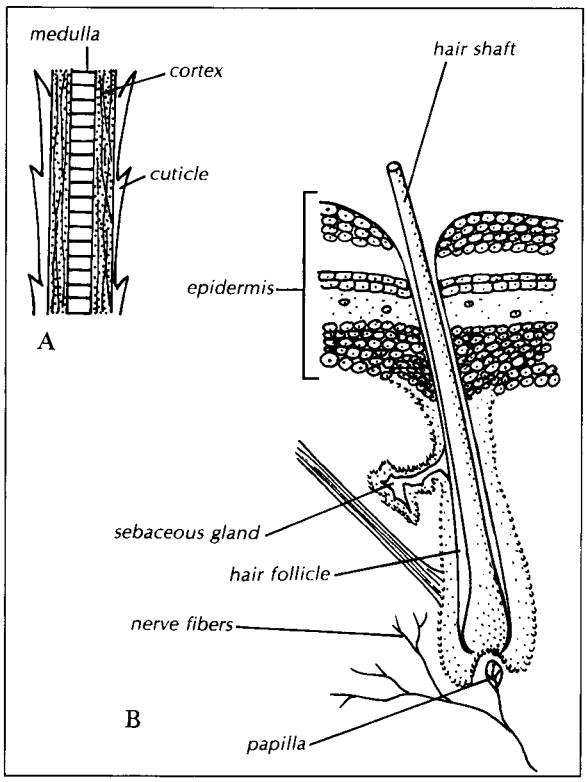
hail, solid form of precipitation that can occur at any time of year, usually in a cumulonimbus cloud and often during a THUNDERSTORM. Large hailstones are spherical or irregularly spherical in shape and are composed of alternate hard and soft layers of ice. Hail usually forms when raindrops are blown up to high (cold) areas in a cloud and freeze. As they fall, they become coated with more water drops; they are then blown back up and refrozen, adding an additional layer. This process is repeated until the wind currents can no longer support the weight of the hailstone. Hailstones are generally less than 0.5 in. (1.3 cm) in diameter, although larger ones are occasionally observed.

Haile Selassie [hī'lē səlăs'ē], 1891–1975, emperor of ETHIOPIA (1930–74). The grandnephew of Emperor MENELIK II and a Coptic Christian, he forced (1916) the abdication of Lij Yasu, a Muslim convert, and placed Menelik's daughter, Zauditu, on the throne. In 1928 he was crowned king, and after Zauditu's mysterious death in 1930, he became emperor. During the Italian invasion (1935–36) he personally led his troops against the enemy. He lived in exile in England until 1941, when he returned and claimed the throne. After World War II he instituted social and political reforms, such as establishing a national assembly in 1955. In 1974, however, he was deposed by an army coup, and he later died under mysterious circumstances.

Hainan [hī'nän'], island and province (1990 pop. 6,557,000), c.13,100 sq mi (33,940 sq km), S China, 30 mi (50 km) offshore in the SOUTH CHINA SEA. Haikou is its capital and largest city. Hainan is the second largest island (after TAIWAN) off China's coast and is the home of the Li and Miao people. Rubber production and fishing are major industries, and rice, sugar, tobacco, coffee, and fruit are cultivated during a year-round tropical growing season. Incorporated into China in the 13th cent., Hainan was occupied by Japan during World War II. The island was created a province and a special economic area in 1988 to spur development of its natural resources and of tourism.

Haiphong [hīfŏng'], city (1990 est. pop. 456,000) NE Vietnam, on a large branch of the Red R. delta c.10 mi (16 km) from the Gulf of Tonkin. One of the largest ports in Southeast Asia, it was devel-

oped (1874) by the French and became their chief naval base in INDOCHINA. During the VIETNAM WAR Haiphong was severely bombed (1965–68, 1972) and its harbor mined. Its shipyards, textile mills, cement factories, and other industrial installations have since been rebuilt.

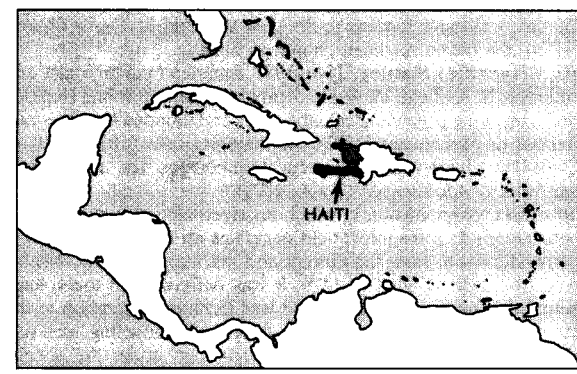


A. cross-section of a hair shaft B. General structure of a hair

hair, slender, threadlike outgrowth from the skin of mammals. Some animals grow a dense profusion of hair known as FUR or WOOL. Insulation from cold, protection against dust and sand, and camouflage are among the functions of hair. Each hair originates in a deep, pouchlike hair follicle, which contains the bulb-shaped root of the hair. The papilla, a net of nerves and capillaries that supplies the hair, extends into an indentation at the base of the root. Here newly dividing cells force older cells upward, where they die and harden into the hair shaft. The shaft has two layers, the colorless cuticle and the cortex, which contains pigment and the protein keratin. Hair is lubricated by oil from sebaceous glands in the follicle.

Haiti, Fr. *Haïti,* officially Republic of Haiti, republic (1992 est. pop. 6,431,000), 10,700 sq mi (27,713 sq km), West Indies, occupying the western third of the island of HISPANIOLA, which it shares with the DOMINICAN REPUBLIC. The capital and main seaport is PORT-AU-PRINCE. The densely populated, mostly mountainous country has the lowest per-capita income in the Americas, with about 50% of the population unemployed and 75% living in poverty. It has few manufacturing industries and a high rate of emigration. Subsistence farming (cassava, rice, yams) is the principal occupation; coffee is the main export. About 95% of the population is of African descent, and French and Creole (a French dialect that is predominant) are spoken. Haiti is a largely Roman Catholic nation in which some *vodun* (voodoo) rites are still practiced.

History. Nominally part of the Spanish colony of SANTO DOMINGO from the early 1500s, eastern Hispaniola remained virtually unsettled until the mid-17th cent., when French colonists, importing African slaves, developed sugar plantations in the north. Under French rule from 1697, Haiti (then called Saint-Domingue) became one of the world's richest sugar and coffee producers. However, after the 1780s, rebellion; class war among African, mulatto, and white Haitians; and invasions by French and British forces shredded the nation's social and economic fabric. In 1801 a former slave, TOUSSAINT L'OUVERTURE, conquered the whole island and abolished slavery; in 1804 Haiti became the second independent nation in the Americas. Ruled until 1859 by self-styled emperors, it lost control of eastern Hispaniola in 1844. Haiti's subsequent history is one of economic poverty, dictatorship, and occasional anarchy, with a period of U.S. military occupation (1915–34). In 1957 François "Papa Doc" DUVALIER was elected president. Supported by a personal police force, the Tontons Macoutes, he imposed an especially repressive rule, relaxed to some degree only after his death (1971), when he was succeeded by his son, Jean-Claude Duvalier. He fled the country in 1986, and a period of social and political unrest followed. In 1991 Jean-Bertrand ARISTIDE, a popular priest, became president after free elections, but the army ousted him later that year. The Organization of American States called for his restoration and imposed an economic embargo, but the army appointed a series of civilian leaders while retaining real power. In 1993 a UN-sponsored oil embargo led to an agreement that called for Aristide's return, but the army blocked implementation of the accord.



Hakluyt, Richard [hăk'lo͞ot], 1552?–1616, English geographer. He promoted English discovery and colonization, especially in North America, and published many accounts of exploration and travel. His chief work is *The Principal Navigations, Voyages, Traffics, and Discoveries of the English Nation* (3 vol., 1598–1600). The Hakluyt Society (founded 1846) continues to publish narratives of early exploration.

halakah or **halacha,** legal portion of the TALMUD and of post-Talmudic literature concerned with personal, communal, and international activities, as well as with religious observance. The term usually refers to the Oral Law, as codified in the MISHNA.

Hale, Edward Everett, 1822–1909, American author; b. Boston. A Unitarian minister, he was a social reformer and chaplain of the U.S. Senate (1903–9). His best-known work is the short novel *The Man without a Country* (1863).

Hale, George Ellery, 1868–1938, American astronomer; b. Chicago. He was the founder of the Yerkes, Mt. Wilson, and PALOMAR OBSERVATORIES (and director of the first two), each in its time housing the largest telescope in the world. His observatories also employed the latest in photographic and spectrographic techniques. He invented (1890) the spectroheliograph, which led to the discovery of magnetic fields and vortices in sunspots, and founded (1895) the *Astrophysical Journal,* still the leading publication in its field.

Hale, Nathan, 1755–76, American Revolutionary soldier; b. Coventry, Conn. Sent to Long Island to get information on the British, he was captured and hanged without trial. On the gallows he is said to have declared, "I only regret that I have but one life to lose for my country."

Hale, Sarah Josepha (Buell), 1788–1879, American author, editor, and feminist; b. near Newport, N.H. Editor of *Godey's Lady's Book* for over 40 years, she is best known as the author of the poem "Mary Had a Little Lamb" (1830).

Haleakala National Park: see NATIONAL PARKS (table).

half-life: see RADIOACTIVITY.

Haliburton, Thomas Chandler, pseud. **Sam Slick,** 1796–1865, Canadian author. A judge and historian, he is known for his series about Sam Slick, Yankee peddler, collected in *The Clockmaker* (1836) and later volumes.

halibut: see FLATFISH.

Halicarnassus [hăl'ĭkärnă'səs], ancient city of Caria, SW Asia Minor (modern Bodrum, Turkey). In the 4th cent. B.C., the widow of King Mausolus built him a tomb there that was one of the SEVEN WONDERS OF THE WORLD. The historians HERODOTUS and Dionysius of Halicarnassus were born there.

Halifax, city (1991 pop. 114,455), capital of Nova Scotia, E Canada, overlooking one of the world's great natural harbors. It is the largest city in the Atlantic provinces and Canada's principal ice-free port and naval base on the eastern seaboard. Much of E Canada's trade passes through the port when the Great Lakes–St. Lawrence Seaway is closed by ice in winter. Founded in 1749 by the British as a rival to France's naval stronghold at LOUISBURG, Halifax played a major role in the AMERICAN REVOLUTION and the WAR OF 1812. It continued to be used by the British fleet until 1906 and was a naval base during both world wars. In 1917 a munitions ship was rammed in the harbor and exploded, killing 1,800 and destroying the northern part of the city. Major landmarks in Halifax include the Citadel, a massive fortress (built 1794–97), and St. Paul's Church (1750), the oldest Anglican church in Canada.

Hall, G(ranville) Stanley, 1844–1924, American psychologist and educator; b. Ashfield, Mass. He organized (1882) at Johns Hopkins Univ. a leading psychological laboratory and founded the *American Journal of Psychology* (1887). As first president (1889–1920) of Clark Univ., he developed its education courses. His most important work is *Adolescence* (2 vol., 1904).

Hall effect, phenomenon in which an electric current applied perpendicularly to a magnetic field generates an electric field that is perpendicular to both the current and the magnetic field, discovered by Edwin H. Hall in 1879. It was believed that the voltage across the generated electric field was in direct proportion to the current, to the magnetic field, and to the conducting material. Klaus von Klitzing demonstrated (1980) that, under the special conditions of low temperature, high magnetic field, and two-dimensional electronic systems (in which the electrons are confined to moving in planes), the voltage difference increases in a series of steps as magnetic field is increased. This is known as the quantized Hall effect. Von Klitzing was awarded the 1985 Nobel Prize in physics for his work. Hall effect devices are used as sensors in robotics, electric propulsion, automobiles, telecommunications equipment, and DC motors.

Haller, Albrecht von, 1708–77, Swiss scientist and poet. Haller's research at the Univ. of Göttingen in experimental physiology, on which he based his theory of irritability, or contractility, of muscle tissue, is set forth in *A Dissertation on the Sensible and Irritable Parts of Animals* (1732). Back in his native Bern, he wrote extensively, notably *Elementa physiologiae corporis humani* (8 vol., 1757–66).

Halley, Edmund, 1656–1742, English astronomer. He was the first to predict the return of a comet, using Isaac NEWTON's gravitational theory to calculate the orbit of the great comet of 1682 (now known as HALLEY'S COMET). He was also the first to point out the use of a transit of Venus in determining the sun's parallax. Halley financed the publication (1687) of Newton's *Principia.* In 1720 he became astronomer royal.

Halley's comet or **Comet Halley,** periodic COMET named for Edmund HALLEY, who observed it in 1682 and identified it with those seen in 1531 and 1607. It returned in 1759, close to the time Halley predicted, as well as in 1835 and 1910. It was sighted again in late 1982 and returned to its closest approach to the sun early in 1986.

Halloween: see ALL SAINTS' DAY.

hallucinogenic drug, ALKALOID substance that alters consciousness; also called psychotomimetic, or, popularly, psychedelic or mind-expanding drug. Hallucinogens include mescaline, or PEYOTE; psilocin and psilocybin, from the mushrooms *Psilocybe mexicana* and *Stropharia cubensis;* LSD (lysergic acid diethylamide); BELLADONNA; and MANDRAKE. MARIJUANA has hallucinogenic properties but is pharmacologically distinct. Hallucinogens have been used by primitive societies in both the Old and New Worlds to facilitate meditation, cure illness, placate evil spirits, and enhance mystical and magical powers. They produce a wide range of effects, from pleasant to very disturbing, depending on dosage, potency, and the personality and environment of the drug taker. Effects include altered perception of time and space and of the color, detail, and size of objects; also the experience of imaginary conversations, music, odors, tastes, and other sensations. Hallucinogens are not physically habit-forming, but tolerance, i.e., the need to take increased quantities to induce the original effect, may develop.

halo, in meteorology, circle of light surrounding the moon or sun. A halo occurs when sunlight or moonlight is refracted or reflected by ice crystals in the atmosphere, usually in a thin layer of high cirrostratus clouds. In general, a white halo results when the light is reflected, and colored rings (showing the colors of the spectrum, with red on the inside) result when the light is refracted.

halogen, any of the five chemical elements in group VIIa of the PERIODIC TABLE. FLUORINE, CHLORINE, BROMINE, IODINE, and the radioactive ASTATINE are nonmetallic, monovalent negative ions and exist in pure form as diatomic molecules. The first four elements exhibit an almost perfect gradation of physical properties. Fluorine is the least dense and chemically the most active, displacing other halogens from their compounds and oxygen from water. Iodine is the least active. The halogens form numerous compounds with each other and with other elements, such as hydrogen halides, metal halides (SALTS), and halocarbons.

halon, any of a group of organic compounds formerly widely used as fire suppressants. Halons, which are bromofluorocarbons, dissipate quickly, leave no residue, and are nontoxic. They were used on fires involving flammable gases and electrical and electronic equipment. Because halons destroy atmospheric ozone (see OZONE LAYER), however, their production was phased out.

Hals, Frans, c.1580–1666, Dutch painter of portraits and genre scenes; b. Belgium. Although his reputation was established early, Hals spent most of his life in poverty. His scenes from everyday life were painted in the first half of his career. In the 1620s and 30s he painted group portraits, e.g., *Banquet of the Officers of the St. George Militia* (1616; Haarlem) with vivacity and informality, and some important single portraits, e.g., *Lucas de Clercq* (Rijks Mus., Amsterdam). He worked rapidly, employing Caravaggesque lighting to capture momentary effects (see CARAVAGGIO). At 84 he painted two masterpieces, *The Governors of the Almshouse* and *Lady Regents of the Almshouse* (both: Haarlem), which have the same brilliant lighting and cool clarity as his gayer canvases. His notable paintings include *The Merry Drinker* (Rijks Mus.) and *The Smoker* (Metropolitan Mus.). Five of his sons were painters, the foremost being **Frans Hals,** c.1618–c.1669, a painter of still lifes and rustic scenes. **Dirk Hals,** c.1591–1656, brother of the elder Frans Hals, specialized in festivals and drinking scenes, e.g., his *Merry Party* (National Gall., London).

Ham: see NOAH.

hamadryads: see NYMPH.

Haman: see ESTHER.

Hamburg, city (1989 est. pop. 1,603,000), coextensive with, and capital of, Hamburg state, N Germany, on the Elbe and Alster rivers. It is Germany's largest and busiest port. Manufactures include copper, ships, and machinery. Founded in the 9th cent., it formed (13th cent.) an alliance with LÜBECK that became the basis of the HANSEATIC LEAGUE. The city was largely destroyed by fire in 1842. Severely damaged during WORLD WAR II, it has been rebuilt and is now a modern cultural center. Felix MENDELSSOHN and Johannes BRAHMS were born in Hamburg.

Hamilcar Barca, d. 229 or 228 B.C., Carthaginian general, father of HANNIBAL. In the First PUNIC WAR, he gave a good account of himself in Sicily. He ruthlessly put down (238) a revolt of mercenaries and became virtual dictator of CARTHAGE. In 237 he set out to conquer Spain but fell in battle.

Hamilton, Alexander, 1755–1804, U.S. statesman; b. West Indies. In the AMERICAN REVOLUTION he was Gen. WASHINGTON'S secretary and aide-de-camp and served brilliantly in the YORKTOWN CAMPAIGN.

As a delegate (1782–83) to the CONTINENTAL CONGRESS, he pressed for a strong national government. After serving as a New York delegate to the FEDERAL CONSTITUTIONAL CONVENTION (1787), he did much to get the Constitution ratified, particularly by his contributions to *The Federalist.* As secretary of the treasury (1789–95) under Pres. Washington, Hamilton sponsored legislation to pay off the debt of the Continental Congress and to charter the BANK OF THE UNITED STATES. To raise revenue he advocated a tariff on imported manufactures and excise taxes. By these measures he hoped to strengthen the federal government and tie it to persons of wealth. In foreign affairs Hamilton sought close ties with Britain and opposed the FRENCH REVOLUTION. Opposition to Hamilton and his supporters, who were known as Federalists, gathered around Thomas JEFFERSON, and the FEDERALIST PARTY was swept under in the election of 1800. Hamilton was killed in a duel by Aaron BURR, whose bids for the presidency (1800) and for New York governor (1804) Hamilton had thwarted.

Hamilton, Emma, Lady, c.1765–1815, English beauty. She was the mistress and, later, wife of Sir William Hamilton, the English ambassador to Naples. After 1798 she was the mistress of Horatio NELSON, whose daughter she bore in 1801. George ROMNEY painted many portraits of her.

Hamilton, Sir William Rowan, 1805–65, Irish mathematician. A child prodigy, he had mastered 13 languages by the age of 13. Hamilton was one of the most creative mathematicians of his time. In *Theory of Systems of Rays* (1828), he unified the field of optics under the principle of varying action, which he later extended to dynamics and which is of fundamental importance in modern physics, particularly quantum theory. His later years were devoted to the development of his theory of quaternions.

Hamilton, city (1991 pop. 318,499), S Ontario, Canada, on Lake Ontario, part of Hamilton-Wentworth municipality (1991 pop. 451,665). A major GREAT LAKES shipping port, it is Canada's chief iron and steel center and manufactures automobiles and heavy machinery. The city, hemmed into the narrow coastal plain by the Niagara escarpment, was founded in 1778 by UNITED EMPIRE LOYALISTS.

Hamites, African people of Caucasoid descent, inhabiting the Horn of Africa (chiefly Somalia and Ethiopia), the W Sahara, and parts of Algeria and Tunisia. They are believed to have been the original settlers of N Africa, having come from S Arabia and farther east. Eastern Hamites include the ancient and modern Egyptians, the OROMO and most other Ethiopians, and the Somali. Northern Hamites include the BERBERS, the TUAREG of the Sahara, and other groups.

Hamitic languages, subfamily of the Hamito-Semitic family of languages. See AFRICAN LANGUAGES (table).

Hamito-Semitic languages, family of languages spoken by people in N Africa, much of the Sahara, parts of E central and W Africa, and W Asia (especially the Arabian peninsula). See AFRICAN LANGUAGES (table); LANGUAGE (table).

Hammarskjöld, Dag [häm'ərshōld"], 1905–61, Swedish statesman, secretary general (1953–61) of the UNITED NATIONS. He was chairman of the board of the Bank of Sweden (1941–48) and deputy foreign minister (1951) before joining Sweden's UN delegation. As secretary general he greatly extended the influence of the UN with his peacekeeping efforts, particularly in the Middle East and Africa. He was on a mission to the Congo (now ZAÏRE) when his plane crashed in northern Rhodesia (now Zambia) in 1961.

Hammer, Armand, 1898–1990, American business executive; b. N.Y.C. He worked for his father's pharmaceutical business in the U.S. and in the USSR, where he also manufactured pencils. On his return (1930) to the U.S., Hammer invested in whiskey, cattle, and broadcasting, and later expanded the Occidental Petroleum Corporation into a multibillion-dollar business. He was noted for being on friendly personal terms with most Soviet leaders (except Stalin). His art collection is housed in the Armand Hammer Museum of Art and Cultural Center in Westwood, Calif.

Hammerstein, Oscar, 2d, 1895–1960, American lyricist and librettist; b. N.Y.C. He collaborated on many MUSICALS with Vincent Youmans, Rudolf FRIML, Sigmund Romberg, Jerome KERN, and Richard RODGERS. His grandfather **Oscar Hammerstein,** 1846–1919, was a well-known German-American operatic impresario. He built the Harlem Opera House (1888) and the Manhattan Opera House (1906) in New York City and introduced many singers to the U.S.

Hammett, Dashiell, 1894–1961, American writer; b. St. Mary's co., Md. He originated the "hard-boiled" detective novel—realistic, fast-paced, sophisticated. His novels include *The Maltese Falcon* (1930) and *The Thin Man* (1932).

Hammurabi [hämōōrä'bē], fl. 1792–1750 B.C., king of BABYLONIA. He founded an empire that was eventually destroyed by raids from Asia Minor. His code of laws, found on a column at Susa, is one of the greatest of the ancient codes.

Hampton, part of the Greater London borough of Richmond upon Thames, SE England, on the Thames R. It is the site of **Hampton Court Palace,** begun by Cardinal WOLSEY in 1514. After his fall it was taken by HENRY VIII, and it remained a royal residence until the time of GEORGE II. Much of it is open to the public. The King's Apartments were damaged by fire in 1986 but have been restored. The **Hampton Court Conference,** held in 1604 in the reign of JAMES I, considered reforms of the Established Church for which its Puritan clergy had petitioned, but few concessions were made. The conference authorized the King James version of the BIBLE.

Hampton Court Palace, London

Hampton, city (1990 pop. 133,793), SE Va., a port of HAMPTON ROADS at the mouth of the James R.; settled 1610 by colonists from JAMESTOWN, inc. 1849. Seafood packing and shipping, light industry, and nearby military installations contribute to the economy. On the site of a Native American village, Hampton is one of the oldest English settlements in the U.S.

Hampton Roads, channel, 4 mi (6.4 km) long, SE Va., through which the James, Nansemond, and Elizabeth rivers pass into CHESAPEAKE BAY. A superb natural harbor, it houses the largest naval complex in the world. NEWPORT NEWS and HAMPTON are on its north shore, NORFOLK and PORTSMOUTH on the south.

hamster, nocturnal RODENT with external cheek pouches for holding food. The common, or European, hamster (*Cricetus cricetus*), about 12 in. (30 cm) long, is reddish brown with white patches on the nose, cheeks, throat, and flanks. The Syrian, or golden, hamster (*Mesocricetus auratus*) of E Europe and W Asia is familiar as a laboratory animal and pet. Hamsters are serious agricultural pests in much of their range.

Hamsun, Knut [häm'sōōn], 1859–1952, Norwegian novelist. His youthful wanderings, including two visits to the U.S., provided the theme for many of his novels, especially *Hunger* (1890), which established him. He is best known for the lyrically beautiful *Pan* (1894), expressing his interest in irrational forces, and for his masterpiece, *The Growth of the Soil* (1917), reflecting his love of nature and concern for the effect of material conditions on the individual spirit. He was awarded the 1920 Nobel Prize in literature but lost popularity during World War II because of his NAZI sympathies.

Han, dynasty: see CHINA.

Hancock, John, 1737–93, political leader of the AMERICAN REVOLU-

TION; b. Braintree, Mass. He opposed the STAMP ACT (1765) and advocated resistance to the British. Hancock was a member (1775–80) and president (1775–77) of the CONTINENTAL CONGRESS, and he was the first to sign the DECLARATION OF INDEPENDENCE. He was later governor of Massachusetts (1780–85, 1787–93).

Hand, Learned, 1872–1961, American jurist; b. Albany, N.Y. A federal judge from 1909 to 1951, Hand, a noted defender of free speech, was often known as the "tenth justice of the Supreme Court." He published *The Spirit of Liberty* (1952) and *Bill of Rights* (1958).

Handel, George Frideric, 1685–1759, English composer; master of the BAROQUE celebrated for his ORATORIO *The Messiah;* b. Germany as Georg Friedrich Handel. By 1705 he had produced two OPERAS in Hamburg; he spent the next four years in Italy, where he absorbed Italian style. Moving to England in 1712, he wrote music, including the celebrated *Water Music* (1717), for GEORGE I. He presented operas in London until 1741. Among his 46 operas are *Julius Caesar* (1724), *Atalanta* (1736), and *Serse* (1738), with its tenor ARIA now known as *Largo. The Messiah* was presented in Dublin in 1742. Its contemplative character sets it apart from the rest of his 32 oratorios, which include *Acis and Galatea* (1720), *Esther* (1732), *Saul* (1739), and *Judas Maccabeus* (1747). He also composed about 100 Italian solo CANTATAS; numerous orchestral works, among them the Twelve Grand Concertos (1739); harpsichord SUITES; organ CONCERTOS; and the anthem "Zadok, the Priest" (1727), used at all British coronations since that of George II.

Handke, Peter, 1942–, Austrian novelist and playwright. His controversial, avant-garde works often reflect his ironical sense of the constricting limitations of language and of reason. They include the plays *Kaspar* (1968) and *They Are Dying Out* (1973) and the novels *The Goalie's Anxiety at the Penalty Kick* (1972), *A Sorrow Beyond Dreams* (1974; play, 1977), and *The Left-Handed Woman* (1976).

Handy, W(illiam) C(hristopher), 1873–1958, African-American songwriter and bandleader; b. Florence, Ala. He was among the first to set down the blues (see JAZZ) and became famous with "Memphis Blues" and "St. Louis Blues."

Hangchow: see HANGZHOU.

hang gliding, form of gliding done using a kitelike wing. The hang glider consists of a Rogallo wing about 18 ft (5.5 m) across and weighing about 35 lb (15.9 kg). The pilot is suspended below the glider and typically jumps from an elevated point to begin the flight. Also called sky surfing, the sport began in California in the late 1960s.

Hangzhou or **Hangchow** [both: häng-jō], city (1990 est. pop. 1,340,000), capital of Zhejiang prov., E China. Long a famous silk- and tea-producing center, Hangzhou has become an important regional industrial complex. Manufactures include textiles, iron and steel products, and motor vehicles. The city is also one of China's most popular tourist centers. The scenic West Lake, wooded hills, and shrines and monasteries dating from the 10th cent. A.D. are all located in the city. As the capital (1132–1276) of the Southern Sung dynasty, it was a famous cosmopolitan center of commerce and culture. Almost destroyed (1861) in the TAIPING REBELLION, it was rebuilt as a modern city.

Hanna, Marcus Alonzo (Mark Hanna), 1837–1904, American capitalist and politician; b. Lisbon, Ohio. He managed the 1896 presidential campaign of William MCKINLEY and was a Republican senator from Ohio (1897–1904).

Hannibal, b. 247 B.C., d. 183 or 182 B.C., Carthaginian general, one of the great military geniuses of all time; son of HAMILCAR BARCA, of the great Barca family. In 221 B.C. he succeeded his brother-in-law, HASDRUBAL, as commander in Spain. During the second PUNIC WAR, he set out to invade Italy with a small force of picked troops, crossed the Alps with a full baggage train and elephants, and with his cavalry overran the Po valley. He wiped out a Roman force and in 217 set out toward Rome. After defeating the Romans again at Lake Trasimeno, he went to S Italy and gained many allies. At Cannae (216 B.C.) he won one of the most brilliant victories in history, but he failed to get proper support from CARTHAGE and could not take Rome. In 207 B.C. his brother Hasdrubal was defeated on the Metaurus R., and Hannibal had to draw back. Recalled (203) to defend Carthage against Scipio Africanus Major (see SCIPIO, family), he was decisively beaten at the battle of ZAMA (202). After peace was concluded (201 B.C.), he became chief ruler in Carthage and governed well; but Rome demanded him as a prisoner, and he went into exile, finally poisoning himself to avoid being given to the Romans.

Hanoi, city (1990 est. pop. 1,089,000), capital of Vietnam, N Vietnam, on the Red R. A major transportation and industrial center, it produces such manufactures as machine tools, plywood, textiles, and chemicals. It became the seat of the Chinese rulers of Vietnam in the 7th cent. and the capital of French INDOCHINA in 1887. When the French withdrew in 1954, Hanoi became the capital of North Vietnam. It was heavily bombed during the VIETNAM WAR. After the North Vietnamese victory, it became the capital of united Vietnam. A cultural center with several universities and institutes, it is noted for its European-style buildings and tree-lined avenues.

Hanover, former kingdom and former province of Germany. Its chief cities included Hanover, Osnabrück, and Stade. In 1692 Duke Ernest Augustus of Calenburg became elector of Hanover. His son succeeded (1714) to the British throne as GEORGE I (see also HANOVER, HOUSE OF), uniting Britain and Hanover in a personal union. NAPOLEON I broke up the electorate, but in 1813 Britain regained possession. In 1815 it was made a kingdom. On the accession (1837) of Queen VICTORIA, Hanover was separated from Britain because of the SALIC LAW of succession. As a result of the AUSTRO-PRUSSIAN WAR (1866), Hanover was made a Prussian (from 1871 a German) province. After World War II it was incorporated into Lower Saxony.

Hanover, city (1989 est. pop. 499,000), capital of Lower Saxony, central Germany, on the Leine R. and the Midland Canal. A transshipment and industrial center with such manufactures as iron and steel and tires, it is noted for its annual industrial fair. It was chartered in 1241 and became a member (1386) of the HANSEATIC LEAGUE and the capital (1692) of the electorate of Hanover (see HANOVER, former kingdom). Badly damaged during WORLD WAR II, the city has been rebuilt since 1945. Historic buildings include the 14th-cent. Marktkirche and the 17th-cent. Leineschloss, which now houses the parliament of LOWER SAXONY.

Hanover, house of, ruling dynasty of Hanover (see HANOVER, former kingdom), which descended from the GUELPHS and in 1714 acceded to the British throne in the person of GEORGE I, elector of Hanover, through a claim based on descent from JAMES I. George I's succession was based on the Act of SETTLEMENT. There were six Hanoverian British monarchs. With VICTORIA, the last Hanoverian ruler of Britain, the crowns of Hanover and Britain were separated.

Hansa towns: see HANSEATIC LEAGUE.

Hansberry, Lorraine, 1930–65, African-American playwright; b. Chicago. Her famous play *A Raisin in the Sun* (1959) deals with the problems of an African-American family in modern America. Many of her writings were collected in *To Be Young, Gifted, and Black* (1969).

Hanseatic League, mercantile league of medieval N German towns. It came into existence gradually as the Hansas—companies of merchants dealing with foreign lands—and the cities from which they operated drew closer together as a way of protecting themselves from foreign competition and piracy. In the 13th cent. more than 70 German cities joined in treaties of mutual protection. The Hanseatic League was formally organized in 1358, and in 1370 it won a trade monopoly in all of Scandinavia. The league prospered in the following centuries but went out of existence in the 17th cent. BREMEN, HAMBURG, and LÜBECK are still known as Hanseatic cities.

Hansen's disease: see LEPROSY.

Hanson, Howard, 1896–1981, American composer, teacher, and conductor; b. Wahoo, Nebr. He directed the Eastman School of Music, Rochester, N.Y. (1924–64). His romantic works include symphonies and the opera *Merry Mount* (1934).

hantavirus, any of a genus (*Hantavirus*) of viruses that are transmitted by rodents and can cause flulike symptoms and—in more severe cases—shock, kidney failure, internal bleeding, fluid accumulation in the lungs, and death. Infection typically results from exposure to the excrement of a rodent host, and sometimes responds to treatment with the drug ribavirin. Hantavirus-caused illness occurs largely in Asia and Europe, particularly in China and

Korea. In 1993, after an outbreak of a sometimes fatal flulike illness in the SW U.S., a previously unknown hantavirus was identified as the cause.

Hanukkah: see under JEWISH HOLIDAYS.

Hapsburg or **Habsburg** [hăps'bûrg], ruling house of AUSTRIA (1282–1918). The family originally held lands in Alsace and NW Switzerland, and Otto (d. 1111) took the name Hapsburg when he was made count. In 1273 Count Rudolf IV became king of the Germans as RUDOLF I; his war with Ottocar II of Bohemia resulted in Ottocar's defeat (1278) and confirmation of Hapsburg possession of Austria, Carniola, and Styria. These lands and the Austrian ducal title were declared hereditary in 1282, and in 1335 Carinthia, too, was claimed. The possessions were divided (1365) between the Albertine and the Leopoldine lines but were reunited under Holy Roman Emperor MAXIMILIAN I in the late 15th cent. Tyrol (1363), NE Istria (1374), and Trieste (1382) were added to the Hapsburg domain. From the election (1438) of Albert II as German king, the head of the Hapsburgs, with one exception, was chosen German king and Holy Roman emperor. Through marriage the Hapsburgs gained most of the Low Countries, and Hapsburg power reached its zenith under Emperor CHARLES V, who had inherited (1516) the crown of Spain. Charles was succeeded in Spain by his son, PHILIP II, and in Austria by his brother, Emperor FERDINAND I. The Spanish Hapsburgs died out in 1700. In Austria the PRAGMATIC SANCTION (1713) guaranteed the indivisibility of the Hapsburg domains and the succession of MARIA THERESA. Her son, Emperor JOSEPH II, began the line of **Hapsburg-Lorraine.** In 1806 Holy Roman Emperor FRANCIS II abdicated and assumed the title emperor of Austria. In 1867 the Hapsburg empire was reorganized into the AUSTRO-HUNGARIAN MONARCHY, which was dissolved at the end of WORLD WAR I.

Harald, kings of Norway: see HAROLD.

Harare, formerly **Salisbury,** largest city (1983 est. pop. 681,000) and capital of Zimbabwe. One of Africa's most modern cities, it is the country's commercial and communications center and the market for an agricultural region. Industries include textiles and clothing, processed food, steel, and chemicals. The city is connected by rail with BULAWAYO and the Mozambique port of Beira. Founded by the British in 1890, it was the capital of the Federation of Rhodesia and Nyasaland (1953–63). In 1982 it was renamed Harare (after a 19th-cent. African chief).

Harbin, city (1990 est. pop. 2,830,000), capital of Heilongjiang prov, NE China, on the Sungari R. It is the main trade, industrial, and transportation center of NE China and the main port on the Sungari. Harbin is part of the great Manchurian complex of metallurgical, machinery, chemical, oil, and coal industries. It is also an important producer of tractors, turbines, and precision instruments. Harbin's strong resemblance to Russian cities is due to settlers who came to the city after Russia was granted (1896) a concession there and after the RUSSIAN REVOLUTION (1917). Most of its European population, once one of the largest in the East Asia, left the city following the rise to power of the Chinese Communists.

Hardenberg, Friedrich von: see NOVALIS.

Harding, Warren Gamaliel, 1865–1923, 29th president of the U.S. (1921–23); b. Blooming Grove (now Corsica), Ohio. An Ohio Republican, Harding was elected (1914) to the U.S. Senate and was a compromise choice as Republican presidential candidate in 1920. His administration had one achievement—the calling (1921) of the Washington NAVAL CONFERENCE. He had promised to appoint a cabinet of the "best minds," but in 1923 came rumors of government scandals. Harding died suddenly (Aug. 1923) in San Francisco on his way back from Alaska. He thus was spared the public exposure of the TEAPOT DOME scandal and the humiliation of seeing his cabinet appointees Albert B. Fall and Harry M. Daugherty brought to the bar of justice. Harding's administration has been called one of the most corrupt in U.S. history. He was succeeded by Calvin COOLIDGE.

Hardouin, Jules: see under MANSART, FRANÇOIS HARDOUIN.

hardware: see COMPUTER.

Hardwick, Elizabeth, 1916–, American writer; b. Lexington, Ky. A founder and editor of the *New York Review of Books,* she has published two autobiographical novels; *A View of My Own: Essays in Literature and Society* (1962); and *Seduction and Betrayal: Women and Literature* (1974).

Hardy, Thomas, 1840–1928, English novelist and poet, one of the great English writers of the 19th cent. He won success with *Far from the Madding Crowd* (1874). His other major novels are *The Return of the Native* (1878), *The Mayor of Casterbridge* (1886), *Tess of the d'Urbervilles* (1891), and *Jude the Obscure* (1896), the last two his masterpieces. Set in the harsh landscape of Hardy's native Dorsetshire ("Wessex" in the books), they are generally gloomy, naturalistic studies of character and environment. Adverse criticism led Hardy to turn to poetry after 1896, and he expressed his pessimism in books such as *Wessex Poems* (1898), *Moments of Vision* (1917), and *The Dynasts* (written 1903–8), an epic historical drama in verse.

hare, herbivorous MAMMAL of the family Leporidae, which also includes the RABBIT, native to Eurasia, Africa, and North and Central America. The term *hare* is especially applied to the genus *Lepus,* sometimes called true hares. Hares generally have longer ears and hind legs than rabbits and move by jumping rather than running. They are usually brown or grayish in color, but northern species acquire a white coat in winter. Most North American hares are very large and are called jackrabbits.

Hare Krishna, communalistic religious movement, officially the International Society for Krishna Consciousness, founded (1966) by A.C. Bhaktivedanta Swami Prabhupada (1896–1977). Claiming thousands of followers, the movement teaches devotion to the Hindu god Krishna (see HINDUISM) as a means of attaining spiritual enlightenment, particularly through the practice of chanting the MANTRA *Hare Krishna* [O Lord Krishna].

Hargreaves, James, 1720?–78, English engineer. His 1764 invention of the spinning jenny doubled production in carding, a process preparatory to SPINNING.

Hari, Mata: see MATA HARI.

Hariri, Abu Muhammad al-Kasim al- [härē'rē], 1054–1122, Arab writer. *Assemblies of al-Hariri,* his principal work and one of the most popular Arabic books, is an episodic tale of an old rogue, Abu Zaid, who earns his living by his wits.

Harlem, section of New York City. Established (1658) as Nieuw Haarlem by the Dutch, Harlem remained rural until the 19th cent., when it became a fashionable residential district. A rapid influx of African Americans beginning c.1910 made it one of the largest African-American communities in the U.S., and in the 1920s it became a center of art and literature (see HARLEM RENAISSANCE). Harlem deteriorated after World War II into an economically depressed area with a high rate of unemployment.

Harlem Renaissance, term used to describe a flowering of African-American literature in the 1920s. During the great migration of African Americans from the rural South to the industrial North (1914–18), some settled in the HARLEM district of New York City, as did the musicians who brought JAZZ from the South, and Harlem became a sophisticated artistic and literary center. In his magazine *Crisis,* W.E.B. DUBOIS urged racial pride among African Americans, and writers, many living in Harlem, began producing fine original works about African-American life. Their work constituted a fresh, new subject that attracted white readers and publishers. Writers associated with the Harlem Renaissance include Arna BONTEMPS, Langston HUGHES, Claude MCKAY, Countee CULLEN, James Weldon JOHNSON, Zora Neale HURSTON, and Jean TOOMER. The Renaissance faded with the onset of the Great Depression of the 1930s.

Harmodius and Aristogiton [härmō'dēəs, ăr"ĭstōjī'tən], d. c.514 B.C., Athenian tyrannicides. Their attempt to assassinate the tyrant Hippias and his brother Hipparchus ended with Hipparchus dead but Hippias unhurt. Harmodius was killed instantly; Aristogiton was captured and executed later. Although they had been motivated by a personal quarrel, they became heroes of ATHENS and were given public recognition after the expulsion (510 B.C.) of Hippias.

harmonic motion, regular vibration, or back-and-forth motion, in which the acceleration of the vibrating object is directly proportional to the displacement of the object from its equilibrium position but oppositely directed. A single object vibrating in this manner is said to exhibit simple harmonic motion; examples are a PENDULUM swinging in a small arc, a mass bouncing at the end of

a spring, and the motion of air molecules when a sound wave passes. Simple harmonic motion is periodic, i.e., it repeats itself at regular intervals. The time required for one complete vibration of the object is the period of the motion. The inverse of the period is the frequency, or the number of vibrations per unit of time. The maximum displacement of the object from its central position of equilibrium is the amplitude of the motion. See WAVE.

harmony, in music, simultaneous sounding of two or more tones and, especially, the study of chords and their relations. POLYPHONY, or the interweaving of several independent melodic lines, prevailed in composition until the 16th cent., when interest centered on harmonic chord construction, or the relationship between one tone and the tone or tones being played at the same time. In 1722 Jean Philippe RAMEAU presented the idea that different groupings of the same notes were inversions of the same chord. In the 18th cent. the concept of TONALITY became firmly established. Using the principle of MODULATION, later composers developed freer concepts of tonality, until some in the 20th cent. discarded traditional tonality altogether. See also ATONALITY; SERIAL MUSIC.

Harmsworth, Alfred Charles William: see NORTHCLIFFE, ALFRED CHARLES WILLIAM HARMSWORTH, VISCOUNT.

Harmsworth, Harold Sidney: see ROTHERMERE, HAROLD SIDNEY HARMSWORTH, 1ST VISCOUNT.

Harnett, William Michael, 1848–1892, American painter; b. Ireland. He is known for the spectacular *trompe l'oeil* (eye-deceiving) realistic effects he achieved in his still lifes, e.g., *After the Hunt* (Calif. Palace of the Legion of Honor, San Francisco).

Harold, 1022?–1066, king of England (1066). The son of Godwin, earl of Wessex, he belonged to the most powerful noble family in the reign of EDWARD THE CONFESSOR. After Harold's succession in 1053 to the earldom of Wessex, he aspired to the throne. In c.1064 he was shipwrecked on the French coast and was forced to take an oath (which he later renounced) supporting WILLIAM I's claim to the English throne. In 1065 he sided with the Northumbrians against his brother Tostig. The family was thus divided at the death of the king, who named Harold his heir. William at once invaded England from the south, and Tostig, with HAROLD III of Norway, invaded from the north. Harold defeated them in a battle in which both Harold III and Tostig were killed. The king then met William in the battle of HASTINGS, fought valiantly, and was killed.

Harold or **Harald,** kings of Norway. **Harold I** or **Harold Fairhair,** c.850–c.933 (r.872–c.933), was the son of Halfdan the Black, king of Vestfold (SE Norway). He became Norway's first king by defeating other petty kings. During his reign, raids on Europe and migration to Iceland reached their peak. His son HAAKON I succeeded him by defeating another son. **Harold III** or **Harold Hardrada** [stern council], d. 1066 (r.1046–66), half brother of OLAF II. He joined (1042) the revolt against MAGNUS I and was made joint king (1046), becoming sole king at Magnus's death (1047). After invading N England, he died in battle with HAROLD of England. **Harold V,** 1937– (r.1991–), became king upon the death of his father, OLAF V.

harp, STRINGED INSTRUMENT of ancient origin, the strings of which are plucked with the fingers. During the 15th cent. the harp came to be made in three parts, as it is today: sound box, neck, and pillar. The strings are stretched between the sound box and the neck, into which are fastened the tuning pegs. The diatonic harp was perfected c.1810 with the invention of double-action pedals, which can raise pitch by a semitone or a tone.

Harpers Ferry, town (1990 pop. 308), Jefferson co., easternmost W. Va., at the confluence of the Shenandoah and Potomac rivers; inc. 1763. The U.S. Arsenal (est. 1796) was seized in the famous raid by John BROWN on Oct. 16, 1859. Because of its strategic SHENANDOAH VALLEY location and its arms production, its industry was repeatedly destroyed by both sides during the CIVIL WAR; the town never recovered. The Harpers Ferry National Historical Park preserves Civil War historical sites.

harpsichord: see PIANO.

Harpy, in Greek mythology, a predatory monster with the head of a woman and the body, wings, and claws of a bird.

Harriman, Edward Henry, 1848–1909, American railroad executive; b. Hempstead, N.Y. A stockbroker, he gained positions of power in the Illinois Central RR (1883) and Union Pacific (1898). After securing control of the Southern Pacific and the Central Pacific, he tried to seize the Chicago, Burlington & Quincy but was blocked by J.J. Hill in a famous financial struggle. He later joined with Hill and J.P. Morgan (see MORGAN, family) to organize the Northern Securities Co., a holding company formed to prevent railroad competition; in 1904 the trust was ordered dissolved by the U.S. Supreme Court. His son was W. Averell Harriman.

Harriman, W(illiam) Averell, 1891–1986, U.S. businessman and public official; b. N.Y.C. A Democrat, he was ambassador to the USSR (1943–46), secretary of commerce (1946–48), governor of New York state (1955–59), undersecretary of state (1963–65), and ambassador-at-large (1965–68). He was also (1968) chief U.S. negotiator at the Paris peace talks on Vietnam.

Harris, Frank, 1856–1931, British-American author; b. Galway, Ireland. He is best known for his scandalously frank highly unreliable autobiography, *My Life and Loves* (3 vol., 1923–27). He also wrote novels, a series of biographical sketches of literary figures (1915–27), and a biography of Oscar WILDE (1916).

Harris, Joel Chandler, 1848–1908, American regionalist writer; b. Eatonton, Ga. His popular tales, narrated by the former slave Uncle Remus, drew upon African-American folklore, dialect, and humor to capture the authentic life of Southern African Americans. Volumes include *Uncle Remus: His Songs and His Sayings* (1881), *The Tar Baby* (1904), and *Uncle Remus and Br'er Rabbit* (1906).

Harris, Patricia Roberts, 1924–85, African-American U.S. public official; b. Mattoon, Ill. Named secretary of housing and urban development (1977) by Pres. CARTER, she was the first African-American woman to serve in a cabinet post. From 1979 to 1981 she was secretary of health, education, and welfare (health and human services after 1980).

Harris, Roy, 1898–1979, American composer; b. Lincoln co., Okla. Vital, melodic, and personal expression is characteristic of his works, including his First Symphony (1934); *When Johnny Comes Marching Home* (1934), a choral work; Cumberland Concerto (1951); and his Piano Quintet (1936).

Harrisburg, city (1990 pop. 52,376), state capital and seat of Dauphin co., SE Pa., on the Susquehanna R.; settled c.1710 as a trading post; inc. 1791. A commercial and transportation center, it produces steel and processed foods. Iron and coal mines are nearby. Harrisburg became the state capital in 1812; its capitol building (1906) is noteworthy. A 1979 nuclear accident at nearby THREE MILE ISLAND focused national attention on the area.

Harrison, Benjamin, 1833–1901, 23d president of the U.S. (1889–93); b. North Bend, Ohio. A grandson of William Henry HARRISON, he commanded an Indiana volunteer regiment in the CIVIL WAR, became a corporate lawyer, and served (1881–87) as U.S. senator from Indiana. The Republicans chose him (1888) as presidential candidate against Grover CLEVELAND. After what has been called the most corrupt campaign in U.S. history, he was elected by the electoral college, though Cleveland had won the popular vote. He approved all regular Republican measures, including the highly protective McKinley Tariff Act. The first Pan-American Conference was held (1889) during his administration. Defeated (1892) for reelection by Cleveland, he later represented Venezuela in the VENEZUELA BOUNDARY DISPUTE.

Harrison, William Henry, 1773–1841, 9th president of the U.S. (Mar. 4–Apr. 4, 1841); b. Charles co., Va. Following service against Native Americans in the Old Northwest, Harrison was governor (1800–1812) of the Indiana Territory and engaged the forces under TECUMSEH in the battle of Tippecanoe (1811). In the WAR OF 1812, he recaptured Detroit from the British and defeated a combined force of British and Native Americans in the battle of the Thames (1813). He was a U.S. congressman (1816–19) and senator (1825–28) from Ohio. Gaining the WHIG PARTY presidential nomination in 1840, he and his running mate, John TYLER, ran a "rip-roaring" campaign with the slogan "Tippecanoe and Tyler too." On becoming president he selected a brilliant Whig cabinet, but he died after only a month in office. He was the grandfather of Benjamin HARRISON.

Hart, Lorenz Milton, 1895–1943, American lyricist; b. N.Y.C. His lyrics were witty, literate, and expressive. He collaborated with Richard RODGERS on such MUSICALS as *Connecticut Yankee* (1927) and *Pal Joey* (1940).

Hart, Moss, 1904–61, American dramatist; b. N.Y.C. He collaborated

with George S. KAUFMAN on such comedies as *You Can't Take It with You* (1936; Pulitzer) and *The Man Who Came to Dinner* (1939), and with Kurt WEILL and Ira GERSHWIN on the musical *Lady in the Dark* (1941).

Harte, (Francis) Bret(t), 1836–1902, American author; b. Albany, N.Y. At 19 he went to California, where he helped establish the *Overland Monthly,* in which his short stories and poems first appeared. Harte is best known for his picturesque stories of Western local color, e.g., "The Luck of Roaring Camp" and "The Outcasts of Poker Flat." He was U.S. consul in Germany and Scotland (1878–85) and spent his last years in England.

hartebeest: see ANTELOPE.

Hartford, city (1990 pop. 139,739), state capital, central Conn., on the Connecticut R.; settled as Newtown 1635–36 on the site of a Dutch trading post (1633); inc. 1784. It is a world-famous insurance center and a commercial, industrial, and cultural hub. Manufactures include typewriters, precision instruments, and computers. Part of the Connecticut colony (1639), Hartford was an important depot in the AMERICAN REVOLUTION and was the scene of the 1814–15 HARTFORD CONVENTION. The old statehouse (1796), the capitol (1878), and the Wadsworth Atheneum are noteworthy. Harriet Beecher STOWE, Mark TWAIN, and Wallace STEVENS were among its notable residents.

Hartford Convention, Dec. 15, 1814–Jan. 4, 1815, meeting held in Hartford, Conn., to consider the problems of New England in the WAR OF 1812. It was an outgrowth of the disaffection of New England Federalists with government policy and with the expenses of the war. The sessions were held in secret, and the moderates prevailed. The proposal to secede from the Union was discussed and rejected, and New England's grievances were aired, but the war's successful conclusion made any recommendation a dead letter. The convention confirmed STATES' RIGHTS as the refuge of sectional groups and sealed the destruction of the FEDERALIST PARTY, which never regained its lost prestige.

Hartford Wits: see CONNECTICUT WITS.

Hartmann von Aue [härt'män fən ou'ə], c.1170–c.1220, German poet whose name is also spelled von Ouwe. Among his works are the chivalric romances *Erec* and *Iwain,* the religious legend *Gregorius,* and the idyl *Poor Henry,* used by LONGFELLOW for his *Golden Legend.*

Harun ar-Rashid, c.764–809, 5th and most famous ABBASID caliph (786–809). His empire included all of SW Asia and the northern part of Africa. He was a patron of the arts, and during his reign Baghdad was at its apogee. He figures prominently in the *Thousand and One Nights.*

Harunobu (Suzuki Harunobu), 1725–70, Japanese color-print artist of the *ukiyo-e* school (see JAPANESE ART). He was the first to use a wide range of colors effectively in printing, and in 1765 he developed multicolored calendar prints from wood blocks. His subjects include actors, courtesans, and domestic life.

Harvard University, mainly at Cambridge, Mass. The oldest American college, Harvard College was founded (1636) with a grant from the Massachusetts Bay Colony and named (1638) for its first benefactor, John Harvard. Intended as a training ground for Puritan ministers, it evolved a more generalized program of education. Supported largely by private gifts, Harvard's expansion into one of the world's great universities occurred mainly during the administration (1869–1910) of Charles W. ELIOT, when the elective system was introduced and graduate education was developed. Besides Harvard College the university has many graduate schools. The Harvard University Library is among the nation's largest and finest (see LIBRARY, table). Affiliated with the university is Radcliffe College for women (est. 1879), whose students are instructed by the Harvard faculty.

harvestman: see DADDY LONGLEGS.

Harvey, William, 1578–1657, English physician, considered by many to have laid the foundation for modern medicine. A physician at St. Bartholomew's Hospital in London and at the court, he was the first to demonstrate the function of the heart and the complete circulation of the blood. His renowned *On the Movement of the Heart and Blood in Animals* (1628) describes his theories, which were not fully substantiated until 1827. Harvey also contributed greatly to comparative anatomy and embryology.

Hasdrubal [hăz'drōōbəl], d. 221 B.C., Carthaginian general. He succeeded his father-in-law, HAMILCAR BARCA, as commander in Spain, increased the Carthaginian empire, and founded Cartagena. He was succeeded by his brother-in-law HANNIBAL.

Hasidim [Heb., = the pious], term used by the rabbis to describe those Jews who maintained the highest standard of religious observance and moral action. The term has been applied to three distinct movements. **1** The first Hasidim, also called the Assideans or Hasideans, were members of a sect that developed between 300 B.C. and 175 B.C. Rigid adherents of Judaism, they led the resistance to the Hellenizing campaign of Antiochus IV of Syria and were important in the revolt of the MACCABEES. **2** In 12th- and 13th-cent. Germany there arose the Hasidei Ashkenaz, a group with messianic and mystical elements, influenced by SAADIA BEN JOSEPH. **3** The third movement of Hasidim was that founded in the 18th cent. by BAAL-SHEM-TOV and known as HASIDISM.

Hasidism, Jewish movement founded in Poland in the 18th cent. by BAAL-SHEM-TOV. Its name derives from HASIDIM. The movement arose in reaction to persecutions and to the academic formalism of rabbinical Judaism. It encouraged joyous religious expression through music and dance and taught that purity of heart was more pleasing to God than learning. Although the Talmudists pronounced Hasidism heretical in 1772, it continues to be a strong force in Jewish life. Since the HOLOCAUST the U.S. and Israel have been the main centers of Hasidism. The various Hasidic communities are staunch defenders of tradition against the increased secularism in modern Jewish life.

Hasmoneans: see MACCABEES.

Hassam, Childe, 1859–1935, American painter and etcher; b. Boston. Hassam, who studied in Paris, produced sprightly landscapes and interiors that show the strong influence of IMPRESSIONISM, e.g., *Isles of Shoals* (Metropolitan Mus.).

Hassan II, 1929–, king of Morocco (1961–). He succeeded his father, MUHAMMAD V. An abortive coup (1971) led him to yield some of his powers to parliament. After 1976 his country fought for control of WESTERN SAHARA; in 1982, bolstered by U.S. military support, Morocco began the economic development of Western Sahara.

hassium (Hs), artificial radioactive TRANSURANIUM ELEMENT. Report of its production has been made by a West German group at Darmstadt, who in 1984 bombarded lead with iron ions to obtain the Hs^{265} isotope. It is also called unniloctium (Uno). See ELEMENT (table); PERIODIC TABLE.

Hastings, Warren, 1732–1818, first governor general of British India (1774–1784). His aggressive policy of judicial and economic reform rebuilt British prestige in India but created powerful enemies at home, including Edmund BURKE and Charles James FOX. He was impeached (1787) on charges of extortion and other crimes. After a long and costly trial, he was acquitted (1795).

Hastings, borough (1986 est. pop. 81,100), E Sussex, SE England. Today a seaside resort and residential city, it was occupied in Roman times and probably earlier. The battle of Hastings (1066) between the Norman invaders of England and the Anglo-Saxon defenders, the first and most decisive victory of the NORMAN CONQUEST, took place nearby.

Hatta, Mohammad, 1902–80, Indonesian statesman. With SUKARNO, he fought for Indonesian independence from the Netherlands. He served (1945–48, 1950–56) as vice president of Indonesia but broke with Sukarno and resigned in 1956.

Hatteras, Cape, promontory on Hatteras Island, N.C. The site of frequent storms and shipwrecks, it is known as the "Graveyard of the Atlantic." The cape is part of **Cape Hatteras National Seashore,** one of the longest stretches of undeveloped shoreline on the U.S. Atlantic coast.

Haughey, Charles James, 1925–, Irish political leader and prime minister (1979–81, Mar.–Dec. 1982, 1987–92). In 1970 Haughey, a member of the FIANNA FÁIL party and finance minister, was charged with smuggling arms to Northern Ireland, but he was later acquitted. After the resignation (1979) of Prime Min. John LYNCH, Haughey was named as his successor. He resigned after Fianna Fáil's 1981 electoral loss but briefly returned to office in 1982. In 1987 Haughey and Fianna Fáil again returned to power; after 1989 he led a Fianna Fáil–Progressive Democrat coalition. In 1992 ac-

cusations of Haughey's involvement in a ten-year-old wiretapping scandal led to his resignation.

Hauptmann, Gerhart [houpt'män], 1862–1946, German dramatist, novelist, and poet. He inaugurated the naturalist movement in German theater with his plays *Before Dawn* (1889) and *The Weavers* (1892), then turned to the romantic with *Hannele* (1893) and *The Sunken Bell* (1897). His prose works include the novels *The Fool in Christ, Emanuel Quint* (1910), and *The Heretic of Soana* (1918). A leading figure in German literature for three generations, he was awarded the 1912 Nobel Prize in literature.

Hausa, African ethnic group numbering about 23 million, chiefly in N Nigeria and S Niger. The Hausa, who are almost exclusively Muslim, practice agriculture and carry on a widespread trade. Their language is a lingua franca of W Africa. Formerly organized as the **Hausa States,** they were long vassals of the Muslim state of Bornu and were conquered by SONGHAI (1513) and by the FULANI (early 19th cent.). The Hausa are a major force in Nigerian politics.

Hausa language, member of the Chad group of languages, frequently assigned to the Hamitic subfamily of the Hamito-Semitic family of languages. See AFRICAN LANGUAGES (table).

Haussmann, Georges Eugène, Baron [ōsmän'], 1809–91, French civic official and city planner. Noted for his bold plan for PARIS under NAPOLEON III, he is largely responsible for the city's appearance, its wide streets, broad vistas, parks, and avenues radiating from focal points.

Havana, Span. *La Habana,* city (1987 est. pop. 2,125,000), W Cuba, capital of Cuba and La Habana prov. The largest city and chief port of the WEST INDIES, it is Cuba's political and industrial center, with shipyards, assembly plants, oil and sugar refineries, rum distilleries, and cigar factories. It is a popular winter resort, although tourism from the U.S. ended after the Cuban revolution of 1959. One of the oldest cities in the Americas, Havana was founded by the Spanish before 1520. It has often been invaded and held by foreign forces. The sinking of the U.S. battleship *Maine* in its harbor sparked (1898) the SPANISH-AMERICAN WAR. The modern part of Havana has wide avenues and impressive public buildings. Much of the old colonial city has been preserved. A major landmark is Morro Castle.

Havel, Václav, Czech playwright, president of CZECHOSLOVAKIA (1989–92) and the CZECH REPUBLIC (1993–). His experimental, absurdist plays attacking totalitarianism became popular in Prague and abroad but were suppressed after the Soviet invasion in 1968. Havel became a prominent dissident and was arrested several times and imprisoned twice. He was the principal spokesman for the Civic Forum, an opposition group, when it succeeded in forcing (1989) the Communist party to share power, and he became interim president of Czechoslovakia. In 1990 Havel was elected to a two-year term as president. He resigned in 1992 when the breakup of Czechoslovakia, which he opposed, became inevitable. He was elected president of the new Czech Republic in 1993.

Hawaii, 50th state of the U.S., a group of eight major islands and numerous islets in the central Pacific Ocean, c.2,100 mi (3,380 km) SW of San Francisco.

Area, 6,450 sq mi (16,706 sq km). *Pop.* (1990) 1,108,229, a 14.8% increase over 1980 pop. *Capital,* Honolulu. *Statehood,* Aug. 21, 1959 (50th state). *Highest pt.,* Mauna Kea, 13,796 ft (4,208 m); *lowest pt.,* sea level. *Nickname,* Aloha State. *Motto, Ua Mau Ke Ea O Ka Aina I Ka Pono* [The Life of the Land Is Perpetuated in Righteousness]. *State bird,* Hawaiian goose. *State flower,* hibiscus. *State tree,* candlenut. *Abbr.,* HI.

Land and People. The islands, of volcanic origin, are ringed with coral reefs. Oahu, site of HONOLULU, the capital and only large city, is the most populous and economically important island. On HAWAII Island are located MAUNA KEA, a huge extinct volcano, and MAUNA LOA, a large active volcano in Hawaii Volcanoes National Park. Haleakala, one of the world's largest volcanic craters, on MAUI Island, is part of Haleakala National Park. (See NATIONAL PARKS, table.) Other principal islands are Kahoolawe, KAUAI, LANAI, MOLOKAI, and Nihau. The islands are generally fertile, largely covered in luxuriant vegetation, and enjoy a mild climate. In 1990 over 60% of Hawaii's ethnically diverse population was of Asian descent, including people of Japanese, Chinese, and Filipino origin. There is a small minority of indigenous Hawaiians; about 33% of the population is white.

Economy. Service industries, especially tourism and military installations, dominate the economy of Hawaii. The leading agricultural products are sugarcane and pineapples—both cultivated on large corporate plantations—and cattle and dairy products. Sugar refining and pineapple canning are the basis of the leading industry, food processing, which is supplemented by petroleum refining and printing and publishing.

Government. The constitution (adopted 1950) provides for a governor serving a four-year term. The legislature consists of a senate with 25 members elected to four-year terms and a house with 51 members serving two-year terms. Hawaii sends two representatives and two senators to the U.S. Congress and has four electoral votes.

History. It is believed that the Polynesians who first settled the islands had arrived by c.750 A.D. The first European to discover (1778) the islands was Capt. James COOK. In 1810 King KAMEHAMEHA I united the islands under his sovereignty, ushering in a prosperous period of agriculture and trade. However, American and European traders introduced devastating infectious diseases that greatly reduced the native population. Missionaries and American planters who arrived in 1820 established sugar plantations and increasingly dominated the islands' economy and government. The monarchy was overthrown in 1893, and Hawaii became a U.S. territory in 1900. On Dec. 7, 1941, Japanese aircraft made a surprise attack on the naval base at PEARL HARBOR, plunging the U.S. into WORLD WAR II. Since the war's end and statehood (1959), Hawaii has enjoyed sustained economic and population growth. In 1992 Kauai was devastated by a hurricane.

Hawaii, island (1990 pop. 120,217), 4,037 sq mi (10,456 sq km), largest and southernmost island of the state of HAWAII, coextensive with Hawaii co. Geologically the youngest Hawaiian island, it consists of three volcanic mountains—MAUNA KEA (13,796 ft/4,205 m, the state's highest point), MAUNA LOA, and Hualalai. The northern coasts have rugged cliffs; the western and southern coasts are generally low, with many beaches. Hawaii includes tropical rain forests, grasslands, and barren lava flows. Sugarcane and pineapples are its principal products. Hilo is the largest city. The Kona district (noted for its coffee) and Hawaii Volcanoes National Park are on the island.

Hawaii Volcanoes National Park: see NATIONAL PARKS (table).

hawk, name for smaller members of the Accipitridae family, diurnal BIRDS of prey, distinguished from the related FALCONS by their broader, rounded wings. Hawks have keen sight, sharply hooked bills, and powerful feet with curved talons. The hunting hawks, or accipiters, include the goshawk, which feeds on small MAMMALS and birds, and the destructive chicken hawk. Buteos, or BUZZARDS, are a diverse group of larger hawks; they feed on RODENTS and REPTILES. The term *hawk* is also applied to many falcons and a number of unrelated birds, e.g., the nighthawk (a GOATSUCKER) and certain GULLS and jaegers.

Hawke, Bob (Robert James Lee Hawke), 1929–, Australian prime minister (1983–91). A former president of the Australian Council of Trade Unions (1970–80) and a member of Parliament, he became leader of the Australian Labor party (ALP) in 1983 and led the ALP to victory in 1983, 1984, 1987, and 1990. He was replaced as prime minister by fellow ALP member Paul KEATING in 1991 when a recession caused his government to lose popular support.

Hawkes, John (Clendennin Burne, Jr.), 1925–, American writer; b. Stamford, Conn. His novels often mix everyday reality with menacing hallucinations. They include *The Lime Twig* (1951), *Blood Oranges* (1971), *The Passion Artist* (1979), *Adventures in the Alaskan Skin Trade* (1985), and *Sweet William* (1993).

Hawking, Stephen William, 1942–, British theoretical physicist. His key area is astronomical bodies known as black holes (see GRAVITATIONAL COLLAPSE). Hawking has worked on the formation, size, and radiation of black holes as well as research supporting the big bang theory (see COSMOLOGY). He wrote *A Brief History of Time* (1988).

Hawkins, Coleman, 1904–69, African-American musician; b. St. Joseph, Mo. He established the tenor saxophone as a major JAZZ instrument. His huge tone, vigorous attack, and evolving improvi-

satory style made his influence pervasive, even among avant-garde musicians.

Hawkins or **Hawkyns, Sir John,** 1532–95, English admiral. As a slave trader, he sold Africans at a profit in Spanish ports. As treasurer and comptroller of the navy, he improved ship construction. In the great defeat of the Spanish ARMADA, he commanded the *Victory* and was knighted for his services. His son, **Sir Richard Hawkins,** 1562–1622, served under his father and Sir Francis DRAKE. While on a raiding expedition in South America, he was captured and sent to a Spanish prison (1597–1602). He later served in Parliament.

Hawks, Howard Winchester, 1896–1977, American film director; b. Goshen, Ind. He directed his first film in 1926 and is noted for crisp dialogue and visual clarity. His credits include *Scarface* (1932), *Bringing Up Baby* (1938), *To Have and Have Not* (1944), *The Big Sleep* (1946), *Red River* (1948), and *Gentlemen Prefer Blondes* (1953).

Hawksmoor or **Hawksmore, Nicholas,** 1661–1736, English architect involved in the development of most of the great English BAROQUE buildings. He assisted Christopher WREN at Chelsea Hospital and St. Paul's, and Sir John VANBRUGH at Castle Howard and Blenheim Palace. His London churches (1714–30) include St. George's, Bloomsbury, and Christ Church, Spitalfields.

Hawley-Smoot Tariff Act, enacted 1930 by the U.S. Congress. It brought the U.S. tariff to its highest point in history. The retaliatory tariffs of foreign nations caused a sharp decline in U.S. foreign trade. The act was sponsored by Rep. Willis C. Hawley (Oreg.) and Sen. Reed Smoot (Utah).

Hawthorne, Nathaniel, 1804–64, a master of American fiction; b. Salem, Mass. Hawthorne created highly symbolic fiction that penetratingly explored complex moral and spiritual conflicts. In early life he wrote the unsuccessful novel *Fanshawe* (1829) and the acclaimed short-story collection *Twice-Told Tales* (1837; 2d series, 1842). He lived briefly (1841) at BROOK FARM, basing his later novel *The Blithedale Romance* (1852) on the experience. After his marriage (1842) to Sophia Peabody, he settled in Concord, Mass., where he wrote the tales collected in *Mosses from an Old Manse* (1846). In the novels *The Scarlet Letter* (1850), his masterpiece, and *The House of the Seven Gables* (1851), he examined the gloomy, brooding spirit of Puritanism. His last novel, *The Marble Faun* (1860), is set in Italy. His works include two juvenile books, *A Wonder Book* (1852) and *Tanglewood Tales* (1853). He also helped establish the American short story as an art form.

Hay, John (Milton), 1838–1905, American author and statesman; b. Salem, Ind. After serving as assistant private secretary to Pres. LINCOLN, Hay wrote *Pike County Ballads* (1871) and, with John G. Nicolay, *Abraham Lincoln: A History* (10 vol., 1890). As secretary of state (1898–1905) under presidents MCKINLEY and Theodore ROOSEVELT, he was responsible for the OPEN DOOR policy in China and for the HAY-PAUNCEFOTE TREATIES.

Haydn, Franz Joseph [hī'dən], 1732–1809, Austrian composer, one of the great masters of classical music. Haydn's early years in poverty ended when his compositions brought him to the attention of some of Vienna's aristocrats. He became musical director to the princes Esterházy, serving for 29 years, received commissions, traveled, and formed a close friendship with MOZART, a bond that influenced the music of both. His string quartets and symphonies expanded C.P.E. BACH's three-part SONATA form, affecting the development of classical music. Haydn wrote over 100 symphonies, many of which are called by names, e.g., The "Clock" Symphony (1794), over 80 string quartets, over 50 sonatas, and many other pieces; two great ORATORIOS, *The Creation* (1798) and *The Seasons* (1801), were written in his old age.

Hayek, Friedrich August von [hī'ĕk], 1899–1992, British economist; b. Austria. An opponent of governmental control of the economy, he taught at the universities of London (1931–50), Chicago (1950–62), and Freiburg (1962–70). He shared the 1974 Nobel Prize in economics with Gunnar MYRDAL for his work in the theory of money and economic fluctuations. Hayek became a British subject in 1938.

Hayes, Helen, 1900–93, American actress; b. Washington, D.C., as Helen Hayes Brown. Called the First Lady of the American Theater, she starred in such plays as *Dear Brutus* (1918), *Victoria Regina* (1936), and *A Touch of the Poet* (1958) and such films as *The Sin of Madelon Claudet* (1932; Academy Award) and *Airport* (1969; Academy Award).

Hayes, Rutherford Birchard, 1822–93, 19th president of the U.S. (1877–81); b. Delaware, Ohio. A lawyer, he became (1858) city solicitor of Cincinnati. In the CIVIL WAR he took part in some 50 engagements and rose in rank to a major general of volunteers (1865). Hayes served (1865–67) as a Republican in Congress and was three times elected (1867, 1869, 1875) governor of Ohio. In 1876, chosen as the Republican candidate for president, he ran against Democrat Samuel J. TILDEN. In the election the returns of South Carolina, Louisiana, Florida, and Oregon were disputed, and Congress created an electoral commission to decide the result. The commission awarded all the disputed returns to Hayes, thus giving him a majority of one in the electoral college. Indignation over this partisan decision affected Hayes's administration, which was generally conservative and efficient and no more. He withdrew federal troops from Louisiana and South Carolina, ending the RECONSTRUCTION era. An advocate of hard money, he vetoed the BLAND-ALLISON ACT, which was passed nonetheless.

Haymarket Square riot, outbreak of violence in Chicago on May 4, 1886. Amid American labor's drive for an eight-hour working day, a demonstration was staged by anarchists in Haymarket Square. A crowd of some 1,500 people gathered; when police attempted to disperse them, a bomb exploded and rioting ensued. Eleven people were killed, and more than 100 others wounded. Eight anarchists were tried, but no evidence was found to link them to the bomb. They were, however, convicted of inciting violence. Four were hanged, one committed suicide, and three—after having served seven years in prison—were pardoned (1893) by Gov. John P. ALTGELD.

Hay-Pauncefote Treaties, negotiated in 1899 and 1901 by U.S. Secy. of State John HAY and Lord Pauncefote of Preston, British ambassador to the U.S. The first treaty was amended (1900) by the U.S. Senate and was rejected by the British. The second treaty, superseding the CLAYTON-BULWER TREATY, gave the U.S. the right to construct and fully control an Isthmian canal in CENTRAL AMERICA. It retained nominally the principle of neutrality under the sole guarantee of the U.S. and provided that the canal would be open to ships of all nations on equal terms, but it omitted a clause contained in the first draft forbidding fortifications.

Hayward, city (1990 pop. 111,498), Alameda co., W Calif.; settled 1851, inc. 1876. A rapidly growing San Francisco Bay area city, it is an important distribution and processing center for an agricultural area. Its manufactures include steel and chemicals. A California State Univ. campus is located there.

Haywood, William Dudley, 1869–1928, American labor leader, known as Big Bill Haywood; b. Salt Lake City, Utah. At age 15 he began work as a miner, and in 1900 he became secretary-treasurer of the Western Federation of Miners. In 1905 he helped organize the INDUSTRIAL WORKERS OF THE WORLD. Forced out of the Socialist party because of his militancy, he preached the doctrines of class struggle and mass action. Haywood was convicted of sedition during World War I but escaped to the Soviet Union. He wrote an autobiography, *Bill Haywood's Book* (1929).

hazel, shrub or small tree (genus *Corylus*) of the BIRCH family, grown as an ornamental and for its edible nuts. Species include the American hazel (*C. americana*) and European hazels (*C. maxima* and *C. avellena*); hazelnuts, usually known as filberts, are chiefly from the European trees. WITCH HAZEL is not related to hazel.

Hazlitt, William, 1778–1830, English essayist and critic. His penetrating literary criticism is collected in *Characters of Shakespeare's Plays* (1817), *Lectures on the English Poets* (1818), *Lectures on the English Comic Writers* (1819), *Table Talk* (1821–22), and *The Spirit of the Age* (1825). His *Dramatic Literature of the Age of Elizabeth* (1820) renewed interest in SHAKESPEARE and Elizabethan drama. Among his masterful essays are "On Going a Journey" and "On the Feeling of Immortality in Youth."

Hazzard, Shirley, 1931–, Australian novelist. She has lived in the U.S. since 1951. Noted for her insight, sensitivity, and poetic style, she has published two collections of short stories and three novels, *The Evening of the Holiday* (1966), *The Bay of Noon* (1970), and *The Transit of Venus* (1980).

H.D.: see DOOLITTLE, HILDA.

He, chemical symbol of the element HELIUM.

head-hunting, widespread practice of taking and preserving the head of a slain enemy, occurring from ancient times into the 20th cent. It may have evolved from CANNIBALISM. Taking a head was believed to strengthen one's own tribe and weaken the enemy's. Heads were also secured as tokens of courage and manhood. North American tribes took only the scalp; the JIVARO of South America preserve the skin to make so-called shrunken heads.

Head Start, U.S. educational program for disadvantaged preschool children, established under the Economic Opportunity Act of 1964. The program was initially aimed at preparing poor children for elementary school, but it was later extended to children above the poverty level, whose parents paid according to their income.

Health and Human Services, United States Department of, federal executive department that administers government health and SOCIAL SECURITY programs. It is the reorganized successor (1980) to the Dept. of Health, Education, and Welfare. It includes the Public Health Service, CENTERS FOR DISEASE CONTROL AND PREVENTION, FOOD AND DRUG ADMINISTRATION, NATIONAL INSTITUTES OF HEALTH, Social Security Administration, and the Health Care Financing Administration, which administers Medicare and Medicaid.

health-care proxy, legal document in which a person assigns to another the responsibility to make medical decisions in case of incapacitation. In many states the person who is designated in a health-care proxy also has the authority to withhold life-sustaining medical treatment. See also LIVING WILL.

Health, Education, and Welfare, United States Department of: see EDUCATION, UNITED STATES DEPARTMENT OF; HEALTH AND HUMAN SERVICES, UNITED STATES DEPARTMENT OF.

health insurance, prepayment plan providing medical services or cash indemnities for medical care; it may be voluntary or compulsory. Compulsory accident and sickness insurance was initiated (1883–84) in Germany by Bismarck and adopted by Britain, France, Chile, the USSR (now Russia), and other nations after World War I. In 1948 Britain instituted the most comprehensive compulsory health plan to date, including free medical care from any doctor participating in the system; a small charge for some services has been instituted since then. Canada has provided nearly free hospital service since 1958 and more comprehensive coverage since 1967. National health insurance has been widely adopted in Europe and parts of Asia. In the U.S., where the medical profession opposed government health insurance, voluntary cooperative or commercial programs developed, offering limited benefits to group or individual subscribers. Blue Cross and Blue Shield, the largest such insurers, covering hospital care and doctors' fees, respectively, are nonprofit agencies. In 1965 the federal government established two plans: Medicare, for persons age 65 and over, providing basic hospital insurance and supplementary insurance for doctors' and other health-care bills; and Medicaid, for low-income persons, operated by the states and covering hospital, physician, and other services. The U.S. is the only Western industrial nation without some form of comprehensive national health insurance. In 1993 Pres. Clinton proposed a health insurance program that would ultimately provide coverage for most citizens. See also MANAGED HEALTH CARE.

health maintenance organization (HMO), type of prepaid medical service in which members pay a monthly or yearly fee for all health care, including hospitalization. Most HMOs involve physicians engaged in group practice. Because costs to patients are fixed in advance, preventive medicine is stressed, to avoid costly hospitalization. "Open-ended" HMOs offer members the option of seeing a doctor who is not part of the HMO, but the patient must pay additional costs. In 1993 there were 45.3 million Americans enrolled in HMOs. See also MANAGED HEALTH CARE.

Heaney, Seamus [hē'nē], 1939–, Northern Irish poet. Rooted in his own life and in that of Ireland, balanced between the personal and the topical, Heaney's carefully crafted poems are extremely evocative yet clear and direct. His volumes of verse include *North* (1975), *Field Work* (1979), *Station Island* (1985), and *Seeing Things* (1991). Many of his critical and autobiographical pieces in prose were collected in *Preoccupations* (1980).

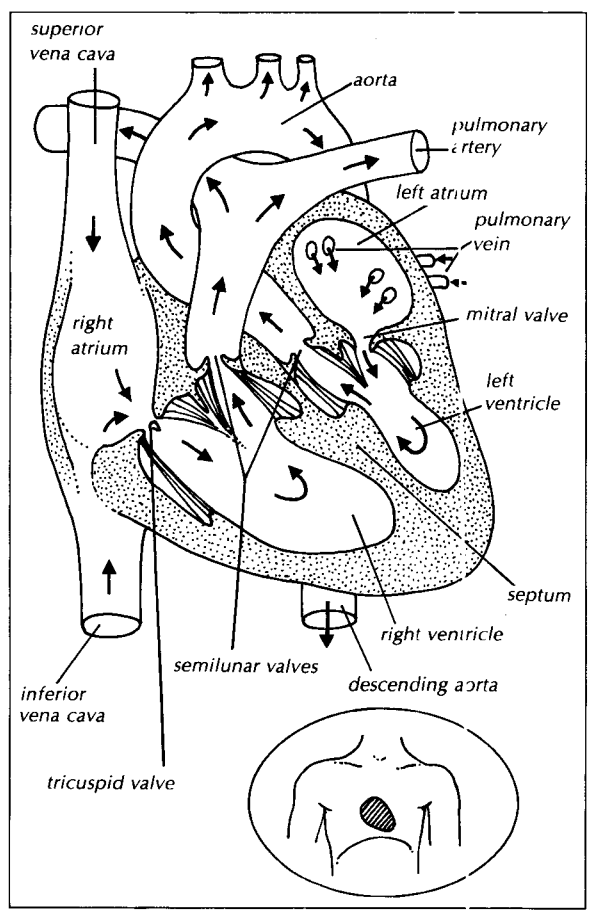
hearing: see EAR.

Hearn, Lafcadio, 1850–1904, American author; b. Ionian Islands; came to U.S., 1869. Partially blind and discontented, he wrote about the macabre and exotic, e.g., *Stray Leaves from Strange Literature* (1884). In 1890 he went to Japan, where he became a citizen and wrote 12 books.

Hearne, Samuel, 1745–92, British fur trader and explorer of N Canada. Working for the HUDSON'S BAY COMPANY, he explored the Coppermine River area in 1770. He opened up unknown territory and proved that there was no short NORTHWEST PASSAGE.

Hearst, William Randolph, 1863–1951, American journalist and publisher; b. San Francisco. During his lifetime Hearst established a vast publishing empire that included 18 newspapers in 12 cities and 9 successful magazines (including *Good Housekeeping* and *Harper's Bazaar*). His use of flamboyant pictures, shrieking typography, and mass-appeal news coverage, together with a policy of buying distinctive talent from other papers and selling papers at a penny, made him the leader in "penny journalism" by 1900. His papers' wild reports of Cuba's struggle for independence from Spain helped bring about the SPANISH-AMERICAN WAR. A flamboyant figure, later in life he became stridently conservative. His huge castle at San Simeon, Calif., is now a state museum.

heart, muscular organ that pumps blood to all parts of the body. The pear-shaped human heart is about the size of a fist and lies just left of center within the chest cavity. The contractions of heart muscle, or myocardium, are entirely self-stimulated. The heart is divided into two cavities by a wall of muscle; each cavity is divided in turn into two chambers, the upper ones called atria, the lower ones ventricles. Blood from the veins, high in carbon dioxide but low in oxygen, returns to the right atrium. It enters the right ventricle, which contracts, pumping the blood through the pulmonary



Cross-section of the heart, with arrows indicating direction of blood flow

The key to pronunciation appears on page xiii.

artery to the LUNGS. Blood rich in oxygen and poor in carbon dioxide returns from the lungs to the left atrium and enters the left ventricle, which contracts, forcing the blood into the aorta, from which it is distributed throughout the body. The blood is prevented from backing up by a series of valves. See CIRCULATORY SYSTEM. See also CORONARY ARTERY DISEASE; TRANSPLANTATION, MEDICAL.

heart, artificial, external or surgically implanted mechanical device designed to replace a patient's diseased heart. The first one used on a human being, the Jarvik-7, was implanted (1982) in Dr. Barney Clark, who lived for 112 days; another patient, William Schroeder, lived 620 days. Two major drawbacks of the Jarvik-7 were the danger of stroke from clots formed in the artificial heart and the need for the patient to be hooked to the external air compressor that powered the pump. By 1989 such devices had largely become a bridge to human heart transplants. A related device, the **ventricular assist device** (VAD), or "artificial ventricle," is an internally implanted pump designed to aid a person with a failing left ventricle; unlike an artificial heart, it does not require removal of the patient's heart. In 1991 doctors implanted the first portable VAD; it was powered by a battery pack. Its pump used a special interior lining to promote the growth of a surface like that lining blood vessels, reducing the risk of the formation of blood clots, which can cause stroke. See also TRANSPLANTATION, MEDICAL.

heart disease, any of several abnormalities of the HEART and its function in maintaining blood circulation. Among the most common causes of heart disease are BIRTH DEFECTS of the heart; infectious diseases, such as RHEUMATIC FEVER; degenerative changes due to CORONARY ARTERY DISEASE; and HYPERTENSION. These and other forms of cardiovascular disease, alone or in combination, can lead to congestive heart failure, a condition in which the heart cannot pump sufficient blood to meet the demands of the body. The various forms of heart disease may also cause disturbances in normal heartbeat, called arrhythmias.

heart-lung machine, device that maintains the circulation and oxygen content of the BLOOD when connected with the arteriovenous system. Used in open-heart surgery to bypass the CIRCULATORY SYSTEM of the HEART and LUNGS, the oxygenator repeatedly draws off blood from the veins, reoxygenates it, and pumps it into the arterial system.

heat, internal ENERGY of a substance, associated with the positions and motions of its component molecules, atoms, and ions. The average kinetic energy of the molecules or atoms, which is due to their motions, is measured by the TEMPERATURE of the substance; the potential energy is associated with the state, or phase, of the substance (see STATES OF MATTER). Heat energy is commonly expressed in CALORIES, BRITISH THERMAL UNITS (Btu), or joules (see WORK). Heat may be transferred from one substance to another by three means: CONDUCTION, CONVECTION, and RADIATION. See also HEAT CAPACITY; SPECIFIC HEAT; THERMODYNAMICS.

heat capacity or **thermal capacity,** ratio of the change in HEAT energy of a unit mass of a substance to the change in TEMPERATURE of the substance. The heat capacity is a characteristic of a substance; it is often expressed in CALORIES per gram per degree Celsius or BRITISH THERMAL UNITS per pound per degree Fahrenheit. See also SPECIFIC HEAT.

Heath, Sir Edward Richard George, 1916–, British statesman. A Conservative, he was prime minister from 1970 to 1974. His attempts to reduce soaring inflation by enforcing wage controls led to bad relations with the trade unions and a confrontation with the miners' union (Nov. 1973–Feb. 1974) that forced the nation into a three-day workweek. In 1975 Heath lost the party leadership to Margaret THATCHER. In the 1980s he was a vocal and bitter critic of Thatcher's government.

heath, common name for some plants of the family Ericaceae, composed chiefly of evergreen shrubs native to the Old World. Heaths form the characteristic vegetation of many regions with acid soils, particularly moors, swamps, and mountain slopes. They are valued for their edible fruit, e.g., BLUEBERRY, CRANBERRY, and HUCKLEBERRY; as a source of flavoring, e.g., WINTERGREEN; and for their showy blossoms, e.g., RHODODENDRON, AZALEA, and TRAILING ARBUTUS. The names *heath* and *heather* are often used interchangeably, although true heaths (genus *Erica*) have needlelike foliage and white, rose, or yellow flowers, and heathers, such as the common heather of Scotland (*Calluna vulgaris*), have scalelike foliage and rose-colored flowers.

heather: see HEATH.

heat pump, device for controlling the air temperature in buildings. A heat pump operates like a reversible air conditioner. In summer, air flowing across the colder, heat-absorbing side of a REFRIGERATION apparatus is chilled and ducted through the building, and the heat is vented through an apparatus outdoors. In winter, the flow of the refrigerant is reversed. It absorbs heat through the outdoor apparatus, and the heat is released using the indoor apparatus and ducted through the building. Heat pumps are inefficient when the outside temperature is below freezing.

heaven, in Judaeo-Christian belief, the state of bliss in which the just see God face to face. Many Christians believe that after the RESURRECTION the glorified human body will be reunited forever with the soul in heaven, a realm popularly thought to contain material delights. Islam is accused of teaching of a heaven filled with delights of the flesh, but the passages in the Koran describing it may be allegorical.

heavy spar: see BARITE.

heavy water: see HYDROGEN.

Hebe [hē'bē], in Greek religion, goddess of youth; daughter of ZEUS and HERA and wife of HERCULES.

Hébert, Jacques René [ābĕr'], 1757–94, French revolutionary. The editor of a virulent paper, *Le Père Duchesne,* he led the CORDELIERS after MARAT's death. He was largely responsible for the price ceilings during the REIGN OF TERROR. His power over the Paris commune threatened ROBESPIERRE, who had him and his followers guillotined on a concocted charge of conspiracy. His fall marked the triumph of the propertied middle class.

Hebrew language, member of the Canaanite group of the Semitic subdivision of the Hamito-Semitic family of languages. In 1948 it became the official language of Israel. See LANGUAGE (table).

Hebrews. For history, see JEWS; for religion, see JUDAISM.

Hebrews, epistle of the NEW TESTAMENT, 19th book in the usual order, traditionally ascribed to St. PAUL; few modern scholars accept his authorship. It was written before A.D. 96. Most modern scholars feel it is addressed to Christians lapsing into indifference. The first part (1.1–4.13) argues Jesus' superiority to the angels and to MOSES; the second (4.14–10.18) treats Jesus' ministry and sacrifice, which supersedes all other sacrifices and serves to expiate sin.

Hebrides, the, group of more than 500 islands, W and NW Scotland. Less than a fifth of the islands are inhabited. They form two groups: the Outer Hebrides (known administratively as the Western Isles) and the Inner Hebrides, including SKYE and IONA. The main economic activities are fishing, farming, sheep grazing, and the manufacture of tweeds and other woolens. The islands were ruled by the Norwegians (8th–13th cent.) and by Scottish chiefs (13th–16th cent.) until they were acquired by the Scottish crown.

Hebron, city (1990 est. pop. 80,000), in the Israeli-occupied WEST BANK, near Jerusalem. Grapes, grains, and vegetables are grown in the area, and the main industries include tanning, food processing, and glass blowing. According to the Bible, the cave of Machpelah in Hebron is the burial place of ABRAHAM and his family, and the city was King DAVID's capital for seven years. Hebron has been occupied by Israel since the 1967 ARAB-ISRAELI WAR.

Hecate, in Greek mythology, goddess of ghosts and witchcraft. An attendant of PERSEPHONE, she was a spirit of black magic, able to conjure up dreams and the spirits of the dead. She haunted graveyards and crossroads.

Hecht, Ben, 1894–1964, American writer; b. N.Y.C. A controversial figure, he worked on Chicago newspapers and in the film industry in Hollywood. He wrote novels, stories, and plays. His best-known work, written with Charles MacArthur, is *The Front Page* (1928), an irreverent drama of newspaper life.

Hector, in Greek mythology, greatest Trojan hero of the TROJAN WAR, eldest son of Priam and HECUBA and husband of Andromache. In HOMER's *Iliad* he was killed by ACHILLES in revenge for the death of Patroclus.

Hecuba, in Greek mythology, queen of TROY; wife of Priam, to whom she bore 19 children, including HECTOR, PARIS, Troilus, and CASSANDRA. After the TROJAN WAR she was taken as a slave by ODYSSEUS.

She is an important character in EURIPIDES' plays *Hecuba* and *The Trojan Women.*

hedgehog, usually brown or yellow Old World MAMMAL of the family Erinaceidae, related to MOLES and SHREWS. Spiny hedgehogs, of Africa and Eurasia, are covered with stiff spines; they can roll into a ball when attacked, becoming invulnerable to predators. The European hedgehog (*Erinaceus eropaeus*) is nocturnal, living in a burrow (often in hedgerows) and hibernating in winter. It is about 9 in. (23 cm) in length. Like a hog, it roots in the ground for food; it eats worms, insects, mice, frogs, and poisonous snakes.

hedonism, in philosophy, the doctrine that pleasure is the highest good. Ancient hedonism equated pleasure variously with the gratification of sensual desire (as in the teaching of Aristippus and the Cyreniacs, c.435–360 B.C.) and with the intellectual serenity brought on by the rational control of desire (as in the teaching of EPICURUS). Modern British hedonism, expressed first in UTILITARIANISM, represents a social universalism, stressing that the aim of life is the greatest happiness for the greatest number.

Hegel, Georg Wilhelm Friedrich, 1770–1831, German philosopher. His all-embracing philosophical system, set forth in such works as *Phenomenology of Mind* (1807), *Science of Logic* (1812–16), and *Encyclopedia of the Philosophical Sciences* (1817), includes theories of ethics, aesthetics, history, politics, and religion. Hegel posited an enveloping absolute spirit at the center of the universe that guides all reality, including human reason. His absolute IDEALISM envisages a world-soul, evident throughout history, that develops from, and is known through, a process of change and progress now known universally as the Hegelian dialectic. According to its laws, one concept (thesis) inevitably generates its opposite (antithesis); their interaction leads to a new concept (synthesis), which in turn becomes the thesis of a new triad. Thus, philosophy enables human beings to comprehend the historical unfolding of the absolute. Hegel's application of the dialectic to the concept of conflict of cultures stimulated historical analysis and, in the political arena, made him a hero to those working for a unified Germany. He was a major influence on subsequent idealist thinkers and on such philosophers as KIERKEGAARD and SARTRE; perhaps his most far-reaching effect was his influence on Karl MARX, who substituted materialism for idealism in his formulation of DIALECTICAL MATERIALISM.

hegira or **hejira** [Arab. *hijra,* = breaking off of relations], flight of the Prophet MUHAMMAD in Sept. 622 from his native city, MECCA (because of its hostility toward him), to Yathrib (later renamed MEDINA). The Muslim era is dated from the first day of the lunar year in which the hegira took place. The abbreviation A.H. is used before years of the hegira, as A.D. is in Christendom.

Heidegger, Martin, 1889–1976, German philosopher. A student of HUSSERL, whom Heidegger succeeded as professor of philosophy at Freiburg, he was also influenced by KIERKEGAARD, DILTHEY, and NIETZSCHE. Heidegger's analysis in his major work, *Being and Time* (1927), of the concepts of "care," "mood," and the individual's relationship to death, relates the authenticity of being, as well as the anguish of modern society, to the individual's confrontation with his own temporality. Although he rejected the title, Heidegger is regarded as one of the founders of 20th-cent. EXISTENTIALISM; he influenced the work of SARTRE, DERRIDA, and others. His later work included studies of poetry and of dehumanization in modern society.

Heidelberg, city (1989 est. pop. 131,000), Baden-Württemberg, SW Germany, on the Neckar R. Its manufactures include machinery and precision instruments. First mentioned in the 12th cent., it was the residence of the electors and capital of the PALATINATE until the 18th cent. Its famous university (est. 1386) is the oldest in Germany. Since 1952 the city has been the headquarters of the U.S. army in Europe.

Heifetz, Jascha, 1901–87, Russian-American violinist. A child prodigy in Europe, he emigrated (1917) to the U.S., becoming a greater artist in maturity. He combined reasoned interpretation with virtuoso technique.

Heilbroner, Robert L., 1929–, American economist; b. N.Y.C. He has successfully popularized economics and explained economic theory to the lay reader. His works include *The Worldly Philosophers* (1953), *The Limits of American Capitalism* (1966), and *The Nature and Logic of Capitalism* (1985).

Heimlich maneuver, emergency procedure used to treat choking victims whose airway is obstructed by food or another substance. It forces air from the lungs through the windpipe, pushing the obstruction out. If the victim is standing, the rescuer wraps his (or her) arms around the victim's waist; making a fist with one hand and placing the thumb side of the fist against the abdomen just above the navel, the rescuer grasps his fist with the other hand and presses in with firm, quick, upward thrusts.

Heine, Heinrich [hī'nə], 1797–1856, German poet. His early poems, e.g., *Book of Songs* (1827), established him as a romantic, and his travel sketches, beginning with *Harz Journey* (1826), reveal a mixture of poignant emotion and barbed wit. A supporter of the social ideals of the FRENCH REVOLUTION, he left Germany for Paris in 1831. From there he continued to disseminate French revolutionary ideas in Germany and was the leading figure in the literary movement Young Germany. Heine worked in Paris as a correspondent for German newspapers and died there after years of severe illness. His lyrics have been used in some 3,000 compositions by SCHUMANN, SCHUBERT, and many others; his best-known song is "Die Lorelei." His later verse satires *Atta Troll* (1843) and *Deutschland* (1844) reflect his reaction, as a German of Jewish descent, to German anti-Semitism. Virtually all his work has been translated into English.

Heinlein, Robert (Anson MacDonald), 1907–88, American science fiction writer; b. Butler, Mo. His best-known novel, *Stranger in a Strange Land* (1961), about a young man who is raised by Martians and returns to Earth, became a 1960s cult classic. Other books include *Green Hills of Earth* (1951) and *I Will Fear No Evil* (1971).

Heisenberg, Werner, 1901–76, German physicist. A founder of QUANTUM MECHANICS, he is famous for his uncertainty principle, which states that it is impossible to determine both the position and momentum of a subatomic particle (such as the electron) with arbitrarily high accuracy. The effect of this principle is to convert the laws of physics into statements about relative, instead of absolute, certainties. Heisenberg's matrix mechanics, a form of quantum mechanics, was shown to be equivalent to Erwin SCHRÖDINGER's wave mechanics. Heisenberg received the 1932 Nobel Prize in physics for his work in nuclear physics and quantum theory.

Hekla [hĕk'lä], active volcano, c.4,900 ft (1,490 m) high, SW Iceland, on the Mid-Atlantic Ridge. Hekla regularly emits steam and has several craters. The most destructive known eruption occurred in 1766; the most recent in 1947.

Helen, in Greek mythology, the most beautiful of women; daughter of ZEUS and LEDA, sister of CLYTEMNESTRA and of CASTOR AND POLLUX. Courted by many suitors, she married MENELAUS. When PARIS awarded the apple of discord to APHRODITE, the goddess gave him Helen; he carried her off to Troy, precipitating the TROJAN WAR. After the war she returned to Sparta with Menelaus, by whom she bore Hermione.

Helena, Saint, c.248–328?, mother of CONSTANTINE I. Converted to Christianity in 313, she is said to have discovered the True Cross and the Holy Sepulcher in Jerusalem. Feast: Aug. 18.

Helena, city (1990 pop. 24,569), state capital and seat of Lewis and Clark co., W central Mont., on the eastern slope of the CONTINENTAL DIVIDE; inc. 1870. A commercial center in a ranching and mining area, its manufactures include machine parts and paints. Helena's main street is the site of Last Chance Gulch, where gold was discovered in 1864.

helicopter, type of aircraft in which the lift is obtained by means of one or more power-driven horizontal propellers called rotors. In a single-rotor helicopter the reaction torque from the spinning rotor is compensated by a small vertical rotor near the tail. On twin-rotor craft the rotors spin in opposite directions, so that their reaction torques cancel each other. The helicopter is steered in any direction by inclining the axis of the main rotor in that direction. Because of its maneuverability and ability to land and take off in small areas, the helicopter is used in warfare and in a wide range of services, e.g., air-sea rescue, fire fighting, crop sowing, and traffic control. See SIKORSKY, IGOR.

heliocentric system: see COPERNICAN SYSTEM.

The key to pronunciation appears on page xiii.

Heliopolis [Gr., = city of the sun], ancient city, N EGYPT, in the Nile delta, 6 mi (10 km) below Cairo. It was the center of sun worship, and its god RA or Re was the state deity until THEBES became the capital (c.2100 B.C.), when the gods AMON and Ra were combined as Amon-Ra. Its famous schools declined after the founding of Alexandria (332 B.C.)

Helios [hē'lēŏs], in Greek mythology, the sun god; son of the TITANS Hyperion and Theia; father of PHAËTHON. Each morning he left a palace in the east and crossed the sky in a golden chariot, then returned along the river Oceanus. He was a national god in Rhodes, where a COLOSSUS represented him. In Rome he was known as Sol and was an important god.

Helios, in space exploration: see SPACE PROBE, table.

heliotrope, in mineralogy: see BLOODSTONE.

helium (He), gaseous element, first observed spectroscopically in the SUN during a solar eclipse in 1868. Its noncombustibility and buoyancy make this extremely unreactive, INERT GAS the most suitable of gases for BALLOONS and AIRSHIPS. Deep-sea divers often breathe a helium-and-oxygen mixture; because helium is less soluble in human blood than nitrogen, its use reduces the risk of the bends (see DECOMPRESSION SICKNESS; DIVING, DEEP-SEA). Liquid helium is essential for low-temperature work (see LOW-TEMPERATURE PHYSICS; SUPERFLUIDITY). Helium is also used in arc welding and gas-discharge lasers. Abundant in outer space, helium is the product of hydrogen fusion in STARS. See ELEMENT (table); PERIODICTABLE.

hell, in Christian theology, eternal abode of those damned by God. Souls in hell are led by SATAN and deprived forever of the sight of God. In legend it is a place of fire and brimstone, where the damned undergo physical torment. Islam has a similar hell. In the ancient Jewish Sheol or Tophet, souls wander about unhappily, but Sheol later became much like the Christian hell. The ancient Greeks believed souls went to an underworld called Hades.

Helladic culture: see MYCENAEAN CIVILIZATION.

Hellen, in Greek mythology, ancestor of the Hellenes, or Greeks; son of DEUCALION and Pyrrha. His sons Dorus, Xuthus, and Aeolus were the progenitors of the principal Greek nations—the DORIANS, Ionians, Achaeans (see under ACHAEA), and Aeolians.

Hellenism, the culture, ideals and pattern of life of classical Greece, especially of Athens during the age of PERICLES; also, later thought and writing drawing on these ideals. It is often contrasted with austere, monotheistic Hebraism. The Hellenic period ended in the 4th cent. B.C. and was followed by HELLENISTIC CIVILIZATION.

Hellenistic civilization, spread of HELLENISM through the Mediterranean and Middle East and into Asia after ALEXANDER THE GREAT'S conquests. While the Greek city-states stagnated, their culture flourished elsewhere, notably at ALEXANDRIA. The city's influence on art, letters, and commerce was so great that the era is sometimes called the Alexandrian age. PERGAMUM and other cities also were important. Navigators extended the known world, and commercial wealth was reflected in ornate, grandiose architecture. Social divisions were extreme, but education was more widespread than ever before, with Greek the language of culture. A division between popular and learned writing appeared. The libraries of Alexandria and Pergamum were great learning centers, and writers like CALLIMACHUS, LUCIAN, and THEOCRITUS flourished. Philosophical disputation abounded, with STOICISM and Epicureanism (see EPICURUS) especially important. The highest achievement of the age may have been the preservation of Greek culture for the Romans. As Rome overshadowed the Mediterranean world, Hellenistic civilization was absorbed rather than extinguished.

Heller, Joseph, 1923–, American writer; b. Brooklyn, N.Y. He is best known for the novel *Catch-22* (1961), a wildly comic tale of military absurdities. He has also written a play and the novels *Something Happened* (1974), *Good as Gold* (1979), *God Knows* (1984), and *Picture This* (1988).

Heller, Walter, 1915–87, American economist; b. Buffalo, N.Y. Professor at the Univ. of Minnesota since 1946, he was chairman (1961–64) of the Council of Economic Advisers under Pres. J.F. KENNEDY and consultant to Pres. L.B. JOHNSON until 1969. He advocated deficit spending to spur economic growth, and federal revenue sharing with the states. His writings include *Monetary vs. Fiscal Policy* (1969; with Milton FRIEDMAN) and *The Economy* (1976).

Hellman, Lillian, 1905–84, American dramatist; b. New Orleans. Her finely crafted plays include *The Children's Hour* (1934), *The Little Foxes* (1939), and *Watch on the Rhine* (1941). She is also noted for her autobiographical works, e.g., *An Unfinished Woman* (1969), *Pentimento* (1973), *Scoundrel Time* (1976).

Helmholtz, Hermann Ludwig Ferdinand von, 1821–94, German scientist. An investigator of thermodynamics, electrodynamics, and vortex motion in fluids, he extended the application of the law of conservation of energy and in 1847 formulated it mathematically. A pioneer in physiological optics, Helmholtz invented (1851) the ophthalmoscope. He was professor of physics at the Univ. of Berlin.

Helms, Jesse, 1921–, U.S. politician; b. Monroe, N.C. A radio broadcasting executive, Helms gained prominence in the 1960s as a staunchly conservative Raleigh (N.C.) radio commentator. Elected (1972) to the U.S. Senate as a Republican from North Carolina, he gained notoriety for his outspoken, often unyielding support of right-wing causes in the Senate. Helms was chairman of the Senate agriculture committee from 1981 to 1986.

helots: see SPARTA.

Helsingør or **Elsinore,** city (1988 pop. 56,643), E Denmark, on the Oresund. It is an industrial center, fishing port, and summer resort. Known since the 13th cent., it served as a toll port from the 15th to the 18th cent. Kronborg castle (now a maritime museum), the setting of Shakespeare's *Hamlet,* is used to stage performances of the play.

Helsinki, city (1988 pop. 490,101), capital of Finland, S Finland, on the Gulf of Finland. Though blocked by ice from January to May, it is a natural seaport and the nation's administrative, cultural, and commercial center, with machine shops, shipyards, food-processing plants, and textile mills. Founded in 1550 by GUSTAVUS I of Sweden, it was devastated by fire in 1808 but was rebuilt and became the capital in 1812. Its university became (19th cent.) a center for Finnish nationalist activity against Russian rule. Landmarks include the railway station (designed by Eliel SAARINEN) and the sports stadium, site of the 1952 OLYMPIC GAMES.

Hemingway, Ernest, 1899–1961, one of the great American writers of the 20th cent.; b. Oak Park, Ill. With the publication of his novel

Ernest Hemingway

The Sun Also Rises (1926), he was recognized as a leading spokesman of the "lost generation" of American expatriates in post–World War I Paris. Writing in a direct, terse style, Hemingway focused on courageous people living essential, dangerous lives. His other major novels include *A Farewell to Arms* (1929), a tragic wartime love story, and *For Whom the Bell Tolls* (1940), based on an incident in the SPANISH CIVIL WAR, in which he was a correspondent. He is also famous for his vigorous short stories, e.g., "The Killers" and "The Snows of Kilimanjaro." In 1945 he settled in Cuba, where he wrote the novella *The Old Man and the Sea* (1952; Pulitzer). His other writings include the nonfiction works *Death in the Afternoon* (1932) and *Green Hills of Africa* (1935). In 1954 he was awarded the Nobel Prize in literature. He later moved to Idaho, where, plagued by illness, he committed suicide.

hemlock, coniferous evergreen tree (genus *Tsuga*) of the PINE family, native to North America and Asia. The common hemlock of E North America (*T. canadensis*) has small cones and short, dark-green leaves that give the branchlets a flat appearance. It is grown as an ornamental and has been valued as a source of tanbark. The wood of a Western hemlock (*T. heterophylla*) is used for construction. POISON HEMLOCK is an herb of the CARROT family.

hemoglobin, respiratory pigment found in the red blood cells of all vertebrates and some invertebrates (see BLOOD). It is produced in the bone marrow and carries oxygen to the body from the LUNGS. An inadequate amount of circulating hemoglobin results in a condition called ANEMIA.

hemophilia, hereditary disorder in which the clotting ability of the BLOOD is impaired and excessive bleeding results. Unable to form or maintain a sufficient blood clot, a hemophiliac may bleed uncontrollably after a small cut or bruise, after rigorous exertion, or even spontaneously. Hemophilia is genetically transmitted through females but usually affects only males. It is treated by transfusing the missing clotting factor; manufactured clotting factor also is now available. In the 1980s, before donated blood was routinely screened for the AIDS virus, some hemophiliacs contracted AIDS through transfusions of contaminated blood.

hemorrhoids or **piles,** dilation of the veins in or about the anus, often producing itching, bleeding, and pain. A common disorder associated with conditions such as constipation, pregnancy, and diarrhea, hemorrhoids can be treated with warm baths, ointments, and suppositories; in severe cases, injections, freezing, laser surgery, or traditional surgery may be necessary.

hemp, annual herb (*Cannabis sativa*) native to Asia and widely cultivated in Europe. It is often grown for the fiber made from its stems and for the narcotic drugs hashish and MARIJUANA, made primarily from the female flowers. Of major importance in many kinds of cord, hemp fiber is used in making paper, cloth, and other products. Hemp seed is used as bird food, and oil from the seeds is used in the manufacture of paints, varnishes, and soap.

Henderson, Rickey, 1957–, American baseball player, b. Chicago. A power-hitting outfielder with blazing speed, he holds the career base-stealing record. He played with the Oakland Athletics (1979–84) and achieved fame with the New York Yankees (1985–90). Plagued by injuries, he was traded (1990) to the Athletics and then (1993) the Toronto Blue Jays. He rejoined the Athletics in 1994.

Henie, Sonja [hĕn'ē], 1912–69, Norwegian-American figure skater; b. Norway. Ten times the world's figure-skating champion, she won Olympic championships in 1928, 1932, and 1936. She later became a popular professional skater and movie actress.

Henley, William Ernest, 1849–1903, English poet, critic, and editor, best known as the author of the poems "Invictus" and "England, My England." He also wrote plays with R.L. STEVENSON and edited literary reviews.

Henri, Robert, 1865–1929, American painter; b. Cincinnati. A member of the EIGHT, he rebelled against academic art and excelled in dramatic portraits, e.g., *Spanish Gypsy* (Metropolitan Mus.) and *Young Woman in Black* (Art Inst., Chicago). One of the foremost American art teachers, he imbued such students as George BELLOWS, Rockwell KENT, and Edward HOPPER with his dynamic concepts.

Henrietta Maria, 1609–69, queen consort of CHARLES I of England, daughter of HENRY IV of France. Her dealings with the pope, foreign powers, and army officers increased Parliament's suspicion of Charles and fear of a Catholic uprising, and helped to precipitate (1642) the ENGLISH CIVIL WAR.

Henry, rulers of the HOLY ROMAN EMPIRE. **Henry I** or **Henry the Fowler,** 876?–936, German king (919–36), was the first of the Saxon line, precursors to the Holy Roman emperors. After succeeding CONRAD I as German king, he won LOTHARINGIA from its allegiance to France (925), defeated the MAGYARS (933), and fortified his frontiers. St. Matilda, his queen, founded many monasteries. **Henry II,** 973–1024, emperor (1014–24) and German king (1002–24), was the last of the Saxon line. He was duke of Bavaria and succeeded his third cousin, OTTO III. In 1004 he entered Italy and was crowned king of Lombardy. He carried on a long warfare with BOLESLAUS I of Poland. After being crowned (1014) emperor, Henry was forced to assert his control over Italy. Both he and his empress, Kunigonde, are saints of the Roman Catholic Church. **Henry III,** 1017–56, emperor (1046–56) and German king (1039–56), served jointly as king with his father, CONRAD II, and acceded after his father's death. Under Henry the medieval Holy Roman Empire probably attained its greatest power and solidity. He defeated (1041) the Bohemians and maintained control over SAXONY and Lotharingia. The four Germans he named to the papal throne greatly increased the power of the papacy. His son, **Henry IV,** 1050–1106, emperor (1084–1105) and German king (1056–1105), was the central figure in the long struggle between the Holy Roman Empire and the papacy, which had been greatly strengthened by his father. His appointment of bishops in 1075 was condemned by Pope GREGORY VII. Henry declared Gregory deposed, and Gregory in turn excommunicated Henry. Even though Henry recanted, an antiking, Rudolf of Swabia, was named by a faction of German nobles, and civil war broke out. Henry was again excommunicated, but he invaded Italy, defeated the pope's forces, and was crowned emperor (1084) by the antipope, Guibert of Ravenna. His continuing battles with the pope, however, endangered the monarchy. With the blessing of Pope PASCHAL II, **Henry V,** 1081–1125, emperor (1111–25) and German king (1105–25), forced his father, Henry IV, to abdicate (1105), but he soon fell out with the pope. In 1111 he took Paschal and his cardinals prisoner. To secure his release the pope crowned Henry emperor and made other concessions. The conflict continued but was finally resolved by the Concordat of Worms (1122). **Henry VI,** 1165–97, emperor (1191–97) and German king (1190–97), was the son and successor of FREDERICK I. As the husband of Constance, heiress of Sicily, he gained control (1194) of that kingdom. He also took RICHARD I of England prisoner and forced him to swear fealty. He died while preparing to lead a Crusade. **Henry VII,** c.1275–1313, emperor (1312–13) and German king (1308–13), was a minor count of the house of Luxembourg when he was named king. As emperor he tried vainly to end the strife between the GUELPHS AND GHIBELLINES. He died while on a futile campaign to secure imperial authority in S Italy.

Henry, kings of England. **Henry I,** 1068–1135 (r.1100–1135), was the youngest son of WILLIAM I. On the death of his brother WILLIAM II, he had himself elected and crowned king while his older brother, ROBERT II, duke of Normandy, was on crusade. In 1101 Robert invaded England, but Henry bought him off. Henry invaded Normandy in 1105, defeated his brother, and became duke of Normandy. In the meantime he had been involved in a struggle with ANSELM over lay investiture. His later years were marked by his attempts to obtain the succession for his daughter MATILDA. Under Henry's reign of order and progress, royal justice was strengthened. **Henry II,** 1133–89 (r.1154–89), was the son of Matilda and GEOFFREY IV, count of Anjou. Founder of the Angevin, or Plantagenet, line, he became duke of Normandy in 1150 and in 1152 married ELEANOR OF AQUITAINE, thus gaining vast territories in France. In 1153 he invaded England and forced STEPHEN to acknowledge him as his heir. As king he restored order to war-ravaged England, subdued the barons, centralized the power of government in royalty, and strengthened royal courts. Henry's desire to increase royal authority brought him into conflict with THOMAS À BECKET, whom he had made (1162) archbishop of Canterbury. The quarrel, which focused largely on the jurisdiction of the church courts, came to a head when Henry issued (1163) the Constitutions of CLARENDON, defining the relationship between church and state, and ended (1170) with Becket's murder, for which Henry was forced by public

The key to pronunciation appears on page xiii.

indignation to do penance. During his reign he gained northern counties from Scotland and increased his French holdings. He was also involved in family struggles. Encouraged by their mother and LOUIS VI of France, his three oldest sons, Henry, RICHARD I, and Geoffrey, rebelled (1173–74) against him. The rebellion collapsed, but at the time of Henry's death, Richard and the youngest son, JOHN, were in the course of another rebellion. **Henry III,** 1207–72 (r.1216–72), was the son of John. He became king under a regency and was granted full powers of kingship in 1227. In 1230, against the advice of the chief justiciar, Hubert de Burgh, he led an unsuccessful expedition to Gascony and Brittany. He dismissed Hubert in 1232 and began a reign of extravagance and general incapacity, spending vast sums on futile wars in France. Henry's absolutism, his reliance on French favorites, and his subservience to the papacy aroused the hostility of the barons. His attempt to put his son, Edmund, earl of Lancaster, on the throne of Sicily (given to Henry by the pope) eventually led to the BARONS' WAR. Simon de MONTFORT, the barons' leader, won at Lewes and summoned (1265) a famous PARLIAMENT, but Henry's son EDWARD I led royal troops to victory at Evesham (1265), where de Montfort was killed. By 1267 the barons had capitulated, Prince Edward ruled the realm, and Henry was king in name only. **Henry IV,** 1367–1413, (r.1399–1413), was the son of JOHN OF GAUNT. In 1387 he joined the opposition to RICHARD II and was one of the five "lords appellant" who ruled England from 1388 to 1389. In 1398 Richard banished Henry and, after John's death in 1399, seized the family's vast Lancastrian holdings. Counting on the king's unpopularity and his absence in Ireland, Henry invaded England and successfully claimed the throne, thus establishing the Lancastrian dynasty. His reign was spent suppressing rebellions, notably by Richard's followers; by the Scots; by the Welsh under OWEN GLENDOWER; and by Sir Henry PERCY. He left the kingdom militarily secure but in debt. His son, **Henry V,** 1387–1422 (r.1413–22), presided over the privy council during his father's illness. As prince of Wales (Shakespeare's "Prince Hal"), he led armies against Owen Glendower and figured largely in the victory over the Percys. The early years of his reign were troubled by the rebellion of the Lollards (see LOLLARDRY). Determined to regain lands he believed to be his, he invaded France in 1415, thus reopening the HUNDRED YEARS WAR. After announcing his claim to the French throne, he met and defeated a superior French force at the famous battle of AGINCOURT. By 1420 he had conquered Normandy, married CATHERINE OF VALOIS, and persuaded her father, CHARLES VI of France, to name him his successor. He fell ill and died in 1422. As king he ruled with justice and industry, restoring civil order and the national spirit. Though his wars left the crown in debt, his charm, military genius, and care for his less fortunate subjects made him a popular hero. His son, **Henry VI,** 1421–71 (r.1422–61, 1470–71), became king when he was not yet nine months old. During his early years England was under the protectorate of two of his uncles. After their defeat at Orléans by JOAN OF ARC, the English attempted to protect their French interests by crowning Henry king of France at Paris in 1431, but their cause was hopeless. Henry's rule was dominated by factions, and there were many riots and uprisings indicating public dissatisfaction with the government. The struggle between the faction headed by Henry's wife, MARGARET OF ANJOU, and Edmund Beaufort, duke of Somerset, and that headed by Richard, duke of York, developed into the dynastic battle between the LANCASTERS and YORKS known as the Wars of the ROSES. Henry went insane in 1453. In 1455 Somerset was killed in the battle of St. Albans, and the Yorkists gained control of the government. Margaret had control from 1456 until 1460, when the Yorkists won a victory at Northampton and Henry was taken prisoner. York, who had been named Henry's successor, was killed at Wakefield in 1460, but his son EDWARD IV defeated the Lancastrians and was proclaimed king. Later he fled to Holland, and Henry was briefly (1470–71) restored. In 1471 Edward retook the throne, and Henry was murdered in the Tower of London. Henry was a mild, honest, pious man, a patron of literature and the arts, and the founder (1440) of Eton College. He was also unstable, weak-willed, and politically naïve. **Henry VII,** 1457–1509 (r.1485–1509), became head of the house of Lancaster at Henry VI's death. In 1485 he invaded England from France and defeated the forces of RICHARD III at the battle of Bosworth Field. The next year he married Edward IV's daughter, Elizabeth, thus uniting the houses of York and Lancaster and founding the TUDOR dynasty. Although his accession marked the end of the Wars of the Roses, the early years of his reign were disturbed by Yorkist attempts to regain the throne, e.g., the impersonations of Lambert SIMNEL and Perkin WARBECK. He consolidated English rule in Ireland (1494) and effected a peace treaty with Scotland (1499), which was followed by the marriage of his daughter Margaret to JAMES IV of Scotland. He established the Tudor tradition of autocratic rule tempered by justice and increased the powers of the STAR CHAMBER court. His son **Henry VIII,** 1491–1547 (r.1509–47), married his brother Arthur's widow, KATHARINE OF ARAGÓN, who bore him a daughter, MARY I. His chief minister, Thomas WOLSEY, concluded an alliance with FRANCIS I of France. but Henry (despite the FIELD OF THE CLOTH OF GOLD) joined (1522) Emperor CHARLES V in a war against France. England prospered internally under Wolsey, who had almost complete control. The court became a center of learning, and the pope gave Henry the title "Defender of the Faith" for a treatise he wrote against Martin LUTHER. By 1527 Henry, desiring a male heir, wished to marry Anne BOLEYN, but Pope CLEMENT VII, under the control of Katharine's nephew, Charles V, resisted his demands for a divorce. Wolsey's failure in this affair caused his downfall, and Thomas Cromwell became chief minister. An anti-ecclesiastical policy was adopted, and the subservient Thomas CRANMER became archbishop of Canterbury. He immediately pronounced Henry's marriage to Katharine invalid. Papal powers were transferred to the king, who became the supreme head of the English church. The break with Rome was now complete, and the Church of ENGLAND was established. Anne, whom Henry immediately married, had one daughter, ELIZABETH I. The marriage ended in 1536, when Anne was convicted of adultery and beheaded. Ten days later Henry married Jane SEYMOUR, who died in 1537 giving birth to EDWARD VI. The king dealt harshly with rebellions against the abolition of papal supremacy and the dissolution of the monasteries. In 1537 he licensed the publication of the Bible in English. His marriage (1540) to ANNE OF CLEVES (whom he disliked and soon divorced) led to the execution of Cromwell. He then married Catherine HOWARD, who suffered (1542) Anne Boleyn's fate. In 1543 Catherine PARR became his sixth queen. In 1542 war with Scotland began again, and Henry made unsuccessful attempts to unite the two kingdoms. Wales was officially incorporated into England (1536), but the conquest of Ireland proved too expensive. The end of Henry's reign saw a gradual move toward Protestantism. Henry remained immensely popular, despite his advancement of personal desires under the guise of public policy or moral right. His political insight, however, grew steadily better, and the power of Parliament increased. He gave England a comparatively peaceful reign.

Henry, kings of France. **Henry I,** c.1008–1060 (r.1031–60), was the son and successor of ROBERT II. He unwisely invested his brother Robert with the duchy of Burgundy, setting up a powerful rival to the French kingdom. Henry also fought with William, duke of Normandy (later WILLIAM I of England). **Henry II,** 1519–59 (r.1547–59), succeeded his father, FRANCIS I. Weak and pliant, he was dominated by Anne de Montmorency, by his mistress DIANE DE POITIERS, and by François and Charles de GUISE. Henry resumed his father's wars against Holy Roman Emperor CHARLES V and continued them against Charles's son PHILIP II of Spain. He was killed accidentally in a tournament and was succeeded by FRANCIS II. **Henry III,** 1551–89 (r.1574–89), was the son of Henry II and CATHERINE DE' MEDICI. He helped his mother plan the SAINT BARTHOLOMEW'S DAY massacre (1572) and was elected (1573) king of Poland. Assuming the French crown on the death of his brother CHARLES IX, Henry was faced with an ongoing civil war between Roman Catholics and Protestants, who were called HUGUENOTS (see RELIGION, WARS OF). In 1576 he made concessions to the Protestants that caused Henri, 3d duc de GUISE, to form the Catholic League. When the Protestant Henry of Navarre (later HENRY IV of France) became (1584) legal heir to the throne, Guise forced Henry III to suppress Protestantism and to exclude Navarre from the succession. In the ensuing War of the Three Henrys, Navarre defeated a royal army at Coutras (1587). Guise then revolted against the weakened Henry III, who was expelled (1588) from Paris by the mob. The king arranged the as-

sassination of Guise, joined forces with Navarre, and attempted to retake Paris. During the siege he was assassinated by a fanatical monk, Jacques Clément. Henry III was the last male member of the house of VALOIS. **Henry IV,** 1553–1610, king of France (1589–1610) and, as Henry III, king of Navarre (1572–1610), was the first BOURBON monarch of France. Raised as a Protestant, he became (1569) the nominal head of the Huguenots. To save himself from the Saint Bartholomew's Day massacre (1572), Henry renounced his faith. He returned to Protestantism in 1576, however, and led a combined force of Protestants and moderate Catholics against Henry III and the Catholic League (for the resulting conflict see under **Henry III,** above). Henry became heir to the throne in 1584 and became king after Henry III was assassinated (1589). He defeated the Catholic League at Arques (1589) and Ivry (1590) but abandoned the siege of Paris when the league received aid from Spain. In 1593 Henry again abjured Protestantism, allegedly with the remark "Paris is well worth a Mass." He entered the city in 1594, and his conciliatory policy soon won him general support. He waged a successful war (1595–98) against Spain, and by the Edict of NANTES (1598) established political rights and a measure of religious freedom for the Huguenots. The rest of his reign was spent restoring order, industry, and trade. He was assassinated by a fanatic, François Ravaillac. In 1600 Henry had married MARIE DE' MEDICI, and he was succeeded by their son LOUIS XIII. Henry IV's gallantry, wit, and concern for the common people have become legendary.

Henry, German kings: see HENRY, rulers of the Holy Roman Empire.

Henry, Joseph, 1797–1878, American physicist; b. Albany, N.Y. A professor of philosophy at Princeton (then the College of New Jersey), he was later (from 1846) the first secretary and director of the Smithsonian Institution. Henry improved the electromagnet, invented and operated the first electromagnetic telegraph, and discovered self-inductance. The unit of inductance is often called the *henry* in his honor. Independently of Michael FARADAY, he discovered the principle of the induced current.

Henry, O.: see O. HENRY.

Henry, Patrick, 1736–99, political leader in the AMERICAN REVOLUTION; b. Hanover co., Va. A brilliant orator, he served in the Virginia house of burgesses (1765–74) and the CONTINENTAL CONGRESS (1774–76) and was governor of Virginia (1776–79). The phrases "If this be treason, make the most of it" and "Give me liberty or give me death" are attributed to him. He later worked to add the Bill of Rights to the Constitution.

Henry E. Huntington Library and Art Gallery: see under HUNTINGTON, COLLIS POTTER.

Henry of Flanders, c.1174–1216, Latin emperor of CONSTANTINOPLE (1206–16) after his brother, BALDWIN I. Ablest of the Latin emperors, he fought off the Bulgarians.

Henry of Navarre: see Henry IV under HENRY, kings of France.

Henryson, Robert, c.1425–c.1506, Scottish poet. His *Testament of Cresseid* is a harshly moral epilogue to CHAUCER's *Troilus and Criseyde.* His *Moral Fables of Aesop,* on the other hand, are macabre and drily humorous.

Henry the Fowler: see Henry I under HENRY, rulers of the Holy Roman Empire.

Henry the Lion, 1129–95, Guelphic duke of SAXONY (1142–80) and of BAVARIA (1156–80). Bavaria and Saxony were restored to him by Holy Roman Emperor FREDERICK I in an effort to end the strife between the GUELPHS AND GHIBELLINES. He supported Frederick in Italy and Christianized the Wendish lands. By 1180 the growth of his power had alarmed the emperor, who seized his two duchies and subdivided them into small principalities. Henry later regained Brunswick and Lüneburg in Saxony. His son became emperor as OTTO IV.

Henry the Navigator, 1394–1460, prince of Portugal, patron of exploration. The son of Portuguese King JOHN I, he established (1416) at Sagres a base for sea exploration, an observatory, and a school for geographers and navigators. Henry's sea captains explored the W African coast, rounding Cape Verde (1444) and reaching as far as present-day Sierra Leone. Their return with gold and slaves made for a lucrative and popular business, although he forbade (1455) the kidnapping of Africans. His promotion of navigation and exploration provided the groundwork for the development of Portugal's sea power and colonial empire.

Henze, Hans Werner [hĕn'tsə], 1926–, German composer. He was influenced early by STRAVINSKY, HINDEMITH, and BARTÓK and experimented with TWELVE-TONE MUSIC. His leftist politics are manifested in such works as *Essay on Pigs* (1969). He has written SYMPHONIES and OPERAS, e.g., *The Young Lord* (1964) and *The English Cat* (1983).

hepatitis, any of several viral inflammations of the liver that cause nausea, fever, weakness, loss of appetite, and, usually, JAUNDICE. Two forms are most common: hepatitis A (infectious), spread through contaminated food or water; and hepatitis B (serum), usually transmitted by sexual activity, transfusion of infected blood or transplantation of infected tissue, or use of shared syringes by drug addicts or of poorly sterilized medical and dental instruments. A third type, hepatitis C, is also transmitted by contaminated blood transfusions and tissue transplants. Although rarer, hepatitis C is more likely to become chronic and to result in CIRRHOSIS. Hepatitis can also occur as a complication of other diseases or as a toxic reaction to alcohol, drugs, or other chemicals. VACCINATION for hepatitis B is recommended for all infants and others at risk for the virus; a hepatitis A vaccine has also been developed. Chronic hepatitis B and C may be treated with INTERFERON.

Hepburn, Katharine, 1909–, American actress; b. Hartford, Conn. She has enhanced the screen with her individual and commanding presence since 1932. Her films include *Morning Glory* (1933; Academy Award), *The Philadelphia Story* (1940), *The African Queen* (1951), *The Lion in Winter* (1968; Academy Award), and *On Golden Pond* (1981; Academy Award).

Katharine Hepburn

Hephaestus, in Greek mythology, OLYMPIAN god; son of HERA and ZEUS; husband of APHRODITE. Originally a Middle Eastern fire god, in Greece he was the divine smith and god of craftsmen, worshiped in centers such as Athens. Usually a comic figure, he was represented as bearded, with mighty shoulders but lame. He worked at huge furnaces, aided by CYCLOPES. The Romans identified him with VULCAN.

Hepplewhite, George, d. 1786, English cabinetmaker. His work is noted for light, curvilinear forms; painted or inlaid decoration with

ribbon and rosette motifs; slender, tapering legs; chair backs in shield and oval forms; and the use of satinwood, painted beechwood, and mahogany. His small pieces, e.g., inlaid work tables, are especially prized.

Hepworth, Dame Barbara, 1903–75, English sculptor. Working primarily in stone or bronze, she sought perfection of form and surface technique. Her smooth, usually nonfigurative sculptures are reminiscent of those of Jean ARP.

Hera, in Greek mythology, queen of OLYMPIAN gods; daughter of CRONUS and RHEA; wife and sister of ZEUS; mother of ARES and HEPHAESTUS. A jealous wife, she plagued Zeus, his mistresses, and his progeny, e.g., HERCULES. Hera was powerful and widely worshiped as the protectress of women, marriage, and childbirth. The Romans identified her with JUNO.

Heracles: see HERCULES.

Heraclitus, c.535–c.475 B.C., Greek philosopher. He taught that there is no permanent reality except the reality of change, a position illustrated by his famous maxim "You cannot step twice in the same river." Thus the only possible real state is the transitional one of becoming. He believed fire to be the underlying substance of the universe and all other elements to be transformations of it.

Heraclius, c.575–641, Byzantine emperor (610–41). He recovered provinces from Persia (622–28) but lost them (629–42) to the Arabs. MONOTHELETISM resulted from his efforts to reconcile MONOPHYSITISM with the Orthodox Church. He began the reorganization of the empire into military provinces.

Herakles: see HERCULES.

heraldry, system in which inherited symbols, or devices, called charges are displayed on a shield, or escutcheon, for the purpose of identifying individuals or families. In the Middle Ages the herald, often a tournament official, had to recognize knights by their shields. As earlier functions of the herald grew obsolete, his chief duties became the devising, inscribing, and granting of armorial bearings. Heraldry proper, developed by noblemen using personal insignia on seals and shields, was a feudal institution. It is thought to have originated in Germany in the late 12th cent. and to have been imported into England by the Normans (see NORMAN CONQUEST). The CRUSADES and the tournaments that drew together knights from many countries caused heraldry to flourish in Europe. The embroidering of family emblems on the surcoat worn over chain mail in the 13th cent. accounts for the term "coat of arms." The use of armorial bearings spread rapidly thereafter. In England the regulation of heraldry was assigned to the HERALDS' COLLEGE (chartered 1483). Arms were borne by families, corporations, guilds, colleges, cities, and kingdoms, and the tradition still persists.

Herat, city (1984 est. pop. 161,000), capital of Herat prov., NW Afghanistan, on the Hari Rud. Located in a fertile valley, the city is renowned for its fruits, textiles, and carpets. It is the site of the 12th-cent. Great Mosque. Herat's strategic location on ancient trade routes made it an object of conquest. Long part of the Persian empire, Herat fell to Jenghiz Khan (1221), Timur (1383), and the Uzbeks (early 16th cent.). In 1881 it was confirmed as part of a united Afghanistan. Soviet troops occupied (1979–89) the city and demolished many of its buildings.

herbal medicine, use of natural plant substances to treat illness. The practice has existed since prehistoric times and is used today by up to 80% of the world's population as a primary form of medicine. Herbs may be used directly as teas or extracts, or they may be used in the production of drugs. Modern medicines that come from plants include aspirin from willow bark (*Salix* species) and digitalis from foxglove (*Digitalis purpurea*).

Herbert, George, 1593–1633, English METAPHYSICAL POET and Anglican priest. His devotional poems, combining reverence with a homely familiarity with religious experience, were published after his death (1633) as *The Temple.*

Herbert, Victor, 1859–1924, Irish-American cellist, composer, and conductor. After coming to the U.S. (1886), he conducted the Pittsburgh Symphony Orchestra (1898–1904). His major successes were melodious OPERETTAS, including *Babes in Toyland* (1903), *The Red Mill* (1906), and *Eileen* (1917).

herbicide, substance that kills plants or inhibits their growth. Nonselective herbicides, generally toxic, are used to clear all plants from a broad area; selective herbicides attack weeds without permanently harming crops. Scientists are using GENETIC ENGINEERING to develop crop varieties with increased tolerance for herbicides. Inorganic compounds such as common salts have long been used as herbicides; c.1900 certain sulfates, ammonium and potassium salts, and other compounds began to be used as selective herbicides. The 1940s saw the development of 2,4-D (2,4-trichlorophenoxyacetic acid), an organic compound that is a highly selective systemic herbicide. Such herbicides are now widely used. Several such compounds, including 2,4,5-T (2,4,5-trichlorophenoxyacetic acid), have been banned by the Environmental Protection Agency as potentially dangerous. 2,4,5-T was used in Agent Orange (a defoliant employed by U.S. forces in Vietnam), which has been linked to some diseases suffered by veterans. Since Agent Orange, heightened awareness of possible ecological and health dangers attributable to herbicides has resulted in reevaluation of many compounds and has called indiscriminate use into question.

Herblock (Herbert Lawrence Block), 1909–, American cartoonist; b. Chicago. Widely syndicated, his work has appeared in the Washington *Post* since 1946 and has been collected in numerous volumes. Known for his witty political drawings, he won the Pulitzer Prize in 1942 and 1954.

Herculaneum, ancient city at the foot of Mt. Vesuvius, S Italy, buried along with POMPEII when Vesuvius erupted in A.D. 79. Since the first ruins of the popular Roman resort were found in 1709, the most important excavations have been the Villa of the Papyri, a basilica, and a theater.

Hercules, Heracles, or **Herakles,** most popular Greek hero, famous for strength and courage. The son of Alcmene and ZEUS, he was hated by HERA, who sent serpents to his cradle; he strangled them. Later Hera drove Hercules, mad and he slew his wife and children. He sought purification at the court of King Eurystheus, who set him 12 mighty labors: killing the Nemean lion and HYDRA; driving off the Stymphalian birds; cleaning the Augean stables; capturing the Cerynean hind, Cretan bull, mares of Diomed, Erymanthian boar, cattle of Geryon, and CERBERUS; and procuring the girdle of Hippolyte and the golden apples of the Hesperides. He was later involved in the Calydonian hunt (see MELEAGER) and the Argonaut expedition (see JASON). At his death he rose to OLYMPUS, where he was reconciled with Hera and married HEBE. Represented as a powerful man cloaked with a lion's skin and carrying a club, he was widely worshiped. He is the hero of plays by SOPHOCLES, EURIPIDES, and SENECA.

Herder, Johann Gottfried von, 1744–1803, German philosopher, critic, and clergyman. He was an influential critic and a leader of the STURM UND DRANG movement. While studying at Königsberg, he was influenced by Immanuel KANT, and later he gained notice with *Fragments Concerning Current German Literature* (1767). He became court preacher at Weimar through the influence of GOETHE, whose work was greatly influenced by Herder's *On the Origin of Language* (1772). At Weimar, Herder became the chief theorist of German ROMANTICISM and produced his anthology of foreign folk songs, *Voices of the People* (1778–79). His vast work *Outlines of the Philosophy of Man* (1784–91) developed a major evolutionary approach to history, propounding the uniqueness of each historical age.

Heredia, José María [ärä′~~th~~eä], 1803–39, Cuban lyric poet and prose writer. Such poems as "Niagara" (1825) typify his romantic melancholy and joy in nature. Exiled (1823) as a revolutionary, he spent two years in New York City before settling in Mexico. He also wrote stories, essays, and plays.

hermaphrodite, animal or plant with both female and male reproductive systems, producing both eggs and sperm. Some hermaphrodites undergo self-FERTILIZATION, in which egg and sperm of the same individual fuse, as in self-pollinating plants; others may undergo cross-fertilization, in which egg and sperm of different individuals fuse, as in the earthworm. Protandric hermaphrodites (e.g., oyster and sage plant) produce both eggs and sperm but at different times.

hermeneutics, branch of philosophy dealing with the theory of understanding and interpretation. "Understanding" is viewed as a circular process whereby one can understand the whole only in terms of the parts, but the parts only from the whole. First used to in-

terpret biblical texts in the early 19th cent., the theory was extended by SCHLEIERMACHER beyond scriptural interpretation, and by the end of the century DILTHEY construed it as the general methodology for all the social sciences and humanities. Both held that a universal human capacity for empathy—the personal experience of that which has been expressed by someone else—was the bridge between past and present. In the 20th cent. HEIDEGGER and his student Hans-Georg Gadamer rejected this psychological foundation, instead basing their hermeneutics on the study of linguistic phenomena such as translation and etymology.

Hermes, in Greek mythology, son of ZEUS and Maia; messenger of the gods and conductor of souls to HADES. He was also the god of travelers, of luck, music, eloquence, commerce, young men, cheats, and thieves. He was said to have invented the lyre and flute. The riotous Hermaea festival was celebrated in his honor. Hermes was represented with winged hat and sandals, carrying the caduceus. He is equated with the Roman MERCURY.

Hermitage, museum in Saint Petersburg (Leningrad), one of the world's foremost houses of art. It was reconstructed in the neoclassical style in the 19th cent. from the original palace built by CATHERINE II. Although opened to the public in 1852, it contained only the imperial collections until 1917. It now has over 40,000 drawings; 500,000 engravings; and 8,000 paintings of the Flemish, French, Dutch, Spanish, and Italian schools. It also contains many superb modern works, notably by PICASSO and MATISSE, and the art of many civilizations. Russian art is exhibited separately in Mikhailovsky Palace.

hermit crab, primarily marine animal (a CRUSTACEAN) distinguished from the true CRAB by its long, soft, spirally coiled abdomen terminating in an asymmetrically hooked tail. Most occupy the empty shells of GASTROPODS and are marine scavengers. The largest species reaches 1 ft (30 cm) in length.

hernia, protrusion of an internal organ or part of an organ through the wall of a body cavity. It may be present at birth or acquired after heavy strain on the musculature in such areas as the lower abdomen (inguinal hernia), diaphragm (hiatus hernia), or region around the navel. Surgery is sometimes recommended to alleviate symptoms and prevent the hernia from becoming caught and strangulated (cut off from the blood supply).

hero, in Greek mythology, famous person worshiped after death as quasi-divine. Heroes might be actual great people, real or imaginary ancestors, or "faded" deities (ancient gods demoted to human status). Most hero worship, performed at night with blood sacrifices, was celebrated at the supposed place of the hero's tomb.

Herod, dynasty reigning in Palestine at the time of Jesus. **Antipater,** fl. c.65 B.C., founded the family fortune. He was an Idumaean, who gained a stronghold in Palestine. His son **Antipater,** d. 43 B.C., was favored by Julius CAESAR, who made him (c.55 B.C.) virtual ruler of all of Palestine. The son of the second Antipater was **Herod the Great,** d. 4 B.C., who gave the family its name. He was friendly with Marc ANTONY, and secured (37 B.C.–4 B.C.) the title king of Judaea; after the battle of Actium he made peace with Octavian (later AUGUSTUS), who thereafter showed him great favor. Herod made great efforts to mollify the Jews by publicly observing Hebrew laws and by building a temple, but also promoted hellenization. In his last years Herod became bloodthirsty, and around the time of Jesus' birth, he ordered the massacre of the innocents. His son **Herod Antipas,** d. after A.D. 39, tetrarch of Galilee and Peraea, was the Herod who executed JOHN THE BAPTIST and who was ruling at Jesus' death. He repudiated his wife to marry his niece Herodias, wife of his half-brother Herod Philip. He was eventually banished by CALIGULA in A.D. 39. **Herod Agrippa I,** d. A.D. 44, was the nephew of Herod Antipas and a man of some ability. His son, **Herod Agrippa II,** d. C.A.D. 100, was a poor ruler who alienated his subjects. The Herods are usually blamed for the state of virtual anarchy in Palestine at the beginning of the Christian era. The prime source is the history by JOSEPHUS.

Herodotus [hērŏd'ətəs], 484?-425? B.C., Greek historian, called the Father of History; b. Halicarnassus, Asia Minor. His history of the PERSIAN WARS, the first comprehensive attempt at secular narrative history, marks the start of Western historical writing. The work is written in an anecdotal style of great charm and offers a rich diversity of information about the ancient world.

heroic couplet: see PENTAMETER.

heroin, NARCOTIC drug synthesized from MORPHINE. In many parts of the world, it is used as an analgesic (for relief of pain), particularly for the terminally ill. In the U.S. its manufacture and importation are restricted, and its use in medicine remains under investigation. Heroin predominates in illicit narcotics traffic. See DRUG ADDICTION AND DRUG ABUSE.

Heron, mathematician: see HERO OF ALEXANDRIA.

heron, BIRD of the family Ardeidae, large wading birds, including the BITTERN and EGRET, found in many temperate regions but most numerous in tropical and subtropical areas. Herons have sharp, serrated bills, broad wings, and long legs. Their plumage is soft and drooping, and (especially at breeding time) they may have long, showy plumes on their heads, breasts, and backs.

Hero of Alexandria or **Heron** [hēr'ŏn], fl. A.D. 62, mathematician and inventor. His origin is uncertain, although he wrote in Greek on the measurement of geometric figures and invented many contrivances operated by water, steam, or compressed air, including a fountain and a fire engine.

herpes simplex, virus causing infection of the skin characterized by one or more blisters filled with clear fluid that usually appear around the lips (cold sores). The initial infection, probably occurring during infancy or childhood, subsequently becomes dormant. The reappearance of blisters may be triggered by such factors as fever, exposure to sunlight, menstruation, or pregnancy. Genital herpes, a type of SEXUALLY TRANSMITTED DISEASE, can be treated with the drug acyclovir.

Herrick, Robert, 1591–1674, considered the greatest of the English Cavalier poets. A country clergyman, he never married, and the many women in his poems are probably fictitious. Most of his work appeared in *Hesperides* (1648), which included the sacred songs called *Noble Numbers.* A disciple of JONSON, Herrick shows classical influence, but his greatness rests on simplicity and sensuousness. Among his best-known lyrics are "Upon Julia's Clothes" and "Corinna's Going a-Maying."

herring, important marine or freshwater food FISH of the family Clupidae, including the sardine, menhaden, and SHAD. Herrings are relatively small but very abundant; they swim in large schools. The adult common herring (*Clupea harengus*) of the N Atlantic is about 1 ft (30 cm) long, with silvery sides and blue back. The menhaden, of the Atlantic coast of North America, is a commercially important source of oil and fish meal. Of the smaller herrings and related species, the anchovies and sardines are the most important. Herring species have been depleted by overfishing. They also fluctuate in response to natural conditions, e.g., the anchovies off Peru are adversely affected by EL NIÑO.

Herschel, family of distinguished English astronomers. **Sir William Herschel,** 1738–1822, originally Friedrich Wilhelm Herschel, b. Germany, discovered (1781) the planet Uranus, which led (1782) to his position as private astronomer to the king. The large reflecting telescopes that he constructed, including one with a 40-ft (12.2-m) focal length, far surpassed in size those of his contemporaries. He concluded from the motion of double stars that they are held together by gravitation and that they revolve around a common center, thus confirming the universal nature of Isaac NEWTON's theory of gravitation. He discovered the Saturnian satellites Mimas and Enceladus (1789) and the Uranian satellites Titania and Oberon (1787). His research on nebulae suggested a possible origin of new worlds from gaseous matter, and his catalog of nebulae (including some objects that are now known to be galaxies or star clusters) increased those known from about 100 to 2,500. His sister, **Caroline Lucretia Herschel,** 1750–1848, discovered eight comets and three nebulae. For her arrangement of her brother's catalog of star clusters and nebulae, she received (1828) the Royal Astronomical Society's gold medal. Sir William's son, **Sir John Frederick William Herschel,** 1792–1871, spent four years (1834–38) at the Cape of Good Hope cataloging 1,707 nebulae and clusters and 2,102 pairs of double stars. He published (1864) a consolidated catalog of 5,079 nebulae and clusters; revised by Johann Dreyer as *A New General Catalogue of Nebulae and Star Clusters* (NGC; 1888), it is still a standard reference. In photography, he was the first to use sodium thiosulfate as a fixing agent, and he introduced the terms *positive image* and *negative image.*

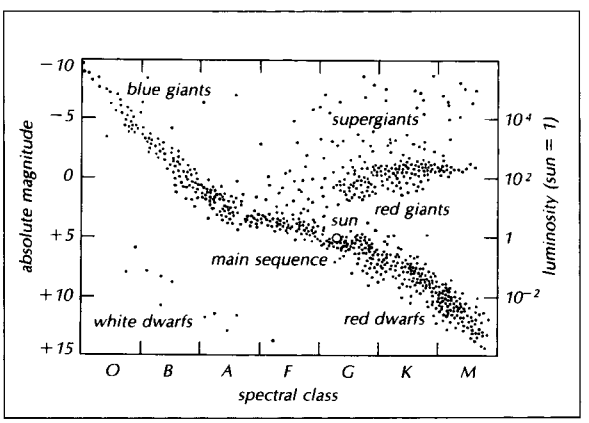
Hersey, John (Richard), 1914–93, American writer; b. China. A former war correspondent, he examined WORLD WAR II events in *Hiroshima* (1946) and the novels *A Bell for Adano* (1944; Pulitzer) and *The Wall* (1950). His later novels include *The Walnut Door* (1977) and *Antonietta* (1991).

Herskovits, Melville Jean, 1895–1963, American anthropologist; b. Bellefontaine, Ohio. A professor at Northwestern Univ. (from 1927), he did his fieldwork in Africa and pioneered in applying principles of modern cultural anthropology to African-American ethnology. His works include *The Myth of the Negro Past* (1941) and *The Human Factor in a Changing Africa* (1962).

Hertz, Heinrich Rudolf, 1857–94, German physicist. He confirmed James Clerk MAXWELL's electromagnetic theory and produced and studied electromagnetic waves (radio waves), which he showed are long transverse waves that travel at the speed of light and can be reflected, refracted, and polarized like light. The unit of frequency, the hertz, is named for him.

Hertzog, James Barry Munnik, 1866–1942, South African political leader. A Boer, he served (1910–12) in BOTHA's cabinet in the newly created Union of SOUTH AFRICA, but opposition to Botha's cooperation with the British led him to form the Nationalist party. As prime minister (1924–39) he instituted various methods of racial segregation, or APARTHEID.

Hertzsprung-Russell diagram [for astronomers Ejnar Hertzsprung and Henry Norris RUSSELL], graph showing the LUMINOSITIES, or absolute MAGNITUDES, of the STARS of a cluster or galaxy plotted against their surface temperatures (or some temperature-dependent characteristic such as SPECTRAL CLASS or color). The majority of stars lie on a diagonal band—the main sequence—that extends from hot stars of high luminosity, in the upper-left corner, to cool stars of low luminosity, in the lower-right corner. The concentration of stars in certain distinct regions of the H-R diagram indicates that definite laws govern stellar structure and STELLAR EVOLUTION.



The Hertzsprung-Russell (H-R) diagram shows the absolute magnitudes of stars as a function of their spectral class, which is related to their temperature. Most stars fall along a diagonal, the main sequence, that extends from cool, dim red dwarfs to hot, bright blue giants.

Herzen, Aleksandr Ivanovich, 1812–70, Russian revolutionary leader and writer. A civil servant, he was sent to the provinces (1834) for participating in a socialist group. He left Russia permanently in 1847. In England he set up the first free Russian press abroad; his weekly journal *Kolokol* (1857–62) was banned in Russia but widely read. His books include *My Past and Thoughts* (1855).

Herzl, Theodor [hĕr'tsəl], 1860–1904, Hungarian Jew, founder of modern ZIONISM. As a newspaper correspondent covering the DREYFUS AFFAIR, he became convinced that the only solution to European ANTI-SEMITISM was the establishment of a Jewish national state. He organized the first Zionist World Congress (1897) and was its president until his death.

Herzog, Werner, 1942–, German film director. His visionary, ironic films, often treating bizarre historical incidents, include *Aguirre the Wrath of God* (1973), *Stroszek* (1977), *Heart of Glass* (1977), *Nosferatu* (1979), and *Fitzcarraldo* (1982).

Hesiod, fl. 8th cent.? B.C., Greek poet, self-described as a Boeotian farmer. His *Works and Days* is filled with maxims for farmers, to inculcate righteousness and efficiency. Also ascribed to him is the *Theogony*, a genealogy of the gods. Hesiod and HOMER codified much of Greek myth.

Hesse, Hermann [hës'ə], 1877–1962, German novelist and poet. An ardent pacifist, he became a Swiss citizen after the outbreak of World War I. The spiritual loneliness of the artist is a major theme in Hesse's symbolic novels, which include *Peter Camenzind* (1904), *Demian* (1919), *Steppenwolf* (1927), and *Narziss und Goldmund* (1930). *The Glass Bead Game* (1943) and *Siddhartha* (1922) reflect his interest in Asian mysticism. In 1946 he was awarded the Nobel Prize in literature.

Hesse, Philip of: see PHILIP OF HESSE.

Hesse, state (1990 est. pop. 5,661,000), 8,150 sq mi (24,064 sq km), central Germany. Weisbaden is the capital. Hesse is largely agricultural, with heavily forested areas. Fine wines are produced along the Rhine valley. Industries include textiles, chemicals, metallurgy, and mining. Hesse emerged (1247) as a landgraviate under the Holy Roman emperor and was divided (1567) among several lines; Hesse-Kassel and Hesse-Darmstadt were the most important. In the 18th cent. the rulers of Hesse raised revenue by letting mercenaries, called Hessians, for hire. Hesse-Kassel was made (1803) an electorate and was annexed (1866) to PRUSSIA. Hesse-Darmstadt joined (1871) the German Empire and was ruled by its own dynasty until 1918.

Hestia, in Greek mythology, goddess of the hearth; daughter of CRONUS and RHEA. Widely worshiped, she was a kind deity who represented personal and communal security and happiness. The Romans identified her with VESTA.

Heyerdahl, Thor, 1914–, Norwegian explorer and anthropologist. Seeking evidence that ancient cultures could have been diffused by transoceanic travelers, he sailed across the Pacific (1947), the Atlantic (1970), and the Persian Gulf (1977) in replicas of primitive crafts. He described these voyages in *Kon Tiki* (tr. 1950), *The Ra Expeditions* (tr. 1971), *The Tigris Expedition* (tr. 1981) and *Easter Island: The Mystery Solved* (1989). His work is controversial.

Heyward, DuBose, 1885–1940, American author; b. Charleston, S.C. His story of African-American life on the Charleston waterfront, *Porgy* (1925), was dramatized (1927) by Heyward and his wife, Dorothy, and made into the folk opera *Porgy and Bess* (1935), with music by George GERSHWIN.

Heywood, Thomas, 1574?–1641, English dramatist, best known for *A Woman Killed with Kindness* (1603), one of the finest domestic tragedies. A prolific playwright, he also wrote *Apology for Actors* (1612), a response to Puritan attacks.

Hezekiah, d. c.686 B.C., king of Judah (c.715–c.686 B.C.). The successor to AHAZ, he resisted two invasions by SENNACHERIB of Assyria. He was one of the best of Judah's kings, abolishing idolatry and listening to ISAIAH and MICAH.

Hf, chemical symbol of the element HAFNIUM.

Hg, chemical symbol of the element MERCURY.

Hialeah, city (1990 pop. 188,004), SE Fla., NW of Miami; inc. 1925. It has printing and diversified manufacturing industries. Nearby Miami International Airport is a major employer. Hialeah Park race track is in the city.

hiatus hernia: see HERNIA.

Hiawatha, fl. c.1550, legendary chief of the Onandaga, credited with founding the IROQUOIS CONFEDERACY. He is the hero of a well-known poem by Henry Wadsworth LONGFELLOW.

hibernation, protective practice, among certain animals, of spending part of the cold season (when normal body temperatures cannot be maintained and food is scarce) in a state of relative dormancy. Hibernating animals can store enough food in their bodies to survive this period, during which no growth occurs and body activities are at a minimum. Cold-blooded animals (poikilotherms) assume the temperature of the environment and must hibernate when temperatures fall below freezing; frogs and fishes, for example, bury themselves in ponds below the frost line. Most warm-

blooded animals (homoiotherms) can survive freezing environments by metabolic control of their body temperatures, although many seek insulation in sheltered places, e.g., bears and bats in caves. Studies have shown that, in addition to living off stored fat, hibernating bears maintain muscle mass and healthy bones by recycling body waste products that normally would be excreted.

hibiscus: see MALLOW.

Hickok, Wild Bill (James Butler Hickok), 1837–76, American frontier marshal; b. near Ottawa, Ill. After becoming marshal of Hays (1869) and Abilene (1871), in Kansas, he gained repute as a marksman from his encounters with outlaws. After his murder in Deadwood (now in South Dakota) by Jack McCall, he became a legend.

hickory, deciduous, nut-bearing tree (genus Carya) of the WALNUT family, native to E North America and Southeast Asia. The shagbark hickory (*C. ovata*) is valued for its edible hickory nuts and strong, resilient wood, often used for golf clubs, tool handles, and furniture. The pecan tree (*C. illinoensis*) and the paper-shelled pecans, the cultivated varieties with unusually thin-shelled nuts, yield pecans, which are among the most popular and commercially important nuts in the U.S.

Hicks, Edward, 1780–1849, American painter and preacher; b. Bucks co., Pa. Untrained in art, he painted primitive works of great charm and appeal. Hicks's fame rests on the nearly 100 versions of his painting *The Peaceable Kingdom.*

Hidalgo y Costilla, Miguel [ēthäl'gō ē kōstē'yä], 1753–1811, Mexican priest and revolutionary hero. In 1810 he rebelled against Spanish rule and, with a huge, almost entirely native army, won the initial battles. But he was defeated (1817) by a royalist army at Calderón Bridge and was captured, defrocked, and executed.

Hidatsa: see MANDAN; GROS VENTRE.

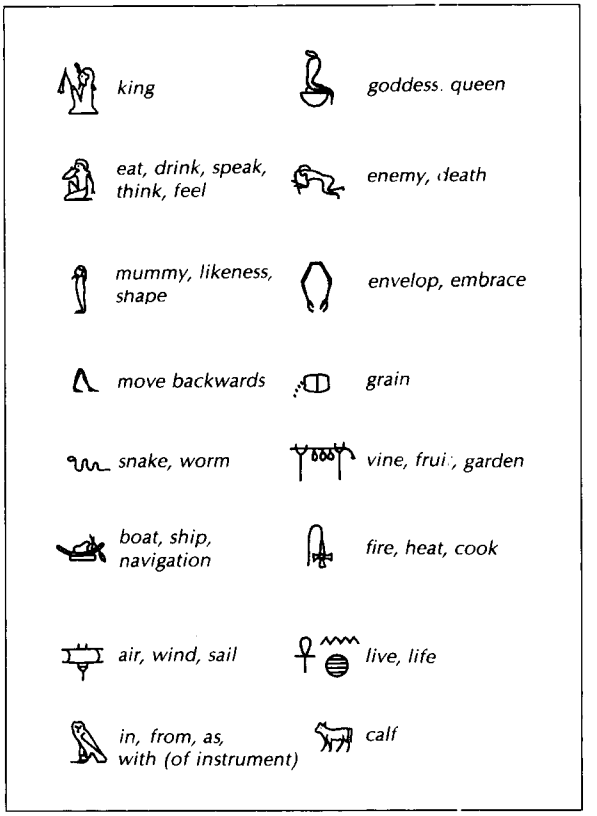
Hideyoshi (Hideyoshi Toyotomi) [hēdāō'shē], 1536–98, Japanese warrior and dictator. He was a general in the dictator Nobunga's service, and after Nobunga's death (1582) he set out to unify Japan. In 1580 he came to terms with IEYASU, and by 1590, with the defeat of the Hojo clan, he was the ruler of a unified Japan. Hideyoshi fostered foreign trade and beautified his capital, Osaka. In 1592 his campaign against China subdued only Korea.

hieratic: see HIEROGLYPHIC.

hieroglyphic [Gr., = priestly carving], type of writing used in ancient EGYPT. Similar pictographic styles of Crete, Asia Minor, and Central America and Mexico are also called hieroglyphics. Interpretation of Egyptian hieroglyphics, begun by J.F. CHAMPOLLION, is virtually complete; the other hieroglyphics are still imperfectly understood. Hieroglyphics are conventionalized pictures used chiefly to represent meanings that seem arbitrary and are seldom obvious. Egyptian hieroglyphics were already perfected in the first dynasty (3110–2884 B.C.), but they began to go out of use in the Middle Kingdom and after 500 B.C. were virtually unused. There were basically 604 symbols that might be put to three uses (although few were used for all three purposes): as an ideogram, as when a sign resembling a tree meant "tree"; as a phonogram, as when an owl represented the sign *m,* because the word for owl had *m* as its principal consonant; or as a determinative, an unpronounced symbol placed after an ambiguous sign to indicate its classification (e.g., an eye to indicate that the preceding word has to do with looking or seeing). The phonograms provided a basis for the development of the ALPHABET.

Higginson, Thomas Wentworth, 1823–1911, American author; b. Cambridge, Mass. A minister and abolitionist, he was also a versatile writer whose books include an account of his CIVIL WAR experiences, a novel, and literary biographies. With M.L. Todd he was the editor of Emily DICKINSON's *Poems* (1890–91).

Highlands, mountainous region, N Scotland. Famous for its rugged beauty, it consists roughly of that part of Scotland north of the imaginary line from Dumbarton to Stonehaven, excluding the Orkneys, the Shetlands, and lower coastal areas. Farming, fishing, and distilling are the main occupations; tourism is also important. Early history is not well known, but by the 11th cent. the Scottish monarchy was centered in the Lowlands, and the Highland lairds were left to run their own affairs. In the early 18th cent. Highlanders strongly supported the JACOBITE uprisings. Until the 19th cent. the Scottish Gaelic language was the core of a Highland culture marked by the clan system and distinctive dress (kilt, tartan, etc.).



Examples of hieroglyphics

In 1975 the former counties of the region were reorganized into Highland, one of Scotland's nine administrative units.

Hilbert, David, 1862–1943, German mathematician. After work on the theory of invariants, he developed a new approach that foreshadowed 20th-cent. abstract algebra. Hilbert also made important contributions to algebraic number theory and to functional analysis, particularly in the area of integral equations. His presentation in a 1900 speech of a list of 23 unsolved problems of mathematics stimulated much investigation by 20th-cent. mathematicians. Hilbert taught (1895–1930) at Göttingen Univ., where his breadth of mind and personality attracted to him many students who became important mathematicians.

Hildebrand: see GREGORY VII, SAINT.

Hildegard of Bingen, 1098–1179, German nun, mystic, and cultural figure, known as the Sibyl of the Rhine. An aristocrat and child visionary, she entered religious life (c.1116) and became abbess in 1136. Her theological magnum opus, *Scivias* (c.1151), contains 26 visions. She also wrote a medical encyclopedia, works of natural history, and musical compositions. Widely proclaimed a saint, she has not been canonized.

Hill, Joe, 1879–1915, Swedish-American union organizer; b. Sweden, as Joseph Hillstrom. He came to the U.S. in 1902 and, as a maritime worker, joined the INDUSTRIAL WORKERS OF THE WORLD in 1910. He wrote many labor songs, including "Casey Jones" and "The Union Scab." Found guilty in 1915 of murdering a prominent Salt Lake City man, Hill was executed. He has become a legendary hero of radical labor.

Hillary, Sir Edmund Percival, 1919–, New Zealand mountain climber and explorer. In 1953 he and Tenzing Norkay of Nepal became the first people to reach the summit of Mt. EVEREST. He led (1958) a party in the first successful overland trek to the South Pole since 1912.

Hillel, fl. 30 B.C.–A.D. 10, Jewish scholar; b. Babylonia. President of the SANHEDRIN, he fostered a systematic, liberal interpretation of Hebrew Scripture and was the spiritual and ethical leader of his generation. SHAMMAI opposed his teachings.

The key to pronunciation appears on page xiii.

Hillel, organization: see B'NAI B'RITH.

Hilliard, Nicholas, 1537–1619, English miniature painter. The first true miniaturist in England, he was court painter to ELIZABETH I and JAMES I. His meticulous portraits on card, vellum, and the backs of playing cards are elegant and subtle.

Himalayan cat: see under CAT.

Himalayas [hĭməl'əyəz, hĭməlā'əz], great mountain system of Asia, extending c.1,500 mi (2,410 km) through Pakistan, India, Tibet, Nepal, Sikkim, and Bhutan. For most of its length it comprises two nearly parallel ranges separated by a wide valley in which the INDUS R. flows west and the BRAHMAPUTRA (Yarlung Zangbo) flows east. The northern range is called the Trans-Himalayas. The southern range has three parallel zones: the perpetually snow-covered Great Himalayas, where Mt. EVEREST, the highest mountain in the world, rises to 29,023 ft (8,846 m); the Lesser Himalayas, with elevations of 7,000 to 15,000 ft (2,130 to 4,570 m); and the southernmost Outer Himalayas, 2,000 to 5,000 ft (610 to 1,520 m) high. The Himalayas are associated with many legends in Indian mythology. Simla, Naini Tal, Mussoorie, and Darjeeling are popular summer retreats from the heat of the Indian plains to the south.

Himmler, Heinrich, 1900–1945, German NAZI leader. He was a Nazi from the founding (1920) of the party, and after HITLER came to power, he headed (1936–45) the secret police, or Gestapo. The most ruthless of the Nazi leaders, Himmler was responsible for the death of millions in forced-labor and CONCENTRATION CAMPS. He was also held in fear by members of the Nazi party. In the last years of WORLD WAR II, he was the virtual dictator of German domestic affairs. He was captured by the British in 1945 but committed suicide by taking poison.

Hims or **Homs,** city (1991 est. pop. 435,000), W central Syria. It is a commercial center located in a fertile plain where wheat, grapes, and other crops are grown. The city's manufactures include refined oil and flour and fertilizer. In ancient times called Emesa, it was the site of a temple to BAAL and gained prominence when a temple priest, Heliogabalus, became (A.D. 218) Roman emperor. The Arabs took the town in 636 and renamed it. From the 16th cent. to 1918 the Ottoman Turks ruled it. The French then held it as part of a League of Nations mandate until Syria gained independence (1941).

Hindemith, Paul, 1895–1963, German-American composer and violist; b. Germany. He combined traditional and experimental techniques in a distinctive style. The NAZIS banned his compositions (1937) because of their dissonance and modernity, and he emigrated to the U.S. Hindemith's early compositions are contrapuntal and often atonal (see COUNTERPOINT; ATONALITY). Later he returned to a tonality some have called neoclassical. His best-known work is a symphony (1934) drawn from his opera *Mathis the Painter* (1938). In addition to other operas, sonatas, and chamber works, he wrote *Ludus Tonalis* (1943) for piano and the song cycle *The Life of Mary* (1923, 1948).

Hindenburg, Paul von, 1847–1934, German field marshal and president (1925–34). In WORLD WAR I he won victories on the eastern front, especially the battle of Tannenberg (1914), making him the greatest German hero of the war. Although a monarchist, he supported the new republican government in 1918 and was elected president in 1925. In the election of 1932 he defeated HITLER and was reelected, but he was persuaded to appoint (1933) Hitler chancellor. He was figurehead president until his death.

Hindenburg: see AIRSHIP.

Hindi [hĭn'dē], language belonging to the Indic group of the Indo-European family of languages. It is the official language of India. See LANGUAGE (table).

Hinduism, Western term for the religious beliefs and practices of innumerable sects to which the vast majority of the people of India belong. Arising initially as a synthesis of indigenous religion and the religion brought to India c.1500 B.C. by the ARYANS, Hinduism developed in syncretism with the religious and cultural movements of the Indian subcontinent. Hindu belief is generally characterized by the CASTE system and the acceptance of the VEDA as sacred scripture. The Veda, which comprises the liturgy and interpretation of sacrificial ritual, culminates in the UPANISHADS, mystical and speculative works that state the doctrine of BRAHMAN, the absolute reality or Self, and its identity with the individual soul, or *atman.* The goal of Hinduism, like that of other Eastern religions, is liberation from the cycle of rebirth and the suffering brought about by one's own actions (see KARMA); this can be effected by following spiritual YOGA, practices leading to knowledge of reality and union with God. Early Brahmanism, the religion of the priests, or Brahmans (who through Vedic ritual sacrifice established a proper relation to the gods), was challenged in the first millennium B.C. by non-Vedic systems such as BUDDHISM and JAINISM. To meet the challenge, the Brahmans recognized popular devotional movements and showed greater concern for the people. Writings like the laws of MANU regulated DHARMA (duty) according to one's class (priest, warrior, farmer or merchant, laborer) and stage in life (celibate student, householder, forest recluse, one who completely renounces societal ties). The post-Vedic Puranas deal with this structure of individual and social life and also describe the repeating cycle of birth and dissolution of the universe, represented by the divine trinity of Brahma, the creator; Vishnu, the preserver; and Shiva, the destroyer. In medieval times, TANTRA and devotional sects flourished, producing poet-saints who wrote religious songs and epics. This literature still plays an essential part in Hinduism, as does the practice of *puja,* or worship of enshrined deities such as Vishnu and his incarnations Rama and Krishna, Shiva, Ganesha, and Devi (also called Kali, Sarasvati, or Lakshmi). Many modern Hindu leaders, e.g., Swami Vivekananda, Mohandas GANDHI, and Aurobindo GHOSE, have stressed the necessity of uniting spiritual life with social concerns. A Hindu revival in the late 20th cent. has led to a political movement to replace the secular Indian state with a Hindu one and to renewed tensions between Indian Hindus and Muslims.

Hindu Kush, one of the highest mountain systems in the world, extending c.500 mi (800 km) west from Pamir Knot, N Pakistan, into NE Afghanistan. Tirich Mir (25,236 ft/7,692 m) is the highest point. Meltwater from the permanently snow-covered peaks feeds the headstreams of the AMU DARYA and INDUS rivers. Several high-altitude passes, followed by trade routes, cross the mountains, once called the Caucasus Indicus.

Hindustani, subdivision of the Indic group of the Indo-Iranian subfamily of the Indo-European family of languages. See LANGUAGE (table).

Hines, Earl "Fatha," 1905–83, African-American jazz pianist and composer; b. Duquesne, Pa. In the 1920s, while working for Louis ARMSTRONG, Hines transformed the role of the piano in JAZZ by making it a solo instrument. His nickname came from a radio announcer's acknowledgment of his role as "the father of modern jazz piano."

hip-hop: see RAP MUSIC.

Hipparchus, fl. 2d cent. B.C., Greek astronomer; b. Bithynia (present-day Turkey). Ptolemy's geocentric theory of the universe (see PTOLEMAIC SYSTEM) was based largely on the conclusions of Hipparchus. In Ptolemy's *Almagest,* Hipparchus is credited with discovering the PRECESSION OF THE EQUINOXES, the eccentricity of the sun's apparent orbit, and certain inequalities of the moon's motions. He also made the first known comprehensive chart of the heavens.

Hippocrates, c.460–c.370 B.C., Greek physician, recognized as the father of medicine. He is believed to have been born on the island of Cos, where he later practiced and taught. Hippocrates based medicine on objective observation and deductive reasoning. Although he accepted the belief that disease results from an imbalance of the four bodily humors, he maintained that the humors were glandular secretions and that outside forces influenced the disturbance. He taught that medicine should build the patient's strength through diet and hygiene, resorting to more drastic treatment only when necessary. The **Hippocratic Oath,** an ethical code formulated in ancient Greece and still administered to medical graduates in many modern universities, cannot be directly credited to him, but it does represent his ideals and principles.

Hippolytus: see PHAEDRA.

hippopotamus, river-dwelling MAMMAL (*Hippopotamus amphibius*) of tropical Africa, related to the pig (see SWINE). The male stands about 5 ft (160 cm) at the shoulder and weighs about 5 tons (4,500 kg). The broad, short-legged body has a thick brown or gray hide, and the eyes are near the top of the head, so the animal can see

when submerged. Hippopotamuses live in small herds, feeding on aquatic plants. Hunted for meat and hides, they are endangered.

Hirohito, 1901–89, emperor of Japan. Made regent in 1921, he succeeded his father, Taisho, as emperor in 1926. Hirohito helped persuade the Japanese government to accept unconditional surrender at the end of WORLD WAR II. In 1946 he renounced the idea of imperial divinity and was stripped of all but ceremonial powers by a new constitution. His son, AKIHITO, succeeded him.

Hiroshige (Ando Hiroshige) [hērō'shēgā"], 1797–1858, Japanese painter and color-print artist of the *ukiyo-e* school (see JAPANESE ART). Among his works is a landscape series, *Fifty-three Stages of the Tokaido Highway* (1833), and rain, mist, and moonlight scenes that influenced WHISTLER.

Hiroshima, city (1990 pop. 1,085,677), capital of Hiroshima prefecture, SW Honshu, Japan. Founded c.1594, the city is divided by the Ota R. into six islands. A commercial and industrial center, it manufactures ships, motor vehicles, steel, rubber, and furniture. Hiroshima was the target (Aug. 6, 1945) of the first ATOMIC BOMB ever dropped on a city: casualties numbered nearly 130,000 and 90% of the city was leveled. Most of Hiroshima has been rebuilt, but a gutted area, the "Peace City," has been set aside as a memorial.

Hirsch, Samson Raphael, 1808–88, German rabbi and chief exponent of Neo-Orthodoxy. He sought to combine traditional Jewish studies with secular learning (*Nineteen Letters,* 1836) and condemned the Reform movement (see JUDAISM) for breaking with tradition.

Hirshhorn Museum and Sculpture Garden, Washington, D.C., opened 1974. Part of the SMITHSONIAN INSTITUTION, it was designed by Gordon BUNSHAFT to house 6,000 pieces of the huge art collection of industrialist Joseph H. Hirshhorn, who gave them to the nation in 1966; the remainder of his collection was bequeathed to the museum upon his death in 1981. It was Washington's first museum devoted exclusively to modern art and is very rich in sculpture, POP ART, OP ART, COLOR FIELD PAINTING, and PHOTOREALISM.

Hishikawa Moronobu: see MORONOBU.

Hispaniola, 29,530 sq mi (76,483 sq km), subtropical island with abundant rainfall, in the WEST INDIES. It is divided between HAITI (W) and the DOMINICAN REPUBLIC. The island was discovered in 1492 by Columbus and has at times been known as Española and Saint-Domingue.

Hiss, Alger, 1904–, U.S. public official; b. Baltimore. He served (1936–47) in the Dept. of State, becoming a foreign policy coordinator. In 1948 Whittaker Chambers, an editor who was a confessed Communist courier, accused Hiss of helping to transmit confidential government documents to the Soviets. Hiss denied the charges and was indicted for perjury by a grand jury. His first trial ended in a hung jury, but in a second trial (1950) he was found guilty and served four years in prison. In 1992 a high-ranking Russian official said he had found no evidence in the archives of the former USSR that Hiss had been a spy.

Hissarlik: see TROY.

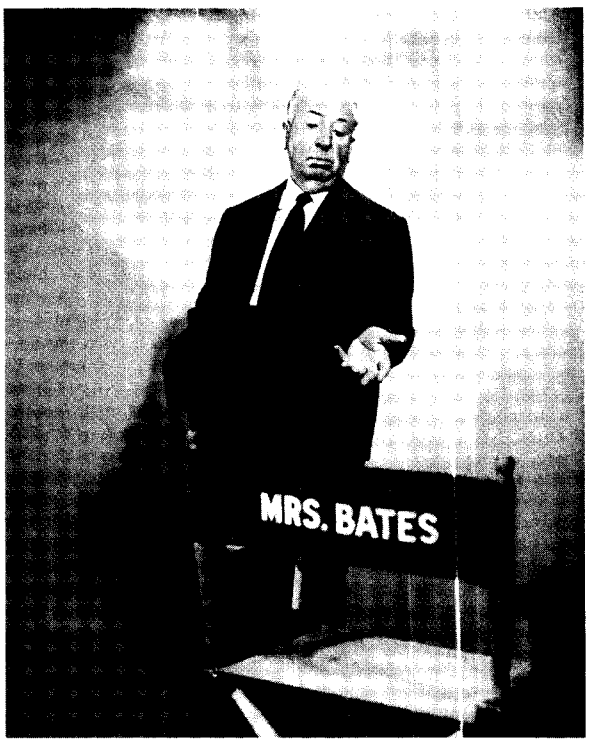
histamine, organic compound derived from the amino acid histidine. Histamine is released from certain cells upon tissue injury or by the action of certain antibodies (see IMMUNITY). It then tends to dilate capillaries and to make them more permeable, which may lead to edema (tissue swelling) and hives, accompanied by severe itching. This reaction, common to many allergies, can often be controlled with ANTIHISTAMINES.

histology, study of the groups of specialized cells called TISSUES, found in most multicellular plants and animals. Histologists study tissue organization at all levels, from the whole organ to the molecular components of cells. Histological techniques include tissue culture, fixing and staining, light and electron microscopy, and X-ray diffraction. In medicine, histological techniques are used to identify diseased tissue.

historical linguistics: see LINGUISTICS.

Hitchcock, Alfred, 1899–1980, Anglo-American film director; b. London. A master of suspense, he made such films as *The Lady Vanishes* (1938), *Notorious* (1946), *Strangers on a Train* (1951), *Psycho* (1960), and *Frenzy* (1972).

Hitler, Adolf, 1889–1945, German dictator, founder and leader of NATIONAL SOCIALISM, or Nazism; b. Austria. In World War I he served



Alfred Hitchcock

in the Bavarian army, was gassed and wounded, and received the Iron Cross (first class) for bravery. The war embittered him, and he blamed Germany's defeat on the Jews and Marxists. Settling in Munich, he joined with other nationalists to found (1920) the Nazi party. In the famous "beer-hall putsch" (1923), Hitler attempted to overthrow BAVARIA's republican government, but the army put down the revolt, and Hitler was imprisoned. He thus became known throughout Germany and used his nine months in prison to write *Mein Kampf* [my struggle], filled with anti-Semitism, power worship, disdain for morality, and his strategy for world domination. It became the bible of the Nazi party. The Nazi movement grew slowly until 1929, when the economic depression brought it mass support. Hitler made prime use of his frenzied but magnetic oratory of hate and power, his insight into mass psychology, and his mastery of deceitful strategy, or the "big lie." He used his virulent ANTI-SEMITISM and anti-Communism to win the support both of the workers and of the bankers and industrialists. Although he was defeated when he ran for president in 1932, Pres. Paul von HINDENBURG was persuaded to name him chancellor (1933), and the REICHSTAG gave him dictatorial powers. With other Nazi leaders, among them GOERING, HIMMLER, and GOEBBELS, he crushed the opposition and took control of all facets of German life. Anti-Semitism was enacted into law, and CONCENTRATION CAMPS were established. In 1934, voters approved the union of the presidency and chancellorship in Hitler's person. His aggressive foreign policy, abetted by English and French appeasement, culminated in the triumph of the MUNICH PACT (1938). As he prepared Germany for war, he bullied smaller nations into making territorial concessions. He became allied with MUSSOLINI in Italy, and he helped FRANCO come to power in Spain. Austria was absorbed into the "Third Reich," and Czechoslovakia was dismembered. In 1939 he signed a nonaggression pact with the Soviet Union that gave him a free hand to invade Poland. With that act WORLD WAR II began, and Hitler took complete control of Germany's war efforts. At first Germany was triumphant, but the tide turned, and by July 1944 the German military situation was desperate. Despite a well-planned assassination attempt against him, in which he was injured, Hitler remained in charge and insisted that Germany fight to the death. As the Third Reich collapsed, Hitler remained in an underground bun-

The key to pronunciation appears on page xiii.

ker in Berlin while the Russians approached the city. On April 29, 1945, he married his longtime mistress, Eva BRAUN, and on April 30 they committed suicide. He left Germany a devastated nation. Hitler's legacy is the memory of the most dreadful tyranny of modern centuries.

Hittite, language belonging to the Anatolian subfamily of the Indo-European family of languages. See LANGUAGE (table).

Hittites, ancient people of Asia Minor and Syria who flourished from 1600 to 1200 B.C. The Hittites, a people of Indo-European connection, were supposed to have entered Cappadocia around 1800 B.C. The Hittite empire, with its capital at BOĞAZKÖY (also called Hattusas), was the chief power and cultural force in W Asia from 1400 to 1200 B.C. It was a loose confederation that broke up under the invasions (c.1200 B.C.) of the Thracians, Phrygians, and Assyrians. The neo-Hittite kingdom (c.1050–c.700 B.C.) that followed was conquered by the Assyrians. The Hittites were one of the first peoples to smelt iron successfully. They spoke an Indo-European language.

HIV or **human immunodeficiency virus:** see AIDS.

Ho, chemical symbol of the element HOLMIUM.

Hoban, James, c.1762–1831, American architect; b. Ireland. He designed and built (1792–99) the WHITE HOUSE, which he rebuilt after the British burned it in 1814. He was also a supervising architect in the building of the CAPITOL.

Hobbema, Meindert [hôb'əma], 1638–1709, Dutch painter, considered the last of the great 17th-cent. Dutch landscape painters (see landscape painting). His paintings of woodland scenes, country villages, water mills, and other rustic subjects are full of life and luminosity, with bold execution and color. His best-known works include *The Mill* (Louvre) and *Entrance to a Village* (Metropolitan Mus.).

Hobbes, Thomas, 1588–1679, English philosopher. Hobbes developed a materialist and highly pessimistic philosophy that was denounced in his own day and later but has had a continuing influence on Western political thought. His *Leviathan* (1651) presents a bleak picture of human beings in the state of nature, where life is "nasty, brutish, and short." Fear of violent death is the principal motive that causes people to create a state, contracting to surrender their natural rights and to submit to the absolute authority of a sovereign. Although the power of the sovereign derived originally from the people, Hobbes said—challenging the doctrine of the divine right of kings—the sovereign's power is absolute and not subject to review by either subjects or ecclesiastical powers. Hobbes's concept of the SOCIAL CONTRACT led to investigations by other political theorists, notably LOCKE, SPINOZA, and J.J. ROUSSEAU, who formulated their own radically different theories of the social contract.

Hobby, Oveta Culp, 1905–, U.S. public official and publisher; b. Killeen, Tex. She was (1943–45) the first director of the Women's Army Corps and served (1953–55) as the first secretary of the Dept. of Health, Education, and Welfare. She was editor (1952–53, 1955–83), president (1955–65) and (1965–83) chairman of the board of the Houston *Post.*

Ho Chi Minh [hô chē mĭn], 1890–1969, Vietnamese nationalist leader, president of North VIETNAM (1954–69). In 1911 he left Vietnam and lived in London, the U.S., and France, where he became (1920) a founding member of the French Communist party. He later lived in Moscow, but he returned to Vietnam in World War II and organized a Vietnamese independence movement, the Viet Minh. He raised an army to fight the Japanese, and in the French Indochina war (1946–54), he defeated the French colonial regime. After the Geneva Conference (1954), which divided Vietnam, Ho became the first president of North Vietnam. In his last years he led the North's struggle to defeat the U.S.-supported government of South Vietnam (see VIETNAM WAR).

Ho Chi Minh City, formerly **Saigon,** city (1989 pop. 3,169,135), S Vietnam, on the Saigon R. It is a large river port and industrial center producing textiles, ships, processed foods, motor vehicles, and other goods. An ancient settlement in the KHMER EMPIRE, Saigon grew into a city under French rule in the 19th cent. It became the capital of South Vietnam in 1954. Military headquarters for U.S. and South Vietnamese forces during the VIETNAM WAR, it was heavily damaged and faced the overcrowding created by the influx of over 1 million refugees. It was renamed at the end of the war. Built in the European style, it is the seat of several universities.

hockey, field, outdoor stick-and-ball game similar to SOCCER. It is played on a field measuring 50 to 60 yd by 90 to 100 yd (46 to 55 m by 82 to 91 m) by two teams of 11 players each. Teams attempt to advance the ball down the field with their wooden sticks. A point is scored by delivering the ball past the goalkeeper through the goal posts, which are joined by a net. Of ancient origin, field hockey was played in England for centuries before it spread to other countries. In the U.S., field hockey for women has been popular since 1901, especially in colleges and high schools.

hockey, ice, winter skating sport in which players use sticks to propel a rubber disk into a net-enclosed goal. A rough sport, it is played chiefly by men, who wear heavy protective gear. The rink, which is divided into three zones (attacking, neutral, and defending), measures up to 200 ft (61 m) in length and 98 ft (30 m) in width. A team consists of six players, including a goalie, all of whom wear ice skates. Play is directed toward advancing the disk (called a puck) with flat-bladed sticks and striking it into the goals at each end of the rink. A goal counts one point. A player who violates the rules is removed to the penalty box for two minutes or more while his team plays shorthanded. Ice hockey originated in Canada in the 1870s and later spread to the U.S. and other northern countries. It has been an Olympic event since 1920. The professional National Hockey League (founded 1917) is made up of 26 teams representing U.S. and Canadian cities. The annual Stanley Cup playoffs determine the league championship.

Hockney, David, 1937–, English artist. He has lived in the U.S. since the 1960s. His realistic, witty, clearly illuminated compositions often contain elements of POP ART. A superb draftsman, he has executed several print series, designed stage sets, and produced mosaic-like photo montages.

Hodgkin, Sir Alan Lloyd, 1914–, English biophysicist. For their work in analyzing the electrical and chemical events in nerve-cell discharge, he and Andrew HUXLEY shared with Sir John Eccles the 1963 Nobel Prize in physiology or medicine. He was a research professor of the Royal Society (1952–69) and professor of biophysics at Cambridge Univ. (1970–81).

Hodgkin, Dorothy Mary Crowfoot, 1910–, English chemist and X-ray crystallographer; b. Egypt. She received the 1964 Nobel Prize in chemistry for determining the structure of biochemical compounds (particularly of vitamin B_{12}) used to control pernicious anemia. In 1933 she and J.D. Bernal made the first X-ray photograph of a protein (pepsin). She was president (1977–78) of the British Association for the Advancement of Science.

Hodgkin's disease, chronic malignant disorder of the lymph nodes; the commonest form of lymphoma. Symptoms vary but often include enlargement of one or more lymph nodes, particularly in the neck region, followed by fatigue, loss of weight, and fever. As the disease progresses, other lymph nodes and organs may become involved. It is often treated effectively with radiation and CHEMOTHERAPY.

Hoffa, James Riddle, 1913–1975?, American labor leader; b. Brazil, Ind. In 1957 he became president of the TEAMSTERS UNION, which was expelled from the AFL-CIO that year because of evidence of union corruption. Hoffa's power continued to grow, however, and by 1964 he was able to effect the trucking industry's first national contract. In the same year he was convicted in two separate trials for jury tampering and fraud. Imprisoned in 1967, he retained the Teamster presidency until 1971, when Pres. Nixon commuted his sentence, with the proviso that he not engage in union activity until 1980. Hoffa disappeared in 1975 and is widely assumed to have been murdered.

Hoffman, Dustin, 1937–, American actor; b. Los Angeles. He began his career on Broadway but became popular with his first major film, *The Graduate* (1967). Known for his acute characterizations, he has appeared in such films as *Midnight Cowboy* (1969), *Kramer vs. Kramer* (1980; Academy Award), *Tootsie* (1982), and *Rain Man* (1989; Academy Award).

Hoffman, Malvina, 1887–1966, American sculptor; b. N.Y.C. She was a pupil of RODIN. Her most notable achievement is a series of 100 bronze statues of racial types (Field Mus., Chicago). She is also known for her spirited figures and her portrait busts.

Hoffmann, Ernest Theodor Amadeus [hôf'män], 1776–1822, German romantic novelist and composer. His gothic tales of madness, grotesquerie, and the supernatural include *The Serapion Brethren* (1819–21) and *Kater Murr, the Educated Cat* (1821–22). OFFENBACH'S opera *Tales of Hoffmann* is based on three of his stories.

Hofmann, Hans, 1880–1966, American painter; b. Germany. After emigrating to the U.S. in 1930, he opened two art schools (N.Y.C. and Provincetown, Mass.) that were central to the development of ABSTRACT EXPRESSIONISM. His own exuberant canvases combine violent, clashing colors.

Hofmannsthal, Hugo von [hôf'mänstäl], 1874–1929, Austrian dramatist and poet. *Electra* (1903), *Der Rosenkavalier* (1911), and *Ariadne auf Naxos* (1912) are librettos written for Richard STRAUSS. Also notable are his *Poems* (1903), the tragedy *The Tower* (1925), and his adaptation of *Everyman* (1911).

hog: see SWINE.

Hogan, Ben, 1912–, American golfer; b. Dublin, Tex. One of the game's leading money winners, he won nine major championships, beginning with the Professional Golfers' Association title in 1946. His greatest victories, notably a sweep of the U.S. Open, British Open, and Masters crowns in 1953, came after recovery from a near-fatal automobile accident in 1949. Hogan was the first since Bobby JONES to capture four U.S. Open titles.

Hogarth, William, 1697–1764, English painter, satirist, engraver, and art theorist. His first real success came in 1732 with a series of six morality pictures, *The Harlot's Progress,* first painted and then engraved. *The Rake's Progress* (1735) followed. In the series *Marriage à la Mode,* considered his masterpiece, he depicts the inane, profligate existence of a fashionable couple with great detail and brilliant characterization. His *Analysis of Beauty* (1753) is a treatise on the ROCOCO aesthetic. In such prints as *Gin Lane,* he satirizes cruelty and stupidity. His portraits *The Shrimp Girl* (National Gall., London) and *Captain Coram* (1740) are masterpieces of British painting.

hog cholera, infectious viral disease of swine; also called swine fever. Perhaps the most serious disease of hogs in North America, it is characterized by listlessness, temperature increase, muscle tremors, and convulsions. Mortality is high; recovered hogs are permanently stunted.

Hohenstaufen [hō"ənshtou'fən], German princely family of the 11th to 13th cent. They were dukes of Swabia from 1079; German kings and Holy Roman emperors, 1138–1254; and kings of Sicily, 1194–1266. Their chief rivals were the Guelphs (see GUELPHS AND GHIBELLINES), who sided with the papacy in the long struggle between emperor and pope.

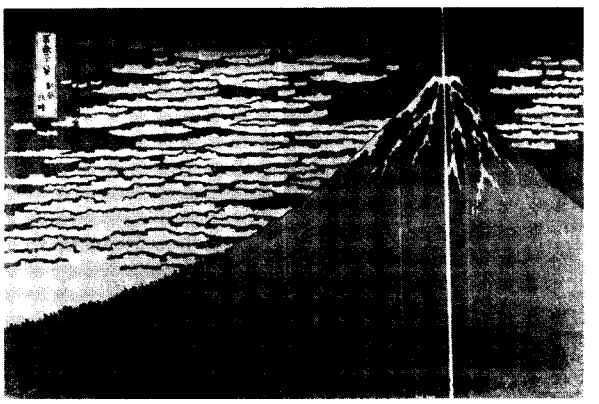
Hohenzollern, German princely family that ruled from the 11th cent. until 1918. They ruled BRANDENBURG (1415–1918), PRUSSIA (1525–1918), and Germany (1871–1918). They comprised two main branches (the Swabian and the Franconian) and held various titles, including that of burgrave, margrave, duke, and elector. In 1701 Frederick I styled himself "king in Prussia," and thereafter the members of the Franconian branch held that title. After Germany was unified in 1871, three Hohenzollern emperors (or kaisers), WILLIAM I, FREDERICK III, and WILLIAM II, reigned.

Hohokam, ancient agricultural culture of S Arizona (c.300–1200 A.D.). The Hohokam are noted for their extensive irrigation systems but also built sunken ball-courts, pyramidal mounds, and other structures similar to those of central Mexico. Most archaeologists believe that Hohokam culture evolved from local antecedents, although they did trade with more southerly groups. Their fate and possible ancestry of the PIMA and TOHONO O'ODHAM (Papago) is widely disputed.

Hokan-Siouan, linguistic stock, or family, whose member languages are spoken by indigenous peoples in North America. See NATIVE AMERICAN LANGUAGES (table).

Hokkaido, island (1990 pop. 5,643,515), Japan, second largest (c.30,130 sq mi/78,040 sq km), northernmost, and most sparsely populated of Japan's major islands. It is separated from HONSHU island by the Tsuguru Strait and from SAKHALIN (held by Russia but also claimed by Japan) by the Soya Strait. The rugged, partly volcanic interior reaches a high point of 7,511 ft (2,289 m) at Asahidake. Forests, providing lumber, pulp, and paper, cover much of the island, and there are important coal, iron ore, and manganese deposits. The AINU, the original inhabitants, became a minority after Japan began a policy of settling the island after 1868. SAPPORO is the chief city.

Hokusai (Katsushika Hokusai), 1760–1849, Japanese painter, draftsman, and wood engraver, one of the foremost *ukiyo-e* print designers (see JAPANESE ART). He used over 50 different names. His prodigious output included book illustrations, printed cards, and landscapes in a variety of styles. His technical excellence and observant delineation of contemporary life can be seen in *Mangwa, or Ten Thousand Sketches* (15 vol., 1814–78) and *Views of Mt. Fuji.*



Katsushika Hokusai woodblock print Fuji in Clear Weather

Holbein, Hans [hôl'bīn], the Elder, c.1465–1524, German painter and draftsman. His early work is heavily influenced by the Flemish style, e.g., the *Life of the Virgin* (Augsburg Cathedral). Later altarpieces, done after 1500, e.g., those of the *Basilica of St. Paul* and of *St. Catherine* (both: Augsburg), show Italian influence. He also designed STAINED GLASS windows and remarkable silverpoint drawings. His younger son, **Hans Holbein,** the Younger, c.1497–1543, an outstanding portrait and religious painter of the northern RENAISSANCE, started his career early. In Basel, Switzerland, he illustrated ERASMUS's *Praise of Folly* and in 1519 was admitted to that city's painters' guild. During this period he decorated many buildings and painted the *Passion Scenes* and the celebrated *Dead Christ* (both: Basel); the altarpiece of the *Madonna with St. Ursus and a Bishop Saint* (Solothurn, Switzerland); and his famous *Madonna of the Burgomaster Meyer* (Darmstadt, Germany). In these works and in the portraits of Erasmus and Boniface Amerbach (Basel), he shows his full genius. The larger conception, monumental composition, and idealization of characters show Italian influence. In England from 1526 to 1528, he painted a fine group of portraits, including one of Sir Thomas More (Frick Coll., N.Y.C.), all of which reveal his exquisite gift for characterization. He returned to England in his last years and did his famous portrait of Christine of Denmark and *The French Ambassadors* (both: National Gall., London). He was also court painter to HENRY VIII and painted numerous portraits of the king and his wives. His preliminary drawings and woodcuts are also famous.

Hölderlin, Friedrich [höl'dərlĭn], 1770–1843, German lyric poet. He is considered a link between the classic and romantic schools. Before his mind failed at 36, he wrote lofty yet subjective poetry modeled on classic Greek verse. *Hyperion* (1797–99) is an elegaic novel in prose; he also wrote a dramatic fragment, *The Death of Empedocles* (1799).

holding company: see TRUST.

Holiday, Billie, 1915–59, African-American singer; b. Baltimore as Eleanora Fagan. She began singing in 1930 and earned a supreme position among modern JAZZ singers with her emotional impact and highly personal approach to a song. Her life was complicated by the drug addiction that eventually destroyed her career and hastened her death.

Holinshed, Raphael or **Ralph** [hŏl'ĭnz-hĕd"], d. c.1580, English chronicler. With the assistance of William Harrison and Richard Stanihurst, he wrote the famous *Chronicles of England, Scotland,*

and Ireland (1577), from which SHAKESPEARE and other Elizabethian dramatists drew material for plays.

holistic medicine, system of health care based on a concept of the "whole" person as one whose body, mind, spirit, and emotions are in balance with the environment. Stressing personal responsibility for health, a holistic approach may include conventional medicine and various nontraditional methods of diagnosis and therapy, e.g., ACUPUNCTURE, BIOFEEDBACK, faith healing, folk medicine, megavitamin therapy, MEDITATION, and YOGA. Surgery and prescription drugs are generally avoided; instead, patients are encouraged to establish self-regulated regimes to control such illness-related factors as poor diet, smoking, alcohol intake, and stress. See also ALTERNATIVE MEDICINE.

Holland, former county of the HOLY ROMAN EMPIRE and, from 1579 to 1795, the chief member of the United Provinces of the Netherlands. Its name has been popularly applied to the entire Netherlands. Since 1840 the area has been divided into two provinces, North and South Holland. The original county was created in the 10th cent. and was controlled (14th–15th cent.) in turn by the WITTELSBACH family, BURGUNDY, and the HAPSBURGS. Holland led (16th–17th cent.) the struggle for Dutch independence, and its history became virtually identical with that of the Netherlands.

Hollerith, Herman, 1860–1929, American inventor; b. Buffalo, N.Y. He developed a system that used cards with punched holes to encode data, as well as machines to punch and tabulate the cards. In 1896 he founded the Tabulating Machine Company, predecessor of the International Business Machines Company (IBM).

holly, common name for trees and shrubs of the Aquifoliaceae family, widely distributed but most numerous in Central and South America. Many are cultivated as ornamentals. The English holly (*Ilex aquifolium*) and the American holly (*I. opaca*) are popular for their hard white wood and decorative spiny leaves and red berries. Some hollies are sources of tea, such as MATÉ, and medicinal preparations.

hollyhock: see MALLOW.

Hollywood. 1 Community (1985 est. pop. 250,000), part of the city of LOS ANGELES, S Calif., on the slopes of the Santa Monica Mts.; inc. 1903, consolidated with Los Angeles 1910. Long the center of the U.S. movie industry (its first film was made c.1911), it draws many tourists, but most film and television companies have moved to nearby areas or the suburbs. Its crowded and lively Hollywood Blvd. and Sunset Strip are famous. **2** City (1990 pop. 121,697), Broward co., SE Fla., on the Atlantic coast, N of Miami; inc. 1925. A resort and retirement center, it has electronics and building-materials industries. Most of Port Everglades, the area's largest port, is located there.

Holmes, Oliver Wendell, 1809–94, American author and physician; b. Cambridge, Mass.; father of Oliver Wendell HOLMES, Jr. A professor at Harvard medical school (1847–82), he wrote a number of important medical papers. Holmes's most familiar poems include "Old Ironsides," "The Chambered Nautilus," and the ironic "Deacon's Masterpiece." His witty series of sketches, originally published in the *Atlantic Monthly,* were collected in *The Autocrat of the Breakfast-Table* (1858) and other volumes. Holmes also wrote pioneering psychological novels, e.g., *Elsie Venner* (1861), and biographies.

Holmes, Oliver Wendell, Jr., 1841–1935, associate justice of the U.S. SUPREME COURT (1902–32); b. Boston; LL.B., Harvard Univ. (1886). A profound scholar, Holmes achieved international recognition in 1881 with publication of *The Common Law,* in which he attacked prevailing views of jurisprudence. He was associate justice (1882–99) and chief justice (1899–1902) of the Massachusetts supreme judicial court. On the U.S. Supreme Court, he advocated "judicial restraint." From his eloquent and frequent disagreements with his more conservative colleagues over the nullification of social legislation, Holmes came to be known as the Great Dissenter.

Holmes, Sherlock: see DOYLE, SIR ARTHUR CONAN.

holmium (Ho), metallic element, discovered independently by J.L. Soret and M. Delafontaine in 1878 and by Per Teodor Cleve in 1879. The soft, malleable, lustrous, silvery metal is in the LANTHANIDE SERIES. Holmium and its oxides and salts have no commercial uses. See ELEMENT (table); PERIODIC TABLE.

Holocaust, name given to the period (1933–1945) of persecution and extermination of European Jews by Nazi GERMANY. After Adolf HITLER's rise to power in 1933, most Jews who did not flee Germany were sent to CONCENTRATION CAMPS. With the outbreak of WORLD WAR II, Hitler began to implement his "final solution of the Jewish question": the extermination of Jews in all countries conquered by his armies. By the end of the war, 6 million Jews had been systematically murdered and a creative religious and secular community destroyed. A U.S. HOLOCAUST MEMORIAL MUSEUM was dedicated and opened in 1993 in Washington, D.C. See also ANTI-SEMITISM; NATIONAL SOCIALISM; WAR CRIMES.

Holocaust Memorial Museum, in Washington, D.C., designed by James Ingo Freed; opened 1993. Using a harsh architectural vocabulary, the museum immerses visitors in the era of the HOLOCAUST, memorializing its victims by tracing the history of the Holocaust in artifacts, recorded oral histories, documentary films, and photographs.

Holocene epoch: see GEOLOGIC ERA (table).

Holofernes: see JUDITH.

holography, method of reproducing a three-dimensional image of an object by means of light-wave patterns recorded on a photographic plate or film. The object is illuminated with a coherent beam of light produced by a LASER. Before reaching the object, the beam is split into two parts: the reference beam is recorded directly on the photographic plate, and the other is reflected from the object and then is recorded. On the photographic plate the two beams create an INTERFERENCE pattern, exposing the plate at points where they arrive in phase. When this photographic recording, called a hologram, is later illuminated with coherent light of the same frequency as that used to form it, a three-dimensional image of the object becomes visible and the object can be photographed from various angles. Color holograms are formed using three separate exposures with laser beams of each of the primary colors (see COLOR). In **acoustical holography,** a coherent beam of ultrasonic waves (see SOUND), instead of light, is used. The resulting interference pattern is recorded with microphones to form a hologram, which, when viewed with laser light, produces a visible three-dimensional image. Holography has been combined with microscopy to study very small objects; it also is used in industry for stress and vibrational analysis.

Holst, Gustav, 1874–1934, English composer. GRIEG, Richard STRAUSS, and VAUGHAN WILLIAMS were early influences. His outstanding works are *The Planets* (1914–16), an orchestral SUITE; *The Hymn of Jesus* (1917), for chorus and orchestra; and the orchestral piece *Egdon Heath* (1927).

Holt, Helen Maud: see under TREE, SIR HERBERT BEERBOHM.

Holy Alliance, 1815, agreement among the emperors of Russia and Austria and the king of Prussia. It was part of the complex redesign of the political fabric of Europe after the fall of the Napoleonic empire and was an attempt by conservative monarchs to preserve the social order. It was engineered by METTERNICH, and eventually almost all the princes of Europe signed the agreement. Although it accomplished nothing specific, it became a symbol of reaction. Opposition to it was a major aim of British foreign policy.

Holy Ghost or **Holy Spirit,** in Christian doctrine, the third person of the TRINITY, sometimes described as the aspect of God immanent in this world, in people, and in the church. Its descent upon the APOSTLES, giving them the gift of tongues (Acts 2), is commemorated on Pentecost (Whitsunday). The dove is the symbol of the Holy Ghost.

Holy League, alliance formed (1510–11) by Pope JULIUS II during the ITALIAN WARS to expel LOUIS XII of France from Italy. It included Venice, the Swiss cantons, the Spanish king FERDINAND V, HENRY VIII of England, and Holy Roman emperor MAXIMILIAN I. It fell apart after Julius's death (1513).

holy orders, in Christianity, the traditional degrees of the clergy, conferred by the Sacrament of Holy Order. The Roman Catholic Church, like the Church of England, has three orders: bishop, priest, and deacon, and like the Orthodox Eastern churches it has permanent deacons, who serve in local parishes. The bishop heads a diocese consisting of many parishes; a priest may be the head of a parish or a member of a religious order. Monsignor and cardinal are honorary titles, unidentified with any particular office.

Holy Roman Empire, designation for the political entity that orig-

inated at the coronation as emperor of German king OTTO I in 962 and endured until the renunciation of the title by FRANCIS II in 1806. It was the successor state to the empire founded in 800 by CHARLEMAGNE, who claimed legitimate succession to the Roman Empire. In theory, just as the pope was the vicar of God on earth in spiritual matters, so the emperor was God's temporal vicar; hence he claimed to be the supreme temporal ruler in Christendom. Actually, the power of the emperors never equaled their pretensions. Their suzerainty never included the East, and it ceased early over France, Denmark, Poland, and Hungary. Their control over England, Sweden, and Spain was never more than nominal, and their control over Italy was always in contention. The core of the empire was the various German principalities, plus Austria, Bohemia, and Moravia. Switzerland, the Netherlands, and parts of northern Italy were at times included. Its rulers were chosen by the princes of Germany until 1356, after which they were elected by a fixed number of ELECTORS. They elected the German king (later known as king of the Romans). He became emperor only when crowned by the pope in Rome. After 1562, however, emperors-elect dispensed with coronation by the pope and were crowned at Frankfurt. Emperors held immediate jurisdiction only over their hereditary family domains (e.g., the Saxon dynasty over Saxony) and over the imperial free cities. The rest of the empire they controlled only to the extent to which they influenced the imperial Diet. Important also was the relative power of the papacy at any given period. The conflict between pope and emperor was a never-ending one. A longtime dispute was over the right of INVESTITURE, an issue finally settled in the church's favor by the Concordat of Worms (1122). Political control of Italy was another source of conflict. In addition to being a spiritual leader, the pope was also a great temporal power there; and popes were generally jealous of efforts by the emperors to extend their political control over the various Italian states. The feud between the GUELPHS AND GHIBELLINES dramatized the conflict. Although the emperorship was technically an elective office, after 1438 the HAPSBURG dynasty became permanently entrenched. Thereafter, the hereditary domains of the Hapsburgs were the primary concerns of the emperors. The domain of CHARLES V, for example, stretched around the globe, far beyond the boundaries of the Holy Roman Empire. The empire was seriously weakened by the REFORMATION, which generally aligned the German Protestant princes against the emperors, who championed Roman Catholicism. The THIRTY YEARS WAR ended with the virtual dissolution of the empire in the Peace of WESTPHALIA (1648), which recognized the sovereignty of all the states of the empire. Thereafter, the title was largely honorific; the Hapsburg emperors remained powerful monarchs, but because of their hereditary domains and not because of the empire. In the 18th cent. the prestige of the empire was further weakened by the military triumphs of LOUIS XIV of France, whom the emperors opposed. Also, the male Hapsburg line died out, creating a crisis that culminated in the War of the AUSTRIAN SUCCESSION and the SEVEN YEARS WAR. In the end, the husband of MARIA THERESA, heiress to the Hapsburg lands, became emperor as FRANCIS I. Whatever power remained in the office, however, was exerted by Maria Theresa herself and her advisers. The empire ended in 1806 as the result of the triumphs of NAPOLEON I in the French Revolutionary Wars. Francis II, grandson of Maria Theresa and Francis I, renounced his title and styled himself Francis I, emperor of Austria. After the fall of Napoleon (1815), no attempt was made to resurrect the Holy Roman Empire.

HOLY ROMAN EMPERORS *(including dates of reign)*

Saxon dynasty

Otto I, 936–73
Otto II, 973–83
Otto III, 983–1002
Henry II, 1002–24

Salian or Franconian Dynasty

Conrad II, 1024–39
Henry III, 1039–56
Henry IV, 1056–1105
Henry V, 1105–25
Lothair II, duke of Saxony, 1125–37

Hohenstaufen Dynasty and Rivals

Conrad III, 1138–52
Frederick I, 1152–90
Henry VI, 1190–97
Philip of Swabia, 1198–1208
antiking: Otto IV (Guelph), 1198–1208
Otto IV (king, 1208–12; emperor, 1209–15), 1208–15
Frederick II (king, 1212–20; emperor, 1220–50), 212–50
Conrad IV, 1237–54
antiking: Henry Raspe, 1246–47
antiking: William, count of Holland, 1247–56

Interregnum, 1254–73

Richard, earl of Cornwall, and Alfonso X of Castile, rivals

Hapsburg, Luxemburg, and Other Dynasties

Rudolf I (Hapsburg), 1273–91
Adolf of Nassau, 1292–98
Albert I (Hapsburg), 1298–1308
Henry VII [Luxemburg], 1308–13
Louis IV (Wittelsbach), 1314–46
Charles IV (Luxemburg), 1346–78
Wenceslaus (Luxemburg), 1378–1400
Rupert (Wittelsbach), 1400–10
Sigismund (Luxemburg), 1410–37

Hapsburg Dynasty

Albert II, 1438–39
Frederick III, 1440–93
Maximilian I, 1493–1519
Charles V, 1519–58
Ferdinand I, 1558–64
Maximilian II, 1564–76
Rudolf II, 1576–1612
Matthias, 1612–19
Ferdinand II, 1619–37
Ferdinand III, 1637–57
Leopold I, 1658–1705
Joseph I, 1705–11
Charles VI, 1711–40

Interregnum, 1740–42

Wittelsbach-Hapsburg and Lorraine Dynasties

Charles VII (Wittelsbach-Hapsburg), 1742–45
Francis I (Lorraine), 1745–65

Hapsburg-Lorraine Dynasty

Joseph II, 1765–90
Leopold II, 1790–92
Francis II, 1792–1806

Holy Week: see LENT.

homeopathy, system of medicine based on the law of similars—that like is cured by like. In homeopathy a drug that produces the same symptoms as a disease (e.g., quinine given to a healthy person mimics malaria) is used in small doses to treat that disease. Developed by German physician Samuel Hahnemann (1755–1843), it was popular through the early 20th cent. Although U.S. medical schools no longer recognize this approach, it is used by some European and Asian physicians, and many Americans use homeopathic treatments.

Homer, principal figure of ancient Greek literature, the first European poet. Two epic poems are ascribed to him, the *Iliad* and the *Odyssey.* Among the greatest works of Western literature, they are the prototype for all later EPIC poetry. Modern scholars generally agree that they were written for an aristocratic audience by a single poet in Asia Minor before 700 B.C. The *Iliad* tells of an episode in the TROJAN WAR: the wrath of ACHILLES and its tragic consequences, including the deaths of Patroclus and Hector. The *Odyssey,* beginning ten years after the fall of Troy, tells of ODYSSEUS's wanderings on his way home to Ithaca, of his wife and son's plight, and of their reunion. The atmosphere of adventure and fate contrasts with the heavier tone and tragic grandeur of the *Iliad.* Also attributed to Homer, wrongly, were the HOMERIC HYMNS. According to legend, Homer was blind.

Homer, Winslow, 1836–1910, American painter; b. Boston. Homer first won acclaim as a magazine illustrator, especially for his CIVIL WAR portrayals. In 1876 he gave up illustration to devote himself to painting. He found inspiration in the American scene and, above all, in the sea. Homer's paintings are direct and realistic and have

a splendid sense of color. His powerfully dramatic seascapes in watercolor are unsurpassed and hold a unique place in American art, e.g., *Breaking Storm* (Art Inst., Chicago) and *The Hurricane* (Metropolitan Mus.).

Homeric Hymns, hexameter poems, c.800–400 B.C., wrongly attributed to HOMER by the ancients. They are important sources of knowledge about Greek religion.

Home Rule, in Irish and English history, political slogan adopted by Irish nationalists in the 19th cent. to describe their basic objective of self-government for Ireland. The modern movement began in 1870 and was strengthened by the rise of C.S. PARNELL, who unified the Irish party in PARLIAMENT. The First Home Rule Bill, introduced (1886) by GLADSTONE, failed to pass; the Second was passed (1893) by Commons but defeated by Lords. At this point advocates of constitutional means to Home Rule began to lose ground to republicans and revolutionaries. The Third Home Rule Bill passed (1912) by Commons led to threats of civil war from Protestant Ulster, and Lords excluded Ulster from its provisions. The bill never took effect because continuing agitation led to recognition of the Irish Free State with dominion status in 1921, and other ties with Britain were gradually broken (see IRELAND, REPUBLIC OF). The six counties of Northern Ireland remained part of Great Britain, governed under the Fourth Home Rule Bill (1920).

home rule, in the U.S., system adopted in many states by which a city or county is given the right to draft and amend its own charter. It may be either provided for in the state constitution or adopted through an act of the legislature. Home rule was a response to the rapid expansion of cities in the 19th cent. and the need for autonomous city government. The first municipal home-rule clause was adopted by Missouri in 1875.

home schooling, practice of teaching children in the home rather than in public or private schools; the children's parents usually are the teachers. In the U.S. the practice grew rapidly in the 1980s; by the early 1990s some 350,000 children were being educated at home. The laws regulating home schooling differ from state to state. Advocates of home schooling are often disenchanted with public education, and many wish to teach religious precepts forbidden in public settings. Critics have questioned the quality of such education and argue that it deprives children of necessary social interactions.

Homestead. 1 City (1990 pop. 26,866), Dade co., SE Fla.; inc. 1913. A Miami suburb, it is a trade center for surrounding citrus and vegetable farms and a gateway to Everglades National Park (see NATIONAL PARKS, table) and the FLORIDA KEYS. In 1992 a hurricane leveled much of Homestead and nearby areas. **2** Borough (1990 pop. 4,179), Allegheny co., SW Pa., on the Monongahela River just S of Pittsburgh; inc. 1880. Once a major steel producer, it declined rapidly in the 1980s. The Homestead strike (1892), one of the bitterest labor disputes in U.S. history, occurred here.

Homestead Act, 1862, passed by the U.S. Congress. It gave title to 160 acres (65 hectares) of unoccupied public land to each homesteader on payment of a nominal fee and required five years of residence; land could also be acquired after six months' residence at $1.25 an acre. The government had previously sold land in the West to settlers for revenue purposes.

homicide, killing of one human being by another human being. In law, there are four categories of homicide. Two of them, murder and manslaughter, are criminal; both are homicide committed without justification or excuse, but manslaughter is distinguished from murder by the absence of malice aforethought. Noncriminal homicides are justifiable homicide, or killing in circumstances authorized under law (e.g., executing a condemned prisoner), and accidental, negligent, or excusable homicide, which is killing unintentionally by misadventure or without gross negligence (e.g., in the course of unsuccessful surgery).

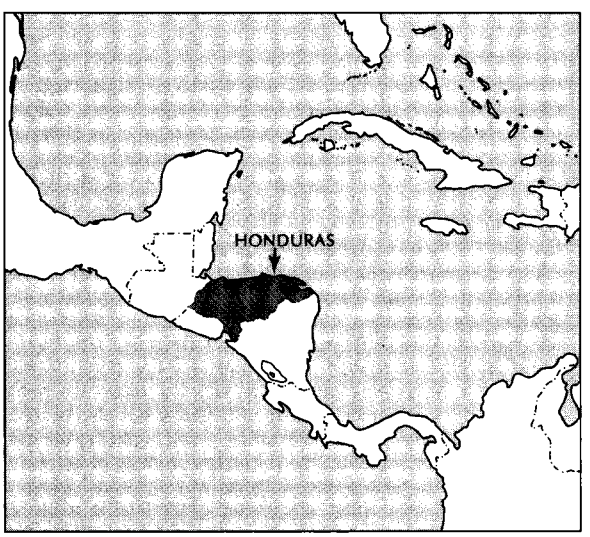
Homo erectus, early human species dating from 1.6 million to 250,000 years ago (see HUMAN EVOLUTION). The species was indistinguishable from contemporary humans from the neck down, except for its slight stature. The size of its braincase, however, was intermediate between *Homo habilis* and *Homo sapiens.* Its culture included stone tools and the first use of fire. The first fossils, found (1891) in Java, were called *Pithecanthropus,* or Java man.

homosexuality, sexual interest in members of one's own sex. Female homosexuality is known as lesbianism. Many male and female homosexuals prefer to be called "gay," a term that has been associated with homosexuality since the early 1900s. Although many people consider homosexuality a moral offense and homosexual sex is illegal in some states and nations, it is no longer considered a psychiatric disorder, and genetic and neural evidence that sexual orientation has a physiological basis is growing. Societal attitudes toward homosexuality have varied greatly, historically and culturally. It was celebrated in ancient Greece and respected historically in Japan. In European cultures, religious and secular laws against homosexuality began in the Middle Ages as prohibitions against any kind of sexual activity not aimed a procreation. Since the "Stonewall Rebellion" in 1969, many groups have formed to fight for the civil rights of homosexuals (see GAY RIGHTS MOVEMENT). Condemnatory attitudes toward homosexuality have complicated efforts to combat AIDS in places like the U.S., where the disease initially appeared among homosexuals.

Homs: see HIMS, Syria.

Honda Soichiro, 1906–91, Japanese automobile executive. A mechanic and race car driver, he was a self-taught engineer. Honda founded a motorcycle company in the 1940s and began producing cars in the 1950s. His company's clean-burning CVCC engine created an automotive revolution, and its cars won a large share of the U.S. market.

Honduras, officially Republic of Honduras, republic (1992 est. pop. 5,093,000), 43,277 sq mi (112,088 sq km), Central America; bordered by the Caribbean Sea (N), Nicaragua (E and S), El Salvador and the Pacific Ocean (SW), and Guatemala (W). The capital is TEGUCIGALPA. Over 80% of the land is mountainous; in the east are the swamps and forests of the Mosquito Coast. Bananas, grown on plantations established by U.S. companies in the 1800s, now account for more than 50% of annual export earnings. Coffee, timber, meat, and shrimp are also exported, and some manufacturing is being attempted, but the general economy remains seriously underdeveloped, and the country is dependent on U.S. aid. The people, of whom about 90% are mestizo, are Spanish-speaking and Roman Catholic.



History. At one time an important center of Mayan culture (see MAYA), the region was colonized after 1524 by the Spanish, who established mines in the highlands. Honduras gained independence in 1821 and, after brief periods as part of the Mexican Empire and the CENTRAL AMERICAN CONFEDERATION, became a separate republic in 1838. Its history has been turbulent, marked by frequent coups (nearly one a year) and trouble with neighbors, most recently a four-day war with EL SALVADOR (1969) and border clashes with NICARAGUA (1981). Foreign influence and conservative government were the rule from the 1890s to the 1950s, when a labor code and other reforms were adopted. From 1963 to the early 1980s,

rightist-to-moderate army elements dominated the nation's politics. A new constitution (1982) brought free elections, but the army remains the most important power in the country. Carlos Roberto Reina became president in 1994.

Honecker, Erich [hön'ĕkər], 1912–, East German communist leader. Imprisoned under the Nazis, he joined the East German Communist party after World War II. He rose in the party bureaucracy and supervised the construction of the Berlin Wall (1961). Honecker succeeded Walter ULBRICHT as party leader in 1971 and became head of state in 1976. Demonstrations in 1989 led to his ouster, and he was charged (1990) with corruption and treason but not tried. Following German reunification he was charged with corruption and with manslaughter in the killing of East Germans fleeing west, and he fled (1991) to the USSR. He returned to Germany to face trial in 1992 but was released because of ill health and went to Chile.

Honegger, Arthur [hŭn'ĕgər], 1892–1955, Swiss-French composer. One of the Parisian group "les SIX," he is known for *Pacific 231* (1923) and the operas *Judith* (1926) and *Antigone* (1927; libretto by COCTEAU).

honey, sweet, viscous fluid made by honeybees from the nectar of flowers and containing 70% to 80% sugar. It has been a major sweetening agent since earliest times. The worker bee transforms the sucrose of nectar into the simple sugars fructose and glucose by the enzyme action of its honey sac, and stores the honey to thicken in the wax cells of the hive. The excess of the colony's requirement may be extracted by humans for use as food. The flavor and color of honey depend on the kind of flower that produced the nectar, e.g., alfalfa, clover, orange, or tupelo.

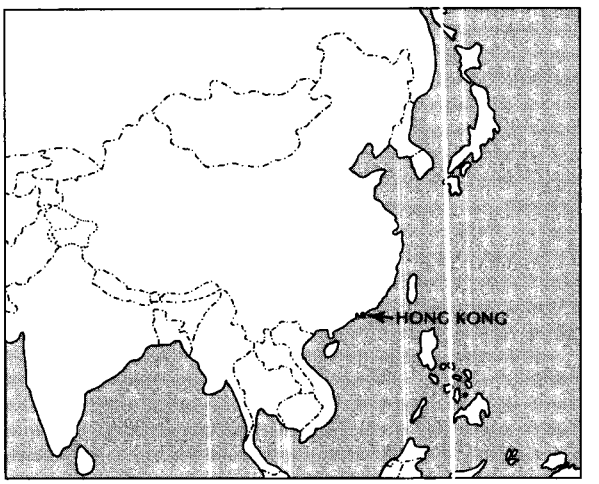
honeydew melon: see MELON.

honey locust, deciduous tree (*Gleditsia triacanthos*) of the PULSE family, native to the eastern half of the U.S. Often grown as a shade tree or as an ornamental, the honey locust has fragrant flowers, compound leaves, branching thorns, and brown pods with edible pulp. Its durable wood is used chiefly for fence posts and crossties.

honeysuckle, common name for vines and shrubs of the family Caprifoliaceae. Found in the Northern Hemisphere, the family includes the honeysuckles, elders, snowberries, viburnums, and weigelas. The true honeysuckles (genus *Lonicera*) include the well-known trumpet honeysuckle (*L. sempervirens*), with fragrant scarlet blossoms, and the Japanese honeysuckle (*L. japonica*), with white to yellow blossoms, now a noxious weed. Elders and viburnums usually have showy clusters of white flowers, and some produce edible berries, e.g., the North American elder (*Sambucus canadensis*), whose berries are used in preserves and wine.

Hong Kong, Mandarin *Xianggang*, British crown colony (1993 est. pop. 6,020,000), land area 399 sq mi (1,034 sq km), adjacent to Guangdong prov., SE China, on the estuary of the Pearl R., 40 mi (64 km) E of MACAO and 90 mi (145 km) SE of GUANGZHOU. The colony comprises Hong Kong island, ceded by China in 1842 and the site of the capital, Victoria; Kowloon peninsula, ceded in 1860; and the New Territories, a mainland area adjoining Kowloon that was leased in 1898 for 99 years along with Deep Bay, Mirs Bay, and some 235 offshore islands. Hong Kong is a free port, a bustling trade center, a shopping and banking hub, and one of the greatest trading and transshipment centers in E Asia. It has also become a leading light industrial manufacturing center, utilizing the abundant cheap labor available. The textile and clothing industry is the colony's largest; plastics and electrical and electronic goods are also produced. Only about one seventh of the land is arable, and food and water must be imported, much of it from China. Some 98% of the population is ethnic Chinese; there are important British and American communities. Traditional Chinese religions are practiced by about 90% of the people; about 10% are Christians. Both Cantonese and English are widely spoken.

History. Hong Kong was a sparsely populated area when it was occupied by the British during the OPIUM WAR (1839–42). As a colony it prospered as an East–West trading center and as the commercial gateway to and distribution center for S China. Conquered (1941) by the Japanese during WORLD WAR II, it was reoccupied by the British in 1945. Hong Kong is one of the most severely crowded urban areas in the world. Hundreds of thousands of refugees streamed into the city after 1949, and thousands more from Vietnam and S China flooded Hong Kong in the late 1970s, sparking stringent new controls on the Chinese border (1980). In 1991 Hong Kong's first direct legislative elections (but for only 30% of the seats) were won almost entirely by liberal, pro-democracy candidates; no pro-China candidate was elected. British efforts to introduce further democratic reforms have met with strong objections from China. In 1997 Britain will return the entire colony to China, and Hong Kong will become a Special Administrative Region.



Honiara, city (1986 pop. 30,413), capital of the SOLOMON ISLANDS, on GUADALCANAL.

Honolulu, city (1990 pop. 365,272; Honolulu co. 1990 pop. 836,231), capital of HAWAII, on the SE coast of the island of Oahu. The city and county are legally coextensive. Famous for its beauty and ethnic diversity, it is the economic center of the Hawaiian Islands and the crossroads of the Pacific. The first European to see it was an Englishman, Captain William Brown. Honolulu grew into a Hawaiian royal residence and became the capital of the kingdom of Hawaii in 1845. In the 19th cent. it was a busy whaling and trading port occupied successively by Russian, British, and French forces. It remained the capital upon U.S. annexation (1898) of the islands and the coming (1959) of statehood. During WORLD WAR II its naval base, PEARL HARBOR, was the staging area for U.S. forces in the Pacific and the site of the 1941 Japanese bombing. After the war, tourism, industrial diversification, and luxury building accelerated. Defense activities are still important. Sugar processing and pineapple canning are important industries. Waikiki Beach and nearby Diamond Head crater are famous. Notable institutions include the Univ. of Hawaii, Bishop Museum, Kawaiahao Church (1841), and Iolani Palace (the only royal palace in the U.S.).

Honorius I, pope (625–38), an Italian. He wrote a letter apparently supporting the heresy of MONOTHELETISM. The pope and letter were declared heretical at the Third Council of CONSTANTINOPLE. The letter is held not to affect papal infallibility because Honorius was not speaking ex cathedra.

Honorius, 384–423, Roman emperor of the West (395–423), which he inherited from his father, THEODOSIUS I, as his brother ARCADIUS inherited the East. Honorius had his guardian, STILICHO, murdered (408). After the Visigoths under ALARIC I invaded Italy and sacked Rome (410), Honorius made peace (412) with them. In 421 he was forced to accept as co-ruler his general Constantius, who had married his sister, Galla Placidia. The West declined markedly during his weak reign.

Honshu, island (1990 pop. 98,352,000), largest (c.89,000 sq mi/230,510 sq km) and most populous island in Japan. It is c.800 mi (1,290 km) long and from 30 to 150 mi (50 to 240 km) wide, with a climate ranging from subtropical in the south to cold-temperate in the north. Rugged mountains, reaching 12,389 ft (3,776 m) at Mt. FUJI, cover most of the island. The population is concentrated in a series of small coastal plains along the south, including the Kanto, or Kwanto, Plain (c.5,000 sq mi/12,950 sq km), site of the great

The key to pronunciation appears on page xiii.

TOKYO-YOKOHAMA industrial complex, the Kinki district (OSAKA-KOBE), and the Nobi Plain (NAGOYA).

Hooch or **Hoogh, Pieter de** [both: hōkh], b. c.1629, d. after 1677, Dutch genre painter. His paintings of intimate interiors, with rooms opening into other rooms or outdoors, display his ability to handle complicated lighting. One of his finest works is *Courtyard of a Dutch House* (National Gall., London).

Hood, John Bell, 1831–79, Confederate general in the American CIVIL WAR; b. Owingsville, Ky. Hood was named (1864) Confederate commander in the ATLANTA CAMPAIGN. He later marched into Tennessee but was defeated (Dec. 1864) at Nashville.

Hood, Raymond Mathewson, 1881–1934, American architect; b. Pawtucket, R.I. His traditional design vocabulary changed to meet the challenges of European modernists in the 1920s. He was co-winner (1922) of the Chicago Tribune Tower international competition with a neo-Gothic design (completed 1925). His McGraw-Hill skyscraper (1931) in New York City is an fine example of the INTERNATIONAL STYLE.

Hood, Thomas, 1799–1845, English poet, noted for his compassion for the poor and unfortunate in such poems as "The Song of the Shirt" and "The Bridge of Sighs." He also wrote much humorous verse and prose and edited several prominent magazines.

hoof-and-mouth disease or **foot-and-mouth disease,** highly contagious viral disease of cattle, sheep, goats, and other cloven-hoofed animals. Symptoms include fever, loss of appetite and weight, and blistering on mucous membranes. The disease is spread both through direct contact and indirectly by way of contaminated food, water, soil, and other materials. Humans seldom contract the disease but may be carriers, as may rats, dogs, birds, and wild animals. Although there are vaccines for the disease, epidemics still cause enormous losses.

Hoogh, Pieter de: see HOOCH, PIETER DE.

Hooke, Robert, 1635–1703, English physicist, mathematician, and inventor; considered the greatest mechanic of his age. He improved astronomical instruments, watches, and clocks, and first formulated the theory of planetary movements as a mechanical problem. He devised (1684) a practicable telegraph system; invented the spiral spring in watches and the first screw-divided quadrant; and constructed the first arithmetical machine and Gregorian telescope. He stated Hooke's law on elasticity (see STRENGTH OF MATERIALS) and anticipated the law of universal GRAVITATION.

Hooker, Joseph, 1814–79, Union general in the U.S. CIVIL WAR; b. Hadley, Mass. Given command (Jan. 1863) of the Army of the Potomac, he was decisively defeated by Gen. R.E. LEE at CHANCELLORSVILLE. He later served in the CHATTANOOGA CAMPAIGN.

Hooker, Richard, 1554?–1600, English theologian and Anglican clergyman. His *Of the Laws of Ecclesiastical Polity* helped to formulate the intellectual concepts of Anglicanism and influenced civil ecclesiastical government.

Hooker, Thomas, 1586–1647, Puritan clergyman in colonial America; b. England. Emigrating (1633) to Massachusetts, he became unhappy with the strict theological rule there. In 1635–36 he and his followers founded HARTFORD, Conn.

Hooke's law: see STRENGTH OF MATERIALS.

Hooks, Benjamin Lawson, 1925–, African-American civil-rights leader; b. Memphis, Tenn. In 1972 Pres. NIXON named Hooks, a lawyer and Baptist minister, to the FEDERAL COMMUNICATIONS COMMISSION, making him its first African-American member. From 1977 to 1993 he was executive director of the NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE.

hookworm, any of a number of parasitic nematode worms found in tropical and subtropical climates. The hookworm larva usually penetrates the exposed skin of humans and other mammals and migrates to the small intestine, where it attaches itself by means of hooks and feeds on the host's blood. Hookworm infestation causes ANEMIA, diarrhea, and abdominal pain and is treated with drugs.

Hoover, Herbert Clark, 1874–1964, 31st president of the U.S. (1929–33); b. West Branch, Iowa. Before 1914 he was a mining engineer and consultant. During World War I he headed food and relief bureaus in Europe. As secretary of commerce (1921–29) under HARDING and COOLIDGE, he fostered trade associations and supported such engineering projects as the St. Lawrence Waterway and the Boulder (now Hoover) Dam. He easily won the 1928 Republican presidential nomination and defeated Democrat Alfred E. SMITH. His administration was dominated by the GREAT DEPRESSION, ushered in by the stock market crash of Oct. 1929. Believing that the economy would regenerate spontaneously, Hoover was reluctant to extend federal activities. But he did begin a large public works program, and the RECONSTRUCTION FINANCE CORPORATION was created (1932). Congress, controlled by Democrats after 1930, passed the Emergency Relief Act and created the federal home loan banks. In 1932 some 15,000 ex-servicemen, known as Bonus Marchers, marched on Washington to demand immediate payment of their World War I bonus certificates. Hoover ordered federal troops to oust them from government property. The U.S. took part in the London NAVAL CONFERENCE of 1930 and the abortive DISARMAMENT CONFERENCE. In 1931 Hoover proposed a one-year moratorium on reparations and war debts to ease the financial situation in Europe. He ran for reelection in 1932 but was overwhelmingly defeated by Franklin D. ROOSEVELT. Later Hoover coordinated (1946) food supplies to war-ravaged countries and headed (1947–49) the Hoover Commission, which recommended administrative reforms of the executive branch. He headed a second commission (1953–55), which studied policy and organization.

Hoover, J(ohn) Edgar, 1895–1972, U.S. director of the FEDERAL BUREAU OF INVESTIGATION (1924–72); b. Washington, D.C. As director, he built an efficient crime-detection system and attacked organized crime. After World War II he targeted Communist activities and became a controversial figure because of FBI harassment of left-wing dissenters.

Hoover Dam, formerly **Boulder Dam** (1933–47), one of the world's major dams, c.726 ft (221 m) high and 1,244 ft (379 m) long, on the COLORADO R. between Nevada and Arizona. Built from 1931 to 1936, the multipurpose dam impounds **Lake Mead**. It has a hydroelectric capacity of 1.3 Mw.

Hoover Institution on War, Revolution, and Peace, at Stanford Univ., Palo Alto, Calif. Established (1919) as the Hoover War Library by Herbert HOOVER, it houses collections that include source material from World Wars I and II. It conducts research, publication, and advanced study.

hop, herbaceous perennial vine of the MULBERRY family, widely cultivated since early times for brewing purposes. The commercial hop (*Humulus lupulus*), native to Eurasia, is grown for the cone-like female flowers, called hops, used to impart a bitter flavor to beer. Oil of hops is used in perfumes, and the stem is used for fiber.

Hope, Bob, 1903–, American comedian, b. England as Leslie Townes Hope. Hope debuted as a comedian on radio (1935). He later teamed with Bing CROSBY and Dorothy Lamour for six successful "Road" films (1940–53) and has appeared in other movies and on television. He made frequent entertainment tours of U.S. military bases.

Hopi, PUEBLO people of the Southwest (see NORTH AMERICA, INDIGENOUS PEOPLES OF) who occupy several MESA pueblos in NE Arizona, numbering 11,173 in 1990. Most speak Hopi, a Uto-Aztecan language (see NATIVE AMERICAN LANGUAGES). Geographically isolated, they resisted European influence more than other Pueblo tribes and participated in Popé's revolt (1680) against the Spanish. In the 1820s the NAVAHO began to encroach on their lands. Sedentary farmers and sheep herders, they retain clan structure and rituals, including the KACHINA ceremony and snake dance; at the same time, the Hopi have a high level of education. In 1975 the federal government began procedures to separate Navaho and Hopi lands, requiring several thousand Navahos to relocate but also assigning some formerly Hopi territory to the Navaho. A court decision in 1992 assigned most of the land still in dispute to the Navaho.

Hopkins, Gerard Manley, 1844–89, English poet. His intense poems and experiments in prosody have profoundly influenced 20th-cent. poetry. Hopkins was a convert to Catholicism and a Jesuit priest, and his poems and letters often show his inner conflict and deep dissatisfaction with himself as a poet and a servant of God. His mature work began with "The Wreck of the *Deutschland*" and includes "God's Grandeur" and "The Windhover." Edited by Robert BRIDGES, his *Poems* was published posthumously in 1918.

Hopkins, Harry Lloyd, 1890–1946, American public official; b. Sioux City, Iowa. An intimate friend and close adviser of Pres.

Franklin D. ROOSEVELT, he headed the Federal Emergency Relief Administration (1933) and the WORKS PROGRESS ADMINISTRATION (1935). He was secretary of commerce (1938–40).

Hopper, Edward, 1882–1967, American painter; b. Nyack, N.Y. A student of HENRI, he gained an early reputation with his etchings. His realistic paintings of streets and houses, often without figures, have an atmosphere of loneliness and an almost menacing starkness. A characteristic oil is *Early Sunday Morning* (1930; Whitney Mus., N.Y.C.).

Horace (Quintus Horatius Flaccus), 65 B.C.–8 B.C., Latin poet, one of the greatest LYRIC poets. His benefactor, MAECENAS, gave him the famous Sabine farm where he spent most of his later life, writing poetry reflecting the civilized spirit of the Augustan age and his own genial disposition and love of nature. His poetry consists of two books of *Satires*, four books of *Odes*, the *Epodes*, two books of *Epistles*, the *Carmen Saeculare* (a hymn), and the *Ars Poetica* (on literary matters). Horace's SATIRE was gentler than that of JUVENAL. He was a master of poetic form, and his later verse shows a completely individual adaptation of Greek meters to Latin. Horace has remained a major influence on English poetry.

Horatius (Horatius Cocles), legendary Roman hero. With two companions he held Lars Porsena's Etruscan army at bay while the Romans cut the Sublician bridge behind him. He then swam the Tiber to safety. The story is related in MACAULAY's *Lays of Ancient Rome.*

horehound, aromatic Old World perennial herb (*Marrubium vulgare*) of the MINT family. It has woolly white foliage and tiny, clustered white flowers. The dried leaves and flowers are used in making candy and cough and cold remedies.

hormone, chemical messenger released in minute amounts by the endocrine, or ductless, glands and carried by the bloodstream to target tissues, where it produces either rapid or long-term effects (see ENDOCRINE SYSTEM). Most hormones fall into two major categories: PEPTIDES (chains of amino acids) and LIPIDS (including STEROIDS). Since the lack of any hormone may cause serious disorders, many hormones are now synthesized for use in treating such deficiencies.

Hormuz, Strait of, strategic waterway, 30 to 50 mi (48 to 80 km) wide, between the PERSIAN GULF and the Gulf of Oman, controlling ocean traffic to and from the oil-rich Persian Gulf area. Located in the strait are Qishm Island (Iran) and three other islands—Greater Tunb, Lesser Tunb, and Abu Musa—seized by Iran (1971) but also claimed by the United Arab Emirates.

Horn, Cape, southernmost point of South America, S Chile, known for its strong currents and stormy climate. "Rounding the Horn" was a great hazard in the era of sailing ships.

Horne, Marilyn, 1934–, American mezzo-soprano; b. Bradford, Pa. She is noted for the power and smoothness of her voice. Her memorable operatic roles include Adalgisa in BELLINI's *Norma* and the title role in BIZET's *Carmen.*

horned lizard or **horned toad,** broad, flat-bodied LIZARD (genus *Phrynosoma*) found in arid regions from SW Canada to Guatemala. The body is 3 to 5 in. (7.6 to 12.7 cm) long, with spines on the head, sides, and back. Horned lizards are protectively colored, usually in dull grays or browns.

hornet: see WASP.

Horney, Karen, 1885–1952, American psychiatrist; b. Germany. Deviating from orthodox Freudian analysis, she emphasized environmental and cultural, rather than biological, factors in the genesis of NEUROSIS. She founded the American Institute of Psychoanalysis in 1941. Her works include *The Neurotic Personality of Our Time* (1937) and *Neurosis and Human Growth* (1950).

Hornsby, Rogers, 1896–1963, American baseball player and manager; b. Winters, Tex. One of the game's greatest hitters, he played shortstop, second base, and other positions for the St. Louis Cardinals (1915–26), managing the team to a World Series victory in 1926. He subsequently played or was player-manager for the New York Giants, Boston Braves, Chicago Cubs, and St. Louis Browns before retiring as a player in 1937. "Rajah" Hornsby won seven National League batting titles, and his .424 average in 1924 remains the modern record. His lifetime batting average of .358 is second only to Ty COBB's .367.

horoscope: see ASTROLOGY; ZODIAC.

Horowitz, Vladimir, 1904–89, Russian-American virtuoso pianist. He made his Russian debut at 17 and first appeared in the U.S. in 1928. He was noted for his interpretations of CHOPIN, RACHMANINOFF, and LISZT.

horse, hoofed, herbivorous MAMMAL of the family Equidae, the single living genus of which is *Equus*, which includes the domestic horse, the wild Przewalski's horse, the ASS, and the ZEBRA. All are swift, plains-dwelling herd animals with teeth adapted for grinding coarse grass. The species can interbreed (see MULE), but offspring are usually sterile. The modern horse evolved in North America (where it later became extinct) and spread over the world. It was hunted by early humans and domesticated by Asian nomads in the 3d millennium B.C. The fast, light southern breeds may have originated independently of the heavier northern draft breeds, and the small breeds called ponies may have evolved from a wild European race. Until the mid-20th cent. horses were widely used for warfare, agriculture, and transportation. Today light breeds are used for show and sport.

horse chestnut, common name for some trees and shrubs of the family Hippocastanaceae, found in north temperate zones and South America. The horse chestnut tree (*Aesculus hippocastanum*) is often cultivated for shade and ornament. The family includes the buckeyes; the prevalence of the Ohio buckeye (*A. glabra*) has given Ohio its nickname, the Buckeye State. The soft wood of horse chestnuts and buckeyes is used for paper pulp and woodenware and in carpentry.

horsemanship: see EQUESTRIANISM.

horsepower: see POWER.

horseradish, perennial herb (*Armoracia rusticana*) of the MUSTARD family, native to central and S Europe. Once used medicinally against scurvy, today it is grown mainly for its pungent roots, which are used in a popular condiment.

horseshoe crab, large marine invertebrate animal (class Merostomata), an ARTHROPOD. It has a heavy, dark brown, domed exoskeleton divided into a broad horseshoe-shaped front part (prosoma), a tapered middle region (opisthosoma), and a spiky, taillike part (telson). Also known as king crabs, horseshoe crabs swim or burrow using five pairs of walking legs. The largest reach 2 ft (61 cm) in length.

horsetail, plant of the genus *Equisetum*, the single surviving genus of a large group of primitive vascular plants that flourished during the Carboniferous period. Found in temperate and tropical regions, horsetails seldom grow to over 3 ft (91 cm), although FOSSIL evidence indicates that many extinct species were treelike in size. They have whorls of small, scalelike leaves around a green, hollow, jointed stem. Some species bear shoots with spore-bearing cones at the top for reproduction. The scouring rush (*E. hymenale*), common in North America and Eurasia, is so called because it has a coarse texture suitable for scouring.

Horta, Victor, Baron, 1861–1947, Belgian architect. His Tassel House, Brussels (1892–93), was the earliest monument of ART NOUVEAU. He also designed the Maison du Peuple (1896–99), the market and communal complex in Brussels.

Horthy de Nagybánya, Nicholas [hôr'tĭ də nŏ'dyəbä"nyŏ], 1868–1957, Hungarian admiral and regent. He led (1919) the counterrevolutionary forces in Hungary against Béla KUN and was regent (1920–44). After he tried to make peace with the USSR in WORLD WAR II, the Germans forced him to resign and took him to Germany. He died in Portugal.

horticulture, science of cultivating fruits, vegetables, flowers, and ornamental plants; a branch of AGRICULTURE. Horticulture usually refers to small-scale gardening and AGRONOMY to the large-scale growing of field crops. Although many horticultural practices are ancient, relatively recent knowledge of GENETICS, plant PHYSIOLOGY and PATHOLOGY, BIOCHEMISTRY, ECOLOGY, ENTOMOLOGY, and SOILS, and the practical application (e.g., in plant breeding) of this knowledge, have made horticulture an extremely complex science. See also BOTANY.

Horus, in ancient EGYPTIAN RELIGION, sky god, god of light and goodness. The son of OSIRIS and ISIS, he avenged his father's murder by defeating Set, the god of evil and darkness.

Hosea [hōzē'ə, –zā'ə] or **Osee** [ōsē'], book of the OLD TESTAMENT, 28th in the Authorized Version, first of the Minor PROPHETS. It con-

sists of the career and sermons of Hosea, who preached against the sins of the northern kingdom of Israel in the 8th cent. B.C., focusing on apostasy, decadence, punishment, and redemption.

Hosokawa Morihiro, 1938–, Japanese politician, grandson of KONOYE FUMIMARO. A member of the Liberal Democratic party (LDP), he was elected (1971) to the upper house of the Japanese parliament and won (1983) the governorship of Kumamoto prefecture, Kyushu. He broke with the LDP in 1992 to found the reformist Japan New party. When former opposition parties won the 1993 elections, he became prime minister. Hosokawa won passage (1994) of electoral reforms designed to reduce political corruption.

Hostos, Eugenio María de [ō'stōs], 1839–1903, Latin American philosopher, sociologist, writer, and political and educational reformer. In Santo Domingo, Puerto Rico, he founded (1879–88) the first normal school and introduced advanced teaching methods; while in Chile he was instrumental in having women admitted to the university. He wrote some 50 volumes of prose.

hot spring, natural discharge of groundwater with an elevated temperature. Most hot springs (including GEYSERS) result from water passing through or near recently formed, hot, igneous rocks. Hot springs are used as a source of geothermal energy in California, Iceland, and Italy. See also HYDROTHERMAL VENT.

Hot Springs National Park: see NATIONAL PARKS (table).

Hotspur: see PERCY, SIR HENRY.

Hottentots: see KHOIKHOI.

Houdin, Jean Eugène Robert [ōōdăN'], 1805–71, French magician. Famed for his optical illusions, he liked to explain the natural causes of these and other "magic" tricks.

Houdini, Harry, 1874–1926, American magician; b. Hungary as Erich Weiss. He took his stage name from the French magician HOUDIN. He was world-famous for his escapes from every sort of bond and sealed container and for his exposure of fraudulent spiritualistic mediums.

Houdon, Jean-Antoine [ōōdôN'], 1741–1828, French neoclassical sculptor. In creating sculptural documents of his time, he developed a kind of portrait remarkable for elegance, measured realism, and depiction of individuality. He did portrait busts of such statesmen as Thomas Jefferson, Benjamin Franklin, and Prince Henry of Prussia and a full-length sculpture of Voltaire. His later works reveal his study of antique form, e.g., *The Bather* (Metropolitan Mus.). He exerted a strong influence for generations.

hound, class of dogs bred to hunt animals. Most hunt by scent, their quarry ranging from such large game as bear or elk to small game and vermin. Some long-legged breeds that hunt mainly by sight are also classed as hounds. A third variety, treeing hounds, track by scent and pursue tree-climbing animals. Many scent hounds have coats patterned in "hound colors": black, white, and tan. See individual breeds, e.g., AFGHAN HOUND, BASENJI, BASSET HOUND, DACHSHUND, FOXHOUND, WHIPPET.

Houphouët-Boigny, Félix [ōōfwā'-bwä'nyē], 1905–93, president of CÔTE D'IVOIRE (1960–93). When Côte d'Ivoire (Ivory Coast) became a constituent member of the French Community in 1958, he was its president. Two years later he led the country to full independence and became president of the new republic. In 1990, in the first election involving opposition parties, he won a seventh five-year term; he died in office.

hour circle: see ASTRONOMICAL COORDINATE SYSTEMS.

House of Commons: see PARLIAMENT.

House of Lords: see PARLIAMENT.

House of Representatives, United States: see CONGRESS OF THE UNITED STATES.

Houses of Parliament: see WESTMINSTER PALACE.

house sparrow: see ENGLISH SPARROW.

Housing and Urban Development, United States Department of (HUD), federal executive department established (1965) to administer programs that provide aid for housing and community development. It grants loan assistance for low-income housing programs, insures mortgages, and encourages the participation of private home-building and mortgage-lending industries in urban development projects.

Housman, A(lfred) E(dward), 1859–1936, English poet and scholar. A failure at Oxford and a recluse, he nevertheless became a leading classicist, editing Manilius, Juvenal, and Lucan. He is best known for the poetry that appeared in two volumes, *A Shropshire Lad* (1896) and *Last Poems* (1922). In such lyrics as "To an Athlete Dying Young" and "When I was One-and-twenty," he handled with vivid economy the themes of mortality and the passing of youth. His brother, **Laurence Housman,** 1865–1959, was also a writer, particularly noted for his play *Victoria Regina* (1934).

Houston, Samuel, 1793–1863, Texas statesman; b. near Lexington, Va. He was sent (1823, 1825) by Tennessee to the U.S. Congress as a Democrat and in 1827 became the state's governor. When his wife left him, however, he resigned (1829) and later moved to Texas. After Texas declared its independence from Mexico, Houston commanded the revolutionary troops and defeated the Mexicans at the battle of San Jacinto (Apr. 21, 1836). He was the first president of the Republic of TEXAS (1836–38), serving again from 1841 to 1844. After Texas joined the U.S., he was U.S. senator (1846–59). Elected (1859) governor of Texas, he opposed secession and was removed from office in 1861.

Houston, city (1990 pop. 1,630,553; met. area 3,301,937), seat of Harris co., SE Tex., a deepwater port on the Houston Ship Channel; inc. 1837. The fourth largest city in the U.S., it is the largest city in the South and Southwest; a commercial, industrial, and financial hub; and one of the world's great oil centers. It has numerous space and science research firms, petrochemical works, shipyards, grain elevators, breweries, mills, and factories. The city is also a major corporate and medical research center. Settled in 1836, it was capital (1837–39) of the Texas Republic. It was a 19th-cent. railhead and grew rapidly after the opening (1914) of the ship channel linking it to the Gulf of MEXICO. Coastal oil fields and other natural resources poured money into Houston. World War II shipbuilding and the opening (1961) nearby of NASA's Manned Spacecraft Center (renamed the Lyndon B. Johnson Space Center, 1973) furthered its growth. Houston is noted for its art museums, numerous universities and cultural institutions, and the Astrodome stadium (opened 1965).

Hovercraft: see AIR-CUSHION VEHICLE.

Hovhaness, Alan [hōvhä'nəs], 1911–, American composer; b. Somerville, Mass. Many of his compositions are based on Armenian culture. He is also interested in unusual sonorities. His works include *Ukiyo-Floating World* (1965), a symphonic poem, *Dawn at Mt. Tahoma* (1973), for string orchestra, and *Mt. Katahdin* (1987), a piano sonata.

Howard, Catherine, 1521?–1542, fifth queen consort of HENRY VIII of England. Niece of the powerful Thomas Howard, 3d duke of Norfolk, she married the king in 1540. She was accused of adultery in 1541 and later beheaded.

Howard, Henry: see SURREY, HENRY HOWARD, EARL OF.

Howard University, at Washington, D.C.; founded 1867 to provide education for newly emancipated slaves. Although predominantly an African-American university, it has always been open to all qualified students. The Founders Library has noted collections of materials on African-American literature and history.

Howe, Elias, 1819–67, American inventor; b. Spencer, Mass. He was apprenticed (1838) to a Boston instrument- and watchmaker, at whose suggestion he turned his attention to devising a SEWING MACHINE. He exhibited his first in 1845, patented another in 1846, and sold a third (1846) in England. After several patent infringement suits, he obtained (1854) a judgment for royalty.

Howe, Gordie (Gordon Howe), 1928–, Canadian hockey player. Possibly the greatest and most durable forward in the history of hockey, he played (1946–71) for the Detroit Red Wings of the National Hockey League (NHL). With his two sons he joined (1973) the Houston Aeros and then (1977) the New England Whalers of the World Hockey Association, ending his career in 1980 with the Hartford Whalers of the NHL. Howe's NHL career records include most seasons (26) and most games (1,767).

Howe, Irving, 1920–93, American critic; b. N.Y.C. An "Old Left" social critic, he also wrote literary criticism. His books include *Politics and the Novel* (1957), *World of Our Fathers* (1976), a study of Jewish immigrants to the U.S., and *Socialism in America* (1985).

Howe, Julia Ward: see under HOWE, SAMUEL GRIDLEY.

Howe, Richard Howe, Earl, 1726–99, British admiral. He defended the English Channel in the SEVEN YEARS WAR. In the AMERICAN REVOLUTION he commanded (1776–78) the North American fleet. He is

best remembered for his victory over the French fleet in the battle called the First of June in 1794. His brother, **William Howe,** 5th **Viscount Howe,** 1729–1814, was a British general. In the American Revolution he was commander in chief in the colonies (1775–78). He commanded the successful battle of Long Island (1776), defeated WASHINGTON at the battle of the BRANDYWINE (1777), and resigned in 1778.

Howe, Samuel Gridley, 1801–76, American reformer and philanthropist; b. Boston. He founded and ran for 44 years the New England Asylum for the Blind (later the Perkins Institute), where he was the first to educate a blind deaf-mute successfully, and advocated reforms in the treatment of the insane and mentally retarded. His wife, **Julia Ward Howe,** 1819–1910, b. N.Y.C., was a social reformer and a widely published author who wrote the words of "The Battle Hymn of the Republic" (1861). With her husband, she edited the abolitionist paper *Commonwealth.*

Howells, William Dean, 1837–1920, American novelist and critic; b. Martins Ferry, Ohio. A printer, journalist, and biographer of Lincoln, he won recognition with the first of many travel books, *Venetian Life* (1866), written after five years as consul to Venice. On his return to the U.S., he was associated with such periodicals as the *Atlantic Monthly* and *Harper's Magazine.* In his novels and in his criticism, Howells was a champion of REALISM in American literature. Among his works the realistic novels *A Modern Instance* (1882) and *The Rise of Silas Lapham* (1885) are regarded as his major achievements. The friend and editor of Mark TWAIN, Howells sponsored such younger American realists as Stephen CRANE and Frank NORRIS, and his essays on realist European writers helped to mold American taste. An amazingly prolific writer, he wrote novels, plays, criticism, reminiscences, and short stories.

howitzer: see ARTILLERY.

Hoxha, Enver [hô'jä], 1908–85, Albanian Communist leader and general. One of the founders (1941) of the Albanian Communist party, he became its first secretary in 1954. After World War II he held important government posts, including premier (1946–54), foreign minister (1946–53), and commander of the armed forces (1944–54).

Hrdlicka, Ales [hûrd'lĭchkä], 1869–1943, American anthropologist; b. Bohemia. A curator (1910–42) at the SMITHSONIAN INSTITUTION, he founded and edited (1918–43) the *American Journal of Physical Anthropology.* His investigations of the evolution and migrations of early human beings produced *Physical Anthropology* (1919), *Anthropometry* (1920), *Old Americans* (1925), and *Alaska Diary, 1926–1931* (1943), among other works.

Hs, chemical symbol of the element HASSIUM.

Hs-. For some Chinese names beginning thus, see S-; e.g., for Hsi, see SI.

Hsia, dynasty: see CHINA.

Hua Guofeng or **Hua Kuo-feng** [both: hwä gwô-fŭng], 1920–, Chinese Communist leader. He succeeded (1976) ZHOU ENLAI as premier and MAO ZEDONG as chairman of the Chinese Communist party. Hua was ousted as premier (1980) and party chairman (1981) when the followers of Vice Premier DENG XIAOPING consolidated their power. In 1982 Hua was removed from the party's politburo.

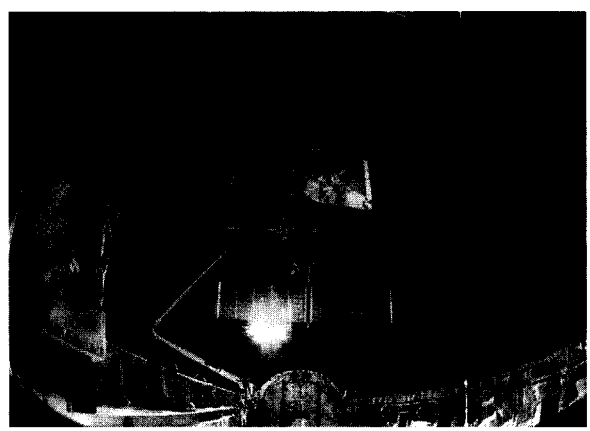
Huang He, Hwang Ho, or **Yellow River,** great river of N China, c.3,000 mi (4,830 km) long, sometimes called "China's Sorrow" for the devastating floods once common along its lower course. From the Kunlun Mts. in W China, it flows generally east, with a "great northern bend" (around the Ordos Desert), to a mouth on the Bo Hai, an arm of the YELLOW SEA north of the Shandong Peninsula. The river is named for the great quantities of yellow silt that it carries from China's fertile loessland region and has deposited seaward over the millennia to form a great, now densely populated delta called the North China Plain. A 50-year construction program, designed to control future flooding and harness the river for increased irrigation and hydroelectric production, was initiated in 1955.

Hubbard, L. Ron: see SCIENTOLOGY.

Hubble, Edwin Powell, 1889–1953, American astronomer; b. Marshfield, Mo. As a staff member (from 1919) at Mt. Wilson Observatory, Hubble used the 100-in. (254-cm) telescope there to discover that there are large-scale galaxies beyond the Milky Way and that they are distributed almost uniformly in all directions. In what is now known as HUBBLE'S LAW, he was the first to offer observational evidence supporting the theory of the expanding universe.

Hubble's law, statement that the greater the distance between any two GALAXIES, the greater is their relative speed of separation. In other words, the universe is expanding roughly uniformly. This empirical finding is more consonant with the big bang theory of the universe's origin than with the steady state theory (see COSMOLOGY). The law was first proposed in 1929 by Edwin HUBBLE who observed that the more distant a galaxy, the greater is its RED SHIFT, and hence its velocity relative to our galaxy.

Hubble Space Telescope, U.S. astronomical observatory put into orbit in 1990 from the SPACE SHUTTLE *Discovery.* Built 1978–90 at a cost of $1.5 billion, the telescope (named for astronomer E.P. HUBBLE) was expected to provide the clearest view yet obtained of the universe. A flaw in the telescope's 94.5-in (2.4-m) light-gathering mirror, discovered after the telescope was in orbit, initially limited its effectiveness. In 1993, however, astronauts repaired the telescope, replacing critical instruments and adding corrective optics while in orbit.



Hubble Space Telescope

huckleberry, shrub (genus *Gaylussacia*) of the HEATH family, native to the Americas. Huckleberry, often confused with BLUEBERRY, is grown as an ornamental or for its fruit. The common huckleberry (*G. baccata*) is particularly valued for its blue or black fruit.

Hudson, Henry, fl. 1607–11, English explorer. Sailing for the Dutch EAST INDIA COMPANY in search of the NORTHWEST PASSAGE, he explored (1609) the HUDSON R., giving the Dutch their claims to the area. Sailing for the English, he reached (1610) HUDSON BAY. He was abandoned at sea by a mutinous crew.

Hudson, William Henry, 1841–1922, English author and naturalist; b. Argentina of American parents. The romance *Green Mansions* (1904), set in a South American jungle, is a classic. *Far Away and Long Ago* (1918) is autobiographical. He describes nature with great sensitivity, force, and beauty.

Hudson, river in New York state, flowing generally south c.315 mi (510 km) from Lake Tear of the Clouds on Mt. Marcy in the Adirondack Mts. to the Atlantic Ocean at New York City. It is tidal, and navigable by ocean vessels, to Albany, 150 mi (240 km) upstream. First sighted (1524) by VERRAZANO, it was explored (1609) by Henry HUDSON and became part of the first all-water trans Appalachian route when linked (1825) to the GREAT LAKES by the ERIE CANAL. Many industries are located along its banks, which are also associated with the well-known HUDSON RIVER SCHOOL of painting and Washington IRVING's legend of Rip Van Winkle.

Hudson Bay, shallow sea, N Canada, covered by ice from October to mid-July. Explored and named (1610) by Henry HUDSON, the bay (which extends south as James Bay) is c.850 mi (1,370 km) long and c.650 mi (1,050 km) wide. It connects with the Atlantic Ocean through Hudson Strait and with the Arctic Ocean through Foxe Channel. The Hudson Bay region has been a rich source of furs since the late 1600s (see HUDSON'S BAY COMPANY).

Hudson River school, group of American landscape painters, working from 1825 to 1875. Influenced by European ROMANTICISM's attitude toward nature, they were attracted to the grandeur of the Hudson River valley's scenery and painted its awesome beauty along with other spectacular vistas from the American landscape. Thomas COLE was the leader of the group during its most active years. Other members of the school were BIERSTADT, DURAND, KENSETT, S.F.B. MORSE, Henry Inman, F.E. CHURCH, and, in his early work, George INNESS.

Hudson's Bay Company, corporation chartered (1670) by the English crown to operate a fur trade monopoly and settlements in the HUDSON BAY region of North America and to discover a NORTHWEST PASSAGE to E Asia. The company's traders failed to find a passage, but they did establish a monopoly of the Canadian fur trade after the company's amalgamation (1821) with the NORTH WEST COMPANY ended their violent rivalry (see RED RIVER SETTLEMENT). The united company ruled a vast territory extending from the Atlantic to the Pacific, and its fortunes peaked under Sir George SIMPSON's governorship (1821–56). An internal reorganization (1863) passed its stock from a few to many holders. The company's fur monopoly was curtailed by the transfer (1869) of its territory to the new dominion government in return for £300,000. In the late 19th and early 20th cent. it was transformed from a fur-trading agency to a gigantic corporation with many varied business interests. The company was split up into separate organizations in 1930.

Hue [hwā], city (1990 est. pop. 211,000), S Vietnam, on the Hue R. near the South China Sea. The third largest city in Vietnam, it is the market center for a rich farming region and has a cement plant nearby. Hue was probably founded in the 3d cent. A.D. In the 16th cent. it became the seat of the dynasty that ruled ANNAM. The French took Hue in 1883. In 1954 it became part of South Vietnam. During the VIETNAM WAR it was the scene of fighting in which c.4,000 civilians were killed and most of the city destroyed. After the war it was incorporated into united Vietnam; it has since been rebuilt.

Huerta, Victoriano [wär'tä], 1854–1916, Mexican president (1913–14). As commander of federal forces, he overthrew Pres. MADERO and set up a dictatorship marked by corruption and violence. Numerous revolts forced him to resign (1914) as president and to flee into exile.

Hufstedler, Shirley Mount, 1925–, American jurist and U.S. secretary of education (1979–81); b. Denver. She was a county and state judge in California (1961–68) and a federal judge (1968–79). In 1979 Pres. CARTER named her the first secretary of education.

Huggins, Sir William, 1824–1910, English astronomer. A pioneer in spectroscopic photography, he helped develop the combined use of the telescope, spectroscope, and photographic negative. He adapted the gelatin dry-plate negative for use in astronomical photography, making possible exposures of any length. Huggins proved that while some nebulae are clusters of stars, others are uniformly gaseous. He made (1866) the first spectroscopic observations of a nova.

Hugh Capet, c.938–996, king of France (987–96), first of the CAPETIANS. He inherited (956) a vast domain in France from his father, Hugh the Great, and in 987 was elected king. He spent much of his reign fighting with Charles I of Lower Lorraine, the ignored Carolingian claimant.

Hughes, Charles Evans, 1862–1948, American jurist and statesman; b. Glens Falls, N.Y.; LL.B., Columbia Univ. (1884). After presiding over the enactment of much progressive legislation as governor of New York (1907–10), he was appointed (1910) associate justice of the U.S. SUPREME COURT. He resigned in 1916 to run for president, but he was narrowly defeated by Woodrow Wilson. As U.S. secretary of state (1921–25), he greatly increased U.S. diplomatic prestige. In 1930 he was appointed 11th chief justice of the U.S. Supreme Court, serving until 1941; he was moderately conservative, although he frequently voted to uphold controversial NEW DEAL legislation.

Hughes, Howard Robard, 1905–76, U.S. business executive; b. Houston. At 20 he inherited patent rights to an oil tool drill that, manufactured by the Hughes Tool Co., formed the basis of his financial empire. A pilot, he set several aviation records and in the 1930s formed the Hughes Aircraft Corp. His interests extended to the motion picture industry, and he produced such films as *Hell's Angels* (1930) and *The Front Page* (1931). He later gained control of RKO Studios and of Trans World Airways (TWA). A billionaire, he became a recluse in his later years.

Hughes, (James) Langston, 1902–67, African-American poet; b. Joplin, Mo. A major figure in the HARLEM RENAISSANCE, he depicted urban African-American life. His collections of verse include *The Weary Blues* (1926) and *One-Way Ticket* (1949). Among his other works are plays, children's books, and novels.

Hughes, Ted, 1930–, English poet, Poet Laureate of England (1984–). He attempts in tightly controlled verse to bring order out of violence and passion. His works include *The Hawk in the Rain* (1957), *Crow: From the Life and Songs of the Crow* (1971), *Moortown* (1980), and *Wolfwatching* (1989). He was married to Sylvia PLATH.

Hughes, Thomas, 1822–96, English author. His novel of school life, *Tom Brown's School Days* (1857), is a classic, idealizing Dr. Thomas Arnold, headmaster of Rugby school.

Hughes, William Morris, 1864–1952, Australian statesman; b. England. He was minister for external affairs (1904) in the first Labour government and was later attorney general (1908–9, 1910–13, 1914–21). As prime minister (1915–23) of Australia, he strongly supported Britain in WORLD WAR I.

Hugo, Victor Marie, Vicomte [hyōō'gō], 1802–85, French poet, dramatist, and novelist and 19th-cent. France's leading literary figure. The preface to his drama *Cromwell* (1827) placed him at the head of the romantic school, and the production of his unconventional poetic drama *Hernani* (1830) produced a riot between champions of ROMANTICISM and CLASSICISM. Other plays are *Le Roi s'amuse* (1832) and *Ruy Blas* (1838). His principal poetic works, e.g., *Autumn Leaves* (1831), *Rays and Shadows* (1840), and *Contemplations* (1856), demonstrate his musical powers and highly personal voice. His two great epic novels, *The Hunchback of Notre Dame* (1831) and *Les Misérables* (1862), for which he is best known in English, portray the sufferings of humanity with great compassion and power. Originally a monarchist, Hugo later became an ardent republican, and his opposition to NAPOLEON III led to his exile in 1851. In 1870 he returned in triumph to Paris, where his final years were marked by public veneration; he is buried in the Panthéon.

Huguenots [hyōō'gənŏts], French Protestants, followers of John CALVIN. Protestants founded (1559) a Presbyterian church in France and soon became one of the nation's most industrious and economically advanced elements. They emerged victorious over Roman Catholic forces in the Wars of RELIGION (1562–98) and by the Edict of NANTES (1598) received some religious and political freedom. Cardinal RICHELIEU captured their strongholds, however, and the Peace of Alais (1629) stripped them of their political power. In 1685 LOUIS XIV revoked the Edict of Nantes, and countless Huguenots fled to Protestant Europe and to America.

Huizinga, Johan [hoi'zĭnga], 1872–1945, Dutch historian. Noted for his work on the cultural history of the late Middle Ages, he wrote the classic *Waning of the Middle Ages* (1919). He considered the Renaissance the death of the MIDDLE AGES rather than the birth of the modern world.

Hull, Bobby (Robert Marvin Hull, Jr.), 1939–, Canadian hockey player. Considered the best left wing in the sport's history, he played 15 seasons (1957–72) with the Chicago Black Hawks. His total of 610 goals was third best among National Hockey League players. He later played (1972–80) for the Winnipeg Jets, then of the World Hockey Association, and scored 303 goals.

Hull, Cordell, 1871–1955, American statesman; b. Overton co. (now Pickett co.), Tenn. A U.S. congressman (1907–21, 1923–31) and senator (1931–33) from Tennessee, he served (1933–44) as secretary of state under Pres. F.D. ROOSEVELT. Hull sought sound international economic relations and in WORLD WAR II backed the creation of a world organization to maintain peace. He was awarded the 1945 Nobel Peace Prize.

Hull House: see ADDAMS, JANE.

human evolution, theory of the origins of the human species, *Homo sapiens.* Humans and their immediate ancestors, known as hominids, are notable for their bipedal locomotion, slow rate of maturation, large brain size, and—at least among the more recent

hominids—the development of a relatively sophisticated capacity for language, tool use, and social activity. About 5 million years ago, humans and apes began to develop along separate lines. The earliest known hominid fossils are of the genus *Australopithecus* (at least 4 million years ago). They were short and small-brained and were the first primates to walk on two feet. The first member of the genus *Homo* was *Homo habilis* (at least 2 million years ago), a small, gracile species exhibiting marked expansion of the brain. By about 1.6 million years ago, *H. habilis* had evolved into the larger, more robust, and larger-brained HOMO ERECTUS, the first hominid known to have migrated off the African continent. Between 400,000 and 250,000 years ago, NEANDERTHAL MAN and the archaic forms of *Homo sapiens* that replaced it evolved. By 35,000 years ago in Europe (see CRO-MAGNON MAN), the transition to fully modern humans was complete. Among hominids there is evidence of increasing intelligence, behavioral flexibility, and cultural complexity in the fossil record. Tool use, once thought to be the hallmark of the genus *Homo*, is now known to be common in chimpanzees. Nevertheless, tools of increasing complexity accompany the evolution of the human species. With the emergence of modern humans, there is an explosion of technological innovations and artistic activities.

Human Genome Project, international scientific effort to map all of the approximately 100,000 GENES on the 23 human chromosomes and, eventually, to sequence the 3 billion DNA base pairs that make up these genes. Begun in 1990 and centered in the U.S. and France, the study's goal is to understand the basis of genetic diseases like muscular dystrophy and Alzheimer's disease and to gain insight into human evolution. The 15-year, $3 billion project will also compare human genomes (the full set of genes and traits) with those from the bacterium ESCHERICHIA COLI, a FRUIT FLY, and a NEMATODE worm, in order to study the many genetic similarities shared by all species.

human growth hormone (HGH) or **somatotropin,** glycoprotein hormone released by the anterior PITUITARY GLAND that is necessary for normal skeletal growth in humans (see PROTEIN). Evidence suggests that the secretion of HGH is regulated by the release of certain peptides by the HYPOTHALAMUS of the brain. HGH is known to act on many aspects of cellular metabolism, but its most obvious effect is the stimulation of the growth of cartilage and bone in children. An HGH deficiency before puberty results in pituitary dwarfism; an excess results in gigantism. Excess HGH after puberty has little effect on skeletal growth but results in a disease known as acromegaly. Pituitary dwarfism can be treated by injections of synthetic growth hormone produced by GENETIC ENGINEERING in bacteria. HGH is also used illegally by bodybuilders and athletes to increase muscle mass.

human immunodeficiency virus: see AIDS.

humanism, philosophical and literary movement in which human values and capabilities are the central focus. The term originally referred to a point of view particularly associated with the RENAISSANCE, with its emphasis on secular studies (the humanities), a conscious return to classical ideals and forms, and a rejection of medieval religious authority. BOCCACCIO, ERASMUS, and PETRARCH were outstanding humanists. In modern usage, humanism often indicates a general emphasis on lasting human values, respect for scientific knowledge, and cultivation of the classics.

human papillomavirus (HPV), any of a family of more than 60 viruses that cause various growths, including plantar warts and genital warts, a sexually transmitted disease. Detectable warts can be removed but often recur. Genital warts caused by certain types of HPV are associated with cancer of the cervix, vulva, vagina, and penis.

human rights, universal rights held to belong to individuals by virtue of their being human, encompassing civil, political, economic, social, and cultural rights and freedoms, and based on the notion of personal human dignity and worth. Conceptually derived from the theory of NATURAL LAW and originating in Greco-Roman doctrines, the idea of human rights appears in some early Christian writers' works and is reflected in the MAGNA CARTA (1215). The concept winds as a philosophical thread through 17th- and 18th-cent. European and American thought, including the DECLARATION OF INDEPENDENCE (1776) and the French DECLARATION OF THE RIGHTS OF MAN AND CITIZEN (1789). The UN's Universal Declaration of Human Rights (1948) reasserted the concept after the horrors of WORLD WAR II, and human rights have since become a universally espoused yet widely disregarded concept. Organizations such as Amnesty International and Human Rights Watch promote human rights and denounce human rights abuses.

Humboldt, Alexander, Freiherr von, 1769–1859, German naturalist and traveler. From 1799 to 1804 he made his renowned expedition with A.J.A. Bonpland to Central and SOUTH AMERICA and CUBA, a journey that did much to lay the broad foundations for the sciences of physical geography and meteorology. Humboldt explored the ORINOCO R. and the sources of the AMAZON R., and conducted experiments. He wrote *Voyage of Humboldt and Bonpland* (1805–34) and *Kosmos* (1845–62).

Hume, David, 1711–76, Scottish philosopher and historian. Hume carried the EMPIRICISM of LOCKE and George BERKELEY to the logical extreme of radical SKEPTICISM. He repudiated the possibility of certain knowledge, finding in the mind nothing but a series of sensations, and held that cause-and-effect in the natural world derives solely from the conjunction of two impressions. Hume's skepticism is also evident in his writings on religion, in which he rejected any rational or natural theology. Besides his chief work, *A Treatise of Human Nature* (1739–40), he wrote *Political Discourses* (1752), *The Natural History of Religion* (1755), and a *History of England* (1754–62) that was, despite errors of fact, the standard work for many years.

humidity, moisture content of the atmosphere, a major element of climate. Humidity measurements include *absolute humidity,* the mass of water vapor per unit volume of natural air; *relative humidity* (usually meant when the term *humidity* alone is used), the ratio of the actual water-vapor content of the air to its total capacity at a given temperature; and *specific humidity,* the mass of water vapor per unit mass of a natural air. Relative humidity is usually measured by means of a HYGROMETER. The National Weather Service's **temperature-humidity index** gives a single numerical value that serves as a measure of comfort (or discomfort) during warm weather. When the index is at 70, most people feel comfortable; at 75 about one half are comfortable; at 80 most are uncomfortable.

hummingbird, small, colorful BIRD with a long, slender bill, of the New World family Trochilidae, found chiefly in the mountains of South America. Hummingbirds vary in size from the 2¼-in. (6-cm) fairy hummingbird of Cuba, the smallest of all birds, to the 8½-in. (21.6-cm) giant hummer of the Andes. They are usually seen hovering or darting (at speeds of up to 60 mi/97 km per hr) in the air, beating their wings at 50 to 75 beats per sec. Constant feeding supplies their enormous energy needs. At night they lapse into a state of torpor similar to HIBERNATION.

Humperdinck, Engelbert, 1854–1921, German composer and teacher, friend and associate of Richard WAGNER. He is known chiefly for his first opera, *Hänsel und Gretel* (1893), loved for its fairy-tale subject and folk-based music.

Humphrey, Doris, 1895–1958, American modern dancer and choreographer; b. Oak Park, Ill. She was a soloist with the Denishawn companies until 1927, when she formed a company with Charles WEIDMAN. A foremost figure in MODERN DANCE, she choreographed *Water Study* (1928) and *Theater Piece No. 2* (1956).

Humphrey, Hubert Horatio, 1911–78, U.S. vice president (1965–69); b. Wallace, S.D. He served as mayor of Minneapolis (1945–48) and U.S. senator from Minnesota (1949–64, 1971–78). A strong advocate of civil rights, he was vice president under L.B. JOHNSON. In 1968 he was the Democratic presidential candidate but lost a close election to Richard M. NIXON.

humus, organic matter decayed to a relatively stable, amorphous state. An important component of fertile SOIL, it affects physical properties such as soil structure, water retention, and EROSION resistance. Humus is formed when soil microorganisms decompose animal and plant material into elements usable by plants (see FERTILIZER).

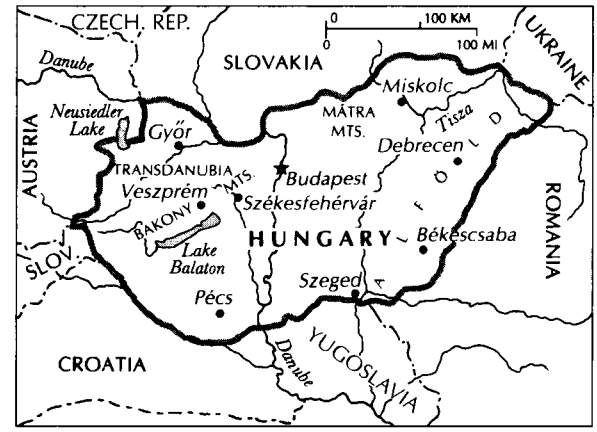
Hundred Days, in French history, the period (Mar. 20 to June 28, 1815) that began when NAPOLEON I reentered Paris after his exile on Elba. It ended when LOUIS XVIII was restored after Napoleon's defeat in the WATERLOO CAMPAIGN.

Hundred Years War, 1337–1453, conflict between England and France. Its basic cause was a dynastic quarrel between the kings of England, who held the duchy of Guienne, in France, and resented paying homage to the kings of France. There were several immediate causes: a quarrel between EDWARD III of England and PHILIP IV of France over a part of Guienne held by France; English attempts to control the commercially important FLANDERS, a French possession; fishing disputes in the English Channel; and Philip's support of Scotland in its dispute with England. The war began in 1337, when Edward, assuming the title King of France, invaded France. The English won a sea battle at Sluis (1340) and land battles at Crécy (1346), Calais (1347), and Poitiers (1360), where King John II of France was captured. The Treaty of Brétigny (1360) awarded England Calais, Aquitaine, and a large ransom for the captured king. In return, England gave up its claim to the French crown. The war resumed in 1369, when nobles in Aquitaine rebelled over the oppressive tax policies of EDWARD THE BLACK PRINCE. By 1373 DU GUESCLIN had won back most of the English claims. The conflict then languished until 1415, when HENRY V of England defeated France's best knights at AGINCOURT. He then allied himself with Burgundy and went on to subdue Normandy. In the Treaty of Troyes (1420), CHARLES VI of France was forced to recognize Henry as regent and heir to the throne of France, disinheriting his own son, the dauphin. By 1429 the English and their Burgundian allies controlled practically all of France N of the Loire and had Orléans under siege. French fortunes were reversed that year, however. JOAN OF ARC lifted the siege of Orléans and saw the dauphin crowned as CHARLES VII at Rheims. Her capture and execution did not end the string of French victories. In 1435 Charles obtained an alliance with Burgundy, and by 1450 France had reconquered Normandy. By 1451 all of Guienne except Bordeaux was in French hands. Bordeaux fell in 1453, leaving the English only Calais (which they retained until 1558). Domestic difficulties, specifically the Wars of The ROSES, kept England from making any further attempts to conquer France. The Hundred Years War inflicted untold misery on the French people. Famine, the Black Death, and roving bands of marauders decimated the population. An entirely new France emerged. The virtual destruction of the feudal nobility allowed the monarchs to unite the country more solidly under the royal authority and to ally themselves with the newly rising middle class. England ceased thinking of itself as a continental power and began to develop as a sea power.

Hungarian language, member of the Ugrian group of the Finno-Ugric languages, which form a subdivision of the URALIC AND ALTAIC family of languages. See LANGUAGE (table).

Hungary, Hung. *Magyarország,* officially Republic of Hungary, republic (1992 est. pop. 10,333,000), 35,919 sq mi (93,030 sq km), central Europe; bordered by Slovakia (N), Ukraine (NE), Romania (E), Yugoslavia, Croatia, and Slovenia (S), and Austria (W). The capital is BUDAPEST. The DANUBE R. forms part of the border with Slovakia, then turns south and bisects the country. East of the Danube lies the Great Hungarian Plain (Hung. *Alföld*); W of the river are the Little Alföld and the Transdanubian region. Lake Balaton, the largest lake in Europe, is a leading resort area. Traditionally agricultural, Hungary has become heavily industrialized since World War II, producing machinery, textiles, metal goods, chemicals, and motor vehicles. Major farm products are corn, wheat, sugar beets, barley, potatoes, grapes and other fruit, livestock, and poultry. Bauxite and coal are the most important mineral resources. The people are largely ethnic Hungarians; GYPSIES are the largest minority (5.8%). About two thirds of the population is Roman Catholic, but there is a large Protestant minority and nearly 100,000 Jews (the largest Jewish population in central Europe). Hungarian is the official language.

History. Most of the area that is now Hungary and TRANSYLVANIA was conquered in the late 9th cent. A.D. by the MAGYARS, a Finno-Ugric people from beyond the Urals; Christianization was completed by St. STEPHEN (r.1001–38), first king of Hungary. A feudal society developed, controlled by a few powerful nobles, the magnates. Hungary was ruled after 1308 by the Angevin dynasty and after 1386 by other foreign houses. In 1526 the Ottoman Turks defeated the Hungarians at the battle of Mohács. In the long wars that followed, the Turks dominated most of Hungary, while Transylvania was ruled by noble families (see BÁTHORY and RÁKÓCZY). By 1711, however, all Hungary had fallen under HAPSBURG control. A short-lived independent Hungarian republic (1849) under Louis KOSSUTH was overthrown by Austrian and Russian troops, and in 1867 the AUSTRO-HUNGARIAN MONARCHY was established, in which Austria and Hungary were nearly equal partners. After the collapse of the Dual Monarchy in WORLD WAR I, Hungary was proclaimed (1918) an independent republic and was drastically reduced in area and population by the Treaty of Trianon (1920). The Communist dictatorship (1919) of Béla KUN was put down by Romanian intervention, and in 1920 Adm. Nicholas HORTHY DE NAGYBÁNYA became regent of a kingless Hungarian kingdom. In WORLD WAR II Hungary joined (1941) the AXIS and was invaded (1944) by the USSR. A republican constitution was adopted in 1946, but a Communist coup d'etat in 1948 set up a totalitarian people's republic in 1949. In 1956 a popular anti-Communist revolution, led by former premier Imre NAGY, was suppressed by Soviet forces. However, the Soviet-supported counter-government of János KÁDÁR, one of Nagy's ministers, slowly liberalized the country's economic, political, and cultural life. "Goulash communism" made Hungary the most prosperous Soviet-bloc nation, but economic stagnation and decline set in during the 1970s and 80s. In 1988 Kádár was replaced as party leader by a moderate reformer. In 1990 the conservative Hungarian Democratic Forum (HDF) and its allies won a parliamentary majority. József Antall became prime minister, and Árpád Göncz, a writer and former dissident, was elected president. The new government embarked on the privatization of Hungary's state enterprises, selling interests in more than half of such businesses by 1993. Antall died in 1993 and was succeeded as prime minister by Péter Boross.



Huns, nomadic people who originated in north-central Asia. Although in customs they resemble the MONGOLS and MAGYARS, they appear not to have been related ethnically to other groups. Short and somewhat Mongolic in appearance, the Huns were organized into ravaging military hordes riding small, rapid horses. In the 3d cent. B.C. they invaded China, where part of the GREAT WALL was built to exclude them. They appeared in the Volga valley c.372; the Goths were pushed west, where they destroyed the Roman Empire. Most of European Russia, Poland, and Germany paid tribute to ATTILA, the greatest Hun king. Defeated (451) in Gaul, the Huns ravaged Italy until Attila's death (453), after which little is known of them.

Hunt, Holman: see HUNT, WILLIAM HOLMAN.

Hunt, (James Henry) Leigh, 1784–1859, English writer. Hunt edited liberal weeklies, notably the *Examiner* (1808–21), and wrote many critical articles. He befriended the important writers of his time, among them KEATS and SHELLEY. His own fame rests on his essays, his lyrics "Abou Ben Adhem" and "Jenny Kissed Me," and his autobiography (1850).

Hunt, Richard Morris, 1828–95, American architect, an exponent of 19th-cent. eclecticism; b. Brattleboro, Vt.; brother of W.M. HUNT. In New York City he founded the first studio to train architects. Most of his work imitated historical styles, e.g., the Lenox Library, N.Y.C., and mansions in New York and Newport, R.I.

Hunt, William Holman, 1827–1910, English painter. He was a founder of the PRE-RAPHAELITE brotherhood, and his sincere devotion to its principles can be seen in such paintings as *The Light of the World* (Oxford Univ.).

Hunt, William Morris, 1824–79, American painter; b. Brattleboro, Vt. A disciple of the BARBIZON SCHOOL, which he introduced into Boston, he exerted great influence on American art. His paintings include portraits, landscapes, and figure pieces, e.g., *Girl at a Fountain* (Metropolitan Mus.).

Huntington, Collis Potter, 1821–1900, American railroad builder; b. near Torrington, Conn. He helped organize the Central Pacific RR and eventually gained for himself and his partners practical control of transportation in the West, consolidated (1884) in the Southern Pacific RR. Most of his vast fortune was left to his nephew **Henry Edwards Huntington,** 1850–1927, b. Oneonta, N.Y., who endowed his estate at San Marino, Calif., for public use. It is the site of the **Henry E. Huntington Library and Art Gallery,** which has one of the largest collections of incunabula in America. It also excels in rare American and British documents, manuscripts, and books, and in 18th-cent. paintings.

Huntington, Henry Edwards: see under HUNTINGTON, COLLIS POTTER.

Huntington, city (1990 pop. 54,844), seat of Cabell co., W W.Va., on the Ohio R.; founded 1871 as the western terminus of the Chesapeake & Ohio RR. It is a river port and commercial center with a large bituminous coal trade. Glass and chemical industries and railroad yards are important.

Huntington Beach, city (1990 pop. 181,519), Orange co., S Calif., on the Pacific coast, across from Santa Catalina Island (see SANTA BARBARA ISLANDS), in a vegetable- and citrus-growing area; inc. 1909. It has oil refineries and aerospace, communications, and other industries. Its fine beaches are well known.

Huntington Library and Art Gallery: see under HUNTINGTON, COLLIS POTTER.

Huntington's disease, formerly **Huntington's chorea,** hereditary disease of the central nervous system, beginning usually in middle age and characterized by involuntary jerky movements, personality changes, and progressive mental deterioration. It is caused by a mutated gene on chromosome 4. The child of a person with Huntington's has a 50% chance of inheriting the gene, which inevitably leads to the disease.

Huntsville, city (1990 pop. 159,789), seat of Madison co., N Ala.; inc. 1811. A major space research center, Huntsville is the site of the Redstone Arsenal, the U.S. Army's missile and rocket center; NASA's Marshall Space Flight Center; and the Alabama Space and Rocket Center, the world's largest space museum. Local industry also includes tires, glass, and electrical equipment. Alabama's first constitution was written (1819) in Huntsville. Numerous antebellum buildings remain.

Huron, confederation of four Native American groups of the Eastern Woodlands (see NORTH AMERICA, INDIGENOUS PEOPLES OF) who spoke Wyandot, an Iroquoian language of the Hokan-Siouan stock (see NATIVE AMERICAN LANGUAGES). Numbering about 20,000 in the 17th cent., they lived in palisaded villages near Georgian Bay in Ontario and grew tobacco. In the mid-17th cent. the Iroquois (see IROQUOIS CONFEDERACY) hunted them down relentlessly. In 1750 they settled in Ohio; there they were known as the Wyandot to the British, with whom they sided in the AMERICAN REVOLUTION. In 1867 they were removed to NE Oklahoma, where some hundreds now live as citizens, the tribe having been terminated in 1959. In 1990 there were 1,947 Wyandots in the U.S.

Huron, Lake, second largest (23,010 sq mi/59,596 sq km) of the GREAT LAKES and fourth largest lake in the world, on the U.S.-Canada border. It is 206 mi (332 km) long and up to 183 (295 km) wide, with a surface elevation of 580 ft (177 m). It receives the waters of Lake Superior through the St. Marys R. and of Lake Michigan through the Straits of Mackinac, and it drains S into Lake Erie through the St. Clair R.–Lake St. Clair–Detroit R. system.

hurricane, tropical CYCLONE formed over the North Atlantic, E North Pacific, W South Pacific, and Indian oceans in which the winds attain speeds greater than 75 mph (121 km/hr). A tropical cyclone passes through two stages, tropical depression and tropical storm, before reaching hurricane force. An average of 3.5 tropical storms per year become hurricanes; one to three of these approach the U.S. coast. Hurricanes usually develop between July and October. A hurricane is nearly circular in shape, and its winds cover an area about 500 mi (800 km) in diameter. As a result of the extremely low central air pressure (around 28.35 in/72 cm of mercury), air spirals inward toward the hurricane's eye, an almost calm area about 20 mi (30 km) in diameter. Hurricanes, which may last from 1 to 30 days, usually move westward in their early stages and then curve northward toward the pole. Deriving their energy from warm tropical ocean water, hurricanes weaken after prolonged contact with colder northern ocean waters, becoming extratropical cyclones; they decay rapidly after moving over land areas. The high winds, coastal flooding, and torrential rains associated with a hurricane may cause enormous damage. Tropical cyclones that form over the E North Pacific Ocean and its seas are called typhoons; those over the Indian Ocean and its seas, cyclones.

Hurston, Zora Neale, 1901–60, African-American writer; b. Eatonville, Fla. An anthropologist who sympathetically interpreted African-American folktales in such collections as *Mules and Men* (1935) and *Tell My Horse* (1938), Hurston also wrote two novels, *Jonah's Gourd Vine* (1934) and *Their Eyes Were Watching God* (1937).

Husák, Gustav [hōō'säk], 1913–91, Czechoslovakian Communist leader. After the Soviet invasion of 1968, he succeeded (1969) DUBČEK as Communist party leader and later served as president (1975–89). He reestablished close ties with the USSR and reinstituted tight party control over the government. Widespread opposition to Communist rule forced Husák to resign as president in 1989. He was succeeded by Václav HAVEL, a former dissident.

Husayn ibn Ali, 1856–1931, Arabian political and religious leader. He led the revolt against the Turks and made himself (1916) king of the Hejaz, but he was overthrown (1924) by IBN SAUD. His effort to claim the title of caliph was also unsuccessful. He was the father of ABDULLAH of Jordan and FAISAL I of Iraq.

Hu Shih [hōō shŭr], 1891–1962, Chinese philosopher in Republican China. He promoted vernacular literature to replace writing in the classical style. He was ambassador to the U.S. (1938–42) and chancellor of Peking Univ. (1946–48).

husky: see SIBERIAN HUSKY.

Huss, John [hŭs], Czech *Jan Hus,* 1369?–1415, Czech religious reformer. A priest, he was influenced early by the writings of John WYCLIF. Huss attacked the abuses of the clergy and was supported by Holy Roman Emperor WENCESLAUS, who made him rector of the Univ. of Prague (1409). Huss, however, incurred the hostility of the archbishop of Prague, who had him excommunicated in 1410. He then wrote his chief works, including *De ecclesia,* in exile near Tabor. Because Huss denied the infallibility of an immoral pope and asserted the ultimate authority of Scripture over the church, he is generally considered a forerunner of the Protestant REFORMATION. The Emperor SIGISMUND invited him to defend his views at the Council of Constance (1414–18) and granted him a safe-conduct. In 1414 Huss presented himself at the council, which refused to recognize his safe-conduct, tried him as a heretic, and burned him at the stake.

Hussein I, 1935–, king of JORDAN (1953–). He has maintained a moderate course in his relations with the West and other Arab leaders. The loss of W Jordan to Israel in the 1967 ARAB-ISRAELI WAR led to hostility between Hussein and the Palestinian guerrilla movement and to a civil war (1970) in Jordan that Hussein won, achieving stronger control of the country. In 1974 he agreed to relinquish all Jordanian claims to the WEST BANK to the PALESTINE LIBERATION ORGANIZATION.

Hussein, Saddam, 1937–, Iraqi political leader. A member of the Ba'ath party, Hussein played a prominent part in the 1968 coup that brought the party to power. He became party leader and president in 1979 and has ruled Iraq ruthlessly since. He used the nation's oil revenues to make Iraq a major Arab military power and led the country into the IRAN-IRAQ WAR and PERSIAN GULF WAR.

Husserl, Edmund, 1859–1938, German philosopher, founder of PHENOMENOLOGY. A student of Franz BRENTANO, Husserl offered a descriptive study of consciousness for the purpose of discovering the laws by which experiences are had, whether of the objective world or of pure imagination. He concluded that consciousness

has no life apart from the objects it considers. In his later work he moved toward IDEALISM, denying that objects exist outside of consciousness. His chief works were *Logical Investigations* (1900–1901) and *Ideas for a Pure Phenomenology* (1907). His most prominent pupil was Martin HEIDEGGER.

Hussites, 15th-cent. religious reformers in Bohemia and Moravia, followers of John HUSS. In the Four Articles of Prague (1420), they called for freedom of preaching, communion in both bread and wine, limits to church property holding, and civil punishment of mortal sin. Papal and imperial forces opposed the reformers in the Hussite Wars, during which the Hussites split into two factions, the moderate Ultraquists and the radical Taborites. The Ultraquists were reconciled to the church in 1436, but the Taborites remained obstinate and were finally defeated at Lipany (1534). During the REFORMATION some Ultraquists became Lutherans. The MORAVIAN CHURCH probably descended from the Taborites.

Huston, John, 1906–87, American film director; b. Nevada, Mo. His films include *The Maltese Falcon* (1941); *The Treasure of the Sierra Madre* (1947), with his father, the actor Walter Huston (1884–1950); *The African Queen* (1951); *Moby Dick* (1956); and *The Dead* (1987).

Hutchins, Robert Maynard, 1899–1977, American educator; b. Brooklyn, N.Y. He was president (1929–45) and chancellor (1945–53) of the Univ. of Chicago. Chairman of the board of editors for the *Encyclopaedia Britannica* after 1943, he was an enthusiast for adult education and in 1946 promoted the "Great Books" program. He later directed various research foundations, including the Center for the Study of Democratic Institutions (Santa Barbara, Calif.). His books include *The Higher Learning in America* (1936) and *The Learning Society* (1968).

Hutchinson, Anne (Marbury), c.1591–1643, religious leader in New England; b. England. She emigrated (1634) to Massachusetts Bay, where her brilliant mind won her a following. Believing that a person justified by grace could discover God's will not only through the Bible but directly through the spirit as well, she broke with Puritan orthodoxy. Banished as a heretic (1637), she helped found present-day Portsmouth, R.I. She later moved to what is now Pelham Bay Park, N.Y.C., where she was killed by Native Americans.

Hutton, James, 1726–97, Scottish geologist who formulated controversial theories of the origin of the earth (see UNIFORMITARIANISM) that paved the way to modern geology. His great work was *The Theory of the Earth* (2 vol., 1795). John Playfair, in his *Illustrations of the Huttonian Theory of the Earth* (1802), simplified Hutton's theories.

Huxley, Aldous Leonard, 1894–1963, English author; grandson of T.H. HUXLEY. After writing critical essays and symbolist poetry, he turned to the novel. *Crome Yellow* (1921), *Antic Hay* (1923), and *Point Counter Point* (1928) all depict social decadence. *Brave New World* (1932) describes a nightmarish 25th-cent. Utopia. Other works include *Eyeless in Gaza* (1936) and *Ape and Essence* (1948). In later years he was strongly interested in mysticism and Eastern philosophy. Huxley also published many short stories and essays.

Huxley, Andrew Fielding, 1917–, British physiologist; half-brother of Aldous HUXLEY; grandson of Thomas HUXLEY. He and Alan HODGKIN shared with Sir John Eccles the 1963 Nobel Prize in physiology or medicine for their analysis of the electrical and chemical events in nerve-cell discharge. He served as president of the Royal Society (1980–85).

Huxley, Thomas Henry, 1825–95, English biologist and educator. He gave up his own biological research to become an influential science publicist and was the principal exponent in England of Charles DARWIN's theory of EVOLUTION. An agnostic (see AGNOSTICISM), he doubted all things not immediately open to logical analysis and scientific verification. However, he placed human ethics outside the scope of materialistic evolutionary processes and believed that progress was achieved by the human control of evolution.

Hu Yaobang, 1915–89, Chinese Communist leader. An associate of DENG XIAOPING, he served as general secretary of the Chinese Communist party (1980–87) until protest demonstrations forced him to resign. ZHAO ZIYANG replaced him.

Huygens, Christiaan [hoi'gəns], 1629–95, Dutch mathematician and physicist; son of Constantijn HUYGENS. He improved telescopic lenses, was the first to interpret correctly the ring structure surrounding SATURN, and discovered its satellite Titan. He was the first to use a pendulum in clocks. Huygens developed a wave theory of LIGHT opposed to Isaac NEWTON's corpuscular theory and formulated Huygens's principle of light waves, which holds that every point on a wave front is a source of new waves. He discovered the polarization of light (see POLARIZED LIGHT) in calcite.

hyacinth, bulbous herb (genus *Hyacinthus*) of the LILY family, native to the Mediterranean region and South Africa. The common hyacinth, cultivated primarily in Holland, has a single spike of fragrant flowers in shades of red, blue, white, or yellow. The smaller, related grape hyacinth (*Muscari*), mostly blue-flowered, is also commonly cultivated.

Hyatt, John Wesley, 1837–1920, American inventor; b. Starkey, N.Y. He is known especially for his development of CELLULOID, which he manufactured with his brothers, beginning in 1872. Among his other inventions were the Hyatt filter, a means of chemically purifying water while it is in motion, and a widely used type of roller bearing.

hybrid, term used by plant and animal breeders for the offspring of a cross between two different subspecies or species. In genetics it is the term for the offspring of parents differing in any genetic characteristic.

Hyde, Edward: see CLARENDON, EDWARD HYDE, 1ST EARL OF.

Hyde Park, town (1990 pop. 21,230), Dutchess co., SE N.Y., on the Hudson R.; settled c.1740, inc. 1821. Franklin D. ROOSEVELT was born there and is buried on the Roosevelt estate. The Roosevelt Library (1941) contains a wealth of historical material. The town also contains the mansion of Frederick W. Vanderbilt (grandson of Cornelius VANDERBILT), two state parks, and a culinary institute.

Hyderabad, former state, S central India. It is now divided among the states of Karnataka, Maharashtra, and Andhra Pradesh. Located almost entirely on the Deccan plateau, it has cotton, grain, and rice crops and deposits of iron and coal. The seat of an ancient Hindu civilization, it fell to the MOGULS in the 17th cent. In 1948 a plebiscite endorsed union with India rather than independence under its Muslim prince. In 1950 it was divided among neighboring states. **Hyderabad,** city (1991 pop. 4,280,261), capital of Andhra Pradesh state, is an administrative and commercial center. Its historic structures include the 16th-cent. Char Minar ("four minarets") and Old Bridge.

Hyderabad, city (1981 pop. 702,539), S Pakistan. The third largest city in Pakistan, it has food-processing, textile, metalworking, and other industries. It was founded in 1768 and was the capital of the emirs of Sind. The British EAST INDIA COMPANY occupied it when the Sind became (1839) a British protectorate. The birthplace of the MOGUL emperor AKBAR is nearby.

hydra, freshwater organism (class Hydrazoa) widely distributed in lakes, ponds, and sluggish streams; a COELENTERATE. Hydras are small, cylindrical, solitary animals, about 1 in. (2.5 cm) long, that attach themselves temporarily to submerged objects by means of a disk at the anal end. Tentacles equipped with stinging cells (nematocysts) surround the mouth; hydras use them to stun their prey.

Hydra, in Greek mythology, many-headed water serpent. When one of its heads was cut off, two new ones appeared. It was killed by HERCULES, who burned the neck after decapitation.

hydrangea: see SAXIFRAGE.

hydraulic machinery, machines that derive their power from the motion or pressure of water or some other liquid. Water or oil under pressure is commonly used as a source of power for many types of machines. The hydraulic press, used, e.g., to form three-dimensional objects from sheet metal or plastics and to compress large objects, consists of two cylinders of different size, each filled with liquid and fitted with a piston, and each connected to a pipe filled with the same liquid. According to Pascal's law, pressure exerted upon the smaller piston is transmitted undiminished through the liquid to the surface of the larger piston, which is forced upward. A small pressure exerted on the smaller piston creates a stronger force on the larger piston, because the area of the latter is larger and the distance it moves is less. The same principle is used to power the hydraulic jack, which is used to lift

heavy loads. The hydraulic ELEVATOR is also an application of Pascal's law.

hydraulics, branch of engineering that studies the mechanical properties of fluids. There are two subdivisions. *Hydrostatics,* the study of liquids at rest, involves the problems of buoyancy and flotation, pressures on dams and submerged devices, and hydraulic presses. *Hydrokinetics,* the study of liquids in motion, is concerned with such matters as friction and turbulence generated in pipes by flowing liquids and the use of hydraulic pressure in machinery.

hydrocarbon, any organic compound composed solely of CARBON and HYDROGEN. Hydrocarbons include aliphatic compounds, in which the carbon atoms form a chain, and AROMATIC COMPOUNDS, in which the carbon atoms form stable rings. The aliphatic group is divided into alkanes (e.g., METHANE and PROPANE), alkenes, and alkynes (e.g., ACETYLENE), depending on whether the molecules of the compounds contain, respectively, only single bonds, one or more carbon-carbon double bonds, or one or more carbon-carbon triple bonds. PETROLEUM distillation yields useful fractions that are hydrocarbon mixtures, e.g., NATURAL GAS, GASOLINE, KEROSENE, home heating oil, lubricating oils, PARAFFIN, and ASPHALT. Coal TAR is also a source of hydrocarbons. Hydrocarbon derivatives contain additional elements, e.g., oxygen, and include ALCOHOLS, aldehydes, ketones, carboxylic acids, and halocarbons.

hydrochloric acid, chemical compound formed by dissolving hydrogen chloride (HCl) in water. Most hydrochloric acid produced has a concentration of 30% to 35% hydrogen chloride by weight. Hydrochloric acid is a strong acid (see ACIDS AND BASES) and reacts with most common metals, releasing hydrogen and forming a metal chloride. The major use of hydrochloric acid is in the manufacture of other chemicals. It is also used in pickling (cleaning) metal surfaces, e.g., iron, before galvanizing.

hydrocortisone or **cortisol,** steroid HORMONE produced by the ADRENAL GLAND and involved in carbohydrate and protein metabolism and in response to stress. Like CORTISONE it is used to treat ADDISON'S DISEASE, inflammatory and rheumatoid diseases, allergies, and some cancers. Low-potency hydrocortisone, available over the counter, is used to treat skin irritations.

hydrodynamics: see FLUID MECHANICS.

hydroelectric power: see POWER, ELECTRIC.

hydrofoil, finlike device, attached by struts to the hull of a watercraft, that lifts the moving craft above the water's surface. The term also designates the vessel itself. Like an aircraft wing, the foil develops lift as it passes through the water; the hull is raised above the surface, and the reduced water drag permits greater speed. Some hydrofoil vessels are capable of traveling faster than 70 mph (113 km/hr). Hydrofoil vessels are used as ferries and naval craft. A type of hydrofoil called a stabilizer is used on oceangoing passenger ships to minimize the effect of wave action on the vessel.

hydrogen (H), gaseous element, discovered by Henry CAVENDISH in 1766. The first element on the PERIODIC TABLE, hydrogen is colorless, odorless, tasteless, slightly soluble in water, and highly explosive. The hot flame produced by a mixture of oxygen and hydrogen is used in welding and in melting quartz and glass. Normal hydrogen is diatomic (see ALLOTROPY). The most abundant element in the universe, hydrogen is the major fuel in fusion reactions of the SUN and other STARS. Atmospheric hydrogen has three isotopes: *protium* (nucleus: one proton), the most common; *deuterium,* or heavy hydrogen (nucleus: one proton and one neutron), used in particle accelerators and as a tracer for studying chemical-reaction mechanisms; and *tritium* (nucleus: one proton and two neutrons), a radioactive gas used in the hydrogen bomb, in luminous paints, and as a tracer. Hydrogen's principal use is in the synthesis of AMMONIA; liquid hydrogen has been greatly used as a rocket fuel, in conjunction with oxygen or fluorine. Deuterium oxide, or heavy water, is used as a moderator in nuclear reactors. See ELEMENT (table).

hydrogen bomb, weapon deriving a large portion of its energy from the nuclear fusion of hydrogen isotopes. In fusion lighter elements are joined together to form heavier elements, and the end product weighs less than the components forming it. The difference in mass is converted into energy. Because extremely high temperatures are required to initiate fusion reactions, a hydrogen bomb is also known as a thermonuclear bomb. The structure of a hydrogen bomb is as follows: an ATOMIC BOMB is surrounded by a layer of lithium deuteride (a compound of lithium and deuterium) and then by a tamper, or thick outer layer, frequently of fissionable material, that holds the contents together in order to obtain a larger explosion. The atomic explosion produces neutrons that fission the lithium into helium, tritium, and energy, and creates the extremely high temperature needed for the subsequent fusion of deuterium with tritium, and of tritium with tritium. Explosion of the neutron bomb, which has a minimal atomic trigger and a nonfissionable tamper, produces blast effects and a hail of lethal neutrons but almost no radioactive fallout. The first thermonuclear bomb was exploded in 1952 at ENEWETAK by the U.S., the second in 1953 by the USSR. See also DISARMAMENT, NUCLEAR.

hydrogen chloride: see HYDROCHLORIC ACID.

hydrogen cyanide: see CYANIDE.

hydrogen peroxide: see PEROXIDE.

hydrology, study of water and its properties, including its distribution and movement in and through the land areas of the earth. The hydrologic cycle consists of the passage of water from the oceans into the atmosphere; onto, through, and under the lands; and back to the ocean. Hydrology is mainly concerned with the part of the cycle that follows the precipitation of water onto the land and precedes its return to the oceans. See also METEOROLOGY; OCEANOGRAPHY.

hydrolysis, chemical reaction of a compound with WATER, usually resulting in the formation of one or more new compounds. The most common hydrolysis occurs when a salt of a weak acid or weak base (or both) is dissolved in water. Water ionizes into negative hydroxyl ions (OH^-) and positive hydrogen ions (H^+), which become hydrated to form positive hydronium ions (H_3O^+). The salt also breaks up into positive and negative ions, and the formed ions recombine.

hydrometer, calibrated glass float used to determine the SPECIFIC GRAVITY of a liquid. It usually consists of a thin glass tube that is weighted at one end so that it will float upright in a liquid. The scale reading on the tube that is level with the surface of the liquid in which the hydrometer floats indicates the number of times heavier or lighter the liquid is than water, i.e., the specific gravity of the liquid. The hydrometer is based on ARCHIMEDES' PRINCIPLE.

hydrophobia: see RABIES.

hydrophone, device, used in SONAR apparatus and in certain underwater weapons, that receives underwater sound waves and converts them to electrical energy. The voltage generated can then be read on a meter or played through a loudspeaker. It is the marine equivalent of the MICROPHONE.

hydroponics, growing of plants without soil, in water (and sometimes a sterile medium, e.g., sand) containing balanced concentrations of essential nutrients. Hydroponics can increase yields of commercial crops because plants are grown closer together than in the field; it also almost eliminates weeds and pests. The technique is limited by the support required to hold a given plant upright.

hydrothermal vent, crack along a rift or ridge in the deep ocean floor that spews out water heated by the magma under the earth's crust. Giant tube worms, yellow mussels, and pink sea urchins are found in the unique ecological systems that surround the vents. All of these animals live on bacteria that use CHEMOSYNTHESIS to produce energy from dissolved hydrogen sulfide. The vents' hot springs leach out valuable subsurface minerals and deposit them on the ocean floor. Some scientists believe such vents may have been the source of life on earth.

hydroxide, chemical compound that contains the hydroxyl (—OH) radical. The term refers especially to inorganic compounds. Organic compounds that have the hydroxyl radical as a functional group are referred to as ALCOHOLS. Most metal hydroxides are bases. ALKALI METAL hydroxides, such as sodium hydroxide (NaOH), are strong bases and are very soluble in water. The ALKALINE-EARTH METAL hydroxides are less basic, and magnesium hydroxide (MILK OF MAGNESIA) is only slightly basic. Some hydroxides, such as aluminum hydroxide [$Al(OH)_3$], exhibit AMPHOTERISM.

hyena, chiefly nocturnal MAMMAL of the family Hyaenidae of Africa and SW Asia. Known for its cry, which sounds like maniacal laughter, it feeds mostly on carrion and can crush bones with its strong

The key to pronunciation appears on page xiii.

teeth and jaws. Three species are generally recognized: the spotted hyena (*Crocuta crocuta*) of sub-Saharan Africa; the smaller striped hyena (*Hyaena hyaena*) of Asia and N Africa; and the brown hyena (*H. brunnea*) of S Africa.

hygrometer, instrument used to measure the moisture content of a gas, as in determining the relative HUMIDITY of the air. The most common type of hygrometer is the dry- and wet-bulb psychrometer. It consists of two identical mercury THERMOMETERS, one of which has a wet wick around its bulb. The sling type of psychrometer is swung around in the air. Water evaporating from the wick absorbs heat from the bulb, causing the thermometer reading to drop. The observer, after reading the dry-bulb temperature and the drop in the wet-bulb temperature, can determine the relative humidity from appropriate tables. Among other kinds of hygrometers are ones that use human hair or electrical resistance, rather than thermometers, to determine moisture content.

Hyksos [Egyptian, = rulers of foreign lands], invaders of ancient EGYPT, now substantiated as the XV–XVII dynasties. A northwestern Semitic people, they entered Egypt c.1720–1710 B.C. and subdued the Middle Kingdom pharaohs. The Hyksos established a peaceful, prosperous reign. Their introduction of Canaanite deities and Asian artifacts broke down the isolationism of Egypt.

hyperactivity, excessive physical activity of emotional or physiological origin, usually seen in young children; one of the components of ATTENTION DEFICIT HYPERACTIVITY DISORDER.

hyperbola: see CONIC SECTION.

hyperbolic geometry: see NON-EUCLIDEAN GEOMETRY.

Hyperion, in astronomy, natural satellite of SATURN.

hypertension, elevated blood pressure resulting from an increase in the amount of blood pumped by the heart or from increased resistance to the flow of blood through the small arterial blood vessels (arterioles). When the cause is unknown, the condition is called primary, or essential, hypertension. When a cause can be identified (e.g., a disorder of the adrenal glands, kidneys, or arteries), the condition is known as secondary hypertension. Factors such as heredity, obesity, and emotional stress are thought to play a role. Known as the "silent killer," hypertension often produces few overt symptoms; it may, however, result in damage to the heart, eyes, kidneys, or brain and ultimately lead to heart failure or STROKE. Treatment of hypertension includes diets to reduce weight and alcohol intake, increased exercise, and various drugs, such as DIURETICS, BETA BLOCKERS, ACE INHIBITORS, and CALCIUM-CHANNEL BLOCKERS (see also BIOFEEDBACK). Recent research has questioned the importance of dietary salt as a major contributor to hypertension, and other studies point to low calcium intake as a cause.

hypertext, technique for organizing computer databases or documents to facilitate the nonsequential retrieval of information. Related pieces of information are connected by predefined or user-created links that allow a user to follow associative trails across the database. The linked data may be in a text, graphic, or audio format, allowing MULTIMEDIA presentations. Hypertext applications offer a variety of tools for very rapid searches for specific information. See also INFORMATION STORAGE AND RETRIEVAL.

hypnosis, altered state of consciousness characterized by focused concentration similar to that experienced when daydreaming or concentrating and oblivious to distraction. It allows access to the highly suggestible subconscious mind by quieting the conscious mind. Research has shown electrical changes in the brain during hypnosis; the brain waves of a hypnotized person are usually different from those of a person in the normal waking state. Most people can be hypnotized, although the ability varies from person to person. Techniques vary but usually involve deep relaxation accompanied by the focusing of the mind (as on an object or the voice of the hypnotist). Hypnosis is occasionally used as an aid in medical practice, especially for anesthesia and pain relief; in psychotherapy, e.g., to help patients recall traumatic events and overcome denial; and in BEHAVIOR THERAPY, to assist people in breaking unwanted habits (e.g., smoking, overeating).

hypoglycemia, abnormally low level of blood glucose (sugar), the body's chief energy source (hence the term *low blood sugar*). It is most often caused by an oversecretion of insulin from the pancreas triggered by stress, exercise, fasting, or disorders of the adrenal or pituitary glands, liver, or pancreas; in persons with diabetes it may result from an overdose of insulin. Symptoms range from weakness, fatigue, shakiness, and anxiety to mental disturbances, convulsions, and coma. Acute episodes are relieved by ingestion of glucose or sucrose. Long-term treatment involves control of causative factors and diet regulation.

hypothalamus, important supervisory center in the BRAIN. The hypothalamus regulates body temperature, BLOOD PRESSURE, heartbeat, METABOLISM of fats and carbohydrates, and blood-sugar level. It participates, with other brain centers, in the control and monitoring of several other functions, such as water balance and certain motor responses. The hypothalamus is also thought to be involved in the expression of emotions and in sexual behaviors.

Hypsilanti: see YPSILANTI.

hysterectomy, surgical removal of the uterus, sometimes including the removal of the cervix, Fallopian tubes, and ovaries (see REPRODUCTIVE SYSTEM). It is performed in cases of malignant tumors or of benign growths causing bleeding and pain. Hysterectomy does not interfere with sexual activity, but since it eliminates the possibility of childbearing, it is avoided in younger women when more conservative treatment is feasible.

hysteria, any of several psychological conditions. In conversion hysteria, or conversion disorder, a psychological conflict is converted into a bodily disturbance. Symptoms, which have no underlying physical cause, may include limb paralysis, blindness, or convulsive seizures. Dissociative hysterical neuroses, or dissociative disorders, include multiple personality disorder and AMNESIA. Hysterical personality, or histrionic personality disorder, is characterized by excessive emotionality and attention-seeking. Because of the broad and confusing use of the term (and the popular use of *hysterics*), the term *hysteria* is gradually being replaced in psychiatry.

I

I, chemical symbol of the element IODINE.

Iacocca, Lee (Lido Anthony Iaccoca), 1924–, American business executive; b. Allentown, Pa. In 1946 he joined the Ford Motor Co., where he rose to president (1970–78). He left Ford after a dispute with Henry FORD II and became president (1978–79) and chairman (1979–92) of the Chrysler Corp., reviving it through shrewd financial policies and with a loan guarantee and tax concessions granted by Congress.

iambic pentameter: see PENTAMETER.

Iapetus, in astronomy, natural satellite of SATURN.

Iaşi [yäsh] or **Jassy** [yä'sē], city (1989 est. pop. 330,000), E Romania, in Moldavia, near the Moldova border. The center of a farming region, it produces chemicals, drugs, plastics, and textiles. It was (1565–1859) MOLDAVIA's capital. In World War II its large Jewish population was massacred by the Nazis.

Ibadan, city (1987 est. pop. 1,144,000), SW Nigeria. The second largest city of Nigeria, it is a major commercial and industrial center, producing metal products, furniture, soap, and handicrafts. The center of a rich agricultural area, it is a market for cocoa, which, with cotton, is grown in the region. Founded in the 1830s, it developed into the most powerful Yoruba city-state before coming under British protection in 1893.

Iberian Peninsula, SW Europe, c.230,400 sq mi (596,740 sq km). Occupied by Spain and Portugal, it is separated from the rest of Europe (NE) by the PYRENEES and from Africa (S) by the Strait of GIBRALTAR.

ibex, wild goat (genus *Capra*) found in rugged, mountainous country from central Asia to the Himalayas, S Europe, and NE Africa. Surefooted and agile, ibexes live in small herds and feed on vegetation. They are sturdily built, with brown to gray coats and heavy horns of varying size; the chin is bearded and the tail short. The adult ibex stands from 2½ to 3½ ft (76 to 106 cm) at the shoulder.

ibis, wading BIRD with long, slender, downcurved bill, found in warmer regions of the world. Its body is usually about 2 ft (61 cm) long; most feed on fish and other aquatic animals. The sacred ibis of ancient Egypt (*Threskiornis aethiopica*), a white and black bird, no longer frequents the NILE basin, although it inhabits other parts of Africa.

Ibiza: see BALEARIC ISLANDS.

Ibn al-Haytham [ĭb'ən äl-hīthäm'] or **Alhazen** [ălhəzen'], 965–c.1040, Egyptian mathematician, physicist, and astronomer; b. Persia. His *Optics,* which influenced the work of Johannes KEPLER and René DESCARTES, introduced the important idea that light rays emanate in straight lines in all directions from every point on a luminous surface. In mathematics, al-Haytham elucidated and extended EUCLID's *Elements.*

Ibn Ezra, Abraham ben Meir, 1098–1164, Jewish grammarian, commentator, poet, philosopher, and astronomer; b. Spain. Best known as a biblical critic, he was the inspiration for Robert BROWNING's poem "Rabbi Ben Ezra."

Ibn Gabirol, Solomon ben Judah, c.1021–1058, Jewish poet and philosopher, also known as Avicebron; b. Spain. He wrote hundreds of poems, both sacred and secular; much of his religious poetry has been incorporated into the Judaic liturgy. His great philosophical work *The Fountain of Life* greatly influenced Christian thought.

Ibn Khaldun [ĭb'ən khäldo͞on'], 1332–1406, Arab historian; b. Tunisia. Considered the greatest of Arab historians, he wrote *Kitab al-Ibar* [universal history], in which he treated history as a science and outlined a philosophy of history.

Ibn Saud [ĭ'bən säo͞od'], c.1888–1953, founder of SAUDI ARABIA and its first king. As leader of the WAHHABI sect he claimed ancient rights in the area. By 1912 he had conquered the Nejd, and he triumphed over HUSAYN IBN ALI and became king of the Hejaz in 1924. In 1932 he combined his conquests into the kingdom of Saudi Arabia.

Ibo, ethnic group in Nigeria, chiefly from SE Nigeria and numbering about 15 million. Receptive to Christianity and education under British colonialism, they became heavily represented in professional, managerial, and technical occupations. They played a major role in securing (1963) Nigerian independence. Political conflict in the 1960s caused the Ibos to secede from Nigeria and form the Republic of BIAFRA. Civil war followed, and by 1970 Biafra had been defeated.

Ibrahim Pasha, 1789–1848, Egyptian general, son of MUHAMMAD ALI. He led Turkish forces against the WAHHABIS in Arabia (1816–19) and rebel Greeks (1825–28). After his father turned against the Turks, he conquered Syria (1832–33), but Britain and Austria forced its return to Turkey (1838).

Ibsen, Henrik [ĭb'sən], 1828–1906, Norwegian dramatist, probably the most influential figure in modern theater. He was stage manager and playwright of the National Stage in Bergen (1851–57) and director of the Norwegian Theater in Oslo (1857–62). Because his early plays went unrecognized or were greeted with hostility, he went to Italy in 1864, and it was there and in Germany that he wrote the bulk of his dramas. Ibsen's work can be divided into three periods. The first phase, that of poetic drama, deals primarily with historical themes, folklore, and romantic pageantry, and includes the tragedy *Brand* (1866) and the existentialist *Peer Gynt* (1867). Then came the realistic social plays for which he is best known, e.g., *A Doll's House* (1879), *Ghosts* (1881), *An Enemy of the People* (1882), *The Wild Duck* (1884), and *Hedda Gabler* (1890), in which Ibsen rebelled against sterile and restrictive social conventions. The final period is characterized by a strong emphasis on symbolism, e.g., *The Master Builder* (1892) and *John Gabriel Borkman* (1896), which blend an introspective realism with folk poetry.

ibuprofen, nonsteroidal anti-inflammatory drug that reduces pain, fever, and inflammation. Available over the counter, it is commonly used to treat rheumatoid arthritis, gout, and painful menstruation. Side effects include intestinal upset, which can lead to gastritis and ulcers.

Icarus: see DAEDALUS.

ICBM: see MISSILE, GUIDED.

iceberg, mass of ice that has become detached from an ice sheet or GLACIER and is floating in the ocean. Only about one ninth of its total mass projects above the water. Rocks dropped to the ocean floor by melting icebergs have been studied to determine the range of icebergs during glacial periods. Because of the 1912 collision of the ocean liner TITANIC with an iceberg, a constant census of icebergs is maintained and their locations reported to nearby ships.

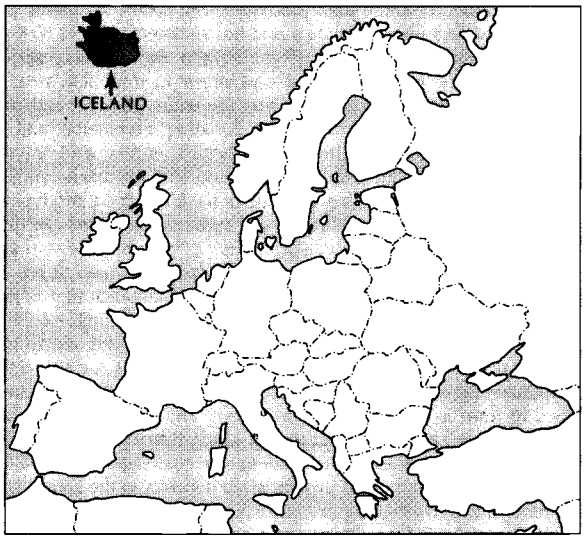
ice hockey: see HOCKEY, ICE.

Iceland, Icel. *Island,* officially Republic of Iceland, republic (1992 est. pop. 259,000), 39,698 sq mi (102,819 sq km), the westernmost state of Europe, occupying an island in the Atlantic Ocean just S of the Arctic Circle. REYKJAVÍK is the capital. Iceland, whose coasts are indented by deep fjords, is a plateau averaging 2,000 ft (610 m) in height and culminating in vast icefields. There are about 200 volcanoes, many still active. Hot springs abound and are used for inexpensive heating. Only about one fourth of the island is habitable, and most settlements are on the coast. The climate is relatively mild and humid in the west and south, and polar and tundralike in the north and east. Fishing is the most important industry, with codfish and herring the chief exports. Agriculture is limited (hay, potatoes, turnips), but sheep, horses, and cattle are grazed extensively. Aside from aluminum smelting there is little heavy industry, and imports provide most of the country's needs. The Lutheran Church is established, and 95% of the people are

The key to pronunciation appears on page xiii.

members. Icelandic (Old Norse) is the official language; Old Norse literature reached its greatest flowering in Iceland.

History. Iceland was settled (c.850–75) by the Norse (see VIKINGS). A general assembly, the ALTHING, was established in 930, making it the world's oldest functioning parliamentary body, and Christianity was introduced c.1000. Norwegian rule was imposed after 1261, and in 1380 Iceland, with Norway, passed to the Danish crown, inaugurating a national decline that lasted to 1550. The 17th and 18th cent. were disastrous: pirate raids destroyed trade; epidemics and volcanic eruptions killed a large part of the population; and a private trade monopoly, created in Copenhagen in 1602, caused economic ruin. The 19th cent. brought a rebirth of national culture and a strong independence movement led by Jón Sigurðsson. A constitution and limited home rule were granted in 1874, and Iceland became a sovereign state in personal union with DENMARK in 1918. In WORLD WAR II British and U.S. forces defended the island. Icelanders voted in 1944 to end the union with Denmark, and an independent republic was proclaimed on June 17, 1944. Disputes with Britain over fishing rights in Iceland's waters resulted in three "cod wars" and a four-month break in diplomatic relations before a settlement was reached in 1976. In 1980 Vigdís Finnbogadóttir was elected to the presidency (a largely ceremonial post), becoming the world's first popularly elected female head of state, and she has held the office since then. David Oddsson, of the conservative Independence party, has been prime minister since 1991.



Icelandic language, member of the North Germanic, or Scandinavian, group of the Germanic subfamily of the Indo-European family of languages. See LANGUAGE (table).

Iceland spar, colorless variety of crystallized CALCITE known for its properties of transparency and double refraction, found primarily in Iceland. It is used chiefly in the manufacture of Nicol prisms.

ice skating: see SKATING.

Ickes, Harold LeClaire, 1874–1952, American statesman; b. Blair co., Pa. A Republican, he was secretary of the interior (1933–46) under F.D. ROOSEVELT and Harry TRUMAN. He was also head (1933–39) of the PUBLIC WORKS ADMINISTRATION.

iconoclasm [Gr., = image breaking], opposition to the religious use of images. Religious pictures and statues were an early feature of Christian worship. Opponents of their use claimed that they led to idolatry. Iconoclasm flourished in Asia Minor in the 8th and 9th cent. and was favored by several Byzantine emperors. Opponents of iconoclasm were Popes Gregory II and ADRIAN I and Empress IRENE, who restored the images. Iconoclasm was rejected at the Second Council of NICAEA (787). The controversy led Byzantine artists toward spiritual expression rather than naturalism.

Ictinus, fl. 2d half of 5th cent. B.C., Greek architect. With CALLICRATES as his associate, he built the PARTHENON on the Acropolis at Athens (447–432 B.C.).

id: see PSYCHOANALYSIS.

Idaho, mountain state in the NW U.S.; bordered by Montana and Wyoming (E), Utah and Nevada (S), Oregon and Washington (W), and the Canadian province of British Columbia (N).

Area, 83,557 sq mi (216,413 sq km). *Pop.* (1990) 1,006,749, a 6.6% increase over 1980 pop. *Capital,* Boise. *Statehood,* July 3, 1890 (43d state). *Highest pt.,* Borah Peak, 12,662 ft (3,862 m); *lowest pt.,* Snake R., 710 ft (217 m). *Nickname,* Gem State. *Motto, Esto Perpetua* [It Is Perpetual]. *State bird,* mountain bluebird. *State flower,* syringa. *State tree,* white pine. *Abbr.,* ID.

Land and People. Over 60% of the mountainous and heavily forested land of Idaho is controlled by the federal government, much of it in national forests, Yellowstone National Park (see NATIONAL PARKS, table), and recreation areas such as Craters of the Moon National Monument. The ROCKY MOUNTAINS' lofty peaks, including the Bitterroot, Salmon R., and Sawtooth ranges, dominate the terrain. The SNAKE R. flows through S Idaho in a great arc, creating the state's most extensive valley. Among the river's spectacular gorges is Hell's Canyon, North America's deepest (7,900 ft/2,408 m). The climate ranges from hot summers in the arid south to cold, snowy winters in the mountainous north. About 57% of the state's population lives in urban areas. The largest city is BOISE, followed by POCATELLO and IDAHO FALLS. The population is (1990) nearly 95% white.

Economy. Agriculture is the most important sector of the economy. Cattle are the leading product, and dairy goods are also important. The chief crops are potatoes (Idaho is the leading U.S. producer), peas, sugar beets, wheat, hay, and barley. Lumber and wood products, processed foods, and chemicals are the major manufactures. Tourism has also become important, and the state attracts many campers and outdoor sports enthusiasts. Idaho is the country's leading silver producer, and it also extracts significant quantities of zinc, phosphate, lead, and gold.

Government. The constitution (adopted 1889) provides for a governor serving a four-year term. The legislature consists of a 42-seat senate and 84-seat house, with members of both bodies elected to two-year terms. Idaho sends two representatives and two senators to the U.S. Congress and has four electoral votes.

History. Probably the first whites to enter the area were members of the LEWIS AND CLARK EXPEDITION (1805), but they were not far ahead of fur trappers, who established trading posts and by the 1840s had depleted the fur supply. Present-day Idaho was part of Oregon country, over which the U.S. gained control in 1846. With the discovery of gold and silver during the early 1860s, settlers poured in. In the late 19th cent. the growth of ranching, violent labor conflicts in the mines, and the arrival of railroads were concurrent with the development of cities. In recent years, the Snake R. projects have provided a huge hydroelectrical capacity and a greatly expanded water supply for irrigated agriculture. In the late 1980s the state rebounded from recession earlier in the decade, largely by attracting many new businesses, notably high-technology firms.

Idaho Falls, city (1990 pop. 43,929), seat of Bonneville co., SE Idaho, on the Snake R.; inc. 1900. The chief city of the upper Snake Valley, it is the commercial center of a farm and ranch region. The Idaho National Engineering Laboratory, a government facility, is a major employer. The city's industries produce steel and building materials, and tourism is important. Idaho Falls was settled (1860) by MORMONS.

idealism, in philosophy, the attempt to account for all objects in nature and experience as representations of the mind, and sometimes to assign to such representations a higher order of existence. It is opposed to MATERIALISM and NATURALISM. Early idealism (e.g., that of PLATO) conceived a world in which eternal ideas constituted reality; in modern times idealism (e.g., that of George BERKELEY in the 18th cent.) has come to refer the source of ideas to the individual's consciousness. In KANT's transcendental idealism, the phenomenal world of human understanding opposes a world of things-in-themselves, while the later German idealists (e.g., FICHTE, SCHELLING, and HEGEL) treated all reality as the creation of mind or spirit. More recent idealists include F.H. BRADLEY and CROCE.

Ides: see CALENDAR.

Idrisi [ĭdrē'sē] or **Edrisi** [ĕ–], b. 1099?, d. after 1154, Arabian geographer. After many travels, he came to the court of Roger II of Sicily. His monumental work, *Kitab Rujjar* (the Book of Roger; 1154), contains his description of the earth, supplemented by reports of travelers sent out by Roger.

Ieyasu (Ieyasu Tokugawa) [ēā'yäsōō], 1542–1616, Japanese dictator, founder of the TOKUGAWA shogunate. He helped the dictators Nobunga and HIDEYOSHI to unify Japan and received (1590) a fief near Edo (Tokyo). He became the most powerful daimyo, or baron, by defeating his rivals in the battle of Sekigahara (1600) and became shogun in 1603. Ieyasu encouraged foreign trade; one of his advisers was an Englishman, Will Adams.

Ignatius of Antioch, Saint, d. c.107, bishop of Antioch (Turkey) and Christian martyr. He wrote epistles to Christian communities in Rome and Asia Minor to combat heresy. He stressed the virgin birth, the TRINITY, and the role of the bishop, and was the first Christian writer to use the word *Catholic.* Feast: Oct. 17.

Ignatius of Constantinople, Saint, c.800–877, Greek churchman, patriarch of CONSTANTINOPLE. A son of Byzantine Emperor MICHAEL I, he was castrated and imprisoned by Emperor LEO V to prevent his accession. In 846 or 847 he was made patriarch and opposed ICONOCLASM. In 858 Ignatius was replaced with PHOTIUS, but on the accession (867) of BASIL I, Ignatius again became patriarch and was confirmed by the Fourth Council of CONSTANTINOPLE. Feast: Oct. 23.

Ignatius of Loyola, Saint, 1491–1556, Spanish churchman, founder of the JESUITS. A soldier, he was converted in 1521 and began to study religion. In 1534, in Paris, he and six others took vows of poverty and chastity and were later (1537) ordained. They were received (1538) by the pope, and in 1540 Ignatius won papal approval for his *Formula* for a new religious order. In 1541 he was elected general of the order, a post he held until his death. Ignatius was a leader in the Catholic Reformation (see REFORMATION, CATHOLIC), but he was more interested in education and missionary work than in converting Protestants. His *Spiritual Exercises* are a major devotional work. Feast: July 31.

igneous rock: see ROCK.

Iguaçu Falls or **Iguassú Falls,** on the Argentina-Brazil border, one of the world's greatest waterfalls, with a drop of c.210 ft (64 m), located on the Iguaçu R. near its confluence with the PARANÁ R. Nearby is the great ITAIPU Dam and one of the world's largest hydroelectric power complexes.

iguana, large LIZARD (family Iguanidae) found in tropical America and the GALAPAGOS ISLANDS. The common iguana (*Iguana iguana*), a tree-living species found along streams from Mexico to N South America, is bright green with a crest of spines from the neck to the striped tail. Its tail accounts for two thirds of its length (3–6 ft/90–180 cm).

IJsselmeer [ī'səlmār"], shallow freshwater lake, NW Netherlands, created when much of the old Zuider Zee, an inlet of the North Sea, was enclosed in 1932 by two dams totaling 19 mi (31 km) in length. During the next half century, more than 850 sq mi (2,200 sq km) of fertile farmland, in five polders (tracts), was reclaimed from the IJsselmeer.

Ikhnaton [ĭknä'tən] or **Akhenaton** [ä"kənä'tən], d. c.1354 B.C., Egyptian king (c.1372–54) of the XVIII dynasty; son of Amenhotep III. A religious innovator, he abandoned polytheism to embrace an absolute solar monotheism, holding that the sun alone was God and he the sun's physical son. Under him a new school of artists abandoned convention and returned to nature (to glorify the sun). His fanaticism was his undoing; he defaced earlier monuments, arousing the anger of the priests and the people. Neglecting the provinces, he left to his successors only EGYPT and the upper NILE valley, not the empire he had inherited. Of the art works of his reign, the bust of his wife, NEFERTITI, is the most famous.

Ilf, Ilya Arnoldovich [ēlf], pseud. of **Ilya Arnoldovich Fainzilberg,** 1897–37, Russian writer. Ilf and Yevgeny Petrovich PETROV wrote the satirical novels *The Twelve Chairs* (1928) and *The Little Golden Calf* (1931). *Little Golden America* (1936) is a humorous account of their trip to the U.S.

Iliad: see HOMER.

Ilion or **Ilium:** see TROY.

Illia, Arturo [ēl'yä], 1900–83, president of Argentina (1963–66). A physician, he was elected president with only 25% of the vote. He was unable to deal with the country's deteriorating economy or with the Peronists. In addition, he canceled Argentina's petroleum contracts with foreign countries. He was deposed by military leaders in 1966.

Illinois, confederation of Native American tribes of the Eastern Woodlands (see NORTH AMERICA, INDIGENOUS PEOPLES OF), who spoke an Algonquian language of the Algonquian-Wakashan stock (see NATIVE AMERICAN LANGUAGES). In the mid-17th cent. 6,500 Illinois lived in the N Illinois area, but by 1750 warfare had reduced them to 2,000. They were all but exterminated in retaliation for the supposed assassination of PONTIAC by a member of the Illinois. In 1833 the survivors, largely Peorias, moved West, and their descendants live on a reservation in NE Oklahoma. In 1990 there were 1,365 Peorias in the U.S.

Illinois, midwestern state in the N central U.S.; bordered by Lake Michigan, Indiana, and—across the Ohio R.—Kentucky (E), Missouri and Iowa, across the Mississippi R. (W), and Wisconsin (N).

Area, 56,400 sq mi (146,076 sq km). *Pop.* (1990) 11,430,602, a 0.1% increase over 1980 pop. *Capital,* Springfield. *Statehood,* Dec. 3, 1818 (21st state). *Highest pt.,* Charles Mound, 1,235 ft (377 m); *lowest pt.,* Mississippi R., 279 ft (85 m). *Nicknames,* Inland Empire; Prairie State. *Motto,* State Sovereignty—National Union. *State bird,* cardinal. *State flower,* native violet. *State tree,* white oak. *Abbr.,* Ill.; IL.

Land and People. Most of Illinois consists of broad, fertile, level plains drained by more than 275 rivers. The state's temperate climate is marked by cold winters and hot summers. Almost 85% of the population lives in urban areas. CHICAGO, the third largest city in the U.S. and the center of the third largest metropolitan area, is by far the leading city of Illinois and the entire Midwest and is a major center of heavy industry, transportation, commerce, and finance. Other important cities are ROCKFORD, PEORIA, and SPRINGFIELD. In 1990 the state was 78% white and 15% African American.

Economy. Illinois has long had one of the U.S.'s most productive economies. Prosperous industrial and agricultural sectors are supported by a superb transportation complex, including GREAT LAKES shipping, and since 1959 the port of Chicago has been linked to the Atlantic via the SAINT LAWRENCE SEAWAY. Manufacturing is the leading source of income, with machinery (including machine tools and transportation equipment), electrical and electronic equipment, steel and other metals, and chemicals the principal products. Illinois is the leading U.S. producer of soybeans; is second to Iowa in output of hogs and corn; and earns considerable income from cattle, hay, and wheat. Much heavy industry is supported by Illinois's extensive bituminous coal deposits, the fifth largest in the country, and by petroleum deposits in the south. The state is the U.S.'s leading producer of fluorspar.

Government. The constitution (adopted 1970) provides for a governor elected to a four-year term. The legislature consists of a senate whose 59 members serve terms of both four and two years, and a house with 118 members elected for two years. Illinois elects 20 representatives and 2 senators to the U.S. Congress and has 22 electoral votes.

History. The ILLINOIS, SAC AND FOX, and other Native American peoples lived in the area when French explorers, including Father Jacques MARQUETTE and Louis JOLLIET, explored the region during the late 17th cent. It passed from France to Britain in 1763, but it was ceded to the U.S. at the end of the AMERICAN REVOLUTION and was part of the NORTHWEST TERRITORY before becoming (1809) a separate territory. The BLACK HAWK WAR (1832) virtually ended the tenure of Native Americans in Illinois. During the mid-19th cent. Abraham LINCOLN launched his political career in Illinois, which was just becoming a major industrial state. Chicago, with its huge steel mills and stockyards, attracted thousands of European immigrants. The late 19th cent. saw the growth of the GRANGER MOVEMENT among farmers and violent labor strife in industry. In 1937 new oilfields were discovered, further enhancing industrial growth. In the 1980s much of Illinois's heavy industry suffered a serious decline, although the state continued to benefit from industrialization of its downstate area. In 1980 the first U.S. president born in Illi-

The key to pronunciation appears on page xiii.

nois, Ronald Reagan, was elected. Flooding along the Mississippi inundated large areas of W Illinois in 1993.

Ilium: see TROY.

Illyria and **Illyricum,** ancient regions of the Balkan peninsula occupied by Indo-European–speaking tribes, including the Dalmatians and Pannonians. Warlike and piratical, they withstood (6th cent. B.C.) Greeks attracted by their mines and later attacks by Macedonians. The Romans conquered them and set up (168–167 B.C.) the province of Illyricum. Today Illyria means the Adriatic coast N of central Albania.

imaginary number: see NUMBER.

imagists, group of English and American poets (c.1909–c.1917) who rebelled against the exuberance and sentimentality of 19th-cent. verse. Influenced by CLASSICISM, Chinese and Japanese poetry, and the French SYMBOLISTS, they advocated a hard, clear, concentrated poetry, free of artificialities and replete with specific physical analogies. The group included Ezra POUND, Richard ALDINGTON, Amy LOWELL, and Hilda DOOLITTLE.

imam [Arab., = leader], in ISLAM, a recognized leader or a religious teacher. Any pious Muslim may function as imam. The term is also used as a synonym for *caliph,* God's vice-regent. Among SHIITES the belief arose that a hidden or unrecognized imam, or true caliph (the MAHDI), would return at the end of the world to restore the true CALIPHATE.

immunity, ability of an organism to resist foreign substances called *antigens*—viruses, bacteria, bacterial toxins, or certain nonliving substances—in the body. Immunity is present in all vertebrates and some invertebrates. Invasion by an antigen triggers the production of proteins called antibodies by special white blood cells (lymphocytes) located chiefly in the spleen and lymph nodes (see LYMPHATIC SYSTEM). The process is highly specific, with different lymphocytes recognizing only certain antigens and producing antibodies against only that particular antigen. Lymphocytes called B cells produce the antibodies, which circulate in the blood (humoral immunity). The antibodies neutralize antigens by removing them from the body's circulation, causing them to clump, or making them more susceptible to other immune cells. Other lymphocytes, which mature in the THYMUS GLAND and are called T cells, are active in cell-mediated immunity, i.e. they activate other cells that cause direct destruction of antigens or assisting B cells. Immunity has been found to be important not only in resisting infectious disease, but also in defense against CANCER, in successful organ TRANSPLANTATION, in ALLERGIES, and in AUTOIMMUNE DISEASES. See also IMMUNOLOGY; IMMUNOSUPPRESSIVE DRUG.

immunity, diplomatic: see EXTRATERRITORIALITY.

immunology, study of the resistance of organisms to disease or INFECTION caused by viruses, bacteria, and their by-products, such as endotoxins and exotoxins (see TOXIN). Immunologists study behavior of pathogenic (disease-causing) substances, resistance to infection, and defensive measures used by organisms to fight invading pathogens (see IMMUNITY). Current research includes study of the use of immune globulins (proteins that function as antibodies) and the study of the lymphocytes, called T cells, that are attacked by the AIDS virus (HIV).

immunosuppressive drug, substance that suppresses the activity of the body's immune system. Such drugs can be administered to prevent the body's rejection of a transplanted organ (see TRANSPLANTATION, MEDICAL). They are also used to treat AUTOIMMUNE DISEASES such as rheumatoid arthritis and to suppress temporarily the proliferation of white blood cells in LEUKEMIA. Their benefits must be weighed against the fact that they suppress the immune system in general, leaving the body open to other disease.

impala: see under GAZELLE.

impatiens: see JEWELWEED.

impeachment, formal accusation by a legislature against a public official, to remove him from office. The term loosely includes both the bringing of charges, or articles, and the trial that may follow. Impeachment developed in England in the 14th cent. In the U.S. the House of Representatives (see CONGRESS) can bring articles of impeachment against federal officials, including the president. Trial is by the Senate, which must convict by a two-thirds margin of the members present. There have been 15 federal impeachments and 7 convictions. Andrew JOHNSON was the only president to be impeached (1868), but he was acquitted by the Senate. Richard NIXON resigned (1974) the presidency before the House could bring charges against him.

Imperial Conference, assembly of representatives of the self-governing members of the BRITISH EMPIRE, held about every four years until WORLD WAR II. The assemblies were first called Colonial Conferences (1887–1902) and were concerned with defense problems. More formalized meetings were held later (1907–37) to discuss defense and economic problems. Since the war, Commonwealth policy has been coordinated through regular meetings of the prime ministers of Commonwealth nations.

imperialism, broadly, the extension of rule or influence by one government, nation, or society over another. Evidence of the existence of empires dates back to the dawn of written history, when local rulers extended their realms by conquering other states. Ancient imperialism reached its climax under the Roman Empire, but it was an important force elsewhere, e.g., the Middle East, N Africa, and central Asia. In the West, imperialism was reborn with the emergence of the modern nation-state and the age of exploration and discovery. European COLONIZATION of the Western Hemisphere and Africa from the 15th to 17th cent. was followed in the 18th cent. by attempts to regulate the trade of colonies in the interests of the mother country. Later, the growth of manufacturing after the INDUSTRIAL REVOLUTION introduced a new form of imperialism, as industrial nations scrambled for raw materials and new markets for manufactured products. The inequities of the system produced a growing opposition by the end of the 19th cent., when Marxists argued that imperialism was the ultimate state of capitalism. After WORLD WAR I, anti-imperialist feeling grew rapidly, and since WORLD WAR II nearly all of the countries once subject to Western control have achieved independence. Contemporary debate centers on neo-imperialism, with many less-developed countries contending that their economic development is largely determined by the developed countries through unfair trading practices, control over capital, and the power of multinational corporations.

Imperial Valley, low-lying depression in a desert area S of the Salton Sea, S California, extending S into NW Mexico. Irrigated by water diverted from the Colorado R. by the All-American Canal, it is an important U.S. source of cotton, citrus, dates, and winter vegetables. Completion of HOOVER DAM (1936) ended periodic inundation there.

impetigo, highly contagious skin infection affecting mainly infants and children, caused either by hemolytic streptococcus or staphylococcus. The rash consists of red spots or blisters that rupture, discharge, and become encrusted. ANTIBIOTIC ointment is usually effective.

impotence, inhibited sexual excitement in a man during sexual activity that, despite an unaffected desire for sex, results in inability to attain or maintain a penile erection. Impotence can result from psychological factors (performance anxiety or fear of abandonment or unwanted pregnancy), sociocultural factors (negative sexual attitudes or religious beliefs) or, less frequently, physical causes such as hormonal abnormalities, DIABETES, DRUGS, and ALCOHOLISM. Treatment of impotence depends on the underlying cause. Impotence should be distinguished from STERILITY (inability to produce sperm adequate for reproduction). See also SEX THERAPY.

impressionism, in music, a French movement of the late 19th and early 20th cent. It was begun by Claude DEBUSSY as a reaction to the emotionalism of romantic music. Using new chord combinations and exotic rhythms and scales, Debussy developed a style in which atmosphere and mood take the place of strong emotion or a story. The influence of impressionism is evident in the music of RAVEL, DELIUS, FALLA, and SATIE.

impressionism, in painting, late-19th-cent. French school. It was generally characterized by the attempt to depict transitory visual impressions, often painted directly from nature, and by the use of broken color to achieve brilliance and luminosity. The movement began with MONET, Pierre Auguste RENOIR, and SISLEY, who met regularly with CÉZANNE, PISSARRO, MORISOT, and, later, DEGAS and MANET. They repudiated academic standards, the romantics' emphasis on emotion, and literary and anecdotal subject matter; they also rejected the role of the imagination. Dubbed "impressionists"

by hostile journalists after Monet's painting *Impression: Sunrise, 1872*, they observed nature closely, with scientific interest. Impressionist objectivity proved to be limiting, but the movement produced an aesthetic revolution, influencing many later painters.

In, chemical symbol of the element INDIUM.

Inca, pre-Columbian empire in W South America (see SOUTH AMERICA, INDIGENOUS PEOPLES OF) whose language was QUECHUA (see NATIVE AMERICAN LANGUAGES). From its center at CUZCO (Peru), the empire at its height dominated the entire Andean region, extending 2,000 mi (3,200 km). It was a closely knit state ruled by an emperor who required total obedience but looked after his subjects' welfare. The state owned almost everything and could draft people to work in mines or on public projects. Priests, government servants, the aged, sick, and widowed were supplied from imperial storehouses. The large royal family formed the nobility; a privileged, Quechua-speaking "Inca class" governed colonies. Lesser officials formed a minor nobility. The empire was administratively divided and subdivided, down to local communities. Surveys and census reports were recorded on knotted strings called *quipas*. The Incas' pantheistic, ritualistic religion sometimes incorporated human sacrifice. By terracing and irrigation, Inca engineers made a difficult terrain fertile; the llama and alpaca were domesticated. Remarkable feats of construction were accomplished in such cities as MACHU PICCHU, using clay models, tools such as plumb bobs, and wooden rollers to transport huge stone blocks. A network of roads included bridges, ferries, and relay stations. The Inca also made elaborate tapestries, fine polished pottery, and complex metalwork. Inca history begins when the legendary MANCO CAPAC brought his people from mountain caves into the Cuzco valley. In their early period (c.1200–c.1440) the Inca subjugated neighboring peoples. Their great conquests (1440–93) came under Pachacuti and his son Topa Inca. The present Ecuador was won by Huayna Capac, the last of the great Inca emperors. At his death (1525) his sons fought over the empire; just as Atahualpa triumphed, Francisco PIZARRO arrived (1532) to begin the Spanish conquest. Pizarro executed Atahualpa and entered Cuzco. Despite resistance and the rebellion (1536–37) of the second Manco Capac, the Inca were subdued, and their culture was eventually Hispanicized. Only in recent years have efforts been made to integrate their descendants (about 50% of the population) into the national life of Peru.

incense-tree, common name for deciduous shrubs and trees of the family Burseraceae, found chiefly in tropical America and NE Africa. The incenses frankincense and myrrh are prepared from the resin exuded by some species. Frankincense, or olibanum, derived mainly from *Boswellia carterii,* is used medicinally and for fumigation. Myrrh, prepared especially from *Commiphora erythraea* and common myrrh, *C. myrrha,* is used medicinally and in perfumes and was used by the ancients in embalming. Frankincense and myrrh, together with GOLD, were the gifts of the WISE MEN OF THE EAST.

Inchon, city (1985 pop. 1,386,911), NW South Korea, on the Yellow Sea. The country's second largest port, Inchon is a major industrial center, producing steel, coke, textiles, chemicals, and fertilizers. Fishing is an important industry. Population growth and transportation links have merged Inchon and SEOUL into one urban area. During the KOREAN WAR, U.S. troops landed (Sept. 15, 1950) there to launch a UN counteroffensive against the North Koreans.

inclination, in astronomy: see ORBIT.

inclined plane: see MACHINE.

inclosure or **enclosure,** in British history, the process of inclosing (with fences, ditches, hedges, or other barriers) land formerly subject to common rights. In England the practice dated from the 12th cent. and accompanied the breakdown of the MANORIAL SYSTEM. Its great development came in the 14th cent. with the rapid expansion of the Flemish wool trade and the resulting monetary advantages of fenced sheep pastures. Inclosure reached its peak in the 17th cent. Though hard on the small farmer, it produced more efficient farming.

income tax, assessment levied on individual or corporate income. The first modern income tax was levied (1799–1816) in Britain to fund the Napoleonic Wars, but it did not become permanent until 1874. Similarly, the U.S. imposed a temporary income tax during the CIVIL WAR; the system became permanent with the adoption of the 16th amendment (1913) to the CONSTITUTION. Since 1919 most U.S. states have adopted the tax, as have several cities, beginning with Philadelphia (1939). See also TAXATION.

Independence, city (1990 pop. 112,301), seat of Jackson co., W Mo., a suburb of Kansas City; inc. 1849. Its manufactures include electrical equipment, cement, machinery, and oil products. The city was a MORMON settlement (1831) and a starting point for Western expeditions in the 1830s and 40s. Harry S TRUMAN lived there and is buried on the grounds of the Truman Library.

Independence, American War of: see AMERICAN REVOLUTION.

Independence, Declaration of: see DECLARATION OF INDEPENDENCE.

Independence Day: see FOURTH OF JULY.

Independence Hall, building in Philadelphia, in Independence National Historical Park. The DECLARATION OF INDEPENDENCE was proclaimed here, and it was the site of the CONTINENTAL CONGRESS and the FEDERAL CONSTITUTIONAL CONVENTION.

independent counsel, in U.S. law, a judicially appointed investigator of charges of misdeeds by high government officials. Originally termed special prosecutor, the position was created by the 1978 Ethics in Government Act. Prompted by the WATERGATE AFFAIR, the purpose of the law was to avoid the conflict of interest that might develop if the executive branch investigated its own officials. The request for the appointment of an independen counsel, however, had to be made by the attorney general. The act expired in 1992.

Independent Treasury System. When Pres. Andrew JACKSON transferred (1833) government funds from the BANK OF THE UNITED STATES to state banks, rampant speculation followed and led to the Panic of 1837. In 1840, under Pres. VAN BUREN, an independent treasury isolated from all banks was set up, but in 1841 the Whigs repealed the law, and it was not until 1846 that the Democrats restored the Independent Treasury System. The Act of 1846 ordered that public revenues be retained in the Treasury building or in subtreasuries in various cities. The Treasury was to pay out its own funds and be completely independent of the banking and financial system of the nation; all payments in and out were to be in specie. In practice the system created problems in prosperous times by amassing surplus revenue, and thus restraining legitimate expansion of trade; in depressed times, the treasury's insistence on being paid in specie reduced the amount of specie available for private credit. The large expenditures of the CIVIL WAR also revealed problems, and Congress created (1863–64) national banks. The Independent Treasury was later used to stabilize the money market, but the Panic of 1907 proved the attempt futile. The Federal Reserve Act of 1913 marked the end of the system.

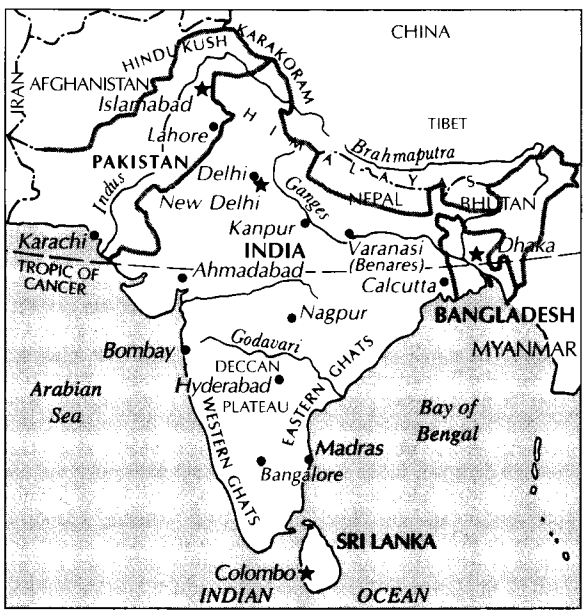
index number, in ECONOMETRICS, a figure reflecting a change in value or quantity, as compared with a standard or base. The base usually equals 100, and the index number is usually expressed as a percentage. For example, if a commodity cost twice as much in 1980 as it did in 1970, its index number would be 200, relative to 1970. An example of index numbers in the U.S. is the Consumer Price Index (CPI), which measures a "market basket" of goods and services bought by a typical urban family. The CPI, as a barometer of INFLATION and the COST OF LIVING, triggers increases in Social Security benefits and the wages of many union workers.

India, officially Republic of India, federal republic (1991 pop. 843,930,861), 1,269,413 sq mi (3,287,782 sq km), S Asia, occupying most of the Indian subcontinent, bordered by Pakistan (W); Afghanistan, China, Nepal, and Bhutan (N); and Myanmar (E); Bangladesh forms an enclave in the NE. Jutting into the INDIAN OCEAN, southern India has a shoreline of about 3,500 mi (5,630 km) along the Bay of BENGAL in the east and the ARABIAN SEA in the west. The capital is NEW DELHI; other important cities include CALCUTTA, BOMBAY, DELHI, MADRAS, and BANGALORE.

Land and People. The land may be divided into three topographical zones: the towering HIMALAYAS in the north; the fertile, densely populated Indo-Gangetic alluvial plain in the north-central section; and the southern peninsula, dominated by the uplands of the DECCAN plateau. The GANGES R., sacred to the Hindus, flows through the heart of the nation. Economically, India often seems like two separate countries: village India, supported by primitive agriculture, where tens of millions live below the poverty level; and urban India, one of the most heavily industrialized areas in the world.

The key to pronunciation appears on page xiii.

Although the traditional textile industry is still important, the emphasis is on heavy industry, which produces iron and steel, machine tools, transportation equipment, and chemicals. Computer software is an increasingly important export. About 70% of the work force is engaged in agriculture, growing rice, wheat, peanuts, corn, and millet for subsistence; cash crops are sugarcane, tea, oilseeds, cotton, tobacco, and jute. The opium poppy is also grown, both for the legal pharmaceutical market and illegal drug trade; cannabis is produced as well. Improved irrigation, the introduction of chemical fertilizers, and the use of high-yield strains of rice and wheat have led to record harvests, and by the late 1970s India was self-sufficient in grain, becoming an exporter in the early 1980s. India has perhaps more cattle per capita than any other country, but their economic value is severely limited by the Hindu prohibition against their slaughter. Among the country's rich mineral resources are coal, zinc, iron, manganese, mica, bauxite, and lead. India is the world's second most populous country (after China). The ethnic composition is complex, but two major strains predominate: the Aryan, in the north, and the Dravidian, in the south. More than 1,500 languages and dialects are spoken; Hindi (spoken throughout the north) and English (used in politics and commerce) are the official languages, and 14 other languages are recognized by the constitution. The population is overwhelmingly Hindu, but there are significant numbers of Muslims (more than 10% of the population), Christians, Buddhists, Sikhs, Jains, and Parsis. About 80% of the population is rural. The caste system, under which people are socially classified at birth, is an important facet of Hinduism, and thus a dominant feature of Indian life; the 1950 constitution abolished the lowest caste, known as untouchables, but caste conflicts remain a serious problem.



History. The INDUS VALLEY CIVILIZATION (c.2500–c.1500 B.C.) was the first to flourish on the Indian subcontinent (in present-day Pakistan). It fell c.1500 B.C. to Aryan invaders from the northwest, who dominated the area for 2,000 years and developed HINDUISM, the socioreligious system that is the basis of India's institutions and culture. Under the MAURYA dynasty (c.325–c.183 B.C.)—especially ASOKA (d. 323 B.C.), who established Buddhism as the state religion—Indian culture had its first great flowering. A golden age of Hindu culture was achieved under the GUPTA dynasty, in the 4th–5th cent. A.D., considered India's classical period. By the 10th cent. Muslim armies from the north were raiding India, and in 1192 the Delhi Sultanate, the first Muslim kingdom in India, was established. The small Muslim kingdoms that succeeded it were swept away by BABUR, a great Muslim invader from Afghanistan, who established the MOGUL empire in 1526. Portugal, which captured Goa in 1510, was the first European nation to gain a foothold in India, but the British, French, and Dutch were soon vying with the Portuguese for Indian trade. With the weakening of the Mogul empire in the 18th cent., the struggle was renewed—this time between France and Britain, with the British EAST INDIA COMPANY emerging dominant. In 1857, after the bloody INDIAN MUTINY against the British, the East India Company was abolished and control of India was transferred directly to the British crown. Discontent with British rule became intense during the early 20th cent., and the INDIAN NATIONAL CONGRESS (founded 1885), led by Mohandas GANDHI and Jawaharlal NEHRU, mounted a movement for independence. The British instituted a program of gradual power-sharing, but Congress leaders, frustrated by the slow pace, organized the Quit India movement during World War II. The desire of the Congress to maintain a united front against Britain was frustrated, however, by the MUSLIM LEAGUE, which demanded the partition of India into separate Hindu and Muslim states. Finally, in 1947, British India was divided into two independent nations: India, with Nehru as prime minister, and PAKISTAN, under Muhammad Ali JINNAH. More than 1 million people died in the ensuing disorder. Hostile relations between the nations led to the INDIA-PAKISTAN WARS (1947–48, 1965, 1971). A specific dispute was jurisdiction over KASHMIR, which both countries claimed. India was also involved in a border conflict (1962) with China. A sovereign republic from 1950, India became a leader of the nonaligned nations. Indira GANDHI (Nehru's daughter), who became prime minister in 1966, precipitated a crisis in 1975 when, after being convicted of campaign fraud, she declared a state of emergency and suspended civil liberties. Her Congress party was defeated in national elections in 1977, but the new ruling coalition, the Janata party, was beset by factionalism and economic difficulties. Gandhi was reelected in 1980 but faced continued runaway population growth, labor strife, and intercaste violence. In 1984 over 1,000 people were killed when she ordered an attack on armed Sikh separatists in Amritsar. Four months later she was assassinated by Sikhs in her bodyguard. Her son Rajiv GANDHI succeeded her. Although India grew economically, Rajiv Gandhi became increasingly unpopular. In 1989 he lost his majority in parliament and resigned. Two subsequent, short-lived coalition governments led to new elections (1991), during which Rajiv Gandhi was assassinated and no party won a majority. The Congress party formed a government under P.V. Narasimha RAO, who took steps to diminish the state's role in the economy. Religious conflict sparked by militant Hindus and exploited by Hindu political parties was a persistent problem in the 1980s and led to bloody riots in 1992.

Indiana, midwestern state in the N central U.S.; bordered by Lake Michigan and the state of Michigan (N), Ohio (E), Kentucky, across the Ohio R. (S), and Illinois (W).

Area, 36,291 sq mi (93,994 sq km). *Pop.* (1990) 5,544,159, a 1% increase over 1980 pop. *Capital,* Indianapolis. *Statehood,* Dec. 11, 1816 (19th state). *Highest pt.,* 1,257 ft (383 m), Wayne co.; *lowest pt.,* Ohio R., 320 ft (98 m). *Nickname,* Hoosier State. *Motto,* Crossroads of America. *State bird,* cardinal. *State flower,* peony. *State tree,* tulip poplar. *Abbr.,* Ind.; IN.

Land and People. Along the shores of Lake MICHIGAN are the sand formations of Indiana Dunes National Lakeshore, which give way to the glaciated lake area, separated by the Wabash R. from the fertile plains that cover most of the state. Nearly 65% of the population lives in urban areas. The largest city is INDIANAPOLIS, followed by FORT WAYNE, EVANSVILLE, GARY, and SOUTH BEND. In 1990 about 91% of the population was white and about 8% was African American.

Economy. Manufacturing, the leading source of income, is concentrated in the Calumet region along Lake Michigan, adjacent to Chicago, where cities such as Gary produce steel and other manufactures, including electrical and transportation equipment, machinery, chemicals, and primary metals. Most of these industries have recently suffered significant recessionary reversals. About three quarters of the land is devoted to agriculture, with corn, sorghum, grains, soybeans, hogs, and cattle the major products. Indiana is the nation's leading producer of building limestone and has rich coal deposits and some petroleum.

Government. The constitution of 1851 provides for a governor elected to a four-year term. The general assembly consists of a senate whose 50 members serve four-year terms and a house whose 100 members are elected to two-year terms. Indiana sends 10 representatives and 2 senators to the U.S. Congress and has 12 electoral votes.

History. The remains of the MOUND BUILDERS, Indiana's earliest known inhabitants, have been found along the state's rivers and bottomlands. Subsequently, the area was occupied mainly by the MIAMI, DELAWARE, and Potawatomi. The first Europeans to explore the area were the French, notably Robert Cavalier, sieur de LA SALLE, in 1679. Vincennes, the first French settlement, was established in 1725. The region was ceded (1763) to Britain, which in turn ceded it to the U.S. at the end of the AMERICAN REVOLUTION. Part of the NORTHWEST TERRITORY, Indiana was the site of major battles with Native Americans, including Fallen Timbers (1794) and Tippecanoe (1811). During the 1840s canals and railroads strengthened Indiana's link with the East, providing the impetus for industrial development that began during the 1860s and continued into the 20th cent. The opening (1959) of the SAINT LAWRENCE SEAWAY, linking the Great Lakes with the Atlantic Ocean, and of a new harbor on Lake Michigan (1970) have increased the importance of shipping in Indiana's economy. The recession of the late 1980s and early 90s was particularly severe in Indiana's industrial north; in and around Indianapolis diversification of industry spurred economic growth.

Indian Affairs, Bureau of (BIA), created in 1824 in the War Dept. with jurisdiction over trade with and defense against Native Americans and over resettlement of Native Americans on reservations. In 1849 the bureau was transferred to the Dept. of the INTERIOR, where the primary function of the agency became the administration of reservation lands. On some reservations and Alaskan Native areas the BIA still is responsible for health and social services, education and job training, reclamation and development projects, or law enforcement.

Indianapolis, city (1990 pop. 731,327; met. area 1,249,822), state capital and seat of Marion co., central Ind., on the White R. By far the state's largest city, it is the chief processing point in a large agricultural region and an important grain and livestock market. Its manufactures include chemicals, drugs, telephone and electronic equipment, and automotive and aircraft parts. An insurance center, it has numerous educational and medical facilities. Indianapolis is a transportation hub and a center of the trucking industry. The Indianapolis Motor Speedway is the scene of the world-famous annual 500-mile automobile race. Urban renewal projects in the 1970s and 80s have produced many modern, multistory buildings.

Indian art and architecture is essentially traditional and religious. Each work of art is both a symbol and a manifestation of a god or his powers. In both Buddhist and Hindu art, symbolism in every gesture, posture, and attribute contains many levels of meaning (see BUDDHISM; HINDUISM). The earliest Indian art emerged in the Indus R. valley during the 2d half of the 3d millennium B.C. The Indus valley civilization (c.2500–c.1500 B.C.) produced early examples of city planning and drainage systems, as well as many statuettes and square seals with naturalistically rendered bulls as decorations. From the MAURYA dynasty the most famous architectural remains are the edict pillars, over 50 ft (15 m) high, surmounted by lotus flowers and animal figures. Also dating from this period are the stone ogival chaitya windows found at a sanctuary near Bodh Gaya. The early classic period of the Sunga dynasty (2d–1st cent. B.C.) and early Andhra dynasty (1st cent. B.C.) has left the earliest extant STUPAS, mounds surrounded by railings and gateways covered with ornament. Between the 2d and 5th cent. A.D., art from the Gandhara and Mathura regions developed. Gandhara art presents the first human images of the BUDDHA and was profoundly influenced by 2d-cent. Hellenistic art (see HELLENISTIC CIVILIZATION). Ornate stupas and monasteries held colossal gilt figures and imported glassware. Mathura created a wholly Indian sculptural art, usually employing reddish limestone. Symmetrical heavier Buddhas smile benignly at worshipers. The GUPTA period (A.D. 320–600) was the golden age of Buddhist art. Smooth, elegant reliefs cover the facades and interiors of remaining chaitya halls. The murals in the caves at Ajanta depict the joys of secular life and the beauty of the spiritual. From the 6th cent. on, with the Hindu dynasties, temples were built that were so exuberantly embellished with sculpture that their style is called "sculptural architecture." The Dravidian-style temple is constructed in five pyramidal *raths* (temples). Skilled CIRE-PERDUE sculptures were produced until the late 19th cent. Most Indian wall paintings except for fragments from the caves of Ajanta, were destroyed, but examples of manuscript illumination remain. Jain manuscript illuminations are brightly colored and have the characteristic protruding farther eye. Rajput painting is characterized by an interest in nature and sinuous grace in the human form. Little of the glorious tradition of Indian artistic achievement survived British rule. A revival of Indian themes in the 20th cent. has produced such artists as Rabindranath Tagore, Nandalal Bose, and Ram Kinker.

Indian literature. Oral literature in the vernacular languages of India is of great antiquity, but it was not until about the 16th cent. that an extensive written literature appeared. Its development was spurred by the emergence of Hindu pietistic movements that encouraged the popularizing of SANSKRIT LITERATURE, e.g., the RAMAYANA was put into popular verse form. Among Muslims, classical Persian poetry was the basis for Urdu verse written for the Mogul court. In the early 19th cent., with the establishment of vernacular schools and the importation of printing presses, a great impetus was given to popular prose. Today literature is written in all the important languages of India, Pakistan, and Bangladesh, and there is a large literature in English. Among the best-known writers of the 19th and 20th cent. are Rammohun Roy, Bankim Chandra CHATTERJEE, Rabindranath TAGORE, Mohandas GANDHI, Jawaharlal NEHRU, R.K. NARAYAN, Raja RAO, and Bhabhani BHATTACHARYA.

Indian Mutiny, 1857–58, also known as the Sepoy Rebellion, revolt of the Indian soldiers (sepoys) in the British army in BENGAL that became a widespread uprising against British rule in India. The Bengali soldiers resented British annexation (1856) of Oudh, their homeland. They were also angered by the issuing of cartridges coated in beef fat (which violated Hindu law) and pork fat (which violated Muslim law). Fighting quickly spread all over N India; the rebels besieged Lucknow and conquered Kanpur and Delhi. British reconquest was completed by March 1858. Various reforms resulted, the most important being the transfer of rule from the East India Company to the British crown.

Indian National Congress, Indian political party, founded in 1885 to promote economic reforms. It became the spearhead of the Indian movement for independence from Great Britain. Its membership became overwhelmingly Hindu, as most Muslim members left it for the MUSLIM LEAGUE. In 1919, led by Mohandas GANDHI, it adopted a policy of satyagraha (nonviolent resistance) toward the British. The party was outlawed during WORLD WAR II for refusing to support the British war effort, and most of its leaders were jailed. After India achieved independence (1947), Jawaharlal NEHRU headed both the government and the party. Its dominance continued after Nehru's death (1964) under Shri Lal Bahadur SHASTRI and Nehru's daughter, Indira GANDHI. In 1969 the party split: the conservative wing became the Old Congress party; Indira Gandhi's followers became the New Congress party, winning a landslide victory in 1971. But this party was also to split. After its electoral defeat in 1977, Mrs. Gandhi withdrew and in 1978 formed a new faction, the Congress-I (for Indira) party, which brought her back into power in Jan. 1980. She was assassinated in 1984 by her Sikh bodyguards. Her son Rajiv GANDHI succeeded her as prime minister (1984–90) and leader of the party until his assassination in 1991. P.V. Narasimha RAO succeeded him as party leader.

Indian Ocean, world's third largest ocean, c.28,350,000 sq mi (73,427,000 sq km), between S Asia, Antarctica, E Africa, and SW Australia. It is c.4,000 mi (6,400 km) wide at the equator and reaches a maximum depth of 25,344 ft (7,725 m) in the Java Trench S of Indonesia. Its major arms include the Arabian Sea, Red Sea, Gulf of Aden, Persian Gulf, Bay of Bengal, and Andaman Sea. A complex series of mid-oceanic submarine ridges intersect to enclose deep-sea basins, their summits rising to the surface in places to form the Andaman, Nicobar, Seychelles, and other island groups.

Indian philosophy. Systematized Indian philosophy begins in the period of the UPANISHADS (900–500 B.C.). The rise of BUDDHISM

The key to pronunciation appears on page xiii.

(from the 5th cent. B.C.) led to the development of philosophical tenets presented in the form of sutras, concise aphorisms intended to serve as a memory aid and as a basis for oral elaboration. There are six classical schools that accept the authority of the VEDA. The first, *Nyaya* (6th cent. B.C.), is a school of logic and epistemology. *Vaisheshika* (3d cent. B.C.) posits a sixfold classification of reality (substance, quality, activity, generality, particularity, inherence). The *Samkhya* system (6th cent. B.C.) expounds two basic metaphysical principles: *purusha* (soul) and *prakriti* (matter or nature). *Purusha* appears bound to *prakriti* but may become free through the realization that it is distinct from *prakriti.* The YOGA system of Patanjali (2d cent. B.C.), which accepts Samkhya metaphysics and the concept of a supreme soul, presents an eight-stage discipline of self-control and MEDITATION. The *Purva Mimamsa* school (2d cent. B.C.) sets forth principles of interpretation of the Vedic texts. The different schools of *Uttara Mimamsa,* or VEDANTA, all based on the *Brahma-Sutras* of Baradayana (early cent. A.D.), epitomize the teachings of the Upanishads. The three main heterodox schools not based on the Veda and Upanishads are BUDDHISM, JAINISM, and the materialist school called *Charvaka* or *Lokyata.* The latter, the only Indian school to reject the ideas of KARMA and spiritual liberation, held that only this world exists and that religious ideas are delusion.

Indian pipe, common name for the genus *Monotropa* and the Monotropaceae, a family of low, flowering plants with a funguslike appearance found in north temperate zones. These chlorophylless SAPROPHYTES are yellowish- or waxy-white in color and, with their scalelike leaves and nodding flowers, resemble pipes. The related, bright-red snow plant (*Sarcodes sanguinea*) of the Sierra Nevadas shoots up and blooms as soon as the snow melts.

Indians, American: see MIDDLE AMERICA, INDIGENOUS PEOPLES OF; NORTH AMERICA, INDIGENOUS PEOPLES OF; SOUTH AMERICA, INDIGENOUS PEOPLES OF; and individual peoples. See also AMERICAS, PREHISTORY OF THE; NATIVE AMERICAN LANGUAGES.

Indian Territory, in U.S. history, name of land set aside for Native Americans by the Indian Intercourse Act (1834). In the 1820s the U.S. government began moving the CHEROKEE, Creek, Seminole, Choctaw, and Chickasaw W of the Mississippi R. The act of 1834 designated the area of present-day Oklahoma, N and E of the Red River, as well as Kansas and Nebraska, for them. Other tribes moved there also. In 1854 the territory was delimited by the creation of the Kansas and Nebraska territories, and it was abolished in 1907 with the entrance of Oklahoma into the Union.

Indian wars, in American history, term referring to the series of conflicts, beginning in colonial times, between European settlers and their descendants and indigenous North American peoples. After 1815 the U.S. government began removing Native Americans to reservations W of the Mississippi R., a policy that often triggered war. The Indian wars W of the Mississippi reached their height between 1869 and 1878. WOUNDED KNEE (1890) is often called the last battle of the Indian wars.

India-Pakistan Wars, the series of conflicts between INDIA and PAKISTAN since 1947, when the Indian subcontinent was partitioned as British rule there ended. The roots of the conflict lie in the long-standing hostility between the Hindus and Muslims. More than one million people are believed to have died in the religious rioting that took place immediately after partition, and many millions more were forced to relocate. The status of KASHMIR was particularly troublesome. An uneasy peace was worked out and lasted until 1965, when fighting broke out in the Rann of Kutch, a border region between India and West Pakistan. Fighting spread to Kashmir and the Punjab, but a UN-sponsored cease-fire went into effect in 1966. In 1971 East Pakistan, with the support of India, revolted against the rule of West Pakistan. Again, brutal fighting and massive relocations took place. East Pakistan declared itself independent as BANGLADESH, and 1974 Pakistan recognized that status.

Indic languages, group of languages belonging to the Indo-Iranian subfamily of the Indo-European family of languages. See LANGUAGE (table).

indictment, in law, formal written accusation of crime, affirmed by a grand JURY and presented by it to a court for trial of the accused. The 5th amendment to the U.S. CONSTITUTION guarantees the use of an indictment (thus safeguarding the right to a preliminary hearing by a grand jury) in all trials for capital or other infamous crimes. In practice, however, the tendency has been to allow prosecution of many crimes on "information" (an accusation presented directly by the prosecutor without consideration by a grand jury).

indium (In), metallic element, discovered spectroscopically in 1863 by Ferdinand Reich and H.T. Richter. Soft, malleable, ductile, lustrous, and silver-white, it remains liquid over a wide temperature range. Indium wets glass and can be used to form a mirror surface more corrosion-resistant than one of silver. See ELEMENT (table); PERIODIC TABLE.

Individual Retirement Account (IRA), tax-sheltered retirement plan, originally created (1974) to assist individuals not covered by company pensions. Under the U.S. tax law of 1981, individuals were permitted to contribute up to $2,000 per year (increased from $1,500) to such accounts and coverage was extended to employees already in corporate pension programs. Since 1987 there have been limitations on who can make tax-deductible contributions to an IRA. IRA monies may be placed in high-yield investments, with tax deferred until money is withdrawn.

Indo-Aryan, variant name for Indic languages. Broader uses referring to racial stocks are now obsolete. See LANGUAGE (table).

Indochina, term used in a wide sense for the entire SE Asian peninsula occupied by MYANMAR, MALAYSIA, THAILAND, LAOS, CAMBODIA, and VIETNAM, whose cultures reflect the long-term influence of neighboring India (W) and China (N). The term is also used in a more restricted sense for the colonial empire developed by France in the eastern part of the peninsula after 1862. During World War II France offered greater self-government to the various states it ruled there, within a French federation of Indochina. Vietnamese nationalists rejected the offer (which Laos and Cambodia accepted), demanding (1945) the complete independence of the colony of COCHIN CHINA and of the TONKIN and ANNAM protectorates, or what is now Vietnam. After a long and bitter war, the French were defeated at DIENBIENPHU (1954) and subsequently lost control of all Indochina at the GENEVA CONFERENCE (1954). See also VIETNAM WAR.

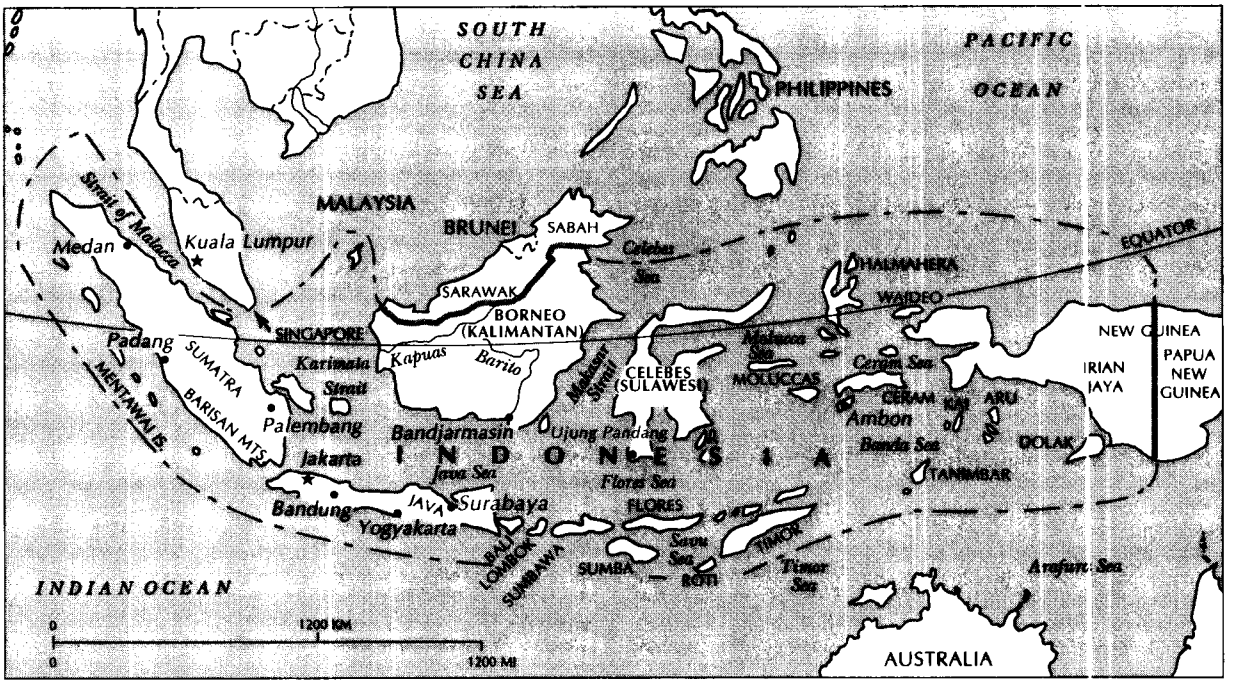
Indochina War: see VIETNAM WAR.

Indo-European, family of languages to which English belongs. It includes more speakers than any other language family. See LANGUAGE (table).

Indo-Iranian, subfamily of the Indo-European family of languages. See LANGUAGE (table).

Indonesia, officially Republic of Indonesia, republic (1992 est. pop. 195,684,000), c.740,000 sq mi (1,916,600 sq km), SE Asia, comprising more than 3,000 islands stretching along the equator from the Malaysian mainland to New Guinea; the main islands are JAVA, SUMATRA, Kalimantan (Indonesian BORNEO), CELEBES (Sulawesi), BALI, TIMOR, the MOLUCCAS (Maluku), and Irian Jaya (West New Guinea). Indonesia is the fourth largest country in the world by population. The capital is JAKARTA, on Java. The islands are mountainous and dotted with volcanoes, both active and dormant; the climate is tropical, with abundant rainfall. About 55% of the work force is engaged in agriculture, and fertile soil sustains a rich yield; principal crops are rice, fruit, cassava, peanuts, rubber, and coffee. Indonesia's natural resources are among the richest in the world; the nation is a leading producer of petroleum, its most valuable export; liquefied natural gas, tin, bauxite, nickel, and gold also are important. Products of the vast rain forests include hardwoods (rapid deforestation has caused international concern), rubber, palm oil, and cinchona. Primarily a supplier of raw materials, the country has little industry beyond oil, mining, and textiles. An aircraft industry was established in 1986, however, and development of other high-technology manufactures is planned. The population is mainly Malayan and Papuan, with an important Chinese minority, and is unevenly distributed among the islands. Over 50% of the people live on Java, which has about 7% of the nation's land area, and the government has undertaken (since 1969) to resettle Javans on Sumatra and other islands. Islam is the predominant religion; there is a Christian minority (about 10%). The official language is Bahasa Indonesia (a Malay lingua franca), but Javanese, English, Dutch, and more than 250 other tongues are spoken.

History. Early in the Christian era, Indonesia came under the influence of Indian civilization, and after the 7th cent. important Bud-



dhist and Hindu kingdoms arose, notably the 13th-cent. Majapahit empire of Java. Arab traders first arrived in the 14th cent., and by the end of the 16th cent., Islam had become the dominant religion. Reduced by internal dissension to a number of small, weak states, the area was easy prey for Europeans (Portuguese, 1511; Dutch, 1596; British, 1600) lured by the rich spice trade. By the 17th cent. the Dutch EAST INDIA COMPANY emerged as the dominant power, and in 1799 the Netherlands assumed direct control of the area, thereafter known as the Netherlands (or Dutch) East Indies. Agitation for independence began early in the 20th cent. Following Japanese occupation of the islands in World War II, nationalist leader SUKARNO proclaimed (1945) an independent Indonesian republic; after four years of intermittent, sometimes heavy fighting, the Dutch finally transferred sovereignty in 1949. Netherlands New Guinea became part of Indonesia in 1963 and was renamed Irian Jaya in 1973. Indonesia forcibly annexed Portuguese East Timor in 1976, a move not recognized by the UN and opposed by the inhabitants. An abortive Communist coup in 1965 led to an anti-Communist takeover by the military, under Gen. SUHARTO, who was elected president in 1968 and reelected in 1973, 1978, 1983, and 1988. Under Suharto, who moved Indonesia closer to the West, the priority has been economic rehabilitation and growth. In recent years government corruption has increased, and Suharto has relied on repression to control dissent.

inductance, quantity that measures the electromagnetic INDUCTION of an ELECTRIC-CIRCUIT component. The self-inductance L of a circuit component determines the magnitude of the ELECTROMOTIVE FORCE (emf) induced in it as a result of a given rate of change of current through the component. The mutual inductance M of two components, one in each of two separate but closely located circuits, determines the emf that each may induce in the other for a given current change. Inductance is expressed in units of henrys. A device designed to produce an inductance, e.g., a wire coil, is called an inductor.

induction, in ELECTRICITY and MAGNETISM, common name for three distinct phenomena. **Electromagnetic induction** is the production of an ELECTROMOTIVE FORCE (emf) in a conductor as a result of a changing magnetic FIELD about the conductor. Such a variation may be produced by relative motion between the conductor and the source of the magnetic field, as in an electric GENERATOR, or by varying the strength of the entire field. Changing the current in a given circuit can also induce emf in a nearby circuit unconnected with the original circuit; this is called mutual induction and is the basis of the TRANSFORMER. **Electrostatic induction** is the production of an unbalanced electric CHARGE on an uncharged metallic body as a result of a charged body being brought near it without touching it. If the charged body is, e.g., positively charged, electrons in the uncharged body will be attracted toward it; if the opposite end of the body is then grounded, electrons will flow into it to replace those drawn to the other end. The body thus acquires a negative charge after the ground connection is broken. **Magnetic induction** is the production of a magnetic field in a piece of unmagnetized iron or other ferromagnetic substance when a magnet is brought near it. The magnet causes the individual particles of the iron, which act like tiny magnets, to line up so that the sample as a whole becomes magnetized.

induction, in LOGIC, the process of reasoning from the particular to the general. Francis BACON proposed induction as the logic of scientific discovery and DEDUCTION as the logic of argumentation. In fact, both processes are used together regularly in the empirical sciences: by the observation of particular events (induction) and from already known principles (deduction), new hypothetical principles are formulated and laws induced.

inductor: see INDUCTANCE.

indulgence, in the Roman Catholic Church, the pardon of temporal punishment due for SIN. Indulgences are granted out of the Treasury of Merit won for the church by Jesus and the saints. Until their sale was made unlawful by the Council of TRENT (1562), the abuse of indulgences was common, and it was this abuse that Martin LUTHER first denounced.

Indurain, Miguel, 1964–, Spanish bicycle racer. The best competitive bicyclist of the early 1990s, he scored consecutive victories in the Tour de France (1991–93) and Giro d'Italia (1992–93). Known for his extremely strong legs, he excels at time trials.

Indus, chief river of Pakistan, c.1,900 mi (3,060 km) long, site of the prehistoric INDUS VALLEY CIVILIZATION. It rises in the TIBET region of China, flows west across Jammu and KASHMIR, India, then southwest through Pakistan, where it receives the "five waters" of the PUNJAB (the Chenab, Jhelum, Ravi, Beas, and Sutlej rivers), to an infertile clay delta on the Arabian Sea SE of Karachi. The unnavigable Indus is harnessed for irrigation and hydroelectricity by the Jinnah, Sukker, and Kotri dams. A treaty (1960) between India and Pakistan regulates withdrawals of water from the river and its tributaries.

industrial policy, government-sponsored economic program in which public and private sectors coordinate their efforts to develop

The key to pronunciation appears on page xiii.

new technologies and industries. The government may provide support through subsidies, preferential tariffs, tax credits, or development banks. This approach to industrial development has been used in many E Asian countries and some W European ones. Although government involvement is often viewed with suspicion in the U.S., subsidies or other support are provided in the areas of defense, energy, transportation, agriculture, and home construction. The federally sponsored semiconductor industry consortium, Sematech (est. 1987), is credited with aiding the revival of U.S. semiconductor manufacturers.

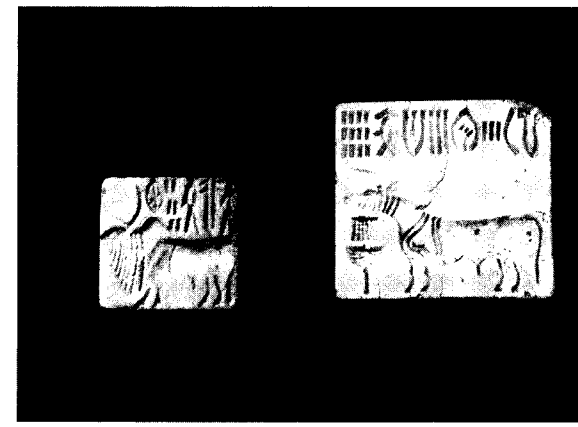
industrial pollutants: see POLLUTION; WASTE DISPOSAL.

Industrial Revolution, term usually applied to the social and economic changes that mark the transition from a stable agricultural and commercial society to a modern industrial society. Historically, it is used to refer primarily to the period in British history from c.1750 to c.1850. Dramatic changes in the social and economic structure took place as inventions and new technology created the factory system of large-scale machine production and greater economic specialization. The laboring population, formerly employed mainly in agriculture, increasingly gathered in great urban factory centers. The same process occurred at later times and in different degrees in other countries. The crucial development of the Industrial Revolution in Britain was the use of steam for power, made possible by the STEAM ENGINE (1769) of James WATT. Cotton textiles was the key industry early in this period. The presence of large quantities of coal and iron proved a decisive factor in Britain's rapid industrial growth. Canals and roads were built, and the advent of the railroad and steamship widened the market for manufactured goods. New periods of development came with electricity and the gasoline engine, but by 1850 the revolution was accomplished, with industry having become a dominant factor in British life. The effects of the Industrial Revolution were worldwide. France (after 1830), Germany (after 1850), and the U.S. (after the Civil War) were transformed by industrialization. Europeans introduced the revolution to Asia at about the turn of the century, but only Japan eventually grew into an industrial giant. The RUSSIAN REVOLUTION had as a basic aim the introduction of industrialism. The Industrial Revolution has changed the face of nations, providing the economic base for population expansion and improvement in living standards, and it remains a primary goal of less developed countries. But with it have also come a host of problems, including labor-management conflicts, worker boredom, and environmental pollution.

Industrial Workers of the World (IWW), revolutionary industrial union organized in Chicago in 1905 by 43 labor organizations. It became the chief organization in the U.S. representing the doctrines of SYNDICALISM. Leaders included E.V. DEBS, W.D. HAYWOOD, and Daniel De Leon. The aim of the IWW, whose members were known as Wobblies, was to unite all skilled and unskilled workers for the purpose of overthrowing CAPITALISM and rebuilding society on a socialistic basis. It opposed arbitration and COLLECTIVE BARGAINING, favoring direct action. After 1908 the IWW became an organization largely of the unskilled, reaching its peak strength (60,000 to 100,000 members) on the eve of World War I. Wartime strikes led to suppression by the federal government, including arrest of its entire leadership, and it declined rapidly thereafter.

Indus valley civilization, c.2500–c.1500 B.C., ancient civilization that flourished along the Indus R. in present-day Pakistan. Its chief cities were Mohenjo-Daro and Harappa, where archaeologists have unearthed impressive public and private buildings that are evidence of a complex society based on a highly organized agriculture supplemented by active commerce. The arts flourished, and examples in copper, bronze, and pottery have been uncovered. Also found were examples of a pictograph script that long baffled archaeologists but was finally deciphered in 1969. The fate of the Indus valley civilization remains a mystery, but it is believed that it fell victim to invading Aryans.

inequality, in mathematics, statement that one expression is less than or greater than another. The symbols $<$ (less than), $>$ (greater than), $\leq$ (less than or equal to), and $\geq$ (greater than or equal to) are used to indicate inequalities, as in $3 < 5$ and $2x + 1 \geq 7$. Like EQUATIONS, inequalities containing variables can be solved; the solutions are also inequalities. For instance, $2x + 1 \geq 7$ has the solution $x \geq 3$, because any number greater than or equal to 3 can be substituted for x to make the left side greater than or equal to 7.



Indus Valley pictograph script

inert gas or **noble gas,** any of the elements in group 0 of the PERIODIC TABLE. In order of increasing atomic number, they are HELIUM, NEON, ARGON, KRYPTON, XENON, and RADON. Sometimes called the rare gases (although argon makes up 1% of the atmosphere), they are colorless, odorless, and tasteless. Inert gases have very low chemical activity because their outermost, or valence, electron shell is complete, containing two electrons in the case of helium and eight in the remaining cases.

inertia, in physics, the resistance of a body to any alteration in its state of MOTION, i.e., the resistance of a body at rest to being set in motion or of a body in motion to any change of speed or of direction. See MASS.

Inez de Castro: see CASTRO, INÉS DE.

infallibility, in Christian thought, the inability of the church to err, believed since early Christian times to be guaranteed by Scripture. As proclaimed at the first VATICAN COUNCIL (1870), Roman Catholics believe in the infallibility of the pope when he speaks *ex cathedra* on faith and morals. The Orthodox hold that ecumenical councils are infallible. Protestants largely reject the infallibility of the church.

infantile paralysis: see POLIOMYELITIS.

infection, invasion of plant or animal tissues by pathogenic (disease-producing) microorganisms, such as BACTERIA, fungi (see FUNGAL INFECTION), VIRUSES, VIROIDS, and PROTOZOANS. Bacteria can destroy certain immune system cells or produce toxins that damage host tissues and interfere with normal metabolism. Viruses can cause either cellular degeneration, as in RABIES, or cellular proliferation, as in WARTS. Many invading organisms produce substances that cause allergic sensitivity in the host (see ALLERGY). IMMUNITY is the capacity of the host to resist infection.

inferiority complex: see COMPLEX.

infertility: see STERILITY.

infinity, in mathematics, that which is not finite; it is often indicated by the symbol ∞. A SEQUENCE of numbers is said to approach infinity if the numbers eventually become arbitrarily large, i.e., larger than any specified number. The word *infinite* is also used to describe a SET with more than any finite number of elements, e.g., the set of points on a line or the set of all prime numbers (see NUMBER THEORY). Georg CANTOR showed that there are different orders of infinity, the infinity of points on a line being of a greater order than that of prime numbers, and developed the theory of transfinite numbers as a means of distinguishing them.

inflation, in economics, a persistent and relatively large increase in the general price level of goods and services. It results from an increase in the amount of circulating currency beyond the needs of trade. The oversupply of currency thus created, in accordance with the law of SUPPLY AND DEMAND, decreases the value of money, or, more accurately, increases the prices of goods and services. Inflation may occur in times of economic or political upheaval, and

it commonly occurs during war, when governments borrow and when there is a limited supply of consumer goods. Under less extreme circumstances, inflation stimulates business and helps wages to rise, but usually not as fast as prices; hence, real wages diminish. As a rule, annual price increases of less than 2% or 3% have not been considered inflationary. The 1970s brought the onset of worldwide inflation (often occurring as stagflation), commonly attributed to the soaring cost of petroleum. Double-digit inflation (i.e., 10% or more) became common in many countries and caused severe economic dislocations. In the early 1980s, however, recession lowered the inflation rate in the U.S., and it has remained relatively moderate since then. The opposite of inflation is **deflation,** a time of falling prices, curtailed business activity, and high unemployment (see DEPRESSION).

influenza, acute, highly contagious disease caused by a number of different viruses. The disease usually begins abruptly with fever, muscular aches, and inflammation of the respiratory mucous membranes; its more severe forms are bacterial PNEUMONIA and BRONCHITIS. Influenza epidemics have decimated large populations; an outbreak in 1918 killed over 20 million people. An injection with influenza virus vaccine can confer temporary immunity.

information storage and retrieval, the systematic process of collecting and cataloging data so that they can be located and displayed upon request. COMPUTERS and DATA PROCESSING have made possible the high-speed, selective retrieval of large amounts of information in such diverse fields as banking, law enforcement, jurisprudence, and medicine. There are several basic types of information-storage-and-retrieval systems. *Document-retrieval systems* store entire documents; these are usually retrieved by title or through a series of key words that denote the category to which they belong. Full-text searching, the capability of retrieving on the basis of any word in the document, is increasingly common and in used in many electronic encyclopedias. *Database systems* store the information as a series of discrete records that are, in turn, divided into discrete fields (e.g., name, height, and weight); records can be searched and retrieved on the basis of the content of the fields (e.g., all people who weigh more than 150 lb/68 kg). The data are stored within the computer, either in main storage or auxiliary storage, for ready access. *Reference-retrieval systems* store references to documents; references relevant to a particular request are retrieved and printed in a list. Such a system can therefore provide an index to literature from a wide variety of sources (e.g., books, periodicals, technical journals) on a particular subject (e.g., hypertension). *Image-retrieval systems* store drawings and photographs that either have been sketched directly on a graphics COMPUTER TERMINAL or have been input through a scanning device. The digitized images can be retrieved for viewing on a graphics terminal or drawn with a plotter or a printer. Such systems are proving increasingly important in COMPUTER-AIDED DESIGN and DESKTOP PUBLISHING. See also HYPERTEXT.

information theory, mathematical theory that explains aspects and problems of communication. A communication system in information theory consists of a message source, an encoder, a channel over which the message is transmitted, a decoder, and a message recipient. *Information* is a measure of the probability of a message being selected from the set of all possible messages. Information thus is distinct from meaning—a string of nonsense words and a meaningful sentence may be equivalent with respect to information content. Numerically, information is measured in bits (short for *binary digits*). One bit is equivalent to the choice between two equally likely choices. When several choices are equally likely, the number of bits is equal to the LOGARITHM of the number of choices taken to the base two. When the various choices are not equally probable, the situation is more complex. The mathematical expression for information content closely resembles the expression for ENTROPY in thermodynamics. The greater the information in a message, the lower its randomness, or "noisiness," and hence the smaller its entropy. For any given channel information theory defines a limiting capacity or rate at which it can carry information, expressed in bits per second. Once the information content and channel capacity are calculated, coding techniques can be defined to control errors in the channel. The theory succeeds remarkably in outlining the engineering requirements and limitations of communications systems.

informed consent, in medicine, a patient's written consent to a surgical or medical procedure or other course of treatment, given after the physician has told the patient all of the potential benefits, risks, and alternatives involved. The concept of informed consent is based on the principle that a physician has a duty to disclose to a patient information that allows the patient to make a reasonable decision regarding his or her own treatment.

infrared astronomy, study of celestial objects by means of INFRARED RADIATION. Although it was shown as early as the late 18th cent. that IR radiation could be detected, modern IR astronomy did not begin until the late 1950s because of the lack of appropriate equipment. Most progress has resulted from data obtained from orbiting OBSERVATORIES. Among the findings are the existence of dust trails in comet orbits, a new class of galaxies that are dim in the visible region of the SPECTRUM but 50 to 100 times brighter in the infrared, clouds of millimeter-sized particles around distant stars, and a bulge near the center of the MILKY WAY.

infrared radiation, ELECTROMAGNETIC RADIATION having a wavelength in the range of 750 to 1,000,000 nanometers, thus occupying that part of the electromagnetic spectrum with a frequency less than that of red visible LIGHT and greater than that of MICROWAVES. Infrared radiation is thermal, or heat, radiation and is generally produced by any body having a temperature above 10K. It has many of the same properties as visible light, such as being reflected or refracted. Infrared radiometers serve as the basis for heat-seeking devices in missiles and night vision devices. Medical uses of infrared radiation include thermal imaging, or thermography, which is also used in industry.

Inge, William [ĭnj], 1913–73, American playwright, b. Independence, Kans. His realistic dramas, often dealing with midwestern small-town life, include *Come Back, Little Sheba* (1950), *Picnic* (1953; Pulitzer), and *Bus Stop* (1955).

Ingemann, Bernhard Severin [ĭng'əmän], 1789–1862, Danish poet and novelist. His historical novels helped revive national literary consciousness, and the religious *Morning and Evening Songs* (1839) contains some of the finest lyrics in Danish.

Inglewood, city (1990 pop. 109,602), Los Angeles co., S Calif.; founded 1873, inc. 1908. A residential and industrial suburb of Los Angeles, it is located in an oil-producing area. Manufactures include machinery, aircraft parts, and electronic equipment. The Northrop Inst. of Technology and Los Angeles Forum, home of the Lakers basketball team, are there.

Ingres, Jean Auguste Dominique [ăN'grə], 1780–1867, French painter. A student of J.L. DAVID and an unparalleled draftsman, he won the Prix de Rome in 1801. The extraordinary sensuality of his work, e.g., the portrait of Mme Rivière (Louvre) and *Jupiter and Thetis* (1811; Musée Granet, Aix-en-Provence), put him at odds with the strict neoclassicists of his day. Ingres was also a portraitist, and his pencil portraits, e.g., *Paganini* (1819), are among his finest works. He was hailed as the bulwark of Davidian classicism for his *Vow of Louis XIII* (cathedral, Montauban), but his true inspiration had always been RAPHAEL. His followers, the *Ingristes,* lacked his genius, but many later artists (DEGAS, RENOIR, and PICASSO) have acknowledged their debt to him. His works include rigidly academic paintings, e.g., *The Apotheosis of Homer* (1827; Louvre), and intimate, sensual nudes, e.g., *The Turkish Bath* (1852–63; Louvre).

inheritance tax, assessment made by a state on the portion of an estate received by an individual; it differs from an estate tax, which is a federal tax levied on an entire estate before it is distributed to individuals. A related federal levy is the **gift tax,** designed to prevent people from avoiding inheritance and estate taxes by giving away property before death. The U.S. tax law of 1981 greatly reduced estate and gift taxes by raising exemptions (from $175,000 to $600,000) and lowering rates.

initiation, ritual transition from one status to another, as from childhood to adulthood, with attendant ceremonies and ordeals. A dominant theme is the symbolism of death and rebirth. Testing the initiate's worthiness to enter the new status, it often involves special instructions, restrictions, seclusion, and/or mutilation. Among the most important social institutions of traditional, preliterate so-

The key to pronunciation appears on page xiii.

cieties, it continues in such modern contexts as fraternal orders and SECRET SOCIETIES.

initiative, referendum, and recall, processes by which voters can directly influence the making of laws and the removal of public officials. An **initiative** is the originating of a law or constitutional amendment by obtaining a prescribed number of signatures on a petition. It is then either voted on in a special election or the next general election, or taken up by the legislature. **Referendum** is a vote of final approval on a specific law or policy. **Recall** is a petition method for removing an elected official, before his or her term has expired, by requiring a special election.

injunction, in law, formal court order directing a party to perform or refrain from performing a specified act. It is often used where money damages cannot satisfy a plaintiff's claim. Developed in EQUITY courts, injunctions were at first only prohibitory; but the practice of issuing positive orders in negative guise (e.g., "Do not allow the wall to stand," meaning "Tear down the wall") led to acceptance of the mandatory (affirmative) injunction. Injunctions are granted in many circumstances, usually by a judge sitting without a jury, and are enforced by contempt of court proceedings.

Inkatha Freedom party: see BUTHELEZI, MANGOSUTHU GATSHA.

inlaying, process of ornamenting a surface by setting into it a material of a different color or substance. Of ancient origin, inlaying of materials such as wood, stone, ivory, glass, metal, and mother-of-pearl has been used on a wide variety of architectural and decorative objects.

Inner Mongolian Autonomous Region, region (1990 pop. 21,457,000), c.460,000 sq mi (1,200,000 sq km), N China. The capital is Hohhot. Bounded on the N by the Republic of Mongolia and Russia, the region is home to the Mongolian nationality, which comprises about 16% of the population. Its extensive grasslands are a major center of stock raising. Mineral extraction is an important industry; steel, machinery, and light industrial products are also manufactured.

Inness, George, 1825–94, American landscape painter; b. Newburgh, N.Y. His early work is in the manner of the HUDSON RIVER SCHOOL, e.g., *Delaware Water Gap* (Montclair Mus., N.J.). He soon discovered a personal style that was freer, more intimate, and richer in color. A Swedenborgian, Inness sought the mystical in nature, portraying it through a wide range of light effects. Among his principal works are *Rainbow After a Storm* (Art Inst., Chicago) and *June* (1882; Brooklyn Mus., N.Y.C.).

Innis, Roy (Emile Alfredo), 1934–, African-American CIVIL-RIGHTS leader; b. St. Croix, Virgin Islands. A member of the CONGRESS OF RACIAL EQUALITY (CORE) since 1963, he has served as its national director (1968–82) and chairman (1970–). In the late 1960s he abandoned an integrationist approach to civil rights for the ideology of black power and a revived black nationalism, but he later supported Pres. REAGAN's policies and criticized Jesse JACKSON.

Innocent I, Saint, d. 417, pope (401–17), an Italian. He was champion of papal supremacy. In 410, he tried but failed to halt ALARIC's sack of Rome. Feast: July 28.

Innocent II, d. 1143, pope (1130–43), a Roman named Gregorio Papareschi. Opposed by the antipope Anacletus II, Innocent won the support of BERNARD OF CLAIRVAUX and Holy Roman Emperor LOTHAIR II and prevailed over Anacletus's successor, Victor IV. He convened the Second Lateran Council (1139) and condemned the teachings of Peter ABELARD and Arnold of Brescia.

Innocent III, 1160?–1216, pope (1198–1216), an Italian named Lotario di Segni, one of the most prominent figures of medieval history. A learned theologian, he held the theory that supremacy of the spirit over the flesh meant that the pope, as church ruler, should be superior to lay rulers of states—a theory not held in present Roman Catholic doctrine. To establish papal supremacy, Innocent was active in political affairs. In the Holy Roman Empire, he arbitrated the dispute of PHILIP OF SWABIA and OTTO IV in Otto's favor (1201); later favored Philip (1207–8); crowned Otto (1209) after Philip's murder, only to excommunicate him (1210) and bring about the election of FREDERICK II, who was his ward. In England, Innocent, by naming Stephen Langton archbishop of Canterbury, infuriated King JOHN; in the quarrel, Innocent put England under interdict and excommunicated (1209) the king. John submitted and received England and Ireland as a fief from the pope. Later, Innocent declared that MAGNA CARTA was not binding on John because it was extorted by force and without the knowledge of his overlord (Innocent). In France the pope could not establish political power over PHILIP II but did force him to bow to canon law in the matter of a divorce. In Italy he reclaimed papal territories and was recognized as overlord of Tuscany. Thus, in all Europe he went far to put his theory of papal monarchy into effect, though history was to make his victories hollow. He promoted the Fourth CRUSADE and protested when the Crusaders attacked the Byzantine Empire; nevertheless, he recognized the Latin Kingdom of Constantinople, which they set up, and tried to spread the Latin rite there, embittering relations between the Eastern and Western churches. Similarly, he protested when the crusade he had started against the ALBIGENSES was turned to political and economic ends; he later urged St. DOMINIC's mission. Innocent was vigorous in administering internal church affairs and dominated the Fourth Lateran Council (1215). He wrote extensively, and his *De contemptu mundi* on the contempt of this world was popular in the Middle Ages.

Innocent IV, d. 1254, pope (1243–54), a Genoese named Sinibaldo Fieschi. His papacy was preoccupied by a contest with the HOHENSTAUFEN rulers. He opposed Holy Roman Emperor FREDERICK II and had to flee to Lyons, where he convened (1245) the First Council of Lyons, which declared Frederick deposed. Innocent supported pretenders to Frederick's throne and, after Frederick's death, continued the struggle against the emperors Conrad IV and MANFRED.

Innocent VIII, 1432–92, pope (1484–92), a Genoese named Giovanni Battista Cibò. His close friend Giuliano della Rovere (later Pope JULIUS II) largely directed papal affairs. Innocent failed to organize a crusade against the Turkish sultan BEYAZID II, but in 1490 wrung a peace agreement from Beyazid by threatening to recognize Beyazid's brother, Djem, as sultan.

Innocent XI, 1611–89, pope (1676–89), an Italian named Benedetto Odescalchi. Noted for his saintliness, he argued with LOUIS XIV of France over papal authority and denounced Louis's Gallican statement (1682) that kings are not subject to the pope. He condemned the king's revocation of the Edict of NANTES (1685). He was beatified in 1956.

Innsbruck, city (1991 pop. 114,996), capital of TYROL prov., SW Austria, on the Inn R. Established in the 12th cent., it became an important trans-Alpine trading post. Today it is an industrial center and a summer and winter resort. The winter Olympic games were held in Innsbruck in 1964 and 1976. The city's historic buildings include the Hofkirche, a 16th-cent. Franciscan church, and the 15th-cent. Fürstenburg castle.

inoculation: see VACCINATION.

Inonu, Ismet, 1884–1973, Turkish statesman. The chief of staff of the Turkish nationalist army in 1920, he repelled Greek forces at Inonu. He was premier (1923–37) and then president (1938) of the Turkish Republic. He kept Turkey neutral during World War II, westernized Turkish society, and encouraged democracy. Out of power during the 1950s, he returned in the 1960s, when his Republican People's party led several coalition governments.

inorganic chemistry, branch of CHEMISTRY dealing with all the elements and their compounds, except for most carbon compounds, which are studied in ORGANIC CHEMISTRY. Branches of inorganic chemistry include bioinorganic chemistry, coordination chemistry, geochemistry, inorganic technology, nuclear science and energy, reaction kinetics and mechanisms, solid-state chemistry, and synthetic inorganic chemistry.

Inouye, Daniel K., 1924–, U.S. politician; b. Honolulu. A senator from Hawaii since 1962, he was a member of the WATERGATE committee (1972–74) and served as chairman of the committee investigating the IRAN-CONTRA AFFAIR (1987).

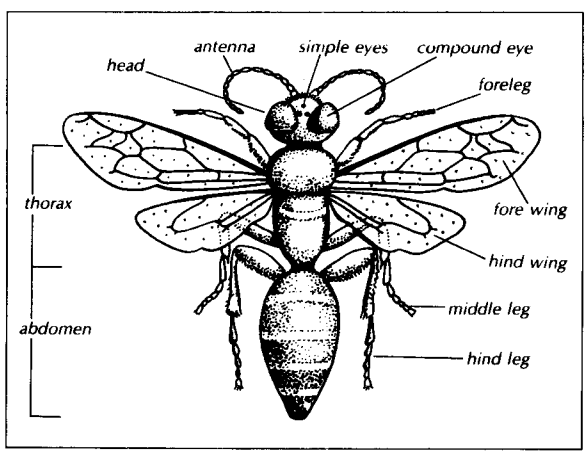
input-output analysis, a tabular technique, devised by Wassily LEONTIEF, that statistically analyzes how a nation's industries interact. It determines the impact on supplier industries of production changes in any single industry. These techniques can be used to measure the impact of changing demand in any industry throughout the economy.

Inquisition, tribunal of the Roman Catholic Church formed to suppress heresy. In 1233 Pope GREGORY IX established the papal Inquisition to combat the heresy of the ALBIGENSES. The Inquisition

used judicial torture but rarely condemned prisoners to burn; imprisonment was the norm. To deal with Protestantism, PAUL III assigned (1542) the Inquisition to the Holy Office. This was replaced (1965) by the Congregation for the Doctrine of the Faith, which governs vigilance in matters of faith. The **Spanish Inquisition,** independent of the papal Inquisition, was established (1478) by the Spanish monarchs to punish converted Jews and Muslims who were insincere. Headed by people such as Tomás de TORQUEMADA, it was notoriously harsher than the medieval Inquisition and much freer with the death penalty. Soon every Spaniard came to fear its power. It was finally abolished in 1834.

insanity, in law, a mental disorder so severe as to render its victim incapable of managing his or her affairs, e.g., incapable of entering into a CONTRACT. In CRIMINAL LAW, insanity may relieve a person from the legal consequences of his or her acts. Determining factors in establishing insanity are the ability to distinguish right from wrong and the capacity to control one's conduct. Some courts accept "irresistible impulse" as a defense. Present insanity is that which renders a defendant incapable of understanding legal proceedings; past insanity refers to the defendant's mental state at the time of the alleged crime. In criminal cases, state laws provide for various means of determining insanity. A defendant found not guilty by reason of insanity is committed to a mental institution. Long-standing controversy over the insanity defense came into focus in the 1982 trial of John Hinckley, Jr., who, after attempting to assassinate Pres. Reagan, was found not guilty by reason of insanity. The plea is rarely employed in the U.S.

insect, invertebrate animal of the class Insecta, an ARTHROPOD. There are more than 700,000 known species. Insects have a chitinous exoskeleton; a segmented body composed of a head (with three pairs of mouthparts, compound and simple eyes, and sensory antennae); a trisegmented thorax (with three pairs of jointed legs and two pairs of wings); and an abdomen (with reproductive appendages). They breathe through a complex network of air tubes (tracheae) opening on the sides of the body. Reproduction is usually sexual, although PARTHENOGENESIS is also common. Some 80% of insect species undergo complete METAMORPHOSIS. Insects are both harmful to humans (as disease carriers and agricultural pests) and beneficial as pollinating agents, as predators on harmful species, and as food in some parts of the world. Fossil records show that insects have undergone relatively little change for 200 million years. The class includes the BEETLES; the MOTHS and BUTTERFLIES; the WASPS, ANTS, and BEES; the FLIES and MOSQUITOES; the true BUGS; APHIDS; and the COCKROACHES and GRASSHOPPERS.



Insect: General anatomy of a wasp, an insect of the order Hymenoptera

insecticide, agent used to kill insect pests. Insecticides have helped increase the yield and improve the quality of crops, but there has been concern about the dangers of chemical insecticide residues in the ecosystem (see ECOLOGY) and in foodstuffs. Such concerns have led to governmental regulation and the replacement of some toxic insecticides that persist in the environment (e.g., DDT and other chlorinated hydrocarbons) with compounds that break down more quickly into less toxic forms. The liabilities of chemical insecticides have encouraged interest in biological controls, which turn natural processes and mechanisms against pest insects and have few if any harmful side effects. Biological controls include using predators, parasites, and pathogens to kill target insects or using synthetic hormones to disrupt pests' normal life processes. Increasingly, biological and chemical methods are coordinated in INTEGRATED PEST MANAGEMENT programs.

insider trading, stock market transactions made with the knowledge of nonpublic information about corporate activity. In the U.S., it has been illegal since 1934. The SECURITIES AND EXCHANGE COMMISSION regards it as unfair to investors who are not privy to such information. Several insider trading scandals shook Wall Street in the mid-1980s.

installment buying and selling: see CREDIT.

instinct, in psychology, term used to indicate an unlearned behavior that is elicited by a specific stimulus and that generally fulfills a vital need of the organism. Instinctive behaviors may include aspects of fighting, escape, courtship, and food-gathering activities; these behaviors are often modified—especially in higher animals—by past experience, as well as by innate regulatory mechanisms. The role of instinct in human behavior is poorly understood, but it is apparently highly modified by the socialization process and individual INTELLIGENCE.

Institut de France [ăNstētü' də frăNs], cultural institution of the French state. Founded in 1795 by the DIRECTORY, it replaced five learned societies that had been suppressed in 1793 by the Convention. Today it is made up of five academies—the French Academy (Académie Française; language and literature) the Académie des Inscriptions et Belles-Lettres (history and archaeology), the Académie des Sciences (physical and mathematical sciences), the Académie des Beaux-Arts (fine arts), and the Académie des Sciences morales et politiques (moral and political sciences). The awards and prizes given by these academies have encouraged endeavor in various fields.

Institutional Revolutionary party (PRI), Span. *Partido Revolucionario Institucional,* Mexican political party. Established (1929) as the National Revolutionary party by former president CALLES, it brought together the country's governmental, military, and agricultural leaders in a program of socioeconomic reform. Since its inception all Mexican presidents and most officials have belonged to the PRI, which has sometimes been accused of corruption and electoral fraud. Its victory margins decreased in the 1980s and 90s, and it has been forced to concede some state elections to its opponents, but the party remains Mexico's dominant political group.

instructional television: see AUDIOVISUAL INSTRUCTION.

insulation, use of materials to inhibit or prevent the CONDUCTION of heat or of electricity. Common heat insulators are ASBESTOS, CELLULOSE fibers, FEATHERS, FIBERGLASS, FUR, stone, WOOD and WOOL; all are poor conductors of heat. In the conduction of electricity from point to point, the conductor acts as a guide for the electric current and must be insulated at every point of contact with its support to prevent escape, or leakage, of the current. Good electrical insulators, or DIELECTRICS, include dry air, dry COTTON, GLASS, PARAFFIN, PLASTICS, PORCELAIN, RESIN, RUBBER, and VARNISHES.

insulin, HORMONE secreted by the islets of Langerhans in the PANCREAS. A protein of 21 amino acids in two cross-linked chains, insulin was the first protein to be sequenced (1951), and its synthesis was reported by several groups in the mid-1960s. Insulin was also one of the first products to be manufactured using GENETIC ENGINEERING. In general, insulin acts to metabolize glucose (sugar). It also increases protein synthesis in muscle. Insufficient insulin in the body results in DIABETES, a condition treated by the administration of insulin or drugs that stimulate insulin secretion.

insurance or **assurance,** system for indemnifying or guaranteeing an individual against loss. Reimbursement is made from a fund to which many individuals exposed to the same risk have contributed specified amounts, known as premiums, so that payment for the loss is divided among many, not falling heavily upon the actual loser. The essence of the contract of insurance, called a policy, is mutuality. The amount of the premium is determined by the op-

eration of the law of averages, as calculated by actuaries. Reinsurance, whereby losses are distributed among many companies, was devised to meet the enormous claims resulting from disasters. Insurance may now be obtained against almost any conceivable risk. Fire insurance usually covers damage from lightning; other insurance against the elements includes hail, tornado, flood, and drought. Life insurance, originally conceived to protect a wage-earner's family when he or she died, has developed policies that provide a lump sum at the end of a term of years or payment of benefits to a terminally ill person. Annuity policies, which pay the insured a yearly income after a certain age, are also available. Automobile insurance compensates not only for fire and theft, but also for damage to the car and for injury to the victim of an accident (liability insurance, now required in many states). Under no-fault insurance plans, automobile-accident victims are compensated by their own company, eliminating the need for a lawsuit, except in serious cases. Bonding, or fidelity insurance, protects an employer against dishonesty or default by an employee. In group insurance, employees pay a lower premium than they would as individuals. By investing premium payments in a wide range of revenue-producing projects, insurance companies have become a major supplier of capital. Many forms of insurance, such as SOCIAL SECURITY, workers' compensation, and unemployment benefits, are government-sponsored. Devices resembling modern insurance seem to have originated in ancient times. By the mid-14th cent. marine insurance was common in the maritime nations of Europe. The first life-insurance policy is believed to have been issued in England in 1583, and Lloyds, perhaps the world's best-known insurer, began issuing marine insurance in London in the 1600s. The first insurance company in the American colonies was founded at Charlestown, S.C., in 1735. See also HEALTH INSURANCE.

intaglio, design cut into stone or other material, or etched or engraved in a metal plate, producing a concave effect that is the reverse of relief or CAMEO. Intaglio PRINTING techniques include ENGRAVING and ETCHING.

integer: see NUMBER; NUMBER THEORY.

integral calculus: see CALCULUS.

integrated circuit, miniature ELECTRIC CIRCUIT containing large numbers of electronic devices—including TRANSISTORS, RESISTORS, CAPACITORS, and DIODES—and packaged as a single unit with leads extending from it for input, output, and power-supply connections. All the electronic devices are formed by selective treatment (doping) of a single chip of SEMICONDUCTOR material. Integrated circuits are used as computer memory circuits and MICROPROCESSORS. They are categorized according to the number of transistors or other active circuit devices they contain; an active circuit device is one that receives power from a source other than its input signal. An ordinary, or small-scale, integrated circuit (SSI) may contain up to several tens of such devices; a medium-scale integrated circuit (MSI), many tens to several hundred; a large-scale integrated circuit (LSI), several hundred to a few thousand; an extra-large-scale integrated circuit (ELSI), a few thousand or more; and a very-large-scale integrated circuit (VLSI), several hundred thousand or more. The first VSLI device was introduced in 1981.

integrated pest management (IPM), planned program that coordinates economically and environmentally acceptable methods of pest control with judicious and minimal use of toxic pesticides. IPM programs assess local conditions, including climate, crop characteristics, the biology of the pest species, and soil quality, to determine the best method of pest control. Tactics employed include better tillage to prevent soil erosion and introduction of beneficial insects that eat harmful species.

integration, in U.S. history, the goal of eliminating discrimination and segregation of African Americans from the rest of American society. After RECONSTRUCTION, white dominance, codified in segregation (Jim Crow) laws, was reestablished in the South: African Americans were denied the vote and an equal share in community life. In 1896 the Supreme Court upheld the principle of separate but equal treatment (PLESSY V. FERGUSON), and by 1920 segregation affected education, transportation, hospitals, churches, housing, and public facilities. The rising CIVIL-RIGHTS movement opposed segregation, and in the late 1940s the federal government gradually moved toward integration. Following the Supreme Court's momentous decision in BROWN V. BOARD OF EDUCATION (1954) that public school segregation is inherently unequal and denies African Americans equal protection under the law, the 17 segregationist states and the District of Columbia were ordered to desegregate their schools. In some places the order met with resistance, lawsuits, and even violence: in Arkansas, federal troops enforced integration (1957) over Gov. Orval Faubus's objections, while Gov. George C. WALLACE tried in vain (1963) to block African-American enrollment at the Univ. of Alabama. Another milestone was the successful bus boycott (1955–56) in Montgomery, Ala., led by civil-rights activist Martin Luther KING, Jr., to end segregation in transportation. Freedom riders then tackled segregation in interstate transportation. Segregated lunch counters, restaurants, beaches, and other public places were also challenged with increasing effect in both the North and South during the 1960s. The Civil Rights Act of 1964, prohibiting discrimination in voting, education, employment, and public facilities, together with the 1965 Voting Rights Act, for the first time gave the federal government the power to enforce desegregation—by denying federal funds to segregated programs and schools or by overseeing elections, for example. The Civil Rights Act of 1968 barred discrimination in the sale or rental of housing. Desegregation of schooling proceeded slowly, but despite setbacks such as widespread opposition to school busing as a means of effecting integration, by the 1980s relatively few African-American students in the U.S. still remained in schools that were completely segregated. Despite real achievements in integration, racial tensions remain one of the U.S.'s most intractable problems, in large part because personal biases and racial stereotyping (by and of all races) cannot be altered by legislation or lawsuits. See also AFFIRMATIVE ACTION.

intelligence, in psychology, the general mental ability involved in processes such as calculating, reasoning, classifying, learning, the use of language, and adjusting to new situations. It is widely accepted that although potential intelligence is related to heredity, the environment is a critical factor in determining the extent of its expression. Since the concept of intelligence is elusive, it has generally been defined by psychologists as that which is measured by intelligence tests. Alfred BINET and Théodore Simon developed the first modern intelligence test in 1905 for the French school system. Currently, the most widely used intelligence tests are the Wechsler Intelligence Scale for Children (WISC) and the Wechsler Adult Intelligence Scale (WAIS). Others commonly used in the past include the Army Alpha Test, first administered to recruits in World War I, and the Revised Stanford-Binet Intelligence Tests, developed by Lewis Terman in the 1930s. One criticism of intelligence tests is that test items may be meaningless or more difficult for members of different sociocultural groups. Test findings in the U.S., however, closely correlate with career and academic achievement. In response to the criticism that intelligence is an attribute of the entire personality and cannot be measured in isolation, "pure" intelligence tests have given way to tests that also measure special aptitudes and personality factors. Recent theories have sought to broaden the definition of intelligence by identifying different types of intelligence, e.g., linguistic and interpersonal intelligence.

intelligence gathering, securing of military, political, or other information, usually about one nation for the benefit of another. It includes the analysis of diplomatic reports, publications, statistics, and broadcasts, as well as **espionage,** or spying, a clandestine activity. French revolutionary Joseph FOUCHÉ developed (1799–1802) the first modern political espionage system, and FREDERICK II of Prussia is considered the father of modern military espionage, which was to play an important role in WORLD WAR I. The efficient British system was the keystone of Allied intelligence in WORLD WAR II. The Office of Strategic Services, the first U.S. espionage agency (1942), was succeeded (1947) by the CENTRAL INTELLIGENCE AGENCY, the NATIONAL SECURITY AGENCY, and other intelligence-gathering bodies. Modern techniques include RECONNAISSANCE SATELLITES, long-distance photography, sophisticated sensing and listening ("bugging") devices, and computer analysis. Defense against espionage is principally a function of counterintelligence specialists. In the business world the massive task of information-gathering that is a normal part of marketing may occasionally include so-

called industrial espionage, an attempt by one company to discover another's secrets.

interest, charge for the use of money, usually figured as a percentage of the principal and computed annually. Such charges have been made since ancient times, and they fell early into disrepute. The Jews and the Christian church forbade interest charges, or usury, as it was called, within their own groups. Gradually the distinction was made between low interest rates and high ones, which came to be known, and condemned, as usury. In the U.S. state usury laws set ceilings on interest, but in 1981, when rates soared to record highs, many legislatures increased or abolished such ceilings in order to attract lenders. High interest rates can dampen the economy by making it more difficult for consumers, businesses, and home buyers to secure loans, as happened in 1981 when the prime rate—the rate that banks charge their best customers—climbed past 20%, with most other rates a few points lower. Economists differed over the causes of such extraordinary rates, but inflationary expectations, federal budget deficits, and the restrictive monetary policies of the FEDERAL RESERVE SYSTEM were important factors.

interference, in physics, the effect obtained when two systems of WAVES reinforce, neutralize, or in other ways interfere with each other. Interference is observed in waves both in a material medium (such as SOUND) and in ELECTROMAGNETIC RADIATION. *Constructive interference* occurs when two waves in the same phase combine. The waves reinforce each other, and the amplitude of the resulting wave is equal to the sum of the amplitudes of the interfering waves. When the phases of the two waves are shifted by 180°, i.e., the maximum positive amplitude of one wave coincides with the maximum negative amplitude of the other wave, *destructive interference* occurs, which results in the canceling of the waves when they have the same amplitude. See DIFFRACTION.

interferon, any of a group of proteins produced by cells in the body in response to viruses. Interferon impairs the growth and replication of the attacking virus and has been shown to have some antitumor properties. Interferons used as drugs include alpha interferon, for HEPATITIS B and C and Kaposi's sarcoma (a cancer associated with AIDS), and beta interferon, for MULTIPLE SCLEROSIS.

Interior, United States Department of the, federal executive department (est. 1849) principally charged as the custodian of the nation's natural resources. Among the many divisions whose chiefs report to the secretary of the interior are the Bureau of Land Management, which must reconcile the often conflicting demands (e.g., for conservation or economic use) made upon U.S. public land; the Bureau of Mines, which sets safety regulations in mining; the Bureau of Reclamation, which oversees water and power projects; the National Park Service, which maintains NATIONAL PARKS and monuments; the Fish and Wildlife Service; the Bureau of INDIAN AFFAIRS (est. 1824); and the Geological Survey.

Interlingua: see INTERNATIONAL LANGUAGE.

internal-combustion engine, engine in which combustion of fuel takes place in a confined space, producing expanding gases that are used to provide mechanical power. The most common internal-combustion engine is the four-stroke reciprocating engine used in AUTOMOBILES. Here, mechanical power is supplied by a piston fitting inside a cylinder. On a downstroke of the piston, the first stroke, fuel that has been mixed with air (by FUEL INJECTION or using a CARBURETOR) enters the cylinder through an intake valve; the piston moves up to compress the mixture at the second stroke; at ignition, the third stroke, a spark from a spark plug ignites the mixture, forcing the piston down; in the exhaust stroke, an exhaust valve opens to vent the burned gas as the piston moves up. A rod connects the piston to a crankshaft. The reciprocating (up and down) movements of the piston rotate the crankshaft, which is connected by gearing to the drive wheels of the automobile. The ignition spark is provided by an electrical system whose power comes from a battery, which also supplies power to the starting system, a small electric motor that turns the crankshaft until the engine takes over. The engine is cooled by water circulating around the cylinders and is lubricated by motor oil driven around the moving engine parts by an oil pump. The two-stroke engine, which combines intake and compression in the first stroke and power and exhaust in the second, is used in lawn mowers and for small vehicles such as motorcycles. Other variations of the internal-combustion engine include the Wankel engine, which replaces the piston and cylinder with a triangular rotor moving inside an oval chamber, and the DIESEL engine. (For a description of an external-combustion engine, see STEAM ENGINE.)

Internal Revenue Service (IRS), division of the U.S. Dept. of the TREASURY, established in 1862. It is responsible for the assessment and collection of federal taxes other than those levied on alcohol, tobacco, firearms, and explosives, and collects most of its revenues through the individual and corporate INCOME TAX.

international date line, imaginary line on the earth's surface, generally following the 180° meridian of LONGITUDE, where, by international agreement, travelers change dates. Traveling eastward across the line, one subtracts one day; traveling westward, one adds a day. The date line is necessary to avoid the confusion that would otherwise result. For example, if an airplane were to travel westward with the sun, 24 hours would elapse as it circled the globe, but it would still be the same day for those in the airplane, while it would be one day later for those on the ground below.

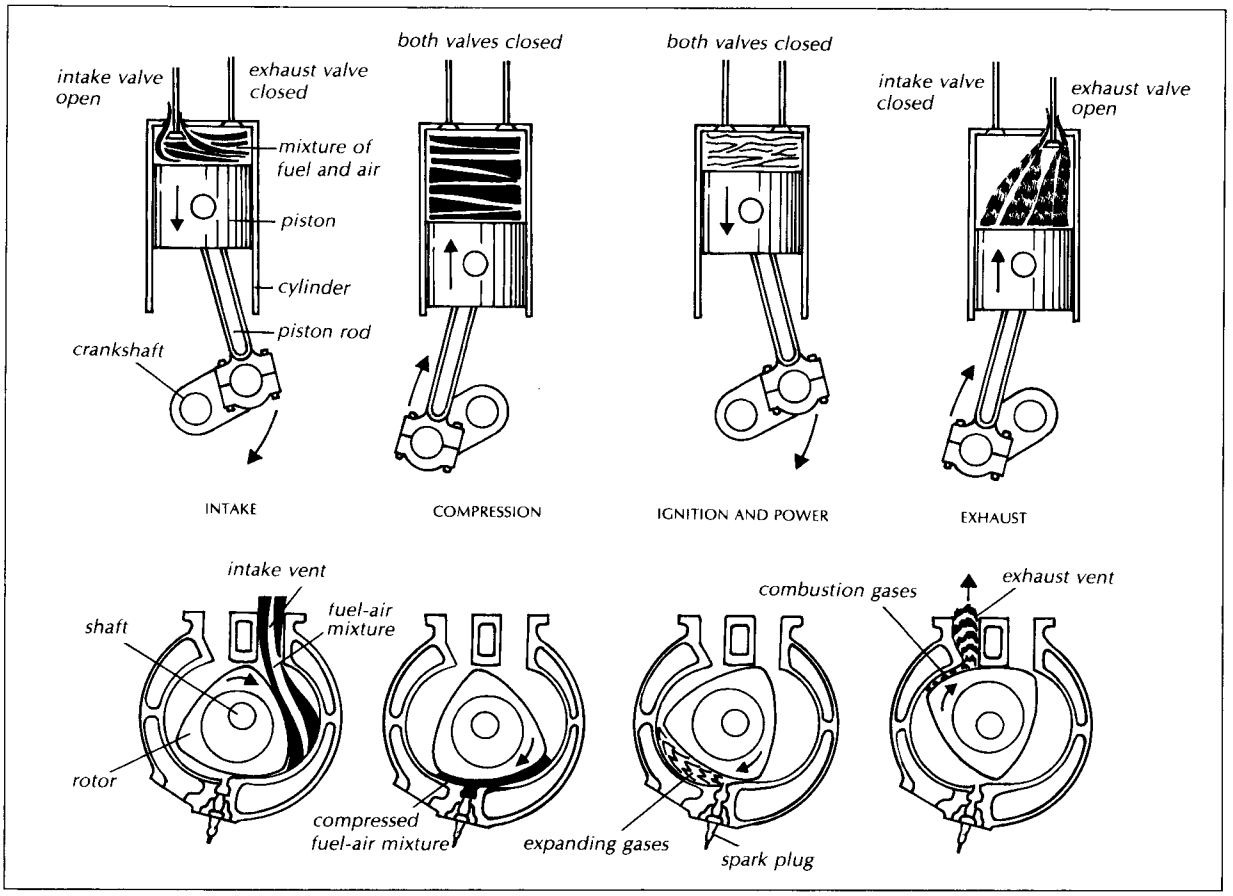
International Finance Corporation: see UNITED NATIONS (table 3).

International Fund for Agricultural Development: see UNITED NATIONS (table 3).

International Labor Organization: see UNITED NATIONS (table 3).

international language, sometimes called universal language, a language intended to be used by people of different linguistic backgrounds to facilitate communication. Latin was an international language during the Middle Ages and Renaissance. During the 18th cent., French was known as the language of diplomacy, and English is often said to fill such a role today in world commerce. Many artificial languages, i.e., languages constructed by human agents, have also been promoted as international languages. It has been estimated that since the 17th cent. several hundred efforts have been made to create such artificial tongues. Among the best known of these is Esperanto, invented by Dr. Ludwig L. Zamenhoff of Poland and first presented to the public in 1887. It has enjoyed some recognition as an international language, being used, for example, at international meetings and conferences. The vocabulary of Esperanto is formed by adding various affixes to individual roots and is derived from Latin, Greek, the Romance languages, and the Germanic languages. The grammar is based on that of European languages but is regular and greatly simplified. The spelling is phonetic. A simplified form of Esperanto is Ido, short for Esperandido. Another well-known artificial language is Interlingua. Created in the early 20th cent., it is derived from English and the Romance languages in both grammar and vocabulary. Later (1932), the British scholar C.K. Ogden developed Basic English, a simplified form of English with a vastly reduced vocabulary.

international law, body of laws considered legally binding among national states; also known as the law of nations. It is based both on customary usages and on provisions of multilateral or bilateral agreements. It is influenced, but not made, by the writings of jurists, unratified conventions, and decisions of the WORLD COURT, the INTERNATIONAL COURT OF JUSTICE, and other tribunals. Since it is not enforced by any supernational sovereign body, some theorists, including HOBBES, have denied it true legal status. But it is recognized in practice, and enforcement is by virtue of world opinion, third-state intervention, sanctions of international organizations like the UN, and, in the last resort, war. In some areas, such as WAR CRIMES, international law governs individuals as well as states. The development of international law coincides with the rise of national states after the Middle Ages, and the first comprehensive formulation of international law, *Concerning the Law of War and*



Internal-combustion engine

Peace, by Hugo GROTIUS, appeared in 1625; among the principles that he enunciated as the basis of international law are the sovereignty and legal equality of all states. International law thereafter grew largely through treaties among states. Following the Napoleonic period, the 1815 Congress of VIENNA reestablished and expanded international law. The GENEVA CONVENTION (1864) and the HAGUE CONFERENCES (1899, 1907), dealing with the rules of war, are other landmarks in development of an international legal code. The 20th cent. presented new problems: Two world wars led to the formation of the LEAGUE OF NATIONS, and then of the UNITED NATIONS, as a body capable of compelling obedience to international law; nuclear proliferation exacerbated the need for international arms treaties (see DISARMAMENT, NUCLEAR); and burgeoning space exploration has led to creation of the field of SPACE LAW. See also AIR, LAW OF THE; SEA, LAW OF THE.

International Maritime Organization: see UNITED NATIONS (table 3).

International Monetary Fund: see UNITED NATIONS (table 3).

international monetary system, rules and procedures by which different national currencies are exchanged for each other in world trade. The first formal international monetary system of modern times was the gold standard, in effect during the late 19th and early 20th cent. Gold served as an instrument of exchange and the only standard of value. The international gold standard broke down in 1914, however, partly because of its inherent lack of liquidity. It was replaced by a gold-bullion standard, but that, too, was abandoned in the 1930s. In the decades following World War II, international trade was conducted under a gold-exchange standard. Under this system, nations fixed the value of their currencies not to gold but to some foreign currency, which was in turn fixed to and redeemable in gold. Most nations fixed their currencies to the U.S. dollar. During the 1960s, however, a severe drain on U.S. gold reserves led to the introduction (1968) of the so-called two-tier system. In the official tier, the value of gold was set at $35 an ounce; in the free-market tier, the price was free to fluctuate according to supply and demand. At the same time, the International Monetary Fund (IMF) created SPECIAL DRAWING RIGHTS as a new reserve currency. In the early 1970s new troubles plagued the international monetary system, resulting in the temporary adoption of "floating" exchange rates based largely on SUPPLY AND DEMAND. Finally, under a 1976 agreement IMF members accepted a system of controlled floating rates and took steps to diminish the importance of gold in international transactions, including elimination of the official price. Since the 1970s the U.S. dollar, Japanese yen, German Deutchmark, and the EUROPEAN MONETARY SYSTEM's European Currency Unit have played the most important roles in international trade. See FOREIGN EXCHANGE.

International style, in architecture, form that originated in the 1920s and became the dominant mode of public architecture in the 1950s and 60s. Structure was regularized, mass lightened, and ornament suppressed, often resulting in an austere framework of steel or concrete, great expanses of glass, and white-walled interiors. Outstanding examples of the International style are the BAUHAUS (1926) at Dessau, by GROPIUS, and the Barcelona pavilion (1929), by MIES VAN DER ROHE. In the U.S., exponents of the style included Richard NEUTRA and Philip JOHNSON.

International System of Units: see METRIC SYSTEM.

International Telecommunication Union: see UNITED NATIONS (table 3).

International Union for the Conservation of Nature and Natural Resources or **World Conservation Union,** international organization founded (1948) to encourage the preservation of wildlife and wild environments. It lists ENDANGERED SPECIES worldwide and promotes ecological and environmental research.

Internet, the: see NETWORK.

Interpol, acronym for the International Criminal Police Organiza-

tion, a worldwide clearinghouse for police information. Established in Vienna in 1923, it was reconstituted in Paris in 1946. Focusing on counterfeiting, forgery, smuggling, and the narcotics trade, it serves more than 150 member nations, providing information about international criminals and helping to apprehend them.

Interstate Commerce Commission (ICC), independent U.S. government agency (est. 1887) responsible for regulating the economics and services of specified carriers engaged in transportation between states. The first U.S. regulatory agency, it was formed in response to malpractices in the railroad industry. Its jurisdiction has gradually expanded to include trucking, bus lines, water carriers, freight forwarders, pipelines not regulated by other agencies, and express agencies, and it controls rates and enforces laws against discrimination in these areas. Its safety functions were transferred to the Dept. of TRANSPORTATION in 1967, and since the 1980s the ICC has had a reduced role in regulating trucking, bus lines, and railroads.

interstellar matter, matter in a galaxy between the stars. About 1% is tiny interstellar grains, believed to be frozen water vapor and carbon dioxide. The grains may appear optically as bright reflection or dark NEBULAE. The rest of the matter is gas, mostly hydrogen and helium, but many molecules have been detected by RADIO ASTRONOMY techniques.

intestine, muscular, hoselike portion of the DIGESTIVE SYSTEM extending from the lower end of the STOMACH to the anal opening. In humans the fairly narrow small intestine is a tubelike structure that winds compactly back and forth within the abdominal cavity. The contraction of its muscular walls (peristalsis) propels food onward while digestion is completed. Innumerable minute projections (villi) in the intestinal lining absorb the altered food for distribution by the BLOOD and LYMPHATIC SYSTEMS to the rest of the body. In the lower right abdominal cavity, the small intestine joins the large intestine (colon), where most of the water content of the remaining mass is absorbed.

Intolerable Acts, name given by American patriots to five laws (including the QUEBEC ACT) adopted by the British Parliament in 1774, limiting the geographical and political freedom of the colonists. Four of the laws were passed to punish Massachusetts for the BOSTON TEA PARTY.

Intracoastal Waterway, toll-free, sheltered water route, extending 2,455 mi (3,951 km) along the U.S. Atlantic Coast (Trenton, N.J.–Key West, Fla.) and the Gulf Coast (NW Florida–Brownsville, Tex.), with open-water extensions of 645 mi (1,038 km) N to Boston and along the W Florida coast. Authorized by Congress in 1919 and maintained by the Army Corps of Engineers, the waterway has a minimum depth of 12 ft (4 m) for most of its length and is used by commercial and pleasure boats.

intrauterine device (IUD), variously shaped BIRTH CONTROL device, usually of plastic, which is inserted into the uterus by a physician. The IUD may contain copper or progesterone. Apparently the IUD creates a hostile environment for the fertilized egg.

Inuit: see ESKIMO.

invertebrate, any multicellular animal lacking a backbone. Invertebrates include all animals except the fishes, amphibians, reptiles, birds, and mammals, which are in the phylum Chordata (see CHORDATE). The major invertebrate groups are the segmented or ANNELID WORMS, ARTHROPODS, COELENTERATES, ECHINODERMS, FLATWORMS, MOLLUSKS, NEMATODES, and SPONGES.

investiture, in FEUDALISM, the ceremony by which a lord "invested" a vassal with a fief, usually by giving him a symbolic stone or clod. In clerical investiture, the symbols were the pastoral ring and staff. Since bishops and abbots were both spiritual and temporal lords, kings and popes disputed the right of investiture in the Middle Ages. Lay investiture—the investiture of a cleric by a temporal lord—became a bitter quarrel between Pope GREGORY VII and Holy Roman Emperor HENRY IV when Gregory forbade (1075) it. After a long conflict, HENRY V and Pope CALIXTUS II resolved the issue in the Concordat of Worms. In England, WILLIAM II began a long struggle over investiture that was settled (1107) by a compromise between HENRY I and St. ANSELM which gave investiture to the church and homages from church revenues to the king.

in vitro fertilization, technique for conception of a human embryo outside the mother's body. Several ova, or eggs, are removed from the mother's body and placed in special laboratory culture dishes (Petri dishes); sperm from the father are then added. If fertilization occurs, a fertilized ovum, after undergoing several cell divisions, is either transferred to the mother's or a surrogate mother's body for normal development in the uterus, or frozen for later implantation. First developed by Drs. Patrick C. Steptoe and Robert G. Edwards of Great Britain (where the first "test-tube baby" was born under their care in 1978), the technique was devised for use in cases of infertility when the woman's fallopian tubes are damaged and cannot be surgically repaired or the man's sperm count is low. It is also now used to enable parents with other reproductive problems (e.g., inability to produce eggs, poor sperm quality, or endometriosis) to bear a child. The technique has raised legal, ethical, and religious issues, including concerns regarding custody of frozen embryos in cases of divorce and questions regarding the appropriateness of the procedure by the Roman Catholic Church. See also ARTIFICIAL INSEMINATION; FERTILIZATION; REPRODUCTIVE SYSTEM; SURROGATE MOTHER.

Io, in astronomy, natural satellite of JUPITER.

Io, in Greek mythology, princess of Argos. She was turned into a heifer by ZEUS to protect her from HERA's jealousy. Hera claimed the heifer and had the many-eyed monster ARGUS guard it. When HERMES killed Argus, Hera's gadfly drove Io until she came to rest in Egypt. There Zeus returned her to human form. Io has been identified with the Egyptian ISIS.

iodine (I), nonmetallic element, discovered in 1811 by Bernard Courtois. The least active of the HALOGENS, it is a dark-gray to purple-black solid that, when heated, sublimes directly to the vapor state. The violet-colored vapor has a characteristic irritating odor. Tincture of iodine and iodoform have important medical uses. Silver iodide is used in photography. Starch turns deep-blue in the presence of iodine; this is a test for either substance. Thyroid-gland hormones contain iodine; inadequate dietary iodine results in goiter, a swelling of the thyroid. Thyroid defects are treated with iodine-131. See ELEMENT (table); PERIODIC TABLE.

ion, atom, or group of atoms, having a net electric charge, acquired by gaining or losing one or more electrons or protons. A simple ion consists of only one charged atom; a complex ion consists of an aggregate of atoms with a net charge. Because the electron and proton have equal but opposite unit charges, the charge of an ion is always expressed as a whole number of positive or negative unit charges. If an atom or group loses electrons or gains protons, it will have a net positive charge and is called a cation. If an atom or group gains electrons or loses protons, it will have a net negative charge and is called an anion. See also ACIDS AND BASES; ELECTROLYTE.

Iona, island, 3.5 mi (5.6 km) long and 1.5 mi (2.4 km) wide, NW Scotland, one of the Inner HEBRIDES. Tourism is the main industry. The island is famous as the early center of Celtic Christianity. In 563 St. COLUMBA founded a monastery there and spread Christianity to Scotland.

Ionesco, Eugène [yŏnĕs'kō], 1912–, French playwright; b. Romania. His works express the absurdity of bourgeois values and the futility of human endeavor in a universe ruled by chance. *The Bald Soprano* (1950), a classic of the theater of the absurd, was followed by *The Lesson* (1951), *The Chairs* (1952), and *Rhinoceros* (1959).

Ionia [īō'nēə], ancient Greek region of ASIA MINOR, on the E Mediterranean (in present-day TURKEY), and including the Aegean Islands. It was here that the Ionians, Greek colonists driven from the mainland by the Dorians, established colonies before 1000 B.C. There came to be 12 important cities—among them MILETUS, SÁMOS, and EPHESUS. After invasions by Cimmeria and Lydia, the cities came under Persian rule (546 B.C.). In 500 B.C. they revolted against DARIUS I; Athens and Eritrea came to their aid, and the PERSIAN WARS resulted. Ionia was conquered by ALEXANDER THE GREAT in 335 B.C. The cities remained rich and important during the Roman and Byzantine empires, but after the Turkish conquest (15th cent. A.D.) their culture was destroyed.

Iowa, midwestern state in the N central U.S.; bounded by the Mis-

The key to pronunciation appears on page xiii.

sissippi R., across which lie Wisconsin and Illinois (E); Missouri (S); Nebraska and South Dakota, from which it is separated by the Missouri R. (W); and Minnesota (N).

Area, 56,290 sq mi (145,791 sq km). *Pop.* (1990) 2,776,755, a 4.7% decrease from 1980 pop. *Capital,* Des Moines. *Statehood,* Dec. 28, 1846 (29th state). *Highest pt.,* 1,670 ft (509 m), Osceola co.; *lowest pt.,* Mississippi R., 480 ft (146 m). *Nickname,* Hawkeye State. *Motto,* Our Liberties We Prize and Our Rights We Will Maintain. *State bird,* Eastern goldfinch. *State flower,* wild rose. *State tree,* oak. *Abbr.,* IA.

Land and People. Most of Iowa is composed of gently rolling prairies, covered with some of the world's most fertile soil and lying between the high bluffs of the MISSISSIPPI and MISSOURI rivers. Because of its location in the center of the North American landmass, Iowa has a typical continental climate characterized by seasonal extremes in temperatures. Over 60% of the population of this traditionally agricultural state lives in urban areas. DES MOINES is the largest city, followed by CEDAR RAPIDS and DAVENPORT. In 1990, nearly 97% of the population was white.

Economy. The state has one of the country's most important and prosperous agricultural sectors. Iowa's deep black soil yields huge quantities of corn, soybeans, oats, hay, wheat, and barley, which help support its cattle and hogs and supply its large food-processing industry. Manufacturing is a large source of income; tires, nonelectrical and farm machinery, electronic equipment, and chemicals are among the principal products.

Government. The constitution of 1857 provides for a governor serving a four-year term. The general assembly consists of a senate whose 50 members serve four-year terms and a house with 100 members elected for two-year terms. Iowa elects two senators and five representatives to the U.S. Congress and has seven electoral votes.

History. The earliest known inhabitants of present-day Iowa were the MOUND BUILDERS, whose remains are preserved at Effigy Mounds National Monument. The SAC AND FOX, Iowa, and SIOUX tribes lived there when French explorers arrived during the late 17th cent., including Robert Cavelier, sieur de LA SALLE, in 1681–82. The U.S. obtained the area by the LOUISIANA PURCHASE (1803), and after the BLACK HAWK WAR (1832) Native Americans were forced to cede all their lands to whites, who rushed to settle the prairies. Among the many settlers who came both from New England and N Europe were a group of German Pietists who established (1855) at Amana a communal society that still exists. With its large rural population, Iowa proved to be fertile ground for such reform movements as the GRANGER MOVEMENT, GREENBACK PARTY, and POPULIST PARTY during the late 19th cent. Since World War II, Iowa has registered a gradual decline in farm population that has been more than balanced by a steady increase in its urban population; however, it remains basically a rural state. In 1993 record rains caused widespread flooding in Iowa.

Iphigenia [if"əjənī'ə], in Greek myth, daughter of CLYTEMNESTRA and AGAMEMNON. When his ships were becalmed en route to the TROJAN WAR, Agamemnon sacrificed Iphigenia to ARTEMIS. In another version, Artemis saved her and made her a priestess at Taurus. Later, Iphigenia saved her brother, ORESTES, and the two fled to Greece. EURIPIDES dramatized both legends.

Ipsambul: see ABU SIMBEL.

Iqbal, Muhammad [ikhbäl'], 1873–1938, Indian poet, philosopher, and political leader. Because he advocated an independent homeland for India's Muslims, he is regarded as the spiritual founder of PAKISTAN. In his poetry and essays he urged regeneration of Islam through love of God and active development of the self.

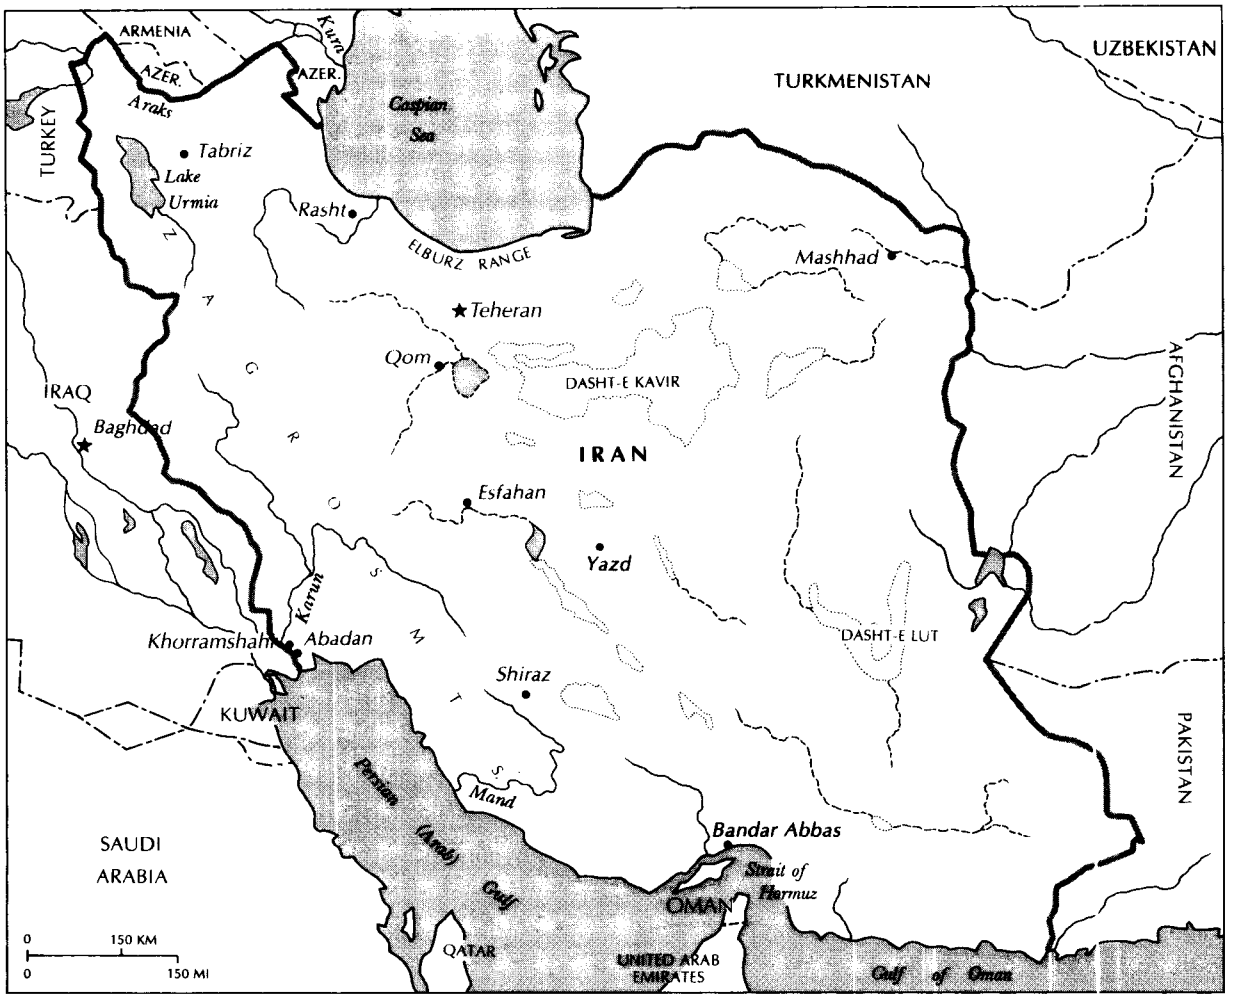
Ir, chemical symbol of the element IRIDIUM.

IRA: **1** in economics, see INDIVIDUAL RETIREMENT ACCOUNT. **2** in Irish history, see IRISH REPUBLICAN ARMY.

Iran, officially Islamic Republic of Iran, known as Persia until 1935, republic (1992 est. pop. 61,183,000), 636,290 sq mi (1,648,000 sq km), SW Asia, bordered by Armenia, Azerbaijan, the Caspian Sea, and Turkmenistan (N), Afghanistan and Pakistan (E), the Persian Gulf and Gulf of Oman (S), and Turkey and Iraq (W). TEHERAN is the capital. Iran lies on a high plateau (alt. c.4,000 ft/1,200 m) surrounded by the Elburz and ZAGROS mountain ranges; there are great salt deserts in the interior. The climate is continental, with hot summers and cold winters. Iran is subject to numerous and often severe earthquakes. The country is one of the world's leading oil producers, and revenues from petroleum contribute 90% of the nation's wealth. Although only about 10% of the land is arable, agriculture supports about a third of the population. Wheat is the most important crop, and fruit, nuts, and hides are among the major exports. Textiles are Iran's second most important industrial product, and traditional handicrafts (such as carpet weaving) still play a role in the economy. Iran's culturally diverse population, with Persian, Turkic (including Azerbaijani), Kurdish, Tatar, and Arab strains, is mainly urban. Islam is the official religion; about 98% of Iranians are Shiite Muslims, although most of the Kurds and Arabs are Sunnites. Farsi (Persian) is the official language; a number of other tongues, including Azeri, Kurdish, Arabic, English, and French are also spoken.

History. Village life began on the Iranian plateau as early as c.4000 B.C. The Persian empire, founded (c.550 B.C.) by CYRUS THE GREAT, was succeeded, after Greek and Parthian occupation, by the SASSANID dynasty in A.D. 226 (see PERSIA). Iran's history may be said to have begun in 641, when the Arabs overthrew the Sassanids, introduced Islam, and incorporated Persia into the CALIPHATE. Persia was later invaded by the Turks (10th cent.), JENGHIZ KHAN (13th cent.), and TIMUR (14th cent.). The Safavid dynasty (1502–1736), which reached its height under ABBAS I, restored internal order and established the Shiite form of Islam as the state religion. Persia then entered into a long period of decline during which it steadily lost territory and fell under the domination of the European powers. The discovery of oil in the early 1900s intensified European interest, and the Anglo-Russian Entente of 1907 divided Persia into British and Russian spheres of influence until after World War I. In 1921 Reza Khan, an army officer, overthrew the decadent Kajar dynasty, and, as REZA SHAH PAHLEVI, established the Pahlevi dynasty in 1925; in 1941 he abdicated in favor of his son MUHAMMAD REZA SHAH PAHLEVI. In the 1950s the power of the shah was challenged by Premier Muhammad MUSSADEGH, a militant nationalist who nationalized the oil industry and forced the shah to flee the country. However, with strong Western backing, monarchist elements ousted Mussadegh in 1953. In the 1960s the shah initiated a modernization program that was designed to improve economic and social conditions, but which brought social and political unrest. The regime, supported by the U.S., became increasingly repressive, and in 1979 popular opposition forced the shah to leave. Ayatollah Ruhollah KHOMEINI, an Shiite leader exiled since 1964, returned and established an Islamic republic. Hundreds of the shah's supporters were tried and executed, others fled the country, and the westernization of Iran was reversed. On Nov. 4, 1979, Iranian militants seized the U.S. embassy in Teheran, held the occupants hostage, and demanded the return of the shah from the U.S. After the shah's death (1980) in Egypt, an agreement was negotiated that freed the hostages on Jan. 20, 1981. Meanwhile, a full-scale border war with Iraq erupted in Sept. 1980 (see IRAN-IRAQ WAR), severely reducing Iran's oil production and disrupting its economy. The government was also beset by internal violence and unrest among ethnic minorities. The war ended with a cease-fire in 1988. In 1989, Khomeini died and was replaced as supreme religious leader by Iran's Pres. Ali Khamenei; Akbar Hashemi RAFSANJANI became president. Rafsanjani has diminished the influence of fundamentalist and revolutionary factions and placed greater emphasis on economic development but has also embarked a military buildup.

Iran-contra affair, in U.S. history, secret government arrangement to provide funds to the Nicaraguan contra rebels from profits gained by selling arms to Iran. Aid to the contras had been prohibited by Congress, and discovery of the arrangement in 1986 shook the administration of Ronald REAGAN. Most directly involved were Adm. John Poindexter and Marine Lt. Col. Oliver North, both of the NATIONAL SECURITY COUNCIL (NSC). It was unclear to what degree higher officials, particularly Reagan and Vice Pres. BUSH, were involved. North said he believed Reagan was largely aware of the secret arrangement, and the independent prosecutor's report (1994) said that Reagan and Bush had some knowledge of the affair or its coverup but no evidence could be found to link them to any crime. A presidential commission was critical of the NSC,



while congressional hearings uncovered a web of official deception, mismanagement, and illegality. A number of criminal convictions resulted, including those of North and Poindexter, but North's and Poindexter's were vacated on appeal for technical reasons. Former State Dept. and CIA officials pleaded guilty in 1991 to withholding information about the contra aid from Congress, and Caspar Weinberger, the former defense secretary, was charged (1992) with the same offense. In 1992 Pres. Bush pardoned Weinberger and other government officials who had been indicted or convicted for withholding information on or obstructing investigation of the affair.

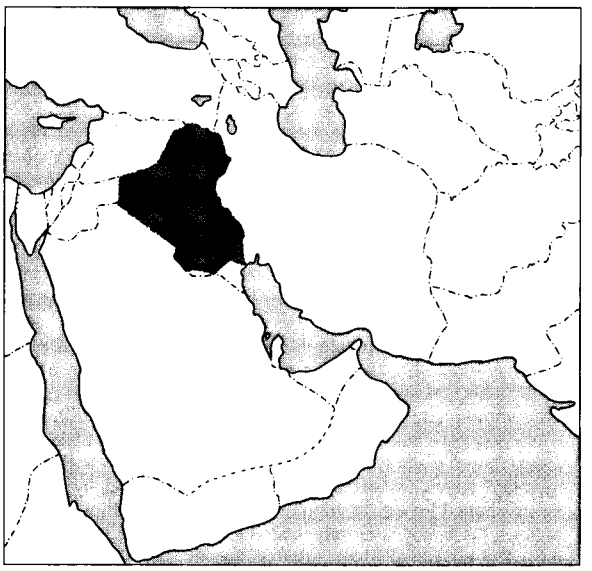
Iran-Iraq War, Persian Gulf War, or **Gulf War,** 1980–88. In 1975, a militarily weaker Iraq signed over to Iran partial control of the SHATT AL-ARAB waterway. With the fall (1979) of MUHAMMAD REZA SHAH PAHLEVI (1979), Iran's military crumbled. Iraq seized (Sept. 1980) 90 sq mi (230 sq km) of Iranian territory in the Shatt al-Arab but failed to win the swift victory predicted by many; a bloody war of attrition set in. Iraq's use (1984) of chemical weapons (see CHEMICAL WARFARE) drew worldwide outrage. The scope of the conflict increased, and the ships of neutral nations in the Persian Gulf were attacked by both sides. By 1987 U.S. forces in the gulf began flying limited sorties against Iranian oil rigs and naval vessels. Iran and Iraq finally accepted a UN peace plan, and fighting between the two nations ceased in Aug. 1988. Estimates of the number of dead range up to 1.5 million. In 1990 Iraq, concerned with securing its forcible annexation of Kuwait (see PERSIAN GULF WAR), agreed to accept the 1975 treaty, withdraw its troops from Iranian territory, and exchange all prisoners of war. A treaty was not signed, however, and both sides still hold thousands of POWs, despite several prisoner exchanges since 1988.

Iranian languages, group of languages belonging to the Indo-Iranian subfamily of the INDO-EUROPEAN family of languages. See LANGUAGE (table).

Iraq, officially Republic of Iraq, republic (1992 est. pop. 18,446,000), 167,924 sq mi (434,924 sq km), SW Asia, bordered by the Persian Gulf, Kuwait, and Saudi Arabia (S), Jordan and Syria (W), Turkey (N), and Iran (E). Principal cities include BAGHDAD (the capital), BASRA, and MOSUL. Iraq is an almost landlocked country, its only outlet to the sea a short stretch of coast on the PERSIAN GULF. It is composed of a mountainous region in the northeast and the vast Syrian Desert, inhabited by a few nomadic shepherds, in the southwest; in-between is the heart of the country, a fertile lowland region watered by the TIGRIS and EUPHRATES rivers. Although about one third of the labor force is engaged in agriculture, oil production, notably in the great fields of Mosul and Kirkuk, dominates the economy, producing nearly 95% of its income. Iraq is among the largest oil producers of the Mideast. Its petroleum resources were nationalized in 1972, and oil revenues have been used to promote industrialization and to transform Iraq into a military power. The country has a small, diversified industrial sector, with textiles, shoes, processed food, and building materials among its products. Iraq is the world's leading exporter of dates; other crops include cotton, cereals, and vegetables. Agriculture depends largely on irrigation. Most of the population are Muslim Arabs, divided religiously into the Sunnis of central Iraq and Shiites of the south. The Kurds, who inhabit the north (see KURDISTAN), are the principal minority. Arabic is the official language in most of the country; Kurdish is official in northern sections; Assyrian and Armenian are spoken by some.

History. Modern Iraq is approximately coextensive with ancient

The key to pronunciation appears on page xiii.



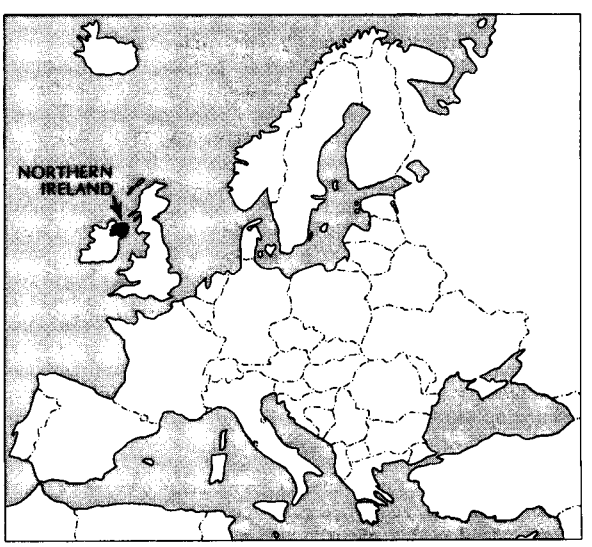
MESOPOTAMIA, and prior to the Arab conquest in the 7th cent. A.D. was the site of a number of flourishing civilizations, including SUMER, AKKAD, ASSYRIA, and BABYLONIA. In the 8th cent., as capital of the ABBASID caliphate, Baghdad became an important center of learning and the arts. Mesopotamia fell to the Ottoman Turks in the 16th cent. The British invaded Iraq in World War I, and in 1920 the country became a LEAGUE OF NATIONS mandate under British administration. Iraq was made a kingdom under FAISAL I in 1921, and the British mandate was terminated in 1932, although British military bases remained. Meanwhile, the first oil concession had been granted in 1925, and in 1934 the export of oil began. Domestic politics were marked by turbulence, and the country experienced seven military coups between 1936 and 1941. Following an army coup in 1958, Iraq became a republic under Gen. Abdul Karim Kassem. The chronic Kurdish problem flared up in 1962, when tribes demanding an autonomous KURDISTAN gained control of much of N Iraq. The rebellion collapsed (1975), but intermittent warfare has continued. In 1968 a coup brought the Ba'ath party to power, and in 1979 Saddam HUSSEIN became party leader and Iraq's president. Iraq launched (1980) a costly war against Iran that ended (1988) in a stalemate (see IRAN-IRAQ WAR). In 1990 Iraq invaded Kuwait, which it had previously claimed, provoking the PERSIAN GULF WAR; the war ended (1991) with Iraq ousted from Kuwait. Following the war, Iraqi Shiites and Kurds revolted. The uprisings were crushed, but both groups were provided (1992) with limited UN protection, which proved ineffective in the case of the Shiites.

Ireland, Irish *Eire,* second largest island (32,598 sq mi/84,429 sq km) of the British Isles. It lies W of the island of GREAT BRITAIN, from which it is separated by the North Channel, the Irish Sea, and St. George's Channel. It is divided politically into Northern Ireland and the Republic of Ireland; physically, it is composed of a large, fertile central plain roughly enclosed by a highland rim. Heavy rains (over 80 in./203 cm annually in some areas) account for the brilliantly green grass that makes Ireland the "emerald isle." The interior is dotted with lakes and wide stretches of river called loughs. The longest river is the Shannon.

History. Celtic tribes in ancient Ireland established a distinctive culture (see CELT) that, in its full flower after the introduction (5th cent. A.D.) of Christianity by St. PATRICK, produced superb works of art and literature. Beginning in the 8th cent., Norsemen (see VIKINGS) invaded the area, remaining until the Irish king BRIAN BORU broke their strength in 1014; Ireland then remained free from foreign interference for 150 years. But in the 12th cent. Pope Adrian granted overlordship of Ireland to HENRY II of England, initiating an Anglo-Irish struggle that lasted for nearly 800 years. The bitter religious contention between Irish Catholics and Protestants began in the 16th cent. after England tried to impose Protestantism on a largely Catholic Ireland. Irish rebellions flared up repeatedly—under HENRY VIII, ELIZABETH I, and Oliver CROMWELL. The Act of Union (1800) united England and Ireland; the Irish parliament was abolished, and Ireland was represented in the British parliament. Agitation by the Irish leader Daniel O'CONNELL resulted in passage of the CATHOLIC EMANCIPATION Act in 1829. But political developments were dwarfed by the Great Potato Famine (1845–49), in which nearly a million Irish died of starvation and disease; another 1,600,000 emigrated (1847–54) to the U.S. Irish desire for domestic control persisted. The failure of the British government to implement HOME RULE, complicated by the fear in largely Protestant Ulster of Catholic domination, led to the Easter Rebellion of 1916. The militant SINN FÉIN, founded (1905) among Irish Catholics, emerged as the dominant nationalist group, declaring themselves the Dáil Éireann (Irish Assembly) and proclaiming an Irish republic (1918). Outlawed by the British, the Sinn Féin went underground and waged guerrilla warfare. In 1920 a new Home Rule bill provided for partition of Ireland, with six counties of Ulster remaining part of the United Kingdom as Northern Ireland (see IRELAND, NORTHERN). In 1922 a treaty gave the remainder of Ireland dominion status within the British Empire as the Irish Free State (see IRELAND, REPUBLIC OF).

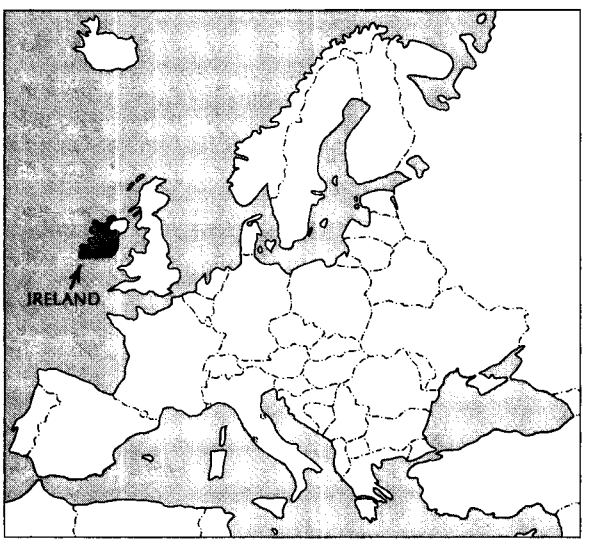
Ireland, Northern, political division of the United Kingdom of Great Britain and Northern Ireland (1991 pop. 1,577,836), 5,642 sq mi (14,147 sq km), comprising six counties of Ulster in NE Ireland. The capital is BELFAST, one of Britain's chief ports. Farming is the principal occupation. Shipbuilding, food processing, and the manufacture of textiles are the leading industries; Northern Ireland's fine linens are famous. The majority of the population is Protestant, but about 40% is Catholic. English is the official language.

History. Northern Ireland's relatively distinct history began in the 17th cent. when the British crown, after suppressing an Irish rebellion, populated much of Ulster with Scottish and English settlers, giving the area a Protestant character in contrast to the rest of Ireland. The question of political separation did not arise, however, until proposals for HOME RULE for Ireland, first broached in 1886 by British prime minister William GLADSTONE, aroused fears in largely Protestant Ulster of domination by the Catholic majority in the south. The situation continued to deteriorate, and by World War I civil war was imminent. The Government of Ireland Act (1920) attempted to solve the problem by enacting Home Rule separately for the two parts of Ireland. Ulster thus became the province of Northern Ireland, but the Irish Free State (now the Republic of Ireland), established in the remainder of Ireland in 1922, refused to recognize the finality of the partition. The situation remained relatively stable until the late 1960s, when protest by the Catholic minority against economic and political discrimination led to widespread violence by the "provisional" wing of the IRISH REPUBLICAN ARMY (IRA) on one side and the Ulster Defense Asso-



ciation, a Protestant terrorist group, on the other. In reply, the British government sent in British troops in 1969 and suspended the Ulster parliament in 1972 and assumed direct rule of the province (except for a period in 1973–74). Protestant and Catholic extremists rejected several efforts at power-sharing, and sectarian conflict marked by bloodshed continued. In 1982 an elective assembly was established with the aim of eventually ending direct rule, but a boycott sparked by the Anglo-Irish Agreement (1985), which granted the Irish republic a consultative role in certain Northern Irish affairs, led to its dissolution (1986). A 1993 Anglo-Irish declaration offered to open negotiations to all parties that renounce violence. See IRELAND; IRELAND, REPUBLIC OF.

Ireland, Republic of, independent republic (1992 est. pop. 3,521,000), 27,136 sq mi (70,282 sq km), occupying all but the northeastern corner of the island of Ireland in the British Isles; formerly the Irish Free State (1922–37) and Eire (1937–49). DUBLIN is the capital. Agriculture, primarily stock and poultry raising, engages 70% of the land and less than 15% of the people; crops include flax, oats, wheat, turnips, potatoes, sugar beets, and barley. Tourism is the second largest source of income. Industry produces linen and laces (for which Ireland is famous), food products, beer and ale, and textiles, particularly woolens. Gaelic and English are the official languages, but English is more widely spoken. About 95% of the population is Roman Catholic, but there is no established church.



History. The establishment by treaty with GREAT BRITAIN of the Irish Free State in 1922 completed the partition of Ireland into two states (Northern Ireland was created in 1920) and resulted in civil war between supporters of the treaty and opponents. The anti-treaty forces, embodied in the IRISH REPUBLICAN ARMY (IRA) and led by Eamon DE VALERA, were defeated, but the IRA continued as a secret terrorist organization. De Valera and his Fianna Fáil party finally entered the Dáil (parliament) in 1927, and de Valera became prime minister in 1932. Under his administration a new constitution was promulgated (1937), establishing the sovereign state of Ireland, or Eire, within the British Commonwealth. In World War II Eire, remaining neutral, denied the use of Irish ports to the British, although many Irish served voluntarily in the British armed forces. In 1948 Ireland demanded total independence from Great Britain; the Republic of Ireland was proclaimed in 1949 and the country withdrew from the Commonwealth. In the late 1960s problems flared up with Northern Ireland, aggravated by the terrorist activities in Northern Ireland of the IRA, which was headquartered in the republic. In 1973 the country joined the European Community (see EUROPEAN UNION). The Fianna Fáil dominated the country's politics until a Fine Gael coalition came to power in 1973; the two parties have tended since to alternate in power. Since 1993 a Fianna Fáil–Labor coalition government led by Prime Min. Albert REYNOLDS has been in office. In 1985 the republic began participating in Northern Irish affairs relating to legal, political, and security matters through an intergovernmental committee set up under a British-Irish agreement. See also IRELAND; IRELAND, NORTHERN.

Irene, c.750–803, Byzantine empress (797–802). As regent for her son, CONSTANTINE VI, she neglected wars in her zeal to suppress ICONOCLASM. Her son's misconduct enabled her to depose him (797), have him blinded, and ascend the throne. Her accession gave CHARLEMAGNE a pretext for having himself crowned emperor (800). Irene was deposed (802) and died in exile.

iridium (Ir), metallic element, discovered by Smithson Tennant in 1804. Chemically very unreactive, iridium is a very hard, usually brittle, extremely corrosion-resistant, silver-white metal used in chemical crucibles, surgical tools, and pivot bearings. The international kilogram standard is an iridium-platinum alloy. See ELEMENT (table); PERIODIC TABLE.

iris, common name for members of the genus *Iris* of the Iridaceae, a family of perennial herbs that includes the CROCUS, freesia (genus *Freesia*), and gladiolus (genus *Gladiolus*). The family is typified by modified stems (BULBS, corms, and RHIZOMES) and by linear or sword-shaped leaves. Distributed worldwide except in the coldest regions, the family is closely related to the LILY and AMARYLLIS families. The cultivated irises, freesias, and gladioli show a wide variety of colors in their usually perfumed blossoms. The many species of wild iris are often called flags. Orrisroot, a violet-scented flavoring used in dentrifices, perfumes, and other products, is made from the powdered rhizomes of several European species.

Irish Land Question, name given in the 19th cent. to the problem of Irish land ownership, which went back many centuries. In the 12th cent. a feudal landholding system was imposed on Ireland. The TUDORS, CROMWELL, and WILLIAM III continued land confiscations; the result was the creation of an absentee landlord class and an impoverished Irish peasantry. The 18th-cent. penal laws increased the difficulty of landowning by Catholics; Catholic Emancipation did not help much, although it did bring Irish Catholics into the British Parliament. Irish hatred for England grew through the great famine of the 1840s and the influx of speculators after the Encumbered Estates Act of 1849. The violent FENIAN MOVEMENT, the Reform Act of 1867, and support by GLADSTONE led to the First Land Act (1870). The National Land League, led by Michael Davitt and C.S. PARNELL, fought for passage of the Land Act of 1881, which gave the three "F's"—fair rent, fixity of tenure, and freedom from sale. Land purchase by the tenant became the main issue. Agitation by the Irish Union League led to passage of the Wyndham Act (1903), which provided loans at reduced rates for tenants who wanted to buy land, and bonuses for landlords willing to sell. By 1921 Irish tenants owned two thirds of the land, the rest was confiscated by law and given to them.

Irish language, also called Irish Gaelic, member of the Goidelic group of the Celtic subfamily of the Indo-European family of languages. See LANGUAGE (table).

Irish Republican Army (IRA), nationalist organization dedicated to the unification of Ireland. It was organized by Michael COLLINS after the Easter Rebellion of 1916 (see IRELAND) and became the military wing of the SINN FÉIN party. Despite the establishment of the Irish Free State (1922), the IRA refused to accept a separate Northern Ireland under British rule. With popular support lessened by its violent actions and pro-German agitation during WORLD WAR II, it was outlawed by both Irish governments and became a secret organization. In 1969 it split into an "official" majority, which disclaimed violence, and a terrorist "provisional" wing, whose attacks on British troops in Northern Ireland, random bombings, and other acts of terror in England and elsewhere have become, along with attacks by Protestant extremists, an unabated cycle of Northern Irish violence.

Irish setter, large SPORTING DOG; shoulder height, c.26 in. (66 cm); weight, 50–70 lb (22.7–31.8 kg). The long, silky coat of the American variety is solid red; that of its Irish counterpart is often red and white. It was developed in 18th-cent. Ireland as a field hunter.

Iron, Ralph: see SCHREINER, OLIVE.

iron (Fe), metallic element. Iron is a lustrous, ductile, malleable, silver-gray metal. A good conductor of heat and electricity, it is

attracted by a magnet and is itself easily magnetized (see MAGNETISM). Iron is abundant in the universe; it is found in many stars, including the sun. It is the fourth most common element in the earth's crust, of which it constitutes about 5% by weight, and is believed to be the main component of the earth's core. Iron is rarely found uncombined in nature except in METEORITES, and it rusts readily in moist air. LIMONITE and hematite are the chief iron ores; other ores include MAGNETITE, taconite, and siderite. Iron ores are refined in a BLAST FURNACE to produce pig iron, which can be remelted and poured into molds to make CAST IRON, commercially purified to make WROUGHT IRON, or alloyed with carbon and other elements to make STEEL. Iron compounds are used as paint pigments, in dyeing, and in ink manufacture. A component of HEMOGLOBIN, the oxygen-carrying pigment of red BLOOD cells in vertebrates, iron is important in nutrition; one cause of ANEMIA is iron deficiency. See ELEMENT (table); IRON AGE; PERIODIC TABLE.

Iron Age, technological period from the first general use of iron to modern times. In Asia, Egypt, and Europe it followed the BRONZE AGE; Europeans brought it to the Americas. Hammered iron was known in Egypt before 1350 B.C., and after the fall of the HITTITE empire (1200 B.C.), migrants carried iron technology to S Europe and the Middle East. Smelting was known in the ETRUSCAN CIVILIZATION. After the Early Iron Age (c.800–500) in central Europe, migrating CELTS spread the use of iron into W Europe and the British Isles, where Late Iron Age peoples used it for tools, vehicles, coinage, and art objects (see LA TÈNE). Metal technology increasingly influenced culture up to the INDUSTRIAL REVOLUTION and beyond.

Iron Guard, Romanian nationalistic, anti-Semitic terrorist organization founded in 1924. Although officially banned in 1933, it continued under different names. It helped Ion ANTONESCU to take power in 1940, preparing the way for the Nazi takeover of the country in WORLD WAR II.

Iroquoian, branch of Native American languages, belonging to the Hokan-Siouan linguistic family of North America. See NATIVE AMERICAN LANGUAGES (table).

Iroquois Confederacy or **Iroquois League,** confederation of five indigenous North American peoples, or nations, Mohawk, Oneida, Onondaga, Cayuga, and Seneca; founded c.1570. After the Tuscarora joined, c.1722, it became known collectively as the Six Nations. The Iroquois speak Iroquoian languages of the Hokan-Siouan stock (see NATIVE AMERICAN LANGUAGES. In the early 17th cent. the Iroquois inhabited New York N and W of the Hudson R., numbering c.5,500. Materially, politically, and militarily their culture was the most advanced in the Eastern Woodlands. The Iroquois conceived of themselves as living in a metaphorical long house in which each nation had a role, e.g., the Mohawks guarded the eastern door. By absorbing neighboring tribes in territorial wars, the League came to number 16,000 by the late 17th cent. Led by CORNPLANTER, Red Jacket, and Joseph BRANT, all but the Oneida and Tuscarora sided with the British in the AMERICAN REVOLUTION. Today the Iroquois live mostly in Ontario and in New York, where in the 1970s and early 80s they occupied disputed lands. Some, however, have become urban—many Mohawks, for instance, have worked as structural steelworkers. The Oneida opened a gambling casino near Syracuse, N.Y., in 1993. There were 49,038 Iroquois in the U.S. in 1990.

irrational number: see NUMBER.

Irrawaddy, one of the great rivers of Asia and the chief river of Myanmar, c.1,000 mi (1,600 km) long, formed by the confluence in N Myanmar of the Mali and Nmai rivers. It flows south, receiving the Chindwin R. just below Mandalay, to form a vast delta (c.200 mi/320 km wide) beginning at Henzada, c.180 mi (290 km) from the Andaman Sea. The river is navigable up to Myitkyina and serves as Myanmar's economic lifeline.

irredentism, originally, the nationalist movement for annexation to Italy of predominantly Italian areas—*Italia irredenta* [unredeemed Italy]—retained by Austria after 1866. It was a strong motive for Italy's entry into WORLD WAR I. The term is also applied to similar movements in other nations.

irrigation, in AGRICULTURE, artificial watering of the land, using water diverted from rivers and lakes or pumped from underground (see DAM). Modern large-scale irrigation is often part of a multipurpose project that may also produce hydroelectric power and provide systems for water supply and flood control. Surface irrigation delivers water to a field directly from a canal, well, or ditch. In surface-pipe irrigation, the water is piped to the field and distributed via sprinklers or smaller pipes. Drip irrigation delivers a small, measured amount of water to each plant through narrow plastic tubes and helps prevent the two major problems caused by irrigation: waterlogging, saturation of the soil as a result of inadequate drainage; and soil salinization, the accumulation of salts deposited by irrigation water. In addition, extensive irrigation (137 billion gallons a day in the U.S.) has contributed to concerns about water supply, water rights of those downstream, and aquatic habitats of endangered species.

Irtysh, river, c.2,650 mi (4,260 km) long, NE Kazakhstan and central Russia, chief tributary of the OB R. It rises as the Kara-Irtysh in NW China and flows through Kazakhstan and past Semey (Semipalatinsk) into W Siberia, past Omsk and Tobolsk to join the Ob near Khanty-Mansiysk.

Irvine, city (1990 pop. 110,330), Orange co., SW Calif.; inc. 1971. One of the fastest-growing U.S. cities, it has important electronics research and development facilities and service and retailing industries. Irvine is also the site of a Univ. of California campus.

Irving, Sir Henry, 1838–1905, English actor and manager; b. John Henry Brodribb. As the innovative manager (1878–1903) of the Lyceum Theatre, London, he reigned supreme on the English stage, appearing with his leading lady, Ellen TERRY, in Shakespearean and contemporary productions. He was the first English actor to be knighted (1895).

Irving, John, 1942–, American novelist; b. Exeter, N.H. The combination of sex, violence, social satire, and grotesque comedy in his novels gives him an affinity with the black humorists. *The World According to Garp* (1978) made him an overnight success. Other novels include *The Hotel New Hampshire* (1981), *The Cider House Rules* (1985), and *A Prayer for Owen Meany* (1989).

Irving, Washington, 1783–1859, American author; b. N.Y.C. His earliest works, *Letters of Jonathan Oldstyle, Gent.* (1802–3) and *Salmagundi* (1807–8; written with William Irving and J.K. Pauling), were collections of amusing essays. Under the pseudonym Diedrich Knickerbocker he wrote *A History of New York* (1809), perhaps America's first great book of comic literature. Irving's reputation at home and abroad was established with the essays in *The Sketch Book of Geoffrey Crayon, Gent.* (1820), including such tales as "Rip Van Winkle" and "The Legend of Sleepy Hollow." While a diplomat in Madrid (1826–29), he wrote several works on Spanish subjects, among them the charming sketches in *The Alhambra* (1832). After returning to the U.S. he wrote a number of books on the American West, e.g., *A Tour of the Prairies* (1835). Except for a term as U.S. minister to Spain (1842–46), Irving spent most of his later years at his estate, Sunnyside, near Tarrytown, N.Y. There he completed several works, including his biography of George Washington (5 vol., 1855–59). A gentle satirist who was master of a graceful, sophisticated style, Irving created some of the most popular essays and tales in American literature.

Irving, city (1990 pop. 155,037), N Tex., a suburb of DALLAS; inc. as a city 1952. Building supplies, chemicals, electronic equipment, and aircraft parts are manufactured there. Its Texas Stadium is home to the Dallas Cowboys professional football team. The Dallas–Fort Worth Airport (opened 1974) borders Irving on the west. The Univ. of Dallas is in the city.

Isaac, Byzantine emperors. **Isaac I,** c.1005–1061 (r.1057–59), first of the COMNENUS dynasty, was proclaimed emperor by the army. He abdicated after losing popularity and failing in war. **Isaac II** (Angelus), d. 1204 (r.1185–95, 1203–4), was made emperor by the people. He repulsed the Normans but failed to suppress a Bulgar rebellion. He was deposed and blinded by his brother, ALEXIUS III, but the army of the Fourth CRUSADE restored him as co-ruler with his son, ALEXIUS IV. After their overthrow by ALEXIUS V, the Crusaders sacked Constantinople.

Isaac, in the BIBLE, a patriarch, only son of ABRAHAM and SARA. He married REBECCA, and their sons were ESAU and JACOB. ISHMAEL was his half-brother. As a supreme act of faith, Abraham offered Isaac at an early age as a sacrifice to God—a deed prevented by divine intervention. Some scholars have questioned Isaac's historicity.

Isabella, Spanish queens. **Isabella I** (the Catholic), 1451–1504,

queen of Castile and León (1474–1504) and queen of Aragón (1479–1504), with her husband, FERDINAND V, established the unified Spanish kingdom. She suppressed the lawless Castilian nobles by reviving the medieval HERMANDAD, administered the holdings of powerful religious military orders, and placed the INQUISITION under royal control. Isabella was a prime mover (1492) in the expulsion of the JEWS, the conquest of GRANADA from the MOORS, and discovery of the New World by COLUMBUS. Together she and Ferdinand advanced learning and the arts, especially architecture. The accession of **Isabella II,** 1830–1904, queen of Spain (1833–68), caused the CARLIST wars. Her marriage (1846) to Francisco de Asis, which contravened Anglo-French agreements regarding the choice of husbands for certain Spanish princesses, contributed to a rift between England and France. Frequent conflicts between moderates and liberals led to her deposition (1868). In 1870 she abdicated her rights in favor of her son, ALFONSO XII.

Isabella, 1296–1358, queen consort of EDWARD II of England; daughter of PHILIP IV of France. Neglected and mistreated by her husband, she hated the royal favorites, the Despensers, who had seized her lands. While in France (1325), she formed a liaison with Roger de MORTIMER. They invaded England in 1326, forced Edward to abdicate, and caused his murder. They ruled corruptly until EDWARD III seized power in 1330.

Isabella Stewart Gardner Museum: see GARDNER, ISABELLA STEWART.

Isaiah [īzā'yə, īsā'] or **Isaias** [īsā'yəs], book of the OLD TESTAMENT, 23d in the Authorized Version, first and longest of the Major Prophets, a collection of prophecies attributed to Isaiah, apparently a nobleman in the kingdom of Judah (c.740 B.C.). The book falls into two sections of metrical prophecies (1–35; 40–66) divided by a prose section. The first set of poems deals with prophecies against the Assyrians and other nations; those affecting ISRAEL and JUDAH announce destruction and subsequent redemption. The second poetic section is a prophecy of redemption of the kingdom of Israel, delivered from captivity and from sin. The book contains many of the most beautiful passages in the Bible (among them prophecies thought by Christians to refer to Jesus) and may be the result of diverse authorship.

Iscariot: see JUDAS ISCARIOT.

Ise [ē'sā], city (1990 pop. 104,162), Mie prefecture, S Honshu, Japan. One of the foremost religious centers of SHINTO, it is the site of the shrines of Ise. Said to have been built in 4 B.C., the three shrines, set deep in a forest, exhibit an archaic style of architecture without Chinese or Buddhist influence. One houses the Sacred Mirror of the imperial regalia.

Iseult: see TRISTRAM AND ISOLDE.

Isfahan: see ESFAHAN.

Isherwood, Christopher, 1904–86, English author. His experiences in Germany gave him material for *The Last of Mr. Norris* (1935) and *Goodbye to Berlin* (1939; reissued as *The Berlin Stories,* 1946). These form the basis of John Van Druten's play *I Am a Camera* (1951) and the musical *Cabaret* (1966). He collaborated with AUDEN on three plays and on *Journey to a War* (1939). He moved to the U.S. in 1939. His later writings include *Essentials of Vedanta* (1969) and *My Guru and His Disciple* (1980).

Ishmael [ĭsh'māĕl], in the BIBLE, son of ABRAHAM and Hagar, half brother to ISAAC, and ancestor of 12 tribes in N Arabia. Through SARA's jealousy, he and his mother, who was Sara's handmaid, were sent into the desert. Hence the name Ishmael came to mean "outcast." According to tradition, the Arabs are the descendants of Ishmael.

Ishtar, ancient fertility deity, the most widely worshiped goddess in Babylonian and Assyrian religion. Ishtar was important as a mother goddess, goddess of love, and goddess of war. Her cult spread throughout W Asia, and she became identified with various other earth goddesses (see GREAT MOTHER OF THE GODS).

Isis, nature goddess whose worship, originating in ancient Egypt, gradually extended throughout the lands of the Mediterranean world and became one of the chief religions of the Roman Empire. The worship of Isis, together with that of her brother and husband, OSIRIS, and their son, HORUS, resisted the rise of Christianity and lasted until the 6th cent. A.D.

Islam [Arab., = submission to, or having peace with, God], the religion of which MUHAMMAD was the prophet. An adherent of Islam is a Muslim [Arab., = one who submits]. The youngest of the three great monotheistic world religions (the others being JUDAISM and CHRISTIANITY), Islam is the dominant religion throughout large portions of Asia and Africa, especially North Africa, the Middle East, Central Asia, Pakistan, Bangladesh, Malaysia, and Indonesia (the world's largest Muslim country). In 1990 there were some 935 million Muslims worldwide, less than one fifth of whom were Arab; there are an estimated 6 million Muslims in the U.S. Its salient feature is its devotion to the Koran, or Qur'an, a book believed to be the revelation of God to Muhammad. Since the Koran is in Arabic, this language is used in Islam all over the world; hence the custom of referring to God as Allah, His name in Arabic. The ethos of Islam is its attitude toward God: to Him Muslims submit; Him they praise and glorify; and in Him alone they hope. He is awesome, transcendent, almighty, just, loving, merciful, and good. No creature may be compared to Him, and to Him alone do Muslims pray. Muhammad is the last and greatest of God's prophets, who also include ADAM, NOAH, ABRAHAM, MOSES, and JESUS. According to the Muslim eschatology, there will be a judgment at the end of the world; heaven awaits the believers and hell the nonbelievers. The ordinary pious Muslim does not distinguish faith from works; both are indispensable and mutually supplementary. There are five essential duties in Islam. (1) A Muslim must affirm that "There is no god but God, and Muhammad is the Messenger of God." (2) Five times daily he must pray facing MECCA: at dawn, at noon, in midafternoon, at dusk, and after dark. (3) A Muslim must give alms generously. (4) A Muslim must keep the fast of RAMADAN, which is the ninth month of the Muslim year. (5) Once in his life a Muslim must, if he can, make the pilgrimage (hajj) to Mecca. There are also a prohibition of alcohol and pork and injunctions against gambling, usury, fraud, slander, and the making of images. The Sunna, the way or example of the Prophet, supplements the Koran. It consists of the collected sayings and anecdotes of Muhammad. The Ijma, or the agreement of Islam, is expressed in Muhammad's saying "My community will never agree in an error" and is the principle that has enabled Islam to resolve apparent contradictions and maintain both a flexibility and its unity with the past. The Koran, the Sunna, and the Ijma are the three foundations of Islam. Islam does not recognize a priestly class, but religious and legal officers have acquired an authority similar to that of the clergy in Christian and Jewish communities. The fundamental division of Islam into SUNNI and SHIITES dates from disputes over the succession to the CALIPHATE in the first centuries of the Muslim era. The WAHHABIS are the only important modern separatist Sunni sect. The Shiites, by contrast, have fathered countless sects, including the Assassins, DRUZE, FATIMIDS, Ismailis, and Karmathians. However, there is a remarkable community of feeling in Islam even today, when Muslims are divided politically into many groups. Historically, Muslim thought shows three major tendencies: legalism, rationalism, and mysticism; philosophy has never been distinct from theology. The greatest period of Muslim thought and culture was the 9th to 11th cent. In recent years Islam has seen a resurgence of FUNDAMENTALISM among both Sunni and Shiites, most notably in Iran, Sudan, Algeria, Tunisia, and Eygpt.

Islamabad, city (1988 est. pop. 200,000), capital of Pakistan. Construction of Islamabad [city of Islam], which replaced KARACHI as the capital, began in 1960. Points of interest include the Grand National Mosque and the botanical gardens.

Islamic art and architecture. In the century after the death (A.D. 632) of the prophet MUHAMMAD, his Arab followers spread his teachings through Egypt and North Africa, as far west as Spain and as far east as Sassanid Persia. Because of their rapid expansion and the paucity of their artistic heritage, the Muslims derived their unique style from a synthesis of the arts of the Byzantines, the Copts, the Romans, and the Sassanids. The great interior surface of the Mosque of Damascus (715) was covered with stone MOSAICS in the Byzantine technique. No human figures were depicted, but there were crowns, fantastic plants, realistic trees, and empty towns. In A.D. 750 the ABBASID dynasty moved the capital to Baghdad, and immediately Persian influence became stronger. In the ruins of Samarra lusterware fragments have been found. The Great Mosque of Al Qayrawan (c.862) is decorated with square luster tile. The 9th

cent. saw the development of metalwork in Egypt, and skilled craftsmanship can be seen in rock-crystal carving, a Sassanid art. From the 10th to 13th cent. great strides were made in the minor arts in Egypt. calligraphy, bookbinding, papermaking, and illumination were developed. The Kufic script was animated with floriated, interlaced, and anthropomorphic designs. Early in the 13th cent. a school of secular manuscript painting arose near Baghdad with pictures of two types: those that illustrate scientific works, descending from late Hellenistic models, and those that illustrate anecdotal tales and whose miniatures represent the true spirit of CARICATURE. After the Mongol invasions there was a revitalization of art through Chinese taste and artifacts. Textiles and CARPETS were again manufactured throughout Islam, and Turkish ceramics reached their peak in the "Iznik" ware of the 16th and 17th cent. Early Islamic architecture used the Syrian cut-stone technique of building, as in the Mosque of Damascus, and popularized the DOME (see MOSQUE). Sassanid building techniques such as the squinch were combined with the mosque form. In the 10th cent. the FATIMIDS introduced into Egypt the decorative stalactite ceiling and placed emphasis on decorative flat moldings. The cruciform Mosque of Hasan, in Cairo (1536), reflects Persian influence, while the square Char Minar of Hyderabad (1591), with its large ARCHES, arcades, and MINARETS, is characteristic of the Indian style of the Delhi Sultanate. The art of Islamic Spain used faïence and lacy, pierced-stone screen windows. Turkish architects were influenced by the Byzantine church of HAGIA SOPHIA. In general, all Islamic art and architecture is the result of synthesis rather than origination, with decoration of the surface the most important factor in every work. Interlaced lines and brilliant color characterize the style. See also MOGUL ART AND ARCHITECTURE.

island, relatively small (compared to a CONTINENT) body of land completely surrounded by water. The largest, in descending order, are GREENLAND, NEW GUINEA, BORNEO, MADAGASCAR, BAFFIN ISLAND, SUMATRA, HONSHU, and GREAT BRITAIN. Islands are either *continental,* caused by partial submergence of coastal highlands or by the sea breaking through an isthmus or peninsula, or *oceanic,* originating from the ascension of the ocean floor above water through volcanic activity or other earth movements. Tropical oceanic islands sustained above sea level by coral growth are called atolls (see CORAL REEFS).

Isle Royale National Park: see NATIONAL PARKS (table).

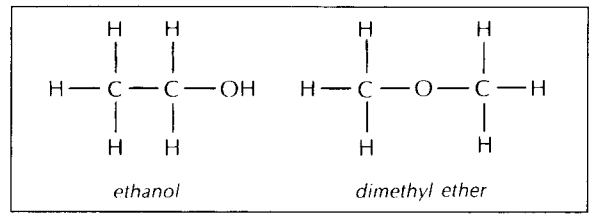
Ismail, 1486–1534, shah of PERSIA (1502–24), founder of the Safavid dynasty. He restored Persia to the position of a sovereign state and established SHIITE Islam as the state religion, thus incurring the wrath of the Sunnite Ottoman Turks and the Uzbeks.

Ismail Pasha, 1830–95, ruler of Egypt (1863–79), the first to bear the title khedive (viceroy); son of IBRAHIM PASHA. His grandiose schemes, including building the SUEZ CANAL, forced him to submit (1876) to joint Anglo-French management. He was deposed (1879) in favor of his son, Tewfik Pasha.

Isocrates [īsŏk'rətēz], 436–338 B.C., Greek orator, pupil of SOCRATES. A great teacher, he taught every young orator of his time. His most celebrated oration is *Panegyricus,* in which he urges Hellenic unity against Persia.

Isolde: see TRISTRAM AND ISOLDE.

isomer, in chemistry, one of two or more compounds having the same molecular formula (i.e., the same number of atoms of each element in a molecule) but different structures (arrangements of atoms in the molecule). Isomers have the same number of atoms of each element in them and the same atomic weight but differ in other properties. **Structural isomers,** e.g., ETHANOL (CH_3CH_2OH) and dimethyl ether (CH_3OCH_3), differ in the way the atoms are joined together in their molecules. **Stereoisomers** have the same basic arrangement of atoms in their molecules but differ in the way the atoms are arranged. Geometric isomers, which are stereoisomers that differ in the positioning of groups about a double bond or some other feature that gives the molecule a certain amount of structural rigidity, differ in physical properties such as melting and boiling points. Optical isomers, also called enantiomers or chiral molecules, are stereoisomers in which the two molecules are mirror images of each other and, each being asymmetrical, cannot be superposed on each other; optical isomers differ in the direction in which they rotate light passed through the molecules and can have different properties. Spearmint leaves and caraway seeds get their distinctive odors from different optical isomers of the compound carvone, and it has been theorized that one optical isomer of THALIDOMIDE produced sedation and the other caused birth defects.



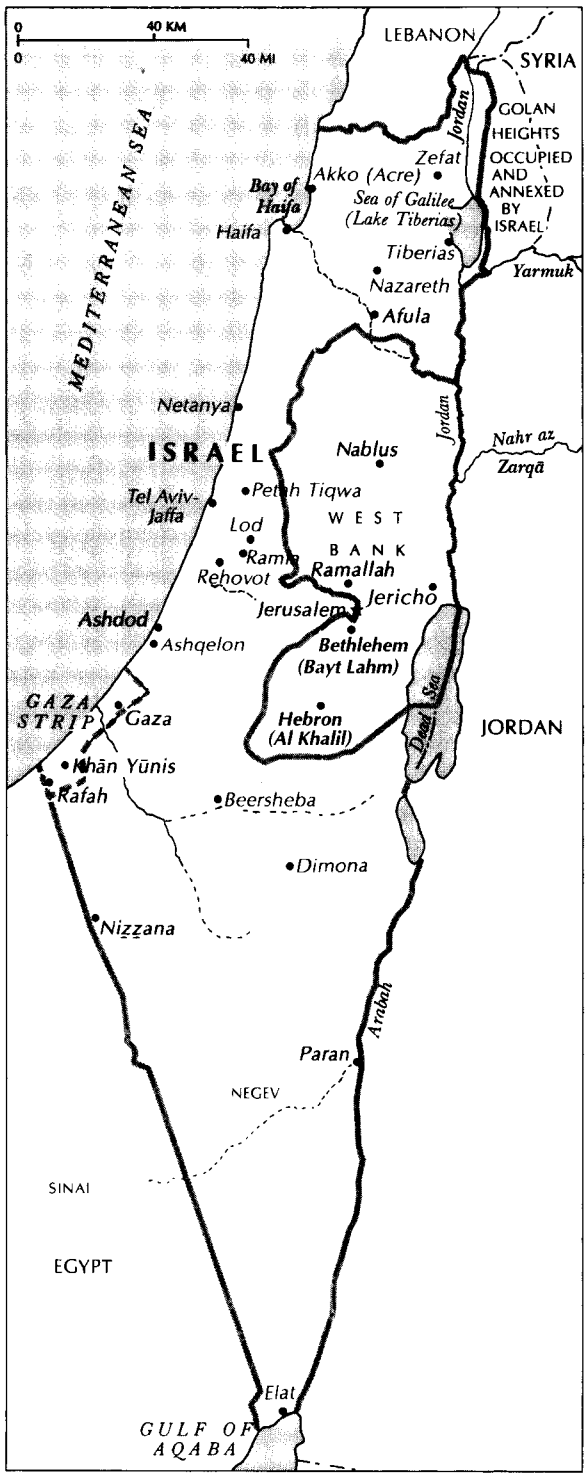
Isomers

isotope, one of two or more atoms having the same ATOMIC NUMBER but differing in ATOMIC WEIGHT and MASS NUMBER. The nuclei of isotopes of the same element have the same number of PROTONS (equal to the element's atomic number) but have different numbers of NEUTRONS. The isotopes of a given element have identical chemical properties but slightly different physical properties. A radioactive isotope, or radioisotope, is a natural or artificially created isotope having an unstable nucleus that decays, emitting alpha, beta, or gamma rays (see RADIOACTIVITY) until stability is reached. For most elements, stable and radioactive isotopes are known.

Israel [as understood by Hebrews, = striven with God], in the Bible, name given JACOB. The Hebrews adopted the name as a national designation. Under REHOBOAM, in 931 B.C., the Israelite kingdom broke into a northern kingdom called Israel and a southern one called JUDAH.

Israel, officially State of Israel, republic (1992 est. pop. 4,748,000, including Israelis in occupied Arab territories), 7,992 sq mi/20,700 sq km (excluding occupied Arab territories), SW Asia, bounded by Lebanon (N), Syria and Jordan (E), the Mediterranean Sea and Egypt (W), and the Gulf of Aqaba (S). The capital is JERUSALEM; other major cities are TEL AVIV–JAFFA and HAIFA. There are four land regions: the Mediterranean coastal plain; a mountain area in the northeast; the semiarid NEGEV in the south; and, in the extreme east, a portion of the GREAT RIFT VALLEY, including the DEAD SEA, which at 1,292 ft (394 m) below sea level is the lowest point on earth. Despite adverse conditions, extensive irrigation has enabled agriculture to flourish. Fresh fruits and vegetables are the major export crops. A wide variety of industrial goods is produced, including textiles, chemicals, military and electronic equipment, and machinery; Israel is second only to Belgium in processing diamonds. The manufacture of high technology items (computers, software, and telecommunications equipment) and biotechnology have also become significant. Tourism is also important. The standard of living is high for a Middle Eastern nation, but a high trade deficit, heavy defense expenditures, and inflation rates of 50% to 100% in the 1980s have put the economy under a great strain. About 85% of the population are Jews, about half of whom are immigrants from Europe, North America, Asia, and North Africa. The non-Jewish population consists mainly of Muslim, and a smaller group of Christian, Arabs. The official languages are Hebrew and Arabic, but English and many European languages are widely spoken. Israel is highly urbanized. About 7% of the people live on COLLECTIVE FARMS known as *kibbutzim, moshav ovdim,* and *moshav shitufim.*

History. For the earlier history of the region, see PALESTINE. In November 1947 the United Nations divided Palestine, then under British mandate, into Jewish and Arab states. Six months later the British withdrew, and on May 14, 1948, the state of Israel was proclaimed. The neighboring Arab states of Lebanon, Syria, Jordan, Egypt, and Iraq rejected both the partition of Palestine and the existence of the new nation. In the war that followed (1948–49), Israel emerged victorious and with its territory increased by one half. Arab opposition continued, however, and full-scale fighting broke out again in 1956 (the Sinai campaign), 1967 (the Six-Day War), and 1973 (the Yom Kippur War). Israel emerged from these conflicts (see ARAB-ISRAELI WARS) with large tracts of its neighbors'



territories. In 1978 Israeli Prime Min. Menachem BEGIN and Egyptian Pres. Anwar al-SADAT signed the CAMP DAVID ACCORDS; a peace treaty between Egypt and Israel was signed (1979) in Washington, D.C., and Israel withdrew from the SINAI by 1982. Little progress was made, however, with respect to the GAZA STRIP and WEST BANK, and in 1981 Israel annexed the GOLAN HEIGHTS (captured from Syria in 1967). Israel's fierce, intermittent fighting with the PALESTINE LIBERATION ORGANIZATION (PLO) in LEBANON led to a devastating Israeli invasion in 1982. Israel withdrew in 1985 but maintained a 6–12 mi (10–20 km) security zone there just north of the border. Begin retired in 1983 and was succeeded by Yitzhak SHAMIR. Indecisive elections in 1984 and 1988 resulted in an awkward coalition government, led by Labor party leader Shimon PERES (1984–86) and Shamir (1986–90). In June 1990, after the coalition collapsed, Shamir formed a right-wing government. In the late 1980s and early 1990s there were increasingly violent clashes between Palestinians and Israeli troops in the occupied territories. Soviet Jews began emigrating to Israel in large numbers in 1990, strapping Israel's resources, and Iraq launched missiles at Israel during the PERSIAN GULF WAR. In 1992 the Labor party and its allies won the largest bloc of seats in parliament, and Yitzhak RABIN became prime minister. Israel began peace talks with Syria, Jordan, and the Palestinians in 1991 and signed (1993) an accord with the PLO that called for Palestinian self-rule in the Gaza Strip and Jericho.

Israel, Tribes of, in the BIBLE, the 12 tribes of Hebrews named for 10 sons of JACOB (Reuben, Simeon, Judah, Zebulun Issachar, Dan, Gad, Asher, Naphtali, and Benjamin) and the two sons of Jacob's son JOSEPH (Ephraim and Manasseh). The 13th tribe, Levi (the third of Jacob's sons), was set apart and had no one portion of its own. After the break in the Hebrew kingdom under REHOBOAM, the tribes of Judah, Benjamin, and some Levites formed a southern kingdom called Judah; the other 10 tribes formed a northern kingdom called Israel. These 10 were later (721 B.C.) conquered and transported to Assyria. They became known as the 10 lost tribes; numerous conjectures have been advanced as to their fate, and they have been identified with various peoples.

Israëls, Jozef [ēs'räĕls], 1824–1911, Dutch genre painter. He used dramatic, silver-gray light to express the melancholy character of his themes, e.g., *Toilers of the Sea* (Amsterdam) and *Expectation* (Metropolitan Mus.).

Issachar: see ISRAEL, TRIBES OF.

Isserles, Moses ben Israel, c.1525–1572, Polish rabbi, annotator, and philosopher, known as Remah. He is best known for his works on Jewish law (see HALAKAH), notably his additions to the code of Joseph CARO, which made the code acceptable to Ashkenazic Jews.

İstanbul, city (1990 pop. 6,748,435), capital of İstanbul prov., NW Turkey, on both sides of the Bosporus where it enters the Sea of Marmara. The city was known both as İstanbul (since 1453) and as Constantinople until 1930, when the one official name İstanbul was declared; before A.D. 330 its site was occupied by BYZANTIUM. Turkey's largest city and chief seaport, it produces textiles, glass, shoes, motor vehicles, and other manufactures. The part of İstanbul corresponding to historic Constantinople is built on seven hills rising on the south side of the Golden Horn, an inlet of the BOSPORUS. Points of interest include the HAGIA SOPHIA, once a church and mosque; the Seraglio, the palace of the Ottoman sultans; and many museums. In 1973 the Bosporus Bridge was the first to unite the city's European and Asian sections.

Itaípu, city (1981 est. pop. 80,000), S Brazil, on the Paraná R., which forms the E boundary of Paraguay. The rapidly growing city was created after 1973 to house workers building the Itaípu Dam and power complex, one of the world's largest hydroelectric projects. A joint Brazilian-Paraguayan venture, the complex was engineered to generate 12,600 megawatts, as much power as the ASWAN and GRAND COULEE dams combined.

Italian East Africa, former federation of Italian territories in E Africa that comprised the colonies of ERITREA and Italian Somaliland (see SOMALIA) and the kingdom of ETHIOPIA. Formed in 1936, when Italian forces conquered Ethiopia, it lasted until the territories were freed of Italian rule by the British in 1941.

Italian language, member of the Romance group of the Italic subfamily of the Indo-European family of languages. See LANGUAGE (table).

Italian Wars, 1494–1559, efforts by the great European powers, chiefly France and Spain, to control the small, independent states of Renaissance Italy. In 1494 CHARLES VIII of France invaded Italy and seized Naples, only to be forced to retreat by a coalition of Spain, Holy Roman Emperor MAXIMILIAN I, the pope, Venice, and Milan. In the second phase (1494–1504), LOUIS XII of France occupied Milan, Genoa, and (jointly with Spain) Naples. In 1508 Pope JULIUS II formed an alliance with France, Spain, and Maximilian I

The key to pronunciation appears on page xiii.

against Venice. The pope and Louis soon fell out, and in 1510 the pope formed the HOLY LEAGUE, this time including the Swiss, for the purpose of expelling France from Italy. Julius died in 1513, and the league dissolved. In 1515 the great victory of FRANCIS I at the battle of Marignano reestablished French power in Italy. The wars between Francis and Emperor CHARLES V began in 1521. In 1526, after being defeated and captured, Francis was forced to renounce all claims in Italy. Once freed, however, he formed the League of Cognac with the pope, HENRY VIII of England, Venice, and Florence. In retaliation, Charles V sacked Rome (May 1527). The pope capitulated, and the war ended (1529) with the Treaty of Cambrai. France again was forced to renounce its Italian claims. The death of Francis (1547) and the Treaty of Cateau-Cambrésis (1559) effectively ended France's exploits in Italy and left Spain supreme there.

Italic languages, subfamily of the Indo-European family of languages. See LANGUAGE (table).

Italy, Ital. *Italia,* officially Italian Republic, republic (1990 pop. 57,576,429), 116,303 sq mi (301,225 sq km), S Europe; bordered by France (NW), the Ligurian and Tyrrhenian seas (W), the Ionian Sea (S), the Adriatic Sea (E), Slovenia (NE), and Austria and Switzerland (N). It includes the large Mediterranean islands of SICILY and SARDINIA. VATICAN CITY and SAN MARINO are independent enclaves on the Italian mainland. ROME is the capital. About 75% of the country is mountainous or hilly, and 20% is forested. N Italy, made up of a vast plain contained by the ALPS in the north, is the richest region, with the best farmland, largest industrial centers, and a flourishing tourist trade; Gran Paradiso (13,323 ft/4,061 m), the highest peak wholly within Italy, is located here. Central Italy has great historic and cultural centers, such as Rome and FLORENCE. S Italy is generally the poorest and least developed area. The Italian peninsula, bootlike in shape, is traversed for its entire length by the APENNINES. Italian is the major language, though there are small German-, French-, and Slavic-speaking minorities. Almost all Italians are Roman Catholic.

Economy. Largely agricultural until World War II, Italy industrialized rapidly after 1950. By the early 1970s industry contributed about 40% of the national product, compared with only 11% for agriculture. Chief manufactures include iron and steel, refined petroleum, chemicals, textiles, motor vehicles, and machinery. Principal farm products include wheat, corn, sugar beets, rice, tomatoes, citrus fruits, olives and olive oil, and livestock. Wine production is important. Tourism is a major source of foreign exchange. Mineral resources are limited, and 75% of energy needs must be imported. An increasing problem for the country's economic health, and one that may hinder its further integration into the EUROPEAN UNION, is the large state sector, which is inefficient and rife with patronage and corruption.

Government. Under the 1948 constitution, legislative power is vested in a bicameral parliament, consisting of a 630-member chamber of deputies and a senate of 315 elected and 5 life members. All legislators were formerly elected by a system of proportional representation that fostered political corruption, but reforms enacted in 1993 assigned 75% of the seats to winner-take-all districts. The council of ministers, headed by the premier, is the country's executive.

History. After the expulsion of the Etruscans from what is now central Italy, ancient Italian history (5th cent. B.C.–5th cent. A.D.) is largely that of the Roman Empire, of which Italy was the core. Like the rest of the empire, Italy was overrun by barbarian tribes in the early 5th cent. A.D. The Eastern emperors struggled over its remains, but Byzantine rule was soon displaced (569) by that of the LOMBARDS, except in Rome, where Pope GREGORY I (r.590–604) laid the foundation for the PAPAL STATES. The persisting Lombard threat against Rome brought the intervention of PEPIN THE SHORT (754, 756) and CHARLEMAGNE (800), who established Frankish hegemony over Italy. The German king OTTO I invaded (961) Italy and was crowned (962) emperor by the pope; this union of Italy and Germany marked the beginning of the HOLY ROMAN EMPIRE. Southern Italy, conquered (11th cent.) by the Normans, eventually passed to the Angevins of NAPLES and the Aragonese kings of Sicily. North and central Italy saw the rise of separate city-states; these, despite constant internecine warfare, built huge commercial empires, dominated European finance, and produced the great cultural flowering known as the RENAISSANCE. Beginning in the late 15th cent., Italy became the battleground of French, Spanish, and Austrian imperialism. By the 18th cent. Italian subjection to foreign rule, notably by the Spanish BOURBONS and the Austrian HAPSBURGS, was complete and remained so until the FRENCH REVOLUTIONARY WARS and NAPOLEON I redrew the map of Italy. After the Congress of VIENNA (1814–15), Austria, whose influence in Italy was now paramount, could not long suppress the burgeoning nationalistic movement for unification (see RISORGIMENTO). Unification was ultimately achieved under the house of SAVOY, largely through the efforts of CAVOUR, GARIBALDI, and VICTOR EMMANUEL II, who became king of Italy in 1861. Italy later acquired Venetia (1866) and Rome and its environs (1870). Though a member of the TRIPLE ALLIANCE, Italy entered (1915) WORLD WAR I on the Allied side and in the peace treaty obtained additional territory, including S TYROL, TRIESTE, and Istria. After the war, political and social unrest encouraged the growth of fascism, and in 1922 MUSSOLINI seized power. He created a totalitarian corporative state, conquered Ethiopia (1936), seized Albania (1939), and entered (1940) WORLD WAR II as an ally of Germany. In 1943 Italy surrendered to the Allies. Italy became a republic in 1946, and the king was exiled. The 1947 peace treaty deprived Italy of its colonies and considerable territory. Trieste was regained in 1954. The postwar era has seen a succession of short-lived, pro-Western coalition governments; the Communists (now the Democratic Party of the Left), although strong electorally, have been excluded from ministerial positions. The MAFIA and organized crime have had a persistent corrupting influence on postwar Italian society, and in the late 1970s leftist guerrilla terrorism plagued the country, most notably in the kidnapping and murder (1978) of former premier Aldo MORO. The 1992 parliamentary elections resulted in centrist, four-party minority government led by Giuliano Amato, a Socialist. Corruption probes, begun in 1992, led to the arrest of hundreds of business and political figures and the investigation of many others, including several party leaders and former prime ministers. A large vote, in a 1993 referendum, in favor of ending proportional representation in Italy's senate was regarded as a call for political change, and Prime Min. Amato resigned. Carlo Azeglio Ciampi, head of Italy's central bank, succeeded him, and legislation was passed that largely ended proportional repre-

sentation in parliament. In new elections in 1994, a coalition of conservatives and neo-fascists, led by Silvio Berlusconi, won a majority of the seats in parliament.

Ithákí or **Ithaca,** island (1981 pop. 3,646), c.37 sq mi (96 sq km), W Greece, one of the Ionian Islands. Olive oil, currants, and wine are produced there. It is traditionally celebrated as the home of ODYSSEUS.

Ito Hirobumi, prince, 1841–1909, Japanese statesman and architect of Japan's modernization. After visiting the West, he created the new government and constitution (1889). He was prime minister (1892–96; 1898, 1900–01) and formed the Seiyukai party (1900). While serving as resident-general of Korea, he was assassinated.

Iturbide, Agustín de [ētōōrbē'thā], 1783–1824, Mexican revolutionary leader. In 1821, while commanding royalist troops, he agreed to the Plan of Iguala and the Treaty of Córdoba, assuring MEXICO's independence from Spain. He favored a conservative state and had himself proclaimed emperor (1822), but radical rebels forced him to abdicate and go into exile (1823). When he returned illegally to Mexico, he was executed.

IUD: see INTRAUTERINE DEVICE.

Ivan [ēvän'], rulers of Russia. **Ivan III** (the Great), 1440–1505, grand duke of Moscow (1462–1505), was the creator of the consolidated Muscovite (Russian) state. He subjugated Novgorod and other territories and in 1480 freed Muscovy from allegiance to the GOLDEN HORDE. He married Sophia, niece of the last Byzantine emperor, and claimed Moscow as the successor to the Roman and Byzantine empires. **Ivan IV** (the Terrible), 1530–84, grand duke of Moscow (1533–84), had himself crowned czar in 1547. He began trade with England, engaged in an unsuccessful war with Poland and Sweden to improve his access to the Baltic Sea, and began Russia's eastward expansion; Siberia was conquered during his reign. In later years he grew tyrannical and paranoid. He formed a special corps, the *oprichniki,* with which he conducted a reign of terror against the BOYARS. In one of his rages he killed his son and heir, Ivan (1581). He married seven times, disposing of his wives by forcing them to take the veil or ordering their murder. His sons Feodor I and DMITRI survived him, but his favorite, Boris GODUNOV, took power. **Ivan V,** 1666–96, czar (1682–90), succeeded his brother, Feodor III, ruling with PETER I under the regency of his sister, Sophia Alekseyevna. Feebleminded, he was excluded from affairs of state. He was father of Czarina ANNA, who was succeeded by her infant grand-nephew, **Ivan VI,** 1740–64, a German by birth. Deposed (1741) by Czarina ELIZABETH, Ivan VI was murdered in 1764 by order of CATHERINE II.

Ivanov, Lev [ēvä'nôf], 1834–1901, Russian dancer, teacher, choreographer, and ballet-master. He worked with Marius PETIPA and was a major force in the development of the classic romantic ballet in Russia. He choreographed *The Nutcracker* (1892) and, with Petipa, revised *Swan Lake* (1877). He influenced Michel FOKINE.

Ives, Charles, 1874–1954, American composer; b. Danbury, Conn. An organist who entered the insurance business, Ives composed music advanced in style, anticipating some of the innovations of SCHOENBERG and STRAVINSKY, but generally unpublished. In 1939 performance of his second piano SONATA, *Concord* (1909–15), won him recognition. His works, which include chamber, orchestral, and choral pieces and about 150 songs, draw on American folk music.

Ives, James Merritt: see CURRIER & IVES.

ivory, type of dentin present only in ELEPHANT tusks. Major sources are Africa and Asia. Ivory was long used for carvings and inlay work and as a surface for miniature painting. The ancient civilizations of Egypt, Assyria, Babylon, Greece, Rome, India, China, Japan, Byzantium, and early Christian Europe produced works in ivory. In modern times it has also been used to make keys for pianos and other instruments, billiard balls, and handles. The diminishing elephant population (largely the result of their slaughter for ivory) and efforts to protect existing herds led to an international treaty (1990) banning the ivory trade and the increasing use of alternative materials, such as PLASTIC and certain specially designed substitutes, as ivory stocks are depleted. In the past, teeth or tusks of such animals as the hippopotamus, walrus, narwhal, sperm whale, and wild boar were also called ivory

Ivory Coast: see CÔTE D'IVOIRE.

ivy, name applied loosely to any trailing or climbing plant, particularly cultivated forms; more properly, the English ivy (*Hedera helix*) and some other members of the family Araliaceae. The evergreen English ivy, grown in many varieties, is a popular ornamental vine; its berries are poisonous. The GRAPE family also includes some ivies, most notably the VIRGINIA CREEPER and Boston ivy. Kenilworth ivy (*Cymbalaria muralis*), of the figwort family, is often used as ground cover.

Iwo Jima, volcanic island, c.8 sq mi (21 sq km), W Pacific, largest and most important of the Volcano Islands. Annexed by Japan in 1891, the island, site of a Japanese air base, was captured (Feb.–Mar. 1945) by U.S. marines at great cost. American administration ended in 1968. Iwo Jima is uninhabited, except for a small military force. The island's Mt. Suribachi is an extinct volcano.

IWW: see INDUSTRIAL WORKERS OF THE WORLD.

Ixion, in Greek mythology, king of the Lapithes. He murdered his bride's father to avoid paying him the bride price. When no one on earth would purify him, Zeus took Ixion to Olympus and purified him. Ixion attempted to seduce Hera, but Zeus created a phantom of her and by it Ixion fathered the CENTAURS. In punishment he was chained for eternity to a fiery wheel in Tartarus.

İzmir, formerly **Smyrna,** city (1990 pop. 1,762,849), capital of İzmir prov, W Turkey, on the Gulf of İzmir, an arm of the Aegean Sea. It is Turkey's second largest seaport and an industrial center with varied manufactures. Settled during the Bronze Age (c.3000 B.C.), it was colonized (c.1000 B.C.) by Ionians and destroyed (627 B.C.) by the Lydians. Under Macedon and Rome it prospered. It changed hands many times from the 7th to 15th cent. A.D., when the Ottoman Turks conquered it. Greece contested the city after the collapse (1918) of the OTTOMAN EMPIRE; when the Treaty of Lausanne confirmed it as Turkey's, the large Greek population was evacuated, making İzmir mostly Turkish. Earthquakes in 1928 and 1939 caused severe damage to the city.

J

Jabbar, Kareem Abdul-: see ABDUL-JABBAR, KAREEM.

jackal, carnivorous MAMMAL (genus *Canis*) related to the DOG and WOLF and similar in size and behavior to the COYOTE. Some authorities classify jackals in a separate genus (*Thos*). Jackals are found in Africa and S Asia, where they inhabit deserts, grasslands, and brush country. They forage by night and spend the day in holes or hidden in grass or brush.

jack-in-the-pulpit: see ARUM.

jackrabbit, popular name for several North American HARES.

Jackson, Andrew, 1767–1845, 7th president of the U.S. (1829–37); b. Waxhaw Settlement, on the border of North and South Carolina. Jackson helped to draft the Tennessee constitution and was elected (1796) to the U.S. Congress. In the WAR OF 1812 he defeated the CREEK at Horseshoe Bend (Mar. 1814), was made a major general, and decisively defeated seasoned British troops at New Orleans (Jan. 8, 1815). In 1818 he led a reprisal against the Seminoles in Florida and captured Pensacola, involving the U.S. in serious trouble with Spain and Britain. The conduct of Old Hickory, as he was called, pleased the people of the West. He was the greatest hero of his time and became associated with increased popular participation in government. This so-called Jacksonian democracy almost won him the presidency in 1824, but the election ended in the House of Representatives, with a victory for J.Q. ADAMS. Jackson was elected president in 1828 and brought a strong element of personalism to Washington. His Kitchen Cabinet was powerful, and the SPOILS SYSTEM developed. Jackson and Vice Pres. J.C. CALHOUN differed on NULLIFICATION, and Calhoun resigned (1832). Jackson's fight against the BANK OF THE UNITED STATES was an important issue in the election of 1832, in which he defeated Henry CLAY. He then transferred federal assets from the bank to chosen state, or "pet," banks. In 1836 he issued the Specie Circular, which said that all public lands must be paid for in specie and which hastened the Panic of 1837.

Jackson, Jesse Louis, 1941–, African-American political leader, clergyman, and CIVIL-RIGHTS activist; b. Greenville, S.C. He was executive director (1966–71) of Operation Breadbasket, founder and national president (1971–83) of People United to Save Humanity (Operation PUSH), and the first serious African-American candidate in the presidential primaries (1984; 1988). An advocate of statehood for the District of Columbia, he was elected (1990) as one of the District's nonvoting "shadow" senators.

Jackson, Mahalia, 1911–72, African-American singer; b. New Orleans. Living in Chicago from 1927, she sang in churches and revival meetings and began to make recordings. By the 1950s her powerful, joyous GOSPEL MUSIC style had gained her an international reputation.

Jackson, Michael, 1958–, American singer and composer; b. Gary, Ind. At eight, he was the lead singer of his family's group, The Jackson Five. He has achieved great popularity as an adult performer. His album "Thriller" broke all records by selling over 30 million copies. In 1993 he was charged in a civil suit with sexual abuse, which he denied. The suit was settled out of court in 1994.

Jackson, Stonewall (Thomas Jonathan Jackson), 1824–63, Confederate general in the U.S. CIVIL WAR; b. Clarksburg, Va. At the first battle of BULL RUN he earned his sobriquet when he and his brigade stood "like a stone wall." He conducted the brilliant Shenandoah Valley campaign (May–June 1862) and joined Gen. R.E. LEE for the SEVEN DAYS BATTLES. Serving under Lee, Jackson flanked the Union army to set up the Confederate victory at the second battle of Bull Run (Aug. 1862) and fought in the ANTIETAM CAMPAIGN and at Fredericksburg. At CHANCELLORSVILLE (May 1863) Jackson again flanked the Union army en route to a smashing Confederate victory, but he was mortally wounded by fire from his own troops. He was Lee's ablest and most trusted lieutenant.

Jackson, William Henry, 1843–1942, American artist and pioneer photographer of the West; b. Keeseville, N.Y. From 1858 Jackson recorded the scenic grandeur and historic sites of the American West. His Yellowstone photographs influenced the decision to make the area the first NATIONAL PARK.

Jackson, city (1990 pop. 196,637), state capital and seat of Hinds co., W central Miss., on the Pearl R.; inc. 1833. The state's largest city, it has processed-food, wood-products, metal, glass, and other industries, and is the center of the state's oil industry. Jackson is also a major southern rail and distribution center. It became capital in 1821 and was named for Andrew JACKSON. A center for the VICKSBURG CAMPAIGN in the CIVIL WAR, it was largely destroyed by SHERMAN's forces. The old capitol (1839) is now a museum. During the 1960s it was the site of many demonstrations for CIVIL RIGHTS.

Jackson Hole, fertile Rocky Mt. valley, NW Wyoming, partly in Grand Teton National Park (see NATIONAL PARKS, table). Named for the trapper David Jackson, who wintered (1828–29) there, the valley is a resort area that supports a diverse wildlife and is the wintering ground for large elk herds.

Jacksonville, city (1990 pop. 635,230), coextensive (since 1968) with Duval co., NE Fla., on the St. Johns R. near its mouth on the Atlantic; settled 1816, inc. 1832. The largest city in Florida, it is a major port and rail, air, and highway hub, with shipyards and extensive freight-handling facilities. Lumber, paper, processed food, computer components, and chemicals are leading products. Naval operations are important, as is insurance, banking, and tourism. The city's growth was interrupted by the SEMINOLE War and the CIVIL WAR, and the city was destroyed by fire in 1901 and rebuilt. Points of interest include the Gator Bowl, a Confederate monument, and several museums, and a large outdoor jazz festival is held annually.

Jack the Ripper, name given to a 19th-cent. London murderer. In 1888 he was responsible for the death and mutilation of seven East End prostitutes. Although a manhunt was undertaken and the police received letters purportedly from the Ripper, he was never found. Many theories regarding his identity have been advanced.

Jacob, in the BIBLE, ancestor of the Hebrews, the younger of the twin sons of ISAAC and REBECCA. By bargain and trickery, Jacob got the birthright and the blessing that was intended for his twin, ESAU. Jacob had two wives, Leah and her younger sister, RACHEL. On the banks of the Jabbok, he wrestled with an angel and received the name of Israel. He was the ancestor of the 12 tribes of Israel (see ISRAEL, TRIBES OF).

Jacob, François, 1920–, French biologist. By studying the genetic basis of lysogeny (see BACTERIOPHAGE), he and Elie Wollman discovered (1961) a new class of genetic elements, the episomes. Studies of the regulation of bacterial enzyme synthesis led Jacob and Jacques MONOD to propose (1961) the concepts of messenger RNA (see NUCLEIC ACID) and the operon. For this work Jacob and Monod shared with André LWOFF the 1965 Nobel Prize in physiology or medicine.

Jacobean style, an early phase of English Renaissance architecture and decoration, a transition between the ELIZABETHAN STYLE and the pure Renaissance style introduced by Inigo JONES. Under James I (r.1603–25) Renaissance motifs, communicated through German and Flemish carvers, were freely adopted, but some Gothic influence lingered. Columns and pilasters, round-arch arcades, and other classical elements mixed with characteristic English ornamental detail. The style influenced furniture design and other arts. Holland House, London, and Knole House, Kent, are noted Jacobean buildings.

Jacobins, political club of the FRENCH REVOLUTION. Formed in 1789, the club was named after the monastery of the Jacobins (Parisian

name of the Dominicans), where it met. The members were mainly bourgeois and at first included moderates such as Honoré de MIRABEAU. With the FEUILLANTS, the Jacobins were (1791–92) the chief parties in the Legislative Assembly. They sought to limit the power of the king, and many had republican tendencies. The group split on the issue of war in Europe, which the majority, the GIRONDISTS, sought. The minority, supported by the lower classes of Paris, opposed the war and grew more radical and republican. In the National Convention, which proclaimed the French republic, these Jacobins and other extremist opponents of the Girondists were called the MOUNTAIN. After contributing heavily to the fall (1793) of the Girondists, the Jacobins, under Maximilien ROBESPIERRE, instituted the REIGN OF TERROR, which they used not only against counterrevolutionaries, but also against their former allies, the CORDELIERS and Georges DANTON. The Jacobins lost power on the fall (1794) of Robespierre, but their spirit lived on in revolutionary doctrine.

Jacobites, adherents of the exiled branch of the house of STUART after the GLORIOUS REVOLUTION of 1688. They took their name from the Latin form (*Jacobus*) of the name James. The Jacobites sought the restoration of JAMES II, then advanced the claims of his descendants until 1807, when the direct Stuart line ended. They included many Catholics, high churchmen, and extreme Tories. After the death of Queen ANNE (1714), Henry St. John and the 6th earl of Mar attempted a rising known as "the '15" (1715) to crown the Old Pretender, James Edward STUART; they were defeated in the disastrous battles of Preston and Sheriffmuir. The second major Jacobite rising, called "the '45," occurred when the Young Pretender, Charles Edward Stuart, invaded (1745) England and was crushed at the battle of Culloden Moor.

Jacquerie [Fr., = collection of *Jacques*, a nickname for the French peasant], 1358, a revolt of the French peasantry. The uprising stemmed from poor economic conditions, high taxation, and pillaging during the HUNDRED YEARS WAR. It was brutally crushed by CHARLES II of Navarre and other nobles.

jade, common name for either of two minerals, both white to green in color, used as gems. Jadeite $NaAl(SiO_3)_2$, rarer and costlier, is found in Myanmar, China, Japan, and Guatemala. Nephrite $Ca_2(Mg,Fe)_5Si_8O_{22}(OH,F)_2$ occurs in New Zealand, Central Asia, Siberia, and parts of North America. Jade was much used by primitive peoples to make implements and has been prized by the Chinese and Japanese as the most precious of gems.

jaguar, large CAT (*Panthera onca*) found from the SW U.S. to S central Argentina. It has a yellow or tawny coat with black rings and spots; some rings surround spots, a feature which distinguishes it from a LEOPARD. An adult male may be 4½ ft (1.4 m) long (excluding the long tail), stand 2½ ft (76 cm) high at the shoulder, and weigh 200 lb (90 kg). Mainly forest dwellers, jaguars are also found in rocky, semidesert areas and on the PAMPAS.

jai alai, also called pelota, handball-like game of Spanish Basque origin. It is played as either singles or doubles on a three-walled court (*fronton*) with a hard rubber ball (*pelota*) that is hurled with a wicker basket (*cesta*) attached to the player's arm. The sport is popular in Latin America and is played in some states (e.g., Florida and Connecticut) where jai alai betting is legal.

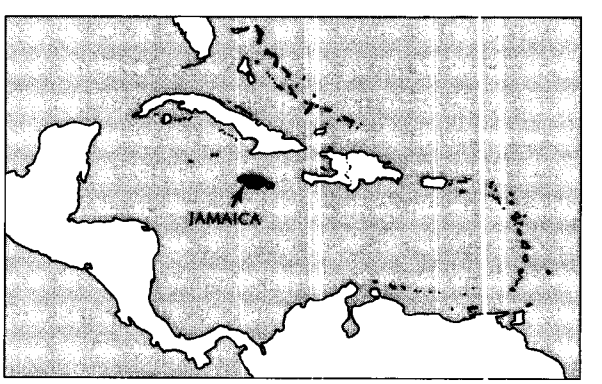
Jainism, the religion of Jina, a religious system of India practiced by about 2 million followers. It arose in the 6th cent. B.C. in protest against the ritualism of HINDUISM and the authority of the VEDA and was established by a succession of 24 saints, the last of whom was Vardhamana (called Mahavira or Jina), apparently a historical figure. He preached asceticism and concern for all life as a means of escaping from the transmigration of souls that results from one's past actions (see KARMA) and of achieving NIRVANA. Early Jainism spread from NE India, converting the emperor CHANDRAGUPTA and other rulers, according to tradition. In time, elements of Hinduism were adopted, including the CASTE system and a number of Hindu deities. Contemporary Jains are known for charitable works and their eschewal of any occupation that even remotely endangers animal life.

Jakarta or **Djakarta,** city (1988 est. pop. 8,800,000), capital and largest city of Indonesia, NW JAVA. It is the administrative, commercial, industrial, and transportation center of the country; industries include food processing, ironworks, automobile assembly, textiles, and chemicals. Resembling a Dutch town, with its many canals and drawbridges, Jakarta has an old quarter and a new suburb. Its port, the largest in Indonesia, handles most of the country's export-import trade. Founded (c.1619) as the Dutch EAST INDIA COMPANY fort of Batavia, it became capital of the newly established nation in 1949 and was renamed Jakarta. It is the site of the Univ. of Indonesia. Notable museums include the National Museum, with its superb collection of Asian porcelain, and Jakarta Museum (the former Batavia City Hall).

Jakobson, Roman, 1896–1982, Russian-American linguist and literary critic. His early work, grounded in structural linguistics, contributed to the development of the "Prague school" of linguistics, which argued for a historical emphasis in the study of speech sounds. He came to the U.S. in 1943. He later worked on distinctive-feature theory, which defines speech sounds by the presence or absence of specific phonetic qualities. Among his works is *Framework of Language* (1980).

Jamaica, island republic (1992 est. pop. 2,507,000), 4,232 sq mi (10,962 sq km), West Indies, S of Cuba and W of Haiti. The capital is KINGSTON. Most of Jamaica is an elevated plateau with a mountainous spine reaching 7,402 ft (2,256 m) in the Blue Mts., but there are low-lying plains along the north and south coasts. Jamaica is the second-ranking world supplier of bauxite and alumina, which account for half of its foreign exchange. Tourism, stimulated by the island's subtropical climate and excellent beaches, is the second largest source of exchange. The most important agricultural product is sugar, from which molasses and rum are produced. Other export crops are coffee, bananas, citrus fruits, and tobacco. A large majority of the people are of African descent. The chief religion is Protestantism, with Roman Catholic and spiritualist minorities. The official language is English, although most Jamaicans speak an English creole.

History. Discovered by COLUMBUS in 1494 and first settled (1509) by Spaniards, Jamaica was captured by England in 1655; formal cession was in 1670. A large African slave population worked sugar plantations in the 18th cent., when Jamaica was a leading sugar producer. The decline of sugar after the abolition (1838) of slavery created economic hardship, civil unrest, and British suppression (1865–84) of local autonomy. Black rioting, sparked by poverty and British racial policies, recurred periodically, reaching a peak in 1938. In 1944 universal adult suffrage was introduced. After a brief period (1958–62) as part of the WEST INDIES Federation, in 1962 Jamaica became an independent member of the Commonwealth. After 1972 a move toward socialism under Prime Minister Michael Manley led to violence between extremist factions and produced an economic crisis. Edward Seaga, a moderate, took office in 1980 and restored some measure of economic stability. In 1989 Manley's party returned to power with a more conservative program. Manley resigned in 1992, due to ill health, and was succeeded by P.J. Patterson, who subsequently won his own electoral mandate in 1993.



James, Saint, d. A.D. c.43, one of the Twelve APOSTLES called St. James the Greater. The son of Zebedee and brother of St. JOHN, he is venerated widely, especially (as Santiago) in Spain.

The key to pronunciation appears on page xiii.

James, Saint (the Less or Little), one of the Twelve APOSTLES. He was the son of Alphaeus and Mary.

James, Saint, the "brother" of Jesus, according to St. Paul. Since belief in the perpetual virginity of Mary precludes a blood relationship, he is assumed to have been a stepbrother. The Roman Catholic Church identifies him with St. James the Less. He apparently opposed the imposition of Jewish Law on Gentile Christians and is probably the author of the Epistle of James.

James, kings of England, Scotland, and Ireland. **James I,** 1566–1625 (r.1603–25), the son of Lord DARNLEY and MARY QUEEN OF SCOTS. He succeeded (1567) to the Scottish throne on the forced abdication of his mother. During his minority, Scotland was ruled by regents, and he was the creature of successive combinations of his mother's pro-French Catholic party and the Protestant faction, which favored an alliance with England. He began his personal rule in 1583. Allying himself with ELIZABETH I, he accepted calmly his mother's execution in 1587. He succeeded Elizabeth in 1603. At the Hampton Court Conference of 1604 (which commissioned the translation that resulted in the Authorized or King James Version of the BIBLE), he displayed an uncompromising anti-Puritan attitude. His inconsistent policy toward English Catholics (which resulted in the GUNPOWDER PLOT) angered them as well as Protestants. After the death (1612) of his able minister Robert Cecil, earl of SALISBURY, he asserted his divine right, battling with Sir Edward COKE and relying on incompetent favorites, e.g., George Villiers, 1st duke of BUCKINGHAM. These actions, his extravagance, and his refusal to recognize the importance of Parliament furthered discontent and led to the ENGLISH CIVIL WAR. In 1611 he dissolved Parliament, ruling without it (except for the Addled Parliament, 1614) until 1621. In 1624 he acceded to its wish for war with SPAIN. His reign saw the beginnings of colonization in North America. He was succeeded by CHARLES I. **James II,** 1633–1701 (r.1685–88), was the second son of Charles I and the brother and successor of CHARLES II. He escaped to France (1648) in the English Civil War. At the RESTORATION (1660) he returned to England and was made lord high admiral, serving (1655; 1672) in the DUTCH WARS. In about 1668 he became a Roman Catholic. After his resignation as admiral because of the TEST ACT (1673) and his marriage to the staunchly Catholic Mary of Modena (1673), he became increasingly unpopular. His daughter MARY married the Protestant William of Orange (later WILLIAM III), and they became, after James, heirs presumptive to the English throne. Exiled after the false accusations of a Popish Plot (1678) by Titus OATES, he was recalled in 1680. After the failure of Parliament to exclude him from succession and the abortive RYE HOUSE PLOT, Charles II's death brought him to the throne in 1685. His unpopularity was increased by the Bloody Assizes of Baron JEFFREYS OF WEM, his attempts to fill important positions with Roman Catholics, and his autocratic methods with a hostile Parliament. The birth of his son, James Edward STUART, as a possible Catholic heir, led to the GLORIOUS REVOLUTION of 1688, in which William of Orange became king. James fled to France. In 1689 he attempted to restore himself in Ireland but was defeated (1690) at the battle of the Boyne. He died in exile.

James, kings of Scotland. **James I,** 1394–1437 (r.1406–37), was the son of ROBERT III. Fearful for his safety because of the ambitions of the king's brother, Robert Stuart, duke of Albany, Robert III sent James to France in 1406. The prince was captured by the English and held captive until 1424. Treated as a royal guest, he was well educated. Ransomed by several Scottish nobles, he returned to Scotland and governed energetically. He brought peace by ruthless methods, exterminating members of the Albany family. James's popularity was lessened by his vindictiveness, cupidity, and quick temper; he was assassinated by a group of nobles. He is thought to be the author of a number of fine poems. His son, **James II,** 1430–60 (r.1437–60), had successive earls of Douglas as regents during his minority. Allying himself with William Douglas, the 6th earl, he was ruling in his own right by 1450. When he discovered (1452) William in a conspiracy, he killed him. After the ensuing revolt, he seized the Douglas lands. He invaded England in the Wars of the ROSES and was accidentally killed. His son, **James III,** 1452–88 (r.1460–88), was seized at his mother's death by the Boyd family, who ruled until 1469. A cultivated king, James lacked the force necessary in a turbulent period. He fought with his brother, Alexander STUART, who, aided by other nobles, rebelled in 1482. The nobles rebelled again in 1488 and murdered James at Sauchieburn. His son, **James IV,** 1473–1513 (r.1488–1513), was a popular and able monarch who brought progress and stability to Scotland. In 1503 he married Margaret Tudor, daughter of HENRY VII of England. Scottish relations with England deteriorated with the accession of HENRY VIII. James invaded England in 1513 and was killed in the battle of Flodden, in which the Scottish aristocracy was almost annihilated. His son, **James V,** 1512–42 (r.1513–42), was the object of a struggle between his regents. Held captive, he escaped (1528) and allied himself with France against Henry VIII. He married MARY OF GUISE in 1538. War with England broke out in 1542. James's nobles gave him little support, and his army was routed at Solway Moss. He died shortly thereafter and was succeeded by his infant daughter, MARY QUEEN OF SCOTS. For **James VI,** king of Scotland (r.1567–1625), see James I, under JAMES, kings of England, Scotland, and Ireland.

James, Alice, 1848–92, American diarist and the sister of Henry and William JAMES; b. N.Y.C. Although she did not receive a formal education and suffered several breakdowns, her diaries, written from 1886 to 1892, contain astute observations on her times and family.

James, Henry, 1843–1916, American novelist; b. N.Y.C.; brother of William JAMES. He settled in London in 1876 and became a British citizen in 1915. In his early novels, such as *Daisy Miller* (1879) and *The Portrait of a Lady* (1881), he compared the sophisticated culture of Europeans with the naïve quality of Americans. In his next period, James dealt with revolutionaries, as in *The Bostonians* (1886) and *The Princess Casamassima* (1886). He also wrote several powerful short novels, such as *The Aspern Papers* (1888) and *The Turn of the Screw* (1898). He returned to the international theme in his last novels, *The Wings of the Dove* (1902), *The Ambassadors* (1903), and *The Golden Bowl* (1904), widely considered his masterpieces. He was also a fine short-story writer and a noted critic. Considered one of the great masters of the novel, James is particularly noted for his portrayals of the subtleties of character and for his complex style.

James, Jesse, 1847–82, American outlaw; b. Clay co., Mo. From 1866 Jesse and his brother Frank headed a band of outlaws whose trail of robberies and murders led through many central states. He was killed by a gang member seeking a reward.

James, William, 1842–1910, American philosopher and psychologist; b. N.Y.C.; son of the theologian Henry James and brother of the novelist Henry JAMES. He taught first psychology and then philosophy at Harvard Univ. His *Principles of Psychology* (1890) was a brilliant and epoch-making work. Although he is often considered the founder of PRAGMATISM, James gave that title to C.S. PEIRCE. According to James, the truth of a proposition is judged by its practical outcome. His "radical empiricism" rejected all transcendental principles and directly influenced the instrumentalism of John DEWEY. James maintained a lifelong interest in religion and psychical research. His works, noted for their literary quality, include *The Will to Believe* (1897), *The Varieties of Religious Experience* (1902), and *Pragmatism* (1907).

James, EPISTLE of the NEW TESTAMENT, 20th book in the usual order, traditionally placed among the Catholic or General Epistles and ascribed to St. James the Less. A practical work, it gives diverse admonitions in no special order, among them two general ethical principles: "Be doers of the word, not hearers only" (1.19–27) and "Faith without works is dead" (2.14–26).

Jameson, Sir Leander Starr, 1853–1917, British colonial administrator in South Africa. In 1895 he led the unauthorized Jameson Raid into the Boer colony of the Transvaal, an act that helped to precipitate the SOUTH AFRICAN WAR. He was captured and turned over to the British, who imprisoned him briefly. He later returned to South Africa, where he was prime minister of the Cape Colony (1904–8).

Jamestown, former village, SE Va., first permanent English settlement in America; est. May 14, 1607, by the London Company on a peninsula (now an island) in the James R.; named for the reigning English king, JAMES I. Disease, starvation, and attacks by Native Americans decimated the settlement, and the remaining colonists prepared to return; but new settlers and supplies were sent, and

Lord DE LA WARR arrived in 1610. John SMITH was an early colonial leader. John ROLFE began the cultivation of tobacco there in 1612; in 1614 he married POCAHONTAS, assuring peace with the indigenous people. The first representative government in the colonies met there (1619); Jamestown was capital of VIRGINIA through most of the 17th cent. The village was almost entirely destroyed during Bacon's Rebellion (1676; see BACON, NATHANIEL). The site, which contains the old church tower (c.1639), some original gravestones, and many replicas of the early settlement, is mainly administered by the U.S. government.

Jami, Nur ad-Din Abd ar-Rahman [jä'mē], 1414–92, Persian poet and DERVISH. Among his works are *Seven Thrones*, a collection of poems including "Salaman and Absal," and *Abode of Spring*, a collection of short stories.

Janáček, Leoš [yä'nächĕk], 1854–1928, Czech composer, theorist, and collector of Slavic folk music. His works include the operas *Jenufa* (1904), *Katia Kabanova* (1921), and *The Makropulos Affair* (1926); a song cycle; and a MASS.

Janet: see CLOUET, JEAN.

Janissaries, elite corps of war captives and Christian youths in the service of the OTTOMAN EMPIRE (Turkey). Converted to Islam and trained under the strictest discipline, they eventually became powerful enough to make and unmake sultans. By the 17th cent. membership was largely hereditary. Their power came to an abrupt end in 1826 when Sultan MAHMUD II had them massacred in their barracks.

Jansen, Cornelis [yän'sən], 1585–1638, Dutch Roman Catholic theologian, bishop of Ypres. He sought to reform Christian life by a return to St. AUGUSTINE. From his posthumous *Augustinus* (1640) arose the movement called **Jansenism,** which stressed greater personal holiness. The movement, centered in France, caused great controversy within the Roman Catholic Church because of its advocacy of an extreme form of PREDESTINATION and its discouragement of frequent communion. It was attacked in papal bulls (1705, 1713), and the Jansenist convent of Port-Royal, near Paris, was closed. Jansenists are still found in the Netherlands.

Jansky, Karl Guthe, 1905–50, American radio engineer; b. Norman, Okla. While trying to determine the causes of radio communications static for Bell Telephone Laboratories, Jansky discovered (1931) radio waves from extraterrestrial sources—a discovery that led to the development of the science of RADIO ASTRONOMY; By 1932 he had concluded that the source of the interference was located in the direction of the center of the Milky Way galaxy.

January: see MONTH.

Janus, in Roman mythology, custodian of the universe, god of beginnings. The guardian of gates and doors, he held sacred the first hour of the day, first day of the month, and first month of the year (which bears his name). He is represented with two bearded heads set back to back.

Japan, Jap. *Nihon* or *Nippon*, country (1991 pop. 124,017,137), 142,811 sq mi (369,881 sq km), occupying an archipelago off the coast of E Asia. The capital is TOKYO. Japan proper has four main islands; these are, from north to south, HOKKAIDO, HONSHU (the largest island, where the capital and major cities are located), SHIKOKU, and KYUSHU. Many smaller islands lie in an arc between the Sea of Japan and the East China Sea, and the Pacific Ocean. Honshu, Shikoku, and Kyushu enclose the Inland Sea. Mountains, including a number of volcanoes, cover two thirds of Japan's surface; the most famous peak is Mt. FUJI. The land is also marked by short, rushing rivers, forested slopes, irregular lakes, and small, rich plains. Rainfall is abundant, and typhoons and earthquakes are frequent.

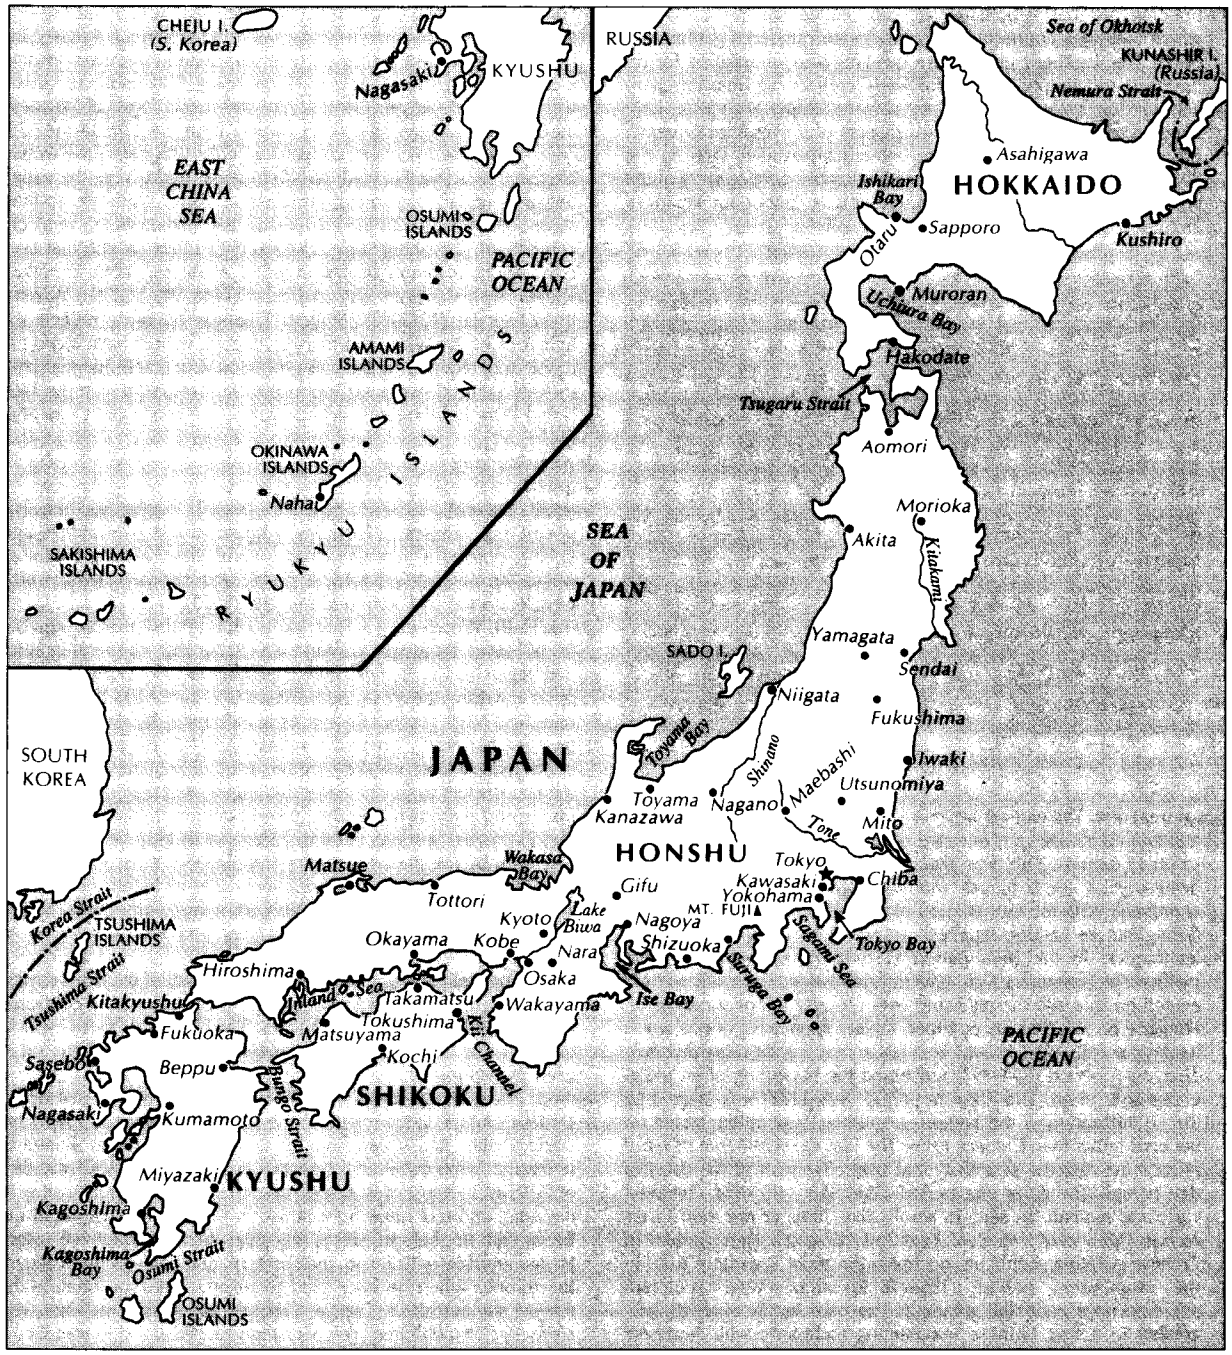
Economy. Mineral resources are meager. Many rapid streams provide hydroelectric power, and nuclear energy is produced. High-speed train service now extends to many parts of the country. Japan's farming population has been declining steadily and now comprises about 8% of the total labor force. Arable land (less than 16% of the country's area) is intensively cultivated; rice and other cereals are the main crops. Fishing is highly developed, and the annual catch is one of the largest in the world. Since its defeat in World War II, Japan has developed into one of the world's great economic powers. The world's leading producer of ships and automobiles, it also ranks high in the production of steel, electronic equipment, and textiles. Japan's industry depends heavily on imported raw materials, especially petroleum and iron and aluminum ore. Japan's successful exports have produced huge foreign trade surpluses that have created strains with the U.S. and W European nations.

People. The Japanese are primarily descended from various peoples who migrated from Asia in prehistoric times the dominant strain is N Asian or Mongolic. The principal religions are SHINTO and BUDDHISM, and Japanese thought has also been deeply affected by CONFUCIANISM. The present educational system, established after World War II, has created a highly educated and skilled population.

Government. The constitution, which went into effect in 1947, established a democratic form of government. It declares the emperor to be the symbolic head of state and renounces Japan's right to declare war. The national diet, which has sole legislative power, is composed of the 512-member house of representatives and the 252-member house of councilors. Reforms passed in 1994 will reduce lower-house membership to 500. Executive power rests with the prime minister, who is elected by the diet, and his appointed cabinet. Japan is divided into 47 prefectures, each governed by a popularly elected governor and a legislature.

History. In legend, Japan was founded in 660 B.C., but reliable records date only to about A.D. 400. By the 5th cent. Japan was unified by the Yamato clan, and the foundations of a centralized imperial state were laid by the 8th cent. Court culture was influenced first by Chinese learning and institutions and then by a rebirth of native Japanese culture. By the 9th cent. the powerful Fujiwara family ruled as regents, and imperial authority was undermined. The 12th cent. ushered in Japan's medieval period, with the development of feudalism, the rise of a warrior class called the SAMURAI, and the establishment of military rule under Minamoto Yoritomo, the first SHOGUN. After civil war between rival warrior clans, the country was unified in 1600 under a new shogun, Tokugawa IEYASU. For more than 250 years the TOKUGAWA family ruled over a Japan internally at peace and largely cut off from the outside world. In 1853 the U.S. naval officer Matthew C. PERRY arrived in Japan to force the opening of trade with the West, and in 1868 the shogunate collapsed, when the Meiji Restoration returned formal power to the Emperor MEIJI. A new government was established under the able leadership of former samurai. Adopting the techniques of Western civilization, Japan modernized rapidly into an industrial state and military power. A constitutional monarchy and a parliament (diet) were established by the constitution of 1889. The success of Japan in the First Sino-Japanese War (1894–95) and the RUSSO-JAPANESE WAR (1904–5) brought the nation to international prominence. An Anglo-Japanese alliance was formed in 1902. Japan annexed Korea in 1910, established a puppet-state in MANCHURIA in 1932, and began the Second SINO-JAPANESE WAR (1937–45) by invading N China. Japan formed a military alliance with Germany and Italy in WORLD WAR II and opened hostilities against the U.S. with an attack on PEARL HARBOR in 1941. After rapid initial success, the Japanese were defeated by the Allies. Following the dropping of atomic bombs by the U.S. on HIROSHIMA and NAGASAKI, Japan surrendered in Aug. 1945 and was occupied by U.S. forces. The signing of a peace treaty in 1951 led to full Japanese sovereignty over the main islands in 1952. The U.S. returned the BONIN and nearby islands to Japan in 1968 and the RYUKYU ISLANDS (Okinawa) in 1972. The LIBERAL DEMOCRATIC PARTY (LDP) dominated postwar politics, but beginning in the 1970s various scandals increasingly tarnished its image. TAKESHITA NOBURU served as prime minister (1987–1989) until, amid reports of scandal, he resigned, and Uno Sosuke replaced him. Uno resigned after a sex scandal and an election defeat, and Kaifu Toshiki became (1989) prime minister. In 1991 MIYAZAWA KIICHI succeeded Kaifu as prime minister. Miyazawa's government fell in 1993 after the LDP split over political reforms. No party won a majority in the subsequent elections, but an opposition coalition formed a government, and HOSOKAWA MORIHIRO became prime minister.

Japan, Sea of, arm of the Pacific Ocean, c.405,000 sq mi (1,048,950 sq km), located between Japan, Korea, and the Russian Far East. A branch of the warm Japan Current flows northeast through the sea, modifying climatic conditions and keeping coastal ports ice-



free as far north as VLADIVOSTOK, Russia's only major all-year outlet to the Pacific Ocean sea lanes.

Japanese, language of uncertain origin that is spoken by more than 100 million people, most of whom live in Japan. Japanese appears to be unrelated to any other language; however, some scholars see a kinship to Korean, and others link Japanese and Korean to the ALTAIC languages (see URALIC AND ALTAIC LANGUAGES).

Japanese architecture. Evidence of neolithic building in Japan remains. Chinese religious architecture came to Japan with BUDDHISM in the 6th cent. Parts of the monastery of Horyu-ji, near Nara, illustrate the first epoch of Japanese architecture (6th–8th cent.), characterized by gravity and simple, vital construction, sparsely ornamented. Wood has always been the favored material. Interior columns and thin woodwork and plaster walls were characteristic. Vitality and grace are communicated by the refined curvatures in columns and overhanging roofs. Emulation of the Chinese style is seen in the monastery of Todai-ji (begun 745), with its great hall housing the daibutsu (colossal Buddha), fronted by twin pagodas. Distinctively Japanese architecture dates from the late Heian period (898–1185). The Phoenix Hall at Uji, near Kyoto, represents the apogee of Japanese design, with its airiness and beautiful situation near a lotus lake. In the 13th cent. a renewed interest in CHINESE ARCHITECTURE came with the emergence of ZEN BUDDHISM. Japanese temple design adhered to the Chinese symmetrical pattern. In front of the main building stood an impressive gateway. Accessory structures included the PAGODA. The Shinto temple was small and simple; greatest importance was attached to the landscape setting. Regard for the environment was seen also in secular

building, as in the housing schemes called *shinden-zukuri*, in which buildings connected by corridors surrounded a garden and pond. The Japanese upper-class dwelling was unexcelled for refinement and simplicity. Exterior walls were usually movable panels; interiors were subdivided by screens. Important rooms contained a *tokonoma*, an alcove for display of flower arrangements. European architectural influence entered Japan after 1868. In the 20th cent. the Japanese began to influence the development of the INTERNATIONAL STYLE in MODERN ARCHITECTURE. Important Japanese architects include Tange Kenzo and Kurokawa Kisho.

Japanese Netsukes, ivory, 18th–19th cent.

Japanese art. The earliest Japanese art, probably dating from the 3d and 2d millennia B.C., consisted of monochrome pottery in a cord pattern (*jomon*). This was replaced by bronze bells with simple designs, clay tomb figures (*haniwa*), and some painted burial chambers. With the introduction of BUDDHISM in the 6th cent., and throughout its history, Japanese art relied on Chinese forms and techniques. In the Nara period (710–784) traditional technical methods of Japanese painting were established. The work was executed on thin silk or soft paper with Chinese ink or watercolors. Mounted on silk brocade or paper, the paintings were of two types: hanging scrolls (*kakemono*) and horizontal scrolls (*emakimono*). The Jogan period (794–897) witnessed the beginning of an indigenous style of art. The Fujiwara period (898–1185) was marked by the crystallization of the *Yamato-e* tradition of painting, based on national rather than Chinese taste. The famous scroll *Tale of Genji* reflects the extreme sensitivity and overrefinement of the court of that period. The Kamakura period (late 12th–14th cent.) restored vigor and realism, as seen in scrolls like *Tales of the Heiji Insurrection* (13th cent.; Mus. of Fine Arts, Boston). Here, unlike in Chinese painting, humanity occupies the most important role. In the Momoyama period (1568–1615) architectural sculpture achieved unprecedented grandeur. The KANO family of artists succeeded in fusing Chinese ink-painting technique with Japanese decorative quality. During the Edo period (1615–1867) miniature sculptures called *netsuke* became popular. In the 18th cent., influenced by Dutch engravers, a new type of art arose in the form of woodblock prints known as *ukiyo-e* pictures of the fleeting or floating world. *Ukiyo-e* color-print designers won worldwide renown, the best known being HARUNOBU and HIROSHIGE. Mid-19th-cent. contacts with European culture enervated Japanese art, and in the 20th cent. a great number of painters and sculptors have been strongly influenced by Western styles.

Japanese literature. Although Japanese and Chinese are different languages, the Japanese borrowed and adapted Chinese ideographs early in the 8th cent. so that their spoken language could be written. This system was used in the writing of *Records of Ancient Matters* (712), the sacred book of SHINTO, but other works of the period were written in pure Chinese. The addition of two phonetic syllabaries (*kata-kana* and *hiragana*) during the Heian era (794–1185) opened a golden age in which Japanese literature, written in Japanese, reached its first peak of development. Much of the Heian literature was written by women, notably MURASAKI SHIKIBU, a noblewoman whose *Tale of Genji* (early 11th cent.) is ranked with the world's greatest novels. The four basic forms of Japanese drama were evolved (see ASIAN DRAMA) from the 12th to the 17th cent. Under the TOKUGAWA shogunate (17th–19th cent.) the written language was standardized, and freer verse forms, e.g., the HAIKU, began to replace the *tanka*, the classical form. While Heian literature dealt mostly with the aristocracy, the Tokugawa era was concerned with the bourgeoisie. CHIKAMATSU's plays are the first tragedies about common people in world literature. Other important writers were the poet Matsuo Basho (1648–94) and the novelist Ihara Saikaku (1642–93). Modern Japanese literature reflects the influence of the West, and many 20th-cent. writers have faced the problem of reconciling Japanese tradition with that influence. They include TANIZAKI JUNICHIRO, KAWABATA YASUNARI (who won the 1968 Nobel Prize in literature), MISHIMA YUKIO, ABE KOBO, and Ooka Shohei.

japanning: see LACQUER.

Japheth: see NOAH.

Jarrell, Randall, 1914–65, American poet; b. Nashville, Tenn. His poetry, e.g., *Losses* (1948), *The Woman at the Washington Zoo* (1960), reflects a sensitive, tragic world view. Among his other works are children's books; a novel; and critical essays, which were collected in *Poetry and the Age* (1953).

Jaruzelski, Wojciech [yärōōzĕl'skē], 1923–, Polish military and political leader. He fought in World War II, became a general in 1956, and began his rise in the Communist party in 1960. During the 1981 crisis involving the trade union SOLIDARITY, Jaruzelski became premier and party leader. Known as a moderate, he sought a compromise but finally ordered a military crackdown, placed Poland under martial law, and ordered the arrest of Solidarity leader Lech WALESA. Backed by Soviet leadership, his government outlawed Solidarity and put down attendant protest demonstrations and strikes (1982). Martial law was lifted in 1983, and in 1985 he was elected president by the parliament after stepping down as premier. Narrowly reelected (1989) by a parliament that included members of Solidarity, Jaruzelski resigned his Communist party posts. He resigned as president the following year and was succeeded by Walesa.

jasmine or **jessamine,** plant (genus *Jasminum*) of the OLIVE family, chiefly of Old World tropical and subtropical regions but cultivated in other mild areas and greenhouses. The blossoms, mostly yellow or white and usually fragrant, are used in scenting tea; the oil is used in perfumery.

Jason, one of the greatest heroes of Greek mythology. Raised by the centaur CHIRON, Jason claimed the kingdom of Iolcus, which his uncle, Pelias, had stolen from his father, Aeson. Pelias agreed to return it if Jason gathered the GOLDEN FLEECE, owned by King Aeëtes of Colchis. In quest of it, Jason assembled the Argonauts, sailed in the *Argo*, and had many adventures. In Colchis, they captured the fleece with the help of Aeëtes' daughter, MEDEA, who loved Jason. Medea returned with Jason, married him, and helped him to secure the throne. When he later tried to divorce her, she brutally destroyed his betrothed, Creusa; Creusa's father; and, in some versions, her own children. The gods then caused Jason to wander for many years. The story of Jason and Medea appears frequently in literature, notably in EURIPIDES.

jasper, opaque, impure CHALCEDONY, usually red but also yellow, green, and grayish blue, used as a gem. Ribbon jasper has colors in stripes.

Jaspers, Karl, 1883–1969, German philosopher. Generally placed within the orbit of EXISTENTIALISM, Jaspers believed that genuine philosophy must spring from the study of a person's individual existence, which he viewed as enclosed by an all-embracing, transcendental reality he called "the encompassing." Among his works are *Man in the Modern Age* (1931) and *Philosophy* (3 vol., 1932).

jaundice, abnormal condition in which body fluids and tissues, particularly the skin and eyes, take on a yellowish color as a result of excess bilirubin, a substance normally removed from the bloodstream by the LIVER and eliminated from the body in BILE. Causes include excessive disintegration of red blood cells (as in some

types of ANEMIA); damage to liver cells by disease (e.g., CIRRHOSIS, HEPATITIS); and bile duct blockage (e.g., by gallstones or tumors). Jaundice in the newborn may indicate an RH FACTOR reaction.

Java, island (1990 pop. 107,573,749), Indonesia, c.51,000 sq mi (132,090 sq km), one of the world's most densely populated regions. It constitutes only one seventh of Indonesia's area but contains nearly two thirds of the population. A chain of volcanic, forested mountains traverses the island east to west, rising to 12,060 ft (3,676 m) at Mt. Semeru. The climate is warm and humid, and the volcanic soil is exceptionally productive, yielding two or three crops a year when irrigated. Most of Indonesia's industry is on Java, and lumbering and mining also are important. From the 10th to 15th cent. the island was the center of Hindu-Javanese culture, from which it derives today's highly developed art forms. It was under Dutch rule from 1619 to 1946.

Java man: see HOMO ERECTUS.

Jay, John, 1745–1829, American statesman, 1st chief justice of the U.S. SUPREME COURT (1789–95); b. N.Y.C. A lawyer, he guided the drafting of the New York State constitution. He was president (1778–79) of the CONTINENTAL CONGRESS and one of the commissioners who negotiated (1781–83) peace with Great Britain (see PARIS, TREATY OF). As secretary of foreign affairs (1784–89), he advocated strong central government. During his tenure as chief justice, he was sent (1794) on a mission to England, where he negotiated what became known as JAY'S TREATY. Jay was also governor of New York for two terms (1795–1801).

jay, BIRD (family Corvidae) related to the CROW and found in Europe, Asia, and the Americas. The blue jay (*Cyanocitta cristata*) of central and E North America has a grayish blue crest and upper parts, and bright blue wings with white and black markings. The Canada jay (*Perisoreus canadensis*), gray with a white throat and forehead and no crest, is found in northern coniferous forests and swamps.

Jay's Treaty, concluded in 1794 between the U.S. and Britain to settle difficulties arising mainly out of violations of the Treaty of PARIS of 1783 and to regulate commerce and navigation. The treaty, signed in England by John JAY and Lord GRENVILLE, provided for British evacuation of posts in the Old Northwest, unrestricted navigation of the Mississippi, and equal privileges for American and British vessels in Great Britain and the East Indies. It placed severe restrictions on U.S. trade in the West Indies and did not allow indemnity for Americans whose slaves were carried off by Britain's evacuating armies. Because the treaty failed to protect American seamen against impressment, or to secure recognition of the principles of international maritime law, it aroused indignation in the U.S., and appropriations to put it into effect were delayed until 1796.

jazz, American musical form, developed c.1890 from African-American work songs, SPIRITUALS, and other forms whose harmonic, melodic, and rhythmic elements were mainly African. It came to general notice in the 1920s, when whites adapted or imitated it. Jazz began in the South and spread north and west. The *blues* has remained a vital part in all periods. Blues generally employs a 12-bar construction and a "blue" SCALE thought to be African in origin. Vocal blues have earthy, direct lyrics. The tempo may vary, and the mood ranges from despair to cynicism to satire. Major early blues artists were Blind Lemon Jefferson, Ma Rainey, and Bessie SMITH. W.C. HANDY popularized blues. *Ragtime,* a syncopated, polyphonic genre (fl. 1890s–1910s), spread through sheet music and piano rolls (see POLYPHONY). Scott JOPLIN was its most famous exponent. *New Orleans* or *Dixieland* jazz developed from military music, blues, and the French tradition in New Orleans. Pioneer musicians like Buddy Bolden and Jelly Roll Morton performed at functions from funerals to dances. In World War I musicians went north up the Mississippi, seeking work. In Chicago, King Oliver, Louis ARMSTRONG, and others introduced jazz to a wider audience, and young whites like the cornetist Bix Beiderbecke were drawn to it. At the end of the 1920s a new phenomenon, *swing,* emerged. The small New Orleans band had played polyphony, but swing involved larger groups (14–18) featuring soloists with arranged backgrounds. The bands of Count Basie, Duke ELLINGTON, and Benny GOODMAN were especially notable. *Bop* (bebop), a 1940s revolt against the formulas of swing, was rhythmically complex and harmonic, rather than melodic, at base. Charlie PARKER and Dizzy GILLESPIE were the leaders. In the 1950s *progressive jazz,* with bop's harmonics but simpler melody and rhythm, flourished, chiefly on the West Coast, inspired largely by the swing giant Lester YOUNG. Stan Getz and Dave Brubeck were key figures. *Hard bop,* a second wave, was led by such musicians as Sonny Rollins and John COLTRANE. An exploratory avant-garde of the 1960s coexisted with the efforts of Miles DAVIS and others to bring ROCK MUSIC into jazz, and in the 1970s reached into the past to create a music with elements of all jazz styles, epitomized in the work of the Art Ensemble of Chicago. Wynton MARSALIS was the most prominent of several younger artists who sparked a jazz resurgence in the 1980s that was less avant-garde and more traditional. Almost all jazz styles remain current today.

Jeanneret, Charles Édouard: see LE CORBUSIER.

Jeffers, Robinson, 1887–1962, American poet; b. Pittsburgh. After 1914 he lived on the California coast. His virile, intense poetry includes *Roan Stallion* (1925) and *The Double Axe* (1948). He is also known for his adaptations of Greek tragedy, e.g., *Medea* (1947), *The Cretan Woman* (1954).

Jefferson, Thomas, 1743–1826, 3d president of the U.S. (1801–9); b. Goochland (now in Albemarle) co., Va. A member (1769–75) of the Virginia house of burgesses, he was a leader of the patriot faction. At the Second CONTINENTAL CONGRESS he drafted the DECLARATION OF INDEPENDENCE, a historic document that reflects his debt to John LOCKE and other philosophers. In 1779 he became governor of Virginia, guiding that state through the troubled last years of the AMERICAN REVOLUTION. A member (1783–84) of the Continental Congress, Jefferson drafted a plan for decimal coinage and drew up an ordinance for the Northwest Territory that formed the basis for the ORDINANCE OF 1787. In 1785 he became minister to France. Appointed secretary of state (1790–93) in Pres. WASHINGTON'S cabinet, Jefferson defended agrarian interests against the Federalist policies of Alexander HAMILTON and led a group called the Republicans—antecedents of the present DEMOCRATIC PARTY. He served as vice president (1797–1801) and protested the passage of the ALIEN AND SEDITION ACTS by writing the Kentucky Resolutions (see KENTUCKY AND VIRGINIA RESOLUTIONS). The Republicans triumphed at the polls in 1800, but Aaron BURR, who had been slated to become vice president, tied Jefferson in the presidential vote. Jefferson was finally chosen president by the House of Representatives, largely on the advice of Hamilton, who considered Jefferson less dangerous than Burr. Jefferson was the first president inaugurated in Washington, a city he had helped to plan. He instituted a republican simplicity in the city and cut federal expenditures. He believed that the federal government should be concerned mainly with foreign affairs, leaving local matters to the states and local authorities. Usually strict in interpreting the Constitution, he pushed through the LOUISIANA PURCHASE of 1803, an action that it did not expressly authorize. He also planned the LEWIS AND CLARK EXPEDITION. During his second administration, difficulties arose from attacks on neutral U.S. shipping by the warring powers of Britain and France. With such measures as the EMBARGO ACT of 1807 he tried to use economic pressure to gain a solution, but this aroused strong opposition in the U.S. In retirement after 1809 at his beloved home, Monticello, Jefferson brought about the founding of the Univ. of Virginia and continued his lifelong interests in science, architecture, philosophy, and the arts.

Jefferson City, city (1990 pop. 35,481), state capital and seat of Cole co., central Mo., on the Missouri R., near the mouth of the Osage R.; inc. 1825. State government is the major employer; the city is also the processing center for an agricultural area. Printing and various manufactures are important. The state capital since 1826, its Renaissance-style capitol (1917) contains murals by Thomas Hart BENTON.

Jefferson Memorial, monument in Washington, D.C., honoring Thomas JEFFERSON. Dedicated in 1943, the domed white marble structure was designed by the American neoclassical architect John Russell Pope; it houses a 19-ft (5.8-m) statue of Jefferson by Rudulph Evans.

Jeffreys of Wem, George Jeffreys, 1st Baron, 1645?–1689, English judge under CHARLES II and JAMES II; noted for his cruelty. In the Bloody Assizes following the rebellion (1685) of the duke of

MONMOUTH, he caused nearly 200 persons to be hanged, some 800 transported, and many more imprisoned or whipped.

Jehannet: see CLOUET, JEAN.

Jehoshaphat [jēhŏsh'əfăt], **Josaphat,** or **Joshaphat,** king of Judah (c.873–849 B.C.), son and successor of King Asa. He was an ally of King AHAB of Israel and his successors and was the first king of Judah to make a treaty with the kingdom of Israel. The **Valley of Jehoshaphat,** mentioned in Joel as a place of judgment, has been identified by tradition with the northern extension of the vale of Kidron to the east of JERUSALEM.

Jehovah: see GOD.

Jehovah's Witnesses, international sect founded in the U.S. in the late 19th cent. by Charles Russell. They were called Russellites before 1931. Their doctrine centers on the imminent second coming of Jesus. Witnesses refuse to salute the flag, bear arms, or participate in government. All members are considered ministers, and believers engage in active proselytizing. In 1991 they reported a U.S. membership of 858,367.

Jekyll, Gertrude, 1843–1932, British artist, landscape gardener, and crafts artist. She was associated with William Robinson and Edwin LUTYENS in developing an informal style of garden. Her works include *Wood and Garden* (1899) and *Garden Ornament* (1918).

Jellicoe, John Rushworth Jellicoe, 1st **Earl,** 1859–1935, British admiral. As commander in chief of the Grand Fleet (1914–16) in WORLD WAR I, he was engaged in the inconclusive battle of Jutland (1916). He was later first sea lord (1916–17) and governor general of New Zealand (1920–24).

jellyfish, free-swimming stage (see POLYP AND MEDUSA) of invertebrate animals (COELENTERATES) of the classes Hydrozoa and Scyphozoa of the phylum Cnidaria. Many jellyfish are colored and are considered to be among the most beautiful of animals. They have bell- or umbrella-shaped bodies with a clear, jellylike material filling most of the space between the upper and lower surfaces. A mouth is located on the underside and tentacles dangle from the bell margin. Most catch their prey with stinging cells located in the tentacles and most are marine, living in ocean depths and along the coasts.

Jena [yā'nä], city (1989 est. pop. 108,000), Thuringia, SE Germany, on the Saale R. Its industries include pharmaceuticals and precision and optical instruments. Known since the 9th cent., the city gained international repute in the 18th and 19th cent., when SCHILLER, HEGEL, FICHTE, and SCHELLING taught at its university (est. 1557). GOETHE also lived there.

Jenghiz Khan or **Genghis Khan** [jĕng'gĭz kän], 1167?–1227, Mongol conqueror. After uniting the Mongol tribes, he conquered (1213–15) most of the Chin empire of N China. From 1218 to 1224 he subdued Turkistan, Transoxania, and Afghanistan and raided Persia and E Europe. A brilliant military leader, he ruled one of the greatest land empires of history from his capital at KARAKORUM. After his death his empire was divided among his sons and grandsons.

Jenkins, Roy (Harris), 1920–, British politician. A member of the House of Commons (1948–87), he was first elected as a Labour member and was minister of aviation (1964–65), home secretary (1965–67, 1974–76), and chancellor of the exchequer (1967–70) in Labour governments. He served (1977–81) as president of the Commission of the European Community. In 1982 he was elected to Parliament as a member of Britain's new SOCIAL DEMOCRATIC PARTY, which he had helped to found. In 1987 he became chancellor of Oxford Univ. and was created Baron Jenkins of Hillhead.

Jeremiah or **Jeremias,** book of the OLD TESTAMENT, 24th in the Authorized Version, 2d of the Major PROPHETS. It tells of the career of Jeremiah, a prophet who preached (c.628–586 B.C.) in Jerusalem. His message was a summons to moral reform, personal and social, backed by threats of doom. Jeremiah was allowed to stay in Jerusalem after its fall to Babylon (586 B.C.), and continued prophesying in Egypt. The prophecies in the book were arranged by his secretary Baruch, and are not in strict chronological order. They include prophecies against Gentile nations and well-known Messianic passages (in 14, 23, 30, 32).

Jericho, ancient city of Palestine, in the Jordan valley N of the Dead Sea, near modern Ariha, or Jericho, in the Israeli-occupied WEST BANK. According to the Bible, JOSHUA took Jericho from the Canaanites and destroyed it. It later fell to HEROD, the Muslims, and others. Excavations of the original site, begun early in the 20th cent., reveal the world's oldest known settlement, dating perhaps from c.8000 B.C. Nearby, a Hellenistic fortress and Herod's palace have been excavated.

Jeroboam I [jĕrəbō'əm], first king of the northern kingdom of Israel (c.922–901 B.C.). When SOLOMON's son, REHOBOAM, became king, Jeroboam led the secession of the ten tribes who formed the northern kingdom of Israel. He was notorious for fostering idolatry.

Jerome, Saint, c.347–420?, Christian scholar, Father of the Church, Doctor of the Church. Following a vision (375) in Antioch (Turkey), he renounced his pagan learning and fled to the desert, where he undertook scriptural studies. He was ordained (378) and, after serving as secretary to Pope Damasus I, began a new version of the BIBLE at the pope's request. From 386 he lived in Bethlehem, revising his Latin translations of the Bible and translating some portions from the Hebrew. All this became the basis for the Vulgate. He also wrote exegetical works, tracts, and biographies of Christian writers. Feast: Sept. 30.

Jersey: see CHANNEL ISLANDS.

Jersey City, city (1990 pop. 228,537), seat of Hudson co., NE N.J., a port on a peninsula formed by the Hudson and Hackensack rivers and Upper New York Bay, opposite lower Manhattan; settled before 1650; inc. 1836. It is a great center of shipping, commerce, and manufacturing. There are docks, oil refineries, railroad shops, warehouses, and many factories. Located on the site of a 17th-cent. Dutch trading post, it grew with the arrival (1840s) of the railroad. Liberty State Park, on the city's waterfront, is the site of a science museum and provides an excellent view of New York harbor.

Jerubbaal or **Jerubbesheth:** see GIDEON.

Jerusalem, city (1991 est. pop. 535,000, including East Jerusalem), capital and largest city of Israel, on a high ridge W of the Dead Sea and the Jordan R. A holy city for Jews, Christians, and Muslims, Jerusalem is an administrative, cultural, and tourist center. Manufactures include cut and polished diamonds, plastics, and clothing. The eastern part of Jerusalem is the Old City; the New City, to the south and southwest, has been largely developed since the 19th cent. and is the site of the Knesset, Israel's parliament. Archaeology indicates that Jerusalem was already settled in the 4th millennium B.C. DAVID captured it (c.1000 B.C.) from the Jebusites (Canaanites), and after SOLOMON built the Temple there (10th cent. B.C.), Jerusalem became the spiritual and political capital of the Hebrews. The city fell to many conquerors, e.g., Babylonia (586 B.C.) and Rome (63 B.C.), and it was the scene of JESUS' last ministry. The Roman emperor TITUS destroyed the rebuilt (Second) Temple (A.D. 70) to punish rebellious Jews. The Muslims, who believe that MUHAMMAD ascended to heaven from the city, treated it well after they captured it in 637. It was conquered by the Crusaders in 1099 and was recaptured (1187) by the Muslims under SALADIN. Jerusalem was the capital (1922–48) of the British mandate of PALESTINE. During the ARAB-ISRAELI WARS, the city was divided (1949–67); the Old City became part of Jordan and the New City became the capital of Israel. In 1967 Israel captured the Old City and formally annexed it. Israel reaffirmed its annexation of the Old City in 1980, an action not accepted by many nations. The Old City contains many holy places of Christianity, e.g., the Church of the Holy Sepulcher; of Islam, e.g., the Dome of the Rock (688–91); and of Judaism, e.g., the Western (or Wailing) Wall (part of the Second Temple compound).

Jerusalem, Latin kingdom of, feudal state founded by GODFREY OF BOUILLON after the conquest of Jerusalem in the First CRUSADE (1099). Antioch, Edessa, and Tripoli were the kingdom's great fiefs. Jerusalem comprised the counties of Jaffa and Ashqelon, the lordships of Krak, Montreal, and Sidon, and the principality of Galilee. The nominally elective kingship and the law, as in the Assizes of Jerusalem, were ideally feudal. In practice, the great feudal lords rarely supported the king in his wars. The rise of the great military orders, e.g., KNIGHTS TEMPLARS, further weakened royal power. Edessa fell (1144), then Jerusalem (1187), and lastly Akko (1291). Godfrey's brother BALDWIN I was Jerusalem's first king, followed by BALDWIN II, the Angevin kings Fulk, BALDWIN III, AMALRIC I, and BALDWIN IV, and, finally, BALDWIN V (d. 1186). Later kingship was nominal only.

The key to pronunciation appears on page xiii.

Jerusalem artichoke, perennial (*Helianthus tuberosus*) of the COMPOSITE family. A species of SUNFLOWER, it is the only root plant of economic importance to have originated in North America. Its potato-like tubers, most favored as a food in Europe and China, contain inulin, a valuable source of FRUCTOSE for diabetics. The tubers are also used to produce ALCOHOL.

Jerusalem cherry: see NIGHTSHADE.

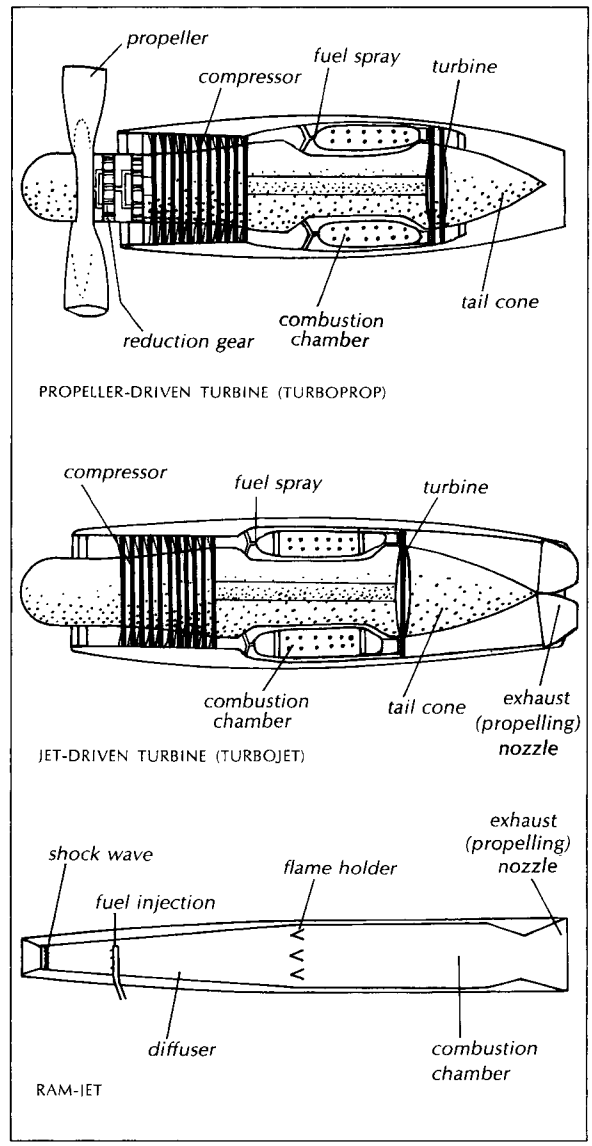
jessamine: see JASMINE.

Jesuit, a member of the Society of Jesus (see JESUS, SOCIETY OF), a Roman Catholic religious order of priests and brothers. Jesuits are noted as educators, theologians, and missionaries.

Jesus or **Jesus Christ,** 1st-cent. Jewish teacher and prophet; in Christian belief, the Son of God, the second person of the TRINITY. The name *Jesus* is Greek for the Hebrew *Joshua,* a name meaning "Savior"; Christ is the Greek word for the Hebrew *Messiah,* meaning "Anointed." Traditional CHRISTIANITY says Jesus was God made man, wholly divine, wholly human; he was born to MARY, a virgin, and died to atone for humanity's sins; his resurrection from the dead provides man's hope for salvation. The principal sources for his life are the four Gospels of MATTHEW, MARK, LUKE, and JOHN. There are also several brief references to Jesus in non-Christian sources, e.g., TACITUS. According to the Gospels, Jesus was born a Jew in Bethlehem to Mary, wife of Joseph, a carpenter of Nazareth. His date of birth is now reckoned have been between 8 B.C. and 4 B.C. When he was about 30, Jesus began a public ministry as a preacher, teacher, and healer. His activity was centered around Galilee, and he gathered a small band of disciples. Jesus preached the coming of the Kingdom of God, often in PARABLES, and called on his hearers to repent. The Gospels also describe miracles he performed. His uncompromising moral demands on his hearers, his repeated attacks on the Pharisees (see JEWS) and scribes, and his sympathy for social outcasts and the oppressed kindled popular enthusiasm. In the third year of his mission, while in Jerusalem for Passover, he was betrayed to the authorities by one of his companions, JUDAS ISCARIOT. After sharing the LAST SUPPER (a Passover seder) with his disciples, he was arrested. The Gospels indicate that he was interrogated by Jewish authorities and handed over to the Romans, who crucified him, perhaps as an agitator. On the third day, his tomb was found empty, and an angel (or a man) announced that he had risen from the dead. According to the Gospels, Jesus later appeared to several of his disciples, and after 40 days he ascended into heaven. In Islam, Jesus is highly regarded as a prophet who restated divine religion, and Hindus acknowledge him as an avatar.

Jesus, Society of, religious order of the Roman Catholic Church founded (1534–39) by St. IGNATIUS OF LOYOLA. Its members, called Jesuits, have a highly disciplined structure and are especially devoted to the pope. They were a major force in the Counter Reformation (see REFORMATION, CATHOLIC) and were leaders in European education. Their missionary work in China, Paraguay, and Canada was remarkable. In 1773, under pressure from the Bourbon monarchies, Pope CLEMENT XIV suppressed the order, but it was restored in 1814. Jesuits have a tradition of learning and science, e.g., St. Robert Bellarmine and TEILHARD DE CHARDIN.

jet propulsion, propulsion of a body, such as an airplane, by a force developed in reaction to the ejection of a high-speed jet of gas. The jet-driven turbine, or turbojet, consists of four basic parts: compressor, combustion chambers, TURBINE, and propelling nozzles. In the combustion chambers the combustion of a fuel, mixed with air coming from the compressor, generates expanding gases, which spin the rotor of the turbine. The axis of the turbine is connected by a shaft directly to the axis of the compressor; thus the turbine drives the compressor. The gas, after passing through the turbine, is exhausted into the atmosphere through a nozzle at high speed. In the fanjet, or turbofan, the turbine powers a set of vanes that force air rearward for both combustion and extra thrust. In the propeller-driven turbine, or turboprop, the turbine not only drives the compressor, but also turns an outside propeller. The ramjet engine relies on its own forward motion to compress the air that enters it. The similar scramjet, designed for hypersonic speeds, uses hydrogen for fuel and could, in theory, propel a craft into orbit. Jet propulsion is also produced by a ROCKET engine.



Jet propulsion engines

jet stream, narrow, swift air currents at altitudes of 7 to 8 mi (11.3 to 12.9 km). The two major jet streams, one in each hemisphere, circle the globe (although discontinuous at some points), varying between 30° and 40° in latitude. They flow in easterly directions in wavelike patterns, with speeds averaging 35 mph (56 km/hr) in summer and 75 mph (120 km/hr) in winter, although speeds as high as 200 mph (320 km/hr) have been recorded. Eastbound aircraft fly with the jet stream (a tail wind) to gain speed and save fuel; westbound aircraft avoid the jet stream (a head wind).

jewelweed, common name for the Balsaminaceae, a family of widely cultivated annual and perennial herbs. The principal genus is *Impatiens,* found in tropical and north temperate regions and so named because its seed capsules burst when touched; certain species are also commonly called touch-me-not. Some species are grown as ornamentals, e.g., the common impatiens (*I. wallerana,* of African origin), various New Guinea species hybrids, and the garden balsam (*I. balsamina*).

Jewett, Sarah Orne, 1849–1909, American author; b. S. Berwick, Me. She is noted for her perceptive, gently humorous studies of small-town New England life. The most memorable of her short-story collections is *The Country of the Pointed Firs* (1896); her best-known novel is *A Country Doctor* (1884).

Jewish holidays. There are seven major holidays in the Jewish

calendar. **Rosh Hashanah,** the New Year, falls on the 1st and 2d days of the Hebrew month Tishri (Sept.–Oct.). It is spent in solemn prayer, and a *shofar,* or ram's horn, is blown in the synagogue. Rosh Hashanah begins the Ten Days of Penitence, which end with **Yom Kippur,** on the 10th of Tishri. This is the Day of Atonement, a day of fasting and praying for forgiveness for the past year's sins. **Sukkoth,** or the Feast of Tabernacles, is the fall harvest festival; it begins on the 15th of Tishri and lasts eight days (seven in Israel). Meals are eaten in a *sukkah,* a booth with a roof of thatch, to recall the shelters of the Jews when they wandered in the wilderness. The day after Sukkoth is Simhath Torah [Heb., = rejoicing of the law], celebrating the annual completion of the reading of the TORAH. **Hanukkah,** or **Chanukah,** recalls the victory of Judas Maccabeus (see MACCABEES) and the rededication of the Temple in Jerusalem. It lasts for eight days, beginning on the 25th of Kislev (Dec.). The Festival of Lights, it is marked by the lighting of candles in a *menorah,* an eight-branched candlestick, to commemorate the miracle of a small vial of oil that burned for eight days. **Purim,** the Feast of Lots, on the 14th of Adar (Feb.–Mar.), celebrates the deliverance of the Persian Jews from a general massacre (according to the Book of ESTHER, which is read in the synagogue on this holiday). The day is one of merrymaking, feasting, and wearing costumes. **Passover,** or **Pesach,** from the 14th to the 22d of Nisan (14th to 21st of Nisan in Israel; Mar.–Apr.), possibly a spring festival originally, recalls the exodus of the Jews, led by MOSES, from Egypt. Throughout the holiday, *matzah* (unleavened bread) is eaten. At the *seder,* a special Passover meal, the *Haggadah,* telling the story of the deliverance from Egypt, is read. **Shavuot,** on the 6th and 7th of Sivan (the 6th of Sivan in Israel; May–June), the Feast of Weeks, is an agricultural festival. The Book of RUTH, which tells of a grain harvest, is read in the synagogue. Traditionally, Shavuot also commemorates the receiving of the TEN COMMANDMENTS.

Jews, accepted designation of believers in JUDAISM; originally represented in the Bible as the descendants of Judah and the dominant group in Judea. In the Bible, Jewish history begins with the patriarchs ABRAHAM, ISAAC, and JACOB in CANAAN. Jewish agricultural tribes lived in Egypt until MOSES led them away from the persecutions of Ramses II and eventually back to Canaan. DAVID, an early Jewish king from the tribe of Judah, defeated the enemies of the Jews, expanded his territory, and brought peace and prosperity to his people. His son SOLOMON built the first Temple and was famous for his wealth and wisdom. After Solomon's death the Jewish kingdom split into two smaller kingdoms, ISRAEL and JUDAH. In 722 B.C. the Assyrians conquered Israel, sending most Israelites into exile (see ISRAEL, TRIBES OF). Judah also was conquered. Under Babylonian rule the Temple was destroyed (586 B.C.), but it was rebuilt by 516 B.C. The MACCABEES (2d and 1st cent. B.C.) restored Jewish independence for a time, but Roman domination followed (see ROME), and Jerusalem was destroyed (A.D. 70). After the fall of the Roman Empire, Jews migrated to Western Europe. From the 9th to 12th cent. their conditions improved, particularly in Spain, but the period from the Crusades to the 18th cent. was one of intermittent persecution in Europe, where the Jews served as a convenient scapegoat in troubled times (see ANTI-SEMITISM; INQUISITION). The rise of capitalism improved their economic condition, and Jews gained political emancipation in the 17th cent. in Holland and later in other countries. With the coming to power of the NAZIS in Germany, in 1933, persecution of the Jews became increasingly widespread and violent (see HOLOCAUST). The establishment of Israel in PALESTINE in 1948 created the Jewish state envisioned by ZIONISM but also led to war with Palestinian Arabs and neighboring Arab countries opposed to the creation of Israel (see ARAB-ISRAELI WARS). The population of Jews worldwide before WORLD WAR II was 16 million; 6 million died in the Holocaust. In 1990 the world Jewish population was estimated at 17.8 million: U.S., 6 million; Israel, 3.5 million; Europe and the former USSR, 3.5 million; and the remainder in Africa and other parts of the Americas and Asia. See also FALASHAS; HASIDIM; SEPHARDIM.

Jezebel: see AHAB.

Jiang Qing or **Chiang Ch'ing** [both: jēäng chĭng], 1913–91, Chinese Communist leader, wife of MAO ZEDONG. She became prominent as a radical during the CULTURAL REVOLUTION (1966–69) and was appointed (1969) to the politburo. After Mao's death, she was one of the GANG OF FOUR arrested (1976) for planning a coup. In 1981 she was convicted and received a death sentence, which was suspended for two years and then commuted to life imprisonment in 1983. After her death the government reported that she had been released from prison for medical reasons in 1984.

Jiang Zemin, 1926–, Chinese government official, general secretary of the Chinese Communist party (1989–) and president of China (1993–). Trained as an engineer, Jiang held positions in industry, becoming electronics industry minister in 1983. In 1985 he became mayor of Shanghai and deputy secretary of the Shanghai Municipal party (secretary after 1988). A member of the Chinese politburo since 1987, he was named to succeed ZHAO ZIYANG as Communist party general secretary after the army crushed (1989) prodemocracy demonstrations in Beijing and other cities. A protégé of DENG XIAOPING (he replaced Deng as head of the powerful government and party military commissions in 1989–90), Jiang is regarded as a pragmatist. He was named president of China in 1993.

Jidda or **Jedda,** city (1988 est. pop. 1,500,000), W Saudi Arabia, on the Red Sea. It is the port of MECCA and annually receives a huge influx of pilgrims; the oil industry is economically important. Present-day Jidda is not more than three centuries old, but Old Jidda, c.12 mi (19 km) south of the modern city, was founded c.646 by the caliph Uthman. Jidda was ruled by the Turks until 1916 and was conquered by IBN SAUD in 1925.

Jiménez, Juan Ramón [hēmā'nāth], 1881–1958, Spanish poet. Early identified with MODERNISMO, as in his *Elejías* (1908) and the distinctive prose poems of *Platero and I* (1914–17), he later adopted a simpler, sparer style suffused with mysticism, as in *Eternidades* (1918) and *Total Season* (1946). Jiménez left Spain during the civil war to live first in the U.S., then in Puerto Rico. He was awarded the 1956 Nobel Prize in literature.

Jiménez de Quesada, Gonzalo [hēmā'nēth dā kāsā'thä] c.1499–1579, Spanish CONQUISTADOR in Colombia. Commissioned to explore the Magdalena R. in search of EL DORADO, he set out in 1536. He defeated the Chibcha and founded (1538) BOGOTÁ as the capital of New Granada (now COLOMBIA). In 1550 he was made marshal of New Granada and councillor of Bogotá for life. His 1569 expedition in search of El Dorado was disastrous.

Jinan or **Tsinan** [both: jē-nän], city (1990 est. pop. 2,320,000), capital of Shandong prov., E China, 3 mi (4.8 km) S of the HUANG HE. Over 100 natural springs are located in Jinan, which is also a regional manufacturing center producing metals, trucks, machinery, chemicals, textiles, and paper.

Jinnah, Muhammad Ali, 1876–1948, founder of PAKISTAN. He at first supported the INDIAN NATIONAL CONGRESS and its advocacy of Hindu-Muslim unity, but after 1934 he led the MUSLIM LEAGUE in its agitation for a separate Muslim nation. He gained power during World War II by supporting British war efforts. In the postwar independence negotiations he was successful in his insistence on the creation of Pakistan (1947) as the homeland for India's Muslims.

jinni [jĭnē'], plural **jinn,** in Arabic and Islamic folklore, spirit or demon with supernatural powers, especially of changing size and shape. Both good and evil, jinn are popular figures in Middle Eastern literature, particularly in the *Thousand and One Nights. Genie* is the English form.

Jívaro, indigenous people of Ecuador (see SOUTH AMERICA, INDIGENOUS PEOPLES OF). They engage in farming, hunting, fishing, and weaving. Each patrilineal family group lives in a large, isolated communal house. The Jívaro, who were once famous for the practice of ritual head shrinking, long resisted conquest.

Joanna (the Mad), 1479–1555, Spanish queen of CASTILE and LEÓN (1504–55). Because of her insanity the kingdoms were ruled by two regents, her husband, PHILIP I (1504–6), and her father, FERDINAND V (1506–16). Her son Charles (later Holy Roman Emperor CHARLES V) was proclaimed joint ruler of Castile in 1516, and Joanna was confined to a castle for life.

Joan of Arc, 1412?–31, French saint and national heroine, called the Maid of Orléans. A farm girl, she began at a young age to hear the "voices" of St. Michael, St. Catherine, and St. Margaret. When she was about 16, the voices exhorted her to bear aid to the DAUPHIN, later CHARLES VII of France, then kept from the throne by the English

in the HUNDRED YEARS WAR. Joan journeyed in male attire to meet the dauphin and conquered his skepticism as to her divine mission. She was furnished with troops, but her leadership provided spirit and morale more than military prowess. In May 1429 she raised the siege of Orléans, and in June she defeated the English at Patay. After considerable persuasion the dauphin agreed to be crowned at Rheims, and Joan was at the pinnacle of her fortunes. In Sept. 1429 she unsuccessfully besieged Paris. The following spring she went to relieve Compiègne but was captured by the Burgundians and sold to the English, who were eager for her death. To escape responsibility, the English turned her over to the ecclesiastical court at Rouen, where she was tried for heresy and witchcraft by French clerics who supported the English. Probably her most serious crime was the claim of direct inspiration from God; in the eyes of the court this refusal to accept the church hierarchy constituted heresy. Only at the end of the lengthy trial did she recant. She was condemned to life imprisonment, but shortly afterward she retracted her abjuration. She was then turned over to the secular court as a relapsed heretic and was burned at the stake (May 30, 1431) in Rouen. The proceedings of the original trial were annulled in 1456. Joan was canonized in 1920. Her career lent itself to numerous legends, and she has been represented in much art and literature. Feast: May 30.

Job [jōb], book of the OLD TESTAMENT, 18th in the Authorized Version. Based on a folktale, it may have been written between 600 and 400 B.C. It discusses, in dialogue or dramatic form, the problem of good and evil in the world. In the prologue (1–2), Satan obtains God's permission to test the "upright man" Job; accordingly, all Job has is destroyed, and he is physically afflicted. The main part of the book (3–31) consists of speeches by Job and three friends who come to "comfort" him. A fourth speaker, Elihu (32–37), who accuses Job of arrogant pride, is followed by God himself (38–42), who rebukes Job and his friends. Job is restored to happiness. The ethical problem of the book is not explicitly resolved; rather, the author intended to criticize a philosophy that associated sin with the sufferer.

Jobs, Steven Paul, 1955–, American businessman; b. San Francisco. Working with Stephen Wozniak, he created the company that produced the Apple computer in 1976. He resigned (1985) and founded the NeXT Computer Company.

Jocasta: see OEDIPUS.

Joel, book of the OLD TESTAMENT, 29th in the Authorized Version, 2d of the Minor PROPHETS. Dated variously from the 9th to the 3d cent. B.C., it predicts a plague of locusts, followed by blessings, this being a Messianic prophecy.

Joffre, Joseph Jacques Césaire [zhô'frə], 1852–1931, marshal of France. French commander in chief from 1911, he deserves partial credit for the victory of the Marne (1914) in WORLD WAR I. After the Germans nearly captured Verdun (1916), Joffre was replaced by Robert Georges Nivelle.

Joffrey, Robert: see ROBERT JOFFREY BALLET.

Johannesburg, largest city (1985 est. pop. 1,609,000) of South Africa, TRANSVAAL prov., on the southern slopes of the WITWATERSRAND. The sprawling city, situated in the nation's major gold-mining region, is a manufacturing and commercial center and a transportation hub. Founded (1886) as a gold-mining settlement, it grew rapidly and had c.100,000 people by 1900.

John, Saint, one of the Twelve APOSTLES, traditional author of the fourth GOSPEL, three EPISTLES, and the REVELATION. He and St. James the Greater were sons of Zebedee; Jesus called them Boanerges, or Sons of Thunder. With PETER, they were closest to Jesus, witnessed the Transfiguration, and were at Gethsemane. Jesus, dying, committed the Virgin Mary to John's care. He may be the same as St. John of Ephesus (d. A.D. c.100). He is variously known as St. John the Evangelist, St. John the Divine, and the Beloved Disciple.

John VIII, d. 882, pope (872–82), a Roman. He strenuously opposed St. Ignatius, patriarch of Constantinople, and when Ignatius died, he recognized PHOTIUS as patriarch, momentarily solving the differences between East and West. John crowned the emperors CHARLES II (the Bald; 875) and CHARLES III (the Fat; 881). He was murdered by relatives.

John XII, c.937–964, pope (955–64), a Roman named Octavian. Elected pope before age 20, John led a notoriously immoral life. He was allied with OTTO I and crowned him (962) the first German emperor, but later sided with Berengar II of Italy. Otto conquered Rome, deposed John, and elected Leo VIII as pope. John retook Rome (964) but was soon murdered.

John XXIII, antipope (1410–15): see COSSA, BALDASSARRE.

John XXIII, 1881–1963, pope (1958–63), an Italian named Angelo Giuseppe Roncalli. He was a papal diplomat in the Balkans and Middle East (1925–44), papal nuncio to France (1944–53), and in 1953 was named cardinal and patriarch of Venice. As pope he showed great concern for church reform, the promotion of peace, world social welfare (expressed in his encyclical *Mater et Magistra*), and for dialogue with other faiths. The convening (1962) of the Second VATICAN COUNCIL was the high point of his reign. His heartiness, his overflowing love of humanity, and his freshness of approach to ecclesiastical affairs made John one of the best-loved popes of modern times.

John, Byzantine emperors. **John I** (Tzimisces), c.925–76 (r.969–76), began his reign by murdering NICEPHORUS II. He extended Byzantine power against the Russians and Arabs. **John II** (Comnenus), 1088–1143 (r.1118–43), succeeded his father, ALEXIUS I. He failed to cancel Venetian trade privileges but won military victories. **John III** (Ducas Vatatzes), d. 1254 (r.1222–54), succeeded his father-in-law, Theodore I. During his reign the empire thrived, and he almost reunited the Byzantine territories. **John IV** (Lascaris), b. c.1250, d. after 1273, succeeded his father, Theodore II, under a regent (1258–61). Michael Palaeologus became co-ruler (1259), had the boy emperor blinded and imprisoned (1261), and succeeded as MICHAEL VIII. **John V** (Palaeologus), 1332–91 (r.1341–76, 1379–91), had his throne usurped during his minority by **John VI** and later by his son Andronicus IV. He lost territory to the Ottoman Turks and recognized their suzerainty (1371). **John VI** (Cantacuzene), c.1292–1383 (r.1341–54), usurped the throne of John V, calling to the Ottoman Turks for aid. He later abdicated. **John VII** (Palaeologus), c.1370–1408, grandson of John V, briefly usurped (1390) the throne of John V with Turkish help and later became co-ruler (1394–1403) with his uncle MANUEL II. **John VIII** (Palaeologus), 1390–1448 (r.1425–48), son of Manuel II, ruled an empire reduced to the city of Constantinople. He sought in vain to secure Western aid against the Turks by agreeing at the Council of Florence (1439) to a union of the Eastern and Western churches. His brother and successor, CONSTANTINE XI, was the last Byzantine emperor.

John, 1167–1216, king of England (1199–1216); youngest son of HENRY II. After his brother RICHARD I left on the Third CRUSADE, John conspired unsuccessfully with PHILIP II of France to supplant Richard as king. On Richard's death, John ascended the throne to the exclusion of his nephew ARTHUR I of Brittany, who, with the aid of Philip II, began a revolt in France. Although Arthur was captured (1202), John lost many of his French possessions to Philip. John's refusal to accept a new archbishop of Canterbury led to his excommunication (1209). To regain papal favor, he surrendered (1213) his kingdom to Pope INNOCENT III, and received it back as a papal fief. In England his abuse of feudal custom in raising money aroused intense opposition from the barons. They rebelled in 1215 and compelled John to set his seal to the MAGNA CARTA. He was succeeded by his son HENRY III.

John, kings of France. **John I** (the Posthumous), 1316, was the posthumous son of LOUIS X and lived only five days. He was succeeded by his uncle PHILIP V. **John II** (the Good), 1319–64 (r.1350–64), was the son of PHILIP VI. His reign was troubled by the HUNDRED YEARS WAR with England and by his quarrels with CHARLES II of Navarre. Captured (1356) by the English at Poitiers, John was released (1360) by the Treaty of Brétigny for a ransom and hostages. In 1364 one of the hostages escaped, and John, to save his honor, returned to England, where he died. His son CHARLES V succeeded him.

John, kings of Hungary. **John I** (John Zápolya), 1487–1540 (r.1526–40), voivode [governor] of Transylvania (1511–26), was the son of Stephen ZÁPOLYA. He succeeded King Louis II, who was killed at the battle of Mohács (1526). The succession was challenged by Ferdinand of Austria (later Holy Roman Emperor FERDINAND I), but John prevailed and was confirmed as king by the Turkish sultan, who exercised real power. His son and successor, **John II** (John Sigismund Zápolya), 1540–71 (r.1540–71), was crowned as an in-

fant. Sultan SULAYMAN I invaded (1541) Hungary and made John prince of TRANSYLVANIA under Turkish suzerainty. Deposed (1551) by Austrian interests, John was restored (1556) by Turkish pressure. During his reign Transylvania adopted (1564) Calvinism as the state religion.

John, kings of POLAND. **John II** (John Casimir), 1609–72 (r.1648–68), succeeded his brother, LADISLAUS IV. During John's reign, known as the Deluge, Poland lost the E Ukraine to Russia, Livonia to Sweden, and East Prussia to Brandenburg. Wars against Cossacks, Turks, Tatars, Russia, Transylvania, and Sweden occupied much of his time. He abdicated in 1668 and retired to a monastery. **John III** (John Sobieski), 1624–96 (r.1674–96), was the champion of Christian Europe against the Turks. In 1683 he relieved the Turkish siege of Vienna, and in 1684 he formed a Holy League with the pope, the Holy Roman emperor, and Venice. He failed to wrest Moldavia and Walachia from Turkey. He was succeeded as king by the elector of Saxony, whose accession as AUGUSTUS II marked the virtual end of Poland's independence.

John, kings of PORTUGAL. **John I** (the Great), 1357?–1433 (r.1385–1433), illegitimate son of PETER I and half-brother of FERDINAND I, led a popular revolt in 1384 against the regency established in the name of Ferdinand's daughter Beatrice and withstood a Castilian siege of Lisbon. Elected king the next year, he defeated the Castilians and assured Portugal's independence. His reign was one of the most glorious in Portuguese history. **John II** (the Perfect), 1455–95 (r.1481–95), was an astute politician and a patron of Renaissance culture. He supported Portuguese exploration and in 1494 agreed to set bounds for Portuguese and Spanish colonization. **John III** (the Fortunate), 1502–57 (r.1521–57), ruled at the height of the Portuguese empire, when its colonization of BRAZIL began and its Asian territories were extended. But the decline of agriculture and population portended Portugal's stagnation following his reign. **John IV,** 1604–56 (r.1640–56), became king of independent Portugal upon the revolt from Spain (1640). He consolidated his position against Spain by concluding alliances with France and other nations. **John V** (the Magnanimous), 1689–1750 (r.1706–50), maintained Portugal's alliance with England and kept the peace. Gold from Brazil permitted him to become a great patron of arts and letters and he beautified Lisbon. Wealth also made him independent of the CORTES, and he ruled with increasing absolutism. **John VI,** 1769–1826 (r.1816–26), was regent for his mother, Maria I, who was insane. He lost a war to France (1801) and eventually fled (1807) to Brazil. He returned (1821) after a revolution and the proclamation of a liberal constitution, but he did everything he could to modify it. In 1825 he recognized Brazil's independence.

John, Elton (Hercules), 1947–, English popular singer, pianist, and composer; b. Reginald Kenneth Dwight. By the mid-1970s he had become famous by presenting his own and other composers' songs in spectacularly staged productions. His songs include "Benny and the Jets" and "Rocket Man."

John, three epistles of the NEW TESTAMENT, 23d, 24th, and 25th books in the usual order, ascribed to St. JOHN, the disciple. First John was clearly written by the author of the GOSPEL. Second and Third John are generally agreed to be by the same person. First John is a homily on the blending of mystical and practical religion. Second John, the Bible's shortest (13 verses) book, warns against false teachers who deny JESUS' historicity. Third John protests the failure of a church leader to receive teaching missionaries.

John, Gospel according to Saint, fourth book of the NEW TESTAMENT, clearly set off from the other three Synoptic GOSPELS, although John may have used both MARK and LUKE as sources. The evangelist seems to have two aims—to show that JESUS is the vital force in the world, now and forever, and that he lived on earth to reveal himself in the flesh. In a philosophical prologue, Jesus is identified with the Word (Logos). The book recounts selected incidents from Jesus' ministry and (13–21) the Passion and RESURRECTION. The influence on CHRISTIANITY of the Gospel of John, particularly with reference to its enunciation of Jesus' position in the TRINITY, has been enormous.

John Birch Society, right-wing, anti-Communist organization in the U.S. It was founded (1958) by Robert Welch. Among its objectives are the repeal of social security legislation and of the graduated income tax, and the impeachment of certain government officials.

John Bull: see ARBUTHNOT, JOHN.

John Chrysostom, Saint [krĭs'əstəm], c.347–407, Doctor of the Church, greatest of the Greek Fathers. Made (398) patriarch of CONSTANTINOPLE, he came to be admired for his eloquence, ascetic life, and charity. After attempting church reform and denouncing the ways of the imperial court, John was illegally deposed (403) by the Empress Eudoxia and Bishop Theophilus. Recalled briefly, he was again sent into exile, where he died. His writings, notable for their purity of Greek style, greatly influenced Christian thought. Feasts: Nov. 13 in the East; Sept. 13 in the West.

John Damascene, Saint: see JOHN OF DAMASCUS, SAINT.

John Henry, legendary African-American famous for his strength, celebrated in ballads and tales. In one version of the story he outworks a steam drill but dies from the strain. The legend may have some historical basis.

John Maurice of Nassau, 1604–79, Dutch general and colonial administrator; grandnephew of WILLIAM THE SILENT. As governor-general of BRAZIL (1636–43) for the DUTCH WEST INDIA COMPANY he took NE Brazil from Portugal; rebuilt RECIFE; and, to ensure the supply of slave labor, seized Portuguese strongholds on the Guinea coast. He later held commands in the THIRTY YEARS' WAR and the DUTCH WARS.

Johnny Appleseed: see CHAPMAN, JOHN.

John of Austria, 1545–78, Spanish admiral and general, illegitimate son of Holy Roman Emperor CHARLES V. In 1571 he won the famous naval victory of LEPANTO over the Turks. Appointed governor-general of the NETHERLANDS (1576–78), he tried to stamp out rebellion.

John of Austria, 1629–79, Spanish general, illegitimate son of Philip IV. He was viceroy of Sicily (1648–51) and fought rebels (1656–58) in the Spanish NETHERLANDS, where he lost the battle of the Dunes (1658). His campaign (1661–64) to reconquer Portugal also failed. In 1677 he overthrew the Spanish regency of the queen-mother Mariana but ruled only briefly.

John of Damascus, Saint, or **Saint John Damascene,** c.675–c.749, Syrian theologian, Father of the Church, Doctor of the Church. He wrote against ICONOCLASM and defended orthodoxy. *The Fountain of Wisdom* is his theological masterpiece. Feast: Dec. 4.

John of Gaunt, 1340–99, duke of Lancaster, fourth son of EDWARD III of England. He acquired the Lancaster holdings (see LANCASTER, HOUSE OF) through marriage and became one of the most influential nobles in England. He served under his brother EDWARD THE BLACK PRINCE in the HUNDRED YEARS WAR and by his second marriage (1371) gained a claim on the throne of Castile. For a short time John, in effect, ruled England for his aging father; he remained powerful under his nephew RICHARD II. From 1386 to 1388 he fought in vain to make good his Castilian claims. Returning (1389) to England, John helped to restore peace between Richard II and the barons. In 1396 he married Catherine Swynford; they were ancestors of the TUDORS. John was the patron of CHAUCER. His eldest son was HENRY IV.

John of Lancaster, duke of Bedford: see BEDFORD, JOHN OF LANCASTER, DUKE OF.

John of Leiden, c.1509–1536, Dutch Anabaptist leader. In 1534, following a revolt in Münster by ANABAPTISTS, he set up a theocracy and led, as "king," a communistic and polygamous state until expelled (1535) by the prince bishop. He and the other leaders were tortured and executed.

John of Luxemburg, 1296–1346, king of Bohemia (1310–46), son of Holy Roman Emperor HENRY VII. He was elected king after the death of his father-in-law, Wenceslaus II. Although blind, he fought on the French side at Crécy in the HUNDRED YEARS WAR, where he was killed.

John of the Cross, Saint, 1542–91, Spanish mystic and poet, Doctor of the Church. He was a founder of the Discalced CARMELITES and a friend of St. THERESA of Ávila. His reforming zeal antagonized the hierarchy, and he was imprisoned in 1577. In his cell he wrote *Spiritual Canticle* and began *Songs of the Soul,* which are among the finest creations of Spanish literature. After escaping (1578), he went to Andalusia, where he wrote masterly prose treatises on mystical theology, notably *The Dark Night of the Soul* and *The Ascent of Mount Carmel.* Feast: Dec. 14.

John Paul II, 1920–, pope (1978–), a Pole named Karol Wojtyła. Archbishop of Kraków, he was elected pope in Oct. 1978. He was the first non-Italian pope in 450 years and the first Polish pope. Conservative on doctrine, John Paul traveled widely early in his reign, e.g., to Poland and the U.S. in 1979. Following a trip to E Asia (1981), he was shot at the Vatican on May 13, 1981, by a Turkish terrorist. John Paul has continued to travel and has worked for ecumenism, e.g., his 1982 trip to Britain, where he held an ecumenical service in Canterbury Cathedral. He has also been an outspoken commentator on world events, opposing the imposition (1981) of martial law in Poland and criticizing the inadequacies and injustices of both capitalism and communism in two encyclicals (1981, 1991). His predecessor, **John Paul I,** 1912–78, pope (1978), an Italian named Albino Luciani who had been patriarch of Venice, was elected pope in Aug. 1978 and reigned for only 34 days before his death.

Johns, Jasper, 1930–, American artist; b. Augusta, Ga. Influenced by Marcel DUCHAMP, Johns sought to transform common objects into art by placing them in an art context. His paintings of flags and targets (1954–59) heralded POP ART. His later works, such as *Seasons* (1987), have become increasingly self-referential, using recurrent motifs as symbols to engage the viewer.

Jasper Johns

Johns Hopkins University, The, mainly at Baltimore, Md.; incorporated (with Johns Hopkins Hospital) 1867; opened 1876. Patterned after a European university, it emphasized graduate research over collegiate instruction, becoming a model for programs at other institutions. The hospital became the nucleus of Johns Hopkins's famous medical school (est. 1893). It has a noted school of advanced international studies (Washington, D.C.).

Johnson, Andrew, 1808–75, 17th president of the U.S. (1865–69); b. Raleigh, N.C. A self-educated tailor, he rose in Tennessee politics to become congressman (1843–53), governor (1853–57), and U.S. senator (1857–62). In Washington, Johnson voted with other Southern legislators on questions of slavery, but after Tennessee seceded (June 1861) he remained in the Senate and vigorously supported Pres. LINCOLN, who appointed him (1862) military governor of Tennessee. As a Southerner and a war Democrat, he was an ideal choice as a running mate to Lincoln on the successful Union ticket in 1864, and he succeeded to the presidency after Lincoln's assassination. As president he was denounced by the radical Republicans for his RECONSTRUCTION program, and in 1866 his political power began to decline sharply. When Johnson tried to force Secy. of War Edwin M. Stanton—whom he rightly suspected of conspiring with congressional leaders—out of office, the radical Republicans sought to remove the president. On Feb. 24, 1868, the House passed a resolution of IMPEACHMENT against him. The most important of the charges, which were purely political, was that he had violated the Tenure of Office Act in the Stanton affair. On Mar. 5 the Senate was organized as a court to hear the charges. The president himself did not appear. In spite of tremendous pressure brought to bear on several senators, the Senate failed to convict by one vote. Johnson's administration had some accomplishments, notably the purchase (1867) of Alaska. After his presidency he was returned (1875) to the Senate from Tennessee, but died shortly afterward.

Johnson, Earvin "Magic," 1959–, African-American basketball player; b. Lansing, Mich. He joined the Los Angeles Lakers of the National Basketball Association (NBA) in 1979 and became one of the best and best-liked players in the NBA. In his 12 years with the Lakers, he won three most-valuable-player awards (1987, 1989–90), and the team won five NBA championships (1980, 1982, 1985, 1987–88) in eight appearances in the finals. He retired (1991) when he learned he was infected with the AIDS virus, but he played briefly during the 1992 pre-season.

Johnson, Eyvind, 1900–1976, Swedish novelist and short-story writer. He is probably best known for his cycle of four autobiographical novels, *The Novel about Olof* (1934–37), which is noted for its psychological penetration. Other novels include *Return to Ithaca* (1946) and *Steps into Silence* (1973). He shared the 1974 Nobel Prize in literature with his countryman Harry MARTINSON.

Johnson, James Weldon, 1871–1938, African-American author; b. Jacksonville, Fla. A lawyer, he was a founder and secretary (1916–30) of the NAACP. He was American consul (1906–12), first in Venezuela and then in Nicaragua. His books include the novel *Autobiography of an Ex-Coloured Man* (1912), such poetry as *God's Trombones* (1927), and an autobiography (1933).

Johnson, Lyndon Baines, 1908–73, 36th president of the U.S. (1963–69); b. near Stonewall, Tex. As a Democratic congressman from Texas (1937–49) he supported Pres. F.D. ROOSEVELT's New Deal. He was elected senator in 1948 and became majority leader following the 1954 elections. After losing the 1960 presidential nomination to J.F. KENNEDY, Johnson agreed to become Kennedy's running mate. After Kennedy's assassination (Nov. 22, 1963) Johnson was immediately sworn in as president. Announcing that he would carry out the late president's programs, he skillfully prodded Congress into enacting (1964) an $11 billion tax cut and a sweeping Civil Rights Act. Elected (1964) to a full term, he launched a program of social and economic welfare programs to create what he termed the Great Society. It included Medicare and Medicaid (see HEALTH INSURANCE), federal aid to education, increased antipoverty programs (including HEAD START), and the 1965 Voting Rights Act. The Dept. of TRANSPORTATION and the Dept. of HOUSING AND URBAN DEVELOPMENT were created. Johnson's domestic achievements, however, were soon obscured by foreign affairs. When North Vietnam allegedly attacked (Aug. 1964) U.S. destroyers, Congress passed the TONKIN GULF RESOLUTION, which gave the president authority to take any action necessary to protect U.S. troops. Johnson began (Feb. 1965) the bombing of North Vietnam and increased U.S. forces in South Vietnam to nearly 550,000 (1969). The VIETNAM WAR aroused widespread opposition in Congress and among the public, and rioting (1968) in the African-American ghettos of U.S. cities further marred his presidency. In 1965 Johnson sent U.S. troops into the DOMINICAN REPUBLIC. He announced (Mar. 1968) that he would not run for reelection and

retired to his Texas ranch. In 1934 he had married Claudia Alta Taylor (nicknamed Lady Bird), b. 1912; they had two children, Lynda Bird (now Mrs. Charles S. Robb) and Luci Baines.

Johnson, Philip Courtelyou, 1906–, American architect and historian; b. Cleveland. He wrote *The International Style* (1932) with Henry-Russell Hitchcock and became a major advocate of the new architecture. His glass house in New Canaan, Conn. (1949), reveals the influence of MIĒS VAN DER ROHE, with whom he collaborated on the Seagram Building (1958), N.Y.C. He designed the New York State Theater at Lincoln Center (1964) and the American Telephone and Telegraph Headquarters Building (1978; now the Sony Building), both in New York City.

Johnson, Samuel, 1709–84, English author. The leading literary scholar and critic of his day, he helped to define the great period of English literature known as the Augustan Age. He is as celebrated for his brilliant conversation as for his writing. He began writing for London magazines around 1737, on literary and political subjects. The anonymously published poem *London* (1738) won the praise of POPE, and his reputation was further enhanced by his poetic satire *The Vanity of Human Wishes* (1749) and his moral essays in *The Rambler* (1750–52). Johnson's place was permanently assured by his great *Dictionary of the English Language* (1755), the first comprehensive English lexicon. *Rasselas,* a moral romance, appeared in 1759, and the *Idler* essays between 1758 and 1760. In 1763 Johnson met James BOSWELL, and his life thereafter is documented in Boswell's great biography (1791). With Joshua REYNOLDS he founded (1764) "The Club"; this elite gathering, with such members as GOLDSMITH, BURKE, and GARRICK, was dominated by Johnson, whose wit and aphorisms are still remembered. In 1765 he published his edition of SHAKESPEARE, the model for later editions. His last works include an account (1775) of a trip with Boswell to the Hebrides and the perceptive 10-volume *Lives of the Poets* (1779–81). He was England's first complete man of letters, and his influence was incalculable.

Johnson, Uwe [yŏn'zŏn], 1934–84, German novelist. He grew up in East Germany but emigrated (1959) to West Berlin. Using an experimental prose style that presents several viewpoints of the same event, his works examine the problems of humanity in a divided Germany. Among his best-known novels are *Speculations About Jacob* (1959), *Two Views* (1965), and the novel series *Anniversaries* (1970–74).

Johnson, Virginia E.: see MASTERS AND JOHNSON.

Johnson, Walter (Perry), 1887–1946, American baseball player; b. Humboldt, Kans. A right-handed pitcher, he spent his entire playing career (1907–27) with the Washington Senators. The "Big Train" won 416 games (second highest total on record) and established several pitching marks, including most shutouts (113), most strike-outs (3,508), and most consecutive scoreless innings (56). He won 20 or more games in 12 seasons (32 in 1912 and 36 in 1913). Johnson later managed the Senators (1929–32) and the Cleveland Indians (1933–35).

Johnston, Albert Sidney, 1803–62, Confederate general in the U.S. CIVIL WAR; b. Washington, Ky. Confederate commander in the West, he attacked (Apr. 6, 1862) Gen. GRANT at SHILOH. Johnston was killed in the battle, and the South lost one of its ablest generals.

Johnston, Joseph Eggleston, 1807–91, Confederate general in the U.S. CIVIL WAR; b. Prince Edward co., Va. He took part in the first battle of BULL RUN and was commander in the PENINSULAR CAMPAIGN until May 1862. Given command in the West, he was unable to stem the Union success in the VICKSBURG CAMPAIGN and the ATLANTA CAMPAIGN, and he was relieved of command (July 1864). Later reinstated, he surrendered (Apr. 26, 1865) to Gen. SHERMAN.

Johnstown, city (1990 pop. 28,134), SW Pa., on the Conemaugh R.; settled 1770, inc. as a city 1936. Located in a beautiful mountain region, its industries produce coal, metal products, and chemicals. Major U.S. steel producers dominated the city until the 1980s; the city grew with the industry after the Civil War. Johnstown is remembered for the disastrous flood of May 31, 1889, when about 2,200 died after a dam break.

John the Baptist, Saint, d. A.D. c.28–30, Jewish prophet, the forerunner of JESUS; son of Zacharias and Elizabeth, a kinswoman of the Virgin MARY. He preached in the Jordan valley, baptizing many, including Jesus, whom he recognized as the Son of God. Herodias, wife of HEROD, and her daughter (traditionally called SALOME) had him beheaded.

John the Fearless, 1371–1419, duke of Burgundy (1404–19), son of PHILIP THE BOLD. Continuing his father's feud, he had Louis, duc d'Orléans, assassinated (1407) and won control of the French government. In 1411 civil war broke out between the Orléanists, or Armagnacs, and the Burgundians. Forced to flee Paris (1413), John did not aid the now Armagnac-controlled government against HENRY V of England and in 1418 took advantage of French defeats to retake Paris and seize the king, CHARLES VI. John was assassinated at a meeting with the DAUPHIN (later CHARLES VII) and was succeeded by his son PHILIP THE GOOD.

joint, in anatomy, juncture between two bones. Some joints are immovable, e.g., those connecting bones of the skull. Hinge joints provide a forward and backward motion, as at the elbow and knee. Pivot joints permit rotary movement, as in the turning of the head from side to side. Ball-and-socket joints, like those at the hip and shoulder, allow the greatest range of movement. Ease of movement is aided by elastic cartilage, lubricating synovial fluid, and, in some joints, a cushioning, fluid-filled sac (bursa) that reduces friction. Joints are subject to injury and to diseases such as ARTHRITIS. The use of artificial joints is now common, particularly in hip-joint and knee-joint replacement.

Joint Chiefs of Staff: see under DEFENSE, UNITED STATES DEPARTMENT OF.

Joinville, Jean, sire de [zhwăNvēl'], 1224?–1317?, French chronicler. His memoir of LOUIS IX (whom he served as a close adviser) is an invaluable record of the king, feudal France, and the Seventh CRUSADE, written in a simple, delightful style, with a sharp eye for graphic detail.

Joliet, Louis: see JOLLIET, LOUIS.

Joliot-Curie, Frédéric and **Irène:** see CURIE, family.

Jolley, Elizabeth, 1923–, Australian writer; b. England. A nurse during World War II, she later emigrated to Western Australia. Although writing since childhood, her first book, *Five Acre Virgin and Other Stories,* did not appear until 1976. Her novels such as *Miss Peabody's Inheritance* (1983), *Foxybaby* (1986), and *The Sugar Mother* (1988), are studies of comic eccentricity written in a traditional style but animated by feminist concerns.

Jolliet or **Joliet, Louis** [both: jō'lēĕt"], 1645–1700, French explorer; b. Quebec prov., Canada. He discovered, with Jacques MARQUETTE, the upper MISSISSIPPI R. in 1673.

Jolson, Al, c.1886–1950, American entertainer; b. Russia as Asa Yoelson. He made famous such songs as "Swanee," "Sonny-Boy," and "Mammy," the last sung in *The Jazz Singer* (1927), the first major film with sound.

Jonah, Jonas, or **Jona,** book of the OLD TESTAMENT, 32d in the Authorized Version, 5th of the Minor Prophets. It tells of a Hebrew PROPHET in the reign of Jeroboam II (c.793–753 B.C.) sent to reform NINEVEH. To avoid the command, he sails for Tarshish, but his disobedience brings a storm; the crew throw him overboard. Swallowed by a "great fish," he is cast up after three days and fulfills his mission. Jonah's escape is seen as foreshadowing Jesus' RESURRECTION.

Jones, Bobby (Robert Tyre Jones, Jr.), 1902–71, American golfer; b. Atlanta. A lawyer, he played golf as an amateur and won the U.S. Open (1923, 1926, 1929–30), the U.S. Amateur (1924–25, 1927–28, 1930), and the British Open (1926–27, 1930). The first golfer to win the U.S. Open and British Open in the same year (1926), he was the only player ever to score what was then the grand slam of golf, taking the open and amateur titles in both the U.S. and Britain in 1930. Still an amateur, he retired that year with 13 major championships.

Jones, Casey (John Luther Jones), 1864–1900, American locomotive engineer celebrated in song; b. Fulton co., Ky. He received his nickname from Cayce, Ky., where he went to work. Driving the *Cannon Ball* express from Memphis, Tenn., to Canton, Miss., he applied the brakes in time to save the lives of the passengers in a wreck at Vaughan, Miss., but he was killed.

Jones, Sir Edward Burne: see BURNE-JONES.

Jones, Ernest, 1879–1958, English psychoanalyst; b. Wales. Founding the London Clinic for Psycho-Analysis in 1925, he was instrumental in introducing the study of PSYCHOANALYSIS into England and

the U.S. He is considered an authoritative biographer of Sigmund FREUD.

Jones, Inigo, 1573–1652, one of England's first great architects. He studied Renaissance and Palladian buildings in Europe. After designing settings for court masques, he became in 1615 the king's surveyor of works and began (1616) the Queen's House, Greenwich, the first English design to embody Palladian principles (see PALLADIO, ANDREA). He then built (1619–22) the royal banquet hall, Whitehall. In many houses in London and in the country he broke from the prevailing JACOBEAN STYLE, marking a starting point for the Renaissance and Georgian periods in England.

Jones, James, 1921–77, American novelist; b. Robinson, Ill. Written in the tradition of NATURALISM, his powerful novels include *From Here to Eternity* (1951), his best-known work; *Some Came Running* (1957); and *The Thin Red Line* (1962).

Jones, James Earl, 1931–, African-American actor; b. Tate co., Miss. He gained Broadway stardom with his powerful portrayal of a prizefighter in *The Great White Hope* (1968) and excelled in *Othello* (1963, 1982), Athol FUGARD's *A Lesson from Aloes* (1980), and August WILSON's *Fences* (1987). He has also appeared in films and on television.

Jones, John Paul, 1747–92, American naval hero; b. Scotland. In the AMERICAN REVOLUTION he raided British shipping in the waters off Great Britain. He captured the British warship *Drake* (1778) and, while commanding the *Bon Homme Richard,* the *Serapis* (1779). When he was asked to surrender his badly damaged ship in the latter battle, Jones defiantly replied, "Sir, I have not yet begun to fight."

Jones, LeRoi: see BARAKA, AMIRI.

jonquil: see NARCISSUS.

Jonson, Ben, 1572–1637, English dramatist and poet, known for his linguistic brilliance. An actor, he produced his first important play, *Every Man in His Humour,* in 1598 and *Every Man out of His Humour* in 1599. *The Poetaster* (1601) satirized fellow playwrights. After collaborating with CHAPMAN and MARSTON on *Eastward Ho!* (1604), he entered his great period, marked by the comic masterpieces *Volpone* (1606), *Epicoene* (1609), *The Alchemist* (1610), and *Bartholomew Fair* (1614)—all characterized by biting satire and intriguing plots. A moralist, he sought to teach improvement through exaggerating the foibles and passions (humors) of his characters. Jonson became a favorite of JAMES I and wrote court MASQUES, as well as two Roman tragedies, *Sejanus* (1603) and *Catiline* (1611). After *The Devil Is an Ass* (1616), his dramatic career declined. Jonson's nondramatic poetry includes the collections *Epigrams* (1616); *The Forrest* (1616), notable for the songs "Drink to me only with thine eyes" and "Come, my Celia, let us prove"; and *Underwoods* (1640). His many followers are known as the "sons of Ben."

Joos of Ghent: see JUSTUS OF GHENT.

Jooss, Kurt [yus], 1901–79, German dancer, producer, and choreographer. His most famous ballet was the expressionistic, antiwar *Green Table* (1932). He was in England during the Hitler era and returned to Germany after World War II. He has influenced the development of psychological themes in ballet.

Joplin, Scott, 1868–1917, African-American ragtime pianist and composer; b. Texarkana, Tex. The best-known ragtime composer (see JAZZ), he wrote such works as "Maple Leaf Rag" (1899) and the ragtime opera *Treemonisha* (1911).

Jordaens, Jacob [yôr'däns], 1593–1678, Flemish baroque painter; b. Belgium. His works include portraits and religious and allegorical paintings. The influence of CARAVAGGIO is evident in his early work, e.g., *The Artist's Family* (Hermitage, Saint Petersburg). His later works show increased grandeur and richness, e.g., *Triumph of Bacchus* (Kassel, Germany). In his last years he stressed the classical element in BAROQUE art, as seen in the rigidly composed *Christ and the Doctors* (Mainz, Germany).

Jordan, Barbara Charline, 1936–, African-American lawyer, public official, and educator; b. Houston. As a Democratic member of the U.S. House of Representatives (1973–79), she achieved national renown as a member of the House Judiciary Committee when it investigated (1974) the WATERGATE AFFAIR. In 1979 she became professor of public affairs at the Univ. of Texas.

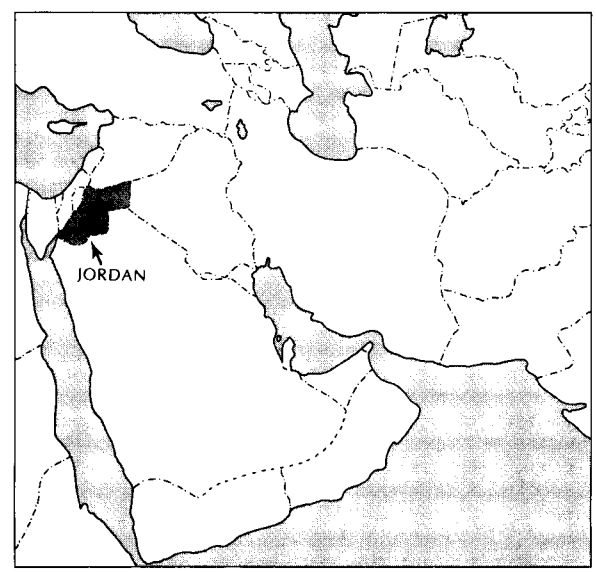
Jordan, David Starr, 1851–1917, American biologist and educator; b. near Gainesville, N.Y. He was president of Indiana Univ. (1885–91) and the first president of Stanford Univ. (1891–1913). A peace advocate, he opposed U.S. entry into World War I. He was director of the World Peace Foundation (1910–14) and president of the World Peace Congress (1915). His writings include *Imperial Democracy.*

Jordan, Michael (Jeffrey), 1963–, African-American basketball player; b. Brooklyn, N.Y. Joining the Chicago Bulls of the National Basketball Association (NBA) in 1984, he became the premier guard of the late 1980s and early 1990s. Jordan was the NBA's leading scorer for seven straight years (1987–93) and holds the career record for scoring average (32.3 points per game). He was NBA's most valuable player for three years (1988, 1991–92) and led the Bulls to three NBA championships (1991–93). He retired in 1993.

Jordan, Vernon Eulion, Jr., 1935–, African-American civil-rights leader; b. Atlanta. A graduate of Howard Univ. Law School, he was executive director (1970–71) of the United Negro College Fund and president (1970–81) of the National Urban League. Jordan was seriously wounded (1980) by a sniper in Fort Wayne, Ind. In 1981 he joined a Washington law firm.

Jordan, officially Hashemite Kingdom of Jordan, kingdom (1992 est. pop. 3,557,000), 37,737 sq mi (97,740 sq km), SW Asia, bordered by Israel (W), Syria (N), Iraq (NE), and Saudi Arabia (E, S). AMMAN is the capital and largest city. Pre-1967 Jordan fell into three main geographical regions: East Jordan, which encompasses about 92% of the country's land area; the Jordanian Highlands (highest point, 5,755 ft/1,754 m); and West Jordan (the WEST BANK), part of historic Palestine. In the Arab-Israeli War of 1967, Israel captured and occupied the West Bank, and Jordan has since renounced its claim to the area (see below). Jordan's economy is largely agricultural, although less than 5% of the land is arable. The principal crops are vegetables, wheat, and citrus fruits; olives are grown for oil. Manufactures are limited to such items as foodstuffs, clothing, and cement, and there is some oil refining. Phosphate rock and potash are the only minerals produced in quantity. The annual cost of Jordan's imports far exceeds its earnings from exports. Aqaba, on the Gulf of AQABA, is the only seaport. The inhabitants of Jordan are mostly of Arab descent (about two thirds are of Palestinian descent), and Arabic is the official language (English is also spoken among the upper and middle classes). About 95% of the people are Sunni Muslims. Under the 1952 constitution, the king is the most powerful figure in the country; he appoints a cabinet (headed by a prime minister). The bicameral parliament was dissolved in 1974 and not reconvened until 1984; the 1989 elections were first in 22 years. Political parties were again permitted to field candidates in 1993.

History. This section deals primarily with the region east of the



Jordan River; for the history of the area to the west, see PALESTINE. The region of present-day Jordan was conquered successively by the Seleucids (4th cent. B.C.), Romans (mid-1st cent. A.D.), and Muslim Arabs (7th. cent.). After the Crusaders captured (1099) Jerusalem, it became part of the Latin Kingdom of Jerusalem. The Ottoman Turks gained control in 1516, and what is now Jordan remained in the OTTOMAN EMPIRE until World War I. In 1920 Transjordan (as it was then known) was made part of the British mandate of Palestine. The country gained independence in 1946, and the name was changed (1949) to Jordan, reflecting its acquisition of land W of the Jordan R. during the Arab-Israeli War of 1948. ABDULLAH ibn Husain, a member of the Hashemite dynasty that headed Jordan since 1921, was assassinated in 1951. His grandson, HUSSEIN I, became king the following year. Jordanian forces were routed by Israel in the 1967 war (see ARAB-ISRAELI WARS), and Jordan lost the West Bank. Growing hostility between Hussein and the Palestinian guerrilla organizations operating in Jordan reached a climax during a brief civil war in 1970, and the guerrilla bases were destroyed the following year. Under pressure from Arab states, Hussein renounced (1974; reaffirmed 1988) Jordanian claims to the West Bank in order to allow the PALESTINE LIBERATION ORGANIZATION eventually to organize a state in this territory. Jordan also joined the most other Arab countries in opposing the 1979 peace treaty between Egypt and Israel. Jordan was officially neutral in the PERSIAN GULF WAR, but many Jordanians supported Iraq. Since 1991 Jordan has been involved in peace talks with Israel.

Jordan, river, Palestine, c.200 mi (320 km) long. It is formed by headwaters converging in N Israel, flows south between Israel and the GOLAN HEIGHTS and through the Sea of GALILEE (Lake Tiberias) into a below-sea-level valley called the Ghor (a continuation in Asia of Africa's GREAT RIFT VALLEY), where it forms the boundary between Israel and the WEST BANK (W) and the country of Jordan (E), and empties into the DEAD SEA. The river becomes increasingly saline to the south and is not navigable. Much of its water and that of the Yarmuk, its chief tributary, is diverted for irrigation. It is often mentioned in the Bible as the scene of Jesus' baptism.

Josaphat, in the Bible: see JEHOSHAPHAT.

Joseph, Saint, husband of the Virgin, a carpenter, a descendant of the house of DAVID. He is highly honored by Orthodox and Roman Catholics as the chaste spouse of the Virgin MARY and the foster father of JESUS. Feast: Mar. 19.

Joseph, rulers of the HOLY ROMAN EMPIRE. **Joseph I,** 1678–1711, emperor (1705–11), king of Hungary (1687–1711) and of Bohemia (1687–1711), became emperor during the War of the SPANISH SUCCESSION and died before it ended. He vigorously supported the Spanish claims of his brother, who succeeded him as Emperor CHARLES VI. **Joseph II,** 1741–90, emperor (1765–90), king of Bohemia and Hungary (1780–90), was the son of MARIA THERESA and Emperor Francis I, whom he succeeded. Until his mother's death in 1780, he exerted little authority, but once in power he instituted far-reaching social, economic, and religious reforms, including the law (1781) abolishing serfdom. His aim was to abolish hereditary and ecclesiastical privileges by creating a centralized and unified state administered by a civil service based on merit. He liberalized the legal codes, reformed tax policies, and founded hospitals, orphanages, and insane asylums. He was idolized by the common people but opposed by the nobles and the clergy, and most of his reforms did not outlive him. Nevertheless, he left a freer state than the one he had found on his accession. His foreign policy, focused on attempts to annex Bavaria and his military adventures in Turkey, was generally not successful.

Joseph, kings of Bohemia and Hungary: see JOSEPH, rulers of the Holy Roman Empire.

Joseph, in the BIBLE, the favored son of JACOB and RACHEL. He was sold into slavery by his brothers, who were jealous of their father's favoritsm toward him. Taken to Egypt, Joseph rose to authority in the house of Potiphar, only to be imprisoned on the false accusations of Potiphar's wife. Released after interpreting Pharaoh's dream, Joseph rose in Pharaoh's favor. He was reunited with his family when, as governor of Egypt, he helped them during a famine.

Joseph (Chief Joseph), c.1840–1904, chief of a band of NEZ PERCÉ. Joseph was among those chiefs who peacefully resisted a land cession treaty fraudulently obtained (1863) by the U.S. When fighting broke out (1877), he and several hundred Nez Percé undertook a heroic 1,000-mi (1,600-km) retreat to Canada but were forced to surrender just 30 mi (48 km) from their goal. He spent the rest of his life on the Colville reservation, Wash.

Josephine, 1763–1814, empress of the French (1804–9) as the consort of NAPOLEON I. Born Marie Josèphe Rose Tascher de La Pagerie, in Martinique, she married (1779) Alexandre de BEAUHARNAIS, who was executed (1794) in the FRENCH REVOLUTION. In 1796 she married Napoleon, but he had their childless marriage annulled (1809) so that he might marry the Austrian princess MARIE LOUISE. Josephine thereafter lived in retirement.

Josephus, Flavius [jōsē'fəs], A.D. 37–A.D. 95?, Jewish historian. A soldier, he took part in the war between the Romans and Jews and won the favor of the Roman general VESPASIAN. His works include *The Jewish War, Antiquities of the Jews,* and *Against Apion* (a defense of the Jews).

Joshua or **Josue,** book of the OLD TESTAMENT, sixth in the Authorized Version, a historical sequel to DEUTERONOMY, telling of the occupation of Palestine by the Hebrews. The chief figure is Joshua, MOSES' successor as leader of Israel. The book may be divided into three sections: the conquest of the Promised Land (1–12), the allotment of the land by tribes (13–22), and the farewell sermon and death of Joshua (23–24). The fall of Jericho (6) is a famous passage.

Josquin Desprez or **Des Prés** [both: dāprā'], c.1440–1521, Flemish composer, regarded as the greatest of his age. His earlier works were contrapuntal (see COUNTERPOINT); his later, more chordal. He was noted for his chansons and MOTETS.

Joule, James Prescott, 1818–89, English physicist. He established the mechanical theory of HEAT and was the first to determine the relationship between heat energy and mechanical energy (the mechanical equivalent of heat). Joule discovered the first law of THERMODYNAMICS, which is a form of the law of conservation of ENERGY. The mechanical unit of WORK, the joule, is named for him.

joule: see WORK.

Jove: see JUPITER.

Jovian, c.331–64, Roman emperor (363–64). He made a humiliating peace with Persia and restored Christianity to the privileged position it had held before JULIAN THE APOSTATE'S reign

Joyce, James, 1882–1941, Irish novelist. Perhaps the major 20th-cent. writer in English, Joyce was a master of language, exploiting its total resources. Educated in Dublin Jesuit schools, he lived after 1902 on the Continent, returning to Ireland only briefly. *Dubliners,* his short stories, was suppressed in Ireland because of topical references and published in London (1914). He spent World War I in Zürich, working on *A Portrait of the Artist as a Young Man* (1916), his first novel. Publication of *Ulysses,* written 1914–21, was delayed by obscenity charges; it did not appear in the U.S. until 1933. After 1922, Joyce worked on *Finnegans Wake* (1939). He died in Zürich in 1941. With each major work, Joyce's profundity and complexity grew. *Dubliners* centers on moments of spiritual insight he called epiphanies. *A Portrait* is a fairly realistic autobiographical account of young Stephen Dedalus's growing realization that he must free himself from the narrowness of Irish society. *Ulysses* recounts the events of June 16, 1904, in the actions and thoughts of the salesman Leopold Bloom, his wife, Molly, and Stephen Dedalus, now a teacher. The book follows the design of HOMER'S *Odyssey* in theme and image. With its shifts in consciousness, its rich allusion, and its play with language, it is a difficult but rewarding celebration of life. *Finnegans Wake* seems at times to present the dreams of a Dublin publican, at times to represent a universal consciousness. Less read, it is not well understood. The Joyce canon includes three volumes of poems, *Chamber Music* (1907), *Pomes Penyeach* (1927), and *Collected Poems* (1937); the Ibsenesque play *Exiles* (1918); and *Stephen Hero* (1944), a fragmentary draft of *A Portrait.*

Joyner-Kersee, Jackie, 1962–; American track-and-field athlete; b. East St. Louis, Ill. She won the silver medal in the heptathlon in the 1984 Olympics, won the gold medal and set the world record in the event in 1988, and won the gold again in 1992. She also won a gold medal (1988) and bronze medal (1992) in the long jump.

József, Attila [yō'zhĕf], 1905–37, Hungarian poet. Born in poverty,

he published his first book at 17 and in 1930 joined the illegal Communist party. After periods of schizophrenia he committed suicide. His compassionate poetry deals with political and existential themes.

Juana Inés de la Cruz [dä lä krōōs], 1651–95, Mexican poet. Considered the greatest lyric poet of the colonial period, she was an intellectually precocious girl who entered a convent at 16. Her classical and scientific studies were criticized by her superiors, including the bishop of Puebla, whose objections to women's education she answered in a spirited autobiographical letter (1691). The long poem *First Dream* (1680) was her major achievement. She also wrote plays, both religious and worldly. Her last years were devoted to the spiritual life; she died aiding victims of an epidemic.

Juan Carlos I [hwän kär'lōs], 1938–, king of Spain (1975–). The grandson of ALFONSO XIII, he married (1962) Princess Sophia of Greece. Francisco FRANCO named him (1969) his successor as ruler. Upon Franco's death (1975), he became the first Spanish king since his grandfather was deposed in 1931. Personally popular, he has proven to be a strong force for Spanish political stability and democracy. In Feb. 1981 he successfully foiled a right-wing military coup.

Juárez, Benito [hwä'rās], 1806–72, Mexican statesman. A lawyer of Native American descent, he helped to overthrow (1855) SANTA ANNA's dictatorship and to limit the privileges of the church and army. He led the liberals to victory in the War of the Reform (1858–61) and, as president (1857–65, 1867–72), oversaw the transfer of political power in MEXICO from the creoles to the mestizos. Juárez defeated France's attempt (1864–67) to establish a Mexican empire and tried to implement reforms.

Juárez or **Ciudad Juárez,** city (1990 pop. 797,679), N Mexico, on the Río Grande, opposite El Paso, Texas. A cotton-processing center and resort at the desert's edge, it has grown rapidly since the 1970s as assembly plants exporting to the U.S. have favored the area. First called El Paso del Norte, it was a base for Spanish colonial expansion northward and later served as the headquarters of Benito JUÁREZ, for whom it was renamed in 1888.

Juda: see JUDAH.

Judaea or **Judea** [both: jōōdē'ə], Greco-Roman name for S Palestine. At the time of Jesus, it was both part of the province of Syria and a kingdom ruled by the HERODS.

Judah or **Juda,** in the BIBLE, fourth son of JACOB and LEAH and the eponymous ancestor of one of the 12 Tribes of Israel (see ISRAEL, TRIBES OF). Judah is a distinctive figure, a leader in the family counsels. His tribe gave its name to the kingdom of Judah.

Judah, more southerly of two kingdoms created by the division of the kingdom of the JEWS under REHOBOAM. Judah, which lasted from 931 B.C. to 586 B.C., had its capital in JERUSALEM and was ruled by the house of DAVID.

Judah ha-Levi or **Halevy,** c.1075–1141, Spanish rabbi, poet, philosopher, and physician. His poems—secular, religious, and nationalist—are filled with a serene and lofty spirit. In his great philosophic work, *Sefer ha-Kuzari* (tr. *Kuzari,* 1964), he attempts to establish the superiority of the Jewish religion.

Judah ha-Nasi [prince] or **Judah I,** A.D. 135?–220?, religious and political leader of the Palestinian Jews and head of the SANHEDRIN. He collected and edited the Oral Law, which he compiled as the MISHNA.

Judaism, the religious beliefs and practices and the way of life of the JEWS. Central to these is the notion of monotheism, adopted by the biblical Hebrews. In this early period there also developed a belief in the ultimate coming of God's kingdom on earth, a time of peace and justice. With the destruction (586 B.C.) of the First Temple and the consequent Babylonian captivity came the expectation of national restoration under the leadership of a MESSIAH. In Babylonia the Israelites were exposed to, and adopted, new ideas, e.g., the personification of evil (Satan) and the resurrection of the dead. In the post-exilic period (not later than the 5th cent. B.C.) the practice of publicly studying the TORAH, or Pentateuch, and of writing expositions on it, began; these were later collected in the MISHNA and TALMUD. The conquests of Alexander the Great brought other new ideas, most significantly that of the immortality of the soul. Conflict over the acceptable level of Hellenization led to the revolt of the MACCABEES. As conditions of life deteriorated, apocalyptic beliefs grew: national catastrophe and the Messianic kingdom were seen as imminent events. Out of these beliefs grew both Christianity and classical, or rabbinic, Judaism. Rabbinic Judaism, which evolved over five centuries (until A.D. c.500), replaced the Temple with the SYNAGOGUE (the Second Temple was destroyed in A.D. 70), the priesthood with the RABBI, and sacrificial ceremony with the prayer service. Emphasis was placed on study of the Torah, on the growing need for national restoration in the Promised Land, and on the function of this world as preparatory for the world to come. In the medieval period two new developments arose: the CABALA, influenced predominantly by NEOPLATONISM, and, opposed to it, rationalism, whose principal exponent was MAIMONIDES. Although the Jewish Middle Ages extended into the 18th cent., the general European Renaissance had its Jewish counterpart, e.g., in the work of the poet Judah ABRAVANEL. At the same time, the influence of the SEPHARDIM, particularly the Marranos, came to be felt, generally as a liberalizing force. The 18th cent. produced both the great traditional rabbinic figure ELIJAH BEN SOLOMON (the Gaon of Vilna) and the untraditional figures BAAL-SHEM-TOV, the founder of HASIDISM, and Moses MENDELSSOHN, spiritual progenitor of the later Reform movement. With the 19th cent. came the question of how Jews were to maintain tradition when the non-Jewish world demanded its abandonment. In Eastern Europe this problem was dealt with by the Haskalah, or Jewish enlightenment, movement, whose members, e.g., Nachman KROCHMAL, sought to revitalize Jewish life by recreating it along the lines of the best in European culture. Finally, in reaction to the needs of a persecuted people and to growing nationalistic desires, ZIONISM arose, promising a return to the Holy Land. Ultimately, it was HALAKAH (the law) over which Jews divided; Orthodoxy regards halakah as derived from God and therefore authoritative, whereas Reform sees it as binding only in its ethical content. The Conservative movement assumes a middle position, maintaining most of the traditional rituals but recognizing a need for change in accordance with overriding contemporary considerations. Reconstructionist Judaism, a 20th-cent. movement, accepts all forms of Jewish practice, regarding Judaism as a culture rather than a theological system. See also JEWISH HOLIDAYS.

Judas, in the Bible. **1** See JUDE, SAINT. **2** Judas Maccabeus: see MACCABEES. **3** See JUDAS ISCARIOT.

Judas Iscariot [iskâr'ēət], JESUS' betrayer, one of the Twelve APOSTLES. The chief priests paid him 30 pieces of silver, for which he led soldiers to Gethsemane and identified Jesus to them by kissing him. Later he repented and killed himself. The blood money bought a potter's field. The name *Iscariot* suggests he may have belonged to an anti-Roman sect, the Sicarii, and may have betrayed Jesus out of disappointment that Jesus was not the political Messiah he had looked for.

Judas Maccabeus: see MACCABEES.

Judd, Donald (Clarence), 1928–94, American sculptor; b. Excelsior Springs, Mo. Associated with MINIMALISM, he was known for his geometric works in wood or steel painted with industrial pigments.

Jude, Saint, or **Saint Judas,** one of the Twelve APOSTLES. Jude is an English form used to distinguish him from JUDAS ISCARIOT; he is also called Lebbaeus and Thaddaeus.

Jude, epistle of the NEW TESTAMENT, next to last book of the Bible. A Catholic, or general, EPISTLE, it warns against some heresy that led to immorality and has a close literary relationship with Second PETER.

Judea: see JUDAEA.

Judges, book of the OLD TESTAMENT, seventh in the Authorized Version, the sequel to JOSHUA. It tells of the Hebrews from Joshua's death until the time of SAMUEL. The religious interpretation, stated in an introduction, is that the book recounts Israel's successive apostasies and their consequences. The judges, primarily military leaders of the tribes, include Deborah, GIDEON, Jephthah, and SAMSON.

Judith, book included in the OLD TESTAMENT of the Western canon and the Septuagint but not in the Hebrew Bible, and placed in the APOCRYPHA in the Authorized Version. It tells of an armed attack on the Jewish city of Bethulia and of how Judith, a beautiful widow,

saved the city by killing Holofernes, the enemy leader. The book probably antedates 100 B.C.

judo: see MARTIAL ARTS.

Judson, Edward Zane Carroll: see BUNTLINE, NED.

jujitsu: see MARTIAL ARTS.

jujube: see BUCKTHORN.

Julia, feminine name in the Julian gens. **1** Died 54 B.C., daughter of Julius CAESAR and wife of POMPEY. She maintained the bond between them, but after her death they became open enemies. **2** 39 B.C.–A.D. 14, daughter of AUGUSTUS and wife, in turn, of Marcus Claudius Marcellus (d. 23 B.C.), Marcus Vipsanius Agrippa, and TIBERIUS. Her infidelities caused her banishment by Augustus. Soon after Tiberius became emperor, she died of starvation.

Juliana, 1909–, queen of the Netherlands (1948–80). She succeeded her mother, WILHELMINA, and abdicated in favor of her eldest daughter, BEATRIX.

Julian the Apostate, 331?–363, Roman emperor (361–63); nephew of CONSTANTINE I. A scholar, writer, and general, he sponsored far-reaching legislation. He decreed religious toleration but tried unsuccessfully to restore paganism. Killed in battle, he was succeeded by JOVIAN.

Julius I, Saint, pope (337–52), a Roman. When asked for his opinion on ARIANISM, he summoned a council at Rome (340). The Arians did not come, and Julius wrote them a letter, chiding them for lack of sincerity; the letter was remarkable as an early claim to papal jurisdiction over the whole church. Feast: April 12.

Julius II, 1443–1513, pope (1503–13), an Italian named Giuliano della Rovere. A warrior, he completed the work of his enemy, Cesare BORGIA, of restoring the Papal States to the church and took a vigorous part in the ITALIAN WARS. Julius assembled (1512) the Fifth Lateran Council, which abolished simony in the college of cardinals. An art patron, he favored RAPHAEL (who painted his portrait), MICHELANGELO, and BRAMANTE. He laid the cornerstone of St. Peter's Cathedral. Worldly as Julius was, he was one of the first to try to break the hold of Renaissance corruption on Rome.

Julius Caesar: see CAESAR, JULIUS.

July: see MONTH.

July Revolution, revolt in France in July 1830 against CHARLES X. The attempt of the ultraroyalists under Charles to return to the ancien régime provoked opposition from the more liberal middle class. When Charles's minister, Jules Armand de Polignac, issued the July Ordinances, which controlled the press, dissolved the newly elected chamber of deputies, and reduced the electorate, insurrection followed. Charles fled and abdicated, and LOUIS PHILIPPE was proclaimed king.

June: see MONTH.

Juneau, city (1990 pop. 26,751), state capital, SE Alaska, in the Alaska Panhandle; settled by gold miners 1880, inc. 1900. Lying at the foot of two lofty peaks, it has an ice-free harbor. Government, fishing, lumber, and tourism are important to the economy. Alaska's capital since 1906, the city is one of the largest in area in the U.S. (3,108 sq mi/8,050 sq km) and the only mainland U.S. state capital not accessible by land.

Jung, Carl Gustav [yo͝ong], 1875–1961, Swiss psychiatrist, founder of analytical psychology. Jung met Sigmund FREUD in 1907, and became the first president of the International Psychoanalytic Association when it was formed. He broke with Freud in 1912, when Jung published his revolutionary *Psychology of the Unconscious,* which postulated two dimensions of the UNCONSCIOUS—the personal (repressed or forgotten content of an individual's mental and material life), and what he termed the collective unconscious (those acts and mental patterns shared either by members of a culture or universally by all human beings). Under certain conditions these manifest themselves as archetypes—images, patterns, and symbols that are often seen in dreams or fantasies and that appear as themes in mythology, religion, and fairy tales. In *Psychological Types* (1921) Jung elucidated EXTROVERSION AND INTROVERSION. He held the most significant task for any person to be the achievement of harmony between the conscious and the unconscious. The definitive edition of his collected works in English translation was published between 1951 and 1979.

Jünger, Ernst [yŭng'ər], 1895–, German writer. His early works, e.g., *Storm of Steel* (1920), glorify war. Later he opposed HITLER and militarism. His war diaries express a mystical plea for peace, as in *On the Marble Cliffs* (1939) and *Heliopolis* (1949). *The Glass Bees* (1957) and *Aladdin's Problem* (1983) are late novels.

junior college: see COMMUNITY COLLEGE.

juniper, aromatic evergreen tree or shrub (genus *Juniperus*) of the CYPRESS family, widely distributed over the north temperate zone. Many are important sources of lumber and oil. The insect-repellent wood of the red cedar (*J. virginiana*) is especially valuable for closets, furniture, and posts; the oil is used in medicine and perfumery. The common juniper (*J. communis*) and its varieties (e.g., dwarf and pyramidal) are grown ornamentally; its fruits are used to flavor gin.

Junius, pseud. of an English political writer. His letters, sent to the London *Public Advertiser* (Jan. 1769–Jan. 1772), attacked GEORGE III and his ministers and centered on the John WILKES controversy. His identity remains a mystery.

junk bond, a BOND that involves greater than usual risk as an investment and pays a relatively high rate of interest, typically issued by a company lacking an established earnings history or having a questionable credit history. Junk bonds became a common means for raising business capital in the 1980s, when they were used to help finance the purchase of companies, especially by LEVERAGED BUYOUTS. See also MILKEN, MICHAEL R.

Juno, in Roman mythology, wife and sister of JUPITER; great goddess of the state. Like the Greek HERA, she was the protectress of women.

Jupiter, in astronomy, 5th PLANET from the sun, at a mean distance of 483.6 million mi (778.3 million km), and largest planet in the solar system, with an equatorial diameter of 88,700 mi (142,800 km). It is a gaseous planet with an atmosphere composed mostly of hydrogen and helium, with traces of methane, ammonia, and other gases, and about five or six zones each of counterflowing eastward- and westward-flowing winds. The most prominent atmospheric features (all in the southern hemisphere) are the Great Red Spot, a storm at least 300 years old and measuring c.30,000 by 10,000 mi (48,000 by 16,000 km), and three large white ovals that formed in 1939. Jupiter has 16 known natural satellites, 12 of which are of small diameter. The four larger Galilean satellites were discovered by GALILEO in 1610. **Callisto** (diameter: 2,995 mi/4,820 km), the most distant and the least active geologically of the four, has a heavily cratered surface. **Ganymede** (diameter: 3,279 mi/5,276 km), second most distant of the four and the largest satellite in the solar system, has heavily cratered regions, tens of miles across, that are surrounded by younger, grooved terrain. **Europa** (diameter: 1,942 mi/3,126 km) is a white, highly reflecting body whose smooth surface is entirely covered with dark streaks up to 70 km in width and from several hundred to several thousand kilometers in length. **Io** (diameter: 2,257 mi/3,632 km), the closest to Jupiter of the four, is the most active geologically, with eight active volcanoes that are probably energized by the tidal effects of Jupiter's enormous mass. The red color of **Amalthea** (diameter: 150 mi/240 km), a small, elongated satellite interior to Io's orbit that was discovered (1892) by Edward BARNARD, probably results from a coating of sulfur particles ejected from Io. Four SPACE PROBES have encountered the Jovian system: *Pioneers 10* and *11* (1973 and 1974) and *Voyagers 1* and *2* (both 1979). The latter two discovered Io's volcanoes, a thin ring system surrounding Jupiter, and three of the smaller satellites. The U.S. launched (1989) the space probe *Galileo* to orbit and study Jupiter and send a probe into its atmosphere.

Jupiter, in Roman mythology, supreme god; also called Jove; son of SATURN and Ops; brother and husband of JUNO. Originally an agricultural god, he developed into the prime protector of the state and was identified with the Greek ZEUS.

Jurassic period: see GEOLOGIC ERA (table).

jury, in COMMON LAW, a group of laymen summoned to study the EVIDENCE and determine the facts in a dispute tried in a court of law. The jury was probably brought to England by the NORMAN CONQUEST (11th cent.). Early juries consisted of people with personal knowledge of a dispute. Eventually, formally produced evidence became the basis for decision by an objective jury. The use of the jury system, which by the 18th cent. had become an important

protection against judicial and administrative tyranny, spread to territories colonized by England. The sixth and seventh amendments to the U.S. CONSTITUTION provide for a jury trial in most criminal and civil cases. A grand jury of 12 to 23 members usually considers the evidence and determines whether a trial is justified (see INDICTMENT). A petit (petty) jury, usually of 12 members, sits at the trial proper and, after hearing the evidence, reaches a verdict. Traditionally, the verdict was required to be unanimous, but today some states allow majority verdicts.

Justice, United States Department of, federal executive department established (1870) to help the U.S. attorney general enforce federal laws, to furnish legal counsel in federal cases, and to construe laws under which other federal executive departments act. Its solicitor general represents the federal government in SUPREME COURT cases. The department's divisions include Antitrust, Civil, Civil Rights, Criminal, Environment and Natural Resources, and Tax; its agencies include the FEDERAL BUREAU OF INVESTIGATION, the Drug Enforcement Administration, the Bureau of Prisons, and the Immigration and Naturalization Service.

Justin I, c.450–527, Byzantine emperor (518–27). He strongly opposed MONOPHYSITISM and had close relations with the Western Church. Lacking education, he entrusted government to his nephew, who succeeded him as JUSTINIAN I.

Justinian I, 483–565, Byzantine emperor (527–65), nephew of JUSTIN I. His heavy taxes and the discontent of the Monophysites (see MONOPHYSITISM) involved internal political factions in the Nika riot, which was crushed (532) by Empress THEODORA. She was helped by two generals, BELISARIUS and NARSES, who had recovered Africa and Italy for the empire. Justinian advocated caesaro-papism, i.e., the supremacy of emperor even over church, and called the Second Council of Constantinople (553) in a fruitless effort to reconcile the Monophysites to the church. His chief accomplishment was the codification of ROMAN LAW. His many public works included the church of HAGIA SOPHIA.

Justin Martyr, Saint, A.D. c.100–c.165, Christian apologist. He opened a school of Christian philosophy at Rome, where he was martyred. Two undisputed works remain, both philosophic defenses of Christian doctrine—the *Apology* and the *Dialogue.* Feast: June 1.

Justus of Ghent, fl. c.1460–c.1480, Flemish religious and portrait painter, known as Jodocus or Joos of Ghent. His simple, quiet style provides a clear link between Flemish and Italian art, e.g., the *Adoration of the Magi* (Metropolitan Mus.).

jute, tropical annual (genus *Corchorus*) of the LINDEN family, and its fiber. Although the fiber, of comparatively low CELLULOSE content, is weak and deteriorates quickly, it is the principal coarse fiber in commercial production; chief sources are *C. capsularis* and *C. olitorius.* India, with its hot climate and abundant cheap labor, is the unrivaled world producer and processor. Easily dyed and spun, jute is used for coarse fabrics, especially burlap and sacking, and for twine, rope, and insulation.

Jutland, Battle of, May 31, 1916, only major naval engagement between the British and German fleets in WORLD WAR I off the coast of Jutland, in Denmark. The outnumbered German fleet performed brilliantly and escaped in the fog. The tactics of the British commander, Admiral Jellicoe, and the heavy British losses caused much controversy.

Juvenal (Decimus Junius Juvenalis) [jōō'vənəl], fl. 1st–2d cent. A.D., Roman satiric poet. His verse established a model for the SATIRE of indignation. Written from the stern viewpoint of older standards, his 16 satires denounce a lax and luxurious society, tyranny, affectations, and immorality; the form is terse, polished, and epigrammatic.

K

K, chemical symbol of the element POTASSIUM.

K2 or **Mount Godwin-Austen,** the world's second highest peak, 28,250 ft (8,611 m) high, in the Karakorum range, N Kashmir, at the China-India border. It was discovered in 1856 and first climbed in 1954 by an Italian team led by Ardito Desio.

Kaaba or **Caaba,** in ISLAM, the most sacred sanctuary, the center of the Muslim world and the chief goal of pilgrimage. It is a small building in the Great Mosque of MECCA, nearly cubic in shape, built to enclose the Black Stone, the most venerated Muslim object. The Kaaba was a pagan holy place before MUHAMMAD, and many legends surround its origin. Nonbelievers are forbidden to approach it. Muslims face the Kaaba when praying.

Kabalevsky, Dmitri, 1904–87, Soviet composer. His many works, melodic and harmonically conservative, include the opera *Colas Breugnon* (1938); the SUITE *The Comedians* (1940); the OPERETTA *The Sisters* (1967), and piano and chamber works.

kabbalah: see CABALA.

Kabuki: see *Japanese drama* under ASIAN DRAMA.

Kabul, city (1989 est. pop. 1,400,000), capital of Afghanistan and its largest city and economic and cultural center, E Afghanistan, on the Kabul R. Manufactures include textiles, beet sugar, ordnance, and machinery, but warfare has limited economic activity since 1979. Strategically located, the city, whose history dates back more than 3,000 years, became Afghanistan's capital in 1773. It has been destroyed and rebuilt many times. It has an old quarter, with narrow, crooked streets, and a modern section. Kabul has a university (est. 1931), numerous colleges, and a fine museum. Soviet troops occupied the city from 1979 to 1989, and Kabul has been torn by factional fighting since the ouster (1992) of Najibullah.

kachina, among PUEBLO peoples, the spirit of the life forces. Elaborately costumed tribesmen, impersonating kachinas, visit Pueblo villages early in the year. They dance, sing, and give gifts to children. Dolls that the HOPI and ZUÑI carve and dress like the dancers are also called kachinas.

Kádár, János [kä'där], 1912–89, Hungarian Communist leader. He was imprisoned (1951–54) for alleged pro-Titoism. In the 1956 uprising (see HUNGARY) he first joined the cabinet of Imre NAGY but then formed a counter-government with support from the USSR, which crushed the revolt. He was premier (1956–58, 1961–65) and first secretary of the Communist party (1956–88).

Kafirs: see XHOSA.

Kafka, Franz [käf'kä], 1883–1924, German novelist and short-story writer, of a Jewish family; b. Prague. In remarkably clear and precise prose, Kafka presents a world at once real and dreamlike in which modern people, burdened with guilt, isolation, and anxiety, make a futile search for personal salvation. Among his symbolic novels are *The Trial* (1925), *The Castle* (1926), and *Amerika* (1927). Important stories include "The Metamorphosis" (1915), "A Country Doctor" (1919), and "In the Penal Colony" (1920), all translated into English, as are his diaries (1948–49) and several volumes of correspondence.

Kahlo, Frida, 1907–54, Mexican painter. Drawing on personal experiences, she portrayed the harshness and pain of women's lives in stark, often shocking works, including many self-portraits. Kahlo was also influenced by Mexican culture, aspects of which she

painted in bright colors, with a mixture of realism, surrealism, and symbolism. She was married to Diego RIVERA.

Kahn, Louis Isadore, 1901–74, American architect; b. Estonia. From the 1920s he worked on many housing projects, e.g., Carver Court (1944), Coatesville, Pa. He also designed the Yale Univ. Art Gallery, the Salk Institute, La Jolla, Calif., and the Kimbell Art Museum, Fort Worth, Tex., and exerted wide influence as a professor.

Kakinomoto no Hitomaro [kä'kē'nō'mō'tō nō hē'tō'mä'rō], d. 710?, early Japanese lyric poet. The greatest poet in the *Manyoshu*, the oldest extant Japanese poetry anthology, he is known for the unusualy wide range of his verse forms, his sense of humanity, and his empathy with nature.

Kalahari, arid desert area, c.100,000 sq mi (259,000 sq km), in Botswana, E Namibia, and N South Africa, with a yearly rainfall ranging from 5 in. (12.7 cm) in the southwest to 20 in. (50.8 cm) in the northeast. The nomadic San (Bushmen) and Khoikhoi are the principal inhabitants.

Kalamazoo, city (1990 pop. 80,277), seat of Kalamazoo co., SW Mich., on the Kalamazoo R. where it meets Portage Creek; inc. as a city 1883. It has paper, metal, and pharmaceutical industries, and the area produces celery and other crops, grains, and dairy goods. Western Mich. Univ. and two colleges are located there.

kale, borecole, and **collards,** common names for nonheading types of CABBAGE (mostly of the variety *acephala*), cool-weather crops of the MUSTARD family. They are grown for their edible greens and, in Europe, for fodder.

Kalends: see CALENDAR.

Kalevala, Finnish national epic. It recounts the exploits of three semidivine brothers in mythical Kaleva, land of the heroes. Known to scholars as early as 1733, the folk verses that make up the epic were collected in the 19th cent. by Zakarias Topelius and E. Lönnrot. The effect of the *Kalevala* on Finnish art has been great.

Kali [Hindi, = the Black One], important goddess in popular HINDUISM and TANTRA, associated with destructive forces.

Kalidasa [kä"lĭdä'sə], fl. 5th cent.?, Indian dramatist and poet, the greatest figure in classical SANSKRIT LITERATURE. His three surviving plays—*Shakuntala, Vikramorvasi,* and *Malavikagnimitra*—are court dramas in verse and relate fanciful or mythological tales of romantic love ripened by adversity. He also wrote fine epic and lyric poetry.

Kalimantan: see BORNEO.

Kaliningrad, formerly Königsberg, city (1990 pop. 404,000), W European Russia, on the Pregolya R., in a Russian exclave surrounded by Poland and Lithuania. An ice-free Baltic seaport and naval base, it produces ships, machinery, and other manufactures. Königsberg, in E Prussia, was founded (1255) as a fortress of the TEUTONIC KNIGHTS and joined (1340) the HANSEATIC LEAGUE. The Univ. of Königsberg (founded 1544) reached its greatest fame when KANT taught there. The city became part of the USSR in 1945 and was renamed for the Soviet leader Mikhail Kalinin. Most of the population is now Russian.

Kamakura, city (1990 pop. 174,299), central Honshu, Japan, on Sagami Bay. A religious center and resort, Kamakura is famous for its 42-ft (12.8-m) high bronze Buddha, cast in 1252. The city was the seat of Yoritomo, the first SHOGUN, and his descendants (1192–1333); under the Ashikaga Shogunate (1333–1573), it was the government headquarters of E Japan.

Kamchatka, peninsula, c.750 mi (1,210 km) long, NE Russia, projecting southwest from the Asian mainland between the Sea of Okhotsk (W) and the Bering Sea and Pacific Ocean (E). It is traversed by two parallel ranges containing the only active volcanoes in Russia and has a cold and humid climate. Fishing (notably for crabs), sealing, fur trapping, mining, and lumbering are the main occupations. The population is predominantly Russian, with large Koryak minorities.

Kamehameha I [kämä'hämä'hä], c.1738–1819, Hawaiian king. He was king of the island of Hawaii after 1790 and through conquest became (1810) ruler of all the Hawaiian islands.

Kamenev, Lev Borisovich [kä'mĭnyĭf], 1883–1936, Soviet Communist leader; b. L.B. Rosenfeld. After the RUSSIAN REVOLUTION (1917) he was a member of the first politburo of the Communist party. When LENIN died (1924), Kamenev, STALIN, and ZINOVIEV excluded TROTSKY from power, but in 1925 the Stalinist majority defeated Kamenev and Zinoviev, who joined Trotsky's opposition. In 1936 Kamenev, with Zinoviev and others, was tried for treason and executed.

Kampala, largest city (1991 pop. 773,463) and capital of Uganda, on Lake VICTORIA. It is linked by railroad to SW Uganda and Mombasa, Kenya, and by ships crossing the lake to ports in Kenya and Tanzania. The city is built on and around six hills. An international airport is nearby, at ENTEBBE. Kampala, which grew up around a British fort constructed in 1890, replaced Entebbe as the capital in 1962.

Kampuchea: see CAMBODIA.

Kanarese [känərēz'], Dravidian language of India. See LANGUAGE (table).

Kandahar or **Qandahar,** city (1989 est. pop. 203,000), capital of Kandahar prov., S Afghanistan. The country's second largest city, it is a market for sheep, cotton, grain, and dried fruit. Manufactures include textiles and processed food. Possibly founded by Alexander the Great, the city was the capital (1748–73) of the kingdom of Afghanistan and was occupied (1839–42, 1879–81) by the British in the Afghan wars. After the 1979 Soviet invasion of Afghanistan, the Soviets and Afghan rebels engaged (1981) in heavy fighting in Kandahar.

Kandinsky, Wassily, 1866–1944, Russian abstract painter and theorist. Regarded as the originator of abstract art (see ABSTRACT EXPRESSIONISM), he developed his ideas concerning the power of pure color and nonrepresentational painting in Paris, where he came in contact with neo-impressionism (see POSTIMPRESSIONISM) and FAUVISM. In his study *Concerning the Spiritual in Art* (1912), he examined the psychological effects of color. He was a founder of the BLAUE REITER. In the 1920s his style evolved from pure bursts of color to more precise geometric compositions. In 1922 he joined the BAUHAUS faculty; later he wrote *Point and Line to Plane* (1926), which includes an analysis of geometric forms in art.

Kandy, city (1985 est. pop. 125,000), capital of Central prov., Sri Lanka, on the Kandy Plateau. It is a mountain resort and the trade center for an area producing tea, rubber, rice, and cacao. The capital of the Sinhalese kings after 1592, Kandy was held temporarily by the Portuguese (16th cent.) and the Dutch (18th cent.). The British captured it in 1815. Nearby Kandy are the Univ. of Sri Lanka (est. 1942) and noted botanical gardens.

kangaroo, hopping MARSUPIAL of the family Macropodidae, found in Australia, Tasmania, and New Guinea. Kangaroos have powerful hind legs, long feet, short forelimbs, and long, muscular tails for maintaining balance. The female has a pouch in which she suckles the newborn kangaroo (joey). The chief grazers of Australian plains, kangaroos are diurnal and live in herds. Great red kangaroo males may attain a height of 7 ft (210 cm) and weigh over 200 lb (90 kg). Smaller members of the kangaroo family include the rabbit-sized wallabies and pademelons. Kangaroos have been extensively hunted as pests and for their valuable hides.

Kano [kä'nō], family or school of Japanese painters. **Kano Masanobu,** c.1434–c.1530, the forerunner of the school, painted landscapes, birds, and figure pieces. Done chiefly in inks, his work is Japanese in spirit, with Chinese technical influence. His son, **Kano Motonobu,** c.1476–1559, was the actual founder of the school. He introduced heavily stressed outlines and bold decorative patterns into Chinese-style ink paintings that appealed to the warrior class. **Kano Eitoku,** 1543–90, grandson of Motonobu, painted screens with energy, ease, and inventiveness, using brilliant colors against gold-leaf backgrounds. **Kano Tanyu,** 1602–74, first known as Morinobu, was the grandson of Eitoku and was called the reviver of the Kano school. He was the official painter of the Tokugawa government (1621) and established a school of his own. His *Confucius and Disciples* is in the Museum of Fine Arts, Boston. See also JAPANESE ART.

Kano, city (1987 est. pop. 538,000), N Nigeria. It is the commercial center for an agricultural region that produces cotton, cattle, and peanuts. A rapidly growing city, it is the chief industrial center of N Nigeria, manufacturing a variety of consumer goods, and is known for its leatherwork. Kano is connected by rail with LAGOS and has an international airport. One of the seven Hausa city-states, Kano reached the height of its power in the 17th and 18th cent. The British captured the city in 1903. In 1981 it was the site

The key to pronunciation appears on page xiii.

of an uprising by Moslem separatists, in which nearly 1,000 were killed.

Kanpur, city (1991 pop. 2,111,284), Uttar Pradesh state, N central India, on the Ganges R. An industrial center, it produces chemicals, textiles, and other manufactures. It was a village until the Nawab of Oudh ceded it to the British in 1801. During the INDIAN MUTINY (1857) the entire British garrison, including women and children, was killed.

Kansas, midwestern state occupying the center of the coterminous U.S.; bordered by Missouri (E), Oklahoma (S), Colorado (W), and Nebraska (N).

Area, 82,264 sq mi (213,064 sq km). *Pop.* (1990) 2,477,574, a 4.8% increase over 1980 pop. *Capital,* Topeka. *Statehood,* Jan. 29, 1861 (34th state). *Highest pt.,* Mt. Sunflower, 4,039 ft (1,232 m); *lowest pt.,* Verdigris R., 680 ft (207 m). *Nickname,* Sunflower State. *Motto. Ad Astra per Aspera* [To the Stars Through Difficulties]. *State bird,* Western meadowlark. *State flower,* native sunflower. *State tree,* cottonwood. *Abbr.,* Kans.; KS.

Land and People. Kansas is part of the GREAT PLAINS and is famous for its seemingly endless fields of wheat. The land rises more than 3,000 ft (914 m) from the eastern alluvial prairies to the semiarid high plains of the west, which stretch toward the foothills of the ROCKY MOUNTAINS. Kansas has a typical continental climate characterized by seasonal extremes in temperatures, blizzards, tornadoes, and severe thunderstorms. Nearly 70% of the population lives in urban areas. WICHITA, one of the country's leading aircraft-manufacturing centers, is the largest city, followed by KANSAS CITY (adjacent to Kansas City, Mo.) and TOPEKA. In 1990, 90% of the population was white and 6% was African American.

Economy. Kansas is the country's leading producer of wheat and the second leading producer of sorghum. Corn and hay are also important crops. Cattle, raised on the abundant grazing lands, constitute the most profitable agricultural commodity. Meatpacking and the dairy industry are major economic activities, although food processing is surpassed in value by the production of transportation and computer equipment and nonelectrical machinery. Kansas is the country's leading producer of helium and also extracts petroleum, natural gas, and salt.

Government. The constitution (adopted 1859) provides for a governor elected for a four-year term. The legislature consists of a senate with 40 members serving four-year terms and a house with 125 members serving two-year terms. Kansas is represented in the U.S. Congress by two senators and four representatives and has six electoral votes.

History. When the Spanish explorer Francisco Vásquez de CORONADO visited the area in 1541, it was inhabited by Native Americans, including the Kansa, WICHITA, and PAWNEE, whose nomadic life, based on buffalo-hunting, was transformed after the Spanish introduced the horse. The U.S. acquired the land through the LOUISIANA PURCHASE (1803). As settlement proceeded during the 19th cent., Kansas became the center of national controversy on the question of slavery, and by the 1850s sentiment reached the level of armed warfare among settlers, including the abolitionist John BROWN, earning it the name "bleeding Kansas." Kansas fought with the Union in the CIVIL WAR and suffered the highest rate of fatal casualties of any northern state. After the war, thousands of new settlers arrived to farm the prairies. As part of the DUST BOWL, Kansas sustained serious land erosion during the drought of the 1930s. During World War II, airplane manufacturing became very important, and industry continued to grow into the 1980s. As the state has become increasingly urban and suburban, however, more emphasis has also been placed on the financial and service sectors concentrated in and around its major cities.

Kansas City, two adjacent cities: one (1990 pop. 149,767), seat of Wyandotte co., NE Kans. (inc. 1859); the other (1990 pop. 435,146), in NW Mo. (inc. 1850), the largest city in Missouri. Ports at the junction of the Missouri and Kansas rivers, they form a commercial, industrial, cultural, and transportation center. The cities are a huge market for crops and livestock with stockyards, grain elevators, refineries, and mills. Transportation equipment, chemicals, and petroleum and paper products are among the manufactures. The area was the starting place for many Western expeditions, and several early 19th-cent. settlements were the predecessors to today's cities. Points of interest in Kansas include an agricultural museum, a Shawnee mission (1839), and a unique mall in the city's center; among those in Missouri are the Nelson-Atkins Museum of Art, Thomas Hart Benton's home, and several theaters.

Kansas-Nebraska Act, bill passed (1854) by the U.S. Congress to establish the Kansas and Nebraska territories. Controversy over SLAVERY and conflict over the route of the proposed transcontinental railroad had delayed territorial organization of the region. Four attempts to organize a single territory had been defeated by Southern opposition to the MISSOURI COMPROMISE, which would have barred slavery from the territory. Finally, Sen. Stephen A. DOUGLAS presented a bill that made concessions to the South. It created two territories, Kansas and Nebraska, and called for "popular sovereignty" (see SQUATTER SOVEREIGNTY). An amendment repealed the antislavery clause of the Missouri Compromise. The squatter sovereignty provision caused both pro-slavery and antislavery forces to try to swing the popular decision in Kansas in their favor (see EMIGRANT AID COMPANY). The tragedy of "bleeding Kansas" resulted, and sectional division reached a point that precluded reconciliation and culminated in the CIVIL WAR.

Kant, Immanuel, 1724–1804, German philosopher, one of the greatest figures in the history of METAPHYSICS. After 1755 he taught at the Univ. of Königsberg and achieved wide renown through his teachings and writings. According to Kant, his reading of HUME woke him from his dogmatic slumber and led him to become the "critical philosopher," synthesizing the rationalism of LEIBNIZ and the SKEPTICISM of Hume. Kant proposed that objective reality is known only insofar as it conforms to the essential structure of the knowing mind. Only objects of experience, phenomena, may be known, whereas things lying beyond experience, noumena, are unknowable, even though in some cases we assume a priori knowledge of them. The existence of such unknowable "things-in-themselves" can be neither confirmed nor denied, nor can they be scientifically demonstrated. Therefore, as Kant showed in the *Critique of Pure Reason* (1781), the great problems of metaphysics—the existence of God, freedom, and immortality—are insoluble by scientific thought. Yet he went on to state in the *Critique of Practical Reason* (1788) that morality requires belief in their existence. Kant's ETHICS centers in his categorical imperative, or absolute moral law, "Act as if the maxim from which you act were to become through your will a universal law." His *Critique of Judgment* (1790) considered the concepts of beauty and purposiveness as a bridge between the sensible and the intelligible worlds. Kant's influence on modern philosophy has continued to the present day. His work fostered the development of German IDEALISM by FICHTE, SCHELLING, and HEGEL. The Neo-Kantianism of the late 19th cent. applied his insights to the study of the physical sciences (Hermann Cohen, Ernst CASSIRER) and to the historical and cultural sciences (Heinrich Rickert); his influence is also seen in the thought of DILTHEY; in the pragmatism of DEWEY and William JAMES; in the theology of SCHLEIERMACHER; and in GESTALT psychology.

Kantorovich, Leonid Vitalievich, 1912–86, Soviet economist and mathematician. He applied linear programming to economics and proposed the adoption of widely used Western economic techniques. He shared the 1975 Nobel Prize in economics with Tjalling C. Koopmans for work on optimum allocation of resources. His books include *Management Science* (1939) and *Functional Analysis* (1977).

Kaohsiung [gou-shyōōng], city (1988 est. pop. 1,343,000), S Taiwan. It is the second largest city of Taiwan, the leading port in S Taiwan, and a heavy industrial center. Its manufactures include petroleum products, metals, ships, and fertilizer. The city was developed by the Japanese, who occupied Taiwan in 1895.

Kapitza, Pyotr Leonidovich, 1894–1984, Soviet physicist. He trained in England under Ernest RUTHERFORD and contributed to LOW-TEMPERATURE PHYSICS. Forbidden to leave the USSR again, he was placed under house arrest when he refused (1946) to work on atomic weapons. He was finally released (1955) and worked on research supporting Soviet space projects. He shared the 1978 Nobel Prize in physics for his work on the superconductivity of liquid helium.

Kaplan, Mordecai Menahem, 1881–1983, American rabbi, educa-

tor, and philosopher; b. Lithuania. He is the originator of Reconstructionist JUDAISM and the founder of its Society for the Advancement of Judaism.

kapok, tropical tree of the BOMBAX family, and the resilient fiber obtained from its seeds. The water- and decay-resistant fiber, obtained chiefly from *Ceiba pentandra,* is used as a stuffing, especially for life preservers, and for insulation against sound and heat.

Karachi, largest city (1981 pop. 4,901,627), and former capital of Pakistan, capital of Sind prov., on the Arabian Sea near the Indus R. delta. It is Pakistan's chief seaport and industrial center, with such manufactures as automobiles, refined petroleum, and steel. Developed (18th cent.) as a port and trade center by Hindu merchants, it passed (1843) to the British, who made it the seat of the Sind government, a military outpost, and a major seaport. It was Pakistan's capital from independence (1947) until 1959, when RAWALPINDI became the interim capital pending completion of ISLAMABAD. Points of interest include the tomb of Muhammad Ali JINNAH, Pakistan's founder.

Karadjordjević or **Karageorgevich,** Serbian dynasty descended from KARAGEORGE that ruled from 1842 to 1945. It alternated with its longtime rival, the OBRENOVIĆ dynasty.

Karageorge, 1768?–1817, Serbian patriot, founder of the KARADJORDJEVIĆ dynasty; b. George Petrović. After defeating the Turks, he was proclaimed (1808) hereditary chief of the Serbs. He was murdered, probably at the instigation of Miloš Obrenović.

Karageorgevich: see KARADJORDJEVIĆ.

Karajan, Herbert von [käräyän'], 1908–89, Austrian conductor. He was musical director of the Berlin Philharmonic from 1955 to 1989. He was noted for his recording activity.

Karakorum, ruined city, central Mongolia, MONGOL capital (c.1220–67) under JENGHIZ KHAN. The ruins were discovered in 1889 by N.M. Yadrinstev, a Russian explorer. A nearby site, also called Karakorum, was the UIGUR capital.

Karamanlis or **Caramanlis, Constantine,** 1907–, Greek political leader. A conservative, he was premier from 1955 to 1963. He took Greece into NATO and worked to settle the CYPRUS problem. In exile during the rule (1967–74) of the military junta, he formed the New Democratic party. Returning to Greece in 1974, he again served as premier (1974–80) and then as president (1980–85, 1990–).

Karamzin, Nikolai Mikhailovich [kərəmzēn'], 1766–1826, Russian writer. Karamzin made the Russian literary language more polished and rhythmic. His sentimental story, "Poor Liza" (1792), forecast the novel of social protest. His greatest work was his *History of the Russian State* (11 vol., 1818–24).

karate: see MARTIAL ARTS.

Kariba Dam, one of the world's largest dams, S central Africa, impounding the ZAMBEZI R. to form **Kariba Lake** (c.175 mi/280 km long and 20 mi/32 km wide), on the Zambia-Zimbabwe border. The dam, 420 ft (128 m) high and 1,900 ft (579 m) long, was built (1955–59) to provide hydroelectricity and serves as a bridge between Zimbabwe and Zambia.

Karl-Marx-Stadt: see CHEMNITZ.

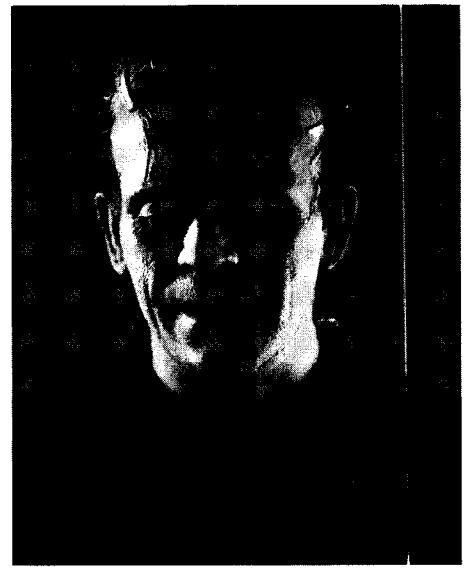
Karloff, Boris, 1887–1969, Anglo-American actor; b. England as William Henry Pratt. A fine actor with a superb speaking voice, he won fame as the monster in such horror films as *Frankenstein* (1931) and *The Bride of Frankenstein* (1935).

Karlstadt: see CARLSTADT.

karma [Skt., = action, work, or ritual], basic concept common to HINDUISM, BUDDHISM, and JAINISM. The doctrine holds that one's state in this life is the result of physical and mental actions in past incarnations and that present action can determine one's destiny in future incarnations. Karma is a natural, impersonal law of moral cause and effect; only those who have attained NIRVANA, or liberation from rebirth, can transcend karma.

Karnak, village, central Egypt, on the Nile R., 1 mi (1.6 km) E of LUXOR. Remains of the pharaohs abound at Karnak. Most notable is the Great Temple of AMON; its huge hypostyle hall (388 ft by 170 ft/118 m by 52 m) has 134 columns arranged in 16 rows. The temple was largely conceived and built, on an older foundation, in the XVIII dynasty.

Karpov, Anatoly, 1951–, Russian chess master. Karpov won (1975) the world championship by default when Bobby FISCHER, the title-holder, refused to agree to terms for a match. He successfully defended (1978, 1981) his title against Viktor Korchnoi but lost (1985) to Gary KASPAROV. Karpov again won (1993) the World Chess Federation championship when Kasparov formed a rival chess association.



Boris Karloff

Karsavina, Tamara [kərsä'vyĭnə], 1885–1978, Russian dancer. She made her debut (1902) in St. Petersburg, joined (1909) DIAGHILEV in Paris, and created principal roles in *Firebird* and *Petrouchka.* She often danced with NIJINSKY and was a leading exponent of Michel FOKINE'S theories.

Karst, barren limestone plateau, W Slovenia, extending c.50 mi (80 km) southeast from the lower Soča (Isonzo) Valley. Characterized by underground drainage, caves, sinkholes, deep gullies, and other features associated with dissolution and collapse of carbonate rocks, the name has become a generic term used to describe any area where similar landforms occur.

Kasavubu, Joseph, 1917?–1969, 1st president (1960–65) of the Republic of the Congo (now ZAÏRE). Under his leadership the Congo gained independence from Belgium. Kasavubu won a struggle for power with Premier LUMUMBA but was ousted by Gen. MOBUTU in 1965.

Kashmir [kăshmēr'], disputed territory, S Asia, administered since 1972 as the Indian state of Jammu and Kashmir (1991 pop. 7,718,000; c.54,000 sq mi/139,900 sq km; capital Srinagar), the only predominantly Muslim Indian state, and the Pakistani Azad Kashmir (1981 est. pop. 1,980,000; c.32,000 sq mi/82,900 sq km; capital, Muzaffarabad). Known for its beauty, Kashmir is covered with lofty, rugged mountains, including sections of the HIMALAYAN and Karakorum ranges. The heart of the region is the Vale of Kashmir, where wheat and rice are grown. After years of Buddhist and Hindu rule, Kashmir was converted to Islam in the late 14th cent., and became part of the MOGUL empire in 1586. The British installed a Hindu prince as ruler in 1846. Since the partition of India in 1947, control of the territory has been contested by India and Pakistan (see INDIA-PAKISTAN WARS), with occasional interference by China. The present division of the territory was drawn up in 1972. In the late 1980s unrest grew in Indian Kashmir as Muslim militants, some supporting independence and others union with Pakistan, resorted to guerrilla attacks. In 1990 the region was placed under army rule in an attempt to suppress the insurgency; the army has used often brutal measures to maintain Indian rule.

Kashmiri [kăshmē'rē], language belonging to the Dardic group of the Indo-Iranian subfamily of the Indo-European family of languages. See LANGUAGE (table).

Kasimir. For Polish rulers thus named, see CASIMIR.

Kasparov, Gary, 1963–, Armenian chess player; b. Azerbaijan as

Garri Kimovich Wainshtein. In Sept. 1984 he challenged Anatoly KARPOV for the world championship and appeared likely to win when the match was halted amid controversy in Feb. 1985. He won a rematch (Sept.–Nov. 1985), becoming the youngest world champion ever. He later broke with the World Chess Federation and formed a rival association; in 1993 he defended against Nigel Short. Kasparov is noted for his aggressive style of play.

Kassebaum, Nancy Landon: see under LANDON, ALFRED MOSSMAN.

Katanga: see SHABA.

Katayev, Valentin Petrovich [kətī'əf], 1897–1987, Russian novelist, playwright, poet, and short-story writer; brother of Yevgeny Petrov (see under ILF, ILYA). In *The Embezzlers* (1926), a novel, and *Squaring the Circle* (1928), a play, he satirized Soviet economic conditions. His four-part novel, *Black Sea Waves* (1936–61), portrays Russian life from 1905 through World War II. *The Holy Well* (1966) and *Broken Life* (1972) are memoirs.

Katayev, Yevgeny Petrovich: see PETROV, YEVGENY PETROVICH.

Katharine of Aragón, 1485–1536, first queen consort of HENRY VIII of England; daughter of Ferdinand V of Castile and León and ISABELLA I of Castile. In 1501 she married Arthur, eldest son of HENRY VII. He died in 1502; a papal dispensation allowed Henry VIII, his brother, to marry Katharine in 1509. Only one of her six children (MARY I) survived infancy, and Henry became impatient for a male heir. Also, with the collapse of the English-Spanish alliance in 1525, Katharine's political influence waned. In 1527 Henry tried to have the marriage annulled, a move that led to the English REFORMATION. After his secret marriage (1533) to Anne BOLEYN, Henry had a court declare his first marriage invalid. Katharine was confined at various estates; she refused to recognize the divorce or the break with Rome.

Katmai National Park: see NATIONAL PARKS (table).

Katmandu, city (1981 pop. 235,160), capital of Nepal, central Nepal, c.4,500 ft (1,370 m) above sea level, in a fertile Himalayan valley. Nepal's administrative and commercial center, it lies on an ancient route from India to China. Ruled by the Newars, it fell (1768) to the GURKHAS. Landmarks include the royal palace, temples, and Sanskrit libraries.

Katsushika Hokusai: see HOKUSAI.

katydid, name for some large, singing, winged INSECTS of the long-horned GRASSHOPPER (family Tettigoniidae). Katydids are green or pink and range from 1¼ to 5 in. (3 to 12.5 cm) in length. They are nocturnal and arboreal. The song of the male, which supposedly sounds like "Katy did, Katy didn't," is produced by rubbing together specialized structures on the front wings.

Katyn [kətĭn'], village, W European Russia, W of Smolensk near the Belarus border. It was occupied by the Germans in World War II. In 1943 the German government announced that the mass graves of 4,250 Polish officers had been found in a nearby forest and blamed Soviet forces for the massacre. The Soviet government asserted that the Poles had been killed by the Germans. In 1990 the USSR admitted that Soviet secret police had killed the Poles, and in 1992 Russian officials released documents that showed STALIN had ordered the killings.

Kauffmann, Angelica, 1741–1807, Swiss neoclassical painter and graphic artist. A protégée of Sir Joshua REYNOLDS and one of the original members of the Royal Academy, she was a fashionable portraitist and decorator. After her marriage in 1781 she lived in Italy. Her works include *Religion* (National Gall., London) and the etching *La Pensierosa.*

Kaufman, George S., 1889–1961, American playwright; b. Pittsburgh. He collaborated on over 40 plays, including *Beggar on Horseback* (1924; with Marc CONNELLY), *Dinner at Eight* (1932; with Edna FERBER), and *Of Thee I Sing* (1932; with Morrie Ryskind and George GERSHWIN; Pulitzer). Many of his most famous plays were written with Moss HART, e.g., *You Can't Take It with You* (1936; Pulitzer), *The Man Who Came to Dinner* (1939).

Kauai [kou"wī'], island (1990 pop. 51,177), 549 sq mi (1,422 sq km), N Hawaii. Formed by extinct volcanoes, it is the oldest Hawaiian island, with Kawaikini (5,170 ft/1,576 m high) its tallest peak. Most people live along the coast; Lihue (1990 pop. 5,536) is the largest town. Sugarcane, rice, and pineapples are the chief crops, and tourism is important. An independent kingdom when visited (1778) by Capt. James COOK, it became (1810) part of the kingdom of HAWAII. The island was devastated by a hurricane in 1992.

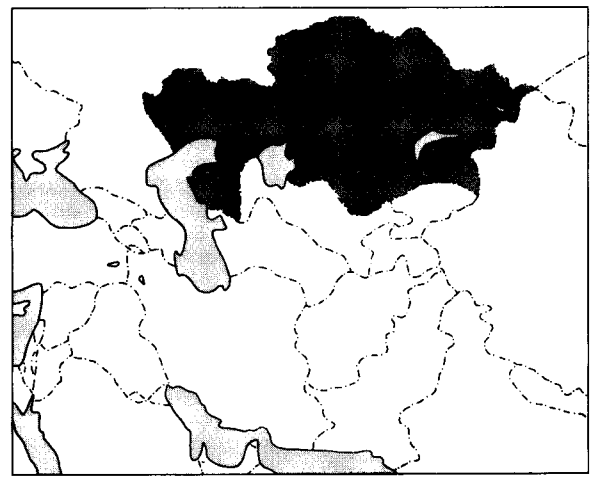
Kaunda, Kenneth [koun'də], 1924–, African political leader, president of ZAMBIA (1964–91). He led the nationalist movement in Northern Rhodesia. When it became independent (1964) as Zambia he became its first president and gained prominence as an opponent of white minority rule in neighboring Rhodesia (see ZIMBABWE) and in South Africa. In 1972 he proclaimed a one-party state. Discontent with one-party rule and deteriorating economic conditions led to several coup attempts against him, and in 1990 opposition parties were again legalized. He was overwhelmingly defeated for reelection in 1991.

Kawabata Yasunari [käwä'bätä], 1899–1972, Japanese novelist. Written in a lyrical, impressionistic style, his novels are distinguished by a masterful use of imagery. Often they treat, in a delicate, oblique fashion, the relationship of men to women, of humanity to nature. His novels include *Snow Country* (tr. 1956) and *The Sound of the Mountain* (tr. 1970). In 1968 Kawabata became the first Japanese author to receive the Nobel Prize in literature.

Kawasaki, city (1990 pop. 1,173,606), Kanagawa prefecture, central Honshu, Japan, on Tokyo Bay. Located in the Tokyo-Yokohama industrial area, it has steel mills, shipyards, oil refineries, and factories producing electrical machinery, motors, petrochemicals, and cement. Heigenji Temple, dedicated to the Buddhist priest Kukai, is in Kawasaki.

Kazakhstan, officially Republic of Kazakhstan, republic (1992 est. pop. 17,104,000), c.1,050,000 sq mi (2,719,500 sq km), central Asia, formerly a constituent republic of the USSR. It borders on Russia (N); China (E); Kyrgyzstan, Uzbekistan, and Turkmenistan (S); and the Caspian Sea and European Russia (W). The capital is Almaty (Alma-Ata); other large cities are Qaraghandy (Karaganda), Shymkent (Chimkent), Semey (Semipalatinsk), and Öskemen (Ust-Kamenogorsk). Kazakhstan produces much wool, cattle, and wheat and is rich in coal, oil, gas, and such minerals as chromium, silver, tungsten, lead, zinc, and copper. The Turkic-speaking Muslim Kazakhs (Qazaqs) comprise only 40% of the population; ethnic Russians make up 38% of the population, and other groups include Germans, Ukrainians, Tatars, and Uzbeks. The official language is Kazakh, but Russian remains the primary language of commerce and government.

History. The region was ruled by the MONGOLS from the 13th to 18th cent. and then by Russia. In 1916 the Kazakhs rebelled against Russian rule, and were in the process of establishing a Western-style state when the Bolshevik Revolution occurred in 1917. The region became part of the USSR in 1920 and a constituent republic in 1936. As the USSR broke up following the hard-line coup against Soviet Pres. GORBACHEV (1991), Kazakhstan declared its independence—it was one of the last republics to do so—and joined the COMMONWEALTH OF INDEPENDENT STATES. Nursultan A. Nazarbayev, president of Kazakhstan since 1990, has moved to privatize the economy since independence.



Kazan, Elia, 1909–, American stage and film director, producer, and writer; b. Turkey as Elia Kazanjoglous. A founding member of the Actors' Studio (see STRASBERG, LEE), he directed *A Streetcar Named Desire* (1947; film, 1951), *Death of a Salesman* (1949), and the film *On the Waterfront* (1954). He has also written several novels, e.g., *The Anatolian* (1982), and an autobiography (1988).

Kazan, city (1990 est. pop. 1,001,000), capital of Tatarstan, E European Russia. A major port on the Volga R., it has shipyards, chemical and explosives factories, and other industries. Founded in 1401, it became (1445) the capital of a powerful TATAR khanate that was conquered (1552) by IVAN IV of Russia. TOLSTOY and LENIN studied at the Univ. of Kazan (founded 1804).

Kazantzakis, Nikos [kä"zändzä'kēs], 1883–1957, Greek writer; b. Crete. Of an intensely poetic and religious nature, he produced his most ambitious work in *The Odyssey, a Modern Sequel* (1938), a verse tale that explores the world views of BUDDHA, JESUS, NIETZSCHE, LENIN, and others. He is, however, better known for two earthy, realistic novels, *The Greek Passion* (1938) and *Zorba the Greek* (1946), both of which were filmed.

Kean, Edmund, 1787?–1833, English actor. His violent acting style expressed the romantic ideal. Popular in the U.S. and England, he was famous for Shakespearean roles. His Shylock in *The Merchant of Venice* was a landmark in theater history. His son, **Charles John Kean,** 1811?–1868, was best known for his spectacular and historically accurate productions. Charles's wife, **Ellen Tree Kean,** 1806–80, was a noted comedienne.

Kearny, Stephen Watts, 1794–1848, American general in the MEXICAN WAR; b. Newark, N.J. Made (1846) commander in the West, Kearny captured Santa Fe and Los Angeles and was military governor of California until 1847. His nephew, **Philip Kearny,** 1814–62, commanded the 1st New Jersey Brigade in the U.S. CIVIL WAR. He fought in the PENINSULAR CAMPAIGN and at the second battle of BULL RUN. In Sept. 1862 he was killed when he unwittingly crossed Confederate lines at Chantilly.

Keating, Paul, 1944–, Australian politician. A trade-union official and Labor party member, he was elected to parliament in 1969. He was (1983–91) federal treasurer (treasury minister) and deputy prime minister (1990–91) under Prime Min. HAWKE and pushed free-market economic policies designed to spur growth. In mid-1991 he challenged Hawke for the party leadership but lost and resigned his posts. Continuing recession, however, eroded support for Hawke, and Keating replaced him (Dec. 1991) and later (1993) won re-election. As prime minister, Keating has emphasized Australia's ties with Asia and sought to end the British monarch's role as head of state.

Keaton, Buster (Joseph Francis Keaton), 1895–1966, American film actor and director; b. Piqua, Kans. A comic genius, he made such silent films as *Sherlock Junior* (1924), *The Navigator* (1924), and *The General* (1927).

Keats, John, 1795–1821, English poet, considered one of the greatest English poets. Apprenticed to a surgeon in 1811, he soon came to know Leigh HUNT and in 1816 gave up surgery for poetry. His first volume of poems appeared in 1817; it included "On First Looking into Chapman's Homer." The long poem *Endymion,* published in 1818, was vigorously attacked by the critics. Keats's passionate love for Fanny Brawne began in 1818, but he had contracted tuberculosis and they did not marry. Shortly after the publication of *Lamia, Isabella, The Eve of St. Agnes, and Other Poems* (1820), Keats went to Italy for his health and died there at the age of 25. Keats's poems are unequaled for dignity, melody, and richness of imagery. They include "Ode to a Nightingale," "Ode on a Grecian Urn," "To Autumn," "Ode on Melancholy," and the unfinished epic "Hyperion." "The Eve of St. Agnes" and "La Belle Dame sans Merci" are examples of romantic medievalism at its best. His sonnets include "When I have fears that I may cease to be" and "Bright star, would I were stedfast as thou art."

Keble, John, 1792–1866, English clergyman and poet. His poetical work *The Christian Year* (1827), based on the BOOK OF COMMON PRAYER, won him a professorship of poetry at Oxford (1831–41). J.H. NEWMAN called his sermon "National Apostasy" (1833) the start of the OXFORD MOVEMENT.

Keeling Islands: see COCOS (KEELING) ISLANDS.

Kefauver, (Cary) Estes, 1903–63, U.S. political leader; b. Madisonville, Tenn. A Democratic congressman (1939–49) and senator (1949–63) from Tennessee, he led (1950–51) a Senate committee investigating crime and supported civil-rights legislation. He was the unsuccessful Democratic candidate for vice president in 1956.

Kekkonen, Urho Kaleva [kē'kōnĕn], 1900–86, president of Finland (1956–81). Leader of the Agrarian party (from 1965 the Center party), he held various cabinet posts from 1936 and was prime minister (1950–56). He resigned the presidency for reasons of health and was succeeded (1982) by Mauno Koivisto.

Kekulé von Stradonitz, Friedrich August [kā'kōōlā], 1829–96, German organic chemist. A professor at Bonn, he is most noted for his representation of the molecular structure of BENZENE as a ring. Such rings are the basic structural feature of AROMATIC COMPOUNDS.

Keller, Helen Adams, 1880–1968, American author and lecturer; b. Tuscumbia, Ala. Blind and deaf from the age of two, she was put (1887) in the care of Anne Sullivan (see MACY, ANNE SULLIVAN), who became her teacher and lifelong companion. Keller made rapid progress and in 1904 was graduated from Radcliffe College with honors. She published and lectured widely to raise funds for the training of the blind and for other social causes.

Kellogg-Briand Pact, or Pact of Paris, agreement reached in 1928 by 15 nations (and eventually ratified by 62 nations) who agreed to settle all conflicts by peaceful means and who renounced war as an instrument of national policy. U.S. Secy. of State Frank Billings Kellogg and French Foreign Minister Aristide BRIAND were its sponsors. Its effectiveness was vitiated by its failure to provide measures of enforcement. Ultimately, the pact proved to be meaningless, especially as nations adopted the practice of waging undeclared wars.

Kelly, Ellsworth, 1923–, American painter; b. Newburgh, N.Y. He paints flat color areas, usually with sharp, geometric contours, e.g., *Atlantic* (1956; Whitney Mus., N.Y.C.).

Kelly, George, 1887–1974, American playwright; b. Philadelphia. His best-known plays, satires on American middle-class life, include *The Torch-Bearers* (1922) and *Craig's Wife* (1925; Pulitzer).

Kelly, Grace (Patricia): see GRACE, princess consort of Monaco.

Kelvin, William Thomson, 1st Baron, 1824–1907, British mathematician and physicist; b. Ireland. He was professor (1846–99) of natural philosophy at the Univ. of Glasgow. His work in THERMODYNAMICS coordinating the various existing theories of heat established the law of the conservation of ENERGY as proposed by James JOULE. He discovered the Thomson effect in thermoelectricity and introduced the Kelvin scale, or absolute scale, of TEMPERATURE. His work on the transmission of messages by undersea cables made him a leading authority in this field.

kelvin: see METRIC SYSTEM; TEMPERATURE.

Kelvin temperature scale: see TEMPERATURE.

Kemp, Jack (French), 1935–, U.S. politician and government official; b. Los Angeles. A professional football quarterback for 13 seasons (1957–69), primarily with the San Diego Chargers and Buffalo Bills, he was elected as a U.S. representative from New York in 1970. A conservative Republican, he championed supply-side economics and urban ENTERPRISE ZONES, coauthored the 1981 Kemp-Roth tax cut bill, and ran unsuccessfully for the 1988 Republican presidential nomination. He was (1989–93) secretary of housing and urban development under Pres. BUSH.

Kempis, Thomas à: see THOMAS À KEMPIS.

Kenai Fjords National Park: see NATIONAL PARKS (table).

Kendall, George Wilkins, 1809–67, American journalist; b. near Amherst, N.H. A partner in founding (1837) the New Orleans *Picayune,* he was an active exponent of the MEXICAN WAR, in which he served. His reports, sent back to his paper by private express, earned him a reputation as the first modern war correspondent.

kendo: see MARTIAL ARTS.

Keneally, Thomas, 1935–, Australian novelist. His strong, often violent novels are usually set in a specific historical period, e.g., *The Chant of Jimmie Blacksmith* (1972), about an aborigine run amok in the Australia of 1900. His other novels include *The Confederates* (1979) and *Flying Hero Class* (1991). *Schindler's List* (1982) novelizes the story of Oskar Schindler, a businessman who saved the lives of many Jews during the HOLOCAUST.

Kennan, George Frost, 1904–, U.S. diplomat and historian; b. Milwaukee, Wis. A formulator of the policy of "containment" toward

the USSR, he was ambassador to Moscow (1952) until the Russians demanded his removal. He later served (1961–63) as ambassador to Yugoslavia. His works include *American Diplomacy, 1900–1950* (1951), his memoirs (2 vol., 1967–72), and the autobiographical *Sketches from a Life* (1989).

Kennedy, American family, active in U.S. government and politics. **Joseph Patrick Kennedy,** 1888–1969, b. Boston, engaged in banking, shipbuilding, and motion-picture distribution before serving as chairman of the Securities and Exchange Commission (1934–35) and head of the U.S. Maritime Commission (1936–37). He was U.S. ambassador to Great Britain (1937–40). His son **John Fitzgerald Kennedy** was president of the U.S. (see separate article). His son **Robert Francis Kennedy,** 1925–68, b. Brookline, Mass., served (1961–64) as U.S. attorney general. He resigned after Pres. Kennedy's death and was elected (1964) U.S. senator from New York. In 1968 he sought the Democratic presidential nomination, but after winning the California primary he was mortally wounded by a gunman, Sirhan B. Sirhan. Joseph Kennedy's youngest son, **Edward Moore Kennedy,** 1932–, b. Boston, has served as U.S. senator from Massachusetts since 1962. A spokesman for liberal causes, he has advocated such reforms as national health insurance and tax reform. His political future was marred somewhat by the Chappaquiddick incident (July 1969) in which Mary Jo Kopechne, a passenger in a car he was driving on an island near Martha's Vineyard, Mass., was drowned when the car ran off a bridge. Kennedy unsuccessfully challenged Pres. Jimmy CARTER for the 1980 Democratic presidential nomination.

Kennedy, Anthony M.: see SUPREME COURT, UNITED STATES (table 1).

Kennedy, John Fitzgerald, 1917–63, 35th president of the U.S. (1961–63); son of Joseph P. Kennedy; brother of Robert Francis Kennedy and Edward Moore Kennedy (see KENNEDY, family); b. Brookline, Mass. After enlisting in the U.S. navy in World War II, he served with distinction as commander of a PT boat in the Pacific. He was a Democratic congressman from Massachusetts (1947–53) and in 1952 won a seat in the U.S. Senate. The next year he married Jacqueline Lee Bouvier (see ONASSIS, JACQUELINE BOUVIER). Kennedy narrowly lost the Democratic vice presidential nomination in 1956 and in 1960 won the party's presidential nomination. He defeated Republican Richard NIXON, becoming at 43 the youngest man to be elected president. His domestic program, the New Frontier, called for tax reform, federal aid to education, medical care for the aged under Social Security, and the extension of civil rights. Many of his reforms, however, stalled in Congress, and foreign-affairs crises occupied much of his time. He was much criticized for his approval for the abortive BAY OF PIGS INVASION (1961) of Cuba. In Oct. 1962 U.S. reconnaissance planes discovered Soviet missile bases there. In the ensuing CUBAN MISSILE CRISIS, Kennedy ordered a blockade of Cuba and demanded the removal of the missiles. After a brief and tense interval, the USSR complied with his demands. The next year the U.S. and the Soviet Union signed a limited treaty banning nuclear tests. Kennedy also increased the number of U.S. military advisers in South Vietnam to about 16,000 (see VIETNAM WAR). He established the Alliance for Progress to give economic aid to Latin America and created the PEACE CORPS. He also pressed hard to achieve racial INTEGRATION in the South. On Nov. 22, 1963, Kennedy was shot and killed in Dallas, Tex. Vice Pres. Lyndon JOHNSON succeeded him as president. The WARREN COMMISSION, appointed to investigate the assassination, concluded that it was the work of a single gunman, Lee Harvey Oswald. In 1979, however, the House Select Committee on Assassinations, relying in part on acoustical evidence, concluded that a conspiracy was "likely" and that it may have involved organized crime.

Kenneth I, d. 858, traditional founder of the kingdom of Scotland. He united (c.843) the thrones of Dalriada and the Picts.

Kensett, John Frederick, 1818–72, American painter; b. Cheshire, Conn. Famous for delicately colored landscapes, he was a member of the HUDSON RIVER SCHOOL.

Kent, Rockwell, 1882–1971, American artist and writer; b. Tarrytown, N.Y. Kent is known for his stark, powerful graphic art and paintings. His major works include *Toilers of the Sea* (Art Inst., Chicago) and *Winter* (Metropolitan Mus.). Among his books are *Wilderness* (1921) and *Salamina* (1935).

Kent, kingdom of, one of the kingdoms of Anglo-Saxon England. Kent was settled (mid-5th cent.) by the Jutes, who overcame the British inhabitants. Their kingdom comprised essentially the area of the present county of Kent. King ÆTHELBERT of Kent established hegemony over England south of the Humber R. and became a Christian. Kent was later subject to King OFFA of MERCIA and in 825 became part of WESSEX. The kingdom remained an advanced area of pre-Norman England because of the archbishopric of CANTERBURY and because of steady intercourse with the Continent.

Kentucky, one of the so-called border states of the S central U.S.; bordered by West Virginia (E), Tennessee (S), the Mississippi R., across which lies Missouri (SW), and Illinois, Indiana, and Ohio, all across the Ohio R. (W, N).

Area, 40,395 sq mi (104,623 sq km). *Pop.* (1990) 3,685,296, a 0.7% increase over 1980 pop. *Capital,* Frankfort. *Statehood,* June 1, 1792 (15th state). *Highest pt.,* Black Mt., 4,145 ft (1,264 m); *lowest pt.,* Mississippi R., 257 ft (78 m). *Nickname,* Bluegrass State. *Motto,* United We Stand, Divided We Fall. *State bird,* cardinal. *State flower,* goldenrod. *State tree,* Kentucky coffee tree. *Abbr.,* Ky.; KY.

Land and People. Coal-rich E Kentucky is part of the APPALACHIAN MOUNTAINS system. The mountains give way in the west to the rolling agricultural plains and rocky hillsides of the Pennyroyal, the famous Bluegrass region, where thoroughbreds are raised, and low flatlands along the MISSISSIPPI R. The climate is generally mild. About 52% of the population lives in urban areas. LOUISVILLE is the largest city, followed in size by LEXINGTON. In 1990 the population was 92% white and 7% African American.

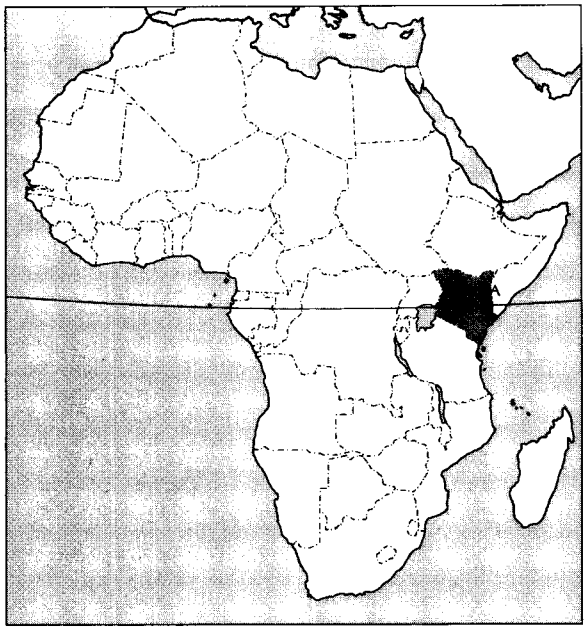
Economy. Manufacturing accounts for most of Kentucky's income, with nonelectrical machinery, apparel, electrical equipment, and chemicals among the principal products. Finance, insurance, and real estate also now play significant roles in the state's economy. Tobacco has long been the state's chief crop. Other major agricultural products are cattle, soybeans, dairy products, corn, and hay. Kentucky leads the nation in the production of bituminous and lignite coal, and stone, petroleum, and natural gas are also extracted. The Kentucky Dam, on the TENNESSEE R., is a major part of the TENNESSEE VALLEY AUTHORITY. Tourism is of growing importance, partly because of such attractions as Mammoth Cave National Park (see NATIONAL PARKS, table) and the annual Kentucky Derby thoroughbred race, held in Louisville.

Government. The constitution of 1891 provides for a governor elected to a four-year term. The general assembly consists of a senate whose 38 members serve four-year terms and a house with 100 members elected to two-year terms. Kentucky is represented in the U.S. Congress by six representatives and two senators and has eight electoral votes.

History. Early settlers began crossing the mountains to settle in Kentucky during the 1760s, and in 1775 Daniel BOONE helped to blaze the WILDERNESS ROAD. After Kentucky became (1792) the first state west of the Appalachians to join the Union, it prospered from river traffic on the Mississippi and Ohio. Residents of this border state were torn over the question of slavery, and although Kentucky remained in the Union, its residents fought on both sides in the CIVIL WAR. Coal mining, which began on a large scale during the 1870s, was well established by the early 20th cent. Mining areas, especially Harlan co., became the scene of violent labor strife when the United Mine Workers of America attempted to unionize the mines during the 1930s. Mining subsequently entered a decline, but because of the national energy crisis of the 1970s, Kentucky enjoyed new prosperity from the revival of its coal-mining industry during the 1970s and 80s.

Kentucky and Virginia Resolutions, in U.S. history, resolutions passed in 1798 and 1799 by the Kentucky and Virginia legislatures in opposition to the ALIEN AND SEDITION ACTS. The Kentucky Resolutions, written by Thomas JEFFERSON, stated that the federal government had no right to exercise powers not delegated to it by the Constitution. A further resolution declared that the states could nullify objectionable federal laws. The Virginia Resolutions, written by James MADISON, were milder. Both were later considered the first notable statements of the STATES' RIGHTS doctrine.

Kenya [kĕn'yə, kēn'–], officially Republic of Kenya, republic (1992 est. pop. 26,164,000), 224,960 sq mi (582,646 sq km), E Africa, bordered by Somalia (E), the Indian Ocean (SE), Tanzania (S),



Lake Victoria (SW), Uganda (W), the Sudan (NW), and Ethiopia (N). Principal cities are NAIROBI, the capital, and MOMBASA, the chief port. Kenya, which lies astride the equator, has five main regions: a narrow, dry coastal strip; bush-covered plains in the interior; high-lying scrublands in the northwest; fertile grasslands and highland forests in the southwest; and the GREAT RIFT VALLEY in the west, location of some of the country's highest mountains, including MT. KENYA (17,058 ft/5,199 m), and of Lake Turkana (Rudolf). Except for the temperate highlands, the climate is hot and dry. The great majority of Kenyans engage in subsistence farming. Coffee, tea, petroleum products, cereals, and fresh vegetables, fruits, and flowers are the chief exports. Large numbers of cattle are pastured in the grasslands. Industry, which is expanding, includes oil refining, food processing, and the manufacture of consumer goods, cement, and textiles. Tourists, attracted by Kenya's protected wildlife in Tsavo National Park, are an important source of income. The Kikuyu, Luhya, Luo, Kalenjin, Kamba, and 35 other indigenous ethnic groups make up 97% of the population. Many of the people follow traditional beliefs, but about 65% are Christian and about 6% Muslim. Swahili is the official language, but English is used in commerce.

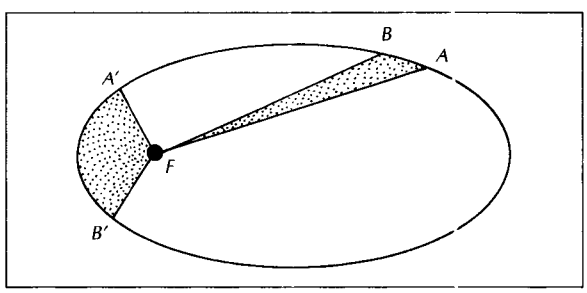
History. Anthropological discoveries indicate that humans, perhaps the first on earth, probably inhabited southern Kenya some 2 million years ago. In the Kenya highlands farming and domestic herds can be dated to 1000 B.C. Arab traders settled on the coast by the 8th cent. A.D., establishing several autonomous city-states. The Portuguese, who first visited the Kenya coast in 1498, gained control of much of it but were expelled by Arabs in 1729. In 1886, under a British-German agreement on spheres of influence in E Africa, most of present-day Kenya passed to Britain, and in 1903, after a railroad opened up the interior, the first European settlers moved in. Under Britain, Europeans controlled the government, and Indians, who had arrived earlier, were active in commerce, while Africans were largely confined to subsistence farming or to work as laborers. Protests by Africans over their inferior status reached a peak in the so-called MAU-MAU emergency (1952–56), an armed revolt against British rule. After the rebellion Britain increased African representation in the legislative council, and in 1963 Kenya gained independence. The country became a republic in 1964, with Jomo KENYATTA as president. The first decade of independence was marked by disputes among ethnic groups (especially the Kikuyu and the Luo), by the exodus of many Europeans and Asians, and by sporadic fighting with Somalia over boundary issues. Daniel arap MOI of the Kenya African National Union succeeded to the presidency after Kenyatta's death in 1978. A stable democracy in 1978, Kenya under Moi became a one-party state and, increasingly, a dictatorship. Undermined by growing internal opposition and international resistance to supplying aid to his government, Moi agreed to end one-party rule in 1991, but social and political unrest, especially tribal conflicts that Moi's government has been accused of promoting, continued. Moi was reelected president (1992) in a multiparty election that his opponents denounced as fraudulent.

Kenya, Mount, or **Mount Kirinyaga,** extinct volcano, 17,058 ft (5,199 m) high, in Kenya. The snow-capped peak, located near the equator, is the second-highest mountain in Africa, after KILIMANJARO.

Kenyatta, Jomo, 1893?–1978, 1st president of KENYA (1964–78). One of the best-known African leaders, he founded various pan-African nationalist movements. He was imprisoned by the British in 1953 following the MAU MAU uprising and was exiled in 1959. He was released in 1961 to negotiate Kenya's independence (1963).

Kepler, Johannes, 1571–1630, German astronomer. He was professor of mathematics at Graz (1593–98) and court mathematician to Holy Roman Emperor Rudolf II. In 1596 he wrote *Mysterium cosmographicum,* which led to exchanges with GALILEO and Tycho BRAHE. His *Astronomia nova* (1609) contained the first two of what became KEPLER'S LAWS; the third law appeared in 1619 in his *Harmonice mundi.* These laws were the result of calculations based on Brahe's accurate observations, which Kepler published in the *Tabulae Rudolphinae* (1627).

Kepler's laws, three mathematical statements by Johannes KEPLER that accurately describe the revolutions of the planets around the sun. The first law states that the shape of each planet's orbit is an ellipse (see CONIC SECTION), with the sun at one focus. The second law states that if an imaginary line is drawn from the sun to the planet, the line will sweep out equal areas in space in equal periods of time for all points in the orbit. The third law states that the ratio of the cube of the semimajor axis of the ellipse (i.e., the average distance of the planet from the sun) to the square of the planet's period (the time it needs to complete one revolution around the sun) is the same for all the planets. Newton gave a physical explanation of Kepler's laws with his laws of MOTION and law of GRAVITATION. See also CELESTIAL MECHANICS.



Kepler's law: Schematic representation of Kepler's second law. The areas ABF and A'B'F are equal and are swept out in equal intervals of time by a planet orbiting around the sun (at F).

Kerensky, Aleksandr Feodorovich, 1881–1970, Russian revolutionary. He was prime minister in the provisional government that followed the Feb. 1917 RUSSIAN REVOLUTION, but his failure to withdraw Russia from WORLD WAR I or to deal with economic problems enabled the Bolsheviks (see BOLSHEVISM) to overthrow him in Nov. 1917. He fled to Paris and then (1940) to the U.S.

Kerguelen Island: see FRENCH SOUTHERN AND ANTARCTIC LANDS.

Kérkira or **Corfu,** island (1991 pop. 105,043), 229 sq mi (593 sq km), NW Greece, in the Ionian Sea. Its industries include agriculture, fishing, and tourism. Settled c.730 B.C. by Corinthians, it later concluded a rebellious alliance with Athens that helped to precipitate (431 B.C.) the PELOPONNESIAN WAR.

Kern, Jerome, 1885–1945, American composer; b. N.Y.C. Among his successful MUSICALS were *Show Boat* (1927; with Oscar HAMMERSTEIN 2d) and *Roberta* (1933). He wrote many famous songs, including "Smoke Gets in Your Eyes."

kerosene or **kerosine,** a colorless, thin oil that is less dense than water. It is a mixture of HYDROCARBONS commonly obtained in the fractional DISTILLATION of PETROLEUM, but also from coal, oil shale, and wood. Once the most important refinery product because of its use in lamps, kerosene is now used chiefly as a carrier in insecticide sprays and as a fuel in jet engines.

Kerouac, Jack, 1922–69, American writer; b. Lowell, Mass. A leader of the BEAT GENERATION, he wrote of the frenetic pursuit of new experience. His best-known work is the novel *On the Road* (1957). He also wrote other novels and poetry.

Ketchwayo: see CETEWAYO.

kettledrum: see DRUM.

Kew Gardens, Surrey, S England, on the Thames just W of London; officially, Royal Botanic Gardens. Founded in 1761 by a member of the royal family and presented to the nation in 1841, the gardens cover 288 acres (117 hectares) and contain thousands of plant species, four museums, and laboratories and greenhouses.

Key, Francis Scott, 1779–1843, American poet, author of the STAR-SPANGLED BANNER; b. Carroll co., Md. A lawyer, he was U.S. attorney for the District of Columbia (1833–41).

key, in music, is used to indicate the scale from which the tonal material of a composition is derived. To say that a composition is in the key of C major means that it uses as its basic tonal material the tones of the C-major scale and that its harmony employs the chords built on the tones of that scale. MODULATION to another key may be utilized within the composition. A term usually used synonymously with *key* is TONALITY; absence of a feeling of key is ATONALITY.

Key Largo, island: see FLORIDA KEYS.

Keynes, John Maynard, Baron Keynes of Tilton [kānz], 1883–1946, English economist and monetary expert. His theories, known as Keynesian economics, are the most influential economic formulation of the 20th cent. In 1919 he represented the British treasury at the peace conference ending WORLD WAR I, but he resigned in protest over the VERSAILLES Treaty's economic provisions. He gained world fame with *Economic Consequences of the Peace* (1919). His departure from the classical concepts of a free economy dates from 1929, when he endorsed a government public-works program to promote employment. In the 1930s his theories prompted several nations to adopt spending programs, such as those of the NEW DEAL, to maintain high national income. His chief work, *The General Theory of Employment, Interest, and Money* (1936), advocates active government intervention in the market and, during recessionary times, deficit spending and easier monetary policies to stimulate business activity. At the Bretton Woods Conference (1944) he helped to win support for the creation of a world bank. He was raised to the peerage in 1942.

Key West, city (1990 pop. 24,832), seat of Monroe co., S Fla., on an island at the SW end of the FLORIDA KEYS, c.150 mi (240 km) from Miami, 90 mi (145 km) from Cuba. It is the southernmost city of the continental U.S., a resort and artists' colony and fishing center. Winslow HOMER painted there; Ernest HEMINGWAY, whose home is a museum, wrote there.

KGB, abbreviation of the Russian name of the USSR's Committee for State Security, the Soviet SECRET POLICE from 1953–54 to 1991. It and the MVD, the Ministry of the Interior, were the two organizations sharing responsibility for order and security. The KGB was responsible for security troops, the loyalty of government employees and the elite, and espionage and subversive activities abroad. The origins of the KGB were in the CHEKA, founded under LENIN and headed by Felix DZERZHINSKY. Reorganized in the 1920s as the OGPU (United State Political Directorate), its functions were transferred (1934) to the NKVD (People's Commissariat for Internal Affairs). The NKVD became notorious as the instrument of STALIN's state terror. In 1943 the NKVD was split into the predecessor organizations of the KGB and MVD, which were briefly reunited after Stalin's death under Lavrenti BERIA. Under KHRUSHCHEV, the KGB's arbitrary powers were reduced, and it was subjected to party control. In the aftermath of the attempted coup (1991) against Soviet Pres. GORBACHEV, in which KGB leaders played a major role, reformers were named to head the KGB and Interior Ministry. The KGB was renamed and restricted to counterintelligence, economic crimes, and air and rail security. Foreign intelligence gathering was assigned to the new Central Intelligence Service. With the USSR's collapse, Russia absorbed the KGB's remnants, combining most of them under the Security and Internal Affairs Ministry. YELTSIN ordered the ministry replaced with a new Federal Counterintelligence Service in 1993.

Khachaturian, Aram Ilich, 1903–78, Russian composer of Armenian parentage. His colorful music uses Armenian and Asian folk elements. He is best known for the ballet *Gayané* (1942), including the popular *Sabre Dance.*

Khalid ibn Abd al-Aziz al-Saud, 1913–82, king of Saudi Arabia (1975–82). He became king after the assassination of his half-brother FAISAL. The son of IBN SAUD, the founder of Saudi Arabia, he was the third of Ibn Saud's sons to become king. He continued the widespread economic and social reforms begun by Faisal. His half-brother FAHD succeeded him.

Kharkiv or **Kharkov,** city (1990 est. pop. 1,620,000), NE Ukraine, at the confluence of the Kharkiv, Lopan, and Udy rivers in the upper Donets valley. It is the second largest Ukrainian city and a main rail junction. Manufactures include metals, machinery, and chemicals. Founded in 1656 as a military outpost, it became a center of commerce and culture. From 1919 to 1934 it was the capital of UKRAINE, until superseded by KIEV.

Khartoum, city (1983 pop. 473,597), capital of Sudan, a port at the confluence of the Blue Nile and White Nile rivers. Food, cotton, gum, and oil seeds are processed; textiles, clothing, and glass are produced. Khartoum is a railroad hub, with road connections to the adjacent cotton-growing region and an international airport. Founded in 1821 as an Egyptian army camp, it developed as a trade center and slave market. British forces resisted a long siege here in which Gen. Charles GORDON was killed (1885). The headquarters for the Bank for African Development, Khartoum is the economic link between the N and S African nations.

Khasbulatov, Ruslan Imranovich, 1942–, Russian politician. A Chechen from the Caucasus region, he was an academic economist in Moscow before his election (1990) to the Russian Congress of People's Deputies and parliament. A supporter of Boris YELTSIN, he served as his deputy (1990–91) and was elected chairman (speaker) of the congress and parliament in 1991. Increasingly critical of Yeltsin's economic program after 1991, he led the legislators in their power struggle with Yeltsin in 1993. He was imprisoned when parliament's attempt to oust Yeltsin by force was crushed by the army.

Khayyam, Omar: see OMAR KHAYYAM.

Khazars, ancient Turkic people who appeared in Transcaucasia in the 2d cent. A.D. and subsequently settled in the lower Volga region. They rose to great power; the Khazar empire at its height (8th–10th cent. A.D.) extended from the northern shores of the Black Sea and the Caspian Sea as far west as Kiev. The Khazars maintained friendly relations with the Byzantine Empire. Their empire came to an end in 965, when they were defeated by the duke of Kiev. In the 8th cent. the Khazar nobility embraced Judaism and thus are believed by some to be the ancestors of many East European Jews.

Khíos or **Chios,** island (1991 pop. 52,691), c.350 sq mi (910 sq km), E Greece, in the Aegean Sea. Its main industries are agriculture and marble quarrying. Colonized by Ionians, the island was independent by 479 B.C. It claims to be the birthplace of HOMER and is famed for its scenic beauty.

Khmer Empire, ancient kingdom of SE Asia, roughly corresponding to modern CAMBODIA and LAOS; fl. 6th–15th cent. It reached its greatest extent in the ANGKOR period (A.D. 889–1434), which produced exquisite architecture and sculpture. Khmer civilization was formed largely by Indian influences. The Khmers fought repeated wars against CHAMPA and the Annamese. The empire declined after invasions from Thailand.

Khmer Rouge, Cambodian Communist guerrilla force. Aided by Vietnamese Communists, it waged a war (1970–75) that toppled LON NOL. Under POL POT, it undertook a ruthless collectivization drive in which perhaps 1.5 million people died. Border fighting with Vietnam led to a Vietnamese invasion (1978–79), the ouster of the Khmer Rouge, and installation of the Heng Samrin regime. The Khmer Rouge, however, continued to field an army of c.30,000 near the Thai border and retained UN recognition as the official

Cambodian government. In 1982 it formed a coalition with former premier NORODOM SIHANOUK and non-Communist leader Son Sann. Khieu Samphan officially succeeded Pol Pot as head of the Khmer Rouge in 1985, but Pol Pot is believed to remain the real leader. All Cambodian factions signed (1991) a treaty calling for UN-supervised elections and disarming 70% of all forces, but the Khmer Rouge withdrew (1992) from the peace process and resumed fighting.

Khoikhoi, people of Namibia and Cape Province, South Africa. Formerly called Hottentots by whites, they speak a Khoisan language close to that of the San (Bushmen). A pastoral, nomadic people, they were decimated as Dutch colonialists took over their lands beginning in the 17th cent.; most of the c.40,000 survivors live in villages in Namibia.

Khomeini, Ruhollah [kōmānē'], 1900–89, Iranian ayatollah (religious leader); b. Ruhollah Hendi. A SHIITE Muslim, he adopted the name Khomeini in 1930. After teaching at a theological school in Qom, he was arrested (1963) and exiled to Turkey and Iraq before moving to Paris in 1978. Following the revolution that deposed MUHAMMAD REZA SHAH PAHLEVI, Khomeini returned in triumph to Iran in 1979, declared an Islamic republic, and began to exercise ultimate authority in the nation. His rule was marked by the holding of U.S. hostages (1979–81) and by war with Iraq (1980–88).

Khorezm [khərĕz'əm] or **Khwarazm,** ancient central Asian state; now in NW Uzbekistan. Part of the empire of CYRUS THE GREAT (6th cent. B.C.), Khorezm was conquered by the Arabs and converted to Islam in the 7th cent. A.D. Briefly independent (late 12th cent.), it ruled from the Caspian Sea to Bukhara and Samarkand, but fell to JENGHIZ KHAN (1221), to TIMUR (late 14th cent.), and then to the Uzbeks (early 16th cent.), who called it the khanate of Khiva.

Khosru, kings of PERSIA. **Khosru I,** d. 579 (r.531–79), was the greatest of the Sassanid monarchs and extended Persian rule E to the Indus River and W across Arabia, and N and NW by taking part of Armenia and Caucasia from the Byzantines. **Khosru II,** d. 628 (r.590–628), of the Sassanid dynasty, conquered much Byzantine territory before being assassinated by his son and successor, Kauadh II Shiruya.

Khrushchev, Nikita Sergeyevich [khrōōshchôf'], 1894–1971, Soviet leader. Of Ukrainian peasant origin, he joined the Communist party in 1918, becoming a member of its central committee in 1934. As first secretary of the Ukrainian party (from 1938) he carried out STALIN's purge of its ranks. As a full member of the politburo (after 1939) he was a close associate of Stalin. In the power struggle after Stalin's death (1953) he emerged as first secretary of the party. At the 1956 party congress he delivered a "secret" report denouncing Stalin's policies and personality. The new atmosphere of freedom, however, led to uprisings in Poland and Hungary that year. In 1957 he replaced BULGANIN as premier, becoming head of both state and party. As part of his policy of "peaceful coexistence" in the COLD WAR, he toured the U.S. in 1959 and met with Pres. EISENHOWER; but in 1960 he cancelled the Paris summit conference after a U.S. reconnaissance plane was shot down over the USSR. Repeated crop failures, his retreat in the CUBAN MISSILE CRISIS (1962), and the ideological rift with China led to his removal from power in Oct. 1964.

Khufu [khōō'fōō] or **Cheops** [kē'ŏps], fl. c.2680 B.C., Egyptian king, founder of the IV dynasty. He ruled for 23 years and built the greatest PYRAMID at Gizeh.

Khyber Pass, narrow, steep-sided mountain pass, c.3,500 ft (1,070 m) high and 28 mi (45 km) long, on the Pakistan-Afghanistan border. For centuries the main western land approach to India, it was used by ALEXANDER THE GREAT, TIMUR, and other conquerors. A modern highway and a railroad (built 1920–25) with 34 tunnels link Peshawar, Pakistan, with the Afghan capital, Kabul.

kibbutz, economically most important type of Israeli COLLECTIVE FARM. The land is held by the Jewish National Fund and rented at a nominal fee; all other property (except certain personal possessions) is collectively owned. Planning and work is collective, and collective living is the rule. Elected officials administer social and economic affairs. About 5% of Israel's population live on kibbutzim.

Kickapoo, indigenous people of North America (see NORTH AMERICA, INDIGENOUS PEOPLES OF) speaking an Algonquian language of the Algonquian-Wakashan stock (see NATIVE AMERICAN LANGUAGES). Living in SW Wisconsin, they added buffalo hunting to their Eastern Woodlands culture. In the 18th cent., numbering 3,000, they moved to Illinois. For siding with the British in the WAR OF 1812, they lost their lands to the U.S. From Missouri and Kansas some went to Mexico c.1852. After the Civil War the Mexican Kickapoo harassed U.S. border settlements. Today small groups of Kickapoo live in Oklahoma, in Kansas, and along the Texas-Mexico border. In 1990 there were 3,577 Kickapoo in the U.S.

Kid, Thomas: see KYD, THOMAS.

Kidd, William (Captain Kidd), 1645?–1701, British pirate. Commissioned (1695) as a privateer to guard English ships in the Red Sea and Indian Ocean, he turned pirate. He was tried for piracy and murder and hanged in England. Legends of his barbaric cruelty and buried treasure are unsubstantiated.

Kidder, Alfred Vincent, 1885–1963, American archaeologist; b. Marquette, Mich. His excavations (1915–29) at Pecos, N.Mex., laid the foundation for modern archaeological field methods. He conducted (1927–50) a broad-scale research program in the Guatemalan highlands that established the framework of Mayan stratigraphy. His writings include *Introduction to the Study of Southwestern Archaeology* (1924), regarded as the first comprehensive archaeological study of a New World area.

kiddush [Heb., = sanctification], Jewish ceremonial blessing indicating the beginning of the Sabbath or a Hebrew festival, usually said at mealtime.

kidnapping, in law, unlawful taking away of someone by force, threat, or deceit, to detain the person against his or her will. Public outcry at the kidnapping and murder of the son of Charles A. LINDBERGH in 1932 led to adoption of severe penalties for the offense, now punishable by the U.S. government and most states by death or life imprisonment. Traditionally done for ransom, in recent years kidnapping has also been used by political extremists as a means of extorting concessions from governments, e.g., the release of political prisoners.

kidney, one of a pair of small, bean-shaped organs of the URINARY SYSTEM, located near the spine at the small of the back. The kidneys extract water and urea, mineral salts, toxins, and other waste products from the blood with filtering units called nephrons. From the nephrons the collected waste (URINE) is sent to the bladder for excretion. One kidney must function properly for life to be maintained. Kidney diseases include nephritis, inflammation of the kidneys caused by infection or degenerative changes in the renal capillaries, and nephrosis, a condition resulting from lesions in the renal tubules characterized by general edema and by protein in the urine. See also DIALYSIS; TRANSPLANTATION, MEDICAL.

kidney machine: see DIALYSIS.

Kiel [kēl], city (1989 est. pop. 241,000), N Germany on Kiel Bay, capital of SCHLESWIG-HOLSTEIN. Germany's chief naval base from 1871 to 1945, it is now a shipping and industrial center producing ships, textiles, metal products, and printed materials. Kiel was chartered in 1242 and joined the HANSEATIC LEAGUE in 1284. It passed to Denmark in 1773 and to Prussia in 1866. A naval mutiny at Kiel touched off a socialist revolution in Germany in 1918.

Kierkegaard, Søren, 1813–55, Danish philosopher and religious writer, a precursor of 20th-cent. EXISTENTIALISM and a major influence on modern Protestant theology. Kierkegaard described the various stages of existence as the aesthetic, the ethical, and the religious; advancing through this "existential dialectic," the individual becomes increasingly aware of his relationship to God. This awareness leads to despair as he realizes the antithesis between temporal existence and eternal truth. Reason is no help in achieving the final religious stage; a "leap of faith" is required. Kierkegaard's works, largely ignored in his own lifetime, include *Either/Or* (1843), *Fear and Trembling* (1843), *Philosophical Fragments* (1844), and *Concluding Unscientific Postscript* (1846).

Kiev [kē'ĕf], Ukr. *Kyyiv,* city (1990 est. pop. 2,620,000), capital of UKRAINE, on the Dnieper R. It Ukraine's largest city and a major port. Industries include food processing, metallurgy, machinery, and chemicals. One of the oldest European cities, it was a commercial center as early as the 5th cent. and became the capital of KIEVAN RUSSIA in the 9th cent. Invaded (1240) by the Mongols, it paid tribute to the GOLDEN HORDE until it passed (14th cent.) under

the control of LITHUANIA. It became (17th cent.) part of the Russian Empire and later (1920) of the USSR. During the German occupation (1941–44) thousands of Kiev's residents, including 50,000 Jews, were massacred. Reconstruction of the city ended c.1960. Its architectural treasures include the 11th-cent. Cathedral of St. Sophia.

Kievan Russia, medieval state of the Eastern Slavs. Earliest forerunner of Russia and the USSR, it included most of present-day UKRAINE and BELARUS and part of NW European Russia. In about 862 Rurik, a Varangian (Scandinavian) warrior, founded a dynasty at NOVGOROD. His successor, Oleg (d. 912), seized Kiev, establishing the Kievan state, and freed the Eastern Slavs from the sway of the KHAZARS. Under Sviatoslav (d. 972) Kievan power reached the lower Volga and N Caucasus. VLADIMIR I (r.980–1015) introduced Christianity. Under his son, YAROSLAV (r.1019–54), the state reached its cultural and political apex, but after Yaroslav's death it was weakened by internal strife and ultimately fell to the Mongols (1237–40).

Kigali, town (1990 est. pop. 913,481), capital of Rwanda. Founded by Germany in 1907, it is the country's main administrative and economic center and has an international airport. A tin-smelting plant processes cassiterite (tin ore), which is mined in the vicinity.

Kikuyu, Bantu-speaking agricultural people of northern Kenya, inhabiting highlands NE of Nairobi; they number over 5 million. The most influential of Kenya's peoples, they fought the British during the 1950s MAU MAU rebellion. Dwelling traditionally in family homesteads, more recently in villages, they have a patrilineal social organization with much emphasis on age groups. Kikuyu tribal customs are described in Jomo KENYATTA's *Facing Mount Kenya* (1938).

Kilauea [kē'läwā'ə], volcanic crater, Hawaii island, on the southeastern slope of MAUNA LOA in Hawaii Volcanoes National Park (see NATIONAL PARKS, table). It is c.8 mi (13 km) in circumference and 3,646 ft (1,111 m) deep, with a lake of molten lava c.740 ft (230 m) below its rim. Its most recent eruption began in 1983.

Kilimanjaro, highest mountain of Africa, NE Tanzania. An extinct volcano, it rises in two snow-capped peaks, Kibo (19,340 ft/5,895 m) and Mawenzi (17,564 ft/5,354 m).

killer whale: see DOLPHIN.

Kilmer, Joyce, 1886–1918, American poet; b. New Brunswick, N.J. He is known chiefly for his poem "Trees," in *Trees and Other Poems* (1914).

kilogram: see METRIC SYSTEM; WEIGHTS AND MEASURES, table.

Kimhi or **Kimchi** [kĭm'khē], family of Jewish scholars and grammarians in Spain and France. **Joseph ben Isaac Kimhi,** 1105?–1170?, wrote a biblical commentary, translations from Arabic, and poetry, and made grammatical reforms. His *Sefer ha-Berit* is an anti-Christian polemic. His son **Moses Kimhi,** d. 1190?, wrote *Paths of Knowledge,* a grammatical text used by 16th-cent. Christian Hebraists for its philological information. Another son, **David Kimhi,** known as Redak, 1160?–1235?, was the author of a noted Hebrew grammar, a biblical dictionary, and learned commentaries that were included in standard editions of the Hebrew Bible.

Kim Il Sung, 1912–, North Korean political leader. Trained in Moscow, he was North KOREA's first premier (1948–72) and led his nation in the KOREAN WAR. In 1972 he became president under a revised constitution. His son, **Kim Jong Il,** 1942–, has been groomed as his successor. Active in the Korean Worker's party leadership since 1964, Kim Jong Il became secretary of its central committee in 1973. In 1991 he was appointed supreme commander of the armed forces.

Kim Young Sam, 1927–, South Korean political leader. An opponent of military rule and National Assembly member (1954–79), he was (1980–85) banned from politics and twice put under house arrest. Kim was an unsuccessful presidential candidate in 1987 but shrewdly merged his party with the ruling Democratic Liberals (1990) and won the presidency in 1992. He initiated a series of political and economic reforms.

kindergarten, system of preschool education designed (1837) by Friedrich FROEBEL. In an educational situation less formal than elementary school, children's play instincts are organized constructively through songs, stories, games, simple materials, and group activities, to develop habits of cooperation and application. In the U.S. kindergartens are generally part of the public school system. The first American kindergarten was established in 1856, the first public kindergarten in 1873.

kinematics: see DYNAMICS.

kinetic energy: see ENERGY.

kinetic-molecular theory of gases, physical theory that explains the behavior of gases by assuming that any gas is composed of a very large number of very tiny particles, called molecules, that are very far apart compared to their sizes. The molecules are assumed to exert no forces on one another, except during rare, perfectly elastic collisions. A gas corresponding to these assumptions is called an ideal gas. The analysis of the behavior of an ideal gas according to the laws of mechanics leads to the GAS LAWS. The theory also shows that the absolute TEMPERATURE is directly proportional to the average kinetic energy of the molecules. Pressure is seen to be the result of large numbers of collisions between molecules and the walls of the container in which the gas is held. See THERMODYNAMICS.

kinetics: see DYNAMICS.

King, Billie Jean, 1943–, American tennis player; b. Long Beach, Calif., as Billie Jean Moffitt. Outstanding in both singles and doubles play, she won 6 singles and 10 doubles championships at Wimbledon by 1979, and took the U.S. Open singles crown 4 times between 1967 and 1974. King has been instrumental in improving the status of women's professional tennis.

King, Martin Luther, Jr., 1929–68, African-American clergyman and civil-rights leader; b. Atlanta, Ga. An active Baptist minister and a moving orator, he first gained national prominence by advocating passive resistance to segregation and leading a year-long boycott (1955–56) against the segregated bus lines in Montgomery, Ala. He subsequently set up the Southern Christian Leadership Conference as a base for nonviolent marches, protests, and demonstrations for African-American rights, such as the 1963 March on Washington and the 1965 voter-registration drive in Selma, Ala. King was awarded the 1964 Nobel Peace Prize, but his leadership was challenged as civil-rights activists became more militant. In the late 1960s he intensified his opposition to the war in Vietnam and to economic discrimination. While planning a multiracial Poor People's March for antipoverty legislation, he was shot and killed in Memphis, Tenn. James Earl Ray was convicted of the murder. King's wife, **Coretta Scott King,** 1927–, b. Heiberger, Ala., carried on his civil-rights work after his assassination. She wrote *My Life with Martin Luther King* (1989).

King, Rufus, 1755–1827, American political leader; b. Scarboro, Me. As a delegate (1784–87) to the CONTINENTAL CONGRESS, he helped draft the ORDINANCE OF 1787; and he attended the FEDERAL CONSTITUTIONAL CONVENTION. A Federalist, he served (1789–96, 1813–25) as U.S. senator from New York. He also was minister to Great Britain (1796–1803, 1825–26).

King, William Lyon Mackenzie, 1874–1950, prime minister of CANADA (1921–30, 1935–48). He was editor (1900–1908) of the *Labour Gazette* and minister of labor (1909–11) in the Liberal government before he succeeded (1919) Wilfred LAURIER as party leader. As prime minister during World War II, King directed the Canadian war effort and signed agreements with the U.S. providing for joint defense.

King Arthur: see ARTHURIAN LEGEND.

King George's War: see FRENCH AND INDIAN WARS.

King Philip's War, 1675–76, the most devastating INDIAN WAR in NEW ENGLAND. Named for King Philip, chief of the Wampanoag Indians, the war began when the English executed three Native Americans for murder. It involved several Native American peoples and all the New England colonies before the tribes were defeated.

Kings, books of the OLD TESTAMENT, called First and Second Kings in the Authorized Version, where they occupy 11th and 12th place. They continue the history of 1 and 2 SAMUEL from the death of DAVID to the destruction of the southern kingdom of JUDAH (i.e., from 1000 to 560 B.C.). They include the reign of SOLOMON (1 Kings 1–11); a parallel account of the two Hebrew kingdoms (1 Kings 12–2 Kings 17), including the stories of the house of AHAB and the prophets ELIJAH and ELISHA; and the end of the southern kingdom (2 Kings 18–25).

Kings Canyon National Park: see NATIONAL PARKS (table).

Kingsley, Charles, 1819–75, English author and clergyman. His

views on CHRISTIAN SOCIALISM were expressed in the novel *Alton Locke* (1850). A remark by Kingsley denigrating the Roman Catholic clergy produced a controversy with J.H. NEWMAN and led to Newman's *Apologia.* Kingsley's novels include *Westward Ho!* (1855) and, for children, *The Water Babies* (1863).

Kingston, city (1989 est. pop. 661,000), SE Jamaica, capital of Jamaica. It is the island's commercial hub, chief port, and largest city. Founded in 1693 on one of the Caribbean's best-protected harbors, near the early capital of Port Royal, Kingston replaced Spanish Town as Jamaica's capital in 1872. Tourism, oil refining, and food processing are major industries. The city's botanical gardens are famous.

Kingstown, city (1990 est. pop. 29,500), capital of SAINT VINCENT AND THE GRENADINES.

King William's War: see FRENCH AND INDIAN WARS.

Kinnock, Neil (Gordon), 1942–, British politician, leader of the LABOUR PARTY (1983–92). First elected to Parliament in 1970, he became a left-wing critic of Labour Prime Mins. Harold WILSON and James CALLAGHAN. A protégé of Michael FOOT, he rose in the party hierarchy, becoming (1979) spokesman for education in the Labour shadow cabinet. In 1983 he was chosen party leader. Kinnock moved Labour to more centrist positions, neutralizing the party's extreme left and reducing the challenge posed by the Liberal and Social Democratic parties, but he could not lead Labour to victory at the polls.

Kino, Eusebio Francisco [kē'nō], c.1644–1711, Jesuit missionary explorer in the U.S. Southwest; b. Segno, in the Tyrol. He was cosmographer on a 1681 mission to colonize lower CALIFORNIA. It failed, and he settled at Pinero Alta (now N Sonora and S Arizona), exploring and mapping the region.

Kinsey, Alfred Charles, 1894–1956, American biologist; b. Hoboken, N.J. He is known for his studies, based on over 10,000 personal interviews with assorted Americans, of human sexuality; this work was summarized in *Sexual Behavior in the Human Male* (1948) and *Sexual Behavior in the Human Female* (1953), which he wrote with colleagues. He taught at the Univ. of Indiana from 1920, and founded and directed (1942–56) the university's Institute for Sex Research.

Kinshasa, largest city (1984 pop. 2,653,558) and capital of Zaïre, W Zaïre, a port on the Congo (Zaïre) R. It is the country's communications and commercial center, with rail links upriver to Matadi, motorboat service to Brazzaville, Congo Republic, and an international airport. Founded in 1881 by Henry M. STANLEY, who named it Leopoldville (after Leopold II of Belgium), the city became the capital of the Belgian Congo in 1926. A rebellion there in 1959 launched the country's drive for independence. Modern Kinshasa (so named in 1966) is an educational and cultural center.

kinship, relationship between persons by blood or MARRIAGE; also, a system of rules based on such relationships and governing marriage, descent, inheritance, and, sometimes, residence. All societies recognize consanguinity (relationship by blood or by descent from a common ancestor) and affinity (relationship to a spouse's cosanguineous relatives). Marriage between persons in lineal consanguinity (in direct line of descent, e.g., father and daughter) or between brother and sister is considered incest and is almost universally void under church, civil, and common law, while marriage between persons of collateral consanguinity (sharing a common ancestor but not in direct line of descent, e.g., first cousins) may be allowed. Every individual is classified by kinship lines, or descent. Social organization is often dominated by descent groups based on links through females (matrilineal), males (patrilineal), or both (bilateral). In some societies the concept of kinship extends beyond the family to groups or clans in which consanguinity is hypothetical or even mythological, but which are governed by all the laws of descent.

Kiowa, indigenous people of the Plains (see NORTH AMERICA, INDIGENOUS PEOPLES OF), speaking a probable Aztec-Tanoan language (see NATIVE AMERICAN LANGUAGES). They had a pictographic calendar and worshiped a stone image, the *taimay.* Nomads, they acquired horses c.1710. Forced from the Black Hills by the CHEYENNE and SIOUX, they joined the COMANCHE in raids as far south as Mexico. In the 19th cent. they opposed white settlers and migrating eastern tribes until subdued (1874) by the U.S. Army. In 1990 there were 9,421 Kiowas in the U.S. The **Kiowa Apache,** a small group long associated with the Kiowa, live with them on an Oklahoma reservation.

Kipling, Rudyard, 1865–1936, English author; b. India. Kipling's popular works interpret India in all its heat, strife, and ennui. His romantic view of English imperialism is reflected in such well-known poems as "Mandalay," "Gunga Din," and *Recessional* (1897). His works include poems, in *Departmental Ditties* (1886) and *Barrack-Room Ballads* (1892); stories, in *Plain Tales from the Hills* and *Soldiers Three* (both 1888); a novel, *The Light That Failed* (1890); and children's stories, such as *The Jungle Book* (1894), *Captains Courageous* (1897), and *Kim* (1901). He received the 1907 Nobel Prize in literature.

Kipnis, Alexander, 1891–1978, Russian-American operatic bass; b. Russia. He performed in Berlin, Chicago, and New York City and was noted in the role of Boris Godunov.

Kirchhoff, Gustav Robert [kĭrkh'hôf], 1824–87, German physicist. He was professor of physics at the universities of Breslau, Heidelberg, and Berlin. He and Robert BUNSEN, working with the spectroscope, discovered the elements CESIUM and RUBIDIUM. Kirchhoff explained the Fraunhofer lines in the solar spectrum (see SUN) and formulated KIRCHHOFF'S LAWS describing current and voltage in an electric circuit.

Kirchhoff's laws, pair of laws stating general restrictions on the current and voltage (see POTENTIAL, ELECTRIC) in an ELECTRIC CIRCUIT or network. The first states that at any given instant the sum of the voltages around any closed path, or loop, in the network is zero. The second states that at any junction of paths in a network the sum of the currents arriving at any instant is equal to the sum of the currents flowing away.

Kirchner, Ernst Ludwig [kĭrkh'nər], 1880–1938, German expressionist painter and graphic artist. Inspired by primitive sculpture; late Gothic WOODCUTS; and the art of MUNCH, VAN GOGH, and the Fauves (see FAUVISM), he co-founded the BRÜCKE. His works, e.g., *The Street* (1913; Mus. of Mod. Art, N.Y.C.), show startling contrasts of pure color and aggressive forms. His woodcuts are powerful creations of the expressionist vision.

Kirghizia or **Kirghizstan:** see KYRGYZSTAN.

Kirghizstan: see KYRGYZSTAN.

Kiribati, officially Republic of Kiribati, independent nation (1991 pop. 71,137), 342 sq mi (886 sq km), consisting of 33 islands scattered across 2,400 mi (3,860 km) of the Pacific Ocean near the equator. It includes islands in the Gilbert, Phoenix, and Line groups and Banaba (formerly Ocean) Island, whose residents were moved to Rabi Island, FIJI, and are Fiji citizens. The population is nearly all Micronesian, with about 30% concentrated on TARAWA, site of the capital, Bairiki. Fishing and the growing of taro and bananas form the basis of the mainly subsistence economy. Copra became the chief export after mining of Banaba's once thick phosphate deposits ended in 1979. Languages spoken are English (official) and Gilbertese. Most of the people are Christian, about evenly divided between Roman Catholics and Protestants. A Commonwealth member, the country is a republic with a president, a cabinet, and a unicameral legislature. The islands were administered (1892–1916) with the Gilbert Islands as a British protectorate that became (1916) the British Gilbert and Ellice Islands colony. They gained self-rule in 1971, and, after the Ellice Islands gained (1978) independence as TUVALU, the remaining islands were granted independence (1979) as Kiribati. U.S. claims to several islands, including Kanton (formerly Canton) and Enderbury, were abandoned in 1979. A rapidly growing population has led to plans for resettling people from the central islands to the comparatively underpopulated Line Islands. See PACIFIC OCEAN map.

Kirinyaga, Mount: see KENYA, MOUNT.

Kirkland, (Joseph) Lane, 1922–, American labor leader, president (1979–) of the AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS (AFL-CIO); b. Camden, S.C. He was an executive assistant (1961–69) to AFL-CIO Pres. George MEANY and, from 1969, secretary treasurer of the AFL-CIO. Succeeding Meany as president, he made consolidation of the labor movement a major goal, overseeing the reentry of the United Automobile Workers (1981) and TEAMSTERS UNION (1987) into the AFL-CIO.

Kirkpatrick, Jeane (Duane Jordan), 1926–, U.S. public official; b.

Duncan, Okla. A Democrat, she was professor of political science at Georgetown Univ. when Pres. REAGAN chose her (1981) to be the U.S. representative to the UNITED NATIONS. She gained a reputation for independent thought, often criticizing the UN itself. She returned to Georgetown Univ. in 1985.

Kirov, Sergei Mironovich, 1886–1934, Soviet political leader. Kirov engaged in revolutionary activities after joining (1904) the Russian Social Democratic party. He headed (from 1926) the Leningrad Communist party organization and became a member of the Politburo (1930). His assassination triggered STALIN's Great Terror (1934–38).

Kirov Ballet, officially (since 1991) the St. Petersburg Ballet, one of the two major ballet companies of Russia (the other is the BOLSHOI). Originally the Imperial Russian Ballet, it was instrumental in developing much of classic ballet's technique and repertoire under the direction of Marius PETIPA. It declined after the Russian Revolution (1917). Agrippina Vaganova helped restore it to prominence, and it was renamed (1935) the Kirov Ballet. Famous for its classical elegance, the company declined again by the 1970s when limitations on artistic freedom prompted Rudolf NUREYEV, Natalia MAKAROVA, and Mikhail BARYSHNIKOV to defect. The political changes of the late 1980s and early 90s, which allowed the company to perform many previously forbidden Western ballets, reinvigorated it.

Kishinev: see CHIŞINĂU.

Kissinger, Henry Alfred, 1923–, U.S. secretary of state (1973–77); b. Germany. An expert in international affairs and nuclear defense, he was national-security adviser (1969–75) to Presidents NIXON and FORD, and played a major role in the formulation of U.S. foreign policy. He arranged Nixon's visit (1972) to China, shared (1973) the Nobel Peace Prize for negotiating a cease-fire with North Vietnam, and helped arrange a cease-fire in the 1973 ARAB-ISRAELI WAR.

Kitagawa Utamaro: see UTAMARO.

Kitakyushu [kētä'kyo͞oshō͞o], a port city (1990 pop. 1,026,467), Fukuoka prefecture, N Kyushu, Japan, on the Shimonoseki Strait between the Inland Sea and the Korea Strait. Kitakyushu is one of Japan's major manufacturing and railroad centers and has a great variety of industries producing iron and steel, textiles, chemicals, machinery, ships, and porcelain. It is also the base for a deep-sea fishing fleet. The city is connected by tunnel and bridge with Shimonoseki on Honshu.

Kitasato Shibasaburo, 1852–1931, Japanese physician. With Emil BEHRING he studied the tetanus bacillus and developed (1890) an antitoxin for diphtheria. He discovered (1894) the infectious agent of bubonic plague, which he described simultaneously with Alexandre Yersin.

Kitchener, Horatio Herbert Kitchener, 1st **Earl,** 1850–1916, British field marshal and statesman. In 1896 he began the Anglo-Egyptian reconquest of the Sudan that culminated in a victory at Omdurman (1898). He served under F.S. Roberts in the SOUTH AFRICAN WAR and, when Roberts returned (1900) to England, was left to face continued guerrilla warfare. By extending blockhouses, interning civilians, and denuding the land—methods that received much criticism—he secured Boer submission (1902). In WORLD WAR I he was secretary for war and, despite strained relations with the cabinet, carried out the vast expansion of the British army. He was drowned on a mission to Russia when his ship was sunk by a German mine.

Kitchener, city (1991 pop. 168,282), S Ontario, Canada, in the Grand R. valley, adjoining the smaller city of Waterloo. Major manufactures include processed food, and metal, leather, and rubber goods. Called Berlin until 1916, Kitchener was settled in 1806 by MENNONITES from Pennsylvania. It is renowned in Canada for its annual Oktoberfest.

Kitt Peak National Observatory, astronomical observatory (founded 1958) located at an altitude of 7,000 ft (2,130 km) on the Papago (Tohono O'Odham) reservation, SW of Tucson, Ariz.; it is administered by the Association of Universities for Research in Astronomy under contract with the U.S. National Science Foundation. Principal instruments include the Mayall 158-in. (4.01-m) reflector and the 60-in. (1.52-m) Robert McMath Solar Telescope, the largest of this type. The observatory's ten telescopes are supplemented at Kitt Peak by four other telescopes operated by other institutions.

Horatio Herbert Kitchener

Kitwe, city (1987 est. pop. 449,000), N central Zambia, near Zaïre; founded 1936. It is the main commercial and industrial center of a rich mining region known as the Copper belt. Manufactures include food products, clothing, and plastics.

kiva, large, underground chamber used by PUEBLO men for secret ceremonies. A modern kiva is a rectangular or circular structure with a fire pit in the center and a timbered roof; it is accessible by ladder. An opening in the floor represents the entrance to the lower world and the place through which life emerged into this world.

kiwi or **apteryx,** flightless BIRD (genus *Apteryx*) of New Zealand related to the OSTRICH and EMU. The size of a large chicken, the kiwi has short legs and coarse, dark plumage that hides rudimentary wings. There are three living species, all protected.

Klee, Paul [klā], 1879–1940, Swiss painter, graphic artist, and art theorist. His sophisticated theories of abstraction, combined with his inventiveness, give his works the appearance of great innocence. Associated with the BLAUE REITER, he became aware of new theories of color use, and thereafter his whimsical and fantastic images show a luminous, subtle color sense. Characteristic works are the witty *Twittering Machine* (1922; Mus. Mod. Art, N.Y.C.) and the disturbing *Revolutions of the Viaducts* (1937; Hamburg). His *Pedagogical Sketchbooks* (tr. 1944) define his approach to art.

Klein, (Christian) Felix, 1849–1925, German mathematician, noted for his work in geometry and on the theory of functions. His "Erlangen Programm" (1872) for unifying the diverse forms of geometry through the study of equivalence in transformation groups was influential for over 50 years. Klein was a prolific writer and lecturer on the theory, history, and teaching of mathematics.

Klein, Melanie, 1882–1960, British psychoanalyst; b. Vienna. As the first major child psychoanalyst, Klein developed the technique of play therapy in the analysis of children. Her writings include *The Psychoanalysis of Children* (1932) and *Narrative of a Child Analysis* (1961).

Kleist, Heinrich von [klīst], 1777–1811, German dramatic poet. Among his comedies are *The Broken Pitcher* (1806) and *Amphitryon* (1807). Other works include *Penthesilea* (1808), *Kätchen von Heilbronn* (1810), and the masterful tragedy *The Prince of Homburg* (1821). Kleist's terse, dynamic style and sense of conflict are also evident in stories and in novellas, e.g., *Michael Kohlhass* (1808). His unhappy life ended in suicide.

Klemperer, Otto, 1885–1973, German conductor. Working in Prague, in Berlin, and later in Los Angeles and Pittsburgh, he was

celebrated for his interpretations of Beethoven, Mahler, and Richard Strauss.

Klimt, Gustav [klĭmt], 1862–1918, Austrian painter, the foremost exponent of ART NOUVEAU in Vienna. His greatest works were portraits and landscapes of exotic and erotic sensibility, with symbolic themes and extravagant rhythms.

Kline, Franz, 1910–62, American painter; b. Wilkes-Barre, Pa. His large canvases of dynamically painted black-and-white grids, sometimes with notes of bright color, are among the important achievements of ABSTRACT EXPRESSIONISM.

Klondike, region in the YUKON TERRITORY, NW Canada, near the Alaska border, the scene of a great gold rush in the late 1890s. The area is crossed by the Klondike R., which enters the YUKON R. at DAWSON, the principal town. Rich placer-gold deposits were discovered in Rabbit (now Bonanza) Creek, a tributary of the Klondike, in 1896. When news of the find reached the U.S. in July 1897, thousands rushed to the virtually uninhabited region by a variety of difficult overland and river routes, swelling its population to c.25,000 in 1898 and causing near-famine conditions during winter months. Some $100 million in gold was mined there in about 10 years. The area still produces small amounts of gold, together with some silver, lead, and other minerals.

Klopstock, Friedrich Gottlieb [klŏp'shtŏck], 1724–1803, German poet, important for his influence on GOETHE and the STURM UND DRANG. A major work is *The Messiah* (1748–73). His lyrical *Odes* (1747–80) influenced German song composition.

knight, in medieval history, an armed and mounted warrior of the nobility or, under FEUDALISM, of the landholding class. Knighthood was conferred by the overlord by a blow on the neck or shoulder with the flat of a sword. A class of landless knights, created by primogeniture, formed in the CRUSADES such great military religious orders as the KNIGHTS TEMPLARS and KNIGHTS HOSPITALERS. Secular orders of knights also appeared, e.g., the Order of the Garter in Britain and the Golden Fleece in Burgundy. As feudalism waned, knightly service was often commuted into the cash payment known as SCUTAGE. Feudal knighthood ended in Germany in the early 16th cent., and earlier in Britain and France. In modern Britain, knighthood is conferred by the sovereign on commoners or nobles for civil or military achievements. A knight is addressed as Sir; a woman, knighted in her own right, as Dame.

Knights Hospitalers, members of the military religious order of the Hospital of St. John of Jerusalem, called also the Knights of St. John, of Jerusalem, of Rhodes, or of Malta. The order grew out of an 11th-cent. pilgrims' hospital in the Holy Land (see PALESTINE). As a military order it grew rich and powerful. After the Saracen conquest (1291) of Akko, the Knights took RHODES (1310), which they defended (1480) against the Ottoman sultan MUHAMMAD II but yielded (1522) to SULAYMAN I. Emperor CHARLES V gave them Malta (1530), which they defended against the Turks. After the Turkish defeat (1571) at LEPANTO, the Hospitalers engaged peacefully in hospital work until Napoleon seized Malta (1798). The order as constituted in the 19th cent. bears little relation to the old order.

Knights of Jerusalem: see KNIGHTS HOSPITALERS.

Knights of Labor, American labor organization started in Philadelphia in 1869. Becoming a national body in 1878, it was organized on an industrial basis, welcoming women and African Americans, and even employers. Among its aims were an eight-hour day, abolition of child and convict labor, and equal pay for equal work. The Knights of Labor attained its peak membership of 702,000 in 1886, but unjust blame for the HAYMARKET SQUARE RIOT of that year, together with factional disputes and weak management, resulted in its virtual extinction by 1900.

Knights of Malta and Knights of Rhodes: see KNIGHTS HOSPITALERS.

Knights of St. John of Jerusalem: see KNIGHTS HOSPITALERS.

Knights Templars, members of the military religious order of the Poor Knights of Christ, also called Knights of the Temple of Solomon. Like the KNIGHTS HOSPITALERS and the TEUTONIC KNIGHTS, they rose during the CRUSADES. From a band of nine knights united (c.1118) to protect pilgrims, the order grew large and rich. They were famous for dashing military exploits. After the city of Akko fell (1291), they went to Cyprus. Their wealth made them the bankers of Europe and led to persecution (1308–14) by PHILIP IV of France. The last grand master and their other leaders were burned as heretics (1314), and the order came to an end.

Knossos or **Cnossus** [nŏs'əs], ancient city on the N coast of CRETE. Occupied long before 3000 B.C., it was the center of MINOAN CIVILIZATION, known mainly from study of the great palace of Knossos. In Greek legend, it was the capital of King MINOS and the site of the labyrinth. Knossos was destroyed, probably by invaders, c.1400 B.C., but it later flourished as a Greek city until the 4th cent. A.D.

Know-Nothing movement, U.S. political movement in the mid-19th cent. The increased immigration of the 1840s had resulted in concentrations of Roman Catholic immigrants in the Eastern cities. The Democrats welcomed them, but local nativist societies were formed to combat "foreign" influences and uphold the "American" view. The American Republican party, formed (1843) in New York, spread to neighboring states as the Native American party and became a national party in 1845. Many secret orders sprang up, and when outsiders made inquiries of supposed members, they were met with a statement that the person knew nothing; hence members were called Know-Nothings. The Know-Nothings sought to elect only native Americans to office and to require 25 years of residence for citizenship. Allied with a faction of the WHIG PARTY, they almost captured New York in the 1854 election and swept the polls in Massachusetts and Delaware. In 1855 they adopted the name American party and dropped much of their secrecy. The issue of slavery, however, split the party, and many antislavery members joined the new REPUBLICAN PARTY. Millard FILLMORE, the American party's presidential candidate in 1856, won only Maryland, and the party's national strength was broken.

Knox, John, 1514?–1572, Scottish religious reformer, founder of Scottish PRESBYTERIANISM. A Catholic priest, he had attached himself by 1545 to the reformer George Wishart and soon became a Protestant. In England (1549–53) Knox preached, was a royal chaplain briefly, and helped prepare the second Book of Common Prayer. After the accession (1553) of MARY I, he went into exile, chiefly in Geneva, where he consulted with John CALVIN. In 1557 the Scottish Protestant nobles made their first covenant (see SCOTLAND, CHURCH OF) and invited (1559) Knox to return to lead their fight against the regent, MARY OF GUISE. After a civil war, the reformers forced the withdrawal of Mary's French forces and won their freedom as well as dominance for the new religion. They tried (1560) to abolish the pope's authority and condemn the practices of the old church. Knox verbally attacked the Roman Catholic MARY QUEEN OF SCOTS, and, after her abdication (1567), the acts of 1560 were confirmed and Presbyterianism was established in Scotland. Knox's single-minded zeal made him the outstanding leader of the Scottish Reformation and an important influence in Protestant movements elsewhere.

Knoxville, city (1990 pop. 165,121), seat of Knox co., E Tenn., on the Tennessee R.; settled c.1785, inc. 1876. Trade center for a farm, coal, and marble area, it produces processed meats, seat belts, chemicals, and other goods. It was territorial capital (1792–96) and twice (1796–1812, 1817–18) state capital. The city was occupied by federal troops during the CIVIL WAR. The city is a tourist center; Great Smoky Mts. National Park (see NATIONAL PARKS, table) is nearby, and the 1982 World's Fair was held there. It is the site of the Univ. of Tennessee.

koala, arboreal, nocturnal MARSUPIAL (*Phascolarctos cinereus*) native to Australia. Bearlike in appearance, it has thick, gray fur, a tailless body 2 to 2½ ft (60 to 75 cm) long, a black nose, and large, furry ears. Its diet consists of only one species of eucalyptus (see MYRTLE) at a particular stage of maturation. The koala has been hunted for food and fur and is now endangered.

Kobe [kō'bā], city (1990 pop. 1,477,423), capital of Hyogo prefecture, S Honshu, Japan. A leading Japanese port, industrial center, and railway hub, it has shipyards, steel mills, vehicle-assembly and food-processing plants, and many factories. Kobe was heavily bombed during WORLD WAR II but has been rebuilt and enlarged. It is a cultural center, with colleges, universities, temples, and shrines.

Kobuk Valley National Park: see NATIONAL PARKS (table).

Koch, Edward Irving, 1924–, mayor of NEW YORK CITY (1977–89); b. N.Y.C. A Democrat, he served (1969–77) as a U.S. congressman from New York and was elected mayor of New York City in 1977.

He is credited with avoiding the city's bankruptcy during the financial crisis of the late 1970s. Reelected mayor in 1981 and 1985, he was defeated in the 1989 primary election by David N. DINKINS, who was then elected mayor.

Koch, Kenneth [kōk], 1925–, American poet, novelist, and playwright; b. Cincinnati, Ohio. He is noted for his "anti-symbolic" poems and books on teaching poetry-writing to children and the elderly, e.g., *Rose, Where Did You Get That Red?* (1973) and *I Never Told Anybody* (1977).

Koch, Robert, 1843–1910, German bacteriologist. He devised a method of staining bacteria with aniline dyes and developed bacteriological culture techniques still used. He established the bacterial cause of many infectious diseases, including anthrax (1876), tuberculosis (1882), conjunctivitis (1883), and cholera (1884), and studied sleeping sickness, malaria, bubonic plague, rinderpest, and other diseases. For developing tuberculin as a test of tuberculosis he received the 1905 Nobel Prize in physiology or medicine.

Kodály, Zoltán [kô'dī], 1882–1967, Hungarian composer and collector of folk music. With BARTÓK he collected thousands of Hungarian FOLK SONGS and dances. His best-known works are the opera *Háry János* (1926; orchestral suite, 1927); the *Psalmus Hungaricus* (1923); and *Missa Brevis* (1945). His method for teaching music to children is widely employed.

Koestler, Arthur, 1905–83, English writer; b. Hungary. A Communist in the 1930s, he left the party over the STALIN purge trials and became a spokesman of the non-Communist left, combining a brilliant journalistic style with a sense of commitment. His best-known novel, *Darkness at Noon* (1941), describes the purge of a Bolshevik "deviationist." He is also known for his essay "The Yogi and the Commissar" and for philosophical studies, e.g., *The Ghost in the Machine* (1968).

Koffka, Kurt: see GESTALT.

Kohl, Helmut, 1930–, German political leader, chancellor of West Germany (1982–90) and of Germany (1990–). A member of the Christian Democratic party, Kohl led (1976–82) the opposition in the Bundestag (lower house of parliament). Conservative and pro-American, he replaced Social Democrat Helmut SCHMIDT as chancellor in 1982. During his administration, West Germany prospered economically and became increasingly influential in world affairs. With the accession of East Germany to the Federal Republic of Germany in 1990, Kohl became chancellor of a reunited Germany. The economic collapse in the east and the cost of unification, however, created social and economic problems that proved difficult to handle.

Köhler, Wolfgang: see GESTALT.

Koivisto, Mauno Henrik, 1923–, Finnish politician, president of Finland (1981–94). A Social Democrat, he served as finance minister (1966–67, 1972) and prime minister (1968–70, 1979–80). Appointed interim president in 1981, he later won (1982, 1988) election to the office. He sought close ties with the West while maintaining a policy of neutrality and good relations with the USSR and, subsequently, Russia.

Kokoschka, Oskar [kōkôsh'kä], 1886–1980, Austrian expressionist painter and writer. Influenced by KLIMT's elegant work, he developed an expressionist style that emphasizes psychological tension, e.g., the portrait of Hans Tietze and his wife (1909; Mus. Mod. Art, N.Y.C.). His striking landscapes include *Jerusalem* (Detroit Inst. Arts).

kola: see COLA.

Kolonia, town (1980 pop. 5,549), capital of the Federated States of MICRONESIA, on the island of Pohnpei (formerly Ponape).

Komodo dragon: see MONITOR.

Kongo, kingdom in W Central Africa that flourished from the 14th to 17th cent. in the region that is now ANGOLA and ZAÍRE. It was ruled by a *manikongo,* or king, and its capital was Mbanza (later São Salvador). After 1491 Kongo was increasingly under the influence of the Portuguese, who attempted to Christianize the kingdom. Their rapaciousness, particularly that of the slave traders, played a major part in weakening the kingdom. After 1665 the *manikongo* was little more than a Portuguese vassal.

Königsberg: see KALININGRAD.

Konoye Fumimaro [kōnoyā], 1891–1945, Japanese premier (1937–39, 1940–41). He pressed China for concessions in the Second SINO-JAPANESE WAR and proclaimed (1938) Japan's goal of a "new order in East Asia." Konoye concluded (1940) an alliance with the Axis powers but resigned after he failed to reach an agreement with the U.S. His suicide prevented his trial as a war criminal after WORLD WAR II.

Konrad, Gyorgy, 1933–, Hungarian novelist. In his semi-autobiographical first novel, *The Case Worker* (1969), and other writings, he has examined the social and spiritual problems of life under Communism. Among his works are *The City Builder* (1975) and *A Feast in the Garden* (1989), a novel of the HOLOCAUST.

Kook, Abraham Isaac, 1864–1935, Jewish scholar and philosopher; b. Latvia. In his view, PALESTINE and ZIONISM were necessary to Judaism. As chief rabbi of the Ashkenazic community of Palestine from 1921, he was one of the first Orthodox rabbis to apply Talmudic learning to current problems and was sympathetic toward Jewish mysticism.

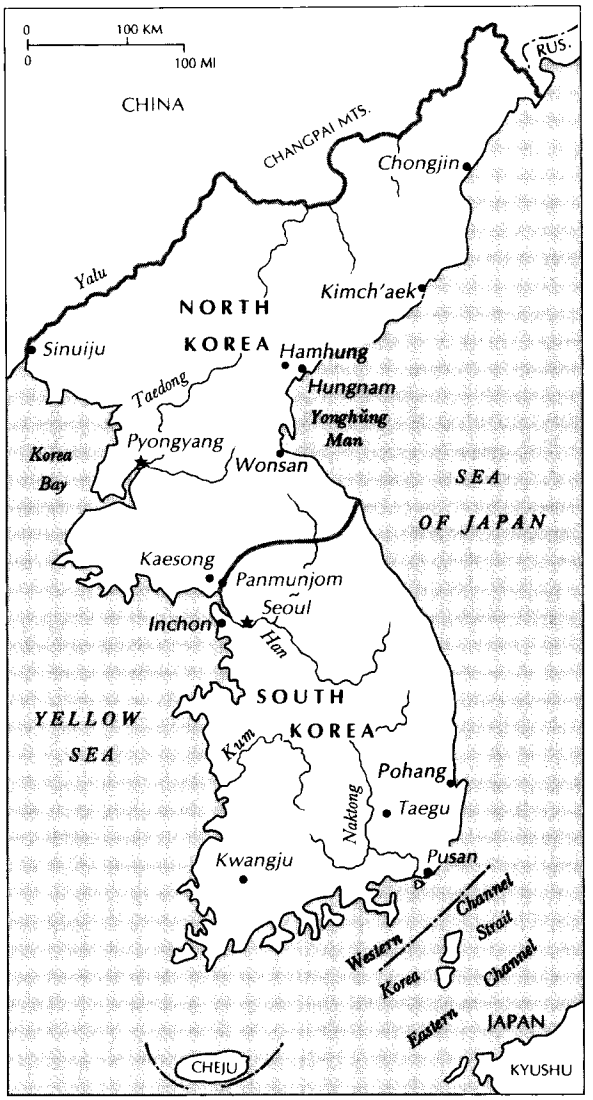
Kooweskoowe: see ROSS, JOHN.

Köprülü, family of humble Albanian origin, several members of which served as grand viziers in the OTTOMAN EMPIRE (Turkey) in the 17th and 18th cent. The name is also spelled Kiuprilu, Koprili, and Kuprili. The most eminent member of the family was **Mehmed Köprülü,** 1583–1661, who became grand vizier to Sultan MUHAMMAD IV in 1656 and gained complete authority. He regained some of the former Ottoman prestige by restoring internal order, reforming finances, and rebuilding the Ottoman military forces.

Koran or **Quran** [Arab., = reading], the sacred book of ISLAM and one of the world's most influential books. According to Islamic belief, the Koran was revealed by God to the Prophet MUHAMMAD in separate revelations during the Prophet's life at Mecca and Medina. The canonical text was established A.H. 30 (A.D. 651–52) under the caliph Uthman. The revelations are divided into 114 *suras* [chapters]. The Arabic of the Koran is the classic language.

Korea, Korean *Choson,* historic country (85,049 sq mi/220,277 sq km), E Asia. A peninsula 600 mi (966 km) long, Korea separates the Yellow Sea (W) from the Sea of Japan (E). It is bounded by the Korea Strait (S), and its land boundaries with China and Russia (N) are marked by the great YALU and Tumen rivers. The land is largely mountainous, rising in the northeast to its highest point at Mt. Paektu (9,003 ft/2,744 m). Some 3,420 islands, mostly uninhabited, lie off the coast. Korea has great mineral wealth, with 80% to 90% of it concentrated in the north. Of the peninsula's five major minerals—gold, iron ore, coal, tungsten, and graphite—only the last two are found principally in the south. North Korea, which has some 300 different kinds of minerals, is especially rich in iron and coal. It ranks among the world leaders in production of graphite, gold, tungsten, magnesite, zinc, molybdenum, and other minerals. Only about 20% of Korean land is arable; rice (the chief crop), barley, wheat, corn, soybeans, and grain sorghums are extensively cultivated. The fishing waters off Korea are among the best in the world, and fish remains the chief source of protein in the Korean diet. The economy was shattered by the war of 1950 to 1953, but huge amounts of foreign aid and intensive government programs in both north and south sped postwar reconstruction. Important industrial advances were made in the 1960s and 70s, and South Korea now has one of the most rapidly growing economies in Asia, with its gross national product exceeding that of the north by more than five times by the early 1990s. South Korean manufactures include textiles, clothing, processed foods, electrical and electronic equipment, automobiles, chemicals, ceramics, and a variety of consumer products. Major North Korean products include iron, steel, machinery, textiles, and chemicals. Most Koreans are Confucianists or Buddhists; there are many Christians in the south. Korean is spoken in both parts of the country; English is widely taught in the south.

History. Korea was founded in 2333 B.C. The kingdom of Koguryo, one of the three native states, arose in Manchuria near the Yalu R. in the 1st cent. A.D. The kingdom of Silla emerged A.D. c.350 and unified the peninsula in the 7th cent. The Koryo dynasty ruled a united Korea from 935 until Mongol invasions from China in the 13th cent. forced an alliance under Mongol control. The Yi dynasty (1392–1910) built a new capital at Hanyang (now SEOUL) and established CONFUCIANISM as the official state doctrine. Japa-



nese troops moved into Korea during the First Sino-Japanese War (1894–95) and the RUSSO-JAPANESE WAR (1904–5), and Japan formally annexed (1910) the country, which remained under Japanese colonial rule until 1945. During World War II the Allies promised Korea independence, and after the war the country was divided into two zones of occupation, with Soviet troops north and Americans south of the line of lat. 38°N. In 1948 two separate regimes were established—the Republic of Korea in the south, and the Democratic People's Republic under Communist rule in the north. Since the KOREAN WAR (1950–53) the peninsula has remained two independent nations divided roughly at the 38th parallel. Since 1990 there have been increasing contacts between the governments of the two Koreas. In 1991 both nations joined the UN after the North dropped its opposition to such a move. **North Korea,** officially Democratic People's Republic of Korea (1992 est. pop. 22,227,000), 46,540 sq mi (120,538 sq km), has its capital at PYONGYANG, the largest city. After the Korean War the Communist government launched an ambitious program of industrialization. North Korea maintained close relations with the USSR and the People's Republic of China, both of which provided aid for reconstruction. Postwar politics have been dominated by KIM IL SUNG, who kept the country isolated, heavily armed, and thoroughly collectivized. A personality cult has glorified Kim, and his son, Kim Jong Il, has been groomed to succeed him. By the early 1990s the rapid economic growth of North Korea's early years had given way first to stagnation, then to hardship, and there was widespread dissatisfaction with the repressive regime. The North was also increasingly isolated as the USSR, once a key ally, was dissolved and China, now its most important ally, improved ties with the economically more successful South. In 1991 the U.S., Japan, and South Korea accused the North of developing nuclear weapons. North Korea initially refused to permit international inspections and threatened (1993) to withdraw from the nuclear nonproliferation treaty, but it agreed to inspections in 1994. **South Korea,** officially Republic of Korea (1992 est. pop. 44,149,000), 38,022 sq mi (98,477 sq km), has its capital at Seoul, the largest city; PUSAN is the chief port. Syngman RHEE, elected the first president in 1948, was forced to resign in 1960 by a popular uprising against his authoritarian rule. A military junta under Gen. PARK CHUNG HEE seized power in 1961 and had by 1975 assumed near-dictatorial powers. In the 1960s foreign trade, especially with Japan, replaced American aid. Ties with the U.S. were temporarily strained by alleged Korean influence peddling in the U.S. Congress and by Pres. CARTER's decision (later suspended) to withdraw U.S. troops from South Korea. In 1979 Pres. Park was assassinated in an apparent coup attempt; soon after, Lt. Gen. CHUN DOO HWAN led a military coup and took control. Despite widespread opposition to his government's repressive measures, Chun was elected president and reelected under a new constitution in 1981. Roh Tae Woo, Chun's chosen successor, became (1988) president after an election in which the opposition was divided. He attempted to improve relations with opposition politicians and with the North and established diplomatic relations with the USSR (1990) and China (1992). In 1992 Kim Young Sam, a former opposition leader who had merged his party with Roh's, was elected president, becoming the first civilian to hold the office since the Korean War.

Korean, language of uncertain relationship that is spoken by about 36 million people, most of whom live in Korea. It is thought by some scholars to be akin to JAPANESE, by others to be a member of the Altaic subfamily of the URALIC AND ALTAIC family of languages (see LANGUAGE, table), and by still others to be unrelated to any known language.

Korean War, conflict between Communist and non-Communist forces in Korea from June 25, 1950, to July 27, 1953. At the end of WORLD WAR II, Korea was divided at the 38th parallel into Soviet (North Korean) and U.S. (South Korean) zones of occupation. In 1948 rival governments were established. When North Korean forces invaded South Korea, the UN authorized member nations to aid South Korea. Gen. Douglas MACARTHUR commanded the UN forces until 1951, when he was replaced by Gen. Matthew B. RIDGWAY. In Oct. 1950 Chinese Communist forces joined the North Korean army. Fighting centered around the 38th parallel. In 1951 negotiations for a cease-fire were begun at Panmunjom; it was achieved on July 27, 1953.

Kornberg, Arthur, 1918–, American biochemist. For his discovery of the mechanisms in the biological synthesis of DNA, he shared with Severo OCHOA the 1959 Nobel Prize in physiology or medicine. He has done research at the National Institutes of Health (1942–52), Washington Univ. (1953–59), and Stanford Univ. (1959–).

Korolev, Sergei Pavlovich, 1907–66, Soviet rocket designer. His role as chief designer of the Soviet space program was revealed only after his death. After he successfully launched two intercontinental ballistic missiles in Aug. 1957, Soviet premier Nikita Khrushchev allowed him to attempt the orbiting of a test satellite; as a result, *Sputnik 1,* the first artificial earth satellite, was orbited successfully on Oct. 4, 1957. Korolev also directed the launching of the USSR's first unmanned space probes and manned space missions.

Koror, island (1990 est. pop. 10,500), capital of PALAU.

Kosciusko, Thaddeus, 1746–1817, Polish general and patriot. He fought for the colonists in the AMERICAN REVOLUTION and then returned to Poland, where he became a champion of independence. In 1794 he led an unsuccessful rebellion against Russian and Prussian control of Poland.

Kosciusko, Mount, 7,316 ft (2,230 m) high, in SE New South Wales, Australia. It is the highest point in Australia.

kosher [Heb., = proper], term applied to food that is in accordance with Jewish dietary laws. Animals that chew their cud and have

The key to pronunciation appears on page xiii.

cloven hooves (e.g., cows and sheep) are kosher; rules governing their slaughter and preparation also apply to fowl. Proper preparation of kosher meats includes complete drainage of blood. Kosher fish are those with scales and fins. Milk products may not be cooked or eaten with, or immediately after, meat or poultry. The origins of and motivations for Jewish dietary laws and customs have been variously explained as hygienic, aesthetic, folkloric, ethical, and psychological.

Kosinski, Jerzy, 1933–91, Polish–American writer; b. Łodz, Poland. His best-known work is *The Painted Bird* (1965), a novel depicting a boy's nightmarish wanderings among brutal peasants during World War II. His other novels, e.g., *Steps* (1968) and *The Devil Tree* (1973), echo the theme of character disintegration through cruelty and revenge.

Kosovo [kô'sôvô] or **Kosova** [kô'sôvä], former autonomous province, 4,126 sq mi (10,686 sq km), S Yugoslavia, in Serbia. Priština is the chief city. A largely mountainous region, its major occupations are agriculture, stock raising, forestry, and lead and silver mining. Its population is about 90% Albanian, with Serbian and Montenegrin minorities. Most of the region was incorporated into Italian-held Albania from 1941 to 1944. Serbia abolished Kosovo's autonomy in 1989–90 in reaction to a campaign for constituent republic status for the region and began repressing Albanians and encouraging Serbian migration into the region. In response Albanians pressed for Kosovo's complete independence, elected a "parliament" in 1992, and boycotted (1992) Serbian elections. At **Kosovo Field,** the fertile central valley of Kosovo, the Ottoman Turks defeated Serbia and its allies in 1389; Serbia and Bulgaria then passed under Ottoman rule. On the same site in 1448 the Turks defeated an army led by John Hunyadi.

Kossuth, Louis, Hung. *Kossuth Lajos,* 1802–94, Hungarian revolutionary hero. A fiery orator, Kossuth was one of the leaders of the Hungarian revolution of 1848 (see HUNGARY). His principles were liberal and nationalistic. When Austria prepared to move against the Hungarians, he became head of the government of national defense. He served as president of the newly formed Hungarian republic from Apr. to Aug. 1849 but was forced to resign after Russian troops intervened in favor of Austria. Thereafter he lived in exile.

Kosygin, Aleksei Nikolayevich [kəsē'gĭn], 1904–81, Soviet leader. Appointed to the central committee of the Communist party in 1939, he became first deputy chairman of the USSR council of ministers in 1960 and succeeded Nikita KHRUSHCHEV as premier in 1964, sharing power with Leonid BREZHNEV until the mid-1970s.

Koufax, Sandy (Sanford Koufax), 1935–, American baseball player; b. N.Y.C. A left-hander with overwhelming speed and a brilliant curve, he played (1955–66) with the Dodgers, first in Brooklyn and then in Los Angeles. He struck out 2,396 batters, pitched four no-hitters (including a perfect game), and won the Cy Young Award three times as the game's top pitcher. At the peak of his career (he won 26 and 27 games his last two seasons), he was forced into premature retirement because of a chronic arm ailment.

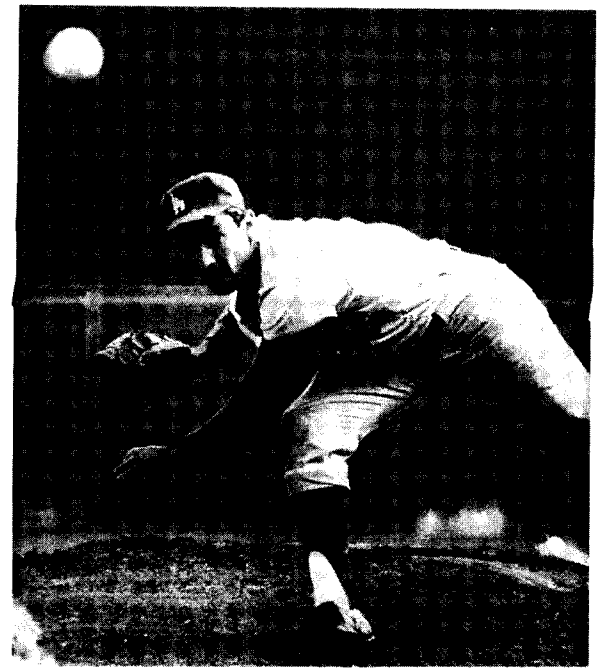
koumiss: see FERMENTED MILK.

Koussevitzky, Serge, 1874–1951, Russian–American conductor. He came to the U.S. in 1924 and conducted (1924–49) the Boston Symphony Orchestra. He directed (from 1936) the Berkshire Symphonic Festivals (the Berkshire Festival). A champion of modern music, he commissioned and performed new works by COPLAND, BARBER, William SCHUMAN, and others.

Kr, chemical symbol of the element KRYPTON.

Krakatoa or **Krakatau,** active volcano, W Indonesia, forming an island (c.5 sq mi/13 sq km) in Sunda Strait, between Java and Sumatra. The volcano, which rises to 2,667 ft (813 m), is famous for its 1883 eruption, one of the most violent of modern times, which scattered debris as far as Madagascar. The associated TSUNAMI swept over nearby coastal areas, causing great loss of life.

Kraków or **Cracow,** city (1989 est. pop. 743,000), S Poland, on the Vistula R. It is a river port and industrial center producing metals, machinery, textiles, and chemicals. Founded c.700, the city was (1320–1596) the residence of Poland's kings. Its university was founded in 1364. Ruled at various times by Austria, Prussia, and Russia, Kraków reverted to Poland in 1919. On a hill, the Wawel, are the royal castle (rebuilt 16th cent.) and a Gothic cathedral (rebuilt 14th cent.).



Sandy Koufax

Kranach, Lucas: see CRANACH, LUCAS.

Kravchuk, Leonid Makarovich, 1934–, president of UKRAINE (1991–). An ideologist in the Ukrainian Communist party, he was elected (1990) chairman of Ukraine's Supreme Soviet. A cautious pragmatist and an opponent of Ukrainian nationalists, he did not initially oppose the coup against GORBACHEV, but afterward he quit the Communist party and advocated Ukraine's independence. In Dec. 1991 he became Ukraine's first popularly elected president, as Ukrainians simultaneously voted for independence. Kravchuk was a leading force in the establishment of the COMMONWEALTH OF INDEPENDENT STATES. He has clashed with the parliament over the slow pace of economic reform.

Krebs, Sir Hans Adolf, 1900–1981, English biochemist; b. Germany; emigrated to England, 1933. For his studies of intermediary metabolism he shared with Fritz Lipmann the 1953 Nobel Prize in physiology or medicine. These studies included the elucidation of the cycle of chemical reactions called the CITRIC ACID CYCLE, or Krebs cycle, the major source of energy in living organisms.

Krebs cycle: see CITRIC ACID CYCLE.

Kreisky, Bruno [krīs'skē], 1911–90, Austrian political leader. A lifelong socialist who fled Nazi-ruled Austria, he was foreign minister (1959–66), Socialist party chairman (1967–83), and chancellor of Austria (1970–83). As chancellor, he increased Austria's role in world affairs and presided over a growing economy.

Kreisler, Fritz [krīs'lər], 1875–1962, Austrian-American violinist. From about 1901 he was perhaps the most popular violinist in the U.S. He composed OPERETTAS and numerous famous violin pieces, e.g., *Tambourin Chinois.*

kremlin, Rus. *kreml,* citadel or walled center of a city. A medieval kremlin protected against attack and was a city in itself. Those of MOSCOW and several other cities still stand. Moscow's, called simply the **Kremlin,** occupies 90 acres (36.4 hectares). Along its crenellated walls, built in the 15th cent., are palaces; one houses the tsars' crown jewels, another the parliament building. Inside the Kremlin are three cathedrals and a bell tower. The tsars' residence until St. Petersburg became the capital (1712), the Kremlin was the Soviet political and administrative center from 1918 to 1991, when the USSR disintegrated. It now houses Russian government offices.

Křenek, Ernst, 1900–91, Austrian-American composer. In the 1920s he composed in a neoclassical style. His jazz opera *Johnny Strikes*

Up (1926) was a great success. After a neo-Romantic period, he adopted the TWELVE-TONE system, as in his opera Karl V (1933). In 1937 he moved to the U.S. The operas *Dark Waters* (1950) and *Sardakai* (1969), and *Eleven Transparencies* (1956) for orchestra and ELECTRONIC MUSIC, are among later pieces.

Krishna [Skt., = black], popular deity in HINDUISM; the eighth avatar, or incarnation, of Vishnu.

Krleža, Miroslav, 1893–1981, Croatian novelist, playwright, and poet. He captured the concerns of a revolutionary era in Yugoslavia in his trilogy of social dramas about the Glembay family (1928–32) and in novels like *The Return of Philip Latinovicz* (1932) and *Banners* (1963–65), a multivolume saga of the Croatian bourgeoisie beginning in the early 20th cent.

Krochmal, Nachman Kohen [krôkh'mal], 1785–1840, Jewish secular historian and writer; b. Galicia. He was a leader of the Haskalah, or Jewish enlightenment, and a founder of Conservative JUDAISM.

Kroeber, Alfred Louis, 1876–1960, American anthropologist; b. Hoboken, N.J. A major figure in the founding of modern anthropology, he clearly set forth the relationship between cultural patterns and the individual. His major works include *The Nature of Culture* (1952) and *Style and Civilization* (1957).

Kronecker, Leopold, 1823–91, German mathematician. After making a fortune in business, he became a noted algebraist. He was a pioneer in the field of algebraic NUMBERS and formulated the relation between number theory, the theory of equations, and elliptic functions.

Kronos: see CRONUS.

Kropotkin, Prince Piotr Alekseyevich, 1842–1921, Russian anarchist. A noted geographer, he was imprisoned (1874–76) for political activities and fled Russia. Kropotkin settled in England, but after the February 1917 RUSSIAN REVOLUTION returned to Russia. When the Bolsheviks took power, he retired from political life. His writings include *Mutual Aid* (1902), which holds that cooperation rather than competition is the norm in both animal and human life, and *Memoirs of a Revolutionist* (1899).

Kruger, Paul, 1825–1904, South African Transvaal statesman, known as Oom Paul. He was a founder (1852) of the Transvaal, and after its annexation by Britain (1877) he was a leader of the Boer settlers there. He led the Boer Rebellion (1880) that forced Britain to restore independence and was president (1883–1900) of the Transvaal. In the SOUTH AFRICAN WAR (1899–1902) he went to Europe, where he made vain attempts to enlist aid for his country.

Krupp [krōōp], family of German armament manufacturers who flourished in the 19th and 20th cent. **Friedrich Krupp,** 1787–1826, built a small steel plant at Essen c.1810. His son, **Alfred Krupp,** 1812–87, the "cannon king," specialized in armaments and acquired mines all over Germany. Under Alfred's son, **Friedrich Alfred Krupp,** 1854–1902, the family extended its operations. The husband of his daughter, Bertha Krupp (after whom the Big Bertha guns were named), took the name **Gustav Krupp von Bohlen und Halbach,** 1870–1950. He took over what was then a public company and made it the center of Nazi rearmament in the 1930s. In 1943, HITLER converted the company back into a family holding, and **Alfred Krupp von Bohlen und Halbach,** 1907–67, son of Gustav and Bertha, ran the company until the end of World War II. He was convicted (1948) as a war criminal but was released from prison (1951) and allowed to resume control of the firm. After his death, Krupp became a public corporation and the family ceased (1968) to control it.

kryolite: see CRYOLITE.

krypton (Kr), gaseous element, discovered by William RAMSAY and M.W. Travers in 1898. It is a rare INERT GAS used to fill electric lamp bulbs and various electronic devices, and to detect heart defects. From 1960 to 1983 the definition of a meter was based on the emission spectrum of the krypton-86 isotope. See ELEMENT (table); PERIODIC TABLE.

Kuala Lumpur, largest city (1990 est. pop. 1,750,000) and capital of Malaysia, S Malay Peninsula, at the confluence of the Klang and Gombak rivers. It is a transport hub and trade and industrial center in a tin-mining and rubber-growing district. Founded (1857) by Chinese miners, it became the capital of the Federated Malay States (see MALAYSIA) in 1896.

Kublai Khan (kōō'blī kän'), 1215?–1294, Mongol emperor, founder of the Yüan dynasty of China. He succeeded (1260) his brother Mangu as khan of the empire founded by their grandfather JENGHIZ KHAN. Kublai Khan defeated (1279) the Sung dynasty of China, but his campaigns against Japan, Southeast Asia, and Indonesia failed. His rule was nominal except in Mongolia and China. He improved public works and established a magnificent capital at Cambuluc (now Beijing), where Marco POLO visited him.

Kübler-Ross, Elisabeth, 1926–, Swiss-American physician; M.D., Univ. of Zürich, 1957. After settling in the U.S. in 1958, she taught psychiatry and specialized in treating the terminally ill. Her best-selling book *On Death and Dying* (1969), describing five psychological stages experienced by the dying (denial, anger, "bargaining for time," grieving, and acceptance), has greatly influenced the humane treatment and counseling of terminally ill patients and the rise of HOSPICE care for dying persons.

Kudrun: see GUDRUN.

Kuhn, Richard, 1900–1967, Austrian chemist. Awarded the 1938 Nobel Prize in chemistry for his work on the carotinoids and on vitamins, he was unable, because of the Nazis, to accept the award until after World War II. He isolated vitamins B_2 (riboflavin) and B_6.

Kuhn, Thomas Samuel, 1922–, American philosopher and historian of science; b. Cincinnati, Ohio. In his influential *The Structure of Scientific Revolutions* (1962), he distinguished between normal science, which solves puzzles while operating within a particular "paradigm," and revolutionary science, which occurs rarely and requires that one paradigm be abandoned for another. This insight was derived, in part, from his analysis of the Copernican revolution.

Kuhn, Walt, 1880–1949, American painter; b. N.Y.C. He is known for his boldly interpretive studies of backstage and circus life, e.g., *Blue Clown* (Whitney Mus., N.Y.C.). Kuhn was one of the organizers of the famed ARMORY SHOW.

Kuiper, Gerard Peter or **Gerrit Pieter,** 1905–73, American astronomer; b. Netherlands. Kuiper discovered a carbon dioxide atmosphere on Mars (1948), URANUS's satellite Miranda (1948), and NEPTUNE's satellite Nereid (1949). He proposed (1951) the existence of a disk-shaped region of minor planets outside the orbit of Neptune (now called the Kuiper belt) as a source for short-period COMETS. See also OORT, JAN HENDRICK.

Ku Klux Klan, designation mainly given to two distinct American secret societies. The first, founded in the South in 1866, opposed RECONSTRUCTION. Organized by ex-Confederates and led by Nathan B. Forrest, it used elaborate disguises and rituals, augmented by whippings and lynchings, to terrorize African Americans and their supporters. Forrest disbanded the Klan in 1869, but its members continued to keep African Americans from the polls. The second Klan, organized in 1915, had a wider scope: embracing anti-Catholic, anti-Semitic, nativist, and fundamentalist impulses, it spread to the North, fueled by the militant patriotism of World War I. In the mid-1920s it had 4 to 5 million members; it declined rapidly thereafter but contributed to the 1928 defeat of Alfred E. SMITH, a Catholic. The Klan revived in reaction to civil-rights activism in the 1960s, using violence against civil-rights workers in the South. Despite its split into competing factions, the Klan became involved in racial confrontations late in the 1970s. The various factions continue to recruit new members, largely in response to AFFIRMATIVE ACTION programs, unstable economic conditions, and other factors, but intimidation, rather than violence, is the Klan's main tactic and its success is often limited.

Kulkulcán: see QUETZALCOATL.

Kumasi, city (1984 pop. 348,880), capital of the Ashanti Region, central Ghana. The nation's second largest city, it is a commercial and transportation center in a cocoa-producing region. It was founded c.1700 as the capital of the ASHANTI confederation and is the seat of the Ashanti kings. Points of interest include a British fort (1897).

kumiss: see FERMENTED MILK.

kumquat, evergreen shrub (genus *Fortunella*) of the RUE family, cultivated for its small, orange-yellow CITRUS FRUITS, eaten fresh or in preserves. Kumquats, with their sweet-scented white flowers, are also grown as ornamentals in warm areas of the U.S.

Kun, Béla [kōōn], 1886–1939?, Hungarian Communist leader. In

1919, when Count Karolyi's government resigned, the Communists and Social Democrats formed a coalition government under Kun. He raised a Red Army that overran SLOVAKIA. The Allies forced him to evacuate Slovakia, and a counterrevolution broke out. Kun was defeated by a Romanian army of intervention. He went (1920) to the USSR and probably died in prison or Siberia.

Kundera, Milan, 1929–, Czech writer. His first novel, *The Joke* (1967), is about a student whose joking reference to Trotsky earns him a sentence at hard labor. It brought Kundera into official disfavor in Prague and resulted in the loss of his citizenship. He moved to France and became a French citizen in 1980. He has also written poems, plays, short stories, and other novels, e.g., *The Book of Laughter and Forgetting* (1979), *The Unbearable Lightness of Being* (1984), and *Immortality* (1990).

Küng, Hans, 1928–, Swiss Roman Catholic theologian. A professor at Tübingen Univ. and an adviser (1962–65) to the Second VATICAN COUNCIL, he has consistently criticized papal authority. His *Infallible? An Inquiry* (1971) rejects papal infallibility. In 1979 Küng was stripped of his right to teach as an official Roman Catholic theologian. He has written many other books, including *Why I Am Still a Christian* (1987).

Kunitz, Stanley (Jasspon) [kyōō'nĭts], 1905–, American poet and editor; b. Worcester, Mass. His complex poems are in such volumes as *Intellectual Things* (1930), *Selected Poems, 1928–1958* (1958; Pulitzer), and *Next-to-Last Things* (1985). He has edited reference books (with Howard Haycraft), e.g., *Twentieth Century Authors* (1942).

Kuniyoshi, Yasuo [kōō'nē'ēyō'shē], 1892?–1953, American painter; b. Japan. Considered Asian in spirit but Western in technique, his paintings, drawings, and prints are rich in symbolism and fantasy, but often somber in color.

Kunming, city (1990 est. pop. 1,520,000), capital of Yunnan prov., SW China. It comprises an old walled city, a modern commercial suburb, and a residential and university section. Kunming is an industrial, administrative, commercial, cultural, and transportation hub of SW China. On its outskirts is a famed Ming dynasty temple.

Kuomintang, Chinese political party. It was organized (1912) by Sung Chiao-jen to succeed the Revolutionary Alliance and was outlawed (1913) after gaining a majority in the first national assembly elected in China. Under SUN YAT-SEN it established revolutionary secret governments in Guangzhou in 1918 and 1921. In 1924 it formed an alliance with the Communists under Sun's Three People's Principles (nationalism, democracy, and livelihood). After Sun's death (1925), it was led by CHIANG KAI-SHEK, who purged the Communists (1927) and captured the capital, Beijing, in 1928. The Kuomintang ruled China until 1949, fighting the Japanese invaders and the Communists. Defeated by the latter, its members fled to the island of TAIWAN, which they continued to rule under Chiang, under Chiang Ching-kuo, his son, and under LEE TENG-HUI. In 1991 Lee ended emergency rule on Taiwan, which had permitted Kuomintang delegates elected to the National Assembly in 1947 to retain their seats.

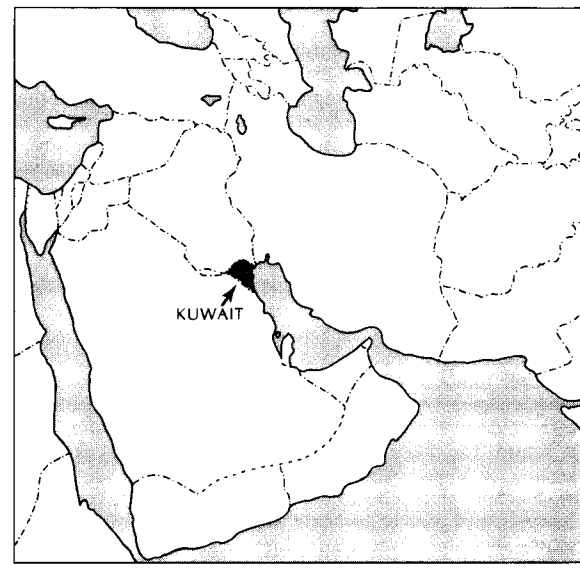
Kuprin, Aleksandr Ivanovich [kōō'prĭn], 1870–1938, Russian novelist and short-story writer. His best-known novels are *The Duel* (1905), an attack on Russian military life, and *The Pit* (1924), a sensational exposé of prostitution.

kurchatovium (Ku): see RUTHERFORDIUM.

Kurdistan, extensive plateau and mountain region in SW Asia (c.74,000 sq mi/191,660 sq km), inhabited mainly by Kurds and including parts of E Turkey, N Syria, NE Iraq, S Armenia, and NW Iran. Ethnically and linguistically close to the Iranians, the **Kurds,** who number about 20 million, were traditionally nomadic herders but are now mostly seminomadic or sedentary. The majority are devout SUNNI Muslims and speak Kurdish. The Kurds have traditionally resisted subjugation by other nations. Kurdistan was conquered by the Arabs and converted to Islam in the 7th cent. The region was held by the Seljuk Turks in the 11th cent., by the Mongols from the 13th to 15th cent., and then by the Ottoman Empire. Since World War I the Kurds have struggled unsuccessfully in the various countries in which they live for self-determination and independence. In 1946 a short-lived, Soviet-backed Kurdish republic was formed in Iran. There were Kurdish uprisings in Iraq in the 1960s, 70s, and 80s, and since the mid-1980s Kurdish guerrillas have fought the Turkish government. After the PERSIAN GULF WAR, Kurdish groups again rose against Iraq but were crushed, and perhaps 1.5 million fled to Turkey and Iran. Returning under UN protection, they established (1992) an "autonomous region" in N Iraq. There was also fighting in the early 1990s between Turkish and Iraqi Kurds.

Kuril Islands or **Kuriles,** island chain, NE Asia, part of Russia; the southernmost islands are claimed by Japan as the Northern Territories. The islands extend c.775 mi (1,250 km) S from the KAMCHATKA Peninsula to near HOKKAIDO, Japan, and are cold, damp, and sparsely populated. They were divided between Japan and Russia in 1855. In 1875 Japan gave up nearby SAKHALIN for Russian concession of the northern Kuriles; the entire chain was occupied by the USSR in 1945.

Kurosawa Akira [kōōrō'säwä], 1910–, Japanese film director. With *Rashomon* (1950), he gained international recognition, becoming the best known Japanese filmmaker in the West. He blends Eastern and Western styles, has often adapted the works of foreign authors (including Dostoyevsky, Gorky, and Shakespeare), and is known for his impressive use of wide screen cinematography. His other films include *Ikiru* (1952), *Seven Samurai* (1954), *Yojimbo* (1961), *Dersu Uzala* (1976), *Kagemusha* (1980), *Ran* (1985), and *Rhapsody in August* (1991).



Kuwait, officially State of Kuwait, independent sheikhdom (1992 est. pop. 1,378,000), 6,177 sq mi (16,000 sq km), NE Arabian peninsula, at the head of the Persian Gulf, bounded by Saudi Arabia (S) and Iraq (N and W). The capital is KUWAIT. It is a sandy and barren country. With more than 10% of the world's estimated oil reserves, Kuwait is a leading exporter of petroleum and has used some of the enormous profits for social improvements. In the 1960s the government launched a program of industrial diversification, successfully introducing oil refining and production of natural gas and fertilizers. The population is predominantly Arab and Sunni Muslim, although only half the inhabitants are native-born.

History. Kuwait, settled by Arab tribes in the early 18th cent., has been ruled since its inception by the al-Sabah dynasty. Nominally an Ottoman province, the sheikhdom became a British protectorate in 1897, remaining so until independence in 1961. Oil production began in the 1940s and was controlled by a joint British-American firm until 1974, when Kuwait nationalized most of the operations. Kuwait took part in the Arab oil embargo against nations that supported Israel in the 1973 Arab-Israeli War, and is a member of the ORGANIZATION OF PETROLEUM EXPORTING COUNTRIES (OPEC). In Aug. 1990 Kuwait was invaded and forcibly annexed by Iraq, an act that led to and was reversed by the PERSIAN GULF WAR. Widespread looting and intentional destruction by Iraqi troops and the fighting

during the war devastated Kuwait, particularly its oilfields, but by the end of 1992 the country had repaired nearly all the damage and its oil output was at about the prewar level. In 1992 opposition candidates won a majority of the seats in parliament.

Kuwait or **Al-Kuwait,** city (1990 est. pop. 151,000), capital of Kuwait, situated on a Persian Gulf inlet. The city was modernized after oil was discovered in 1938 and was heavily damaged in the PERSIAN GULF WAR. Its port, Mina al-Ahmad, has refineries and shipyards. The country's first university (est. 1966) is there.

Kuybyshev: see SAMARA.

Kuyp, family of Dutch painters: see CUYP.

Kuznets, Simon, 1901–85, American economist; b. Russia. After emigrating (1922) to the U.S., he worked for the National Bureau of Standards (1927–63) and taught at the Univ. of Pennsylvania (1930–54), Johns Hopkins (1954–60), and Harvard (1960–71). Generally credited with having developed the GROSS NATIONAL PRODUCT as a measure of economic output, he was awarded the 1971 Nobel Prize in economics. *National Income and Its Composition, 1919 to 1938* (1941) is considered his major work.

Kwajalein: see MARSHALL ISLANDS.

Kwakiutl, indigenous people of the Northwest Coast (see NORTH AMERICA, INDIGENOUS PEOPLES OF) who live in Vancouver Island and adjacent British Columbia, Canada. They speak a Wakashan language of the Algonquian-Wakashan stock (see NATIVE AMERICAN LANGUAGES). In the 19th cent. they conducted elaborate POTLATCH ceremonies. Numbering c.15,000 before European contact, they are now reduced to a few thousand, mostly fishermen and farmers.

Kwangju, city (1985 pop. 905,896), capital of South Cholla prov., SW South Korea. A regional agricultural and commercial center, Kwangju has rice mills and produces automobiles, textiles, and beer. There are several ancient tombs and temples in the area. In 1980 Kwangju was seized for several days by rebels protesting martial law in South Korea; government troops eventually suppressed the uprising.

Kwanzaa or **Kwanza,** secular seven-day festival in celebration of the African heritage of African Americans, beginning on Dec. 26. Developed by Maulana Karenga and first observed in 1966, Kwanzaa is based in part on traditional African harvest festivals but particularly emphasizes the role of the family and community in African-American culture. Each day is dedicated to a particular principle (unity, self-determination, collective work and responsibility, cooperative economics, purpose, creativity, and faith), and on each day one of the candles on a seven-branched candelabrum is lighted. The celebration also includes the giving of gifts and a karamu, or African feast.

kwashiorkor, protein deficiency disorder of children, prevalent in overpopulated parts of the world where the diet consists mainly of starchy vegetables, particularly Africa, Central and South America, and S Asia. Such a diet is deficient in certain amino acids, which make up PROTEINS vital for growth. Depending on the extent, onset, and duration of the deficiency, manifestations include skin changes, edema, severely bloated abdomen, diarrhea, and generally retarded development.

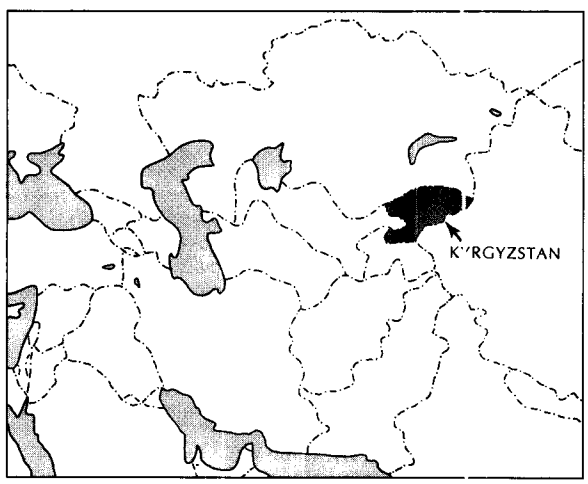
Kweiyang: see GUIYANG.

Kyd or **Kid, Thomas,** 1558–94, English dramatist. His fame rests on *The Spanish Tragedy* (c.1586), which initiated the Elizabethan revenge TRAGEDY. Popular through the 17th cent., *The Spanish Tragedy* is noted for its action, rhetoric, and character delineation.

Kyoto [kyō'tō], city (1990 pop. 1,461,140), capital of Kyoto prefecture, S Honshu, Japan. Founded in the 8th cent., it was Japan's capital from 794 to 1868. The cultural heart of Japan, the city has magnificent art treasures and is the seat of Kyoto Univ. and other institutions of higher learning. Along with Osaka, it has undergone an economic and cultural revival. Kyoto is a religious center, noted especially for its ancient Buddhist temples. Rich in historic interest, its buildings include the old imperial palace and Nijo Castle, the former palace of the Ashikaga SHOGUNS. Industries include electronics, chemicals, and the manufacture of tools and cameras. The city is famous for its silk, cloisonné, bronzes, damascene work, and porcelain.

Kyrgyzstan, Kirghizstan, or **Kirghizia,** officially Republic of Kyrgyzstan, republic (1992 est. pop. 4,568,000), c.79,000 sq mi (204,600 sq km), central Asia, formerly a constituent republic of the USSR. It borders China (SE), Kazakhstan (N), Uzbekistan (W), and Tajikistan (SW). The capital is BISHKEK (formerly Frunze). A mountainous country, it has rich pasturage for livestock. Cotton, sugar beets, and other crops are grown. Among its mineral resources are coal, oil, natural gas, antimony, mercury, uranium, and gold. Industries include the extraction and processing of its many resources, food processing, steel manufacture, and metallurgy. The Kyrgyz (or Kirghiz), a nomadic, Turkic-speaking Sunni Muslim people with Mongol strains, comprise a little over half the population; Russians, Uzbeks, and others make up the rest. The official language is Kyrgyz, but Russian is also spoken.

History. The Kyrgyz emigrated in the 17th cent. from the region of the upper Yenisei R., where they had lived since the 7th cent. The region was annexed (1855–76) by Russia and became part of the USSR in 1921 when Bolshevik forces subdued the nomadic Kyrgyz. The area became an autonomous republic of the USSR in 1926 and a constituent republic in 1936. In 1991, following the attempted hard-line coup against Soviet Pres. Gorbachev, the republic declared its independence as Kyrgyzstan; as the central Soviet government collapsed, it joined the COMMONWEALTH OF INDEPENDENT STATES. In 1993 a new constitution, establishing a unicameral parliament and separate heads of state and government, was adopted. Askar Akayev, who has been president of Kyrgyzstan since 1990, has sought more radical economic and political reforms than the other Central Asian republics.



Kyushu, island (1990 pop. 13,064,955), c.16,205 sq mi (42,133 sq km), southernmost and third largest of the main islands of Japan. It is mainly of volcanic origin, with a scenic, mountainous interior rising to 5,886 ft (1,794 m) at Kuju-san. There are many hot springs. Coal, mined in the north, contributed to the early development of the principal industrial cities (KITAKYUSHU, FUKUOKA, and Omuta). NAGASAKI is the chief port.

Kyzyl Kum or **Kizil Kum,** desert, central Asia, in Kazakhstan and Uzbekistan, SE of the ARAL SEA. Seminomadic tribes inhabit most of the region, which has gold and natural gas deposits and supports agricultural settlements in the river valleys and irrigated oases.

L

La, chemical symbol of the element LANTHANUM.

Labor, United States Department of, federal executive department established (1913) to administer and enforce statutes that promote the welfare, improve the working conditions, and advance the employment opportunities of the American workforce. Its major divisions include the Bureau of International Labor Affairs, the Employment and Training Administration, the Employment Standards Administration, the Bureau of Labor Statistics, the Pension and Welfare Benefits Administration, and the OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION.

Labor Day, holiday celebrated in the U.S. and Canada on the first Monday in September to honor the laborer.

labor law, legislation affecting workers and the conditions of employment. The earliest English factory law (1802) dealt with the health, safety, and morals of child textile workers. Labor unions were legalized in Britain in 1825, but agreements among their members to seek better hours and wages were punishable as conspiracy until 1871. In the U.S. early legislation was aimed at improving working conditions, but labor organizing was discouraged by the federal doctrine of conspiracy until this was superseded by state laws, beginning in 1842. A wide range of labor legislation has been enacted over the years—including laws prohibiting night work and work in hazardous occupations for women and children; laws establishing MINIMUM WAGES in certain occupations; and laws regulating interstate commerce to discourage sweatshop labor and child labor. Congress exempted (1916) UNIONS from the antitrust laws, and the use of injunctions in labor disputes was outlawed in 1932, although later reinstated. A landmark in legislation favorable to trade unions was achieved in the Wagner Act of 1935, which established the right of workers to organize and required employers to accept COLLECTIVE BARGAINING. In 1938 the Fair Labor Standards Act provided for minimum wages and overtime payments for workers in interstate commerce. The outbreak of strikes after World War II, however, brought demands for more restrictive labor legislation, culminating in passage of the Taft-Hartley Labor Act (1947), which declared illegal such union practices as the secondary boycott, the closed shop, and jurisdictional strikes (see STRIKE). Further restrictions were imposed in 1959 by the Landrum-Griffin Act. The Civil Rights Act (1964) prohibited race-, sex-, and religion-based discrimination in employment, and age discrimination was barred in 1967. Concern over workplace safety led to the act (1970) that established the OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION, and a 1974 law created a federal agency to insure many pension plans. The AMERICANS WITH DISABILITIES ACT (1990) barred job discrimination against otherwise qualified disabled individuals.

labor union: see UNION, LABOR.

Labour party, major British political party, the other being the CONSERVATIVE PARTY. Spurred by the increased enfranchisement of the working class (1867, 1884) and with the help of the FABIAN SOCIETY and the Trades Union Congress, the Labour Representation Committee was founded in 1900; it was renamed the Labour party in 1906. Its espousal of mildly socialist policies led to its quick rise to official opposition status in Parliament in 1922. In 1924 it formed its first ministry, under Ramsey MACDONALD. During the early 1930s a new group of Labour leaders, including Clement (later Earl) ATTLEE and Ernest BEVIN, called for increased nationalization of industry. Labour won the 1945 election, and the Attlee government enacted many social reforms, including a national health service. Harold WILSON, prime minister in 1964–70 and 1974–78, held the party together despite a widening split over economic and foreign policy issues. His successor, James CALLAGHAN, was unable to prevent a decisive Labour defeat at the polls in 1979, and, in 1981, a number of centrist members withdrew and formed the SOCIAL DEMOCRATIC PARTY. In 1983 Neil KINNOCK became leader of the Labour party. Kinnock moved the party toward the political center, but Labour lost the 1987 and 1992 elections. John SMITH succeeded Kinnock as party leader in 1992.

Labrador: see NEWFOUNDLAND.

Labrador retriever, large SPORTING DOG; shoulder height, c.23 in. (58.4 cm); weight, 60–75 lb (27.2–34.1 kg). Its short, oily coat, either black, brown, or yellow, resists cold weather and icy water. Widely used to hunt waterfowl, it was developed in Newfoundland and brought to England in the early 1800s.

La Brea, formerly Rancho La Brea, area, S California, known for its asphalt (tar) pits. Now within the boundaries of Hancock Park, Los Angeles, the pits are an extensive source of Pleistocene plant and animal fossils.

Lacan, Jacques, 1901–81, French psychoanalyst. Although known for his unorthodox treatment methods, he was a critic of modern, particularly U.S. psychoanalytic revisionism. He adhered to orthodox Freudian ideas, holding that there is a constant, unresolveable conflict between the ego and the UNCONSCIOUS, and that the true intent of PSYCHOANALYSIS is analysis, not cure. His collection *Écrits* (1966) was highly influential, especially in linguistics and literary criticism.

lacquer, solution of film-forming materials, natural or synthetic, usually applied as an ornamental or protective coating. Quick-drying synthetic lacquers are used to coat such products as automobiles, furniture, and textiles. Lacquer-work was one of the earliest industrial arts of Asia. It was highly developed in India; the Chinese inlaid lacquer-ware with ivory, jade, coral, or abalone. The art spread to Korea, then to Japan, where it took new forms. The ware, which is often given more than 40 coats of lacquer, may be decorated in color, gold, or silver and enhanced by relief, engraving, or carving. In the 17th cent. the technique known as japanning was used to make Western European imitations of lacquer-ware. Commercial production of lacquer-ware in the 19th cent. resulted in a decline in quality.

lacrosse, soccerlike ball and goal game, played by two teams of 10 players each on a field 60 to 70 yd (54.86 to 64.01 m) wide and 110 yd (100.58 m) long. The hard rubber ball is received, carried, and passed in the pocketlike head of the stick (crosse). Teams attempt to advance the ball until it can be hurled with the crosse or kicked into the opponent's goal (counting one point). Only the goalkeeper may touch the ball with the hands, and no field player may enter the crease, an area surrounding the goal. Lacrosse is a game of rough physical contact; fouls are penalized by disqualification or temporary suspension (as in ice HOCKEY) that leave the penalized team with a player handicap. Of Native American origin, the game was developed in Canada and introduced (1870s) into the U.S., where it is a popular college sport in the East.

lactose or **milk sugar** (empirical formula: $C_{12}H_{22}O_{11}$), white crystalline SUGAR formed in the mammary glands of all lactating animals and present in their milk. A disaccharide (see CARBOHYDRATE), lactose can be broken down by HYDROLYSIS into GLUCOSE and galactose. When milk sours, the lactose in it is converted by bacteria to lactic acid. Lactose is less sweet-tasting than SUCROSE and, unlike sucrose, is not found in plants and is not fermented by ordinary yeast.

Ladin: see RHAETO-ROMANIC.

Ladino: see SEPHARDIM.

Ladislaus I, king of Bohemia: see LADISLAUS V, king of Hungary.

Ladislaus II, king of Bohemia: see ULADISLAUS II, king of Hungary.

Ladislaus V or **Ladislaus Posthumous,** 1440–57, king of HUNGARY (1444–57) and, as Ladislaus I, king of Bohemia (1453–57). The posthumous son of the German king Albert II, he was duke of Austria by birth. His guardian, Holy Roman Emperor FREDERICK III,

refused to let him leave his custody until 1452. Ladislaus was crowned (1453) king of Bohemia but governed none of his realms. George of Podebrad was regent in Bohemia; John Hunyadi and later Ulrich, count of Cilli, were regents in Hungary.

Ladislaus, Polish rulers. **Ladislaus I,** 1260–1333, duke (1306–20) and king (1320–33) of POLAND, unified the kingdom after 82 years of division. **Ladislaus II** or **Ladislaus Jagiello,** 1350?–1434, king of Poland (1386–1434) and grand duke of Lithuania (1378–1401), acceded to the Polish crown by marrying Queen Jadwiga, at which time he was baptized and agreed to convert Lithuania to Christianity. He defeated (1410) the TEUTONIC KNIGHTS. **Ladislaus III,** 1424–44, king of Poland (1434–44) and, as Uladislaus I, king of Hungary (1442–44), led two crusades against the Turks (1443, 1447); the first was successful, the second ended with his defeat and death at the battle of VARNA. **Ladislaus IV,** 1595–1648, king of Poland (1632–48), struggled with his subjects and nobles, and fought wars with the Swedes, Russians, and Turks.

ladybird beetle or **ladybug,** small, brightly colored BEETLE. Generally under ¼ in. (6 mm) long, ladybugs are hemispheric in shape, have short legs, and are red or yellow with black spots or black with red or yellow spots. Ladybugs and their larvae feed on destructive, plant-eating insects; adults are frequently used in pest control.

lady's-slipper: see ORCHID.

laetrile, name given the chemical amygdalin, found in the kernels of many fruits, notably APRICOTS, bitter ALMONDS, and PEACHES. The subject of controversy for many years, laetrile has been purported by some to be a cure for CANCER. In 1981 the U.S. National Cancer Institute reported laetrile to be ineffective against cancer.

La Farge, John, 1835–1910, American artist and writer; b. N.Y.C. He was primarily engaged in mural painting and the design and manufacture of STAINED GLASS, e.g., his works in Trinity Church, Boston. La Farge also created notable oils, watercolors, and drawings. A man of the widest culture, he did much to establish a tradition of American fine arts and is known for his many urbane pieces of art criticism.

Lafayette or **La Fayette, Marie Joseph Paul Yves Roch Gilbert du Motier, marquis de,** 1757–1834, French general and statesman. Enthusiastic about the AMERICAN REVOLUTION, he sailed (1777) to America and was made a major general by the CONTINENTAL CONGRESS. A close friend of Gen. WASHINGTON, he served at Brandywine, VALLEY FORGE, and in the YORKTOWN CAMPAIGN. In the FRENCH REVOLUTION, Lafayette became (1789) commander of the militia (later the National Guard) and tried unsuccessfully to moderate between the contending factions. Given command (1792) of the army of the center, he was relieved of command after he had spoken in favor of the monarchy. He fled France and was imprisoned in Austria. Freed in 1797, he later made a triumphal tour (1824–25) of the U.S. He led the moderates in France during the JULY REVOLUTION of 1830. The modern French flag was created by Lafayette in 1789.

La Fayette, Marie Madeleine Pioche de La Vergne, comtesse de, 1634–92, French novelist of the classical period. Her chief and only surviving work, *La Princesse de Clèves* (1678), analyzing a woman's renunciation of an illicit love, is the first great French novel.

Laffite or **Lafitte, Jean,** c.1780–1826?, leader of a band of privateers and smugglers. He preyed on Spanish commerce from bases in Louisiana and Texas. He and his followers aided U.S. troops against the British at the battle of NEW ORLEANS (1815).

La Follette, Robert Marion, 1855–1925, U.S. senator from Wisconsin (1906–25); b. Primrose, Wis. A Republican, he was a U.S. congressman (1885–91) from Wisconsin; later, as governor (1901–6), he introduced reforms that became known as the Wisconsin Idea. As senator he was at odds with the Republican leadership and generally supported Pres. WILSON's reforms, but he voted against the U.S. entry into World War I and opposed the League of Nations. In 1924 he ran for president on the PROGRESSIVE PARTY ticket and polled 5 million votes. His son **Robert Marion La Follette, Jr.,** 1895–1953, was a U.S. senator from Wisconsin (1925–47). Another son, **Philip Fox La Follette,** 1897–1965, was governor of Wisconsin (1931–33, 1935–39).

La Fontaine, Jean de, 1621–95, French poet. His *Selected Fables* (1668–94), 12 books of some 230 fables drawn largely from AESOP, place him among the masters of world literature. Told with wit and acumen, in brilliant verse and narrative, the fables have achieved worldwide success. Although their charm and simple facade have made them popular with children, most are sophisticated satires and serious commentaries on French society. Other works include *Tales and Novels in Verse* (1664–74), humorous tales drawn largely from BOCCACCIO and ARIOSTO; comedies and librettos for opera; and poems on classical themes.

LaFontaine, Sir Louis Hippolyte, 1807–64, Canadian statesman. The leader of the Reform party in Lower Canada (Quebec), he and Robert BALDWIN headed two ministries (1842–43, 1847–51) that enacted reforms and achieved responsible government. He was chief justice (1853–64) of Lower Canada.

Lagerkvist, Pär Fabian [lä'gərkvĭst], 1891–1974, Swedish writer, winner of the 1951 Nobel Prize in literature. His concern with good and evil and with man's search for God is expressed in such novels as *The Hangman* (1933) and *Barabbas* (1950), and the play *Man Without a Soul* (1936). His verse collections include *Evening Land* (1953).

Lagerlöf, Selma [lä'gərlövˌ], 1858–1940, Swedish novelist. Her novels, often set in her native Värmland and based on legends and sagas, include *The Story of Gösta Berling* (1891) and *The Ring of the Lowenskolds* (1925–28). She also wrote the children's classic *The Wonderful Adventures of Nils* (1906). She received the 1909 Nobel Prize in literature, the first woman to be thus honored.

Lagos, largest city (1989 est. pop. 1,274,000) and former capital of Nigeria, on the Gulf of Guinea. It comprises four islands and four mainland sections, connected by bridges and causeways. Lagos is Nigeria's chief port and industrial center, a road and rail terminus, and site of an international airport. An old Yoruba town, Lagos grew as a trade center and seaport from the 15th cent. It was a center of the slave trade until Britain annexed the city in 1861. Because of severe congestion in the modern city and its peripheral location, Nigeria announced (1976) plans to create a new federal capital at ABUJA, and the government was moved there in 1991.

Lagrange, Joseph Louis, Comte [lägräNzh'], 1736–1813, French mathematician and astronomer; b. Italy. He was director of mathematics (1766–87) at the Berlin Academy of Sciences. After moving to Paris, he became (1793) chairman of the French commission on weights and measures and was influential in the adoption of the decimal system as the basis for the metric system. Under Napoleon, Lagrange was made senator and count. His contributions to mathematics included work on the calculus, the calculus of variations, number theory, the solutions of equations, and the application of calculus to probability theory. In astronomy, he made theoretical calculations on the libration of the moon and on the motions of the planets and satellites of Jupiter. He also did research on the nature and propagation of sound and on the vibration of strings. His chief work was the *Mécanique analytique* (1788).

LaGuardia, Fiorello Henry, 1882–1947, mayor of NEW YORK CITY

Fiorello LaGuardia

(1934–45); b. N.Y.C. A Republican, he was a U.S. congressman (1917–19, 1923–33) and was elected mayor (1933) on the Fusion ticket. Known as "the Little Flower" (from his first name), he achieved numerous municipal reforms. His courage and energy gave him a national reputation.

Lahore, city (1981 pop. 2,707,215), capital of Punjab prov., E central Pakistan, on the Ravi R. Pakistan's second largest city, it is the commercial center of an agricultural region and has such industries as filmmaking, food processing, and steel making and produces many handicrafts. In 1206 India's first Muslim emperor was crowned in Lahore. The city flourished (16th cent.) as a capital of the MOGUL empire, was annexed by the Sikhs in 1767, and passed to the British in 1849. The palace and mausoleum of Emperor Jehangir and the Shalimar gardens are among the splendid remains of the Mogul period.

Lahr, Bert, 1895–1967, American comic actor; b. N.Y.C. as Irving Lahrheim. He is remembered as the Cowardly Lion in the film *The Wizard of Oz* (1939) and as Estragon in Samuel BECKETT's *Waiting for Godot* (1956).

Laing, R(onald) D(avid), 1927–89, British psychiatrist. He studied schizophrenia for over thirty years and came to view it as a culturally-conditioned, family-induced internal conflict, a controversial idea. He directed (1962–65) London's Langham Clinic, a therapeutic community where hierachical distinctions between doctors and patients were essentially eliminated.

laissez faire [Fr., = leave alone], in economics and politics, a doctrine holding that an economic system functions best when there is no interference by government. It is based on the belief that the natural economic order tends, when undisturbed by artificial stimulus or regulation, to secure the maximum well-being for the individual and therefore for the community. The principles of laissez faire were formulated by the French PHYSIOCRATS in the 18th cent. in opposition to MERCANTILISM. In Britain, Adam SMITH, Jeremy BENTHAM, and J.S. MILL developed laissez faire into a tenet of classical economics and a philosophy of individualism. During the 19th cent. the so-called MANCHESTER SCHOOL of economics popularized the doctrine of free trade and brought laissez faire into politics (e.g., by securing repeal of the CORN LAWS). In time, laissez faire came to be perceived as promoting monopoly rather than competition and as contributing to "boom-and-bust" economic cycles, and by the mid-20th cent. the principle of state noninterference in economic affairs had generally been discarded. Nevertheless, laissez faire, with its emphasis shifted from the value of competition to that of profit and individual initiative, remains a bulwark of conservative political thought, influential in the 1980s in such government administrations as that of Ronald REAGAN in the U.S. and Margaret THATCHER in Britain.

Laius: see OEDIPUS.

lake, body of standing water occupying a depression in the earth. Most lakes are freshwater bodies; a few (e.g., the GREAT SALT LAKE, the DEAD SEA), however, are more salty than the oceans. The GREAT LAKES of the U.S. and Canada are the world's largest system of freshwater lakes. The CASPIAN SEA is the world's largest lake. Most lake basins were formed by the erosive action of GLACIERS on bedrock. Other sources include volcanic calderas and natural and human-made dams in streams and RIVERS. Lakes are transient geologic features, eventually disappearing because of climatic changes, erosion of an outlet, and EUTROPHICATION.

Lake Clark National Park: see NATIONAL PARKS (table).

Lake District, scenic mountain region, c.30 mi (50 km) wide, NW England. It includes 15 lakes, among them Ullswater, Derwentwater, and Windermere, and reaches a high point of 3,210 ft (978 m) in Scafell Pike. Many writers and artists have lived there, including William WORDSWORTH, Samuel Taylor COLERIDGE, and Robert SOUTHEY, who are known as the Lake Poets.

Lake of the Woods, island-studded resort lake on the U.S.–Canadian border, 1,485 sq mi (3,846 sq km), extending c.70 mi (110 km) N from N Minnesota into SW Ontario and SE Manitoba. The one third that belongs to the U.S. separates the northernmost point in the coterminous 48 states from Minnesota.

Lakewood, city (1990 pop. 126,481), N central Colo., a suburb of DENVER; inc. 1969. It is primarily residential, with light industries producing electronic and medical equipment. Corporate and federal government offices are important.

Lamarck, Jean Baptiste Pierre Antoine de Monet, chevalier de, 1744–1829, French naturalist. Regarded as the founder of invertebrate paleontology, he is noted for his study and classification of invertebrates and for his evolutionary theories; the latter were first made public in his *Système des animaux sans vertèbres* (1801). **Lamarck's theory of evolution,** or **Lamarckism,** asserted that all life forms have arisen by a continual process of gradual modification throughout geological history. It was based on the theory of ACQUIRED CHARACTERISTICS, which held that new traits in an organism develop because of a need created by the environment and that they are transmitted to its offspring. Although the latter hypothesis was rejected as the principles of heredity were established, Lamarck's theory was an important forerunner of Charles DARWIN's theory of EVOLUTION.

Lamartine, Alphonse Marie Louis de [lämärtēn'], 1790–1869, French romantic poet, novelist, and statesman. Drawing on traditional and contemporary sources, his best-known work, *Poetic Meditations* (1820), including the well-known poem "Lake," is noted for its musical lyricism and affinity for nature. Other poetic volumes include *Harmonies* (1830) and the narrative *Jocelyn* (1836). Lamartine wrote *The History of the Girondists* (1847), in praise of the GIRONDISTS, and after the FEBRUARY REVOLUTION of 1848 he briefly headed the provisional government. Among his later works is the novel *Graziella* (1849).

Lamb, Charles, 1775–1834, English essayist. A boyhood friend of COLERIDGE, he was a clerk in India House (1792–1825). He lived with his sister, Mary Ann Lamb, who was subject to violent fits of insanity. With her he wrote *Tales from Shakespeare* (1807). Lamb established his reputation as a critic with *Specimens of English Dramatic Poets* (1808) and as an essayist with *Essays of Elia* (collected 1823, 1833). The essays cover a variety of topics and maintain throughout Lamb's singular tone—intimate, familiar, and humorous.

lamb: see SHEEP.

Lamentations, book of the OLD TESTAMENT, 25th in the Authorized Version, directly after JEREMIAH, to whose author it has been ascribed since ancient times. It is a series of poems mourning the destruction of JERUSALEM by Babylon.

Lampedusa, Giuseppe di, 1896–1957, Italian novelist. A Sicilian prince, he drew on family history for his acclaimed novel *The Leopard* (1958), about the demise of an aristocratic society after the unification of Italy.

lamprey, primitive marine and freshwater FISH (family Petromyzontidae) lacking a sympathetic nervous system, spleen, and scales. Although unrelated, the lamprey externally resembles the EEL. Most lampreys are parasitic bloodsuckers, attaching themselves to other fish by means of horny teeth set in a circular, jawless mouth; an anticoagulant in the saliva keeps the blood fluid. Some freshwater lampreys eat flesh as well. They are abundant in the Great Lakes, where they are considered pests by the fishing industry.

lamp shell, common name for animals in the phylum Brachiopoda, marine invertebrates resembling but not related to CLAMS. Found in shallow seas, lamp shells attach themselves to objects by means of a short stalk (pedicel) and feed by means of a characteristic tentacled organ (lophophore) surrounding the mouth. The lophophore creates currents that draw water, with food and oxygen, into the shell. Lamp shells are usually from 1 to 2 in. (2.5–5 cm) across.

LAN: see LOCAL AREA NETWORK.

Lanai [lənī'], island, 141 sq mi (365 sq km), central Hawaii. Mt. Lanaihale (3,370 ft/1,027 m) is its highest point; Lanai City (1990 pop. 2,400) its chief town. Purchased (1922) by a fruit company, it was long a major pineapple-growing center. The company's corporate successor, which owns most of Lanai, has promoted tourism and developed its lands on a limited basis.

Lancaster, Burt(on Stephen), 1913–, American film actor; b. N.Y.C. His films include *All My Sons* (1948), *From Here to Eternity* (1953), *Elmer Gantry* (1960; Academy Award), *The Birdman of Alcatraz* (1962), *The Swimmer* (1968), *Atlantic City* (1980), and *Tough Guys* (1986).

Lancaster, city (1990 pop. 55,551), seat of Lancaster co., SE Pa., on the Conestoga R.; settled c.1709 by German MENNONITES; inc. as a

city 1818. A farming market town, it has stockyards and various light industries. Tourism and outlet retailing are important. Lancaster's rich history includes involvement in the AMERICAN REVOLUTION, service as state capital (1802–12), and development of the Conestoga wagon, later modified into the prairie schooner. James BUCHANAN lived there; his home (1828) is a national shrine.

Lancaster, house of, royal family of England. The line was founded by the second son of HENRY III, **Edmund Crouchback,** 1245–96, who became earl of Lancaster in 1267. His nickname "Crouchback," or crossed back, refers to the fact that he went on crusade and was entitled to wear the cross. His son **Thomas, earl of Lancaster,** 1277?–1322, led the barons against his cousin EDWARD II and was (1314–18) the virtual ruler of England. Defeated at the battle of Borough bridge, he was beheaded for treason. Thomas's brother, **Henry, earl of Lancaster,** 1281?–1345, was chief adviser to the young EDWARD III. His son, **Henry, duke of Lancaster,** 1299?–1361, was made duke in 1351 for excellent service in the HUNDRED YEARS WAR. When he died without male heirs, JOHN OF GAUNT inherited the Lancastrian lands by marrying Henry's daughter Blanche. John's son Henry deposed (1399) RICHARD II and became king as HENRY IV. Other Lancastrian kings were HENRY V and HENRY VI. Claims by the rival house of YORK led to the Wars of the ROSES; the Lancastrian claims passed to the house of TUDOR.

lancelet, small, fishlike lower CHORDATE, related to the VERTEBRATES. Usually about 1 in. (2.5 cm) long, with a transparent body tapering at both ends, the lancelet has no distinct head and no paired fins. A filter feeder that lives in shallow marine waters, it is usually found buried in the sand with only the mouth end projecting. The lancelet has a nerve cord but no heart, no brain, and no eyes. LAMPREY larvae resemble the lancelet.

Lanchow: see LANZHOU.

Land, Edwin Herbert, 1909–91, American inventor and industrialist; b. Bridgeport, Conn. He became interested in POLARIZED LIGHT and invented (1932) a material to eliminate glare, now known by the trademark Polaroid. In 1937, Land established the Polaroid Corp. to manufacture such products as sunglasses, camera filters, and headlights. He also developed a process for three-dimensional pictures (1941); invented the polaroid camera (1947), which takes and prints photos in one step; and introduced "instant" color photographs (1963).

Landau, Lev Davidovich, 1908–68, Soviet physicist. He was head of the theoretical department of the USSR Academy of Sciences. A leader in Soviet space technology, he helped make the first Soviet atomic bomb. For his contributions to LOW-TEMPERATURE PHYSICS, especially his development of a theory of SUPERFLUIDITY, and his pioneering studies on gases, he received the 1962 Nobel Prize in physics.

Landis, Kenesaw Mountain, 1866–1944, American jurist and commissioner of baseball (1921–44). A U.S. district judge in N Illinois (1905–22), he assumed the new post of baseball commissioner in the wake of the "Black Sox Scandal," a revelation that players in the 1919 World Series had been bribed. Landis strictly ruled organized baseball until his death, restoring public confidence in the game.

Landon, Alf(red) Mossman, 1887–1987, American politician; b. West Middlesex, Pa. He was governor of Kansas (1933–37) and the 1936 Republican candidate for president. His daughter, **Nancy Landon Kassebaum,** 1932–, b. Topeka, Kans., was elected (1978) U.S. senator from Kansas.

Landowska, Wanda [ländôf'skä], 1877–1959, Polish-French harpsichordist and pianist. She founded the École de Musique Ancienne, near Paris, giving many concerts between 1919 and 1940. She came to the U.S. in 1940 and is largely responsible for the revival of interest in the harpsichord.

Landrum-Griffin Act: see LABOR LAW.

Landseer, Sir Edwin Henry, 1802–73. English painter of animals. He is best known for his sentimental, humanized paintings of dogs, e.g., *Dignity and Impudence* (Tate Gall., London).

landslide, rapid slipping of a mass of earth or rock from a higher elevation to a lower level due to gravity and water lubrication. In humid climates, slow-moving earthflows can block roads and cause property damage. The more spectacular mudflows that pour down canyons in areas subject to erosion cause severe damage as well as loss of life.

landsmaal: see NORWEGIAN LANGUAGE.

Landsteiner, Karl, 1868–1943, American medical researcher; b. Austria; came to U.S., 1922. For discovering human BLOOD GROUPS he was awarded the 1930 Nobel Prize in physiology or medicine. His research in immunology and the chemistry of antigens and serological reactions led to contributions in hemolysis and in methods of studying poliomyelitis. With Alexander Wiener and Philip Levine he identified the RH FACTOR (1940).

Lanfranc, d. 1089, Italian churchman and theologian, archbishop of Canterbury (1070–89). He founded an illustrious school at Bec (c.1040) and wrote *Concerning the Body and Blood of the Lord,* a treatise on the Eucharist (see COMMUNION) that became a medieval classic. An associate of WILLIAM I of England, he reluctantly became archbishop of Canterbury. In England his reforms included establishing ecclesiastical courts, strengthening the monasteries, and shifting bishoprics from small towns to important cities.

Lang, Fritz, 1890–1976, German-American film director; b. Austria. Among his German films are *Metropolis* (1926), a science-fiction classic, and *M* (1930), a study of a child-murderer. His Hollywood work includes *Fury* (1936), *Ministry of Fear* (1944) and *The Big Heat* (1953).

Lange, Dorothea, 1895–1965, American photographer; b. Hoboken, N.J. Lange's *Migrant Mother* (1936) is typical of her powerful documentary portraits of rural America in the Depression years. She also recorded the Japanese-American internment (1941).

Dorthea Lange's Migrant Mother, *1936*

Langland, William, c.1332–c.1400, putative author of *The Vision of William concerning Piers the Plowman* (*Piers Plowman*), a tremendously popular Middle English allegorical poem in unrhymed alliterative verse. Consisting of three dream visions it is both a social satire and a vision of the simple Christian life.

Langley, Samuel Pierpont, 1834–1906, American scientist; b. Roxbury, Mass. He invented the bolometer, an instrument for recording variations in heat radiation, and with it he measured the distribution of heat in the solar and lunar spectra. From these studies he concluded that the solar constant of radiation was in fact a variable. Director (from 1867) of the Allegheny Observatory and secretary (from 1887) of the Smithsonian Inst., Langley founded (1890) the Smithsonian Astrophysical Observatory.

Langmuir, Irving, 1881–1957, American chemist. He introduced atomic-hydrogen welding, invented a gas-filled tungsten lamp, and contributed to the development of the radio vacuum tube. For his work in surface chemistry, in which he developed an important technique for studying layers of molecules one molecule thick, he

The key to pronunciation appears on page xiii.

MAJOR LANGUAGES OF EUROPE, ASIA, AND SOME ISLANDS OF THE PACIFIC AND INDIAN OCEANS (**Asterisk indicates a dead language*)

Caucasian Languages (*spoken in the Caucasus region, Turkey, and Iran*)

NORTHERN	Abkhaz, Adyghe (including Circassian and Kabardin), Chechen
SOUTHERN	Georgian

Dravidian Languages (*spoken in S India and N Sri Lanka*)

Eastern Romance	Italian, Rhaeto-Romanic (including Romansh, Ladin, and Friulian), Rumanian, Sardinian
Western Romance	Catalan, French, Ladino, Portuguese, Provençal, Spanish

won the 1932 Nobel Prize in chemistry. He discovered that particles of dry ice and iodide added to certain clouds could produce rain or snow.

Langtry, Lillie, 1853–1929, English actress; b. Jersey, Channel Islands. Called the Jersey Lily, she was noted for her great beauty and her liaison with EDWARD VII. *Lady Windermere's Fan* was written for her by Oscar WILDE.

language, systematic communication by vocal symbols. It is a universal characteristic of the human species. The earliest forms of language known are no more "primitive" than modern forms. Because language is a cultural system, individual languages classify objects and ideas differently. There are some 6,500 spoken languages, but about 2,000 have fewer than 1,000 speakers. The smallest have only a few members; the largest, in approximate descending order based on the number of native speakers, are North Chinese vernacular (Mandarin), English, Spanish, Hindustani, Bengali, Arabic, Russian, and Portuguese. Differences within languages are DIALECTS. Languages change continuously, but various factors, especially literacy, lead to the development of a community's standard language, usually one dialect, e.g., London English. Literary and colloquial standards may differ, and a group jargon may be unintelligible to outsiders; the differences are primarily in vocabulary. Groups of related languages are called families and stocks. For a survey of the important languages by family, see the table accompanying this article and the AFRICAN LANGUAGES and NATIVE AMERICAN LANGUAGES articles. See also LANGUAGE ACQUISITION.

language acquisition, the process of learning a native or a second language. Although how children learn to speak is not perfectly understood, most explanations involve both the observation that children copy what they hear and the inference that human beings have a natural aptitude for understanding grammar. Children usually learn the sounds and vocabulary of their native language through imitation, and grammar is seldom taught to them; that they rapidly acquire the ability to speak grammatically supports the theory of Noam CHOMSKY and others that children are able to learn the grammar of a particular language because all intelligible languages are founded on a "deep structure" of universal grammatical rules that corresponds to an innate capacity of the human brain. People learning a second language pass through some of the same stages as do children learning their native language.

langue d'oc [läNg dôk'] and **langue d'oïl** [dôē], names of the two principal groups of medieval French dialects, *oc* and *oïl* being their respective words for *yes*. *Langue d'oc* was spoken south of a line running, roughly, from Bordeaux to Grenoble. Also called PROVENÇAL, it was the language of the great medieval TROUBADOURS. The *langue d'oïl* of the Paris region developed into modern French.

MAJOR LANGUAGES OF EUROPE, ASIA, AND SOME ISLANDS OF THE PACIFIC AND INDIAN OCEANS (*Continued*)
(**Asterisk indicates a dead language*)

SLAVIC (or SLAVONIC)	
East Slavic	Belarussian (or White Russian), Russian, Ukrainian
South Slavic	Bulgarian, Church Slavonic,* Macedonian, Serbo-Croatian, Slovenian
West Slavic	Czech, Kashubian, Lusatian (or Sorbian or Wendish), Polabian,* Polish, Slovak
THRACO-ILLYRIAN	Albanian, Illyrian,* Thracian*

MON-KHMER	Cambodian (or Khmer), Cham, Khasi, Mon (or Talaing), Nicobarese, Sakai, Samang
MUNDA	Santali

Uralic and Altaic Languages (*spoken discontinuously in Eurasia from E Europe to the Pacific Ocean*)

ALTAIC	
Turkic	
Eastern	Uigur, Uzbek
Southern	Azeri (or Azerbaijani), Chuvash, Turkish, Turkmen
Western	Kazakh, Kazar, Kireghiz, Noghay, Tatar
Mongolian	Buryat, Kalmuck, Khalkha (or Mongol proper)
Tungusic	Manchu, Tungus
URALIC	
Finno-Ugric	
Finnic	Cheremiss, Estonian, Finnish (or Suomi), Karelian, Lapp, Mordvinian, Permian tongues
Ugrian (or *Ugric*)	Hungarian (or Magyar), Ostyak, Vogul
Samoyedic	Samoyed

Note: The numerous aboriginal languages of Australia and the numerous Papuan languages have not as yet been studied sufficiently to be classified with any certainty as far as relationships with each other are concerned. They are, however, unrelated to the other languages of the world.

The non-related languages of the world include Ainu, Basque, Japanese, and Korean, as well as the dead languages Elamite, Etruscan, Hurrian, Meroitic, and Sumerian.

Both *langue d'oïl* and *langue d'oc* dialects persisted, however, in some rural areas as *patois*, or popular, provincial speech.

Lanier, Sidney, 1842–81, American poet and musician; b. Macon, Ga. An accomplished flutist, he wrote a study of the interrelation of music and poetry, *The Science of English Verse* (1880). His own melodic verses, e.g., "Corn," "Song of the Chattahoochee," were published in *Poems* (1887).

Lansing, city (1990 pop. 127,321), state capital, S Mich., at the confluence of the Grand and Red Cedar rivers; inc. 1859. It was made state capital in 1847. The arrival of the railroad in the 1870s and the automobile industry in 1897 spurred its growth. Automobiles and automobile parts are the main manufactures. Michigan State Univ. is in East Lansing, a suburb.

lanthanide series, RARE-EARTH METALS with atomic numbers 58 through 71 in group IIIb of the PERIODIC TABLE. They are, in order of increasing atomic number, CERIUM, PRASEODYMIUM, NEODYMIUM, PROMETHIUM, SAMARIUM, EUROPIUM, GADOLINIUM, TERBIUM, DYSPROSIUM, HOLMIUM, ERBIUM, THULIUM, YTTERBIUM, and LUTETIUM. Although they closely resemble LANTHANUM and each other in their chemical and physical properties, lanthanum (at. no. 57) is not always considered a member of the series.

lanthanum (La), metallic element, discovered in 1839 by C.G. Mosander. It is a silver-white, soft, malleable, ductile, and chemically active RARE-EARTH METAL. Lanthanum is used in making ductile cast IRON and as an alloy in cigarette-lighter flints. It occurs in MONAZITE. See ELEMENT (table); PERIODIC TABLE.

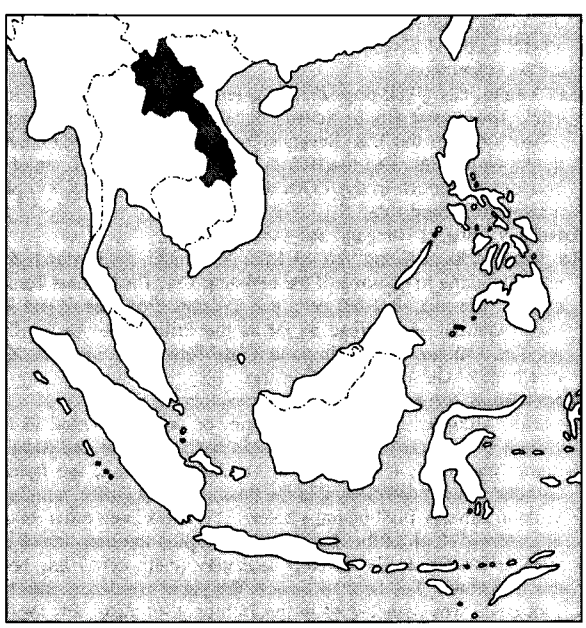
Lanzhou or **Lanchow** [both: län-jō], city (1990 est. pop. 1,510,000), capital of Gansu prov., W China, on the HUANG HE. The transport and industrial center of NW China, it has a large oil refinery and a plutonium gas-diffusion plant. Its products include petrochemicals, textiles, and machinery. The city is a center for China's Muslims. Since 1960, it has been the center of China's atomic energy industry.

Laocoön [lāŏk'ōŏn], in Greek mythology, priest of APOLLO who warned the Trojans not to touch the wooden horse made by the Greeks during the TROJAN WAR. He and his two sons were crushed by sea serpents as they sacrificed to POSEIDON, and the Trojans brought the horse into the city. The death struggle of the family is portrayed in a famous Greek sculpture by Agesander, Athenodorus, and Polydorus, now in the Vatican.

Laos [lä'ōs], officially Lao People's Democratic Republic, republic (1992 est. pop. 4,440,000), 91,428 sq mi (236,800 sq km), SE Asia, bordered by China (N), Vietnam (E), Cambodia (S), and Thailand and Myanmar (W). The capital is VIENTIANE. Except for lowlands along the MEKONG R., where most of the people live, and three sparsely populated plateaus, the terrain is mountainous and thickly forested. The climate is monsoonal. Economically, the country is one of the least developed in Asia. There are no railroads, few

roads, and practically no mining or industry, although textiles have become a major export. The predominantly rural population is engaged primarily in fishing and subsistence agriculture. Rice (by far the chief crop), corn, vegetables, coffee, tobacco, sugarcane, and cotton are important. Illegal opium poppies and cannabis are produced in the northwest (the "golden triangle"). Ethnic Lao, related to the Thai, make up about half the population; minorities include ethnic Thai, Vietnamese, and Chinese as well as a number of tribal mountain groups. Lao is the official language; French and English are also widely spoken. Buddhism is the most widely practiced religion.

History. Part of the KHMER EMPIRE, Laos was infiltrated in the 13th cent. by Lao people from Yunnan, China, and by the 17th cent. a powerful Lao kingdom called Lan Xang held sway over much of SE Asia. After 1707 internal dissension split the kingdom, which passed to Siam (early 18th cent.) and then became (1893) a protectorate in the French-ruled union of INDOCHINA. After occupation by Japanese forces in World War II Laos became (1949) a semiautonomous state within the FRENCH UNION. It received independence in 1953. By that time the Pathet Lao, a Communist nationalist movement aided by the Vietminh (Vietnamese Communists), had gained control of N Laos, establishing a rival government headed by Prince Souphanouvong. A protracted civil war followed, and after 1965 the VIETNAM WAR increasingly spilled over into Laos. A cease-fire was finally signed in 1973, and a coalition government was formed under Premier Souvanna Phouma. It soon collapsed, however, and the Pathet Lao took over the government in 1975 and abolished the monarchy. Souphanouvong became president, and Kaysone Phomvihane, head of the Communist party, became premier. A flood of refugees, including most of the professional and commercial classes, fled the country. Laos became increasingly dependent on Vietnam for military and economic assistance, and the two countries signed a 25-year treaty of friendship in 1977. In the early 1990s Laos abandoned economic communism for capitalism, but the party retained tight political control. Kaysone became president in 1991, but he died the following year and Nouhak Phoumsavan became president and Khamtay Siphandon party leader.



Lao-tze or **Lao-tzu** [lou-dzŭ], b. c.604 B.C., legendary Chinese philosopher. It is uncertain that Lao-tze [Chin., = old person or old philosopher] is an historical figure. According to legend and to sources from the 1st cent. B.C., he was a royal librarian named Li Erh. He is traditionally cited as the author of the *Tao-te-ching*, the central text of TAOISM, but modern scholars date that work as a whole from the 4th cent. B.C.

La Paz, city (1992 pop. 1,883,122), W Bolivia, administrative capital of Bolivia since 1898. (The constitutional capital is SUCRE.) It is the nation's largest city and its commercial center. Manufactures include clothing and processed food. Situated in a narrow Andean river valley at an elevation of c.12,000 ft (3,660 m), it is the highest capital city in the world. It was founded in 1548 and was a key point on colonial trade routes. Tourist attractions in the area include Lake TITICACA.

laparoscopic surgery: see ENDOSCOPE.

lapis lazuli, gem composed of lazurite and other minerals in shades of blue, usually flecked with PYRITE. Most often found in massive form in metamorphosed limestones, it has been used since ancient times for beads and small ornaments. Lapis lazuli was the original pigment for ultramarine and was the "sapphire" of the ancients.

Laplace, Pierre Simon, marquis de, 1749–1827, French astronomer and mathematician. On the basis of Isaac NEWTON's gravitational theory, he made mathematical studies of the motions of comets, the moon, Saturn, Jupiter, and Jupiter's satellites, as well as of the theory of tides. His research results, which together with those of Joseph LAGRANGE and earlier mathematicians established Newton's theory beyond a doubt, were published in his famous *Mécanique céleste* (5 vol., 1799–1825). His more popular *Exposition du système du monde* (1796) gave scientific form to the nebular hypothesis of the origin of the solar system.

Lapland, vast region of N Europe, largely within the Arctic Circle, occupying N Norway, N Sweden, N Finland, and the Kola Peninsula of Russia. The climate is severe, and the vegetation cover a sparse tundra except in the forested southern zone. Reindeer, an essential foodstuff, were seriously contaminated by the 1986 Chernobyl nuclear disaster, dealing the region a severe economic blow. There are important high-grade iron ore deposits at Gällivare and Kiruna (Sweden), copper deposits at Sulitjelma (Norway), and nickel and apatite deposits in Russia. The **Lapps** or **Laplanders,** the indigenous population, number about 60,000 and are concentrated mainly in Norway; they call themselves the Sami. They speak a Finno-Ugric language, and are believed to have originated in central Asia and to have been pushed into the northern extremities of Europe by the later migrations of Finns, Goths, and Slavs.

larceny, in law, unlawful taking and carrying away of another's property with intent to deprive the owner of its use or to appropriate it to one's own or someone else's use. Grand larceny, usually classed as a FELONY, is distinguished from petty larceny, usually a misdemeanor, by the value of the property involved. Robbery (the taking and carrying away of property by force or threat of force) and embezzlement (wrongful use of legally entrusted property) are both classed as larceny in most modern statutes.

larch, non-evergreen CONIFER (genus *Larix*) of the PINE family, found in the Northern Hemisphere. The needles of the larch are borne in characteristic radiating clusters. The Western larch (*L. occidentalis*), of North America, achieves great height; its wood is used for interior construction and cabinetmaking. The American larch, or tamarack (*L. laricina*), also a source of timber, is often cultivated for its beauty.

Lardner, Ring(gold) Wilmer, 1885–1933, American writer; b. Niles, Mich. A sports reporter (1907–19), he became known for short stories in a racy sports idiom, e.g., *You Know Me, Al* (1916). His later stories, cynical and pessimistic, yet humorous, include *What of It?* (1925) and *First and Last* (1934).

Laredo, city (1990 pop. 122,899), seat of Webb co., S Tex., on the Rio Grande; founded 1755, inc. 1852. It is the major port of entry on the U.S.-Mexico border; import-export trade thrives, and tourism is important. Ranching, oil, and smelting operations are also important. Laredo has many ties with its Mexican sister city, NUEVO LAREDO. It was a post on the Mexican road to SAN ANTONIO, and during the MEXICAN WAR it was the capital of a "Republic of the Rio Grande."

lark, perching BIRD of the mainly Old World Alaudidae family. Skylarks, the best known of the larks, are c.7 ¼ in. (18.2 cm) long and similar in coloration (grays and browns above and light underneath) and nesting habits (meadows, plains, and other open ar-

eas). The horned lark belongs to the only species native to North America, *Eremophila alpestris;* the prairie lark is a subspecies. On the ground, these larks run rather than hop; in flight, they have a melodious song. The MEADOWLARK belongs to another family.

Larkin, Philip, 1922–85, English poet. His poems display a subtle wit and his fine eye for the ordinary in English life. His volumes include *The Less Deceived* (1955), *The Whitsun Weddings* (1964), and *High Windows* (1974). He also wrote novels and jazz criticism.

larkspur, any north temperate, Old-World annual (genus *Consolida*) of the BUTTERCUP family. *Consolida* species were formerly classified in the genus *Delphinium,* which includes the similar annual, biennial, and perennial herbaceous plants commonly called larkspurs or delphiniums. Plants of both genera are popular garden plants. In many cultivated larkspurs and delphiniums the spurred flowers, usually blue, pink, or white, rise in a spire above the leaves.

La Rochefoucauld, François, duc de [rôshfo͞okō'], 1613–80, French author. As head of an ancient family, he opposed RICHELIEU and was later active in both FRONDES, which gives his *Mémoires* (1662) historical interest. However, his place in French literature rests on the *Maxims* (1665), a collection of several hundred lucid and polished moral maxims expressing his pessimistic view that selfishness is the source of all human behavior.

larynx, organ of voice in mammals. An extension of the trachea, the human larynx is a small, boxlike chamber with walls of cartilage bound by muscles and membranes. The vocal cords, a pair of elastic folds in the mucous-membrane lining, lie within the larynx. During speech the cords are stretched across the larynx; outgoing breath, forced between them, vibrates and produces voice. The sound varies with the tension of the cords and the space between them.

La Salle, Robert Cavelier, sieur de [läsäl'], 1643–87, French explorer in NORTH AMERICA. He commanded Fort Frontenac, developed trade, and built many forts. In 1682 he and his lieutenant, Henri de Tonti, descended the MISSISSIPPI to its mouth. La Salle took possession of the whole valley, naming it LOUISIANA. After three futile attempts to find the mouth of the Mississippi by sea, he was murdered in a mutiny.

Las Casas, Bartolomé de [läs kä'säs], 1474–1566, Spanish missionary in Latin America. Ordained a priest (1510), he worked to improve the condition of the indigenous peoples and to end their enslavement and forced labor. He converted uncivilized tribes, tried but failed to establish (1520–21) a model native colony, and visited Spain to urge government action. Chiefly through his efforts, a humanitarian code known as the New Laws was adopted (1542) to protect the native peoples in Spanish colonies. The New Laws were later so altered, however, as to be ineffective.

Lascaux: see PALEOLITHIC ART.

laser [acronym for *l*ight *a*mplification by *s*timulated *e*mission of *r*adiation], device for the creation and amplification of a narrow, intense beam of coherent LIGHT. In a laser, the atoms or molecules of a crystal, such as ruby or garnet—or of a gas, liquid, or other substance—are excited so that more of them are at higher energy levels than are at lower energy levels. If a PHOTON whose frequency corresponds to the energy difference between the excited and ground states strikes an excited atom, the atom is stimulated, as it falls back to a lower energy state, to emit a second photon of the same (or a proportional) frequency, in phase with (see WAVE; COHERENCE) and in the same direction as the bombarding photon. This process is called stimulated emission. The bombarding photon and the emitted photon may then each strike other excited atoms, stimulating further emission of photons, all of the same frequency and phase. This process produces a sudden burst of coherent radiation as all the atoms discharge in a rapid chain reaction. First built in 1960, lasers now range in size from semiconductor lasers as small as a grain of salt to solid-state and gas lasers as large as a building. The light beam produced by most lasers is pencil-thin and maintains its size and direction over very large distances. Lasers are widely used in industry (for cutting and boring metals and other materials), in medicine (for self-cauterizing surgery), and in communications, scientific research, and HOLOGRAPHY. They are an integral part of such familiar devices as BAR-CODE scanners, laser PRINTERS, and COMPACT DISC players. See also MASER.

laser disc: see VIDEODISC.

laser printer, a COMPUTER printer that produces output by a process similar to PHOTOCOPYING. Rather than using reflected light from an image (as in xerography), it uses the data sent from the computer to turn a laser beam on and off as it scans a charged drum. The drum then attracts toner powder to the areas not exposed to the light. Finally, the toner is fused to paper over the belt by heated rollers. Faster, quieter, and with more attractive results than standard printers, they have made an impact on business since they have become more generally available (1984) for PERSONAL COMPUTERS. See also DESKTOP PUBLISHING.

Laski, Harold Joseph, 1893–1950, British political scientist and economist. He taught (1920–50) at the London School of Economics and served on the executive committee of the FABIAN SOCIETY (1922–36) and of the LABOUR PARTY (from 1936). He was chairman of the party (1945–46) and held various government posts. His many works include *Karl Marx* (1921), *Democracy in Crisis* (1933), and *Faith, Reason, and Civilisation* (1944).

Lassalle, Ferdinand, 1825–64, German socialist. Although partially influenced by MARXISM, Lassalle's theory of state socialism differed from it in contending that once universal suffrage was achieved, the state could be forced to establish workers' cooperatives. He played a key role in founding (1863) the first workers' political party in Germany, the forerunner of the Social Democratic party.

Lassen Peak, intermittently active (1914–21) volcano in the CASCADE RANGE in N California, a part of Lassen Volcanic National Park (see NATIONAL PARKS, table). It was the only active volcano in the coterminous U.S. until the eruption (1980) of Mt. SAINT HELENS.

Lassen Volcanic National Park: see NATIONAL PARKS (table).

Lasso, Orlando di, 1532–94, Dutch composer, also Orlandus Lassus or Roland de Lassus. He represents the culmination of Renaissance music. A famous singer and choirmaster, he published his first books of MADRIGALS in Antwerp in 1555 and subsequently held positions in other cities. Lasso brought Flemish POLYPHONY to its highest development. His more than 2,000 works are in every form known in his day—MASSES, MOTETS, chansons, madrigals, and others.

Last Supper, repast taken by JESUS and his disciples on the eve of the passion (Mat. 26.17–30; Mark 14.12–26; Luke 22.7–39; John 13–17; 1 Cor. 11.23–29). At that time Jesus instituted the SACRAMENT called COMMUNION.

Las Vegas, city (1990 pop. 258,295), seat of Clark co. S Nev.; inc. 1911. The largest city in Nevada, it is one of the fastest-growing urban areas in the U.S. Revenue from gambling, entertainment, theme parks, and other tourist industries forms the backbone of its economy, although in the 1970s diversified industry began to play a more important role.

László V, king of Hungary: see LADISLAUS V.

La Tène, ancient Celtic site on Lake Neuchâtel, Switzerland, that gives its name to cultures of the late IRON AGE. The earliest Tenian culture (6th cent.–late 5th cent. B.C.), drawn from Greek and Etruscan civilizations, spread as far as the British Isles in the first great CELT migrations. An important late Tenian site includes lake dwellings at Glastonbury, S England.

latent heat: see BOILING POINT; MELTING POINT.

Lateran, group of buildings, SE Rome, on land presented to the church by CONSTANTINE I. The Lateran basilica is the cathedral of Rome, the pope's church, the first-ranking church of the Roman Catholic Church. Officially it is the Basilica of the Savior, familiarly St. John Lateran. Built perhaps before 311, it has been often rebuilt or restored. Much of the decoration, including the mosaics of the apse, is medieval. The Lateran baptistery (c.4th cent.) has been much restored. The Lateran palace, the papal residence until the 14th cent., was demolished in the 16th cent. to make way for the smaller present palace. The palace now houses a historical museum.

Lateran Treaty, 1929, concordat between the Holy See and Italy. In 1871 the unity of Italy was perfected by limiting papal sovereignty to a few buildings. The papacy objected to the loss of Rome and the Papal States, creating the dilemma called the Roman Question. The Lateran Treaty resolved the matter by creating the new sover-

eign state of VATICAN CITY. It also recognized Roman Catholicism as the only state religion of Italy. The treaty was signed for the pope by Cardinal Pietro Gasparri, and for Italy by Benito MUSSOLINI.

Lateur, Frank: see STREUVELS, STIJN.

latex: see RUBBER.

Latimer, Hugh, 1485?–1555, English Protestant martyr. Bishop of Worcester under HENRY VIII, he refused to recant his Protestantism when the Roman Catholic MARY I became queen. With Nicholas RIDLEY, he was burned at the stake.

Latin America, collective term for the 20 republics of South and Middle America where Romance languages are generally spoken. It includes Portuguese-speaking BRAZIL, French-speaking HAITI, and Spanish-speaking ARGENTINA, BOLIVIA, CHILE, COLOMBIA, COSTA RICA, CUBA, DOMINICAN REPUBLIC, ECUADOR, EL SALVADOR, GUATEMALA, HONDURAS, MEXICO, NICARAGUA, PANAMA, PARAGUAY, PERU, URUGUAY, and VENEZUELA. It is also sometimes extended to include PUERTO RICO and the French WEST INDIES and, less frequently, BELIZE, GUYANA, FRENCH GUIANA, and SURINAME.

Latin Empire of Constantinople: see CONSTANTINOPLE, LATIN EMPIRE OF.

Latin Empire of Jerusalem: see JERUSALEM, LATIN EMPIRE OF.

Latin language, the language of ancient Rome, a member of the Italic subfamily of the Indo-European family of languages. As the standard language of most of the Roman Empire, it spread widely and developed into the Romance languages. To this day Latin survives as the official tongue of Vatican City and as the official language of communication of the Roman Catholic Church. See LANGUAGE (table).

Latins, in ancient times, inhabitants of Latium. Rome early became a dominant city in Latium, and Roman hegemony was definitely established by 338 B.C. The Latins were admitted to Roman citizenship in 90 B.C.

latitude, angular distance from the EQUATOR of any point on the earth's surface. The equator is latitude 0°, and the poles are 90°N and S, respectively. One degree of latitude is about 69 mi (110 km), increasing slightly poleward as a result of the earth's polar flattening. See also LONGITUDE.

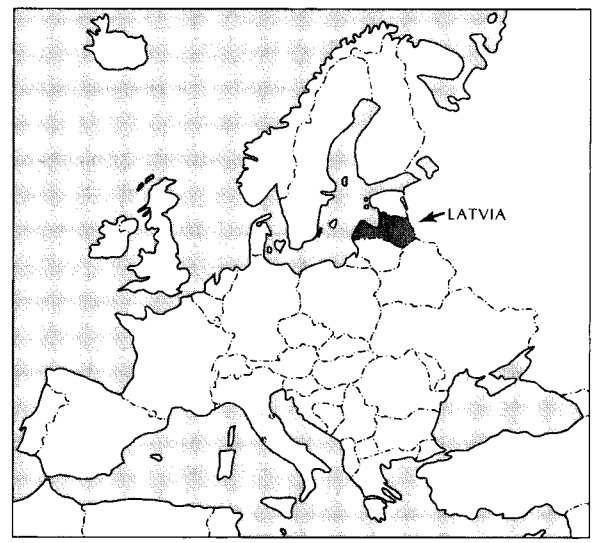
La Tour, Georges de, 1593–1652, French painter. Named painter to the king in 1639, he executed religious and GENRE pictures that showed Dutch modifications of CARAVAGGIO's style. His minutely descriptive early works include *St. Jerome* (Stockholm). An example of his nocturnal scenes, dramatically illuminated by a candle or hidden light source, is *Education of the Virgin* (Frick Coll., N.Y.C.). He discarded detail for simple sculptural forms in his later work, e.g., *Repentant St. Peter* (Cleveland Mus.).

Latrobe, Benjamin Henry, 1764–1820, considered the first professional architect in the U.S.; b. England. He arrived in the U.S. in 1796. In 1803 Pres. JEFFERSON appointed him surveyor of public buildings. Beside houses in Philadelphia, Washington, and other cities, he did monumental work, introducing Greek forms, an important element of the CLASSIC REVIVAL. His design (1799) for the Bank of Pennsylvania, Philadelphia, was based on an Ionic temple. This and his Roman Catholic cathedral in Baltimore (1805–18), the first U.S. cathedral, are among the leading monumental works of his time.

Latter-Day Saints, Church of Jesus Church of: see MORMONS.

Latvia, Lettish *Latvija,* officially Republic of Latvia, republic (1992 est. pop. 2,729,000), 24,590 sq mi (63,688 sq km), north central Europe, formerly a constituent republic of the USSR. It borders on Estonia (N); Lithuania (S); the Baltic Sea and Gulf of Riga (W); and Russia (E) and Belarus (SE). The capital and largest city is RIGA; other large cities include Daugavpils and Liepaja. Dairying, stock raising, and timbering are major occupations. Industries include shipbuilding, metallurgy, and the manufacture of machines, chemicals, and electrical equipment. The majority of the people are Letts and Latgalians (both widely known as Latvians), but there is a significant Russian and smaller Belarussian, Ukrainian, and Polish minorities. Citizenship is restricted to those who or whose parents were citizens in 1940; others can apply if they have been residents for 16 years and speak Lettish (Latvian). Lettish is the official language, but Russian is widely spoken.

History. The region was conquered and Christianized by the Livonian Knights (13th cent.) and later fell to Poland (1561), Sweden (1629), and Russia (1721–95). German merchants and landowners had reduced the population to servitude, but in 1819 serfdom was abolished. Russian replaced German as the official language in 1885. Latvia became independent in 1920 but was forcibly annexed by the USSR in 1940. It was occupied (1941–44) by the Germans in World War II. After the war Latvia was returned to Soviet rule, and the economy was nationalized. In 1990 the Latvian parliament voted in favor of independence from the Soviet Union, and following the attempted coup (1991) against Soviet Pres. GORBACHEV the Soviet government recognized Latvia's independence. In 1993 Latvia signed a free-trade agreement with Estonia and Lithuania. Guntis Ulmanis became president in 1993.



Latvian language: see LETTISH.

Laud, William, 1573–1645, English prelate. Laud was hostile to the Puritans and worked with CHARLES I to eliminate them from important positions in the church. Named (1633) archbishop of Canterbury, he tried to standardize Anglican ritual along High Church lines. He persecuted and imprisoned many nonconformists and supported Charles to the end. He was impeached (1640) by the Long Parliament and condemned (1644) to death by the Commons.

Laue, Max Theodor Felix von, 1879–1960, German physicist. Laue was awarded the Nobel Prize in physics in 1914 for his discovery of X-ray diffraction in crystals.

laughing gas: see NITROUS OXIDE.

Laughton, Charles, 1899–1962, Anglo-American actor; b. England. A versatile character actor, he appeared in such films as *The Private Life of Henry VIII* (1933), *Mutiny on the Bounty* (1935), and *Advise and Consent* (1962).

Laurasia: see CONTINENTAL DRIFT.

laurel, common name for the family Lauraceae, trees and shrubs found chiefly in tropical Southeast Asia and America; most are evergreen. The true laurel (*Laurus nobilis*), also called bay or sweet bay, is native to the Mediterranean, and is the source of bay leaf, a seasoning. Laurel symbolized victory and merit to the ancients. Other members of the family include the sassafras (*Sassafras albidum*), the aromatic bark of which is used for tea, and the spicebush (*Lindera benzoin*), both of the U.S.; and the AVOCADO of Central America, now widely grown in the U.S. Members of the Asian genus *Cinnamomum* are cultivated largely for their aromatic bark (see CAMPHOR; CINNAMON).

Laurel and Hardy, American film comedy team. Its members were Stan Laurel, 1890–1965, b. England as Arthur Stanley Jefferson, and Oliver Hardy, 1892–1957, b. Atlanta, Ga. Their zany comic routines often involved pantomime. Among their films are *Sons of the Desert* (1933), *Babes in Toyland* (1934), and *A Chump at Oxford* (1940).

Laurence, (Jean) Margaret, 1926–87, Canadian author. Her novels of character include *This Side Jordan* (1960), *A Jest of God* (1966), and *The Diviners* (1974). She also wrote stories, essays, and works on African literature.

Laurencin, Marie [lōräNsăN'], 1885–1956, French painter and printmaker. Her elegant, highly personal style consists of simplification of form, flat and decorative surface, and delicate pastel colors, e.g., *The Assembly* (1910).

Laurentian Plateau: see CANADIAN SHIELD.

Laurier, Sir Wilfrid [lô'rēā, Fr. lōrya'], 1841–1919, prime minister of CANADA (1896–1911), the first French Canadian to hold the office. He worked for French-English political cooperation and became (1887) the Liberal opposition leader. As prime minister he advanced Western development, the railroads, preferential tariffs, and Canada's defenses.

Lautrec, Henri de Toulouse: see TOULOUSE-LAUTREC, HENRI DE.

lava, molten ROCK erupted on the earth's surface by a VOLCANO or through a fissure in the earth. It solidifies into igneous rock that is also called lava. Before reaching the surface, lava is known as magma. See also PUMICE.

Laval, Pierre, 1883–1945, French politician. Entering politics as a Socialist, Laval later became an Independent and was premier (1931–32, 1935–36). In 1935 he proposed a plan to halt Italy's conquest of Ethiopia by appeasing MUSSOLINI. After the fall of France in WORLD WAR II, Laval was vice premier (1940) in the VICHY government, but he was dismissed on suspicion of trying to overthrow Marshal PÉTAIN. Outspoken in favor of collaboration with Nazi Germany, Laval was reinstated (1942) with dictatorial powers. He agreed to draft labor for Germany and began a reign of terror. In 1945 he surrendered to the Allies and was executed for treason. His poorly conducted trial was denounced by many.

Laval, city (1991 pop. 314,398), coextensive with Île-Jésus, a 94-sq-mi (243-sq-km) island, S Quebec, E Canada. A mainly residential suburb of MONTREAL, the city was created in 1966 through amalgamation of 14 small communities on the island.

Lavalleja, Juan Antonio [läväyā'hä], c.1786–1853, Uruguayan revolutionary leader. He led the small group—the Thirty-three Immortals—that declared (1825) Uruguay's independence from Brazil. Denied the presidency of the new nation, he revolted twice (1832, 1834) against Pres. Fructuoso Rivera and joined in the civil war (1843–51). From the war two dominant political parties emerged: the Blancos (whites), which he led; and the Colorados (reds), under Rivera.

Laver, Rod(ney George), 1938–, Australian tennis player. He won the grand slam of tennis (Australian, U.S., British, and French titles) in 1962 and 1969, the only person to do so twice. In 1971 he became the first professional tennis player to earn over $1 million. His many national championships included four at Wimbledon.

Laveran, Charles Louis Alphonse, 1845–1922, French physician. While an army surgeon in Algiers, he discovered (1880) the parasite that causes MALARIA. For his work on protozoa in the causation of disease he received the 1907 Nobel Prize in physiology or medicine.

Lavoisier, Antoine Laurent [lävwäzyā'], 1743–94, French chemist and physicist. A founder of modern chemistry, he was one of the first to use effective quantitative methods to study reactions. His classification of substances is the basis of the distinction between chemical elements and compounds and of the system of chemical nomenclature. He proposed the oxygen theory of combustion, thereby discrediting the PHLOGISTON THEORY, and described oxygen's role in respiration. Concerned with improving social and economic conditions in France, he held various government posts; he was guillotined during the Reign of Terror.

Law, John, 1671–1729, Scottish financier in France. Law gained (1717) a commercial monopoly in LOUISIANA and formed the Compagnie d'Occident, or Mississippi Company, which was enlarged (1719) as the Compagnie des Indes. In 1720 Law's bank (the royal bank since 1718) was merged with the trading company, and a rash of speculation followed. This so-called Mississippi Scheme collapsed (Oct. 1720), and ruined many investors. Law died in disgrace in Venice. The "Mississippi Bubble" discredited the idea of a national bank, but encouraged colonization in Louisiana.

law, rules of conduct of organized society, enforced by threat of punishment. Early examples from Babylonia (the code of HAMMURABI), India (Laws of MANU), and Palestine (Mosaic code) suggest a universal tendency of religious and ethical systems to produce a legal order. ROMAN LAW developed the distinction between public law, in which the state is directly involved, and private law, concerned with disputes between persons. Roman influence survived in the canon law of the Catholic Church and in the laws of FEUDALISM, and it is the basis of modern CIVIL LAW. In England, law made by royal judges became COMMON LAW, later modified by the laws of EQUITY. The work of Sir William BLACKSTONE in the 18th cent., which stressed the natural rights of human beings, greatly influenced U.S. law, which is distinguished by the coexistence of federal and state systems.

Lawrence, D(avid) H(erbert), 1885–1930, English author. Holding that industrial culture dehumanizes, he glorified union with nature and its corollary, sexual fulfillment. His great novels are *Sons and Lovers* (1913; restored ed. 1992), *The Rainbow* (1915), and *Women in Love* (1921). After World War I, Lawrence wrote about the idea of a superhuman leader for humanity. The novels of this period, e.g., *The Plumed Serpent* (1926), are considered failures. His controversial and sexually explicit *Lady Chatterley's Lover* (1928) was long banned. Lawrence wrote in a sensuous, lyrical style, brilliantly conveying the specific, and greatly influenced 20th-cent. fiction. His works include poetry, short stories, essays, plays, travel books, and criticism.

Lawrence, Ernest Orlando, 1901–58, American physicist; b. Canton, S.D. He was a professor at the Univ. of California and director of its radiation laboratory. For his invention and development of the cyclotron (see PARTICLE ACCELERATOR) and his studies of atomic structure and transmutation, he received the 1939 Nobel Prize in physics.

Lawrence, Gertrude, 1898–1952, English actress; b. Alexandre Dagmar Lawrence-Klasen. On the musical stage from childhood, she charmed audiences in shows such as *Private Lives* (1931) and *The King and I* (1951).

Lawrence, James, 1781–1813, U.S. naval hero; b. Burlington, N.J. Commanding the *Chesapeake* in the WAR OF 1812, he was defeated by the British frigate *Shannon* outside Boston harbor. His dying words, "Don't give up the ship!" became famous.

Lawrence, Sir Thomas, 1769–1830, English portrait painter. He succeeded Sir Joshua REYNOLDS as painter in ordinary to the king, became an Academician, and was knighted in 1815. After doing portraits of state and church officials in Austria and Italy, he became president of the Royal Academy. Among his best portraits are the *Calmady Children* (Metropolitan Mus.), *Pinkie* (Huntington Gall., San Marino, Calif.), and the portraits of Mrs. Siddons and Benjamin West (National Gall., London) and George IV and Princess Caroline (National Portrait Gall., London).

Lawrence, T(homas) E(dward), 1888–1935, British adventurer, soldier, and scholar, known as Lawrence of Arabia. After the outbreak of World War I, he was attached to the intelligence section of the British army in Egypt. In 1916 he joined the Arab forces under Faisal al Husein (FAISAL I) and became a leader in their revolt against Turkish domination. After the war he was a delegate to the Paris Peace Conference, where he sought in vain to achieve independence for the Arabs. By this time Lawrence had become something of a legendary figure. In 1922 he joined the Royal Air Force under an assumed name. Lawrence wrote about his Arabian adventures in *The Seven Pillars of Wisdom* (1935; abr. ed., *Revolt in the Desert,* 1927). He also published a translation of the *Odyssey* (1932).

Lawrence. **1** City (1990 pop. 65,608), seat of Douglas co., NE Kans., on the Kansas R.; founded 1854, inc. 1858. A focus of historical controversy, it was the center of Free State activity, suffered (1856) a proslavery raid, and was sacked and burned (1863) by William QUANTRILL. The Univ. of Kansas dominates the city's economic and cultural life, but agriculture and light industry are also important. **2** City (1990 pop. 70,207), a seat of Essex co., NE Mass., on the Merrimack R.; settled 1655, inc. as a city 1853. Textiles, clothing, and electrical equipment are among its manufactures. Laid out by a group of Boston capitalists in 1845, with mills, a dam, and workers' dwellings, it became a great textile center of the 19th cent. It was the scene (1912) of a famous mill strike.

The key to pronunciation appears on page xiii.

Lawrence Berkeley Laboratory (LBL; est. early 1930s) and **Lawrence Livermore Laboratory** (LLL; est. 1952), nuclear-science research centers, founded by Ernest LAWRENCE and located, respectively, in Berkeley and Livermore, Calif. The Univ. of California operates them with funds provided by the U.S. Dept of Energy. LBL's work centers on the study of atomic nuclei and makes use of four major particle accelerators, but it also does research on environmental problems and energy technology. LLL carries out research on nuclear weaponry, the effects of radiation, controlled thermonuclear reactions, lasers, materials, and climate.

lawrencium (Lr), radioactive element, first prepared in 1961 by A. Ghiorso and co-workers by boron nuclei bombardment of californium. It is an ACTINIDE-SERIES element. In 1965 a Soviet group prepared a different isotope by the reaction of oxygen-18 with americium-243. See ELEMENT (table); PERIODIC TABLE.

Layamon, fl. c.1200, first major Middle English poet. His *Brut* gives a history of Britain from the fall of Troy to Brutus' arrival in Britain through the death of Cadwaladr (a semilegendary Welsh king, d. 664?). Important in the development of the ARTHURIAN LEGEND, it contains the first mention of LEAR and CYMBELINE.

Lazarsfeld, Paul F., 1901–76, Austrian-American sociologist; b. Vienna. After beginning as a mathematician, he established a research center for social psychology. Emigrating (1933) to the U.S., he studied the social effects of mass media. A founder of the Bureau of Applied Social Research, he authored a groundbreaking study of American voting patterns and, with his collaborator, Robert K. MERTON, introduced innovations in sociological method and the use of statistics in social research.

Lazarus. **1** Brother of MARY and Martha of Bethany; he was brought back to life by JESUS. **2** Beggar in a parable who was spurned in life by a rich man. After death, the rich man, parching in hell, pleads in vain that Lazarus, now in heaven, be permitted to give him a drink.

Lazarus, Emma, 1849–87, American poet; b. N.Y.C. A spokeswoman for Judaism, she wrote a book of poems, *Songs of a Semite* (1882). Her sonnet about the Statue of LIBERTY, "The New Colossus," is engraved on the statue's pedestal.

L-dopa or **levadopa,** drug used to alleviate symptoms of PARKINSON'S DISEASE and related syndromes, particularly rigidity, slow movements, and trembling, resulting from a deficiency of dopamine in the brain. Introduced into the bloodstream, L-dopa is probably converted to dopamine by neurons in the brain.

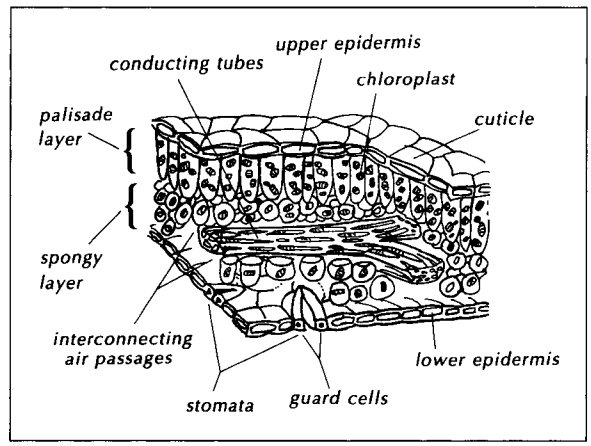
lead (Pb), metallic element, one of the earliest known metals, used by the ancient Egyptians and Babylonians. A poor conductor of heat and electricity, lead is silver-blue, dense, relatively soft, and malleable, with low tensile strength. It is used in lead-acid storage batteries (see CELL, in electricity), SOLDER, and plumbing, and as protective shielding against X rays and radiation from nuclear reactors. The principal lead ores are GALENA, cerussite, and anglesite. Lead compounds (all poisonous) include tetraethyl lead (formerly used as a gasoline antiknock additive) and oxides used in mordants and pigments. Continued exposure to lead—through inhalation of fumes or sprays and ingestion of food containing lead—can result in a cumulative chronic disease called **lead poisoning.** It was once a serious occupational hazard, but protective equipment and other precautionary measures have reduced its incidence. Lead poisoning remains a serious problem in children, who are more susceptible to it. Causes may include ingestion of paint chips from peeling walls or pipes or inhalation of contaminated dust during home renovation. Lower doses may be treated by altering the diet to counteract lead's effects and and cleaning the person's environment to reduce intake. Higher doses are treated with chelating agents, drugs that remove lead from the body. See ELEMENT (table); PERIODIC TABLE.

lead glance: see GALENA.

lead poisoning: see under LEAD.

Leadville, city (1990 pop. 2,629), alt. c.10,200 ft (3,110 m), seat of Lake co., central Colo.; inc. 1878. The quintessential western boom town, it began as the site of a gold rush (c.1860–62). A silver boom followed, from 1877 to 1893, when the population reached 40,000, and a second gold boom came in the late 1890s. Some mining and smelting continue, but tourism and agriculture are also important.

leaf, the chief food-manufacturing organ of higher plants, a lateral outgrowth of the STEM. The typical leaf consists of a stalk, or petiole, and a thin, flat, expanded portion (needlelike in most CONIFERS), or blade. The blade, veined with sap-conducting tubes (xylem and phloem), consists of upper and lower layers of epidermal cells, including cells that control the size of tiny pores (stomata) that are used in gas exchange and TRANSPIRATION. Between the two layers are cells, rich in CHLOROPHYLL, that conduct PHOTOSYNTHESIS.



A. General structure of a leaf B. Microscopic cross-section of the leaf blade

leaf insect, tropical herbivorous INSECT, about 4 in. (10 cm) long, whose flattened, green, irregularly shaped body gives it a leaflike appearance. The related WALKING STICK resembles a twig.

League or **Holy League,** during the Wars of Religion (see RELIGION, WARS OF), organization of French Catholics aimed at the suppression of Protestantism. Founded (1576) by Henri, 3d duc de Guise, it was dissolved (1577) by King HENRY III. Although revived (1585), it failed to survive HENRY IV's military successes.

League of Nations, a former international organization, formed after WORLD WAR I to promote international peace and security. The basis of the League, the Covenant, was written into the Treaty of VERSAILLES and other peace treaties and provided for an assembly, a council, and a secretariat. A system of colonial mandates was also set up. The U.S., which failed to ratify the Treaty of Versailles, never became a member. Based in Geneva, the League proved useful in settling minor international disputes, but was unable to stop aggression by major powers—e.g., Japan's occupation of Manchuria (1931), Italy's conquest of Ethiopia (1935–36), and Germany's seizure of Austria (1938). It collapsed early in World War II and dissolved itself in 1946. The League established the first pattern of permanent international organization and served as a model for its successor, the UNITED NATIONS.

League of Women Voters, public service organization, an outgrowth (1920) of the National American Women Suffrage Association. Founded to educate women in the intelligent use of their newly acquired suffrage, it later broadened its scope to include the improvement of the political process in general. Its activities include educational and research campaigns on local, state, and national levels. Men were admitted after 1974; the league has 110,000 members.

Leah, in the Bible, Laban's elder, uglier daughter, RACHEL's sister and JACOB's first wife.

Leakey, family of anthropologists and archaeologists whose work in East Africa indicated that human EVOLUTION centered there rather than in Asia. **Louis Seymour Bazett Leakey,** 1903–72, b. Kenya, began excavating at OLDUVAI GORGE, Tanzania, in 1931. There he and his wife, **Mary Douglas Leakey,** 1913–, b. England, discovered stone tool and hominid fossil evidence that pushed back the dates for early humans. Notable finds were *Zinjanthropus* (1959), dated at 1.75 million years of age (now generally regarded as Australopithecine), and *Homo habilis* (1961). Mary Leakey has more recently discovered *Homo* fossils over 3.75 million years old. Louis Leakey's evolutionary interpretations of these discoveries were frequently controversial. He popularized archaeology in his lectures

and books, including *Adam's Ancestors* (4th ed. 1953) and *Unveiling Man's Origins* (1969). In 1972 their son, **Richard (Erskine Frere) Leakey,** 1944–, b. Kenya, discovered near Lake Turkana (Lake Rudolf), Kenya, yet another type of hominid skull, which may represent a transition between *Australopithecus* and *Homo* genera. He was (1974–89) director of the National Museums of Kenya and headed (1989–94) Kenya's wildlife service. With Roger Lewin he published *Origins Reconsidered* (1992).

leap year: see CALENDAR.

Lear, legendary English king. GEOFFREY OF MONMOUTH claimed to have translated Lear's story from Old English records, but it probably had its origins in Celtic mythology. It is the subject of SHAKESPEARE's tragedy *King Lear*.

Lear, Edward, 1812–88, English humorist and artist. He is best known for his illustrated limericks and nonsense verse, collected in such volumes as *A Book of Nonsense* (1846).

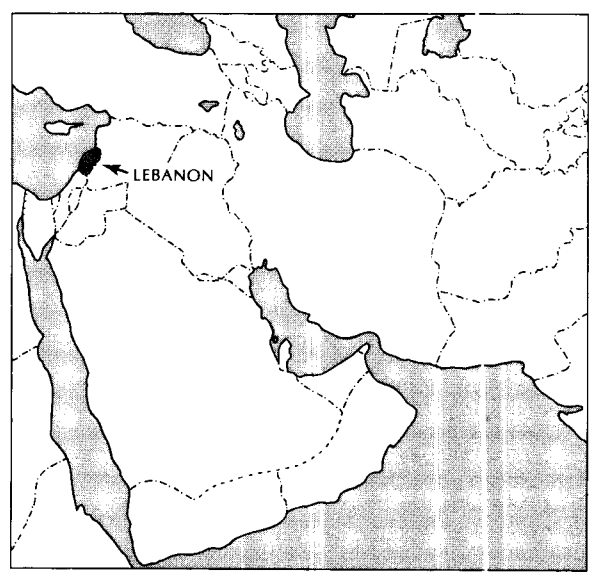
learning disabilities, in education, any of various disorders involved in understanding or using spoken or written language, including difficulties in listening, thinking, talking, reading, writing, spelling, or ARITHMETIC. They may affect people of average or above-average intelligence. Learning disabilities include conditions referred to as perceptual handicaps, minimal brain dysfunction (MBD), DYSLEXIA, developmental aphasia, and attention deficit hyperactivity disorder; they do not include learning problems due to physical handicaps (e.g., impaired sight or hearing, or orthopedic disabilities), MENTAL RETARDATION, emotional disturbance, or cultural or environmental disadvantage. Techniques for remediation are highly individualized, including the simultaneous use of several senses (sight, hearing, touch), slow-paced instruction, and repetitive exercises to help make perceptual distinctions. Students are also assisted in compensating for their disabilities; for example, one with a writing disability may use a tape recorder for taking notes or answering essay questions. Behavior often associated with learning disabilities includes short attention span and impulsiveness. School programs for learning-disabled students range from a modified or supplemental program in regular classes to placement in a special school, depending upon the severity of the disability.

leather, skin or hide of animals, cured by TANNING to prevent decay and to impart flexibility and toughness. Early peoples used pelts preserved with grease or smoke for garments, tents, and containers. Since the 18th cent. machines have been used to split the tanned leather into the desired thicknesses of flesh layers and grain (hair-side) layers. Pelts are prepared by dehairing, cleaning, tanning, and treating with fats to ensure pliability. Finishes include glazing, staining or dye coloring, enameling or lacquering (as for patent leather), and sueding (buffing to raise a nap). Artificial leather, made since c.1850, is now mainly manufactured from vinyl PLASTIC.

Leavis, F(rank) R(aymond), 1895–1978, English teacher and author. He wrote critical works, including *The Great Tradition* (1948), and essays on society like *Mass Civilization and Minority Culture* (1930). His wife, **Q(ueenie) D(orothy) Leavis,** 1900–1982, was also a critic of note.

Lebanon, officially Republic of Lebanon, republic (1992 est. pop. 3,439,000), 4,015 sq mi (10,400 sq km), SW Asia, bounded by the Mediterranean Sea (W), Syria (N, E), and Israel (S). The capital is BEIRUT. Much of the terrain is mountainous, with two main ranges—the Lebanon in the west and the Anti-Lebanon in the east—paralleling the coast; the fertile Al Biqa valley lies between them. Until the disruption caused by the civil war of 1975–76, Lebanon had a service-oriented economy, and Beirut, a free port, was the financial and commercial center of the Middle East. Through the 1980s the commercial and industrial life of Lebanon was in severe disarray, but by the early 1990s the economy had at least partially revived. Banking, food processing, and the manufacture of textiles and chemicals are now economically important. Principal crops are grains, olives, and citrus fruits. Remittances from Lebanese working abroad are an important source of foreign exchange. Most Lebanese are Arabs; there is a small Armenian minority. Arabic is the official language, but French and English are also widely spoken. The population is divided between Muslims, mainly Sunni and Shiite, and Christians (mainly Maronites), who make up about one quarter of the total.

History. The site of the ancient maritime city-state of PHOENICIA, the area later fell to successive Middle Eastern powers. Christianity was introduced under the Roman Empire and persisted even after the coming of Islam with the Arab conquest (7th cent.). In the late 11th cent. Lebanese Christians aided the Crusaders (see CRUSADES) in the region. The area came under the Ottoman Turks in the 16th cent., and after the Turkish defeat in WORLD WAR I it became part of a French mandate known as Greater Lebanon. Since independence in 1945, Lebanon has been plagued by civil strife and problems with its neighbors. A member of the ARAB LEAGUE, it took little part in the ARAB-ISRAELI WARS that followed Israel's independence in 1948, but the stage was set for future problems when many Palestinians fled Israel and settled in S Lebanon. Meanwhile, Lebanon's internal equilibrium was shaken (1958) by a rebellion against pro-Western policies, and U.S. forces were called in briefly. In 1975 civil war erupted between leftist Muslims, aided by the PALESTINE LIBERATION ORGANIZATION (PLO), and conservative Christians. In 1976 Syrian troops intervened, and a cease-fire was declared, but Israel and the PLO engaged in a sporadic border war in S Lebanon. In 1978, following a limited Israeli invasion, a UN peacekeeping force was placed in S Lebanon. Fighting continued, however, and in 1982 Israel invaded Lebanon, forcing out many members of the PLO and causing widespread devastation. A massacre of Palestinians by Lebanese Christians during the Israeli occupation of Beirut led to worldwide criticism of Israel and the establishment of a multinational peacekeeping force in Beirut. In Oct. 1983 terrorist bombings killed over 230 U.S. Marines and French troops in their respective compounds, and both nations subsequently withdrew their remaining forces. When the Lebanese parliament in 1988 proved unable to elect a successor to the Christian president, Amin Gemayel. Gemayel, on the expiration of his term, appointed a Christian general, Michel Aoun, as interim president, but Muslims challenged his legitimacy. In 1989 Arab governments brokered a peace agreement that produced a new constitution that increased the political power of the Muslim majority. Elias Hrawi, a Christian, was elected president, but Aoun refused to step down and fighting between Christian factions for and against Aoun broke out. In 1990, at Hrawi's request, Syrian troops attacked Aoun's position. Aoun took refuge in the French embassy and later fled to France, ending the civil war. Hrawi signed (1991) a treaty of friendship and cooperation with Syria that essentially guaranteed Syrian domination of Lebanon's foreign relations. In 1993 fighting again erupted between Shiite Hezbollah guerrillas and Israel in S Lebanon.



Le Brun, Charles, 1619–90, French painter, decorator, and architect. Influenced by POUSSIN, he developed a more decorative form of CLASSICISM. His first royal commission, *The Family of Darius*

before Alexander (1661), gained him the favor of LOUIS XIV. He became painter to the king (1662), controlling artistic theory and production in France for two decades. Head of the Gobelins works, he designed royal furnishings and was director of the Académie royale. The atmosphere of richness and splendor he created can be seen at VERSAILLES.

Lebrun, Élisabeth Vigée: see VIGÉE-LEBRUN.

le Carré, John, pseud. of **David John Moore Cornwall,** 1931–, English novelist. He is noted for his bleak, complex studies of international espionage. His novels include *The Spy Who Came In from the Cold* (1963), *Tinker, Tailor, Soldier, Spy* (1974), *The Little Drummer Girl* (1983), and *The Night Manager* (1993).

Leconte de Lisle, Charles Marie [ləkôNt' də lēl], 1818–94, French poet, the leading PARNASSIAN. Anti-Christian and a pessimist, he saw death as the only reality and drew his inspiration from antiquity, as in *Poèmes antiques* (1852), *Poèmes barbares* (1872), and *Poèmes tragiques* (1884).

Le Corbusier [lə kôrbüzyā'], pseud. of **Charles Édouard Jeanneret** [zhänərā'], 1887–1965, French architect; b. Switzerland. His buildings and writings had a revolutionary effect on the international development of MODERN ARCHITECTURE. After 1915 he began to produce radical schemes for houses and apartments, drawing inspiration from industrial forms. In 1923, at Vaucresson, near Paris, the first building (a villa) was constructed according to his principles. His book *Towards a New Architecture* (1923) gained wide circulation. His plan for a "vertical city" was partially realized in the Unité d'Habitation, Marseilles (1946–52). His most ambitious work was the main buildings for the capital of the Punjab, Chandigarh (begun 1951). Other buildings include a chapel at Ronchamp (1950–55) and the Visual Arts Center, Harvard Univ. (1961–62).

LED (light-emitting diode): see DIODE.

Leda, in Greek mythology, wife of Tyndareus, king of SPARTA, mother by him of CLYTEMNESTRA. In most legends Leda was seduced by ZEUS, who appeared as a swan. She bore two eggs: from one issued CASTOR AND POLLUX, from the other HELEN.

Lederberg, Joshua, 1925–, American geneticist; b. Montclair, N.J. For their studies establishing that sexual recombination occurs in bacteria, he and Edward Tatum shared the 1958 Nobel Prize in physiology or medicine with George BEADLE. Lederberg and his student Norman Zinder discovered the process called transduction, by which certain viruses transfer a chromosome from one bacterial cell to another. From 1978 to 1990 he was president of Rockefeller Univ.

Le Duan [lā dwän], 1908–86, Vietnamese Communist leader. Imprisoned by the French colonial regime, he later rose in North Vietnam's Communist party to become (1959) first secretary. After HO CHI MINH's death (1969), Le Duan emerged as the leader of North Vietnam's ruling collective. In 1976, after Vietnam's reunification, he was renamed party leader and served until his death.

Lee, Ann, 1736–84, English religious visionary, founder of the SHAKERS in America. In 1758 she joined the "Shaking Quakers," and, claiming revelation in a vision (c.1770) that the second coming of Christ was fulfilled in her, she became their leader. Lee led (1774) a band to America, where in 1776 the first Shaker settlement was founded at Watervliet, N.Y.

Lee, Charles, 1731–82, American Revolutionary general; b. England. When he was captured (1776) by the British in Basking Ridge, N.J., he gave them a plan to defeat the Americans. His treason was not discovered, and he was exchanged and rejoined (1778) Gen. WASHINGTON's army. At the battle of MONMOUTH (1778), he ordered a retreat that prevented an American victory and was suspended and later (1780) dismissed.

Lee, Francis Lightfoot, 1734–97, American Revolutionary leader, signer of the DECLARATION OF INDEPENDENCE; b. Westmoreland co., Va. As a member (1758–76) of the Virginia house of burgesses, he urged resistance to Britain. He served (1775–79) in the CONTINENTAL CONGRESS.

Lee, Henry, 1756–1818, American Revolutionary soldier, known as "Light-Horse Harry Lee"; b. Prince William co., Va. A daring cavalry officer, he fought in the Carolina campaign after 1780. He was the father of Robert E. LEE and the cousin of Richard H. LEE.

Lee, Richard Henry, 1732–94, American revolutionary leader; b. Westmoreland co., Va. A member (1774–79, 1784–87) of the CONTINENTAL CONGRESS, he signed the DECLARATION OF INDEPENDENCE and later opposed the federal Constitution on the STATES' RIGHTS issue. He was U.S. senator from Virginia (1789–92).

Lee, Robert E(dward), 1807–70, Confederate general in the U.S. CIVIL WAR, son of Henry LEE; b. Westmoreland co., Va. He served with distinction in the MEXICAN WAR, was superintendent at West Point (1852–55), and led (1859) the U.S. marines who captured John BROWN at Harpers Ferry. After the secession of the lower South, he declined the field command of U.S. forces. After Virginia's secession, however, he was given (June 1862) command of the Army of Northern Virginia and immediately took the offensive in the SEVEN DAYS BATTLES. He crushed the Union army at the second battle of BULL RUN, but Gen. G.B. MCCLELLAN halted Lee's first invasion of the North in the ANTIETAM CAMPAIGN. Lee repulsed Union advances at the battles of FREDERICKSBURG and CHANCELLORSVILLE, where he lost his ablest lieutenant, Stonewall JACKSON. His second invasion of the North ended in defeat in the GETTYSBURG CAMPAIGN (1863). He repulsed Gen. U.S. GRANT's direct assaults in the WILDERNESS CAMPAIGN (May–June 1864), but in July Grant laid siege to Petersburg. Lee became (Feb. 1865) general in chief of all Confederate armies, but the South was near collapse. He surrendered (Apr. 9, 1865) to Grant at APPOMATTOX Courthouse. After the war he was president of Washington College (now Washington and Lee Univ.). Lee was idolized by his soldiers, and many historians consider him to be the greatest general of the Civil War.

Lee, Spike (Shelton Jackson Lee), 1957–, American filmmaker: b. Atlanta, Ga. He celebrates the richness of African-American culture while examining racism and other social problems. Lee's films include *She's Gotta Have It* (1986), *Do the Right Thing* (1989), *Jungle Fever* (1991), and *Malcolm X* (1992).

leech, segmented or ANNELID WORM with a cylindrical or slightly flattened body having suckers at both ends; it usually feeds on blood, which it stores in pouches large enough to hold several months' supply. Most are aquatic. Leeches were once used to bleed patients suffering from almost any ailment; they are still used in some regions to treat bruises.

Leeds, city (1991 pop. 680,722), W Yorkshire, N central England, on the Aire R. Lying between manufacturing and agricultural regions, Leeds is a center of communications, transportation, and regional government. Manufactures include woolens, locomotives, and farm implements. Triennial music festivals are held in the classical town hall (1858).

leek: see ONION.

Lee Teng-hui, 1923–, Taiwanese political leader and agricultural expert. He was a member of the Joint Commission on Rural Reconstruction (1957–61), a minister without portfolio (1972–78), mayor of Taipei (1978–81), governor of Taiwan province (1981–84), and vice president (1984–88). In Jan. 1988 he succeeded to the presidency at the death of Chiang Ching-kuo (see under CHIANG KAI-SHEK). He has permitted increasing political democratization in Taiwan and has used Taiwan's economic success to diminish its international isolation.

Leeuwenhoek, Antony van [lā'vənhōōk"], 1632–1723, Dutch student of natural history. He made over 247 MICROSCOPES, some of which magnified objects 270 times. He examined microorganisms and tissue samples and gave the first complete descriptions of bacteria, protozoa, spermatozoa, and striped muscle. He also studied capillary circulation and observed red blood cells.

Leeward Islands: see WEST INDIES.

Le Gallienne, Eva [ləgăl'yən], 1899–1991, American actress and producer; b. England. She founded the Civic Repertory Theatre (1926) and, with Margaret WEBSTER, the American Repertory Theatre (1946). She produced classical revivals and was an outstanding interpreter of IBSEN.

Legendre, Adrien Marie [ləzhäN'drə], 1752–1833, French mathematician, noted especially for his work on number theory and elliptic integrals. He invented the method of least squares independently of Carl GAUSS and was the first to state it in print (1806).

Léger, Alexis Saint-Léger: see PERSE, SAINT-JOHN.

Léger, Fernand [lāzhā], 1881–1955, French painter. A modified CUBISM is apparent in much of his work. In paintings such as *The City* (1919; Philadelphia Mus. of Art) he celebrated the machine in

a naïve, energetic style, using flat tones of pure color, black, white, and gray.

Legionnaire's disease, infectious, sometimes fatal, disease characterized by high fever, dry cough, lung congestion, and subsequent PNEUMONIA, and kidney and liver damage. The disease struck over 180 people attending an American Legion convention in Philadelphia in July 1976—hence the name. It is caused by several species of *Legionella* bacteria, which are inhaled via contaminated water droplets produced by air-conditioning cooling systems. The disease is treated with the ANTIBIOTIC erythromycin.

legislature, representative assembly empowered to enact statute law and to levy taxes. In a DEMOCRACY its members are elected by the general populace. One of the oldest is the English PARLIAMENT, a bicameral legislature whose lower (House of Commons) and upper (House of Lords) chambers derive from class divisions. In the U.S. CONGRESS, which is also bicameral, the House of Representatives and the Senate were established on federal principles. The Israeli Knesset is an example of a unicameral legislature.

legume, name for any plant of the PULSE family; more generally, any vegetable harvested from such a plant. Botanically, a legume—a pod that splits along two sides, with the seeds attached to one of the sutures—is the characteristic FRUIT of the pulse family.

Lehár, Franz [lĕ'här], 1870–1948, Hungarian composer of OPERETTAS. He is best known for *The Merry Widow* (1905), *The Count of Luxembourg* (1909), and *Gypsy Love* (1910), works filled with gaiety and engaging melodies.

Lehmann, Lilli [lā'män], 1848–1929, German operatic soprano. She began as a coloratura, but became a great Wagnerian singer (see WAGNER, RICHARD) with a repertory of 170 roles. She also interpreted LIEDER and was a teacher.

Lehmann, Lotte, 1888–1976, German-American soprano. After singing in Berlin and Vienna, she made her American debut in Chicago (1930) and sang with the METROPOLITAN OPERA, New York City (1934–45). She was noted for her performances in operas by Richard STRAUSS.

Leibniz or **Leibnitz, Gottfried Wilhelm, Baron von,** 1646–1716, German philosopher and mathematician. His career as a scholar embraced the physical sciences, law, history, diplomacy, and logic, and he held diplomatic posts (from 1666) under various German princes. Leibniz also invented the CALCULUS, concurrently with but independently of NEWTON. His philosophical writings, including *Theodicy* (1710) and *Monadology* (1714), popularized by the philosopher Christian von Wolff, were orthodox and optimistic, claiming that a divine plan made this the best of all possible worlds (a view satirized by VOLTAIRE in *Candide*). According to Leibniz, the basic constituents of the universe are simple substances he called monads, infinite in number, nonmaterial, and hierarchically arranged. His major work, *New Essays on Human Understanding,* a treatise on John LOCKE's *Essay concerning Human Understanding,* was written in 1704 but because of Locke's death published only in 1765. A critique of Locke's theory that the mind is a blank at birth, it exerted great influence on KANT and the German ENLIGHTENMENT. Modern studies have tended to focus on Leibniz's contributions to mathematics and logic; manuscripts published in the 20th cent. show him to be the founder of symbolic logic (see LOGIC).

Leicester, Robert Dudley, earl of [lĕs'tər], 1532?–1588, English courtier and favorite of Queen ELIZABETH I. He aided (1553) the plot to place Lady Jane GREY on the throne, but was pardoned. After the accession (1558) of Elizabeth, he became a privy councillor, and was rumored to be Elizabeth's most likely choice for a husband. Though his wife's suspicious death (1560) darkened his reputation and his remarriage (1578) temporarily estranged the queen, he retained Elizabeth's confidence. Later he led (1585–87) an unsuccessful expedition against the Spanish in the Netherlands.

Leicester [lĕs'tər], city (1991 pop. 270,493), county town of Leicestershire, central England. Of industrial importance as early as the 14th cent., it now manufactures shoes, hosiery, machinery, and other products. It was, in turn, a town of the Romans, the early Britons, and the Danes. Extensive Roman and medieval remains are found there.

Leiden or **Leyden,** city (1991 est. pop. 112,000), W Netherlands. Among its various manufactures, the textile industry has flourished since the 16th cent. It is famous for its university (est. 1575), the nation's oldest, a center (17th–18th cent.) of science, medicine, and Protestant theology. Leiden took part in the Dutch revolt against the Spanish and was saved (1574) by WILLIAM THE SILENT. It is the birthplace of REMBRANDT.

Leif Ericsson, fl. 999–1000, Norse discoverer of America; b. probably in Iceland; son of ERIC THE RED. Information about his travels is taken from Norse SAGAS. One states that he was blown off course on a trip to GREENLAND c.1000 and landed in an area that he named Vinland (probably in either NOVA SCOTIA or NEW ENGLAND).

Leinsdorf, Erich, 1912–93, American conductor; b. Austria. Associated with the METROPOLITAN OPERA (1938–43) and New York City Opera (1956–62), he also led the Boston Symphony Orchestra (1962–69) and appeared widely as a guest conductor.

Leipzig, city (1989 est. pop. 545,000), Saxony, SE Germany. It manufactures textiles, electrical equipment, machine tools, chemicals, and other goods. It has been a commerical center since medieval times and became a cultural center in the 17th and 18th cent. LEIBNIZ and Richard WAGNER were born there; J.S. BACH (now buried in the 15th-cent. Church of St. Thomas), Robert SCHUMANN, Felix MENDELSSOHN, and the young GOETHE worked there. A monument commemorates the victory over NAPOLEON I in the Battle of Leipzig (1813). In 1989 demonstrations in the city sparked the downfall of the Communist East German government and the subsequent German reunification.

leishmaniasis, any of a group of tropical diseases caused by parasites of the genus *Leishmania.* The parasites infect the very white blood cells that normally would defend the body from such invaders. Leishmaniasis is spread by blood-sucking sand flies that bite, leaving deep, disfiguring sores. If the parasites spread to internal organs, death can result.

Lem, Stanislaw, 1921–, Polish writer. Lem's writings, including many translated works of SCIENCE FICTION, reflect his philosophical concern over the moral implications of modern science and technology, and also reflect his acute sense of comedy and irony. Among his works are the novels *Memoirs of a Space Traveler* (1957), *Solaris* (1961), and *The Futurological Congress* (1983).

Lemaître, Georges, Abbé, 1894–1966, Belgian astrophysicist and cosmologist. He posited that the universe began as a condensed primeval atom that exploded, creating the force by which the universe is still expanding.

Lemercier, Jacques [ləmĕrsyā'], c.1585–1654, French architect, a major contributor to classical French style. He was a designer of Jesuit churches, and his chief surviving work is the church of the Sorbonne, Paris (1635). He also designed Cardinal RICHELIEU's Paris residence, later transformed into the Palais-Royal, and the town of Richelieu.

lemming, mouselike RODENT of arctic or northern regions, inhabiting tundra or open meadows. All are about 5 in. (13 cm) long, with stout bodies, thick fur, and short tails. Two or three times per decade, Norway lemmings (*Lemmus lemmus*) undergo a population explosion that forces them to set out in search of food. Crossing bodies of water by swimming, some reach the ocean and drown—giving rise to folklore about lemmings committing mass suicide.

lemon, yellow-skinned CITRUS FRUIT of a small tree (*Citrus limon*) of the RUE family. High in VITAMIN C, lemons prevent scurvy. Products include citric acid, juice, oil, polish, pectin, and flavorings. Lemons grow best in a mild climate, e.g., the Mediterranean, California, and Florida.

LeMond, Greg(ory James), 1961–, American bicycle racer; b. Los Angeles. In 1986 LeMond became first American to win the Tour de France, a three-week, 2,500-mi (4,000-km) race and cycling's premier event. Seriously injured in a 1987 hunting accident, he returned to racing and won the Tour de France in 1989 and 1990. He was also world champion twice (1983, 1989) and won the Tour Du Pont in 1992.

lemur, prosimian, or lower PRIMATE, of the related families Lemuridae and Indriidae, found only on Madagascar and adjacent islands. Lemurs have monkeylike bodies, long, bushy tails, pointed muzzles, large eyes, and flat nails, except the second toe, which

The key to pronunciation appears on page xiii.

has a stout claw. Most are arboreal. Best known is the ring-tailed lemur (*Lemur catta*), which is atypically terrestrial.

Lena, river, easternmost of the great rivers of Siberia, Russia, c.2,670 mi (4,300 km) long. It flows generally north, then northeast, from a source near Lake BAYKAL to empty into the ARCTIC OCEAN through a delta c.250 mi (400 km) wide. The river, which is navigable for 2,135 mi (3,436 km) in summer, is frozen at its mouth from Oct. to June.

Le Nain [lə năN'], family of French painters consisting of three brothers. **Antoine Le Nain,** 1588?–1648, painted colorful miniatures of family scenes. **Mathieu Le Nain,** 1607–77, was painter to the city of Paris, specializing in portraiture and depicting the city militia. **Louis Le Nain,** 1593?–1648, conceived the famous genre scenes in which peasant life is treated sympathetically and realistically. The brothers collaborated on much of their work, e.g., *The Forge* and *Peasant's Repast* (both: Louvre).

Lendl, Ivan, 1960–, Czech-American tennis player. Known for his powerful forehand, punishing serve, and poker-faced style, he was a dominant singles player in the 1980s. Lendl won all the grand slam tournaments except Wimbledon: the Australian (1989–90), French (1984, 1986–87), and U.S. opens (1985–87).

lend-lease, WORLD WAR II arrangement whereby the U.S. furnished necessary supplies, including food, machinery, and services, to its allies. The Lend-Lease Act (1941) empowered the president to sell, lend, lease, and transfer such material under whatever terms he deemed proper. It was originally intended to aid Britain and the Commonwealth countries, and China. By the war's end virtually all the Allies (including the USSR) were part of it. Total lend-lease aid exceeded $50 billion. By 1972 the U.S. had reached settlements with all the nations that had received lend-lease aid.

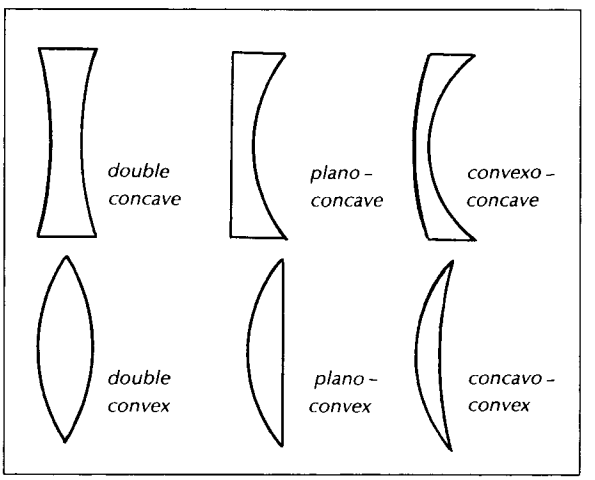
L'Enfant, Pierre Charles [läNfäN'], 1754–1825, American architect; b. France. On Pres. WASHINGTON's request he submitted (1791) plans for the new capital city at Washington. He was dismissed due to various personal antagonisms, but in 1889 the plans were exhumed from the archives, and in 1901 the capital was developed along their lines.

Vladimir Lenin

Lenin, Vladimir Ilyich, 1870–1924, Russian revolutionary, founder of Bolshevism, and major force behind the founding of the USSR. Born in the Volga region, the son of a school inspector named Ulyanov, he was deeply influenced by his brother Aleksandr, who was executed in 1887 for plotting to kill the czar. Lenin abandoned the law to devote himself to Marxist study and agitation among workers, and was arrested and exiled to Siberia in 1895. There he married Nadezhda K. Krupskaya. In 1900 they left Russia for W Europe; about this time he took the name Lenin. Lenin's insistence that only a disciplined party of professional revolutionaries could bring socialism to Russia (expressed in his 1902 pamphlet *What Is to Be Done?*) led the Russian Social-Democratic Workers' party, meeting in London in 1903, to split into two factions: the Bolsheviks, led by Lenin, and the Mensheviks (see BOLSHEVISM AND MENSHEVISM). Lenin returned to Russia on the outbreak of the 1905 Revolution but left in 1907. He continued to write and to engage in Social-Democratic party politics in W Europe. When WORLD WAR I began he saw it as an opportunity for worldwide socialist revolution. In March 1917 the RUSSIAN REVOLUTION broke out and he returned to Petrograd, where in November (October according to the Old Style) he led the Bolsheviks in overthrowing KERENSKY's provisional government. As chairman of the Council of People's Commissars he became virtual dictator; his associates included STALIN and TROTSKY. Among the Soviet government's first acts were the signing of the Treaty of BREST-LITOVSK with Germany and the distribution of land to the peasants. The Bolsheviks (who became the Communist party) asserted that the October Revolution had created a proletarian dictatorship; in fact, it was the party that ruled. Political opposition was suppressed, but civil war, complicated by foreign invasion and war with Poland, continued until late 1920. In 1919 Lenin established the Third International, or COMINTERN, to further world revolution. His policy of "war Communism," prevailing until 1921, brought extensive nationalization, food rationing, and control over industry. In an attempt to boost the economy, he launched the NEW ECONOMIC POLICY (NEP), which allowed some private enterprise. Lenin's death in 1924 precipitated a power struggle in which Stalin was victorious. Lenin's main contributions to Marxism were his analysis of IMPERIALISM and his concept of a revolutionary party as a highly disciplined unit. He was one of the greatest and most practical revolutionists of all time.

Leningrad: see SAINT PETERSBURG.

Lenôtre or **Le Nôtre, André** [lənō'ə], 1613–1700, French landscape architect. Working for LOUIS XIV, he brought to full development the spacious formal French garden, at the palace of VERSAILLES, the TUILERIES, and other sites.



Lenses

lens, a device for forming an image of an object by the REFRACTION, or bending, of light. In its simplest form it is a disk of transparent substance, commonly glass or plastic, with its two surfaces curved or with one surface plane and the other curved. Generally each curved surface—called *convex* if curved outward and *concave* if curved inward—of a lens is made as a portion of a spherical surface; the center of the sphere is called the center of curvature (C) of the surface. All rays of light passing through a lens are refracted except those that pass directly through a point called the optical center. A divergent lens (thicker at the edges than at the center) bends parallel light rays passing through it away from each other. The image formed by a diverging lens is always erect (upright), smaller than the object, and virtual (located on the same side of the lens as the object). A convergent lens (thicker at the center than at the edges) bends parallel light rays toward one another; if they are parallel to the principal axis of the lens, they converge to a common point, or focus (F), behind the lens. The image formed by a converging lens depends on the position of the object relative to the lens's focal length (distance between the focus and the optical center) and its center of curvature. See ABERRATION, in optics; CAMERA; MICROSCOPE; TELESCOPE.

Lent [from Old Eng. *lencten,* = spring], Christian period of fasting

and penitence preparatory to EASTER. Lent begins on Ash Wednesday, the 40th weekday before Easter Sunday. Of the Sundays of Lent, the fifth is Passion Sunday, and the last is Palm Sunday. The week preceding Easter is Holy Week and includes GOOD FRIDAY. Lent ends at midnight on Holy Saturday.

lentil, Old World annual (*Lens culinaris*) of the PULSE family. Its pods contain two dark seeds—lentils—unusually high in PROTEIN content; the seeds are ground into meal or used in soups. One of the first food plants cultivated in Europe, lentils are increasingly grown for food in the U.S.

Lenya, Lotte, 1900–1981, Austrian actress; b. Caroline Blamauer. She was married to the composer Kurt WEILL and was the foremost interpreter of his songs, appearing in *The Threepenny Opera* and *Mahagonny.*

Leo I, Saint (Saint Leo the Great), c.400–461, pope (440–61), an Italian. One of the greatest pontiffs and a doctor of the Church, Leo waged a campaign against schism and heresy. He attacked MANICHAEISM in Italy and, in a conflict with St. Hilary of Arles, asserted his authority over all bishops. He defended church teaching against NESTORIANISM and MONOPHYSITISM. In 452 he persuaded ATTILA not to attack Rome. Feast: Nov. 10.

Leo III, Saint, d. 816, pope (795–816), a Roman. After being physically attacked by the family of his predecessor, ADRIAN I, Leo escaped to CHARLEMAGNE and won his support. Leo crowned (800) Charlemagne emperor at Rome, thus initiating the Holy Roman Empire. Seeking East-West unity, he declared the *Filioque* phrase of the Nicene CREED liturgically dispensable. Feast: June 12.

Leo IX, Saint, 1002–54, pope (1049–54), a German named Bruno. A relative of Holy Roman Emperor CONRAD II, Leo, aided by Hildebrand (later Pope GREGORY VII), launched a program of clerical reform. Leo was also concerned with the heresy of Berengar of Tours and was defeated (1053) by the Normans in S. Italy. Michael Cerularius, patriarch of Constantinople, attacked (1053) the pope, and Leo excommunicated him in 1054, beginning the formal schism between East and West. Feast: Apr. 19.

Leo X, 1475–1521, pope (1513–21), a Florentine named Giovanni de' Medici. Son of Lorenzo de' MEDICI, he was famous for his patronage of RAPHAEL, the continuation of St. Peter's by BRAMANTE, and his literary circle. The Fifth Lateran Council, which he called, failed to effect the desired reforms, and the Protestant REFORMATION began when Martin LUTHER posted (1517) his 95 theses. Leo excommunicated the reformers, notably with the bull *Exsurge Domine* (1520), but failed to deal effectively with the crisis.

Leo XIII, 1810–1903, pope (1878–1903), an Italian named Gioacchino Pecci. He devoted himself to forming Catholic attitudes appropriate to the modern world and issued encyclicals to that end. *Immortale Dei* (1885) charted the course for Catholics as responsible citizens in modern democratic states. *Rerum novarum* (1891), a most important encyclical, outlined Catholic social ideals, pointing to the abuses of capitalism and the deficiencies of Marxism. To meet intellectual attacks on the Church, he wrote *Aeterni Patris* (1879), which declared the philosophy of St. THOMAS AQUINAS official, and he founded the Inst. of Thomistic Philosophy at Louvain. In his reign, the conflict in Germany between the government and the church (the Kulturkampf) was ended (1887) with a victory for the church.

Leo, Byzantine emperors. **Leo I** (the Great or the Thracian), d. 474 (r.457–74), enlisted Isaurians to break the power of Germans in his army. His naval attack on the Vandals failed (468). **Leo III** (the Isaurian or the Syrian), c.680–741 (r.717–41), deposed Theodosius III. He checked the Arab threat, ended anarchy in the empire, and issued a civil code, the *Ecloga.* His ICONOCLASM alienated Popes Gregory II and Gregory III, who ended Byzantine suzerainty over Rome. **Leo IV** (the Khazar), d. 780 (r.775–80), succeeded his father, CONSTANTINE V. Leo's widow, IRENE, became regent for their son, CONSTANTINE VI. **Leo V** (the Armenian), d. 820 (r.813–20), made a 30-year truce with the BULGARS. Reviving iconoclasm, he deposed the patriarch Nicephorus (815) and persecuted St. Theodore of Studium. **Leo VI** (the Wise or the Philosopher), 862?–912 (r.886–912), modernized the code of JUSTINIAN I in his *Basilica* (887–93). By renewing (906) the schism with the patriarch PHOTIUS he forced Photius's resignation.

León, Juan Ponce de: see PONCE DE LEÓN, JUAN.

León, region and former kingdom, NW Spain, E of Portugal and Galicia. It includes the provinces of León, Salamanca, and Zamora. The climate is harsh; the sparse population engages in coal mining, stock raising, agriculture, and linen manufacturing. The kings of ASTURIAS took the region (8th–9th cent.) from the MOORS, and the city of León became (10th cent.) their capital. The kingdom of León was permanently joined (1230) with CASTILE.

León, city (1990 pop. 872,453), central Mexico. Founded in the 1570s, it is in a fertile river valley c.5,600 ft (1,700 m) high. It is a commercial, agricultural, and mining center and is noted for its shoe manufactures.

León, city (1988 est. pop. 136,000), W Nicaragua, on Lake Managua. The nation's second largest city, it is a major commercial hub. Founded in 1524, it was colonial Nicaragua's political center and, after independence (1821), a stronghold of liberal forces. Its bitter rivalry with conservative Granada led to the founding (1855) of a "neutral" capital, MANAGUA. It is the seat of the Univ. of Nicaragua and is noted for its 18th-cent. cathedral, which houses the tomb of Rubén DARIO.

Leonardo da Vinci [də vĭn'chē], 1452–1519, Italian painter, sculptor, architect, musician, engineer, and scientist, probably the supreme example of RENAISSANCE genius. Born in Vinci, Tuscany, he was the illegitimate son of a Florentine notary and a peasant girl. His precocious artistic talent brought him to VERROCCHIO's workshop in 1466, where he met BOTTICELLI and GHIRLANDAIO. The culmination of his art in this first period in Florence is seen in the magnificent, unfinished *Adoration of the Magi* (Uffizi), with its characteristic dramatic movement and chiaroscuro. In c.1482 Leonardo went to the court of Ludovico SFORZA in Milan and there composed most of his *Trattato della pittura* and the notebooks that demonstrate his versatile genius. The severe plagues in 1484 and 1485 drew his attention to town planning, and his drawings and plans for domed churches reflect his concern with architectural problems. In 1483, Leonardo and his pupil Ambrogio de Predis were commissioned to execute the famous *Madonna of the Rocks* (two versions: 1483–c.1486, Louvre; 1483–1508, National Gall., London). The now badly damaged *Last Supper* (c.1495–1498; Milan) was executed during the period when he was experimenting with the FRESCO medium, and this partly accounts for its damage. Despite this, a sublime spiritual content and power of invention mark it as one of the world's masterpieces. Leonardo's model for an equestrian monument to Francesco Sforza was never cast, and in 1500 he returned to Florence, where he did much theoretical work in mathematics and pursued his anatomical studies in the hospital of Santa Maria Nuova. As a military engineer for Cesare BORGIA he studied swamp reclamation and met Niccolò MACHIAVELLI. In c.1503 he executed the celebrated *Mona Lisa* (Louvre). Then, as architect and engineer in Milan to the French king LOUIS XII, he continued his scientific investigations into geology, botany, hydraulics, and mechanics. In 1510–11 he painted *St. Anne, Mary, and the Child* (Louvre), a work that exemplifies his handling of *sfumato*—misty, subtle transitions in tone. His enigmatic *St. John the Baptist* (c.1513; Louvre) was executed for Pope LEO X and his brother Giuliano de' Medici in Rome. Shortly after 1515, Leonardo accepted an invitation from FRANCIS I of France to settle in the castle of Cloux. Here he pursued his own researches until his death. His versatility and creative power, as well as the richness and originality expressed in his notebooks, drawings, and paintings, mark him as one of the great minds of all time.

Leoncavallo, Ruggiero, 1858–1919, Italian composer. His one great success was the opera *I Pagliacci* (1892), a classic example of Italian *verismo,* opera based on a realistic plot.

Leonov, Aleksei Arkhipovich, 1934–, Soviet cosmonaut and Russian general. While serving as copilot of *Voskhod 2* (Mar. 18–19, 1965), he became the first person to perform extravehicular activity. Leonov was also command pilot for *Soyuz 19* in the *Apollo-Soyuz Test Project* (July 15–21, 1975). He became an air force major general in 1975.

Leontief, Wassily [lē'ŏntēf], 1906–, American economist; b. Russia. He was at Harvard from 1931 to 1975. He is best known for developing the input-output method of economic analysis, used by most industrialized nations, for which he won (1973) the Nobel Prize in economics.

The key to pronunciation appears on page xiii.

leopard, large carnivore (*Panthera pardus*) of the CAT family, found in Africa and Asia. Its yellowish fur is patterned with black spots and rings. Black leopards, a color variant, are called PANTHERS. The largest male leopards are about 7 ft (2.3 m) long, including the tail. They live mainly in forests and are solitary and nocturnal, preying on small animals and livestock.

Leopardi, Giacomo, conte, 1798–1837, Italian poet and scholar. His fame rests mainly on his *Canti* (songs), written between 1816 and 1836. Lyrical, lofty, and pessimistic, they are patriotic and contemptuous of Italian rulers of the day. He is regarded as the outstanding 19th-cent. Italian poet.

Leopold, rulers of the HOLY ROMAN EMPIRE. **Leopold I,** 1640–1705, emperor (1658–1705), king of Bohemia (1656–1705) and of Hungary (1655–1705), fared badly against Louis XIV of France in the third (1672–78) of the Dutch Wars and in the War of the Grand Alliance (1688–97). He was more successful against the Ottomans, and the Treaty of Karlowitz (1699) greatly increased his domains. He made VIENNA a cultural center. **Leopold II,** 1747–92, emperor (1790–92) and king of Hungary and Bohemia (1765–90), was the younger son of MARIA THERESA and Emperor Francis I, and the brother of Emperor JOSEPH II, whom he succeeded. His defense (1791) of his brother-in-law, Louis XVI of France, helped to precipitate the FRENCH REVOLUTIONARY WARS, which spelled the end of the Holy Roman Empire.

Leopold, kings of the Belgians. **Leopold I,** 1790–1865 (r.1831–65), was the youngest son of Francis Frederick, duke of Saxe-Coburg-Saalfeld. After the death (1817) of his wife, Princess Charlotte, daughter of the English prince regent, Leopold lived in England until elected king of newly formed Belgium. In 1832 he married a daughter of LOUIS PHILIPPE of France; their daughter became the wife of MAXIMILIAN, emperor of Mexico. Leopold introduced ministerial responsibility, electoral reform, and a national bank. **Leopold II,** 1835–1909 (r.1865–1909), was the son of Leopold I. With the aid of H.M. STANLEY he founded (1884–85) the Congo Free State (see ZAÏRE) under his personal rule. Using slave labor he amassed a huge fortune, until scandal forced him to turn the Congo over to the Belgian government. In Belgium, labor unrest forced the granting (1893) of universal male suffrage. His nephew, ALBERT I, succeeded him. **Leopold III,** 1901–83 (r.1934–51), was the son of Albert I. He led the Belgian army in resisting the German invasion in May 1940, but surrendered on May 28 over cabinet opposition. Held by the Germans until 1945, he was accused of collaboration on his return to Belgium and forced into exile in Switzerland while his brother, Prince Charles, acted as regent. He was allowed to return in 1950 but soon abdicated in favor of his son, BAUDOUIN I.

Leopold, kings of Bohemia and Hungary: see LEOPOLD, rulers of the Holy Roman Empire.

Lepanto, battle of, Oct. 7, 1571, naval battle between the Christians and Turks fought in the Gulf of Patras, off Lepanto, Greece. The fleet of the Holy League, commanded by JOHN OF AUSTRIA, virtually destroyed the fleet of the OTTOMAN EMPIRE (Turkey), ending the threat of Turkish naval supremacy in the Mediterranean.

Lepidus, family of the ancient Roman patrician gens Aemilia. **Marcus Aemilius Lepidus,** d. 77 B.C., was given a proconsulship in Gaul, but raised an army in N Italy. He was defeated, and fled from Italy. His son, **Marcus Aemilius Lepidus,** d. 13 B.C., supported ANTONY and, with Antony and Octavian (AUGUSTUS), formed the Second Triumvirate. Octavian became suspicious of Lepidus and curbed his powers.

Leppard, Raymond (John), 1927–, English conductor, composer, and harpsichordist. Best known for "realizing" 17th-cent. Venetian opera, he has led the English Chamber Orchestra (1959–77), BBC Philharmonic (1973–80), and Indianapolis Symphony (1987–). He has also composed film scores, e.g., for *Lord of the Flies* (1963).

leprosy or **Hansen's disease,** chronic infectious disease, caused by *Mycobacterium leprae,* affecting the skin and superficial nerves. It is found mainly, but not exclusively, in tropical regions. The disease produces numerous skin and nerve lesions, which, if left untreated, enlarge and may result in severe disfigurement. Leprosy is treated—successfully in most cases—with dapsone and other drugs. In 1993 the World Health Organization began a campaign to eliminate leprosy by 2000.

lepton: see ELEMENTARY PARTICLES.

Lerdo de Tejada, Miguel [lĕr'thō dā tähä'thä], d. 1861, Mexican public official. He initiated (1856) the Ley Lerdo, providing for the forced sale of church property, and helped to draft the liberal constitution of 1857. His brother, **Sebastián Lerdo de Tejada,** 1820?–1889, succeeded JUÁREZ as president (1872–76) and incorporated the new reform laws in the constitution of 1874. He was overthrown by Gen. DÍAZ.

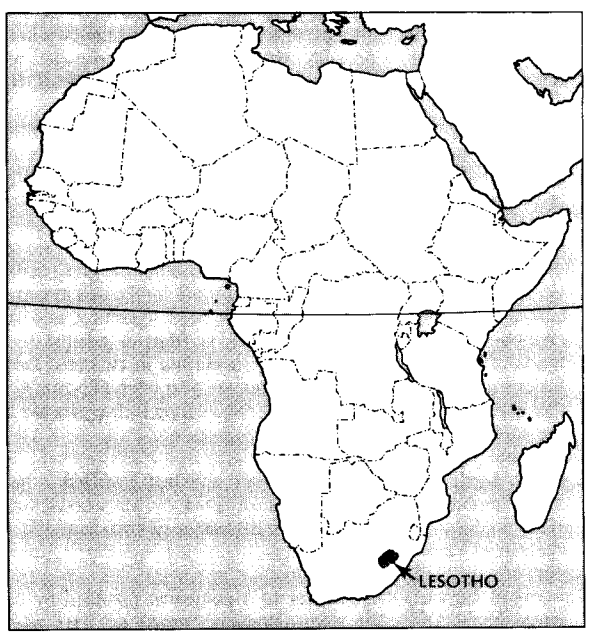
Lermontov, Mikhail Yurevich [lyĕr'məntŭf], 1814–41, Russian romantic poet and novelist. His poem "Death of a Poet" (1837), protesting the death of PUSHKIN in a duel, led to his banishment to the Caucasus, whose stirring landscape became a vital element in his work. The Byronic poem "The Angel" (1832), the narrative *The Demon* (1841), and *Mtsyri* (1840) are among the works on which his poetic reputation, second only to Pushkin's, rests. His novel *A Hero of Our Time* (1840), about a disenchanted nobleman, is a classic of psychological realism. Lermontov was killed in a duel.

Le Sage, Alain René [lə säzh'], 1668–1747, French novelist and dramatist. His masterpiece, *Gil Blas* (1715–35), a rambling picaresque romance, was unusual for its realism and attention to detail. It was a major influence on the development of the realistic NOVEL. The satirical comedy *Turcaret* (1709) is his best dramatic work.

lesbianism: see HOMOSEXUALITY.

Lesbos or **Lésvos,** island (1991 pop. 103,700), c.630 sq mi (1,630 sq km), E Greece, in the Aegean Sea, near Turkey. It has vast olive groves and also produces wine, wheat, and citrus fruits; fishing and tanning are important. A center of BRONZE AGE civilization, it was settled c.1000 B.C. by the Aeolians and became a brilliant cultural center of ancient Greece. It was the home of SAPPHO, ARISTOTLE, and EPICURUS.

Lesotho [ləsō'tō], officially Kingdom of Lesotho, formerly Basutoland, kingdom (1992 est. pop. 1,848,000), 11,720 sq mi (30,355 sq km), S Africa, enclave within South Africa. MASERU is the capital. The eastern two thirds of Lesotho is dominated by the Drakensberg mountain range, with elevations of more than 11,000 ft (3,353 m); the rest of the country is a narrow, rocky tableland. Only a small percentage of the land is arable, but corn, sorghum, and wheat are extensively cultivated. Sheep, cattle, and Angora goats are raised. Mineral resources include some diamonds. Industry is limited to light manufacturing. Lesotho is heavily dependent on SOUTH AFRICA for economic support, and more than 100,000 Sotho work in South African mines. The population is homogeneous, with nearly 100% belonging to the Sotho group. Some 80% are Christian. Non-Sothos are barred from owning land. English and Sesotho, a Bantu tongue, are official languages; Zulu and Xhosa are also spoken.



History. The region that is now Lesotho was originally inhabited by the San (Bushmen). In the 17th and 18th cent. refugees from various tribal wars entered the area, and in the early 19th cent. they were welded together into the Basuto nation by the paramount chief, Moshesh, who founded Lesotho's royal line. Threatened by Boer incursions, in 1868 Moshesh placed his people under British protection. Basutoland, as the territory was known, resisted plans for its incorporation into the newly created Union of South Africa (1910) and ultimately gained independence as the kingdom of Lesotho (1966). Chief Leabua Jonathan, prime minister since independence, suspended the constitution in 1970 when the opposition Congress party appeared to win the elections, and effectively reduced the king to a figurehead. A coup led by Major Gen. Justin Lekhanya toppled Jonathan in 1986. In 1991 Lekhanya was forced to resign, and Col. Elias Tutsoane Ramaena came to power as chairman of a military council. A free election resulted in a Basotho Congress party landslide, and Ntsu Mokhehle became (1993) prime minister.

Lesseps, Ferdinand Marie, vicomte de, 1805–94, French diplomat and engineer. After retiring from consular service, he organized a company and supervised (1859–69) the building of the SUEZ CANAL. In 1878 he headed another company formed to build the PANAMA CANAL. Its bankruptcy (1888) led to his conviction for misappropriation of funds. Later observers have felt he was guilty only of negligence.

Lesser Antilles: see WEST INDIES.

Lessing, Doris, 1919–, British novelist; b. Iran. Her themes include Africa, Communism, women, and global catastrophe. The series collectively titled *The Children of Violence* includes *The Four-Gated City* (1969). Other novels are *The Golden Notebook* (1962) and a series of science-fiction novels entitled *Canopus in Argos: Archives,* of which *The Making of the Representative for Planet 8* (1982) is best known.

Lessing, Gotthold Ephraim, 1729–81, German philosopher and dramatist, a leader of the ENLIGHTENMENT. His critical essays, *Hamburgische Dramaturgie* (1767–69), attacked French classical theater and held SHAKESPEARE up as a model for German playwrights. His own plays include *Miss Sara Sampson* (1755), *Minna von Barnhelm* (1763), *Emilia Galotti* (1772), and *Nathan the Wise* (1779), a plea for the peaceful coexistence of religious faiths. In *Education of the Human Race* (1780), he applied Enlightenment ideas of progress and evolution to religion. His *Laokoon* (1766) is a classic of modern aesthetics.

letterpress: see PRINTING.

Lettish or **Latvian,** language belonging to the Baltic subfamily of the Indo-European family of languages. See LANGUAGE (table).

lettuce, garden annual (*Lactuca sativa* and varieties) of the COMPOSITE family. Long cultivated as a salad plant and unknown in the wild state, lettuce is possibly derived from the weed called wild lettuce (*L. scariola*). Three types of lettuce are grown: head, leaf, and Cos, or romaine (the most heat-tolerant).

leukemia, any of a variety of cancerous disorders of blood-forming tissues (bone marrow, lymphatics, spleen), characterized by the abnormal proliferation of white blood cells and consequently a crowding out of other blood elements. There are many types, each named after the type of cell affected, whether the disease is chronic or acute, and whether it affects children or adults. No one cause of leukemia is known, but genetic abnormalities, certain viruses, and exposure to toxic chemicals are implicated in certain subtypes. Symptoms include weakness, fever, bleeding, and susceptibility to infection. CHEMOTHERAPY is effective against some forms of leukemia, especially those occurring in children. Transfusions and bone marrow transplants are also often effective. New therapies made possible by genetic engineering techniques are being studied. See also CANCER.

levadopa: see L-DOPA.

Le Vau, Louis [lə vō], 1612–70, French architect, involved in most of the important building projects for LOUIS XIV. He worked (after 1655) on the LOUVRE, and designed the palace of VERSAILLES and the chateau of Vaux-le-Vicomte.

lever: see MACHINE.

leveraged buyout, the takeover of a company, financed by borrowed funds. Often, the target company's assets are used as security for the loans acquired to finance the purchase. The acquiring company or group then repays the loans from the target company's profits or by selling its assets. Many leveraged buyouts have been financed through JUNK BONDS.

Leverrier, Urbain Jean Joseph [ləvĕryā'], 1811–77, French astronomer. On the basis of calculations derived from the perturbations of the motions of the planet Uranus, he and John Couch ADAMS independently and accurately predicted the presence of a transuranian planet; Leverrier's prediction, published first, led directly to the discovery (1846) of the planet NEPTUNE.

Levertov, Denise, 1923–, American poet; b. England. Her clear, spare poems are included in such collections as *The Double Image* (1946), *Here and Now* (1957), *Relearning the Alphabet* (1970), and *A Door in the Hive* (1989).

Lévesque, René [lāvĕk'], 1922–87, French-Canadian separatist leader, premier of Quebec (1976–85). Originally a member of the Liberal party, he helped form (1968) Le Parti Québécois, which advocated Quebec's secession from Canada. In 1980 Quebec voters rejected a sovereignty-association scheme in a provincial referendum, but Lévesque's popularity in Quebec remained high. He resigned as party leader and premier (1985) when the party voted to temporarily abandon the goal of separation.

Levi: see LEVITES.

Levi, Primo, 1919–87, Italian writer. He was a chemist of Jewish descent. His writings focus on the 20th-cent. Jewish experience. His works include his 1947 memoir, *Survival in Auschwitz; The Reawakening* (1963); and *The Periodic Table* (1984). He committed suicide.

Lévi-Strauss, Claude, 1908–, French anthropologist. The founder of structural anthropology, he believes that all cultures order the elements of the universe into systems. Structuralism compares the formal relationships among the elements in each system, revealing structural similarities underlying all cultures. Structuralism has influenced linguistics and other social sciences, as well as criticism in literature and the arts. His major works include *Structural Anthropology* (1958), *The Savage Mind* (1962), *Totemism* (1962), *Mythologiques* (4 vol., 1964–71), and *The View from Afar* (1985).

Levites, among the ancient Hebrews, a religious caste of priests, descended from Levi, son of JACOB. They alone of the tribes received no allotment of land in CANAAN. With the unification of worship at JERUSALEM, the Levites became temple servants with hereditary assignments. LEVITICUS is named for them.

Leviticus [lĭvĭt'əkəs], book of the OLD TESTAMENT, third of the five books of the PENTATEUCH ascribed by tradition to MOSES, essentially a collection of liturgical legislation, including laws on the installation of priests (8–10) and on purity and impurity, e.g., dietary laws (11–16).

levulose: see FRUCTOSE.

Lévy-Bruhl, Lucien, 1857–1939, French philosopher, psychologist, and ethnologist. Known for his work on the mentality of preliterate peoples, he wrote such works as *How Natives Think* (1910) and *Primitive Mentality* (1922).

Lewes, George Henry [lōō'ĭs], 1817–78, English author. As the editor of the *Fortnightly Review,* he gained fame as a critic. His most noted work is his *Life of Goethe* (1855). In 1854 he began living with Mary Ann Evans (George ELIOT), whose work he encouraged.

Lewis. For rulers thus named, see LOUIS.

Lewis, Carl, 1961–, American sprinter and jumper; b. Birmingham, Ala. In the 1984 Olympics he won four gold medals, in the 100 meters, the 200 meters, the long jump, and the 4×100 meter relay. This duplicated Jesse OWENS's celebrated feat in the 1936 Berlin Olympics. In 1988 Lewis won three more Olympic medals (two gold and a silver), and in 1992 he won two gold medals. He set a new world record (9.86 sec) in the 100 meters in 1991.

Lewis, Cecil Day: see DAY LEWIS, CECIL.

Lewis, C(live) S(taples), 1898–1963, English author, noted for his exposition of Christian tenets. His works include *The Allegory of Love* (1936), on medieval romantic love, and the ironic *Screwtape Letters* (1942). He also wrote outer-planet fantasies with moral overtones, e.g., *Out of the Silent Planet* (1938), and criticism.

Lewis, Jerry Lee, 1935–, American singer and composer; b. Ferri-

day, La. Combining country music elements with an energetic performance style, he was an early star of ROCK MUSIC. His songs include "Whole Lotta Shakin' Goin' On" and "Great Balls of Fire."

Lewis, John L(lewellyn), 1880–1969, American labor leader; b. Lucas co., Iowa. He worked as a coal miner and rose through the union ranks to become president (1920) of the United Mine Workers of America (UMW). Forceful and eloquent, Lewis built up the union and won the loyalty of the miners. He was an important figure in the AFL until he founded (1935) the CIO, which he headed until 1940 (see AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS). At first a supporter of Pres. F.D. Roosevelt, Lewis became his principal labor critic, backing Wendell Willkie in the 1940 election. In 1942 Lewis pulled the UMW out of the CIO. During World War II he led the coal miners in several strikes, arousing public anger, and drew a heavy fine in 1948 for failing to obey a court order ending a protracted strike. In the 1950s Lewis, becoming less aggressive, sought accommodation with the depressed coal industry. He resigned the UMW presidency in 1960.

Lewis, Meriwether, 1774–1809, American explorer; b. near Charlottesville, Va. Friend and secretary to Pres. JEFFERSON, Lewis headed (1803–6) the LEWIS AND CLARK EXPEDITION. In 1807 he was made governor of the Louisiana Territory.

Lewis, (Percy) Wyndham, 1886–1957, English author and painter; b. Maine. He was associated with VORTICISM, but his own paintings, which are in several important museums, were often more conventional. He also wrote iconoclastic essays and novels like *The Revenge for Love* (1937).

Lewis, Sinclair, 1885–1951, American novelist; b. Sauk Centre, Minn. A brilliant satirist, he offered a devastating picture of middle-class American life. He achieved notice with *Main Street* (1920), a satire on small-town midwestern life. *Babbitt* (1922), a portrait of an average American destroyed by conformity, is considered his greatest book. Lewis satirized the medical profession in *Arrowsmith* (1925; Pulitzer) and attacked hypocritical religiosity in *Elmer Gantry* (1927). Among his 22 novels are *Dodsworth* (1929), *It Can't Happen Here* (1935), and *Cass Timberlane* (1945). In 1930 he became the first American to win the Nobel Prize in literature.

Lewis, Sir (William) Arthur, 1915–91, British economist; b. St. Lucia, West Indies. After teaching at the London School of Economics and the Univ. of Manchester, he was (1959–63) an administrator at the Univ. of the West Indies in Jamaica and (1963–83) a professor at Princeton Univ. A specialist in the economy of developing nations, he was a co-winner of the 1979 Nobel Prize in economics, becoming the first black Nobel laureate in a category other than peace.

Lewis and Clark Expedition, 1803–6, U.S. expedition that explored the LOUSIANA PURCHASE and the land beyond to the Pacific Ocean. Led by Meriwether LEWIS and William Clark (see under CLARK, GEORGE ROGERS), it was dispatched to find a land route to the Pacific, strengthen U.S. claims to the OREGON territory, and gather information on Native Americans and the country. The group started up the Missouri R. from ST. LOUIS in May 1804, and in 1805 their Shoshone woman guide, SACAJAWEA, led them across the Rockies. They descended the Clearwater, Snake, and Columbia rivers and built Fort Clatsop, where they wintered, on the Pacific coast. On their return they separated for a time, Lewis descending the Marias R. and Clark the Yellowstone. Reunited, they arrived in St. Louis in Sept. 1806. Their well-documented expedition opened vast new territories to the U.S.

Lexington, city (1990 pop. 225,366), seat of Fayette co., N central Ky., in the bluegrass region; inc. 1832. It is the major U.S. center for the raising of thoroughbred horses, and a tobacco and bluegrass seed market. Shipping of Kentucky's coal and other products is important, and there are diversified manufactures. The Univ. of Kentucky is in Lexington; "Ashland," the home of Henry CLAY (1806, rebuilt 1850s), is notable.

Lexington and Concord, battles of, Apr. 19, 1775, opening battles of the AMERICAN REVOLUTION. To seize colonial military stores at CONCORD, the British marched from Boston and were met at Lexington by colonial militia. After a brief engagement, the colonials withdrew. The British marched to Concord, where they fought another battle and began a harried retreat to Boston that cost them over 200 casualties.

Leyden, Lucas van: see LUCAS VAN LEYDEN.

Leyden jar: see CAPACITOR.

Lhasa [lä-sŭ], city (1986 est. pop. 84,500), capital and chief trade center of Tibet Autonomous Region, SW China. The center of TIBETAN BUDDHISM before the Chinese occupied Tibet in 1951, Lhasa was known as the Forbidden City because of its remoteness and the hostility of the Lamaist clergy to foreigners. Located here are the magnificent Potala, former palace of the Dalai Lama; the Drepung monastery, one of the largest in the world; and the outwardly unimpressive, but extremely holy, Jokang temple.

Lhasa apso, small NONSPORTING DOG; shoulder height, c.11 in. (27.9 cm); weight, 13–15 lb (5.9–6.8 kg). Its heavy, straight, long coat may be any of various colors, with shades of gold preferred. Developed centuries ago in Tibet, it was given as a gift to dignitaries by the Dalai Lamas.

Li, chemical symbol of the element LITHIUM.

Liaquat Ali Khan [lēä'kət älē' kän], 1895–1951, first prime minister of PAKISTAN (1947–51). He was the chief lieutenant of Muhammad Ali JINNAH and a leader of the Muslim League. After Pakistan was created in 1947, he served as prime minister until he was assassinated in 1951.

libel and slander, in TORT law, two forms of defamation (unjustified disparagement of the good name and reputation of an individual). Defamation is classed as libel when it is in some permanent form, such as writing or a picture; when it is oral, it is classed as slander. In both cases, it must be revealed to a third party. A statement is generally not defamatory if it is true, but under some statutes a defendant must prove good motives in the utterance. Certain privileged situations (e.g., testimony in a court of law) shield a defamer from liability. The usual remedy for defamation is monetary damages.

Liberal Democratic party (LDP), Japanese political party. It began as the conservative Liberal party, which, under YOSHIDA SHIGERU, became the dominant political force in Japan (1949) and retained power after the 1952 elections. The Liberals merged (1955) with the newly created Japan Democratic party. Retaining control of the Japanese government for 38 years, the LDP supported Japan's alliance with the U.S. and fostered close links between Japanese business and government. It lost its parliamentary majority in the 1993 elections, which put a coalition government in power, but remained Japan's largest political party.

Liberal party, British political party. An outgrowth of the WHIG party, it was supported by the bulk of the industrial and business classes enfranchised by the REFORM BILL of 1832. Lord John Russell, a leading Liberal, became prime minister in 1846. The party advocated LAISSEZ FAIRE and initially opposed social legislation. Under William GLADSTONE, however, it accepted electoral and social reforms and, in 1884, took up the cause of Irish HOME RULE. Herbert Asquith (see OXFORD AND ASQUITH, 1ST EARL OF), a Liberal imperialist, became prime minister in 1908. He was followed by David LLOYD GEORGE, who led a coalition government during WORLD WAR I. By the 1930s the Liberals had become a small third party. In 1981 it entered into an alliance with the newly formed SOCIAL DEMOCRATIC PARTY, later (1988) merging with it to form the Social and Liberal Democratic party.

Liberal party, Canadian political party. Reform parties dominated politics in several provinces after confederation (1867), but a strong national party was hampered by Liberal weakness in Quebec. The party's only prime minister in the next 30 years was Alexander MACKENZIE. Louis RIEL's execution, however, angered Quebec, and Wilfrid LAURIER moderated the anticlericalism of Quebec Liberals. He became prime minister in 1896 and forged an English-French coalition that appealed to the middle class. Liberal W.L.M. KING led Canada for much of the 1920s, 30s, and 40s. His successor, Louis ST. LAURENT, lost much of the party's western base, but Lester PEARSON slowly rebuilt the party. Constitutional questions and Quebec dominated Pierre TRUDEAU's tenure. John TURNER briefly succeeded Trudeau as prime minister and led the party until 1990, when Herb Grey and then Jean CHRÉTIEN became party leader. In 1993 dissatisfaction with the economy returned the Liberals to power.

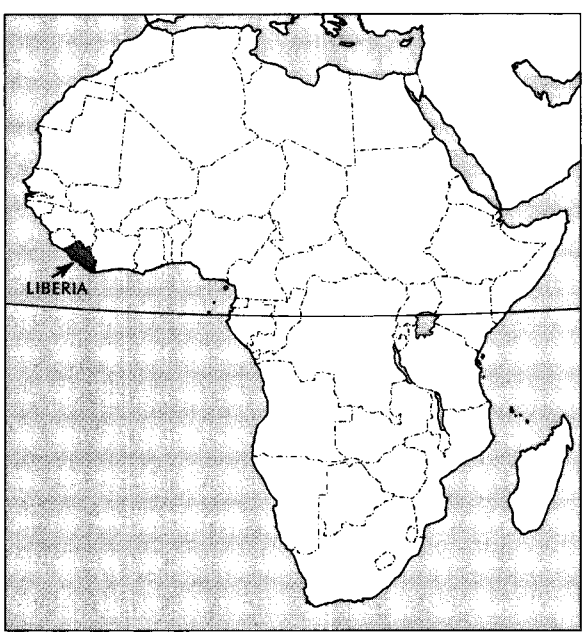
Liberal Republican party, U.S. political party formed in 1872 by Republicans unhappy with the corruption and policies of Pres.

Grant's administration. Among its leaders were Carl SCHURZ, Horace GREELEY, and Charles SUMNER. The party nominated Greeley for president, a choice acceptable to the Democrats, but Greeley proved unpopular with many party leaders and Grant easily won reelection.

liberation theology, doctrine that belief in the Christian Gospel requires that one support the struggles of the poor for freedom and economic justice. Many leftist Catholics, especially in South America, have advocated this mixture of religion and politics, but conservatives, including Pope JOHN PAUL II, have criticized the concept, especially when it is used to support violent revolution and Marxism.

Liberia, officially Republic of Liberia, republic (1992 est. pop. 2,462,000). 43,000 sq mi (113,370 sq km), W Africa, bordered by the Atlantic Ocean (SW), Sierra Leone (NW), Guinea (N), and Côte d'Ivoire (E). MONROVIA is the capital. Liberia has three geographic regions: a flat coastal plain, a dominant interior area of densely forested foothills, and a northern mountain area with elevations of over 4,500 ft (1,370 m). Liberia's economy, formerly dependent on subsistence farming and rubber production, is now based primarily on exports of iron ore. Other exports are rubber, timber, coffee, cocoa, and diamonds. The government derives a sizable income from registration of foreign ships while exercising no control over them, a practice that has made the Liberian merchant marine appear to be one of the world's largest. The descendants of American settlers, though not numerous, long wielded considerable political influence. The indigenous African population is made up of diverse ethnic groups and mainly practices traditional religions. Islam and Christianity are significant minority faiths. English is the official language, but tribal tongues are widely spoken.

History. Liberia was founded in 1821 as a haven for freed American slaves by the AMERICAN COLONIZATION SOCIETY. The first American settlers arrived in 1822, and some 15,000 were eventually settled. The colony became independent in 1847. Constitutional issues, mounting foreign debts (the government was bankrupt by 1909), and the loss of disputed territory threatened the stability of the new nation, but with U.S. help, independence was preserved. In 1930 revelations of government connivance in a slave trade from Liberia resulted in the downfall of the regime and proposals for international control. Such action was averted, however, by the leadership of presidents Edwin Barclay (1930–44) and William V.S. Tubman (1944–71); the latter opened Liberia to international investment, gave tribal peoples a greater voice in the country's affairs, and improved living standards. In 1979, after years of political stability, a government proposal to increase the price of rice (the main staple) produced widespread violence. A year later a coup led by soldiers of African origin ended 100 years of rule by Americo-Liberians; Pres. William R. TOLBERT (who had succeeded Tubman in 1971) was assassinated, and the country was placed under military rule, with 28-year-old Samuel K. Doe assuming the presidency. Doe's tyrannical rule and his favoritism toward his own ethnic group precipitated a civil war in 1990. In late 1990 Doe was captured by rebels and executed; fighting subsequently broke out between the rebel factions. Peacekeeping forces led by Nigeria largely ended the fighting, but progress toward peace stalled, with the peacekeepers controlling Monrovia and environs and rebel forces under Charles Taylor controlling most of the rest of Liberia. A 1993 accord established a cease-fire and interim government and called for multiparty elections in 1994. Implementation of the accord, however, was slow, and the emergence of new armed groups threatened to disrupt the pact.



Liberty, Statue of, colossal (152-ft/46-m) statue on Liberty Island, N.Y.C., in Upper New York Bay, in New Jersey waters but under New York jurisdiction. Designed by F.A. BARTHOLDI, it was presented to the U.S. by the Franco-American Union to commemorate the AMERICAN REVOLUTION. Dedicated in 1886, it became a national monument in 1924 and was extensively restored in 1986.

Liberty Bell, historic relic housed near Independence Hall, Philadelphia. Hung in 1753, it was rung in July 1776 to proclaim the DECLARATION OF INDEPENDENCE. It was hidden (1777–78) from the British in Allentown, Pa., and later returned. The bell was cracked in 1835 and again in 1846.

library, place containing an organized collection of written, artistic, or other kinds of materials. The earliest known library was a collection of clay tablets in Babylonia in the 21st cent. B.C. Other early libraries were the Babylonian library at Nineveh of King ASSURBANIPAL (d. 626? B.C.) and the sacred library in the Temple at JERUSALEM. In 330 B.C. the first public library in Greece was established in order to preserve accurate examples of the works of the great dramatists. The most famous libraries of antiquity were those at ALEXANDRIA, in Egypt, and PERGAMUM. Roman libraries were brought from Greece, Asia Minor, and Syria as the result of conquests (1st and 2d cent. B.C.). The great Roman public libraries were the Octavian (destroyed A.D. 80) and the Ulpian, founded in the reign of TRAJAN. Early Christian libraries were located in monasteries; those founded in Britain by Anglo-Saxon monks produced fine manuscript illumination. The Arabs (9th–15th cent.) collected many fine libraries. In the RENAISSANCE, nobles like Lorenzo de' Medici (see MEDICI, family) had great libraries, and many of the major university libraries, e.g., Bologna and Oxford, were created. The Vatican Library, the oldest public library in Europe, was founded in the 15th cent. In the U.S., the Boston Public Library opened in 1653 and was followed by the Library Company of Philadelphia in 1731, a circulating library. In 1833 the first U.S. tax-supported library opened in Peterborough, N.H. The American Library Association, formed in 1876, spurred improvements in library methods and the training of librarians. Libraries in the U.S. and Britain benefited greatly from the philanthropy of Andrew CARNEGIE, who strengthened local interest in libraries by making his grants contingent upon public support. Among the innovations of the late 19th cent. were free public access to books and branch libraries. In the early 20th cent. traveling libraries, or "bookmobiles," began to take books to readers in rural areas. Modern innovations include reader's advisory services, interlibrary loans, lecture series, public book reviews, and the maintenance of special recording and juvenile collections. Two widely used systems of classification are the Dewey decimal system of Melvil DEWEY and the Library of Congress system. Since the 1930s a number of technological tools have been developed that have revolutionized library science. These include microphotographic techniques for text preservation (microfilm; microfiche); photocopiers; and COMPUTER data banks that enable libraries to store vast amounts of information (see INFORMATION STORAGE AND RETRIEVAL) and produce comprehensive indexes and catalogs.

Libreville, city (1985 est. pop. 236,000), capital of Gabon, a port on the Gabon R. estuary, near the Gulf of Guinea. It is an administrative center and has petroleum and plywood industries. Founded

The key to pronunciation appears on page xiii.

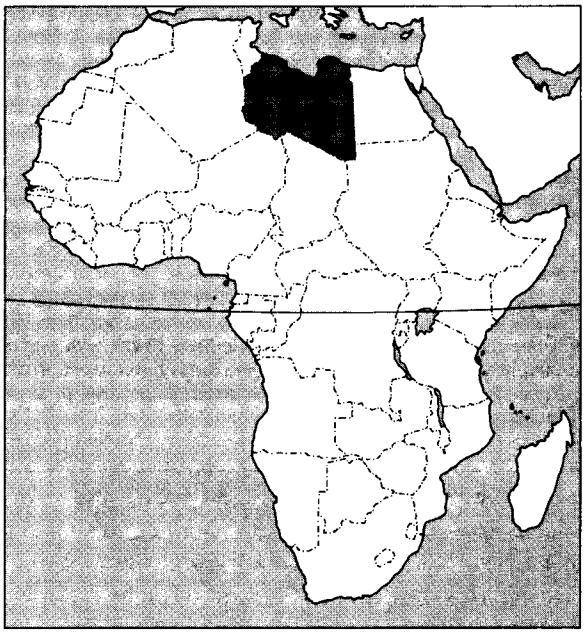
in 1843 as a French trading station to which freed slaves were sent, it was named Libreville [Fr., = freetown] in 1848. It was the chief port of FRENCH EQUATORIAL AFRICA until the development of Pointe-Noire in the 1930s.

Libya, officially Socialist People's Libyan Arab Jamahirya, republic (1992 est. pop. 4,485,000), 679,358 sq mi (1,759,540 sq km), N Africa, bordered by Algeria and Tunisia (W), the Mediterranean Sea (N), Egypt and Sudan (E), and Chad and Niger (S). The principal cities are TRIPOLI (the capital) and TOBRUK. Most of Libya is part of the SAHARA desert; the population is restricted to a coastal strip along the Mediterranean and a few widely scattered oases in the Libyan desert, in the east, and the Fazzan region, in the south. The discovery of oil in 1958 transformed Libya from a poor agricultural country into one of the world's leading petroleum producers, with vast sums to spend on social, agricultural, and military development. The discovery of oil in 1958 transformed Libya from a poor agricultural country into one of the world's leading petroleum producers, with vast sums to spend on social, agricultural, and military development. Petroleum accounts for 95% of export earnings and more than 50% of national income; Libya is also an important producer of natural gas. Major crops include cereals, olives, fruits, dates, and vegetables. The majority of the inhabitants are Arabs, but there are scattered communities of Berbers and, in the southwest, many of mixed Berber and African descent. Of the work force of about one million, over 25% are resident foreigners. Islam is the official religion (most Libyans are SUNNI Muslims), and Arabic is the official language.

History. At various times in its history the territory that is now Libya was occupied by Carthage, Rome, Arabia, Morocco, Egypt, and Spain. It was part of the Ottoman Empire from 1551 to 1911, serving in the 18th cent. as a base for pirates who, in return for immunity, provided large revenues to the local ruler. Libya was seized by Italy in 1911, but Libyan resistance continued until the 1930s. During WORLD WAR II, as an Italian colony, it was one of the main battlegrounds of N Africa (see NORTH AFRICA, CAMPAIGNS IN), passing under an Anglo-French military government when the Axis was defeated in the area in 1943. In accordance with a UN decision, in 1951 the country became independent as the United Kingdom of Libya, with King Idris I as ruler. Idris was ousted in 1969 in a coup d'etat led by Col. Muammar al-QADAFFI, who established an anti-Western dictatorship. British and American bases were closed in 1970, and unification was sought, unsuccessfully, with several other Arab countries. An implacable foe of Israel, Qadaffi used Libya's vast oil wealth to help support the Palestinian guerrilla movement, particularly radical elements. In 1979 Libya intervened in Uganda to help keep Idi AMIN in power, and in 1981 it dispatched troops into neighboring CHAD (Libya had occupied the disputed Aozou Strip, in N Chad, in 1973), withdrawing most of them later that year. Qaddafi's forces continued to take sides in Chadian fighting, eventually occupying much of N Chad, but they were pushed back somewhat in 1987. In 1990 the dispute over the Aozou Strip was submitted to the International Court of Justice. As a member of OPEC (see ORGANIZATION OF PETROLEUM EXPORTING COUNTRIES) Libya has been a leading exponent of limiting production and increasing prices of petroleum. In the late 1980s the U.S. took action against Libya for its backing of terrorist activities against U.S. citizens, including an air strike (1986) on Qaddafi's residence and other sites in Libya. Since 1986 Libya has attempted to form a union with the Arabic countries of the MAGHREB, especially Algeria and Tunisia. In 1992 the UN Security Council accused Libya of supporting state terrorism and called for a ban on air flights and arms sales to it unless suspects in the LOCKERBIE and another airplane bombing were turned over to the U.S., Britain, and France.

lichee: see LITCHI.

lichen, complex organism consisting of blue-green or green ALGAE living symbiotically with a FUNGUS, usually sac fungi. Lichens commonly grow on rocks or trees. The body, or thallus, is composed of fungal filament, or hyphae. The fungi obtains food from the algae and, in turn, absorbs and retains the water that is used by the algae for PHOTOSYNTHESIS. Reproduction of the algae and fungi is usually simultaneous. Lichens can withstand great extremes in temperature and can be found in deserts and the polar regions.



Lichtenstein, Roy, 1923–, American painter; b. N.Y.C. Linked to the POP ART movement, he derives his subject matter from sources such as comic strips. One of his ironic, sophisticated works is *Preparedness* (Guggenheim Mus., N.Y.C.).

Licinius, 250–325, Roman emperor. Coemperor (308) with Galerius, he allied himself with CONSTANTINE I and defeated Maximin in 313, thus becoming sole ruler in the East. He was later defeated and put to death by Constantine.

Licinius (Caius Licinius Calvus Stolo), fl. 375 B.C., tribune to whom the Licinian Rogations are attributed. They strictly limited the amount of public land that one person might hold, limited grazing rights, regulated debts, and ordained that one consul must be a plebeian.

licorice, European, blue-flowered perennial (*Glycyrrhiza glabra*) of the PULSE family; also, the sweet substance obtained from its roots, used medicinally and as a flavoring. It is cultivated chiefly in the Middle East.

Lidice [lĭ'dyĭtsĕ], village, NW Czech Republic. In 1942, in reprisal for the assassination of Nazi official Reinhard Heydrich, the Germans razed Lidice, killed the men, and deported the women and children. After the war a new village was built near the old one, now a memorial.

Lie, Trygve Halvdan [lē], 1896–1968, Norwegian statesman, first secretary general (1946–53) of the UNITED NATIONS. He served in ministerial posts and was foreign minister of his government in exile during World War II before being elected to the UN. His support of UN action during the KOREAN WAR earned him the enmity of the USSR. On leaving the UN he resumed an active role in Norwegian politics.

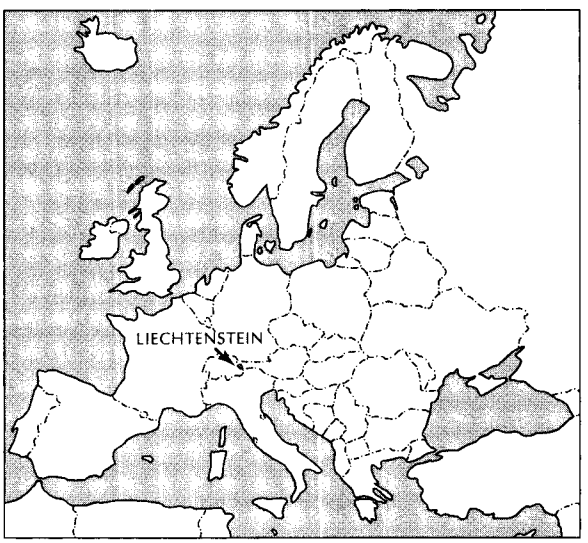
Liebermann, Max, 1847–1935, German GENRE painter and etcher. Influenced by the BARBIZON painters, Frans HALS, and Jozef ISRAËLS, he developed a style close to IMPRESSIONISM. He depicted the working classes, landscapes, and outdoor groups. Among his works is *Ropewalk* (Metropolitan Mus.).

Liebig, Justus, Baron von [lē'bĭkh], 1803–73, German chemist. As professor (1824–52) at Giessen, he was among the first to establish a chemical teaching laboratory, where some of the leading 19th-cent. chemists were trained. A professor (1852–73) at Munich, he improved methods of organic analysis and discovered chloral; he was also one of the discoverers of chloroform. His work in agricultural chemistry aided in the development of artificial fertilizers.

Liechtenstein, officially Principality of Liechtenstein, principality

(1992 est. pop. 28,600), 61 sq mi (157 sq km), W central Europe, in the Alps between Austria and Switzerland; the Rhine R. forms its western boundary. Vaduz is the capital. Liechtenstein produces machinery and other metal goods, pharmaceuticals, precision instruments, ceramics, and textiles. Most of the firms are owned and operated by Swiss. Tourism and revenues from some 25,000 foreign corporations nominally headquartered in Vaduz because of low taxes and bank secrecy, are important sources of income. Roman Catholicism is the state religion; German is the national language. The 1921 constitution established a parliament elected by male suffrage; not until 1986 did women receive the vote at both the national and local levels.

History. The principality was created in 1719 as a fief of the HOLY ROMAN EMPIRE. A member of the GERMAN CONFEDERATION from 1815, it became independent in 1866. It is closely linked with SWITZERLAND and is represented abroad by the Swiss government. In 1989 Prince Hans-Adam II succeeded his father, Franz Josef II, as sovereign.



lieder [Ger., = songs], songs written in the German vernacular. Although the term encompasses centuries of musical history, it is popularly used to denote German art songs of the 19th cent. These songs, usually for a single voice, have as lyrics poems by such authors as GOETHE. The most noted composers of lieder are SCHUBERT, SCHUMANN, and BRAHMS.

lie detector, instrument designed to determine whether a subject is lying or telling the truth, generally by detecting evidence of the slight increase in body tension believed to occur when a person knowingly lies. Various devices developed in the 20th cent. and used mainly in police work measure blood pressure, respiration, pulse, electrical changes on the skin, and voice frequencies. Lie detectors are not considered infallible, and test results are not usually accepted as evidence in U.S. courts. The use of lie detectors to screen employees and job applicants is highly controversial.

Liège, city (1991 est. pop. 199,000), E Belgium, at the confluence of the Meuse and Ourthe rivers. The cultural center of French-speaking Belgium, it is a transportation hub and an industrial city whose manufactures include metal goods, armaments, and motor vehicles. It was largely rebuilt after considerable damage in World War II.

Lifar, Serge, 1905–86, Russian dancer, teacher, choreographer, director, and dance historian. He was primarily self-taught and danced (1923–29) with DIAGHILEV. He created (1929) the title role in BALANCHINE's *The Prodigal Son*. He was the principal dancer and ballet-master of the Paris Opéra (1929–44, 1947–58). His own works include *Phèdre* (1950) and *Le Grand Cirque* (1969).

ligament, strong band of CONNECTIVE TISSUE that joins BONES to other bones or to cartilage in the JOINT areas. Ligaments tend to be pliable but not elastic, permitting limited movement while holding attached bones in place. Fibrous sheets supporting internal organs are also ligaments.

light, that part of ELECTROMAGNETIC RADIATION to which the human eye is sensitive. The wavelengths of visible light range from c.400 to c.750 nanometers. If white light, which contains all wavelengths, is separated into a SPECTRUM, each wavelength is seen to correspond to a different COLOR. The scientific study of the behavior of light is called OPTICS; it covers REFLECTION of light by a MIRROR or other object, REFRACTION of light by a LENS or PRISM, and DIFFRACTION of light as it passes by an opaque object. Christiaan HUYGENS proposed (1690) a theory that explained light as a WAVE phenomenon. Isaac NEWTON, however, held (1704) that light is composed of tiny particles, or corpuscules, emitted by luminous bodies. By combining his corpuscular theory with his laws of mechanics, he was able to explain many optical phenomena. Newton's corpuscular theory of light was favored over the wave theory until important experiments, which could be interpreted only in terms of the wave theory, were done on the diffraction and INTERFERENCE of light by Thomas YOUNG (1801) and A.J. FRESNEL (1814–15). In the 19th cent. the wave theory became the dominant theory of the nature of light. The electromagnetic theory of James Clerk MAXWELL (1864) supported the view that visible light is a form of ELECTROMAGNETIC RADIATION. With the acceptance of the electromagnetic theory of light, only two general problems remained. It was assumed that a massless medium, the ETHER, was the carrier of light waves, just as air or water carries sound waves. The famous experiments (1881–87) by A.A. MICHELSON and E.W. Morley, in which they tried unsuccessfully to measure the velocity of the earth with respect to this medium, failed to support the ether hypothesis. With his special theory of RELATIVITY, Albert EINSTEIN showed (1905) that the ether was unnecessary to the electromagnetic theory. Also in 1905, Einstein, in order to explain the PHOTOELECTRIC EFFECT, suggested that light, as well as other forms of electromagnetic radiation, travel as tiny bundles of energy, called light quanta, or PHOTONS, that behave as particles (see QUANTUM MECHANICS). Light thus behaves as a wave, as in diffraction and interference phenomena, or as a stream of particles, as in the photoelectric effect. The theory of relativity predicts that the speed of light in a vacuum (186,282 mi/sec = 299,792.458 km/sec) is the limiting velocity for material particles.

light-emitting diode: see DIODE.

lightning, electrical discharge accompanied by THUNDER, commonly occurring during a THUNDERSTORM. The discharge may take place between two parts of the same cloud, between two clouds, or between a cloud and the earth. Lightning may appear as a jagged streak (forked lightning), as a vast flash in the sky (sheet lightning), or, rarely, as a brilliant ball (ball lightning). The electrical nature of lightning was proved by Benjamin FRANKLIN in his famous kite experiment of 1752. Space probes have photographed lightning on Jupiter and recorded indications of it on Venus, Saturn, Uranus, and Neptune.

lightning bug: see FIREFLY.

light-year, in astronomy, the distance (5.87×10^{12} mi/9.46×10^{12} km) that LIGHT travels in one sidereal YEAR.

lignite or **brown coal,** carbon-containing fuel intermediate between COAL and PEAT, brown or yellowish in color and woody in texture. Lignite contains more moisture than coal and tends to dry and crumble when exposed to air. It burns with a long, smoky flame but little heat.

lignum vitae, tropical American evergreen tree (genus *Guaiacum*). Its dense, durable wood, chiefly from *G. sanctum* and *G. officinale*, is used where strength and hardness are required, e.g., in ship construction and for butcher blocks.

lilac, Old World shrub or small tree (genus *Syringa*) of the OLIVE family, noted for its fragrant, cone-shaped masses of lavender or white flowers. Many variations in form, e.g., double flowers, and color, e.g., rosy pink, have been hybridized from the familiar common lilac (*S. vulgaris*).

Lilienthal, Otto [lēlyəntäl], 1848–96, German aeronautical engineer. A pioneer in experiments with gliders, making more than 2,000 flights, he based his developments largely on observations of birds. He died as a result of a crash landing.

The key to pronunciation appears on page xiii.

Lilith, Jewish female demon, probably originally the Assyrian storm demon Lilitu. In Jewish folklore she is a vampirelike child-killer and the symbol of lust.

Liliuokalani [lēlēōō"ōkälä'nē], 1838–1917, last reigning queen of the Hawaiian islands (1891–93). Her rule caused a revolt of sugar planters (mostly Americans), who deposed her. She wrote many songs, including the popular "Aloha Oe" or "Farewell to Thee."

Lille, city (1990 pop. 172,142), capital of Nord dept., N France. Long known for its textiles, it is the heart of a large, industrially developed metropolitan area. Once chief city of the county of Flanders and home of the 16th-cent. dukes of Burgundy, Lille was captured by the duke of Marlborough (1708) and restored to France by the Treaty of Utrecht (1713).

Lillehammer [lĭ'ləhämər], town (1985 pop. 21,935), S Norway. A lakeside resort and commercial center in an agricultural valley, it was the site of the 1994 winter Olympic games.

Lillie, Beatrice, 1898–1989, English comedienne; b. Canada. She won an international reputation for sophisticated wit in revues, radio and television shows, and films.

Lilly, John: see LYLY, JOHN.

Lilongwe [lēlông'gwā], city (1987 pop. 233,973), capital of Malawi. Located in a fertile agricultural area, it became Malawi's capital in 1966, and government buildings, an international airport, and a railroad link were built.

lily, common name for the family Liliaceae, perennial plants having showy flowers and erect clusters of narrow, grasslike leaves. The lily family is distributed worldwide but is particularly abundant in warm temperate and tropical regions. Most species grow from BULBS or other forms of enlarged underground STEMS. Common wildflowers in the family are ASPHODEL, DOGTOOTH VIOLET, LILY OF THE VALLEY, and TRILLIUM. Ornamentals of commercial importance include lilies, HYACINTHS, MEADOW SAFFRON, SQUILL, and TULIPS; food plants of commercial importance are ASPARAGUS and plants of the ONION genus. YUCCA and ALOE species are popular SUCCULENTS. True lilies include the Madonna lily (*Lilium candidum*) of Europe; the white trumpet lily (*L. longiflorum*) of Japan, which includes the Easter, or Bermuda, lily (var. *eximium*); the tiger lily (*L. tigrinum*) of China; and the Turk's-cap lily (*L. superbum*) and leopard lily (*L. pardalinum*), both of North America.

lily of the valley, fragrant, spring-blooming perennial (genus *Convallaria*) of the LILY family. It has dainty, bell-shaped, white or pink flowers on a stalk between two shiny leaves and grows in the shade. There are two species: the widely cultivated *C. majalis*, native to Europe, and *C. montana*, which grows in the Appalachian Mts.

Lima, city (1993 pop. 6,397,431), W Peru, capital of Peru. Its port is CALLAO. Lima is Peru's largest city, and its urban area is the nation's economic center, with oil-refining and diversified manufacturing industries. Founded by Francisco PIZARRO in 1535, Lima was the magnificent capital of Spain's New World empire until the 19th cent. Rebuilt several times, it retains the architectural styles of several periods but is dominated by modern buildings erected since World War II. Its focal point is the central Plaza de las Armas, with its huge palace and cathedral. The Univ. of San Marcos (est. 1551) is one of the finest in South America.

Limbourg brothers [lăNbōōr'], fl. 1380–1416, Pol, Jan, and Herman, Franco-Flemish manuscript illuminators. In 1411 they became court painters to Jean, duc de Berry for whom they did their Gothic masterpiece, the *Très Riches Heures* (c.1415; Musée Condé, Chantilly). This exquisite BOOK OF HOURS shows scenes of daily life, and profoundly influenced Flemish painting.

lime: see CALCIUM OXIDE.

lime, small, shrublike tree (*Citrus aurantifolia*) of the RUE family. Its bright-green fruit, smaller and more acid than the LEMON, has long been used to prevent scurvy. The plant grows well in rocky or sandy soils. It is the most frost-sensitive of the CITRUS FRUITS, and chief production areas are in tropical regions.

Limerick, city (1986 pop. 56,279), Co. Limerick, SW Republic of Ireland, on the Shannon estuary. Industries include fishing, food processing, and lacemaking. Taken by the English in the late 12th cent., it was JAMES II's last Irish stronghold after the GLORIOUS REVOLUTION. Preserved there is the Treaty Stone on which the document granting Irish Catholics political and religious liberty was signed in 1691.

limestone, sedimentary rock composed of calcium carbonate. It is ordinarily white but may be colored brown, yellow, or red by iron oxide and blue, black, or gray by carbon impurities. Most limestones are formed from the skeletons of marine invertebrates; a few are chemically precipitated from solution. Organic acids acting on underground deposits lead to formations such as those in Carlsbad Caverns and Mammoth Cave national parks (see NATIONAL PARKS, table). Limestone is used in iron extraction, in cements and building stones, and as a source of lime (see CALCIUM OXIDE). Limestone varieties include CHALK, DOLOMITE, MARBLE, OOLITE, and travertine.

limner, the work of untrained, generally anonymous artists in the American colonies. Their work often showed flat, awkward figures in richly detailed costumes and landscape settings. The limner tradition extended into the 19th cent.

limonite or **brown hematite,** yellowish to dark brown mineral [$FeO(OH)\cdot nH_2O$] occurring worldwide in deposits formed by the alteration of other minerals containing iron. It is used as a pigment (in ocher) and as an ore of IRON. Both iron rust and bog iron ore are limonite.

Limousin or **Limosin, Léonard** [lēmōōzăN', lēmôzăN'], c.1505–c.1577, French painter, celebrated member of a Limoges, Belgium, family of enamel artists. He did plates, vases, goblets, medals, and portraits for Francis I and Henry II of France. Remarkable for their elegance, precise techniques, and intense color, his works include plaques of the French kings, Diane de Poitiers, Martin Luther, and John Calvin. His art is best studied at the Louvre.

limpet, GASTROPOD mollusk with a flattened conical shell and a muscular foot with which it clings tightly to rocks. Although occasional specimens reach 4 in. (10 cm) in length, most are smaller. Limpets are found mainly in cooler waters of the Atlantic and Pacific oceans.

Lincoln, Abraham, 1809–65, 16th president of the U.S. (1861–65); b. Hardin co. (now Larue co.), Ky. Born in a log cabin in the backwoods, Lincoln was almost entirely self-educated. In 1831 he settled in New Salem, Ill., and worked as a storekeeper, surveyor, and postmaster while studying law. The story of his brief love affair there with Anne RUTLEDGE is now discredited. In 1834 he was elected to the state legislature, and in 1836 he became a lawyer. He served one term (1847–49) in Congress as a Whig; in 1855 he sought to become a senator but failed. In 1856 he joined the new REPUBLICAN PARTY. He ran again (1858) for the Senate against Stephen A. DOUGLAS, and in a spirited campaign he and Douglas engaged in seven debates. Lincoln was not an ABOLITIONIST, but he regarded slavery as an evil and opposed its extension. Although he lost the election, he had by now made a name for himself, and in 1860 he was nominated by the Republicans for president. He ran against a divided Democratic party and was elected with a minority of the popular vote. To the South, Lincoln's election was a signal for secession. By Inauguration Day seven states had seceded, and four more seceded after he issued a summons to the militia. It is generally agreed that Lincoln handled the vast problems of the CIVIL WAR with skill and vigor. Besides conducting the war, he faced opposition in the North from radical abolitionists, who considered him too mild, and from conservatives, who were gloomy over the prospects of success in the war. His cabinet was rent by internal hatred, and the progress of the war went against the North at first. In 1863 he moved to free the slaves by issuing the EMANCIPATION PROCLAMATION, but preserving the Union remained his main war aim. His thoughts on the war were beautifully expressed in the GETTYSBURG ADDRESS (1863). In 1864 Lincoln ran for reelection against George B. MCCLELLAN and won, partly because of the favorable turn of military affairs after his appointment of Gen. U.S. GRANT as commander-in-chief. Lincoln saw the end of the war but did not live to implement his plan for RECONSTRUCTION. On Apr. 14, 1865, while attending a play at Ford's Theater, in Washington, D.C., he was shot by the actor John Wilkes Booth (see under BOOTH, JUNIUS BRUTUS). He died the next morning. As time passed a full-blown "Lincoln legend" grew, and he became the object of adulation and a symbol of democracy. His wife, **Mary Todd Lincoln,** 1818–82, b. Lexington, Ky., met and married Lincoln in 1842. The harsh portrayal of her by Lincoln's biographer William H. Herndon is

certainly exaggerated. Only one of their four sons, **Robert Todd Lincoln,** 1843–1926, b. Springfield, Ill., reached manhood. He served as secretary of war (1881–85) and minister to Great Britain (1889–93). A corporation lawyer for railroad interests, he was president of the Pullman Co. (1897–1911).

Lincoln, city (1990 pop. 191,972), state capital and seat of Lancaster co., SE Nebr.; inc. 1869. It is the railroad, trade, and industrial center for a large grain and livestock area. Many insurance companies have home offices there. The Univ. of Nebraska is in the city; points of interest include the capitol (completed 1934) and the home of W.J. BRYAN.

Lincoln Center for the Performing Arts, New York City, was constructed between 1959 and 1972. The complex includes the Metropolitan Opera, Avery Fisher (formerly Philharmonic) Hall, New York State Theater, Juilliard School (including Alice Tully Hall for recitals), Vivian Beaumont Theater, Library-Museum for the Performing Arts, a band shell, and several Fordham Univ. buildings. Among the architects were W.K. Harrison, Eero SAARINEN, Philip JOHNSON, and Max Abramowitz, and the stage designer Jo MIELZINER. In 1991 a 28-story tower with dormitory rooms, rehearsal studios, movie theater, and other facilities was added to the complex.

Lincoln Memorial, monument in Washington, D.C., built 1914–17. Designed by the American architect Henry Bacon and styled after a Greek temple, it houses a heroic statue of Abraham LINCOLN by Daniel Chester FRENCH and two murals by the American painter Jules Guerin.

Lind, Jenny, 1820–87, Swedish soprano. She became a noted operatic singer in Europe before 1849, when she abandoned opera for concert and oratorio until 1870. Under the management of P.T. BARNUM, she toured (1850–52) the U.S. Known as the "Swedish nightingale," she was one of the great coloraturas of her period.

Lindbergh, Charles Augustus, 1902–74, American aviator who made the first solo nonstop transatlantic flight; b. Detroit. An air reserve officer, he astounded the world on May 21, 1927, by landing in Paris after a flight from New York in his *Spirit of St. Louis.* In the U.S. he received unprecedented acclaim. After the kidnapping and murder of their son in 1932, he and his wife moved to England. In 1936, Lindbergh collaborated with Alexis CARREL in inventing a perfusion pump (artificial heart). In 1938–39 he advocated U.S. neutrality in a European war; when his speeches were branded as pro-Nazi, he resigned his commission, but later flew combat missions in the Pacific. His wife, **Anne Spencer Morrow Lindbergh,** 1906–, b. Englewood, N.J., is a writer. Her works include *North to the Orient* (1935) and *Listen! the Wind* (1938), accounts of flights made with her husband; *Gift from the Sea* (1955), a poetic study of women's problems; and volumes of diaries and letters.

linden, a woody shrub or tree of the family Tiliaceae, including the tropical genus *Corchorus,* from which JUTE is obtained. The name most often refers to deciduous trees (genus *Tilia*) known as linden, lime tree, or basswood, valued for ornament and shade. Their light, strong wood is useful for woodenware and excelsior and in BEE culture; their flowers yield an excellent honey. Fiber made from the tough inner BARK, or bast (hence the name basswood), is used in caning and wickerwork.

Lindner, Richard, 1901–78, American painter; b. Germany. He emigrated to the U.S. in 1941. He is noted for his strangely erotic, almost sadistic images. Mainly of women and strongly influenced by CUBISM, they are painted in harsh, sharply defined colors, e.g., *Ice* (1966; Whitney Mus., N.Y.C.).

Lindsay, (Nicholas) Vachel, 1879–1931, American poet; b. Springfield, Ill. He lived as a modern-day troubadour, selling his drawings and poems as he traveled. His best poetry is virile and strong, with a fine spoken music. Volumes include *The Congo* (1914) and *Collected Poems* (1938).

linen, fabric or yarn made from FLAX, probably the first vegetable FIBER known. Linen fabric dating from 5000 B.C. has been found in Egyptian tombs. Egyptian, Greek, and Jewish priests wore linen to symbolize purity. Brought to N Europe by the Romans, it became the chief European textile of the Middle Ages. French HUGUENOTS carried the art of working flax to Ireland, still the major producer of fine linen. Power looms were first used to weave linen in 1812, but many textile inventions were not applicable to linen thread because its inelasticity made it break readily. Thus the expense of linen weaving relative to that of cotton limits its use. It is woven into fabrics ranging from heavy canvas to sheer handkerchief linen.

linguistics, scientific study of LANGUAGE, covering structure (grammar, PHONETICS, morphology) as well as the history of the relations of languages to one another and language's cultural place in human behavior. Before the 19th cent. language study was mainly a field of philosophy. The German philologist Wilhelm von Humboldt felt that language arose spontaneously from the human spirit: thus languages are different as humans are different. In 1786 Sir William Jones suggested the affinity of Sanskrit and Persian with Greek, opening the study of genetic relationships between languages. With his revelation the school of comparative historical linguistics began. In the 19th cent. Jakob GRIMM, Rasmus Rask, and others did much study establishing the existence of the Indo-European language family. In the 20th cent. the structural or descriptive school of linguistics emerged. The father of structural linguistics, Ferdinand de SAUSSURE, believed in language as a systematic structure linking thought and sound; he thought of language sounds as a series of purely arbitrary linguistic signs. A more recent school, TRANSFORMATIONAL-GENERATIVE GRAMMAR, has received wide notice through the works of Noam CHOMSKY.

Linnaeus, Carolus, 1707–78, Swedish botanist and taxonomist, considered the founder of the binomial system of nomenclature and the originator of modern scientific CLASSIFICATION of plants and animals. In *Systema naturae* (1735) and *Genera plantarum* (1737) he presented his classification system, which remains the basis for modern taxonomy. His more than 180 works also include *Species plantarum* (1753), books on the flora of Lapland and Sweden, and the *Genera morborum* (1763), a classification of diseases.

Linotype: see PRINTING.

linseed oil, amber-colored oil extracted from linseed, the seed of the FLAX plant. The oil obtained from hydraulically pressed seeds is pale in color and practically odorless and tasteless. Oil that has been boiled or extracted by application of heat and pressure is darker, with a bitter taste and unpleasant odor. Linseed oil is used as a drying oil in paints and VARNISHES and in making linoleum, oilcloth, and certain inks. See also FATS AND OILS.

Linz, city (1991 pop. 202,855), capital of Upper Austria, NW Austria, a major port on the Danube R. Manufactures include steel, machinery, and electrical equipment. A Roman settlement, it became (15th cent.) a provincial capital of the Holy Roman Empire. Anton BRUCKNER was organist at the 17th-cent. baroque cathedral. Other historic buildings include the Romanesque Church of St. Martin (8th cent.).

lion, large carnivore (*Panthera leo*) of the CAT family, found in open country in Africa, with a few surviving in India. The tawny-coated male lion usually has a long, thick mane and may reach 9 ft (2.7 m) in length and 400 lb (180 kg) in weight. Lions live in prides of up to 30 individuals. Females do most of the hunting, preying on zebra, antelope, and domestic livestock.

Lipchitz, Jacques [lēpshēts'], 1891–1973, French sculptor; b. Lithuania. Associated with the cubists (see CUBISM), he originated vibrant skeletal constructions and transparent sculptures. During the late 1930s allegories of struggle preoccupied him, e.g., *The Rape of Europa.* His later sculpture includes *The Spirit of Enterprise* (Fairmont Park, Philadelphia) and his celebrated semiautomatics—masses of clay or plasticine molded underwater.

Li Peng, 1928–, Chinese political leader. He has been minister of the Electric Power Industry (1981–82), a member of the Communist party central committee (1982–) and politburo (1985–), acting prime minister (1987–88), and prime minister (1988–). More politically orthodox than some of his contemporaries, he favors greater central economic planning and slower economic growth. He took an active role in the suppression of the 1989 prodemocracy demonstrations.

lipids, natural products in living systems that are insoluble in water but soluble in organic solvents. Major classes of lipids include fatty acids, glycerol-derived lipids (including fats and oils), sphingosine-derived lipids associated with the nervous system, steroids, terpenes, certain aromatic compounds, and long-chain al-

cohols and waxes. The fat-soluble VITAMINS can be classified as lipids.

Li Po or **Li Tai Po,** c.700–762, Chinese poet. He is known for his unconcern for worldly preferment and love of retirement and wandering. Extremely fecund and facile, he wrote of the grief of lovers parted by duty, the beauty of the countryside, and the solace and wisdom found in wine.

lipoprotein, any organic compound that is composed of both protein and the various fatty substances, e.g. fatty acids and steroids such as cholesterol, classed as LIPIDS. There are several types of lipoproteins present in human blood, including low-density (low protein to fat ratio) lipoproteins (LDL) and high-density (high protein to fat ratio) lipoproteins (HDL). LDLs transport CHOLESTEROL to cells that need it and deposit excess cholesterol in the cells lining the blood vessels, forming the plaque that increases the risk of ARTERIOSCLEROSIS. HDLs transport cholesterol from the tissues to the liver for excretion, retarding the formation of plaque and lowering the risk of arteriosclerosis.

liposome, microscopic, fluid-filled pouch formed by mixing LIPIDS with water or water solutions. Liposomes are used to deliver certain drugs (e.g., insulin and some cancer drugs) to the body. Liposomes have also been used experimentally to carry normal genes into a cell in order to replace defective, disease-causing genes.

Lippi [lēp'pē], two 15th-cent. Italian painters. **Fra Filippo Lippi,** c.1406–1469, called Lippo Lippi, was one of the foremost Florentine painters of the early RENAISSANCE. He may have studied under MASACCIO, and his graceful narrative style influenced northern Italian painters. He is best known for his many easel paintings, e.g., *Virgin Adoring the Christ Child* (Uffizi) and *Madonna with Saints* (Louvre). His most important works are the FRESCOES of the lives of St. Stephen and St. John the Baptist (Prato cathedral). His son, **Filippino Lippi,** c.1457–1504, studied under BOTTICELLI. He completed Masaccio's frescoes in the Brancacci Chapel, Florence, and his early works, e.g., *Madonna Enthroned* (Uffizi), echo Masaccio's style. His later works, e.g., the frescoes in Santa Trinita (Florence), the *Adoration of the Magi* (Uffizi), and the dramatic frescoes of St. John and St. Philip (Santa Maria Novella, Florence), were greatly influenced by Botticelli and echo his graceful expression and refinement of line.

Lippmann, Walter, 1889–1974, American journalist; b. N.Y.C. After serving on the editorial staff of the New York *World* (1921–31), he began writing a highly influential syndicated column, first for the New York *Herald Tribune* (1931–62), later for the Washington *Post* (1962–67). This and his many books made him famous as an analyst of moderate detachment and incisiveness.

Lippold, Richard, 1915–, American sculptor; b. Milwaukee. His abstract constructions of wire and sheet metal are precisely engineered, intricate works in which light plays an integral part. An outstanding example is *Orpheus and Apollo* (Avery Fisher Hall, Lincoln Center, N.Y.C.).

liqueur, strong alcoholic beverage made of nearly neutral spirits flavored with herbs, fruits, or other materials, and usually sweetened. The alcoholic content ranges from c.27% to 80%. Cordials are prepared by steeping fruit pulps or juices in sweetened alcohol. Liqueurs include anisette, benedictine, chartreuse, crème de menthe, and kirsch.

liquid: see STATES OF MATTER.

liquid crystal, liquid whose component particles, atoms or molecules, tend to arrange themselves with a degree of order far exceeding that of ordinary liquids and approaching that of solid crystals. As a result, liquid crystals have many of the optical properties of solid crystals. Moreover, because its atomic or molecular order is not as firmly fixed as that of a solid crystal, a liquid can be easily modified by electromagnetic radiation, mechanical stress, or temperature, with corresponding changes in its optical properties. This characteristic has made possible liquid crystal displays (LCDs) such as those used on digital clocks, electronic calculators, portable televisions, and notebook computers.

Lisbon, Port. *Lisboa,* city (1987 est. pop. 831,000), W Portugal, capital of Portugal on the Tagus R. near the Atlantic Ocean. Lisbon is Portugal's largest city and its cultural, administrative, commercial, and industrial hub. It is set on seven terraced hills and has one of the best harbors in Europe. Its manufactures include textiles, chemicals, and steel. Held by Rome from 205 B.C., it fell (714) to the MOORS, who were expelled in 1147. It became the capital c.1260 and reached its height in the 16th cent. with the establishment of Portugal's empire. Earthquakes, notably in 1755, have destroyed many of the city's old buildings, but some remain, e.g., the Castelo de São Jorge, the Church of St. Roque, and the monastery at Belém. The old quarter, the picturesque Alfama, surrounds the 12th-cent. cathedral (rebuilt later).

LISP: see PROGRAMMING LANGUAGE.

Lister, Joseph Lister, 1st **Baron,** 1827–1912, English surgeon. He introduced to surgery the principle of antisepsis, an outgrowth of Louis PASTEUR'S theory that bacteria cause infection, and he founded (1865) modern antiseptic surgery. Using carbolic acid as an antiseptic agent in conjunction with heat sterilization of instruments, he dramatically decreased post operative fatalities. He developed absorbable ligatures and the drainage tube, both now in general use for wounds and incisions.

Liszt, Franz [lĭst], 1811–86, Hungarian composer. A revolutionary figure of romantic music, acknowledged as the greatest pianist of his time, he studied with CZERNY and enthralled audiences with his expressive, dramatic playing. Liszt taught most of the major pianists of the next generation. In his compositions he favored program music, originating the SYMPHONIC POEM, e.g., *Les Préludes* and *Mazeppa* (both: 1856). In his Sonata in B Minor (1853) he developed the technique of transformation of themes and thereby changed the concept of the SONATA form. He influenced Richard WAGNER and Richard STRAUSS. His piano works include six Paganini Études (1851); concertos; and 20 Hungarian Rhapsodies.

Li Tai Po: see LI PO.
